MM/1 Super Personal Systems and Super Personal Plus Systems

The MM/1 system is known around the world for reliable operation in its classic MM/1 Extended configuration.

We now introduce two new configurations:

The MM/1 Super Personal and the MM/1 Super Personal Plus Systems.

Super Personal. Same as the MM/1 personal, except that it can be upgraded to nine megabytes of memory. Includes hundreds of dollars worth of software, our new User Guide, and the OS-9 Guru, a new book about OS-9/68000 from internationally reknowned authors. **$799.00.**

Super Personal Plus. Triples the speed of the Super Personal by adding a 68340 accelerator card. Includes everything in the Super Personal. **$1250.**

Both systems can be upgraded with I/O boards at later times for an additional $300.00.

With the Super Personal and the Super Personal Plus, you can use the MM/1 with three or nine megabytes of memory and get the extra speed that otherwise would require the I/O board. The extra memory permits the use of RAM disks and diskcaching to make for a slick, low-cost system without a hard drive.

The Super Personal and Super Personal Plus include serial ports, keyboard port, video port, CPU with DMA floppy, graphics chip, one megabyte of on-board memory, ROMS, network port (requires additional drivers for use). The Super Personal Plus also adds a faster CPU and another serial port.

To add a hard drive, just get our I/O board.

Super Personal	$799.
Super Personal Plus	$1250.
I/O board	$300.

Availability: June 1 for Super Personal, June 15, Super Personal Plus. I/O boards, call for availability.

Order now, no money down.
