Fake Text Routines for the ML Foundation System

by M. David Johnson

2023/04/22

Abstract

Fake Text Routines are presented which run in PMODE 4, Color Set 0; on top of the ML Foundation System.

=====

Introduction

These Fake Text Routines are intended to be used in the development of PMODE 4, Color Set 0, maze-like games which will run on top of the ML Foundation System.

In my concept for developing such games, I've divided the PMODE 4's 256-pixel by 192-pixel screen into 32 by 16 Fake Text Character fields; where each field is 8 pixels wide by 12 pixels high. (aka, one byte by twelve bytes).

Following this, I've also herein defined a set of 256 character images, each also 8 pixels wide by 12 pixels high, for use with that divided PMODE 4 screen.

This character set is simply the one I designed for use in (at least several of) the games I intend to design. If you choose to use this system yourself, you are by no means restricted to using this character set. Any similar set of 256 individual 8x12 images should work just as well.

————

A Note on Numbers: To keep everything simple to understand, and also neatly lined-up, I frequently refer to numbers as decimal bytes with three full digits, e.g. 004, 027, 229, etc. See Appendix A for conversions between the decimal and hexadecimal representations of bytes. The leading zeroes are NOT intended to indicate octal notation. Octal notation is not used anywhere in this paper.

In works of this complexity (at least for me) typos and other errors are bound to sneak in. Please let me know about any you discover so I can note and correct them.

=====

General Methodology

The development of this character set proceeded in six stages:

1. The definition of the list of 256 characters.
2. The drawing of the graphic image for each of the characters.
3. The encoding of the graphic characters.
4. The development of the PTFCHR Routine for placing a character on the PMODE 4 screen at specified (X,Y) coordinates.
5. The development of associated utility and testing routines.
6. The testing itself.

=====

Fake Text Character Set Character List

The first stage of development was the definition of the 256 characters:

*

* FAKETEXT

* CHARACTER SET REFERENCE

* AS OF 2023/01/14

*

** THE PLAYER

000 - AVATAR

** THE PLAYER'S ENEMIES

001 - BEAST #1

002 - BEAST #2

003 - BEAST #3

004 - BEAST #4

005 - BEAST #5

006 - BEAST #6

007 - BEAST #7

008 - BEAST #8

009 - BEAST #9

010 - BEAST #10

Character Number 255 = FF hex:
255 - SUPO = SUPER-O

**** END**

Fake Text Character Set

Character Encoding Hex Patterns

The third stage of development was the encoding to the character graphics for eventual use by the PTFCHR Routine.

To accomplish this, each of the characters was encoded as twelve bytes; with each of the bytes being a two-nibble representation of the pixel pattern in a given line of the character's 12 lines; and with the lines being arranged from top-to-bottom.

There were thus sixteen distinct nibble patterns.

** THE SIXTEEN PATTERNS

Character Hex Pattern \$00
= 000 decimal

Character Hex Pattern \$01
= 001 decimal

Character Hex Pattern \$02
= 002 decimal

Character Hex Pattern \$03
= 003 decimal

Character Hex Pattern \$04
= 004 decimal

Character Hex Pattern \$05
= 005 decimal

Character Hex Pattern \$06
= 006 decimal

Character Hex Pattern \$077
= 007 decimal

Character Hex Pattern \$08
= 008 decimal

Character Hex Pattern \$09
= 009 decimal

Character Hex Pattern \$0A
= 010 decimal

Character Hex Pattern \$0B
= 011 decimal

Character Hex Pattern \$0C
= 012 decimal

Character Hex Pattern \$0D
= 013 decimal

Character Hex Pattern \$0E
= 014 decimal

Character Hex Pattern \$0F
= 015 decimal

For testing, see the Fake Text Testing Chapter below.

