Allen,

Sorry I missed you at the fest. But, well, ummm, anyway, shoving the piles of unsold fest stuff outta the way......

At long last, one CoCo3^c. The doors suck and I didn't get the extra frontpanel done, but neither of these problems prevent it from being used. I'll get the goods to you within a week or so. The klystrone mounts behind the floppies, over the puppo adapter mounts, but requires a minor power supply hack.
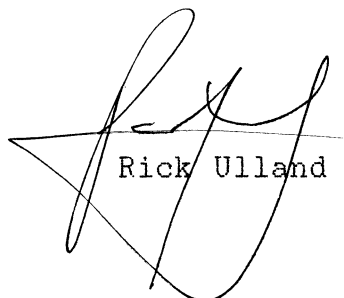

I enclosed part of the OS9 package (might think of it as an OS9 starter kit) for your amusement. Appreciate your thoughts.
Seems I remember you running monochrome- I only found one pattern that allowed 4 shades of grey (and it only works with dark foreground) have you found any better combos?

Actually, you got stiffed quite a bit, since the $ package includes manuals and disks (OS9, Basic09, MultiVue, dynacalc, phantomgraph, cocoartist, etc) and a 6809 version and more runtimes...pd stuff mainly. The plan is to provide one $70 box that runs as sold. Of course Nitro blows this plan all to hell, perhaps I'll buy some Nitros so I can include a runnable 6309 version. (This one is pboost).

Oh yah, the system administrator passwords are 'tecnoc' (tech knock) since I can't seem to type conect backwards.

See yah on the nets!

Rick Ulland
