C•Notes
For the Model 100

*TRS-80 IS A TRADEMARK OF RADIO SHACK, A DIVISION OF TANDY CORP.

The perfect present for your computer. The STX-80 printer for Christmas '83!

What a great gift idea!

It's the STX-80 printer from Star. Sleek, compact and priced under \$200, it's sure to put you in a very giving mood.

The STX-80 prints whisper-quiet print-outs. It features true descenders, foreign language characters and special symbols. It offers both finely detailed dot addressable and block graphics.

And you can give it with confidence knowing that it can run with virtually every type of personal and business computer.

The STX-80 printer from Star. It's the perfect gift for every computer user in your life. Especially if one of them happens to be you!

Enjoy your presents and have a happy and healthy holiday.

FOR ALL

IE • IBM-PC • APPLE II • TRS-80 • P

Percom Data Corporation has one hard disk drive system for just about ALL personal computers . . . including of course . . . IBM®-PC, APPLE® II, and TRS-80®. Percom Data's innovations with 5¼" Winchester technology mean that for most personal computers . . . having a reliable hard disk system is as easy as hooking up a cable.

A Percom Data PHD™ will interface with your present system . . . and your future system . . . so if you do change computers, you can still keep your most important investment . . . your Percom Data Hard Disk Drive.

Because Percom Data helped create the industry standards of today . . . new designs in software and hardware will make your selection of a Percom Data Hard Disk Drive pay off tomorrow through system compatibility.

A Percom Data PHD works to capacity because we take the time to correctly develop interface software to your computer which leaves no performance holes for you to fall into. Percom Data knows software functionality is the key to hardware performance.

Today, Percom Data PHD supports a variety of software to match your computer:

IBM®-PC, PC DOS™ 1.1 OR 1.0

CP/M-86®, CONCURRENT CP/M-86™

APPLE®, DOS 3.3, CP/M™

TRS-80® MODELS III & I, DOPLUS, LDOS

IMAGINE . . . Percom Data Winchester 5¼" technology . . . for today's computers . . . and tomorrow's.

To receive an informational booklet describing Percom Hard Disk Systems, or to determine if we have a system for your computer call our **Hard-Line Hot-Line at 1-800-527-1222.**

We will also give you the name of a nearby authorized Percom Data Dealer. Dealer inquiries are welcome.

It certainly has been an eventful year for the TRS-80 world. While most companies were introducing one or two new products, Tandy turned over nearly its entire line, in the process filling almost every conceivable niche in the microcomputer market.

Tandy has developed an interesting and unique approach: They're selling computers like an automobile company sells cars. No matter what your need, there's a TRS-80 for you (see the Table).

Want a nice, compact travel car? Then try the Model 100. How about a durable pickup truck? You might test-drive the Model 4. Need a family vehicle? The Color Computer could fill the bill. If you need a van for lots of storage, you'll be interested in the 16B. Tandy can even give you a moped with the MC-10.

And now, to top it off, they've introduced their version of the Mercedes-Benz—the Model 2000. It'll not only get you where you're going, Tandy promises, but it'll get you there with style.

Tandy's machines come with a variety of engines. The Model 100, for example, has a fuel-efficient 80C85, while the 16B uses a powerful 68000 gas guzzler. The newest entry, the 2000, has a zippy 80186. And, of course, there's still the Z80, the slant six of microcomputers.

Want CP/M? They've got it. How about something with Unix? Step over here for a minute. Want to look at a machine with MS-DOS? Here's a sleek new beauty for you. Even TRSDOS is still in stock.

From a marketing perspective, Tandy's strategy has a lot going for it. They've managed to cover all the bases. No matter which road the consumer travels, Fort Worth is prepared to follow.

And they've put some pep back into the TRS-80 line. Those who have complained about the dull, conservative, grey suit the Tandy computers have worn can no longer gripe. TRS-80 users are going to see a lot of excitement over the next year or so.

But such a course is also fraught with danger. For starters, Tandy is making little effort to define each computer's market: The company expects the ma-

Like new, low mileage

chines to sort themselves out. While the people at Fort Worth express confidence that the various computers will find their places—or, perhaps more accurately, that their places will find them—the possibility exists that different models will end up competing with one another. How, for example, will the Model 2000 affect Model 12 sales? Will the 4P hurt the 4?

Also, the number of systems could confuse the average consumer. Which TRS-80 to buy? While the careful and intelligent shopper will take the time to

Model	Price
PC-4	\$69.95
PC-3	99.95
MC-10	119.95
PC-2	199.95
CoCo 2	239.95
CoCo 2 (Extended)	319.95
CoCo (64K Extended)	399.95
Model 100	799.00
Model 4 (cassette)	999.00
Model 4P	1799.00
Model 4	1999.00
Model 2000	2750.00
Model 12	3199.00
Model 16B	4999.00
Model 16B Multi-user system	8397.00

You need a scorecard to keep track of the players: Tandy's current lineup. (Prices are for basic units, as shown in the 1984 catalog.)

figure out what's right for him, many others will find it easier to simply go out and get an IBM or an Apple.

The responsibility to educate the potential customer will rest with the Radio Shack store clerks, many of whom lack the necessary in-depth knowledge of the systems and their capabilities. Training its employees may turn out to be one of Tandy's biggest challenges.

Then there's the question of whether Tandy can give proper attention to each system. They've been slow to respond to shifts in the marketplace before; will this slow them even more? Will they, for instance, move quickly enough to upgrade the Model 100 in the face of the many new portables being introduced? Tandy has a lot of plates spinning at once, and they'll need quick hands to keep them from falling off their sticks.

The fact that Tandy has been able to come out with so many computers in such a short time is a tribute to their manufacturing and marketing skills. Here's hoping they can follow up on their promises.

The Model 4P

Tandy's timing was perfect—their 1984 catalog with the new transportable, the 4P, came out just as Osborne Corp. was going belly-up.

The 4P is a nice machine. It's the first transportable we've seen that is also an attractive desktop computer. It's a far sight sexier than the Kaypro, which looks like World War II vintage radio gear. The 4P's features, along with Radio Shack's CP/M, should make it competitive in the transportable market.

Unfortunately, Tandy chose not to market the 4P aggressively. This is, in some respects, understandable—the machine could very well take sales away from the Model 4.

But on the other hand, the 4P enters a market in which there is no longer a dominant leader. Tandy has the chance to take control, much as they did with the Model 100 in the portable field.

The Osborne was a boat anchor, and it sold like proverbial hot cakes. The 4P is a superior product. Tandy should re-evaluate their marketing strategy, and take advantage of this chance while they've got it. ■

TRS-80® Ultra-High Performance MS™-DOS System

The New Tandy Model 2000 Personal Computer

Radio Shack Heralds the Dawn of a New Era in Microcomputer Technology

This remarkable system delivers much more than other 16-bit MS-DOS-based computers. More speed. More disk storage. More expansion. Higher resolution graphics. And a modular design that advances the science of ergonomics.

Use the Hottest Names In Software

Like dBase II™ relational data base. Microsoft-Multiplan™ spreadsheet analysis. PFS® File electronic filing. MultiMate™ word processing. And many more already acclaimed by the entire microcomputer industry.

Increased Speed, Storage and Expansion

A "next-generation" 16-bit CPU makes Model 2000 almost three times faster than the IBM® PC and faster than other MS-DOS computers, so you get the job done quicker. With 1.4 megabytes of storage, you can set up massive data bases. And you can add more memory, high-resolution color and monochrome graphics, our new Digi™-Mouse and much more.

Complete Support

The TRS-80 Model 2000 is backed with the quality and support that have kept Tandy Corporation in the forefront of the microcomputer industry. See it today at over 1000 Radio Shack Computer Centers nationwide.

Monte Bug

My Monte program ("The Business of Planning," September 1983, p. 74) has a problem in the calculation of the standard deviation. Line number 8880 does the standard deviation calculation and uses variable ME(X), the mean, in its calculations.

However, the program does not calculate ME(X) until line 8890. Retype line 8880 as line 8895, or move it using a utility such as the DI command in NEWDOS/80.

To convert the program to another machine or language, I use a statement in line 180 that uses a PEEK (16539). This gets around the Model I's limitations of not letting the printer tab past the sixty-fourth column. You can delete this line for other computers.

Also, lines 4860, 4870, 4930, and 8080 use the FNB function, but you can replace this with a tab.

*Ronald Cangro
7628 Regina Drive
Fort Wayne, IN 46815*

Diagnostic Program Reviews?

The Wisconsin School Bus Association operates a Model III in a small office business environment. We use it in so many phases of our daily operation that down-time cripples us badly.

We have a few diagnostic programs, but don't know if they are effective. Surely some good diagnostic programs exist in the market that can thoroughly check our computer and its peripheral equipment, but we cannot evaluate their effectiveness.

Your reviewers might offer an invaluable assistance to many readers if they would field test and rate diagnostic programs. We have no other source of credible information on these programs.

*Dick Rechlicz
Executive Secretary
Wisconsin School Bus Association
2830 Brookfield Road
Box 403
Brookfield, WI 53005*

We plan to cover the various diagnostics packages early in 1984.—Eds.

Datapoint on ARCNET

I enjoyed the article, "ARCDOS for ARCNET," by Joseph Trojak (August 1983, p. 188). Although Dr. Trojak has a good grasp of the ARC network system, his article contains several misconceptions.

The terms ARC and ARCNET are registered trademarks of the Datapoint Corporation. The ARCNET network is the physical processing/office automation system.

ARC system, or ARC, is the total distributed architectural system, including software and processors, Datapoint uses to provide office automation functions. Dr. Trojak indicates that ARC is the operating system when in fact ARC system is the overall concept.

The basic philosophy behind the ARC network system is not the dedication of one or more processors to disk management, but the ability to attach multiple processors to share common resources (files, printers, storage devices, and communications facilities).

The requirements of the disk operating system demand that common resources be maintained by dedicated processors. A file processor or a processor dedicated to managing files is required to enable sharing of that file resource to the system.

The differentiation with the RMS operating system is that the dedication is no longer mandated. RMS is a multiple-tasking operating system where tasks can manage resources and can run in the network, rather than on a dedicated machine.

Datapoint's ARC systems are not incompatible. The Datapoint 1800 series operates under DOS.G.; our 1560 processors operate under DOS.H, and our integrated office systems operate under DOS.D (3800s and 8600s). Since the ARC network supports multiple operating systems concurrently, you can transfer files between versions easily.

Both DOS and RMS operate within the ARC network with a maximum interprocessor cabling run of four miles.

Finally, the ARC network system and ARCDOS can operate on the same network, but the file structure is incompatible.

*Alan Malinger
Senior Manager, Product Marketing
Datapoint Corp.
9725 Datapoint Drive
San Antonio, TX 78284*

Trojak's Response

Mr. Malinger's definitions of the ARCNET network and ARC system, and his statement of philosophy behind ARC are consistent with Datapoint literature. I will not argue with Datapoint's unique definitions.

However, although ARCNET easily handles the transfer of files between versions of DOS, a program written for a Datapoint minicomputer (e.g., the 3800) cannot be executed by a Datapoint microcomputer (e.g., the 1500). File compatibility is not system compatibility.

Finally, it is true that several vendors offer networks based on the ARCNET technique. Although the networks are electrically compatible with all the Datapoint equipment, they are not compatible at the LNOS level (ISO level 3) with ARC. For example, Netstar Systems' PLAN 4000 uses ARCNET for its electrical connections, and the Xerox Network System at the LNOS level.

*Joseph E. Trojak
Johns Hopkins Hospital
600 North Wolfe St.
Baltimore, MD 21205*

Powersoft on PowerDOT

Richard Green's review of PowerDOT (October 1983, p. 80) gave the product a fair and reasonable work-out. Unfortunately, he reviewed an older, outdated version of PowerDOT: PowerDOT and its manual have undergone a complete rewrite.