=====

CHRSTST2: Fake Text ML Test Loop BASIC Driver

CHRSTST2 calls CHDISP once (at line 4110 below) to display the entire character set using ML code. It's quite fast.

```
1000 '*****
1010 '*'
1020 '* CHRSTST2.BAS
1030 '* MDJ 2023/04/04
1040 '*'
1050 '* TEST PRINTS THE
1060 '* PMODE 4 FAKETEXT
1070 '* CHARACTER SET
1080 '* USING ML LOOP
1090 '*'
1100 '*****
1110 '

2000 ' X = X-COORDINATE (0-31) TO &H7000
2010 ' Y = Y-COORDINATE (0-15) TO &H7001
2020 ' C = CHARACTER CODE (0-255) TO &H7002
2030 '

3000 ' LOAD THE ML ROUTINES
3010 CLEAR 200, &H4000
3020 LOADM "CHR3216X.BIN"
3030 LOADM "CHR3216T.BIN"
3040 LOADM "PTFCHR.BIN"
3050 LOADM "CHDISP.BIN"
3060 '

3100 ' SET UP THE PMODE 4 SCREEN
3110 PCLEAR 4
3120 PMODE 4,1
3130 PCLS 1
3140 SCREEN 1,0
3150 '

4000 ' SETUP FOR ROLLOVER ON
4010 ' FIRST ITERATION
```

```
4020 X = -1
4030 Y = 0
4040 '

4100 ' GO DISPLAY THE CHARACTER SET
4110 EXEC &H536F
4240 '

4300 ' HOLD THE SCREEN
4310 GOTO 4310
4320 '

32767 END
```

For testing, see the Fake Text Testing Chapter below.

=====

Fake Text Testing

The sixth and final stage of development was the testing itself. Both CHRSTEST and CHRSTST2 produce the same screen shown here. Run them both for yourself to compare the speeds with which the character set is displayed.

=====

Results

Finally, CHR3216X.BIN is combined with PTFCHR.BIN to produce C3216SET.BIN which includes both the characters encoding and the code to put characters to the screen; all in one combined file which can be loaded as a single entity:

```
1000 '*****
1010 '*
1020 '* C3216FM2.BAS
1030 '* MDJ 2023/04/06
1040 '*
1050 '* THE FAKETEXT 32 X 16
1060 '* CHARACTER SET FOR
1070 '* PMODE 4
1080 '*
1090 '* EACH OF THE 255
1100 '* CHARACTERS IS 8 BITS
1110 '* (I.E. ONE BYTE) WIDE
1120 '* AND TWELVE BYTES HIGH
1130 '*
1140 '* THIS IS THE FILEMAKER
1150 '* PROGRAM
1160 '*
1170 '*****
1180 '

1300 CLEAR 200, &H4000
1310 LOADM "CHR3216X.BIN"
1390 LOADM "PTFCHR.BIN"
1400 '

1500 SAVEM "C3216SET.BIN", &H4700, &H536E, &H4700
1510 '

32767 END
```

And this file is herein tested with CHRSTST3.BAS which is the same as CHRSTST2.BAS except with adjustments to use C3216SET.BIN instead of CH3216X.BIN and PTFCHR.BIN separately:

```
1000 '*****
1010 '*
1020 '* CHRSTST3.BAS
1030 '* MDJ 2023/04/06
1040 '*
```

```

1050 '* TEST PRINTS THE
1060 '* PMODE 4 FAKETEXT
1070 '* CHARACTER SET
1080 '* USING ML LOOP
1081 '* WITH C3216SET.BIN
1082 '* INSTEAD OF CH3216X.BIN
1090 '*
1100 '*****
1110 '

2000 ' X = X-COORDINATE (0-31) TO &H7000
2010 ' Y = Y-COORDINATE (0-15) TO &H7001
2020 ' C = CHARACTER CODE (0-255) TO &H7002
2030 '

3000 ' LOAD THE ML ROUTINES
3010 CLEAR 200, &H4000
3020 LOADM "C3216SET.BIN"
3030 LOADM "CHR3216T.BIN"
3050 LOADM "CHDISP.BIN"
3060 '

3100 ' SET UP THE PMODE 4 SCREEN
3110 PCLEAR 4
3120 PMODE 4,1
3130 PCLS 1
3140 SCREEN 1,0
3150 '

4000 ' SETUP FOR ROLLOVER ON
4010 ' FIRST ITERATION
4020 X = -1
4030 Y = 0
4040 '

4100 ' GO DISPLAY THE CHARACTER SET
4110 EXEC &H536F
4240 '

4300 ' HOLD THE SCREEN
4310 GOTO 4310
4320 '

32767 END

```

All of this is performed on the FTEXT002.DSK disk, simply because the FTEXT001.DSK disk is full. The results are identical to those shown in the Testing Chapter above.

