DOSPLUS

Experience the Power

"Awesome". The word only begins to describe the power of DOSPLUS 3.5, the latest in the line of popular Disk Operating Systems from Micro-Systems Software, Inc.

Long known for its production of high quality, user friendly operating systems, Micro-Systems Software introduces a whole new breed of DOSPLUS. Version 3.5 explores avenues of power and flexibility previously untouched in TRS-80 DOS'.

DOSPLUS 3.5 is the last word in professionally crafted operating systems and combines un-

limited power and flexibility with the same reliable and steady performance you have come to expect from the name DOSPLUS. In short, DOSPLUS puts you in total control. From its parameter rich library, to the many and powerful utilities, to the full featured BASIC, DOSPLUS is THE system for the TRS-80 Model I or III.

Priced at \$149.95, DOSPLUS gives your micro-computer mainframe power without mainframe price. Order yours today and experience the power...DOSPLUS!

- DOSPLUS 3.5's total device independence and completely external device structure allow interface to almost ANY kind of peripheral. Support will be given for hard disks, printers, and non-standard floppy drives.

- In addition, DOSPLUS 3.5 offers many utilities including a menu driven user interface that allows file manipulation at the touch of a key, full file and disk editing utilities, and a directory check utility with optional repair. Standard utilities let you map file locations, restore killed files, or offset file locations in memory.

- DOSPLUS 3.5 also includes one of the best Disk BASIC interpreters available with any DOS. With exclusive features like controlled screen formatting and label ad-

dressing, DOSPLUS BASIC puts you a step ahead. Single step debugging, global text editing, program cross referencing, and a multi key/multi array sort are all standard.

- The DOSPLUS 3.5 manual will set new standards in documentation. Almost 400 pages of clear, easy reading text that will acquaint you with all areas of system operation. The user's manual is written in English instead of "computerese" and is aimed at both the novice and the experienced user alike. The technical manual clearly documents every part of the system and will prove a gold mine to programmers seeking to interface with DOSPLUS.

FOR ALL

IE • IBM-PC • APPLE II • TRS-80 • R

Percom Data Corporation has one hard disk drive system for just about ALL personal computers . . . including of course . . . IBM®-PC, APPLE® II, and TRS-80®. Percom Data's innovations with 5¼" Winchester technology mean that for most personal computers . . . having a reliable hard disk system is as easy as hooking up a cable.

A Percom Data PHD™ will interface with your present system . . . and your future system . . . so if you do change computers, you can still keep your most important investment . . . your Percom Data Hard Disk Drive.

Because Percom Data helped create the industry standards of today . . . new designs in software and hardware will make your selection of a Percom Data Hard Disk Drive pay off tomorrow through system compatibility.

A Percom Data PHD works to capacity because we take the time to correctly develop interface software to your computer which leaves no performance holes for you to fall into. Percom Data knows software functionality is the key to hardware performance.

Today, Percom Data PHD supports a variety of software to match your computer:

IBM®-PC, PC DOS™ 1.1 OR 1.0

CP/M-86®, CONCURRENT CP/M-86™

APPLE®, DOS 3.3, CP/M™

TRS-80® MODELS III & I, DOPLUS, LDOS

IMAGINE . . . Percom Data Winchester 5¼" technology . . . for today's computers . . . and tomorrow's.

To receive an informational booklet describing Percom Hard Disk Systems, or to determine if we have a system for your computer call our **Hard-Line Hot-Line at 1-800-527-1222.**

We will also give you the name of a nearby authorized Percom Data Dealer. Dealer inquiries are welcome.

Cover by William Giese

About a year ago there was a rash of new computer product introductions. Within a few days I managed to get to the introduction of a Sony micro, two from Wang, and four from Digital Electronics Corp. (DEC). Each expressed extravagant ideas about their expected market share, yet when I tried to discuss marketing plans with their marketing people I found them surprisingly vague. Well, here we are a good deal later and not very much has happened.

The DEC people, when asked why they were so late with their personal computers, said (1) they weren't late and (2) they'd been too busy with other things. The president went on to say that half of the home computers were in the closet unused. Hmmm. DEC was thinking in terms of quickly producing 100,000 of their personal computers and said they expected to get 20 percent of the market. They were very enthusiastic about getting distribution through the Computerland stores, Hamilton Avnet, and the DEC stores.

All of these computers, introduced with considerable hoopla, and all with high hopes on the part of the manufacturers, have remained almost invisible in the desktop computer field. I doubt if any of them have even come close to 1 percent of the market, much less 20 percent. Now what kind of an industry are we in where giant firms such as Sony, Wang, and DEC are unable to make a dent after a year?

Well, with all due respect to both the desktop industry and to these large firms, the main problem, I suspect, was one of marketing. These big firms had good, experienced marketing people... but *not* people with experience in the desktop field. Adam Osborne, who grew up with the micro industry, understood the marketing of micros and quickly got his sales into the millions of dollars. If the marketing managers of these firms had brought in a consultant familiar with the micro field, they might have made an impression. But instead they tried to go ahead with marketing systems geared to minicomputers, not micros.

When these large, well-endowed firms brought out their microcomputers, I suspect there was a good deal of dung around the halls of the Tandy Towers, shaking off of alarmed cowboy boots. It was bad enough when IBM threw their Stetson into the ring, but

Mini makers can't sell their micros

with DEC in there too... and with a rapidly growing rash of DEC stores in malls... can little ole \$2B-sales Tandy keep afloat?

Fortunately for Tandy... and the rest of the microcomputer industry... the moguls at DEC, Wang, and Sony (among a lot of others) stuck firmly to traditional marketing strategies—traditional for the minicomputer field in the case of DEC and Wang, which meant lots of advertising in the magazines being read by data processing professionals. Talk about wasting money! Running ads where they are going to be glimpsed and avoided like the plague by the group most fighting micros has to come under the heading of self-destruction. For the most part, DP managers have thought of micros as toys and have held them in disdain, refusing to give them more than a lip curl and sneer. The more adventurous executives have been sneaking their

micros onto their desks at work, but they're not tied in with the company data-processing network.

The DP-oriented magazines have been getting the brunt of the ad campaign, with the rest going to *Business Week* and so on. Yet when we look at surveys of this new industry, we find that DP professionals are not the big buyers of micros. What we find is that most people who go out and buy a micro have checked with a friend who has one first, not with their MIS manager.

And where do these friends get their information that they pass along to help guide purchases? You know as well as I that micro users are reading the micro magazines, not *Computerworld*, *Computer Decisions*, and so on. They're reading *Personal Computing*, *Creative Computing*, *Microcomputing*, *80 Micro*, and *inCider* (to name a few.) So, while Apple and Tandy have been racking up ever-growing sales, DEC has been closing its stores and looking sadly at Hamilton Avnet to see what went wrong.

You're a micro user. Tell me, does a day go by when someone doesn't ask you for *your* advice on what micro they should buy? I know I'm asked a dozen times a day. Having never touched a DEC micro, it is unlikely that I am going to be an enthusiastic booster. And having read virtually nothing about the DEC systems in the micro magazines, I'm likely to pass any thoughts about getting DEC micros off as a serious judgment error. Aren't these systems really just intelligent terminals designed to augment the larger DEC computers? No offense DEC, but your products are as invisible to me as they are to most of the readers of my magazines.

When you multiply the expected 100,000 computer sales times the cost per system, you're looking at some \$500 million in lost sales. With those kinds of numbers at stake, one would think that DEC could have eked out just a tad for a consultant to help them enter this new field. It isn't as if they hadn't seen what happened to the mainframe firms when they ignored the minicomputer firms a few years ago. Ah, history repeated.

You know, when you consider the difference in cost of advertising in magazines such as *Time* and the microcomputer magazines (one ad in *Time* costs more than ads in almost all of the micro magazines combined and will probably

That's what you get with the LNW80 Model 2—undoubtedly the most versatile, powerful and fully equipped microcomputer in its class today. A machine so superior in concept and design, that it will define the standards of microcomputer performance for years to come.

VERSATILITY

The LNW80 2 performs wonders with the most complete library of software available to any microcomputer on the market today. Every LNW80 2 comes complete with this outstanding library of Business Software. **LNW SMALL BUSINESS AND PROFESSIONAL ACCOUNTING SERIES™** General Ledger, Accounts Receivable, Accounts Payable, Payroll; **ELECTRIC SPREADSHEET™**; **ELECTRIC PENCIL™ WORDPROCESSOR**; **MICROTERM™ MODEM PROGRAM**; **CHART EX™ HIGH RESOLUTION BUSINESS GRAPHICS CHARTING PROGRAM**; **CP/M 2.2™**; **DOSPLUS™**; **LNW-BASIC™**; **MICROSOFT BASIC™**. In addition to a comprehensive line of LNW80 Software, it is also fully compatible with software from TRS80® (Models 1, 3, 4), CP/M® and Cromemco® worlds—a capability which gives you access to the most extensive and mature libraries of business, scientific, engineering and entertainment software applications. So no matter how far you expand into user applications, the LNW80 2 will expand right along with you.

POWER

The LNW80 2 performs miracles with the computing power of 96K RAM (standard) of user memory matched with a mass storage capability which handles 5¼" floppy disks and 5¼" hard disk drives. And while the unit comes with build-in

controllers for 5¼" and 8" floppy disks (single/double sided, single/double density, up to 4.5 Megabytes capacity), the LNW80 2 also gives you the unique ability to read and write diskettes from greater variety of other popular computers than does any other microcomputer. So regardless of how big you grow, you will never end up with thumb-twiddling down time while you expand to a more powerful system. The LNW80 2 will always have enough muscle to handle your biggest and toughest jobs.

FULLY EQUIPPED

The LNW80 2 was developed to anticipate the needs of both expansion and compatibility. So the computer was designed with enough built-in features to keep you from having to spend a small fortune as you move down the road to higher levels of user sophistication. Standard features include high and low resolution graphics in both color and black-and-white, an asynchronous serial communication channel, and a wide variety of tape, printer, monitor and hardware expansion ports. In addition, the LNW80 2 contains an array of quality construction features that fully justify its remarkable one-year limited warranty.

So if you're looking for a microcomputer that will satisfy your performance needs as you grow and develop, take a long, hard look at the LNW80 2. It's the one microcomputer built to meet the challenges of tomorrow—for a long time to come.

REMARKS

result in a tiny fraction of the sales), the businessman who makes a computer-buying decision on the basis of an ad in *Time* is an idiot... and there is a shortage of idiots with enough money to buy computers.

Not that minicomputer firms have a patent on throwing advertising money into the wrong corners. Old timers in the field may remember the wild advertising attack by something called The Last One. This was a program that was heralded as the last *program* one would ever have to buy. The outfit said they had \$1 million to invest in ads... and judging from the splash in *Time*, *Newsweek*, and so on, they probably did indeed spend their \$1 million. I wonder if they had any more success than Bridge Computer, who spent \$50,000 in *Byte* and, as a result, sold three computers? One would guess that they didn't, if one were to judge from the visibility of the firm today... two years later. It would appear that the only winner there was the advertising agency that orchestrated the media attack. ■

C - Compiler for LDOS 5.1

I got pretty excited when *80 Micro* asked me to write Proof Notes, since Rodney and Mercedes hog the Gamer's Cafe. Then I found out that it was for the games issue. Hey—I know something about serious stuff, too. I even won a prize in high school for my paper, "The Cicada—Nature's Little Time Capsule."

Of course, games can be pretty serious business. Who among us has not felt the massive wave of depression that comes from missing a scoreboard by 10 points, the blind rage from a sneak attack by some sleazy little alien with no sense of morals or even etiquette? And what about when you shoot a ship swooping down on you and it *doesn't die*? AND WHAT ABOUT WHEN THE MACHINE LOCKS UP JUST AS—

Well. Suffice it to say that games are not all fun and games.

But let's get philosophical for a moment. What's so great about TRS-80 games anyway? I mean, why would anyone want to play some stupid space shoot-em-up on a dinky black-and-white monitor with lousy graphics to boot when he could be cruising along on a sleek new Apple IIe or Atari 800?

Yes, I wondered that myself once, when all my friends sneered at me and I only dared to play Galaxy Invasion in the bathroom after 3 a.m. But no more! I'm proud to be a TRS-80 gamer!! AND I'LL TAKE ON ANY MAN WHO—

But no point in getting worked up here. I've made peace with my games. No longer am I ashamed of them. For in TRS-80 games I have found simplicity, and in that simplicity I have found the essence of computer gaming.

Who needs all those splashy colors? What's so great about realistic high-resolution graphics? Why bother with state-of-the-art voice synthesis? These are but frilly trappings that obfuscate the basic (some might even say primordial) confrontation between man and machine.

Mad Max on the meaning of games

No matter what we call those objects on the screen, no matter what planet we're on or mythical foe we're fighting, are we doing anything more than trying to zap a bunch of phosphor blobs the computer is tossing at us? Isn't that what it's really all about?

The TRS-80 gamer is a minimalist and a purist. He lets his imagination fill the blanks between the few broad strokes the computer paints with its luminescent brush. And in doing so, he becomes one with the game; in fact, he *becomes* the game, another ball on a binary billiard table that sits in an ephemeral pool hall on an ephemeral side street somewhere in a city that lies next to a river of dreams on a vibrational plane that cuts sharply through a region of time known only to—

Hmmm. I've probably said enough (Mercedes thinks I've said enough when I say "Good morning"). Except to add that the games in this issue have been given the Gamer's Cafe Seal of Approval, and we highly recommend them to you. (And not simply because the editors at *80 Micro* have threatened to ax the Cafe if we don't.) Just remember the words of John Godfrey Saxe:

In battle or business, whatever the game,
In law or in love, it is ever the same;
In the struggle for power, or the scramble for pelf,
Let this be your motto—Rely on yourself!
For, whether the prize be a ribbon or throne,
The victor is he who can go it alone!
Whatever pelf is. ■

—Mad Max

AN IMPROVED VERSION of
the WINNER of THREE
80 MICRO READERS' CHOICE AWARDS

The NEW AIDS-III™

by SofTrends, Inc.

1. **TRUSTWORTHY.** A bad diskette or an undependable machine can ruin your whole day. The NEW AIDS-III checks itself. If something's wrong, it tells you, instead of turning on you like a mad dog.

2. **GENEROUS.** The NEW AIDS-III doesn't use BASIC. But it does use the memory BASIC uses. And to make the most out of that extra memory, it selectively compresses bytes into tiny bits. It all adds up to more usable data records. Up to 3 times as many.*

3. **THOUGHTFUL.** The NEW AIDS-III never treats you harshly. If one keystroke will do, it won't ask for two. The NEW AIDS-III remembers things like report formats, search strategies and file names. So you don't have to. It even reminds you, gently, to save your important data.

4. **INTELLIGENT.** The NEW AIDS-III is smart. It doesn't waste your time with questions about record sizes, field counts and other technical mumble-jumble. A new system can be created, or an old one modified, in a couple of minutes. Even if your name isn't Albert Einstein.

5. **KIND.** The NEW AIDS-III is always ready to help. It says so, on every screen display. HINTS™ (Help Indexed To Screen) tells you on which page in the NEW AIDS-III manual to look for more information. The manual is easy to understand and easy on the eyes.

6. **QUIET.** If you hit the wrong key, you won't hear any annoying buzzes, clicks or chirps. Instead, FLAWS™ (FLash-Annunciated Warning System) will create a striking visual effect. But only for an instant. And without affecting any of the text on the screen. Guaranteed to catch the eye of the fastest touch-typist.

7. **ALERT.** If the NEW AIDS-III is left alone, it lets you know it missed you. It worries about your important data. After several minutes of no activity, the NEW AIDS-III creates a striking visual display to get your attention. Touch any key to let it know you're still there, and it stops. For a little while, anyway.

8. **LEAN.** There's no fat in the NEW AIDS-III. That's because it uses SofTrends' proprietary PMX™ system architecture. Small, lightning-fast, reliable. Lean? Yes. Mean? Definitely not.

9. **FAST.** Searches and sorts hundreds of records in seconds. Screens are displayed in the blink of an eye. Disk access rates approach one-thousand characters per second. No waiting for "garbage collection". The NEW AIDS-III lives fast. Up to 10 times as fast.*

10. **REASONABLE.** Use AIDS III Version 2.0 to help make your choice. If you've got a TRS 80 Model I or III, send us \$79.95 and we'll send you a copy of AIDS III to use free for 30 days. Then if you find it isn't right for you, send it back and we'll refund your money, no questions asked.

* As compared to MTC AIDS-III, Version 1.0

If you own Apparat's
NEWDOS/80-Version 2.0
you need
BREVI-T™
by SofTrends, Inc.

If you have trouble remembering command formats, want to simplify use of DOS, do a lot of program development or just want to be more effective with your TRS-80™, then BREVI-T is for you. Abbreviations can be defined for both DOS and BASIC. These are automatically expanded as part of the command line processor. Optionally, parameters may be defined as part of an abbreviation. For example, "F 1" might be used to FORMAT drive 1. Change the 1 to a 2 and FORMAT drive 2. It's that simple. Complete with easy-to-follow instructions, examples and a sample abbreviation file.

Specify Model I or Model III \$19.95

Let your TRS-80™ Test Itself With THE FLOPPY DOCTOR & MEMORY DIAGNOSTIC

by David Stambaugh

A complete checkup for your MODEL I or MODEL III. THE FLOPPY DOCTOR-Version 3 completely checks every sector of single or double density 35-, 40-, 77-, or 80-track disk drives. Tests motor speed, head positioning, controller functions, status bits and provides complete error logging. THE MEMORY DIAGNOSTIC checks for proper write/read, refresh, executability and exclusivity of all address locations. Includes both diagnostics and complete instruction manual.

SYSTEM DIAGNOSTICS \$24.95
For MODEL III \$29.95

Corvus Absolved

NEWDOS80 2.0 for the Model III does work in concert with the Corvus hard disk environment and the Radio Shack accounting software (*80 Micro*, May 1983, p. 18).

Model III accounting packages are written in Basic. When you load and list the programs, you see that the authors have assigned drive numbers to the various file names used throughout each program disk.

Simply edit and change the drive numbers to the slot number on which you plan to mount the program and data files. Then save the programs with the correct file names.

In addition, the programs and data files seem to fit on one formatted 40-track double-density volume. If you use slot 1 solely for each program and its accompanying data files, you can FCOPY >:1:1 for easy back-up.

Better AIDS-III

Program Listings 1, 2, 3, and 4 are modifications to my AIDS-III articles (*80 Micro*, March 1983 and April 1983, pp. 136 and 168). The listings include modified and additional lines.

The changes provide automatic recognition of model number (I or III), and the detection and use of lowercase support.

FLEX Information

You can obtain further information about FLEX for the Color Computer (*80 Micro*, April 1983, p. 144) from Data-Comp Inc., 5900 Cassandra Smith Road, Hixson, TN 37343, 615-842-4600.

Source code text files are available for the following utilities: high-resolution video routines, a program to set user-defined keyboard characters, a program to set disk-drive stepping rates, a single-disk copy program, FLEX printer drivers, and disk and memory display/change utilities.

My article described a version of FLEX that has since been replaced by version 2.1. Additional FLEX utilities perform several new functions: copy Disk Basic format files to FLEX format files (includes ASCII and binary files), copy FLEX format fields to Disk Basic format files (includes ASCII and binary files), and convert binary files to standard FLEX-loadable program data files.

Manufacturers are introducing several new software packages for FLEX

NEWCLOCK-80

MODEL I

MODEL III

\$59⁹⁵

Wouldn't it be nice if your computer could always boot up with the right time and date and then stay accurate. Newclock-80 will enhance your Model I or III system with powerful clock/calendar/timer functions.

Using LSI (large scale integration) and custom circuits, Newclock-80 provides MO/DATE/YR, HR:MN:SEC plus AM/PM and day of week and even takes care of leap years! It continues to keep time and date with quartz accuracy when the computer is turned off or experiences a power failure. A single battery lasts over 2 years.

Compatibility: Newclock-80 is compatible with any operating system, including DOSPLUS, NEWDOS, LDOS. With its fully decoded circuitry it will work with any other hardware you may own. Bus expanders are available.

Installation is very simple, no tools, no disassembly, no soldering. Just plug it in, that's all. There is no power supply or messy cable. Newclock-80 plugs into the rear of the keyboard **3** or side of the Exp. Int. **2**. Model III Newclock fits the 50 pin card edge (underneath) **1**.

The Software: Newclock-80 is as easy to use as it is to install. -"SET", a Basic program, is used only once to set the time and date and select 12 or 24 hour format. -"TIMESTR", also in Basic, patches your computer "TIMES\$" function to read Newclock-80. It also adds "TIMES" to keyboard-only systems, a short routine is simply "poked" into low memory.

Newclock-80 uses 12 ports (176 to 188): 6 for the time, 6 for the date. The data is conveniently stored in decimal form, no conversion is needed. You can read or modify any digit using simple Basic "INP" and "OUT" statements.

No risk trial. Order your Newclock-80 today, see how easy it is to install and operate then decide within 30 days if you want to keep it. If for any reason you are not delighted with its quality and performance, you may return it for a prompt and courteous refund.

Your unit will come complete **4** with software on tape, detailed instructions, handy reference card, and a 90 day warranty. Specify Model I or III. Software is also available on disk: add \$5. Lithium battery (not included) available from RADIO-SHACK (#23-162) or add \$1.50 to your order.

Thanks to outstanding engineering and efficient manufacturing, ALPHA Products is once again able to offer a great product at a surprising price. Order your Newclock-80 at no obligation today.

PowerSoft Support

Hooray for PowerSoft. They said it all. They said it well. And it needed to be said (*80 Micro*, April 1983, p. 24).

The freeloaders of the world deny creative people their right to make a buck. PowerSoft's superb defense of copy protection should put this matter to rest once and for all.

*Frank J. Rosato
12 Blueberry Lane
Lexington, MA 02173*

VCMOD Mod

Arne Rohde's VCMOD program (*80 Micro*, April 1983, p. 210) contains one bug that occurs if you use the exponential function (shifted @) in an equation.

The correction requires adding three lines to the Assembly-language program before assembling (or, if you're a byte zapper, adding 6 bytes to the object code in the middle of the program, which could mean retyping the last half). Between lines 1850 and 1860 of the original program, add:

1852	CP	5BH
1854	JR	NZ,\$+4
1856	ADD	A,05H

If you must work at the byte level, add the bytes starting at address FF5C hexadecimal (hex) using Mr. Rohde's ORG location of FE00 hex for a 48K Model I machine:

Location	Bytes
FF5C	FE5B
FF5E	2002
FF60	C605

You must increase all subsequent locations by six.

To run VCMOD, assemble it and name it VCMOD/CMD. Then save it on the same disk that contains VC/CMD. To run VisiCalc, type in VCMOD/CMD or VCMOD (or use autostart with AUTO VCMOD) rather than entering VC/CMD or VC (or AUTO VC).

The VCMOD program starts by loading in VC/CMD (or whatever you've named the original VisiCalc program—don't forget to modify line 0480 if you change the name), then modifies the VisiCalc code and runs it.

*L.S. Wilkins
4000 Capitol Drive
Fort Collins, CO 80526*

Copyrights and Conversions

We are in the software business and have gone to great lengths to copyright our programs. Admittedly, the copyright only stops honest people from stealing a program, but comments like yours (*80 Micro*, April 1983, p. 16) give thousands of people the idea that they are honest if they use a copyrighted program for their "personal use."

I'm sure you meant well by your comments, but the term "personal use" is simply too broad. Too many well-meaning readers will take this as a subtle license to copy any and all programs. We provide our source code at no extra cost to our customers, but we do not want them to give it to their friends for "personal use."

*Eddie Waren, President
The Software Terminal
223 Fairway Drive
Fayetteville, NC 28305*

You're right—"personal use" is a bit vague. What we meant is that the consumer has a right to duplicate or modify commercial software as long as he or she doesn't sell or give away copies of that software to other users.—Eds.

WittSoft and Copy Protection

I'd like to respond to some of PowerSoft's statements directed at WittSoft (*80 Micro*, April 1983, p. 24).

PowerSoft says, "... due to the fact that some magazines, companies, and individuals are making it possible for nonregistered users (read pirates) to use our software, supporting registered owners has been hampered."

The Super Utility Plus manual says registration has always been a requirement for support; section 3.2 states, "We will do our best to assist and support all REGISTERED OWNERS, so be sure and include your SERIAL number."

The card that customers sign and return to PowerSoft to receive support is a legal agreement that binds the user to conditions not revealed prior to the purchase. Refusing to sign and return such an agreement doesn't make one a pirate.

On SU+ as a CMD file, PowerSoft says, "... if you are using single density, you don't have much room left for anything else. This makes it impractical to have SU+ as a CMD file." There's no reason the CMD file can't be kept on a data disk when space is a problem, and many users have double-density, double-sided, or 80-track drives.

When the program is in CMD format, users can store it on any medium they like. PowerSoft distributes the \$500 Special Edition in CMD format on a single-density data disk, and makes that the number one selling point in their S/E ad (*80 Micro*, Anniversary Issue 1983, p. 153).

The PowerSoft response might lead one to think that Super Duper is a "1-byte patch (with directions)." It is not. It is a 500-plus byte machine-language program provided on disk with a 16-page manual.

Regarding Scripsit back-up patch authors, PowerSoft says, "... they are looking to make a quick buck and deny good programmers the royalties they are due. ... The guy who wrote Scripsit deserves to be paid for every copy out there that is being used. ..."

Apparently the concern for the author of Scripsit is newly acquired. The PowerSoft ad for Scriplus (*80 Micro*, January 1983, p. 249) says, "Allows MOD III versions to be BACKED UP for your protection."

Concerning utilities to back up SU+ 2.2z, PowerSoft says, "If you bought one, send it back. Only these pirates have a need for it now." Only after WittSoft released a utility to back up version 2.2z did PowerSoft find enough concern for their customers to release CMD back-up instructions.

Those who buy Super Duper receive a program that performs as advertised. PowerSoft specifically exempts version 3.0 from their offer, whereas we've agreed to provide an upgrade when the new version is available.

Regarding the back-up disk included with the program, PowerSoft says, "... it is doubtful that you will be without SU+. Of course, that wasn't good enough for WittSoft. ..."

NOW IT'S TALKING VS 100

VOICE SYNTHESIZER
FOR MODEL I,III,IV
and Coco

- ✓ Unlimited vocabulary.
- ✓ Automatic inflection.
- ✓ Proven VOTRAX technology.
- ✓ We use the famous VOTRAX SC01 phoneme synthesizer. 4 programable pitch level.
- ✓ Built in audio amplifier with volume control. (The Color Computer version speaks through the TV speaker)
- ✓ You can add voice to any basic program in minutes.
- ✓ Super efficient: one single line in Basic will produce a full sentence!
- ✓ Works with any speaker (or add \$5.95 for handsome speaker module).
- ✓ Price breakthrough: same performance as units costing hundreds of dollars.
- ✓ Pronunciation dictionary included for hundreds of common words.
- ✓ Voice editor will help you create unlimited number of words, sound effects, etc..
- ✓ Hundreds of applications —now cost effective in education, robotics, speech therapy, monitoring, games, aid to handicapped, security, prompting... .
- ✓ Fully assembled and tested, 90-Day warranty.
- ✓ Ready to plug in and talk.
- ✓ As usual our 15-day money back guaranty protects you.

\$69⁹⁵

Order # C201 for MODEL I
C203 for MODEL III or IV
C205 for COLOR COMPUTER

Price includes SYNTHESIZER MODULE, POWER SUPPLY, INSTRUCTIONS, EDITING AND DEMO SOFTWARE. \$69.95
SPEAKER MODULE (not needed for coco version) not included, add \$5.95

.....SUPER CONTEST.....

WIN \$1000 + ROYALTIES FOR THE BEST TALKING GAME
+ WIN \$1000 FOR THE BEST "SERIOUS APPLICATION" SOFTWARE

Send S.A.S.E. For contest details.

REVIEWERS: This is truly a remarkable product at an incredible price. We need your help to review it in all the major computer publications. Please send us a note if you are interested.

DEALER DISCOUNTS AVAILABLE

We feel that every program requires at least four copies (original, virgin back-up, working version, and working version back-up). When any of these crashes, the user should have a way to generate a replacement. The issue is not whether one would be without SU+; it's having to pay for back-up disks over and over again.

About WittSoft, PowerSoft says, "Perhaps they should be made aware that every back-up and/or CMD file of SU+ contains the serial number of the purchaser." We do know about it and could have erased it if we'd wanted to. Like PowerSoft, we don't want to be included in categories where we don't belong.

Our letter in the February 1983 issue of *80 Micro* (p. 14) was an edited version of the introduction to the Super Duper manual. One passage removed read, "Use Super Duper only to back up your legally obtained copy of SU+ . . . Kim Watt deserves to be paid for his work."

PowerSoft says, "We challenge you to show us one ad that brags about backing up protected disks." The January 1982 issue of *80 Micro* (p. 153) contains a full-page ad for SU+. Under the heading "Disk Copy" appears, "The Special Disk Copy enables the user to make a back-up of most TRS-80 readable disks that are presently on the market, regardless of any efforts that have been made to protect them."

The response also says, "It was intended to copy garbled disks. . . It was not designed to be a game-disk copier. . . although you perhaps bought it for that purpose." The same ad continues with "This program's only intended use is for you to make back-ups of your legally purchased programs."

PowerSoft says, "We have never highlighted our special copy function in SU+." However, similar text appears on the back cover and in section 1.3 of the version 2.2z manual.

Last, PowerSoft says, "Magazines must take a stand somewhere and stick to it." Magazines (and all forms of media) have a responsibility to serve the public in article, editorial, and advertising content. If they limit any copy utility, they should limit all copy utilities—including Super Utility Plus.

80 Micro raised an important issue and gave all parties a chance to air their opinions. This isn't an indication of "ambivalence," but evidence of the magazine allowing a free exchange of ideas and an unbiased marketplace for computer products.

Page Program

In "Moving Window" (*80 Micro*, April 1983, p. 296), Ken M. Williams resorts to a complicated string manipulation procedure to extract the pattern of bits corresponding to the binary equivalent of the page number.

A simpler technique for displaying a desired page takes advantage of the logical AND operation to extract bits. To extract the *i*th-order bit from an integer *X*, use the statement $B = \text{SGN}(N \text{ AND } X)$, where *N* equals the *i*th power of two. The subroutine in Program Listing 5 illustrates the technique; the desired page number (zero to 127) stored in the variable *PG* calls the routine.

The display for $\text{PG} > 31$ is hardware

```

100 'Subroutine to display a memory page (0-127) given by
PG
110 N = 1                                N will equal
                                           1,2,4,8,16,32,64 for bits
                                           0-6
120 FOR M=&HFFC6 to &HFFD2 STEP 2        7 address pairs in
                                           page-select register
130 B = SGN(N AND PG)                   Extract a bit from PG
140 POKE M+B,0                           Poke it into page-select
                                           register
150 N = 2 * N                             Get ready for next higher
                                           bit
160 NEXT M
170 RETURN
    
```

Program Listing 5

dependent. If you have a 16K machine, or 32K via piggybacking 16K chips, pages 32-63, corresponding to addresses 4000-7FFF hexadecimal (hex), will not produce a stable display without special hardware modifications. RAM does not go higher than 3FFF hex in a 16K machine in any case. Pages 64-127 will be a repeat of pages zero to 63.

If you have a stock 32K machine containing 64K chips that are only half used, pages zero to 127 will be stable and distinct.

Tandy Technology

As an advocate of computer technology, I cringe every time I enter a Radio Shack store. I fail to understand why Tandy is trying to sell computer technology at one end of their store, while they use a manual cash register.

It seems worthwhile for Tandy to use their computers in their check-out process, if for no other reason than to exhibit a working computer.

The stores I've visited would turn off any small-business owner that might be interested in using a computer when he sees that Tandy cannot even develop a system for its own use.

Scripsit for LDOS

To patch Scripsit for use under LDOS Double Density, implement the following patches:

```

PATCH SCRIPSIT/LC (D13,E5=2D 40)
PATCH SCRIPSIT/LC (D06,4F="LDOS")
    
```

The first patch changes the exit address from a reset causing a reboot to the LDOS Ready mode. The second patch changes the version from "VER 1.0" to "VER.LDOS". This is an optional cosmetic change.

Do not use high-memory routines with Scripsit under LDOS.

NOW MODEL I AND MODEL III!

Now Model III users can take advantage of the ALPHA I/O system too. Our new MOD III/I BUS CONVERTER allows most port based Model I accessories (such as our ANALOG-80, INTERFACER 2 and INTERFACER-80) to connect to the Model III bus. MOD III/I BUS CONVERTER, complete with all connectors, only \$39.95.

PRINTSWITCH

Have 2 printers on line at all times and select printer 1 or 2 by means of a conveniently located switch. End the problem of constantly plugging and unplugging printer cables. PRINT-SWITCH is a compact module that plugs onto the parallel printer port of your TRS-80 and provides an edge connector for each of your two printers. It works with any two types of printers: dot matrix, daisy wheel, plotters, TRS-80 converted selectrics, etc. Assembled, tested, ready to use with connector and instructions. For Model I or III (please specify). ONLY...\$59.00

SUPERIOR QUALITY REPLACEMENT & EXTENSION CABLES

Highest quality cable and high force, gold plated contacts ensure the utmost in connection reliability

- 1 KEYBOARD TO EXPANSION INTERFACE \$21
 - 2 DISK DRIVE CABLE FOR 1 OR 2 DRIVES \$32
 - 3 DISK DRIVE CABLE FOR 3 OR 4 DRIVES \$45
 - 4 DISK DRIVE CABLE EXTENDER \$22
 - 5 PRINTER CABLE EXTENDER \$24
 - 6 40 PIN BUS EXTENDER - 2 ft \$22 4 ft \$24
- Custom cable configurations are also available. Call us

YOU ASKED FOR IT: "EXPANDABUS" X1, X2, X3 AND X4. CONNECT ALL YOUR TRS-80 DEVICES SIMULTANEOUSLY on the 40 pin TRS-80 bus. Any device that normally plugs into the keyboard edge connector will also plug into the "EXPANDABUS". The X4 is shown with protective covers (included) for up to 20 devices, more than you will ever need. Using the E/I, it plugs either between KB and E/I or in the Screen Printer port. Professional quality gold plated contacts. Computer grade 40 conductor ribbon cable. X2 \$29 X3 \$44 X4 \$59 X5 \$74. Custom configurations are also available. call us

ANALOG-80: A WORLD OF NEW APPLICATIONS POSSIBLE. 8 DIGITAL MULTIMETERS PLUGGED INTO YOUR TRS-80!!! Measure Temperature, Voltage, Current, Light Pressure, etc. Very easy to use. For example, let's read input channel #4. 10 OUT 0.4. Selects input #4 and also starts the conversion. 20 A=INP(0). Puts the result in variable 'A'. Voila! Specifications: Input range 0-5V to 0-500V. Each channel can be set to a different scale. Resolution 20mV (on 5V range). Accuracy 8 bits (5%) Port Address jumper selectable. Plugs into keyboard bus or E/I (screen printer port). Assembled and tested. 90 day warranty. Complete with power supply, connector, manual. \$139

TIMEDATE 80: REAL-TIME CLOCK/CALENDAR MODULE Keeps quartz accurate time for 3 years on 2 replaceable AAA batteries (not included). Gives MO/DATE/YR, DAY OF WEEK, HR, MIN, SEC and AM/PM. Features INTELLIGENT CALENDAR and even provides for Leap Year. This compact module simply plugs into rear of Keyboard or side of Expansion Interface (may be slipped inside E/I). Includes cassette software for setting clock and patching to any DOS (including NEWDOS 80 2.0). Optional 'Y' connector allows for further expansion. For Model I Fully assembled and tested. Complete with instructions and cassette. ONLY \$95.00 'Y' option add \$12.00

GREEN SCREEN WARNING

IBM and all the "biggies" are using green screen monitors. Its advantages are now widely advertised. We feel that every TRS-80 user should enjoy the benefits it provides. But **WARNING:** all Green Screens are not created equal. Here is what we found:

- Several are just a flat piece of standard colored Lucite. The green tint was not made for this purpose and is judged by many to be too dark. Increasing the brightness control will result in a fuzzy display.
- Some are simply a piece of thin plastic film taped onto a cardboard frame. The color is satisfactory but the wobbly film gives it a poor appearance.
- One "optical filter" is in fact plain acrylic sheeting.
- False claim: "A few pretend to "reduce glare". In fact their flat and shiny surfaces (both film and Lucite type) ADD their own reflections to the screen.
- A few laugh. One ad claims to "reduce screen contrast". Sorry gentleman but it's just the opposite. One of the Green Screen's major benefits is to increase the contrast between the text and the background.
- Drawbacks: Most are using adhesive strips to fasten their screen to the monitor. This method makes it awkward to remove for necessary periodical cleaning. All (except ours) are flat. Light pens will not work reliably because of the big gap between the screen and the tube.

DISK DRIVE EXTENDER CABLE, FREE YOUR MINI-DRIVES. End the daisy-chain mess once and for all. Fits all mini-drives: Percom, Aerocomp, Shugart, Micropolis, MTI, Vista, Pertec, Siemens, BASF. Easy to install, just remove the drive cover, plug in the EXTENDER CABLE and replace the cover. Now you can change and move your drives without disassembly. Keep the cover on and the dust out. High reliability gold plated contacts, computer grade 34 conductor cable. Tested and guaranteed. Get one for each drive ONLY \$8.95

INTERFACER-80 the most powerful Sense/Control module

- 8 industrial grade relays, single pole, double throw isolated contacts. 2 Amp @ 125 Volts. TTL latched outputs are also accessible to drive external solid state relays.
- 8 convenient LEDs constantly display the relay status. Simple "OUT" commands (in basic) control the 8 relays.
- 8 optically-isolated inputs for easy direct interfacing to external switches, photocells, keypad sensors, etc.
- Simple "INP" commands read the status of the 8 inputs. Selectable port address. Clean, compact enclosed design. Assembled, tested, 90 days warranty. Price includes power supply, cable, connector, superb user's manual. \$159

Xenix and the Model 16

In reply to your request for information on the latest applications for the Model 16, Delker Electronics Inc. has been keeping on top of the Model 16/Xenix system. We have accounting, inventory, and language development software from Radio Shack available and currently installed at several customer sites.

With the aid of the Model 16 Multi-User Cobol Development System and MBasic, we have converted Model II programs to the Model 16 with relative ease.

One of the best applications we have found for the Xenix system is the flexibility to upload and download files generated on other systems, such as the new Model 100.

We encourage your increased support for articles involving the Xenix operating system and information on non-Radio Shack software compatible with it.

*Thomas M. Delker, President
Delker Electronics Inc.

Model III Jet Bomber

I typed in Thomas H. Rogers' great screen scrolling game, "Jet Bomber" (*80 Micro*, May 1983, p. 298). On my Model III, the Model I graphics looked strange, indeed.

To take advantage of the special character set on the Model III, and even provide rockets to bomb, you must make three changes. At the end of line 400, change 91 to 255. In line 470, change OR PEEK(PP)=91 to OR PEEK(PP)=255, and change POKE PP,94 to POKE PP,27. (Or experiment with the special character set until you get a jet you like.)

Finally, change IF PEEK(PP)=91 in line 500 to IF PEEK(PP)=255.

More on PowerSoft

In a recent letter concerning copy protection, I asked why software ven-

dors do not mention such protection in their ads. I am certainly not alone in thinking that they should be required to do so.

PowerSoft's lengthy reply did not once address my simple and relevant question. Instead, they raised a storm of falsehoods and misdirection, culminating in a personal attack on me. This is the standard vendor response on this subject. Allow me to correct a few of PowerSoft's statements.

They say that Super Utility has not been promoted for its ability to copy protected disks. Here's a quotation from an early ad (*80 Micro*, December 1980, p. 115): "The special disk copy allows the user to make a backup of ANY (that's right, I said ANY) TRS-80 readable disk... regardless of any efforts that have been made to protect the disk..."

A later ad backed off from the "any" claim (*80 Micro*, September 1981, p. 248): "Special copy (to back up most protected disks...)... go to the heart of your protected disks and read and/or modify data..."

The current SU+ manual goes on in a similar vein. Perhaps this is how people got the idea that SU+ would copy protected disks! More subtle deception is in many of PowerSoft's other arguments. For example, they explain in great detail why a CMD file format is impractical. OK, but that doesn't mean the disk has to be protected.

Also, they attribute to me the desire to give my software away, and then criticize me for expecting the same from them. I never said either of these things!

I have attempted to offer my software on a "share the cost" basis, where the original purchaser is allowed to make a fixed number of copies for others—thus bringing the individual cost to an affordable level. This makes a lot more sales than it loses, and is better for everyone. A new market might need new marketing ideas.

Finally, I am a villain, apparently because my Trakcess program will, among other things, copy some protected disks, as will SU+. I am not embarrassed by this fact. PowerSoft is, but they'll still take the sales and have for years now.

In fact, Mr. Watt told me that he had learned a lot about special copy from Trakcess, and subsequently improved the abilities of his own routine. He approved my publishing a copy procedure

for SU, saying that all controversy over their protected disk was a publicity bonanza, as it is. Now he pretends to be upset, for more publicity.

I would happily see all protection disappear, and many of the sales of Trakcess with it. Every customer could back up, move around, examine, and modify the code he bought, just the way it used to be. This might even happen before my "one-man crusade" (for what?) "wins" (how?) "by forcing away every good programmer we have left."

Obviously, PowerSoft is doing OK. So are Med Systems, Sublogic, Acorn, SFINKS, and all the others to whom I repeat my original, simple question: Is there any reason other than a desire to make every possible sale in any manner that you do not mention your software protection in those big, fancy ads?

Before the industry collapses completely (as vendors like these have predicted since Day One), thanks to *80 Micro* for allowing a second point of view, and for allowing those of us who hold it to advertise, too.

To the many, many people who have written me with questions and comments on disk protection, I can't reply to them all, but I think you'll see some detailed information published on this subject. Send your thoughts in to *80 Micro* instead, where they can have a real effect.

*Roxton Baker

TRS-80 in Business

If you look at Radio Shack's recent market introductions, such as the Model 12, the Xenix packages for multi-user capability, and the portable computer, I think you'll agree that Radio Shack is going the small business computer route and getting away from the fun-and-games home market.

As the owner of two Model IIs, both with hard disks, I have only the highest praise for Radio Shack, their software packages for small businesses, and their entire attitude.

Their computer centers are a place where a businessman can get a serious discussion about what he needs in com-

Model III at Bat

I've received a number of letters from readers who want to know why "Batter Up!" (*80 Micro*, April 1983, p. 130) will not run on their disk-based Model III.

Their operating system takes up space in memory needed for the program. This is true even if the system is larger than 16K because the program restricts memory size and blocks automatic expansion in a larger system.

Program Listing 6 allows the program to run on a Model III with 48K.

*Harold A. Kime
252 East Clay St.
Lancaster, PA 17602*

Supply and Demand

The many letters about software protection and piracy have interested and amused me. An important element is missing in the remarks of those who present production and marketing costs

as justification for software protection and high selling prices.

A long-standing free market axiom states that the cost to produce an item does not determine its value; the utility (no pun intended) provided to the consumer establishes value.

I purchase those products that meet my needs at the lowest possible cost. My needs are simple—good documentation and support services, the right to protect my investment with back-up procedures, and a program that meets my objectives.

I will not purchase a program sight unseen, but will purchase one even though I have a free copy if I'm convinced that good support services are available.

*R. Keith Richard
7608 Stoneridge Place
New Orleans, LA 70126*

More Graphics Software

The Graphics Software Buyer's Guide (*80 Micro*, May 1983, p. 146) omitted our Auto-Graph, a 16K Level II program on cassette for the Models I and III.

It graphs equations on the screen and

printer, automatically scales axes for the highest resolution, and is menu driven. It sells for \$24.95.

Editor/Assembler NODOS

I've received many inquiries from readers about keying in my program NODOS 80 (*80 Micro*, Anniversary Issue 1983, p. 96) using the new Radio Shack Series 1 Editor/Assembler for cassette.

Although Program Listing 3, the re-numbering utility in the article, loads into memory using this new assembler, 16K is insufficient room to assemble the program.

Radio Shack's newer Editor/Assembler for cassette takes about 1500 more bytes of memory than the original version. I programmed NODOS 80 using the original version with a modification for the Model III.

Other than to increase memory, the only solution is to split Listing 3 into two parts with the same technique used in the article to split the program into its four listings. Use Equates to refer to Labels that must pass between the two parts. You will now have to load NODOS 80 as five programs.

A Cry from "Down Under"

Are there any teachers willing to exchange software programs suitable for elementary students with us, and perhaps a few administrative utilities as well? We would also like to establish some form of pen pal communication with other schools.

*Phillip Walsh
Holy Family School
410 Pacific Highway
Lindfield, 2070
Australia*

Fiji and the Genie

Is there a CP/M program available for the Genie 3 that can mix and read different drive formats, such as the PDRIVE command on NEWDOS80? Also, is there an incremental-spacing, letter-quality printer on the market that I can use with Electric Pencil to make a typesetting unit? I would like to hear from other Genie 3 and Color Genie 4 owners.

*E. John Handley
Box 2280
Suva, Fiji Islands*

Character I.D.

I've written a program that analyzes our business bills. The only problem with it is that it takes too long to manually enter all the information from each month's bills. Is there any type of character recognition system or device that will work with my Model III?

*Thomas R. Andrews
Box 422
Angola, IN 46703*

Model I Stereo System

I would like to use my Model I as an audio frequency analyzer for my stereo system. Does anyone know where I can obtain the necessary hardware and software to do this? Also, is it possible to run CP/M on the Model I without any hardware modifications?

*Ronald Hughes
PSC Box 3893
APO NY 09057*

Foreign Language

A potential use for our school's computers is to teach the students Ukrai-

Looking for help

nian. Is there any way to get the Ukrainian alphabet for the TRS-80?

*Grant Lederhouse
Box 1288
Roblin, Manitoba R0L 1P0
Canada*

Invoicing Help

Does anyone know of a software patch for the Model II that will print invoice totals at the bottom of a form?

*Charles Trovato
278 Bay Ridge Parkway
Brooklyn, NY 11209*

Semi-Log Graph

Does anyone have a modification for Micro Software System's Datagraph program to allow it to graph semi-log and log-log graphs?

*James Greenlee
1024 NW 24th St.
Moore, OK 73160*

At Wit's End

Help! I'm at my wit's end. I'm looking for Model II software specifically designed for jewelry inventory control. The program must feature automatic repricing of inventory and inventory

label printing. Can someone come to my rescue?

*George Veazey, III
11622 North Nebraska Ave.
Tampa, FL 33612*

Lowercase Help

Our library was recently given an RS Centronics 779 printer to use for catalog card production. Can someone help us find a lowercase modification kit compatible with this printer?

*Rick Richmond
Sublette County Library
Pinedale, WY 82941*

Printer Driver Needed

I need an Epson MX-80 printer driver for Radio Shack's Model III Business Graphics Analysis Pack. Does anyone have any suggestions?

*Lee C. Rice
Philosophy Department
Marquette University
Milwaukee, WI 53233*

Checkbook Subroutine

Does anyone know if there's a Basic subroutine for the Model III that automatically updates the running balance in a checkbook program after current withdrawals and deposits are entered?

*Gladys Crede
1812 Hickman Road
Des Moines, IA 50314*

Screen Display Problem

The display on my Model I has moved up so that it's difficult to read the top line. The Langley-St. Clair Soft View CRT I bought doesn't correct this problem. Does anyone have a solution?

*Frank Deignan
44 Old Mill Road
Shrewsbury, MA 01545*

Needs Pilot Info

Can someone tell me where I can get documentation for the Pilot 3.0 from Mad Hatter Software? I bought a copy at a store sale and would like to be able to use it.

Limited Time Only

CP/M: THE SOFTWARE STANDARD

★ CP/M presents an industry-standard software interface. Programs designed to run under CP/M can run on all CP/M computers.

★ CP/M is available for almost every computer on the market, including IBM, Xerox, Apple, Commodore, DEC, NEC, Tandy, and many, many more.

★ There are thousands of CP/M programs available—word processors, languages, data bases, and applications. No single manufacturer, not even Tandy, Apple, or IBM, could ever develop and support this much software.

★ With hundreds of software developers competing for a place in the CP/M market, CP/M programs will continue to get better and cost less.

CP/M: POWER AND VERSATILITY

★ The majority of business and professional computers offer CP/M. CP/M programs tend to be "state of the art" in every respect.

★ CP/M means reliability and dependability. Over the years, CP/M has evolved into a mature, sophisticated, and thoroughly debugged product. There are no hidden surprises with CP/M.

★ With CP/M and TRSDOS, your TRS-80 can run twice as much software as other computers. You get to choose the best from both worlds.

★ CP/M offers far more versatility than TRSDOS. CP/M computers are available that offer hard disks with tape backup, multi-user capability, multi-high speed processors, and many other features. There is a CP/M computer to meet all your future needs.

CP/M: SAVE TIME AND MONEY

★ Unlike TRSDOS, CP/M programs can be transferred to your next CP/M computer. All of the money you spend on CP/M software can be considered an investment in the future.

★ Your old TRS-80 will never be obsolete with CP/M. When you buy your next computer, your TRS-80 can serve as a completely compatible home or backup unit.

★ With CP/M, you can effectively master your new computer before you buy it. You will not need to relearn operating procedures, rewrite programs, re-enter old data, or learn new applications programs.

★ With all of these advantages, CP/M is simply the most powerful and cost-effective product you can add to your TRS-80. CP/M conversion easily pays for itself in time and money saved.

OMIKRON CAN SAVE YOU MONEY

★ **Save Now**—Omikron's hardware prices are the lowest in the industry. However, with Omikron, hardware savings are only the beginning. Omikron also sells a variety of CP/M software products for use with our CP/M adapter. Our special software prices can easily save you \$1000 or more on the finest, most popular CP/M programs available.

★ **Save Later**—To help our customers afford the CP/M software they require, Omikron has formed *Cougar*, our official users group. With *Cougar*, Omikron can arrange to purchase CP/M software products at high volume discounts. This allows us to offer our customers surprising discounts on top quality software products. Over a year's time, many of our *Cougar* members save hundreds of additional dollars on software purchases.

*Cougar products and prices are available only to Omikron hardware purchasers

OMIKRON PRODUCT INFORMATION

★ Omikron products are designed for years of trouble-free operation. All Omikron printed circuit boards carry a "life-time warranty" to the original purchaser.

★ Omikron products are designed for simple, "plug-in" installation. No soldering or modification to your TRS-80 is required.

★ The Omikron CP/M system features a sophisticated set of utilities and drivers designed to optimize and enhance the use of CP/M on the TRS-80.

★ Over the years, Omikron, has sold thousands of CP/M adapters. Our products have been highly praised in reviews in Byte, Interface Age, SoftSide, 80-US, Desktop Computing, 80 Micro, and many others. Reviews are available on request.

OMIKRON'S PRODUCTS

- Mapper I/48—48K CP/M for the Model I
- Mapper I/64—64K CP/M for the Model I
- Mapper III/48—48K CP/M for the Model III
- Mapper III/64—64K CP/M for the Model III
- Mapper II—8" drives for the Model I
- CP/M software including: WordStar, MailMerge, Super-Sort, Microproof, Electric Webster, COMMX, and, CBASIC II.

New Products: (available 2nd quarter, 1983)

- 8" drives for the Model III

Program Addition

There is a problem with my "Mini-Micro Text Editor" program listing as published in the May 1983 issue (p. 290). To make the program work add the following two lines:

```
1000 PRINT "SINGLE OR DOUBLE
SPACING? (1 OR 2)";
1010 INPUT X: X=X-1: IF X<>0 AND
X<>1 THEN 1010 ELSE POKE 17210, X:
X=USR(0)
```

Jasper Kump
Box 108
Pyatt, AR 72672

Frustrations Resolved

In "Build an EPROM Programmer"

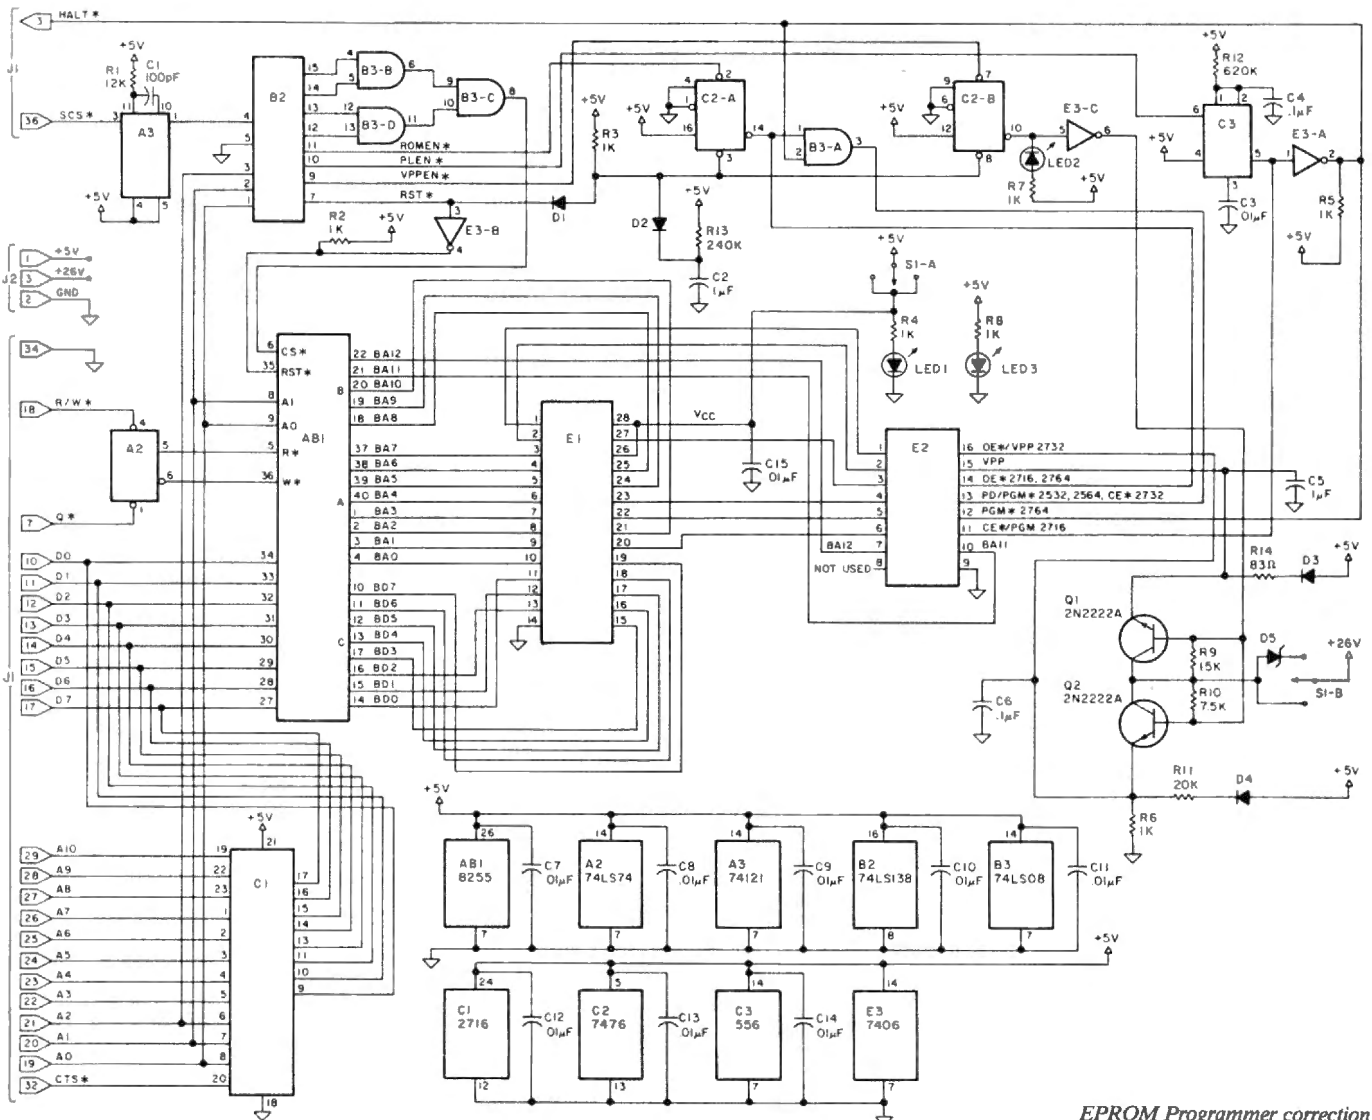

by William Mahoney (June 1983, p. 200), Photo 1 incorrectly showed the EPROM being programmed. Socket pins 1, 2, 27, and 28 should have been empty. On p. 220, the last line of the middle column mentions address 05AD. This should be changed to 05B7. Also, Fig. 7 was incorrectly drawn. The proper schematic is shown below. Our

apologies for these frustrating mistakes.—Eds.

A Bomber Mistake

I found a rather simple mistake in Thomas Rogers' "Jet Bomber" program (May 1983, p. 298). On p. 303 in the text concerning the Model II Debug program, you need to change DUMP HSCROLL?CMD[START = H000,END = F054] to DUMP HSCROLL/CMD START = F000, END = F054.

Pat Palmer

Langley-St. Clair Gets Mail

From unsolicited letters of testimonial

Yesterday I installed your amber CRT replacement tube in my 48K Radio Shack Model I computer. I am very happy with the anti-glare tube. I have found it to be very easy on the eyes. I was getting eye strain after about 30 minutes at the keyboard. After using the computer 3 hours last night, I had no problem with eye strain.

....You are more than welcome to use excerpts from my letter in your ads. I have found that the amber tube is very easy on the eyes and I recommend it for anyone who uses a computer for more than just an hour a day.

*Thanks again,
R.T.
Redding, CA*

This morning I received the credit copy of my first LSI Amber CRT. I just thought that it might be a good idea to tell you that the second CRT is working just fine. As a matter of fact, it was perfect even without the recommended burn-in period. Thanks again to you and LSI for the prompt service you have given me. I just wish a little of this would rub off on some of the software vendors I have been dealing with. If you talk to Tom Hartmann, please thank him for his help. The CRT is great. I spent most of the Easter Weekend out here at the office playing with it and the computer.

*Best wishes to you
and LSI,
J.W.
Charleston, WV*

M/C VISA
ACCEPTED

The earliest microcomputers had a single input device: a row of toggle switches on the front of a cabinet. They had no cassette ports, no disk drives, no modem, and no keyboard. To input data, you had to set a series of switches representing the individual bits of a single byte or address.

On the TRS-80, the keyboard is the most important input device, but it is still nothing more than a collection of on/off switches. Many computers have an ASCII-encoded keyboard. Whenever a key is pressed, the ASCII value of that key is sent to the computer for processing.

However, the TRS-80 keyboard is

Programming the keyboard

not encoded. It is merely a matrix of switches that operate like the keyboard of an inexpensive calculator. Each time you press a key, a connection is made between one of eight columns and one of eight rows. Though the Model III keyboard has only 53 keys (52 on a Model I), it is mapped to 1K of memory between 3800H and 3BFFH.

To see the keyboard in action, run Program Listing 1. Experiment by pushing different keys and combinations of keys. With every keystroke, half the keyboard memory changes value. Listing 1 merely transfers the keyboard memory to the video memory while adding 30H (48D) to each position to show a blank keyboard as all zeros (the source code is shown in Program Listing 2).

After experimenting with the keyboard-to-video program, you should notice that:

- the upper-left position (equivalent to 3800H) never changes; it remains a zero.
- when you press a key, the lower right position (38FFH) has a non-zero value.
- different keys affect different portions of the screen, but several keys affect the same portions.
- different keys produce different values, but several keys produce the same values.
- pressing more than one key creates new values and new patterns of positions.

Most keyboard maps look something like Fig. 1. The address for each row is the lowest memory address the keys in that row affect, and it is the one address without interference from keys in other rows. If you wish to write a program that checks for a combination of two keys, you can either have the program check both rows (the most common method) or check a position that both keys will change.

In Basic, the INKEY\$ function is a slow way of checking for a particular keystroke. Your program reacts to the keyboard much more quickly by PEEKing the key's address and then acting appropriately. As an example, use the arrow keys to sketch a picture on the screen with Program Listing 3. The same technique speeds up many Basic games.

If you are a hardware hacker, you probably noticed some holes in the ma-

The Answer is... NEWSSCRIPT!™

THE WORD PROCESSOR FOR BUSINESSMEN AND PROFESSIONALS

With ongoing support directly
from us

A FEW OF NEWSSCRIPT's 200 STANDARD FEATURES:

- FORM LETTERS WITH MERGING OF NAMES AND ADDRESSES
- GIVES SUPERB APPEARANCE TO YOUR FINAL DOCUMENTS
- COMPREHENSIVE MANUAL WITH TUTORIAL AND EXAMPLES
- CENTERING, TOP/BOTTOM TITLES, INDENTS, PAGINATION
- UNDERLINING, BOLDFACE, DOUBLE-WIDTH, ITALICS†
- SUB/SUPER SCRIPTS, RIGHT-JUSTIFIED PROPORTIONAL†
- CREATES TABLE OF CONTENTS, SORTED INDEX
- "LEGAL" LINE NUMBERING
- SCREEN GRAPHICS, SPECIAL PRINTER SYMBOLS†
- SEARCH/REPLACE GLOBALLY OR WITHIN LINES, COLUMNS
- BLOCK MOVE, COPY, DELETE, INSERT, FILE MERGES
- AUTOSAVE, WHOOPS, DIRECTORY, KILL
- SUPPORT FOR ALL LISTED PRINTERS IS INCLUDED **
(NO PATCHES INVOLVED) **
- SUPPLIED READY-TO-RUN ON "TINY" DOSPLUS
- ALSO RUNS UNDER NEWDOS/80, LDOS, MULTIDOS, TRSDOS

NEWSSCRIPT 7.0:	\$124.95
Mailing Labels Option:	29.95
Special: NEWSSCRIPT + LABELS:	139.95
Daisywheel Proportional Option:	49.95
"Pencil"/"Scriptsit" File Converter:	24.95
NEWSSCRIPT Manual & Reference card only:	29.95
Electric Webster + Correction Feature:	149.50
Hyphenation Feature for Electric Webster:	49.95
Grammatical Feature for Electric Webster:	39.95
Graphics Editor and Programmer (GEAP):	49.95
Dotwriter High-resolution graphics:	69.95
Special: GEAP + Dotwriter:	99.95

REQUIRED CONFIGURATION:

48K TRS-80, MAX-80, LNW, or compatible, with one or more disk drives. Specify Model I or Model III.

† some features work only if your printer has the mechanical capability.

** Daisy Wheel Proportional is an extra-cost option.

**TO ORDER, CALL NOW,

Order from your Software dealer or from:

PROSOFT® ✓98

Dep't. C, Box 560 No. Hollywood, CA 91603

TERMS: VISA, Mastercard, checks, money orders, COD. No P.O.'s accepted. Most orders shipped within 24 hours. Please add \$3.00 for surface UPS in U.S.A., or \$6.00 for UPS Blue Label. Add \$6.00 in Canada, \$15.00 overseas air shipment, 6½% sales tax in California.

BUILT-IN SUPPORT FOR MOST POPULAR PRINTERS†, INCLUDING:

Anadex, Brother, Centronics, C.Itoh, Diablo, Epson, Gemini, Microline, NEC, Prowriter, Gume, Radio Shack (LP 1-8, DW2, DMP-410, DWP 200-2100), Smith Corona, Teletype, Typewriter, anything compatible with any of these, and many others, parallel and RS-232.

SPECIAL AVAILABLE OPTION: Right-justified proportional for Diablo, F-10, Gume, Spinwriter, etc. Requires "Daisywheel Proportional" Option plus NEWSSCRIPT.

REVIEWERS AND USERS AGREE:

"NEWSSCRIPT" is the best word processor I have seen ... unsurpassed in printer control ... no other TRS-80 word processor can match its ability to format text ... its editor is fast, easy, and powerful." (80 MICRO, Oct. 1982)

"Your phone information system and the prompt and courteous staff that you provide to help your clients ... are worth the cost of the system." (V.H.H.)

"Better than cold beer on a hot day!! Thank you!!" (R.S.)

"What a program. So easy to learn and easier to use. I waited too long before ordering!" (P.J.M.)

"... takes the TRS-80 to a new level of text handling ... very user-friendly ... superb documentation, adaptability to many printers and operating systems ... a standard against which other TRS-80 word processing programs will be judged." (SOFTSIDE, Dec. 1982)

"... ongoing support second to none, with superb documentation." (80 U.S. Journal, Feb. 1982)

Program Listing 3

trix in Fig. 1. You can easily add 11 or 12 more keys to your TRS-80, and give special functions to each. In fact, the control key required for Electric Pencil 1.0 was simply a key added to the matrix in the Shift row. To add extra keys, wire each to the appropriate row and column of your keyboard. You can

also add a second, remote keyboard in the same manner. (See *The Custom TRS-80 and Other Mysteries* by Dennis Bathory Kitz, IJG Inc., Upland, CA, 1982, for detailed instructions.)

Because the TRS-80 keyboard is not encoded, the meaning of each key must be determined by software. If you wish

to change key definitions for a few keys or the entire keyboard, all you need do is write new software. The Model I and Model III store the address of the keyboard driver—the routine that scans and decodes the keyboard—at 4016H and 4017H. If you put the address of a different routine in those bytes, that new routine becomes the keyboard driver.

Basic calls the keyboard driver at the end of every instruction, looking for either a Break command or a SHIFT@ command. Because the driver is called so often, newly defined key combinations react instantly (except when Basic enters its string space garbage collection routine).

The keyboard driver is allowed to use registers AF, BC, DE, and HL and must return the value of the key pressed in the A register. If no key is pressed, the driver loads the A register with zero and sets the Z flag. With these restrictions in mind, you can write a short program to modify the normal driver flow and define any new keys or key combinations you wish.

For example, Program Listing 4 runs with any long and involved program. You might want a page of instructions available at all times. Although you could implement a screen swap routine by continually checking with INKEY\$, defining a new key combination streamlines the program's design.

For this implementation, pressing the shift and clear keys halts all other program operations and displays a Help screen. The original screen and the program in progress continue after another

*NOTE—On the Model III, bit 0 is the left shift key and bit 1 is the right shift key. On the Model I, bit 0 is both shift keys.

Fig. 1. Map of the Keyboard

"WHERE DID ALL THE MONEY

TALLYMASTER offers a new, powerful, easy-to-use way of summarizing and analyzing budgets and expenses. It's designed for personal and small business use by people who need quick answers to the question, "Where Did All The Money Go?"

Like most PROSOFT products, "TALLYMASTER" originally was developed just for our own use. To find out why our expenses kept rising, we looked for a quick and easy way to categorize our bills. The check register gave too much detail, and with "VISICALC", it was hard to just add new numbers at random.

TALLYMASTER takes a simple, common-sense approach to organizing and summarizing expenses and sales. Up to 702 categories can be defined. As numbers are added to them, new totals are shown instantly. It's like having a room full of calculators, all in easy reach. Totals can be sorted, reports printed, and disk files combined.

TALLYMASTER's handsome documentation has a step-by-step tutorial, with dozens of examples and illustrations. We've even included five sample disk files for you. Whether you're managing a home budget or business expenses, this program can give you better understanding and control. It helped us, and it can help you.

TALLYMASTER is available for the TRS-80 Models I and III (48K) and the IBM Personal Computer (128K). The TRS-80 version is just \$79.95. The IBM version, with functional keys and an extra-fast sort, is just \$129.95.

THE NEXT STEP

keystroke.

This driver routine has to stay in a specific place in memory after the pointer at 4016H is set—if it were relocatable and moved around, Basic would never be able to find it and the computer would hang up or reset. Therefore,

don't load the routine into a string or integer array.

Instead, pick a spot for it in memory (high or low) and assemble it to that location. Be sure to record three addresses from the symbol table; you will later need to know the location of

Setup, Unset, and Swap to use the routine from Basic.

Listing 4 contains many interesting features. First, the Setup routine, which saves the current driver address and puts the address of Test in its place, checks to be sure the routine is not initialized. Without this check, a second call to Setup causes the keyboard driver to enter an endless loop because the Return address would be set to Test.

Also, note that a machine-language routine must call Setup, not Basic. Changing the driver address from Basic requires two POKES. However, Basic scans the keyboard for a Break command or a SHIFT @ command after the first POKe, and uses the current (just changed) keyboard driver address. But the driver address is incorrect until after the second POKe, which probably won't be executed because the computer is lost in RAM, looking for a nonexistent driver.

The Unset routine restores the original keyboard driver to the system. It is wise to include the routine before the end of the Basic program, or else the new driver routine remains active until a reset. If you should later load a new program over the driver, you face another potential hair-pulling disaster.

The third section, Test, checks for the necessary Shift-Clear command that invokes the swap routine. The program checks for a Shift command first, then a Clear command. Notice that the check for a Shift command only considers a non-zero value in that row, ignoring the difference between the two Model III shift keys. If you have other special keys wired into the shift row, the check must be made more particular. If the shift and clear keys aren't pressed, control passes to the original driver through the address stored at Return.

The fourth section of the routine, starting with line 480, is the screen swap driver. This routine is only reached when the shift and clear keys are pressed. First, the Swap routine is called (Swap is written as a subroutine so you can also call it from Basic during initialization). Then continuous calls are made to the Key routine until all keys are released. Third, a time delay routine is called to avoid key bounce during the key release.

Next, the Key routine is again called continuously until you press any key to signal that you want to return to Basic. The screen is swapped back to its original state, and, as soon as you release

80micro PRODUCTION

in association with WAYNE GREEN PUBLICATIONS
Presents...

THE 80 MICRO REVIEW GUIDE

Written and Directed by the Reviewers and Editors of
80 MICRO
With an All-Star Cast of over 500 reviews of hardware,
software and books.

ACT I Scene One:

(Lights up. JOHN DOE sits in front of his computer reading a thick book. A sledge hammer is embedded in the 34-column printer to his left. PETE SMITH enters STAGE RIGHT.)

PETE: Hi, John, what's new?

JOHN: (Without looking) Hi, Pete. Just choosing a new printer.

PETE: What's wrong with the old one?

JOHN: Can't seem to get the daisy wheel past the sledge hammer.

PETE: Sledge hammer? What's that? Some new computer term?

JOHN: (Looking at Pete for the first time) Put your glasses on, Pete. (Pete does so and sees the sledge hammer)

PETE: Wow!... (Crosses to printer) Boy, you sure did a number on it! How many swings did it take?

JOHN: Just one.

PETE: One?! That's pretty impressive.

JOHN: Yeah, well I've had a lot of practice. Took me two or three swings to get the others.

PETE: Others? How many have there been?

JOHN: (Staring off into space) Let's see... two printers, three modems, one joystick and a couple of cassettes.

PETE: That's a lot of money down the tubes.

JOHN: I know. That's why I'm making sure I get my money's worth this time.

PETE: How?

JOHN: With this. (He holds up the book)

PETE: (Reading cover) The 80 MICRO Review Guide?

JOHN: Brand new. Over 500 reviews of hardware, software and books. All encapsulated from the pages of 80 MICRO, and all with this quick-comparison 5-star rating system. I can compare printers, modems, joysticks, games, word processing programs, business programs, books on language and programming—

PETE: Must have cost you a pretty penny.

JOHN: Nope. Just \$7.95.

PETE: That's all? How can I get one?

JOHN: You got the latest issue of 80 MICRO? (PETE nods) Just use the order card or the coupon in there. Or call toll free 1-800-258-5473 and use your MasterCard, VISA, or American Express.

PETE: Sounds easy enough.

JOHN: It is. And this Review Guide is great. I already saved more than the cost of the book when I used it to get that disk drive unit over there. Hey, where are you going?

PETE: To order my 80 MICRO Review Guide.

JOHN: But, Pete—

PETE: Don't worry. I'll bring the sledge hammer back as soon as I'm done with it.

(Lights fade as Pete exits STAGE RIGHT)

THE NEXT STEP

the key, control returns to Basic.

The key checks could call the ROM routine at 002BH, which scans the keyboard and returns the value of any pressed key in the A register; pressing the shift and clear keys a second time, however, makes the program double back on itself because it's still in the keyboard driver line. Therefore, the program checks the keyboard by scanning byte 3BFFH, the only byte that is always non-zero with a key pressed. The final delay routine sets the A register to zero and triggers the Z flag. No other manipulation of these two registers is necessary to notify Basic that no key is pressed. Basic continues on its way without knowing the routine was invoked.

Though the machine language portion of the routine uses only 97 bytes, the entire routine requires 1,121 bytes because of the necessary buffer for the save screen. Despite its relatively large memory requirement, such a routine probably saves memory space compared to other forms of self-documentation.

The process for using the swap driver in a program is straightforward if you record the three addresses from the symbol table during assembly. First, print the Help screen and then, with the USR command, call the Swap section of the routine. This stores your Help screen in the buffer and also transfers whatever garbage happens to be in the buffer to the video screen. Clear the

screen and call Setup to initialize the Help feature. Sometime before the program ends, call Unset to clear Test from the keyboard driver chain. Program Listing 5 shows how to use the program.

You could invent many other types of auxiliary keyboard drivers for special purposes. For some applications, you might want to call the regular keyboard scan first and have your program take some action if a certain key or group of keys is pressed. For example, you could easily develop a routine that allows direct input of graphics or special characters from the keyboard.

Also, you could redefine some of the unused control code characters. Pressing the shift key, the down-arrow key, and any key from A-Z simultaneously produces the ASCII codes from 1-26. At least half of these codes have no effect during telecommunications. A program could call the regular driver and take various actions based on which control code is pressed.

If you write an unusual auxiliary driver you think others might enjoy, send it to me. If I consider it to be of general interest, and if it works on the Model I and III, I'll include it in a future article so we can all experiment with it. ■

Electric Webster™

A 50,000 word dictionary

SPELLING CHECKER

that can even SPELL, with dictionary display and automatic correction

Automatic

HYPHENATION

Simple

GRAMMAR & STYLE

Checker

Even **Looks up Correct Spellings** for you!

"Electric Webster is the **Cadillac of vocabulary programs**. . . If I could only have one, it would be Electric Webster.

'80 Microcomputing, September 1982

- **INTEGRATES** into 7 different word processing programs, (SuperScripts, Scripts, Newscript, Lazy Writer, Electric Pencil, Copy Art, Superscript).
- **SINGLE KEY OPERATION:** You need only press a key and in moments, Electric Webster can actually be saving, proofing, correcting and hyphenating your text—all automatically.
- **50K WORDS AND MANY MORE:** You can view words in context, or add them to your dictionary at the stroke of a key.
- **VERIFIES CORRECTIONS:** If you think you know the correct spelling of a word, EW will check it for you before it makes the corrections.
- **DISPLAYS DICTIONARY:** If you don't know, EW will look up the correct spelling for you, and display the dictionary.
- **FAST CORRECTING:** In as little as 30 seconds, Electric Webster can return you to your Word Processing program, with your text fully corrected and on your screen.
- **VOTED #1:** If this sounds too good to believe, you don't need to take our word for it. Take the word of the thousands of *80 Micro* readers who voted Electric Webster the #1 spelling checker. Take the word of the scores of professional software reviewers who have raved about Electric Webster. Or, ask your local computer or software dealer for a demonstration, and see for yourself!

ACCLAIMED IN REVIEW AFTER REVIEW:

Microproof: "There is simply **no finer program** available . . ." *Creative Computing*, March 1982

Microproof: "This is a very useful product and should be obtained by anyone who uses a word processor."
80 Microcomputing, August 1981

Microproof: "The summary review of this program? **One word—Excellent.**"
Computronics, September 1981

"Actually, Electric Webster is faster than its predecessor (Microproof). . . and spelling corrections are immediately verified against the dictionary before being accepted. . ."
Microcomputing, September 1982

My spelling book is now gathering dust. Electric Webster not only checks spelling, displays words in context and corrects errors in the text, but it will also immediately take you to the right place in a 50,000 word dictionary so you can check the correct spelling for yourself." *Info World*, August 1982

"In my opinion, the **perfect combination** is Correcting Electric Webster with the hyphenation and grammar add-ons. To my surprise, it fills every reasonable expectation. It is fast, easy to use and accurate." *Desktop Computing*, December 1982

LOW PRICES—Add features as you need them:

Are you confused by all the versions of TRSDOS? Should you use version 1.0, 1.1, 1.2, 1.3, 2.0a, 2.0b, II, HD, 4.1, 4.2, or 16?

The original Model II TRSDOS was version 1.0. Later improvements and fixes yielded versions 1.1, 1.2, and 1.3. The only time you'll see these versions is if you purchase software originally designed for the Model II. Should you buy a program on such a disk, leave it there. The program was written and debugged on that version and you can be sure it functions correctly.

The newest Model II version is TRSDOS 2.0. A letter suffix indicates whether it will run on the Model II, 12, or 16. TRSDOS 2.0a is for the Model II, although 2.0b also runs on it. But 2.0b must be in control if the disk is used on the Model 12 or 16.

To convert a 2.0a disk into a 2.0b, simply type DO THINLINE from the TRSDOS Ready mode. Then reset and the version number changes right on the screen.

Model 12 and 16 disk drives shut off if they are not addressed within 20 seconds of the last access. The idea is to save wear and tear on the disk and the drive mechanism. However, if disk input or output is required, the motor turns on and the disks must be brought up to speed before the system accesses them.

Versions of TRSDOS

TRSDOS 2.0b instructs the computer to wait 8/10 second. If operating time is a factor on your Model II, though, you should use version 2.0a. This speeds up disk I/O since there is no delay in accessing the disk. To convert 2.0b to 2.0a, type DO UNTHIN from the TRSDOS Ready mode.

One final note: Version 2.0 does not support double-sided disks.

When Radio Shack brought their first hard disk out on the market, they needed an operating system to control it. Thus, TRSDOS HD was born.

The latest Model 12 and 16 disk operating system is version 4.2. TRSDOS

HD is extinct. The hard-disk operating system is built into version 4.2. As you might have guessed, version 4.2 replaces version 4.1, which made its debut when the Model 16 came out last year. The Model 16 owner's manual sometimes refers to TRSDOS 4.2 as TRSDOS II.

Version 4.2 uses disk space most efficiently of any TRSDOS to date. It supports double-sided disks.

You cannot use just any disk to record data on both of its sides. The indexing sector hole on the disk appears at different locations on single- and double-sided disks. If the computer detects a double-sided disk, it automatically writes to the other side when side 1 is full.

TRSDOS 16, which is part of the version 4.2 disk, controls the MC68000 microprocessor in the Model 16, II/16, and 12/16 machines.

In summary, if you have a Model II, you should be using TRSDOS 2.0a. If you have a Model 12 or 16, use version 4.2 (TRSDOS II). Versions 2.0 and 4.2 address the Z80 microprocessor. Use TRSDOS 16 when dealing with the MC68000.

TRSDOS 2.0 and 4.2 format disks differently—version 4.2 uses disk space more efficiently. However, you can transfer programs and files between the two with the command FCOPY. ■

"THE RESULTS ARE IMPRESSIVE..."

—Dennis Kitz, 80 Microcomputing: 12/82

Langley-St. Clair's* **Soft-View™** Replacement CRT's eliminates the strobe, flicker and fatigue from TRS-80's™.

Now you can upgrade your monitor with the new medium persistence green or amber phosphor tube.

State-of-the-art systems such as IBM™ and Apple III™ do not use the less costly "P4" B&W display tube because it is actually intended for TV viewing and its rapid strobes (60 times per second) cause irritating eye fatigue.

No amount of "green plastic" will solve this problem. But the new **Soft-View** CRT display tube from Langley-St. Clair will.

- Available in slow decay Green or medium decay "European Amber" (the standard in Europe)
- Made with Lead/Strontium impregnated glass that stops X-ray emission.
- Of high-contrast face glass that also stops most U.V. radiation.
- Available in frosted glass with extra Anti-Glare benefits.
- Easily installed...comes with pre-mounted hardware.
- Warranted for one full year against manufacturing defects or tube failure.
- The finest quality double-dark glass phosphor fields to produce dramatic contrast.
- Ideal for Word Processing and Programming, yet fast enough for Games and Graphics.

Continued from p. 40

Assembly-Language Corner

Photo 1 shows the MC68000 board used in the Model 16, II/16, and 12/16. The arrow points out the microprocessor. Physically, it is a very big chip compared to typical integrated circuits. The sheer number of input and output connections accounts for its large size.

The 68000 offers an abundance of general-purpose registers, named A0-A7 and D0-D7. Each register can store up to 4 bytes of data.

The term "addressing mode" refers to the microprocessor's instructions and the syntax needed to address the MPU (microprocessor unit) registers.

The MC68000 instruction set is similar to those of most other microprocessors. However, there is one new factor. Instructions need a suffix that tells the computer how many bytes of the register are to be acted upon. These suffixes are labeled B to represent a byte operation, W for 2 bytes (a word), and L for a long word or 4 bytes.

The statement LDW .A0,#5 acts on 2 bytes (a word). Address register A0 is loaded directly with the decimal number 5. Since the suffix is W, the upper byte of the word is filled with a zero. You cannot be sure of the values stored in the other 2 bytes of the register, however. If you want to be certain that the register's 4 bytes contain only a value of 5, specify LDL instead of LDW.

In keeping with Z80 load format, the operand of the LD statement contains the destination register and source value (or source register) separated by a comma. The source appears to the right of the comma in parallel with Z80 programming. This is true for all MC68000 op codes with one exception, STORe. Like the load instruction, it places values in registers. The syntax for STORe is ST source,destination. You must use B, W, or L to indicate the number of bytes affected by the operation.

In the LD example, a pound sign (#) tells the processor to treat the following entity as a number. Otherwise, it is a memory location.

Finally, the period in front of register A0 indicates direct register addressing while an @ sign denotes direct addressing. Direct addressing means to place the value from the source directly into the register specified in the destination position of the operand.

LD is used for direct register addressing, and the op code MOV (for MOVE) is for indirect operations. For instance, LDA .A0,STORAGE AREA loads the memory address location of this section of the program given the identifying label STORAGE AREA. LDA is a complete instruction to load an address location into a register. Since memory addresses are 4 bytes long, the instruction always works on the entire register and requires no B,

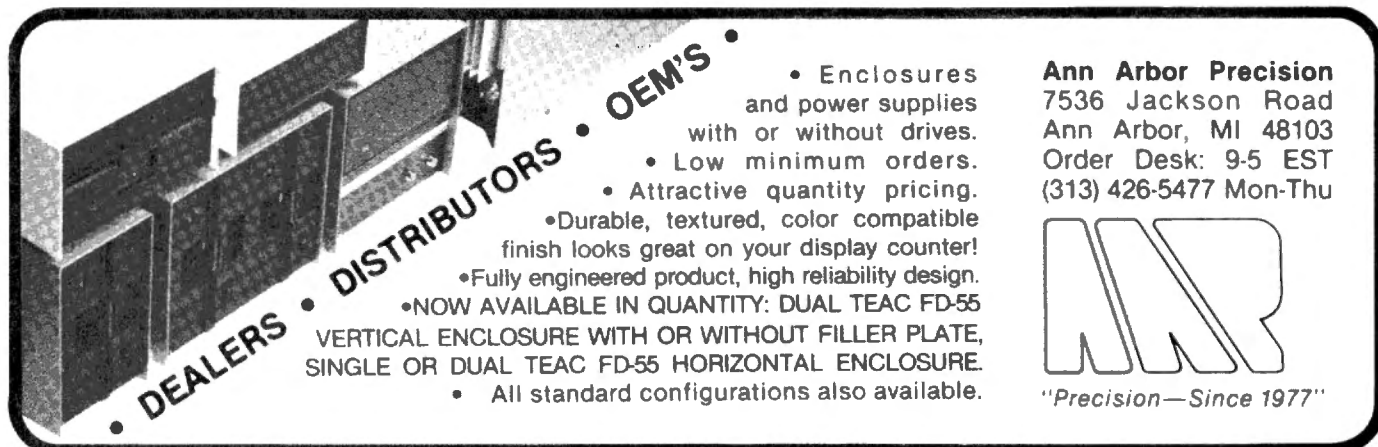

W, or L suffix.

Let's go one step further and load the decimal number 5 into the memory address whose location was defined with the label STORAGE AREA. The address was loaded into register A0 using the instruction LDA .A0,STORAGE AREA. Now the program must load the number 5 into the memory location to the address indicated by the value stored in A0. In other words, A0 points to the destination. The register itself is not to receive the 5. Because the @ sign represents the indirect addressing mode, the routine might look like this:

```
LDA .A0,STORAGE AREA
MOVW @A0,#5
```

It is standard practice to use the suffix W on loads and moves even when you are loading only 1 byte. A W forces a zero into the second upper byte of the register. Most op codes work on a word, in contrast to 8-bit MPU's which handle 1-byte instructions.

The MC68000 places all instructions in even memory address locations. A good reason for defining a word instead of a byte when setting aside memory as storage areas for text or numeric data is to ensure even placement of instructions that appear later. ■

• Enclosures and power supplies with or without drives.

• Low minimum orders.

• Attractive quantity pricing.

• Durable, textured, color compatible finish looks great on your display counter!

• Fully engineered product, high reliability design.

• NOW AVAILABLE IN QUANTITY: DUAL TEAC FD-55 VERTICAL ENCLOSURE WITH OR WITHOUT FILLER PLATE, SINGLE OR DUAL TEAC FD-55 HORIZONTAL ENCLOSURE.

• All standard configurations also available.

New Release

Now supports Mailing Lists, Form Letters, "ZAP-PROCESSING", and 18 more printer drivers.

Zorlof II

STILL ONLY
\$69.95

IF YOU STILL THINK YOU HAVE TO SPEND \$200 FOR A GREAT WORD PROCESSING SYSTEM, THEN YOU NEED TO READ THIS AD!!