PowerDOT II is a much better package. It sports a 60-page manual in a loose-leaf binder, and contains examples, screen dumps, and explanations.

Continued on p. 12

Who sells low-cost high performance disk systems for TRS-80, IBM and other Popular Computers?

We Do!

Continued from p. 8

tions of new features.

To facilitate new drawing, we added a Circle command, an adjustable Angle command, and a Scroll command. We also have a hardware interface available for drawing and design using the Radio Shack Color Mouse on the Model III or 4.

Other new features include the ability to create graphics character sets that users can save to disk and use to create other screens, and compatibility with all DMP series Radio Shack printers.

Hopefully, this letter sets the record

straight on PowerDOT II.

New Docs for LDOS Toolbox

Jim Heid did a fine job reviewing "The LDOS Toolbox" (September 1983, p. 200).

Jim mentioned that although he loved the software and gave it an excellent review, he was not completely hap-

py with our documentation. Since his review, we have rewritten the documentation, and were able to incorporate Mr. Heid's suggestions and some new additions, including the elimination of reduced print size.

We typeset the entire manual and it is much more readable and usable than before.

Thank you for this opportunity to update Mr. Heid's review, and for an informative magazine.

Dallas, TX 75229*

ERROR Trap

In our Directory of Software Manufacturers and Distributors (October 1983, p. 196), we erroneously listed J.F. Consulting, of Palm Desert, CA, as a software dealer.

J.F. Consulting is out of business, and RCM Computers (221 Hirschfield Drive, Williamsville, NY 14221) now supports their products.

Also, the address and software categories for Logical Systems Inc. (p. 220) were in error. Logical Systems Inc. (8970 N. 55th St., P.O. Box 23956, Milwaukee, WI 53223) markets software in the following categories: compilers, custom software, education, inventory control, inventory, operating systems, plotting/graphics, program generators, programmer aids, and utilities.

Small Computer Co. was also ac-

identally omitted from the October software directory. Small Computer Co. (230 W. 41st St., Suite 1200, New York, NY 10036) developed Radio Shack's Profile data-base manager, and sells enhancements for it.

International Software Sales Inc. was accidentally omitted from our Business Software Buyer's Guide (September 1983, p. 152). ISSI (P.O. Box 233, Newtonville, NY 12128) markets the following programs: Multi-company processing, general ledger, accounts receivable, accounts payable, inventory, payroll (with or without job costing), order entry, delivery ticket control, club management system, engineering, and professional management.

Software Legalities

Regarding Carl Oppedahl's review of *Legal Care for Your Software*, by Daniel Remer (August 1983, p. 76), I am writing a book for Prentice-Hall on the same subject, and wish to express my disagreement with Mr. Remer's approach.

My main objection to *Legal Care for Your Software* is the pull-out forms the author provides. These forms do the public more harm than good.

It takes many long, hard hours of study and work before you can become a lawyer skilled in microcomputer law, yet the author (and reviewer) expects the reader to use Remer's forms to draft his own legal forms.

This is a serious mistake. It's the same as reading your first book on Basic and then trying to write a complex Basic program. It's simply not that easy.

The general public does not always understand the implications of what specific contract language means. For example, in many of his forms Remer implies that the prevailing party will get his attorney's fees paid. A clause like that is the same as playing Russian roulette. The plaintiff always expects

to win, but if he loses he must pay the defendant's attorney fees.

*L.J. Kutten
Attorney at Law
201 South Central
P.O. Box 16185
St. Louis (Clayton), MO 63105*

Oppedahl's Case

In law, as in any other field, the danger exists that a lay person might come to harm trying to do something that would be better done by a professional. I share Mr. Kutten's view that a do-it-yourself book might promote this.

Not everyone who writes and sells software, however, can afford the attorney's fees needed to negotiate, draft, and sign a publishing contract. In addition, many writers end up dealing with organizations whose experience, legal talent, and financial resources far exceed their own.

For those writers, only two choices exist: deal with the publisher completely unprotected, or with the aid of a book like Legal Care for Your Software.

I agree with Mr. Kutten that problems exist with preprinted pull-out forms, especially because of differences in state laws. I suspect very few of the forms will actually be signed as they are.

The forms are, nonetheless, useful in

at least two ways. If an author negotiates a contract from scratch, the forms provide a checklist of areas to cover. Also, when a publishing firm presents a writer with a publisher's standard contract, these forms provide a relatively neutral source of alternative language for the clauses that the writer wants to try to change.

Parties in a position of bargaining power (credit card companies, for example) routinely offer their take-it-or-leave-it contracts with a one-sided clause stating that their legal fees will be paid by the other party in the event of a litigation. My view is that such a clause, if present in a contract at all, should be written to apply to both parties equally.

*Carl Oppedahl, J.D.
99 Park Ave.
New York, NY 10016*

Software Rip-Offs

I am writing to you in response to Computer Shack's letter in September 1983 Input (p. 16) griping about software piracy.

I admit that piracy is a great problem to software authors, but companies that rip off software ideas created by others are just as bad.

Computer Shack is very bad about this. They often are not original in the themes of their games. Most of Com-

puter Shack's games are rip-offs of other people's ideas, and software authors who go to the trouble of creating original games are being hurt by this.

Menu Modifier

Most menu-driven programs have boring menus, so I designed a menu (see the Program Listing) to use in the programs I write. The program adds some life to my menus and doesn't stare back when I'm deciding which option to choose.

Line 10 clears string space. Line 20 draws the square that holds the menu options, and could be used as a subroutine for many different menus if you include a Return command. Lines 30 and 40 display the exact options available. Replace the Xs in the program with your own options.

Line 50 lets you change the value of K to determine how fast the (-) scrolls through the menu and does all the necessary testing.

Line 60 determines to what part of the program control passes after the operator has determined the option.

Works with all joystick games.

Model IV: order model III version

\$59.95 NEWCLOCK-80

Wouldn't it be nice if your computer could always boot up with the right time and date and then stay accurate. Newclock-80 will enhance your Model I or III system with powerful clock/calendar/timer functions.

Using LSI (large scale integration) and custom circuits, Newclock-80 provides MO/DATE/YR, HR:MN:SEC plus AM/PM and day of week and even takes care of leap years! It continues to keep time and date with quartz accuracy when the computer is turned off or experiences a power failure. A single battery lasts over 2 years.

Compatibility: Newclock-80 is compatible with any operating system, including DOSPLUS, NEWDOS, LDOS. With its fully decoded circuitry it will work with any other hardware you may own. Bus expanders are available.

Installation is very simple, no tools, no disassembly, no soldering. Just plug it in, that's all. There is no power supply or messy cable. Newclock-80 plugs into the rear of the keyboard ③ or side of the Exp. Int. ②. Model III Newclock fits the 50 pin card edge (underneath) ①

The Software: Newclock-80 is as easy to use as it is to install. -"SET", a Basic program, is used only once to set the time and date and select 12 or 24 hour format. -"TIMESTR", also in Basic, patches your computer "TIMES\$" function to read Newclock-80. It also adds "TIMES\$" to keyboard-only systems, a short routine is simply "poked" into low memory.

Newclock-80 uses 12 ports (176 to 188): 6 for the time, 6 for the date. The data is conveniently stored in decimal form, no conversion is needed. You can read or modify any digit using simple Basic "INP" and "OUT" statements.

No risk trial. Order your Newclock-80 today, see how easy it is to install and operate then decide within 30 days if you want to keep it. If for any reason you are not delighted with its quality and performance, you may return it for a prompt and courteous refund.

Your unit will come complete ④ with software on tape, detailed instructions, handy reference card, and a 90 day warranty. Specify Model I or III. Software is also available on disk: add \$5. Lithium battery (not included) available from RADIO-SHACK (#23-162) or add \$1.50 to your order.

Thanks to outstanding engineering and efficient manufacturing, ALPHA Products is once again able to offer a great product at a surprising price. Order your Newclock-80 at no obligation today.

Moscow, PA 18444

A Gift from Tandy

Tandy has given me an extra feature on my Model III Disk Basic that isn't mentioned in the manual or promised in their catalog. When I scroll through a program with the arrow keys, I lose 2 bytes of free memory for every line I scroll. Has anyone encountered this bonus feature and found out how to fix it?

Nate Salsbury
608 Madam Moore's Lane
New Bern, NC 28560

Chip Control Codes

I'm looking for some information on the WD1793 floppy disk controller used in the Model III. I already have the Model III reference manual, but what I really need are the control codes for the chip. Does anyone know where I can find additional information on this chip?

Scott Goehring
6205 North Tuxedo
Indianapolis, IN 46220

Help!

I'm looking for a Help file for my Model III version of LDOS 1.5.3 that's comparable to the PHELP/CMD The Toolbox uses. If you have a program like this, please contact me.

DMP Modification

Does anyone have a patch for Model III TRSDOS 1.3 that will display the entire error message rather than just Error X?

Also, does anyone know of a modification for the DMP 200 printer that will let me software-select the CR/NL DIP switch so I can switch from using the underline feature of Electric Pencil to list or print a Basic program on a different disk without wearing out the switch?

Robin L. Salmansohn
1855 Woodland Road
Abington, PA 19001

File Name Expansion

I'm looking for a way to expand the size of TRSDOS's directory beyond the current 80 file-name limit. My wife has a lot of recipes that she stores on disk, but she gets a Disk Full message after entering 80 file names even though there is still three quarters vacant space remaining. Does anyone have any suggestions?

William E. Baker

NOW MODEL I AND MODEL III!

Now Model III users can take advantage of the ALPHA I/O system too. Our new MOD III/I BUS CONVERTER allows most port based Model I accessories (such as our ANALOG-80, INTERFACER 2 and INTERFACER-80) to connect to the Model III bus. MOD III/I BUS CONVERTER, complete with all connectors, only \$39.95.

2 Printers?

PRINTSWITCH

Have 2 printers on line at all times and select printer 1 or 2 by means of a conveniently located switch. End the problem of constantly plugging and unplugging printer cables. PRINTSWITCH is a compact module that plugs into the parallel printer port of your TRS-80 and provides an edge connector for each of your two printers. It works with any two types of printers: dot matrix, daisy wheel, plotters, TRS-80 converted electrics, etc. Assembled, tested, ready to use with connector and instructions. For Model I or III (please specify). ONLY \$59.00

SUPERIOR QUALITY REPLACEMENT & EXTENSION CABLES

Highest quality cable and high force, gold plated contacts ensure the utmost in connection reliability.

- 1 KEYBOARD TO EXPANSION INTERFACE \$21.
 - 2 DISK DRIVE CABLE FOR 1 OR 2 DRIVES \$32.
 - 3 DISK DRIVE CABLE FOR 3 OR 4 DRIVES \$45.
 - 4 DISK DRIVE CABLE EXTENDER \$22.
 - 5 PRINTER CABLE EXTENDER \$24.
 - 6 40 PIN BUS EXTENDER — 2 ft. .. \$22 4 ft. .. \$24.
- Custom cable configurations are also available. Call us.

YOU ASKED FOR IT: "EXPANDABUS" X1, X2, X3 AND X4. CONNECT ALL YOUR TRS-80 DEVICES SIMULTANEOUSLY on the 40 pin TRS-80 bus. Any device that normally plugs into the keyboard edge connector will also plug into the "EXPANDABUS". The "X4" is shown with protective covers (included). The TRS-80 keyboard contains the bus drivers (74LS367) for up to 20 devices, more than you will ever need. Using the E/I, it plugs either between KB and E/I or in the Screen Printer port. Professional quality, gold plated contacts. Computer grade 40 conductor ribbon cable. X2..\$29 X3..\$44 X4..\$59 X5..\$74
Custom configurations are also available. call us

ANALOG-80: A WORLD OF NEW APPLICATIONS POSSIBLE.