=====

Appendix B: My CoCo Philosophy

The CoCo community enjoys a great diversity of interests.

Some choose to concentrate on hardware innovations and modifications such as interfacing with VGA and HDMI monitors, SD Card data storage, and 104-key keyboards. This interest is at least partly born of necessity, since composite monitors, floppy diskettes, and CoCo spare parts are no longer manufactured and are in increasingly short supply.

Others concentrate on expanding the software horizons of the CoCo 3, using NitrOS-9 and other operating systems to make the multitasking CoCo behave ever closer to modern Windows, Mac, and Linux machines.

Still others are devoted to emulating the CoCo on other platforms by developing emulators such as VCC, OVCC, MAME, and XRoar.

And some just love retro gaming.

My personal interest is twofold:

1. To see VCC increasingly used as a learning tool for budding software developers.
2. To see just how much I can cram into a 64K CoCo 2.

First, VCC: Today's Grade School, Junior High, and High School students have a wealth of available learning tools. Micro-bits, Arduinos, and Raspberry Pi supermicro devices provide highly affordable entry-level introductions to computer programming and interfacing. Maker-Spaces and Innovation Centers in our schools and libraries help foster growth and experience.

But these devices do have limitations. Even these simple(?) computers can have rather steep learning curves, and their low initial cost can quickly expand as new peripherals and experimental equipment and supplies are added.

VCC is free, and can be used on any Windows computer: just download it, install it, and it runs. If you don't own a Windows computer, your school, library, or a friend probably does. The included BASIC language is easy to learn and can readily serve as a stepping-stone towards more complex programming languages. (And, no, learning structured programming does not require a language that enforces structure. In fact, I think learning to structure your programs is actually more effective when you do so on your own.)

I prefer VCC to the other emulators for these purposes because its setup is trivial: Again, just download it, install it, and it runs. OVCC, MAME, and XRoar have their advantages, but ease of setup is not one of them. Even with their available Windows binary packages, they require pre-installation of other bits and pieces of software before they can be downloaded,

installed, and run. This may not be a major problem for a reasonably adept aficionado, but it forms a significant barrier for the newbie. And, it's the newbie whom we're trying to reach, interest, and encourage here; the newbie who may not yet recognize even the tiniest awakening of interest in things computational.

But, for these purposes, VCC has one glaring weakness: its instruction manual is woefully terse. I would like to see VCC bundled with a selection of tutorials, manuals, and examples suited to guiding even the most newbie of newbies into the wonders of computing.

Second, The Stuffed CoCo: I'm simply fascinated by the challenge of seeing how much functional capability I can sandwich into the nooks and crannies of the 64K space. Whether it's working in the available RAM left by the 32K ROM and the dedicated RAM that supports that ROM, or whether it's jumping right into ALLRAM mode and just filling the entire 64K to near-overflowing; it's an investigative gauntlet which goes right to the heart of my enchantment with puzzles in general.

It's great fun!

Appendix C: New BDS Software License

This New Software License applies to all software found on the BDS Software site, and supersedes all previous copyright notices and licensing provisions which may appear in the software itself or in any documentation therefor.

All software which has previously been placed in the public domain remains in the public domain.

All other software, programs, experiments and reports, documentation, and any other material on this site (other than that attributed to outside sources) is hereby copyright © 2018 (or later if so marked) by M. David Johnson.

All software, documentation, and other information on the BDS Software site is available for you to freely download without cost.

Whether you downloaded such items directly from this site, or you obtained them by any other means, you are hereby licensed to copy them, to sell or give away such copies, to use them, and to excerpt from them, in any way whatsoever, so long as nothing you do with them would denigrate the name of our Lord and Savior, Jesus Christ.

I make absolutely no warranty whatsoever for any of these items. You use them entirely at your own risk.

If they don't work for you, I commiserate.

If they crash your system, I sympathize.

But I accept no responsibility whatsoever for any such consequences. Under no circumstances will BDS Software or M. David Johnson be liable for any negative results of any kind which you may experience from downloading or using these items.

BDS Software's former mail address at P.O. Box 485 in Glenview, IL is no longer valid. Any mail sent to that address will be rejected by the U.S. Postal Service. See my Contact page.