The Magnificent WORD PROCESSING SYSTEM

For the TRS-80 Model I and III

- Supports over 50 different popular printers including OKIDATA Microline 80, 82A, 83A, 84A, Qume, Centronics 737, 739, Radio Shack Line Printer IV, VI, Daisy Wheel II, EPSON MX-80, MX-100, Graftrax, Graftrax Plus, Gemini-10, Gemini-15, NEC PC-8023A-C, Spinwriter 5510, 5515, 5520, 5525, C. Itoh Prowriter 8510, Starwriter FP-1500, F-10, Tec 8500R, Smith-Corona TP-1, Brother HR-1, COMREX ComRiter CR-1, IDS Microprism 480, and Diablo 630.
- Supports proportional space right-margin justifying on Centronics 737, 739, Radio Shack LinePrinter IV, Daisy Wheel II, Graftrax Plus, NEC PC-8023A-C, Spinwriter 5510, 5515, 5520, 5525, C. Itoh Prowriter 8510, Starwriter FP-1500, F-10, and Diablo 630.
- Powerful Mailing List and Mail-Merge capabilities for personalizing standard legal documents and Form Letters, handling infinite number of data records per run, infinite number of data fields per data record, and data fields as large as up to 1000 characters each.
- Brand new feature called "ZAP-PROCESSING", allows you to display and edit any type of data or program file in "ZAP" (byte-hexidecimal) format.
- Any character or symbol your printer can print, even dot graphics, can be used in mid-line printing with the Special Character feature.
- Written in fast Z80 machine language with type-ahead key-stroke buffering for speed typing.
- Single key-stroke control of all editing functions for ease of use.
- Continuous on-screen display of word count, line count, and free memory count.
- Superscripts, subscripts, underlined, bolded, expanded and condensed type styles - combine and intermix within a line.
- Automatically justifies and word-wraps on the screen as you type.
- Search, Replace, and Global Search and Replace.
- Odd and even page user-definable headers, footers, and page number lines, with automatic page numbering.
- User-definable linespacing, sheet size, top, bottom, left, and right margins.
- Move blocks of text and copy blocks of text from disk, to disk, and within the text.
- Examine disk directory on any disk and kill files while editing.
- Powerful full-screen editing features for EDTASM and BASIC files, including automatic renumbering of lines.
- Built in function to dump contents of screen to printer.
- Print-previewing formats text, inserts headers, automatically numbers pages, etc. on the screen without printing it on paper.
- Page by page pausing capability for sheet fed printers.
- Supports both parallel and serial printers.
- Printer control code access.
- Works with NEWDOS, NEWDOS80, TRSDOS, MULTIDOS, LDOS, and DOSPLUS - Single or Double Density.
- Compatible with most all available spelling checker programs.

GUARANTEE

Many word processing systems claim theirs are the best, but few would dare guarantee them. Not us! We are confident that ZORLOF is the most useful word processing system on the market for under \$200. If you don't agree, return it within 30 days for a full refund.

Add \$2.00 shipping & handling. Florida residents add 5% sales tax. Checks require 3 weeks to clear banks.

I'd like to tie this edition of The Color Key into the games theme of the August issue. This presents certain problems: I'm not much of a game player.

I do have a soft spot for Pac Attack and Doodle Bug. I've even taken on Zaxxon or Defense to satisfy some primitive blood lust, but I yield to the kids where any claim to dexterity is concerned.

And forget adventure games. I've already spent too long stumbling around one isolated sector of Aardvark's Circleworld, and that's my most successful encounter with the type! I have a tough time getting interested in screen after screen of text when I know what else the CoCo can do.

All of which gives me the structure for this column: a little on games, much more on the graphics that give them their appeal.

A Radar Routine

I might not be too big on games, but simulations are for grownups. My life-long enthusiasm for aircraft, and so for flight simulators of all types, sets me to thinking about CoCo graphics as applied to war games (I mean tactical and strategic simulations).

I've been flirting with the idea of writing a complex simulation of the Battle of Britain. The setting of *Batlbrit* (I already have the file name) will be the RAF (Royal Air Force) War Room, with the computer providing a real-time radar display of the battle area: much of England's southern Channel coast, including cities and airfields.

British radar picks up the incoming Luftwaffe formations, and the player has to allocate fighter resources to intercept them. This provides possibilities for strategic considerations and the use of historical data.

I plan to use the short routine in the Program Listing as the basis of the radar display. It needs some polishing; the array that stores the formation could be defined more efficiently, that's clearly not the English coast on the screen, and eventually I'll have multiple aircraft formations present at any given time.

Perhaps the game writers among you can see other uses for the routine even now. It's based on combining Extended

Graphics, games, and the Color Computer

Color Basic's Get and Put commands for simulating motion with periodic screen clearing to provide a satisfactory radar effect. A given return stays fixed on the screen until the next sweep of the beam, then you see its new position.

The listing defines the fictitious coastline as a string variable, CL\$, so you can use it in multiple Draw statements without a lot of retyping.

The M, or Move, subcommand within the definition of CL\$ allows you to draw lines at practically any angle; otherwise, oblique lines would be restricted to the 45-degree positions of the E, F, G, and H subcommands.

The little routine between lines 130 and 160 is useful for constructing a fuzzy radar return for the incoming aircraft. Line 150 defines the fuzziness. Use numbers less than 0.9 to fill more of the array.

Line 240 sets the speed and direction for the radar signal's movement across the screen. I included the random term in the expression for DY to make it harder to predict where the incoming formation would cross the coast.

At this stage of the full-blown game, computer-generated Luftwaffe strategy inserts predefined course changes for the bomber fleets.

Lines 240-320 draw successive radar scans. The PCLS blink in line 250 adds realism. If you find it bothersome, you can delete lines 250 and 260, and blank out the old radar return by putting a blank rectangle on top of it before writ-

ing the updated signal onto the screen.

Line 270 allows the coastline to show up before the aircraft do; I now think the display looks better without this effect, and might get rid of the line in future work. Line 509 is an endless loop to freeze the final display.

It's taken longer to describe the routine than to write it. If these techniques still leave you cold, I recommend a couple of good references.

Color Computer Graphics, by William Barden, Jr., is available for \$5.95 at Radio Shack Computer Centers. The book is for the Basic programmer. Barden's usual style comes through; he might succeed in making Video Display Generator (VDG) and Synchronous Address Multiplexer (SAM) programming comprehensible.

Assembly Language Graphics for the TRS-80 Color Computer, by Don and Kurt Inman, is from Reston Publishing Co., Reston, VA, for \$14.95. It's much headier stuff. The Inmans use sound and graphics as the most attractive vehicles for teaching Assembly language. Much of the book discusses putting text on the screen when using a graphics display mode, which leads me neatly to my next topic.

Using the Keyboard with Graphics

In many games, the player wants to enter keyboard commands while retaining a high-resolution graphics display. That's how the RAF commander will direct his forces in my *Battle of Britain* simulation. A normal input command won't work, since it causes the machine to revert to the text display mode.

In last month's column, I discussed Arizin Inc.'s Colorkit utility (P.O. Box 8825, Scottsdale, AZ 85252). The .TXOF command defeats the reversion to text display when an input is encountered.

To use this in *Batlbrit*, I could have the display freeze as a signal for keyboard input. Hitting enter restarts the display, while the program parses the input string and takes appropriate action.

Handy as these utilities are, it's unrealistic to expect prospective game players to rush out and buy Colorkit; besides, it takes up about 5K of RAM that might not be available. Finally, you'd have to make the keyboard en-

Shape your TRS-80 to communicate with any computer you want.

Omniterm is the most flexible, powerful terminal program you can buy. Omniterm lets you adapt your TRS-80 to communicate with 99.9% of the world's computers. Your company's mainframe, for example. Or any other personal computer, time-sharing computer, or communications service.

Omniterm overcomes incompatibilities in screen formats, baud rates, character sets, control codes and file transfer protocols. Seven complete translation tables let you change any character, for complete compatibility of all input and output devices. Omniterm is so flexible, users have even set up their ASCII-coded systems to communicate with EBCDIC-coded systems.

You can send all ASCII characters, even those that aren't on your keyboard. Reformat your screen to neatly accommodate any line length. Run your printer while you're sending or receiving data. And even review data that's scrolled off the top of the screen.

Omniterm's well-thought-out design makes it easy to use. You can get a status display of all functions while on line to tell you what's going on, and make any changes at the same time. You can create a special file of your settings to make it easier next time. You also get X/Y cursor control, single keystroke sign-on and auto-dialing. Even a phone directory. And lots more.

You don't have to be a computer expert to use Omniterm. Just spend a day with what the reviewers call "the best manual in the business." Then if you need help, just call, write, or contact us via CompuServe, Delphi, or Source.

Omniterm is the proven terminal program. The program thousands of people have used successfully. And the one the editors call the "top program available" (*Byte*, *80-Micro*, *Infoworld*, etc.)

Omniterm comes complete with sample setting files, conversion utilities, a practical text editor, seven translation tables, and a 76-page manual with index.

Available at leading dealers, or prompt shipment on direct phone and mail orders. Order Omniterm, for a super-smart TRS-80 that's putty in your hands.

Only \$95 for TRS-80 Models I, III or 4 (32K memory, one disk minimum). \$175 for Models II, 12 or 16 (64K memory minimum). (In Mass., add 5% sales tax.) MasterCard, VISA, and C.O.D.

IBM PC version coming soon.

THE COLOR KEY

tries blind; Colorkit doesn't have a way of echoing them to the high-resolution screen.

However, you can still use the INKEY\$ function to interpret keyboard input one character at a time, even when a graphics display is up. A screen echo is also easy to arrange. Have the program draw a high-resolution graphics representation of the character whose key you just pressed. I've published one such character set (*80 Micro*, Anniversary Issue 1983, p. 469).

You can also retain use of the enter key for command termination. If PEEK(338)=191, that's enter. If PEEK(339)=191, you've pressed clear. That might be handy to rectify a typing error; if the machine detects a clear, it should ignore everything entered up to that point and start over.

Information of this sort is readily available from the many CoCo keyboard maps produced over the past few years. The first one in my files appeared in "The Color Computer" by Philip Martel and Robert Nicholas (*80 Micro-computing*, June 1981, p. 206).

Some Graphics Editors

One of my first projects after adding joysticks to my computer was writing a paintbrush program to create low-resolution graphics without squinting at graph paper or sweating out a mass of Pset commands. I even added a routine to save the video RAM data as an ASCII tape file.

However, it's possible to do much more, and nowadays most software vendors have some sort of graphics editor in their portfolio. These vary from programs that let you create individual figures for incorporation into a game, to full-screen editors that do for graphics what a good word processor does for text.

Larry Ashmun's Color Graphics Editor (CGE) from Soft Sector Marketing (6250 Middlebelt, Garden City, MI 48135) gives you a small screen area in which to build a figure for use in a larger program.

The disk version stores the graphics data as an ASCII file of Basic data statements, or as a file of Form Double Byte (FDB) directives for an Assembly language program. You even have a limited capability to check out animation effects before committing your creation to disk.

A powerful feature of most graphics

Program Listing. Routine to Simulate a Radar Screen

editors is the ability to program the VDG and SAM chips in nonstandard ways. If you've delved into CoCo graphics programming at the Assembly language level, you know that the Microsoft interpreter accesses only certain setups, the four PMODEs of Extended Color Basic.

Other graphics and semigraphics modes exist, and some nice effects are possible if you're willing to get involved with some of the details. How about the equivalent of PMODE 4 with three colors on a black background?

CGE gets you started in the right direction, although the Basic programmer still has a lot of work to do.

After loading the program, you have a choice of four modes, each with two color sets. In resolution, these correspond to PMODEs 1, 3, and 4, plus a 128-by-64-element mode designated as 2C. You then enter the edit mode, in which you create a shape for later use.

The display gives you a rectangular graphics work area, plus a table of four two-digit columns. Each digit will later contain the hexadecimal (hex) representation of the data stored in 1 byte, or four dots, of video memory. Each pair

of bits controls the color of one dot. Thus, the first line of digits represents the first video line, and so on.

There are two shape creation modes. In Dot/Draw, you move a flashing cursor within the work area and press number keys to create color dots. (I could use it to create the aircraft formations in *Batlbrit*, for instance.) The numbers in the table change as you lay down dots.

Hex/Direct Entry lets you write hex numbers directly into the table. This can be faster if you know the hex representations of the colored dot patterns you want.

However, I've found an effect similar to keybounce that limits the speed with which I can enter data in this mode. I suspect that this results from an insufficient delay time in the keyboard scanning routine, and should be amenable to a software fix.

CGE gives the programmer tools for filling the work area box with a solid background color, Exclusive ORing the box's contents with another color to change background and figure, and moving the figure within the box.

You can use this to simulate animation when combined with the four buf-

SOFTWARE AT SOFT PRICES.

Hoyle and Hoyle's Query!² Database Management System makes record keeping affordable.

What can Query!² do for you? Any information you ever recorded on 3x5 cards (or wished you had) from recipes to mail lists; from stocks and bonds or inventory to book or music collections; from church directories to medical research (at UNC and UT), Query!² owners have done it all - and more.

Wouldn't it be nice to type in the beginning and ending date of next week and ask Query!² if anyone you know has a birthday or anniversary during that period? With our sensible \$29.95 price tag and clear, concise manual, you can have Query!² performing like this in an hour. Use Query!² to organize your information into records with up to 255 fields (that's more lines than the average file card has) of up to 255 characters each. Add records (as many as your disk can hold) by following simple prompts. View your records and edit easily. Print them out in three different formats (one makes mail labels from the first seven fields — allowing you to still keep track of phone numbers, sales, service, products, etc.) Need your records in order? Query!² can sort on any field fast. Looking for one particular piece

of information? Query!² will let you search on as many as 40 fields — so you can find a book even if you can't remember the title or author.

Thousands of satisfied Heath/Zenith users during the past year have put Query!² to the test.

"I stand in awe of you who produce programs such as Query!²" Dick Smith, Palo Alto, California

"I want to thank you for developing this set of programs. I am very pleased to have a high quality database system at a very reasonable price."

Rev. John F. Potter, Ringoes, NJ

Now for the TRS-80 III, Apple IIe, IBM-PC, Heath/Zenith and Standard 8" IBM format, CP/M. Query!² is sensible, fast (assembly language programs), flexible, affordable, and at \$29.95 you can't afford to wait!

THE COLOR KEY

fers CGE sets aside for storing the current contents of the box. You can sequentially rotate the buffers' contents in and out of the work area, so you can see the effects of storing slightly different versions in each.

Unfortunately, while CGE does make shape creation simple, incorporating the shapes into a Basic program is awkward. The Basic output option of disk CGE generates an ASCII file of data statements (line numbers 100, 110, and so on) that you must renumber and merge with the rest of your program.

Then it's up to you to read the data into an array and use POKE or Get/Put to get it onto the screen. The tape version of the program can't even generate the file for you; you have to copy the data table by hand.

There is no easy road to arcade-quality animation for Basic programmers. If you want high speed, you have to use Assembly language.

CGE author Ashmun doesn't duck this issue; he does provide an Assembly format option. I just think it's important to keep your expectations within

bounds when considering the purchase of a software tool.

Bob Crispen's Foxygraf (Computerware, Box 668, 4403 Manchester Ave., Encinitas, CA 92024; \$29.95 tape, \$34.95 disk) takes another tack. This is quite a comprehensive package, with a manual that features an excellent treatment of graphics in general and CoCo programming in particular.

Few people have done a better job of describing the interactions between the three determinants of a CoCo display: page, the address of the top left corner of the screen; VDG mode, the vertical size of the screen and the vertical separation between bytes; and color set, which controls page width and pixels per byte.

With Foxygraf, you can create images on part or all of the screen, using the arrow keys and space bar to control a cursor of variable size. You can save the images to tape (with the cassette version of the program, anyway) and subsequently recall them. You can also interface them to Extended Color Basic programs.

Foxygraf gives the user an unusual degree of control over VDG and SAM programming. It has its own shorthand commands for drawing lines and ellipses, and for painting rectangular portions of a screen.

You can define the cursor as a graphics block or any alphanumeric character received from the keyboard. This makes it possible to mix text with graphics in semigraphics modes. With practice you can get unusual effects, although it might not be possible to maintain them when recalling an image with Basic.

Foxygraf also supplies complete real-time information about the parameters of the mode and screen in use. A query command lets you leave the graphics screen to examine and possibly change parameters without destroying your work.

The program also keeps track of the cursor's position in two coordinate systems: graphics screen rows and columns, and RAM addresses. This is handy for defining the portion of the screen you want to record.

Images are recorded as binary files,

retrievable with CLOADM commands. They are not exactly the same as the files that Color Basic's CSAVEM produces—there are extra bits in the header to set the graphics parameters—but they are readable.

The task isn't completely trivial, since you must note and clear the required part of memory to avoid clobbering a program with the imagery. Foxygraf's thorough record-keeping seems to give the programmer the best possible chance of getting things right.

The manual includes a tutorial and command summary, details of memory utilization, subroutine addresses, and other miscellany of interest to the experimenter.

I've recently been using Computerware's other graphics editor, 3-D Drawing Board (16K tape, \$24.95; 32K disk, \$29.95). This is a very different animal: a tool for constructing wire frame drawings of three-dimensional objects, with the ability to view an object from different points in space.

This amounts to a hands-on introduction to the world of computer-aided design, and it's a marvelous demonstration of the Color Computer's powers. Of course, it's important to keep the program's limitations in mind (I almost said in the proper perspective).

An object's shape is defined by a series of cross sections, called z-cuts because they are taken perpendicular to the z-axis of a Cartesian coordinate system. You must make each z-cut up of straight line segments.

The computer's limited memory results in limitations on the complexity of objects. In a 32K system, you can have no more than nine z-cuts, and the outline on each z-cut can have no more than 20 nodes (corners, to be imprecise).

The program, which I'll call 3-D from now on, is capable of connecting corresponding nodes on different z-cuts to give the finished image its wire frame appearance. Again, memory size rears its ugly head; you can have no more than 300 connections in a figure.

You also have a limit on the number of nonprismatic connections, i.e., linkages between dissimilar shapes. An example of a nonprismatic connection is that between the eaves of a house (a rectangular shape) and the ridge of the roof (a straight line). 3-D is limited to ten connecting lines in each such connection.

Within these limitations, it's a terrific

program. If you have the data, you can specify z-cut outlines by the coordinates of their nodes. If you don't have the data, you can draw the z-cuts with a joystick-controlled cursor in what looks like PMODE 4.

"... the subsequent use of files is a weak spot for many graphics editors."

You can also mix the two input modes. If your object has a constant cross section, you can replicate z-cuts with a few keystrokes instead of re-drawing the figure.

3-D shines in its ability to create different views of an imaginary object. Once you've defined an object by z-cuts, you can use the CoCo's joysticks to conduct an imaginary flyaround.

The right stick controls your viewpoint's horizontal and vertical position, while the left governs viewing distance and object rotation about the line of sight (equivalent to cocking your head

to one side).

You don't see continuous motion on the screen. In practice, you generate one view of your object, move the joysticks by a likely amount, and press the right stick's button to command a drawing from your new vantage point. If only the CoCo could use high-resolution light pen techniques...

You can store objects constructed with 3D on tape or disk as ASCII files. In principle, other programs can read and manipulate these, although your math had better be good to do so. In fact, the subsequent use of files is a weak spot for many graphics editors.

3-D still puts on quite a show. You wouldn't use it to design a space shuttle, or even next year's Chevy, but it can do wonders for a mind jaded by too many alien invaders. It's marvelous what you can do with a little trigonometry. ■

DOSPLUS 4.0 Hard Disk Operating System
 Micro-Systems Software Inc.
 4301-18 Oak Circle
 Boca Raton, FL 33431
 Models I and III
 \$299.95 (included with Prometheus at no extra charge)

by John Ratzlaff

The Prometheus 5 Hard Disk System is a relatively low-cost, mass-storage Model III system based on Winchester technology. Its manufacturer, World Wide Data Systems Inc., is the parent company of Computex, which has been selling disk drive kits and other Model III add-ons for several years.

I purchased a Prometheus 5, a 5-megabyte drive, for my Model III. The drive included DOSPLUS 4.0, the hard-drive operating system by Micro-Systems Software. Fortunately, DOSPLUS is my top choice among all available TRS-80 operating systems.

Preparing the System

Installing the Prometheus drive is simple. Plug a ribbon cable into the back of the drive and into the input/output (I/O) connector on the bottom of the Model III. Then plug the power cord into the wall.

The manual accompanying the hard disk (mine was a preliminary version) did not indicate which way to plug the cable into the drive (exiting to the left or right). I was wrong the first time, but when the computer didn't work, I reversed the cable and it worked properly.

The cable should exit to the right when viewed from the back. The manual indicates no harm is done if you plug it in backward.

Installing the operating system is not so simple. First, use the CONFIG command to set the various parameters for the hard drive, then format the drive using the HFORMAT utility. Transfer the system files using SYSGEN, then the rest of the files using Transfer. Finally, use CONFIG again to signal DOSPLUS that the system now resides on the hard disk.

Once you format the hard drive, it is ready to store files, even before you transfer the system files. Since I was so excited to use my new hard drive, I saved a Basic program onto the newly formatted drive to see if it worked. And it *did* work!

Unfortunately, when I proceeded with SYSGEN, it aborted with an error message. Figuring that I should use SYSGEN without any files on the drive, I killed the file I had saved and tried it again.

This time it seemed to work, but when everything was finished I couldn't boot up from the hard drive. An "unknown error code" message appeared and the program booted from the floppy disk.

Neither the Prometheus nor the DOSPLUS manual provided pertinent suggestions, so I called Micro-Systems for advice. They suggested I reformat the disk and try again, because even a

Our reviewers use a five-star rating system. One star represents the low end of this spectrum, while five stars represent the spectacular and high end of the spectrum.

killed file can cause problems with SYSGEN.

It makes sense to me now: The system expects system files to occupy certain places in the directory. Since a killed file still occupies a directory slot, one of the system files is forced to an improper slot. Anyway, everything worked fine after that.

The Prometheus manual describes all the settings you use in configuring and formatting the hard drive. However, DOSPLUS 4.0 has tremendous flexibility: You can configure the hard drive any way you want, within some limitations.

The Prometheus 5 hard drive has one platter with 32 sectors per track, and 320 cylinders on that platter. Other models in the Prometheus series have the same specifications, but they have more platters. The Prometheus 10 has two platters, for instance.

The manual directs you to specify 32 sectors per granule, or two granules per cylinder. Since the platter has two sides, each cylinder has two tracks, or 64 sectors.

If you recall that a granule is the smallest unit of disk space you can allocate to a file, you will realize that it's a very large minimum file size. If you store a small Basic program on the disk,

Choose a Quality Computer Services hard disk system for your old or new microcomputer

1. Because it is ultra-reliable and warranted to stay that way.

2. Because it offers up to 40 million bytes of high-speed performance.

3. Because you'll get the best ... for a little less.

A hard disk drive from Quality Computer Services is compatible with just about any microcomputer, including those listed at the right. So rugged that hundreds are operating on five continents—including many remote sites where service is not available. When you buy one you get a free warrantee for a full year. (It's free because we don't think you'll ever have to use it.)

Learn more about QuCeS hard disk systems—choice of 6, 12, 20 or 40 megabytes; easy hookup; expansion and backup options; new removable 5 megabyte Winchester disk; high-performance specifications; and name of nearest dealer.* Just return the coupon. Or if you prefer, call or write QuCeS.

* Dealer inquiries invited.

It's nice to know that QuCeS prices are very competitive. Our price for 20 megabytes for example, including 1-year warrantee, attach software and all hardware, is just \$2999.

Choose QuCeS when you want the best ... for a little less

QuCeS hard disk systems are compatible with Apple II®, Epson™, Heath/Zenith™, IBM®, TRS-80® I, II, III, XVI, Osborne™, many S100™ based, and most other popular microcomputers.

NEW!

* Optional cartridge disk for on-line/off-line backup storage of up to 5 megabytes per cartridge.

it uses 8K of disk space.

After some calculations, I decided that I wanted my granule size to be eight sectors, so I set `GS=8`. This makes the minimum file size 2K. However, a smaller minimum file size allows more files on the disk, so I set the directory size to 32 sectors (22 sectors was the suggested size). This allows a maximum of 240 files in the directory.

DOSPLUS imposes several minor limitations. You can have no more than eight granules per cylinder, so my granule size had to be eight or more. The directory cannot exceed the length of one track, which limits it to 32 sectors on the Prometheus.

Incidentally, the DOSPLUS manual stresses that ideally the directory size should be one granule. I could find no reason for that, and allocating four granules for the directory has worked fine for me.

Another important feature of DOSPLUS is the ability to partition the hard drive into two or more pseudo drives. The Prometheus has 320 cylinders, so you must partition DOSPLUS because it accommodates no more than 200 cylinders per drive.

I decided to have my first drive (drive 4) contain 120 cylinders, and the second drive contain 200 cylinders. I could create as many as three drives, as long as each drive had 100-200 cylinders.

You partition the drive by specifying the base address in the `CONFIG` command. The base address refers to the cylinder on which the pseudo drive begins. In my configuration, drive 4 has a base address of zero, while drive 5 has a base address of 120.

When you've formatted the drive, specify how many cylinders to format for that drive. It is possible to create overlapping pseudo drives by using improper values with `CONFIG` and `HFORMAT`. The DOSPLUS manual warns you against such actions.

The New World of Hard Drives

Once you configure, format, and `SYSGEN` the hard drive, it's ready to act as the system drive. The Model III still tries to boot from the floppy disk in drive zero, so you must have a system disk in drive zero when you turn on the computer.

When the operating system has read in enough of the system files from the floppy disk, its base of operations transfers to the hard drive (if so con-

figured). All subsequent actions originate from the hard drive, so library commands and utilities execute much faster, and you can remove the system disk from drive zero.

Using the Master parameter in `CONFIG`, you can also specify that all disk searches must begin with the hard drive or any drive you want. You can have the system consider drive 4 the default drive for `DIR` and other commands, and the starting point when searching for a file with an unspecified drive number.

This speeds searches considerably, since the hard drive's response time is much shorter than that of floppy disk drives. However, if a search starts at drive 4, the system searches only the hard drives. If you want a file from drive zero or 1, you must specify the drive number.

The hard disk's speed is impressive for two reasons. The disk is always rotating, eliminating the delay while it gets up to speed, and the disk rotates at 3,600 revolutions per minute (rpm), allowing a much faster data transfer rate.

However, track-to-track access time is not that much faster (3 milliseconds), so a lot of head travel results in a noticeable delay. For instance, during the search for a file, the head moves from the drive 4 directory (cylinder 60) to the drive 5 directory (cylinder 220). This travel over 160 tracks (and back again, if necessary) causes a delay of between one and two seconds.

Such a delay also occurs during access to files on drive 5. The operating system usually consults one of the system files on drive 4 near the directory track, so the head travels back and forth between pseudo drives 4 and 5.

This takes a bit longer than it does on floppy drives since the operating system would simply access another drive, reducing the necessary head travel.

As the DOSPLUS manual states, "the name of the game" is minimizing head travel. A hard drive with more platters and fewer cylinders is faster than a drive with one platter and many cylinders (such as the Prometheus), all other things being equal.

A hard drive with two platters and 160 cylinders has the same capacity as the Prometheus drive, with only half the head travel. The difference is quite small, however, and is insignificant under most circumstances.

Head travel aside, the fact is that a

file loads from a hard disk much faster than from a floppy disk, typically in 40-50 percent less time. It's not instantaneous, but it is quicker.

Space is the other main advantage of hard disks. Even after transferring nearly all my files to the hard drive, I still have over 4 megabytes of available memory.

The drive accepts huge files as well as many files. It easily accommodates a monstrous data-base file that you would have to break into several parts and place on several disks with a floppy disk system. This makes the data base much easier to use.

Back-up of the hard drive has traditionally been a problem. Although the hard drive is much more reliable and not subject to the same physical abuses as floppy disks, it is still wise to back up your files periodically.

DOSPLUS 4.0 does not provide a means of backing up the entire contents of the hard disk to floppy disks in one step. Two utilities, `Transfer` and `HCOPY`, back up files on the hard drives.

`Transfer` copies all the files from one drive to another. Since the destination disk (a floppy) is obviously too small to hold them all, it lets you specify a class of files using wildcard file specs.

For instance, "`TRANSFER/BAS:4:1`" transfers all the files ending with `BAS` (assuming they would all fit on the destination disk). If you can break down the set of files on the hard drive into subsets small enough to fit on floppy drives, you can back them all up.

Since the hard drive handles large files that wouldn't fit on a single floppy disk, the `HCOPY` utility breaks a file into pieces and saves each portion on a separate disk. It also reads those pieces back onto the hard drive and reassembles them into the original file.

The floppy disks must be formatted and ready before `HCOPY` is run. When using `HCOPY` to read the file back in from floppy disks, enter the disk containing the last portion of the file last. Otherwise, you can present the disks to `HCOPY` in any order.

The `HZAP` utility duplicates the functions of `DISKZAP`, a useful DOSPLUS disk-view-and-modify utility, except that it operates on the hard drive. Because of the many different hard drive systems available, you must use hard drive parameters that `HZAP` uses. It does not go by the settings in `CON-`

FIG. Tell it the number of platters, number of cylinders, sectors per track, track access time, and write pre-comp track each time you use it.

That latter parameter is not adequately explained in either manual, so I use the default setting. It would be nice to change the defaults so you would not have to specify the settings each time, but no provision is made for that.

A more serious problem with HZAP is that it does not go higher than cylinder 255, so you can't use it on the top 64 cylinders of the Prometheus drive. Other drive brands that don't have more than 255 cylinders present no problem.

DOSPLUS 4.0 provides a new directory command, ACAT, for alphabetical file catalog. DOSPLUS 3.4 and 4.0 are otherwise identical except for the hard disk support. ACAT has an alphabetically sorted catalog that makes it easier to find a specific file among the hundreds that could be in the directory.

ACAT also accepts wildcard specifications, displaying only the files that meet specified criteria. "ACAT A?/DAT" alphabetically displays all the files on the default drive that have file names beginning with A and ending with the extension DAT.

• The sort is extremely quick, with practically no delay while sorting. This is an extremely useful function, although you cannot reliably call it from Basic because of the room required to do the sort.

When the hard drive is turned on, the LED on the front panel flashes until the drive is up to speed and ready. Wait until the hard drive is ready before attempting to boot from it. This usually takes less than 15 seconds.

The hard drive case has a small cooling fan which, along with the constantly

rotating disk, produces a low whir. You can easily adjust to the noise and to the barely audible click as the head steps from track to track. The hard drive's overall sound is preferable to the intermittent whirring and clicking of a floppy drive.

Round-up

The Prometheus 5 hard drive and DOSPLUS 4.0 make an excellent team, with only a few minor drawbacks. DOSPLUS is slightly harder to install than other hard-disk operating systems, precisely because it is more flexible.

The Prometheus hard drive might be better off with two platters and fewer cylinders, but it is a terrific value considering that it includes an excellent operating system at no extra cost, and it is priced much lower than most hard disk systems.

Several competing hard-disk systems cost as much as \$1,000 more and have no significant additional features. The Prometheus 10, with twice the capacity, costs only \$200 more—an even better value!

The only serious deficiency of DOSPLUS 4.0 is the need for a true back-up utility to copy all the files on the hard drive onto as many floppy disks as necessary.

Micro-Systems has recently announced their latest operating system, DOSPLUS 3.5, which should be available by the time you read this. They will no longer have a separate version for hard drives, but will provide add-on drivers to DOSPLUS 3.5 for hard-drive support.

One important change is Micro-Systems' merging HZAP into DISK-ZAP, so the same program operates on both floppies and hard disks. ■

R. DUKETTE

the insect's remaining parts continue living and advance towards you.

If you kill the monster before it gets to you, another one advances rapidly. The second caterpillar has a nasty assistant, a deadly beetle, that attacks you from unexpected directions. While you're busy staying alive, a tarantula joins your enemies in an attempt to devour you.

Two players can use different joysticks to take turns for each round of a game. You score points by completely destroying a mushroom or by hitting a caterpillar segment, a beetle, or the ta-

rantula. After you reach a score of 10,000, you receive a bonus of one extra round.

Magic mushrooms allow the caterpillar to quickly dive towards you. Killer mushrooms break the caterpillar into segments that head down the screen. Regular mushrooms cause the caterpillar to turn away in the opposite direction.

This is one of the most entertaining Color Computer games available. It combines exciting play, attractive graphics, and realistic sound effects in a professional product. ■

POWER! (Version 3.03, erroneously advertised as 3.3)

COMPUTING!

2519 Greenwich St.
San Francisco, CA 94123
\$149

by Charles R. Perelman

POWER! is pure joy. It tames your CP/M until it's downright friendly, speeds up CP/M operations, reduces file name entry errors, and gives you a bushel of worthwhile utilities at a reasonable price.

You'll put this 16K of software on all your system disks and wonder how you got along without it. Its flexibility and 50 separate routines are a bargain. POWER!'s new version 3.03 improves an already fine package with greater finesse, more features, and enhanced documentation.

Using POWER! as a wraparound for CP/M gives added protection from nasty BDOS errors, even permitting removal of the system disk after booting. If you change disks and forget to hit control-C before writing to a disk, POWER! politely informs you to mend your ways without crashing the system.

Commands

POWER! supports most CP/M

commands. Copy is a notable substitution for the inscrutable Pip. You can use normal CP/M format, but POWER! syntax is usually shorter and faster.

You'll feel comfortable with POWER! in no time at all, but to get maximum performance you must carefully review the manual and work with it, which is a pleasure compared to bare-bones CP/M. Wildcards are similar to CP/M usage but easier, friendlier, quicker, and more talented. Escape or control-C returns to POWER!, not CP/M.

POWER! does most of the things you've always yearned for with CP/M. Individual utilities available from CP-MUG can't compare to the convenience of this error-trapped, documented, and coordinated composite system.

For openers, DIR alphabetizes your files, shows all system and read-only files appropriately marked, and pauses to let you review a portion of the screen when the directory exceeds your terminal display area.

Convenient wildcard functions display directories by type or with the same initial letters. You can list all user areas or show directories for drives you've previously accessed, or for all user areas on all drives in your system.

Sort lets you change the display so that DIR and other commands involving file lists show system files last, sorted by file extension and alphabetically; by file type, with system files last;

(414) 355-5454 251

or unsorted. Such flexibility forces you to consider which alternative best serves your purposes.

POWER! shines in day-to-day repetitive operations. To Copy, Erase, Type, SETSYS (make a system file), or SETRO (make file read only), start with a menu of files sorted alphabetically with assigned sequential numbers. Choose the numbers or ranges you want, press the enter key, and you get multiple processing of all selected files. This adds tremendous speed to your operations.

You can choose whether to review each file in turn or continue automatically. You can even abort the operation in the middle of a file since the program keeps you informed of the file on which it's working.

When you copy a file and a second file with the same name exists, you must decide whether to overwrite, skip, or make the destination disk file a BAK file.

Other commands in which you select a file for operation use the numbered directory approach as well. You work more rapidly and make fewer mistakes when you type a number and not the entire file name.

Like its CP/M counterpart, Type reviews files on the screen, but it stops to let you read each screen of text rather than testing your reflexes in hitting the hold key as the data flies by. Set Type for continuous scroll and you can increase or decrease scrolling speed by pressing a number.

But wait, there's more. Press the space bar to scroll a line at a time, or to pause and use control-P for printing a specific section of a file. Besides standard Type, TypeA lists text files without formatting commands in 16-character lines, TypeH displays COM files in hexadecimal (hex), and TypeX is DDT (dynamic debugging tool) style with printable ASCII characters at the right side.

If you're not sure which of several files has the data you need, select a group of likely candidates. Start reviewing the first file with Type. As soon as you know you haven't found the right file, break out with control-K to immediately call up the next file in the queue.

Erase a file by mistake? Reclaim displays names of erased files and offers you the chance to revive them if you haven't written over the sectors. Recovered files are set to read-only status; you must reset to read/write to alter the

contents.

Help is only a question mark away when entered from the command prompt. It saves flipping through the manual for proper entry if you forget a command name or mnemonic and get syntax errors. Help doesn't give you any clues to function operation, however.

Run by itself produces a numbered menu of all executable COM files on a disk. You then choose any program. Follow Run with the program name or other parameters, and it works fine with WordStar or a spelling program. Ignore the \$\$\$SUB file in the WordStar directory; POWER! created it to return to the program shell after you finish editing.

When going back to POWER!, don't hit any keys until the sign-on prompt appears or you'll abort the submit file and wind up in CP/M. The alternative form can also directly call CBasic or MBasic and a user program, even if they are on another disk.

POWER! segregates bad blocks with Test, generates checksums with Check to see if two files are exactly the same, and provides file size information in sectors and kilobytes with Size. Log controls a host of display and other options and tells you where POWER! is located in memory.

User and Xuser commands access user areas other than zero. Added capabilities include 32 user areas instead of 16, file copy and move capabilities from one user area to another, and restricted access to programs in user areas 16-31 with the Password command.

Another practical tidbit is a unique customizing command: Pwretool. With a few keystrokes, you can change the name of any command. More important, you can delete or password-protect any command from your customized version of POWER!. This helps prevent hitting the wrong keys and inadvertently making file changes or getting into a file-altering mode.

Pwretool and Pass are separate from Power.COM. They run as COM files rather than within POWER!, and take up an additional 2K each. Excluding these programs from a protected disk prevents a snoopy user from altering protection levels.

The Assembly language monitor routines are a hacker's delight. Rather than struggle with DDT, use CM to compare two Assembly language programs and

list the bytes that differ. DS displays one memory address at a time in both hex and decimal, and lets you change any byte within approximately 120 locations before or after your entry point.

Search, which has wildcard functions, lists addresses of ASCII, hex, or combination groups of characters that match your key. POWER! lets you read from or write to any memory location, fill blocks of memory, move programs around in memory, duplicate blocks, and more.

Do you want to add a few favorite routines of your own? User functions (UR1 to UR4) allow you to jump within POWER! to your own utilities.

Documentation

The new spiral binding on the 8½-by-11-inch manual makes it easy to read from a typing stand. Generous margins and spacing make it easy to scan or study. Besides a table of contents and an index titled "Function Index," the manual has an additional alphabetized summary of all commands.

Following a helpful introduction covering manual organization, backing up, and similar start-up information, the manual has a general outline of program function, format, syntax, and scroll controls.

Except for Password and Pwretool, each POWER! command is listed in alphabetical order. Explanations include sample screens, descriptions of function use and syntax, and step by step instructions. Some of the Assembly language commentary is a little terse and needs some expanding, but generally the information is sufficiently detailed.

A couple of pages contain suggestions for correcting problems that cause common error messages. You'll appreciate hints on applying POWER! to save crashed programs, glitched directories, and files with bad blocks. You'll also have customization details for altering keyboard, video, and program operation, commands, and responses.

The manual contains a wealth of information in plain English, particularly for the more advanced programmer. This is truly exceptional documentation for such a program.

I'm enthusiastic about POWER! and recommend it to any CP/M user without reservation. COMPUTING! guarantees to refund your money if you're unhappy with the software. I think their money is safe. ■

★
Microcomputers in Large Organizations
 by Thomas Madron
 Prentice-Hall Inc.
 Englewood Cliffs, NJ 07362
 Softcover, 181 pp.
 \$12.95

by Timothy Daniel

A friend of mine who handles the care and feeding of a large company's mainframe computer used to note gleefully that the managers in his organization had to sneak microcomputers in the back door. Otherwise, they might incur the wrath of higher-ups for bringing toys to work.

Times have changed; big business and government are taking the micro seriously. *Microcomputers in Large Organizations*, by Thomas Madron,

builds on this new legitimacy.

This book should have a special place in the hearts of TRS-80 owners. The author makes a strong case for using Model IIIs as executive work stations. He even includes a lengthy Basic program that acts as a master menu and appointments calendar. Great stuff for the home hacker, but not necessarily the direction of tomorrow's automated office!

Microcomputers in Large Organizations seems to be based on thorough but somewhat dated research in hobby and trade literature. In his introduction, the author highlights the problems encountered when micros supplement or replace traditional work methods. Topics include planning for change, networking, and micro-mainframe communication.

Once you get beyond the "Gee, aren't micros great" section, the book's lack of substance might disappoint

you. Madron presents only two real-life cases. Each takes about two pages and neither is truly representative of micro integration into a large organization.

The strongest selling point of this book is its unintentional but effective humor. I didn't know whether I should laugh or cry over the following statement about the IBM PC: "Although IBM announced some software for the system, substantial amounts of off-the-shelf software is not expected until the mid 1980's..." You can get information of equal integrity from a fortune cookie or Ouija board.

The publisher's back-cover claim that *Microcomputers in Large Organizations* is "the book that explains everything you need to know to use microcomputers in your business..." is one more rib tickler. But the joke's on you if you spend \$12.95 to find out the punch line. ■

★★★
Sneak Thief
 Soft Sector Marketing Inc.
 P.O. Box 340
 Garden City, MI 48135
 Model I and III
 \$19.95 16K cassette
 \$21.95 32K disk

by Thomas L. Quindry

If you're the thrifty type who relishes rescuing your riches from inflation or evil-doers, Sneak Thief is the game for you. In Sneak Thief, each player is a guard whose duty is to protect his gold from the thief.

You can choose a one- or two-player format. The disk version has a talking voice and saves high scores. Both disk and cassette versions have sound effects and the option of keyboard or joystick control.

You start the game with three guards, and gain an additional guard with every 10,000 points. The game ends when you lose all your gold (around 18 pieces) or all your guards.

The gold is in a box in the center of a room. The thief enters from one of three doors. The guard shoots the thief or captures him by running into him. You earn more points by capturing the

thief, who then goes to the brig.

If the thief succeeds in stealing a piece of gold, he turns into a fugitive and tries to escape through one of the doors. The fugitive seems to move aimlessly around the room until he goes through a door by chance.

*"In Sneak Thief,
 each player
 is a guard
 whose duty is
 to protect his gold
 from the thief."*

If the guard shoots the fugitive, your gold returns and you score points. You cannot capture the fugitive, and running into him brings fatal results.

Sometimes a protector appears who tries to keep you from shooting or capturing the thieves and fugitives. You score points by shooting the protector, but he destroys you if he runs into you.

Another function of the protector is to attempt a jailbreak. If he gets to the brig, the protector removes one prison-

er at a time and each one becomes a thief. For his own protection, it's imperative that the guard shoot the protector as soon as possible.

When the total number of intruders (thieves, fugitives, and protectors) captured or shot equals 20, you've completed a so-called wave. You receive bonus points for all captured thieves, who then disappear from the brig. For each successive wave, the number of bonus points increases for each captured thief.

After ten waves, the bonus points have doubled and you will receive no more increases in the bonus value. You can still score bonus points, however.

If you complete a wave without shooting any intruders (by capturing 20 thieves), you get back all your stolen gold. That's quite a feat, since protectors are releasing prisoners as you capture them. I doubt that a released prisoner is deducted from your 20 count.

As in most arcade games, Sneak Thief's complications increase as you score more points. More intruders enter at once, and protectors try to release prisoners or attack the guard more frequently. The guard has his hands full.

One feature I like is that you must press any key to resume action after you've lost one of your guards. This avoids marathon playing and allows you to leave the game for dinner or whatever.

ARRANGER

100% Machine Language Disk Index Program for the TRS 80 Model I & III. Automatically recognizes ALL major DOS's!

The Arranger is a master index system that automatically records the names of your programs, what disks those programs are on and type of DOS. Features include

- Automatic single and double density recognition.
 - Accepts LDOS, DOS+, TRSDOS, DBL.DOS, NEWDOS 80, MUL.TIDOS, ...
 - Works interchangeably with Model III, I double density.
 - Capacity of 250 disks, 44 filenames disk
 - Quickly locates any amount of free granules
 - Finds a program in less than 30 seconds!
 - Alphabetizes 1500 filenames in 40 secs.!
 - Option to sort by any extension (BAS, CMD, ???)
 - Easily updates diskettes previously added with only 2 keystrokes.
 - Backup function built in.
 - Uses 1 to 4 drives, 35, 40 or 80 tracks.
 - Radio Shack doubler compatible
- Requires 32k 1 disk minimum

The disk version is unique in that it boots on a 40- or 80-track Model I or III. It should also boot in a 35-track disk.

My main objection to the disk medium is that it's practically impossible to save as a command file on a system disk, even with the proper utility program. I used a utility program to examine the disk and learned that the disk input/output (I/O) routines are not file oriented but are track and sector oriented.

The program saves the scores on a single-density track 16, sector zero that would conflict with TRSDOS 1.3 and other Model III DOSes, because it requires single-density tracks and conflicts with some of the DOS as it is stored. The data for the talking voice is also stored in single-density format. All this makes the program unavailable as a command file.

In spite of this inconvenience in the disk version, Sneak Thief is an entertaining game sure to be popular with arcade fans. ■

Early Games
Counterpoint Software
Shelard Plaza North
Minneapolis, MN 55426
Models I and III
Color Computer
Disk or cassette
\$29.95

by Don Stauffer

Early Games is a delightful disk of Enine educational games for pre-school children.

Although the program is essentially self-documenting, a brief but well-written manual accompanies the disk or cassette to explain loading procedures and present a one-paragraph summary of each game. The instructions do not mention the games' sound feature, but it is important.

The menu is educational and appealing in itself. It flashes a typical scene from each game on the screen for a few seconds, in a repeating pattern. The child depresses any key while the frame indicating the game he wants to play is on screen and the game loads. Your child does not need to read to operate the menu.

running out of diskettes?
how many floppies do you have?
only listen to records on one side?
only play tapes on one side?

STOP WASTING HALF YOUR MONEY & MEMORY

EXACTLY.

Why should your single-sided diskettes be readable and writeable only to one side? THESE TIMES DEMAND THAT EVERY DOLLAR YOU SPEND HAVE THE POWER OF TWO

GREAT FOR:

1. Saving storage space
2. Increasing memory
3. Making backup copies
4. Saving money
5. Fun to do

5 1/4" FLIP-IT

Now you can easily convert your single-sided Floppies into Flippies (diskettes) using FLIP-IT's pat. pend., clumpyproof, leeryproof, conversion Kits. Works with single, double or quad density — hard or soft sector. With FLIP-IT, there is:

8" FLIP-IT

NO NEED TO:

1. Measure.
2. Make alignment marks.
3. Take media out of jacket.
4. Alter your hardware.
5. Buy additional software.

"FLIP-IT was very easy to use... converted... four boxes of diskettes in less than one half hour... Used other side... No Problems."

John DeMeritt, Belmont, MA

"No errors in reading or writing data in spite of heavy use... will continue to recommend to my friends and clients."

Joseph Wiellette, Brookline, MA

When ordering, remember to specify your computer system

- a) 5 1/4" FLIP-IT: for all 5 1/4" computers incl. Apple, IBM, Osborne, Atari, Radio Shack, Commodore, Victor, Kaypro, Franklin & more only \$29.95
- b) 8" FLIP-IT: for 8" computers incl. IBM, Wang, Altos, Radio Shack, DEC, DG & more only \$34.95
- c) Labels: (self-sticking, 100 ea.) only \$3.00
- d) Write Protect/Enable Tabs: (100 ea.) \$2.65
- e) Hub-Reinforcer Kit: (positioning tool for hub-opening)
5 1/4" disks: \$10.99 8" disks: \$12.99
- f) Hub-Reinforcer Rings: (50 rings ea for hub-opening)
5 1/4" disks: \$5.85 8" disks: \$7.20

FLIP-IT

works!

At any time, the child can return to the menu by pressing enter. He can operate the system by himself once the program is running.

Each game might not hold a child's

attention for long. However, the variety of games and the menu's friendliness allow him to operate the program for a long time without help.

The first program is a matching num-

bers game. A single, large numeral appears on the screen, and the child must press the corresponding key. If he presses the correct key, a happy tune plays and a new letter appears.

Pressing the wrong key results in a sad pair of notes; the character remains for another try. Since the screen display doesn't change until after the happy tune, the positive audio feedback is important to the child. Sound should accompany this game whenever possible.

Next is a counting game. Anywhere from one to five blocks appear on the screen, and the child must press the correct number key. Again, the sound provides immediate feedback for a correct choice. The use of numbers between one and five is important for the pre-school audience.

An addition game follows. Two groups of blocks appear with a plus sign between them. The child must choose the key corresponding to the sum of the numbers in the blocks. Again, the total does not exceed five.

A subtraction game has the same for-

Dot Writer Ver3.0

- ★ NEW TINY GEAP CHARACTER EDITOR INCLUDED
- ★ CREATE OR MODIFY TYPE STYLES
- ★ NUMEROUS SUPPLIED TYPE STYLES
- ★ MANY ADDITIONAL TYPE STYLES AVAILABLE
- ★ SUPPORTS EPSON, C.I.TOH PROWRITER, PMC 8510, GEMINI 10, NEC 8023 - MORE TO COME
- ★ COMPATIBLE WITH MOST WORD PROCESSORS
- ★ OVER 50 PRINT CONTROL COMMANDS
- ★ COMPATIBLE WITH MOST DOS'S
- ★ CONTROL SPACE BETWEEN LETTERS AND LINES
- ★ TRUE PROPORTIONAL PRINT AND SPACE
- ★ SUBSCRIPT, INTERMIX TYPE STYLES ON LINE OR WITHIN WORD
- ★ INTERMIX GRAPHIC AND TYPE STYLES ON SAME LINE
- ★ USER DEFINED AND CONTROLLED UNDERLINING
- ★ ALL NEW USER FRIENDLY MANUAL
- ★ TRS80, MOD I, III, MAX80, LNW80
- ★ CO CO SUPPORT SOON

You can create and print graphics like these - or you can choose from our library of over 60 type styles!

NEW NEW NEW We are now releasing the long awaited Writer Version 3.0. Dot Writer now includes new Tiny GEAP character creation program that is easy to use and very well documented. All creation commands are available for display on screen any time during the creation process. Tiny GEAP is a short version of the original Graphic Editor And Programmer. Version 3.0 also has many new commands. We have spent a great deal of time working to include the type of options users have asked for. We now have over 50 commands that give virtually total control of the printer. The original power of Dot Writer has been retained and is completely compatible with previously created print files. We have also added such features as vertical tabbing, multiple column printing, automatic index and contents generation, flush right concatenation control and much more. We have spent a great deal of time increasing the speed of the program. Though we are still limited by the printer speed, we have managed to increase the processing time in most applications. We have included more type styles than ever before. You still get the original 12 lettersets but in addition, we have packed even more on the disks. We have rewritten the manuals. New, easy to use and user friendly with plenty of examples! Now we include all printer and computer support with each program. No extra charges! All of this and a lower price too! The new version is only \$79.95 and updates for owners are \$39.95 upon return of the original Dot Writer disk. Now you can do it all for less.

DOT WRITER 3.0 with Tiny GEAP **\$79.95**

GEAP 2.1 is still available for the user who wants to create a video display, including Graphics, Text and INPUT statements and let GEAP write a BASIC program to recreate the screen. The resulting BASIC program can be merged into your own program.

GEAP 2.1 **\$45.95**

Letterset Manipulation Utilities is a package of 12 utilities that the typefounder will love. They allow easy and fast manipulation of graphic files and include: SPLIT to increase a graphic up to 16 times and maintain HI-RES, COPY to mix letters/groups of letters with a letterset. Put the lowercase of one style with the uppercase of another. EXPAND to magnify letters in the file. Also rotation, mirror, italic routines and more!

Letterset Manipulation Utilities **\$39.95**

ADDITIONAL TYPE STYLES - we have 5 font disks available now and many more on the way. These font disks can be used with LAZY FONT too! Write for samples of the type styles that are currently available.

FONT DISKS **\$29.95 ea.**

RGM Computers

221 Hirschfield Dr., Williamsville, N.Y. 14221 (716) 634-3026

mat. A minus sign separates the two groups, and the child must respond with the difference. This game is much harder, since subtraction is a more difficult concept than addition. However, I was impressed with how quickly a child who had never been exposed to subtraction could grasp the concept using this game.

Two alphabet games are similar to the number games. The first is a recognition game, except it displays large alphabetical characters. The second teaches the order of the alphabet. The child presses the key for the letter that follows the one displayed on the screen.

Names is a simple spelling game using the child's name, which the parent enters. The cursor advances after the child types in each correct letter. As in the previous games, sound provides immediate feedback.

The shape comparison game is the highlight of the program. Four shapes appear on the screen, three identical and one different. The shapes are simple ones: blocks with markings, triangles, and hourglasses. This discrimination

between like and unlike forms is crucial to the intellectual skills a young child must master for reading and math readiness.

The last game, a drawing program, is a favorite of children who tried this collection. The child moves the dot with keys, but not the normal arrow key arrangement. Keys on the keyboard's left move the cursor left, keys on the top center move it up, keys on the upper left move it diagonally left and up, and so on.

Even with experience, you might not be sure which key does what. I'm not convinced that this is better than using the arrow keys, and it's the main criticism I have of the program. However, children do not seem to mind the inconvenience of the dot occasionally going where they don't want it to.

Another slight problem is that the cursor always draws a line behind it or erases a previously drawn line. This makes the game easier to handle without a separate menu, but it also creates some frustration.

Aside from math and reading skills, this program teaches computer literacy by increasing the child's familiarity with key positions and with the computer itself.

Other than the criticisms I mentioned in the drawing game, I found few flaws in the program. I'd suggest that a change in the screen display following a correct choice would provide more immediate feedback for models without sound.

This is the most effective educational program I've seen for preschoolers. Three-year-olds could handle many of the games with some adult help, while four- and five-year-olds can spend hours alone with the games.

The ease of operation is truly impressive. Model I and III disk versions are even auto run, so the child can bring up the system by himself if you trust operation of the disk drive to him. If you bought your system with the idea of using educational software to help your children, this is one program you don't want to miss. ■

FREE EPSON MX-80 PRINTER

With the purchase of a TRS-80, Model IV

For a limited time, Data Services, Inc., will give you a FREE Epson MX-80 Printer (\$645 value), when you buy a TRS-80 Model IV, 48K, with two 40 track drives. Call for our newest low prices. (Includes RS-232, Printer Cable, TRSDOS)

*Standard Pascal
User Reference Manual*
Doug Cooper
W.W. Norton & Company
500 Fifth Ave.
New York, NY 10110
Softcover, 176 pp.
\$12.95

by John B. Harrell, III

Since its inception by Kathleen Jensen and Niklaus Wirth, Pascal has been one of the most controversial of languages. Doug Cooper has written a concise and clear manual to explain all aspects of Pascal as the International Standards Organization (ISO) has defined them.

This is truly a reference document. *Standard Pascal User Reference Manual* attempts to clarify the stilted, terse language definitions in the ISO standard.

Mr. Cooper's *Standard Pascal* is easy to read. He develops the notation of Backus-Naur Formalism (BNF) to describe the productions that precisely specify the language's syntax.

He also develops and uses syntax charts (railroad charts) to amplify his explanation of the constructions. This provides clear, visual representation of the BNF forms, which might be confusing even to the experienced reader. Syntax charts are somewhat simplified and the language's complete definition still comes from the BNF productions.

Standard Pascal User Reference Manual has 12 chapters that fully describe the ISO standard definition's implementation of the language. In addition, several appendices address a quick introduction to Pascal, a cross-reference of the BNF forms to the textual material, and syntax charts for the BNF descriptions.

After explaining the notation and defining the basic element of programs as tokens, Mr. Cooper thoroughly discusses the groups of tokens allowed in Pascal. He discusses each group of tokens using the BNF form to describe allowed syntax and gives examples of proper and improper constructions.

Next, he presents each statement that the ISO standard recognizes. Mr. Cooper discusses each Pascal control statement. Here lies the strength of Pascal: The richness of the control state-

ments allows complete structuring and proper control of programs without the confusing GOTO statement so prevalent in Basic and similar programming languages.

Mr. Cooper describes each valid construction allowed for Pascal statements by giving the BNF production that governs it and a syntax chart to explain the BNF form. Myriad examples illustrate the constructions.

The following chapter launches into a discussion of the ordinary data representations in Pascal and the required functions. The initial discussion centers around the simple types the Standard requires.

The BNF description and several examples of right and wrong constructions explicate each simple type. Data

*"Pascal is a
strongly typed language;
you must define items
prior to use."*

type operators (such as addition and multiplication) are first described with their respective ordinary types.

Next, Mr. Cooper presents the required functions of the language. These have four types: arithmetic functions, transfer functions, ordinal functions, and Boolean functions.

Arithmetic functions provide certain mathematic functions expected in each language. Transfer functions don't have common mathematical analogies. These transfer type real data to and from integer data types. The ordinal functions allow manipulation of the ordering relationships.

After the discussion of the language's simple types, operators, and functions, you are ready for the syntax descriptions of simple expressions. Mr. Cooper presents the operations needed in these expressions with a complete discussion of their function on the operands and the precedence of evaluation. Charts provide a complete understanding of each operator's symbol, the operation performed, the operands' data type, and the result's data type.

A program is worthless if the programmer cannot communicate with it

via some form of input and output. This is often the most difficult part of the program's definition: specifying input and output format so the data makes sense to the user. The simplest form of communication with a program written in Pascal is text.

To allow a reader to understand the program segments more clearly, Mr. Cooper provides an early introductory section on text file input and output. This gives you a basic understanding of input and output in Pascal programs, but by no means presents the intricacies of file manipulation (one of Pascal's strong features).

Pascal is a strongly typed language; you must define items prior to use. This definition creates a data item and a data type that remains associated with the item throughout the activation of the block containing each item. You can think of activation as the execution of a particular block of code.

For example, the procedure block "carddeal" defines several variables for use during its execution, but these variables do not exist outside this procedure and have no space in the computer's memory until it executes this procedure.

The last part of the book discusses the complex data typing that sets Pascal off from other languages and makes it strong. As described before, several ways to represent data exist in Pascal programs. You can combine these data types into very complex and powerful data structures by using Pascal's language features.

In addition to the simple data types, the book describes several other types. The enumerated ordinal type allows the programmer to name values to use as constants. For example,

TYPE cardtype = (spade, heart, diamond, club);

might be the definition of type for the variable "card." Then you can assign card any of the four alternatives specified, and test for any of these selections.

To accomplish this in Basic, you would have to use integer values to represent the cards and then make the assignments. Constants of this type (spade, heart, and so on) do not have any external representation. They are self-sufficient as written and you cannot transmit them to text files for input and output.

Subrange types allow the definition of a variable or type over a preselected

13 TIMES FASTER THAN dBASE II™

If you bought your computer to save time, then you need SUPER, the most powerful database system you can use. Power is a combination of speed, ease of use and versatility. SUPER has them all.

FAST - To demonstrate SUPER's speed, ISA retained a professional dBASE programmer to benchmark SUPER vs. the acknowledged leader. A simple mailing list application was chosen to minimize dBASE programming cost. The results:

Task	SUPER Time	dBASE II Time
Set up/Program	5:20 min.	12:18:00 hrs.
Input 100 records	50:29 min.	1:27:50 hrs.
Sort & Print Labels	6:41 min.	4:18 min.
Totals	1:02:30 hrs.	13:50:08 hrs.

Notice that SUPER was faster at every task where *your time* is involved—and saving your time is probably the whole reason you bought a computer.

EASY TO USE - SUPER won because of its ease of use. Since it is menu-driven, office personnel can easily learn to use SUPER to set up their own applications, speeding and simplifying dozens of tasks without the need of programmer support.

VERSATILE - SUPER, unlike other business programs, doesn't dictate how to run your business. With SUPER the computer does what *you* want, when *you* want, the way *you* want it. **SUPER may be the only business program you'll ever need.** It can handle customer files, payables, receivables, depreciation, appointments, cost accounting, time charges, commissions, inventory, manufacturing control, and even matrix accounting systems!

SUPER PERFORMANCE AT A SUPER PRICE -

That SUPER beats the \$700 dBASE program may surprise you, but in terms of price vs. performance SUPER has no competitors. Among its features are: production input, data compression, multiple databases on line, transaction posting, file reformatting, stored arithmetic files, flexible report formats, hierarchical sort and multi-disk files for up to 131,068 records. It can select by ranges, sub-strings, and field comparisons. It interfaces to word processors such as WordStar™, SuperSCRIPTSIT™, Model II/16 SCRIPTSIT™, and NEWSRIPT™. In fact SUPER has so many features that

it takes a six-page product description to cover them all. Write or call and we'll send you one.

SUPER is available for TRS-80™ Models I & III under NEWDOS™, LDOS™, and DOSPLUS; for TRS-80 Models II, III and 16 under TRSDOS™; and CP/M™ systems.

Prices: TRS-80 and Osborne versions	\$250.00
Other CP/M versions	\$295.00
Manual (Price applicable to purchase)	\$ 25.00
Now available for IBM-PC	\$250.00
MasterCard and VISA accepted.	

OTHER SOFTWARE

- **ManageMint™**: A PERT/CPM project management system compatible with SUPER. It includes scheduling, resource and financial management modules.
- **Sales Planning and Data Extraction System**: Improves hit rates while cutting costs.
- **Small, economical program packages** for accounting, business and office applications as well as utilities.

LOAD 80

**TO YOUR
RESCUE**

LET LOAD 80 AND COLOR LOAD 80 RESCUE YOU

In the dawn of the computer age programmers needed the patience of Job to manually keyboard all the major program listings from a single issue of 80 MICRO.

Then LOAD 80 burst onto the scene and exploded that practice. Today thousands of TRS-80* owners use LOAD 80 cassettes and disks every month. These time-conscious computerists spend more time enjoying all the benefits of those 80 MICRO programs.

LOAD 80 programs come directly from 80 MICRO giving you complete and detailed documentation right there in the magazine. And now, the new disk transfer system allows Model III users to run LOAD 80 disks without conversions.

Save close to 30% on the single issue price by subscribing to LOAD 80 today (choose either monthly cassettes or disks).

Color Computer users can now order our September 1983 Quarterly, containing programs from the July, August, and September issues of 80 MICRO) available September 1983). Also available is the "Best of '82" cassette, containing Color Computer programs from the 1982 issues of 80 MICRO.

Start enjoying all the benefits of the programs in 80 MICRO without all the programming hassles. Fill out the attached order form and send it to LOAD 80, 80 Pine Street, Peterborough, NH 03458. Or call toll free and use your Master Card, Visa, or American Express.

****ATTENTION MODEL III USERS****
New, Improved Operating System!
—Ready To Run!!

1-800-258-5473

NEW DISK TRANSFER SYSTEM ALLOWS LOAD 80 TO NOW BE RUN ON MODEL III SINGLE DRIVE UNITS WITH NO CONVERSIONS NECESSARY!!

LOAD 80 is simply the listing from 80 MICRO. Use the KEYBOX accompanying each article as your guide to system configurations. LOAD 80 runs on the *TRS-80 Model I and Model III computers only. COLOR LOAD 80 runs on the *TRS-80 Color Computer only. *TRS-80 and Color Computer are trademarks of Radio Shack, a division of Tandy Corp.

REVIEWS

Continued from p. 64

subrange of the spectrum of allowed values. Both types aid Pascal programs in self-documentation. They cause the information that must otherwise appear in comments to become an integral part of the programs.

The next chapter describes structuring these data types into complex types you can use to store more than one value in a single variable. These are the building blocks used in Pascal to form complex data structures. Mr. Cooper thoroughly describes the major constructions: record and array.

The remainder of this chapter discusses file type. All previously discussed data types are limited to the working size of the computer's store, while type file is limited only to the external storage device's capacity.

The last chapter describes the use of pointer variables. You allocate memory space for all the variables in a procedure block each time you activate it, and de-allocate memory space on termination of the procedure. Once defined, however, the variable structure (activation record) is fixed during the procedure's execution.

Pointers allow truly dynamic data structures that you can create and alter during execution of the program or any procedure contained in it. These structures can remain active even though the procedure that created them has terminated.

Mr. Cooper has provided a valuable tool to programmers using Pascal and those attempting to establish a working Pascal system on computers. He pre-

sents a difficult topic—the standard definition of the language—in clear, concise terms.

His many examples are extremely helpful in understanding the concepts of BNF productions as a tool to language description. You don't need an education in computer science to read Mr. Cooper's reference text.

The material in *Standard Pascal User Reference Manual* is beneficial to anyone who wishes to increase his working knowledge of Pascal. Due to the complexity of the language description, I do not recommend this as a text for the beginner.

It's a text for the Pascal programmer to enhance his fluency in the language and I heartily recommend this book to him. ■

Structured Assembler and Linker
Blackbeard Associates
 13534 Preston Road
 Suite 443
 Dallas, TX 75240
 Models I, II, and III
 \$149

by Bruce Powel Douglass

Structured Assembler and Linker (SALC) is a new concept in assemblers for the microcomputer. It allows *structured* statements in your Assembly-language programs. Conditional branches and loops are easy to write and understand with the English-like struc-

ured control statements. These include If . . . Then . . . Else, While, Repeat, and Case. It minimally supports procedures and functions as well.

SALC also supports unstructured Assembly language so you needn't rewrite all the routines and programs you've already written. SALC allows you to create multiple relocatable Assembly-language modules larger than your computer's memory.

The linker links these separately compiled pieces together into a complete program. The programmer can build subroutine libraries with external declarations to use from other Assembly-

language routines.

The assembler is not field sensitive; it recognizes a label or an instruction no matter where it occurs. Thus, you can indent your programs to more clearly show control construct nesting (as is common in Pascal and other structured high-level languages).

SALC allows long labels, and the first 16 characters are significant. Labels can include upper- and lower-case letters, and three special characters: the underline, the at sign, and the colon.

Constructs and Options

The use of structured constructs makes Assembly-language programming much easier to read and write. Consider Program Listing 1. Normally, this takes the form of Program Listing 2.

Which is easier to read? Which do you think is easier to write? The closer the language is to how people think, the higher its level. Defined this way, SALC is a middle-level language. You're still speaking the computer's language, but its IQ is a little higher.

Consider a routine that performs different tasks on the basis of a returned result. In Z80 mnemonics, this involves a series of tests (CP) followed by jumps (JP). SALC simply performs the routine with the Case construct (see Program Listing 3).

The assembled program contains the CP and JP instructions necessary to implement the Case statement, since Case

```

ARE YOU TIRED OF BLASTING ALIENS?

Have you had too much of firing laser cannons, guarding fuel canisters, eating ghosts, avoiding missiles, and just plain getting killed off in pursuit of a few points? Or maybe you never really liked arcade games in the first place; either way, there is a program that you shouldn't be without. The name of this program:

SUPREME RULER

You become leader of a small and struggling country, attempting to stay alive, and expand if you can. Your government will have to deal with the many things every government runs in to; things like protecting your economy (or else risk a recession), providing services and food for your people, stimulating industry and encouraging new business, managing your government revenues, and controlling your army. From 1 to 4 players can take part if you have 16K of memory, or up to 9 players with more memory. If you don't have enough people around, you can assign any number of the countries for the computer to control. (The computer is a worthy opponent, and it plays by all the rules!) You won't quickly become tired of this program, since you will have to make very many decisions to become a successful ruler; you must ponder tax rates, food distribution, government services, large-scale loans, your army's status, your battles, and much more.

Included with the program is a 40 Page Handbook on how to rule a country successfully. (It is 8 1/2 by 11 inches, spiral bound; most business programs don't have a manual as good as ours!) The program is top-quality with excellent input and display routines.

The 16K and 32K versions are provided together on cassette; the 32K version contains a SAVE GAME feature. PRICE: **\$18.50**

A 32K version (with SAVE GAME) is provided on diskette. PRICE: **\$20.50**

For those of you with 48K: SUPREME RULER PLUS!

We fill up the extra memory with features such as Research/Development spending to make your army more efficient, a credit rating system, expanded reports for information about your country, more intelligent computer opponents, selectable computer "skill levels" (the computer countries can be anything from "Defensive" to "Aggressive"), and MUCH MORE!

With a 50+ Page manual (re-written specifically for SUPREME RULER +), and the program provided on either Cassette or Diskette. PRICE: **\$26.50**

(Note: Any SUPREME RULER Purchaser can upgrade to SUPREME RULER + at any time by returning the original disk/cassette and paying only the difference in price plus \$1 shipping.)

AND FOR THOSE OF YOU WHO ARE NOT TIRED OF ARCADE GAMES . . .

EXTERMINATE!

This 100% Machine Language program will challenge any arcade-game player. An original idea (as far as we know), in which your job is to prevent hordes of alien "BUGS" from escaping out of an underground cavern, by destroying ("Exterminating") them. For the novice, this game becomes only gradually more difficult, so as not to intimidate the player. But for an advanced player, there are methods of getting to the higher skill levels very quickly. EXTERMINATE! is a game with quality graphics and sound, and surprises to keep you busy at every new skill level.

EXTERMINATE: 16K and 32K versions on same Cassette - **\$15.50**

Model I/III 32K program on Diskette - **\$17.50**

CLEARANCE!!!

We constantly examine and update our software offerings in order to make sure that they all live up to our current high standards of quality, and sometimes we remove a program from our line-up. This recently happened to our battle-simulation program, THE BATTLE OF ZEIGHTY. So now we have stopped producing it, but we still have a pile of them stocked up in our inventory. To get rid of them, we've cut the price IN HALF! (Previous purchasers have been compensated.) With this special offer there will be no warranty other than the Media Guarantee. (There will be no updates or returns.)

This is not to say that THE BATTLE OF ZEIGHTY isn't a good program; it is a well-made one player game. It allows you to set up a small army to your own specifications, and then you must use it to try to take over the fictional Zeighty Pass. You give each of your army divisions specific orders, while the computer plays the defending army. The display is satisfactory, consisting of a "Map" that shows the position of the army divisions. Land features (terrain) are not taken in to account, but you'll have enough to keep you busy. The program contains a wide set of commands and options (such as mines, artillery, 4 different division types, and more). It also has a built-in "HELP" function.

With a 20 page, full size manual; for 16K, Cassette - **\$ 8.95**
32K, Diskette - **\$10.95**

OUR "TRIPLE PROTECTION" GUARANTEE

In today's software world it is hard to tell a good program from a bad one by only a magazine ad; that's why JMG has a warranty plan that will guarantee your satisfaction. Here is our "Triple Protection" guarantee:

- 1) QUALITY GUARANTEE:** If you are unsatisfied with the software product you have purchased, you may return it (in good condition) within 14 days for a refund, less a \$2 handling charge. (We also ask that you send us a brief letter stating the reason for your return.)
- 2) UPDATES GUARANTEE:** We always listen to our customers, and we often improve and expand our software products on the basis of their comments. If we make an improvement to a product and release a new version, all our previous purchasers will be notified and offered the update. To receive an update, you only have to return your original disk plus \$1 for shipping costs.
- 3) MEDIA GUARANTEE:** The diskette or cassette has a Lifetime Guarantee. If yours turns out to be defective, or it fails and you do not have any backups made, then just return the disk/cassette and we'll replace it.

TO ORDER:

Just pull out a piece of paper and write the following information down:

- 1) Your name and address (including zip/postal code)
- 2) The program you would like.
- 3) Disk or Cassette?
- 4) State the computer you own. (Model I or III? How many Disk drives? 16K, 32K, or 48K?)
- 5) Enclose either payment (check / money order) OR Credit Card name & number, and expiry date.
- 6) Mail it to JMG, to either of our addresses.

OR

Go and see your nearest dealer. If he doesn't carry JMG programs, shout at him a bit.

is not a Z80 command. However, it takes care of some of the details that make Assembly-language programming a chore.

SALC minimally supports Procedure and Function constructs, used as sub-routines in high-level languages. No parameters are explicitly passed in either of these constructs. This means

no local variables and no recursion. Well, you do have recursion in your subprogram, but you must manipulate the stack yourself.

It would be nice to specify the registers to save on stack directly in the procedure or function statements. The program could then assemble the procedure calls as a set of Pushes followed

by a Call.

The Procedure and Function constructs improve reading the source code. They are essentially ignored except they provide a label for the subprogram. If your procedure is the one in Program Listing 4, you would execute it with a Call statement, such as:

CALL DivideHLby8

The Procedure and Function constructs are assembled identically. Nor-

```
CALL GetInputChar
CASE
  A,EQ,'1' THEN
    ... ;THIS CODE EXECUTED ONLY IF
    ... ;THE A REGISTER HOLDS A '1'
  END
  A,EQ,'2' THEN
    ... ;THIS CODE EXECUTED ONLY IF
    ... ;THE A REGISTER HOLDS A '2'
  END
  A,EQ,'3' THEN
    ... ;THIS CODE EXECUTED ONLY IF
    ... ;THE A REGISTER HOLDS A '3'
  END
END ;END CASE STATEMENT
```

Program Listing 3