8 DIGITAL MULTIMETERS PLUGGED INTO YOUR TRS-80!!! Measure Temperature, Voltage, Current, Light, Pressure, etc. Very easy to use. For example, let's read input channel #4: 10 OUT 0.4 'Selects input #4 and also starts the conversion 20 A=INP(0) 'Puts the result in variable 'A' Voila! Specifications: Input range 0-5V to 0-500V Each channel can be set to a different scale. Resolution: 20mV (on 5V range). Accuracy 8 bits (5%). Port Address jumper selectable. Plugs into keyboard bus or E/I (screen printer port) Assembled and tested 90 day warranty Complete with power supply, connector, manual \$139.

TIMEDATE 80: REAL-TIME CLOCK/CALENDAR MODULE

Keeps quartz accurate time for 3 years on 2 replaceable AAA batteries (not included). Gives MO/DATE/YR, DAY of WEEK, HR MIN/SEC and AM/PM. Features INTELLIGENT CALENDAR and even provides for Leap Year. This compact module simply plugs into rear of Keyboard or side of Expansion Interface (may be slipped inside E/I). Includes cassette software for setting clock and patching to any DOS (including NEWDOS 80, 2.0). Optional "Y" connector allows for further expansion for Model I. Fully assembled and tested. Complete with instructions and cassette. ONLY \$95.00 "Y" option add \$12.00

GREEN SCREEN WARNING

IBM and all the "biggies" are using green screen monitors. Its advantages are now widely advertised. We feel that every TRS-80 user should enjoy the benefits it provides. But **WARNING:** all Green Screens are not created equal. Here is what we found:

- Several are just a flat piece of standard colored Lucite. The green tint was not made for this purpose and is judged by many to be too dark. Increasing the brightness control will result in a fuzzy display.
- Some are simply a piece of thin plastic film taped onto a cardboard frame. The color is satisfactory but the wobbly film gives it a poor appearance.
- One "optical filter" is in fact plain acrylic sheeting.
- False claim: A few pretend to "reduce glare". In fact, their flat and shiny surfaces (both film and Lucite type) ADD their own reflections to the screen.
- A few laughs: One ad claims to "reduce screen contrast". Sorry gentleman but it's just the opposite. One of the Green Screen's major benefits is to increase the contrast between the text and the background.
- Drawbacks: Most are using adhesive strips to fasten their screen to the monitor. This method makes it awkward to remove for necessary periodical cleaning. All (except ours) are flat. Light pens will not work reliably because of the big gap between the screen and the tube.

SPECIAL THIS MONTH!

\$8.95

DISK DRIVE EXTENDER CABLE, FREE YOUR MINI-DRIVES.

End the daisy-chain mess once and for all. Fits all mini-drives: Percom, Aerocomp, Shugart, Micropolis, MTI, Vista, Pertec, Siemens, BASF. Easy to install: just remove the drive cover, plug in the EXTENDER CABLE and replace the cover. Now you can change and move your drives without disassembly. Keep the cover on and the dust out. High reliability gold plated contacts, computer grade 34 conductor cable. Tested and guaranteed. Get one for each drive ONLY \$8.95

INTERFACER-80: the most powerful Sense/Control module.

- 8 industrial grade relays, single pole double throw isolated contacts. 2 Amp @ 125 Volts TTL latched outputs are also accessible to drive external solid state relays.
- 8 convenient LEDs constantly display the relay states. Simple "OUT" commands (in basic) control the 8 relays
- 8 optically-isolated inputs for easy direct interfacing to external switches, photocells, keypads, sensors etc. Simple "INP" commands read the status of the 8 inputs. Selectable port address. Clean, compact enclosed design. Assembled, tested, 90 days warranty. Price includes power supply, cable, connector, superb user's manual \$159

Take the Next Step

There is an error in The Next Step (August 1983, p. 30). The USR call location in Program Listing 1 for tape systems is incorrect. Line 140 should read: 140 POKE 16526,0: POKE 16527,127.

G.E. Casey
4020 Welmont Drive
Fayetteville, NC 28304

Assembling the Disassembler

David Cloutier's "Disassembler" article in C•Notes (September 1983, p. 283) contains several errors. Line 10530 doesn't work, but you can replace it with

```
S=(((LM*16)+RM)*16)+L)*16+R:RETURN
```

Lines 160 and 170 are duplicated and have the wrong mnemonics (Cloutier attempted to use Z80 mnemonics, but the Model 100 has an 8085 processor).

Also, line 1780 RETURN is missing and needs to be added.

James Cole
515 Aspen St.
Vandenberg, CA 93437

Still Searching?

On page 110 of our December 1983 issue, we published an article by Joseph Trojak entitled "Finding the Search Solution." The article was missing Program Listing 12. You can find that listing on p. 213 of this issue.—Eds.

New Transactions

I've received a number of calls from readers who've had a difficult time loading the machine-language FRMS utility in my "Financial Transactions Recorder" article (September 1983, p. 140). The problem is easily solved. Under "Getting Started" on page 150, the Dump information should be DUMP FRMS (START=F000,END=F008).

Also, I've found one minor problem that may mystify other users. During printing to screen in Task 3, the program sets both the Dummy and Dual On modes. This reroutes text meant for the printer to the screen. When you end the program (Task 6), line 6020 turns the dual mode off but leaves the dummy mode active. Thus, anything intended for the printer isn't sent. This remains in effect until the program performs a System "Forms" or System "Forms N".

To correct this situation, modify line 6020 so that it reads:

```
...:SYSTEM"DUAL OFF":SYSTEM"FORMS N":PRINT@...
```

The newly added Forms N command deactivates the dummy mode and allows normal printer operation immediately after the program ends.

R.D. #1, Box 241H
Tennent Road
Englishtown, NJ 07726

Don't Strip Yet!

The System Modifications box to Stephen Mills' "Strip Blackjack" (August 1983, p. 256) is partially incorrect. First, change line 130 (not line 30, as mentioned) in Program Listing 2 to:

```
130 FORX=Z! TOZ!+72:READY:POKEX,Y
:NEXTX:DEFUSR4=Z!:POKEZ!+7,
PEEK(Z+1):POKEZ!+8,PEEK(Z+2):
Z!=PEEK(VARPTR(Z7$)+1)+PEEK
(VARPTR(Z7$)+2)*256IFZ!>32767
THENZ!=Z!-65536
```

Then change line 1600 to:

```
1600 DEFUSR=Z!:G=USR(-399):
G=USR(ASC(Q$)AND15):RETURN
```

And finally, change line 1880 as suggested, but don't change line 1480.—Eds.

For Those Who Seek.

Bible study aids from Bible Research

Systems include the complete KJV Bible text on disks. THE WORD processor can search the Scriptures for any word or phrase. Any portion of the Bible can be printed or displayed. Create your own library of research materials or use ours, called TOPICS.

TOPICS contains cross-reference indexes on over 200 of the primary subjects discussed in Scripture.

FEEDBACK LOOP

Send any questions or problems dealing with any area of TRS-80 microcomputing to Feedback Loop, 80 Micro, 80 Pine St., Peterborough, NH 03458.

I have a 48K dual-disk-drive Model I with a Centronics 700 printer. I use it extensively with VisiCalc, which worked fine until recently. One day after I booted up the program and was about to execute, the computer reset. The next attempt just dropped the program and for the next 15 minutes it refused to cooperate; then it booted and worked fine. Now every time I use the program I have the same problems making it work.

All my other programs, system and Basic, seem to work perfectly. And the program works just fine on a friend's system. Can you help?

Ted Waite
Idaho Falls, ID

It sounds like either your disk drive is starting to go, or something is wrong with your VisiCalc disk. It could be that your disk drive has drifted out of head alignment, or that the motor speed needs adjusting. VisiCalc is a large program and a slight variation in motor speed during the time it takes to load could cause the problem. Similarly, if the drive head is slightly off the track's center, it might be picking up noise from adjoining tracks (which would cause a bad load) or just not getting the data off the disk correctly.

A less likely source of your problem might be the VisiCalc disk, which could be flawed. Your friend's disk drive might be aligned differently or have slightly better electronics, and thus would not notice the problem with the disk.

First, try a different copy of VisiCalc. If just switching program copies solves the problem, then the problem was your program disk. If that doesn't work, have your disk drive checked out. That should solve your problem.

Prior to upgrading to 48K (two disk drives from 16K cassette), I purchased several programs from Radio Shack:

The problem solver

Series I Editor Assembler (26-2011), In-Memory Information (26-1508), and Scripsit (26-1505). My attempts to transfer these programs to disk have met with frustration and failure, even though I used the addresses given in the March 1982 issue of the TRS-80 Microcomputer Newsletter (except Scripsit, which is now on disk).

First, I really like the three programs and want to use them with my disk system. Second, while they are available for disk systems, I can't see the point of purchasing them just because they're on disk when the present ones work so well.

My question is: What are the correct addresses for transferring 26-2011 and 26-1508 to disk, and how do I get them to save and load data from disk instead of tape? Machine language is Greek to me, so any instructions will have to be step by step.

James Krywalski
Buffalo, NY

I can't help you with the addresses. As far as I know the ones given by the newsletter are correct. The second part, modifying the programs to use disk I/O, is almost impossible for anyone but a machine-language programmer. And even he or she would have problems. There's no simple procedure to change the programs to work with disk drives; a patch and additional coding are needed to implement such alterations.

You'll just have to put up with using the programs with cassette data until you can afford the disk versions. Sorry.

I'm currently designing an unusual software speed modification for the Model III. What I need is a great deal of technical information about the Model III Basic interpreter. Can you refer me to a public domain disassembler to use on the Model III ROMs? It has to be public domain because I can't afford to spend any money.

James Stallings
Rocky Mt., NC

There's no such thing as a free program. No matter where you get it, you'll have to pay something for the program, even if it's just for the cassette used to store the program. Anyway, 80 Micro has published the listing of a Basic program for disassembling the ROMs. The July 1981 issue has the program ("Enhance Your Level II Basic," p. 202) and the February 1982 issue contains a debug for the program (p. 28). If you're lucky, you might find a friend with copies of these issues to loan to you.

If you can manage to scrape together the money, the IJG book *Microsoft Model I Basic Decoded* has loads of information regarding the techniques used by Microsoft in their Basic. The Model III ROMs and the Model I ROMs are almost identical, differing only in the I/O routines and a few other enhancements. The IJG book also includes a complete, commented disassembly of the Model I ROMs. I think you'll learn more from an hour or so with this book than you can learn in several weeks on your own.

My new Smith-Corona TP-1 printer has a peculiarity in interfacing with Radio Shack's Model I Scripsit: It won't hear two carriage returns in a row. It isn't a malfunction of either the TP-1 or Scripsit.

This, of course, throws off line spacing and top and bottom margins. Does anyone have a fix for the TP-1 that defeats its Telex-style treatment of carriage returns? Or a patch for disk Scripsit? Or perhaps a series of TRSDOS

Imagine... a letter quality printer
compatible to your TRS 80

Introducing the **JUKI** MODEL 6100

Letter Quality, Daisy Wheel Printer/Driver Software Specifically Developed For Use With The TRS-80™ And SuperSCRIPT™ !!!

\$699⁰⁰

All control codes must be preceded by a <CLEAR>

UNDERSCORE	<CLEAR> <>	UNDERLINES EVERYTHING
BOLD PRINT	<CLEAR> <>	GEE IT LOOKS BOLDER
SHADOW PRINT	<CLEAR> <>	THIS SHADOW IS WILD HU?
1/2 LINEFEED F	<CLEAR> <>	I LOVE SuperSCRIPT™
1/2 LINEFEED R	<CLEAR> <>	Ca(OH) ₂ + H ₂ SO ₄ → CaSO ₄
PAUSE PRINTER	<CLEAR> <>	I HATE PAUSING.
TOP OF FORM	<CLEAR> <>	

Now you can enhance your TRS-80™ Model III word processing system with the JUKI 6100 letter quality printer and driver software package.

