READ ME! READ ME! READ ME!

This is an official release of Robert Offermann for the Atlanta CoCoFEST!

Hello, I'm Robert Offermann, and I'd like to tell you about some of the software you may purchase at my booth, and about some additional software that will be released soon, in time to be mailed for Christmas!

First, let me tell you about:

### REVELATION!

Revelation is an operating system enhancement. What that means is that Revelation! allows you to do things with your CoCo that would otherwise be much more difficult, time consuming, or nearly impossible without it. It is NOT an operating system such as OS-9, nor is it a DOS enhancement such as A-DOS or similar packages.

Here is a sample of what Revelation! can provide for you:

Expanded Text Screens: 80 x 28  
(4 Additional lines!) 40 x 28

Expanded Graphics modes: 640 x 225  
(34 additional lines!) 320 x 225

#### 62 Macro Keys

(These allow you to enter single commands, or even perform entire functions such as switching from 32 columns to 80 columns, all with only 2 or 3 keypresses.)

#### 37 International Characters

(These were added with the CoCo III but no one really took advantage of them through software. Revelation! allows you to enter them straight from the keyboard.)

#### Status Display

(This is a single line optionally displayed on the bottom 28th line of the 80 column display. It will indicate if SHIFT is pressed or SHIFT-LOCK is on, or if the ALT, or CTRL keys are being pressed. It also indicates whether FAST or SLOW mode is being used, as well as the current status of the computer, ie. running a program, paused, or waiting for input.)

#### Control Key

(This allows you to enter control characters, that is, ascii values from 1 to 26, directly from the keyboard. This may be used to add many functions to your own programs that would otherwise be awkward for users to access.)

#### High Speed Disk Access

(Without Revelation, accessing the disk drive can be a pain if you are using the CoCo III in its 2mhz mode. Revelation! keeps track of what speed you are currently using and automatically switches out of high speed before disk access, returning high speed immediately afterward if it was being previously used.)

#### Single key HIGH-SPEED toggle

(F1 has been defined to act as an automatic HIGH-SPEED toggle. It will switch the CoCo III between 2mhz and 1mhz with a single key-press, even while a program is running.)

#### Caps-lock key

(F2 has been defined as a separate CAPS-LOCK key to avoid the rather annoying SHIFT+Q key combination.)

All of this, and it runs in only 128k, without occupying a single byte of user memory. This means that most of your programs, if not all, will run

with Revelation! installed. Your typing can be faster, and your graphics and text screens larger than ever before.

Revelation! is available from Robert Offermann for \$25.00 plus \$1 Shipping and Handling if you order by mail, but here at the CoCoFEST, it's on sale for only \$20.00!

Another program, Blackjack III, is being premiered here at the CoCoFEST. It is a very different Blackjack game than you have likely ever played before. Each face card has been drawn to match the particular suit to which it belongs. Cards are represented on the screen just like you would see them if you were playing with actual cards.

But what REALLY makes Blackjack III special isn't just the incredible graphics displays. Blackjack III also incorporates digitized sound so that the dealer actually talks to you during the game.

This program requires 512k and shows just what can be done with our CoCo III and a little ingenuity. You won't be disappointed!

It sales for just \$15.00, and comes on TWO disks, necessary to contain the graphics and digitized sound involved! Don't miss this one!

Also available soon, a 512k graphics adventure that you'd have to see to believe (and you would have too, but it wasn't ready to premier at the CoCoFEST like I had hoped)! It's entitled:

SLAKE FREEMAN AND THE INVASION OF  
THE MUTANT LINOLEUM MINERS!

Ask Robert Offermann to tell you all about it! Trust me, he'll be glad to.

Software orders and inquiries may be sent to: Robert Offermann