```
PROCEDURE DivideHLby8
  LD B,3
  XOR A ;clear carry and zero A
  WHILE B,NZERO DO
    SRL H ;shift right logic into carry
    RR L ;rotate carry into L
    RR A ;rotate carry into A
    DEC B ;three times
  END ; end WHILE
  ; NOW HL IS DIVIDED BY 8
  ; AND A HAS THE REMAINDER
END ; end DivideHLby8
```

COMPUTER-PERIPHERAL SWITCHERS

Connect any number of peripherals to a single I/O port — use a single printer to support several microcomputers — use two or more printers to support a single microcomputer — access a modem from any of several microcomputers — Ideal for demonstrating or comparing equipment. The Selecto-Switchers are designed to eliminate the unnecessary plugging and unplugging of cables which connect printers, terminals, or modems to various computers. By using a Selecto-Switch, you achieve more efficient system operation, better utilization of peripherals & computer ports, eliminate redundant hardware & reduce service calls. 5 yr. limited warranty on all Selecto-Switchers. No power required. Size (inches) 10L x 7W x 3 1/2 H.

CONTROL DATA KEYBOARDS

- 7-bit Parallel ASCII
- SPST Switching
- FTZ Shielded Base
- N-Key Rollover
- 128 Character ASCII
- Non-Slip, Non-Glare Keycaps
- CDC752 Terminal Keyboards
- Attractive Case

These Control Data Keyboards consist of a base, cover, the keyboard assembly, and an interface cable. Color (case): Harvest gold and black. Color (keycaps): Black, blue, and red. Electrical requirements: +5V @ 600mA, -12V @ 50mA. Size: 21 1/2" W x 9" D x 3 1/4" H. Weight: 6 lbs. All units brand new in original boxes, specifications included.

Keytronics 90-Key Soft-Programmable Keyboard WITH SECURITY KEYLOCK SWITCH

BRAND NEW!

- RFI shielded
- Cursor controls
- Numeric keyboard
- 8-bit Parallel
- Capacitance key
- 10 user-programmable keys
- Positive TTL Logic
- Size: 17" L x 8 1/2" W x 2 1/4" H

Made for Visual Technology, this keyboard features: a security keylock (includes two keys) to guard against unauthorized use; an 11-key numeric keypad; cursor controls; and 10 user-programmable keys. Electrical requirements: +5VDC. Color (case): White. Color (keycaps): Black. Complete with case, keyboard assembly, 40-inch interface cable, and schematics. Weight: 7 lbs.

III's Black Hole EPROM Eraser

9 Chips — 8 Minutes

The Black Hole EPROM Eraser will completely and safely erase 9 EPROMs in less than 8 minutes. The Black Hole is a fully automatic cassette loading eraser featuring U-shaped 4000 hr. UV lamps mounted in a special ALZAK (UV reflectivity of 91) parabolic light tunnel. In operation, the user slips in an anti-static Bug Box (3 ea.) containing the EPROMs to be erased into the loading slot on the front panel of Black Hole. The rest is fully automatic. The Black Hole launches the Bug Box into place, turns on the UV lamps and starts its fully solid state (CMOS) UV integration dose timer. The percentage erasure time is monitored and displayed on a front panel LED readout. At the end of the erase cycle, the Black Hole ejects the Bug Box containing the 9 erased EPROMs and turns off power.

PART NO.	PRICE
ULV-008 Replacement Lamp for ERS-006	\$29.95
ERS-008 Eraser, Auto Eject & LED Readout	\$249.95

IBM MEMORY EXPANSION KIT

SAVE HUNDREDS OF \$\$\$ BY UPGRADING MEMORY BOARDS YOURSELF!

Most of the popular memory boards allow you to add an additional 64K, 128K, 192K, or 256K. The IBM64K kit will populate these boards in 64K byte increments. The kit is simple to install — just insert the nine 64K RAM chips in the provided sockets and set the two groups of switches. Directions are included.

The FDD100-8 8" Floppy Disk Drive (Industry Standard) features single or double density Recording mode, FM single, MFM double density. Transfer rate: 250K bits/sec. single density, 500K bits/sec. double density. The FDD100 is designed to work with the single-sided soft sectored IBM Diskette I, or eq. disk cartridge. Power: 115VAC @ 50-60Hz; +24VDC @ 1.7 amps max.; +5VDC @ 1.2 amps max. Unit as pictured above does not include case, power supply, or cables. Size: 8.55" W x 14" L x 4.5" H. Weighs 12 lbs. Incl. 95pg. manual. Price
 FDD100-8 . . . \$169.95 ea.

mally, a function is a subprogram that returns a simple value, but this is not a high-level language so no difference exists between them. Their function is to better document the programs. You can call the subprograms that return values (called functions) as well as those that do not (called procedures).

Besides the structured Assembly-language constructs, SALC supports a number of options, including assembler directives. Some assembler directives include a title for your assembly listing, page ejection, and the Include directive.

The Include directive lets you insert another source assembly file anywhere within a source program being assembled. When the program reads the Include statement, it loads and assembles the specified file name. You cannot nest Included files. This allows a method of linking program segments together besides using the linking loader.

SALC has a multipass assembler. You have several options available during assembly and linking. You specify these with a /X (where X is a letter de-

noting an option) on the command line.

Options include outputting an indented source file, specifying whether or not to be case-blind (a is the same as A), outputting the error messages to a log file or the screen, and waiting for disk change.

Another useful option is creating a Microsoft compatible relocatable object file. You can link these files with the Microsoft linking loader to compiled Basic, Fortran, or any M80-compatible compiled language.

Summary

On the negative side, SALC does not provide an editor. It takes standard ASCII file format. I use my NewScript word processor to create my SALC files.

A more serious problem is that currently SALC only runs with TRSDOS and LDOS. Programmers who prefer MULTIDOS, NEWDOS80, or DOS-PLUS must sit this one out. SALC might work with some of these operating systems, but it doesn't specifically support any besides TRSDOS and LDOS.

The manual is a bit terse for my tastes. It describes all the structured constructs, and presents some brief examples to show syntax. The end of the manual contains a rather large calculator program (provided on disk as well). The manual could use some middle-level examples.

SALC comes with assemblers and linkers for both Z80 code and 8080 code. The 8080 version is primarily for CP/M folks, I suspect. But if you prefer 8080 programming to Z80, it has a separate assembler. The calculator program is in source, absolute object, and relocatable object code format, in both 8080 and Z80 mnemonics.

My opinion of SALC is quite high. There are a few drawbacks, but the only serious one is that the assembler does not support all DOSes. It works well, but you'll take a while to get used to the structured language constructs. However, considering the time and effort using them saves, the work is insignificant compared to the benefits. ■

Gold Plug - 80

TRS - 80+MOD I, MOD III, COCO

A hhhh, instant relief! At last there is a permanent cure for contact oxidation on Model I edge connectors. Many TRS-80 users are familiar with the symptoms: untimely resets, spontaneous reboots, or the inability to get the computer started at all without a frustrating session with a pink eraser.

The Gold Plug 80 is a well made device consisting of an edge-card plug with gold plated contacts, available with either 34 or 40 contacts. The rear of the plug has ter-

minial tabs which fit exactly over the existing foil fingers on the TRS-80's connectors. After installation, the original plugs have been extended about a half inch, meaning that the plastic door covers no longer fit. This did not trouble me, but you should take it into consideration. E.A.P.'s advertising leaflet, by the way, cautions you about the doors, which is refreshing. They also have the excellent policy of permitting you to return any plugs ordered for a refund if after seeing them you are un-

willing to undertake the installation.

An excellent set of instructions accompany the plugs, and they are shipped promptly. I ordered mine by mail on a Monday and received my set of plugs by first class mail on Tuesday of the next week.

Installation

Installation requires a soldering iron (I use a 40-watt Weller), Rosin-core solder, a Phillips screwdriver, and your last Pink Pearl. The keyboard and Expansion Interface have to be disassembled to get at the connectors, which are then cleaned—the eraser's last fling. The Gold Plug 80 is fitted over the existing plug with the contacts centered, and then soldered to the board. I have some soldering experience, but it proved to be an easy, safe job. The contact is heated, a very small amount of solder applied, and then you go on to the next contact. It took about an hour to do all six plugs.

Lazy Writer Extensions
AlphaBit Communications Inc.
 13349 Michigan Ave.
 Dearborn, MI 48126

by **Dan Robinson**

Lazy Writer has grown a bit in recent months. AlphaBit Communications, the original manufacturer of Lazy Writer, has added a number of extensions to the popular word processing program.

Various extensions display text format, align tables by decimal point and produce totals, incorporate illustrations in your documents, and construct Do files to set up your word processing session. Another extension provides fill-in-the-blank capability.

A "quick" version of Lazy Writer is also available, as well as Electric Webster's new option for automatic hyphenation.

Formatter

Formatter displays the location of line and page breaks as an aid to hyphenation, header changes, and footnoting. When you press the clear and enter keys, the Formatter module searches through the text and clears the screen to present the word, byte, and character count, as well as the number of the last page.

If you return to edit from this point, you'll see a large bar across the screen at page breaks, and centered text is indeed centered on the screen. The text does not appear indented or justified, but the lines terminate at exactly the character displayed. The module does not show headers and footers, but it accounts for them.

The Formatter enhancement is particularly valuable in making certain that a heading isn't cut off from its text, or that tables aren't broken in the middle. Knowing the page breaks, you can insert footnotes in the proper place or change headers and footers.

Another option from the Formatter menu is hyphenation. You select the minimum number of characters to add to each line, and your text appears line by line. The cursor blinks at the last opportunity to hyphenate, and you can move it to the word break.

When you press the hyphen key, For-

matter breaks the word, inserts a hyphen, and adjusts line lengths. Lazy Writer moves on to the next hyphenation opportunity. If you want, you can put soft hyphens in the text rather than hard ones, so printed text breaks at that point only if necessary.

Formatter also error-checks for any goofs you might have made with control codes. It flashes an error message and places the cursor over your mistake. You must reformat text prior to printing.

Formatter is now standard on new

"Formatter... is particularly valuable in making certain that a heading isn't cut off from its text..."

copies of Lazy Writer, and is a \$25 upgrade for current owners.

Lazy Calc

Lazy Calc performs the four basic math functions on figures in your text file and inserts the result in printed copy.

It specifies the number of columns to be used in a nonprinting comment line, and identifies the location of the answer using # signs equal to the number of its digits.

Addition is the default function, so the standard mathematical sign (-, *, or /) must precede the number if you want other functions. Then the program places block move markers from the first number to be calculated to the last digit in the total. You call Lazy Calc from the Lazy Writer directory to perform the math and insert the answers in the text file.

You can pass information to Lazy Calc in comment lines, and mark numerical data (such as dates or check numbers) so it does not become a part of the result. Lazy Calc also functions with alternating credit/debit columns like those used in a balance sheet.

The printed result will be much like Basic's Print Using statement, with a

specified number of digits behind the decimal point, and commas and dollar signs in place. If you make an error, the program returns to your text with the cursor over the mistake.

The program doesn't pretend to compete with spreadsheets, and you'll find that totaling short columns is faster if done manually. Longer columns make the formatting worthwhile, but any number-editing requires repeating the whole process.

The price of Lazy Calc is \$29.95.

Lazy Tab

Lazy Tab lets you set or reset tab positions. Place the location of desired tab settings in a nonprinting comment line, and call Lazy Tab from the Lazy Writer directory. All tabs change to the new specifications.

Lazy Tab also includes a decimal align command to neatly stack your figures one above another, and is compatible with Lazy Calc. Lazy Tab sells for \$15.

Lazy Draw and Lazy Do

Lazy Draw is a separate command file that lets you create illustrations. You can include these in your text file and print them as TRS-80 block graphics.

Draw pictures with the arrow keys, and erase errors by holding the clear key while moving the cursor. You can type text into the picture, and save the result to disk. The screen is saved in ASCII code with an optional offset for printers like the MX-80.

You can load the completed file together with text files and print it as you would any other document. It might require a bit of experimentation to get the desired result, since the Lazy Draw could misinterpret the graphics codes and alter format counters.

The program works only with printers that respond to ASCII codes to print block graphics. The MX-80, for example, prints block graphics as it does with Grafrax 80, but it doesn't function with Grafrax Plus.

Lazy Do is very similar to a DOS Do command or chain file. The program holds a series of instructions to load Lazy Writer, bring up a given document, call a menu, set desired parameters, or perform a given task.

Lazy Draw and Lazy Do come as a pair for \$19.95, or you can order the

We can't keep it secret any longer

**Data-Writer outperforms
Maxi-Manager.
Outperforms Aids-III.
Outperforms Profile III +.**

**Data-Writer is
more powerful,
more flexible, and
easier to use.**

Data-Writer™

But you don't have to take our word for it. Here's what the critics said:

- **80-MICRO:** "Data-Writer seems to have good speed and bug-free performance. It has a great deal of flexibility and capacity, and the ability to restructure an existing data base to meet changing needs gives it a big boost. For Electric Pencil or Scripsit fans, the capability of using an old favorite to maintain a mailing list or data base makes Data-Writer a winner."
- **COMPUTRONICS:** "Here's a program capable of outstanding performance in the preparation of any type of data base...without any previous computer software experience being required of the user. I recommend it without qualification."
- **80-US JOURNAL:** "The manual uses a learn-by-doing approach and is so effective that on the first try a complete and highly functional data base was set up. Reports and customized printouts can be generated in minutes."
- **COMPUERVE:** "What most distinguishes Data-Writer is that files can be created and maintained with an ordinary word processing program...The 80-page instruction manual is very well done and the whole system is easy to use."

Data-Writer is useful! Users around the world have discovered the power and flexibility of this extraordinary data base manager that works by itself or with a word processor. Data-Writer is used by managers in large corporations (Bechtel, Honeywell, Owens-Corning, Westinghouse, agents, stockbrokers, universities, doctors, lawyers, insurance, police departments, churches, flower societies, stamp collectors, wine enthusiasts, software retailers, and many more.

Now Data-Writer is even more powerful, with new expanded features:
10,000-record capacity, and hard disk support
40 fields per record
240 characters per field with Data-Writer's ENTRY program
45 characters per field with 1 second access time
Search for any record with 1 second access time
Select records based on multiple selection criteria
Add fields to restructure your data base

If you have form letters to send to a large group or a subset, if you maintain mailing lists, bibliographies, or inventories with reorder levels, you want to report accounts payable or receivable, expenses, orders, or any other list of numbers with totals and subtotals, then you will find Data-Writer invaluable. You can even create a subset of a larger list (say, all Barossa Valley in 1978, priced between \$8 and \$12, sorted in order of decreasing price). The possibilities are endless.

For the TRS-80 Models I, III (48K, 2 drives, lower case required), Data-Writer is available from software dealers or direct from Software Options, Inc., 19 Rector Street, New York, NY 10006, (212)785-8285. Toll-free order line: (800)221-1624. Price \$145 (plus \$3 shipping and handling). NY State residents add sales tax. Visa/Mastercard accepted.

Canada: For the name of a local dealer, contact J&J Electronics Ltd, 310 Notre Dame Avenue, Winnipeg R3B 1P4; (204)942-0963.
Europe: For the name of a local dealer, contact Malimex Ltd, Bexhill-on-Sea, E. Sussex, England; (0424)220391.
Australia: Malimex Pty Ltd, 11 Bourke Avenue, Gosford 2250
Dealer Inquiries invited.

Lazy Stuff quartet (Lazy Calc, Lazy Tab, Lazy Draw, and Lazy Do) as a package for \$39.95.

Lazy Doc

Lazy Doc is a utility that permits keyboard input to replace data in a coded text file. When Lazy Doc reaches a fill-in-the-blank location, a request for the data appears on the screen and all references to that data are replaced in the file.

Name, address, and the like can come from the operator to match a lengthy standard file without manually editing the text. Line lengths adjust as necessary to fit the variable input length.

Lazy Doc also supports standard or boilerplate paragraphs that you can call from disk and insert in the current text file.

Lazy Doc takes most of the work out of repetitive typing for similar documents. Lazy Doc takes Lazy Writer out of the home and puts it in the office where it can compete with higher priced business software.

Lazy Doc costs \$59.95.

Q Version

David Welsh prepared a quick version of Lazy Writer with the print module in memory. This edition offers greater speed since you don't need to load the print and edit modules; it ends the thumb twiddling users once endured.

Q Version is useful for those who must process a number of short letters, but the code's presence is at the expense of the text buffer. Use the standard version for longer documents or chain them for printing.

Unless you're writing the great American novel, you'll find plenty of space to accommodate your text, and the added speed is a definite plus. The Q version is available to registered owners for \$20.

In the mill are Lazy Merge, which inserts material from a data file into text to produce form letters, and Lazy Font, which supports customized fonts for printers such as the MX-80 with Graftrax.

Lazy Writer has long been highly regarded, and it started with more features than any other TRS-80 word processing program. Its author continues to add features, printer drivers, data sheets, and newsletters that make it the best supported word processing program available for the TRS-80. ■

*Solving the Computer Contract
Dilemma—A How-To Book
for Decision Makers*

Bruce K. Brickman
Hayden Book Co.
Rochelle Park, NJ 07662
First Printing, 1982
Softcover, 166 pp.
\$20

by Carl Oppedahl, J.D.

Daniel Remer's *Legal Care For Your Software*, though geared for software authors, is fine reading for anyone who expects to be on the giving or receiving end of a large sum of money involving software. Remer successfully explains the elementary legal principles that govern the relationships between the software writer, publisher, and consumer.

Further, he illustrates the various financial and business interests of writers and publishers, and anticipates some of the conflicts that arise between them. Finally, he shows how, with a bit of thoughtful bargaining, they can resolve some apparent conflicts through properly drawn contracts. The book generally gives good advice and is easy to read.

Thousands of people write software for home computers and profit from it. Some set up their own firms to market

the programs, but most choose to contract with a publisher who sells the software through an established organization.

Most of them have two things in common—they cannot find a lawyer skilled in computer law, and couldn't afford his advice anyway. *Legal Care For Your Software* is for them.

The first few chapters of the book contain detailed discussions of the two common ways to protect software: trade secret and copyright.

Basically, you accomplish trade secret protection by making sure everyone who gets your program has signed a contract promising not to give it to anyone else. Remer provides tear-out forms to use for this purpose, and lucidly explains the advantages and disadvantages of relying on trade secret protection.

For example, if you absent-mindedly leave a copy of your program lying in the street, someone who has not signed your contract might pick it up and use it. You will be powerless to stop them.

Copyright protection, as Remer describes, is easy to get and easy to keep under the 1976 Copyright Act and 1980 revision. He explains the copyright office forms line by line, and tells how and where on the program to put a proper copyright notice.

The new act and its revision brought computer software securely under the wing of copyright protection, and removed most of the pitfalls for the unwary. Before 1976, for example, if you released even a copy or two of your program to the public without a copyright notice, you ran the risk of losing all rights to the program.

Under the new law, you can often save most of your rights, as long as you don't take too long to affix notices to all the copies.

Remer devotes five well-written chapters to the contracts all software writers negotiate sooner or later. After

THE COMPUTER CONNECTION

ADD THE BI-TECH BAR CODE READER TO YOUR EPSON HX-20 OR YOUR RADIO SHACK MODEL 100 BAR CODE READER INCLUDES DEMONSTRATION AND SAMPLE ROUTINE.

GET IT ALL TOGETHER WITH THE BI-TECH MULTIPLEXER

By adding the Multiplexer to your Hard Disk you can add more computers to your system.

SPECIFICATIONS:

- Single Circuit Board
- No External Power Required
- Multiplexers may be Daisy Chained.
- 4 Users per Multiplexer
- WD 1001 compatible
- Software Independent.
- No Speed loss between CPU & Hard Disk

ADD COMPUTERS TO YOUR HARD DISK

Adding a hard disk to your computer is the first step in making your micro a powerful computer. Adding more computers to your hard disk makes it a real system. The Bi-Tech **MULTIPLEXER** does just that. Joining a **MULTIPLEXER** with your hard disk sub-system enables you to share a hard disk with many computers, and it does so without the need for additional sub-systems. The **MULTIPLEXER** allows users to share programs and data present on the hard disk, thus affording a true data base to all of its users.

The Bi-Tech **MULTIPLEXER**:

- ★ is capable of operating at a faster speed than the hard disk. There is no waiting time as with other systems.
- ★ offers the same data transfer rates as in a single computer to hard disk sub-system.
- ★ is totally transparent to the user, software, and hardware
- ★ is now available for most computers with a BT Hard Disk sub-system and also for many other hard disk systems.

spelling out what is and what isn't required in a valid agreement, he discusses the many issues likely to come up, gives suggestions on how to negotiate them, and points out the areas where a lawyer's help is useful or necessary.

In these chapters, *Legal Care* stands out from many other books in the field. Chapter eight, for instance, discusses areas where the programmer and publisher are likely to clash during negotiation. For example, the parties must decide the term of the contract and arrive at a formula to divide up the sales proceeds.

The natural tendency is to find a particular percentage-of-sales royalty rate and a fixed term. Assuming the publisher offers what seems like a low royalty rate, the programmer might want a short term of license. He assumes that if the program is a success he can renegotiate a higher royalty rate later.

Yet the publisher might not promote the software vigorously unless assured of a long-term agreement within which the promotional investment might be repaid. An impasse follows.

To quote Remer: "... instead of limiting the length of the license, allow the publisher as much time as he wants to sell the program. Then you can motivate him to really push your program by including a clause in the royalties section (of the contract) that guarantees you a minimum royalty level. A publisher who doesn't quite manage to meet an agreed-upon sales quota is faced with the choice of making up the monetary difference (in the hope of selling more programs next quarter) or returning the license to the programmer."

Through examples like this, Remer points out ways in which situations that appear to be adversarial can become cooperative. These range from a variety of negotiation methods to imaginative contract terms decried in the text and appearing in the pull-out licenses at the end of the book.

Patent and trademark are the next subjects. As Remer explains, the United States patent laws are of little help to programmers, at least given recent court interpretations.

While copyright registration usually does not require the assistance of a lawyer, applying for a patent almost always does. When you seek a software patent, the patent office is likely to reject the application. Even if they grant the patent, a court will probably find it

invalid if it later becomes the subject of litigation.

Since all granted patents are public records (the word patent means open for all to see), a patented program cannot be kept as a trade secret. Anyone who wants to learn about the program can order a copy from the patent office.

Trademarks, like patents, generally require the help of a lawyer. Fortunately, it is not essential that a program have a trademark. The chapter on trademark discusses the many steps you have to take to get one, as well as the benefits gained.

*"Remer spells out
the relatively few areas
requiring a lawyer's advice,
and discusses
the remaining topics
in plain language..."*

Even if you have no trademarks, you must avoid infringing the trademarks and service marks of others. Remer explains the footnotes that should appear in any advertisement or manual that refers to someone else's trademark.

No book on software publishing law is complete without a chapter on warranties, and Remer's thorough discussion is recommended reading for everyone, including end users. If a program is published with no mention of a warranty, for example, state and federal laws provide one.

The various pull-out forms let a publisher tailor the warranty for the level of coverage, ranging from lifetime support to Radio Shack's "as is" non-warranty.

A complete index also serves as a glossary by pointing to definitions within the text.

Legal Care For Your Software gives sound, understandable legal advice. Remer spells out the relatively few areas requiring a lawyer's advice, and discusses the remaining topics in plain language with a minimum of legalese.

Clear examples supplement the important concepts, and humorous, explanatory cartoons occasionally break up the text.

The Dilemma

Bruce Brickman's *Solving the Computer Contract Dilemma—A How-To Book for Decision Makers* is hard reading, and is more likely to put you to sleep than teach you anything about computer contracts.

The cover claims that *Computer Contract Dilemma* is for "business executives, data processing managers, and lawyers," but even lawyers specializing in commercial contract law will find the book difficult to understand.

Furthermore, a majority of the court cases discussed are from New Jersey, and have only limited applicability to the rest of the United States. A partial explanation for this lies in the book's apparent origin—the New Jersey Institute for Continuing Legal Education.

Only the first two and final chapters are accessible to laymen. They introduce the book's subject, negotiation of contracts for computer acquisition and leasing, and discuss a variety of bargaining techniques.

None of the negotiation methods—good guy/bad guy, controlled anger, and bargaining solely with the ultimate decisionmaker—is unique to the computer field, but they deserve repetition if only because your opponents will eventually use them all.

Some chapters appear to be transcriptions of lectures. For example, the third chapter, "Computer Contract Basics," starts out: "Litigation with its coincident evidentiary issues forms the prism through which the attorney perceives his client's situation in order to prepare a document able to survive the ultimate litmus of drafting skill."

The punctuation and spelling errors that crop up about every fourth page are what you'd expect from unedited lecture transcripts.

Six of the eleven chapters contain extremely dry top-to-bottom coverage of the Uniform Commercial Code, a body of law that has been enacted, more or less, in each of the fifty states. The chapters discuss sections of the code and actual court cases interpreting them.

Lawyers who read these chapters will be disappointed to find that, despite the 1982 press date, none of the cases cited is more recent than 1979. Also, the case citations are often sloppy in form, and sometimes incorrect.

These chapters are hard going for laymen, partly because they use

InfoScan is an information utility that is used to organize, store and retrieve any type of useful information in any format. It combines the features of a word processor, data base manager, and information retrieval and display utility. You compose information records on the screen using the word processing features, many formats you use a technique described by a 17 character key phrase that you specify. Once created, the information "records" may be scanned as a list on the screen using an impressive key scan bracket. You store the key phrases into the brackets with the arrow keys on your keyboard. When the desired key phrase is found you press a single key and the corresponding information record is retrieved from disk and displayed on the screen. The record displays exactly the same format as you used to create it. You can even design your own forms to fill in.

A searching utility simulates the display window technique. Menus, Keyphrase lists, displayed text, and status information are spread in a series of display windows on your screen. Impressive graphic display effects are used to enhance the visual orientation of the product and user information.

HI-RES GRAPHICS

A brand new concept, POWERDOT allows you to create hi-resolution screen prints on EPSON (GRAFTRAX & GRAFTRAX+) CITHO PROWRITER printers without any hardware additions or modifications to your TRS-80. You can draw directly on your screen which is a "picture window" of a much larger drawing area and move the window to other areas of the drawing. Your only limitations are imagination and disk space. The completed drawing is dumped to the above printers by reducing and transforming the complete graphic pixels to single hi-res dots. Use the same disk for booting on MOD I or MOD III. Designers, architects, engineers and artists will love this unique drawing program.

SAVE 25%

Powermail is a highly sophisticated mass mailing system designed to run under all of the popular DOS's currently available for the Mod I or Mod III. The program is written entirely in machine language for maximum operation speed and occupies only 4K of the available RAM in your computer. There are no slow periods when Powermail is running. New features have been added to the program that others have always lacked. You now have the ability to keep track of mailings using the 24 flags that are incorporated into the Powermail program. The Powermail system will handle a file up to B megabytes, or 55,500 mailings, which may be 55,500. The program will also sort the entire maximum file size and open up to 168 files simultaneously during the process. Author: Kim Watt

MOD I/III

TALLYMASTER

By Prosoft

Manufacturer's Suggested List 79.95
DiskCount Data Special

ONLY 74.95

TALLYMASTER can help you find out if it's the "big picture" financial management tool designed for people responsible for budgets and sales. Revenues and expenses can be placed in up to 700 categories, and grouped and tallied into higher categories. Results are displayed immediately and can be printed and stored on disk. TALLYMASTER is easy to learn and easy to use. It's menu driven and the built-in HELP command displays information on any of 21 specific topics. Facilities include sorting in four ways, selection of ranges of categories to be changed or printed, merging of several files, and multi-column printed reports. Arithmetic functions even allow a user's sales projections. TALLYMASTER was designed to fill the gap between a bookkeeper's detailed journals and the CALC programs. It was designed to help the person running a business (or a household) gain better control over the finances of that business.

AND Cheerfully Accepted

technical legal terms, such as "parol evidence" and "tolling a statute of limitations," yet define them nowhere in the text. Neither a glossary nor an index helps the reader or indicates definitions that do appear in the text.

The analysis of court cases, though usually legally sound, is often cloaked

in impenetrable prose. However, the clarity of writing style varies greatly over the many chapters.

It's also regrettable that only nine pages consider the fast-growing subjects of copyrightability and patentability of software.

As a final comment on the book, the use of the word dilemma in the title is somewhat misleading. The reader who gets through all eleven chapters finds that no particular dilemma (a difficult choice between two equally distasteful alternatives) is ever identified, let alone solved. ■

★★★½

ProTrade—The Professional Tool for Stock and Option Trading
Nevins Microsystems Inc.
210 Fifth Ave.
New York, NY 10010
Model I or III
\$350
\$35 for manual and demonstration disk

by **Frederic S. Goldstein**

ProTrade is designed specifically for an investor familiar with the securities markets in general and the listed option market in particular. It provides two types of information: realized and unrealized profit and loss on groups of transactions, and theoretical values of options based on the Black-Scholes model.

To calculate an option's correct theoretical values, you must provide the program with specific, up-to-date information concerning both the stock and the option. You need to know the underlying stock's volatility, the anticipated amounts of the next several dividends along with their ex-dividend dates and the risk-free interest rate for alternate investments. You also need the option's strike price, conversion ratio, and its expiration date or dates.

The program is menu-driven and the 98-page manual explains each of the 12 menu items. However, the documentation does not contain a good system overview, so I had to work with it awhile.

You execute the program by typing PROTRADE. A message asks if you want to change the usual start-up. If you hit the enter key, or type N and then hit the enter key, the system uses its regular data files. Otherwise, enter the file names you wish to use. This feature allows you to use the same set of disks to work with different data files.

Next, enter the date in the MM/

DD/YY format. If you don't, the system rejects your input.

The main menu gives you 12 choices in two categories. Items 1-4 are called Information Displays and items 5-12 are called Data Bank Changes.

To run any of the information displays, first enter data through the data bank changes. Your first choice should be number 5: Add or Change Security. This lets you enter or correct relevant data on a security.

For stocks, ProTrade prompts you for volatility and the next four ex-dividend dates along with the appropriate amounts. For options, it prompts

"ProTrade evaluates completed trades based on their closing prices and marks open trades to market. . ."

you for the underlying security, the option strike price, its expiration date, and the conversion ratio. Menu item 6 allows you to delete a security. You must enter every security, stock, or option with which you work.

Item 8, Buy or Sell, lets you accumulate a series of trades into a strategy. The program as a whole allows up to ten different strategies. Item 7 allows you to set a current market price for a security subsequent to its entry into a strategy.

Menu item 1 calculates a net realized and unrealized profit or loss based on an analysis of all the trades in a strategy. ProTrade evaluates completed trades based on their closing prices and marks open trades to market using item 7.

For example, suppose you purchase stock in a company and write a call against that position. Then you close the position by buying back the call and

write a new call against the position. The program calculates the realized gain or loss on the position you just closed, an unrealized gain or loss on positions that are still open, and a net of the two.

Item 11 sets the cost of money. The profit and loss routine uses this figure to indicate how much it would cost if you had borrowed the entire amount of funds committed to the strategy. The bottom line of the profit and loss screen reflects the strategy's daily cost.

It's interesting to see a strategy's gross trading profits reduced by a theoretical amount allocated as an interest charge. Unfortunately, the program does not take into account any dividends you might have earned over the period the position was open. The program developers indicated to me that they would correct this oversight in the program's next version.

ProTrade's most valuable feature is its ability to calculate theoretical values for options. You invoke this procedure by selecting item 2. However, you first must select item 10 and enter the interest rate for risk-free money.

If you forget, the option valuation routine tells you to hit the enter key to continue. At this point you'll probably realize that you forgot to enter the necessary number.

The program calculates theoretical option prices in two ways. If you ask for a stock's option prices, the program calculates theoretical values and hedge ratios for calls and puts for the nearest strike below the current price, as well as the next two above the current price.

Unfortunately, since the computations are complex they are also time-consuming. It takes about five minutes to complete the analysis for one company. Furthermore, the break key is disabled. If you want to abandon a set of computations before the program is complete, you either have to reboot or wait until the program finishes.

Also, the routine assumes that op-

tions expire on the fifteenth of the month. In reality, options expire at noon on the Saturday following the third Friday of the month.

You can also ask the program for a specific option's valuation. This approach is much faster because ProTrade makes only one set of computations. This approach is also more accurate because you provide the computer with the exact expiration date back in item 5.

Other menu items let you display transactions in a strategy or securities in the data bank. You also can cancel a trade or security by using a special program called Propurge.

To check for accuracy, I made a series of runs that compared ProTrade with one of the services providing data to option market makers on the floor of the stock exchange. For calls and hedge ratios, the numbers were in complete

agreement to at least two places of accuracy.

However, there were significant differences with respect to puts. The system is high by about ¼ to ½ point. This was not particularly surprising, since there are a number of ways to evaluate puts and the investment community itself is not in agreement on this subject.

Is this program useful for an investor? The answer is a qualified yes. Although the call prices agreed with my other model, both were different from the prices published in the newspaper. Unless you can get accurate volatility readings and an appropriate interest rate, you will have trouble getting meaningful numbers out of the program.

However, it is helpful in spotting options that are greatly over or under priced. It also can help a call writer by indicating what kind of spread to expect when rolling an option from one period

and series to another.

One of ProTrade's weaknesses is that it prints out only lists of securities or trades, but not a chart of the theoretical values for options. You can overcome this limitation on the Model III by using DUAL ON to route the screen display to the printer. Unfortunately, the Model I doesn't have a comparable feature and you must copy by hand any figures you wish to retain.

According to Nevins, all registered owners will receive complete software updates and enhancements for at least two years. Enhancements to the Model I/III versions are scheduled for later in the year. A CP/M version is also in process.

Remember that option trading can be risky. Should you decide to purchase this program, follow its results on paper before committing any funds based on its results. ■

★★★★★

TRS-80 Model I, III, and Color Computer Interfacing Projects
William Barden, Jr.
Howard W. Sams & Co. Inc.
4300 West 62nd St.
Indianapolis, IN 46268
Softcover, 272 pp.
\$14.95

by Gary Shade

TRS-80 Model I, III, and Color Computer Interfacing Projects does an excellent job of demonstrating and explaining how you can interface custom circuitry to these Tandy computers.

For the most part, the circuitry is simple to implement. Most projects require three or fewer integrated circuits and a couple of resistors and capacitors. Design examples cover interfacing the circuitry to the Model I's and III's expansion or input/output (I/O) bus, cassette port, and RS-232 port.

The book presents similar designs for the Color Computer. Mr. Barden uses the CoCo's RS-232, joystick, and ROM cartridge ports to interface to his projects. Each computer receives equal treatment from the author.

This is what makes the book unique. It covers information on three of Tandy's computers in one publication.

Each chapter is devoted to different projects or concepts. The projects also provide the software required to test, calibrate, and drive each of the circuits. Most of the hardware projects require software drivers written in Assembly language.

"...you get information on three computers, the author's knowledge, and some nifty projects..."

You need not be an expert on Assembly language, or even own an editor/assembler, to get the programs to run. The author provides you with loader programs in Basic that POKE the required code into memory. This allows even the most inexperienced experimenter to get up and running with minimum difficulty.

The projects cover analog to digital (A/D) converters, a joystick interface for the Models I and III, and RS-232 communications. Mr. Barden includes an excellent description of the Western Digital TR1602B UART used in the Models I and III. He also describes how

to sense and drive switches, transducers, and light-emitting diodes (LEDs) from each system.

One of the projects is a device to digitize a speaker's voice, store it in the CoCo, and play it back through the speaker in your television set. There are several other Color Computer projects in the book, including a half-year clock.

Mr. Barden discusses the circuitry contained in the three computers, and examines the Model III's I/O bus, the Model I's expansion interface bus, and the CoCo's ROM cartridge port in great detail. He also covers the differences between the Z80 and 6809E CPUs.

Mr. Barden wrote several articles for various publications on interface projects for these computers. Some of the information appears to be reprinted from these articles, although I could only verify one chapter as coming from a magazine.

This by no means detracts from the book's usefulness. The material is coherently organized and provides the reader with a valuable reference.

About the only complaint I have with the book is the length of its title! Considering you get information on three computers, the author's knowledge, and some nifty projects, the book is a bargain at \$14.95.

I highly recommend it to the novice or to anyone interested in learning more about his Tandy computer. ■

REVIEW DIGEST

CHROMAtrs, South Shore Computer Concepts, 1590 Broadway, Hewlett, NY 11557, Model I or III, \$99 kit, \$169 assembled.

"CHROMAtrs is another attempt to add color to the uncolorful TRS-80 Models I and III.

"...CHROMAtrs does give a Model I or III an added 15-color display, assuming that you have a color TV or monitor attached.

"...it offers the devout hobbyist a new toy at an attractive price. I don't see it becoming popular enough to attract any high-level programmers. ...However, for users who like to roll their own, it offers an incredible price-to-performance ratio, especially if built from a kit." *80-U.S. Journal*, June, p. 103.

Word Processing Buyer's Guide, Arthur Naiman, McGraw-Hill Inc., New York, NY, 325 pp., \$15.95.

"(The author) sets up a 100-point scale for his evaluation of word processors, and tells you why each of the points is awarded or, in some cases, deducted. ...whether you're a novice or a hacker, you'll find this book informative and fun. (The) style is conversational, yet clear and succinct. The book covers the word-processor field better than most works of this type..." *Personal Computing*, June, p. 148.

Milestone, Digital Marketing for Organic Software, 2670 Cherry Lane, Walnut Creek, CA 94596, Model I or III with CP/M and Model 4, \$295.

"Milestone is a project management program...intended to complement critical-path analysis. Specifically, it provides information on project completion, project cost, schedule performance and rescheduling impact.

"Considering the complexity of the subject, it is convenient and even easy to use. This is the result of a well-thought-out, menu-driven program. ...This software does require a video-personalization package. The process of customization...can be difficult. ...You should check out the installation procedure in advance to make sure it serves your purposes." *InfoWorld*, May 30, p. 41.

Daisy, Med Systems Software, P.O. Box 3558, Chapel Hill, NC 27514, Model I or III, Model I Scripsit, \$74.95.

"Daisy is a carefully written program that enhances Scripsit in many practical ways. ...If you have a need to prepare highly technical documents, or just long, nontechnical ones, Daisy supplies just about everything you could need. ...If you are looking for a program that will expand Scripsit...and you don't care about right-justified proportional print, then buy Daisy." *Creative Computing*, June, p. 86.

Writing in the Computer Age, Andrew Fluegelman and Jeremy Joan Hewes, Anchor Press/Doubleday & Co., Garden City, NY, 254 pp., \$10.95.

"If you write at all, either professionally or as a casual correspondent, *Writing in the Computer Age* will be useful to you. ...If you have absolutely no experience with word processors, some chapters may be a little daunting, but they're worth reading and digesting before taking the plunge into electronic word-smithing.

"...the authors discuss becoming comfortable with a word processor, the mechanics of editing on paper and on the screen, proofreading, producing elegant manuscripts, organizing research and files, and using computer communications." *Personal Computing*, June, p. 150.

The Works, Omikron Systems, Berkeley, CA, Model I or III, \$299.

"...The Works...has been bundled with software such as WordStar, MBasic and CBasic that are individually worth a great deal more than the hardware modification alone.

"...The Works can be installed by any neophyte following instructions included with the package. ...I have been using my CP/M conversion for six months. ...The Mapper I has never caused any problems, nor interfered with the normal non-CP/M functioning of the computer.

"...The Works *does* work, and represents an excellent value. The user must decide whether the trade-offs involved in switching to CP/M are worth giving up some of the features of newer operating systems." *Interface Age*, June, p. 67.

Sprinter II, Holmes Engineering, 3555 South 3200 West, Salt Lake City, UT 84119, Model I or III, \$99.

"Sprinter II...is the fastest speed-up modification for the TRS-80 Model I and III currently available. It is also the easiest to install and one of the least expensive. The Sprinter II gives you 16 different speeds from which to choose, all integer multiples or dividends of the standard 1.77 MHz clock speed.

"...I have used the modification without any problems whatsoever on any programs, including database management programs, compilers, statistical and other mathematical analysis programs, and programs to load neurological data from an external A/D converter connected to electrodes stuck in my pet leeches." *Creative Computing*, June, p. 161.

SOMEWHERE, OUT THERE, A BEST-SELLING PROGRAM

WHERE IS IT?

Wherever it is, we want it. Maybe, just maybe, we're searching for your program, but we'll never find it unless you call us.

It has to be good, though. Because we're the Software Guild™, an organization devoted to finding the very best microcomputer programs for packaging and distribution under the Softsmith™ label. Hundreds of titles have already been licensed to the Softsmith library. But they're only the beginning. Our goal is to have the best program in major categories on every

popular machine. Of course, we can't do it without you.

If you're a program author or publisher, The Software Guild offers some distinct professional and monetary advantages.

First, you devote your time to what you do best: programming. You can leave the manufacturing, packaging, documentation, distribution and customer service to us.

Second, our revolutionary retail merchandising system will put your program before the public through the normal computer and software stores, plus record outlets, department stores, book shops, and more places where software has never before been available.

IS BEING WRITTEN.

Third, is royalties. Wider distribution means more substantial royalties. And, your Software Guild royalties start to accrue when the dealer makes his purchase in quantity, so you aren't left waiting while money trickles in.

Fourth is flexibility. We do not insist on the exclusive rights to your program. You can deal with other publishers and distributors, or market your program yourself, while it is in Softsmith distribution.

We know you're out there, working and dreaming, and we want to help make your dream come true. Our full staff of professional evaluators are waiting to review your best-seller.

**So call us, wherever you are.
Contact Regina Roberts at (415) 487-5200.**

**Or write:
The Software Guild
2935 Whipple Rd.

Armageddon

by Tom Alar

Flaming meteors plummet into the heart of Madison, WI, obliterating city blocks. Your mission is to man a missile-firing rocket and save the Fauerback brewery, the Capitol building, the Frank Lloyd Wright-designed Unitarian church, and the University of Wisconsin's Sterling Hall from destruction.

Your rocket has 10 missiles that you fire right or left. When your ammunition runs low, reload from the Sterling Hall rooftop deck before another meteorite smashes Madison. If ten meteorites reach the city, or if a meteor hits your rocket, you've failed your mission and the game is over.

Playing Armageddon

The space bar shoots missiles singly or in rapid fire. Missiles are effective only at short range. Your rocket is controlled by either a joystick or by keys on the keypad. The number 4 key moves the rocket left, the 5 key moves it up,

You need speed and dexterity if you are to save Madison, WI, from certain destruction.

the 6 key moves it right, and the 2 key moves it down.

Armageddon has four skill levels, but you cannot advance to the next level unless you've earned it with spectacular bombing raids.

Armageddon's Program

The 16K Model III action is fast because the main control loop directs program action, and branches to other routines. Four loops perpetuate themselves whenever your rocket goes right, left, up, or down. As many character

strings and math functions as possible perform outside the loops.

Program Changes

If you don't have a joystick, delete lines 2400-2555, 3090, 3140, and 3190. Change line 2260 to

```
2260 IF PEEK (14400) = 128 GOTO 2270 ELSE 2570
```

If skill level 4 proves too difficult, delete it by changing line 4030 to

```
4030 IF SC > 9999 LS = 2: IF SC > 19999 LS = 3
```

and deleting lines 4040 and 4050. If you can't reach skill level 4 with bombing tactics, but want to try it, change line 110 so LS = 4, and delete line 4030.

Change the delay between meteorites by altering the reset value of H from H = 10. The higher the number you assign H, the faster the meteorite drops.

To fly around the sides of the screen, delete lines 10-90 and change lines 3210 and 3310 to:

```
3210 E = 225 - INP(0): IF B > 828 THEN B = B - 2
3310 E = 255 - INP(0): IF B < 132 THEN B = B + 2
```

NM\$	Player's Name
SC	Score
SH	High Score
B	Location of Rocket
G	Location of Meteorite

Langley-St.Clair Gets Mail

From unsolicited letters of testimonial

Gentlemen:

...Thank you for such an excellent product! I spent part of last evening installing the CRT and had absolutely no problems with the installation. I wish all modifications could be as easy and as well supported as the one I received from your organization. You can be sure of recommendations for your product from me.

Thanks again
D.C.
APO, NY

Dear Langley-St.Clair:

[This] letter [is] to thank you for putting together a really great addition to the Radio Shack Model II.

I had unsuccessfully tried two different kinds of anti-glare products prior to the purchasing of your anti-glare Green Phosphor CRT.

Not being an electronics expert I was hesitant to try the installation myself. But, after reading the instructions that were supplied with the CRT, I decided to try it. The instructions were so outstanding that the whole process was accomplished without any problem or question....

We hope you will develop some other additions or improvements for the Model II. We can be counted as an enthusiastic supporter.

Cordially,
B.T.
Gregory, Michigan

Langley-St.Clair Gets Mail

From unsolicited letters of testimonial

I have just received one of your SOFT-VIEW CRT's and I wanted to write you to tell you that I am impressed. I ordered the CRT by phone on Wednesday afternoon, and I received it this morning (Friday) by UPS. When the UPS truck pulled up, I commented that it would be weird if that was the CRT, figuring that it would show up in about a week. That was the fastest shipment from a telephone order I've ever got!

I should also mention that I was pleased to find that the people I talked to on the phone were very nice and friendly, a quality lacking in many companies I have dealt with by phone....

I have installed RAM chips and two disk drives on my Model III and many times in doing so I could have used directions as good and adequate as I got with the CRT. I congratulate the writer of the instructions for doing a very good job. The directions were intelligent, well-written and described the operation very well without becoming dull or technical....

....By the way, this is the first letter I've written to a supplier of computer hardware that was in praise. I have told a few off by mail, but this is the first time I have been this pleased with a company supplying hardware for my computer. I only hope that your attitude is contagious.

Sincerely,
W.B.

**If it's from IJG
IT'S JUST GREAT!**

Lost On the Great Barrier Reef

by Tom Johnstone and Mike Matthews

Finally, the summer holidays! You decide to go fishing in your new speedboat. Leaving Australia's Sydney Harbour you head northeast across the Pacific Ocean to a well-known fishing spot off the Great Barrier Reef.

Arriving there, you start to lay down your nets around a deserted island when your engine suddenly fails. Hurriedly, you examine the fuel tank and find it empty. Before you drift too far, you drop your anchor and look at the isle before you. You are hopelessly stranded and your only hope lies in what might be on this seemingly desolate landscape.

You hop into your lifeboat and head for the island. Unfortunately, you have no survival equipment and must exist on what you can find on the island.

You must find fuel for your speedboat before dark so you can reach the safety of the Australian mainland. But many secrets and intriguing puzzles await you.

Move about the island and manipulate objects using two-word commands (a verb followed by a noun). Since the program recognizes over 50 words, you should have no problem finding the correct word for each situation.

One program feature lets you enter just the first three letters of each command. Also, the directions north, south, east, and west can stand alone and don't require the verb "go."

One aggravating aspect of many adventures is that they can't be logically

While fishing Down Under, your boat runs out of gas. How will you get back to the mainland?

mapped; Lost on the Great Barrier Reef can be mapped.

The Program

This game was written for a TRS-80 Model I or III with at least 16K of memory (see Program Listing). The program is numbered in multiples of 10 to make it possible to use the Auto command when typing it in. Some features of the program, such as scroll protection, are apparent only on a Model III.

A main control loop at lines 250-500 branches off to the separate routines for different commands, located in lines 510-2560. The end of the program lists the instructions, descriptions of all the locations, and a number of data statements containing the different verbs and the island map.

The main control loop is an important part of the program since it identifies the different two-word commands. The computer automatically identifies the first three letters of the

verb. It then searches the input for a space and, upon finding one, assumes the next three characters denote a noun.

Then the program processes the verb and noun and checks them against a number of flags. If they match, the program branches out to the separate routines that handle them. If they don't match, the computer scans through the data statements containing the different verbs and compares these with the input verb. If this verb doesn't match any of the program verbs, it prompts the user for another input. When a verb does match, the program branches out by means of an ON . . . GOTO statement to a separate routine that handles that verb.

The routines that process the different commands are set up so the program compares the input noun to a number of nouns that apply to the verb. If the noun doesn't apply to the situation, an appropriate message is displayed and the program prompts for another input. If the noun does apply, the correct process is performed.

The Key Box

**Model I and III
16K RAM
Cassette or Disk Basic**

On the data map, each location is represented by five numbers contained in a data statement. The first is the location number. The remaining four numbers correspond to the directions north, south, east, or west, respectively. A zero in any of these four numbers means that the player cannot go in that direction.

Before you run the game for a friend, we suggest that you type in the following lines:

5 POKE 16396,175:POKE16397,201
3320 NEW

The first change traps the break key, preventing him from looking at the listing. The second erases the program from memory when he is finished playing. ■

Tom Johnstone can be reached at 75 Buntine Road, Wembly Downs, Western Australia 6019, Australia.

Mike Matthews can be reached at 7 Benson Court, Bunbury, Western Australia 6230, Australia.

Expensive Expansion

EXPENSIVE – The *LNW System Expansion II* and built-in comes with a full 32K of 200ns RAM, RS232c 20 MA current loop serial interface. That's for starters. Next, consider our heavy gauge steel case, power indicator lamp, gold-plated connectors, FR-2 glass epoxy circuit board with solder mask and silk screen legends. Then there is the parallel printer port, screen printer port, real time clock, and extra heavy duty onboard power supply with over current protection, over voltage protection and thermal shutdown. If that's not enough then there is the floppy disk controller, guaranteed operation at a 4MHz CPU speed and our 6 month warranty. Every one of these features is *STANDARD*. This is true system expansion. You get every 'expensive' feature without spending more.

CHEAP – Our price is \$399.95. Any way you compare, features or price, *LNW's System Expansion II* is the clear winner. The *LNW System* has been field tested for over two years with thousands of users. It works with any DOS, is 100% TRS-80 Model I compatible and it works 'right out of the box'. If there is any doubt in your mind as to whether you should buy ours or the 'other guys', just ask an *LNW* owner!

WE ARE #1 – Number one in price, features, reliability, performance and delivery. *LNW* is committed to 'expensive' features and quality at reasonable prices. *LNW* is committed to support, thorough documentation, and reliability.

LNW Research Corp.

2620 WALNUT Tustin, CA. 92680
(714) 641-8850 (714) 544-5744

This has made us the number one manufacturer of system expansion units and accessories for the Model I computer.

EXPANSION OPTION – 8-inch drive capability is as easy as plugging in the *LNDDoubler 5/8* option*. Now you can have any combination of single- or double-density, single- or double-sided, 8" and/or 5" disks on-line! 8-inch disk storage increased to 591,360 bytes – 77-track single-sided, double-density or 1,182,720 bytes – 77-track double-density, double-sided.

The *LNDDoubler's* unique 5/8 switch allows you to boot from 5- or 8-inch system disks and it's accessible from outside the interface. The \$219.95 *LNDDoubler 5/8* comes with a double-density disk operating system (DOS+ 3.3.9), complete with BASIC and utility programs... ready to run your software.

Each of your present 40-track, single-sided 5-inch drives will store up to 184,320 bytes (formatted storage) – that's an 80% increase in storage capacity for only half the cost of just one disk drive. With three 8-inch double-density, double-sided drives your Model I will have 3.75 Megabytes of online storage – that's more storage than a Model II or Model III!

*8" drive operation requires special cable, 8" double-density requires 3.55MHz CPU speed-up modification or LNW-80 4MHz computer.

GREAT PROGRAMS DELIVERED ON DISK OR TAPE WHILE KEEPING YOUR BUDGET BALANCED!!!

Hurry, hurry! Put a little variety into your computing life! Step right up to the quality programs from **CLOAD Magazine** — and have enough money left over for cotton candy!

A subscription to **CLOAD Magazine** consists of 6 to 8 ready-to-load useful, practical, and fun programs delivered by First Class Mail every month. Some of our past performers: Loan Amortization, Menu, Ship Adventure, Bond, Cave Raider, Planets, and Shrink.

Don't clown around (another cliché!). Get a subscription to **CLOAD Magazine**. Or just catch a single act and try a back issue. You'll be dazzled by the Greatest Software Deal on Earth!

The Bottom Line:	Tape	Disk
1 year (12 issues)	\$50.00	\$95.00
6 months (6 issues)	\$30.00	\$55.00
Single Copies		
Back Issues	\$ 6.00	\$11.00
Good Games #1	\$12.00	\$23.00
Adventures #1	\$12.00	\$23.00

*In the Model III mode only!

The Fine Print:

Issues from Oct 78 available on tape. Issues from Oct 82 available on disk, also. Ask for list (Level I issues also available).

California residents add 6% to single copies.
North America — First Class postage included.
Overseas — add \$10 to subscriptions and \$1 to single copies. Sent AO rate.

Predictable.

A flawless future is in sight with 3M diskettes.

When it comes to keeping track of precious data, predictable means reliable. Being able to count on every diskette, every time. At 3M, reliability is built into every diskette. We've been in the computer media business for over 30 years. And we've never settled in. We're constantly improving and perfecting our product line, from computer tape and data cartridges to floppy disks.

3M diskettes are made at 3M. That way, we have complete control over the entire manufacturing process. And you can have complete confidence in the reliability of every 3M diskette you buy.

Look in the Yellow Pages under Computer Supplies and Parts for the 3M distributor nearest you. In Canada, write 3M Canada, Inc., London, Ontario. If it's worth remembering, it's worth 3M diskettes.

3M hears you...

3M

Once More, With Feeling

by G. Michael Vose

Tandy has come a long way since the days of the Model I. Just look at the Model 4, with 64K, 4 MHz, and CP/M potential, for only \$1,999.

★★★★★

Model 4
Tandy/Radio Shack
Fort Worth, TX 76102
\$1,999

In the microcomputer game, the byword of late seems to be, "Anything you can do, I can do better." If it's not a price reduction or a smaller disk drive, it's a computer with a lower chip count.

Denser VLSI chips with low power

consumption not only bring us exciting new products like Tandy's portable Model 100, they also make possible second- and third-generation spinoffs of existing machines.

For Apple, new chip technology provided the Apple IIe earlier this year. Similar advances now bring us the TRS-80 Model 4, an improved version of the computer that started life as the Model I.

If you own a Radio Shack computer, your mailbox brought the news of this new computer in late April. You proba-

bly remember the basics—4 MHz Z80 CPU, 64K of memory expandable to 128K, and an 80-column screen display, plus a new version of TRSDOS and the prospect of CP/M. Now it's time to find out what all the hoopla is about.

A Wolf in Sheep's Clothing

The Model 4 comes in three standard configurations: a 16K cassette-based system selling for \$999, a 64K one-drive system without an RS-232 communications port for \$1,699, and a 64K two-drive system with RS-232 port for \$1,999. All this is packaged in a textured, off-white cabinet similar to that on the Model III.

Like the Apple IIe, however, it's what's inside that makes the Model 4 different. Using advances in chip design and packaging, Radio Shack reduced the number of components required to build the Model 4's circuits.

This component reduction provides increased computing power *and* lower cost. Radio Shack passed these savings along to consumers and simultaneously beefed up the Model 4 with additional features in a machine priced less than a 1982 Model III.

For example, using new video circuitry, the Model 4 provides an 80-column by 24-line high-resolution video display of excellent quality. An on-board speaker generates sound, and a reworked keyboard is easier to use.

I'll examine these features in detail below and tell you how Radio Shack put it all together. I think the Model 4's new hardware makes this machine as powerful as any Z80 computer available today, particularly at its price.

With computers, however, "hardware doth not a workable solution make," as the Bard might have quipped. The \$64,000 question is always, "What

Photo 1. The Model 4. (All photographs in this article by Jeff DeTray.)

**My wonderful upgrade offer:
If you bought my accounting software a while back,
it's good news.
If you didn't, it's a good reason to buy it now.**

You're probably growing. My software keeps growing too.

I've tinkered with it right along, improving it constantly. My accounting systems now work for CP/M, TRSDOS and MS/DOS (the IBM PC). It's a natural outgrowth of my support. Talk to a few thousand users on the phone, and you get a few new ideas.

Early on, I resolved that none of my customers would suffer if they bought a system before I improved it. So I've made this offer ever since I started over four years ago:

No matter when you bought, I'll upgrade any of my accounting systems to its latest capability on the same machine for \$25. If you've upgraded your machine, I'll give you a replacement system for either \$25 or the difference between what you paid for your software originally and the price of the new

software. If you've gone from a TRS-80 Model I to a Model II/16 or an IBM PC, say, you get a full credit for whatever you paid me for your Model I systems. Just send me your old disks and I'll send you the new ones.

It's this simple. If you ever buy any of my software, you'll never lose your investment.

I wish the whole world were that simple.

Instant Assembler

New Version!

The **Instant Assembler** is a powerful assembly language development system for the TRS-80, and our new version is better than ever. If you are already an assembly language programmer, its unique design will greatly increase your productivity. If you're just getting started, there is no better assembler to help you learn machine language programming. Our new version includes the following features:

- Immediate assembly which detects syntax errors as source is entered.
- Compact source format that allows you to write programs nearly three times as large as other assemblers in the same amount of memory.
- Produces relocatable code modules that can be saved on disk or tape and linked together in memory for large or modular assemblies.
- Assembles to disk, tape, or directly to memory for immediate debugging with the built-in debugger.
- The built-in debugger will step through your programs one instruction at a time, showing each disassembled instruction and its effect on the registers and memory.
- The debugger can use the symbols in your source code when stepping or disassembling.
- Input and output of conventional source or condensed INTASM source.
- Assembly and disassembly of undocumented Z-80 instructions.
- Comprehensive 65 page instruction manual with many examples.

The **Instant Assembler** package includes six separate programs. The assembler itself includes the editor and built-in debugger. The **Linking Loader** is included in several versions for different memory sizes. A stand-alone version of the debugger (**MicroMind**) is also included. **MicroMind** can be relocated in memory and has commands to single-step, set breakpoints, display or alter registers or memory, find bytes or words, disassemble to screen or printer, convert between hex and decimal numbers, and write SYSTEM tapes.

INTASM 2.1 is \$39.95 for the tape version and \$49.95 for disk (specify Model I or Model III). The instruction manual only is \$5, refundable with purchase of the program. Include \$2 postage, and California residents add 6% sales tax. VISA, MASTERCARD, and COD orders are accepted. Satisfaction is guaranteed or a full refund will be made.

MUMFORD MICRO SYSTEMS
Box 400-A, Summerland, CA 93067
(805) 969-4557

Quality software since 1978.

software will it run?" Let's first look at the Model 4 from the software angle.

The Software

Earlier, Radio Shack tried to maintain software compatibility between the Model I and III; they followed this tradition with the Model 4. The machine has a Model III mode—much like the

*“...you can run
virtually any
Radio Shack software
that runs
on a Model III...”*

Model 16 has a Model II mode—so it runs Model III software.

In the Model III mode, however, you only get a 64 by 16 display and 2 MHz CPU operation, and you can only use a Model III operating system and Basic. It's a bit like putting a Volkswagen engine in a Cadillac.

In this Model III mode, you can run virtually any Radio Shack software that runs on a Model III—including Model I software that runs on a Model III. Model III software manufactured by companies other than Radio Shack might *not* run on the Model 4, however.

For example, certain game programs that feature special loaders (designed to foil attempts to copy the disks the games are shipped on) might fool the Model 4's bootstrap loader, since this loader is different from the Model III's; these programs can't be loaded so they can't be run in either mode.

Some people will be uncomfortable with the Model 4 in Model III mode because the video display looks slightly squashed. The letters appear to have the same width as they do on a Model III screen, but they look more squat. The Model 4's characters in Model III mode actually have better resolution than the characters on a Model III screen but they take a while to get used to.

What software does the Model 4 run as a Model 4? For the time being, the only Model 4 software available is an operating system, TRSDOS 6.0, and the latest version of Microsoft Basic, version 5.0. In the next few months, Radio Shack is expected to announce SuperScript, VisiCalc, and other applications packages for the Model 4.

At the official debut of the Model 4—the general meeting of the prestigious Boston Computer Society on

April 27, chosen partly to commemorate the 20th anniversary of Tandy's acquisition of Radio Shack—Jon Shirley claimed that “lots of software never offered for the Model III will be available for the Model 4, taking advantage of its 80-column display and 128K memory.”

The biggest news is that CP/M 3.0 will be available for the Model 4 in mid-summer, opening up another dimension of software possibilities from WordStar to Supercalc, dBASEII to Perfect-Writer. You can expect to see dozens of ads from companies selling CP/M software converted to the Model 4's disk format in these pages in the near future.

While there have been no official announcements, you can also expect the Model 4 to support the UCSD p-system, along with several good Pascal compilers. Eventually, you might be able to run C and Ada compilers on the Model 4.

A New Version of Basic

For now, however, you must be content with TRSDOS 6.0 and Basic. This certainly poses no limitation as both these software constructs are as powerful as any Radio Shack has ever offered.

Microsoft Basic 5.0 (identified on the Model 4 screen as “BASIC 01.00.00 for TRSDOS Version 6” and in the manual as “TRSDOS 6 Basic”) is the same Basic that runs on the IBM Personal Computer, the NEC PC8000, the Victor 9000, and several other major microcomputers.

This version of Basic supports all Level II Basic commands except CSAVE, CLOAD, Clock, CMD, POSn, Rename, and Verify. The Model 4 does not support cassette-based operations from Basic.

Basic 5.0 adds these new keywords: Chain, Common, ERR\$, OCT\$, Option Base, RENUM, Row, SPACE\$, SPC, Swap, Wait, While...Wend, and WRITE#. Table 1 summarizes the functions of these new keywords.

There are some significant differences in the new Basic and Level II Basic. One that takes some getting used to is the new Basic's requirement that all reserved words be delimited by spaces. You cannot write FORX = 1 TO 10, for example, or DEFUSR. Instead, you must write FOR X = 1 TO 10 and DEFUSR.

This is no small task when you start converting Level II Basic programs to run on the Model 4. Since you can copy Level II programs onto Model 4 disks and subsequently load them into TRSDOS 6.0 Basic, you will have to convert programs before you run them.

A feature of TRSDOS 6.0 Basic that

is easy to get used to is its ability to use variable names of up to 40 characters in length—with all 40 characters significant. This lets you use descriptive variable names, including multiple word names like *first.counter*. Meaningful variable names enhance program readability.

TRSDOS 6.0 Basic rounds numbers rather than truncates them in converting real numbers to integers. Since the Model 4 uses an 80-column display, its internal print zones are 20 spaces apart rather than the 16 spaces in the Model I and III. As discussed under hardware, the Model 4 is a RAM-based machine, so there are no ROM routines to access from Basic.

TRSDOS 6.0 Basic dynamically allocates string space, making Clear statements unnecessary. Division-by-zero errors are not fatal and Then is optional in If...Then...Else statements.

These features make TRSDOS 6.0 Basic a more powerful language, but there are a few "gotcha's."

The first gotcha is the amount of memory available for Basic programs. With the operating system and the entire Basic interpreter residing in user memory, only 29,424 bytes of program space are available. The Model III, with

much of the interpreter in ROM, gives you 38,202.

Second, with spaces necessary to delimit key words and with long variable names possible, TRSDOS 6.0 Basic programs eat up memory more quickly.

Conspicuous by its absence in TRSDOS 6.0 Basic are the key words Sound and Play, used by other computers to access the machine's sound capability. In fact, the Model 4 manual says very little about the unit's sound capability.

TRSDOS 6.0

The Model 4 operating system is called TRSDOS 6.0, and is an upgrade of Logical Systems Inc.'s LDOS 5.x.x. It was christened version number 6.0 to distinguish it from previous versions of TRSDOS and from previous versions of LDOS.

LDOS has been reviewed extensively in these pages; it is a powerful operating system offering job control language, device control, software filters, and numerous utilities. I call LDOS a programmer's operating system, due both to its power *and* (another gotcha) its complexity.

The main criticism I'll level at Radio Shack regarding the Model 4 is this

operating system—not because it lacks power, but because it is hard to use.

I've used LDOS extensively and know my way around it pretty well. I've also used DOSPLUS and MULTIDOS extensively, in addition to TRSDOS 2.x and 1.x. Of all these operating systems, LDOS is the most difficult to use. TRSDOS 6.0, unfortunately, features all of LDOS's obscurity.

For experienced computerists or semiprofessional and professional programmers writing applications software for the Model 4, LDOS presents no problems. But many newcomers to computing, buying a Model 4 as their first machine, might find TRSDOS 6.0 a difficult introduction.

Radio Shack would better serve the vast new audience the Model 4 will attract (since it can double as a CP/M computer) by writing a shell to insulate the average user from the operating system. This shell could present a menu offering major choices such as formatting and backing up a disk, loading a program, copying a program, and exiting to the operating system. Such a shell could make operating system blues a thing of the past.

Part of the problem with LDOS and TRSDOS 6.0 is the documentation.

Control Cash & Inventory at Check-out

NEW SYSTEM MAKES TRS-80 III A TOTAL CASH REGISTER & POINT-OF-SALE COMPUTER

Which performs all the normal functions of a computer and is specially programmed to....

- **COMPUTE** Sales Taxes, Discounts, Special Sales and Promotions
- **TRACKS** Sales by Type, such as Visa, Mastercard, Check, Charge, etc. and by Employee/Operator for up to 30 people
- **SELF-PROMPTING** to Cashiers
- Produces Audit Trails and **ACCOUNTING DATA** for entire operation
- **CONTROLS** up to 20,000 **INVENTORY** LINE ITEMS on our Hard Disk Drive
- **CONTROLS** up to 1,500 **INVENTORY** LINE ITEMS on your Floppy Drive
- Complete, Ready-to-Run **SOFTWARE** comes with Cash Control Drawer Unit
- **AUDIBLE SIGNAL** produced when any key is depressed by any operator
- **DRAWER** operates automatically or by manual override anytime
- Generates **RECEIPTS** on Printer
- Available to display in English, French, Spanish, or German Languages
- Operates on 110AC or 220AC...just plug it in
- **NO INTERFERENCE** with or modification of regular TRS-80 Mod III...plugs right into computer

Software of Tomorrow... Today 211

While the manual is well organized and reasonably well-written, it seldom tells you all you need to know to accomplish a task.

For example, TRSDOS 6.0 comes with a filter file called CLICK/FLT. This software filter is used to produce an audible click when you strike the Model 4's keys. To engage the filter, you must set the keyboard.

In Appendix A, where you are directed by looking in the index for the entry CLICK/FLT, the manual offers this syntax for engaging the filter:

```
SET devspec CLICK/FLT
FILTER *KI devspec
```

The accompanying text states, "In order to use the click filter, you must SET it to this filter program, and activate it with the FILTER command." If you follow these instructions an error message appears stating that the device (the keyboard) is already set.

A lot of additional reading indicates that you must first set the physical device equal to a phantom device before you activate the filter. The information is there, but *not in one place*, a drawback typical of the manual.

When you're working with a complex program, it's impossible to provide concise instructions. But I believe that it can be done more effectively than it has been with the Model 4 TRSDOS manual.

(By the way, here is the syntax needed for the CLICK/FLT filter:

```
SET *PD TO CLICK/FLT
FILTER *KI *PD
```

This sequence sets a phantom device (PD) to the filter file and then filters the keyboard through the phantom device, which in turn invokes the filter file. All this to make your keys click!)

In spite of its complexity and inadequate documentation, TRSDOS 6.0 is the best operating system offered by Radio Shack for one of its computers (Xenix and CP/M 3.0 were not available for inspection at this writing).

Of major importance is the conversion (CONV) utility, which lets you copy files from TRSDOS 1.2- and 1.3-formatted disks to TRSDOS 6.0. Therefore, Model III owners who buy the Model 4 upgrade kit (see Hardware, below) can easily convert Basic programs to the Model 4, as can anyone with Model III programs on disk.

The only Model III disk the Model 4 won't copy is a copy-protected Scripsit or VisiCalc disk, or a disk with a non-standard format.

You can even convert machine-language programs. But they might not run on the Model 4 (remember, there are no ROM routines). I immediately copied Scripsit and VisiCalc from an LDOS 5.1 disk to a TRSDOS 6.0 disk (TRSDOS 6.0 reads LDOS disks without the need for CONV) only to discover that the programs did not execute in the Model 4 environment.

Another major utility is the communications (COMM) program, a terminal program that lets you use your Model 4 to talk to other computers via the RS-232 communications line. COMM even allows you to obtain information from another computer and send it directly to a printer attached to your machine.

Two other interesting utilities are the TAPE100/CMD file, which allows the Model 4 to read Model 100 tapes, and the MEMDISK/DCT file, which allows a disk drive to be simulated in RAM if you have a full 128K. (80 Micro will present separate articles about these capabilities of the Model 4 in upcoming issues.)

TRSDOS 6.0 supports hard-disk

Chain	Chains one program to another and initiates a run of the last program chained.
Common ERRS	Reserves space for variables so they can be passed to a chained program. Returns a system error number and message.
OCTS	Converts a decimal number to octal.
Option Base	Resets the minimum value for an array subscript.
RENUM	Renumbers a program.
Row	Returns the row position of the cursor.
SPACES	Prints a string with zero-255 spaces.
SPC	Prints a line with between zero-255 spaces.
Swap	Exchanges the values of two variables.
Wait	Suspends program execution until an input/output port receives a value.
While . . . Wend	Executes a loop as long as the entry condition is true.
WRITE#	Writes data to a sequential-access disk file (replaces PRINT#).

Photo 2. The Model 4's Keyboard.

operation, although the Model 4 manual contains virtually no information about this. The occasional reference to hard disks refers the reader to the Radio Shack hard-disk manual for information.

The Hardware

Now that you have an idea of what

the Model 4 can and cannot do from a software standpoint, let's look inside the cabinet to discover what hardware goodies make up this affordable new machine.

But before we go inside, let's look at the outside. The primary difference is a new paint job and a modified keyboard. There isn't much to say about the paint—it's off-white—but the keyboard has some nice new keys (see Photo 2).

The first thing you notice is that where the Model III has three white keys, the Model 4 has 15. In addition to the enter keys, the four cursor control

keys, the shift keys, and the break and clear keys are white. Also white are five new keys—control, caps, and three function keys (labelled F1, F2, and F3).

Besides the keyboard and cabinet color, you'll find that only the nameplate and the RAM-size emblem differ from those on the Model III.

The Model 4 uses the same disk drives as the Model III—single-sided, double-density drives with 160K capacity—and supports a maximum of four drives.

Disk operation is a bit different with the Model 4. A small, on-board ROM turns on the disk drive when you first turn on or reset the machine. This ROM reads the first track on the disk in drive zero and determines whether the disk is a Model III or Model 4 (or, ultimately, a CP/M) disk.

If the disk is for a Model III, a hardware multiplexer switches out the first 16K of RAM and switches in 14K of ROM, plus 2K of system RAM, and emulates a Model III. When a Model 4 (or CP/M) disk is decoded, the full 64K of RAM is used and the entire operating system loads into RAM from the disk.

The CPU Board

The main reason for the Model 4's increased processing power and lower cost is a lower chip count. Overall, the 64K Model 4, with 84 chips, has 23 fewer chips than a 48K Model III (with 107 chips).

The Model 4 uses NEC 64K x 1 dy-

PEL-TEK Announces EXTRAORDINARY VALUES for the TRS-80 MOD I/III Pel-Tek's Word Machine Version 2.0

A full featured line oriented word processor in machine language... now better than ever with these features:

- Block graphics (for printers that support it)
- Embedded printer controls • Help screen
- Lower case support for unmodified Mod I's
- Variable margins, line length, page length, line spacing
- Access to D.O.S. with warm start re-entry
- Scroll up/down text • Save/load disk files
- Insert/delete characters/lines • String search
- Printer independent • Simplified commands
- Twenty four page typeset manual with command summary sheet (Manual FREE with S.A.S.E.)

Easy to learn, easier to use, now compatible with Aspen's RANDOM HOUSE proof reader.

Semi-Custom Logic Circuits

The Model 4 makes use of new, VLSI (very large-scale integration—over 1,000 transistors on a chip) semi-custom logic chips. These chips are also called programmable gate array logic chips.

Essentially, a semi-custom logic chip contains a large number of standard circuits, called gates, for hardware implementation of Boolean logic functions—ANDs, ORs, NORs, and NANDs. These circuits are not connected to each other until the chip is programmed, a process similar to encoding ROM chips.

A gate is simply a circuit with two or more inputs and one output. A gate array is a geometric pattern of gates that can be combined during manufacture (or when programmed, as in the newest generation of pro-

grammable gate arrays) to perform a complex function.

The logic circuits on the chip are combined to produce multiplexing circuits, flip-flops, address decoding circuits, bus control logic, and the like. Once the design of the circuits is fixed, many chips (in Tandy's case, hundreds of thousands) are programmed.

Semi-custom chips have several advantages. Because they are already fabricated, economies of scale keep their cost down. They allow circuit designers to build boards with empty sockets while all the other circuits on the board are built—the designer can design around this "hole" and come back later to install the customized IC once the overall design is complete. ■

—GMV

Ammicro introduces the first letter quality printer for \$680 that can also be used as a typewriter.

The **MICROWRITER™** Daisy wheel printer.

There was a need for a low cost letter quality machine that would be suitable for use as an office typewriter, and as a computer printer. Ammicro met that need by combining the Microwriter parallel interface and the traditional Olivetti craftsmanship that was available in their Praxis machine.

With the Microwriter you can have the best of both worlds a letter quality printer, and a high quality office typewriter all in one machine, that sells for less than the cost of a good dot matrix printer!

It's not just printer or a typewriter that comes complete with a deluxe carrying case, but a feature-packed, lightweight machine that doubles as an office typewriter. This printer is a simple, low cost, reliable unit which can be utilized with word processing systems, microcomputers, personal computers, and small business systems. The Microwriter's low noise level and slim modern styling allow it to blend with any decor.

The Microwriter's print quality is identical to the finest office typewriters on the market. This machine is not only perfect for letters and manuscripts, but with its 165 character, 12 inch print width, the machine is perfect for letter quality budget spread sheets, price lists, data sheets, and forms.

The Microwriter can tab, rule single lines both vertical and horizontally, underline and print at 10, 12, or 15 characters per inch (switch selectable)! Its ten character memory for automatic error correction, lift off correction ribbon, and fixed or programmable page formats are a few of the many features that make it a perfect office typewriter. Microwriter not only handles letter and legal size sheet paper in widths up to 12 inches wide, but also handles fanfold paper.

There's a wide selection of 21 interchangeable daisy wheels available. And ribbon cassettes that just drop in.

Its operation as a computer printer is simple. Just load it up with paper and you are ready to go. Centronics compatible parallel output cables are currently available from stock for the following computers: IBM PERSONAL COMPUTER™, OSBORNE 1™, ZENITH Z-100™, BURROUGHS B-20™, Convergent Technologies models IWS & AWS™, TRS-80 MODEL I, II, III™, APPLE II™. . . custom cables also available by special order.

This machine creates a new standard by which all current low cost letter quality printers will follow. Ammicro's Microwriter is truly designed for the lifestyles of the 80's and for decades to come.

Why settle for just any printer when you can have a MICROWRITER. . . a fine letter quality typewriter for you and your computer.

The Microwriter is the only daisy wheel printer on the market for \$680. For more information, see your local computer dealer or contact Ammicro directly.

Photo 3. Model III CPU Board.

dynamic RAM chips rated at 100 nanoseconds versus the Model III's 16K x 1's. This alone reduces the chip count for 64K from 24 to eight chips.

Much of the bus control logic circuitry and address decoding circuitry is consolidated onto programmable gate array logic chips (see accompanying box), further reducing the chip count.

Finally, the video control circuitry is replaced by a custom video chip to reduce the chip count even further, while providing better resolution plus two character sets—one for the 64 by 16 (Model III mode) display, the other for the 80 by 24 or 40 by 24 display.

The microprocessor is the workhorse Z80A running at a fast 4 MHz. The increased speed of the processor accommodates the extra decoding hardware and software necessary to bank-select an extra 64K of RAM. (It'll also sort your mailing list faster.)

The Model 4's power supply is consolidated onto one board, replacing the two-board power supply in the Model III, giving the machine a much cleaner look (see Photos 3 and 4). The disk drive housing is better shielded than the Model III's.

The Model 4 I reviewed carried the serial number 0026691 (the model number is 26-1069). This machine's CPU board has a substantial number of reworked and rewired circuits; in fact, one IC has a pin bent up away from the socket it normally occupies and an attached wire leading to another circuit.

It thus appears that some early models were altered in the latter stages of production. (An American folk tale says never buy a new model car until

they've made a few thousand; does this wisdom apply to computers, too?)

The Model 4 video display offers substantially higher resolution than the Model III. It looks like the Model II/12/16 display, with the same 80-column character set. Preproduction rumors claimed the Model 4's display would be green—they were wrong; it's white-on-black. The display does support reverse video, however, and a high-resolution graphics board is offered as a \$249.95 option.

Model III owners can upgrade their machine to a Model 4 for \$799. The upgrade includes a new CPU board and keyboard installed in your existing Model III cabinet (installation charges

are extra). A Model 4 upgrade also provides the new operating system and Basic.

The 64K memory expansion for the Model 4 costs \$149. The CPU board has eight empty sockets for the extra chips needed for this upgrade.

The 50-pin expansion bus on the Model 4 is identical to that of the Model III, as is the RS-232 circuitry.

Little information is available at this time about the machine's sound capability. As mentioned previously, Basic does not offer any sound commands (in spite of advertising claims) and the only sound I generated in my review was a faint clicking noise from a tiny speaker under the keyboard. *80 Micro* will hasten to uncover more about this mysterious sound facility.

Evaluation

My opinion of the Model 4 is positive. With the exception of the new Osborne Executive and one or two other portable computers, the Model 4 is the least expensive Z80 machine on the market today.

With CP/M and TRSDOS capability, it has the potential to address a massive market. A big market means outstanding software support, new peripherals, and hundreds of great articles in *80 Micro* about a powerful machine.

The recent shift by Tandy away from proprietary system software bodes well for the future of the TRS-80 line. If you're like me, you'll applaud this trend and look forward to other new computer products both from Radio Shack and the companies that support the TRS-80s. ■

THE CUTTING EDGE

THE CONCEPT

A series of computer games in which players become characters of their own design, characters who must grow in skill and wisdom to survive the challenges presented them. Characters developed in the simpler of the games would be transferrable to the more difficult as their abilities increase. Rather than offering one fixed goal in one set maze, the software would have to contain thousands of potential goals and thousands of possible pitfalls, for thousands of hours of amusement. The concept, in short, was for the creation of a series of games unlike any available in the microcomputer market.

THE SERIES

Called The Warrior of RAS. The programs in the series are **DUNZHIN**, **WYLDE**, **KAIV** and **ZIGGURAT**. **DUNZHIN** is the simplest of the series, and gives the beginning warrior a chance to learn the techniques necessary for success in the others. **DUNZHIN** is set in a massive dungeon. **WYLDE** takes place in a trackless wilderness. Subterranean adventures are presented in **KAIV**, and **ZIGGURAT** takes place in a giant pyramid, with an adventure so complex and challenging even the author wonders if he can ever complete it.

The Warrior of RAS series. From Randall Don Masteller and ScreenPlay™.

The choice is simple. You can play the Warrior of RAS games, or something not quite as good.

DUNZHIN	\$29.95
KAIV	\$29.95
WYLDE	\$29.95
ZIGGURAT	\$29.95

Available in cassette versions for Atari 400/800, Radio Shack Model I/III, and Commodore 64.

Available in diskette versions for Atari 400/800, Radio Shack Model I/III, Apple II+, IIe, IBM Personal Computer, and Commodore 64.

All versions require 48K.

THE GAMES

demanded by such a concept would be unlike common software. They would require machine-language speed, and dungeon-master complexity. Graphics would have to be an integral part of the adventure, rather than pretty but static pictures with no real-time connection to action. They would have both a game-save and character-save feature. And, on whatever machine they were implemented, the software would have to have the same great graphics, the same speed of command interpretation, the same complexity and mind-bending challenge.

A stiff challenge. But ScreenPlay™ found an author up to it.

THE AUTHOR

Randall Don Masteller. Well-known within the close-knit fraternity of non-computer fantasy role-players, Masteller combines years of professional programming experience with an awe-inspiring imagination and dedication to fantasy gaming. No other fantasy role-playing game author has skills comparable to Masteller's. And Masteller's software demonstrates that skill.

Only From ScreenPlay.

by Richard Uglum

You're a slimy rat. And you're stuck—in a 3-D Color Computer maze straight out of the twilight zone. Escape if you can!

Have you ever wondered what it's like to be a laboratory rat? Consuming mass quantities of cancer-causing food and drink, being injected, dissected, and molested? And those crazy mazes!

This Color Computer game simulates the life of an experimental rat. It gives you a rat's-eye view of a maze you must

successfully negotiate. The game is based on a two-dimensional maze, but gives you a three-dimensional view as you travel through it.

The Maze

The maze comprises a 20- by 20-element array (DIM A(20,20)) of

ones and zeros. The ones represent the walls, the zeros corridors. The maze's starting location is the value two, and the exit is the value three. The walls form the boundaries and cannot be traversed.

The screen display is divided in half to create the rat's-eye view. Each half is divided into three ranges: the current location of the rat and the two locations immediately in front of the rat.

There are four possible corridor combinations for each area on each side of the screen. For example, at range zero (the rat's current coordinates), the following combinations of corridors and walls exist for the left side of the screen:

- corridor to the left, corridor to the front.
- corridor to the left, wall to the front.
- wall to the left, corridor to the front.
- wall to the left, wall to the front.

This scheme produces 24 combinations that have to be checked to print the entire screen. The program keeps track of your direction and accordingly

- A(20,20) array that holds the maze
- X,Y the current coordinates of the rat
- XS,YS the starting coordinates of the maze
- XE,YE the exit coordinates of the maze
- XT,YT temporary coordinates for the rat's position
- XF,YF position immediately in front of the temporary rat position
- XR,YR position immediately right of the temporary rat position
- XL,YL position immediately left of the temporary rat position
- XA,YA values used to increment the range of view
- F value of array in front of rat (F = A(XF,YF))
- L value of array to the left of the rat
- R value of array to the right of the rat
- D direction the rat is facing
- A\$ command input variable

causes problems.

The line commands in the program (see Table 2) draw the maze so that the line-end coordinates are obvious for converting this program to other machines. Try converting the program to draw commands; it requires some extra effort, but it might make the program execute faster.

Version Two

The object of the second version of Rat Maze is similar to the first, but the maze is smaller and the rat slower. In addition, an invisible exit is included in the maze at a randomly chosen juncture. A tone increases in pitch as the rat nears this exit.

The most significant change, however, is the addition of five rat-eating cats to the maze. The cats, represented by circles, try to corner the rat. Three of the cats produce increasingly shrill noises as they get near the rat. The other two cats are silent. If you try to avoid the cats, you'll never find the exit.

Use POKE 65495,0 to make this version playable. ■

USE YOUR RADIO SHACK[§] COMPUTER TO WRITE SOFTWARE FOR ALL THE REST

• IBM • DIGITAL EQUIPMENT • NEC • HEWLETT-PACKARD • SAGE • TEXAS INSTRUMENTS • APPLE • RADIO SHACK • XEROX • COMMODORE • TERAK • OLIVETTI • ALTOS • ZENITH • CORVUS • COMPAQ • VICTOR

If you have been writing programs on microcomputers for any length of time, you've discovered that nearly all operating systems lock you into one family of microprocessors (or worse, into one brand of computer). That leaves you some hard choices about your software development. Whether you are writing programs at home for personal use, or in the corporate environment, or for national distribution, the question about portability to other machines now and in the future is the same. Should you go after the 8-bit or the 16-bit market? Would it be better to target IBM, Apple, Radio Shack, Commodore, or Osborne? How will you move your programs to Digital Equipment machines, or the Texas Instruments market? And what about next year's crop of microcomputers?

The UCSD p-System "Universal Operating System"* has the answer.

O.S.	8080	Z-80	8085	6509	6502	8086	HP-87	LSI-11	68000	9900	VAX
p-System	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
CP/M	✓	✓	✓								
CP/M-86						✓					
MSDOS						✓					
TRSDOS		✓									

8-bit
16-bit
32-bit

While some operating systems **claim** to be universal, only one is, in fact. And with the UOS, the entire operating system — editors, linkers, assemblers, compilers and all applications written under the UOS are designed for portability which means that a program written and compiled on one computer under the UOS can be ported to any other supporting the UOS and run without change. **No** other operating system can beat that degree of portability. Not only that, but the system features complete and integrated programmer productivity tools to conserve your software investment. The p-System "virtual" operating system characteristics make it possible to run very large applications in only 64K of RAM, yet allows you to take advantage of the additional speed and memory of the 16 and 32 bit computers.

Here is what we have for the Radio Shack line of micros:

UOS includes screen editor, bios, file manager, disk format, utilities, library for:

Model 16 (68000)	\$475
Model 12 (Z-80)	\$375
Model 4 (Z-80)	\$375
Model II (Z-80)	\$375

New Release - Model III upgrade board (Holmes) with 16K RAM (for 64K total) 80 x 24 video **and** the UOS \$595

Add-On's (Run on all)

Pascal Compiler	\$375
FORTAN-77 Compiler	\$350
BASIC Compiler	\$225

File Conversions:

TRSDOS to p-System	\$100
CP/M to p-System	\$100
IBM 3741 to p-System	\$285

Plus a complete line of high performance software including spreadsheet, data base, mailing list, word processing, accounting, medical and mathematical applications programs from some of the best names in the software business. Applications have been selected for sale and national distribution by IBM, Texas Instruments, DEC, and others.

Write or call for our free newsletter and listing of applications software for these computers and the Apple, IBM-PC, IBM Displaywriter, DEC Pro 350, DEC 11/03 & 11/23, Altos 8000 series, Terak & Sage.

[§]trademark of Tandy Corporation.

[†]PCD Supports Systems Software on DEC LSI-11, Radio Shack Models II, III, 4 12 & 16, Altos, Terak, IBM PC, Apple II±, & Sage.

SCRIPTR

SCRIPTR makes **SCRIPTSII** a **100%** SYSTEM
 Special Custom Versions Support *All Popular Printers*

MX-80 version allows for Underlining Emphasized, Sub + Super Scripting, Double and *ITALICS*. MID-LINE even on Justified text lines without disturbing the formatting. **SCRIPTR** supports **EVERY** programmable feature of the **GRAPHTRAX 80** and **PLUS** roms. No other MOD. does as much!

STANDARD FEATURES INCLUDE

- WRITE ANY code or string of codes to your printer.*
- WRITE ROM LETTERS by inserting data during printing.*
- Print any page DIRECT with correct headers / footers*
- Reenter SCRIPTSII to get use of ALL DOS FUNCTIONS.*
- See where PAGES start and end without printed copy.*
- Edit mode for errors, changes or GRAPHICS entry.*
- 17) TEACHING PROGRAMS fully explain every function.
- 66 page manual-bound - CAS5-DISK Ver. Model I/III for
- CUSTOM VERS FOR FOLLOWING**
- Centronics 737 + 739 / LP-8 + LP-4 - Daisy Wheel II.
- Microline 80 + 82A - Prowriter + Cieth 8510A + F-10
- SCM-TP-1 - DMP-200 + 400 + 410 - Gemini 10 + 15 MORE
- LDOS COMPATIBLE**
- SYSTEM REQ** TRS-80 MOD I/III, 32K, lower case.
- Disk ver. requires **SCRIPTSII/ILC** on both Model's I/III.
- PRICE** \$40.00 on DISK / CAS5. 5.5K. program.
- FREE BROCHURE** Demonstrates all features.
- Customer support by phone or letter after the sale makes Scriptr a pleasure to own and use. 1,500 fully satisfied customers in over 14 countries. **CALL I WAITE FOR INFO.**

CRAYON DELUXE

FULL SUPPORT FOR: PROWRITER
 MX-80 / 100 + **NEW GEMINI 10 +15**
NEW CIOTH 8510A + NEC-8023A

DONT LET THIS SIMPLE NAME FOOL YOU **CRAYON DELUXE** is not a toy but a COMPLETE WORD/GRAPHICS PROCESSOR which offers complete versatility in creating custom letter-sets and graphics. Written in **Z-80** Assembler it is fast, flexible and very easy to use. No program of this kind written in BASIC can compare to it. Computing the bit patterns for 760,320 bits per page of printing demands Z-80 Assembler. COMPARE + you won't get S.E.A. Demand

STANDARD FEATURES INCLUDE

1. Programmable Underlining, even create lined paper.
2. Mix **WIDE** and regular sizes **MID-LINE**.
3. **INVERT** any part of the text even **MID-LINE**.
4. **SHORT LINE SEEKING** for maximum speed. **NO WAITING!**
5. **Reversed Block Capitals Character Set.**
6. **FontMaster** - A 15K. Machine Language program which enables you to create your own custom fonts. **STORE, RETRIEVE AND PRINT letters INSTANTANEOUSLY** Allows **3 1/2** coresident character sets in memory. PLUS a fast easy way to print sample **LETTERS** and **SETS**
7. **Repeat printing capability** without carriage advance even on graphic lines gives *Typewriter Quality* print.
8. **Create 100,** or any number of copies of High-Res **MAIL LABELS** or **LETTERHEADS** with easy hands off operation.
9. Complete **FORMATTING CONTROLS** within the text allow for multiple page printing without operator control.
10. **The sharpest dot matrix print you've ever seen!!**
11. Variable **DOT Linespacing** control for text documents.
12. **Bit Masking** allows creation of graphs and the graph paper simultaneously. **Superimpose any background!!!**
13. **CREATE Block Graphics** in any size and with every set.
14. **Fine Line Drawing** for creating **real business forms.**
15. Character sets may contain letters up to 40H x 127W.
16. **Continuous WIDE** printing in any font or style. Even allows for partial **EXPANDED** from this mode.

FREE BROCHURES!!

ORDERING INFORMATION

CRAYON - Disk/Cass MOD 1/3 \$45 DISK / \$35 CAS5
CRAYON DELUXE - DISK MOD 1/3 \$80.00 w/7 SETS

ADDITIONAL FONTS AVAILABLE

HERITAGE = AMERICAN TEXT + OLD ENGLISH \$15.00
ELITE = 4 Variations on disk for \$15.00
DIGITAL = 3 computer fonts for \$15.00 on disk.
PRINT SAMPLES - 24,97,29,6,34,95,2,57.

CRAYON DELUXE. THE FUTURE IS NOW
 WE ARE NOW CARRYING A 25 MEG. HARD DISK SYSTEM FOR THE TRS-80 MODEL III. PRICE = \$3300 COMPLETE WITH DOSPLUS 4.0 ASSEMBLED - FORMATTED - SYSTEM SEES IT AS 4 DRIVES. CALL! JUST BOOT-UP AND YOU ARE UP AND > 743 WITH HARD DISK.

After 2 years of extensive research and development
 XYZT Computer Dimensions, Inc is proud to announce ...

NICE™

the NEW INTERACTIVE COMPUTING ENVIRONMENT

NICE is nothing less than a comprehensive integration of all computing facilities - including DOS, numerous utilities, application programs, even games combined with menus, database, screens, libraries, reports - an interactive environment friendly to the first time user and the sophisticated systems intergrater alike. If you know what a turbo-charger can do for an auto engine, that is what NICE does for a computer. Clearly, it is the most exciting news to come along in software for the microcomputer

**DO YOU KNOW HOW TO BOOT YOUR SYSTEM?
 THEN YOU KNOW HOW TO TURN YOUR COMPUTER
 INTO THE MOST POWERFUL USER FRIENDLY BUSINESS MACHINE!!**

NICE makes development and using software - EASY. Based on a new concept this state-of-the-art software gives you the interactive power until now found only on mainframes, but at micro prices. Put a powerful menu-driven command structure at your fingertips! Run word-processors, spell-checkers, spread-sheet programs, utilities, application programs without remembering command sequence or constantly checking the manuals. Everything you need is on the screen. Create your own applications and add them to the system - use menus, relational files, customized screens, special forms. In a matter of hours, you zip through the programming projects you usually expected to take months. All thanks to a modular, consistently designed system.

**IS YOUR WORDPROCESSOR WORKING?
 THEN THOSE SCREENS OUGHT TO BE IN YOUR SYSTEM !**

Using a computer should not be difficult - no more complicated than driving a car. With NICE you are no longer required to know all of the intricate internal operations of the computer. Creation of all types of screens, menus, inquires and reports or customized forms is as simple as writing a letter - type it on your word-processor, save it to disk, and it is ready for use. You don't have to be a programmer - just a computer user.

It's NICE for you!

NICE system consists of:

- Interactive Control & Programming Language (ICPL) \$150.
- Menu and Screen management facilities (MSF) \$75.
- Database facility (DBF) \$75.
- Forms and Report Writer (FRW) \$75.
- Library Support Option (LSO) \$75.
- Minimal NICE configuration — ICPL+MSF+LSO.

Minimal hardware requirements — 2 disk TRS-80® mod I/III. System is compatible with NEWDOS/80®-LDOS®-DOSPLUS®-MULTIDOS® floppy or hard disk.

Check, M.O., C.O.D., VISA,
 MC plus \$4.00 s/h.
 Foreign orders — extra \$10.00

Program Listing. The Corral

Airplane pilots have all the fun. When they're not out flying, they can boot up Flight Simulator on a Model III.

But suppose your avocation is capturing muddy pigs. How can you practice your skills if you don't have any swine handy?

This may be the piece of software you're looking for—a muddy pig simulator.

How It Works

The corral fence is broken and two pigs have escaped. It's up to you and your crew to capture the pigs in as little time as possible.

This task isn't easy. The pigs are very muddy, and you must surround them on all sides to capture them. Guide your crew to strategic positions and use obstacles and corners to your advantage. Use the arrow keys to move players and the space bar to change which player you control.

The upper left corner holds the high scorer's initials and time. In the upper middle is your present time. ■

Contact Michael Conforti at 28 Somerset Road, Glastonbury, CT 06033.

LOOK! UP IN THE DRIVE...

IT'S A MAILING LIST...

IT'S A DATA BASE

IT'S A LETTER PROCESSOR

IT'S A MAIL MERGE PROGRAM

YES, IT'S ALL THAT AND MORE...

IT'S BASESCRIPT

FASTER THAN A SPEEDING BYTE, ABLE TO LEAP TALL STACKS OF DATA WITH A SINGLE PASS, AND DEDICATED TO MAINTAINING **TRUTHFUL** DATA RECORDS, **JUSTIFIED** DOCUMENTS, AND THE **ALL AMERICAN** MAILING LIST!

Fast . . . Reliable . . . Flexible . . . Easy To Use

A Full Featured Letter Processor:

Word wraparound, auto centering and margins, left/right justification, headers, page numbering, columnar math, insert, delete, merge, append, on-screen help, and more . . .

A Mail Merge Program:

Produce single or multiple "custom" letters with virtually unlimited selectivity by zip, sub-category assignment, activity levels, "wild card" search and more . . .

A Complete Mailing List System:

Large and flexible name/address fields including preferred form of addressing, large comments field, letters sent, replies received, and activity tracking. Expanded tracking abilities are user selectable. Supports foreign zip codes.

A Forms Program:

Create, fill out, update and store your in-house "forms." Users report finding almost unlimited applications for this unique feature.

Priced at just \$99.95 including 70+ page manual

Shipped on a DOS PLUS® TDOS operating system. Specify Model I, Model III, or LNW 80. Postage and handling \$2.50. Out of U.S. \$10.00. Florida residents add 5% sales tax. Mastercard and Visa accepted.

My Foe Flicker

by Joseph Dlhopsky

Eliminate the flickering that plagues your animation routines. This technique alerts your Z80 when the electron gun's aim is on target.

Does your Model III animation program exhibit jerky, flickering screen movement, instead of the smooth motion you see on a television, movie, or arcade screen? It's a common problem in machine-language animation programs. Here are some tips on how to eliminate that annoying screen flicker.

Microcomputer CRTs operate on the same principle as black and white television sets: The electron gun that excites (and lights) screen phosphors aims a beam of electrons in a sequential pattern over the screen's surface. In a television, the information displayed on the screen is a picture. In the Model III, and other computers, the information consists of ASCII and graphics characters.

The computer's electron beam scans the entire screen starting at the top left. The beam moves to the right to finish the top line, then executes a horizontal retrace to return the beam to the screen's leftmost point. It jumps down to the second line and traverses it from left to right. After 192 lines (for a TRS-80), the beam executes a vertical retrace and starts at the top again. The entire process operates at a frequency of 60 Hz (cycles per second) in the United

States (50 Hz in Europe and other countries), refreshing the video screen every 16.667 milliseconds (ms).

The 17-ms interval is important in animation. Most human beings detect no flicker in a display updated at 60 Hz. This frequency is the minimum at which most people physiologically fuse a flickering display into one that appears to be solid—called critical flicker frequency or CFF. If you reduce the frequency, more and more people detect flicker. Animators must keep this in mind. A good animation program is written in machine language to make screen changes every 17 ms; a program written in Basic is much too slow for animation.

Sometimes, even machine language is too slow. To display movement of an object on the screen, an animation routine must erase the old material from the screen before, or as, the new material appears. A complex animation program can take longer than 17 ms to determine the new position of the screen's contents. So, a certain amount of jumping can occur as the video frame frequency falls below the critical flicker frequency. This can be written off as a practical limitation of the system, although a clever programmer might be able to speed up the routines to reduce the problem.

There is another flicker problem not associated with a limitation of the machine-language program. Rather, it is a characteristic of how the microcomputer displays information on the video

screen. Many programmers are not aware of the design attributes that influence the quality of their visual displays.

For instance, Sublogic's T80-FS1 Flight Simulator program for the Model III, which lets the user "fly" a Sopwith Camel, is a very complex machine-language program that updates the video screen three to six times per second. This rate is well below the critical fusion frequency, so considerable screen flicker and jumping is apparent.

These video irregularities result from display design problems. When the machine-language routines update screen data, the update information is immediately loaded into video RAM. The results of some routines alter video RAM already changed by other routines. The changes in video RAM occur more often than the 3- to 6-Hz rate of the screen. As a result, material appears and disappears from the screen randomly. Moreover, noticeable flicker occurs when entire material is momentarily erased from the screen, only to be replaced a split second later.

The psychological experimentation I do requires precise, non-flickering video displays of visual stimuli. It is often necessary to know exactly when a stimulus appears on the screen so that the experimental subject's reaction time is precisely measured. In the process of my experimentation, I realized the stimulus does not merrily appear on the screen precisely when the Z80 tells it to. It appears when the electron beam gets around to it in its 60-Hz cyclic journey across the screen. Video screen scanning occurs independently of the intentions of the Z80 or of the program designer.

The TRS-80's video display is memory-mapped. There are 1,024 locations in random-access memory (RAM) for each character location on the video

The Key Box

**Model III
16K RAM
Basic, Assembly Language
Editor/Assembler**

screen (RAM addresses 3C00-3FFF hexadecimal, 15360-16383 decimal). Most TRS-80 programmers are aware that whenever the TRS-80 is instructed to load a value into a video RAM location, the corresponding ASCII or graphics character appears on the video screen in the assigned location. However, the Z80 has not carried out the act of drawing the stimulus on the screen.

Rather, it has loaded a byte code into a video RAM address. The video RAM, then, serves as a base from which the video circuitry, operating independently of the Z80, reads and translates data to control the intensity of the electron beam as it scans the screen.

Since the Z80 does not actively draw material on the screen, a major problem exists for animators. Suppose, for example, you have a machine-language program that prints very large letters on the screen. It takes 17 ms for each 16-line letter to appear on the screen, even though the Z80 loads data into video RAM in a fraction of a millisecond.

Suppose your program draws the letter A, waits three seconds and then draws the letter B. The Z80 has no idea where the electron beam is pointing when it loads the letter data into video RAM. Ideally, the beam should be at the top of the screen. But, if the beam is in the middle of the screen, you could see the top half of the letter A and the bottom half of the letter B for an instant.

This nonsensical figure lasts only for an instant. For an alphabet display, the problem might not be acute. But if you're trying to navigate your Sopwith F.1 Camel, bomb a fuel depot without crashing into the mountains, and avoid being shot down by five German fighters on your tail, you don't want any distractions and you want clear screen displays.

What might resolve Flight Simulator's problems? Ideally, all intended screen updates should be carried out on an invisible page dedicated to video memory. Once an update is complete, the Z80 should wait until the electron beam is at the top of the screen or at an invisible location (more on this later). Then a block load instruction should be executed, transferring the invisible page to active video RAM just ahead of the electron beam. The resulting program retains the original jumpiness, but it is flicker-free. However, the TRS-80 display generator is not precisely timed nor is it designed to provide flicker-free, steady animation.

I wanted the Z80 to determine the electron beam's location at any given moment, a feature not included as a

hardware option. Mike Berger, a design engineer for the Model III, helped me develop a routine, written in Z80 machine language, that uses the Model III's real-time clock (RTC). The RTC is software driven through an RTC interrupt operating at 30 Hz.

When an RTC interrupt occurs, the Z80 finishes the current machine-language instruction. Then processing shunts to an interrupt-handling address containing the RTC interrupt-handling routine.

A normal RTC routine increments a counter at RAM address 4216 hexadecimal (16918 decimal). This counter, therefore, increments every 33.3 ms. Every 30 incrementations, one second is added to the RTC's second counter. After the RTC is updated, the Z80 returns from the interrupt and continues its previous task. In short, the interrupt causes the Z80 to suspend its current processing for a fraction of a millisecond every 33.3 ms to update the clock.

The interrupt's 30 Hz operating frequency derives from the 60 Hz video scan frequency. The video circuitry produces a signal after every second screen page (every 33.3 ms). The Z80 interprets this signal as a maskable in-

terrupt. Video synchronization is achieved because the electron beam's screen location is known when the interrupt occurs.

The programmer steals the interrupt from the real-time clock. The clock stops keeping accurate time (or stops altogether, depending on how you work it) but you don't have to tell time to produce a good animation.

RTC interrupt normally vectors the Z80 to RAM address 4046 hex (16454 decimal). This address and the following two addresses contain codes for an Assembly-language jump instruction, JP 2935H. This instruction tells the Z80 where to jump to in RAM to update the RTC. Normally, the address is 2935 hex (13609 decimal).

To use the RTC interrupt for video synchronization, the programmer must change the 2-byte address in 4047 and 4048 hex from the RTC interrupt-handling address to the address of the machine-language routine coordinating the Z80's screen printing.

Program Listing 1 is a machine-language routine that uses the RTC interrupt to move a 16-line vertical bar from the left side of the screen to the right side. The program assembles with any TRS-80 editor/assembler and loads

EPSON GRAPHICS

**FROM YOUR
BASIC • FORTRAN • PL-1 • PASCAL
PROGRAMS**

Grafpac-80 will read data from a disk file on your system and convert it to a hi-resolution plot or graph. Grafpac-80 plots up to 960 dots across and ± 32000 dots vertically on the Epson MX-80 — that's ± 25 pages !!

Grafpac-80 commands include circle, ellipse, two and three dimensional data, penup/down, plot/move relative or absolute, single character or string plotting with rotation and size control, border generation, and many more

Grafpac-80 is available for CP/M on 8 inch disk, TRS-DOS (model I and III) on 5 1/4 inch disk. Requires 48K memory. TRS-DOS systems need two disks *

Prices: TRS-DOS I & III	\$49.95
CP/M	\$69.95

Program Listing 1

from disk. Alternatively, the object code (see Table 1) can be POKed into RAM as part of a Basic program. Regardless of the technique used to get the program in RAM, it must begin at location FE00 hex (65024 decimal). If running the program as a USR call from Basic, be sure to answer less than 65024 to the Memory Size query.

Before delving into the details of Listing 1, you may want to run a simple Basic program that moves a vertical bar across the screen in a fashion similar to Listing 1. An example appears in Program Listing 2 that demonstrates the fatiguing flicker. While a machine-language routine might perform the task more quickly and efficiently, without video synchronization the program shows no great improvement in flicker.

Listing 1 reverts the RTC interrupt, waits for the interrupt, draws the first line, waits for 16.667 ms to pass, then erases the line and simultaneously draws the next line. When the vertical line moves to the right edge of the screen, the RTC interrupt returns to normal.

Line 140 locates the Delay ROM address so the program can call it when a delay is desired.

FLEXPLUS DOS.....\$69.95

A powerful, easy-to-use disk operating system!

COLOR COSMIC INVADERS

***FREE* \$21.95 Value.
on every FLEX+ DISK**

Advantages of FLEXPLUS DOS

- Best price anywhere
- Wealth of existing software
- Easy start-up—just type "RUN FLEX +"
- Allows you to save RS compatible binary disk files from FLEXPLUS
- NO HARDWARE MODIFICATIONS NEEDED
- Warranty will not be voided—no need to open computer
- Most FLEX compatible software will run

FLEXPLUS.....\$69.96

for new F Boards

FLEXPLUS with Supercharger.....\$89.95

for E and F Boards

- Print Spooling—print while editing, assembling, etc.
- All Flex compatible software will run including INTERRUPT DRIVEN SOFTWARE

E Board to F Board Conversion.....10.95

- Eliminates need for Supercharger, Simple Installation
- Full Instructions, Just remove two chips and plug in our prewired ICs.
- Soldering of one wire to a test point required

Line 150 disables all maskable interrupts, including the RTC interrupt. This avoids the possibility of an interrupt occurring while the vector is being changed.

Lines 160 and 170 change the RTC interrupt vector to the RAM address of the Start routine (beginning at line 220).

Line 180 enables the interrupts so the new vector will operate.

Lines 190 and 200 execute a 50-ms pause during which the Z80 waits for the interrupt to occur. Once it does, 100 microseconds pass and the Z80 then begins processing the instructions in the Start routine. The RETI instruction in line 480 returns the Z80 to line 200 to complete the 50 ms pause.

Line 210 executes a return to Basic or to the machine-language program that called the routine.

Line 220 begins the interrupt-handling routine. It first disables all maskable interrupts because the routine takes longer than 33.3 ms to complete. If the interrupts are not disabled, the RTC interrupt would restart the routine every 33.3 ms and it would never be completed.

Lines 230 and 240 load the starting address (the top left location on the

Table 1. Object Code for 17 Millisecond Moving Bar (Program Listing 1)

beam is at the same starting position for each new bar. The BC register contains an MSB-LSB (most significant byte-least significant byte) value equivalent to $14.8 * (\text{desired delay} - 2.46 \text{ microseconds})$ described in Radio Shack's ROM call definition. This value must be stored in RAM addresses FFDB (LSB) and FFDC (MSB) hex (65499 and 65500 decimal) before the routine is called. It takes 882.5 microseconds to erase an old bar and draw a new one, so the value in FFDB and FFDC contains a value that carries out a pause of 15.78 ms (16.667 - .8825 ms).

Lines 400-430 increment the value in addresses FFFC and FFFD (the video starting location for each bar) to set up for drawing the next bar. They also check to see if the end of the screen is reached.

If the end of the screen is not reached, line 440 jumps to draw the next bar. If it has been reached, the program goes to line 450.

Lines 450 and 460 return the RTC interrupt vector back to normal.

Lines 470 and 480 enable the interrupts and return from the current interrupt. Note that the Start routine must end with an EI instruction and a RETI instruction. You cannot use a RET instruction. If you leave out these commands, there is no telling what might happen, but it wouldn't be what you wanted.

The software I designed to perform psychological experiments is a hybrid of programs where machine-language routines carry out critical functions within larger Basic programs. Similarly, Program Listing 3 shows a Basic program that loads the machine code for Listing 1 from a disk file and carries out a demonstration.

Line 120 of Listing 3 performs the disk load. The disk file with the machine-language object code should be named MOVEBAR/CMD for proper loading. For non-disk users, replace line 120 with commands to POKE the object code in Table 1 into RAM. When you do this, you must include the following two commands that tell Basic where the USR routine starts: POKE 16526,0 and POKE 16526,254.

To understand the timing of the RTC interrupt and its relationship to the location of the electron beam, you should understand the characteristics of the video screen operation. See Fig. 1 for a diagram of the video organization.

Most TRS-80 programmers are aware that the Model III's video screen consists of 16 lines of 64 characters each. Each of the 16 video lines consists

of 12 scan lines. The electron stream travels from left to right as it draws each of the 12 lines in each character (actually, alphanumeric characters use only the top eight scan lines). It travels back from right to left before it starts the next scan line. This is called horizontal retrace and the beam is blanked during this interval. For convenience, it is said that the horizontal retrace really consists of 16 non-displayed characters that are tagged on at the end of the 64 character line; the TRS-80 thinks it is printing 80 character lines.

After the electron beam completes the last scan line on video line 16, it travels up to line 1 to begin the process anew. Just as 16 extra characters are figuratively added to the horizontal lines to accommodate the time it takes to make a horizontal retrace, six extra lines are added to the last line to accommodate the time it takes to complete a vertical retrace.

During vertical retrace, the electron beam is once again blanked. The result is that we have six video lines—17 through 22—that are not displayed. This would seem to be the ideal time to load data into video RAM because the changes wouldn't appear until the electron beam returned to the first scan line on the top of the screen. Even more advantageous, the RTC interrupt occurs at the beginning of invisible line 17!

Listing 1 uses this to accomplish all the changes in video RAM before the electron beam completes its vertical retrace to return to the top scan line: The Start routine begins 100 ms after the interrupt, and the changes in video RAM are completed 882.5 microseconds later.

LINE NUMBER	VISIBLE PORTION OF VIDEO LINE (64 CHARACTERS)	16 INVISIBLE CHARACTERS

21	..3.03 msec.....
22	..3.79 msec.....

Fig. 1. Video configuration in the Model III. The visible portion of the video screen is the 16 dark horizontal lines. Each 64-character video line has 16 non-displayed characters at the end, shown here as dots. These characters describe the time it takes for the electron beam to complete a horizontal retrace. Lines 17 through 22 are non-displayed. These describe the time it takes for the electron beam to complete a vertical retrace. The Real Time Clock interrupt occurs at the beginning of line 17.

As to timing requirements, simple arithmetic tells you how much time you have to work. Twenty two lines are drawn in 16.7 ms. Each line, therefore, is drawn in 757.57 microseconds (including horizontal retrace). If the RTC

interrupt arrives at zero microseconds, line 1 is printed 757.57×6 microseconds, or 4.54 ms, later. If your machine-language routines are completed in under 4.5 ms, it is possible to update video RAM before the electron beam

When it comes to superior performance, we study our lines very carefully.

Superior printer performance is not a fluke. It evolves from analyzing printed line after printed line. Taking the time to test and retest. After 30 years of manufacturing precision parts, we know that there are no shortcuts.

And so we took the Gemini-10X and methodically put it through its 120 cps pace. We achieved a print head life of over 100 million characters with an extremely precise dot alignment creating each crisp character.

So far so good.

Next, sophisticated performance demanded versatility. A wide choice of character sets, a buffer expandable to 8K, and the ability to interface with all popular personal computers. We added macro

instruction, giving Gemini-10X the capability to perform up to 16 operations with one command. We included as standard a paper feed system that has a friction and fully adjustable tractor feed. Then we even built in the dexterity to print graphics and text on the same line.

Done.

And, of course, staying the best means constant reviewing and fine-tuning. Keeping the Gemini easy to find, easy to afford and so reliable it can be warranted for up to twice as long as its major competitors.

Only the most careful engineering has built the new hard-working Gemini-10X. You'll applaud its performance.

Program Listing 4

begins to print the updated information. Hence, no flicker is apparent.

Program Listing 4 shows the source code for a machine-language routine that prints a vertical bar in the center of the screen. The decimal conversions for the object code appear in Table 2. Program Listing 5 is a Basic program that allows the user to enter a microsecond pause that Listing 4 takes before it draws the bar. If you select a microsecond pause within the 16.7-ms range, you can demonstrate the location of the electron beam at various times from the RTC interrupt. Listing 4, therefore, can calibrate the electron beam's location at different times.

The machine-language program re-assigns the RTC interrupt to the Start address and then waits for the interrupt. RAM addresses FFE0 and FFE1 hex (65504 and 65505 decimal) contain the LSB and MSB codes for the user-selected delay. During this time, the elec-

tron beam completes its vertical retrace and starts to scan the visible lines. When the pause ends, the Z80 loads 191s into the video RAM addresses for a single vertical bar in the middle of the screen. It takes 380 microseconds to complete this loading. So, in effect, the bar data is loaded into video RAM just ahead of the electron beam.

Once the bar is drawn, the program pauses (lines 320 and 330). The codes in addresses FFDB and FFDC hex (65499 and 65500 decimal) create a pause for the remainder of the 16.7 ms from the beginning of the Start routine. Then the code for a blank graphics character (128) is loaded into each of the 16 video RAM locations for the segments of the bar. With the next pass of the electron beam 17 ms from the RTC interrupt, the bar is erased.

For example, if you selected a 10-ms pause from the RTC interrupt before the data is stored in video RAM, the

electron beam is located within line 8 (see Fig. 2). The video data loads just in front of the beam. The Z80 then waits for the rest of the 16.7 ms from the RTC interrupt before it loads blank codes into video RAM. As a result, the top portion of the bar never appears. All you see is a bar starting somewhere within line 8, ending at the bottom of the screen, and lasting 17 ms.

When you run Listing 5, you must reserve high memory above address 65000. The object code for the machine-language routine should be in a disk file called BEAMCAL/CMD, as indicated in line 120. For non-disk users, POKE the object code decimal values starting in the address listed in Table 2.

Listing 5 asks the user to set two parameters. The first question, "How

many flashes?," allows you to call the machine-language routine a number of times in succession. Each time the routine is called, the bar is displayed for 17 ms, so multiple flashes are helpful. The second question, "Length of pause before drawing line?," lets you select the initial microsecond pause that the machine-language routine takes.

When you select a pause, 40 microseconds are subtracted in line 240 of Listing 5. This is because those sections of the machine-language routine that precede drawing the bar take 40 microseconds to carry out. If you wish to use the values in Fig. 1 for each video line, be sure to subtract 100 microseconds, the time required for the Z80 to trigger the Start routine after the interrupt.

Upon answering the computer's que-

ries, you can implement the demonstration by pressing any key. The program POKES the correct values in RAM locations used by the machine-language routine and draws a screen display that helps to locate and interpret the length of the 17-ms bar (see Fig. 2). For calibration purposes, the short horizontal lines indicate the general location of each video line. About 2/3 of the video line (seven scan lines) is located above the horizontal line, 1/3 below it (four scan lines). All alphanumeric characters appear in the space above the horizontal line; some graphics characters span both above and below the horizontal line.

I tested Listings 4 and 5 on my Model III and found a lack of agreement between the initial pause and the expected location of the electron beam. For example, a 10 ms pause should show a complete bar from the middle of line 8 down to the bottom of the screen. The actual line displayed, however, only started at line 9, an error on the order of some 500 microseconds.

The pattern of errors indicates that Listing 4 is either pausing 38 microseconds for each visible line or that the visible lines are drawn 38 microseconds sooner than the 757 microseconds supplied by Radio Shack. The 100-microsecond delay from the interrupt to the beginning of the Start routine appears to be accurate. But the microsecond values given for each line in Fig. 1 are not accurate. I found that the top of the bar appears in the expected location if the pause is adjusted based on the following equation:

$$\text{MEASURED TIME} = \text{PREDICTED TIME} - (\text{LINE NUMBER} \times 38 \text{ microseconds})$$

From this value, you also have to subtract the 100 microseconds overhead from the RTC interrupt. Table 3 lists the results.

I am not certain where the error lies. It may be that the video circuitry of my unit isn't operating at the intended 60 Hz, or my system clock is off, but I somehow doubt this. I may have incorrectly timed the duration of the machine-language instructions. For this, I used Rodney Zak's book, *How to Program the Z80*. And I double-checked my calculations.

Another problem might be in the Delay subroutine in the Model III's ROM. The user's manual gives instructions that imply a microsecond accuracy for this delay call. But if the Delay subroutine is the problem then it underestimates the time with a 5 percent error (38 microseconds per 757-microsecond line). However, I find it difficult to

Fig. 2. Two sample screen displays produced by Program Listing 5 for electron beam calibration. The short horizontal lines are produced by CHR\$(95) which appears as a short line about 2/3 of the way down the video line. When displayed, alphanumeric characters appear in the space above this character. The central grey bar depicts the vertical bar displayed by Program Listing 4. In (a), the entire bar appears. This would be the display if no pause were executed after the RTC interrupt. A 10-ms pause would give a result similar to (b). The entire bar is loaded into video RAM, but the top portions are erased before the electron beam can get to them.

ZEUS

QUEST — A NEW IDEA IN ADVENTURE GAMES! Different from all the others. Quest is played on a computer generated map of Alesia. Your job is to gather men and supplies by combat, bargaining, exploration of ruins and temples and outright banditry. When your force is strong enough, you attack the Citadel of Moorlock in a life or death battle to the finish. Playable in 2 to 5 hours, this one is different every time. TRS-80 Color, and Sinclair, 13K VIC-20. Extended BASIC required for TRS-80 Color and TI99/A. \$14.95 each.

32K TRS 80 COLOR Version \$24.95.

Adds a second level with dungeons and more Questing.

WIZARDS TOWER — This is very similar to Quest (see above). We added wizards, magic, dragons, and dungeons to come up with a Quest with a D&D flavor. It requires 16k extended color BASIC. 13k VIC, Commodore 64, TRS-80 16k Extended BASIC, TI99/A extended BASIC. \$14.95 Tape, \$19.95 Disk.

Authors — Aardvark pays the highest commissions in the industry and gives programs the widest possible advertising coverage. Send a Self Addressed Stamped Envelope for our Authors Information Package.

ZEUS — It's fast and furious as you become the WIZARD fighting off the Thunderbolts of an angry ZEUS. Your Cone of Cold will destroy a thunderbolt and your shield will protect you — for a while. This is the best and highest speed arcade action we have ever done. Difficulty increases in wave after wave, providing hours of challenging fun and a game that you may never completely master. Commodore 64, Vic20 (16k expander), and 16k TRS-80 Color Computer. (ALL MACHINE CODE!)

\$19.95 tape \$24.95 disk. (Tape will not transfer to disk.)

ADVENTURES!!!

The Adventures below are written in BASIC, are full featured, fast action, full plotted adventures that take 30-50 hours to play. (Adventures are interactive fantasies. It's like reading a book except that you are the main character as you give the computer, commands like "Look in the Coffin" and "Light the torch.")

Adventuring requires 16k on Sinclair, and TRS-80 Color. They require 8k on OSI and 13k on VIC-20. Now available for TI99. Any Commodore 64.

\$14.95 Tape — \$19.95 Disk.

ESCAPE FROM MARS

(by Rodger Olsen)

This ADVENTURE takes place on the RED PLANET. You'll have to explore a Martian city and deal with possibly hostile aliens to survive this one. A good first adventure.

PYRAMID (by Rodger Olsen)

This is our most challenging ADVENTURE. It is a treasure hunt in a pyramid full of problems. Exciting and tough!

SEAWOLFE

SEAWOLFE — ALL MACHINE CODE In this high speed arcade game, you lay out patterns of torpedoes ahead of the attacking PT boats. Requires Joysticks, at least 13k RAM, and fast reflexes. Lots of Color and Sound. A fun game. Tape or Disk for Vic20, Commodore 64, and TRS-80 Color. NOTE: tape will not transfer to disk!

\$19.95 Tape — \$24.95 Disk.

Dungeons of Death

Dungeons of Death — This is the first D&D type game good enough to qualify at Aardvark. This is serious D&D that allows 1 to 6 players to go on a Dragon Hunting, Monster Killing, Dungeon Exploring Quest. Played on an on-screen map, you get a choice of race and character (Human, Dwarf, Soldier, Wizard, etc.), a chance to grow from game to game, and a 15 page manual. 16k Extended TRS-80 Color, 13k VIC, Commodore 64. At the normal price for an Adventure (14.95 tape, \$19.95 disk), this is a giveaway.

Dealers — We have a line of about 100 original programs for the machines listed here. We have High speed Arcades, Quality Adventures, Word processors and Business Software for Small machines. Better yet, we have excellent Dealer support. Phone for information.

Send \$1.00 for Complete Catalogue - Please specify system on all orders - \$2.00 Shipping Charge on each order

AARDVARK L.T.D.

believe that this rather large error might have gone undetected by the Model III designers.

If you use Listings 4 and 5 on your own computer and enter the values in the third column of Table 3, the top of the bar should be located about 1/3 of the way down from the horizontal line. For each of the pauses listed, the corresponding video line should be lighted; that is, if you entered 8,005 microseconds, the bar should begin at the top of line 6. It would be interesting if there were some variation between different computers. This would mean that the error is due to a hardware inconsistency. If, on the other hand, the 38 microsecond-per-line error is constant from one unit to another, it reinforces our faith in the precision of TRS-80 hardware, but still causes us to wonder why the error is there.

While the existence of an error is apparent, the strength of Listing 4 is that it facilitates detecting and correcting the error in the programmer's own routines. As an experimental psychologist, I was unaware of the error until I designed and tested Listing 4. Now I can use this program to calibrate other machine-language routines that require

the precise timing characteristic of psychological experimentation.

Animation techniques are not likely to be as demanding as psychological research, but it's nice to know that the video screen operation is predictable. I hope that software designers find the

technique I described here to be useful in developing improved animation routines. ■

Joseph Dlhopsky is employed by St. John's University, Staten Island, NY. Write to him at 27 Wilson St., Port Jefferson Station, NY 11776.

Line Number	Predicted Time From RTC (ms)	Measured Time From RTC (ms)	Difference (us-100)
1	4.545	4.407	38
2	5.303	5.127	76
3	6.061	5.847	114
4	6.818	6.566	152
5	7.576	7.286	190
6	8.333	8.005	228
7	9.091	8.725	266
8	9.848	9.444	304
9	10.606	10.164	342

11	12.121	11.603	418
12	12.879	12.323	456
13	13.636	13.042	494
14	14.394	13.762	532
15	15.152	14.481	571
16	15.909	15.201	608

Table 3. Predicted millisecond pauses for beam calibration at each video line (column 2) do not show the electron beam to be in the expected position. When the values in column 3 are entered in Program Listing 5, the electron beam appears at the beginning of each video line. Column 4 lists the differences, in microseconds, between the predicted and measured pauses for each line. If you divide the value by the line number, you get a constant of 38 microseconds.

CONVERT YOUR SERIAL PRINTER TO PARALLEL CONVERT YOUR PARALLEL PRINTER TO SERIAL

The UPI serial printer interfaces allow an ASCII serial printer to be connected to the parallel printer port of the TRS-80 computers or any other computer which has a Centronics compatible parallel printer port.

Software compatibility problems which normally result when a serial printer is used are totally eliminated because, the computer "thinks" that a parallel printer has been connected. Special driver programs and changes to the operating system are not required with computers designed to work with a parallel printer.

The UPI interfaces are completely self contained and ready to use. A DB25 socket mates with the cable from your serial printer. The ribbon cable attaches to the parallel printer port of your computer. The UPI interfaces convert the output of your parallel printer port into serial data in both the RS232-C and 20 ma. loop formats. Switch selectable features include:

- Linefeed after Carriage Return
- Handshake polarity (RS232-C)
- Nulls after Carriage Return
- 7 or 8 Data Bits per word
- 1 or 2 Stop Bits per word
- Odd, Even, or, No Parity
- Baud rates 110 to 9600

UPI-3VB for TRS-80 I & III	\$149.95
UPI-2VB for TRS-80 II & 16	\$149.95

UPI-2VB-6 for TRS-80 II & 16 with 6 ft. cable	\$159.95
Models for most other computers available at	\$159.95

NEW SERIAL TO PARALLEL INTERFACES

The SPC SERIAL to PARALLEL interfaces convert serial ASCII data into parallel format for use with Centronics type parallel printers. A DB25 socket accepts serial data from your computer. The 36 contact ribbon connector plugs into your parallel printer. Can be used to add a second parallel printer port to computers which reliably support both serial and parallel printers.

Switch selectable options include the following:

- 7 or 8 Data Bits per serial word
- Odd or Even parity for serial word
- Parity or No parity for serial word
- 1 or 2 Stop Bits per serial word
- 300, 600, 1200, 2400, or 4800 BAUD

SPC-1 as described above	\$89.95
SPC-CC with DIN plug and cable for the TRS-80 Color Computer	\$69.95

All prices U.S. funds. VISA, MASTER CARD, COD, Purchase Orders accepted from schools, major corporations, and government agencies. Shipping and Handling on U.S. orders \$4.00. Ten day return period. Ninety day warranty.

Model II/12/16 Games

You might expect Color Computer and Model I/III game players, used to sitting out CLOADs or seeing ads for 32K games that won't fit their 16K machines, to be jealous of the Models II/12/16. A Model II disk can hold 416K; a Model 12 disk, over a megabyte. Someday, someone's going to use one to write the *War and Peace* of adventures.

In the meantime, however, Tandy's business machines seem stuck in the 9-to-5 grind. Comparatively few

companies make games for the II/12/16; most answered *80 Micro's* questionnaire, while data on others was gleaned from ads. Even so, this is one of *80's* skimpiest Buyer's Guides.

The following programs run under TRSDOS on 64K or larger Z80 machines. No one yet makes games for the 68000 or the Model 16's multi-user Xenix system, though workers blasting each others' starships from remote terminals is a lovely idea.

Advanced Data Design Inc., 184-08 Tudor Road, Jamaica Estates, NY 11432, 212-380-0124.

Two multi-game disks, with a modified Basic interpreter that allows finer graphic detail. Game Pack I (\$50) features the two-player games Intercept (block your opponent's line while directing your own to avoid obstacles) and Reversem (Othello), and the arcade-style Lunar Lander and Sink the Battleship.

Game Pack II (\$70) contains the above four, plus Eat'Um (control a growing snake at 10 levels of play) and Reversem II (you against the computer).

Adventure International, Box 3435, Longwood, FL 32750, 305-862-6917.

Scott Adams' Adventures 1-12—from Adventureland and Pirate Adventure through Ghost Town and Golden Voyage—on one TRSDOS 2.0 disk, for \$129.95 (Florida residents add 5 percent tax).

B.O.S.S. Computer Group Ltd., 4136 Burke St., Burnaby, B.C., Canada V5H 1B1, 604-430-4612.

A TRSDOS 2.0/2.0a/2.0b/4.2 disk for \$82.95 (Canadian), with 20 programs. The first 11 are "logic-oriented games," ranging from Biorhythm and Tic-Tac-Toe to Guillotine (you are a French aristocrat trying to talk the peasants out of beheading you) and Joseph (you have been sold to the Egyptians by your brothers and must prepare for the coming drought).

The other nine are graphics games: Extendapede, Parachutist, Satellite, Volleyball, and others like Farmyard

(Farmer Brown chasing a chicken) and Subway (a Russian spy evading a Western agent).

Eberhard Engineering, P.C., 27 Pine Ridge Drive, Smithtown, NY 11787, 516-543-7777.

To quote the press release, Above Intelligence is a collection of "over 25 sophisticated games, brain teasers, and nude printer graphics" (if you have a Daisy Wheel II or line printer). The disk lets you check your I.Q. or biorhythm, rate the men and women in your life, play Hangman and Casino, and print the ever-popular Snoopy calendar as well as pictures of naked ladies.

"Targeted for use by the sophisticated executive," not to mention "ideal for children," the package "promotes interest by computer-fearing staffs, and dramatically reduces the mystique and apprehension associated with computers." All this for \$49.95.

Kuzel Computer Services, 8654 W. Berwyn Ave. #3S, Chicago, IL 60656, 312-399-0273.

Programmer Kenneth Kuzel offers a Star Trek game called The Wrath of Ken, as well as 10 other programs. Munchman, Galactic Invaders, Meteors (an Asteroids game), and Bustout are familiar arcade adaptations. Wormy obliges you to control a ravenous, growing worm; Racer X involves dodging cars and potholes. In Quest for Adventure, you "recruit an army of adventurers and chart an unknown land." Traditional gamers can try Othello, Chess, or Computer Casino (blackjack and slots).

Each Kuzel game sells for \$19.95; any two are available for \$29.95.

Maryland Model II Games, 3304 Carlton Ave., Temple Hills, MD 20748, 301-894-1274.

Skydiver, Star Battle, The Wall, Space Swarm, and Mayhem—five arcade-style games for \$29.95 (Maryland residents add \$1.50 sales tax).

Rizzo Data Systems Corp., 577 Burlington Road, P.O. Box 458, Bridgeton, NJ 08302, 609-451-7979.

By day a small-business-systems dealer, Rizzo doubles as a distributor for AI's Adventures 1-12 (\$132.95) and Interactive Fiction (\$52.95) and the two ADD Game Packs (\$53 and \$73).

In addition, the firm offers Ricochet, Star Trek, and Biorhythms (\$28 each), as well as Lance Micklus' \$78 game disk (checkers, Starflight, Concentration, Treasure Hunt, Banko, and the Dog Star Adventure).

Tycoon (\$38) is a Monopoly-like game, and Starship/I (\$42) lets you save the galaxy in real time. Finally, Electro Casino (\$78) includes blackjack, five-card stud, roulette, and horse racing, and Handicapping (\$103) classifies and ranks thoroughbreds.

Wilson Software Division, 539 Springhouse Lane, Camp Hill, PA 17011.

More gamblers' software: Draw5 (\$23.50) is five-card draw poker and Stud5 (\$18.50) is five-card stud. Spread80 (\$25) computes pro football winners; Pool80 (\$20) operates and maintains an office football pool; and Tout3 (\$22.50) handicaps horse races. ■

PLEASE CALL OR WRITE FOR AUTHORIZED DEALER NEAREST YOU.

DEALER INQUIRIES INVITED!

Put 64K CP/M® 2.2 in your TRS-80 Model III and tap into 2,000 business programs.

Now you can run programs such as WordStar, dBASE II, SuperCalc, MailMerge and virtually thousands of other CP/M-based programs on your TRS-80 Model III.

CP/M 2.2 is the industry standard operating system that gives you access right now to over 2,000 off-the-shelf business programs.

Our plug-in Shuffleboard III comes with 16K of RAM, giving your Model III the power of full 64K CP/M 2.2 without interference of the ROM or video memory. In fact, the Shuffleboard will appear transparent in the TRS-80 mode and will not interfere with any DOS operation.

READ and WRITE Osborne, Xerox and IBM personal computer software plus many more popular formats.

Unfortunately, there is no standardized CP/M format for 5¼" diskettes. But we have developed a way to READ/WRITE and RUN standard programs under the following single-sided formats: Osborne 1 S/D, Xerox 820 S/D, IBM PC* D/D for CP/M 86 only, Superbrain D/D, Kapro II D/D, HP 125 D/D and TeleVideo D/D.

*Will Read and Write Only.

Easy plug-in installation.

It's so simple. The Shuffleboard III plugs into two existing sockets inside your Model III. There are no permanent modifications, no cut traces and no soldering. You'll be up and running in minutes.

New Products.

80 x 24 VIDEO BOARD: Features dual intensity screen, programmable cursor control for block, underline & blink rate, on-board bell with audible keyclick, battery-operated real time calendar/clock, full ASCII character set plus 256 special character graphics, dual RS-232 outputs and composite video output.

FLOPPY DISK CONTROLLER: Now you can access 5¼" and 8" floppy disk drives in any combination up to 4 drives of S/D density, S/D sided. Tap into a wealth of CP/M software which comes on 8" IBM 3740 format or Pickles & Trout CP/M for the Model II.

SOFTWARE: Additional CP/M software programs are available. Call or write for details.

OEM and DEALER inquiries invited.

Introductory price of

\$299.

The Shuffleboard III comes fully burned-in and tested complete with 64K CP/M 2.2 and MBASIC 80 interpreter, plus software manuals and a first class user's manual — with a 1-year limited warranty and 15-day no-risk free trial — for only \$299.

See the Shuffleboard III at your dealer's now.

Once you see what the Shuffleboard can do for your Model III you'll want one at once. If your dealer does not yet stock the Shuffleboard have him give us a call. Or send check, money order, VISA or MASTERCARD number (sorry, no COD's) plus \$5 shipping per board (\$17 outside the USA & Canada)* directly to the address below. Cal. residents please add sales tax. Credit card purchases can be phoned in directly and we'll ship from stock.

(415) 483-1008

Maxi Mail

by Jim Heid

Maxi Mail provides its own DOS to help your Model III manage a mailing list, but this is a system that requires time and patience.

★ ★ ★

Maxi Mail
The Business Division
P.O. Box 3435
Longwood, FL 32750
48K Model III
Two disk drives, printer
\$99.95

No, Maxi Mail is not the misspelled name of a new body-building magazine. It's a mailing list management system for the Model III, offered by the business software arm of Adventure International. Maxi Mail is an easy-to-use, well-documented system, but some of its functions take maxi-time.

System Components

The Maxi Mail software is a combination of machine-language programs and Basic programs with machine-language subroutines. The system comes on one double-density disk, packaged with a 50-page manual in a 7-by 9-inch binder.

The software includes a disk operating system (DOS), a scaled-down version of DOSPLUS called TDOS. It includes Format and Back-up utilities, and supports the seven library commands listed in Table 1. (A library is a list of commands that lets you control the DOS and manipulate your disk files.)

The DOSPLUS people mysteriously

chose the word Cat (for catalog) as the command to display the directory. Most TRS-80 users are used to typing Dir for a directory display. The Cat command displays file names only; if you need more information, such as free disk space or file size, you must read the directory with a DOSPLUS 3.3 or 3.4 system disk.

Because DOSPLUS is a reliable, time-tested operating system, most users will be content with its scaled-down version. If you strongly prefer another DOS, you're on your own.

The manual provides no information on interfacing Maxi Mail with other operating systems. In fact, it states, "...there is no need to transfer Maxi Mail to another DOS." Owners of souped-up TRS-80s with nonstandard disk drives might disagree.

The manual says nothing about high-speed CPU support or about the types of drives TDOS supports. If you have a modified CPU machine or nonstandard drives (8-inch, for example), check with The Business Division before buying Maxi Mail.

Using Maxi Mail

Maxi Mail executes automatically when you press reset. A title page appears while the program loads, and the main menu appears after a few seconds (see Fig. 1). Before you can enter names and addresses, you must initialize a data disk by selecting option 5, "Create New Mailing List."

This option creates a series of data disk files that hold your mailing list. It also initializes a few data files on the system disk. You have several opportunities to abort the initialization process

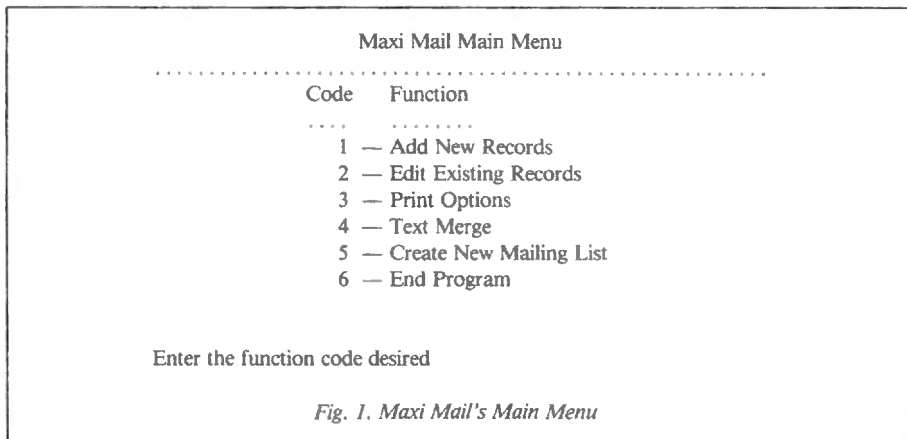

Fig. 1. Maxi Mail's Main Menu

if, for example, you insert a disk you don't want to use.

Maxi Mail requires a separate system disk for each of your mailing lists. If you want to keep three separate lists—one for past customers, one for present customers, and one for prospective customers—you must have three system disks, one for each list.

This doubles the number of back-up disks required, since you have to dupli-

cate each system disk. To back up the three lists above, you need six blank disks—one for each data disk and one for each system disk. This can cost you a lot of blank disks.

The same requirement also invites disaster if you mistakenly use a system disk in combination with the wrong data disk. To see what would happen, I set up a mailing list and entered 55 sample records. (A record contains name

and address information for one person—like one card in a Rolodex file.)

Using the same system disk, I set up another list and entered eight sample records. Everything worked properly. When I went back to add names to the first list, however, the system forgot there were 55 records. It stored only nine records, and sent the other 46 into magnetic oblivion.

Maxi Mail needs a test to warn you if you try to use a bad disk combination. Careful users will label their disks explicitly.

Adding Records

Adding records to your list is easy. When you select option 1, "Add New Records," the screen clears and a data-entry form appears (see Fig. 2). The program also displays the total number of records stored in your list.

Each record contains 13 fields. A field is comparable to a single line on the Rolodex card; each field contains a line of data pertaining to the record. The first two fields are "Last Name" and "First Name." You can replace these labels with "Company Name" and "Attention" by typing @ and pressing enter.

"Telephone Number" actually comprises three fields: area code, exchange, and number. The telephone number fields accept numbers only. This is a minor inconvenience if you refer to telephone exchanges by letter (such as KL5-1212). Maxi Mail does not let you type letters or other characters into the three numeric-code fields either.

Maxi Mail's code fields hold only three alphanumeric characters and 12 numeric characters. If you need to store more data with each record, or if you prefer to spell out data rather than code it into numeric fields, you might want a mailing list system that allows larger code fields or a data-base manager that lets you create the format to store your information.

The periods in each field represent possible characters. Enter your data one field at a time; the field you are working on is highlighted with small graphics squares instead of periods. To leave a field blank, simply press enter.

When you've entered a complete record, the program asks you if it's correct. If you answer no, it asks you for the number of the incorrect field. After you correct that field, Maxi Mail again asks you if the record is correct. By answering no and providing another field number, you can correct any incorrect data.

This method of field correction is common in Basic mailing list programs.

Field Information

Thirteen fields per record; names and lengths as follows:

Last name: 28
First name: 28
Address: 26
City: 15
State/Country: 6
Zip code: 9
Telephone area code: 3
Telephone exchange: 3
Telephone number: 4
Numeric code #1: 4
Numeric code #2: 4
Numeric code #3: 4
Alpha code: 3

The user cannot change field lengths. He can change "Last name" and "First name" fields to "Company name" and "Attention," respectively. Other field names are permanent.

Sorting

Records are kept in zip code order, and in alphabetical order within zip code. No other sorting is possible.

Data File Specifications

Maximum size limited only by free disk space.
Holds approximately 1,000 records per disk.
Separate system disk required for each mailing list.

Label Printing

Capable of printing up to four labels across.
Multiple search criteria allowed.
Label size is user-definable.
Capable of printing summaries.

Form Letter Generation

Lets you supply data from keyboard during printing session.
Printing parameters are user definable.
Multiple search criteria allowed.
Separate word processor required that can save in ASCII format.

DOS Overview

TDOS (scaled-down version of DOSPLUS).
Supports 5-inch, single- or double-density, 35-96 track drives.
Utilities include Back-up and Format.

Description of Library Commands

Auto—activates/deactivates program loading upon reset.
Cat—displays disk contents.
Config—sets track-to-track stepping rate (6, 12, 20, 30, or 40 milliseconds).
Copy—duplicates files from one disk to another.
Kill—deletes files.
Rename—changes a file's name.
Verify—enables read-after-write feature to verify accuracy of disk writes.

Table 1. Maxi Mail Specifications

main menu. Some kind of "record not found" message would be helpful, especially to novice users.

If the program finds the record, it appears on the screen and you have the opportunity to delete it, edit it, display the next matching record, or search for the next name and zip you entered. If you delete the record, Maxi Mail manipulates its data files for a few seconds, then returns to the main menu.

If you choose to edit the record, the program asks which line you want to change. The field correction procedure is identical to that in the "Add New Names" section. A screen editor with movable cursor would be easier to use, but the line-oriented method serves its purpose.

The edit mode is also slow. It took about a minute for Maxi Mail to search through my 55-record mailing list. If you enter a name or zip code incorrectly, you have to wait while the system searches in vain for it. Pressing break stops the program and puts you in Basic's command mode, with nothing but open files and a "Break in line XXX" message to comfort you.

If you change the last name or the zip code of a record, the file insertion routine forces you to wait even longer. I changed the last name of one entry and had to wait over a minute. And the delays get longer as your mailing list grows.

Printing Your List

Maxi Mail performs well when printing. You can print up to four labels per line, and you can change the default values for margins and number of blank lines between labels. If you change the default values, the program stores the new values on the system disk, eliminat-

ing the need to change them in the future.

Maxi Mail supports printers with up to 132 columns. The system does not let you send control codes to the printer. This is a limitation if you have a dot-matrix printer with several print options.

You can print labels for your entire mailing list, or only for those records that match certain criteria. If you select the latter option, you must tell Maxi Mail which fields to search, and what to search for.

You can specify up to ten search fields, designating each search as exclusive or nonexclusive. An exclusive search looks for and prints records that match every parameter you specify; a nonexclusive search prints records that meet one or more of the parameters.

Telling Maxi Mail what to look for is easy. Type in the number next to the name of the field you want to search. Maxi Mail then asks if the search is to be exclusive or nonexclusive.

After you answer, a data-entry line of the appropriate length appears, and the system asks you for the search's beginning and ending range. If you want to print labels for all zip codes starting with zero, for example, you specify 00000 as the beginning range, and 10000 as the ending range.

Version A.0 contains a bug in its record search routine that crashes the program if you try to search by the area code or the area code and exchange fields. The crash results in no data loss, but it does rob you of two valuable search options.

Another search routine bug prohibits you from typing more than 11 characters when searching by the city field, which is 15 characters long. You can't search for a city with a name longer

than 11 characters.

The Business Division is aware of these bugs, and future versions of Maxi Mail will not contain them. If you've already bought version A.0, list the program called PRINT/BAS. If its version number is A.1, return your copy of Maxi Mail for a corrected version.

Summaries and Form Letters

Maxi Mail also prints your mailing list in summary form (column form instead of mailing-label format). You can print a complete record listing (see Fig. 3), or an abbreviated record listing (see Fig. 4). You can also display the abbreviated record listing on the screen.

Maxi Mail's best feature, text merge, lets you print "personal" form letters. First, you write a letter that contains code words called field labels. These tell Maxi Mail that you want to insert something from your mailing list at that point in the letter.

Your letter can also contain keyboard variables that let you supply data from the keyboard during a printing session. Using field labels and keyboard variables, you can print what looks like a personal letter for each entry in your mailing list, or for only those entries that meet your search criteria.

Maxi Mail has a more cumbersome text merge feature than some other systems. Printing letters for all records (no search criteria) requires that you follow this maze of steps and prompts:

- clear file area (by selecting an option from a menu)
- load the file that contains your letter
- compile the file (Maxi Mail checks your letter and makes sure all field labels are spelled correctly)
- specify permanent (stays the same for each letter) or temporary (changes from

THE NEW AMDISK-III MODEL III ADD-ON DRIVE

The AMDISK-III Micro-floppy disk system is an engineering breakthrough in disk size, storage capacity, media protection and user convenience. It's fully compatible with your TRS-80 Model-III*[®]. Enjoy a full 736 KByte† (formatted) storage capability and the extra convenience of the new 3" hard-plastic encased diskettes. They fit into a shirt pocket and are easy to mail, too.

The AMDISK-III drive system is ruggedly constructed for years of trouble-free operation and is backed with our 90 day warranty on parts and labor.

Just circle the reader service number to receive full technical details.

* TRS-80 and TRS-DOS are registered trademarks of Tandy Corporation.

† Requires recording on both sides.

Amdek . . . your guide to innovative computing!

page to page) keyboard variable
 ●start printing, or change printing parameters if desired.

All these steps are probably necessary to support Maxi Mail's flexible text merge features. If your form letter requirements are relatively simple, however, they might be too much trouble.

Documentation and Support

The biggest error in Maxi Mail's documentation was its instruction to press shift and clear simultaneously to print whatever is on the screen. The proper key sequence is shift, down arrow, and asterisk. Otherwise, the documentation has no major errors or omissions.

The writing style is clear, and many sample screens guide the inexperienced

user. The manual is attractively designed and printed on thick, durable stock. It's divided into eight tabbed sections, with an index and a two-page table of contents. Nine appendices cover such subjects as disk formatting and back-up, text formatting commands, and disk operating system use.

The Business Division prefers that you write them with your troubles, but according to the manual, they take phone calls "if you really get desperate." (I'm not sure how they can tell if you're desperate. Maybe they measure the quiver in your voice.)

Although the manual doesn't say so, The Business Division will replace a damaged master disk at no cost, provided you're a registered owner and you

send in the original disk. The company replaces any bug-containing programs to registered owners free of charge.

Pros and Cons

Maxi Mail is a solid, reliable mailing list manager. Inexperienced users should have little trouble with it, although the complex text merge procedure might frighten some.

The system's letter-printing capabilities are very powerful and its search routines are flexible enough for most mailing applications. Its documentation is clear. Adventure International is a reputable company that has been in business for several years.

Maxi Mail is, however, painfully slow at times. Its editing features are inconvenient, partly because editing is done line by line instead of with a screen editor, but mostly because you have to supply the zip code with the last name of the record you want to edit.

As mailing list managers go, Maxi Mail is in the middle ground. For most applications, you could do worse, but you could also do better. ■

Model II Casino

by **Byron Lott**

When you want to use your Model II for something other than business applications, try these 10 Las Vegas casino-style games.

Most Model II game articles begin with lines like: "So you think the Model II is all business and no play?" Actually, not only does the II like a little relaxation now and then, it even has a wild side. Witness these 10 programs, ready for anything from a charity Las Vegas Night to the seediest gam-

bling den.

The programs, One-Armed Bandit, Craps, Big Six, Blackjack, Roulette, Keno, Draw Poker, Faro, Baccarat, and Four-Card Monte, run under Model II Disk Basic. They use the limited graphics capability of the Model II, along with simple subroutines, to

provide casino-style play and scoring.

One-Armed Bandit

This program provides an interesting application of Model II graphics to simulate the typical casino slot machine.

The random display of the 20-sided wheel is a little unusual. It is the result of the R1, R2, and R3 statements in line 340. These are evaluated in lines 550-600 for display and scoring input. Scoring occurs in lines 380-470.

Roulette

In this roulette program, bet selection (in line 240) requires entry of a letter to identify the desired bet. This letter enters and posts the bet on the playing board display, just as a stack of chips would be placed.

When you've placed all the bets, press enter to start the wheel spinning and

INDUSTRIES INC.**

You place your order and it arrives when expected. "What do you know, they did ship that day!" You open your package and **SURPRISE**, it's what you ordered, not last year's version six times removed. "Wait a minute, I must have paid full retail to get this kind of service. H'mm, that's not it. These prices are among the lowest. What's the catch? I've got it! They charged me large shipping and handling charges. No, not that either. It says here 'Free shipping within the Continental 48 States via UPS ground.' Only the differential is charged for UPS Blue or 1st Class. Now I've got it, it's only a dream!!!"

**TRY
US!**

At Micro Images your dreams become reality! How do we do it? Simple, we tell the truth. If the item you order is not in stock — we tell you. If we can't ship that day — we tell you. Which version? We tell you. Why are we telling you this? The answer is easy. This is what we do best and what separates us from the competition, **AND WE WANT YOU TO KNOW.**

the Model II prevents elaborate board layout and three-dimensional views. I've used a simplified table and dice-like structures.

The game starts on line 220; the program resets the appropriate variables and the graphics layout appears. After

you make the initial bet (type and amount) in lines 230-300, the first toss of the dice takes place in lines 310-340. Lines 350-400 evaluate the results.

At this point, the player chooses and enters the remaining types of bets. You can skip each one and make no bet by

Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • XEROX™

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSARECEIVABLES™

\$99.95

VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

VERSAPAYABLES™

\$99.95

VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSAPAYROLL™

\$99.95

VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

VERSAINVENTORY™

\$99.95

VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSALEDGER II™

\$149.95

VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module.

pressing enter.

If you require a second roll of the dice, line 610 performs the toss with

accompanying graphics. Lines 640-750 evaluate the second toss and post the betting results.

Line	Function
10-80	Introduction
90-100	Display field graphics
110-160	Select numbers to bet
170-210	Random selection of 20 numbers to win
220-380	Game scoring
390-430	Game conclusion
440-460	Display field graphics subroutine
470-480	Name ID subroutine
490	Graphics subroutine
500	Graphics subroutine
510-580	Display hi-lite subroutine
590	Number ID subroutine
600	Game ID subroutine
610-690	Game playing instructions

Table 7. Keno

Line	Function
10-110	Introduction
120-130	Produce screen graphics
140-170	Betting input
180-270	Random card selection
280	Layout subroutine
290-320	Card suit subroutine
330	Card content subroutine
340	Card outline subroutine
350-400	Calculation and conclusion
410	Card back graphics subroutine
420	Card content clear subroutine
430-510	Scoring subroutine
520-670	Scoring subroutine
680-760	Scoring subroutine
770-840	Condensed set of rules for game

Table 8. Baccarat

Line	Function
10-100	Program introduction
110-150	Playing screen graphics and prompt for entering bet
160-170	Bet amount evaluation and display
180	Start deal of first hand
190-250	Clear card contents of graphics pattern
260-300	Random selection of card values for original hand
310-340	Instructions for holding selected cards in original hand
350	Hold blanking for cancel selection
360-500	Selection of cards to replace those not retained in original hand
510-900	Program hand evaluation logic
910-1000	Display and scoring logic
1010-1060	Game conclusion
1070-1110	Card graphics location subroutines
1120-1150	Card graphics outline subroutine
1160-1200	Card graphics pattern subroutines
1210	Card value print subroutine
1220	Card suit determination subroutine
1230-1440	Game instruction and scoring information

Table 9. Draw Poker

Blackjack

Try your luck against the house in this game of blackjack using casino-style rules. The program uses four decks of cards, and the simulation includes dealing from a card shoe.

Starting at line 450, you reset the control variables and construct the layout graphics using subroutine 1150 and PRINT@ statements. Place bets using single INKEY statements (lines 480-500) for the number of chips and their color (value).

Lines 520-560 control card draws and display, with the results posted on the screen. If the game doesn't end at this point, betting continues with the prompts in lines 610-660. Betting for the choices available to the player is in line blocks 670-720, 730-800, and 830-890.

Final scoring and posting of the results on the screen occurs in lines 900-1080.

Subroutines using only a few of the characters available on the Model II call layout graphics and card-format graphics. Graphics in Basic can be slow, but their use is a straightforward approach in this type of program.

Faro

Faro is a card game often played in the casinos and saloons of the old West. It's not played much these days because the payoff to the house is not as favorable as in other games.

Using appropriate subroutines to minimize complexity, lines 350-380 construct and identify the playing layout. Then the first card is selected from the deck and displayed (line 390). This card is called "soda" and does not enter into the betting.

Placing bets on the 13 card values starts with line 420. It prompts the player for number of chips, played on which rank, and to win or lose.

Lines 560 and 570 randomly determine the cards drawn by the dealer: RL to lose and RW to win. Several lines of logic analyze and evaluate the cards drawn. Arrays score the plays: B(52) to win, H(52) to lose, C(52) for cards drawn, and L(13) for printing locations. Logical statements compare array contents and calculate results.

After you've played 24 regular turns, the remaining three cards are revealed, but not their order (lines 670-710). The final betting (last turn) is made on these cards (line 740).

Wheel of Fortune

If you don't have time to attend a carnival or county fair, you can try your

from **HOWE SOFTWARE**
FOR TRS-80 MODELS I, II & III & the IBM PC

System Diagnostic

For Cassette or Disk

IS YOUR COMPUTER WORKING CORRECTLY? ARE YOU SURE?
Tests every component of your TRS-80 for proper operation.

DISK
\$99.95

CASSETTE
\$94.95

- ROM: Checksum test
- RAM: Four separate tests including every address and data value
- Video Display: Character generator, video RAM, and video signal tests
- Keyboard: Every key contact tested
- Line Printer: Character test
- Cassette Recorder: Read/write/verify data
- RS-232-C Interface: Read sense switches (Model I), connector fault, data transmission, framing, data loop, baud rate generator
- Disk Drives: Disk controller, drive select and restore, track seek and verify read, read/write/verify all tracks and sectors, formatting, disk drive timer, disk head cleaner
- Model 1: single or double density, 35, 40 or 80 track drives
- Model 3: single or double density, 35, 40 or 80 track drives single or double sided drives

- One program adapts to any system configuration and hardware.
- Individual tests of each device with operator monitoring and intervention.
- Continuous system tests run continually for hours, with diagnostic reports optionally written on line printer.
- Complete instructions and documentation.

SPECIFY TRS-80™ MODEL I OR MODEL III

SMART TERMINAL

Enables your TRS-80 to be used as a data communications terminal to a time-sharing system, computer bulletin board, or another computer, via the RS-232-C interface.

- MEMORY BUFFER holds data for transmission or data received from other computer.
- CASSETTE or DISK may be used to load or save data from memory.
- AUTOMATIC TRANSMISSION of data from memory.
- AUTOMATIC STORAGE of incoming data at user's option.
- TRANSMIT or RECEIVE WITH VERIFICATION options included for communication between two TRS-80s using Smart Terminal.
- Full CONTROL KEYS, including control key mapping into any ASCII character. True BREAK key. Lower case supported on Model I.
- Buffered LINE PRINTER ECHO for incoming data.
- Disk and cassette files fully compatible with ELECTRIC PENCIL™ and SCRIPSIT™ programs.
- BAUD RATE and RS-232-C CHARACTERISTICS can be reset from within the program.
- SAVE PROGRAM option creates "personalized" back-up copy of program with all options set as specified by user.
- ONE PROGRAM supports both cassette and disk systems. Program is compatible with PMC-80 and other TRS-80 "work alike" computers.

Model I or III Version supplied on cassette **\$69.95**
Model II (CP/M) Version supplied on diskette **\$74.95**
\$79.95

MON-3 and MON-5

Monitor Programs #3 and #5 are powerful utility programs which enable you to interact directly with the TRS-80 in machine language. They are useful both for beginners and for advanced programmers.

- BEGINNERS can learn to use machine language.
- COMPLETE instruction manual.
- SIMPLE commands, easy to use.

Both MON-3 and MON-5 contain the following features:

- DISPLAY memory in ASCII and hexadecimal form.
- DISASSEMBLE memory to see machine language commands.
- MOVE and COMPARE blocks.
- SEARCH through memory to find specific values.
- MODIFY memory in different ways.
- RELOCATE object programs.
- READ and WRITE object tapes in SYSTEM format.
- UNLOAD programs in low RAM on disk.
- CREATE SYMBOLIC CASSETTES of disassembled output for use as input to EDTASM program (MON-3 only).
- PRINT output optionally on video display or line printer.

Monitor #5 adds the following features:

- SAVE and LOAD disk files.
- INPUT and OUTPUT of disk sectors, bypassing disk operating system.
- RS-232-C COMMANDS for terminal mode, send and receive data.
- COMPLETE DEBUGGING PACKAGE including setting and displaying registers, single stepping, setting breakpoints and executing machine instructions.

Available for Model I and III Level II computers (16K, 32K and 48K).

Specify TRS-80™ Model I or III

MON-3 (for cassette systems) \$39.95
MON-5 (for disk systems) \$59.95

MAILING LIST

Maintains mailing lists of up to 1326 names (48K version). Add, change, delete, or find names. Machine language sort according to information in ANY field (first or last name, address, city, state, zip code). Three or four line labels printed in 1, 2, 3, or 4 columns, in master list, or on video display.

TRS-80 Model 1/3 Disk Version \$69.95
IBM PC Disk Version \$79.95

HOME BUDGET

Keeps track of your monthly and year-to-date income and expenses. Income and expenses classified by code numbers for identification of categories. Data includes date, code number, amounts and check number (optional). Computes monthly and year-to-date summaries showing income tax deductions. All output printed on video display or line printer at user's option. Complete instructions for customizing to suit your own budget.

TRS-80 Model 1/3 Cassette Version \$29.95
TRS-80 Model 1/3 Disk Version \$49.95
IBM PC Disk Version \$59.95

SMALL BUSINESS ACCOUNTING

Based on Dome Bookkeeping Record #612, this program keeps track of income, expenditures, and payroll for a small business. Receipts and expenditures can be entered on a daily, weekly, or monthly basis. Program computes monthly, through last month, and year to date summaries. Payroll section (included in disk version only) keeps record of employees and paychecks with up to six categories of payroll deductions. Computes employee payroll records and year-to-date payroll totals. Complete instructions for customizing to suit your own business.

TRS-80 Model 1/3 Cassette Version \$29.95
TRS-80 Model 1/3 Disk Version \$59.95
IBM PC Disk Version \$69.95

luck at a simulated wheel of fortune. You only need to enter 73 Basic program lines.

The screen clears and the control variables reset starting on line 270. Line 280 provides the layout graphics using

keyed subroutines that permit more compact programs.

Start betting on line 290, using fast INKEY inputs. To simplify the INKEY use, the number of accepted chips is limited to nine. If you wish, you can

substitute a double INKEY; then a stack of up to 99 chips is possible. If you make the change, the first decade of inputs is 01, 02, and so on.

When the program prompts you, type in a number from one to nine to indicate

Line	Function
10-110	Introduction, define variables, arrays, load card ID arrays
120-250	Rules for game
260-270	Start of game and layout graphics
280-310	Card draw selection and display
320-620	Placing of bets
630-670	Drawing the gate, scoring, and display of results
680-740	Game conclusion
750	Layout graphics subroutine
760	Card outline subroutine
770	Card value printing subroutine
780	Card content clearing subroutine
790	Card suit determination subroutine
800	Card graphics pattern subroutine
810	Play counter subroutine

Listing 2 continues

"These winning numbers appear on lighted flashboards located throughout the casino area."

the number of chips you wish to stack on a given location on the layout (\$1, \$2, \$5, A for \$10, B for \$20, J for Joker, L for Logo) that you will specify shortly.

For the color prompt, type in W (white) for \$1 chips, O (orange) for \$2 chips, R (red) for \$5 chips, G (green) for \$25 chips, or B (black) for \$100 chips. Next, specify the location on the layout where you want the chip or stack of chips placed as your bet.

If you intend to place only one bet, press enter to start the wheel spinning. If you wish to place additional bets, repeat the number of chips, value of each chip, and location of stack for each bet prior to starting the wheel with enter.

Wheel rotation comprises two parts. Line 440 selects one of three lines: 450, 460, or 470. You need a random selection of 54, and this divides the function into three groups of 18 for convenience.

You can try individual modifications if the simulated wheel rotation (including slowing) in subroutines 670 and 720 is too simplified.

Keno

This Model II version of keno uses Disk Basic and the powerful PRINT@ statements to produce a wide range of graphics displays. The larger screen area available with the 1,920 discrete locations allows sufficient placement of both text and graphics. If... Then... Else statements form the conditional requirement for scoring.

The game starts on line 110 when it prompts the player to mark the spots desired. At a casino, you would mark from one to 15 of your favorite numbers on a keno ticket (in our case, the video screen) and present this along with the amount you wish to bet (line

BUSINESS 100 PROGRAM LIST

NAME	DESCRIPTION
1 RULE78	Interest Apportionment by Rule of the 78's
2 ANNU1	Annuity computation program
3 DATE	Time between dates
4 DAYYEAR	Day of year a particular date falls on
5 LEASEINT	Interest rate on lease
6 BREAKVEN	Breekeven analysis
7 DEPRSL	Straightline depreciation
8 DEPRSY	Sum of the digits depreciation
9 DEPRDB	Declining balance depreciation
10 DEPRDDB	Double declining balance depreciation
11 TAXDEP	Cash flow vs. depreciation tables
12 CHECK2	Prints NEBS checks along with daily register
13 CHECKBK1	Checkbook maintenance program
14 MORTGAGE/A	Mortgage amortization table
15 MULTMON	Computes time needed for money to double, triple, etc.
16 SALVAGE	Determines salvage value of an investment
17 RRVARIN	Rate of return on investment with variable inflows
18 RRCONST	Rate of return on investment with constant inflows
19 EFFECT	Effective interest rate of a loan
20 FVAL	Future value of an investment (compound interest)
21 PVAL	Present value of a future amount
22 LOANPAY	Amount of payment on a loan
23 REGWTH	Equal withdrawals from investment to leave 0 over
24 SIMPDISK	Simple discount analysis
25 DATEVAL	Equivalent & nonequivalent dated values for oblig.
26 ANNUDEF	Present value of deferred annuities
27 MARKUP	% Markup analysis for items
28 SINKFUND	Sinking fund amortization program
29 BONDVAL	Value of a bond
30 DEplete	Depletion analysis
31 BLACKSH	Black Scholes options analysis
32 STOCVAL1	Expected return on stock via discounts dividends
33 WARVAL	Value of a warrant
34 BONDVAL2	Value of a bond
35 EPSEST	Estimate of future earnings per share for company
36 BETAALPH	Computes alpha and beta variables for stock
37 SHARPE1	Portfolio selection model-i.e. what stocks to hold
38 OPTWRITE	Option writing computations
39 RTVAL	Value of a right
40 EXPVAL	Expected value analysis
41 BAYES	Bayesian decisions
42 VALPRINF	Value of perfect information
43 VALADINF	Value of additional information
44 UTILITY	Derives utility function
45 SIMPLEX	Linear programming solution by simplex method
46 TRANS	Transportation method for linear programming
47 EOQ	Economic order quantity inventory model
48 QUEUE1	Single server queuing (waiting line) model
49 CVP	Cost-volume-profit analysis
50 CONDPFRO	Conditional profit tables
51 OPTLOSS	Opportunity loss tables
52 FQJQQ	Fixed quantity economic order quantity model
53 FQEOWSH	As above but with shortages permitted
54 FQEOWPB	As above but with quantity price breaks
55 QJUECB	Cost-benefit waiting line analysis
56 NCFANAL	Net cash-flow analysis for simple investment
57 PROFIND	Profitability index of a project
58 CAPI	Cap. Asset Pr. Model analysis of project

59 WACC	Weighted average cost of capital
60 COMPBAL	True rate on loan with compensating bal. required
61 DISCBAL	True rate on discounted loan
62 MERGANAL	Merger analysis computations
63 FINRAT	Financial ratios for a firm
64 NPV	Net present value of project
65 PRINDLAS	Laspeyres price index
66 PRINDPA	Paasche price index
67 SEASIND	Constructs seasonal quantity indices for company
68 TIMETR	Time series analysis linear trend
69 TIMEOV	Time series analysis moving average trend
70 FUPRINF	Future price estimation with inflation
71 MAILPAC	Mailing list system
72 LETWRT	Letter writing system-links with MAILPAC
73 SORT3	Sorts list of names
74 LABEL1	Shipping label maker
75 LABEL2	Name label maker
76 BUSBJD	DOME business bookkeeping system
77 TIMECLK	Computes weeks total hours from timeclock info.
78 ACCTPAY	In memory accounts payable system-storage permitted
79 INVOICE	Generate invoice on screen and print on printer
80 INVENT2	In memory inventory control system
81 TELDIR	Computerized telephone directory
82 TIMUSAN	Time use analysis
83 ASSIGN	Use of assignment algorithm for optimal job assign.
84 ACCTREC	In memory accounts receivable system-storage ok
85 TERMPAY	Compares 3 methods of repayment of loans
86 PAYNET	Computes gross pay required for given net
87 SELLPR	Computes selling price for given after tax amount
88 ARBCOMP	Arbitrage computations
89 DEPRF	Sinking fund depreciation
90 UPSZONE	Finds UPS zones from zip code
91 ENVELOPE	Types envelope including return address
92 AUTOEXP	Automobile expense analysis
93 INSPFILE	Insurance policy file
94 PAYROLL2	In memory payroll system
95 DILANAL	Dilution analysis
96 LOANAFD	Loan amount a borrower can afford
97 RENTPRCH	Purchase price for rental property
98 SALELEAS	Sale-leaseback analysis
99 RRCONVBD	Investor's rate of return on convertible bond
100 PORTVAL9	Stock market portfolio storage-valuation program

Listing 2 continues

150) at the keno counter.

There a writer marks a receipted copy on numbered paper that is good only for that game. At some casinos, a keno runner places your bet and returns your ticket copy to you.

In this simulation, you type in the number and hit enter to mark selected spots. The input is range-protected so that only numbers in the 1-80 range are accepted. If you make a mistake, type in C followed by enter; your current ticket is discarded and a new ticket appears, ready for a fresh start.

When you've made all one to 15 choices, type B and enter to place the amount of the bet (line 150). The function Clear, Bet is protected, so only one of these two letters is accepted.

When the "Place bet" prompt appears, you can type in the amount up to a maximum of \$99,999.99 (although the highest amount normally accepted at a casino is \$25). This value is not range-protected.

After you enter the bet, 20 winning numbers are selected. At the casino, air pressure mixes the 80 numbered balls (line 190) in the keno bowl. The 20 winning balls are ejected from the bowl at random (Basic's random function).

These winning numbers appear on lighted flashboards located throughout the casino area (lines 170-210). For this program, a graphics cross displays the winning numbers D\$ = CHR\$(140) from line 40, which defines them, to line 200, which prints them.

Scoring occurs in lines 220-380 and is based on the payoff for the number of spots marked and the amount of the bet. Line 150 also displays the total number of spots marked during selection.

Various colors refer to the games. These are loaded into array G\$(16) from the data stored in line 600.

Baccarat

In this version of baccarat, line 40 clears string space and defines the string variables. An array containing the value of each card in the eight decks used to play the game is dimensioned in M\$(416). Lines 50, 60, and 80 load the contents of this array. To minimize the tedium of waiting, I've added text between the lines when a large array is loading (line 70).

This program requires one INKEY statement for single-character data, and two INKEY statements for two-character input. INKEY is a string input, so if the data is numeric you must use VAL\$() to obtain the numeric equivalent. You can use the alphanumeric value in the program directly.

Learn to Program Like a Professional!

THE COMPLETE BOOK OF RANDOM ACCESS & DATA FILE PROGRAMMING

Written for TRS-80™ I, II, & III - IBM™/PC - APPLE™ M/S - OSBORNE™ - HEATH™ - DEC™ - SUPERBRAIN™ - and all Computers using CP/M with Microsoft BASIC™

The last word on disk random access and file handling techniques, this series is intended for everyone — beginning programmers, businessmen and professionals will learn how to create custom programs to handle inventories, mailing lists, work scheduling, record keeping, and many other tasks, while more experienced programmers will learn advanced, professional programming techniques for faster, more efficient data storage and retrieval.

Although random access file handling is a matter of some complexity, the subject has been treated in a simple and down-to-earth fashion, so that anyone with some small familiarity with programming in Microsoft BASIC will be able to cope with the material. Each stage of learning uses a sample program as a starting point. The programs grow in capability and complexity as the books progress into all of the various aspects of file handling and record manipulation. An extensive effort has been made to keep the material coherent and every program line is explained in detail.

Volume I BASIC FILE HANDLING

- The writing of a Menu to summarize program functions
- Screen format for data entry
- The creation of a basic record
- The FIELD and LSET routines for buffer preparation
- Disk storage of random access records
- Changing or editing stored records
- The LPRINT capability from disk using three different formats
- Sorting the random file
- Searching by name or key field
- Search in "next" or "prior" fashion
- Purging deleted records
- Using disk file data for calculations
- Future expansion of data fields
- Using flags to prevent program crashes
- Date setting, printer on-line and many other routines to make a program run like a commercially written program

VOLUME I \$29.95
 Option Vol. I Program Disk
 TRS-80 Model I/III \$28.50
 TRS-80 Model II \$32.50

Volume II ADVANCED FILE HANDLING TECHNIQUES

- Relational database programming
- Comprehensive self-balancing accounting system with printouts
- Hashcoded data file manipulation — (probably the fastest method of data retrieval). Hashing the input key and recovery method explained
- Span-blocking techniques allow creation of records longer than 256 bytes without wasted space
- Blocking & Deblocking
- Shell-Metzner sort
- In-place screen editing
- Recovery of deleted record space
- Alpha-index record retrieval
- Fast machine language/BASIC sort
- Linked list record structure and sort-merge, deleted record removal and file reorganization
- Multi-key file reorganization and record searching

VOLUME II \$29.95
 Optional Vol. II Program Disk
 TRS-80 Model I/II/III \$49.95

*** ESSENTIAL UTILITY PROGRAMS FOR EVERY TRS-80 OWNER ***

Facts About Racet Computes Utility Programs

- *** ALL PROGRAMS ARE WRITTEN IN MACHINE LANGUAGE
- *** ABSOLUTELY NO KNOWLEDGE OF MACHINE LANGUAGE IS NECESSARY TO USE ANY OF THE UTILITY PROGRAMS
- *** EACH UTILITY PROGRAM IS CALLED UP FROM **BASIC** USING THE SIMPLE BASIC COMMANDS PROVIDED
- *** EACH UTILITY PROGRAM COMES WITH A **RACET COMPUTES** INSTRUCTION MANUAL
- *** EACH INSTRUCTION MANUAL INCLUDES SEVERAL EXAMPLES OF UTILITY USAGE
- *** EACH UTILITY ALLOWS THE USER TO PERFORM CERTAIN BASIC OPERATIONS TEN, TWENTY OR MORE TIMES FASTER THAN THE EQUIVALENT BASIC ROUTINE (FOR EXAMPLE, **GSF** CAN SORT AN ARRAY OF 1000 RANDOM NAMES INTO ALPHABETICAL ORDER IN UNDER 9 SECONDS!!)

GSF (GENERALIZED SUBROUTINE FACILITY)

- SORTS 1000-ELEMENT ARRAYS IN 9 SECONDS
- SORTS UP TO 15 ARRAYS SIMULTANEOUSLY (MIXED STRING, FLOATING POINT AND INTEGER)
- SORTS SINGLE OR MULTIPLE SUBSTRINGS AS ASCENDING OR DESCENDING SORT KEYS
- READ AND WRITE ARRAYS TO CASSETTE
- COMPRESS AND UNCOMPRESS DATA IN MEMORY
- MOVE ARRAYS IN MEMORY
- DUPLICATE MEMORY
- FAST HORIZONTAL AND VERTICAL LINES
- SCREEN CONTROLS FOR SCROLLING THE SCREEN UP, DOWN, LEFT, RIGHT AND FOR GENERATING INVERSE GRAPHIC DISPLAYS
- ADDS PEEKS AND POKES (MOD-II VERSION ONLY)

MODEL-I VERSION \$25.00
 MODEL-II VERSION \$50.00
 MODEL-III VERSION \$30.00

KFS-80 (KEYED FILE SYSTEM)

- CREATE ISAM FILES (INDEX SEQUENTIAL ACCESS METHOD)
- ALLOWS INSTANT ACCESS TO ANY RECORD ON YOUR DISKETTE
- INSTANTLY RETRIEVE RECORDS FROM MAILING LISTS, INVENTORY, ACCOUNTS RECEIVABLE OR VIRTUALLY ANY APPLICATION WHERE RAPID ACCESS IS REQUIRED TO NAMED RECORDS
- PROVIDES THE BASIC PROGRAMMER THE ABILITY TO RAPIDLY INSERT OR ACCESS KEYED RECORDS IN ONE OR MORE DATA FILES
- RECORDS ARE MAINTAINED IN SORTED ORDER BY A SPECIFIED KEY
- RECORDS MAY BE INSERTED OR RETRIEVED BY SUPPLYING THE KEY
- RECORDS MAY BE RETRIEVED SEQUENTIALLY IN SORTED ORDER
- RAPID ACCESS TO ANY FILE REGARDLESS OF THE NUMBER OF RECORDS
- MULTIPLE INDEX FILES CAN BE EASILY CREATED WHICH ALLOWS ACCESS OF A SINGLE DATABASE BY MULTIPLE KEYS (FOR EXAMPLE, BY BOTH NAME AND ZIP-CODE)

MODEL-I VERSION \$100.00
 MODEL-II VERSION \$175.00
 MODEL-III VERSION \$100.00

DSM (DISK SORT MERGE)

- SORT AN 85K DISKETTE IN LESS THAN THREE MINUTES!
- SORTS LARGE MULTIPLE DISKETTE FILES ON A MINIMUM ONE DRIVE SYSTEM
- ALL RECORDS ARE PHYSICALLY REARRANGED-NO KEY FILES ARE REQUIRED
- SORTS RANDOM FILES CREATED BY **BASIC**, INCLUDING FILES CONTAINING SUB-RECORDS SPANNING SECTORS
- SORTS ON ONE OR MORE FIELDS IN ASCENDING OR DESCENDING ORDER
- FIELDS MAY BE STRINGS, INTEGER, BINARY INTEGER OR FLOATING POINT
- THE SORTED OUTPUT FILE MAY OPTIONALLY HAVE FIELDS DELETED, REARRANGED OR PADDED
- SORT COMMANDS CAN BE SAVED FOR REUSE
- SINGLE SORT MERGE OR MIXED SORT/MERGE OPERATIONS MAY BE PERFORMED
- SORTED OUTPUT MAY BE WRITTEN TO A NEW FILE, OR REPLACE THE ORIGINAL INPUT FILE.

MODEL-I VERSION \$75.00
 MODEL-II VERSION \$150.00
 MODEL-III VERSION \$90.00

MAILLIST (A MAILING LIST DATABASE SYSTEM)

- IDEALLY SUITED FOR ORGANIZATION MAILING LISTS, PERSONAL ADDRESSBOOK, OR MAILING LISTS BASED ON DATES SUCH AS REMINDERS FOR BIRTHDATES OR DUES PAYABLE
- USED ISAM (INDEX SEQUENTIAL ACCESS METHOD) FOR RAPID ACCESS TIMES
- YOUR **MAILLIST** CAN ALWAYS BE SORTED AND MAINTAINED BY UP TO FOUR INDEX FILES (FOR EXAMPLE, NAME, ZIPCODE, DATE AND NUMBER)
- **MAILLIST** ALLOWS UP TO 30 ATTRIBUTES TO BE SPECIFIED (TO BE USED IN SELECTION OF SPECIFIED RECORDS WHEN GENERATING REPORTS OR MAILING LABELS)
- **MAILLIST** SUPPORTS BOTH 5 OR 9-DIGIT ZIPCODES
- PRINTING MAY BE STARTED OR ENDED AT ANY POINT IN THE LIST...THE USER CAN SPECIFY FIELDS OR CODES TO BE PRINTED
- CAPACITY IS 600 NAMES FOR MODEL-I, 3500 NAMES FOR MODEL II, 38,000 NAMES FOR MODEL II WITH HARD DISK DRIVE, 1200 NAMES FOR MODEL III

MODEL-I VERSION \$75.00
 MODEL-II VERSION \$150.00
 MODEL-III VERSION \$75.00

HSDS HARD DISK DRIVE SOFTWARE

- MAKES TRSDOS COMPATIBLE WITH MOST HARD DISK DRIVES
- ADDS MANY EXTRA FEATURES TO TRSDOS \$400.00

COMPROC (COMMAND PROCESSOR)

- AUTO YOUR DISK TO PERFORM ANY SEQUENCE OF INSTRUCTIONS THAT YOU NORMALLY GIVE FROM THE KEYBOARD (FOR EXAMPLE, INSERT THE DISKETTE, PRESS THE RESET BUTTON, YOUR COMMAND FILE COULD AUTOMATICALLY SHOW YOU THE DIRECTORY, SHOW THE FREE SPACE ON THE DISKETTE, LOAD A MACHINE LANGUAGE SUBROUTINE, LOAD BASIC, LOAD AND RUN A BASIC PROGRAM, AND SELECT A GIVEN ITEM ON YOUR MENU ALL WITHOUT TOUCHING THE KEYBOARD)

MODEL-I VERSION \$20.00
 MODEL-III VERSION \$30.00
NOT AVAILABLE FOR MODEL-II

DISCAT (DISKETTE CATALOG SYSTEM)

- THIS COMPREHENSIVE DISKETTE CATALOGUING/INDEXING UTILITY ALLOWS THE USER TO KEEP TRACK OF THOUSANDS OF PROGRAMS IN A CATEGORIZED LIBRARY. FILE INCLUDES PROGRAM NAMES AND EXTENSIONS, PROGRAM LENGTH, DISKETTE NUMBERS AND FREE SPACE ON EACH DISKETTE. KEEP A COMPLETE CATALOG OF THE DIRECTORIES ON ALL YOUR DISKETTES IN ALPHABETICAL ORDER (SORTED ON EACH DISKETTE OR COMPLETE ALPHABETICAL LIST OF PROGRAMS ON ALL YOUR DISKETTES)

MODEL-I VERSION \$50.00
 MODEL-III VERSION \$50.00
 MODEL-II VERSION (SEE MODEL-II UTILITY PACKAGE)

BLINK (BASIC LINK FACILITY)

- LINK FROM BASIC PROGRAM TO ANOTHER SAVING ALL VARIABLES
- THE CHAINED PROGRAM MAY EITHER REPLACE THE ORIGINAL PROGRAM OR CAN BE MERGED BY STATEMENT NUMBER

MODEL-I VERSION \$25.00
 MODEL-III VERSION \$30.00
 MODEL-II VERSION (SEE MODEL-II UTILITY PACKAGE) \$50.00

INFINITE BASIC

- ADDS OVER 80 COMMANDS TO BASIC
- SORTING, STRING CENTERING/ROTATION/TRUNCATION, JUSTIFICATION, DATA COMPRESSION, STRING TRANSLATION/COPYING, SCREEN DISPLAY, SCROLLING, MATRIX OPERATIONS, SIMULTANEOUS EQUATIONS (THROUGH MATRIX INVERSION), DYNAMIC ARRAY RESHAPING

MODEL-I VERSION \$50.00
 MODEL-III VERSION \$60.00
NOT AVAILABLE ON MODEL-II

INFINITE BUSINESS

- ADD ON PACKAGE TO INFINITE BASIC (REQUIRES INFINITE BASIC)
- ADDS PACKED DECIMAL ARITHMETIC WITH 127 DIGIT ACCURACY (+ 0.1%)
- COMPLETE PRINTER PAGINATION CONTROLS, AUTO HEADERS, FOOTERS AND PAGE NUMBERS
- BINARY SEARCH OF SORTED AND UNSORTED ARRAYS (INSTANT SEARCH OF AN ELEMENT WITHIN AN ARRAY)
- HASH CODES

MODEL-I VERSION \$30.00
 MODEL-III VERSION \$30.00
NOT AVAILABLE ON MODEL-II

REMODEL-PROLOAD

- THE ULTIMATE RENUMBERING PROGRAM. RENUMBERS ALL OR PART OF A PROGRAM (ALLOWS PARTIAL RENUMBERING IN MIDDLE OF PROGRAMS)
- PARTIAL OR COMPLETE MERGE OF TWO CASSETTE PROGRAMS

MODEL-I VERSION \$35.00
 MODEL-III VERSION \$35.00
NOT AVAILABLE ON MODEL-II

COPYSYS

- COPY AND VERIFY ALL MACHINE LANGUAGE (SYSTEM) TAPES WRITTEN IN STANDARD FORMAT. IF YOU BUY A MACHINE LANGUAGE PROGRAM, COPYSYS ALLOWS YOU TO EASILY COPY THE PROGRAM ONTO ANOTHER CASSETTE AS A BACKUP

MODEL-I VERSION \$15.00
 MODEL-II VERSION \$20.00
NOT AVAILABLE ON MODEL-II

FOR DEALER INFORMATION CALL: **RACET COMPUTES**

1330 N. GLASSEL, SUITE M, ORANGE CA 92667
 (714) 997-4950

MODEL II SPEEDUP—FAST DISK I/O

THIS IS AN ENHANCEMENT FOR TRSDOS 2.0 THAT WILL RADICALLY DECREASE DISK ACCESS TIME.

- DISKS BOOT FASTER TO DOS
- IMPROVE DISK I/O UNDER BASIC

MODEL II ONLY \$99.95

MODEL II FASTBACK — FULL DISK BACKUP IN 55 SECONDS

IN BUSINESS TIME IS MONEY, AND ONE BACKUP IS WORTH A THOUSAND TEARS.

- WORKS ON SYSTEMS WITH 2 OR MORE DRIVES
- CAN REPLACE YOUR EXISTING TRSDOS 1.2 OR 2.0 BACKUP UTILITY

MODEL II ONLY \$75.00

MODEL-II UTILITY PACKAGE

- ESSENTIAL FOR EVERY MOD-II OWNER
- RECOVER AND REPAIR FILES AND DIRECTORIES (BY JUST ENTERING A SINGLE COMMAND)
- XCOPY: SIMILAR TO COPY BUT CAN COPY ANY NUMBER OF FILES AT ONE TIME FASTER AND MORE ACCURATE THAN COPY SINCE RECORDS ARE COPIED IN GROUPS RATHER THAN ONE RECORDS AT A TIME. USING XCOPY YOU CAN COPY FILES THAT CAN NOT BE COPIED USING THE COPY COMMAND
- SZAP: PROVIDES THE CAPABILITY TO READ AND MODIFY ANY SECTOR ON A DISKETTE
- XHIT: CAN BE USED TO REPAIR A DISKETTE DIRECTORY
- DCS: DIRECTOR CATALOG SYSTEM IS A UTILITY FOR THE MANAGEMENT OF USER DISKETTES. SETS OF A MULTIPLE DISKETTE DIRECTORY FILE (WITH UP TO 1200 INDIVIDUAL FILE NAMES)...ALLOWS SELECTIVELY LISTED OR PRINTED LISTS OF DIRECTORY FILES IN COMBINED SORTED ORDER (FOR EXAMPLE, LISTED ALPHABETICALLY BY DISKETTE, OR A COMPOSITE ALPHABETICAL LIST OF ALL YOUR DISKETTES)
- DEBUG-II: ADDS SEVERAL FEATURES TO THE PRESENT TRSDOS DEBUG UTILITY INCLUDING SINGLE INSTRUCTION CYCLE, AUTO (LOOP) BREAKPOINTS, SUBROUTINE CALLING, BREAK-KEY DETECTION AND MANY OTHERS

MODEL-II ONLY \$150.00

MODEL-II DEVELOPMENT SYSTEM

- THIS PACKAGE IS A MUST FOR ASSEMBLY LANGUAGE PROGRAMMERS
- INCLUDES THE MICROSOFT EDITOR ASSEMBLER PLUS WITH ENHANCEMENTS FOR THE MODEL-II
- A COMPLETE DISASSEMBLER
- SUPERZAP FOR READING AND MODIFY ANY SELECTOR ON A DISKETTE

MODEL-II ONLY \$125.00

MOD-II BASIC CROSS REFERENCE UTILITY

- LIST OR PRINT A SORTED CROSS REFERENCE TO ALL NUMBERS OR VARIABLES WITHIN A PROGRAM
- LIST OF PRINT ALL LINE NUMBERS CONTAINING A SPECIFIED STRING OF CHARACTERS

MODEL-II ONLY \$50.00

*** ALL PRICES AND SPECIFICATIONS SUBJECT TO CHANGE ***

the first deal. The border outlines (lines 210-250) and the random selection of the five cards occurs in lines 260-300, variables R1 through R5. The face values of the cards are within the border outlines (subroutine 1220 for suit, and subroutine 1210 for printing location).

At this point, you must decide whether to play the hand as it stands or to hold specific cards and replace the others. This is accomplished in lines 310-500. Press the numeric keyboard keys 1-5 to hold cards one through five. If you make a mistake, press C to start over.

For the cards held, the original variables R1 through R5 are active and determine the card value. New variables RA through RE replace R1 through R5 in printing and scoring the card value.

Next, press D (for draw) to replace your cards and start the automatic scoring process. This begins on line 510. The numeric array M(52) consists of the 13 cards in each suit from ace to king. Set at 1 to score each of the appropriate cards in the final hand.

When line 40 dimensions the array, all locations are set to zero. This array determines the value of the hand. Starting on line 520, the array is tested for a royal flush. If it passes, the program jumps to line 910 where the type of hand is printed on the screen at location 160 (line 1020), and the value of variable GW (game winnings) is determined from the amount of the bet "M" and the odds (250). Then the game conclusion starts on line 1010.

If the hand does not contain a royal flush, further analysis of the M(52) array contents determines if it meets any of the tests for hands of lesser value down to none.

The next test determines if all the cards are in the same suit (lines 540-570 for hearts, diamonds, clubs, and spades—HX, DX, CX, and SX, respectively). If so, the hand might be a straight flush (lines 600-630). If this test fails, the sequence falls through to line 640, which then indicates only a flush (GOTO line 950 for winnings and display).

If line 580 determines that all the cards are not in the same suit, evaluation continues at line 650. The array contents are tested for a straight (lines 650-720), four of a kind (line 730), three of a kind (lines 740-770), two of a kind (lines 780-830), and whether the three of a kind and two of a kind are related for a full house (line 840) or stand-alone for three of a kind (line 840 fall-through), or two pair (line 850).

Lines 860-890 test your hand for a

(415) 968-1604

pair of jacks or better. If the array contents fail all the tests, line 900 directs the jump to the fate of all unsuccessful players: line 1000 with the bad news that you've lost.

Line 1050 gives you a chance to play again. The M(52) scoring array is erased and then redimensioned prior to the jump to line 110 for a new start.

Four-Card Monte

Four-card monte is a card game played in the gambling halls of the old West. Its rules are simple, and no real skill is required.

The program's first prompt asks if you need instructions. Persons unfamiliar with monte should read the rules for help in placing bets and understanding scoring.

Your first choice is whether to place a bet on the bottom layout, top layout, or both (line 320). If you choose the bottom layout by entering B, line 340 indicates this selection by placing the group <***> below the bottom layout cards and prompting you to fill in the amount of your bet.

Line 360 asks for the number of chips you wish to bet. After you enter the number (from one to nine), line 380 asks for the value of each chip.

The bottom line of the screen displays the value of each chip by color (string variable CV\$, line 320). The value appears below the chosen layout: The dollar value of the bet replaces the asterisks.

Next, the program jumps to line 550 to ask if you will also make a bet on the top layout by entering T, or draw the gate card and play only the one bet by pressing enter. You can bet on either or both layouts in either order.

The RND(52) statement in line 630 selects the gate card, and line 650 starts the scoring evaluation. The four cards for the two layouts are selected in lines 280-310 using array M\$(52) for card identification and array M(52) for card usage.

In line 70, setting any card location equal to 1 precludes selection in the random selection program statements (lines 280, 290, 300, 310, and 630). This excludes 8s, 9s, and 10s.

After scoring the first pair of layouts, line 680 and the play counter subroutine (line 810) allow another pair of layouts and betting until the card deck is depleted. Each pack contains 40 cards and five cards are used per play, so there are eight plays. ■

WHAT THE HECK! IS THIS MANUAL TRYING TO SAY?

Profile III Plus® - 108 insert pages for your manual with plain English explanations and examples including two 16x22 wall charts showing where program goes and why \$14.00

General Ledger - Insert pages for the TRS-80® Mod III Disk Manual clarifying the obscure. Section on HOW accounts interact and produce statements. 19x25 two-color wall chart shows Flow, Commands, Tips \$14.00

Super SCRIPSI® - 19x25 two-color wall chart shows commands with explanations and tips in highly visible form \$4.00

VisiCalc® - 19x25 two-color wall chart shows All THOSE commands with clear explanations at a glance \$4.00

CREST SOFTWARE ✓223

2132 Crestview Drive • Durango, CO 81301
(303) 247-9518

Visa, MC accepted, include card # and expiration date.

(Add \$2.00 Shipping — We use UPS)

HEXIS

SAVE \$50.00 NOW!

Home Expense and Income System
for your TRS-80® III,

48K 2 DISK,

LP VIII or VI System.

Requires TRSDOS®

Check these features:

- You define up to a total of 64 accounts (income and/or expense)
- Completely MENU driven
- 6 different reports, even down to daily detail.
- Easy to read User Manual
- HEXIS can be copied for back-up purposes
- 30 DAY MONEY BACK GUARANTEE
- 1 FULL YEAR WARRANTY
- plus 2 Bonus Programs FREE

**ALL THIS FOR THE INCREDIBLY
LOW PRICE OF ONLY \$49.95**

LIMITED TIME ONLY!!!

Price will be \$99.95 shortly.

Order now by sending your H/W configuration and printer control code summary (if not LP VIII or VI) and your check or money order to: **I.S.B., Dept. HEXIS, P.O. Box 628, Proctor, VT 05765** or call (802) 459-2088 for more information. Allow 2-3 weeks for deliveries

\$3199

12 Meg. Primary for Models II, 12 & 16

NEW from Radio Shack

\$3495

COMPLETE MOD III DISK DRIVE

KIT ONLY \$399 — Reg. \$595.00

Kit comes complete with power supply, double density disk drive, mounting hardware and instructions. *HURRY! This is a limited offer.*

DISK DRIVES for the TRS-80 MODEL III

DRIVE 0

Single Side 40 Track **\$399**
 Double Side, 40 Track **\$474**
 Single Side, 80 Track **\$474**
 Double Side, 80 Track **\$549**

DRIVE 1

Single Side, 40 Track **\$199**
 Double Side, 40 Track **\$269**
 Single Side, 80 Track **\$269**
 Double Side, 80 Track **\$319**

Drive 0 includes the controller board, power supply, cables and all mounting hardware. Complete instructions are included for installation. It takes 30 minutes to an hour to install disk drives in a Model III. No soldering is required. TRSDOS operating system is not included in this low price.

5 1/4" Floppy Drives

TEAC: 50A is a full-size Disk Drive for use on the MOD I & color computer. It has a lead screw actuator. This means that the read-write head is positioned with much greater accuracy, but it takes longer. The 50A has a stepping rate of 30 milliseconds as opposed to 5 milliseconds for the other Drives. The TEAC SLIMLINE is exactly 1/2 the size of the other Drives.

TANDON: This is the most popular 5 1/2" drive. It has been used by Radio Shack, IBM, Osborne and many others. Tandon uses a split-band type actuator.

CDC: The CDC also uses a split-band type actuator. It is known to have excellent quality & has been used by IBM & many others.

POWER LINE PROBLEMS?

SPIKE-SPIKER® ...THE SOLUTION

Protects, organizes, controls computers & sensitive electronic equipment. Helps prevent software "glitches", unexplained memory loss, and equipment damage. Filter models attenuate conducted RF interference. 120V, 15 Amps. Other models available. Ask for free literature.

DELUXE POWER CONSOLE \$79.95

Transient absorber, dual 5-stage filter. 8 individually switched sockets, fused, main switch, & lite.

QUAD-II \$59.95

Transient absorber. Dual 3 stage filter. 4 sockets, lite.

QUAD-I \$49.95

Transient absorber, 4 sockets.

MINI-II \$44.95

Transient absorber, 3 stage filter, 2 sockets.

MINI-I \$34.95

Transient absorber, 2 sockets.

BUSINESS SOFTWARE

It's time to **SLASH OVER-PRICED** Business Software. We have developed a Sophisticated General Ledger Package with many of the same features found in software costing several hundred dollars. This friendly program was designed with Reliability, Efficiency, High Capacity and Ease of Use in Mind.

Features:

- Over 20 various Fin. Reports
- P&L Statement by Department
- Flexible Report Format
- Create up to 500 G/L Accts.
- Over 4000 Transactions/Month
- Fully Menu-Driven
- User-Oriented Documentation

For Model III 48K & 2 drives

General Ledger \$99.95

Also offering ... a **Comprehensive Loan Amortization Program.**

For Business or Home use.

Model 1 & III 48K 1 dr. \$24.95

DAISY WHEEL

New Smith Corona TP-1

True letter quality printer for less than the cost of an office typewriter! Priced \$500 less than other popular daisy wheel printers!

SALE PRICE:
\$499.

LESS \$50 REBATE
June-July 1983

FEATURES:

- ★ Friction feed
- ★ 15 cps, 120 wpm
- ★ Changeable daisy wheels
- ★ Parallel or serial interface
- ★ Compatible with R/S, Apple, etc.

The Next Generation:

SUPERLOG

ADVANCED ELECTRONIC NOTEBOOK
BY KSoft

Over the past two years, LOG Electronic Notebook has quietly been creating a revolution in personal information management. Designed to emulate a familiar pencil and notebook, LOG Electronic Notebook can do for random information what a spreadsheet program does for numbers.

Now, even the best has been improved! KSoft is pleased to announce SUPERLOG, the next generation of the LOG family. SUPERLOG is not a patch! It is a totally rewritten version of the original LOG concept, fully compatible with the LDOS 5.1.3 operating system currently endorsed by Tandy.

SUPERLOG retains all of the versatile features of LOG while adding many new options requested by professional users: Floppy or Hard disk. Any number of LOG files per diskette. 1 to 32767 pages per file. Password protection and error checking. New text editing commands include automatic text Wrap-Around, Expand and Delete for entire lines, a Page Copy command, and an Undo key to reverse editing changes. Cursor motion is more flexible with new key commands plus a Forms simulator. The SEARCH function is greatly enhanced with a Wild-Card character, case-independent search, and multiple word search at 10 pages/second.

Also Note: SUPERLOG is now fully interrupt activated; it may be accessed from practically any foreground task including LDOS Utilities, LBASIC, LSCRIPT, EDAS, etc. with non-destructive return to the foreground program. No other information management program is this versatile!

Write or call Today! We'll be glad to tell you about SUPERLOG and what it can do for you!

SUPERLOG Specify Model I or III. \$119.95
LDOS 5.1.3, 48K, and 2 Drives required.

(Model IV version to be offered soon.)

LOG TRSDOS versions, Models I, III still available.

KSoft (601) 992-2239

318 Lakeside Drive Mastercard and Visa accepted.
Brandon, MS 39042 Add \$5.00 for shipping and handling.

ANNOUNCING: CLEANER 80

**The System That Makes
Your Cleaning Kit Worth
15 Times The Price
You Paid For It.**

Cleaner 80 is a software program designed to give you your money's worth — and more — when it comes to cleaning the disk drive head of your TRS-80 computer.

With this system, you can get up to 400 cleanings out of each disk drive head cleaning kit — instead of the 26 cleanings specified by the manufacturer. That's 15 times the number of cleanings you would normally be able to achieve.

Order yours today. Please specify whether you need the TRS-80 Model I or TRS-80 Model III version.

TRS-80 MODEL III ASSEMBLY LANGUAGE

A complete course in assembly language, written for the beginner. Basic concepts, the Z-80 instruction set, complete Model III ROM and RAM information, programming examples, the disk controller, the TRSDOS 1.3 operating system, RS-232-C interface.

With the book you can also purchase **Monitor #5**, a comprehensive machine language monitor (specify Model 1 or 3).
Book only \$16.95
Book and Monitor #5 on disk \$29.95

HOME BUDGET

Analyzes your income and expenses, computes monthly and year-to-date summaries showing income tax deductions.
Model 1/3/4 disk version \$49.95
Model 1/3/4 cassette version \$29.95
Model 2/12 or IBM/PC version \$59.95

SMALL BUSINESS ACCOUNTING

Based on Dome Bookkeeping Record #612, this program keeps track of income, expenses, and payroll (not included in cassette version) for a small business.
Model 1/3/4 disk version \$59.95
Model 1/3/4 cassette version \$29.95
Model 2/12 or IBM/PC version \$69.95

FREE Software Catalogue

Add \$3.00 postage & handling. New York Residents add sales tax.

Howe Software

14 Lexington Road

TRS-80 MODEL II DISPLAY MANAGEMENT SYSTEM

Do you intend to use first generation CRT management techniques forever ?

When for \$89.00 you can have:

- An interactive screen generator that requires no programming.
- A runtime screen manager that you don't need assembly language knowledge to use.
- A Control panel that lets you run the show from your program, in your language (Cobol/Basic/Assem.)

Don't Miss Out

★ 20% ★

Act Now

STRIKE FORCE

From Melbourne House

You are the warrior-savior of cities under relentless alien attack. You're armed with rapid-fire missiles, radar and incendiary star-shells, but you'll need your fastest thinking and instantaneous response to protect yourself and your people. Great real-time graphics!

38809 16K Tape ~~\$15.95~~ \$12.76

38618 32K Disk ~~\$19.95~~ \$15.96

SENTINEL

From Cornsoft

A new feature allows two people to play at one time! Sentinels on guard for barbarians must repair the brick walls and defend the castles. Capture the enemy for extra points!

10012 Tape

~~\$16.95~~ \$12.76

14072 Disk

~~\$19.95~~ \$15.96

STRATOS

From Adventure International

This may be the battle to destroy the universe. Your enemies have perfected the dreaded Matte Ravager. Wave after wave of the deadly craft attack your planet and puncture the energy envelope surrounding it. You are in control of the Armageddon Wave, the only weapon capable of destroying the alien ships. Exciting challenging non-stop action. "Out of this world" sounds and graphics. 1 or 2 players, requires joystick.

42635 16K Tape ~~\$24.95~~ \$19.96

42679 32K Disk ~~\$24.95~~ \$19.96

DEFENSE COMMAND

By Hogue & Konyu from Big Five

You are the lone defender of 10 Kryptonium fuel cells essential for the survival of the planet. Aliens swoop down from above to steal the fuel, it's your job to destroy them. You can still save the cells after a raid, but you must shoot the alien and simultaneously move under the cell to catch it. If things look bad you can set off one of your 4 antimatter bombs and destroy all enemies on the screen! Arcade fun with action and sound. Joystick compatible.

18100 16K Tape ~~\$16.95~~ \$12.76

18177 32K Disk ~~\$19.95~~ \$15.96

THE WILD WEST

By Clifford Abrahams

from Melbourne House Software Inc.

Relive the exploits of the notorious outlaw Jesse James as lawmen, bounty hunters and renegades gun for you through an Indian camp, train hijacking and bank heist. Keep your finger on the trigger.

34771 16K Tape ~~\$15.95~~ \$12.76

34689 32K Disk ~~\$19.95~~ \$15.96

Savings

FROGGER

From Cornsoft

One of the most popular arcade games ever made now available for your home computer! Just as in the arcade game, you must dodge heavy traffic and jump the moving logs in the stream to get home. Fantastic graphics! Requires joystick.

38247 16K Tape ~~\$19.95~~ \$15.96

38258 32K Disk ~~\$22.95~~ \$18.36

ELIMINATOR

By Westmoreland & Gilman

from Adventure International

You'll need all your keyboard manipulative skills to keep up with the action in this arcade game. You travel across the planet's low-altitude airspace in an effort to prevent the marauding enemy from capturing your energizer cells. All manner of alien craft await your arrival with destructive forces. For 1 or 2 players, with sound.

16816 16K Tape or ~~\$24.95~~ \$19.96

17244 32K Disk ~~\$24.95~~ \$19.96

ROBOT ATTACK

By Hogue & Konyu from Big Five

One of the top names in TRS-80 arcade games adds a new dimension, voice sound effects! It's you against the robots in this fast-moving shoot-em-up. Electrified Mazes and the "Flagship" complicate things as you stalk the evil androids.

The innovations built into ROBOT ATTACK take your TRS-80 near the limits of its capabilities. You MUST see and hear it! Joystick compatible.

18098 16K Tape ~~\$16.95~~ \$12.76

18166 32K Disk ~~\$19.95~~ \$15.96

WEERD

By Arthur Gieckler from Big Five

Maybe you think you've seen some pretty strange things on your computer screen already, but you haven't seen ANYTHING until you've tried WEERD. It's you against the WEERDEST set of space craft ever. But don't just stare at them, get your shields up before they wipe out your planet. Desk version has voice sound effects and permanent high scores. Both are trisstick compatible.

43388 16K Tape or ~~\$19.95~~ \$15.96

43399 32K Disk ~~\$19.95~~ \$15.96

CRAZY PAINTER

From Cornsoft

Your assignment is to paint the maze, avoiding everything that tries to stop you. If anything walks in the paint, it's ruined, and you must go back and repaint it. With sound, great graphics... truly "a-maze-ing."

37808 16K Tape ~~\$16.95~~ \$12.76

37819 16K Disk ~~\$19.95~~ \$15.96

SEA DRAGON

By Westmoreland & Gilman

from Adventure International

Underwater adventure is yours as you command a nuclear sub armed with deadly missiles and torpedoes. Guide it carefully through sea mines and underwater mountains, watch out for depth charges being fired by overhead ships... and don't run out of air! Scrolling sea bottom for added excitement.

35705 16K Tape ~~\$19.95~~ \$15.96

35716 32K Disk ~~\$24.95~~ \$19.96

PENETRATOR

From Melbourne House

Armed with missiles and bombs, you must fly your fighter to the enemy's cache of neutron bombs and destroy them. Your mission is in four stages, involving rugged terrain, caverns and manmade obstacles—not to mention enemy radar missiles and paratroopers. This new departure in arcade gaming allows you to set up your own terrain and enemy emplacements then save them for future use. Make your mission as hard or easy as you like. Joystick compatible.

DEVIL'S TOWER

By John Olsen, Jr. from Fantastic Software

It's up to you to save your planet from the aliens. They've reached the other side of DEVIL'S TOWER. Robot Scouts come at you from the mountain, their war machines fire from the valley and their protector ships put up force fields to protect them. Your skill and reflexes may protect you. Machine language, good graphics and sound effects. For 1 or 2 players.

Micro-Melodies

by Jef Bell

Micro-Melodies is a matching game based on the games Concentration and Memory. Instead of matching prizes or picture parts, however, Micro-Melodies uses the sound capability of a Model I or III to match the opening notes from familiar songs.

The Game

The Micro-Melodies display features a four-by-six-block grid (see Program Listing 1). Each of the 24 blocks contains a letter. Two players alternate turns. The first player chooses a letter and listens to the music played. Then, either by luck or by memory, that player chooses a second letter and another song plays.

If two songs match, the player receives points and the blocks, taken out of play, display "MATCH." If the songs

Micro-Melodies is a Concentration-style game that tests your recall in a unique way—you have to match tunes instead of pictures.

10001	Happy Birthday
10002	Yankee Doodle
10003	Row, Row, Row Your Boat
10004	Mary Had a Little Lamb
10005	Fifth of Beethoven
10006	National Anthem
10007	Sound of Silence
10008	Silent Night
10009	Big Ben (Westminster chimes)
10010	Funeral dirge
10011	Charge!!
10012	Entertainer

The Key Box

Model I & III
16K RAM
Basic

A	Used to read data for songs.
B	For reading data to scramble squares.
C1	Your choice.
C1\$	INKEY\$ for choices.
CC	Storage for first choice.
CP	Cursor position for inputting names.
DD(1-30)	Holds scrambled data for the squares, later the point value of each square.
DI	Helps in determining Print at position of squares.
EG	Number of matched squares.
FL	Flag set if not first game.
I	Loop variable.
IN\$	Used for INKEY\$.
J	Timer loop variable.
MA\$	The "MATCH" square.
N\$	Name of player (used to input names).
N1\$	Player one's name.
N2\$	Player two's name.
NO\$	The note (graphics characters).
PA	Print at position of chosen square.
PL	Loop (1 to 2) for player one or player two.
PP	Temporary storage of PA of the first choice.
R	Random number for scrambling.
S1	Score of player one.
S2	Score of player two.
SC(1-24)	The song numbers (1-12) for each of the 24 squares.
SO(1-12, 1-12, 1-2)	Data for the 12 songs.
SQ\$	The squares.
TU	Loop (1 to 2) for each turn.
TU\$	"1st" or "2nd."
W\$	Name of the winner.
X	Dummy variable for counting.
XX	Used to call sound routine.
XX\$	Stores the sound routine.
YN\$	INKEY\$ for yes/no questions.

Table 3. Micro-Melodies line descriptions.

don't match, the blocks revert to letters and the turn passes to the next player. The player with the most points wins.

Micro-Melodies has an unusual scoring system. Each square is worth five

points at the beginning of the game. Once a player chooses a square, its value decreases by one point, and continues decreasing each time that square is selected. The minimum value of a

square is one point.

Players' strategy is not only to make matches, but to match the squares with the greatest number of points remaining. The point value of a match ranges between a high of 10 and a low of two.

The Program

The songs for Micro-Melodies come from Program Listing 2, Music Maker, adapted from sound routines in "Pow-Bang-Zap-Crash" (80 Microcomputing, November 1980, p. 230). Plug the Model I or III gray AUX cord into an amplifier to hear the Micro-Melodies songs.

The first mode of Music Maker, create tones, enters frequency (1 is the highest, 255 the lowest) and duration (1 is the shortest, 255 the longest) for each note. The second mode, edit tones, displays all frequencies and durations, and allows you to change them. The final mode, play tones, does just that, displaying frequencies and durations as it goes along.

Since I am no musical expert, some notes may be flat. To modify a note, type in the note number, then the new frequency and new duration you desire. Hit the enter key to return to the menu from the edit mode.

To modify the songs in Micro-Melodies, change the data in lines 10001-10012. Each line has the data for the songs. The data alternates frequency and duration to produce a melody. Refer to Table 1 for data on specific songs.

Refer to the variable chart (Table 2) and the brief program description (Table 3) to understand the code more clearly.

Both Micro-Melodies and Music Maker make beautiful music on any Model I or III with 16K or more of memory. ■

Jeff Bell can be reached at 2150 Margaret St. N.W., Salem, OR 97304.

ARCDOS for ARCNET

by Joseph E. Trojak

If the networking possibilities for your Model II, 12, or 16 have always tempted you, read this overview of ARCNET and Tandy's ARCDOS.

★★★★

ARCDOS
Tandy/Radio Shack
Fort Worth, TX 76102
\$499

In March 1983 Tandy released ARCDOS, its local network operating system for TRS-80 Models II, 12, and 16. ARCDOS uses ARCNET, Datapoint's local area network.

First, I want to describe three network operating systems that use ARCNET: Datapoint's ARC and RMS, and Tandy's ARCDOS. Then I'll explain the ARCNET protocol and the hardware necessary to implement the system.

Networks and ARCNET

A local area network (LAN) is a system that transfers digital information among computer resources within a relatively small geographic area. It's a system of interconnected computers (processors) that share resources (disk drives, printers, and so on), programs, and possibly data.

Coaxial cable is the most common transmission medium, although networks also use copper wire and fiber-optic cable. All LANs require a local network operating system (LNOS) to allocate resources among users. The design of an LNOS depends on the processors, peripheral resources, and net-

work structure.

In 1977 Datapoint introduced the hardware to implement the ARCNET networking protocol, but the implementation required much more than ARCNET. A sophisticated network operating system was necessary to control interaction between processors and allocate resources in the system.

Datapoint has developed two systems that use ARCNET. The first, ARC (Attached Resource Computer), is an extension of the disk operating system (DOS) used on stand-alone Datapoint equipment.

The second, RMS (Resource Management System), is a much more sophisticated system that provides multitasking (several programs running on one processor at the same time), has a hierarchical file structure, and allows sharing nondisk resources by all network members. Tandy's ARCDOS network operating system is an extension of TRSDOS and is very similar to Datapoint's ARC.

ARC

The basic philosophy behind the ARC network operating system is the dedication of one or more processors to disk file management, thus allowing other processors in the network access to disk files without attaching each computer directly to a disk drive. Also, multiple computers can share common files.

Computers in an ARC system are either file processors (FPs) or applications processors (APs). A file processor is attached to ARCNET, has mass storage disk drives, and runs a special program (ARC/FP) that allows applications processors to gain access to disk files.

A file processor is functionally dedicated to data management, buffers data, optimizes use of its disks, coordinates data-base updating, provides security, services incoming requests, and is not capable of performing any other task while it is executing the ARC/FP program.

An applications processor is any computer attached to ARCNET capable of executing program tasks. The two types of applications processors include those with peripheral disk storage units (or with the capability of having attached disk drives) and those that you cannot attach to peripheral disk drives.

The latter APs have firmware that downloads the ARC system program into the processor. APs with locally attached disk drives can load the operating system from the local disk or also download the system from a file processor.

A simple ARC system consists of one file processor (FP) and five applications processors (see Fig. 1). Applications processors AP₁, AP₃, AP₄, and AP₅ do not have disk drives and must obtain the operating system instructions and application programs from the file processor disk files.

When you turn on applications processor AP₁, a small ROM program requests that you download the operating system from the disk of FP₁. The ARC/FP program first requests the

AP₁ user's identity and code word, then downloads the operating system into AP₁.

If the user wants to run a Basic program or edit a letter, the FP loads the appropriate program from disk to AP₁. A user at AP₃ can sign on to the ARC system similarly, have the operating system downloaded, and begin word processing, data processing, or using a system utility.

If the AP₁ user wants to create a file on drive 1 called "TEXT/TXT" and the AP₃ user wants to create a file with the same name on drive 1, a conflict arises. Assigning each user a different disk subdirectory resolves this problem.

A subdirectory is a logical division of a disk that allows multiple users to have files with the same name on the same disk. When a user signs on at an AP, he enters a name and code word that determine which subdirectory he uses.

In addition to individual user subdirectories, each disk has two subdirectories called System and Main. The System subdirectory contains disk system files shared by all the users and might also have programs and data files that every user can share. The Main subdirectory has information about the name and code word of each subdirectory on the disk. For security reasons, the information contained in Main is not available to AP users.

Peripheral devices attached to an AP can only be used by that processor. Only AP₁ can use the printer attached to AP₁, and only AP₃ can use the magnetic tape drive attached to AP₃. ARC solves the printer problem by dedicating one or more APs to manage the printer.

If the AP₁ user wants to print a file he has just edited, he first stores the document in a print file format on FP₁'s disk drive using a print spooler that AP₁ ex-

ecutes. AP₄ runs a program called the unspooler. As print files are created, a queue forms to indicate the printing priority, printer type, and printer parameters for each print job. The unspooler then prints each file.

With this system, several APs can use a common printer. However, at least one AP must be dedicated to the task of printing. You can use the unspooler AP for other applications, but when it is not executing the unspooler program, print files accumulate and other users must wait for the AP to start its task of unspooling before they can receive printouts.

“... heavy disk traffic can inundate a lone FP and result in poor system performance.”

No similar mechanism exists for APs to share other peripheral devices. If a user at AP₂ wants to read a magnetic tape file from AP₅, he must use AP₃ to dump the tape file onto a disk file and then access the disk file from AP₂.

As the number of APs in a system grows, users can add additional disk drives to a single FP or additional FPs to the system. In a network with many APs and a single FP, all file transactions must go through the one FP.

In systems with very large, infrequently accessed files, adding disk drives to a single FP is sufficient. However, heavy disk traffic can inundate a lone FP and result in poor system per-

formance. In such cases, it's best to distribute the file transactions among several file processors.

In Fig. 1, adding FP₂ to the system would increase system storage and speed. AP₂ and AP₄ can access a data file from drive 1 on FP₁ and a utility program from drive 2 on FP₂. The ARC/FP program provides both APs with access to the common data file and prevents the simultaneous addition or updating of information to the file.

For example, if the data file is an inventory list and the user at AP₂ has just removed an item, the user at AP₅ should be denied access to the inventory count until the program on AP₂ has properly adjusted it.

Datapoint currently has two distinct and incompatible ARC systems. One runs under DOS.G (Disk Operating System version G) and is designed for minicomputers. The other runs under DOS.H for use with the Datapoint 1560 processor, a Z80-based microcomputer.

RMS

ARC's limitations include the requirement for dedicated FPs and unspooling APs, and the inability to share other common resources. After ARC had been on the market for several years, Datapoint released RMS (Resource Management System), a sophisticated software system that allows almost complete sharing of processor resources within a network.

Although RMS is currently implemented as an LAN, it can cover very large distances. The same processors that utilize ARC work in an RMS installation.

Under RMS, each participating processor devotes a certain amount of its memory and cycle time to the system. The remainder of each processor's memory and cycle time is available for multiple tasks. Software configuration determines the extent to which a processor participates in an RMS system. In Fig. 2, two processors have attached disk drives, two have no peripheral devices, and one has a printer.

Under RMS, file processors perform other tasks in addition to file management and are called Data Resource Processors (DRPs). A portion of DRP₁'s memory performs file management for the system. The additional memory is used for multiple tasks accessed by the processor's console and keyboard and three work stations connected by copper wire.

Each work station is a video display terminal that utilizes DRP₁'s memory. AP₂ has an attached disk drive, but the

Which TRS-80* Accounting Software Do I Buy . . .

That's a tough question. I know, I asked it myself not very long ago. I'm Mike Motta. As president of Shawmut Systems, specialists in TRS-80* custom software, my customers were asking me for Model II and 16 Accounting Software — GL, AR, AP and Payroll. But I said "Why write the software. There must be a good package already available." So I searched for the best I could find. And I found it!

Now, when I tell you that these are the best Accounting programs I've seen on a microcomputer, you probably think that you are just listening to another sales pitch. But you're not. You're listening to a businessman with over twenty years combined experience in sales, management, and programming. So when I say that these programs will work for you, it really means something.

Each program, designed for the Model II or 16, will work with one or more floppy or hard disks. With each program, I'll include a 200 page manual written with the first time user in mind, and a set of sample data files so you can start using the program right away.

But I won't stop there. If you have a question, or a problem, call me. You won't get an operator, or order taker. You'll get me. And if I can't talk to you on the spot, I'll call you back. And I'll fix your problem. FAST.

Now I could say a lot more about these programs, but you really won't know how good they are until you try them. So, order the programs you need, and try them for 14 days. If you're not convinced that these are the programs for you, send them back, and I'll refund your money.

My price for these programs is only \$289.00 each, postpaid. I could charge hundreds more, but I want you to have the best programs at the best possible price. So mail or call your order in today. I'll make sure you'll be satisfied.

system is configured so the disk drive files are available only to AP₂. In the event of a disk drive failure on DRP₁, users can easily change the system's software configuration so AP₂ functions as a DRP and its disk drive is available to all or select users on the system.

AP₃ has a high-speed dot-matrix printer and AP₄ has a letter-quality daisy-wheel printer. The system is configured so that all processors and work stations can access both printers.

ARCDOS

ARCDOS is Tandy's local area network operating system for the Model II, 12, and 16. Each processor must have 64K of memory and an ARCNET board to participate in the network. Model II processors also require a 16K expansion board.

TRS-80 processors can only participate in ARCDOS while running in Model II mode, using the Z80 CPU and associated memory boards. Currently the Model 16's MC68000 CPU cannot

use ARCNET.

ARCDOS is similar to Datapoint's ARC. Each network is limited to 255 processors and must have at least one file processor dedicated to file management. Unlike ARC, each FP can have one attached printer and any AP can use the printer. Like the Datapoint system, ARCDOS has two types of applications processors: those with disk drives (or the capability for attached disk drives) and those with no disk drives that use firmware to download the operating system.

Calling up ARCDOS is simple. The file processor first boots TRSDOS, and then executes the program ARC80FP to start ARCDOS. Once ARCDOS is running, the file processor cannot run other programs. While the FP is running ARCDOS, you can use the command SHOWVOL to show which volumes (disks) are on line.

Applications processors can access up to 10 logical disk drives, local (connected to the AP by the parallel input/output bus) or remote, attached to

an FP. You initially access remote volumes by name using the Mount command. For example, to access a remote disk volume named Account, you would sign on, then type MOUNT ACCOUNT:5.

After a remote volume is logically mounted on an AP, further reference to it is by the disk drive number that Mount assigns. In our example, any disk read or write to drive 5 accesses volume Accounts on the file processor. When the user is finished, he Dismounts the remote volume and signs off the ARC system.

Since ARCDOS operates under TRSDOS, it doesn't have subdirectories like Datapoint's ARC. Each user must take care that his files on any particular FP disk have unique names.

For example, a user at one AP writes a Basic program and saves it on FP disk drive 1 as PROG01. Later another user writes a different program in Fortran and saves it on FP disk drive 1 as PROG01. The latter user's file will overwrite the first and the Basic program is lost. The first user could protect his file by assigning it a password, and the second user has to choose another file name.

ARCDOS Application

As an example of how an ARCDOS network works, consider its application in a large automobile dealership (Fig. 3). FP₁ manages files dealing with new car inventory and sales. FP₂ manages files for mechanic scheduling and parts inventory.

AP₁ has its own disk drives that store sensitive accounting and personnel data. AP₂ is used in the showroom to match inventory to customer needs, enter sales, and place requests for specially equipped cars. AP₃ is used in the general manager's office as a back-up for AP₁ or AP₂.

AP₄ is used in the garage to schedule customer service and request parts from the stockroom. In the parts stockroom, employees enter all parts sales on AP₅ to facilitate inventory control and accounting procedures. Should FP₁ or FP₂ fail, AP₂ can quickly substitute and return the system to normal function with a minimum delay.

ARC-ARCDOS Incompatibilities

You cannot use TRS-80 processors in ARC systems or Datapoint processors in ARCDOS systems because of the difference in the architecture of Datapoint and Tandy computers. ARC DOS.G processors are minicomputers that use a different instruction set from the Z80

ENB

TRUE Relational Database Management for TRS - 80 Mod I/III

ENB is a true relational database manager. Your data is held in ordered sets. You impose structure by creating and linking sets in various ways. Prompt screens are automatically generated from this underlying structure. You define reports ordered by any set, showing directly or indirectly linked sets (and enforce a host of further conditions on the selected set members).

What's more, ENB has an integrated data dictionary; structural info is carried in the database as data, just like everything else. This lets you restructure your database at will, without reblocking or reprogramming, using the regular editing commands. Also, exchange files containing structural data with other ENB databases. Special reports on database structure are built in and (like all reports) are always current.

64K data items, spans 4 disk drives (or hard disk). Interfaces to BASIC, file exchange with Scripsit, VisiCalc and other ENB data bases. Includes 5 action tutorials, 150 page manual.

Developed in England by Southern Software.

chip in TRS-80s.

Although the Datapoint 1560 processor is a Z80-based microcomputer, it has other hardware (ROM, disk drive interface, video display, and keyboard units) that is different from TRS-80 microcomputers. A TRS-80 with appropriately designed software could participate in a Datapoint ARC system and vice versa, but I doubt that either manufacturer has an incentive to develop the necessary software. It is likely that other software vendors will develop such programs.

The most limiting feature of ARC-DOS is that, as an extension of TRSDOS, it doesn't have multitasking capabilities. It seems inevitable that Tandy will develop an LNOS based on Xenix, the multitasking operating system for the Model 16's 68000 CPU. Such a system would have many features of Datapoint's RMS: multitasking at individual processors, hierarchical file structure, and complete sharing of peripheral resources among the system's processors.

Local Networking Concepts

Two transmission techniques are in general use for local networks: baseband and broadband methods. In base-

band transmission, information is encoded and transmitted directly. Only one message is on the system at a time. Baseband systems can usually support up to several hundred users.

Broadband transmission allows multiple simultaneous signals on the line. Coaxial and fiberoptic cables are the most suitable media for this type of

“Baseband systems can usually support up to several hundred users.”

transmission. Broadband systems can handle thousands of users, and support audio and video signals. However, the initial costs of bidirectional signal amplifiers and the expense of maintenance are great.

Two LAN communication protocols are common: CSMA/CD and token passing. With the Carrier Sense Multiple Access/Collision Detection (CSMA/CD) methods, each unit that needs to transmit first checks to see if any message is being distributed. If a message is present, the unit waits until the line is clear.

All units have the capability of detecting transmission collision (the transmission of messages over the line by two or more units at the same time). If a collision occurs, all units pause for a predetermined amount of time, then each unit waits an additional, randomly determined interval before transmitting.

In the token passing protocols, each unit assumes the role of master controller, transmits if necessary, then passes control to the next unit. Figuratively, a token passes from the current master unit to the one that will assume the role of master unit. When all units have had a chance to transmit, the process begins again.

ARCNET

ARCNET is a token passing local-area network system in which each node (ARCNET interface and computer) has a unique address and shares control of the system. The node that currently controls the system is called the master node.

The master node sends information, then passes control to the node with the next higher address. If that node does not accept the attempt to pass control, the master node checks for activity. If activity is present, the master node relinquishes control; otherwise it waits,

HAVE THEY EVER ASKED Why You Bought A Computer?

--- INFO-SCAN WILL SHOW THEM WHY ---

Combines the Features of a Word Processor, Data Base Manager, and Information Retrieval and Display Facility.

Instantly recall and display information of any sort: sales leads; inventories; product data & prices; daily appointments & reminders; names & addresses; diaries; lesson plans & student lists; recipes; index magazine articles, music and program libraries. You create information files using a simple word-processing like entry method. A short key describes the record. Scan the keys on the screen, select one, press a button and the full record displays (or prints). Add, delete, change records in a snap. Written in machine language. Fully self-contained. Simple to operate, you don't need a Ph.D to use it! No programming or other technical knowledge required. 15 page manual.

INFOSCAN Model I/III 48K 1 Drive \$49.95

--- OR SHOW THEM STUNNING GRAPHICS ---

Add the professional touch to your programs. Create complex graphic and text screens effortlessly. Over 30 commands for screen manipulation. Built in 'HELP' facility. Enter 1-1/2 inch graphic letters with a single keystroke (48K required). Save completed screens as a BASIC subroutine, merge with your programs. Full screen displays instantly from your program with a single GOSUB. Do animation. Load existing screens to make changes. Scores of useful features. Written in Machine language. 26 page manual.

The one-size-fits-all computer magazines fall flat!

Time was when you could pull any computer magazine off the rack and it would suit your purpose.

Not anymore. Today, you need a magazine that is tailor-made for your system, a magazine designed to fit your computing needs, a magazine that lets you move freely to expand your knowledge of computing and to use your computer to its *fullest* capacity.

For users of Radio Shack computers, *that* magazine is **80 MICRO**. No other computer magazine *in the world* provides more useful information on the TRS-80* than **80 MICRO**. In 1982 alone, **80 MICRO** published over 5000 pages containing informative articles; useable programs and helpful tips; hardware, software, and book reviews; new product announcements; science, business, and home-use applications; Color Computer* information; tutorials; utilities; and games.

80 MICRO is the largest single source of information for your TRS-80. No one else even comes close—not even Radio Shack. Because **80 MICRO** is not affiliated with the manufacturer, you get unbiased, independent reporting on the latest happenings and innovations.

If you use a TRS-80 you'll want to subscribe to **80 MICRO**. A one year subscription is only \$35.97—25% off the newsstand price.

*TRS-80 and TRS-80 Color Computer are trademarks of Radio Shack, a division of Tandy Corp.

Send in the attached card today, use the coupon below or call toll free **1-800-258-5473**.

Stop buying those ill-fitting computer magazines off the rack. Subscribe to **80 MICRO** and get the magazine that's tailor-made for you.

I want the magazine that's tailor-made for me.
Send me 12 issues of **80 MICRO** for only \$35.97*

then repeats the attempt to pass control to the node with the next higher address.

Each node remembers the address of the node to which it last passed control. This avoids polling of nonexistent nodes and enhances the speed of the system. The master node enquires whether the receiving node has a free buffer to hold the packet of information to be transmitted before it actually sends the packet.

This avoids sending information to a node that cannot accept the message. If the receiving node is not able to receive, the master node passes control to the next node and repeats the attempt to send the message when it again gains control of the system.

ARCNET Hardware

ARCNET uses baseband transmission hardware that transmits over RG62 coaxial cable at 2.5 megabaud. Nodes are attached as collections of stars: Coaxial cable connects each node to an ARCNET hub. Coaxial cable can connect each hub in turn to other hubs.

The two types of hubs are passive and active. A passive hub is a connector attached to the coaxial cables from up to four nodes. It requires no power and

sells for \$79 at Radio Shack (a high price for a small 2 by 2 by 4-inch connector box). You cannot attach passive hubs to other passive hubs, and the combined lengths of the longest two coaxial cables attached to a hub must be less than 200 feet.

“... the maximum distance between the two nodes farthest apart should be four or less miles.”

Active hubs have separate power supplies and transceivers to condition the ARCNET signal for improved reliability. They sell for \$799 at Radio Shack. You can attach up to eight (16 as an option on Datapoint hubs) nodes to an active hub and use up to 2,000 feet of coaxial cable between an active hub and a directly connected node.

To increase the number of nodes in a system or increase the distance the network covers, you can connect two active hubs with up to 2,000 feet of cable. All nodes must be close enough so the maximum time delay between a message

being sent and received is 31 microseconds (μ s). In practice, the maximum distance between the two nodes farthest apart should be four or less miles. You cannot attach passive hubs to active hubs.

The ARCNET interface between the coaxial cable and processor is called a RIM (Resource Interface Module) or ARCNET board. It consists of a parallel interface to the processor, a variable number of 256-byte memory buffers, a controller, a transmitter, a receiver, and a line interface. You can make data transfers to or from the processor at any time, whether or not the transmitter is busy.

The RIM handles all ARCNET protocol procedures. You do not need to involve the attached processor in the details of token passing or data transfer among RIMs. Each RIM in the network has a unique address ranging from 1 to 255.

ARCNET Protocol

ARCNET is a serial, asynchronous system. A 200 nanosecond (ns) dipulse (a 100 ns positive pulse followed by a 100 ns negative pulse) is transmitted as a mark, and no pulse is transmitted as a space. Information transmits through 11 bit units at 2.5 megabaud.

The line idles with no signal present. A transmission starts with an alert burst of six unit-intervals of mark. Data is transmitted as 8 bit characters preceded by two unit-intervals of mark and one unit-interval of space. The five types of transmission include:

- Invitations To Transmit (ITT) is an alert burst followed by one EOT (end of transmission) and two DID (destination identification) characters. This transmission passes control of the line from one unit to another.

- Free buffer enquiry (FBE) is one alert burst followed by one ENQ (enquiry) and two DID characters. It determines whether a unit is ready to receive a transmission.

- Packet is one alert burst followed by one SOH (start of header), one SID (source identification), two DIDs, the character Count (number of characters in packet: 1-253) and two CRCs (cyclical redundancy checks). It contains data transmitted from one node to another.

- Acknowledgement is one alert burst followed by one ACK (acknowledgement). It acknowledges reception of packet or free buffer enquiry.

- Negative Acknowledgement is one alert burst followed by one NAK (neg-

ative acknowledgement) character.

When you first turn on ARCNET, system reconfiguration occurs. When any node determines that no token is circulating (the line is idle for 78 μ s), it begins a time-out sequence equal to $146 \times (255 - ID) \mu$ s where ID is the identification number of the unit (1-255). When the time-out is complete, the unit begins to send invitations to transmit unless there is activity on the line.

The node with the highest ID begins sending invitations to transmit first. After sending an invitation to transmit, the node waits for the receiving node to respond with an FBE, packet, or ITT. If there is no line activity for 78 μ s, the node increments NID by one and sends an ITT.

When a new node joins an active network, it is bypassed repeatedly (since each active node remembers the next highest ID and passes the token to that node), without the following network entering protocol. The new node (or a node that has not received the token for more than 840 ms) enters the network by destroying the token and causing reconfiguration. A reconfiguration burst (consisting of eight marks and one space repeated 765 times) is longer than any other transmission and interface

with the master node's invitation to transmit. Since the reconfiguration burst is activity on the line, the master node relinquishes control. The line then remains quiet for 78 μ s before system reconfiguration occurs.

When a node leaves the system, there is no need for network reconfiguration. The node that had been passing the token to the now silent node does not receive a response to its ITT, so it increments NID and sends another ITT. This process continues until the master node's NID corresponds to the ID of the next highest node.

Summary

ARCNET has been an efficient token passing local-area network in over five years of use in Datapoint systems. Its application to TRS-80 based networks is straightforward and ARCNET provides a reliable network at a relatively low cost. Extension to 68000 based processors such as the Model 16 should help Tandy keep ahead of the competition in the business microcomputer market. ■

Contact Joseph Trojak at Johns Hopkins Hospital, 600 North Wolfe St., Baltimore, MD 21205.

COMPUTER KITS - FROM \$69.95

LNW SEMI-KITS can save you hundreds of dollars. By obtaining your own parts at the lowest possible cost and assembling the **LNW SEMI-KITS**, you can have the most highly acclaimed microcomputer in the industry - the **LNW80**. The **LNW SEMI-KITS** are affordable modules. You can start with a modest cassette system and expand to a full 4Mhz TRS-80 compatible system with 5 or 8 inch double density disks and color at any time.

A. LNW80 CPU - Made of high quality FR4 glass epoxy double sided circuit material, with plated-through holes and gold edge connector. It is fully solder-masked and silk screened. Here are just some of the outstanding features you will have when your **LNW80 CPU** board is fully assembled:
 ● 16K RAM ● Color and black and white video ● 480 x 192 high resolution graphics ● 64 and 80 column video ● 4 Mhz Z80A CPU ● Upper and lower case display ● 500 and 1000 baud cassette I/O - \$89.95

B. SYSTEM EXPANSION - Expand the **LNW80** computer board, **TRS-80** and **PMC-80** computer with the following features: ● 32K memory ● Serial RS232C and 20Ma port ● Real time clock ● Parallel printer port ● 5 inch single density disk controller ● Expansion bus (screen printer port) ● Onboard power supply ● Solder-masked and silk screened legend - \$69.95 (tin plated contacts) - \$84.95 (gold plated contacts)

C. KEYBOARD - 74 key expanded professional keyboard - Includes 12 key numeric keypad. Fully assembled and tested. - \$99.95

D. COMPUTER CASE - This stylish instrument-quality solid steel case and hardware kit gives your **LNW80** that professional factory-built appearance. - \$84.95 Add \$12.00 for shipping.

E. SYSTEM EXPANSION CASE - This stylish instrument-quality solid steel case and hardware kit gives your **SYSTEM EXPANSION** interface that professional factory-built appearance. - \$59.95 Add \$10.00 for shipping.

F. LNW80 CPU - HARD TO FIND PARTS KIT - \$82.00

G. LNW80 VIDEO - HARD TO FIND PARTS KIT - \$31.00

H. SYSTEM EXPANSION - HARD TO FIND PARTS KIT - \$27.50

I. LEVEL II ROM set. (6 chip set) - \$120.00

VISA and MasterCard accepted. Add \$3.00 for shipping plus \$1.00 for each additional item. All shipments via UPS surface. Add \$2.00 for U.S. Mail. Shipments outside continental U.S. funds must be U.S. dollars. Sufficient shipping costs must be included with payment.

Aerocomp's Proven Best-By Test! The "DDC"

Double Density Controller

★ Technical Superiority

At last! A double density controller for Model I with HIGHER PROBABILITY OF DATA RECOVERY THAN WITH ANY OTHER DOUBLE DENSITY CONTROLLER ON THE MARKET TODAY! The "DDC" from Aerocomp. No need to worry about the problems that keep cropping up on existing products. AEROCOMP'S new analog design phase lock loop data separator has a wider capture window than the digital types currently on the market. This allows high resolution data centering. The finest resolution available with digital circuitry is 125 ns (nano seconds). The "DDC" analog circuit allows infinitely variable tuning. Attack and settling times are optimum for 5-1/4 inch diskettes. The units presently on the market use a write precompensation circuit that is very "sloppy". Board to board tolerance is extremely wide - in the order of ± 100 ns. The "DDC" is accurate to within ± 20 ns. The bottomline is state of the art reliability!

★ Test Proven

Tests were conducted on AEROCOMP'S "DDC", Percom's "Doubler A" and "Doubler II" and LNW's "LNDoubler" using a Radio Shack TRS80 Model I, Level 2, 48 K with TRS80 Expansion Interface and a Percom TFD100 disk drive (Siemens Model 82). Diskette was Memorex 3401. The test diskette chosen was a well used piece of media to determine performance under adverse conditions. The various double density adapters were installed sequentially in the expansion interface.

The test consisted of formatting 40 tracks on the diskette and writing a 6DB6 data pattern on all tracks. The 6DB6 pattern was chosen because it is recommended as a "worst case" test by manufacturers of drives and diskettes. An attempt was then made to read each sector on the disk once - no retries. Operating system was Newdos/80, Version 1.0, with Double Zap, Version 2.0. Unreadable sectors were totalled and recorded. The test was run ten times with each double density controller and the data averaged. Test results are shown in the table.

★ Features

TRS80 Model I owners who are ready for reliable double density operation will get (1) 80% more storage per diskette, (2) single and double density data separation with far fewer disk I/O errors, (3) single density compatibility and (4) simple plug-in installation. Compatible with all existing double density software.

★ Value \$119.95

for the Best DD Controller on the market.

SPRING SPECIAL
"DDC" and LDOS

\$169.95

\$149.95 for "DDC" with DOSPLUS 3.3D (limited quantity)

Data Separators

The advances that make the "DDC" great are incorporated in the new AEROCOMP Single Density Data Separator ("SDS") and Double Density Data Separator ("DDS").

★ Has your original manufacturer left you holding the bag?

If you already own a Percom "Doubler A", "Doubler II" or LNW "LNDoubler" or Superbrain, the AEROCOMP "DDS" will make it right. Look at the test results:

MFR. & PRODUCT	SECTORS LOCKED OUT	
	WITHOUT "DDS"	WITH "DDS"
PERCOM "DOUBLER II"	18	1
PERCOM "DOUBLER A"	250	0
LNW "LNDOUBLER"	202	0

Note: Same test procedures as "DDC".
* Trademark of Percom Data Co.
** Trademark of LNW
*** Trademark of Tandy Corporation

**Plugs directly into your existing
Double Density Controller.**

★ TEST RESULTS ★

MFR & PRODUCT	SECTORS LOCKED OUT (AVG)
AEROCOMP "DDC"	0
PERCOM "DOUBLER II"	18
PERCOM "DOUBLER A"	250
LNW "LNDOUBLER"	202

Note: test results available upon written request. All tests conducted prior to 8-25-81

Aerocomp's 14 day money back guarantee applies to hardware only. Specials will be prorated. Shipping \$2.00 in Cont. US. See opposite page for details.

★ "DDS" \$49.95
(Use 1791 chip from your DD Controller)

★ "DDS" with disk controller
chip included \$79.95

★ Disk controller
chip \$34.95

(Shipping \$2.00 Cont. US - see opposite page for details)

Do you need a Single Density Data Separator?

The internal data separator in the WD1771 chip (R/S Expansion Interface) is NOT recommended by WD for reliable data transfer. Do you have any of these problems: Lost data, tracks locked out, CRC errors, disk retry? YOU NEED ONE!

★ "SDS" \$29.95
(For Mod. I; shipping \$2.00)

**See opposite
page**

DISK DRIVES

40 & 80 TRACK

SINGLE & DOUBLE SIDED

as low as **\$169**

PACESETTERS

Aerocomp leads the way to the BEST value in disk drives on the market. Quality, performance, reliability, warranty, service plus free trial — that's what you get from the leader.

AEROCOMP!

BEST FEATURES

- ★ Fast 5 ms. track-track access
- ★ Single or double density
- ★ Easy entry door
- ★ "Flippy" feature allows read-write to the back of the diskette to cut media cost in half!
- ★ Disk ejector (MPI)
- ★ External drive cable connection (no need to remove the cover to hook up the cable)

NEW!

HALF-HIGH DRIVES

Two complete drives in the space of one. Complete with power supply & enclosure.

- ★ Two 40 track SS \$389
- ★ Two 40 track Dual Head \$539
- ★ Two 80 track SS \$419
- ★ Two 80 track Dual Head \$579

COMPLETE DRIVES

TRS80 Mod. I & III, IBM PC & TI 99/4A. Power supply & enclosure. Specify silver or almond. MPI or Tandon. 5.25 in.

- ★ 40 track single side \$199
- ★ 40 track SS "Flippy" \$239
- ★ 40 track Dual Head \$279
- ★ 80 track SS \$299
- ★ 80 track SS "Flippy" \$329
- ★ 80 track Dual Head \$379
- ★ APPLE compatible w/cable (Shugart) . . . \$279
- ★ APPLE compatible disk controller. \$89

Shipping & Handling \$5.00 Per Drive

BARE DRIVES

Internal drives for TRS80 Mod. III, IBM PC, TI 99/4A, 5.25 in. (controller required)

- ★ 40 track Single Side \$169
- ★ 40 track Dual Head \$249
- ★ 80 track SS \$269
- ★ 80 track Dual Head \$339 (add \$30 for "Flippy" modification)
- ★ 8 inch Single Side Thinline. \$399
- ★ 8 inch Dual Head Thinline \$499

Shipping & Handling \$4.00 Per Drive

MODEL III DRIVES

Convert your cassette Mod. III to disk. Complete internal drive kits with 40 track SS drives, disk controller, power supply, mounting towers, hardware & cables.

- ★ Drive Kit Only (no drives) \$199
- ★ One Drive System Kit \$369
- ★ Two Drive System Kit \$539

Shipping & Handling \$8.00 Per System

MODEL I STARTER PACKAGE

One 40 track SS drive, 2-drive cable, TRSDOS 2.3 disk & manual, freight & insurance.

\$249

MISCELLANEOUS GOODIES

- ★ TRSDOS 2.3 disk & manual. \$20
- ★ LDOS (Mod. I or III) \$119

First Drive \$399
Includes controller, cable (2-D) and Book

Additional Drives \$199

FREE TRIAL OFFER

Use your AEROCOMP drive for up to 14 days. If you are not satisfied for ANY REASON (except misuse or improper handling), return in the original shipping container for a full purchase price refund. Applies to hardware only. Sorry, we cannot refund on software. We have confidence in our products and we know you will be satisfied.

WARRANTY

We offer a six months warranty on parts and labor against defects in materials and workmanship. In the event service becomes necessary for any reason, our service department is fast, friendly and cooperative. Our goal is 48 hour turnaround on all warranty or repair drives!

100% TESTED

AEROCOMP disk drives are 100% subjected to burn-in and bench test. We even enclose a copy of the test check list, signed by the test technician, with each drive. AEROCOMP means reliability!

ORDER NOW!

Order by mail or call TOLL FREE TO THE NUMBERS BELOW. Please note toll free lines will accept orders only. We accept VISA or MASTERCARD. Be sure to include card number and expiration date. We will not charge your card until the day we ship. Order by mail with credit card or send check or money order. Please allow 2 weeks for personal checks to clear our bank. Order COD. No deposit required but all COD's will arrive cash, certified check or money order only. We'll send a card showing the exact COD amount before your shipment arrives. Shipping is **not** included in the prices shown. Texas residents add 5% sales tax. **NEXT DAY SHIPMENT** on all in stock items.

Five Portable Programs

Foxfighter

by Brad Dixon
80 Micro Technical Editor

The Model 100 is fast proving itself a powerful computer with great potential in business and home environments. However, there are times when the drudgery of computing must be replaced with some fast-paced entertainment. Foxfighter (Program Listing 1) is a Model 100 game that uses a meager 3K of memory, yet provides plenty of action.

At the game's start you're given the option of receiving flight instructions or moving directly to your mission. The instructions are provided in lines 390-440. As pilot of a Foxfighter aircraft, your mission is to clear the sky of deadly airmines over an enemy city. To operate the Foxfighter, use the O key to move your aircraft up, the P key to move down, and the space bar to fire the fighter's laser cannon. An INKEY function in line 80 scans the keyboard for these flight instructions. Upward flight is performed in line 90 while downward flight and laser fire are controlled in lines 110 and 190, respectively.

Foxfighter's position is guided by the PRINT@ values produced by the loop in line 70. Once in flight, the fighter moves to the beginning of the next line on the screen when it reaches the end of the previous line. When the fighter reaches number 198 in the loop, it is recycled back to the top left corner of the screen.

If you have little interest in guiding the fighter, but would rather obtain a high score, this feature pilots the craft while you sit back and fire at the appropriate time.

This feature produces an interesting characteristic during laser fire called "wrap around, zap around." If you fire the laser cannon within eight spaces of the end of a row, part of the laser fire wraps around to the beginning of the next row. In effect, you are able to shoot around corners.

Another feature makes the game even more challenging. If an airmine is brushed by the nose or tail of your Foxfighter, the airmine becomes invisible on the screen. Don't let this fool

The Key Box

Foxfighter and Intel require 4K RAM, The Year in Review needs 8K RAM, and Subterra and Renumber 100 take 24K RAM.

Program Listing 1. Foxfighter.

Listing 1 continues

you. The airmine is still there and will destroy you if you crash into it. Airmines also disappear if the sensor field around each is disturbed by laser fire aimed at nearby airmines.

Crashes and airmine hits provide similar explosions with flashing asterisks and sounds. In each case, the scoreboard is updated in the upper left corner of the screen. When you exhaust all your fighters, the screen clears and your final score is posted. You can play again or exit the program. Each airmine is worth 10 points and additional fighters are awarded at 500, 1000, and 2000 points.

Enhancements

The cityscape in the program is more for visual effect than for increasing the game's difficulty. Crashes into buildings are

not difficult to add, but in Basic the checks for crashes might inhibit fast game play. Moving targets or anti-aircraft missiles from the surface would also add to the excitement of the game, but, again, the limitations of Basic programming make such refinements impractical.

The available RAM in the Model 100 limits the level of game modification. One nice addition that doesn't sacrifice speed is incorporating a time limit on the game so that a player has to shoot all the airmines within a specified time. If this is not accomplished, points are deducted from the player's score.

I think you'll find Foxfighter a fast and challenging game that's a nice alternative to the Model 100's more serious applications. ■

450	Final score and replay option

Table 2. Foxfighter line descriptions.

Intel

Conversion by Beve Woodbury 80 Micro Technical Editor

"4K Intelligence," a game by William M. Lopez, (*80 Micro*, March 1980, p. 55) was designed so that a computer would "learn" from its mistakes; when it is defeated, it doesn't repeat its last move again. Thus the first few games are easy to win, but as play continues, the computer becomes unbeatable.

"4K Intelligence" is played with chess pawns on a 3- by 3-block matrix. Pawns can move one space forward to an empty space, or diagonally to capture an opponent. That player whose pawn reaches the opposite side first, or who blocks his opponent from moving, wins.

When you start the game, you are given the opportunity to see the game instructions. Type and enter a Y for instructions,

or an N to begin the game. Before the game starts, there is a brief pause while arrays are set up.

You always get the first move. Move a pawn forward one space to a blank space, or diagonally to an occupied space to capture the opponent's pawn. When the screen prompts FROM, choose the pawn to be moved, type the pawn location and press the enter key. When the screen prompts TO, type the desired destination and press enter. If you make an invalid move (move forward to occupied space, move diagonally to unoccupied space, skip a space), the computer is unforgiving. You lose the game!

The Program

Program Listing 2 sets up four arrays. Array M contains values for each board configuration. When a move results in a loss, that move is changed to zero, so that the next time the configuration comes up, the computer uses the next possible move. A 15 appears on the display if the computer cannot make a move. If the computer loses in that way, it changes its previous move to zero. If all three possible moves become zero, column 2 changes to 15 so that next time around the previous move is changed.

Array B contains all possible computer block configurations—those with which the computer has won by blocking all your possible moves.

Array C contains the possible computer moves using the matrix locations. Column 1 has the FROM matrix location and column 2 has the TO matrix location.

Array G contains a summary of the game matrix. The screen location for the pawn is in column 0, the matrix location of the computer pawn in column 1, and your pawn in column 3. A 1 indicates a pawn in that location and zero indicates an empty space. Column 2 contains specific values for the corresponding matrix location for computer pawns, and column 4 has the values for your pawns.

The program occupies almost 4K and contains several REM statements for program clarity. If you have limited memory space, remove all remark lines. ■

Arrays

B()	Computer block configurations
C()	Possible computer moves
G()	Game matrix summary
M()	Board configurations and possible moves

General

A	Row location of computer move
BL	Human blocked if 1
C	Computer configuration value
F	Matrix location to move computer pawn from
H	Human configuration value
I	For... Next loop counter
J	Matrix location to move human pawn from
K	Matrix location to move human pawn to
L	Number of human losses
LC	Column number of previous computer move
LR	Row number of previous computer move
M	Computer move
NS	? Play again?
T	Matrix location to move computer pawn to
W	Number of human wins
X	Value to check for invalid move
YS	? Instructions wanted?

Subterra

Conversion by Mare-Anne Jarvela
80 Micro Technical Editor

Subterra, an adventure game by Richard Ramella, first appeared in our Fun House column (80 Micro, November 1982, p. 488). It requires a 24K Model 100.

Variable	Description
A\$	Data from data statements
B	Array counter
T	For...Next counter
X\$	Input variable
C\$	Input variable
K\$	Input variable
I	For...Next counter
Z	Random number
M	Random number
K	Found key flag
H	Going in or out flag
P	Mile counter

Table 4. Subterra variables list.

Program Listing 3. Subterra.