Totally compatible with the TRS™ Model III when used with the SuperSCRIPT™ word processor, the Model 6100 is a sophisticated printer with all the advanced features of a higher priced unit. And the JUKI Model 6100 printer driver software package can be added to the TRS 80™ Model 4 system as well.

Utilizing a 100 character daisy wheel drop-in system, the Model 6100 prints bi-directionally at 18 cps, has 10/12/15 pitch, proportional spacing, and a 2k buffer memory expandable to 8k. Operating on a linear induction motor for accurate positioning, the logic seeking Model 6100 performs superscript, subscript, bold/shadow printing, double strike, underlining and has graphic capabilities.

Also, the Juki printer is lightweight and conventional in design, has low noise level, is easy to maintain, and features a self-testing function. And the printer driver software is available on diskette for either parallel or serial interface.

But the dream is not over...with a low price tag of \$699.00 and driver software diskette for less than \$25.00 you'll have top quality performance for a remarkably affordable price.

FEEDBACK LOOP

commands to get around this problem?

I'm also looking for a few lines of Assembly code for my Model I that will let me print the video display on my Epson MX-80 printer. I want to incorporate the routine into the freebie Term program Radio Shack gives you when you buy their RS-232 board for the Model I.

*Robert Golstein
Tarzana, CA*

Does anyone have a patch for Scripsit that will let it properly interface to the Smith-Corona TP-1?

The May 1980 issue of *80 Micro* has a screen print program invoked by pressing the I, J, and K keys simultaneously ("LPVIDEO," p. 136). It shouldn't be difficult to incorporate this program into your modified Term program. There're two Debug announcements for that program, one in the August 1980 issue (p. 16) and the other in the September 1980 issue (p. 14).

Actually, it shouldn't be that hard to write one yourself. All you have to do is change the keyboard scan routine to check for the special case of your screen print key, and a jump to a subroutine that scans the video from 3C00 hexadecimal (hex) to 3FFF hex and sends each character to the printer. For more information about the ROMs and useful routines you can access, get IJG's book *Microsoft Basic Decoded*.

Has anyone come up with a better method of mounting the RS-232 board in the Model I expansion interface (EI)? At least once a week (usually in the middle of a transmission) the board malfunctions and I have to take the EI apart and clean the RS-232 contacts. It'll work okay for a while, then I have to repeat the cleaning.

*Tom Phoenix
Greensboro, NC*

I have the same problem with my Model I. The problem is inadequate ventilation of the compartment containing the board. The board gets hot as you use it and linear expansion warps the board, pulling the connections apart and introducing noise. I've found that you can get pretty good contact for several weeks at a time by *not* tightening the two RS-232 screws all the way. When I start to have trouble with it, I just flex the board/EI cable a little and

it's good for another week or so.

A friend of mine, Dennis Kitsz, suggests making a small insulated metal bar that you can put over the RS-232 connector and hold in place by the two screws. The metal bar would prevent the board from flexing, solving the problem. You will, of course, still have to clean the tin/lead contacts on the EI and RS-232 board connectors every once in a while, but at least it won't be every week.

Another solution was published in the May 1981 issue of *80 Micro*: hardwire the board to the EI, permanently solving the problems of poor connections and board flexing ("Hardwire the TLS-232," p. 202). Unfortunately, you have to be pretty good at soldering to accomplish this modification. It also has the implication that if you ever have trouble with any of the components on the RS-232, you can't just remove the board and replace it with another.

I have a Model III and recently bought some NEC memory chips in Japan to increase my system to 48K. When I powered up my computer, all I got was 48,082K, not 49,152 (1024 x 48). I took out the extra chips and checked memory, which indicated 15K plus. Is something wrong with my computer?

Also, when I type in NEW and then PRINTMEM, I don't get back what I started with. After several Loads, Runs, and News, I find that I've exhausted memory and get an OM error. Why?

*Lance Cresswell
San Francisco, CA*

There's nothing wrong with your computer. Basic grabs some of the first bank of RAM for its own use, about 1,000 bytes total (the Model I only takes about 800 bytes). The computer subtracts these bytes from your available RAM, hence the difference between your computed memory and the actual amount left.

Your other problem is tied to the Clear command, used to reserve memory for string variable data. Programs frequently use this command to prevent OS errors from crashing the program, especially in programs with lots of string data, such as mailing list or data base programs. The amount of RAM reserved by Clear is unchanged by the New command. CLEAR 5000 removes 5,000 bytes from the number returned

by the PRINTMEM command. The only way to free the memory is to issue a new Clear command, specifying a lower number. The computer powers up with 50 bytes reserved by Clear. Try issuing a CLEAR 50 command after the New command, and then PRINTMEM. You should always see the same number returned.

I own a 48K Model III single-drive system with NEWDOS80 2.0 and Model III Scripsit 3.2. I'd like to be able to use a do- or chain file on Scripsit that will automatically print a preselected letter or other similar task. I understand Scripsit uses its own keyboard driver, so it doesn't recognize characters stored in a do-file. I've tried to reroute Scripsit's keyboard driver to point to the ROM driver, but my machine-language skills are limited. Is this the correct solution?

I think this automation of Scripsit could open up a new world of data base and word-processor interfacing: run a chain file to load a selected letter, say, depending on a code in the data base, and print it while you sit back and watch it work.

*Mark Read
Artarmon, Australia*

Sounds like an interesting idea. One of the problems with it, besides the keyboard driver routine, is that you have to make sure to reserve memory in high RAM for the do-file and prevent Scripsit from using that area for its own purposes. I believe that NEWDOS80 uses its own keyboard driver routine, so check your technical documentation for information about it. Then route the Scripsit keyboard driver to the NEWDOS driver. That should get you on your way.

Has anyone else tried mating the do-file technique with Scripsit?

I own a 48K Model I that I recently updated with Radio Shack's Double-Density Board. Being clever and wanting to increase on-line storage, I also added a double-sided drive as my second drive. I now realize that TRSDOS 2.77DD doesn't support the second side. How can I access the second side? Can I patch TRSDOS 2.77D to do this? Is a hardware modification needed?

*William Brown
Reistertown, MD*

ANYONE CAN USE OUR SOFTWARE!

MAIL PAC II and CHECKING PLUS represent a new generation of computer software. Our software doesn't even need a manual! Anyone can quickly learn to use either package by following simple, explicit on-screen instructions. But, for those of you who insist -- we've included a complete user's manual as well.

MAIL PAC II FEATURES:

High Capacity --

Stores from one to one million names in Zip Code, Numerical or Alphabetical order. The only limitation is your disk storage space.

Flexibility --

Prints your mailing list on 1, 2, 3, or 4-across labels (with up to 5 user-defined lines on each label) or as a compact, user-designed directory. The record length is completely user-defined, and each field within each of your records is completely variable (allowing storage of any number of characters for any particular address entry). Devote fields to telephone numbers, codes, or even special messages related to each particular name on file.

Powerful --

A built-in word processor allows you to create personalized form letters for each address on your list (or just a particular group of addresses).

Ease of Use --

Create new mailing lists, review existing lists, handle changes of address, delete cancelled names, sort lists, and purge duplicate names from your files. Complete on-screen instructions tell you in plain english exactly how to accomplish all of these tasks.

MAIL PAC II \$99.95

CHECKING PLUS FEATURES:

Complete Check Register --

Checking Plus stores your entire check register in a disk file, and then uses the data to balance your account, track your expenses, and help you make budget projections. Review the entire checkbook, enter checks, deposits, fees and adjustments, mark outstanding checks when paid, and get an instant cash balance at any time. All data can be viewed onscreen or printed out in report form.

Tax Preparation --

Storage of monthly and yearly totals and other important information aids in income tax preparation, for your personal use or for your accountant.

Handles the Details --

Store names and addresses for frequently written checks, then print checks to fit standard window envelopes, eliminating the need for extra typing. You can even store any comment, explanation or other message (up to 255 characters) related to a particular check.

Automatic Monthly Bill Payments --

Enter amounts and names of payees for all of your fixed-cost monthly payments, and then sit back while the system automatically prints checks.

CHECKING PLUS \$99.95

Both Programs Require 48K And At Least One Disk Drive (2 Drives For Higher Storage Capacities). And All Hard Disk Systems Are Supported.

FREE--TRS-80 Mod I,III & 4 programs supplied on DosPlus (minimum system). Complete DosPlus also available.

FEEDBACK LOOP

I haven't heard of anyone who's patched TRSDOS 2.77DD for double-sided drives. Can anyone help?

Assuming that there's no patch forthcoming, your best bet would be to buy a new DOS. MULTIDOS (Cosmopolitan Electronics Corp., 5700 Plymouth Road, Ann Arbor, MI 48105, 313-668-6660, \$99.95), DOSPLUS (Micro-Systems Software Inc., 4301-18 Oak Circle, Boca Raton, FL 33431, 305-983-3390, \$149.95), NEWDOS80 (Apparat Inc., 4401 S. Tamarac Parkway, Denver, CO 80237, 303-741-1778, \$149), and LDOS (Logical Systems Inc., 8970 N. 55th, P.O. Box 23956, Milwaukee, WI 53223, 414-355-5454, \$129) all support double-sided disk drives and work with Radio Shack's Double-Density Board.

You don't need to make any hardware modifications.

I'm a serviceman stationed overseas. I have a Model III with 48K RAM and no disk drives. The shipping over here has caused a problem: After warming up for a few minutes, the characters in the first row seem to condense and become unreadable. I'd like to repair the problem myself, but don't know how.

*Monserate Pagan
San Francisco, CA*

The problem is shock damage to the yoke assembly. Open up the case and discharge the video tube (or let it sit for a day), then grab the yoke and *gently* straighten it out. You may have to try several times before you get it right. If this doesn't work, have a TV technician take a look at the video electronics. You may have to replace the yoke.

If you don't understand what I mean in the above paragraph, then you probably don't know TV electronics well enough to attempt the repair yourself. If so, take it to a repair technician.

I have a Model I, Level II 16K cassette-based system with Exatron Stringy Floppy drive. I have many games with sound, but I don't like having to plug in an audio amplifier to the cassette port, and then hunting up batteries. I'd like to incorporate an amplifier circuit in my computer, but I need a stabilized voltage between 4 and 12 volts and I don't know where to find it inside the computer within easy reach to the cassette port.

In the June 1983 Feedback column you told someone how to install extra memory in his Model III (p. 350). Can I do this with my Model I?

Finally, sometimes, when I listen to my tape recorder by removing the ear plug, the sound is weak and I can hear the rolling of the motor from the speaker. If I remove the cassette and place my hand near the tape head, the rolling becomes louder. Is the head magnetized?

*David Raymond
Brossard, Canada*

There are two ways to tackle the audio amplifier problem. One is to mount the unit inside the computer (above the three-ROM satellite board, under the Radio Shack logo block on the right side of the keyboard), and the other is to run a power line from the internal power supply through the case, which you could then use to drive the amplifier.

The first solution works; I did it to my computer. Find a small audio amplifier board powered by 12 volts or less (5 volts is preferred). Attach it either to the computer circuit board with non-conducting tape, or to the computer case itself. Cut a slot in the case and orient the unit so that you can reach the amplifier's off/volume switch, which should stick out some. You may have to remove the amplifier from its case to do this right. Experiment with several positions to find the best one before you go chopping up the computer case.

Now solder the positive lead from the amplifier to one of the power traces on the computer's circuit board (the traces are facing up, the components are on the bottom, so the traces are easy to get to). Next, solder the black ground wire to the computer's ground trace. And finally, locate the cassette socket, identify the two leads that go to your cassette recorder (don't let the remote plug line confuse you), and then solder the two input wires of the amplifier to the cassette circuit.

This should put you in business, with an audio amplifier neatly hidden away inside your computer case, and an easily accessible volume knob for controlling it.