```

Listing 3 continues

In Subterra, you must traverse underground caves and passages in search of a precious idol. Travel in any direction, but tread cautiously—many hidden traps await you. And don't assume you're through when you find the idol—you are in danger until you and the idol are safely above ground.

Pictures add to the fun, and show off some of the Model 100's graphics. I used CHR\$(27);"p" to make the background dark and CHR\$(27);"q" to make it light. Lines 2230-2730 contain all the graphics. (See Program Listing 3.)

Subterra produces sound in conjunction with the graphics.

Change line 2310 to compose a different tune for the key, line 2390 for the doors, line 2500 for the dragon, line 2620 for the well, and line 2700 for the idol.

The Model 100's random function (RND) gives you numbers between zero and one. I used INT(10*RND(1)) for an integer between zero and nine. RND always gives the same order of random numbers; to avoid that, I used the clock to pick up a different sequence each time (see p. 175 of the Model 100 manual).

Enjoy Subterra—but don't get lost. ■

Renumber 100

by Beve Woodbury
80 Micro Technical Editor

Running out of room to insert additional line numbers in a program is frustrating. This renumber utility solves that problem. It lets you choose line increments and then renumbers the entire program, including all GOTO, GOSUB, Then, and Else lines. (See Program Listing 4.)

The program first reads a Do file (ASCII), then writes a file (NWNUMB.DO) with the corrected line numbers. Because of these file requirements, the number of bytes available to renumber a program must at least equal the number of bytes in the Do file plus 500 bytes for string space and 4 bytes for each line (array). I can renumber a file of approximately 7,000 bytes on a 24K Model 100 with no other files.

When you run the program, it requests the name of the file you want renumbered. Enter the file name, including the .DO extension. The computer pauses while it determines the number of lines in the file and dimensions an array to store the old and new program line numbers.

The program then requests the desired line increments. After you enter this figure, there is another pause while the

Line	Description
10	Clear \$ space for old and renumbered line
20	Title
30	Get name of file to renumber
40-70	Read file to count lines and dimension array
80-120	Set up array of old and new line numbers
130-140	Open files for input and output
150-190	Read old line and replace line number
200-230	Search for GOTO in line
240-270	Search for GOSUB in line
280-310	Search for THEN followed by line number in line
320-360	Search for ELSE followed by line number in line
370	Get next line
380-390	Sound "beep" and end program
400-520	Replace old line number reference with new

Table 5. Renumber line descriptions.

old/new line-number array is set up.

When the program starts to number lines, "Processing, Please Wait" appears on the screen each time a new line is read. If the program is quite long and a line has several line

references, the processing notice remains steady while all the line changes are checked through the array.

It took approximately one minute to renumber the 7,000-byte program mentioned above. This is a long time by computer standards, but it beats renumbering manually. When the program finishes writing the renumber file, it beeps.

Program Listing 4. Renumber utility.

This lets you do other tasks while your program is renumbered.

If there is an undefined line number ("Line number is not in program") referenced in a line, the number is replaced with asterisks.

When the program ends, "Unlisted Line" appears on the screen.

The renumbered file is in NWNUMB.DO. The original file is unchanged. ■

Variable	Description
A\$	Old file line input
C	Location to put remainder of line
C\$	Remainder of line
D	Number of lines in program
F\$	Name of file to renumber
FF\$	Proper file name format to open file
H	Length of new line number
I	Increment amount
J	Length of old line number reference
K	Loop counter
LC	Length of remainder of line
M	Value of MID\$
N	New line number
PP\$	New line number reference
P\$	Formatted new line number
Q\$	Location of remainder of line
R	Array row number
T()	Table (array) of old and new line numbers
UD	Indicate presence of undefined line number
V	Value of old line number
X	Location in line
Y	Length of old line
Z\$	New file line output

Table 6. Renumber variables list.

The Year in Review

by Richard Ramella

This program produces a bar graph that displays data for a 12-month period on the X axis and accommodates up to 10 million units on the Y axis. It requires an 8K Model 100. The display fits comfortably on the screen.

The Program

When you run the program, you'll see the prompt "Enter title in 40 or fewer characters." It can be anything: 1983 Births at Enloe Hospital, Sales of the South Pacific, and so on. If you exceed the 40-character limit, you're told so and given another try.

Then you are asked to enter data for each month, from January to December. For each prompt in this section, type the number of units for that month and hit the enter key to see the next prompt. If you enter a number higher than 10 million, the program politely ends its participation in your scheme.

After you enter the December figure, the screen blanks and the program draws the bar graph.

At the left of the screen the prompt "Month?" appears. Answer it by typing the first three letters of any month in low-

erence and the program displays the number for that month. To see a figure for another month, press the enter key. The screen goes blank and another prompt appears.

The strange letter groupings in lines 370-390 of Program Listing 5 turn into three-letter month abbreviations displayed vertically. The bar for each month builds upward to the right of the month.

The Y axis has 10 divisions on it. At the bottom left of the screen is a notation telling you what each of these 10 increments represents. The abbreviation "incr." is followed by either "tens," "hundreds," "thousands," "10 thous.," "100

thous.," or "millions."

The program notes the largest number you enter and then scales down all the other numbers so the bars displayed are in proportion to each other.

I arbitrarily set a limit of 10 million units. If you have more than 10 million of something in any one month, you might represent your figures with decimals, for example, 300.200000 representing three hundred million, two hundred thousand. ■

Nothing's Perfect

by Ken Barbier

Ah, the benefits of the Model 100: optional 24K bytes of battery back-up RAM, RS-232 serial port, built-in text editor, built-in modem, ability to upload into a larger computer, full-size keyboard, and so easy to carry. But does the computer have any flaws?

Run Speed

I keyed a little benchmark program calculating the cosine of one 240 times (Program Listing 6) into the 100, and got what I thought was a dead computer. It wasn't dead, but it was slow. It took 28 seconds to run a benchmark that takes less than four seconds on my 4 MHz Z80 homebuilt computer, and seven seconds on a TRS-80 Model I.

The 100 Basic computer functions in 14-digit double-precision calculations, and while that provides precise answers, it does not provide speed. Patching the benchmark program to force the variable X to single precision, and the counter I to integer produced a result 28 seconds later with six digits, not 14.

Manual Oversights

I spotted a couple of weaknesses in the generally excellent 100 user's manual. The Call statements in the sample programs on pp. 149, 199, and 201 reference machine-language subroutines contained in the Model 100 PROM. Call is documented, but PROM isn't.

The manual doesn't mention that the maximum number of files is limited to the 20 files displayed at sign-on. If you ask Text to create a twenty-first file, you get a beep and another "File to Edit?" prompt, not a warning that the directory is full.

The sample program on p. 199 uses the Basic PRINT@ function without fully explaining it. The inference you must draw is that PRINT 40 causes the next display to start 40 positions from the screen's first character spot.

The Basic initial program load function (IPL) lets you pre-set the computer to load and execute a program the next time you turn on the computer. But if you don't have Basic loaded when you turn the computer off, it powers up the menu instead of your IPL program.

If you ever turn the microcomputer off during the execution

```
10 PRINT "Rickard Cosine Benchmark"
20 PRINT "START ";TIMES
30 BEEP
40 FOR I=1 TO 240
50 X=COS(1.0)
60 NEXT
70 BEEP
80 PRINT "STOP ";TIMES
90 PRINT X
100 INPUT AS
110 MENU
```

Program Listing 6. Benchmark program.

of a program, the program resumes once you restore power. This is handy if you use the 100 with an unattended controller of data-acquisition device powered from the optional ac adapter, but the user's manual unfortunately doesn't ever tell you this happens.

Terminal Hang-ups

Don't use shortcuts with Telecom in the TERM mode. If you try to step through the procedures for calling another computer on the telephone without actually connecting the modem cable to the phone, you end up in limbo as soon as you press the TERM mode key. The computer is waiting to hear the modem tone from the other end of the phone link before it updates the function key display to that shown on p. 81 of the manual.

Try a dry run before you call another computer. Switch your Model 100 from ORIG to ANS (find the switch on the left) before stepping through the TERM procedures. This makes your computer act like the called machine instead of the caller, and you hear the modem tone as soon as you enter TERM. The computer hangs up at this point, since it's waiting for a call.

Use STAT to change from the modem operation to the RS-232 port to make a dry run all the way through the TERM mode. Enter STAT and key in 88NID. You can then fake an upload of a file from your computer through the serial port, even though there's nothing at the other end.

The computer remembers the STAT assignment, and won't revert to the modem port the next time you power up. Use STAT and the manual's table on p. 85 to restore modem operation.

The RS-232 Port

You can't connect a standard RS-232 data cable to the 100 because the cutout in the computer's case is too small to accommodate the connector shell. Worse, the serial port doesn't conform to RS-232 standard.

A table on p. 205 of the documentation implies that the Model 100 serial port uses the data send and receive signals on pins 2 and 3, and the handshaking signals on RS-232 connector pins 4, 5, 6, and 20. Unfortunately, the computer ignores the handshaking signals.

The Model 100 is configured as a terminal device (DTE) to be connected to a communications device (DCE). A DTE should assert the handshake line Data Terminal Ready (DTR, pin 20) when it is powered up, and Ready To Send (RTS, pin 4) when it wants to talk to the DCE.

Similarly, the communications device on the other end of the RS-232 cable (such as a modem), asserts Data Set Ready (DSR, pin 6) when the machine is turned on, and Clear To Send (CTS, pin 5) when it is ready to accept data. The DTE (Model 100, in this case), should stop sending data if the DCE is not ready (DSR, Not True), or is busy (CTS, Not Ready). The Model 100, however, ignores both DSR and CTS.

The 100 always asserts DTR when in the TERM mode, and does not use RTS at all. When the computer is used to upload

files to, or to download files from, another computer at higher baud rates, data can be lost.

I can connect the serial port to my big computer and upload text files to it at 9600 baud (see Sidebar: "Uploading Text to WordStar"), or I can use the Model 100 as a full duplex terminal on the other computer if I don't exceed a 300 baud rate. If I run at higher data rates, the Model 100 screen scroll takes too long, and data from my big computer to Model 100-as-terminal is lost.

If I hook up my Olympia daisy wheel typewriter/printer to the serial port of the Model 100 to use it as a 300 baud letter-quality printer, the 100 ignores the DSR signal, and sends data faster than the printer can print, garbaging the printout.

Uploading Text to WordStar

The TRS-80 Model 100 built-in text editor, Text, stores data in document files (.DO) in a format incompatible with larger microcomputers running WordStar under CP/M. I had to find a simple method to upload Text files to WordStar.

If the Model 100 Telcom facility is used to upload files, it demands that you tell it how long a text line should be, and inserts hard carriage return (CR) characters into the text at the end of each line as the data is uploaded to the target computer (or modem, or printer).

WordStar, on the other hand, inserts soft end-of-lines consisting of a carriage return character (ODH in hexadecimal) with the eighth bit set on (8DH), followed by a line feed (LF) character (0AH). Only paragraph ends are marked with standard CR, LF (ODH, 0AH) sequences in WordStar.

Since WordStar gets confused by plain text with a CR at the end of each line, but no LF, it can't be used to reformat such files. Therefore, the Model 100 Telcom program can't upload files to WordStar. To upload text from the Model 100 to my WordStar-CP/M system, I had to write UPLOAD.BA, shown in Program Listing 7.

This program takes a Text document file named by the operator and sends it out through the serial port to a host computer without inserting CRs at line ends. Paragraph breaks are sent as they exist within a Text file, with a CR and LF, which is already WordStar-compatible. The end of the text file is signaled to the host com-

```

10 PRINT "TRS-80 Model 100 TEXT to WordStar"
20 MAXFILES=2
30 EF$=CHR$(26)
40 INPUT "File to send: ";FI$
50 OPEN FI$ FOR INPUT AS 1
60 OPEN "COM:88N2D" FOR OUTPUT AS 2
100 A$=INPUT$(1,1)
110 PRINT #2,A$;
120 IF EOF(1) THEN GOTO 1000
130 GOTO 100
1000 PRINT #2,EF$
1010 MENU

```

Program Listing 7. This program permits uploading Model 100 Text files to a host computer running WordStar under CP/M.

The Up-Side

The Model 100 is perfect for remote sites: programmers working in any language can use the 100 to key in, edit, and store their source programs wherever they are. The 14 digits of double-precision accuracy top the accuracy of the single-precision functions of other computers.

If you live in an area with power interruptions, you can avoid computer glitching by keying in text with the 100 running on batteries. The built-in calendar clock and modem provide numerous remote controller possibilities. ■

Ken Barbier can be reached at P.O. Box 1253, Borrego Springs, CA 92004.

puter by the CTRL Z character (IAH).

This last special character is defined in the program (see Listing 7) in line 30. Line 40 prompts the operator for the name of the file to send, which should be entered in the form FILE.DO without quotation marks. Line 50 then opens this file as input.

Output to the serial port is established in line 60 with the baud rate set at 9600, 8 data bits, no parity, 2 stop bits, and XON/XOFF disabled (see the manual for details on setting up the serial port).

The document file is then transmitted character by character by the program loop starting at line 100. When the end of the document file is reached, a CP/M-compatible terminator (EF\$, IAH, CTRL Z) is sent to the host computer, and the Model 100 returns to the menu display.

For this output to be properly received by a CP/M computer, the Model 100 serial port has to be connected to the host computer reader device (RDR:) serial port. Since no serial port handshaking signals are recognized by the Model 100, the text has to be sent in a continuous block.

To receive an uninterruptible input through the RDR:, the host computer inputs and buffers the text from the start to the end-of-file character, before writing it to the disk. This is accomplished under CP/M by instructing the Peripheral Interchange Program (PIP) to create a disk file consisting of reader device input buffered in memory until the end-of-file is received:

```
PIP TEXT.DOC=RDR:[B]
```

Once Text.DOC (or whatever file name you chose on the receive end) has been written to the disk by PIP, WordStar can then reformat the file and insert its own soft end-of-line characters. Invoke WordStar, select Text.DOC as a document file, and execute the WordStar global reformat with the command sequence:

```
CTRL Q, Q, CTRL B
```

What started as a Model 100 Text file is now a WordStar-compatible document file.

A similar technique can be used to upload Text files to other word processors running under other operating systems. ■

THE REST OF 80

IT HAD TO GO SOMEWHERE

There's no reason to deprive you of solid microcomputing information just because it wouldn't fit between the covers of *80 Micro*. But even *80*, as thick as it is, can hold just so much. Here's the answer—**The Rest of 80**—31 of the best tutorials and utilities, hand-picked from the overflowing files at *80 Micro*. These never-before-published articles for the Model I and Model III were just too good to let them get away.

SOMETHING FOR EVERYONE

Whatever your programming skills, **The Rest of 80** can help you learn more and save time and effort. Here are just a few of the chapters you'll find:

- An Unlistable, Unbreakable Program*
- Adding Commands to BASIC*
- Programming in Tiny Pascal*
- Line Drawing*
- Automatic Master Disk Directory*
- Faster Loading for the Model I*
- ASCII Converter*

A Better LDOS KSM
And more on BASIC,

Pascal, and assembly language! Every program is of the same high quality you wait for every month in *80 Micro*. Now try **The Rest of 80**—a welcome addition to your computer library.

ISBN 0-88006-062-X, softcover with spiral binding, 7×9, approx. 300 pp. BK7392 \$9.97

Collegiate Capers

by Christopher Skapura

If you miss your undergraduate days, buy some new notebooks and dust off your mortarboard—here's your chance to go back to college.

Are your college memories fading? Have you forgotten about freshman orientation, good frat parties, and English pop quizzes?

This Model I/III adventure game takes you back. Beginning as an innocent freshman, you battle the administration, professors, and other students for four years. A bachelor's degree is your goal—good luck!

Playing Instructions

Commands in the form of short sentences are accepted. You can enter "Get I.D.," or "Throw biology book," or simply type a direction of you want to walk (N, for example, moves you north).

Type "Look around" to get a description of your surroundings. "Inventory" or "Inv" produces a list of your supplies, and tells you if you're a freshman, sophomore, junior, or senior.

A few red herrings are included in the game. As in life, not everything is important to your goals.

How It Works

A 37- by 26-element array manipulates objects in the program. Specifically, 37 objects are spread out over 26 locations. If you get an object in location 10 (PL = 10) and drop it in location 12 (PL = 12), the array is changed to make the elements RS(36,10) equal zero

Variable	Function
AB	Psychology lab flag
AL	Amount of alcohol in system
BA	Check if given psychology magazine
BO	Paid tuition flag
CM	Chemistry pass/fail check
CT	Count of items carried
C2	Item sort counter
DH	Frat house check
DN	College dean's mood
EX	Exchange book for I.D.
EN	English pass/fail check
E2	Exchange I.D. for book
FA	Financial aid flag
FM	Financial aid form complete
GT	Grade transcript check
IB	Inkblot check
MF	Manila folder/dean check
MN	Amount of money left
NM\$	Character's name
NU	Concatenated input
PE	Phys. ed. pass/fail check
RR\$(37)	Items in university
P\$(26)	Location
PL	Location flag
P1\$(26)	Obvious exits
PR	Opponent
Q	For...Next counter
QQ	Temporary variable
QS	Temporary variable
RES	Input response
RG	Registration table flag
RS%(37,26)	Item, place array
SC	Present score
SI	Registered student flag
ST	Equipment theft check
TR\$(8)	Array of items
TT	Specific item flag
U	For...Next counter
YN	Yes/No response

Listing continues

and RS(36,12) equal one. The one indicates that object 36 is present in location 10, and the zero indicates object 36 is not present at location 10.

The subroutine in lines 500-510 checks what is or is not in each location. Lines 32-34 set up the initial objects and locations throughout the university.

The workhorse of the program begins at line 5700. Starting here, execution goes to a subroutine at line 3000 to check certain flags, returns to line 5700, makes sure that the values of certain variables are zero, and then prompts you for a two-word command.

Depending upon the input, your location in the program, and the value of variables that you set as you proceed through the game, the program branches outward.

A list of variables is included in Table 1. Because of the program's length, I used no remark statements, and included many multi-statement lines. ■

Two Printers?

Get Switch Wit \$94.95

- * Centronics compatible parallel printer switch for MOD I, II or III.
- * Printer selection Automatic (CHRS(2) and CHRS(3)) or Manual (switch).
- * Lights indicate selected printer and automatic or manual operation.
- * All data and control lines buffered.
- * Gold plated edge connectors.
- * No exposed circuit board connectors.
- * Power ON/OFF switch.
- * No MOD II cable modifications.
- * Comes complete with power supply, manual and demonstration program.
- * Specify computer type when ordering.

Tired of Typing? Try

BOBMOD

Give Your Fingers a Break. \$19.95

Keyboard enhancement program

- * Compatible with both MOD I and III.
- * Only one keystroke needed to enter complete BASIC or DOS command.
- * Keyboard and One stroke commands easily redefined from keyboard.
- * Quick keyboard graphics entry.
- * Input line editor: Over type, Insert, Delete, Nondestructive cursor control.
- * Keybeep audio feedback via cassette port (amplifier required).
- * Complete with manual and users guide.
- * Specify DOS when ordering.

The Smartest Printer Switch for Your Money!

UO-LISP

AN OPTIMIZING COMPILER AND ASSEMBLER
AN EXCELLENT SYSTEM FOR A.I. ROBOTIC & INTELLIGENCE SYSTEMS

FAST LOAD LIBRARIES:
COMPILED CODE CAN BE STORED IN RELOCATABLE FILES.

INTERPRETER:
OVER 125 FUNCTIONS IMPLEMENTED IN BASE INTERPRETER.

DOCUMENTATION:
THE MANUAL IS OVER 100 PAGES COVERING ALL ASPECTS OF THE SYSTEM. NUMEROUS EXAMPLES OF EACH FACILITY ARE INCLUDED.

SUPPORT SOFTWARE:
LITTLE META-TRANSLATOR WRITING SYSTEM IS A LISP PROGRAM WHICH PERMITS YOU TO SPECIFY THE SYNTAX OF A PROGRAMMING LANGUAGE AND HOW IT IS TO BE INTERPRETED.

REQUIREMENTS:
TRS-80 MODEL I OR MODEL III, 48K. DUAL DISKS ALSO AVAILABLE FOR CP/M.

ORDERING:
SYSTEM MANUAL...\$20.
COMPLETE SYSTEM...\$60.
LITTLE META MANUAL ONLY...\$15.
LITTLE META TRANSLATOR...\$40.
VISA and MASTERCARD PLEASE INCLUDE EXPIRATION DATE and CARD No.

TM TRS80 color

From the January 1981 issue of the CSRA Computer Club newsletter:

There was some amusement at the November meeting when the Radio Shack representatives stated that the software in the ROM cartridges could not be copied. This month's 68 Micro Journal reported they had disassembled the programs on ROM by covering some of the connector pins with tape. They promise details next month. Never tell a hobbyist something can't be done! This magazine seems to be the only source so far of technical information on the TRS-80 color computer. Devoted to SS-50 6800 and 6809 machines up to now, 68 Micro Journal plans to include the TRS-80 6809 unit in future issues.

To get the MOST from your 6809 CPU - This is the BEST SOURCE! The ONLY Magazine for the 6809 Computer. Months Ahead of All Others!

PAJARO Models I/III 48k

A new programming environment allowing more efficient development of software with user defined statements. Programs easily chained using a built-in bank of variables, making memory seem much larger. Multiple programs in memory. Both integer and 32 place floating point are supported, as well as random and sequential disk files. PAJARO's syntax is much like BASIC's (altho it can be changed if you wish, to spanish, german or whatever you like). Machine language like commands (Block moves and searches) as well as DRAW and SOUND commands. Compiled programs run up to 20 times faster than interpreted BASIC and may be moved to other types of computers (IBM PC, APPLE and CPM run time units available early '84). Models I/III 48k: at least 1 drive. Price is \$89.95 post paid in the U.S. Manual only is \$25.00.

Need More Serial Ports ?

- ★ Add a BTA smart multiport controller to your C.P.U.
- ★ The MODEL 524 expands a single RS232 port to four individual ports with port selection and baud rate controlled by user software.
- ★ Buffered inputs permit simultaneous operation increasing data exchange rate.
- ★ 62K spooler model also available.

The Banner Machine ©

- For the TRS-80 I & III with 32K tape or 48K disk
- For use on the Epson MX-80 with Grafrax
- Uses dot graphics instead of TRS-80 block graphics
- Menu-driven program
- Operation similar to a word processor
- Makes signs up to 10" tall by any length
- 10 sizes of letters from ¼" - 8" high
- Mono or proportional spacing
- Automatic centering; Right and left justifying
- Makes borders of variable width up to ¼"

NODVILL DIET PROGRAM

\$69.95

"TAKE A BYTE".
MAINTAIN, LOSE OR GAIN WEIGHT
With your TRS-80 Double Density Disk Model I/III/4
and
The NODVILL DIET PROGRAM "Take a Byte"
you can quickly and accurately:

- ★ Calculate caloric and nutritive food intake
- ★ Evaluate nutritive value of your diet
- ★ Compare daily diet to Individual RDA Chart
- ★ Create personalized daily meals and menus
- ★ Plan varied daily menus based on sound nutrition
- ★ Save records of daily meals and menus for future planning
- ★ Print nutrition charts, food, meal, menu and grocery lists

"Take a Byte" is a Modular BASIC Program

MAIN Program Menu

- (1) Recommended Daily Dietary Allowance (RDA) CHART
- (2) 733 Expandable Random Access FOOD LIST Data File
- (3) 28 Nutritional MEAL LIST Data File Examples
- (4) 7 Balanced DAILY MENU LIST Data File Examples
- (5) GROCERY LIST Program Module
- (6) 25 Page USER'S MANUAL including Charts and Tables

ALL Data Files can be EDITED and MODIFIED independently and flexibly to reflect your personal diet - your choice of diet book or your doctor's suggested diet.

FOR TRS-80 MODEL I OR III
IBM PERSONAL COMPUTER

The MMSFORTH System. Compare.

- The speed, compactness and extensibility of the MMSFORTH total software environment, optimized for the popular IBM PC and TRS-80 Models 1 and 3.
- An integrated system of sophisticated application programs: word processing, database management, communications, general ledger and more, all with powerful capabilities, surprising speed and ease of use.
- With source code, for custom modifications by you or MMS.
- The famous MMS support, including detailed manuals and examples, telephone tips, additional programs and inexpensive program updates. User Groups worldwide, the MMSFORTH Newsletter, Forth-related books, workshops and professional consulting.

mmsFORTH

A World of Difference!

- Personal licensing for TRS-80: \$129.95 for MMSFORTH, or "3/4TH" User System with FORTHWRITE, DATAHANDLER and FORTHCOM for \$399.95.
- Personal licensing for IBM PC: \$249.95 for MMSFORTH, or enhanced "3/4TH" User System with FORTHWRITE, DATAHANDLER-PLUS and FORTHCOM for \$549.95.
- Corporate Site License Extensions from \$1,000.

If you recognize the difference and want to profit from it, ask us or your dealer about the world of MMSFORTH.

137

NEWBASIC 2.0

Adds over 40 commands to Model I/III disk BASIC.

- Customize NEWBASIC—include only those commands you need.
- Over a dozen easy-to-use and powerful graphics commands (eg, DRAW, LINE, CIRCLE, PAINT).
- Produce sound for music & effects.
- Pre-defined and definable keys.
- Disk-based spooler/despooler.
- Execute strings, label lines, 2-byte PEEK/POKE, restore to any DATA line, block memory move, set hi-mem, and much, much more.
- 70 page manual & summary card.
- **Only \$39.95!** (+ \$2.50 shipping)

Check, money order, VISA, M/C, and C.O.D. (+ \$2) accepted. CA residents add 6% tax. Foreign orders (exc. Canada), \$5 shipping, US funds only. Both Model I & III versions on same disk. Requires 48K & 2 disk drives. (Not copy protected—personal backups OK.) Works with most major DOS's.

209 18th Street
Huntington Beach, CA 92648

Credit card & C.O.D. orders accepted 24-hrs (manned 8-5, M-F): (714) 960-6668.

Dealer inquiries invited.

TIME SAVING - MONEY SAVING PRINTER BUFFER

SPOOL-Z-Q

Spool-Z-Q accepts characters at computer speed and feeds them to your printer at its much slower speed. This eliminates the time you waste waiting for your printer to finish before you can use your computer.

FEATURES

Spool-Z-Q is perfect for use with all parallel (Centronics standard) printers including Radio Shack printers. Spool-Z-Q is stand-alone, it doesn't steal power from the computer or printer. The many advanced features include automatic internal space character compression, copy and self-test functions, and a special "Pause-on-Formfeed" mode.

SIZES AND EXPANSION

Spool-Z-Q comes in 32K, 64K, and 128K character sizes. Any Spool-Z-Q can be user expanded to 64 or 128K by just plugging in chips - the sockets are already installed. There are no jumpers to fool with either, Spool-Z-Q knows how much memory is installed without being told.

15 DAY TRIAL PERIOD

You may try Spool-Z-Q with your system and, if you aren't completely satisfied, return it within 15 days for a no-hassle full refund.

The Automatic Ribbon Re-Inker

Re-ink any type of ribbon (except carbon) for less than 5 cents.

Extremely simple operation. 1) Load cartridge or spool. 2) Add ink to reservoir. 3) Start motor.