The other method is to find the amplifier you want to use, and determine whether it's 12V or 5V. Inside the computer, locate the appropriate power supply circuitry and then solder the two power supply leads to the positive and negative lines. Make sure you orient the

wires correctly for plugging into your amplifier. If the amplifier is designed for using non-battery power (as in an ac adapter), this orientation is crucial. Usually, but not always, the center of the plug is positive and the perimeter is negative. Goofing up here could easily damage your amplifier, computer, or both. Once you've soldered the two wires in place, run them over to the cassette port, cut a small hole, and run them outside the computer. Solder the wires to a plug that will fit your amplifier, and you're all set.

Both of these methods require that you get the *Model I Technical Manual* (Radio Shack part number 26-2103, \$9.95), which includes all the circuit diagrams showing you parts layout and circuit locations.

Adding extra memory to the Model I requires either buying an expansion interface that has the extra sockets for adding the memory, or modifying the CPU circuit board to make room for the extra chips. Microhatch (P.O. Box 501, DeWitt, NY 13214, 315-446-8031, \$169) sells a kit called BIG MEM that replaces the 16K RAM chips you currently have in your keyboard unit with new 64K RAM chips, giving you a 48K system with the Level II ROM. You can disable the ROM if you want, and have a 64K RAM Z80 computer for CP/M. Holmes Engineering (5175 Green Pine Drive, Murray, UT 84107, 801-261-5652, \$139.50) has a similar unit, the IM-2, with 32K RAM that brings your total memory to 48K RAM.

Several companies sell expansion interfaces for the Model I computer, including LNW Research Corp. (2620 Walnut, Tustin, CA 92680, 714-641-8850, \$399, with disk controller, 32K RAM, and RS-232 unit included), Micro-Design (6301 Manchaca Road, Suite B, Austin, TX 78745, 800-531-5002, \$469.95, with modem, disk controller, and 32K RAM included), and Holmes Engineering (see above for address, \$150, memory not included, call for details). Holmes Engineering also has an expansion box for adding other peripherals like a disk controller, RS-232, and so forth.

It sure sounds as if your tape recorder's head is magnetized. I suggest you get a tape head cleaner and demagnetizer and use them on your unit. It should clear up the problem. If it doesn't, your tape recorder probably needs replacement.

BUSINESS 100 PROGRAM LIST

NAME	DESCRIPTION
1 RULE78	Interest Apportionment by Rule of the 78's
2 ANNU1	Annuity computation program
3 DATE	Time between dates
4 DAYYEAR	Day of year a particular date falls on
5 LEASEINT	Interest rate on lease
6 BREAKEVN	Breakeven analysis
7 DEPRSL	Straightline depreciation
8 DEPRSY	Sum of the digits depreciation
9 DEPRDB	Declining balance depreciation
10 DEPRDDB	Double declining balance depreciation
11 TAXDEP	Cash flow vs. depreciation tables
12 CHECK2	Prints NEBS checks along with daily register
13 CHECKBK1	Checkbook maintenance program
14 MORTGAGE/A	Mortgage amortization table
15 MULTMON	Computes time needed for money to double, triple, etc.
16 SALVAGE	Determines salvage value of an investment
17 RRVARIN	Rate of return on investment with variable inflows
18 RRCONST	Rate of return on investment with constant inflows
19 EFFECT	Effective interest rate of a loan
20 FVAL	Future value of an investment (compound interest)
21 PVAL	Present value of a future amount
22 LOANPAY	Amount of payment on a loan
23 REGWITH	Equal withdrawals from investment to leave 0 over
24 SIMPDISK	Simple discount analysis
25 DATEVAL	Equivalent & nonequivalent dated values for oblig.
26 ANNUDEF	Present value of deferred annuities
27 MARKUP	% Markup analysis for items
28 SINKFUND	Sinking fund amortization program
29 BONDDVAL	Value of a bond
30 DEPLETE	Depletion analysis
31 BLACKSH	Black Scholes options analysis
32 STOCVAL1	Expected return on stock via discounts dividends
33 WARVAL	Value of a warrant
34 BONDDVAL2	Value of a bond
35 EPSEST	Estimate of future earnings per share for company
36 BETAALPH	Computes alpha and beta variables for stock
37 SHARPE1	Portfolio selection model-i.e. what stocks to hold
38 OPTWRITE	Option writing computations
39 RTVAL	Value of a right
40 EXPVAL	Expected value analysis
41 BAYES	Bayesian decisions
42 VALPRINF	Value of perfect information
43 VALADINF	Value of additional information
44 UTILITY	Derives utility function
45 SIMPLEX	Linear programming solution by simplex method
46 TRANS	Transportation method for linear programming
47 EOQ	Economic order quantity inventory model
48 QUEUE1	Single server queueing (waiting line) model
49 CVP	Cost-volume-profit analysis
50 CONDPFOT	Conditional profit tables
51 OPTLOSS	Opportunity loss tables
52 FQOQ	Fixed quantity economic order quantity model
53 FQEOUSH	As above but with shortages permitted
54 FQEOQPB	As above but with quantity price breaks
55 QUEUECB	Cost-benefit waiting line analysis
56 NCFANAL	Net cash-flow analysis for simple investment
57 PROFIND	Profitability index of a project
58 CAPI	Cap. Asset Pr. Model analysis of project

59 WACC	Weighted average cost of capital
60 COMPBAL	True rate on loan with compensating bal. required
61 DISCBAL	True rate on discounted loan
62 MERGANAL	Merger analysis computations
63 FINRAT	Financial ratios for a firm
64 NPV	Net present value of project
65 PRINDLAS	Laspeyres price index
66 PRINDPA	Paasche price index
67 SEASIND	Constructs seasonal quantity indices for company
68 TIMETR	Time series analysis linear trend
69 TIMEMOV	Time series analysis moving average trend
70 FUPRINF	Future price estimation with inflation
71 MAILPAC	Mailing list system
72 LETWRT	Letter writing system-links with MAILPAC
73 SORT3	Sorts list of names
74 LABEL1	Shipping label maker
75 LABEL2	Name label maker
76 BGSBUD	HOME business bookkeeping system
77 TIMECLCK	Computes weeks total hours from timeclock info.
78 ACCTPAY	In memory accounts payable system-storage permitted
79 INVOICE	Generate invoice on screen and print on printer
80 INVENT2	In memory inventory control system
81 TELDIR	Computerized telephone directory
82 TIMUSAN	Time use analysis
83 ASSIGN	Use of assignment algorithm for optimal job assign.
84 ACCTREC	In memory accounts receivable system-storage ok
85 TERMSPAY	Compares 3 methods of repayment of loans
86 PAYNET	Computes gross pay required for given net
87 SELLPR	Computes selling price for given after tax amount
88 ARBCOMP	Arbitrage computations
89 DEPRSF	Sinking fund depreciation
90 UPSZONE	Finds UPS zones from zip code
91 ENVELOPE	Types envelope including return address
92 AUTOEXP	Automobile expense analysis
93 INSFILE	Insurance policy file
94 PAYROLL2	In memory payroll system
95 DILANAL	Dilution analysis
96 LOANAFFD	Loan amount a borrower can afford
97 RENTPRCH	Purchase price for rental property
98 SALELEAS	Sale-leaseback analysis
99 RRCONVBD	Investor's rate of return on convertible bond
100 PORTVAL9	Stock market portfolio storage-valuation program

FEEDBACK LOOP

Regarding unexpected reboots and the Gold-Plug 80 connectors, you're ignoring one 34-pin edge connector: the disk drive! My Tandon drives each use a cable to connect two printed circuit boards inside the drive. The data lines cross the rear board to get to the controller board. The same solder-coated edge contacts are used on the controller board as at the back of the drive.

Since I couldn't install a Gold-Plug 80 inside the disk drive, I had to carefully solder 13 wires between the two boards. These 13 connections are accessible after removing the drive cover (the inside connections on the other side of the circuit board are inaccessible, but all are ground lines, so it seems safe to ignore them). Each of the 13 lines on the controller board goes to plated-through connections near the edge, making it convenient to insert each wire into the hole for soldering. On the rear board, you can tack-solder each wire to the connector pins. You need small-diameter wire and a pointed soldering iron (low-wattage).

Since installing these new connectors in my drives, in addition to Gold-Plug 80s on the computer system, I've had no further unexpected hardware reboots. (I also replaced the Radio Shack cables with new gold-plated ones from Alpha Products, Woodhaven, NY 11421).

*John Huffman
Winston-Salem, NC*

Thanks for the information. Fortunately, not all disk drives use two boards inside, so not all of us have to go to the trouble you did to solve the problem. For the rest of us, if you have problems with disk reboots and you've already installed Gold-Plug 80 connectors, check your disk drives—they may need a Gold-Plug too. I'd be very careful about ignoring those ground lines, however; they're needed to help maintain data integrity by screening out electrical noise and RFI.

I have two problems with my 48K Model I which came to light recently. The first, as a result of exploring Delmer Hinrichs' "3-D Printer Graphics" (May 1983, p. 236) while scanning $\text{COS}(X)/(X)$ and $\text{SIN}(X)/(X)$, where X varied from zero to 6PI by steps of $.1\text{PI}$, I found that the $.1$ factor changed in an unusual fashion. I had written X as $A\text{PI}$ where A varied in steps of $.1$.*

I'm at a loss to explain this or to dream up a fix. I previously had this trouble with a step of one, where the step was some consistent factor less than one. I traced this to a corroded connection leading to the expansion interface. I now have Gold-Plug 80s throughout. The present problem lies in the keyboard unit since I get the same results with the EI disconnected. Any suggestions or remedies?

Next, according to several sources I should be able to key in 256 bytes per input line, but my keyboard stops at 240. What's up?

*Thomas Rogers
Morro Bay, CA*

The problem is with the method Microsoft uses to manipulate numbers. I first ran into this problem on an IBM 360 computer in 1969, and then again on a CDC6400 in 1971, so the problem isn't peculiar to just the TRS-80 or Microsoft. The difficulty lies in that $.1$ is not a precisely defined number in binary math; $.1$ is to binary math like $1/3$ is to decimal math. Repetitious calculations slowly build up to a large, noticeable error.

You've stumbled into that strange area of computation called numerical analysis, where the method used to compute the formula can actually affect the final answer. Since you can't change the method used by the ROM for math manipulations, you'll have to use a kludge to get the right answer (as they say in college physics, if the data doesn't fit the curve, fake it).

The only solution is to avoid using step factors of less than 1. Make the step 1, and divide X by 10 to get the proper step for your mathematical formula. This problem, errors with numbers less than 1, is frustrating when you're working with finances. I've had several questions regarding errors in dollars and cents and how to get rid of the trailing digits.

Your sources of information don't know what they're talking about. The Level II ROMs limit keyboard input to 240 characters, although you can make Z80 instruction jumps of 256 bytes. Level II ROMs use the bytes between 256 and 240 to tell the operating system the beginning and ending addresses of the character string, with a zero byte between this information and the string, a

carriage return (at the end of the string), and a zero byte to separate it from the next string in memory. Also, some of those bytes are used to store the variable name (two characters plus type declaration) and a separator byte.

Some of the DOSes on the market have modified routines that let you key in 256 bytes, but the Level II ROMs won't.

In Basic, the extra spaces are used by the program line number, length of the line, address of the next line number, a zero separator between the beginning of the line itself, a carriage return at the end of the line and another zero byte separator (remember, the line editor has a total length of 256 bytes, which have to contain all that information).

In summary, the problems you've encountered are ROM related, and can't really be changed except by substituting the errant routines with new machine-language code that does the job correctly.

I'm using the EDTASM package in NEWDOS 2.1, which isn't supported by Apparat. I've found that when I use the A command to produce object code, the switches for printout, error catching, and so forth, don't work. Since the package is a modification of the original tape EDTASM, Apparat refers the user to the Radio Shack manual, giving only the specific changes made by Apparat.

The syntax for A is listed by Radio Shack as A (filespec) (,switch). The NEWDOS 2.1 EDTASM seems only to accept A, then it prompts for tape or disk output. Does an undocumented syntax change exist here? If not, is there a fix? I'm only a beginner and I don't want to invest in a new editor/assembler at this time.

For those using Newsprint 7.0 and LDOS 513, you have to modify Startup/MIN for LDOS. Newsprint uses its own keyboard driver and, when you use the Clear/Break command sequence (which normally splits a Newsprint line in two), Newsprint and LDOS each read the break key once and return you to BASIC READY. To make the Clear/Break sequence work properly, include the following command in Startup/MIN:

`SYSTEM (BREAK = OFF)`

A tip for LDOS users who have print-

Learn to Program Like a Professional!

THE COMPLETE BOOK OF RANDOM ACCESS & DATA FILE PROGRAMMING

Written for TRS-80™ I, II, & III - IBM™/PC - APPLE™ M/S - OSBORNE™ - HEATH™ - DEC™ - SUPERBRAIN™ - and all Computers using CP/M with Microsoft BASIC™

The last word on disk random access and file handling techniques, this series is intended for everyone — beginning programmers, businessmen and professionals will learn how to create custom programs to handle inventories, mailing lists, work scheduling, record keeping, and many other tasks, while more experienced programmers will learn advanced, professional programming techniques for faster, more efficient data storage and retrieval.

Although random access file handling is a matter of some complexity, the subject has been treated in a simple and down-to-earth fashion, so that anyone with some small familiarity with programming in Microsoft BASIC will be able to cope with the material. Each stage of learning uses a sample program as a starting point. The programs grow in capability and complexity as the books progress into all of the various aspects of file handling and record manipulation. An extensive effort has been made to keep the material coherent and every program line is explained in detail.

Volume I BASIC FILE HANDLING

- The writing of a Menu to summarize program functions
- Screen format for data entry
- The creation of a basic record
- The FIELD and LSET routines for buffer preparation
- Disk storage of random access records
- Changing or editing stored records
- The LPRINT capability from disk using three different formats
- Sorting the random file
- Searching by name or key field
- Search in "next" or "prior" fashion
- Purging deleted records
- Using disk file data for calculations
- Future expansion of data fields
- Using flags to prevent program crashes
- Date setting, printer on-line and many other routines to make a program run like a commercially written program

VOLUME I \$29.95
 Option Vol. I Program Disk
 TRS-80 Model I/III \$28.50
 TRS-80 Model II \$32.50

Volume II ADVANCED FILE HANDLING TECHNIQUES

- Relational database programming
- Comprehensive self-balancing accounting system with printouts
- Hashcoded data file manipulation -- (probably the fastest method of data retrieval). Hashing the input key and recovery method explained
- Span-blocking techniques allow creation of records longer than 256 bytes without wasted space
- Blocking & Deblocking
- Shell-Metzner sort
- In-place screen editing
- Recovery of deleted record space
- Alpha-index record retrieval
- Fast machine language/BASIC sort
- Linked list record structure and sort-merge, deleted record removal and file reorganization
- Multi-key file reorganization and record searching

VOLUME II \$29.95
 Optional Vol. II Program Disk
 TRS-80 Model I/II/III \$49.95

ers that accept single codes instead of requiring escape codes first: use the System (Graphic) command. You can then construct a filter, using XLATE/FLT, that will let you use some of the TRS-80's special characters and graphics symbols, but which most printers can't produce. I use graphics characters generated by two LDOS keystrokes to output special printer codes within VisiCalc, for example.

Mark Fagan
Toronto, Canada

The problem is the way you're specifying the switches. I've used NEWDOS 2.1 with the modified EDTASM for several years without experiencing any problems with the switches. You should type:

```
A filespec,switch,switch
```

Remember, the switches MUST be in uppercase. The blank space is mandatory. I know Apparat EDTASM works, just experiment a little.

Thanks for the tips.

I have a Model I with Holmes' 48K internal memory and an Exatron Stringy Floppy. I'm thinking of getting disk drives to take advantage of software for 32K and 48K.

What effect will my Holmes board have if it's operating with an MDX-2, Disk 80, or LNW Expansion Interface?

Ronald Mattson
Brockville, Canada

The presence of the Holmes board shouldn't make any difference to the expansion interfaces, as long as they don't include memory of their own. If they do include memory, then you'll have a conflict between the information in the Holmes IM memory and the memory in the EI. The end result will probably be blown memory or memory driver chips.

I'm an owner of a Model III, complete with a VR Data disk controller and two VR Data disk drives. After receiving a notification of reassignment to Europe, I asked some people at Radio Shack about making my computer work with 50-cycle current. Here are the answers:

● *"There's no way to do it, you'll have to buy another Model III in Europe."*

● *"You don't need to do anything as long as you use a stepdown transformer; the dc drives won't notice anything."*

● *"All you need is a transformer to convert from 220V/50 Hz to 110V/60 Hz."*

Three months later, here I sit listening to my drive motors turning themselves off and on, over and over, at about three-second intervals. Everything works fine, but I can't get used to the idea of my drives tearing themselves up like this. Can you help?

E.F.
Augsburg, Germany

"You've stumbled into that strange area of computation called numerical analysis."

As I recall, Model III TRSDOS comes with a utility called HZ50/CMD that's supposed to configure the Model III drives to work correctly with 110V/50 Hz current. Contact your closest Radio Shack dealer about getting a copy of this utility for your system.

My computer is a Model I Level II with 32K RAM LNW interface, one Tandon drive, and four BASF 6106 disk drives. At one time the BASF drives worked, one at a time, but I've changed the programming jumpers so much that they no longer work.

I can use the Tandon drive alone, but that's too restrictive. I want to use the Tandon with the BASF, or the BASF by themselves. I noticed that the Radio Shack cable has teeth pulled so that the position of the drive on the cable defines the drive number, but when I bought one it didn't help me.

Alfred Bowman
Gig Harbor, WA

The first thing you should do is buy the technical manual for the BASF 6106

drives. Software Support (One Edgel Road, Framingham, MA 01701, 617-872-9090, \$14.95) has copies of the manual. You can also get the manual from BASF Corporation (Computer Hardware Sales, Crosby Drive, Bedford, MA 01730, 617-271-4168), but I don't know the price.

Now, for your problem: You can only hook up the BASF drives with a maximum of three drives on the system. The BASF drives are jumpered inside the case as either drives 1, 2, or 3. If you use the Radio Shack cable, then you must make sure that the drive jumper setting matches the pin select of the cable (first cable position drive must be jumpered as drive 1, position 2, jumpered as drive 2, etc.).

The Radio Shack disk drive system is designed as a radial chain, with each drive accessed separately. I'll tell you how to set up a BASF drive as drive 3 (which is where I have my BASF drive in my Model I system). Find jumper matrix JJ1 (a 6-pin jumper block). If pins 1 and 2 (bottom set) are connected, the drive is set as drive 1. If pins 3 and 4 (middle set) are jumpered together, it's drive 2. The top two pins set it up as drive 3.

Find jumper matrix JJ2 (a 14-pin jumper block beside JJ1). Jumper pins 3 and 4, and 9 and 10 together. This sets the head load option to radial. Jumper pins 5 and 6 together for radial select option.

Find the two 14-pin jumper blocks at the front of the drive. The one closest to the drive door is JJ4. Jumper pins 5 and 6 of JJ3, and 3 and 4 of JJ4 together to set the write protect of your disk to mean that a covered notch protects the disk. Jumper pins 5 and 6 of JJ4 together so that the LED on the door will light when the drive door is locked and the drive is spinning at speed. Jumper JJ3 pins 13 and 14 together for automatic head load.

These options should get your disk drives in operation until you get your own drive manual and can select the options you want.

I have a Model III dual-disk micro-computer. My problem is that I can't assemble my 185-record 12-extent source-code program with Radio Shack's Series I Editor/Assembler (only 35 bytes free, I get Symbol Table overflow).

I'm willing to spend up to \$200 for a one-time solution. I've heard that Ra-

FEEDBACK LOOP

dio Shack's "Edit" assembler will fit my needs, but none of the local Radio Shacks know what it is. Can you help?

Vik Gavande
Austin, TX

You want MZAL, by Computer Applications Unlimited (P.O. Box 214, Dept FSBE, Rye, NY 10580, 914-937-6286, \$149). This system of programs uses a linking loader to independently assemble written source-code modules into one program. The limit is 30,000 bytes for a symbol table, or your available disk space. For more information on this system, read the review in the October 1982 issue of *80 Micro* (p. 160).

UPDATE

In the October 1983 Feedback I said that the Alpha-Products joystick used the 5-volt line of the TRS-80 for a power source. Well, one of their technicians called me and told me that their unit doesn't even have a pin connection to that line, so it couldn't be using that line for a power source. Given that fact, I can't see any reason why the joystick would malfunction in the manner described by A.L.H., of Raritan, NJ (October 1983, p. 336). Sorry about that. ■

Terry Kepner is a freelance writer and programmer, and the vice president of Interpro. He's been writing about microcomputers since 1979.

(112K EXTENDED MEMORY ADD \$100.00)

THE HOLMES
VID-80™

FEATURES OF VID-80™ WITH CP/M®:

- ENHANCED CP/M® 2.2 OP SYSTEM
- READ AND WRITE many disk formats: IBM PC, XEROX, ZENITH Z-100, OSBORNE I, KAYPRO II, 8", 40 and 80 TRACK, DS DRIVES ETC.
- 80 x 24 and 64 x 16 Display
- READ-WRITE-RUN many of the thousands of CP/M based business and personal software packages
- 112K EXTENDED MEMORY option - set up as solid state disk
- Optional 5MHZ System speed up **SPRINTER III™**
- Model IV Capabilities - optional modified **TRS DOS 6.1** and **DOSPLUS®**
- **UCSD PASCAL®** p-system - optional software required

INDUSTRY STANDARD:

The **HOLMES VID-80, CP/M 2.2 and 80x24 video upgrade** makes the model III one of the **most powerful computers** on the market. With the VID-80 installed your model III can read, write and run numerous CP/M based programs from the thousands of software packages available for this industry standard operating system.

The 80x24 display improves resolution and eases use of computer during spread sheet, wordprocessing, and programming operations.

These features combined with the TRSDOS and other TRS-80, operating systems makes the model III capable of running more software than any other system currently available.

The VID-80 simply plugs into existing sockets inside the model III without modifications, soldering or trace cuts on the system.

HOLMES has a **full range of upgrade and peripheral products** available for the TRS-80 models I, III, IV and 100 portable computers: products include-DISK CONTROLLERS, MEMORY EXPANSION SYSTEMS, SPEED UP BOARDS, PORTABLE TAPE DRIVES, PRINTERS, CP/M 2.2 for MOD. IV, etc.

HOLMES IS YOUR SOURCE FOR COMPUTER PERIPHERALS

Wait! Before you read this column, follow these instructions exactly:

1. If you are using a disk system, specify zero files when you enter Basic.
2. Type Program Listing 1 into your Model I, Model III, or Model 4 (in Model III or ROM mode).
3. Make sure you've entered everything exactly as it appears.
4. Save the program to tape or disk.
5. After you save the program, run it.

Do you understand what happened? Should you list it again to take a better look? I'll leave what, why, and how in the air for a moment; I'll discuss this programming technique later in the column.

Strings on the Screen

I'm devoting this month's column to answering the mail and presenting some short, useful readers' techniques, as well as a few of my own.

A programming potpourri

First come requests from Model I/III and Model 4 programmers for ways of reproducing material that appears on the screen. Some of the requests have been spurred by a feature which I be-

lieve is unique to LDOS (Model 4's TRSDOS 6.0 is a licensed version of LDOS 6.0). The techniques are the same no matter what material you want to get from the screen.

When you boot an LDOS system disk, you are asked to enter the date in the standard MM/DD/YY format. As soon as you press the enter key, the computer processes the date and displays it in the more normal day, month, date, year format. For example, if you enter 12/31/83, LDOS translates it to Sat, Dec 31, 1983. Every time you use LDOS's Date command, the date appears in the expanded format. It's a nice, though not critical, feature of LDOS.