We have a MAC INKER for any printer—many MAC INKER units support multiple printers. Ink contains lubricant for safe dot matrix printhead operation. Multicolored inks available. Ask for brochure.

Computer Friends

100 Northwest 86th Avenue
Portland, Oregon 97229
(503) 297-2321 ~357

Price \$54.95 plus \$3.00 S&H. Prices slightly higher for some printers. Total satisfaction or full refund.

US Patent Pending

MacInker

Attack of the TRS-80

by Hollie H. Satterfield

Attack of the TRS-80 is a graphics-filled adventure game with a difference: you need strategy and luck, rather than pure logic, to complete it. Attack runs on Models I and III with at least 16K of RAM. Model I owners should make the changes listed in Table 1.

The game is set in a lunar colony where a deranged Model I has taken over the land and its electronic inhabitants. Your mission is to locate and

A lunar colony is depending on you to deliver its inhabitants from a deranged Model I.

destroy the nefarious TRS-80. Deadly robots patrol the corridors trying to stop you. The colonists have been temporarily evacuated, and you are their only hope.

Essential to victory is your suspension of disbelief—the ability to believe the unbelievable. Each time you are injured in this game you can take the wound or you can use suspension-of-disbelief points; to win, however, you can't use more than 75 of these points, or your adventure would be too unbelievable. Also, you can receive only six wounds, and you must maintain an alertness factor above zero.

A map is randomly generated for each game, and you must choose items to take on your mission (some might be useless). The same rooms appear in every game, but the items found in each room change. Since the rooms are randomly arranged, you might run into some rooms more than once. Make a map of the colony as you play.

The game uses slightly less than 16K. POKE in the graphics using the string-packing technique in Program Listing 1. (For details on this procedure, see "The STRING\$'s the Thing," *80 Micro*, June/July 1982, p. 298.) Instead of spaces in lines 499-501 and 1000-

```
1000 XA = PEEK(16416):XB = PEEK(16417):PRINT@0,"CARRYING" H "ITEMS.
ALERTNESS:" A "SUSPENSION OF DISBELIEF: "DB:POKE16416,XA:POKE16417,
XB:IFDB>75 OR A<1 THEN 60000
1010 PRINT"CARRYING" H "ITEMS. ALERTNESS:" A " SUSPENSION OF
DISBELIEF:"DB:IFDB>75 OR A<1 THEN 60000 ELSE RETURN
```

From line 695 on, change every GOSUB 1000 to GOSUB 1010
 Add GOSUB 1000 to line 540 after CLS
 Change GOSUB 1010 in line 330 to GOSUB 1000
 Remove POKE16916, 0 from line 10007

Table 1. Model I owners must make these changes to Program Listing 2.

Lines	Description
10-40	Instructions.
60-520	Initialize variables and let you choose your provisions. Data includes robot names and strengths in line 140, map set-up in 140-170, rooms in 190-320, provisions in 380 and 410, and objects and their locations in 480 and 490.
540-579	Print room descriptions and determine if robots are present.
580-645	Decipher your commands and refer to lines 650-910. Compare line 645 to the data in 515 to see which verbs go to which lines.
1000	Updates your points. Locations 16416 and 16417 contain the current cursor position.
2000-2230	Line 575 refers to these if special decisions are required in certain rooms.
2240-10013	Explain your final combat against the TRS-80 when you reach that room.
10100-16100	Contain combat routines and "charts"; yours are in lines 15000-15800, and the robots' are in lines 16000-16050.

Table 2. Description of Lines in Program Listing 2.

The Key Box

**Model I and III
 16K RAM
 Cassette Basic**

10006, you can use numbers or letters for easier counting. It doesn't matter, because these positions are replaced by characters POKEd in by the program.

After running the program, delete everything except lines 499-501 and 10000-10006. Type Program Listing 2 "on top" of the remaining lines (typing the listings separately and merging them is difficult). Model III owners will see the graphics characters in the remains of Listing 1, while Model I owners will see

token words substituted for the characters; both versions work equally well. Table 1 explains the program's lines.

This program was inspired by, and loosely based on, *Return of the Stainless Steel Rat*, a board game published by Simulations Publications Inc., which is no longer in business. ■

Contact Hollie H. Satterfield at 416 Starmont Drive, Danville, VA 24540.

REMSOFT, INC.

Let Your TRS-80® Teach You ASSEMBLY LANGUAGE

Tired of buying book after book on assembly language programming and still not knowing your POP from your PUSH?

REMSOFT proudly announces a more efficient way, using your own TRS-80® to learn the fundamentals of assembly language programming . . . at YOUR pace and YOUR convenience.

Our unique package, "INTRODUCTION TO TRS-80® ASSEMBLY PROGRAMMING", will provide you with the following:

- Ten 40 minute lessons on audio cassettes
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- Step-by-step dissection of complete and useful routines to test memory and to gain direct control over the keyboard, video monitor, and printer.
- How to access and use powerful routines in your Level II or Model III Basic ROM

AVAILABLE FOR MODEL 1 & 3

REMASSEM (tape) \$74.95
REMASSEM (disc) \$79.95

LEARN TRS-80® ASSEMBLY LANGUAGE DISK I/O

Your disk system and you can really step out with REMSOFT'S Educational Module, REMDISK-1, a "short course" revealing the details of DISK I/O PROGRAMMING using assembly language. Intended for the student with experience and assembly language.

COURSE INCLUDES:

- Two 45-minute lessons on audio cassette
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- A booklet of comprehensive, fully commented program listings illustrating sequential file I/O random-access file I/O and track and sector I/O.
- A diskette with machine readable source codes for all programs discussed in both Radio Shack EDTASM and Macro formats.
- Routines to convert from one assembler format to the other.

Presently available for Model 1 only
REMDISK-1 only \$29.95

IF YOU'RE GOING TO BE PICKY ABOUT AN OPERATING SYSTEM SEE WHICH WAS PICKED BEST.

The readers of 80 Micro were asked to select their favorite operating system for the TRS-80 Model I&III. LDOS, DOSPLUS, TRSDOS, MULTIDOS, WOBOS I and NEWDOS/80 were all on the ballot. They picked NEWDOS/80.

The editors of 80 Micro have also awarded their Hall of Fame Awards. From among every software package on the market, the editors picked only six that they felt made a lasting and significant contribution to the TRS-80 computer. NEWDOS/80 was one of the six.

Since we first introduced the NEWDOS operating system we've been stating its features, capabilities and advantages. Thank you 80 Micro readers and NEWDOS/80 users for supporting us.

Version 2.0 . . .

High Performance DOS

NEWDOS/80 Version 2.0 is our highest performance system yet. The versatility and sophistication of Version 2.0 includes features like:

- Double density support on the Model I

• Enhanced compatibility between Model I and III

- Triples directory size
- Dynamically merge in BASIC (also allows merging of non ASCII format files)
- Selective variable clearing
- Can display BASIC listings page by page
- Automatic repeat function key
- Routing for peripheral handling
- Enhanced disassembler
- Command chaining
- Superzap to scan files
- Fast sort function in BASIC

Hard Disk Support Now Available

- Support for Apparatus and Radio Shack's Model III hard disk (optional-available upon request for additional \$60)

These features make NEWDOS/80 one of the most powerful additions you can make to your system. And Apparatus's commitment to support assures that you've purchased a superior product, both today and tomorrow. At just \$149.00 it could be the best investment you will make for your TRS-80.

For more information see your local computer store or contact Apparatus, Inc., 4401 S. Tamarac Parkway, Denver, CO 80237, 303/741-1778.

TRS-80 and TRSDOS are registered trademarks of Tandy Corp., LDOS - Logical Systems, DOSPLUS - Micro Systems Software, MULTIDOS - Cosmopolitan Electronics, WOBOS I - Western Operations, NEWDOS/80 - Apparatus.

 Apparatus, Inc.

MASTER HORSE HANDICAPPER

OVER 3 YEARS IN THE MAKING
1st complete handicapping program
that evaluates all variables

EVALUATES FROM RACING FORM:

Age	Gender	Post (Today)
Class	Jockey (Today)	Post (Last)
Condition	Jockey (Last)	3 Speed
Consistency	Length	Trainer
Earnings	Time of Yr.	Workouts

And gives you GRAPHIC REPRESENTATION of finish

ADAPTS TO ANY TRACK IN THE WORLD

Quickly and easily by changing data statements relating to local track records/jockeys and trainers.
COMPLETE INSTRUCTIONS INCLUDED

If you own a model I/III and also enjoy a day at the races, why not combine them and make a nice profit. With a \$1.75 racing form and this program you can take the "luck" out of the track and be a "consistent" winner.

Note: Specify Mod I/III & Memory.

Program:

- A. Thoroughbred + Maiden 59.95/16K
- B. Quarterhorse + Maiden 59.95/16K
- C. Pace Handicap 39.95/16K
- D. Thoroughbred/Pace 79.95/32K
- E. All with One MENU 99.95/48K

This program can be suited to 16K-48K machines TAE OR DISC

Maxwell's Demon

by Lee Morgenstern

Learn something about Maxwell's Hypothesis while you try to keep the hot and cold molecules separated in this physics-based game.

The hottest debate in physics in 1871 centered around James Clerk Maxwell's theory of thermodynamics. Maxwell hypothesized that if you manipulate a valve between two containers filled with gas at identical temperatures so that fast-moving molecules accumulate in one container and slow-moving molecules in the other, the temperature difference created produces useful energy.

But Maxwell's theory seemed to violate the second law of thermodynamics,

which states that in a closed system, you can't create order from chaos. When Maxwell first described his hypothesis, it sparked a great deal of debate in the scientific community. However, the hardware necessary to test his hypothesis wasn't available, so the theory could be debated but never proved or disproved. As such, it was a thought experiment only.

Today, computers make thought experiments obsolete. With the help of

your Model I/III, you can demonstrate Maxwell's theory visually. It also makes an entertaining game.

The Game

Maxwell's Demon, as the game is called, is so named because the concept of a controllable valve, while central to Maxwell's idea, did not exist in his time. Instead, Maxwell proposed that a supernatural being—a demon—maintained the temperature difference between containers.

In this game, you are Maxwell's demon, the force that separates fast-moving molecules from slow-moving molecules. These hot and cold molecules are depicted on the screen as large H and C characters.

There are six levels of play. The lowest level has four slow-moving molecules, and the highest has 12 fast-moving molecules. The space bar opens and closes the valve separating the two compartments and the break key lets you exit from the game or select a new playing level.

Program Design

The program is written in Assembly language for fast animation. Data tables drive most of the logic for animating the molecules.

Data-driven logic makes the program simple to understand and makes program modification easier since it reduces processing time.

A data base containing all possible

situations, such as the positions of an animated figure, increases processing speed and improves animation quality.

The idea of referring to a table of pre-calculated values is not new. Techniques to do so have existed for a long time, but were impractical due to the amount of memory required. Since memory is less expensive today, such techniques are now feasible. The following program provides an example of one of these techniques.

Data Structure

The tables in this program are two-dimensional arrays. The first dimension points to a list of starting addresses for lists in the second dimension. Each list in the second dimension contains the actual table entries.

The first table in the program listing, the move table, uses pixel position and move direction as the two indexes. MOVX, the first list, consists of the addresses MOV0 through MOV5, which correspond to the six pixel positions. MOV0 through MOV5 are the second dimension lists; they are indexed by move direction, and contain the final entries.

The program accesses an entry in the table by following these steps:

- (1) Load the DE registers with the first index.
- (2) Load the HL registers with the address of the first list.
- (3) Add DE to HL.
- (4) Reload DE with the 2 bytes addressed by HL. This is the starting address of the proper second list.
- (5) Load HL with the second index.
- (6) Add DE to HL.
- (7) Load the table entry bytes addressed by HL.

Data Tables

The move table, MOVX, determines how to move a molecule. It handles eight move directions including up left, up right, down left, and down right in each of two ways. The first way moves one pixel up or down and one pixel left or right. The other way moves one pixel up or down and two pixels left or right. The indexes of MOVX are pixel position (zero through five) and move direction (zero through seven). There are two values in each entry: the new pixel position and the video address offset.

The wall table, WALLX, determines how to bounce a molecule off a wall. The indexes of WALLX are move direction (zero through seven) and wall number (zero, 2, 4, 6). The entries in the table are new move directions.

The hot table, HOTX, and cold

table, COLDX, each contain the graphics bits for the molecules in each of the six pixel positions. Figure 1 shows the H graphics in each of the pixel positions.

The molecule control variables, H0 through H5 and C0 through C5, contain parameters that maintain the current status of the molecules. The data in the HC table initializes the values. Each list consists of the pixel position, video address, move direction, and molecule type.

There are three more tables that contain program control parameters. Each is indexed by the playing level. The molecule update table, LEVELX, con-

*“The program begins
by disabling interrupts
and setting the stack
pointer to the highest point
in a 16K memory.”*

tains pointers to active molecule update sequences. The molecule update count table, FIGCTX, contains the length of the molecule update list. The molecule timing table, TIMX, contains the time delays between molecule updates.

Program Control

The program begins by disabling interrupts and setting the stack pointer to the highest point in a 16K memory.

Fig. 1. Pixel Positions for Hot Molecule Graphic.

"No, we're all okay, but our computer's gone."

It could have been a lot worse.

Luckily, all that was missing was the computer and some spreadsheet software. And that should be covered by insurance.

But it isn't. Ed didn't realize that once he started using his home computer on business projects, his homeowners insurance no longer would cover it.

As suddenly as the robbery had occurred, Ed found himself out several thousand dollars with no way to recover it.

You need SAFEWARE™

If you use your microcomputer for business, you can protect yourself from a loss like this with SAFEWARE. For as little as \$35 a year, SAFEWARE insurance covers all hardware, media and purchased software. Both business and personal.

SAFEWARE protects against theft, fire, accidental damage, even the destruction caused by power surges.

And, now, SAFEWARE is available on a 10-day trial basis. If you are not completely satisfied with the coverage provided, return the policy within 10 days for a full refund.

The only risk you take with SAFEWARE is not having it.

To obtain more information, or bind coverage immediately, call the toll free number. Or send the coupon to: Columbia National General Agency, 88 E. Broad St., Columbus, Ohio 43215 (In Ohio call toll free 1-800-848-2112).

Before starting any animation, the program calls four routines to set the scene: DMSG displays the opening message containing the name of the program and a list of the playing levels, GETLV reads the keyboard and inputs a playing level from the operator, Setup sets up the playing level parameters and initializes the locations of the molecules, and BRD draws the playing area on the screen.

Demon then executes a loop that updates the location and movement of each active molecule. FIGCNT contains the number of passes to be made through this loop. FIGX points to a list containing the molecule control variable addresses in the sequence to be updated. Notice that each active hot molecule appears twice in the list and each active cold molecule appears once. This causes the hot molecules to be moved twice as fast as the cold ones.

For each pass through this loop, Demon updates a molecule by calling four routines. Each routine requires that the IX register contain the address of the molecule control variable list. Wall controls the animation of the wall bouncing—it checks for wall contact, and if any occurs, it changes the move

direction in the control variable list for that molecule.

REM removes the molecule graphics from the screen. Move calculates the next screen location for the molecule, and Add redraws the molecule graphics at the new location.

When Demon finishes with the molecule update loop, it calls the Open routine to control the opening or closing of the partition. It then executes a time delay before restarting the loop. During this delay, any wall contact produces a beeping sound through the cassette port. When the time delay is finished, the loop is repeated unless the break key is pressed. The break key restarts the entire program, letting the operator select a new playing level.

At slow playing levels, Demon calls the Open routine in the middle of the molecule update loop. This provides better response time for the operator.

“During this delay, any wall contact produces a beeping through the cassette port.”

Routines

The MSG routine clears the screen and displays the opening message with the name of the program and a list of the playing levels. MSG scans the message text and transfers each character to the video memory. There are two control characters that MSG processes differently: The dollar sign indicates a carriage return and an asterisk signals the end of the message.

The GETLV routine reads the memory-mapped keyboard byte for the number keys to determine the playing level selected. It loops until it detects a bit set, indicating a depressed key. It then shifts and counts the bits to find the key and the corresponding playing level.

The Setup routine establishes control parameters based on the selected playing level. The parameters consist of the number-of-molecules updates, FIGCNT; the time delay between updates, TIMING; and the molecule update list pointer, FIGX. Setup then performs a block move from HC to H0 to

initialize the molecule locations and move directions.

The BRD routine draws the playing area on the screen. It stores a one into the door status flag (DOOR) indicating a closed door. It displays the playing level and operating instructions on the last line of the screen.

The Wall routine deflects molecules after a wall contact by changing the move direction appropriately. It also takes into account a corner contact,

“The Wall routine deflects molecules after a wall contact by changing the move direction appropriately.”

where the molecule can touch two walls simultaneously.

The Wall routine checks for a wall contact by extracting the X and Y coordinates of the molecule location and then comparing these values to the known locations of the walls. Figure 2 shows the pixel positions where wall

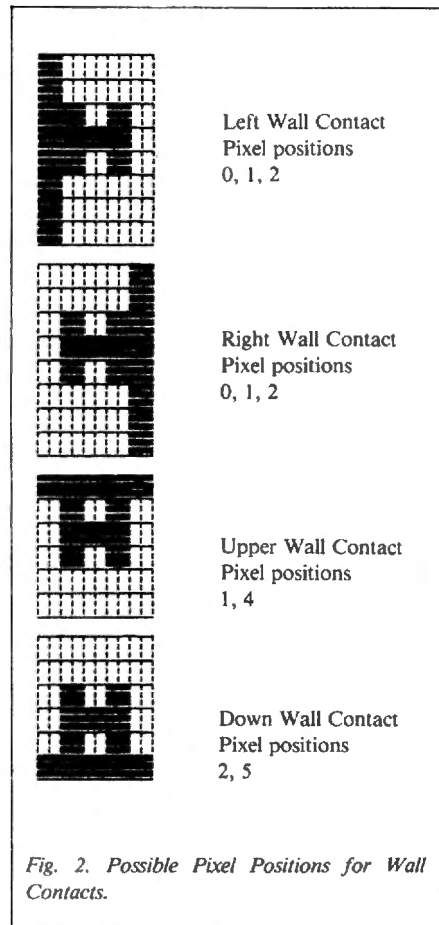

Fig. 2. Possible Pixel Positions for Wall Contacts.

MODEL IV DISK UPGRADE ONLY FROM MICRO MAINFRAME SHIPPING FROM STOCK

- Our **FDC-3B** Standard Grade controller is for single sided disk operation only and does not provide for 8" disk operation.
- Our **FDC-3C** Premium Grade controller is for double sided and/or 8" disk drives.

BOTH COMPLETE DISK UPGRADE KITS INCLUDE THE TEC 5" SINGLE SIDED, DOUBLE DENSITY TEC DISK DRIVE. Double sided drives will be available at extra cost. 8" drives are available from a number of vendors. Please order according to the stock numbers listed below:

DRIVE UPGRADE KIT INCLUDES CONTROLLER, SWITCHING POWER SUPPLY, INSTALLATION KIT, TEC DISK DRIVE AND COMPLETE INSTRUCTIONS.

FDC-3BKD (Standard Grade Controller) \$ 349.95
FDC-3CKD (Premium Grade Controller) \$ 369.95

DISK CONTROLLER PC BOARDS ARE AVAILABLE AS FOLLOWS.

FDC-3B (Standard Grade Controller) \$ 79.95
FDC-3C (Premium Grade Controller) \$ 99.95

CONTROLLER UPGRADE KIT (less drive) INCLUDES CONTROLLER, SWITCHING POWER SUPPLY, INSTALLATION KIT, AND COMPLETE INSTRUCTIONS.

FDC-3BK (Standard Grade Controller) \$ 179.95
FDC-3CK (Premium Grade Controller) \$ 199.95

MODEL-III ** COMPUTER COMPLETE WITH DUAL TEC DISK DRIVES, 48K RAM, AND A MICRO MAINFRAME FACTORY INSTALLED DISK UPGRADE KIT.

M32-1 Model-III ** with **FDC-3BKD** \$1495.00
M32-2 Model-III ** with **FDC-3CKD** \$1595.00

THE NEW DS-1A DATA SEPARATOR IS NOW AVAILABLE AND GIVES SUPERIOR DATA SEPARATION AND EXTENDS 8" DISK OPERATION TO ALMOST ANYONE'S DISK CONTROLLER!

If you are having difficulty with your disk controller, the problem may be the data separator. Micro Mainframe can provide data separation you need, and, on selected controllers, we can give you 8" disk capability for FREE!

DS-1A Data Separator \$ 39.95

WHAT IS DIFFERENT ABOUT THE MICRO MAINFRAME CONTROLLER?

- **MICRO MAINFRAME** controllers have features other manufacturers haven't yet thought of.
- **MICRO MAINFRAME** products have been proven over the longest period of time of any in the industry and are state of the art. Thanks to our high volume production, we can offer the highest quality products at the most competitive price in the industry.
- **EVERY MICRO MAINFRAME CONTROLLER PRODUCED HAS INCLUDED GOLD PLATED CARD EDGE CONNECTORS FOR INCREASED RELIABILITY AT NO EXTRA COST.**
- **MICRO MAINFRAME IS FIRST TO USE THE STATE OF THE ART 9216 DATA SEPARATOR (FDC-3C ONLY).** We have proven this data separator for a full year and have used it beginning with the very first **FDC-3C** disk controller. Unlike other controllers, **NO ADJUSTMENTS ARE EVER REQUIRED TO OUR DATA SEPARATOR.**
- **MICRO MAINFRAME IS FIRST TO PROVIDE FOR 8" DISK OPERATION ON BOTH OUR FDC-3A and FDC-3C MODELS.**
- **MMF GIVES YOU A SYSTEM THAT CAN GROW WITH YOUR NEEDS,** from floppy disk systems to state of the art hard disk systems with full ECC and the industry's only SASI Multiplexer with our SASI-NET **.
- **MMF's NEW 24 PAGE INSTALLATION MANUAL IS SECOND TO NONE.** Installing a disk upgrade kit from **MICRO MAINFRAME** is now easier than ever before.

WHO IS MICRO MAINFRAME?

MICRO MAINFRAME is the oldest and most respected after-market manufacturer of floppy disk controllers for the Model-III **.

MICRO MAINFRAME has more experience in floppy and hard disks than any other manufacturer, and we are producing our now-famous **FDC-3** series of disk controllers for the third year.

MICRO MAINFRAME has sold thousands of controllers to many OEM's who have marketed MMF controllers as their own unit.

HOW DO I ORDER?

In order to provide the lowest possible price to the end user, **MICRO MAINFRAME** does not accept credit cards. You may either pre-pay your shipment, or we will ship COD. All orders over \$600 require a 10% deposit upon placement. All non-certified funds will be held a minimum of 3 weeks to allow them to clear. Shipping and handling charges are extra and are not included in the prices above. **MODEL-III ** COMPUTERS** are shipped by truck only. Please phone MMF to obtain shipping and handling fees to your location.

ACCEPT NOTHING LESS THAN THE BEST. INSIST UPON GENUINE MICRO MAINFRAME QUALITY PRODUCTS. Micro Mainframe has a complete line of products for the TRS-80 ** computer system. Call or write for our descriptive flyer.

DEALER INQUIRIES SOLICITED ON YOUR PRINTED LETTERHEAD ONLY.

Phone orders are accepted only between 8:30 AM and 5:00 PM Pacific Time.

contacts are possible. For the left and right walls, the molecule must be in pixel positions zero, 1, or 2. Only pixel positions 1 and 4 can contact the upper wall. For the down wall, only pixel positions 2 and 5 can make contact.

If Wall finds that a molecule is at a wall with the right pixel position, it calls CONTC to change the move direction unless the wall is the partition and the door is open. If the Y coordinate of the molecule is within range of the door, Wall makes no change to the move direction and lets the molecule continue through.

Wall handles a corner contact by first processing the left or right wall move change and then recalling CONTC for the upper or lower wall.

CONTC finds the new move direction for a molecule contacting a wall. It requires that the E register contain the wall number zero, 2, 4, or 6 (corresponding to left, right, up, or down). It uses this wall number, along with the move direction. CONTC stores the new move direction in the molecule control variable list by way of the IX register.

The REM routine removes the molecule graphics from the screen. It performs two loops, each processing four graphics characters. To avoid too much interference with an overlapping molecule, it masks out the graphics bits rather than storing blanks. REM uses the pixel position and the type of molecule to index into the proper table to find the graphics characters.

The Move routine calculates the next location and pixel position for a molecule. It indexes into the move table to find the next pixel position and video address offset. It then adds this offset to the current video address and stores it into the molecule control list.

The Add routine redraws a molecule on the screen. It performs a logical OR of the graphics bits with the video memory bits for each graphics character and prevents any blanking of an overlapping molecule or wall.

The Open routine opens or closes the door in response to the space bar. If the space bar is pressed and the door is closed, it blanks out the door on the screen. If the space bar is not pressed, it draws the door on the screen. It also redraws the partition each time in case it is overwritten by a passing molecule. ■

INTRODUCING!!!

α FAST, & SOPHISTICATED
and USER FRIENDLY ✓75
graphics and text program

KWIKDRAW NEW!

from
Lichen
Software

WITH KWIKDRAW YOU CAN QUICKLY AND EASILY CREATE/EDIT DISPLAYS COMBINING GRAPHICS, TEXT, AND SPECIAL CHARACTERS. YOU CAN: • Save/Load displays to/from disk in 3 formats: BASIC/ASCII/object • Save/Load/Overlay displays to/from 10 RAM buffers • Print in a variety of formats, with multiple copy and BACKGROUND printing • 2 cursor sizes, each can move at one of 255 speeds from slow to VERY FAST! • Set delay before keys repeat • Have cursors stop at screen edge or wraparound to opposite edge • Fast line & circle • Move/Duplicate/Erase individual figures and/or text • Fill figures • Reverse black/white • Scroll entire screen with/without wraparound • 2 mirror image routines • View directories • 8 menu/help screens • AND MUCH MORE!! Logical key assignments are easy to learn. 50+ page manual with instructions for using displays in your programs. What makes it KWIK? Written in 100% machine code — no SLOW BASIC or compiled BASIC! Backups allowed. REQUIRES: 48K Model III* & 1 disk drive. Printing routines require an Epson MX** series printer. TERMS: \$74.95 — cash, certified check, money order, or personal check. Allow 2-3 weeks for personal checks to clear, all other orders will be shipped within 48 hours. LICHEN SOFTWARE, 6603 N. LEE ST. TRS-80™

WOBOS™ I

Basic Operating System

WOBOS I is a menu driven, prestructured program in BASIC that provides access to over 30 utility functions during development or actual use of a program. Its unique layout allows you to develop your programs within a well organized environment that provides a very strong foundation to build upon. You always had to start from scratch before but now, after loading WOBOS I, you'll start with over 11K of subroutines and system utilities. Imagine what this can do for your productivity! WOBOS I is not an accessory to your program. It actually becomes its foundation!

WOBOS I for Model III BASIC		03	01	82	12:34:56
PROGRAM	MENU	UTILITIES			
1	Your Program A	11	Data List		
2	B	22	Sort		
3	C	33	Rename		
4	D	44	Append		
5	E	55	Memory Dump		
6	Graphics Synthesis	66	Map		
7	Special characters 0-31	77	Size		
8		91-127	88	New Data Entry	
9		192-255	99	Device I/O	

Illustrated above is the Primary Menu of WOBOS I for Model III. In addition to the features shown, the DEVICE I/O generates a separate 9-choice menu that will allow you to compile, update, sort and output your data files. It also includes a utility that will save both the DATA and WOBOS I on tape and/or disk. With controllable SOUND!

"Once you've used it, you'll never write another program without it!"

Try **DISnDATA**,
The Disassembler That
Even Tracks Down DATA!!!
NEW!!! VERSION 2

- Outputs fully labeled R.S. or APPARAT™ EDTASM™ - format code to display, printer, cassette or disk.
- Loads programs from cassette or disk and displays main entry point.
- Printer output fully paginated.

- Outputs: H37F7 DEFM *Cass? DEFB 03H instead of the meaningless *equivalent " AB25 LD B,E LD H,C LD (HL),E LD (HL),E CCF JR NZ,\$+5 ;, etc

- Automatically identifies such data areas
- Relocates itself to any desired RAM area, up/down one byte or as many as required
- Runs on TRS-80 Model I (Level II) or Model III, 16K or more, cassette or disk

To order **DISnDATA** phone (513) 435-4480 (M-F 9 a.m. - 5 p.m. EST), or send check or money order for

#1354-12 (Model I/III cassette) \$34.95
#1354-22 (Model III diskette), TRSDOS* format \$39.95

(U.S. Funds only) Add \$2.00 shipping (U.S.) \$5.00 (Foreign), \$3.00 Additional on C.O.D. Orders.
Ohio Residents please add 6.5% Sales Tax.

Put your TRS-80™ in touch with IBM's universe

Now you can have full IBM communications capability through one of Innovative Data Technology's 1/2" magnetic tape peripherals.

Featuring industry-standard interfaces, rapid data transfer rates, full operating and command subsets and a wide selection of models and configurations, IDT's magnetic tape subsystems provide economical and reliable data/program interchange, 40M bytes of storage and disc back-up. All IDT subsystems come complete and include tape transport, formatter, intelligent controller, computer resident coupler, cables, documentation and software. But most importantly, they help put your system in touch with the IBM universe.

Kings and Castles

by Gary Michaels

Remember "Kings and Catapults"? Well, now you can enjoy that same kind of action on your Color Computer with this exciting variation.

As an avid Dungeons & Dragons player and a semi-accomplished adventure fanatic, I was intrigued by William C. Adams' fantasy role-playing game, "Kings and Catapults" (*80 Micro*, February 1982, p. 232).

Adams' program was written for the Model I or III. Since there are few adventure programs available for the Col-

or Computer, I decided to try my hand at converting his program to Extended Color Basic. After many hours editing and reediting it, I believe I've come up with a reasonable facsimile, and added a few surprises along the way (see Program Listing 1).

The Game

Like its predecessor, Kings and Castles is a one- or two-player game in which each participant takes the role of a king. Each king commands a large army of fierce warriors, a kingdom of civilians, an arsenal of cannon, and a number of infiltrators available for hire. Players can also acquire a catapult

The Key Box

Color Computer
16K RAM
Extended Color Basic

which, if used properly, inflicts substantial damage.

At the start of every war, each king has a large sum of money, which he uses to pay his troops, buy cannon, or hire infiltrators (at \$10,000 each). Infiltrators are potentially the most deadly weapons at your disposal. If they survive the opposing king's guards, they'll strike the king down, making you the victor.

You can also claim victory if your opponent's castle loses all of its vulnerable spots (hit points), or if you destroy all of his warriors. However, additional men can be recruited from the civilian ranks.

On occasion, your father (who is also a very powerful king) ships you aid in the form of money, warriors, cannon, civilians, catapults, or, if you're fortunate, a sampling of each.

The first ruler to overcome his opponent five times becomes the victor, and is deemed the monarch of both kingdoms.

Significant Changes

On the surface, Kings and Castles appears almost identical to its predecessor, but there are several significant changes.

The opponents' names, accompanied by their ranks, appear in a scoreboard at the top of each title screen. This lets you know when you can afford to live dangerously and when it's time to infiltrate to save your skin.

Catapults are fired either at your opponent's men or his castle.

The computer (in a one-player game) is now an extremely worthy opponent. In Kings and Catapults, it selected options unavailable to it, such as attempting to infiltrate when it had no spies left, causing it to lose a turn. This happened with alarming regularity, as the computer's moves were chosen by an 'X=RND(4)' statement. In addition, it was unable to buy cannon when all its cannon were destroyed, or to hire civilians when its warriors were decimated. The latter often caused the computer to lose entire wars, making for an extremely boring game.

In this version, however, the computer chooses its options more methodically. It fires cannon or catapults at your warriors or castle, not randomly but according to what causes you to lose more quickly. It no longer stupidly advances troops into battle with only 200 men left. It infiltrates when necessary, hires civilians when warriors are becoming an endangered species, and purchases cannon when supplies run out.

Program Listing 1. Kings and Castles.

Listing 1 continues

A legend now appears at the top of the screen notifying you and your opponent which option the other has chosen. (Previously it was difficult, especially when battling against the computer, to ascertain just how your men or castle were destroyed.)

Floods and plagues, which occur from time to time and inflict a tremendous amount of damage, now cannot occur when either king has fewer than 10,000 warriors or hit points, so battles must be decided by head-to-head combat. Although this is unrealistic, you'd be surprised at how tedious it was previously to lose battles because of a devastating plague. This was particularly annoying to the Northern ruler, because if both kings' castles were wiped out, the Northern king always lost.

Infiltrators must fight a minimum of two guards to kill the opposing king—it was much too simple to fell a lone guard in Kings and Catapults.

Sound effects are added to each phase of the battles. They include "We're In The Money" for payday, "Taps" for either king's demise, "Jaws" for floods, "The Love Boat Theme" when fathers ship aid, the Wizard of Oz's guard song ("Ohh-ee-

Listing 1 continues

oh, Ee-ohh-oh") for troop advances, and "You're In The Army Now" for hiring civilians.

I have also included a random seed generator. Since the Color Computer doesn't have one built in, each time the game loaded from tape, the first status listing gave the same number of warriors, castle hit points, and civilians. North's father would always bring aid on his second turn, and it was always \$23,302.

Fortunately, a friend at a local Radio Shack store came to my rescue, writing the 'RNDGEN' subroutine that appears in lines 5-25. This subroutine replaces a Random routine found in Model I or III programs. Without it, this program is useless.

Possible Modifications For 32K Users

As this program uses all but about 500 bytes of the 16K Color Computer's memory, further changes are all but impossible for those with that system. But 32K owners may want to make these relatively simple modifications.

Playing this game with female friends might elicit comments like, "Why does it always call me 'him'?" The remedy is to insert a question at the beginning of

UPGRADE

Micro-Designs System Upgrade for the TRS Model III and 4

The Micro-Design TRS 80 upgrade includes Micro-Designs exceptional MDX-6 disk controller board, one 40 track Tandon Disk Drive, NECESSARY INSTALLATION CABLES AND HARDWARE. Will also control external 8" Disk Drive Systems.

They Driving Force!

JFD - COCO DISC SYSTEM - \$449

J & M Systems, Ltd. is a leader in the Model III marketplace with our JFD-III Disc Controller. With thousands in operation, we have set new standards in controller performance and reliability. We bring these same high standards to the COCO, resulting in the highest quality disc controller system on the market. Compare these functions before you buy:

- Price. \$449 includes controller, first drive, disc basic in ROM, and manuals. Just plug it in.
- Never needs adjusting. Our exclusive Digital Phase Lock Loop Data Separator and Digital Pre-comp Circuit eliminates the 3 adjustments found on other controllers.
- High quality standard production disc drives. For improved service and reliability, Tandon & Teac drives provide twice the read sensitivity that the drives found in other disc systems do, and hold their alignment far longer.
- Gold-plated card edge connectors throughout.
- Software compatible with Radio Shack Disc Basic, Flex, and OS/9.

J & M Systems, Ltd., 137 Utah NE, Albuquerque, N.M. 87108

the program that asks which gender each player is, and have the computer change each affected statement accordingly, so that king becomes queen, he becomes she, and so on.

Modify the program so that firing cannon at your opponent's warriors also knocks out a few of his cannon, as it does when you fire at his castle.

When you fire your catapult at the opposing king's castle and he has a catapult, you should be able to destroy it. Perhaps you can use a statement like the one found in the 'Fire Cannon At Castle' lines.

Add statements that allow fathers to send aid only when it is needed. That way, he wouldn't bring you 30,000 warriors when you really need a castle repair crew.

Calculate the number of opponent warriors killed according to which army is stronger. That way, if your troops are

*"Infiltrators must fight
a minimum
of two guards
to kill the
opposing king. . . ."*

larger than those of your opponent, you stand a better chance of destroying him by advancing your troops.

The last is the most obvious—add graphics to the program. Artistic graphics would add immensely to the fun.

Entering and Loading the Programs

Due to the memory size of the 16K computer, the instructions are given in a separate program, which includes a colorful graphics display (see Program Listing 2). Again, if you have 32K or more, you can add this program to the main program. If you own the basic 16K computer, you can dispense with it altogether, if desired, but it includes the complete loading instructions which save you the trouble of referring back to this article.

Enter and load the instructions program as usual. CSAVE the program on tape (or disk if you have 32K). Turn your computer off and then on again. It is important that you follow the above directions carefully. Do not attempt to simply type in 'NEW' or use a delete statement. They will not work.

The main "Kings and Castles" program does not fit into the 16K Color Computer's normal memory even with a PCLEAR 1 statement because it uses approximately 14,100 bytes. So type in the following before attempting to enter or load the program:

```
POKE25,6 (ENTER)
POKE27,6 (ENTER)
POKE29,6 (ENTER)
POKE31,6 (ENTER)
```

These instructions work in Color Computers with Basic 1.0 and the newer Basic 1.1. I've been told the following can be used in 1.1 machines in place of all those POKE statements, but I can't confirm or deny it:

```
POKE25,6 (ENTER)
NEW (ENTER)
```

*"... it is advisable
to wipe out
your opponent's castle
as soon as possible."*

Strategies for Battles

Except for infiltrators, catapults are the most powerful weapons on the battlefield. They destroy up to 10,999 warriors or castle hit points. The computer uses it when it has one, as you should.

Catapults are always located in castles. The only way to destroy them is to fire cannon at the castle. In light of the above statistics, it is advisable to wipe out your opponent's catapult as soon as possible.

Cannon kill up to 4,999 men, or take out an equal number of hit points. They also destroy up to 100 opposing cannon, so five good hits on your opponent's castle can send him to the cannonsmith, wasting one of his turns. Additional cannon cost from \$1 to \$99, depleting his cash reserve and possibly stopping him from using an infiltrator later.

Payday comes around every 12th turn, during which each warrior is paid \$2 from his king's coffers. So if you have 25,000 men, payday costs you

Langley-St. Clair Gets Mail

From unsolicited letters of testimonial

I recently purchased your amber CRT for my Model III with anti-glare features. I seldom write regarding products I've purchased for the computer, but I felt that your product warranted a short note. I am extremely happy with my new CRT. The color is great, and easy on the eyes, as you claimed. Your documentation was excellent. I am by no means electronically inclined, but I had no problem with the installation.

Just wanted you to know that I would recommend your product to anyone interested in upgrading their CRT. Thank you for your excellent service also.

A.P.

New Monmouth, NJ

I have got my Orange CRT installed in my computer and it sure is a good tube. Now after looking at the screen for 8 hours my eyes aren't falling out. Thank you very much for all the trouble you had to go through with my order. This tube works fine, and after a little getting used to the color I like it a lot better than green and 100% better than B/W. Your company is sure wonderful to do business with. You can be sure I will tell anybody that is looking for a replacement CRT where to get one. Also tell Donna thanks for all the help she gave me...she was right about the color; it is a lot better to look at once you get used to it. Again, thank you very much.

\$50,000. You begin with over \$120,000 so money is usually not a factor unless you run out of cannon or elect to use an infiltrator.

While cannon or catapults are not guaranteed to hit their targets—you can

*“... you don't
want to opt
for troop action
if you're
low on men...”*

hit a field or your weapon might backfire—advancing troops into battle is a sure killer. It's a little risky, as you and your opponent always lose men, up to 4,999 in fact. So you don't want to opt for troop action if you're low on men,

especially if you have no civilians left to hire. But it's an excellent option if your opponent is down to 500 men and you have 10,000.

I like to save my infiltrators until I'm in deep trouble. Although they can win the game for you on the first move, they are much more useful when you're down to 1,000 warriors and 760 hit points. They're your last hope for victory when you're down.

One Final Note

Due to space considerations, there are no remark statements in the programs, but each line is covered in the line descriptions (see Table 1). Don't add additional spaces between characters in the main program. ■

THE MICRO COMPUTER BUSINESS WILL GROW FROM \$10 TO \$100 BILLION IN THE NEXT EIGHT YEARS! ARE YOU READY TO CASH IN?

The **micro computer business** is predicted to grow from its present \$10 billion to \$100 billion before 1990! Imagine the possibilities this opens for you! No matter where you live, if you're starting up or presently in business, **no other industry offers you more opportunities!**

Now, finally, all the inside information you need to secure a prosperous future in this dynamic industry is available in **one place - THE COMPUTER ENTREPRENEUR MANUAL!** An immense information source, compiled by our **inquisitive** research team, aided by a panel of **experts and business people** from **all areas** of the **computer industry!**

We present the inside story of **more than 100 lucrative computer businesses you can enter**, where you'll find the **real opportunities** for the eighties: from one man operations like **Programming Author, Word Processing Center or Consulting, to Systems House, Service Bureau, Computer Store** etc! Many at little or no investment! All the invaluable facts and figures: **How to start, Capital needs, Profit estimates and Margins, How to Sell and Market, How missing technical or business experience need not stand in your way, Source of Suppliers, etc!** Details that could take **years** to find out on your own!

We'll show you **inside tricks**, like how to **never again pay retail** for computer products and consumer electronics, **even for one item - right now**, while you're starting your business! How to get **free merchandise** and trade show **invitations, etc.** This alone will **more than pay for the manual!** You'll read **actual case histories** of other computer entrepreneurs, so you can **learn from their mistakes, and profit from their success stories!** Where you'll be **one year** from now depends on **your actions today!** Let us show you **how to take the first crucial steps!**

Order now and take **advantage** of our **limited introduction special, THE COMPUTER ENTREPRENEUR MANUAL**, and a **six month subscription to THE COMPUTER ENTREPRENEUR REPORT/NEWSLETTER** (so you're **always up-to-date** with the industry), both for only **\$29.95!** You must be convinced on **how easy** you can **strike it rich** in the **micro computer business - or you may return the manual for a full refund** within thirty days! **USE OUR TOLL FREE NUMBER TO ORDER!**

EVERYTHING YOU NEED TO KNOW TO SUCCEED IN THE COMPUTER BUSINESS IS ALL IN THIS MANUAL!

THE COMPUTER ENTREPRENEUR MANUAL has the **answers to all your questions** about **selecting, starting and successfully running a computer business!** There has **never been such a comprehensive collection of know-how and information** about this business in **one place!** All the **facts you need to plan and achieve your goals** in **easy-to-follow, step-by-step instructions!**

These are some of the **100-plus businesses** covered in **PART ONE** of the manual, with the **facts on How to start and run, Start-up Cost** (Even how to operate on a shoestring), **What profits to expect, Wholesale prices, Mark-ups, Suppliers, future outlook, case histories** for each, etc:

Systems House, Software Author (who to sell to and who to avoid) **Service Bureau, Software Publisher** (How to find programs that sell, **Word Processing Service, Consulting and Consultant Broker** (use your skills or those of others, **make \$150 - \$1000 a day!**), **The incredible Games Business, Computer Store** (Franchises: Pro and Contra, or a low inventory store in your home!), **OEM, Hardware Mfg, Data base and Teletext Service** (big prospects!), **Used Computers, Repairs, Rent-A-Computer, Promote Fests and Trade Shows, Turnkey Systems,**

Bartering, Mail Order, Compile and rent mailing lists, Specialized Data Headhunting and Temp Help Service, Tech Writer Shop, Custom Engineering, The highly profitable Seminars and Training Business, and many more!

Many **new ideas and ground floor opportunities!** **Interviews and success stories on companies of all sizes!** **Privy info on the profits made:** How some **computer store operators net \$100 - \$250,000!** Little known outfits that made their owners **millionaires**, one of these low-key companies, making simple boards went from **nil to \$20,000,000 and 100 employees in four years!** **Programmers that make \$300,000, Thousands of micro millionaires** in the making, etc!

Whatever your goal is - **Silicon Valley Tycoon, or just a business at home - we guarantee you'll find a business to suit you - or your money back!**

PART TWO of the manual is **loaded with the know-how and "streetfighting" savvy** you need, both as a **novice or business veteran**, to get started, to stay and to **prosper** in the **micro computer business!** A **goldmine of information** in clear and easy-to-use instructions: **How to prepare your Business Plan, Outside financing, The mistakes you must avoid, How to hire and manage employees, Incorporation** (when, and how to do it **cheaply**), **Surviving bad times, Record Keeping, how to estimate your market before you start, Use multiple locations to maximize profits, how to promote and stay steps ahead of the competition!** **How to get free advertising, free merchandise, free advice, Power negotiating with suppliers to double your profit margins, etc!** Even how to **keep a present job while starting a business part time!**

Don't miss this opportunity to be part of this great industry - the next success story could be your own! **Order the manual today!** Part one and two, bound in a **deluxe ring binder**, where you can also collect our **newsletter** (free for six months with the manual - a **\$32.50 value!**) - all for only **\$29.95!**

THE COMPUTER ENTREPRENEUR NEWSLETTER - ALL THE LATEST INSIDE BUSINESS NEWS! NOW! SIX MONTHS FREE WITH YOUR MANUAL!

You're **always attuned** to the industry, and your **manual kept up-to-date**, with our **newsletter!** Each issue has the **latest business news, ideas, new suppliers, our indispensable "watchdog" column on profits, discounts** (don't miss mfg's promos, like recently, when top video monitor sold at \$80 - that's half wholesale, **one third of the retail price!**), **the competition, the big deals, etc!** **Feature stories** with start-up info and case histories on **new micro businesses!**

You'll get **invitations** to trade shows and conventions, the **usage of our advisory service** and our **discount buying service** for your purchases!

You'll find **many items** in our newsletter that will **save you the cost of your manual many times over!**

Strip Blackjack

by Stephen Mills

Strip blackjack adapts the concept of strip poker to computer blackjack. The result is more interesting than either. The program shows off the graphics and sound capabilities of the TRS-80, as well as the computing power of 16K memory.

The stakes involved are real, personal, and legal in most places. Finally, the game is protracted enough to give players a sense of involvement that strip poker doesn't provide.

The rules of play are similar to casino blackjack. The computer acts as both bank and dealer. A player's stakes are chips allotted by the computer for each article of clothing worn. As dealer, the computer always draws last, draws on 16 points, stands on 17, and wins pre-

If you find that strip poker has lost its charm, liven up your next party with a new hit game.

emptively with 21 points on the deal.

The game observes the five-card rule; if a player has five cards totaling 21 or less, he wins automatically, as if a blackjack were drawn on the deal.

An option is available to include jokers in the deck. If the computer draws a joker, all bets are lost; if a player draws one, the program randomly decides the consequences. A player

can win or lose the round automatically, or receive extra chips from the computer. There is also the less likely possibility of losing practically everything on a joker.

Betting is more structured than in conventional blackjack. The computer awards a specific number of chips for each article of clothing. It maintains each player's clothing in a hierarchical order, with clothing worth the least number of chips, like shoes and sweaters, at the upper level and undergarments at the bottom level.

Players can bet only according to this hierarchy. That is, shoes and sweater chips are bet first, undergarment chips last.

A player's bet can range anywhere from zero chips to the total number of chips a piece of clothing is worth. So, if a player is wearing a sweater, he can bet

Table 1. Program Description

10-75	Packed string graphics
85-140	General initialization
150-240	Instructions
250-370	Initialization of game parameters
380-750	Main playing loop
380-450	Betting; cards are dealt into array
460-610	Individual player interactive processing
620-640	End-of-round display
650-700	Dealer's activities

Table 1 continues

The Key Box

**Model I and III
32K RAM
Cassette Basic
Audio Amplifier Optional**

710-750	End of play; results and internal maintenance Subroutines
770	Home cursor; video maintenance
780-920	Player entry and stakes setting
930-960	Player level informational routine
970-1030	Dealer's cards display
1040	Clears the on-screen instructions
1050	Displays play instructions
1060	INKEY\$ subroutine
1070	The current level of player Y is returned as S
1100	Displays card image
1110-1140	Convert numeric card values to display form
1150-1260	Extra chip round
1280-1300	Player X loses one level
1310-1320	Find next valued level of player X
1340-1360	Random selection of one card
1370-1380	Shuffling—initialize card matrix
1390	Executes card selection routine and stores it in player's hand
1400-1480	Player's joker processing
1490-1520	Deck display
1520	Clears hands
1530-1570	Review contents of hands
1580-1600	Video paging routine
1610-1660	Process individual clothing questions and responses
1670	Title display
1680-1730	Clothing query block for items common to both sexes
1740-1760	Recompute current betting level
1770-1920	Sound subroutines
1930	Evaluation of card points
1940-1960	Error traps
2000-2040	Chip equalization option routine

System Modifications

Multiple USR Functions

Disk Basic and some tape operating system enhancements provide multiple USR functions. To provide for this, change line 30 from:

```
POKE16526,PEEK(Z+1):POKE16527,PEEK(Z+2)
```

to:

```
DEFUSR4=Z!
```

Change all occurrences of USR to USR4 in lines 1770-1920.

Cassette Sound

You can produce sound through an amplifier or a modified cassette system. The latter method requires turning on the cassette system relay. Program Listing 2 supports the former technique, and does not operate the cassette relay latch.

You must make some changes to provide operation of the relay on the

Model I. In line 100, one of the data elements is a space. The interpreter reads this as a numeric value of zero. Change the space to 4.

In line 1400, find POKEZ! + 32,8. Replace the 8 with a 12. In lines 1480 and 1880, find POKEZ! + 32,0 and change the zero to 4.

Memory Differences

This program will run on memory in 16K, although you should probably delete the instruction section in lines 140-240. The presence of any operating system utilities could make a critical difference.

You can adjust this to some extent by modifying the amount of string space reserved in line 120. An optional 650 bytes allow the maximum number of players, but you can do with less.

Another possibility is to add lines that delete 10-85 (90 and 95 are available). You must enter Run again after the graphics display. ■

IEEE-488 TO TRS-80* INTERFACE

Everything needed to add powerful BASIC GPIB-488 controller capability to TRS-80 Model 1, 3 or 4, Level 2 or DOS with a minimum of 16K.

See our other ads

up to 3 points, the total allotment for sweaters. Whenever a player loses all the chips for a given level, he must sacrifice the associated apparel.

Winnings are always kept separate and are always bet and lost first.

Sequence of Play

The game begins with a full-screen display, followed by an option to display instructions. The computer then asks if you have sound capability. This requires attaching the cassette AUX plug to a speaker. This program provides a variety of interesting sound effects. If you do not use sound, the program skips the sound subroutines to circumvent tedious time delays.

The computer prompts for the number of players, the number of decks to use, and the number of jokers to add. You are allowed up to 10 players or you can play solitaire. The default is one for the number of decks and zero for the number of jokers.

The option for a fast or slow game follows. This decision affects the number of chips allocated for each player's clothing.

The program asks each player for name, sex, and clothing worn. The clothing interview consists of yes/no

Integer Variables

C1	Numeric value for the rank of a card (1 = ace, 13 = king)
C2	Suit code for a card
F	Freeze-play flag, used with one of the joker effects
LS	Long/slow game flag used by the chip allocation algorithm to compute value
N	Used to construct the betting ranks table of player Y during initialization interview; 2nd-dimension pointer for arrays B and V
ND	Number of decks in play
PC	Number of players
PO	Players out. Talled each round to check for an end-of-game condition. If not, the tally is continued during rounds to decide whether dealer must draw
PS	Position on CRT used for PRINT@
R	Remaining cards in shuffled deck
S	A flag used for making special adjustments to the B and V arrays
T	Total point value of a group of cards
T1	Dealer's total
TA	Total number of aces possessed
X	A miscellaneous local variable, sometimes used to identify a player (see text)
Y	Loop variable usually identifying the player being processed
ZD	Flag for the use of sound

Single-Precision Variables

X!	Loop variables for fractional decrementing
Z!	PEEK/POKE address pointer

String Variables

A	Item name during initialization interview
AS	His or Her depending on SX(Y)
B	Player's name (same as B(Y,0)) or other temporary functions
BB	A screen width graphics bar
BC	— separator
BD	Deck or Decks depending on ND
CBS	Graphic representation of the bottom edge of a playing card
CM\$	The middle of a card
CT\$	The top of a card
NS	The display format of a card's rank
SS	The display format of a card's suit
Z7\$	String where data for the sound routine is stored
ZD\$	String in which the machine-language sound USR routine is stored

Arrays and Matrices

B(PC,10)	String array. B(Y,0) is the player's name; other second-dimension elements are names of items worn
C(PC,4,1)	Card hands. First dimension is the player (dealer = zero). Second dimension is card number. Third dimension is rank (zero) and suit (one) of card
CL(PC)	Pointer to the player's active betting level
D(13,4)	Deck of cards by rank and suit; zero elements are not used
I\$(12)	String array of packed graphics
SX(PC)	Sex code (zero = Female; one = Male)
T(PC)	Carries player's point total from play to end-of-round results; can carry special values indicating no play, joker, and so on
V(PC,10)	Value of items in the B array. The second-dimension zero element stores winnings
W(PC)	The wager each player makes on the round

RUN BASIC PROGRAMS AT SUPER SPEED

WITH ZBASIC 2.2.

THE WORLDS FASTEST TRS-80 BASIC COMPILER from **SIMUTEK**

BELIEVE IT OR NOT WE'VE ADDED MORE NEW FEATURES to the ONLY INTERACTIVE BASIC COMPILER for the TRS-80!

1. Speed increases of 10-100 times are typical after compilation.
2. Compiled code can be RELOCATED to run anywhere in memory. Code is even ROMable!
3. ZBASIC 2.2 NOW SUPPORTS BOTH RANDOM and SEQUENTIAL DISK I/O.
4. ZBASIC 2.2 is now a super tool for business programmers: RANDOM ACCESS FILES, and PRINT USING statements are supported as well as a HIGH PRECISION MATH package (with no rounding problems).
5. Special BUILT-IN MACHINE LANGUAGE COMMANDS to increase program operation by as much as 1000 times! Special commands are implemented for fast memory searching (CPDR, CPJR), block memory moves (LDIR, LDDR), inputting and printing HEX numbers, inserting MACHINE LANGUAGE into COMPILED CODE, disabling and enabling interrupts, inverting memory, 16 bit PEEKs and POKEs, and stack control, debug and much more.
6. ZBASIC 2.2 compiles the ENTIRE PROGRAM into Z-80 machine language. (Not 8080 code or a combination of BASIC and machine language like some other compilers.) Clumsy LINKING LOADERS, and RUNTIME MODULES are not needed, ZBASIC 2.2 creates a ready to run MACHINE LANGUAGE program.
7. NO ROYALTIES imposed on registered ZBASIC owners.
8. Typical COMPILATION TIME is TWO SECONDS for a 4K program.
9. Use TRS-80 Basic to write ZBASIC programs!
10. Compile some existing programs with only minor changes. (BASIC programming experience is required.)
11. Fully compatible with both the Model I and the Model III. Mod I compiled programs work on a MODEL III, and vice-versa. ZBASIC works with NEWDOS-80, NEWDOS+, DOSPLUS, LDOS, MULTIDOS, ULTRADOS, TRSDOS etc (Not TRSDOS Mod I double density)
12. BUILT-IN and much improved MUSIC and SOUND EFFECTS commands.
13. Improved CHAINING for disk users.
14. TIME\$ now available on DISK version. (Mod I only)
15. ZBASIC 2.2 now has an INPUT @ command (similar to PRINT @).
16. The TAB function will now tab 255 columns on a printer. (BASIC cannot tab past column 64.)
17. NEWDOS 80 2.0 USERS can use the CMD "dos command" function! (DOSPLUS may use name "dos command")
18. NEW and EASIER to use USR COMMANDS.
19. New math functions to calculate XOR and INTEGER REMAINDERS of a DIVISION.
20. Logical STRING COMPARISONS are now supported.
21. The disk commands INSTR, MID\$ ASSIGNMENT are now supported on both DISK AND TAPE ZBASIC.
22. DEFSTR is now supported.
23. Eight disk files may be opened simultaneously; random, sequential or mixed.
24. LINE INPUT#, is now supported.
25. Invoke the compiler by simply hitting these two keys: "-"
26. NEW 60+ PAGE MANUAL WITH DESCRIPTIONS AND EXAMPLE.
27. ZBASIC 2.2 Comes with CMDFILE/CMD program from MISOSYS, to allow appending or merging compiled programs and machine language programs from tape or disk.

ZBASIC 2.2 DOES NOT SUPPORT THESE BASIC COMMANDS:

1. ATN, EXP, COS, SIN, LOG, TAN, and exponentiation. (However, subroutines are included in the manual for these functions.)
2. ERROR, ON ERROR GOTO, ERL, ERR RESUME.
3. No direct commands like AUTO, EDIT, LIST, LLIST ETC, although these commands may be used when writing programs.
4. Others NOT supported: CDBL, CINT, CSNG, DEFFN, FIX, FRE.
5. Normal CASSETTE I/O. (ZBASIC supports it's own SPECIAL CASSETTE I/O statements.)
6. SOME BASIC COMMANDS MAY DIFFER IN ZBASIC. For instance, END jumps to DOS READY, STOP jumps to BASIC READY etc
7. MEMORY REQUIREMENTS: to approximate the largest BASIC program that can be compiled in your machine (at one time), enter BASIC and type: PRINT (MEM-6500)/2. Remember, you can merge compiled programs together to fill memory.

ZBASIC 2.2 SPEED COMPARISON DEMO

To help give you an idea how fast compiled programs are, we have included this demo program:

ZBASIC 2.2 DEMO PROGRAM

Time to compile and run complete program	: 0 MIN. 2 SEC.
BASIC Execution speed MOD I, LEVEL II	: 7 MIN. 34 SEC.
ZBASIC Execution speed MOD I, LEVEL II	: 0 MIN. 18 SEC.
BASIC Program size (WITHOUT VARIABLES)	: 895 BYTES
ZBASIC Program size (WITHOUT VARIABLES)	: 2733 BYTES

(Remember that the ZBASIC program includes an 1879 byte sub-routine package.) Program shown exactly as compiled and run in BASIC and ZBASIC.

of blackjack. Each player has a turn at the keyboard, with a display that shows the dealer's cards, the players' cards, and the stakes.

Between rounds, players can examine the cards remaining in the deck, or review the hands of the current round. The rounds can continue until all but one player has lost everything.

Theory and Strategy

Ordinary blackjack is a tug-of-war to shift the available resources, the chips, to your advantage. In strip blackjack, you try to control a process of erosion.

During a game, a player's stakes are limited to the clothing value, so the opportunity to place a large bet is rare. Winning a few chips does not usually increase the potential bet, since the next bet is restricted to the winnings themselves.

Other factors further increase the likelihood of a player losing. The dealer always wins on jokers; a player might lose. Also, winnings are good only for buffering your losses and for making immediate claims against another player. Winnings cannot increase indefinitely. The net result of winning more than 10 chips is to reduce, not increase, the total number of chips in play.

Computer Case Company

WE MAKE A GREAT CASE FOR YOUR RADIO SHACK.

RS204

One size does not fit all. Our cases are designed for specific hardware configurations. When you put your computer in our case, it fits hand-in-glove. Once your equipment is safely inside the attache-style carrying case, it never has to be taken out again. To operate, simply remove the lid and connect the power. To store your computer, disconnect the power, enclose your disks, working papers, and manuals in the compartments provided, and attach the lid. It's as easy as that.

In ordinary blackjack, a player wins by gaining some of the dealer's resources. The wins and losses of other players are irrelevant to your game. In this game, although you play cards and bet against the dealer, wins and losses are meaningful only in relation to the other players.

Since playing is virtually guaranteed to erode everyone's stakes, each player is competing for the best status in relation to the others. Winning is simply losing more slowly.

Playing strategy—when to draw and when to stand—is identical to casino blackjack. You do have the option of reviewing the available cards. Since a good blackjack player attempts to keep track of this anyway, use the option; it eases the strain on your memory.

Betting strategy is different. You are betting against the other players, so try to minimize your losses and maximize theirs. I recommend very conservative betting of your fundamental resources.

The procedure for betting chips won (extra chips) is variable. There is little point in gambling for the extra chip round when the other players are betting from a two- or three-chip rank. If they are at a more valued rank that you can eliminate by accumulating more than 10 extra chips, bet heavily off the extra chip rank.

The Program

The program's graphics display uses packed graphics strings to decrease memory requirements and provide fast execution. When you key in the program, you can either skip the graphics and go straight to Program Listing 2 for the substance of the program, or create the packed graphics array by transcribing and running Program Listing 1, then adding the remainder, Listing 2.

Listing 1 conceals the graphics in its data statements and POKEs them into the empty I\$ array. Packed graphics look strange when you list the program; the interpreter sees the graphics values as Basic statement tokens and translates them accordingly. Lines 15-75 of strip blackjack always resemble the chaos you get after a bad CLOAD.

The machine-language USR subroutine for the sound effects is not packed in. The program carries it in the form of data statements (lines 100-110). No memory is ever protected for this subroutine; at run time it resides in the string storage area.

This is safe because the string variables used are defined before any other strings, and never redefined. This assures that they will always reside at the

P&T CP/M[®] 2 is GROWING

TRS-80 MODEL II
\$185

Still the best CP/M for the Mod II with features like 596 Kb per diskette, typeahead, full serial port support, and more.

TRS-80 MODEL 16
\$220

Includes full support for thinline drives; gives 1.2 Mb per diskette for the Mod 16 (Z-80 mode) and Mod II's with double sided drives.

RADIO SHACK HARD DISK
\$250

Includes all the features of P&T CP/M 2 plus 8.7 Mb per hard disk drive.

CAMEO HARD DISK

Support for the standard Cameo hard disk system (\$250) or the multiplexer (for multiple computers) system \$400.

CORVUS HARD DISK
\$250

Support for a 5, 10, or 20 Mb Corvus hard disk system.

Start with a Model II floppy system and grow into a hard disk. Since all P&T CP/M 2 systems are fully compatible, you will have no conversion worries.

Special note: P&T hard disk systems allow you the user to configure logical drive assignments to your specifications. Write for more details.

Prepaid VISA, M/C, or COD orders accepted All prices FOB Goleta and subject to change. CP/M is a registered trademark of Digital Research. TRS-80 is a trademark of Tandy Corp.

top of available memory, unmoved by the interpreter's string storage reallocation routines.

The FRE(Q\$) forces reallocation at the end of every round of play. This prevents interruption of the graphics during play, which use CHR\$ and STRING\$ in the preference to set and reset.

The program lines are densely coded for speed and RAM economy. The functional breakdown by line number (Table 1) and the variable and array table (Table 2) should help in understanding and customizing the program. In the nature of this program, execution is almost constantly in a For...Next loop, performing functions for each of the players.

The variable Y is normally the loop variable identifying the current player. In cases where a subroutine can be called for another player while the Y loop is still active (for example, 1310-1320), the variable X is used. See the sidebar, "System Modifications," for the changes required for different system configurations. ■

Instant typing

NOW FOR
MODEL 100

Say "Goodbye" to the awkward hunt & peck method of typing! Instant Software introduces you to Typing Teacher—the patient tutor that will improve your typing skills. This complete seven-part package takes you all the way from initial familiarization with the keyboard, through words and phrases, to complete mastery of the keyboard. On screen diagrams show you the correct placement for fingers. Displays keep eyes up and away from keyboard to master proper techniques. Take home TYPING TEACHER today and type like a pro tomorrow. Requires: TRS-80* Model 100. 8K #0463RH \$17.95. TRS-80*, Tape, Mod I and Mod III. 16K. #0099R \$17.95. TRS-80 Disk Model I & III w/CONVERT, or PMC, 16K, #0451RD \$22.95

Light Cycle

by Donald David

Light Cycle is a fast-paced, action-packed Model III game for one or two players. It is derived from a program called Boa by Jeff Myers (*80 Microcomputing*, May 1981, p. 294).

In Light Cycle, each player uses four keys to maneuver a beam of light around the screen. As the beam travels,

Try to shade all of your Model III screen white. Obstacles and a maze make it tougher.

It leaves a trail of light. Try to shade as much of the screen as possible with light. The first beam to hit a wall, obstacle, or the other player's beam loses.

After you play Light Cycle, the percentage of the screen shaded white appears at the bottom of the screen.

Four levels of difficulty challenge your reflexes. The screen for the first level contains no obstacles—it is straightforward and fairly simple.

Levels 2 and 3 each contain randomly placed obstacles, level 3 more than level 2. You can pass through some of these obstacles. If you want to increase or decrease the number of obstructions, change the For...Next loop in lines 8070, 8080, 9270, and 9280.

The fourth level is a circuitous maze. Try to get through it! ■

Donald David can be reached at 990 North Ave., Deerfield, IL 60015.

The Key Box

**Model I and III
16K RAM
Cassette or Disk Basic**

- COMPUTER SHACK -

Stronghold

By Ken Olson and Larry Chow

Using all the skill you can muster, protect your city by moving your shield and stopping the bombs. From every angle, bombs will destroy the cities outer shielding until it reaches the city itself. If the city is hit, you and all your people will be destroyed. You can catch the bombs and launch them at opposing cities, or just worry about saving yourself.

One or two player action with sound and split second graphics that'll amaze the eye and ear.

Tape..... \$22.95 Disk..... \$25.95

Moon Rover

By Scott Watson

When we first landed on the moon, scientist found it to be a dead planet. So we preceded to build our first LUNAR STATION.

But the moon was inhabited, and they're not as friendly as E.T.. On the ground and in the air they're attacking! Just keep moving and hope that you are not stopped or that you don't fall into a crater before earth forces can arrive.

With fantastic sound and truly excellent graphics, MOON ROVER will provide hours upon hours of exciting play.

Tape..... \$22.95 Disk..... \$25.95

Time Bandit

By Bill Dunlevy

With TIME BANDIT, you virtually create your own game. You can choose from more than TWENTY places during the entire game. And each place has more than 15 distinct variations and levels of difficulty; this means over 300 variations in all!

Unbelievable speed, ultra crisp graphics (including scrolling maps and full animation), amazing sound, high scores that save to disk or cassette, voice (disk versions) -- it's all here! The conquest of time and space awaits you. TIME BANDIT the latest game by Bill Dunlevy.

Tape..... \$24.95 Disk..... \$26.95

FIVE EXCITING NEW GAMES FROM COMPUTER SHACK

We give you a discount if your order more than one program. 10% of your order 2, 15% if you order 3 and 20% if you order 4 or more programs (any software).

Convoy

by Philip Mackenzie and Jeffery Sorensen

From the creators of DEMON SEED comes a great new game that promises to keep you on the edge of your seat.. CONVOY!!!

A convoy of trucks has been assigned to move food rations for the troops in the field. You must protect the convoy, utilizing the firepower of the armies new super tank, from enemy fighter planes and helicopters seeking to block and destroy the convoy. As planes come rocketing down, destroy their bombs and send them to the ground in flames. At first, the fighters may seem to ignore you, but watch out!!! As your skill grows, they'll call out reinforcements that'll directly attack and destroy your tank. You'll feel and see the spectacular battlescenes, you'll hear the planes as they dive into the road, and you'll react like you've never reacted before!

CONVOY.. Can you take the challenge?

Tape..... \$22.95 Disk..... \$25.95

Fury

By Doug Frayer

In the background you hear the sirens blare! As your heart fills with dread you know what the sound means! The planet's been INVADDED, the merciless Monnerian have arrived!

With all the other young pilots, you rush down the corridor, strapping on your suit and straightening you head gear. As the top closes on your fighter and the dials light up, you see the controller waving you on. This is it! This is the moment that decides your worth as a pilot! You better be quick and you better be ready! So with a reassuring whisper, you take a firm grasp on the controls and prepare yourself for the battle of a lifetime.

Written by the thrice acclaimed Doug Frayer (Author of CYBORG and JOVIAN) FURY combines strategy and three wave patterns to the traditional space fight. Allowing one or two players, sound and graphics are used to their utmost and the disk version even talks!

Maze Chase

by Leonard Karr

Maze Chase is an action game similar to Pac-Man; bad guys pursue a player through a maze. If they catch him, he loses. In this game, the player wins by catching a moving asterisk before his opponents catch him. It's a chase within a chase. The asterisk is not cooperative. It does its best to evade you.

Use the numeric keypad to control your token. If you don't have a keypad or you want to use different keys, make

**In this maze game, you
are hunter and hunted.
Try to catch the asterisk
before enemies catch you!**

two changes in the program. First, change the instructions in lines 3070-3100 to specify the keys you want

to use. Second, in lines 2110-2140, replace the numbers in quotation marks in the statements 'IF LS="#...'" with the characters of the keys you're using.

Each game starts with a different maze. You cannot memorize patterns to guarantee a win. Sometimes the maze makes a win easy for you, sometimes for your enemies.

There are three levels of play. At the first level, only two bad guys pursue

Variables used to draw maze:

K, J	Counters in For...Next loops
B\$	Black Square
W\$	White square (not used)
M\$	Solid white line 63 spaces long
AL	Location of path above or below starting position
BL	Location of path square as maze is drawn
CL	Random move, up, down, or forward
DI	Path location when path moves up or down
PI	Path location when drawing corners of maze

Variables in movement phase of program:

PI	Movement increment for player
TI	Movement increment for asterisk
AI	Movement increment for bad guy A
BI	Movement increment for bad guy B
CI	Movement increment for bad guy C
DI	Movement increment for bad guy D
AL	Location on video screen of bad guy A

BL	Location on video screen of bad guy B
CL	Location on video screen of bad guy C
DL	Location on video screen of bad guy D
PL	Location on video screen of player
TL	Location on video screen of asterisk
EL	Location on video screen of capture point
PX	Player's location on X axis
PY	Player's location on Y axis
BX	Bad guy B's location on X axis
BY	Bad guy B's location on Y axis
AX	Bad guy A's location on X axis
AY	Bad guy A's location on Y axis
H	Level of play
K, J	Counters in For...Next loops
LL	Count of player losses
WW	Count of player wins
S	Start of computer memory of video screen
B\$	Used to flash capture point
W\$	Used to flash capture point

for the TRS-80 from Micro-Mega

The Original GREEN-SCREEN

The eye-pleasing Green-Screen fits over the front of your TRS-80 Video Display and gives you improved contrast with reduced glare. You get bright luminous green characters and graphics like those featured by more expensive CRT units.

Don't confuse the Original Green-Screen with a piece of thin film stuck to the face of your video tube, such as that advertised by others. The Original Green-Screen is mounted in a full frame perfectly matched to the color and texture of the TRS-80 Video Display. It is attached with adhesive strips which do not mar your unit in any way.

The full frame design of the Original Green-Screen "squares off" the face of your video display and greatly improves the overall appearance of your system.

(Specify whether for Model I or Model III)

THE GREEN-SCREEN..... \$15.95
Add \$1.50 for postage and handling.

Terms: Check or money order, no CODs or credit cards, please. Add amount shown for postage and handling to price of the item. All items shipped within 48 hours by first class or priority mail. Virginia residents, add 4% sales tax. ✓162

***** NEW *****

LNW80 SYSTEMS

1983 Model II with upgrades
RS model III compatibility add-on soon

SPECIAL SYSTEM PACKAGE

LNW80 Model II computer
Green screen monitor
2 Disk drives
DOS PLUS, LNW BASIC, CP/M 2.2

FREE SOFTWARE INCLUDED

New release easy to use
Business System with:
AR, AP, GL, Pay Roll
Electric Pencil 2.0z
Electric Spreadsheet
Chartx
Microterm

BONUS FROM EXCELLONIX YOUR CHOICE:

1. C. Itoh printer and cable
2. Hayes Smartmodem and cable
3. Taxan model RGB3 monitor
(instead of green screen)

SPECIAL PRICE \$2695.00

EXCELLONIX

639 No. Bristol St. #52
Santa Ana, Ca. 92703
(714) 973 1939 (213) 650 5754

Introducing The FIRST

REMOVABLE

WINCHESTER 5 MEGABYTE HARD DISK DRIVE
Installable Directly Into The TRS 80 Model III

FEATURES

- Approximately nine times faster than standard floppy disk drives.
- One hard disk cartridge is equal in capacity to 30 floppy disks.
- Five megabyte on-line storage. • Built-in error detection & correction.

FOR ONLY **\$1799⁹⁵**

you, but the game moves faster than at the other two levels. Three enemies chase you at Level 2, and at Level 3 you must avoid four bad guys.

Keep in mind that all creatures (the player, bad guys, and asterisk) move at the same speed. As long as you make no mistakes and press the right key at the right moment, you cannot be caught from behind (nor can you catch the asterisk from behind). To win, you must maneuver until the asterisk moves toward you on a path without a turnoff.

You can reverse direction or remain immobile during play. The asterisk and enemies must move left, right, or forward. The maze never contains a dead end that could trap them.

Once you figure out your opponents' movements and a couple of the game's idiosyncrasies, you can win most games. If you want to increase difficulty, allow bad guy B to reverse direction. Change lines 1790-2010 by omitting the second condition ('and BI<>#') of the If statements. This makes him harder to avoid and quickly puts him on your tail.

The bad guys use two different strategies to find you. Two of them move more or less randomly and check to see if you're next to them. The other two bad guys know where you are and always attempt to move toward you. Once they get within two squares of you, you can't lose them. They follow you until the end of the game.

The asterisk moves just enough to avoid you, but not enough to escape every time. It spends a lot of time in the corners, but quickly runs out unless you approach it correctly.

The asterisk and the smart bad guys use a similar means of movement. The program analyzes the relative positions of the player and the bad guy or asterisk, and branches to the line with the best movement strategy (+3 units for right, -3 for left, -64 for up, and +64 for down) for that situation. The program tests the move to see if it sends the creature into a wall or reverses his direction of movement.

If the move is legal, the move increment is set and the program branches to the line that makes the move. If the best move is illegal, the test fails and the program continues to the next line that contains the second best move for the situation. If this move is illegal, the test again fails and the program continues to fail through until it finds a legal move.