Problems arise when you go to Disk Basic. If you enter the command PRINT DATE\$, the familiar 12/31/83 returns. Since the day/date algorithm exists as a DOS library command, you can always use CMD "DATE" on the Model I/III or SYSTEM "DATE" on the Model 4 to display the expanded form. But if your program takes action based on the day of the week, or needs to use the expanded form in a printed report, you must somehow capture it in a string. The problem is how to do that.

To further define the problem, notice that the expanded form of the date always takes exactly 17 bytes. Also, assume that you've cleared the screen just before you issued the CMD or SYSTEM command. Therefore, you need a way to put the first 17 bytes on the screen into a string that you can further manipulate or use in a program.

The solutions for the Model I/III and Model 4 are completely different because the Model 4, running under TRSDOS 6.0 and compatible systems, does not use a normal memory-mapped video display (nor a memory-mapped keyboard). It has a special 2K of static RAM for the screen, but that memory isn't part of the 64K RAM available to the Z80 processor.

In simpler terms, you can't POKE characters to the screen or PEEK character values from the screen. (Actually, that's not quite true, but a Basic program can only directly address screen memory by some unusual bank-switching that may destroy values essential to

BUILT-IN SUPPORT FOR MOST POPULAR PRINTERS†, INCLUDING:

Anadex, Brother, Centronics, C.Itoh, Diablo, Epson, Gemini, Microline, NEC, Prowriter, Gume, Radio Shack (LP 1-8, DW2, DMP-410, DWP 200-2100), Smith Corona, Teletype, Typewriter, anything compatible with any of these, and many others, parallel and RS-232.

SPECIAL AVAILABLE OPTION: Right-justified proportional for Diablo, F-10, Gume, Spinwriter, etc. Requires "Daisywheel Proportional" Option plus NEWSSCRIPT.

REVIEWERS AND USERS AGREE:

"NEWSSCRIPT" is the best word processor I have seen ... unsurpassed in printer control ... no other TRS-80 word processor can match its ability to format text ... its editor is fast, easy, and powerful."
(80 MICRO, Oct. 1982)

"Your phone information system and the prompt and courteous staff that you provide to help your clients ... are worth the cost of the system."
(V.H.H.)

"Better than cold beer on a hot day!! Thank you!!"
(R.S.)

"What a program. So easy to learn and easier to use. I waited too long before ordering!" (P.J.M.)

"... takes the TRS-80 to a new level of text handling ... very user-friendly ... superb documentation, adaptability to many printers and operating systems ... a standard against which other TRS-80 word processing programs will be judged."
(SOFTSIDE, Dec. 1982)

"... ongoing support second to none, with superb documentation."
(80 U.S. Journal, Feb. 1982)

THE NEXT STEP

the system—not a recommended technique).

I'll start with the Model I/III solution. Notice that Program Listing 2 is written entirely in Basic, without any machine-language subroutines. Until you're familiar with the technique,

however, it may be a little confusing. The program creates a dummy string, DU\$, expands it to 17 bytes, and points it to the beginning of the screen where the program displays the date. Then it transfers those 17 bytes to DA\$, which it prints to verify that everything is in

order.

You may remember from my last two columns that Basic uses 6 bytes in low memory to store information about a string variable. The actual characters are usually stored in high memory. The 6 bytes for DU\$ would be:

03 hex	string type code
55 hex	"U" (2nd letter of name)
44 hex	"D" (1st letter of name)
len	length of string
lsb	Least significant byte (LSB) of string address
msb	Most significant byte (MSB) of string address

The value returned by VARPTR(DU\$) is the address of the fourth of these 6 bytes, "len."

Line 10 in the program clears the screen and prints the expanded date in the upper left corner. Line 20 creates the dummy string, DU\$. The fun begins in line 30, where, by POKEing 17 into the fourth position in the variable entry, DU\$ automatically becomes 17 bytes long.

In lines 40 and 50, change the address of DU\$ so its information block in the simple variable table indicates that it contains 17 bytes beginning at 3C00 hexadecimal (hex), the beginning of screen memory. Then in line 60, DU\$ is copied to DA\$. This is a necessary last step, because DU\$ points to or contains the first 17 bytes on the screen.

As soon as the screen changes, DU\$'s contents change. Copying DU\$ to DA\$ transfers the present contents of DU\$ (the expanded date) to a safe place in high memory.

DU\$ points to the top of screen memory until you use it on the left side of the equal sign in a LET statement. Then the program points it back to the more normal high memory. You can use strings pointed to the screen to produce some amazing graphics written entirely in Basic. For examples, see my "Super Fast Graphics in Basic" in Volume 9 of the *Encyclopedia for the TRS-80* (Wayne Green Inc., 1982).

The Model 4 solution is slightly more complicated because it combines a Basic program with a machine-language subroutine. The Basic program is shown in Program Listing 3, the machine-language source code in Program Listing 4.

This program operates by creating a string, DAY\$, of the required length.

```

Continued on p. 37

Quality you expect, at a price you don't.

BECK DOUBLE DENSITY DISKETTES

SINGLE SIDED

\$2.19 / **\$2.79**
ea. / ea.

DOUBLE SIDED

Our message to you is simple. If you like the quality of Dyan, Verbatim, 3M, et al, you'll like the quality of Beck soft sector, 5 1/4" flexible diskettes. The only major difference is cost. We're less expensive. In fact, a lot less expensive.

Why does Beck cost less?

Our philosophy is: Excellent quality and reliability, at a cost that beats the jackets off other diskettes. We can do it because we (1) put our money into the product, not mega-marketing schemes and fancy packaging; and (2) sell our money-saving 25-diskette pack to you direct via a toll free order line, so you get fast, door-to-door service efficiently.

**When you buy Beck, you've got the best.
Beck Quality. Beck Reliability.
And, of course, Beck Price.**

1D, soft sector 5 1/4" diskette \$2.19 each
2D, soft sector 5 1/4" diskette \$2.79 each

For IBM, Apple, TRS and 97% of popular microcomputers.

What about quality and reliability?

At Beck, our success as a diskette manufacturer depends upon our ability to provide you with a fully reliable, quality diskette - every time. For that reason we take no shortcuts. You get the best because we are committed to excellence. Every diskette is manufactured to very strict quality standards. We test and retest 21 times throughout the manufacturing process to insure compliance with no less than 42 rigid specifications. We make sure you get the very best - a 100% certified, 100% error free diskette.

Our satisfaction money-back guarantee and full **7** year warranty are proof of our commitment to excellence and confidence in our product.

LOAD 80

**TO YOUR
RESCUE**

LET LOAD 80 RESCUE YOU

In the dawn of the computer age programmers needed the patience of Job to manually keyboard all the major program listings from a single issue of 80 MICRO.

Then LOAD 80 burst onto the scene and exploded that practice. Today thousands of TRS-80* owners use LOAD 80 cassettes and disks every month. These time-conscious computerists spend more time enjoying all the benefits of those 80 MICRO programs.

LOAD 80 programs come directly from 80 MICRO giving you complete and detailed documentation right there in the magazine. And now, the new disk transfer system allows Model III users to run LOAD 80 disks without conversions. Save close to 30% on the single issue price by subscribing to LOAD 80 today (choose either monthly cassettes or disks).

Due to the tremendous popularity of color computing we are replacing COLOR LOAD 80 with INSTANT COCO. INSTANT COCO is the color loader backed by Wayne Green's new and exciting color computing magazine, HOT COCO. See the latest issue of HOT COCO for full details. We will still be offering from COLOR LOAD 80, "The Best of '82," and three volumes of color programs from 1983 issues of 80 MICRO.

Start enjoying all the benefits of the programs in 80 MICRO without all the programming hassels. Fill out the attached order form and send it to LOAD 80, 80 Pine Street, Peterborough, NH 03458. Or call toll free and use your Master Card, Visa, or American Express.

StatPac™

Statistical Analysis Package

A complete data manager and statistical analysis package similar to mainframe SPSS*.

StatPac's features include:

batch processing, variable and value labels, select if, recode, recode if, compute, compute if, sort cases, list cases, write subfile, frequencies, descriptive statistics, crosstabs & chi-square, correlation & linear regression, t-test for matched pairs or independent groups, multiple regression, anova for pregrouped or ungrouped data, two kinds of multiple variable response.

StatPac can handle fixed or free format data files and 2000 cases with up to 255 columns of information per case. Statistic selections and printing options are available on all analyses including paper saving ecology feature.

\$20,000 Net Profit Last Year

BEAT THE POINT SPREAD WITH YOUR PERSONAL COMPUTER!!

In the past three years, a personal computer has consistently produced a major profit picking Professional Basketball bets. A \$200 bet on each computer pick last year produced \$20,000 Net Profit.

The program is fully automatic and self-prompting. It even checks for typing mistakes. A practice program demonstrates how to use all the functions.

For each game, enter the team names and scores. The computer calculates statistical medians for the point spread and total points.

For upcoming games, enter the team names and instantly the screen displays the favorite, the point spread and total points predicted. You bet those games where the computer gives you an advantage versus the spread or over/under points.

If you enter the performance of each team versus the spread, the computer also reports high percentage situations worth betting.

Diskette includes the complete program package for entering game data and obtaining predictions, for practicing use of the program and for erasing old data each year. You can even review the last predictions. It is complete, well tested, highly accurate and easy to use. The computer system costs about 10% of one year's net profit.

Program requires a 48K Apple II, DOS 3.3, 1 disk drive and Applesoft ROM. It is also available for TRS-80 Model III & others.

Each diskette comes with stats for games already played when you make your purchase; you can quickly be in the middle of the action.

Pickam Software also produces programs for N.F.L. & U.S.F.L. Football, Horse Racing and Dog Racing.

We also sell computer systems!!

COMPUSOFT HAS THE KEY

Continued from p. 32

Then a machine-language routine reads each character off the screen and POKEs it into the appropriate location inside DAY\$.

Line 110 of the Basic program clears the screen and forces DOS to print the expanded date form in the upper left corner. Line 120 initializes X to 1 then sets up DAY\$ as 17 ASCII spaces. Lines 130-150 move the machine-language routine, stored in data statements, into CODE\$. The routine is relocatable, so CODE\$'s location in memory is unimportant.

Lines 160-180 find the location of DAY\$, and place it in the integer Q%. Line 190 calculates the location of CODE\$ (the machine-language code) and places it in R. Line 200 does all the work, calling the machine-language routine at R (the address of CODE\$) and sending the address of DAY\$ to the subroutine. Finally, line 210 prints DAY\$ to verify a successful transfer, and then defines DAY\$ as common so it can be sent to another program with a Chain command.

The only way to move from Basic to a machine-language subroutine on the Model I/III is with a USR command. Model 4 Basic has two different commands to call a machine-language rou-

tine, both much more powerful. USR, in Model 4 Basic, can pass a single variable of any type (integer, single-precision, double-precision, or string) to the subroutine. The Call command can pass an unlimited number of variables of all types to a subroutine. A fundamental difference between the Model 4 and the Model I/III machine-language calls is that both Model 4 calls pass the address of variables instead of the values of variables.

When the program passes only one variable with a Call instruction (Q% in our program), the machine-language subroutine in the HL register pair receives its address. Lines 200-220 of Listing 4 load the address of the 17 spaces in DAY\$ into the DE register pair. The program sets register A to zero with an XOR A command and uses it to set both H and L to zero. (This roundabout way of zeroing the HL register pair avoids leaving zero bytes in CODE\$.) Then the program loads B with 17, the number of bytes to transfer from the screen to DAY\$.

Inside the loop, the program saves both BC and DE on the stack. Then it loads A with 15, the index value of the @VDCTL supervisor Call (SVC). None of the addresses of the DOS routines in

TRSDOS 6.0 are documented. Instead, the *Model 4 Technical Manual* supplies a list of approximately 100 SVCs. Each SVC provides one or more functions for interfacing your routine to the system. SVC 15, for example, is a collection of 8 video control functions.

To get a character from the screen, your program must load the A register with 15, the SVC number; register B with 1 to select the read-from-screen function; register H with the row number of the character's position (zero for the top row of the display); and register L for the column number in the row (zero for the leftmost column). An RST 28 hex instruction then fetches the character, returned in the A register. If the program doesn't set the Z flag, an error has occurred during the transfer.

After each fetch, Listing 4 saves the character in DAY\$ (line 360) and the program increments the HL and DE pointers for another fetch. It finishes by returning to Basic. If a fetch error occurs, the program returns immediately, and DAY\$ holds only part of the date display.

You could add an error-checking loop to the Basic program to be sure that DAY\$ doesn't end with a space, and to try the call again if it does, though I've used the routine many times and never seen an error generated. You could easily generalize this routine to read as many characters as necessary from the screen. Just remember to increment H for each new video row.

Another Model 4 Routine

Program Listing 5 shows a technique you can use on a Model 4 in Model III mode only. Line 40 forces A to alternate values of zero and 8. If you send a value of 8 to port 132, you enable the inverse video section of the Model 4's character generator, and can print inverse characters. To display an inverse character, set bit 7 of any normal character value to 1, creating a value between 128 and 255. Unfortunately, neither the ROMs nor DOS supports printing inverse characters on the screen, though it wouldn't be difficult to write a filter for the video driver to do so.

Back to the Beginning

So you thought you could get all the way through the column without actually typing in and running Listing 1, huh? Go back now and do it. Only those of you who have already run it

Langley-St. Clair Gets Mail

From unsolicited letters of testimonial

I recently purchased your amber CRT for my Model III with anti-glare features. I seldom write regarding products I've purchased for the computer, but I felt that your product warranted a short note. I am extremely happy with my new CRT. The color is great, and easy on the eyes, as you claimed. Your documentation was excellent. I am by no means electronically inclined, but I had no problem with the installation.

Just wanted you to know that I would recommend your product to anyone interested in upgrading their CRT. Thank you for your excellent service also.

A.P.

New Monmouth, NJ

I have got my Orange CRT installed in my computer and it sure is a good tube. Now after looking at the screen for 8 hours my eyes aren't falling out. Thank you very much for all the trouble you had to go through with my order. This tube works fine, and after a little getting used to the color I like it a lot better than green and 100% better than B/W. Your company is sure wonderful to do business with. You can be sure I will tell anybody that is looking for a replacement CRT where to get one. Also tell Donna thanks for all the help she gave me...she was right about the color; it is a lot better to look at once you get used to it. Again, thank you very much.

K.L.

THE NEXT STEP

may read the next part.

What's happening in this program? If you translated the POKE addresses in lines 20, 40, and 50 to hexadecimal, you probably already know. I adjusted several low-memory pointers to achieve this effect. Line 20 moves the Array Variable Table and Free Space pointers (40FB hex and 40FD hex) up to a higher location in memory (remember those pointers from last month?). Then the program loads array A(n) with data values. Each data value is a combination of 2 bytes of the tokenized form of another Basic program. Finally, the beginning-of-program pointer (40A4 hex), as well as the variable table pointers, are adjusted to the beginning of the array area, 6F00 hex. Essentially, one Basic program has written another!

Moving the pointer can lead to all sorts of interesting techniques. Though the one in Listing 1 probably has only limited uses, it does serve to illustrate a major point: Basic programs (except for the next-line pointers they contain) are completely relocatable. You can store the lines of a Basic program anywhere in memory.

Programs running under Disk Basic are located much higher in memory than those running with a tape system to allow space for the resident DOS modules and Disk Basic enhancements. Also, the number and type of files you select on entering Disk Basic alter the starting point of your program.

When you add machine-language

routines to a Basic program, you have to worry about where to store those routines. You can put them at the top of memory, and protect them by setting the HIMEM pointer, or you can store them in low memory below the resident Basic program. It's easy to store programs in low memory with a tape system; unless you change the 40A0 hex pointer with a machine-language routine, the Basic program always starts in the same place.

It is more difficult to load a machine-language program below Disk Basic, because the value in 40A0 hex varies according to the number and types of files, and the DOS you use. However, if you load Basic before the machine-language program, life can be much simpler.

Load and run Program Listing 6. The first lines disappear when the program runs, because the program moves the 40A4 hex pointer up one line with each iteration of the loop. The program stores every line of Basic with a 2-byte header that points to the next Basic line. The 40A4 hex pointer holds the address of the first line in the Basic program. By moving that pointer, you can make the first lines invisible.

If you POKEd a machine-language program in the REM statements and then moved the 40A4 hex pointer, the subroutine would be completely invisible to the user. Better yet, it would remain in place no matter how many Basic programs you load and run. And