Since no maze ever contains a dead end, there is always a legal move. Test lines are grouped together to reduce the amount of coding. Each best move uses the other possible moves as alternatives.

```

The maze-drawing routine is in two parts in lines 200-700. The first part creates the strings needed for part two, drawing the maze. You can copy this routine as is for other games as long as you enter each part as a subroutine and don't change the string variables (see Table 1).

If you want to increase the number of pathways, add these lines:

```
270 FOR T=1 TO 2 (Any variable can replace T)
475 NEXT T
```

This causes the program to loop through the path-drawing subroutine twice.

The non-string variable names in the maze-drawing routine bear no relationship to the function of the variables. I used variables from the game's move instructions to reduce the total number of variables and thus gain some speed.

Don't despair if you find the game difficult at first. Once you start to move around the maze without missing a turn, you can defeat your enemies. ■

Write to Leonard Karr at 1436 Village Road, Charleston, SC 29407.

COTTAGE SOFTWARE

PACKER Machine language program that edits all or part of your Basic program to run faster, save memory, or ease editing. The 5 options include UNPACK—unpacks multiple statement lines into single statements maintaining logic, inserts spaces and renumbers lines. SHORT—deletes unnecessary words, spaces, and REM statements. PACK—packs lines into maximum multiple statement lines, including all branches. MOVE—moves line or blocks of lines to any new location on program. On 2 cassettes for 16K, 32K & 48K.

For TRS-80 Mod I or III Level II or Disk Basic . . . \$29.95
SYSTEM TAPE DUPLICATOR Copy your SYSTEM format tapes. Includes verify routines. The Model III version allows use of both 500 and 1500 baud cassettes speeds. For TRS-80 Model I or III Level II . . . \$15.95

CASSETTE LABEL MAKER: A mini word processor to print cassette labels on a line printer. Includes 50 peel- and-stick labels on tractor feed paper.

For TR-80 Model I of III Level II & Printer . . . \$17.95
PRINT TO LPRINT TO PRINT: Edits your Basic program in seconds to change all Prints to LPrints (except Print@ or Print#) or LPrints to Prints. Save edited version.

For TR-80 Model I or III Level II . . . \$12.95
FAST SORT ROUTINES for use with Radio Shack's Accounts Receivable, Inventory Control I, and Disk Mailing List Systems for Model I Level II Sorts in SECONDS! You'll be amazed at the time they can save.

Supplied on data diskette with complete instructions.
FAST SORT for Accounts Receivable . . . \$19.95
FAST SORT for Inventory Control I . . . \$19.95
FAST SORT for Disk Mailing List (specify data diskette of cassette for 1 drive system) . . . \$14.95

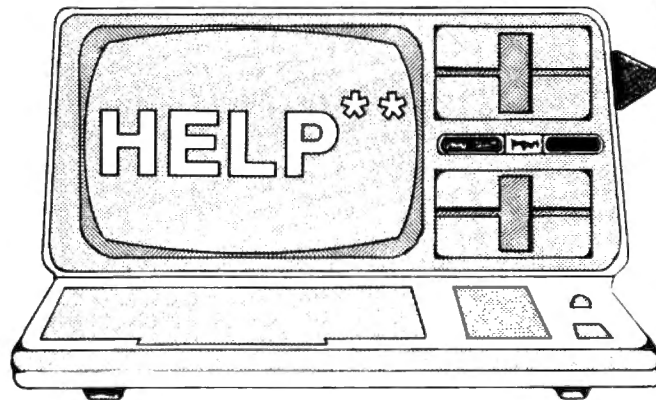

ALL THREE ROUTINES . . . \$44.95
Prices subject to change without notice. Call or write for a complete catalog. Dealer inquiries invited. VISA and Mastercharge accepted. Foreign order in US currency only. Kansas residents add 3% sales tax.

INTRODUCTORY/GAMES

DON'T (or How to Care for Your Computer)—by Rodney Zaks. In plain language, with numerous illustrations, this book tells all the do's and don't's of the care, preservation and correct operation of the small computer system. Specific chapters cover each piece of hardware and software, as well as safety and security precautions and help for problem situations. Have your computer work right the first time and keep it working! No technical background required. For all computer users. BK1237 \$11.95

YOUR FIRST COMPUTER—by Rodney Zaks. Whether you are using a computer, thinking about using one or considering purchasing one, this book is indispensable. It explains what a computer system is, what it can do, how it works and how to select various components and peripheral units. It is written in everyday language and contains invaluable information for the novice and the experienced programmer. (The first edition of this book was published under the title "An Introduction to Personal and Business Computing.") BK1191 \$8.95*

MICROPROCESSOR INTERFACING TECHNIQUES—by Austin Lesca & Rodney Zaks—will teach you how to interconnect a complete system and interface it to all the usual peripherals. It covers hardware and software skills and techniques, including the use and design of model buses such as the IEEE 488 or S-100. BK1037 \$17.95.*

COMPUTERS FOR EVERYONE 2nd Edition—by Jerry Willis and Merl Miller. This new, updated edition shows you how computers can be used in your home, office or school. It explains what computers can do and features a consumer's guide of the more popular computers to help you decide which one to buy and who to buy it from. There's even a chapter devoted to software that describes over 100 programs currently available. Also included are chapters on peripherals, telecommunications and computers in education. Abounds with colorful photographs. BK1260 \$5.95

INTRODUCTION TO WORD PROCESSING by Hal Glazer. This book explains in plain language what a word processor can do, how to use one, how it improves productivity—especially in businesses that handle lots of words—and how to buy one wisely. No technical knowledge required, for all first-time users and those considering purchasing a word processor. BK1238 \$12.95

A USER GUIDE TO THE UNIX SYSTEM by Jean Yates and Rebecca Thomas. Here at last is a clearly written book that allows you to use the Unix operating system easily, and at a fraction of the time it previously took. If you're using, evaluating or simply curious about this system, this is your book. BK1242 \$15.99

WORDSTAR MADE EASY by Walter A. Ettlin. Now WordStar is as simple to learn as it is easy to use. This book teaches WordStar in 14 easy lessons, saving hours of hard work. It comes with a convenient pull-out Command Card. BK1239 \$7.95

80 micro BOOK SHELF

CAPTAIN 80 BOOK OF BASIC ADVENTURES—by Robert Liddil. This book contains 18 of the most popular Adventure programs available today; all in one easy to read book with listings ready to be keyed in to your computer. This unique book also contains an ADVENTURE GENERATOR program, not available from any other source. This generator program will actually write another BASIC ADVENTURE PROGRAM! Although specifically written for the TRS-80 Model I & III, these programs are adaptable to other computers using Microsoft BASIC. BK 1240 \$19.95.

40 COMPUTER GAMES FROM KILOBAUD MICROCOMPUTING—Forty games in all in nine different categories. Games for large and small systems, and even a section on calculator games. Many versions of BASIC used and a wide variety of systems represented. A must for the serious computer gamesman. BK7381 \$7.95.*

WAYNE GREEN BOOKS

COMPUTER CARNIVAL—by Richard Ramella. Your child can become a crackerjack computerist with the sixty TRS-80 Level II programs in **COMPUTER CARNIVAL**. This large-type, spiral bound book for beginners is a veritable funhouse of games, graphics, quizzes and puzzles. Written by 80 Micro columnist Richard Ramella, the programs are challenging enough to ensure continued learning, yet short enough to provide your child with the immediate delight and reward of mastering basic computing skills. And for even greater enjoyment, get the **CARNIVAL COMPANION**, a 30-minute cassette containing all the programs in the book. Eliminates tiresome typing and lets your child spend more time enjoying the programs. BK7389 \$16.97 CC7389 Book and Cassette \$24.97

TEXTEDIT—A Complete Word Processing System in Kit Form—by Irwin Rappaport. TEXTEDIT is an inexpensive word processor that you can adapt to suit your differing needs—from form letters to lengthy texts. Written in TRS-80 Disk BASIC, the system consists of several modules, permitting the loading and use of only those portions needed. A disk is also available which provides the direct loading of the modules, however, the book is required for documentation. For Model I and III with TRSDOS CONVERT.. one disk drive (2 disk drives or copy utility needed to transfer to system disk). Runs under TRSDOS 2.2/2.3. May not function under other systems. BK7387 \$9.97 Disk DS7387 \$19.97

KILOBAUD KLASSTROOM—by George Young and Peter Stark. Learning electronics theory without practice isn't easy. And it's no fun to build an electronics project that you can't use. *Kilobaud Klassroom*, the popular series first published in *Kilobaud Microcomputing*, combines theory with practice. This is a practical course in digital electronics. It starts out with very simple electronics projects, and by the end of the course you'll construct your own working microcomputer! Authors Young and Stark are experienced teachers, and their approach is simple and direct. Whether you're learning at home or in the classroom, this book provides you with a solid background in electronics—and you'll own a computer that you built yourself! BK7386 \$14.95

THE NEW WEATHER SATELLITE HANDBOOK—by Dr. Ralph E. Taggart WB8DQT. Here is the completely updated and revised edition of the best-selling *Weather Satellite Handbook*—containing all the information on the most sophisticated and effective spacecraft now in orbit. Dr. Taggart has written this book to serve both the experienced amateur satellite enthusiast and the newcomer. This book is an introduction to satellite watching, that tells you how to construct a complete and highly effective ground station. Not just ideas, but solid hardware designs and all the instructions necessary to operate the equipment are included. An entire chapter is devoted to microcomputers and the Weather Satellite Station, and for the thousands of experimenters who are operating stations. *The New Weather Satellite Handbook* details all the procedures necessary to follow the current spacecraft. Weather Satellite contains Operation Satellite Systems, Antenna Systems, Weather Satellite Receivers, A Cathode Ray Tube (CRT) Monitor for Satellite Picture Display, A Direct-Printing Facsimile System for Weather Satellite Display, How to Find the Satellite, Test Equipment, Microcomputers and the Weather Satellite Station, Station Operations. BK7383 \$8.95.*

ANNOTATED BASIC—A NEW TECHNIQUE FOR NEOPHYTES—BASIC programming was supposed to be simple—a beginner's programming language which was so near to English that it could be easily understood. But, in recent years, BASIC has become much more powerful and therefore much more difficult to read and understand. BASIC simply isn't basic anymore. *Annotated BASIC* explains the complexities of modern BASIC. It includes complete TRS-80* Level II BASIC programs that you can use. Each program is annotated to explain in step-by-step fashion the workings of the program. Programs are flowcharted to assist you in following the operational sequence. And—each chapter includes a description of the new concepts which have been introduced. *Annotated BASIC* deals with the hows and whys of TRS-80 BASIC programming. *How* is a program put together? *Why* is it written that way? By observing the programs and following the annotation, you can develop new techniques to use in your own programs—or modify commercial programs for your specific use. *Annotated BASIC* Volume 1 BK7384 \$10.95 *Annotated BASIC* Volume 2 BK7385 \$10.95 *Order Both Volumes and Save!* BK738402 \$18.95

THE SELECTRIC INTERFACE—by George Young. You need the quality print that a daisy wheel printer provides but the thought of buying one makes your wallet wilt. **SELECTRIC™ INTERFACE**, a step-by-step guide to interfacing an IBM Selectric I/O Writer to your microcomputer, will give you that quality at a fraction of the price. George Young, co-author of *Kilobaud Microcomputing* magazine's popular "Kilobaud Klassroom" series, offers a low-cost alternative to buying a daisy wheel printer. **SELECTRIC INTERFACE** includes: step-by-step instructions, tips on purchasing a used Selectric, information on various Selectric models, including the 2740, 2980, and Dura 1041, driver software for 280, 8080, and 6502 chips, tips on interfacing techniques. With **SELECTRIC INTERFACE** and some background in electronics, you can have a high-quality, low-cost, letter-quality printer. Petals not included. BK7388 (125 pages) \$12.97

* Use the order card in this magazine or itemize your order on a separate piece of paper and mail to: 80 Micro Book Department • Peterborough NH 03458. Be sure to include check or detailed credit card information. No C.O.D. orders accepted. \$1.50 for the first book. \$1.00 each additional book for U.S. delivery and foreign surface. 80 micro BOOK SHELF

Z80

INSIDE LEVEL II—For machine language programmers. This is a comprehensive reference guide to the Level II ROMs, allowing easy utilization of the sophisticated routines they contain. It concisely explains set-ups, calling sequences, variable passage and I/O routines. Part II presents an entirely new composite program structure which unloads under the SYSTEM command and executes in both BASIC and machine code with the speed and efficiency of a compiler. Special consideration is given to disk systems. BK1183 \$15.95.*

Z-80 ASSEMBLY LANGUAGE PROGRAMMING—by Lance A. Leventhal. This book thoroughly covers the Z-80 instruction set, abounding in simple programming examples illustrating software development concepts and actual assembly language usage. Features include Z-80 I/O devices and interfacing methods, assembler conventions, and comparisons with 8080A/8085 instruction sets and interrupt structure. BK1177 \$16.99.*

TRS-80 ASSEMBLY LANGUAGE—by Hubert S. Howe, Jr. This book incorporates into a single volume all the pertinent facts and information you need to know to program and enjoy the TRS-80. Included are clear presentations of all introductory concepts, completely tested practical programs and subroutines, details of ROM and RAM and disk operating systems, plus comprehensive tables, charts and appendices. Suitable for the first time user or more experienced users. BK1217 \$9.95.*

PROGRAMMING THE Z-80—by Rodney Zaks. Here is assembly language programming for the Z-80 presented as a progressive, step-by-step course. This book is both an educational text and a self-contained reference book, useful to both the beginning and the experienced programmer who wish to learn about the Z-80. Exercises to test the reader are included. BK1122 \$15.95.*

PROGRAMMING • 6809

Nanos System REFERENCE CARDS FOR MODELS I, II, III, COLOR AND POCKET COMPUTERS!

At last! No more flipping through the pages of the BASIC manual! No more working through the maze of machine language instructions! These cards completely summarize the BASIC and Assembler manuals! **FEATURES INCLUDE:**

memory map, eyeball graphics, math instructions, BASIC commands, store instructions, BASIC functions, load instructions, BASIC statements, move instructions, special keys, exchange instructions, PRINT USING examples, shift instructions, BASIC special characters, compare instructions, BASIC and assembler messages and codes, branch instructions, BASIC facts, data alteration instructions, reserved words, I/O instructions, ROM routines, complete character chart with graphics and space-compression codes, hex-dec chart, control code cross-reference, assembler instructions, commands and operators, screen line layout, editor commands and subcommands, condition code easy access.

Plus—"magic graphics number"—a mystery until you learn how to use it!
Designed as a fold-up, accordion-style card, fits in your pocket. Panels organized for optimum speed for reference.

ZX80, ZX81 and Timex Sinclair 1000: FC1012	\$5.95
Pocket Computer: BASIC FC1009	\$2.95
Apple II and Apple II Plus: BASIC and 6502 FC1008	\$4.95
Apple II and Apple II Plus: BASIC only FC1007	\$3.95

PROGRAMMING THE 6809—by Rodney Zaks and William Labiak. This book explains how to program the 6809 in assembly language, covering all aspects progressively and systematically: basic programming techniques and devices, application examples, data structures, and program development. No prior programming knowledge is required. BK1264 \$14.95

TRS-80 COLOR COMPUTER GRAPHICS—by Don Inman with DYMAX. This exciting book will enable you to explore all the graphics capabilities of Extended Color BASIC. You'll learn how to create interesting graphics to enhance your own computer programs. Also included are application programs and subroutines that will be invaluable when you begin writing your own graphics programs. Each chapter ends with a summary and practice exercises. BK1266 \$14.95

ASSEMBLY LANGUAGE GRAPHICS FOR THE TRS-80 COLOR COMPUTER—by Don Inman and Kurt Inman with DYMAX. This dynamic new book uses sound and graphics to show you how 6809 assembly language can be used to perform tasks that would be difficult or impossible with BASIC. All of the techniques are explained in a hands-on approach. Learn how to tailor your own programming style, from editing, assembling, executing and even debugging, to making your own programs run quickly and efficiently. It is also packed with video screen diagrams which explain each step of the process of creating your own graphics. BK1277 \$??.*

6809 MICROCOMPUTER PROGRAMMING AND INTERFACING—by Andrew C. Staugaard, Jr. Getting involved with Tandy's new Color Computer? If so, this new book from the Blacksburg Group will allow you to exploit the awesome power of the machine's 6809 microprocessor. Detailed information on processor architecture, addressing modes, register operation, data movement, arithmetic logic operations, I/O and interfacing is provided, as well as a review section at the end of each chapter. Four appendices are included covering the 6809 instruction set, specification sheets of the 6809 family of processors, other 6800 series equipment and the 6809/6821 Peripheral Interface Adapter. This book is a must for the serious Color Computer owner. BK1215 \$13.95.*

BASIC & PASCAL

LEARNING TRS-80 BASIC—by David A. Lien. Dr. Lien, who is the author of THE BASIC HANDBOOK and the original Radio Shack LEVEL I USER'S MANUAL, has compiled a tutorial which includes portions of the original USER'S MANUAL, and most of LEARNING LEVEL II along with extensive additions. It will completely cover the TRS-80 Models I, II, III, and 16 (sorry, not the color or pocket computers). It is, of course, written in the easy learning style which readers of Dr. Lien's books have come to enjoy. BK1175 \$19.95.

THE BASIC HANDBOOK—SECOND EDITION—by David Lien. This book is unique. It is a virtual ENCYCLOPEDIA OF BASIC. While not favoring one computer over another, it explains over 250 BASIC words, how to use them and alternate strategies. If a computer does not possess the capabilities of a needed or specified word, there are often ways to accomplish the same function by using another word or combination of words. That's where the HANDBOOK comes in. It helps you get the most from your computer, be it a "bottom-of-the-line" micro or an oversized monster. BK1174 \$19.95.*

PROGRAMMING IN PASCAL—by Peter Grogono. The computer programming language PASCAL was the first language to embody in a coherent way the concepts of structured programming, which has been defined by Edsger Dijkstra and C.A.R. Hoare. As such, it is a landmark in the development of programming languages. PASCAL was developed by Niklaus Wirth in Zurich, it is derived from the language ALGOL 60 but is more powerful and easier to use. PASCAL is now widely accepted as a useful language that can be efficiently implemented, and as an excellent teaching tool. It does not assume knowledge of any other programming language and therefore suitable for an introductory course. BK1140 \$12.95.*

INTRODUCTION TO PASCAL—By Rodney Zaks. A step-by-step introduction for anyone wanting to learn the language quickly and completely. Each concept is explained simply and in a logical order. All features of the language are presented in a clear, easy-to-understand format with exercises to test the reader at the end of each chapter. It describes both standard PASCAL and UCSD PASCAL, the most widely used dialect for small computers. No computer or programming experience is necessary. BK1189 \$15.95

MOD III ROM
COMMENTED

Ed. Pennington
**TRS-80 DISK
& OTHER MYSTERIES**

DOS RANDOM ACCESS & BASIC FILE HANDLING—By H.J. Muller. This book was written for the nonprogrammer. It is ideal for the businessman or professional who needs to solve and write special programs for in-house business problems, or the hobbyist who wants to go beyond the cassette recorder and into disk storage and file manipulation. It is written as a self-instruction tutorial and will provide anyone with some Level II experience with the ability to write special programs for inventories, mailing list, work scheduling, record keeping, research project data manipulation, etc. 150 pages. BK1236 \$29.50

TRS-80 DISK AND OTHER MYSTERIES—by Harvard C. Pennington. This is the definitive work on the TRS-80 Model I disk system. It is full of detailed "How to" information with examples, samples and in-depth explanations suitable for beginners and professionals alike. The recovery of one lost file is worth the price alone. BK1181 \$22.50.*

MICROSOFT BASIC DECODED AND OTHER MYSTERIES—by James Enavour. From the company that brought you *TRS-80 DISK AND OTHER MYSTERIES*. Contains more than 6500 lines of comments for the disassembled Level II ROMs, six additional chapters describing every BASIC subroutine, with assembly language routines showing how to use them. Flow charts for all major routines showing how to use them. Flow charts for all major routines give the reader a real insight into how the interpreter works. BK1186 \$29.50.*

HOW TO MAKE MONEY WITH COMPUTERS—In 10 information-packed chapters, Jerry Felsen describes more than 30 computer-related, money-making, high profit, low capital investment opportunities. BK1003 \$15.00.*

SMALL COMPUTERS FOR THE SMALL BUSINESSMAN—By Nicholas Rosa and Sharon Rosa. Here is an excellent guide for businessmen who are interested in finding out what a computer can do for their business, but are not interested in becoming "computer nuts." The authors are consultants who assess the computer needs of businessmen and who touch base with everything necessary to consider before purchasing a computer. The authors tell readers how and where to shop successfully for a computer; what to expect their computer to do for them; how large a computer to consider; how to select software; whether or not to use a consultant; how to introduce the computer to the staff, and much more. Specific topics addressed include accounting records, warehousing, light factory operation and parts inventories. BK1223 \$12.95*

MACHINE LANGUAGE DISK I/O AND OTHER MYSTERIES—by Mike Wagner. The purpose of this book is to inform anyone familiar with Z-80 assembly language programming how to control the TRS-80 Model I and III disk drive interrupt systems. Driver routines for every function described, with abundant examples, are included in this book. It also covers utilization of TRSDOS assembly language file I/O calls and techniques. BK1258 \$29.95

MOD III ROM COMMENTED—Soft-Sector marketing, 1981. This book is not an instruction course on machine language, but rather an information source that you can use time and time again for writing your own program or patching old Mod I machine language programs. It contains an explanation of ROMs in the latest machine from Tandy, with most every location of the 14K ROMs listed, with comments. BK1235 \$22.50.

THE CUSTOM TRS-80 AND OTHER MYSTERIES—by Dennis Kitz. More than 300 pages of TRS-80 customizing information. With this book you'll be able to explore your computer like never before. Want to turn an 8 track into a mass storage unit? Individual reverse characters? Replace the BASIC ROMs? Make Music? High speed, reverse video, Level I and Level II? Fix it if it breaks down? All this and much, much more. Even if you have never used a soldering iron or read a circuit diagram, this book will teach you how! This is the definitive guide to customizing your 80! BK1218 \$29.95.*

BASIC FASTER AND BETTER AND OTHER MYSTERIES—by Lewis Rosenfelder. You don't have to learn assembly language to make your programs run fast. With the dozens of programming tricks and techniques in this book you can sort at high speed, swap screens in the twinkling of an eye, write INKEY routines that people think are in assembly language and add your own commands to BASIC. Find out how to write elegant code that makes your BASIC really hum, and explore the power of USR calls. BK1221 \$29.95.*

THE CP/M HANDBOOK (with MP/M)—by Rodney Zaks. A complete guide and reference handbook for CP/M—the industry standard in operating systems. Step-by-step instruction for everything from turning on the system and inserting the diskette to correct user discipline and remedial action for problem situations. This also includes a complete discussion of all versions of CP/M up to and including 2.2, MP/M and CDOS. BK1187 \$14.95.*

MASTERING CP/M—by Alan R. Miller. For advanced CP/M users or systems programmers who want maximum use of the CP/M operating system, this book takes up where the *CP/M Handbook* leaves off. It will give you an in-depth understanding of the CP/M modules such as CCP (Console Command Processor), BIOS (Basic Input/Output System), and BDOS (Basic Disk Operating System). It explains the incorporation of additional peripherals to the system, console I/O, the use of the file control block and much more. It also includes a library of useful macros and a comprehensive set of appendices. BK1263 \$15.95

80 micro BOOK SHELF

TRS-80 DATA COMMUNICATIONS SYSTEMS—by Frank J. Derfler. If you are interested in using the TRS-80 as a terminal or message system, this is the book to buy. It covers communications, technical material, software and hardware for the entire TRS-80 family of machines. BK1245 \$12.95

MODEL III TRSDOS COMMENTED—Published by Soft Sector Marketing. This book is intended to show moderately experienced programmers the organization and inner workings of a typical Z-80 disk operating system. Every function of the operating system has been decoded and explained, not to bit-by-bit detail, which would be a monstrous task, but rather at an instruction-by-instruction level. Many not-documented features of the system have been found, as well as a few errors. The techniques shown in the system coding will be useful as a guide to programmers interested in systems programming at an assembler level. BK1257 \$29.95

INSIDE SUPER UTILITY PLUS—by Paul Weiner. This book really explains all the mysteries and functions of that remarkable program—Super Utility Plus. This is an excellent tutorial on TRS-80 disks, it contains detailed instructions for recovering bad disks using Super Utility Plus, and also documents previously undocumented features of SUP. This is an excellent companion book to the Super Utility Plus manual. BK1269 \$19.95

TRSDOS 2.3 DECODED AND OTHER MYSTERIES—by James Less Farvour. This book is intended to guide the beginning or experienced system programmer through the internal operations of the TRSDOS operating system used on the Radio Shack Model I computer. A knowledge of basic computer architecture and assembly language programming is assumed, however the significant features of both are presented in the text. An absolute must-have for Model I owners! BK1276 \$29.95

MONEYMAKING/BUSINESS

SO YOU ARE THINKING ABOUT A SMALL BUSINESS COMPUTER—By Richard G. Canning and Nancy C. Leeper. For a well-organized manual on the process of selecting the right computer system for your small business, this text can't be excelled. Designed to introduce the novice in data and word processing to the real benefits of computerization, the book is filled with money- and time-saving tips, photos of equipment, lists of suppliers, prices, explanations of computer terminology, and helpful references to additional sources of information. Everyone contemplating a first computer installation should have this book. BK1222 \$14.00*

USING MICROCOMPUTERS IN BUSINESS—By Stan Veit. Written by the owner/manager of one of the country's largest computer stores selling systems to small businesses, this book is an essential background briefing for any purchaser of microcomputer systems or software. In a fast-moving style, without the usual buzz words and technical jargon, Veit answers the most often asked questions. CONTENTS: How a computer can help your business; Data base management to advance your business; Effective use of word processing; How to use a computer without disrupting your business; Buying your system; Computer languages; What are the limitations of the microcomputer; Software: where to find it, how to judge it; What to do when the computer goes down. BK1225 \$9.95*

BUSINESS SYSTEM BUYER'S GUIDE—By Adam Osborne with Steven Cook. When you enter the market place of small business computers, you face a bewildering array of products, prices, features and fables. This guide cuts through the jargon and unravels the task of buying the right computer system. This book provides solid information on how to determine your needs, how to choose software and hardware for all business applications, what to expect from vendors, what to avoid, and what questions you must ask. It also provides a wealth of detailed information on products, manufacturers, retailers and the whole microcomputer market. BK1229 \$9.95

* Use the order card in this magazine or itemize your order on a separate piece of paper and mail to: 80 Micro Book Department • Peterborough NH 03458. NEWS THIS MONTH

Model 4 Opens in Boston

But Model 100 steals the show at BCS gathering.

One day after it hit the stores, the Model III's successor came out in society: Tandy's new Model 4 made its debut on April 27 in downtown Boston's New England Life Hall. The star of the evening, however, was the TRS-80 Model 100 portable.

The unveiling was sponsored by the Boston Computer Society, which earlier this year played host to Apple Computer's Lisa and Morrow's Micro Decision. For the launch of the Models 4 and 100, Tandy attracted onlookers with four of each of the new machines, from a Model 100 displaying a graphics demo to a 4 flaunting TRSDOS 6.0's impressive directory of utilities.

Several audience members already owned Model 100s, and one Model III user told *80 Micro* he was interested in the Model 4 upgrade. Most others interviewed were not Radio Shack zealots, but intrigued by the new portable: A publisher of fire-protection software envisioned commissioners' using Telcom at fire sites, and an IBM PC owner said, "It (the 100) doesn't replace a larger machine, but for its purpose I think it's quite good." Asked whether she thought the 100 had an advantage over bulkier portables like the Osborne, she answered, "Oh, good Lord, yes."

The evening started with an introduction to Radio Shack. President John Roach described the Fort Worth firm as "a distribution system for the products of technology."

"Tandy and Radio Shack," Roach said, "are a little bit different from everybody else who competes in this business. We're not really a manufacturer, yet we are a manufacturer. We're

Shirley (l) and Roach (r): Proud to bring the 4 and 100 to Boston. (Hub Graphics photo)

not exclusively a product developer, yet we do have product development capabilities. We're really different because we're a controlled distribution system that sells our own products under our own brand."

Stressing customer support, Roach described Radio Shack's 400 Computer Centers as "a resource that will help us do the same thing in the microcomputer field that we do in all the other fields we're in, which is have a nice, signifi-

**MBIP STAND-ALONE PARALLEL
 PRINTER INTERFACE**

- 32K Parallel.....\$299.95
- 64K Parallel.....\$349.95
- 64K Upgrades.....\$179.95

Serial Versions Also Available

The MBIP in-line parallel interface works with almost any computer/printer combination utilizing a Centronics type parallel interface. Available with up to 256K of RAM for data buffering, the MBIP can accept very large files for buffering as fast as your computer can send it.

Most computers are able to send data to the printer at very high speeds, usually much faster than the printer can print it. The MBIP, placed between the computer and the printer, accepts this data as fast as the computer can send it, stores it in its own memory and then sends it on to the printer at the printer's own speed. Since the computer has now transmitted all of its data to the memory of the MBIP, the computer is now free to continue useful work while the MBIP dumps its memory to the slower printer. Under normal circumstances without a MBIP the computer could be tied up for hours on a large file being dumped into the printer costing you valuable time and money.

Using the MBIP's touch sensitive front panel controls, multiple copies of your document can be made without tying up the computer any further. The MBIP simply keeps dumping copies of your document from its memory until it has printed the amount of copies you have specified. Printing may be halted at any point and continued where it left off later. You can even turn your computer off and MBIP will continue until the print job is complete. Additional files may be transmitted to the MBIP for processing even while the MBIP is handling copies from a previous job.

The MBIP requires no user modifications of software and installs in seconds with virtually any computer (including TRS-80, ATARI, IBM-PC, APPLE, OSBORNE, NEC etc.) and any printer (including EPSON, CENTRONICS, NEC, C.I.TOH, IDS, ANADIX, OKIDATA, IBM PERSONAL etc.).

**MBP-16K
 EPSON PARALLEL BUFFER
 16,384 Byte Buffer**

- 16K Epson 80/100.....\$159.95
- 8K Serial Epson 80/100.....\$159.95

The MBP-16K is an intelligent Centronics-Compatible parallel interface for the Epson MX-80, MX-80 F/T, and MX-100 printers, with 16,384 bytes of on-board RAM for data buffering.

The buffering capability of the MBP-16K increases your data processing efficiency by eliminating the wait normally experienced while printing. An Epson printer prints at 80 characters per second; at this speed it takes about five minutes to print a 16,000 character document. During most of this time the computer is waiting for Epson to finish one line so it can send the next. The computer can't do anything else because it's tied to the printer. By using the MBP-16K it takes the computer only *four seconds* to send a 16,000 character document. The Practical Peripherals MBP-16K interface typically accepts data as fast as the computer can send it, until full, returning use of the computer to you while it handles the printing. You can continue with other processing while simultaneously printing data from a previous job, gaining all the time you normally would have spent waiting for the printer to finish. The net result is to eliminate the computer-waiting-for-printer/printer-waiting-for-computer bottleneck, and keep both working. Any program that involves printed output will be speeded up by using the MBP-16K.

The MBP-16K supports all standard Epson Commands, is compatible with GRAFTRAX-80, and is plug compatible with the standard Epson cable. The MBP-16K does not require any user software for control.

The MBP-16K is easy to install — it simply plugs into the existing auxilliary interface connector inside the Epson without modification of the printer.

cant market share, but really have one for different reasons. Radio Shack is the full-service dealer. We're trying to sell you more than just hardware; we're trying to be a support system."

As for hardware, after alluding to Tandy's most recent field of interest, telecommunications, Roach concentrated on computers:

"The pervasiveness of computers is by now almost a foregone conclusion. Computers are going to be, in whatever form, on every desk at school, every desk in the office, on the factory floor. . . . The capability to expand the mind with computers should and will and has already brought some great enhancements to our quality of life."

Toward that end, he said, "We're proud to have made two interesting, one possibly revolutionary, computer introductions in the past month."

Roach kept to general remarks about "the electronic desk," or workstation, of the future, but his comments on price and productivity concerned today's Model 100: "You simply cannot afford to pay a lot more than a typewriter costs to get the functionality that's needed on the average desk. What the world really needs is a low-cost executive workstation that combines the functions (telephone, dialer, appointment book, calendar) currently found on your desk. When you combine this with networking, you have the finest productivity aid the world has ever had.

"Clearly the Model 100 can do many of the things I've described in addition to being portable," Roach concluded. "I believe it's the first of a generation of not only portable computers, but easier-to-use computers."

While Roach saw the 100 as pioneering "much less memory- and software-intensive" designs for tomorrow's still friendlier and more ubiquitous micros, Jon Shirley, Radio Shack's vice president for computer merchandising, described the portable as "a product of revolutionary change" for today.

"While (the 100) does not have disk drives," Shirley said, "it does have an operating system, and an example of, I think, the operating system of the future." Pointing to its start-up menu of both ROM- and RAM-based programs, he declared, "I've always believed that the best operating system is totally invisible, and in this one we've achieved that.

"This menu approach to operating

systems is going to appear on other systems very shortly. Microsoft has already announced an invisible shell for the Xenix system that works exactly like this, and what appears on Xenix will probably appear on MS-DOS sooner or later."

Shirley even compared the Model 100 to the Lisa, albeit with tongue in cheek: "There was a famous machine introduced here some time ago, at over 10 times the price, that almost interacts with its programs—though, granted, they're much larger—but not quite in this way. There are a lot of little glitches in (the Lisa system); there are no little glitches in this machine at this time. We'll put those in later."

Compared to the revolutionary 100, Shirley admitted, the Model 4 is "an evolutionary product, although we're very happy about it. We told our engineering staff that there were a lot of things we wanted to see in a computer at the price of our Model III that it didn't offer, and after all these features we added two more; it had to cost less and it had to be totally compatible with the III and the III's software. They accomplished their task and I think they did it very well."

While a cassette Model 4 "is really absolutely nothing but a Model III" except for the white case and revised keyboard, he said, the disk version is both entirely Mod III compatible and "an all-new computer" under Model 4 software, with an 80-column, 24-line display, 64K RAM expandable to 128K, sound, and doubled operating speed (4 MHz) from the Z80A CPU.

"We put all this stuff in the same case, on the same size circuit board, because there wasn't any more room in there," Shirley recalled. "The primary product is a VLSI chip that is a programmable screen controller letting us have two different screens and two modes in one IC. Our thanks really go out to the semiconductor folks that keep making all these wonderful advances possible. Eight-bit processors are not dead yet."

In addition to the hardware advances, Shirley praised the TRSDOS 6.0 operating system. "It is not invisible to the user, yet it does have some neat features," ranging from Memdisk (the capability to use part of RAM as a fast "disk access" memory) to a communications program. "We also added a utility to load Model 100 cassette

tapes," he noted, "although in retrospect I'm not sure why because all it takes is a cable between the machines and they can talk to each other very easily."

In addition to TRSDOS, Shirley said, "We will supply CP/M Plus, the 3.0 version that supports the whole 128K capacity and will be available in a few months." Asked whether the 4 would use some other manufacturer's CP/M format or "add to the confusion," he confessed, "I don't know. The implementation is being done by Digital Research themselves; it is not your normal thing done by some guy who says, 'Hey, this is the way I'll write the BIOS.' I would expect it would be compatible with someone else's."

As for 80-column software, Shirley answered, "SuperScripsit will probably be the first package that is available. Two of the packages being demonstrated in pre-release form are VisiCalc, which takes advantage of the full 128K, and the older version of Scripsit, which is probably going to be included in a pack that you can take advantage of at a fairly low price. There are going to be a lot of things for the 4 that you couldn't get before because of memory or screen limitations."

(Audience member Tracy Licklider, vice president of Software Arts, later confirmed Shirley's announcement of 128K VisiCalc and told *80 Micro* that his firm's TK!Solver would be available for TRSDOS 6.0. "I think it'll be a good program for the 4," Licklider said.)

Asked about Radio Shack's view of the new machines' market position, Shirley answered, "The 4 audience is really the Apple market. The Apple's got color, but look at their own statistics on how many people use it with monochrome monitors. Color is really the game aspect, and we've never really thought of this as a good game machine.

"The 100 is certainly appealing to business people wanting to communicate with the home office. It's also, I guess, one of the hardest to classify, in terms of what its audience is. A magazine for IBM PC owners is reviewing the 100. We asked them, 'Why are you doing this? It's not IBM-compatible,' and they said, 'Hey, it's a great peripheral for my computer.' So we're going to see people who think it's a peripheral for their systems."

Fill CoCo's Pot O' Gold With 81K and 45,000 Words a Month

And did we mention more than 200 pages of programs, news, information and fun exclusively for your TRS-80® or TDP-100 Color Computer?

That's what has made **the RAINBOW** the premier monthly magazine for CoCo. Columns on Education, learning Assembly Language, Machine Language utilities, Fantasy Games, Hardware and two tutorials a month just for beginners!

Plus, the popular Bob Albrecht teaching data file techniques, the well-known Don Inman on graphics. More than 30 products reviewed each month. "Inside" information in **the RAINBOW's** Pipeline feature. Lots of letters from readers.

Programs are **the RAINBOW's** specialty! Over a dozen of them a month. In areas such as business, utilities, education, graphics, statistics and games. Serious programs...fun programs...useful programs. More than 81K *each month*.

All of this is available for just \$22 a year. It's a great bargain, and carries a money-back guarantee of satisfaction.

Try **the RAINBOW**. Your CoCo will love you for it!

Except for one man who asked about disks and a CRT for the portable ("We're not expecting momentarily to add additional hardware on the 100") and another who wondered why the 4 didn't have double-sided disk drives ("Cause we wanted to sell it for \$2,000

with two drives in it. The price trend for disk drives has not quite been the same as it has in RAM"), the Tandy presentation seemed to impress the BCS audience.

After a question-and-answer session, people crowded around the display

tables to ask more questions and examine the machines. One neophyte peered intently at a Model 4, pressed the orange reset button, and walked shamefacedly away as the screen went blank. The computer had been running a cassette demo. ■

BUSINESS

Danger from the Asian Rim

U.S. must prepare for "two wars," says Senator.

The challenge from Japan is as serious to our long-term security as the challenge from the Soviet Union. It's different, it's more benign, but in terms of the challenge to our industrial infrastructure it's just as important."

With those words, U.S. Senator Paul Tsongas warned computer retailers and industry representatives at a seminar titled "The Small Systems Economy" not to be complacent about America's electronics success. The keynote speaker at a Framingham, MA meeting on May 2, the Massachusetts Democrat began his remarks on "High-Tech Challenge from the Asian Rim" by addressing two reporters who were taking notes on TRS-80 Model 100s: "Where were those two products that you're working on made? Japan. That's my speech, ladies and gentlemen."

In the seminar, sponsored by Comdex producers The Interface Group, Tsongas mentioned the prosperity of high-tech firms along Massachusetts' Route 128, sometimes known as "Silicon Valley East," and Wang Industries' role as a major employer in his home town of Lowell. However, he said, today's profits are no guarantee of 1990's: "The basic approach from many people in Washington is that everything is fine and that we can just keep going on the same way. What we should be concerned about, though, is not where we are today but where we're going to be tomorrow. And I would suggest to you that the trends are not favorable."

As a member of the Senate committees on Foreign Relations and East Asian and Pacific Affairs, Tsongas has strong opinions on Japanese versus

Tsongas: It takes the three R's and R&D to compete with Japan.

American investment policy: "The Japanese are very Darwinian in determining where their money's going to go and where the future is. The U.S. has a very different approach. We tend to focus on those industries that are in decline and try to save those industries.

"The Japanese have a sunrise mentality; we have a sunset mentality. Or, as one businessman put it lately, we have a mortician's view of an industrial base."

Another grave handicap, Tsongas noted, involves our education system. In a report titled *A Nation at Risk*, the National Commission on Excellence in Education described the U.S. school system as so mediocre that, had a foreign power somehow promoted its decline, we would consider the process an act of war.

"The Japanese have math and

science courses in school every year," Tsongas said, "as opposed to the U.S. where if you're interested in dance and basketweaving you can get your education in that and then try to take on the Third World nations in high technology." Combined with the spiraling cost of capital, our investment and educational priorities put America at a disadvantage:

"World War II was won by the U.S., given the sacrifice and bravery on both sides, because we produced more planes and ships and tanks and eventually overwhelmed them with our capacity," Tsongas declared. "In this next war, if they produce more engineers than we do, commit three percent of their GNP to research and development and we don't, have a better educational system, a better cost of capital, there is an inevitability to their ascendancy and an inevitability to our decline."

What to do? "We are not monocultural, so we're not going to emulate Japan; there's no reason why we have to," the Senator said. "The Japanese are more structured, are good at taking an idea and implementing it. We're a much more dynamic society."

Nevertheless, he argued, it would be beneficial to follow Japan and other countries in their commitment to a percentage of the gross national product for R & D. While skeptical of France's state-controlled push in telecommunications, citing the Concorde as an example of government financing gone wrong, Tsongas believes that *laissez-faire* is no longer practical: "One executive said to me recently, 'I don't mind competing with my Japanese counterpart, but I can't compete with him and Japan.'"

Second, Tsongas endorsed the con-

WORLD WIDE DATA SYSTEMS INC. v27

cept of "a high-tech Morrill Act," giving the nation's educational system a boost similar to that which launched the "land-grant colleges" of the 19th century. Such a scheme would benefit both children—Tsongas praised a computer literacy program now operating in the Cambridge, MA schools ("We want that program to be in place in every Massachusetts city and town by September 1984")—and adults, such as middle-level managers sent from Digital Research back to M.I.T. for a semester.

"It would be an education in basic skills, coming from industry, working with a state agency, and matched dollar-for-dollar by the Feds, with use of Federal money but no Federal direction of ideas," Tsongas proposed.

In his summary, the Senator returned to the analogy of military preparedness: "What we need in this country is a realization that we're in trouble. What is lacking in this country is a sense of urgency, a sense of the continuing capacity not only of Japan—when Atari left California they didn't go to Japan, they went to Taiwan—but of the so-called mini-Japans along the Asian rim."

The U.S., he concluded, must be prepared to wage "the two wars," one against the USSR and one of economic competition with the East. Putting all of our resources into the former and ignoring the latter, he threatened, would bring disastrous results.

A week later, *The Wall Street Journal* embraced Tsongas' metaphor: In a May 11 story headlined "Japan, U.S. Gird for Microchip War," Urban C. Lehner reported that "the conviction is growing that Japan will deal the U.S. a devastating defeat" in the struggle to produce and sell 256K RAMs, which could "mark the beginning of the end of the U.S. lead" in other semiconductor work.

After "its loss in the 64K RAM war," Lehner wrote, the U.S. has few firms left with the resources or inclination to enter the fray against the Japanese again. The article quoted executives of two American companies, who said that "chances of the U.S. doing very well in the 256K RAM...market are highly unlikely" and "It's quite reasonable to assume a Japanese victory." An unidentified Silicon Valley spokesman summarized things with the words, "We are in deep sushi." ■

BUSINESS

Here Comes Warmware

Retailers discuss micro sales strategies.

Besides competition from the East (see above), computer dealers have their American customers to worry about. Other speakers at the Framingham symposium told the assembled retailers and ISO (independent sales organization) vendors of two increasing demands: after-sales help for novice owners, and integrated product lines for those wishing to upgrade their systems.

Peter Lowber, a market analyst for The Yankee Group, described the fallout that occurs when "users acquire a personal computer and find that they have no idea what to do with it. And they go back to the computer store and find that the people there don't have any idea either." Price and other things being equal, Lowber said, people prefer to buy equipment from vendors instead of retail outlets, citing reliability, vendor reputation, and service and maintenance.

Offering those attractions at the retail level is the goal of H.E. James Finke, whose Internetwork Inc. chain takes existing computer stores and adds "warmware—cossetting, nurturing, tender loving care of the owner who may otherwise have been mystified by his purchase."

The home computer boom, Finke said, became strong in 1982 and was accelerated substantially by Texas Instruments' 99/4 rebate: "TI...created an impetus that is still with us today. That impetus is measured in the millions of units." The introduction of easy-to-use micros at affordable prices, he said, rivals the advent of TV in the 1950s as "a revolution in how people use their time and resources. Each year, more machines are being made than are in the installed base."

A consumer product, according to Finke, by definition used to need no more than an 8½-by-11-inch sheet by way of documentation. "The right of Americans to buy a complex piece of

technology, plug it in, and use it without reading an instruction manual is an inalienable right of being an American citizen." The home computer has changed that. While rebates and low prices are moving computers off the shelves at discount chains, buyers are disappointed when they return with questions. Expecting computing advice from a salesclerk can be like asking a McDonald's cashier about the right wine.

By contrast, when "an entry-level buyer wants more than a box handed to him by a clerk at one of these stores," ISOs and other retail outlets can carve out a market share with instruction and service—to use Finke's term, warmware.

It seems that Finke's idea of added value, help beyond high-volume merchandising, endorses Tandy's perception of its Radio Shack stores. A former Tandy competitor as previous president and CEO of Commodore, Finke agreed up to a point but had reservations about the Shack's exclusivity:

"Tandy has capillary market presence through its six or seven thousand individual Radio Shack stores and its 400 Computer Centers. I think they are beginning to feel the limitations of not selling through independent sales organizations and mass merchandisers. However, their avowed aim is not market or sales success but return on shareholders' equity, and if that's their aim they can do that without market share."

Computer users, particularly businesses, don't stay rookies for long. When owners want to upgrade from micro to mini, Lowber said, "Some of these start-ups, Apple included, can't do that." DEC and IBM, he declared, profit by having integrated product lines, selling personal computers as well as larger machines.

"There are a lot of small businesses in this country, and they really haven't got their operations on line yet," Lowber

said. "Maybe they've got general accounting." As more businesses computing more thoroughly, he predicted, the decade will see an increasing demand for hardware, software, and support.

Edson DeCastro, president of Data General Corp., dismissed Finke's K-Mart shoppers while agreeing with Lowber's business buyers. "Some personal computers could very well become a passing fad, like the hula hoop," DeCastro said. "We could see some computers enjoy initial acceptance, and make it through a couple of Christmas buying seasons, before being relegated to the basement with other toys. It is quite likely that the personal computer business for home entertainment will become a commodity business like that for calculators and radios, with most production done in such countries as Thailand and Korea."

Data General's strategy, he said, centers on the business and professional market, where margins are higher and there's less competition from high-volume Japanese vendors. DG's new micro, expected this summer, is for this audience: "What we're going to bring that isn't in the market today is coherence. We're going to bring a product line that fits together, one that allows a customer to come in at the low end and move on up."

Data General hasn't been in the lime-light since Tracy Kidder published *The Soul of a New Machine*, but DeCastro was optimistic about his firm's prospects: "We're in a first-time buyer market now. In two or three years, we may be in a replacement market, which will be more difficult for single micro vendors. . . . The talk today is of the hot new micro vendors, but don't sell the traditional vendors short in competing in new markets. We may be old dogs, but we might be able to learn new tricks."

Still, the audience seemed inclined to view DG's move to micros, especially since the company plans to bypass retail stores in favor of its existing minicomputer distribution channels, as too little and too late. Speaking before DeCastro, Finke described home and mass-market sales as "the computer revolution of our time. . . . I doubt that any of the minicomputer manufacturers have the momentum to catch up in any way, shape, or form to this, and not the Japanese either."

In fact, the name most mentioned at the symposium was not Data General but Bell; events since the breakup of AT&T indicate that the telephone titan is about to add computing power to its PBX and communications equipment. One tidbit that kept attendees buzzing was a quote from Archie McGill, president of American Bell's Advanced Information Systems division, in the April 18 *Computerworld*:

"When we talk about terminals, we are really talking about workstations. It's very obvious that once you develop an intelligent workstation, as we have, it provides the basic capability to support multiple functions such as word processing and personal computing.

"We expect to have an effective family of intelligent workstations. There will be additional announcements in 1983." ■

HARDWARE

Portable Pursuit

Mod 100 competitors debut at Comdex.

BY KEN SHELDON

SPECIAL TO 80 MICRO

The TRS-80 Model 100 has been called the harbinger of a new wave of briefcase-sized portable computers. If this spring's Comdex in Atlanta is any indication, the 100's success might be largely responsible for the wave's size.

As always at the computer trade show, well-established manufacturers boasted massive, elaborately designed displays while small start-up companies tried to attract dealers, venture capital, and press attention. This year, the most attention went to portables.

Teleram Communications and Grid Systems, which entered the notebook micro market before Tandy, exhibited their business-oriented, bubble-memory machines, the Teleram T3000 (\$2,495) and Grid Compass (\$8,150), the latter scheduled to offer the popular MS-DOS as well as its proprietary operating system. At the Epson booth, company representatives said that word processing software would soon be available for the HX-20.

A new company, joining Teleram and Grid in the higher-priced, business-oriented segment of the portable field, was Gavilan Computer Corp., which treated members of the press to a champagne breakfast in order to show off the Gavilan "mobile office" for executives on the move.

The Gavilan features an eight-line, 66-character LCD screen display, the Intel 8088 16-bit microprocessor, low-power CMOS circuitry, 80K of internal memory (of which 32K is available to the user), a built-in 3-inch microfloppy

disk drive for another 320K of storage, and a 300-baud modem. In addition, a touch panel or "solid-state mouse" allows users to control the cursor and choose menu items with a touch of the finger.

The portable's proprietary software allows users to pass data back and forth between application packages, which are available on disk or plug-in modules known as "capsuleware." According to a company spokesman, these capsules are so precisely designed that if their labels were any thicker, the cover plate wouldn't close over them—an indication of how hard it is to fit a lot of computer in a small package.

Other modules let users add 32K of RAM or EPROM to the system; these expansion capsules have their own batteries to store data for up to a year.

Besides the built-in and applications software, the Gavilan includes the MS-DOS operating system with Basic and Pascal. The whole package weighs nine pounds (15 with an optional dot-matrix printer) and measures 2.9 by 11.4 by 11.4 inches.

What's the catch? To begin with, the price: at \$3,995, the Gavilan will have a hard time stealing customers away from Radio Shack, whose 32K Model 100 sells for under \$1,000. Still, Tandy's price doesn't seem to bother the Gavilan folks, who feel that executives can afford to pay for their portable's innovative, easy-to-use features.

Another edge for Radio Shack is that the Model 100 is on the shelves and selling today, while Gavilan doesn't expect volume shipments until later this year.

Asked what the portable's two function keys were for, a Gavilan software designer said, "We haven't really decided yet."

In one demonstration, the designer attempted to use the touch panel to scroll down a text file, only to have the lines merge together into an illegible mass. His comment was, "Gee, it shouldn't have done that." As with other Comdex vendors, it seemed Gavilan had obtained an excellent booth location before being quite ready to show the product.

A few aisles away, NEC Home Electronics launched a more direct challenge to Radio Shack, introducing the Model 100's closest competitor. In fact, the NEC PC-8200 is a near twin of the TRS-80 portable—the same firm, Kyocera Electronics of Japan, makes both machines, the U.S. version sold by Tandy as the Model 100.

The PC-8200 features the same eight-line, 40-character display and text editing and Telcom software as the 100; it does not have the 100's modem or address and schedule programs, but boasts a floppy disk expansion port and adapter for a full-size CRT display.

A 32K RAM pack can be plugged into the NEC portable, but users cannot span or address both it and internal RAM simultaneously. Finally, the NEC has 10 function keys; the 100 has eight, plus four dedicated keys (Paste, Label, Print, and Pause/Break).

When the original PC-8200 was released in Japan, some weeks before its TRS-80 brother debuted on this side of the Pacific, NEC general manager Tom Priestley said that a U.S. introduction date is "not until next year, at the earliest." At Comdex, however, NEC exhibitors said the 8200 would be on sale by the end of the summer—although the model on display still had Japanese characters on the keys. Whether the success of Tandy's portable hastened NEC's move is open to question.

Ed Juge, Radio Shack's director of computer merchandising, gave Fort Worth's side of the story in an appearance on CompuServe's software authors' special interest group. The Model 100, he said, "had been defined before NEC negotiations began," but the addition of features such as automatic dialing and log-on delayed its appearance until after the 8200's debut in Japan.

"We have an exclusive deal with the manufacturer, for the U.S.A.," Juge claimed. "He won't provide NEC with a U.S. model. If NEC chooses to import their Japanese model (maybe they'll change the Kana keycaps themselves), so be it . . ."

"I don't know their U.S. setup well, but I don't think they have significant distribution or service capability, so while I'd like to see us stay exclusive, I

doubt the competition would prove too traumatic," Juge concluded. He added a final quip: "But I gotta admit, they've got us cold in at least one feature: We don't come in your choice of four designer colors!"

Traumatic or not, one of the lessons from Comdex is that Radio Shack has seen the Model 100's success, and are beginning to follow suit. ■

Gavilan: 16 bits in a briefcase.

The NEC portable: Why does this machine look familiar?

Turn Your Color Computer into *SUPER* Computer

Color Computerists

HOT CoCo. The exciting new monthly magazine for the TRS-80 Color Computer*. It promises to transform your low-end machine into a high-resolution superstar.

HOT CoCo is the brainchild of Wayne Green, the publisher of *80 Micro*. The information in **HOT CoCo** is first rate with monthly columns and reviews that focus on valuable money-saving techniques. Time savers too! Plus problem solving articles on:

- Utilities—patching, aiding, troubleshooting
- Graphics—graphs and patterns
- Hardware—interfacing and enhancing
- Games—fun and strategy
- Programming techniques and tutorials
- Coverage of home use, business, communications and education applications

Best of all, **HOT CoCo** is written by users just like you. The material is always up-to-date and useful. Hardware, software, books... what's new... what's best... what works.

All this is yours for the affordably low subscription rate of \$24.97. With pre-payment (check or credit card), you'll receive

a 13th issue FREE! Use the attached order form, the coupon below, or call toll free **1-800-258-5473**.

Turn *your* mild-mannered machine into a *SUPER* computer. Subscribe to **HOT CoCo** today.

YES! *I want a subscription to HOT CoCo at \$24.97.*

I understand that with payment enclosed or credit card order, I will receive a FREE issue making a total of 13 issues for \$24.97.

High tech, low skills

While high-tech advocates believe that the electronics and computer age mean more

jobs for more highly skilled workers, two Stanford University researchers say it's just the opposite: The technological age will bring about fewer jobs and an overall reduction of skills.

In a new study, "The Educational Implications of High Technology," Prof. Henry Levin and research associate Russell Rumberger point out that high-tech occupations will total only 7 percent of new jobs created between 1978 and 1990. The U.S. will need 150,000 new computer programmers and 200,000 more systems analysts during this period, but 600,000 more custodians and 800,000 more fast-food and kitchen workers.

Besides creating comparatively few jobs in the future, the study says, computers and robots will send many of today's workers to the showers. Computer-aided design may make 300,000 draftspersons obsolete; office micros perform many tasks that formerly required a secretary. In addition, computers are becoming easier to operate even as they serve more complex functions.

Paradoxically, the micro-processor era may prove to be a boon for the liberal arts: "The educational implications of high technology are that a solid basic education rather than narrow vocational preparation will become most important in the future," Lev-

in and Rumberger conclude.

Schools: The micro majority

By January of this year, 53 percent of all schools in the United States had at least one microcomputer used in education. High schools led the way, with 85 percent reporting ownership, while the figure for elementary schools is 42 percent and rising.

The percentages come from a study of 2,209 public, private, and parochial elementary and secondary institutions surveyed by Johns Hopkins' Center for Social Organization of Schools. Besides analyzing hardware (40 percent of U.S. secondary schools have five or more micros, and one in 10 has machines linked in a network), the study found some interesting details of computer use.

Rather than administering drill and practice in other subjects, most computers are being used to teach computing. General computer literacy is mentioned as a regular or extensive subject by 85 percent of secondary and 64 percent of elementary teachers, while 76 and 47 percent respectively say the computers are being used for Basic programming instruction. Only 31 percent of secondary and 59 percent of elementary teachers use the micro for drill and practice.

While the computer boom isn't benefiting all schools equally—small parochial

schools and public schools in poorer districts are less likely to have micros—the benefits have been substantial.

Three of 10 teachers report that micros have produced "much more" general enthusiasm for school; 24 percent report more learning, at least by above-average students; and 18 percent say more students are working independently, without direct supervision.

Homes: Pleasure before business

While most schools now use micros for serious instruction, the machines haven't made as much progress on the home front. Only 3 to 5 percent of U.S. households have a computer, and—though an impressive one-third of home units are \$1,000-and-up desktop models rather than TV-monitor machines—game-playing is still the first use.

According to *New York Times* reporter Andrew Pollack, "A compelling use has not emerged that would make the computer an essential purchase." A Gallup survey last January revealed that 46 percent of owners reported using their computers for business homework or children's education, with 42 percent mentioning adult education. But the most popular use—admitted by 51 percent of owners—was video games.

Some applications, fre-

quently mentioned in computer showrooms, are surprisingly unpopular at home. Only 37 percent of owners use the computer to balance their checkbooks or budgets; only 27 percent operate a business from home with it. Word processing is a pastime of 18 percent, telecommunications of 14 percent, and storing recipes and counting calories attract a mere 9 and 4 percent respectively.

Different surveys, however, make different claims. Entertainment placed behind "personal management" in a poll by the consulting firm of Arthur D. Little Inc., which combined budgeting, investment analysis, word processing, and data base management in the latter category. Analyst Everett T. Meserve said, "What we're seeing in fact is that the computer in the home has a utility that is of lasting value... It says we don't have a flash in the pan."

Bert Cowlan, who directed a home software study for market researchers Frost & Sullivan, takes Gallup's rather than Little's side: "Overwhelmingly we found that very little serious use seems to be made at the home level." Other surveys also rate game-playing over business, and mention under-\$200 computer owners' frustration with the difficulty and expenses of adapting their machines to other tasks.

With those possible exceptions, though, at least micro owners are happy. Sixty-eight percent told Gallup they were "very satisfied" with their purchase and 24 percent "somewhat satisfied," and about half of those who did not own a computer expressed at least some interest in buying one.

SUPDUP 3.0¹

Duplicate SU+² in STANDARD /CMD format. No need for expensive backup disks!

- Keep a SU+ backup on your system disk — always ready when you need it!
- Create a 'bootable' SU+ disk in unprotected format!
- Enter SU+ with high memory unaltered! Pass data back and forth between SU+ and other programs. Load a high memory monitor and jump to it after SU+ loads!
- No machine language knowledge required! SUPDUP does all the work!
- Works with SU+ versions 2.2z, 2.2P, 3.1 and 3.1a!

If you own Super Utility Plus² you need SUPDUP 3.0¹!

- SUPDUP 3.0¹ is provided on disk with users manual for the Model I or III.

Draw

The Grafyx Solution[®] for your Creativity

Improved Grafyx. DRAW is a powerful graphics and text editing package which allows your imagination to create a picture or design a graphics screen with Grafyx Solution. Micro-Labs' Grafyx Solution is a plug-in, clip on board which gives you 98,304 points in a 512 x 192 matrix. That's sixteen times as many points as a standard Model III!

Ultimate Grafyx. The DRAW program contains almost 10,000 instructions and is written in machine language for ultimate speed and flexibility. By moving

the cursor with the arrow keys and entering one letter commands, you can set, clear or complement points, lines, circles, or boxes. The size of the points that you are setting can be changed at any time. You can even reverse or shift the entire screen in any direction. Any section of the screen may be saved so it can be moved or copied elsewhere. Sections of the screen can also be filled in with patterns.

Practical Grafyx. DRAW is obviously a must for generating computer art or graphic designs, but is also a necessity for anyone, no matter what his

application. Businessmen and scientist can use DRAW to add text labels or other refinements to previously generated graphs. Once the picture is centered, labeled and refined, it can be saved on disk/tape or printed on any of 20 popular printers. All of this is done with single letter commands without ever leaving the DRAW program.

The Grafyx Solution package is shipped from stock and includes the board, 44 programs, and a 54 page manual all for \$299.95. The DRAW program, twelve hi-res pictures, and manual is \$39.95. Shipping is free on pre-paid or COD orders. (Tx. res. add 5% sales tax.)

PULSE TRAIN

China: a 10-year computer gap

Since Chairman Mao's death in 1976, China has been hurrying to catch up with the West. According to the Joint Congressional Economic Committee, one of the People's Republic's top priorities is computer technology, where China is 10 years behind and will need help in

the form of imports.

A series of papers on China under the Four Modernizations reports that vice premier Fang Yi, speaking at China's National Science Conference in 1978, said that China "should have acquired a group of comparatively advanced specialists in computer science research and... built a fair-sized modern computer industry" by 1985. Two goals were mentioned: giant ultra-high-speed computers, and the popularization of micros for wider use.

The Fourth Ministry of Machine Building, which has jurisdiction over planning

and producing electronic components and computer systems, oversees at least 200 large and 500 small plants, as well as 1,500 "neighborhood" factories. However, *Electronic News* reports, China as of January 1980 had only about 1,000 computers in operation, nearly all of them foreign models and perhaps a fifth of those almost obsolete.

Both Control Data Corp., which instituted a corporate China office in 1973, and the U.S. Institute of Electrical and Electronic Engineers told the Joint Committee that "a market of great potential in fourth-generation computers

for U.S. firms could exist" in the People's Republic.

Still, the study concluded, "It is much too soon to predict the outcomes in terms of benefits obtained or the particular obstacles encountered in... negotiations. In any venture with U.S. firms, the Chinese have stated that mutual benefit, mutual cooperation, and long-term relationship must apply to any pending association." With U.S.-China relations cooled by the defection of Chinese tennis star Hu Na, it seems a major computer-export agreement is some way off. ■

Costs, kids, and correspondence

● 1982 brought the \$99.95 Timex-Sinclair 1000 and Texas Instruments' rebate; 1983 has brought a new wave of **COMPUTER PRICE REDUCTIONS**.

END

BYTES

Recently, IBM cut 15 percent from PC price tags. Xerox has knocked 21 to 26 percent off its systems, with the 820-II going from \$2,445 to \$1,795.

The slow-selling Apple III now lists for \$2,695 instead of \$3,495, and stores have discounted the Commodore 64 to \$299 (Tandy's price for a 16K Extended Basic Color Computer). As for the Timex, the paperweight of computers is now \$49.95.

● Talmis, a market survey and consulting firm, reports that VIC-20 users have the most **CHILDREN** (an average of two per household), but TI 99/4 owners have more kids under six years old.

Over a third of all computer-using households have no children, Talmis notes; while 71 percent of Atari 800 buffs have children at home, the number falls to 62 percent for Radio Shack and 57 percent for IBM.

● RCA Corp., whose Consumer Electronics division supplies Tandy with displays for TRS-80s, will market its own computer **VIDEO DISPLAYS** for OEMs. Executive vice president Roy Pollack estimates that the U.S. display market will reach \$1.6 billion by 1990. RCA's first entry will be a 13-inch, high-resolution color unit, due in the fourth quarter of this year.

● Brains before beauty: The British magazine *Micro-Scope*, printing some photos of **MISS WORLD** holding an Epson HX-20, reports that the connection goes beyond mere

publicity—Epson "will, in future years, be closely involved in the judging of the contest."

Said a company spokesman, "As a result of the Epson/Miss World tie-up, more emphasis will be placed on mental abilities (in the judging of Miss World contests), and some of the questions asked of the entrants will be of a more technological nature than heretofore."

● There are new **MAGAZINES** for every taste, from *Micro Discovery*, "The Non-Technical Magazine of Personal Computing," to the bimonthly *PC: The Technical Journal*, an advanced-level spinoff of Ziff-Davis' *PC* for IBM fans.

Modem owners can read *Plumb*, a newsletter about personal telecommunications. And there are two more magazines for video gamers: *Joystick* and *Vidiot*, *The Magazine of Video Lunacy*.

● Computer **BOOKS**, too, are booming. Doubleday & Co. has advanced \$1.3 million—reportedly the highest price ever paid for a trade paperback—to Stewart Brand, the man who brought you *The Whole Earth Catalog*. Brand's new opus? *The Whole Earth Software Catalog*.

● Least Significant Byte: The chairman of TeleCheck, a check verification service affiliated with Tymshare Inc., plans to revolutionize **BUSINESS CORRESPONDENCE**. "We will address our customers and colleagues with a capital 'Y' in 'You,'" says Robert J. Baer. "We are saying 'I respect You—that I'm in business to serve You.'"

"To continue to grow and help our subscribers serve their customers, we must be together on the same plane. That is not the implication of correspondence that uses a capital 'I' for the writer and a lowercase 'y' for the person addressed." Presumably, should Baer mention a customer in an interoffice memo, he'll refer to him as Him.

● Finally, "Fun House" columnist Richard Ramella reports that a 10-year-old girl walked up to a piece of **EQUIPMENT** in a Chino, CA Radio Shack store, grasped its sides, and yelled, "How do you play this thing?" "You don't," replied a clerk. "That's a battery tester." ■

DISK BASIC AID

DISK BASIC
MADE BETTER

Your Color Disk Basic is one of the most powerful Basics on any computer. Add Disk Basic Aid and it also becomes one of the easiest to use! The Basic Aid package will make developing and entering Basic programs a snap. Here are just SOME of the great features Basic Aid contains.

- Full Screen Editing
- Automatic Line Numbering
- 2 Key entry of Basic keywords
- Cross Reference
- Automatic Key Repeat
- User definable keys

PLUS Label support! This unique Basic Aid feature is a vast improvement in the Basic language. Label any line you want and use that label in all calls to that line. Forget about line numbers just call routines by name like this:

ON A GOTO ENTERCHECKS PAYABLES EXIT

A real time saver. And for transportability Basic Aid will convert all labels to line numbers.

These and other great features make Basic Aid a must for anyone who writes or modifies Basic programs. Basic Aid runs on 32K or 64K Disk systems. It comes with complete documentation and our new heavy duty keyboard overlay.

Disk Basic Aid \$49.95

SPECTRUM — STICK

Put the joy back into color computing with the Spectrum Stick. This heavy duty joystick gives you a true feel of control. And it comes with an extra long cable and power on/off LED.

Coming Next Month

With the games issue over, *80 Micro* returns to work in September. The month's topic is business, and applications range from a Model III program that illustrates VisiCalc's data interchange format (DIF) files to inventory control on the Model I.

There's a time distribution summary that tracks employee work by project and task categories, and a menu-driven program to record financial transactions on the II/12/16. SuperScript owners who've been struggling with non-Radio Shack printers will find a generic printer driver that fits anything with a parallel interface. Finally, Sep-

tember's Buyer's Guide looks at business software.

Programmers can pump up Basic with 14 new commands, including the ability to recover programs lost after New or Reset. There's a fast Z80 disassembler that fits into 3K, a three-to-five-line screen dump, and an INKEY\$ routine that won't lose characters no matter how fast you type.

C*Notes will have more Model 100 programs, and *80's* other departments will meet September in style. Richard Ramella's Fun House even has programs for kids who are too young to join their brothers and sisters in going back to school. ■

**INTRODUCING THE IMPROVED
LNW 80 MODEL II
... AT AN UNBELIEVABLE PRICE!**

This computer has it all! TRS-80™ Model I and CP/M® software compatibility with two operating systems; DOSPLUS 3.4 and CP/M 2.2. The LNW 80 MOD II can read and write the 5¼" disk formats of several CP/M computers including: OSBORNE, KAYPRO, XEROX 820, CP/M 86 as well as standard 8" IBM format. Standard features: 96K of RAM, parallel and serial ports, cassette and joystick ports, RGB and Composite Color interfaces, HI-RES graphics and much more! Six month warranty.

~~\$1995.~~
\$1489.

SYSTEM SPECIAL!

Amazing price on the EAGLE III Computer ... \$3499.

System includes: 10 Megabyte hard disk and one double sided floppy disk drive, 32 preprogrammed function keys for word processing, word processing (Spellbinder), financial analysis (Ultracalc), CP/M 2.2, CBASIC.

Optional Software:

Accounting Plus ~~\$2000.~~

With 48K and 2 Disk Drives

(Please Specify Model I or III)

Coming Soon for the IBM PC, Model II and others.

\$149.95

...Now Introducing
The PRODUCER, Jr.

(See Technical Comparison Chart on next page.)

Only **\$89.95**

If BASIC somehow doesn't seem so basic, and your software has been getting you nowhere, then let me introduce myself. THE PRODUCER is my name. Writing programs is my game. If you're interested in an inexpensive way to quickly and easily write professional quality custom software programs, then read on.

Have you ever wasted money on software that didn't do what you thought it would? Are you burned out on high priced, canned programs that make big claims, but don't meet your needs. Has a lack of good software made your computer an expensive gadget that doesn't do what you hoped it would? If so, I'm here with good news. With my help you can put those problems behind you.

What is THE PRODUCER?

In short, I'm a Program Generator designed to write customized software programs. If you have a need to store and retrieve information, perform calculations on your data and get displayed or printed reports, I can help you develop a program to do just that, in just about any format you can imagine. That's why I'm called a program development system. I'm a powerful and sophisticated software package, born of vast technical knowledge and professional design experience. Yet, I'm the most simple, practical, easy to use and functionally versatile program generator ever put on the market.

What can THE PRODUCER do for you?

How can I help you? Just let me count the ways.

1. I make programming easy. I'm 'user friendly.' If you can answer simple English questions and push buttons, I'll do all the hard work. Let me worry about the BASIC language required to complete your program. Describe the program you want and I'll write it for you. The process is simple. First, I produce a printed planning sheet to help you get your ideas on paper. When you've finished planning, you're ready to draw your screen right on the monitor. The Screen design and appearance is completely at your command, including graphics. You have full editorial control. Make all the changes you like, until you're satisfied. After you're thru, I'll guide you thru some simple English questions about your Screen. Based on your answers, I'll write a complete BASIC program for you.

2. I can save you 100's of hours of time. I provide real short cuts to meet your needs by going direct from your idea to a 'ready to use' customized program. I write all the BASIC code for you. I'm simple, but I'm not shallow. The only limit to my capacity is your imagination.

3. I can save you big bucks. You may never need to buy another program to store and retrieve your data. With my help, you can design your own custom programs to get your job done.

4. I can help make you more productive. Having me as your partner will be like taking a smart pill. I'll pay for myself many times over by increasing your productivity and creativity. With my custom programs serving you, your computer will be the valuable friend you hoped it would be.

5. I can help make you a real pro. Based on your ideas, I write complete stand alone programs. I write in BASIC code, but you talk in English to me. And if you're an entrepreneur, you can sell the programs you and I create. As a licensed owner of THE PRODUCER, you may do so without paying royalties.

6. I can make good programmers much better. I produce fully commented BASIC code so you can use me as a building block to write your own specialized software. I have the best screen and input module available anywhere at any price.

What do you get with THE PRODUCER?

1. Two diskettes containing THE PRODUCER program development system, and a complete disk operating system. Also included is a free sample personal management program (value \$59.95) useful to every computer owner.

2. Extensive documentation in a three ring binder, with index tabs, quick reference system, comprehensive index and sections for the novice and professional programmer.

3. Complete printed tutorial, walking through each step in THE PRODUCER process and resulting in a finalized sample program. An audio cassette tape (\$14.95 value) of the tutorial session is also provided free for a limited time.

4. A toll free technical assistance number for PRODUCER owners.

5. A free one year subscription to THE PRODUCER's quarterly newsletter containing ideas, sample programs and update information related to THE PRODUCER.

PRODUCER Generated Programs

We understand your reluctance to invest in THE PRODUCER until you know for sure it provides what we say it does. The programs below are unmodified, finished programs generated by THE PRODUCER. Our customers tell us that PRODUCER generated programs are better than many high priced programs written by human professionals. Compare these programs to any you have seen selling at a similar price. Their quality will surprise you. Buy any of these PRODUCER generated programs now and we will gladly apply the cost of that program toward the future purchase of THE PRODUCER. Or buy THE PRODUCER now and select one of the PRODUCER generated programs to be included in your order, absolutely FREE.

The PRODUCER, JR.

If you don't need all the features of The PRODUCER-- the professional program writer, and you don't want to spend \$149.95 on software, READ ON. Producer Software has the perfect solution for you.

THE PRODUCER, Jr.

A SIMPLE TO USE professional program generator And-it's only \$89.95. This self documented program generator can have anyone creating self-contained, stand alone programs in no time at all. No other program generator can provide you with ease of use, low price and quality.

FEATURES

- * screen generator allows easy definition and creation of fields
- * B-tree file lets you search, insert, delete and edit
- * reports by single restriction (no sort)
- * much more (see technical comparison chart)

The PRODUCER, Jr. comes to you complete with all the above features and its own operating system for only \$89.95. But, don't let this low price fool you--The PRODUCER, Jr. is still the most powerful program generator on the market today, with the exception of the original PRODUCER. And The PRODUCER, JR. is completely compatible to the original PRODUCER, so if you decide to upgrade at a later date you may do so for only \$75.00. So don't miss out. Order today.

For an independent product review of the PRODUCER see page 62 of March issue of 80 Micro

Always remember that computers are not creative in themselves. They need commands or programs from you or me before they can do anything.

In creating characters, you must let the characters fib about their supposed powers. Accept the fantasy when you try these programs, but don't forget reality.

Mystery Guest

First, let's find out who the mystery guest is. You get 20 guesses. Even if it seems hopeless at first, keep trying because there are some hidden clues. You won't find them even if you key in the program.

The mystery character presents 20 numbered prompts, starting with GUESS 1. Type in a name as your guess. Keep guessing to find those clues, and don't be disturbed if the character taunts you a bit.

I'd be happy to identify this person for you, but I don't know the answer. She—or he—has worn a bag over his—or her—head since arriving.

FUN HOUSE

masquerading as a magician tell which one of a deck's 52 cards you have secretly chosen? Of course not. But somehow LaMarle the Amazing blunders his way to an answer every time, if you respond correctly.

One of the secrets of creating a computer character is giving it a few faults—like you and I have—and letting it blab and blunder all it wants. LaMarle is an effective character because he is imperfect in a humorous way.

He makes wild claims, gets wrong answers, and generally puts on a foolish performance.

TURN YOUR COLOR COMPUTER ON TO THE POWER OF FLEX

NOW FROM THE WORLD'S LARGEST SUPPLIER OF SOFTWARE FOR THE FLEX OPERATING SYSTEM COMES FHL COLOR FLEX. JUST LOOK AT THESE FEATURES:

IF YOU ARE TIRED OF NO DISK SOFTWARE, THEN FHL COLOR FLEX IS THE ANSWER!

FLEX is the world's most popular operating system for the 6809 and with over 150 programs we are the largest supplier of serious software for FLEX. These programs range from word processors thru business applications to software development tools. Many Fortune 500 companies use our software. FHL Color FLEX turns your Color Computer into a powerful system more capable than systems costing several times as much.

*FLEX is a trademark of Technical Systems Consultants, Inc.

FLEX NOW ONLY ~~\$99.00~~

- NEW "Ted" Tiny Editor
- NEW "ISM" Tiny Assembler

FHL FRANK HOGG LABORATORY ✓ 262

Printers

Tandy did the right thing locking TRS-80s into parallel printers—problem is, you're supposed to use *their* parallel printers. Getting help from your dealer may be more trouble than it's worth, so ask for help from local user groups. SuperScript software compatibility may be your biggest hurdle.

C. ITOH

Prowriter

Reviewers laud the **Prowriter's** speed (120 cps), the buffer (1.5K), character sets (5 fonts) and graphics (160x144 dpi). The **Prowriter 2** has the same specs, but in a 132 column format. Because delivery is slow nationwide, the **Prowriter** has become "The Printer Worth Waiting For..."

Prowriter **\$399.88**
Prowriter 2 **\$734.88**

STAR MICRONICS

Gemini 10X/15

Gemini 10X is an improved version, with 120 cps, 120 x 144 dpi, 5 fonts (w/italics) and a 2.2K buffer. It's Epson code compatible, too. The **Gemini** comes with tractors & uses plain spool ribbons. The **Gemini 15** is the 132 column version.

Gemini 10 **\$339.88**
Gemini 15 **\$499.88**

OKIDATA

Microline Series

Microline 82As & 83As are data crunchers with 120 cps and optional dot-addressable graphics ROM. They come with both parallel & RS-232C interface (up to 1200 baud).

The **Microline 92 & 93** are text processors with 160 cps draft mode, a 40cps correspondence mode & the graphics included.

Microline 82A **\$419.88**
82A/92 Tractor **\$59.88**
Microline 83A **\$679.88**
Microline 92 **\$524.88**
w/RS-232C **\$634.88**
Microline 93 **\$884.88**
w/RS-232C **\$994.88**

DTC 380Z Letter-Quality Printer

\$1119.88 UPS DELIVERED

The **DTC-380Z** is a 30 cps letter-quality printer with true Diablo emulation. 10/12/15 cpi, sub/super scripts, underlining, graphics, 48K data buffer & 3 on-board interfaces for maximum compatibility (RS-232C or IEEE488 cost \$1139.88). Looks like the Brother HR-1, Comrex & Daisywriter, & it uses the same printwheels & ribbons. The **380Z's** documentation & packaging is superior to the Daisywriter's, as is the support. We think Daisy's cute, but she's not as efficient as the **380Z**.

We sell other dot matrix printers, including the **Anadex Series**, **Centronics Series**, the **Epson Series**, the **IDS Prism Series** & the **Mannesmann Tally 160-L**.

Letter-Quality

C. ITOH

Starwriter

The **Starwriter** uses Diablo code, wheels & ribbons, has 132 columns, a 40 cps print speed, 1/48" line space & 1/120" horizontal spacing—ideal for proportional modes. Parallel or RS-232C interfacing. (For real speed freaks, there's the **Printmaster**, at 55 cps. Same specs as above.)

Starwriter **\$1379.88**
Printmaster **\$1679.88**

SILVER REED

EXP-550

Why buy a Transtar when you can buy from the guys who make them? The Silver Reed **EXP-550** is a 16 cps, 132 column letter-quality printer with *true* Diablo emulation, making it compatible with most word processing software. It's ideal for medium duty office work. The **EXP-550** is a 12 cps version.

EXP-550 (Parallel) **\$719.88**
EXP-550 (Parallel) **\$CALL**

We sell a variety of other letter-quality printers, including the **Diablo 620 & 630**, the **NEC 3530 & 7730** Spinwriters, the **Qume Sprint 11+** & many others. Call (603) 881-9855 for technical details. To order, call (800) 343-0726.

Modems

EMTRON

Lynx

The **Lynx** is a bus-converting modem, meaning you don't need a RS-232C interface to run it. It's a 0-300 baud modem, originate/answer, that has auto dial/answer, full/half duplex & comes complete with all hardware & software. The communication's program, Emterm, is on cassette. We suggest you buy one on disk that supports all the Lynx's features (see **Microterm** below).

Lynx **\$229.88**

DC Hayes Modems

Smartmodem (300 baud) **\$219.88**
Smartmodem (1200 baud) **\$539.88**

Novation Modems

J-Cat (300 baud) **\$139.88**
SmartCat (300 baud) **\$199.88**
SmartCat (1200 baud) **\$499.88**
AutoCat (300 baud) **\$229.88**
AutoCat (1200 baud) **\$629.88**

STANDARD MICROSYSTEMS

Microterm

A terminal program should support all the "bells & whistles" on a modem, & Microterm supports auto-dial/answer modems like the Lynx, DC Hayes Smartmodem or Novation Smart/AutoCats. Features preprogrammed dial & transmit, direct file transfer, 34K capture buffer and a

certified 2400 baud operation rate. Specify Model I or Model III when ordering.
Microterm **\$79.88**

STANDARD MICROSYSTEMS

DOSPlus 3.4

The preferred disk operating system for Model I or III. Features BASIC array sort, (multi-key, multi-array), active "DO", device routing, DOS command repeat, etc. Specify Model I or III, single or double track, 40 or 80 track drive.

DOSPlus 3.4 (Mod I) **\$59.88**
DOSPlus 3.4 (Mod III) **\$89.88**

PROSOFT

NewScript

Forget all those "evaluation" articles. **NewScript** is the best word processing software available, bar none. **NewScript** gives you proportional spacing, single and double width type, subscripts, superscripts, underlining, boldface, multiple pitches, full-screen editing, global search/replace, a customized "form" letter that creates its own mailing labels—exceptional performance. **NewScript** comes with detailed documentation and support from the authors. Specify Model I or III when ordering.

NewScript **\$112.88**

NewScript Options

Script-to-NewScript File Conversion Software **\$27.88**
Proportional Module **\$46.88**

CORNUCOPIA

Electric Webster

Electric Webster is a 50,000 word dictionary that features spell checking & a "browse" feature allowing you to choose spellings or to enter your own. Fully NewScript compatible.

Electric Webster **\$134.88**

Information/Orders:

Dealers enquiries welcome

THE SELECTRIC™ INTERFACE

Daisy wheel quality without daisy wheel expense.

You need the quality print that a daisy wheel printer provides but the thought of buying one makes your wallet wilt. *The Selectric™ Interface*, a step-by-step guide to interfacing an IBM Selectric I/O Writer to your microcomputer, will give you that quality at a fraction of the price. George Young, co-author of *Microcomputing* magazine's popular "Kilobaud Classroom" series, offers a low-cost alternative to buying a daisy wheel printer.

The Selectric™ Interface includes:

- step-by-step instructions
- tips on purchasing a used Selectric™
- information on various Selectric™ models, including the 2740, 2980, and Dura 1041
- driver software for Z80, 8080, and 6502 chips
- tips on interfacing techniques

With *The Selectric Interface* and some background in electronics, you can have a high-quality, low-cost, letter-quality printer. Petals not included.

Credit card orders call TOLL-FREE 1-800-258-5473. Or mail your order with payment plus \$1.50 shipping and handling to: Wayne Green Inc. Attn: Retail Book Sales, Peterborough, NH 03458.

Send any questions or problems dealing with any area of TRS-80 microcomputing to Feedback Loop, 80 Micro, 80 Pine St., Peterborough, NH 03458.

A number of companies are offering CP/M support systems for the Model III. How do you go about obtaining CP/M public domain software, and what are the compatibility problems?

R.K.
Albany, NY

Finding public domain software of any kind is difficult. There's lots of it out there, but you don't see it advertised. Your best sources of public domain programs are user's groups, clubs, and bookstores. Another source is *Dr. Dobb's Journal* (P.O. Box E, Menlo Park, CA 94025, \$2.50). It frequently has articles on CP/M, as well as programs you can use without worrying about copyrights. If you have a CompuServe number, you can either put a request for help in their bulletin board section or join their CP/M Special Interest Group (SIG-PCS47).

CP/M compatibility problems are similar to the compatibility problems involving Basic. Different dialects require alterations to the programs. Unlike Basic, however, CP/M has been rigidly controlled by Digital Research, the company that owns CP/M. This control has considerably reduced the incompatibilities you might encounter. The only real problems lay with machine-language subroutines.

I think the question of expanding RAM in the TRS-80 deserves more attention. Many of us have kept our Model I's simply because they've been good to use and we like them, but we do get frustrated by their 48K limitation.

A firm called MicroHatch has a modification called Bigmem that replaces the 16K keyboard RAMs with 64K RAMs. They claim this allows Model I users to use 96K while using RAMs that require 20 percent less power than the old RAMs. Bigmem will also support CP/M 2.2-compatible programs.

If all this is true, every Model I owner should know about it. What do you think of it? There has to be a way to up-

Questions and answers

grade beyond 48K without bypassing ROMs or making other sacrifices.

J.M.
San Clemente, CA

The theory of all CP/M and other memory expansion units for the Model I and III computers is to replace the ROM with RAM. The Z80 can address only 64K of contiguous RAM. That's a physical limitation of the 16-bit address bus (2 to the 16th power equals 65,536 possible addresses). When you have the full 48K of RAM installed in your computer (from addresses 4000H to FFFFH), the remaining addresses (0000H to 3FFFH) are used for the ROMs and miscellaneous system RAM overhead. This means that you've used all the addresses available on the Z80 bus.

To get more RAM you have to resort to programming and hardware tricks. Simply replacing the ROM with RAM would leave you a 64K Z80 computer with no way of communicating with the outside world (remember, part of the ROM is used to tell the Z80 how to interface with the cassette tape, disk drives, video monitor, and keyboard).

The CP/M modification always includes a simple program that boots your disk drive and loads the CP/M system driver software, letting you communicate with the Z80 via the keyboard and video monitor. In effect, you've replaced the Tandy Basic ROMs with a new system in RAM that puts you in a DOS environment instead of Basic.

If you need Basic, it's loaded from the disk. Because the CP/M system

doesn't include Basic in ROM, you have more RAM available for programs and data until you load in Basic. One company, however, puts the entire CP/M system into ROM so you can switch from Basic to CP/M without having to load from a disk.

To get more than 64K of RAM in your system, you have to use a system called memory banking: You address 64K contiguous bytes of memory, but the Z80 doesn't care which bank of contiguous memory it addresses. Memory banking requires both hardware and software to switch banks of RAM into and out of the address bus. This is how Bigmem works. You normally address the 64K in your keyboard. When you want to address the 32K in your expansion interface, you turn off the upper 32K bank of memory in the keyboard and turn on the RAMs in the expansion interface. Thus, you can store data in one bank, process it, and then switch to the other bank and process its data. You can't have a program that spans both banks. If you try to do that, when the program switches banks, part of the program will no longer exist as far as the CPU is concerned.

To accomplish that type of memory banking requires a supervisor program to constantly check the program and make sure that the proper part of the program is always turned on when the Z80 goes to address it. One mistake and your program becomes hopelessly confused and you have to start over.

Memory banking can be done on a Model I or III without sacrificing ROM. In fact, you can even use memory banking for word processing and spelling programs. Just put your program in the upper 32K bank, the data in the lower 16K, and then switch the upper banks between spelling and word processing.

I'm interested in increasing the available RAM in my Model III. In reading advertisements, it appears you can get an additional 16K and also increase the display to 80 columns by 24 rows. It isn't clear, however, if these kits require CP/M to use these features. I'd like to have 64K and the larger display to use with both my DOSPLUS 3.4 VisiCalc and Scripsit programs, but I don't want

LIVE WIRES FROM THE UTILITY COMPANY!

INSTANT ASSEMBLER New Version!

The INSTANT ASSEMBLER is a powerful assembly language development system for the TRS-80, and our new version is better than ever. If you are already an assembly language programmer, its unique design will greatly increase your productivity. If you are just getting started, there is no better assembler to help you learn machine language programming. Some of its unique features are immediate assembly, which detects syntax errors as source is entered, and a compact source format that allows you to write programs nearly three times as large as other assemblers in the same amount of memory. It produces relocatable code modules that can be saved on disk or tape and linked together in memory for large or modular assemblies. It will also assemble to disk, tape, or directly to memory for immediate debugging with the built-in debugger. You can quickly switch from assembler to debugger without losing your source. The built-in debugger will step through your programs one instruction at a time, showing each disassembled instruction and its effect on the registers and memory. It can even use the symbols in your source code when stepping or disassembling. Our new version will load or save both conventional source files and its own condensed source format.

The INSTANT ASSEMBLER package includes six separate programs. The assembler itself includes the editor and built-in debugger. The LINKING LOADER is included in several versions for different memory sizes. A stand-alone version of the debugger (MICROMIND) is also included. MICROMIND can be relocated in memory and has commands to single-step, set breakpoints, display or alter registers or memory, find bytes or words, disassemble to screen or printer, convert between hex and decimal numbers, and write SYSTEM tapes. The INSTANT ASSEMBLER comes with a comprehensive 65 page instruction manual with many examples.

Specify Model I or Model III. DISK INTASM 2.1 \$49.95 on disk

INSIDE LEVEL II

The Programmers Guide to the TRS-80 ROMS

INSIDE LEVEL II is a comprehensive reference guide to the Model I and Model III ROMs which allows the machine language or Basic programmer to easily utilize the sophisticated routines they contain. Concisely explains set-ups, calling sequences, and variable passage for number conversion, arithmetic operations, and mathematical functions, as well as keyboard, tape, and video routines. Part II presents an entirely new composite program structure which loads under the SYSTEM command and executes in both Basic and machine code with the speed and efficiency of a compiler. In addition, the 18 chapters include a large body of other information useful to the programmer including tape formats, RAM usage, relocation of Basic programs, USR call expansion, creating SYSTEM tapes of your own programs, interfacing of Basic variables directly with machine code, and special precautions for disk systems. INSIDE LEVEL II was reviewed in the April 1982 issue of 80 Micro which said "The book has no flaws; it is a perfect gem." Byte Magazine said "I recommend this book to serious machine language programmers."

Includes updates for Model III. INSIDE LEVEL II \$15.95

DEMON

New Program!

DEMON (for DEbugger and MONitor) is a new and sophisticated tool with which you can explore and debug machine language programs. It has two modes of operation. In the STEP mode, it "emulates" the operation of the Z-80 and allows you to step through any machine language program one instruction at a time, showing you the address, hexadecimal value, Zilog mnemonic, register contents, and step count for each instruction. This ability is extremely useful not only in debugging your own programs, but also for examining how other people's programs work. It will even follow program flow right into the ROMs. DEMON leaves the video screen unaltered so that the program you are stepping through can perform its display functions unobstructed. STEP mode commands include step (trace), step to a branch, run in step mode at a variable rate, run for a specified number of steps, change flags or registers, execute a CALL or RST, set breakpoints in RAM or ROM, and break when a number in a defined range appears in any double register. Commands in the MONITOR mode (all of which are available from the STEP mode) include hex arithmetic, hex to decimal conversion, block move, fill memory, find bytes, jump to address, disassemble to screen or printer, load memory from disk or tape, write memory to disk or tape, full screen memory edit in hex or ASCII, and relocate other programs or itself. DEMON also includes a labelling disassembler with EDTASM format output to either disk or tape. This will generate source code from programs in memory which can then be altered and reassembled by your assembler. Screen displays may be routed to your line printer for hard copy.

Specify Model I or Model III. DEMON \$29.95 on tape or disk

DUPLICATE SYSTEM TAPES WITH CLONE

Make duplicate copies of almost any tape including Basic, SYSTEM, data lists, assembler source, or "custom loaders". The file name, load address, entry point, and every byte (in ASCII format) are displayed on the video screen. Model III version allows changing tape speed so you can make 1500 baud copies of 500 baud programs like SCRIPST.

Specify Model I or Model III. CLONE \$16.95 on tape, \$21.95 on disk

DISK INDEX VERSION 3

Our excellent disk indexing program has now been entirely rewritten in machine language. DISK INDEX will assemble a master index of your entire program library by automatically reading the program names and free space from each disk. The index may then be alphabetized or searched for any disk, program, or extension. It will alphabetize 2400 programs in less than 50 seconds and will find any program out of 2400 in less than 3 seconds. Disks or programs may be added or deleted manually, and the whole index or any selected part may be printed on paper in several different formats. The index itself may also be stored on disk for future access and update. A 48K machine will hold up to 255 disks and over 2400 programs in each index, and you may build as many indexes as you need. There is no limit to the number of filenames it can read on any one disk. It will run on either a Model I or Model III and catalog disks for either machine regardless of which one is running it, though Model I owners must have double density to catalog Model III disks. It will automatically recognize any DOS and disk density. DISK INDEX works with any operating system written for the Model I or Model III except CP/M, and is extremely fast and easy to use.

Specify Model I or Model III. DISK INDEX VERSION 3 \$29.95 on disk

TELCOM II

Our popular smart terminal program has just gotten a lot smarter. After two years of experience with TELCOM and many requests from customers, we have created TELCOM II for the most demanding telecommunications applications. TELCOM II maintains the same ease of operation and all the features of our original program (see below), and includes many enhancements. The terminal mode now has a help menu, a large spooler for simultaneous printer output at high baud rates, acknowledges receipt of all commands, and displays control characters. You can now load disk files into the memory buffer from within the terminal mode, transmit the buffer with a single command, and send files a line at a time. You can even view the buffer or data that has already scrolled off the screen. TELCOM II has 10 different 40 character programmable messages that can each be sent with a single command, and the messages can now include control codes and delays. It also has 5 different character translation tables for compatibility with different systems. One of the most substantial additions to TELCOM is a full protocol file transfer mode which is compatible with the LYNC program available on CP/M systems and the IBM PC. TELCOM II will exchange disk files with any computer running this protocol (including another TRS-80 running TELCOM II), and will automatically correct errors in transmission! Files can be sent to or fetched from an unattended computer with ZERO errors. The extreme ease of use TELCOM is known for has not been compromised. Reconfiguration of the programmable features is done internally from clear menus for fast, easy operation. TELCOM II comes with a comprehensive instruction manual which is available separately for \$5 (which will apply to subsequent purchase of the program). You won't find a smarter or easier to use terminal program at any price.

Specify Model I or Model III. TELCOM II \$69.95 on disk

TELCOM I

Our original and popular smart terminal program has most of the features needed to communicate with time share systems or for high speed file transfers between two disk-based micros over modems or direct wire. It is menu driven and extremely simple to use. Functions include terminal mode, save RAM buffer on disk, transmit a disk file, receive a disk file, examine and modify UART parameters, 8 programmable log-on messages, automatic checksum verification of accurate transmission and reception, and many more user conveniences. Supports line printers, lowercase characters, Xon/Xoff protocol, programmable character keys, and even saves itself on disk in different configurations. It will also exchange binary files without conversion to ASCII.

Specify Model I or Model III. TELCOM I \$39.95 on disk

RAM SPOOLER AND PRINT FORMATTER

This program is a full feature print formatting package featuring user definable line and page length (with line feeds inserted between words or after punctuation), indentation, screen dump, and printer pause. In addition, printing is done from a 4K expandable buffer area so that the LPRINT or LLIST command returns control to the user while printing is being done. Works with cassette or disk systems. Allows printing and processing to run concurrently. Output may be directed to either the parallel port, serial port, or the video screen. 80 Micro said "I can only give my highest recommendation of Spooler and Mumford Micro Systems."

Specify Model I or Model III. SPOOLER \$16.95 on tape, \$21.95 on disk

4 SPEEDS FOR YOUR MODEL I

The SK-2 clock modification allows CPU speeds to be switched between normal, an increase of 50%, or a 50% reduction; selectable at any time without interrupting execution or crashing the program. Instructions are also given for a 100% increase to 3.54 MHz. The SK-2 may be configured by the user to change speed with a toggle switch or on software command. It will automatically return to normal speed any time a disk is active, requires no change to the operating system, and has provisions for adding an LED to indicate when the computer is not at normal speed. It mounts inside the keyboard unit with only 4 necessary connections for the switch option (switch not included), and is easily removed if the computer ever needs service. The SK-2 comes fully assembled with socketed IC's and illustrated instructions.

Model I only. SK-2 \$24.95

FEEDBACK LOOP

to have to convert these programs to CP/M.

W.L.
Sun City, AZ

Yes, you do have to use CP/M to get the increased RAM, but not necessarily for the larger display (see the following letter for details on increased video display). To get the extra RAM, you'll have to disable the built-in ROM Basic, which also disables the I/O routines of the ROM and makes DOSPLUS virtually useless. Since both Scripsit and VisiCalc are designed to operate in a TRSDOS environment, and since CP/M is definitely not a TRSDOS environment, you'll have to scrap these two programs and buy a new word processor and VisiCalc program for the CP/M system.

I'd like to have an 80 by 24 video display on my Model I in order to communicate and execute programs. The 64 by 16 display is fine when used as a computer, but I need the larger display if I want to use it as a terminal.

Could you give me some information on the various modifications? Also, would it be worthwhile to modify my Model I, or would I be better off purchasing an inexpensive 809 by 24 terminal instead? I plan on communicating to a dual system 83 using RM/COBOL.

R.K.
Pittsburgh, PA

Holmes Engineering (3555 South 3200 West, Salt Lake City, UT 84119) has introduced an 80 by 24 display unit for the Model I, the VX-1. It works by replacing the device control block addresses for the standard video with addresses pointing to their driver. The board is enclosed in a separate box about the size of a disk drive. The board retails for \$279.95, and the enclosure, actually an expansion interface system for the Model I, sells for \$99.95.

The MF-2, as it's called, plugs into the expansion port of your expansion interface and uses its own internal 16K RAM for video mapping and control. The VX-1 includes its own bootstrap ROM routine that automatically puts itself into operation when you turn on the computer. When needed, it can be

disabled, leaving you in the standard 64 by 16 display.

Since this unit requires no modification to the Model I boards, it should be easy to install and maintain. The total cost (\$379.90 plus shipping) is cheaper than buying a dedicated terminal. However, if you can get a terminal with modem for less, I'd suggest buying the terminal instead.

I recently installed Omikron's CP/M Mapper I in my Model I disk system. I'm satisfied with the system, but now I'm interested in using CP/M software formatted for other systems without having to send it to Omikron for reformatting. Can you advise me of other alternatives?

K.J.S.
Sudbury, Ontario

This is a software problem. What you need is a machine-language program that reads formats other than your standard. As long as the other software is on 5¼-inch soft-sectored disks, you should be able to transfer the programs to your system disks. I know such programs exist, but I can't find anything specific in my references. Have you tried writing Omikron and asking if the software they use is for sale? If that fails, I suggest you try the CP/M user's group on CompuServe.

As a last resort, Hurricane Laboratories (5149 Moorpark Ave., Suite 105, San Jose, CA 95129, 408-257-8676) has a Model III program that reads Osborne, Xerox 820, Cromenco, IBM PC (single-sided), NEC PC-8000, Omikron Mapper I, and Zenith formatted disks. If you talk with them they may be able to sell you a patched program for your Model I.

I have a Model I, two-disk drive system with Radio Shack's double-density board. I bought Radio Shack's Profile (26-1562) for the Model I, and had a friend customize the hard copy to a format I wanted. Things work fine as long as I stay in single-density, but this restricts me to only 150 records per disk.

I tried using the program in double-density, but all I get is "I/O Attempt to Unopen File". I'm not a programmer, and I don't want a complicated data handling program. Help!

J.S.S.
West Chatham, MA

The problem is that Radio Shack's 2.7DD uses different disk I/O addresses than TRSDOS 2.3, and Radio Shack won't support any of their programs on the double-density board.

The only solution I know of is to switch to another DOS that does support both double-density and the Profile program. This is expensive, but it'll eliminate future problems with programs being incompatible with 2.7DD. Does anyone have a patch for Profile to make it work with 2.7DD?

I've written a program that formats track zero, sector zero in single-density, and track zero, sector one in double-density. The utility achieves this without resorting to hardware modifications, is entirely software controlled, and works with the Model III (16K RAM and one drive required minimum).

Because of the diversity of program writers, Dual Density Formatter formats only track zero. Any programmer has the means at hand to format the rest of the disk in the desired density.

DDF is easy to use. Just load DDF from its self-loading disk, format the target disk in dual density, and then copy your single-density boot loader to sector zero and your double-density boot loader to sector one.

This utility is sold by Applied 80 Software (18 Ivy Lane, Cherry Hill, NJ 08002, 609-482-6864) for \$29.95 in single units. There is a discount for quantity orders.

L.G.
Cherry Hill, NJ

Sounds good. If anyone is interested, give Applied 80 Software a call.

Regarding the object code output from EDTASM that B.B. of San Jose and A.L. of Studio City had (April 1983, p. 394), the probable cause is with the unclear instructions in the manual. Command W writes the current text buffer to tape. This isn't object code, but rather source code. It is loaded back into EDTASM with the L command.

Command A is the one that gives the object code output after assembly listing and error count. The manual states this on p. 3, but it's difficult to see and can confuse someone. I think both B.B. and A.L. confused W with A.

B.S.

FEEDBACK LOOP

After looking over their letters, I believe that you may have solved their problem.

My Model I system works reliably and I've never had any problems with my RS-232. Why? The secret is in my treatment of the connectors.

I scrupulously clean the edge connectors with a pink pencil eraser, and then with isopropyl alcohol. This is repeated until no more black oxide can be removed. I then cover the cleaned surfaces with Dow Corning High Vacuum Silicone Grease. Silicone grease has a very high dielectric constant and is quite viscous, so gaseous diffusion is very slow.

This treatment is good for about a year and a half. Before I came to this solution I had to clean the surface every two days.

D.M.
Calgary, Alberta

That's one solution about which I'd never heard.

I'm having an annoying problem with my Model I. When I use DOS I'm presented with waves of lines, roughly three to four inches apart, moving at a 45-degree angle from the lower left of my video monitor to the upper left. These appear only if the CPU is waiting for me to do something.

The problem seems to be in the expansion box, since the problem disappears if I disconnect the LNW expansion box. I didn't always have this problem; it began after I blew a fuse in the LNW box. I checked the voltages and they appear to be good. I can mask the lines by adjusting the brightness control on the monitor, but then the screen becomes too dark for me to use.

R.R.
Stacy, MN

My first thought was RFI, until you mentioned you could make the lines vanish by adjusting the brightness control. I suspect that the problem is actually a part in the LNW box that was pushed to its limit by whatever caused the fuse to blow. This part is now marginal. It works well enough to be almost impossible to find on the circuit board since all the voltages and currents will be close to their correct marks, but just

bad enough to foul up other parts in the system. That kind of problem takes a lot of work to find, and in most cases it's better to leave it alone.

If you're an accomplished technician, you could probably track the errant part down, but to pay someone to do it for you would be both ridiculous and expensive. Try sending a letter to LNW describing the problem (a photograph would be very helpful, use 1/30th speed setting). Perhaps they've run into the problem before and can tell you where to start.

My wife is a Spanish/French teacher, and she does a lot of business correspondence in Spanish. Even though they are on my Daisy Wheel II, I have been unable to find any patches for writing the Spanish/French characters from SuperScript. What can I do?

G.S.
Santa Rosa, CA

What you need to do is to set the User Printer Codes to the values needed for your Spanish/French letters, and embed them in your documents. By combining the User Printer Codes with the backspace command you should be able to get all the accent marks and special characters you need from your Daisy Wheel II printer.

I have a Model III, dual-disk system. My previous computer was a Model I cassette system. I want to convert my tape data so they can read, write, and store data on disk (e.g., Tape Mailing List by Radio Shack). Is there a simple way to do this?

J.G.
Santa Clara, CA

Converting a tape program to disk is not a task easily done by a novice. You have to change all the tape I/O commands to disk I/O commands. Even transferring the data from tape to disk is a chore. Considering the difficulties, it may be cheaper to get disk programs and retype the information.

As a last hope for J.G., does anyone have a Radio Shack Tape Mailing List program that's been converted to disk?

In response to M.H. (April 1983, p. 392), I'd like to say that I have a similar

problem with EDTASM on my 16K Model III. When inserting lines between other lines I sometimes get incorrect line numbers:

```
00100 ;THIS IS LINE 100
00110 ;THIS IS LINE 110
00120 (BREAK)
*I105
00105 ;THIS IS LINE 105
00115 (BREAK)
PH:*
00100 ;THIS IS LINE 100
00110 ;THIS IS LINE 105
00120 ;THIS IS LINE 110
```

*The EDTASM manual says this shouldn't happen, although a program similar to this one is shown on p. 10. When adding line 105 between lines 100 and 110, the lines are renumbered. The only solution I've found is to insert using *I105,1 and specify a line increment of one.*

By the way, about the letters mentioning incorrect object code output from EDTASM (I use Series I Editor/Assembler Version 1.1), I have no problem with output of assembled code.

J.G.
Dearborn Hts., MI

Regarding the letter from M.H. (April 1983, p. 392), I have the same problem with EDTASM on my Model III, as does a friend of mine. It's not that line 110 was replaced, the new line was inserted and the program renumbered.

I checked renumbering and memory, and both checked out fine. I'm going to try a new copy of EDTASM from Radio Shack in a few days. I'll let you know what happens.

J.M.L.
Eden Prairie, MN

I think we've discovered a bug in the Insert/Renumber portion of EDTASM. It's supposed to tell you if there isn't enough room for a new line between line numbers (using the default increment, of course). The only solution seems to be to specify a line increment less than the increment to the next high-end line number.

I would like to point out to W.B. (April 1983, p. 383) that his C. Itoh 8510 printer is identical to the NEC

If you are an aspiring Programmer, 18 years or younger, enter **80 Micro's** 2nd Annual Young Programmer's Contest. Your entry may be for any TRS-80. Programs will be judged on originality, documentation (more on this below), and program elegance. The age categories are 11 and under, 12 through 14, and 15 through 18. All entries will be judged by the **80 Micro** staff.

Rules

1. Final entries must be in by November 1, 1983.
2. All entries must be submitted in a 10 x 13" envelope and must include: typewritten, double-spaced documentation; a printed copy of the program listing; a magnetic disk or cassette containing the program listing, the documentation, and any figures or tables; and a completed entry blank.
3. Documentation should consist of an explanation of the program, its purpose, how to use it, and the necessary software and hardware needed to use it (including memory re-

- quirements). Good documentation also points out the interesting algorithms and program techniques used without giving a line-by-line account.
4. Entries must be original and unpublished.
5. All winning programs become the property of **80 Micro**.
6. The category in which you will be judged will be determined by your age as of November 1, 1983. You must not have turned 19 by that date.
7. You may submit as many entries as you like, however, each one must be submitted separately and must have all of the information and materials stated above.

FEEDBACK LOOP

PC-8023A printer. The C. Itoh 8510, the NEC PC-8023A, the ADS 8001, and the PMC DMP-85 are all manufactured by TEC of Japan. The major difference between all these machines is just the logo on the manual cover. Therefore the NEC driver found on p. 376 of the April issue works perfectly, and without any changes.

Where can I get the 20-pin connector used to attach the Model III logic board to the keyboard? I want a longer cable so that I can use the keyboard a short distance from the video monitor. Can I get the cable from National Parts?

*M.O.
Houston, TX*

Do you want to increase the distance between the logic board and the keyboard? Or do you want a second cable? If you want to buy a second cable, it's available from National Parts (900 E. Northside Drive, Fort Worth, TX 76102, 817-870-5662). Its serial number is #AW2539, and it costs \$11.50 plus shipping (\$1.50). Be forewarned that the cable has female connectors at each end, so you can't put two cables together to make one long cable. Also, increasing the distance between the logic board and the keyboard makes the unit susceptible to RFI and other electrical noise.

If you do want to use an extended cable, Priority One Electronics (9161 Deering Ave., Chatsworth, CA 91311-5887, 800-423-5922) has both connectors and cables, as does Jameco Electronics (1355 Shoreway Road, Belmont, CA 94002, 415-592-8097).

I'm looking for a Pascal compiler that meets either the ISO or UCSD standard agreement. This compiler must operate on a Model III.

*J.P.
Tracy, Quebec*

Any Pascal that would meet the UCSD or ISO standards wouldn't fit in the available memory of the Model III.

New Classics Software (239 Fox Hill Road, Denville, NJ 07834, 201-625-8838) sells a version of Pascal that comes close to the UCSD standard, except that Mark and Release are used instead of Dispose; it doesn't have variant records, the Width statement or

Page; it uses enhanced Read and Write instead of Get and Put; and File and Text are allowed only in variable declarations and not Type declarations. It sells for \$99.

PCD Systems (P.O. Box 143, Penn Yan, NY 14527, 315-536-7428) sells a version that meets UCSD standards, but they suggest you don't use it to develop programs since there isn't much room left for the actual program. Instead, they suggest using the run-time package on the Model III and use their Pascal on a Model II to develop programs for the Model III.

Other companies marketing Pascal programs for the TRS-80 Model III are: Alcor Systems—800 W. Garland, Suite 100, Garland, TX 75040, 214-226-4476 Barker Software—P.O. Box 5313, Athens, GA 30604

Digital Research/Languages Division—P.O. Box 579, 160 Central Ave., Pacific Grove, CA 93950, 408-649-3896 Hexagon Systems—Regent St., P.O. Box 397, Station A, Vancouver, BC., Canada V6C 2N2, 604-682-7646

Microsoft—10700 Northrup Way, Suite 200, Bellevue, WA 98004, 206-828-8080 Pickles & Trout—P.O. Box 1206, Goleta, CA 93117, 805-685-4641 Radio Shack—1300 One Tandy Center, Fort Worth, TX 76102, 817-390-3011 Ticom Systems Inc.—13470 Washington Blvd., Marina Del Rey, CA 90291, 415-829-7550

I have an MT-32 Microtek expansion interface with 32K RAM. Lately it's been locking up when I load or try to create a large program. I tried new RAM chips without success. When I tried setting memory size below the expansion interface memory locations, everything is fine. What's wrong?

*T.W.
Waukesha, WI*

It's not the memory that's at fault, it's the cable connecting the expansion interface to the keyboard. Remove the cable, rub the contacts on both the keyboard and expansion interface with a pink eraser, and then wash the contacts with isopropyl alcohol (use cotton swabs). This should give you a more reliable system. If the problem returns or persists, you may have to use Gold-

Plugs, or Silver-It to cure the problem (see previous columns for more on this subject).

I have several friends with different computers. Their computers are able to generate new characters. Is it possible to do the same on the Model I? If not, can I put in a new character generator? Where can I get a better memory map for my computer?

*D.J.
Cleveland, TN*

No, you can't generate Model III special characters on the Model I. Yes, you can replace the character generator of the Model I, but I don't know of any company presently selling such chips for the Model I, except to provide an upper/lowercase display on home modified Model I's.

If you're looking for a very detailed memory map, get *MicroSoft Basic Decoded & Other Mysteries* by IJG (1953 West 11th St., Upland, CA 91786). It sells for \$29.95, but is well worth the price.

After installing the Gold-Plug 80 connectors on my Model I keyboard, expansion interface, and disk-drive port, I experienced the same problems as those described by V.C., R.Z., and L.W. in your March and February 1983 columns.

The problems disappeared when I shortened the buffered expansion interface cable by removing one inch on the expansion interface side. Apparently, the additional length of the Gold-Plug 80 connectors was enough to cause memory problems. I suspect that V.C., R.Z., and L.W. are having problems with their expansion interface cable.

*R.M.
Honolulu, HI*

That's interesting. I didn't think the Gold-Plugs added enough to make a difference.

How do you connect a Signalman Mark I modem to a Radio Shack Model I with the RS expansion interface and RS-232 board? The modem and the RS cable both terminate in male DB25 plugs. I tried making a short double female cable, but nothing happened. I tried the COMM and TERM positions

GET AN EAR-FULL

Teach yourself music theory. Become an expert at identifying melodic intervals. Everything you need is in **Music Teacher**, a two-part educational program.

Music Theory—Learn staff and bar lines, treble and bass clefs, the grand staff, time signatures, rests, notes, and major scales.

Ear Trainer—Improve your listening skills. Teach yourself to identify musical intervals by hearing them as often as you like. You'll never find a more patient teacher.

Become a musical expert with **Music Teacher**. Ideal for teachers and students.

FEEDBACK LOOP

on the RS-232 board switch without success.

D.M.
Red Bank, TN

First check and make sure the RS-232, board is operational. Short pins 2 and 3 together. Whatever you type in, your terminal program should be echoed to the screen. If it doesn't, the board is making poor contact with the expansion interface. Loosen the screws and fiddle with the board until you get a response.

Second, check the cable you made with a volt/ohmmeter to make sure that all the connections are good and that you don't have any pins accidentally connected together.

Third, check the manuals for the RS-232 board and the Signalman modem to make sure they are using the same pins for the same purpose.

After all that, you should get a response and be ready to go.

I recently upgraded the expansion in-

terface on my Model I from 16K to 32K, but when I Print Mem my total was 38340, which is wrong for a 48K machine. I tried two different sources for the 16K chips, with the same results.

E.C.
Norfolk, VA

You might not have a hardware problem, but rather a misunderstanding. Do you get the 38340 from Level II Basic or from Disk Basic? If you're in Disk Basic, the missing RAM is the DOS and Disk Basic (the DOS and Disk Basic take up almost 10K). The 38340 sounds awfully familiar to me. I vaguely remember that as being the memory size from TRSDOS Basic with a 48K machine.

If you get that response from Level II Basic, take the unit to the repair center. There's nothing you can do unless you have access to an electronics shop and a troubleshooting manual for the Model I.

I typed in the printer driver for the

NEC PC-8023A-C printer with Super-Script (April 1983, p. 376). It works fine on my C. Itoh Prowriter 8510, but I can't get a document to double-space just by specifying double-spacing in the open document options. Neither do the super/subscript features work correctly. Not knowing much about Assembly language, I decided to use a few user-defined print codes to do the job.

To double-space, use 27 84 52 56. These codes set the line pitch to 48/144 of an inch. Note that simply using 27 84 48 won't work, as the printer is expecting 2 bytes in ASCII code to describe the pitch.

To superscript, use:

```
27 91
27 84 49 50 27 114 10
27 84 49 52 27 102 10 27 65
27 93
```

I recommend using each line as a separate print code. The first sets the printer to incremental print. The second sets line pitch to 12/144 of an inch, sets reverse line feed on, and sends one line feed. The third sets line pitch at 14/144 of an inch, sets forward line feed on,

TriSoft has CP/M-68K for the TRS-80 Model 16

And It's Available Today!

TriSoft introduces the CP/M-68K operating system for the Radio Shack Model-16 and Model-II Enhanced computers. This addition to the CP/M family adds the speed and power of the 16/32 bit MC68000 under CP/M-68K while maintaining compatibility with the vast library of CP/M 2.2 software.

- Runs in conjunction with CP/M 2.2
- Easy context switching between 2.2 and 68K
- Z80 acts as I/O slave under CP/M-68K
- 68000 assembler provided
- Industry standard C compiler provided
- Requires CP/M 2.2

TriSoft CP/M-68K	\$395.

- TRS-80 Model 16 and Model II™ Radio Shack/Tandy
- 68000™ Motorola
- Z80™ Zilog

sends a line feed, and resets pitch to normal 1/6 of an inch. Finally, the last line sets the logic seek mode back on. Line 2 has 2/144 of an inch more line feed because the printer doesn't return to the same place it started from if it's given 12/144 of an inch both times. I recommend using four print codes for the same reason. If you're going to be doing several jumps, it's best to set the printer to incremental mode, do the superscripts and subscripts, and then return to logic seek mode.

Subscribing is done in a similar fashion:

27 91
27 84 49 50 10
27 84 49 52 27 114 10 27 65 27 102
27 93

Note that it's important to be in incremental mode; if you aren't, the printer ignores the entire command. If you're doing this from Basic you'll notice you get a carriage return along with the CHR\$(10) if you aren't in incremental mode. Very irritating.

G.J.
Indianapolis, IN

Thanks for the information.

Can you tell me where I can buy the CP/M conversion for a Model II?

Also, can you provide the name or address of any company that copies large numbers of disks for small-time people who want to sell their programs? I'm also looking for Pascal on the Model II.

E.V.
Baltimore, MD

Got your pencil ready? These are companies with CP/M for the Model II: Aton International—260 Brooklyn Ave., San Jose, CA 95128, 408-554-9922

Cybernetics—8041 Newman Ave., Suite 208, Huntington Beach, CA 92647, 714-848-1922

FMG Corporation—5280 Trail Lake Drive, P.O. Box 16020, Fort Worth, TX 76133, 817-294-2510

Omikron—1127 Heart St., Berkeley, CA 94702, 415-845-8013

Parasitic Engineering—1101 Ninth Ave., Oakland, CA 94606, 415-839-2636

Pickles & Trout—P.O. Box 1206, Goleta, CA 93117, 805-685-4641

Now for the Model II Pascal companies:

Alcor—(see previous letter this

column)
Digital Research/Language Division—(ibid)

FMG Corporation—(see CP/M listing above)

Hexagon Systems—(see previous listing this column)

Microsoft—(ibid)

Radio Shack—(ibid)

Ticom Systems Inc.—(ibid)

For your second request, I don't have the name of any company that manufactures second-party disk programs, although I do know of one that reproduces tape programs in lots of 100. Are there any companies interested in assisting E.V.?

I have a Model III, two-disk-drive system with LP VIII. The computer, cassette recorder, and printer are all connected to a power strip. When I turn it on the printer's print head moves first to the right margin, and then to the left margin. As the computer comes on, the printer prints an E. Is there any way to prevent this?

After a few minutes there is a soft, but annoying, hum from inside the computer. It sounds like a power transformer. Is it the sign of an impending disaster? I live in Europe and we have a 220V, 50Hz power supply. I'd like also to know what will be involved, when I return to the U.S., in changing my computer from 220V to 110V operation.

P.B.
Zurich, Switzerland

The E is the result of a control code sent by the Model III to the printer port on power up. The easiest solution is to leave your printer off until you need it.

The hum develops because the power supply transformer windings are loose (probably due to age) and vibrating with the 50Hz line supply. Nothing is wrong, and no damage will result. If you can put up with the hum, it doesn't need to be replaced.

Switching the power supply is simple, but expensive: Tandy just removes the two 220V power supplies and puts in new 110V units. There are no trade-ins on the 220V units, so you end up paying \$77.80 for each new power supply, plus \$30 installation. Total cost is \$185.60. ■

Terry Kepner is a free-lance writer and programmer, and the vice president of Interpro. He's been writing about microcomputers since 1979.

What's After Basic?

If you ever wished that you had a better programming language, PASCAL 80 may be the language you dream about. It is a compiled language, faster, more accurate and easier to modify than Basic. Yet it is so easy to use that you can forget the hassles and diskette spinning of other compiled languages, including other versions of Pascal.

Now you can create your own command files that execute from DOS without having to load a language into the computer first, but do it with far less work than machine language. You can sell your compiled programs without any royalty payments!

Although designed for teaching and ideal for that purpose, PASCAL 80 also allows serious applications with a full fourteen digits of accuracy, even on log and trig functions!

PASCAL 80 allows you to create files on the TRS-80® Model I, Model III, LNW-80, PMC-80, or LOBO MAX-80 that will run on any of the other machines under TRS-DOS®, LDOS, NewDOS, NewDOS 80, DBL-DOS or DOS Plus.

with Orders postmarked by August 30, 1983.

PASCAL 80 is used in dozens of High Schools, Colleges, and Technical Schools, and has been favorably reviewed in Byte, Creative Computing, and other magazines.

You get all of this at a bargain price of only \$99 plus \$2 shipping. If you call and order by MasterCard or VISA, we will even credit you \$1 for the phone call. Call or send your check today!

TAKE II

This column features Model II, 12, and 16 conversions of earlier programs. Readers who have converted programs for their own use are encouraged to submit them.

CRAM, a program by Hardin Brothers, appeared in the August 1982 issue of 80 Micro. It was short and nicely annotated—a clear candidate for rewriting.

The game is diabolically clever; push any key to make the

moving line turn right. The game is over when the line runs into itself or a border. Your score is the number of right turns you are able to make.

While your tendency is to tap out a steady pattern on the keyboard, that strategy leads to a quick finish with few points. A steadily accelerating pace appears to be required, but be careful, the horizontal and vertical rates of motion are not quite the same.

Since the command IF POINT(I,J) is not available in Model II Basic, a few counters remember the increasingly smaller physical bounds of the playing space. A small delay compensates for the vertical movement that otherwise would be too fast with the 4.0 MHz clock. Without the delay, the program differs only in the screen size.

A young child who practiced for hours and an older person who spent a long lunch hour hold the highest scores—both obtained scores of 24. I'll bet you can't play just one game. ■

Rick Johnson is an analyst for Advanced Technology Inc. and can be reached at P.O. Box 41238, Indianapolis, IN 46241.

Program Listing

ARE YOU TIRED OF HEADACHES AND WATERY EYES FROM STARING AT YOUR TRS-80'S HARSH WHITE VIDEO DISPLAY?

Well, a **FATIGUE FIGHTER** optical filter changes that display to a nice, easy on the eyes, green. It is made of hard 1/8 inch thick acrylic for durability, attaches in seconds without tools, and matches TRS-80® styling. So, invest in some relief, get a **FATIGUE FIGHTER** for your Model I, II, or III. It will probably be one of the most used accessories you will ever buy.

P.S. Available direct from us or at computer stores.

Newscript + Mailing Labels 114.95

THE HOME ACCOUNTANT

The #1 best selling program for home and small business accounting is now available for TRS-80 Model 3. Handles up to 99 accounts, five checkbooks, multiple income accounts, and can split transactions to any number of accounts. Prints net worth statements, income statements, as well as custom designed reports. Displays a bar chart and trend for any selected category. It is easy to use and yet provides all the power you'll need. (By Continental Software, requires Model 3, 2 drives, 48K.)

\$62.95

TALLYMASTER

Designed to help those running a business or household. It is easier to learn than most spreadsheet programs and includes complete documentation and an on-line HELP command. Handles up to 702 expense or income categories. (By Prosoft, requires 48K, 1 disk drive)

\$64.95

T80-FS1 FLIGHT SIMULATOR

The realism of "out-the-window" flight is yours with this challenging simulation by SubLOGIC. It is written in machine language and is capable of a 3 to 6 frame per second display. Flight characteristics are similar to the Piper Super Club. Outperforms other simulators costing over \$100,000.

Model 1 or 3 Tape Version — **\$22.50**
Model 1 or 3 Enhanced Disk — **\$29.50**

Maxi CRAS

A Check Register Accounting System featuring up to 223 accounts with no limit to the number of transactions. Prints statements showing activity in one or more accounts, check registers, income and expense subtotals, and an account distribution statement. If you have been disappointed with other money managers, it's time to get the best. Requires 2 drives & 48K. List \$99.95.

\$79.95

OMNITERM

The best "smart" terminal package available for the Model I/III. It's menu driven and includes a text editor, four conversion utilities, and setting files to access all of the popular data bases such as CompuServ, the Source, Dow Jones, etc. User defined keys and automatic reformatting of data to the size of your screen are only two of many extra features. List \$95.00

BUY A BANANA.™ SAVE A BUNCH.

Meet the Banana,™ the very tough, versatile, portable, and reliable dot-matrix printer from Gorilla.™

At \$249.95 retail it's an ideal and inexpensive companion for personal computers like Apple® (or Apple "look alikes" such as Franklin® or Albert®), TI®, Commodore®, TRS-80®, Kaypro®, Timex®, Osborne®, etc.

After that, it's merely comparable to other printers that can cost up to three times as much: 10" carriages (to handle standard 9½" paper), 80 columns, graphics capability, 10 characters per inch (expandable to 5 cpi) draft-quality print (for perfectly acceptable form letters, data processing,

business reports, etc.) tractor feed (for precise alignment and quick loading), parallel or serial interface (take your pick), self-inking ribbon cassette (for long life and easy installation), 10 portable pounds in weight, and compatibility with so many of the most popular personal computers on the market.

Plus its printhead features a unique single-hammer design that eliminates a lot of moving parts, to eliminate a lot of annoying repairs.

That's the Banana: silly name, serious service. It's everything the expensive dot-matrix printers are . . .

Except expensive.

Leading Edge Products, Inc., 225 Turnpike Street, Canton, Massachusetts 02021
Toll-free: 1-800-343-6833; In Massachusetts (617) 828-8150. Telex 951-624.

READER SERVICE

This card valid until September 30, 1983.

Please help us to bring you a better magazine—by answering these questions.

My vote for the best advertisement in this issue goes to _____ (company) whose Reader Service number is _____

- A. How much have you invested in computer software during the last 12 months?**
 1. Nothing 3. \$100-\$250 5. \$500-\$1,000
 2. Less than \$100 4. \$250-\$500 6. Over \$1,000
- B. How do you acquire most of your software?**
 1. From software houses 4. Program it myself
 2. From magazines 5. Copy it
 3. From friends and other programmers
- C. Where do you buy most of your computer hardware?**
 1. Radio Shack store 4. Mail order
 2. Other computer/electronics store 5. Used equipment dealer
 3. Department store 6. Private individual
- D. What type of TRS-80(s) do you own?**
 1. Model I Level I 4. Model III Level I 7. Model 12
 2. Model I Level II 5. Model III Level II 8. Color
 3. Model II 6. Model 16 9. Pocket
- E. How much have you invested in computer hardware (including peripherals) during the last 12 months?**
 1. Nothing 4. \$2,000-\$3,000 6. \$4,000-\$5,000
 2. Under \$1,000 5. \$3,000-\$4,000 7. Over \$5,000
 3. \$1,000-\$2,000
- F. How much do you plan to spend on computer hardware (including peripherals) during the next 12 months?**
 1. Nothing 4. \$2,000-\$3,000 6. \$4,000-\$5,000
 2. Under \$1,000 5. \$3,000-\$4,000 7. Over \$5,000
 3. \$1,000-\$2,000
- G. Which of the following peripherals do you plan to buy during the next 12 months?**
 1. Printer 6. Voice Synthesizer
 2. Modem 7. Disk System
 3. Plotter 8. Expansion Interface
 4. Joystick/Game Peddles 9. Monitor
 5. Light Pen
- H. Do you ever write Assembly-language programs?**
 1. Yes
 2. No
- I. Do you invest in the stock market?**
 1. Yes
 2. No
- J. The articles in 80 Micro are**
 1. Too simple 2. Too complex 3. Just right
- L. Which of the following columns do you read? Please rate them on a scale of 1 (seldom read) to 5 (always read).**
 1. Remarks 5. Copernica Mathematics 9. The Color Key
 2. Commander 80 6. MONEY DOS 10. The Next Step
 3. The Gamer's Cafe 7. Fun House 11. Suite 16
 4. News 8. Feedback Loop 12. Medical Opinion

We'd never have gotten into this jam if Max hadn't stopped for fried okra in Marietta. We were heading south on Route 80, planning to bypass Atlanta and stop in Macon. That is, until Max spotted the neon sign.

"Bar-B-Que! Fried okra!"

Next thing you know, we'd crossed the median, dodged a line of Georgia traffic, and headed back the other way. Econolines are not meant to jump medians. I thought we'd had it. I could tell Mercedes did too; she made a syntax error in the program she was writing.

While Max traded our extra copy of Dig Out for three orders of okra and four barbecue sandwiches to go, Mercedes and I decided to set up the Cafe in Atlanta after all: spread some gamers' good will, soak up that Southern hospitality, and keep Max off the highways for a while.

The plan was good, but my sense of direction was bad. I proceeded to circle the city on I-95 until sundown, muttering, "How do you get off this beltway?" while the others lost themselves in lunch ("This isn't bad," Mercedes said. "It's sort of like zucchini") and the mail.

Modesty is the true sign of a serious gamer, and Scott McClure, the "Expert High Score Demolisher" of Winter Park, FL (he bellowed, "I HAVE SPOKEN" in May), has been rebuked by several readers. Some thought his letter a joke or deplored his boasting; Jim Dossey of Ocala, FL was more businesslike—"I think he brags too much, so I beat his Bounceoids score (3,059,800 to 2,028,450)."

But even Jim's score must bow to Chas Weiss (Cleveland, OH), who had the game reset on him at 8,879,950 points with 135 men left. There's a remarkable silence from Winter Park.

Speaking of high scores ("Do we ever speak of anything else?" Mercedes muttered), we're considering dropping some entries from the board. Steven C. Ohliger II of Cincinnati may be innocent—he says, "I guess I found out the secret of the game Armored Patrol"—but his score of 1,000,000 makes us think he's stumbled into the "garage," as A.P. experts call it.

80 Micro revealed this invulnerable shelter in August 1982 (p. 21), and it seems the trick could make score claims meaningless. Steve Kolokowsky

Take that, Scott McClure

of Spring Valley, NY, even topped 500,000 just by leaving the game on all night.

Patrick Kellogg (White Bear Lake, MN) writes with other suspect games: "If you load in Super Nova in double-spaced (CHR\$(23)) letters, you can play the game while your ship disappears. You can play forever doing this.

"Liberator will contort itself at 400,000 points, where the player can walk through walls, barrels, anything. And if you get blown up while bombing the base in Penetrator, you can fly underground. . . . Hasn't anyone else found these programming errors?"

We may drop these games from the Much-Too-Big Board (as the editors in Peterborough call it). Meanwhile, Patrick adds, "How about the secret message in Asylum, the 'dividing line' in Eliminator, or the way to get 10,000 free points in Demon Attack? But that's for you to find out."

Finally, there's someone with no name, no address, and no spelling: "My name is Doctor Damage. That's all you'll ever now." We'll print scores without photos, but only from real people.

Max had been looking at the prism-and-glass cityscape and mumbling "Rhett Butler. . . here?" and Mercedes had fallen asleep by the time I veered off the beltway somewhere on the outskirts of town. The first thing we saw was a sign for a place called the Limelight.

"A bar?" Max asked, looking at me.

"Drinks? Beer? Pretzels?" I murmured, looking at him.

"Months on the road sharing milk shakes with an 11-year-old," he growled. "I've had it." So we locked Mercedes in the van and rushed for the entrance.

Once inside, Max and I just stood on the balcony taking it all in: the lights flashing in the cavernous black interior; the frenetic dancers amidst the Lucite; New Wave music, decibels beyond our Radio Shack Minisette.

It was there, beers in hand, that we came to the awful realization: We couldn't think of anything to think or talk about but the Cafe. The dancers reminded Max of Apple Panic, and the lights made me think of readers' answers to our call for screen photo tips.

Michael Peters, district technical representative for Business Imaging Systems, sent advice from Eastman Kodak: "Adding light from a flash or other source only serves to overpower the light produced from the monitor. Try photographing the screen with little or no room light and no flash.

"For best results, use a shutter speed slower than 1/60 of a second to permit a complete scan. Faster speeds will cause a diagonal band to appear on the screen, obliterating information."

Kurt Plowman (Harrisonburg, VA) recommends an even slower speed—1/30, sometimes 1/15 or 1/8—since the monitor is displaying 30 frames per second. Carl Mann (Newburyport, NH) adds that 400 ASA color film works nicely; set the f-stop or aperture after you set the shutter speed.

Inexpensive models with fixed focus and aperture, Carl says, just can't use the screen's light, though an SX-70 or other instant camera with an automatic shutter might do the job.

Conversation was dragging again when Max suddenly spilled his beer. "Mercedes!"

"What?" I followed his shaking finger and saw someone cutting across the dance floor. "Here?"

"No," Max said hopefully. "Could be anyone."

"With dyed hair, leather flight jacket, tap shoes, and a Model 100 slung on her hip from a guitar strap?" I moaned. "It's her all right."

Max was so unnerved at seeing her that he jumped off the balcony and landed below on all fours. He won the dance contest. I took the stairs.

We caught up with her just as she was describing audio spectrum analyzers and sound frequencies to a member of the stage crew. "Oh, hi, guys. This is a neat place. Did you know the Tubes use a Color Computer to synchronize their light display?"

At that moment a security guard arrived, shouting something about jumping off the balcony and being underage. He made us wait backstage while he called Mercedes' dad in Baltimore.

"Twenty years to life," I muttered. "This is going to put us behind schedule on the one-line games contest."

"I think I'll write an adventure and enter the contest myself," Max said. "Win a subscription to *80 Micro* for the Harlan County Jail."

He grabbed a napkin and started scribbling:

```
10 CLS:PRINT"WELCOME TO...";
:FORX = 1TO800:NEXT:PRINT"ESCAPE
FROM DOOM!";FORY = 1TO2STEP0:"FORX
= 1TO800:NEXTX:CLS:INPUT"You are in a
room with 3 doors marked 1, 2, & 3. Which do you
want";A:IFA = 1CLS:PRINT"Wow! You've
escaped!"ELSECLS:PRINT"Sorry, try
again!":NEXTY
```

Mercedes was not impressed: "Geez, that's even duller than the guess-the-random-number games."

"There's a line here that's too long for the screen," I added. "Could you put in a carriage return?"

"No way," Max said. "I had to go into Edit mode to get the last few characters in."

"And that was after I showed him

how to use question marks for PRINT," Mercedes muttered.

"Miss Silver?" the guard yelled. "Your father wants to talk to you." Mercedes winced and scurried off to the phone. She returned, walking very fast—"Dad told them we were harmless; let's get out of here"—and we made, as the saying goes, a bolt for the door.

So we're back on the road—Mercedes' dad apparently wants us to take her straight to Baltimore, but she says the Epcot Center and Disney World are very educational—and the contest's on schedule after all.

If you think you can do better than Max (either adventure or arcade, as long as it fits in 255 bytes of Model I/III/4 Basic), send those games, post-marked by August 1. We're going to publish a bunch of runners-up as well as the lucky subscription winner.

And Max says he's working on a tip sheet for *Escape from Doom*. ■

* Armored Patrol and several other games are on Cafe probation. See next month's Big Board for the verdict.

** Solo record: 2,423,850 (Michael Titus, Horseheads, NY).

+ Level 6.

+ + Expert mode: 339,080 (David Smith, Kingwood, TX).

Gamer's Cafe readers are invited to submit their high scores, for these and other TRS-80 games. We'll print unvalidated scores, but validated ones (a photo of the screen) will, of course, rank higher in prestige.

For everyone who's tried
to top the MX-80, bad news.
We just did.

Epson.

97

The Epson MX-80 is the best-selling dot matrix impact printer in the world. It has been since its introduction. And despite the host of imitators it spawned, no one has been able to top it. Until now.

FX-80: Son of a legend.

The new Epson FX-80 is far more than just doo-dads added on to last year's model. It's the most astonishing collection of features ever assembled in a personal printer.

For starters, it's fast: 160 CPS. And clean. All the print quality Epson is famous for in a tack-sharp 9x9 matrix.

But that hardly scratches the surface.

Create your own alphabet.

With the new FX-80, you aren't limited to ASCII characters. You can create your own. Any character or symbol that can be defined in a 9x11 matrix can be added to the FX-80's already impressive library of type styles and stored in its integral 2K RAM.

So you can create "Sally's Gothic" or "Tom's Roman" just by downloading and modifying standard characters. Or you can create a custom set from scratch. Either way, you can store up to 256 new characters. And if you don't need a new alphabet, the RAM functions as a 2K data input buffer.

Who knows graphics better than Epson?

Nobody, that's who. And if you don't believe it, witness the FX-80.

With a 12K ROM capacity, the FX-80 gives you a few things the others don't. For example, not one, not two, but *seven* different dot addressable graphic modes are program

selectable. And can be mixed in the same print line. Everything from 72 DPI (dots-per-inch) Plotter Graphics to the 640 dots per line resolution designed to match the remarkable monitor clarity of the Epson QX-10 personal computer.

And *that* is in addition to an astonishing array of 136 different user-selectable type styles including Proportional, Elite and Italic as well as the more conventional faces you get on other printers.

Hard-to-beat hardware.

The FX-80 has all the hardware features you've come to know and love on the MX Series: logic seeking, bidirectional printing, the by-now-famous disposable printhead, and more.

The FX-80 features an adjustable pin platen or optional friction/tractor feed, so you can use fanfold, roll or sheet paper ... backwards or forwards. The FX-80 even gives you reverse paper feed.

And if you're printing forms, the FX-80 has a feature you're gonna love: a function that allows you to tear off the paper within one inch of the last print position.

Be the first on your block.

We'd be willing to bet that the FX-80 — like the MX-80 — will have its share of imitators. Don't be fooled. To make sure you get the genuine article, rush down to your local computer store right now and let them show you everything the FX-80 can do.

And while you're there ... ask them to show you how it works with our computers.

A variety of problems in science, engineering, mathematics, and statistics lead to eigenvalues. The determination of frequencies in freely oscillating mechanical or electrical systems, or critical frequencies for rotating shafts, lead to eigenvalue problems. The solutions of many partial differential equations also lead to eigenvalue problems. Determining the principal components of regression matrices (a type of statistical analysis called factor analysis) and determining the relationship between two groups of correlations (called canonical correlation) lead to eigenvalue problems.

An eigenvalue is also known as a characteristic value. In equation 1, A is a square n by n matrix, λ is a scalar (real number), and X is an n by 1 vector:

$$AX = \lambda X \quad \text{Equation 1}$$

The values of λ that make equation 1 true for matrix A are called the *eigenvalues*. The vectors X that make the equation true for some λ are called *eigenvectors*. Together, an eigenvalue and its corresponding eigenvector are called an *eigenpair*.

In principle, the λ 's are easy to find. If you evaluate the determinant in equation 2, you obtain the nth-order polynomial. The I in equation 2 is the nth-order identity matrix. The roots of this polynomial are the eigenvalues. The polynomial arrived at is the *characteristic equation*.

$$\det(\lambda I - A) = 0 \quad \text{Equation 2}$$

Determination and solution of the characteristic equation is one of the least practical methods for solving eigenvalue problems, however. First, expanding the determinant of a 20 by 20 matrix requires 10^{18} arithmetic operations. Since errors add up, the coefficients for the characteristic equation may be totally meaningless by the time the expansion is complete. Add to this the round-off error due to numerical solutions of the polynomials, and you have a pretty bad mess.

The most popular method for determining the largest eigenvalue is the *power method*. Assume that the square matrix A has n eigenvalues, one of which is larger than the others, and that A has n linearly independent eigenvec-

Eigenvalues and eigenvectors

tors $U_1 \dots U_n$ (linearly independent means that no eigenvector is produced

by the combination of the other eigenvectors).

Any vector in the n-dimensional space can be represented by a weighted sum of the various eigenvectors. For an arbitrary vector X_0 ,

$$X_0 = a_1 U_1 + a_2 U_2 + \dots + a_n U_n \quad \text{Equation 3}$$

If you let:

$$X_1 = A X_0 = A (a_1 U_1 + a_2 U_2 + \dots + a_n U_n) \quad \text{Equation 4}$$

$$= a_1 A U_1 + a_2 A U_2 + \dots + a_n A U_n \quad \text{Equation 5}$$

Since all the U_i 's are eigenvectors of A, then

$$A U_i = \lambda_i U_i$$

This is true for all $i = 1$ to n, so the substitution in equation 5 produces:

```

Program Listing 1

If You Do A Lot Of Editing Of Your BASIC Programs, Then This Is The Editor For You!!!

The Full Screen Text Editor for BASIC, we were the first to give the TRS-80 this indispensable ability. What ability? The ability to edit your BASIC program with the ease of word processing. It is a type of word processor specifically designed to handle BASIC programs instead of letters and documents.

■ The capability to change, insert and delete a character or characters:

Simply position the cursor over the character that you wish to change and type in the new one. Another handy feature is Insert Mode, this is used to add text in the middle of a program line.

■ Extend a line or insert new lines:

Extending a line is as simple as two keystrokes, instantly the cursor jumps to the end of the program line and the editor is placed in the insert mode.

■ Delete, copy or move statements:

All you have to do is mark the line or block of lines and then tell the editor where to move or copy them.

■ Global Search and/or change any specified string:

Have you ever needed to change a lot of PRINT statements to LPRINTs?

■ Macro key facility:

Macro keys can cut your programming time in half. You can define each of the 26 letter keys (A-Z) to represent BASIC keywords, or any letter or number combination up to 6 characters per key.

■ Renumber commands:

Whats so special about this renumber facility? Not only can it renumber selected portions of your program, it also checks all GOTO, GOSUB, THEN and ELSE statements and updates them as needed!

You may have seen other Editor programs advertized that give you one, maybe two of these features. You may have also seen some of these features sold as separate utility programs.

Only CAU offers a complete editing system, not just a word processor patched up to handle line numbers.

You can order the BASIC Editor directly from Computer Applications Unlimited or ask your local computer store.

only \$29.95

The Editor is supplied on tape with complete instructions to move it to disk. If you wish us to send the editor on disk please add \$5.00 and ask for a DISK DUMP.

Add \$2.00 for shipping in the U.S. and Canada, \$10.00 outside USA

N.Y. State Residents add applicable Sales Tax. Dealer Inquiries Invited.

```

Listing 2 continues

$$X_i = a_i \lambda_i U_i + a_2 \lambda_2 U_2 + \dots + a_n \lambda_n U_n \quad \text{Equation 6}$$

We can define X_1 .

$$X_1 = A X_0 = a_1 \lambda_1 U_1 + \dots + a_n \lambda_n U_n$$

or

$$X_2 = A X_1 = A^2 X_0 \quad \text{Equation 7}$$

We can define a sequence of these X_i 's as $X_i = A X_{i-1}$. Therefore,

$$X_k = a_1 \lambda_1^k U_1 + \dots + a_n \lambda_n^k U_n \quad \text{Equation 8}$$

We can factor out λ_1^k , leaving

$$X_k = \lambda_1^k (a_1 U_1 + a_2 (\lambda_2/\lambda_1)^k U_2 + \dots + a_n (\lambda_n/\lambda_1)^k U_n) \quad \text{Equation 9}$$

Since λ_1 is larger than the rest of the eigenvalues (we assumed we had a largest eigenvalue at the start), then as k approaches infinity all the ratios of (λ_k/λ_1) will approach zero.

Therefore, for a sufficiently large k :

$$X_k \approx \lambda_1^k a_1 U_1 \quad \text{Equation 10}$$

or

$$X_{k+1} = \lambda_1 X_k \quad \text{Equation 11}$$

This is a convergent sequence of numbers. As k gets larger, the accuracy of equation 10 increases, since the other terms get closer to zero.

This approach, formalized into an algorithm, is called the power method. Since you want to find λ_1 (and because division by a vector doesn't make any sense), you need to produce the dot product of both sides of equation 11 and solve for λ_1 :

$$\lambda_1 = (V \cdot X_{k+1}) / (V \cdot X_k) \quad \text{Equation 12}$$

There are several options for our choice for the vector V , as long as we don't let V be all zeros. A common choice is $V = X_k$. This makes equation 12:

$$\lambda_1 = (X_k \cdot X_{k+1}) / (X_k \cdot X_k) \quad \text{Equation 13}$$

By the definition of the eigenvalue problem, the X_k 's converge to the eigenvector corresponding to the eigenvalue computed. There is a problem, however.

Listing 2 continued

```

```

gle-precision numbers is exceeded (about 1 E 38). An underflow occurs when the number represented falls between the smallest number greater than zero that the computer can represent in single-precision format and zero, and it is represented as zero. To avoid this problem, we will scale the eigenvector during each iteration by dividing all elements of the eigenvector by the largest element. Numbers are thus not allowed to grow significantly larger than zero during each iteration.

If we let m_i be the scaling factor for the i th iteration, we see the algorithm producing:

$$A X_i = m_i X_i \quad \lambda_i = m_i (X_i \cdot X_i) / (X_i \cdot X_i)$$

$$A X_{i+1} = m_{i+1} X_{i+1} \quad \lambda_{i+1} = m_{i+1} (X_{i+1} \cdot X_{i+1}) / (X_{i+1} \cdot X_{i+1})$$

Program Listing 1 (Power) performs this algorithm to find the largest eigenvalue of a square matrix. It assumes the eigenvalue is real and not complex. If the matrix is symmetric, the power method converges twice as fast as for a nonsymmetric matrix. A well-known theorem of linear algebra also assures us

Since these equations compute powers of λ and the eigenvector X , they run the risk of under- or overflow. An overflow occurs when the range of sin-

Listing 3 continues

that if the matrix is symmetric, all the eigenvalues are real.

The program asks for the size of the matrix. This is equal to the number of the rows or columns of the matrix. A starting estimate for the eigenvector is also requested. You might type 1 (enter) 0 (enter) . . . 0 (enter), for example. The program then computes the dominant eigenvalue and its corresponding eigenvector.

Consider the matrix A:

$$\begin{vmatrix} 5 & -2 \\ -2 & 2 \end{vmatrix}$$

Enter this 2 by 2 symmetric matrix by rows. Row 1 is 5 and -2. Row 2 is -2 and 2. The true result is $\lambda = 6$ and $X = [1 \ -5]$.

Power uses the DEF FN capability of Disk Basic. FN MAX(A,B) returns the value of the greater (in absolute terms) of its two arguments. FN MAX(-10,9) returns -10; FN MAX(3,4) returns 4.00. FN DNE(A,B) returns a logical True (-1) if the absolute value of the difference between them is less than 0.00001, the convergence criterion. You can set your own convergence criterion in the program or request it from the user, as you see fit. These functions are simply inserted within the program lines or called as subroutines for Level II users without Disk Basic.

Try Power with the sample problem and see how quickly it converges! Program Listing 2 is the same program written in Pascal. I tested it with Alcor Pascal, but it should run on any standard Pascal implementation, since no special features are used. Note that in Pascal the size of the arrays must be declared since Pascal does not support dynamic array dimensioning.

Well, that's an easy way to find the largest eigenvalue and eigenvector. As it turns out, the initial assumptions are a bit too strict. The largest eigenvalue can be repeated (there can be two largest eigenvalues) and the eigenvectors do not necessarily have to span the vector space for the power method to converge. For some problems, all you need is the largest eigenvalue and its eigenvector.

For other problems, however, you must know most or all of the eigenvalues, eigenvectors, or both. Other methods have been developed to solve this problem. I will discuss two: deflation technique and the inverse power method.

ASSEMBLY LANGUAGE PROGRAMMERS!

Edit Your Programs With Instant Software's
Advanced Debuggers!

Solve your programming problems from ASSEM to ZSIM!

ASSEM, the 3-pass editor/assembler:

- **USES** little RAM
- **PROVIDES** a powerful line editor
- **CORRESPONDS** with any parallel port printer
- **EXECUTES** without modification on 16, 32 or 48K systems, with 1-4 disk drives

ZSIM, the machine code simulator/debugger:

- **EMULATES** instructions using simulated registers
- **ASSEMBLES** directly to disk, tape or memory
- **TRACES** program execution through ROM to debug larger, more complicated programs with speed and accuracy.

The most advanced debugging system!

TRS-80* Model I only, Disk, 32K #0365RD \$119.97

Debug larger, more complicated programs with this simulating, labeling debugger! Any debugger will enhance the usefulness of your assembler, but only ZSIM can make your programming tasks easier! **ZSIM**:

- **RUNS** machine code instructions one-at-a-time at your bidding
- **EMULATES** the instruction using simulated registers
- **INTERRUPTS** the simulations whenever any one of a large number of user-specified conditions are met
- **DISPLAYS** mnemonics for each instruction, using convenient labels
- **LISTS** register contents and corresponding memory locations

ZSIM works on ROM as well as RAM since you don't need breakpoints to retain execution control (although breakpoint operation is also available). This is the best tool available to examine your code in **DETAIL!!**

Take a closer look at your assembly code!

TRS → IBM FILE TRANSFER PROGRAM

Transfer your TRS Model I, II, III, or 16 files to the IBM Personal Computer.

- No more retyping
- No more wasted time
- Fast transfer - baud rates of 110-9600
- File concatenation supported
- Send files of any length
- Make \$\$\$ - the IBM PC is new and software is scarce - take your "new" IBM programs and sell them for \$\$\$.
- Transfer **any** file - ASCII, embedded control codes, compressed binary formats, encrypted data bases, high level language programs (Basic, Fortran, Cobol, Pascal, etc), electronic spread-sheet data, word processor files - it **all** gets transferred - nothing is added - nothing is lost!

The File Transfer Program comes complete with all instructions, hardware and software (for both TRS and IBM).

FILE TRANSFER PROGRAM diskette
(Works with IBM DOS 1.1 or 2.0)

SLICK PAGES? NO! GREAT DEALS? YES!

Computer Shopper pages aren't slick because they were designed for one purpose: to put buyers in touch with sellers at the lowest possible cost. This resulted in bargains on new and used equipment and software. Individuals nationwide are able to list their pre-owned items for only a few dollars. This created hundreds of classified ads in over 100 big 11x14 pages. And to make sure there were enough buyers for advertisers, the subscription price was set low, too! So strike your first deal by taking advantage of this special trial subscription offer: today! 6 months, \$6 or 12 months, \$10. Money back guarantee. MasterCard and VISA accepted.

CONQUER YOUR MOUNTAIN OF BUSINESS PAPERWORK

Because it's there. And it'll be there until you have Easy Calc, Business Analysis and Master Plot... three essential additions to the modern professional's survival gear. Why spend endless hours forecasting, calculating and graph-plotting when Instant Software's business programs can do it for you? At a fraction of the time. And at a fraction of what you'd expect to pay.

MASTER PLOT

Get your point across graphically with this professional graph-plotting and printing package.

- Enter graph data from keyboard equations or from your BASIC programs.
- Plot up to 10 sets of data on the same graph.
- Create your own plotting symbols.
- Choose any number of horizontal and vertical lines.
- Select your own number of interpolated points between your data points.
- Print graphs any size from 1 x 1 to 7 x 24 inches.

Plus much more! Make your charts and graphs the easy way... with Master Plot.

Requires: TRS-80* Model I only
48K Disk Epson**MX-80
printer with Graphtrax
#0435RD \$149.95

BUSINESS ANALYSIS

Get forecasting capabilities previously available only on large computers. This flexible, professional time series analysis and forecasting package lets you:

- Forecast and analyze sales.
- Perform product and business planning.
- Analyze stock, trends and growth rates.
- Research business cycles.
- Forecast spending and energy consumption.

Plus much more! Analyze and forecast like a pro with Business Analysis.

Requires: TRS-80 Model I and III 32K
Tape #0140R \$75.00
Disk #0152RD \$99.95

EASY CALC

Turn your TRS-80 into an electronic spreadsheet!

- Write numeric data into simple rows and columns on your screen.
- Add, subtract, multiply, divide or exponentiate single values or rows and columns.
- Calculate percentages and summations of rows or columns.
- Enter and save entire series of calculations.
- Handles up to 600 figures.

Written for non-computerists. Easy to understand instructions. Easy to use.

Requires: TRS-80 Disk 48K
Model I: #0269RD \$49.95
Model III: #0369RD \$49.95

next most dominant eigenvalue.

Producing the eigenvectors is a little more difficult. The power method applied to matrix B produces an eigenvalue λ_2 and corresponding eigenvector V. Because V has only $n - 1$ elements, put a zero in the first position, so that it has a total of n elements. However, V is not, in general, an eigenvector of A; it is a linear combination of the most dominant eigenvector and the next most dominant eigenvector. In fact, we can show that

$$U_2 = U_1 + tV$$

where

$$t = (\lambda_1 - \lambda_2) / (a_{11} \cdot V)$$

(U_1 and U_2 are the most dominant and next most dominant eigenvectors).

If you compute a third submatrix, C, then the power method produces λ_3 (an eigenvalue of A) and V (a linear combination of U_1 , U_2 , and U_3). You can iteratively proceed until you've determined all eigenvalues and vectors. The Basic code in Program Listing 3 does this, as does the Pascal in Program Listing 4.

The eigenvectors are computed along with the eigenvalues, as in the straight power method. However, to come up with an eigenvector to the original matrix, you must recursively compute the eigenvectors by determining the vector corresponding to the current eigenvector of the next smallest submatrix that is an eigenvector of the next largest submatrix, until you are back to your original matrix. Easier to compute than to say!

Using the deflation programs, you can compute the eigenvalues and their corresponding eigenvectors from real matrices. If the eigenvalues are complex, the programs have a lot of trouble. But if they are all real, as is the case with a symmetric matrix, the program finds reasonable answers.

For example, run the deflation program for the following matrix:

$$\begin{pmatrix} 5 & 4 & 3 & 2 & 1 \\ 4 & 6 & 0 & 4 & 3 \\ 3 & 0 & 7 & 6 & 5 \\ 2 & 4 & 6 & 8 & 7 \\ 1 & 3 & 5 & 7 & 9 \end{pmatrix}$$

Fig. 2. Computed Eigenpairs from 5x5 matrix

Continued from p. 334

all zeros. After a little algebra, if λ is an eigenvalue of the smaller $(n-1)$ by $(n-1)$ submatrix B, then it is also an

eigenvalue of A, the original matrix. B is a deflated matrix to which you can now apply the power method to find the

The actual answers are in Fig. 1. The first row holds the eigenvalues in the order they are computed, from largest

to smallest. The column vectors below each eigenvalue are the corresponding eigenvectors.

Figure 2 shows the results returned from the deflation program. The eigenvectors produced by the deflation programs are scaled with respect to the first element. Let's "unscale" them, and compare the computed results with the actual results (see Fig. 3).

Figure 4 shows the error associated with the computed eigenvalues and eigenvectors. The eigenvectors tend to be more accurate the earlier they are computed. The same is also true for the eigenvectors, but the eigenvalues are normally more accurate than the eigenvectors. (I determined the error by subtracting the computed values from the actual values.)

For larger matrices, the deflation method is limited by accumulated round-off error. Since numerical error occurs during deflation, each deflation matrix is in error. This means the coefficients of the deflated matrix are slightly inaccurate.

The next deflated matrix includes

local error produced by deflation, and the error associated with the previous deflation step. This is called accumulated round-off error. It means there is an upper limit on the number of deflations you can do and still come up with a reasonable answer. Certainly, the 10th eigenvalue is suspect. The error accumulates at different rates depending on the nature of the matrix. If the matrix is ill-conditioned, error accumulates more rapidly.

One way out of this mess is to use the deflation method to obtain initial estimates of the eigenvalues and eigenvectors, and then apply the *inverse power method* to get better estimates of the true answers.

The inverse power method works just like the power method. You might recall that the power method finds the largest eigenvalue and its corresponding eigenvector. It is easy to prove that the smallest eigenvalue of a given matrix is the reciprocal of the matrix's largest inverse. After inverting the matrix, you can find the smallest eigenvalue of the original matrix by applying the power

method to it.

With a little trickery, you can use the inverse power method to find any eigenvalue of the original matrix, provided that you have a decent estimate of it (here's where the deflation method comes in).

Let α be the estimate for the i th eigenvalue (it needn't be either the largest or the smallest). Then, if λ is the true value of the eigenvalue in question, $\alpha - \lambda$ should be small. Since the inverse power method finds the smallest eigenvalue of the original matrix (or the largest of its inverse), then $1/(\alpha - \lambda)$ is the largest eigenvalue of the inverse. Thus, applying the power method to the inverse of the matrix shifted by α zeros in on the eigenvalue desired. Rather than invert the matrix A , you would invert the matrix $(A - \alpha I)$, where I is the identity matrix. The matrix $A - \alpha I$ is the matrix A in which the diagonal elements ($A(1,1)$, $A(2,2)$, etc.) all have α subtracted. Then you can invert this matrix, and apply the power method to get a better approximation of the eigenvalue. ■

CONVERT YOUR TRS-80 MODEL-I OR III INTO A DEVELOPMENT SYSTEM

Now you can develop Z-80 based, stand-alone devices such as games, robots, instruments and peripheral controllers, by using your TRS-80 as a development system. The DEVELOPMATE plugs into the expansion connector of your TRS-80 and adds **PROM PROGRAMMING** and **IN-CIRCUIT-EMULATION** capabilities to your system (with or without expansion interface).

Complete instructions and sample schematics are included to help you design your own simple stand-alone microcomputer systems. THESE SYSTEMS CAN BE AS SIMPLE AS FOUR ICs: one TTL circuit for clock and reset, a Z-80, an EPROM, and one peripheral interface chip.

When the In-Circuit-Emulation cable is plugged into the Z-80 socket of your stand-alone system, the system becomes a part of your TRS-80: You can use the full power of your editor/assembler's debug and trace program to check out both the hardware and the software. Simple test loops can be used to check out the hardware, then the system program can be run to debug the logic of your stand-alone device.

Since the program is kept in TRS-80 RAM, changes can be made quickly and easily. When your stand-alone device works as desired, you use the Developmate's PROM PROGRAMMER to copy the program into a PROM. With this PROM, and a Z-80 in place of the emulation cable, your stand-alone device will work by itself.

The DEVELOPMATE is extremely compact: Both the PROM programmer and the In-Circuit-Emulator are in one small plastic box only 3.2" x 5.4" A line-plug mounted power supply is included. The PROM programmer has a "personality module" which defines the voltages and connections of the PROM so that future devices can be accommodated. However, the system comes with a "universal" personality module which handles 2758, 2508 (8K), 2716, 2516 (16K), 2532 (32K), as well as the new electrically alterable 2816 and 48016 (16K EEPROMs)

- The COMPLETE DEVELOPMATE 81, for Model I, with software, power supply, emulation cable, TRS-80 cable, and "universal" personality module \$329
- DEVELOPMATE 83, Model III version, same as above \$329
- PM2 PERSONALITY MODULE for 2732A EPROM \$15
- PM3 PERSONALITY MODULE for 2764 EPROM \$15

Meet the bugbears

The bugbears of Load 80 are Assembly-language programs. You shouldn't be intimidated by them, though—it's easy to run a program labelled /SRC.

To run an Assembly-language program, you must own an editor/assembler. Editor/assemblers are supplied on disk or on tape; buy one that runs on your model TRS-80. If you never use disks, a tape editor/assembler is what you want. If you always use disks, get a disk editor/assembler. If you usually use disks but buy Load 80 on a cassette, you need a disk editor/assembler that supports tape I/O.

Load 80 Cassette: Cassette Editor/Assembler

Following the directions in your editor/assembler manual, load the editor/assembler.

Use your ears to find the beginning of the program you wish to load.

Enter the Load command—it should be some variation of L file <enter>. Your editor/assembler manual has the correct syntax.

Play the Load 80 cassette. A good load displays flashing stars in the upper right corner of the screen.

Check the listing. Most editor/assemblers use the command P#:* to PEEK at the buffer from beginning (#) to end (*). Check your editor/assembler's manual for proper syntax. The listing should scroll across the screen.

Assemble the listing using the A command. At the Ready Cassette prompt, place a blank cassette in your tape recorder, set it to record, and press the

enter key. The computer then writes the assembled code to your tape.

Use the tape of the assembled code as a system tape. (See your computer manual if you have questions about how to do this.) Read the 80 Micro article accompanying the Load 80 program to find out more about the program.

Load 80 Cassette: Radio Shack Disk Editor/Assembler

Boot the Editor/Assembler disk. The Editor/Assembler manual's appendix has a section on the TPSRC utility. Read it.

Use your ears to find the beginning of the program you wish to enter.

At the DOS prompt, type TPSRC and press enter. The tape source-code utility is engaged. It offers two options; you wish to engage option 1—read a source tape.

Play the Load 80 cassette. The file name appears at the lower left corner of the screen. When the tape is finished, the TPSRC utility automatically saves the program to disk and creates a new file on your disk named file/SRC.

Use the A command to assemble the listing. This creates a file on your disk

named file/CMD. This file runs from the DOS prompt just like any other command file.

Read the 80 Micro article to find out more about the program.

Please note: The Radio Shack Disk Editor/Assembler runs Load 80 Cassette source code.

Load 80 Cassette: Disk Editor/Assembler (Not Radio Shack)

Read your editor/assembler manual

August 1983 Load 80 Directory

to find out how its tape source code utility works. Follow the directions.

Then follow the instructions above for the Radio Shack Disk Editor/Assembler.

Load 80 Disk: Disk Editor/Assembler (Not Radio Shack)

Place your editor/assembler disk in one drive and your Load 80 disk in another. Load your editor/assembler. (See your editor/assembler's manual if you're uncertain about this procedure.)

Use the L (Load) command to load the selected source code program into the editor/assembler.

Use the P command to check the listing you've just loaded. Most editor/assemblers use P#:* to PEEK at the buffer from beginning (#) to end (*).

“Read the 80 Micro article to find out more about the program.”

Assemble the listing by using the A command. This will create a new file on your disk named *file/CMD*.

The assembled program runs from the disk operating system (DOS) prompt according to the author's instructions in *80 Micro*.

Load 80 Disk: Radio Shack Disk Editor/Assembler

To run Load 80 disk source code programs with a Radio Shack Editor/Assembler, use a conversion program. (We published one in *Reload 80*, April 1983, p. 404. It is available on the Load 80 tape or disk, or you can type it in from the listing.)

The Load 80-to-Radio Shack (L80TORS/BAS) program is in Basic and allows single-drive conversions. Run it as you run any Basic program and convert your selected source-code program.

Place your Editor/Assembler disk in one drive and the disk with the selected source-code program in the other.

Follow the directions given above to run a Load 80 disk source-code program with a disk Editor/Assembler.

Please note: You must convert Load 80 disk source-code programs to Radio Shack format to assemble with a Radio Shack disk Editor/Assembler. ■

COMPLETE MODEL III HARD DRIVE SYSTEM \$1295.

THIS IS NO JOKE. We have a large quantity contract to bring you the highest quality system at the lowest price available. The combination of Tandon Hard Drives and Western Digital's error checking and correcting drive controller board create the backbone of the Hard Drive Specialist System. The balance of the interfacing is by (the) oldest engineering teams in the Model III/ Hard Drive business. Unlike other hard drive companies, we rate a hard drive AFTER format (a 15 Meg drive is actually 19.1 MB before format). These units are fully assembled and tested ready to plug into your computer, all that you need to add is software. Power required 105-130 volts AC 60hz

Dimensions 8-1/4"x6-1/2"x13" (just a little bigger than two regular disk drives)

200-Megabyte Bank

The Bank, Corvus Systems' new microcomputer mass memory device, stores up to 200 megabytes of data on a removable tape cartridge. The unit costs \$2,195, and is available for delivery in September.

Computers perceive The Bank as a Winchester disk drive, which it resembles in size and price. However, it stores data on a continuous loop of 100-track magnetic tape enclosed in a 5½-inch-square cartridge.

Three cartridge sizes are planned—60 Mb, 100 Mb, and 200 Mb, the last with a capacity equivalent to 400 single-sided, double-density floppy disks. The Bank is random-access; individual files are addressed and loaded either onto a disk or into the computer itself.

According to Corvus, the unit will be most popular in network applications, particularly those which require very large amounts of on-line data without exceptional speed. The 200 Mb cartridge takes an average of 10 seconds to find data, then transfers it at up to 60K per second.

The Bank locates files in the order they appear on the tape, not in the order of requests; with a number of users (up to 64 on Corvus' Omninet system) simultaneously accessing files, the continuously looping tape produces access times nearly as fast as a busy Winchester.

Information is available from Corvus Systems Inc., 2029 O'Toole Ave., San Jose, CA 95131, 408-946-7700.

A Safe Outlet

Four 15-amp, 125 V ac multiple outlet strips are

available from SGL Waber Electric. The strips feature an on/off switch and circuit breaker protection, and are designed to detect dangerous ground fault currents caused by moisture, improper or faulty connections, or worn insulation.

Each strip sells for \$63.40 (four outlets and a 6-foot cord), \$66.70 (four outlets and a 15-foot cord), \$70.45 (eight outlets and a 6-foot cord), and \$73.80 (eight outlets and a 15-foot cord). They are available from SGL Waber Electric, 300 Harvard Ave., Westville, NJ 08093, 609-456-5400.

Reader Service ✓550

New Dot-Matrix Printers

Japan Digital Laboratory (JDL) exports two dot-matrix printers to the U.S. market. Both feature 180- by 180-dot graphics resolution, condensed and expanded characters, and a bidirectional print head. Both printers have an Intel 8085 chip for Centronics parallel and RS-232C serial ports.

The JDL P200 (\$2,149) uses automatic cassette sheet feed; its 16- by 24-dot (single-

pass) matrix prints at 70 cps in elite format, 58 cps in pica format. The friction-feed JDL P700 (\$2,099) also offers a 145 cps data processing mode.

For more information, contact Pacific Technology Services, 332 Pine St., San Francisco, CA 94104, 415-956-3926.

Reader Service ✓567

Five More Tracks

Model I owners who use TRSDOS 2.3 with 40-track drives are wasting 12K of space per disk—the storage difference between 35 and 40 tracks. CVT3540 is software that formats the additional tracks and patches TRSDOS 2.3 to recognize and use the extra capacity.

The operating system continues to work with 35-track disks, and no files are disturbed in formatting tracks 35 through 39. The utility checks the system code to prevent incorrectly patching a nonstandard DOS.

CVT3540 is supplied on cassette for unprotected transfer to disk. It costs \$17.50 from Mysoft Computer Software, P.O. Box 417, Arroyo Grande, CA

93420, 805-481-3992.

Reader Service ✓559

II/12/16 Disassembler

Disassem is a Z80A program that disassembles Model II program files, converting the binary code to Assembly source code. Output takes place through the screen, printer, and/or a source file.

The hold key starts and stops the display scroll. The F1 key orders a printout. Descriptive error messages help trace mistakes.

The program requires 15K of memory. It includes patches for TRSDOS 2.0a that let you disassemble any Radio Shack program file and view the entire memory while using the Debug monitor. With Tandy's Thinline utility, it can be converted to TRSDOS 2.0b for the Models 12 and 16.

Disassem costs \$49.99 from K & S Associates, 202 Park Ave., Bloomfield, CT 06002, 203-243-3321.

Reader Service ✓576

Logic Analyzer

The OmniLogic LA-1680 works with a 48K Model I or III to provide features normally found in logic analyzers costing \$10,000 or more. Its interactive menus and help routines make complex digital analysis easy.

The LA-1680 can collect 1,000 data samples on each of 16 channels. In addition to triggering modes, such as And/Or/Not on data or glitch (with trigger point located anywhere in its 1,000-word sample memory) the unit features triggering modes like absence of repetitive event and delay by event or time (from 1 microsecond to 30 seconds). The system uses internal or external clocks as fast as 20 MHz; both clock and trigger out-

Corvus Bank

DOES STRING COMPRESSION HAVE YOU TIED UP IN KNOTS?

LET TRASHMAN CLEAN UP THE MESS!

THIS PROGRAM IS A MUST FOR EVERYONE WHO USES "BASIC" ON A TRS-80. Why? Because it can reduce BASIC's string compression time delays by 95% or more.

WHAT'S STRING COMPRESSION?

When a BASIC program changes a string (words, names, descriptions), it moves it to a new place in memory, and leaves a hole in the old place. Eventually, all available memory gets used up and BASIC has to push the strings together to free up some space. This takes time. Lots of time. The computer stops running for seconds or minutes, and you may even think it's "crashed".

Yes! String compression is what's been causing all those intolerable delays. The keyboard won't work, and until all the strings have been collected, you just have to sit and wait. Then things run for a while, until string compression is needed again. And again.

If you're using your computer for business, that wastes your money. If you're using it personally, it wastes your time.

WHAT'S THE SOLUTION?

As soon as you start using TRASHMAN, those delays will almost disappear. The program is very easy to use, so you don't have to be a computer programmer to take advantage of it. It's written in "machine language" and uses only 578 bytes of memory for itself, plus two bytes for each "string" in your program. It works with other machine language programs and all the major operating systems.

HOW WELL DOES IT WORK?

If you use it with a BASIC program that has only a few strings, very little time is wasted in string compression, and TRASHMAN will be only slightly helpful. But, in programs that use hundreds or thousands of strings, including large string arrays, TRASHMAN is just what you need. If you have any remaining doubts, just look at the chart, and then get yourself a copy as fast as possible.

TRASHMAN is available on disk for just \$39.95.

ATTENTION SOFTWARE PUBLISHERS:

Trashman may be licensed for use with your packages. Call for details.

# STRINGS	SECONDS DELAY NORMAL	SECONDS DELAY TRASHMAN	PERCENT IMPROVEMENT
250	11.8	0.7	94
500	45.8	1.6	96.5
1000	179.6	3.5	98
2000	713.2	7.8	98.9

(All timings done on TRS Model I. Model III 15% faster, but pct. improvements identical. Listing of timing program available on request.)

SAVE TIME WITH FASTER

"FASTER" speeds up most TRS-80 BASIC programs by 20-50%. It's helped hundreds of satisfied people and it can help you. Detailed instructions make it easy to use. FASTER analyses your BASIC programs while they run, then displays a simple change, usually one line, that sequences program variables so the ROM will find them faster.

You can use FASTER to speed up programs you've bought, as well as programs of your own. Since it isn't a compiler, your BASIC programs can be read and changed afterwards. FASTER works on business programs, models, and games. The more complex your program, the better the results.

Does FASTER really work? Yes! Just check the reviews in *Personal Computing*, May, 1981, p. 116: "FASTER is effective and easy to use"; *80 U.S. Journal*, April, 1982, p. 106: "I recommend FASTER to everyone"; and *80 MICRO* (April, 1982, p. 40): "If you...would like a significant increase in the run-time speed, then buy FASTER."

FASTER runs on the TRS-80 Models I and III. 16-48K tape or disk, and all major operating systems. **\$29.95**

"QUICK COMPRESS" takes only 276 bytes of memory, and removes the blanks and remarks from even the largest BASIC program in less than 3 seconds. It produces smaller, faster programs without altering their logic. **\$19.95**

SPECIAL: FASTER and QUICK COMPRESS: \$39.95

ERRATIC DISK DRIVES?

You can avoid unnecessary disk errors and repair bills by using RPM. This easy-to-use program measures the rotational speed and fluctuations of your disk drives, and warns you if they are running too fast, too slow, or unevenly.

Incorrect or erratic speed is a common cause of unexplained disk errors and loss of data. RPM's documentation explains how to detect and correct these problems quickly and easily. As *80 MICRO* (April, 1982, page 41) said: "If your drives have problems I recommend RPM before paying to get it repaired."

RPM is supplied on diskette for the TRS-80 Models I and III. We suggest you order a copy before you need it.

LA-1680 Logic Analyzer

puts can be qualified.

After collection, data is analyzed via several innovative displays ranging from standard timing diagrams to eight-channel maps and histograms. Signature analysis is a newly popular method of digital testing; the LA-1680 derives the hexadecimal signature of 14 test points simultaneously.

All test parameters, data, and time and date can be stored on TRSDOS disk, and all channels can be relabeled for convenience. All displays can be printed.

The unit costs \$1,250 from OmniLogic Inc., P.O. Box 87, Renton, WA 98057, 206-271-2000. A Model I/III demo disk of LA-1680 displays is \$5.

Custom Screen Utility

Scrnwrtr is a Model I/III utility that lets you design specially formatted screens for use in Basic programs. Once a screen is designed, pressing the enter key saves it to disk; subroutines are included for later recall.

The design process uses a floating, nondestructive cursor controlled by arrow keys. A corner display constantly shows the cursor's numerical location, and the shift and arrow keys move lines of text.

The program costs \$19.95 from K & L Software, P.O.

Box 39093, Northbridge Station, Charleston, SC 29407, 803-552-9990.

Reader Service ✓554

Graphics for LNW

The Chart-Ex program lets LNW80 computers plot high-resolution bar, line, and pie charts on the screen and print them on an Epson MX-70, -80, or -100 printer with Grafrax.

Data is entered from the keyboard or users' VisiCalc or other files. Chart-Ex plots up to three variables, and offers eight printer output selections.

Chart-Ex costs \$89.95 plus \$2.25 postage (California residents add 6.5 percent sales tax). It is available from Erb Computer Systems, 10840

Hunter Ave., Whittier, CA 90601, 213-699-6684.

Office Dot-Matrix

The Mannesmann Tally MT 1800 is a multifunction printer designed for small business systems with large print runs. Besides offering letter-quality printing at 50 cps and draft work at 200 cps, it operates at a low 52 decibels.

Two letter-quality fonts are included, with additional fonts available in kit form. A graphics option provides three different dot densities and tone gradations from gray to solid black.

A quick-tear assembly allows individual fanfold forms to be removed without

wasting the next form. Automatic front feed controls the printing and formatting of pre-cut forms, and a bottom feed accommodates adhesive labels or heavy paper stocks.

The MI 1800 sells for \$1,995 from Mannesmann Tally, 8301 South 180th, Kent, WA 98032, 206-251-5524.

Reader Service ✓560

Touch Me in the Morning

WattsOut is a 2- by 3-inch anti-static device that attaches to your micro's keyboard and a ground. The words "Touch Me" are prominently displayed on its surface; follow its suggestion before using the keyboard, and charges that could cause data errors and circuit damage are harmlessly drawn away.

According to the manufacturer, WattsOut's \$9.95 price makes it a bargain compared to anti-static mats and sprays. It is available from WattsOut Inc., 2020 S. Oneida #201, Denver, CO 80224, 303-759-3880.

\$560 Ink-jet Printer

Ink-jet technology, usually reserved for large and expensive printers, is now available in a 12-pound, 15- by 10½- by 4½-inch package costing \$560.

The Docutel/Olivetti PR2300 uses a single-jet printing head to direct carbon particles onto standard paper in a 7- by 7-dot matrix. The paper is sensitized with electric impulses in the form of the desired character or graphics pattern; it attracts and permanently affixes carbon particles to the paper. The process is similar to that used in dry-paper copying machines.

The unit prints all 96 ASCII characters, with seven other symbol or foreign-language sets software selectable. It operates at up to 110 cps at 10, 12, or 15 pitch, with six or eight lines per inch. Normal, compressed, double height, double width, and bold printing are available, as is single or double underlining. Graphics are supported at 110 horizontal and 216 vertical points per inch.

The printer uses a standard Centronics or RS-232C interface. It is sold by Docutel/

Olivetti Corp., 155 White Plains Road, Tarrytown, NY 10591, 914-631-8100.

Model III Artistry

Draw (\$29.95) is a graphics and text program on disk for the 48K Model III. It lets you draw designs on the screen using cursor control keys, special commands, and automatic drawing routines, and include text and special characters in the drawing. Displays can be saved to disk and included in other programs.

Printing options include three print sizes, single or double strike, border size, and automatic line, circle, fill in, and overlay. Error messages and "bail-out" routines prevent displays from being spoiled or lost accidentally. The disk includes 10 sample displays.

Kwikdraw (\$74.95) is a fast machine-code version of Draw with expanded features. Routines are included to move, duplicate, and erase figures or text and to move the entire screen with or without wraparound. Material is saved to or retrieved from 10 RAM buffers, and eight menu/help screens are instantly available.

The programs run under TRSDOS 1.3 and support Epson MX printers. They are

Model III Business Kit

Business Multi-Pack is a collection of programs for the 48K Model III. It includes sales forecasting (arithmetic average, regression analysis, and futures analysis), economic order quantity determination, inventory analysis, and several business utilities. Also included are price determination for a desired profit margin, present and future value of a preset sum, an amortization schedule, and a perpetual calendar.

The disk sells for \$99.95 from Single Source Solution, 2699 Clayton Road, Concord, CA 94519, 415-680-0202.

Two High-Resolution Monitors

Two compact display monitors for personal computers are available from Comrex International.

The CR-5400 is a 9-inch monitor with a resolution of 800 lines per inch and a price of under \$200; the 12-inch CR-5600 has a resolution of 1,000 lines per inch and costs less than \$230. Both are offered with a choice of green, yellow-green, or amber images on an anti-glare tube.

For more information, contact Comrex International Inc., 3701 Skypark Drive, Torrance, CA 90505, 213-373-0280.

CoCo Communication Course

Introduction to Data Communication is a tutorial for beginners and hobbyists

Comrex CR-5400 Monitor

that explains the fundamental concepts and technical jargon of computer communications.

The lessons are organized into four parts with a test at the end. Topics covered include the RS-232, DB25 connectors, full and half duplex, synchronous and asynchronous data, types of modulation, and direct-connect and acoustic modems. Examples and diagrams are given on screen.

The tutorial runs on a 16K Color Computer. It costs \$17.95 (cassette) or \$22.95 disk, plus \$2 shipping, from Computerware, Box 668, 4403 Manchester Ave., Encinitas, CA 92024, 619-436-3512.

Soundplus

Soundplus (\$79.95) is a sound and communications

device for the Models I and III. It connects between the cassette port and up to two cassette recorders, and provides 300 baud serial communications for terminals, printers, modems, and other RS-232C devices.

Its amplifier and speaker reproduce sound from games and other programs, and monitor cassette signals to determine the start of programs and detect data dropouts. All features are switch-selectable to eliminate cable swaps.

Soundplus measures 5 by 5 by 2½ inches; it is compatible with Radio Shack's cassette communication software or its own communications program, Complus (\$10 to registered Soundplus owners, \$39.95 to others).

It is available from Beaver Electronics, P.O. Box 13291, Salem, OR 97309. Include \$4 shipping and handling for mail orders.

Reader Service ✓558

Add-a-Voice

16K Color Computer owners can add voice output to Basic programs with Add-a-Voice, a machine-language utility with a vocabulary of 25 digitally recorded words. Extended Color Basic is not required.

Two simple commands select a word and vocalize it through the television speaker. Two sets of words are available: The game set includes words such as "I," "got," and "stop." The quiz set features "yes," "no," "right," and so on. A program with one word set and driver takes only 4K of memory.

Add-a-Voice costs \$14.95 plus \$1 shipping and handling (cassette) from H.I.B., 3505 Hutch Place, Chevy Chase, MD 20815, 301-656-1825 (phone after 6 p.m.).

*RADIO SHACK IS A REGISTERED TRADEMARK OF THE TANDY CORP.

**Programmable
RS-232 Translator**

The PCT-100 is a user-configurable RS-232 interface that uses two bidirectional RS-232 ports and a built-in communications language to perform virtually any translation algorithm.

The unit provides terminal or printer emulation, compatibility and macro-function keys for word processing or other software packages, DEC or IBM family compatibility, type-ahead and data buffering, and baud rate and handshake protocol conver-

sion. A single unit without power supply sells for \$369.

For more information, contact Method Systems Inc., 19751 S. Lakeshore Blvd., Euclid, OH 44119, 216-531-0404.

\$19.95 DBMS

Memory Jogger is a database management system for home, personal, or small-business use. Up to six retrieval keywords or identifiers can be specified for each note or record; one or more (using And/Or) keywords ac-

cess information.

The menu-driven program requires a 48K Model I or III with one disk drive. It sells for \$19.95 from Micro Software, 205 Dumaine Court, Suite 105, Fort Walton Beach, FL 32548, 904-862-5588.

Reader Service ✓579

**Making Transparent
Sorts Visible**

Pulse Software's Transparent Sort program is a graphics demonstration of the Shell-Metzner sort, an efficient Basic sorting subroutine.

Although the subroutine is only 16 lines long, how and why it works can be a mystery to beginning Basic programmers. The Pulse program shows the compare/swap process as it happens, with a display of 26 letters being sorted into alphabetical order. Arrows indicate the letters being compared, and a top-of-screen display shows a continuously updated table of statistics and variables. A comment at the bottom of the screen explains the line being executed.

The Level II program is available on 16K cassette (\$14.95) or 32K disk (\$19.95) for the Models I/III. For more information, contact Pulse Software, P.O. Box 1086, Freehold, NJ 07728.

Reader Service ✓557

Build Your Own Disks

Dual Density Formatter is a Model I/III disk utility that formats track zero, sector zero in single density and track zero, sector one in double density. The machine-language program requires no hardware modifications.

It sells for \$29.95 from Applied 80 Softwares, 18 Ivy Lane, Cherry Hill, NJ 08002, 609-482-6864.

Reader Service ✓575

Look Out Below

Subterranean Encounter is an adventure for the Models I and III that combines the standard text format and two-word commands with graphics illustrations of each location.

The objective is to gain access to the wizard's forbidden castle and collect the treasures within. Lots of nasty surprises await on the subterranean levels, and you'll need logic, luck, and a taste for bad puns to survive.

The adventure requires 32K of memory. It sells for \$24.95 (disk) or \$22.95 (cassette) from Toucan Software, 4024 Canonero Court, Fair Oaks, CA 95628, 916-966-4241.

Reader Service ✓552

Model 16 Spreadsheet

EasyCalc is an electronic spreadsheet program for Model 16s using the TRS-DOS-16 operating system. Written in Cobol, it is designed for fast format planning, so that "what if" questions are answered in minutes rather than hours.

The system features a window mode for data entry and rule modification, and defines rules by columns and rows as well as by individual cells. Multiple spreadsheets can be designed and saved into a menu with password protection.

Since EasyCalc is both command-driven and menu-driven, spreadsheet set-up, data entry, and format and data editing are quick and simple. Its object code takes roughly 50K of memory; finished files require the same amount.

The program sells for \$395 from Datamate Co., 4135 South 100th East Ave., Suite 101, Tulsa, OK 74145, 918-664-7276.

Reader Service ✓553

DIFFERENT TRACK

Printer-Stilts

Want your printer to stand above the crowd? Put it on Printer-Stilts, a set of four rubber-tipped aluminum legs that elevate an Epson MX-70/80 or MX-100 by several inches. The stilts leave space for several hundred sheets of fanfold paper, and tilt the printer for easy viewing of controls and text.

Installation is a simple matter of inserting the legs into the printer housing recesses. No tools are required. You can have a quadruped Epson for \$9.95 plus \$2 postage and handling from Datatek Inc., Dept. 100, P.O. Box 5956, Shreveport, LA 71135, 318-868-2241. Specify MX-70/80 or MX-100.

New Products listings are based on information supplied in manufacturers' press releases. 80 Micro has not tested or reviewed these products and cannot guarantee any claims.

If you guessed that a Practical Peripherals Microbuffer™ printer buffer saves time, you're right. For the way it works, this inexpensive product is the most practical addition to your microcomputer system ever.

With Microbuffer, you don't have to wait for your printer to finish before you resume using your computer. Data is received and stored at fast speeds, then released from Microbuffer's memory to your printer. This is called buffering. The more you print, the more productive it makes your workflow.

Depending on the version of Microbuffer, these buffering capacities range from a useful 8K of random access memory — big enough for 8,000 characters of storage — up to a very large 256K — enough for 256,000 characters of storage.

Practical Peripherals makes stand-alone Microbuffers for any computer and printer combi-

nation, including add-on units especially for Apple II computer and/or Epson printers. Each has different features like graphics dumps and text formatting besides its buffering capabilities. You can choose one that's just right for your system.

Best of all, they're built to last and work exactly like they're supposed to.

If you're still guessing whether you can afford to have one, talk with any computer dealer. That's the best way to find out how practical a Practical Peripherals Microbuffer is.

GUESS WHO HAS MICROBUFFER.™

THE SWITCH

SWITCH TO 5¹/₈" DOUBLE DENSITY

LNDoubler 5/8

FEATURES

- 5- and 8-inch* disk drives
- Single- & double-density
- Any size and density in any mix
- Read Model I, II* and III disks
- 5- or 8-inch* system disk
- Single & double sided disk drives
- DOS+ 3.3.9 included, with Disk BASIC.
- 6 month warranty
- Up to 3.75 megabytes online
- Easy installation – plug-in & run
- Analog phase lock loop data separation
- Precision write precompensation
- Regulated power supply
- Guaranteed operation at 4MHz
- All contacts gold plated
- Solder masked & silk screened
- Runs under DOS+ 3.3.9, TRSDOS 2.3, NEWDOS 2.1, NEWDOS/80 1.0, LDOS, NEWDOS/80 2.0, and ULTRADOS
- Reads 40- and 35-track disks on 80-track drives
- FD1791 controller + your FD1771
- Fits Model I expansion interfaces
- Fits LNW expansion interfaces
- Track configurations to 80-tracks
- 5 inch disk storage increased to:
 - 161,280 bytes – 35-track SS/DD
 - 322,560 bytes – 35-track DS/DD
 - 184,320 bytes – 40-track SS/DD
 - 368,640 bytes – 40-track DS/DD
 - 368,640 bytes – 80-track SS/DD
 - 737,280 bytes – 80-track DS/DD
- 8 inch disk storage increased to:

591,360 bytes – 77-track SS/DD
1,182,720 bytes – 77-track DS/DD
SS: single-sided DS: double-sided
SD: single-density DD: double-density

COMPLETE – The *LNDoubler 5/8*, switches your Model I or LNW-80 into the most versatile computer you can own. The *LNDoubler's* switch allows you to boot from 5- or 8-inch system disks, and it's accessible from outside the interface. The *LNDoubler 5/8* comes with a double-density disk operating system (DOS+ 3.3.9), complete with BASIC and utility programs . . . ready to run your software NOW!

VERSATILE – Whether you want single-sided, double-sided, single- or double-density, 5- or 8-inch operation, complete versatility is here today! Any combination of 5- and 8-inch disk storage is possible with the *LNDoubler 5/8*. Each of your present 40-track, single-sided 5-inch drives will store up to 184,320 bytes (formatted storage) – that's an 80% increase in storage capacity for only half the cost of just one disk drive. With three 8-inch double-density, double-sided drives your Model I will have 3.75 Megabytes of online storage – that's more storage than a Model II or Model III!

ADVANCED – The *LNDoubler 5/8* is the most technically advanced, tested and reliable double-density

board you can buy. The *LNDoubler 5/8* has more features, more options and more software support than any other product of its kind.

EASY TO INSTALL – The *LNDoubler 5/8* is easy to install. There are no traces to cut, no wiring to do, just a screwdriver and a few minutes of your time is all that is required. The instructions are fully illustrated for all interfaces. In minutes you will be 'up-and-running', and enjoying your computer as never before.

COMPARE – Compare features, compare quality, compare value, and make the **SWITCH** today!

Immediate delivery from stock – at your dealer **NOW** for only

\$ 219.95

DEALERS – You too can make The Switch.