```

Program Listing 7. Use the 2K video RAM to enhance regular programs on the Model 4.

THE COMPUTER TANDY SHOULD HAVE BUILT.

Software-selectable screen formats let you run either 24 x 80 CP/M or 16 x 32 and 16 x 64 LDOS programs.

Monitor comes in your choice of green or amber phosphor display.

With our built-in disk interfaces, you can simply plug in any combination of peripherals.

Standard Centronics-type parallel port accommodates a wide variety of printers.

Our 5MHz Z-80B processor runs your programs 25% faster than TRS-80 Model 4.

Rugged construction includes heavy duty case and full-stroke sculptured keyboard.

Available storage includes Lobo's 5-1/4" floppy, 8" floppy and Winchester hard disks.

All Lobo hardware products carry a limited one-year parts and labor warranty.

AT THE PRICE TANDY SHOULD HAVE CHARGED.

The bottom line is this. For far less than the price of a TRS-80[®] Mod 4, you can own a lot more computer.

A computer that's 25% faster. That supports both the CP/M[®] Plus and LDOS[™] operating systems.

A computer that features a price tag of only \$945 for the MAX-80[®] processor. And that expands with your needs without breaking your budget.

A FLEXIBLE SYSTEM AT A FLEXIBLE PRICE

When you put it all together — an entire system, including a dual 5-1/4" floppy drive sub-system (320 Kb of disk storage), monitor, CP/M and LDOS

— totals up to just \$1599.

Totally remarkable. But that's not all. Because this basic MAX-80 system is incredibly flexible. Its dual operating systems run far more software than any other computer. (Including our specially-discounted Perfect-Calc[™] and Perfect-Writer[™] software packages.)

And since our MAX-80 features two RS-232C serial ports, you can easily add both printer and modem without switching back and forth.

SUPPORTS A WIDE VARIETY OF PERIPHERALS

What's more, Lobo offers almost any peripheral you

might want to add to your MAX-80. At very special prices.

Like \$995 for a 5Mb Winchester hard disk, the ultimate in fast, accurate data storage.

Or a whole line of affordable dot matrix and letter-quality printers. Or an 8" floppy drive. Or even a MAX-80 local area network.

EVERY PIECE OF HARDWARE BACKED BY OUR UNBEATABLE WARRANTY

Because every part of the MAX-80 system is so rugged and reliable, we go beyond industry-standard 90 day warranties. We back every piece of Lobo hardware with a full year warranty.

So now, you can run virtually

all your TRS-80 programs faster and cheaper.

Just give us your Visa or Master Card number. We'll rush you the MAX-80. Try it out. Then, if for any reason you change your mind, return it within 30 days. We'll return all your money.

So call us. Because owning a MAX-80 costs you \$945. But finding out about it costs you nothing.

1-800-235-1245

(1-800-322-6103 in California)

LOBO SYSTEMS, INC.

358 South Fairview Avenue, Goleta, California 93117

↪ 535

best of all, it could contain bytes of 00 hex without adversely affecting the resident Basic program. It's absolutely safe.

As one reader, Jim Kyle of Oklahoma City, OK, pointed out, the addresses set by DEFUSR commands don't change with New, Clear, Load, or Run commands. Nor do the values in 16526/16527 for tape systems. Therefore, the same machine-language program is available once it's loaded and the relevant pointers are set.

One More Model 4 Routine

Jim Kyle has also done some explorations with the Model 4 video control that I think you'll find interesting. If you have a Model 4, put it into Model III mode, and run Program Listing 7. Be sure to let it run completely to the end. You should be surprised by the results.

If you don't have a Model 4, you might want to go to your local Radio Shack store or Computer Center and try

it. It will work on all versions of the Model 4, from the 16K RAM tape-based model up to the 128K RAM hard-disk setups, as long as they are first put into Model III mode.

This program illustrates how the 2K video RAM enhances regular programs. If you're going to experiment with other port outputs, first pull the disks from the drives so you don't inadvertently turn on a drive and erase something.

The program operates by acting upon the CRTC (cathode ray tube controller) chip inside the Model 4. Output port 132 (84 hex) selects several systems options, including placement of the cursor (paging) inside the 2K of video RAM and toggling between the 64-character and 80-character display modes. Output ports 136 and 137 directly address the CRTC, in effect telling it the location, in the 2K of video memory, of the top of the screen. The CRTC sees the video RAM as completely circular, with complete wraparound from the end to

the beginning, and it's impossible to send an invalid address.

With that introduction, you should be able to figure out how the program works, and use the same techniques in your own programs. You could, for example, change last August's screen swap program to use the other half of video RAM and save 1K of program memory space. ■

Readers who subscribe to Compu-Serve may take part in open discussions of topics covered by The Next Step. GO PCS-117 to the Software and Authors Special Interest Group (SASIG) and leave your questions or comments addressed to Hardin Brothers on the message board. Be Amazed!

Telengard: How low can you go?

We've created a subterranean monster. Fifty stories low.

That's the number of levels in the TELENGARD dungeon.

Each labyrinthine level holds hundreds of dark chambers and tomb-like corridors for the mighty adventurer to explore. It goes without saying that a shifting collection of hideous monsters with unpredictable behavior patterns can make life in the TELENGARD maze quite interesting—and frequently quite short!

Using wits, magic and true grit, your character delves deeper and deeper into the depths of TELENGARD in this realtime fantasy role-playing game. Available on cassette for Commodore® 64, Atari® Home Computers (40K), TRS-80® Mods. 1/III (32K) and PET® 2001 (32K) for a ghoulish \$23.00. 48K diskettes for Apple® II, Atari®, Commodore® 64 and TRS-80® available also, for \$28.00.

AND FOR THOSE WHO DON'T DIG UNDERGROUND GAMES . . . There's **B-1 NUCLEAR BOMBER**, a nail-biting solitaire simulation of a manned B-1 on a mission over the Soviet Union. Your plane is equipped with six Phoenix Missiles, a one megaton warhead and orders to retaliate! Cassette for Commodore 64, Atari Home Computers (32K), TI99/4 & 4A (16K), VIC-20 (16K), Timex/Sinclair 1000 (16K), and TRS-80 Mods. 1/III (16K) are available for an explosive \$16.00. Diskette versions for Apple (48K), TRS-80 (32K), Atari (24K) and IBM (48K) just \$21.00.

NUKEWAR: Defend your country by massive espionage efforts, or by building jet fighter bombers, missiles, submarines and ABM's. Your cold and calculating computer will choose its own strategy! Cassette for Commodore 64, VIC-20 (16K), TRS-80 Mods. 1/III (16K) and Atari Home Computers just \$16.00.

FOOTBALL STRATEGY: Animated action on a scrolling field. A head-to-head challenge or solitaire as you select the best offensive or defensive plays in response to your opponent. Commodore 64, Atari Home Computers (32K) and TRS-80 Models 1/III/IV (16K) cassette for \$16.00. Atari (32K), IBM (64K) and TRS-80 Models 1/III/IV (32K) diskettes available at \$21.00.

T.G.I.F.: Thank Goodness It's Friday! Avalon Hill's new party game for one to four players recreating an often-not-so-typical week in the lives of the working class. Half the fun is just making it from Monday to Sunday. Commodore 64, Atari Home Computers (40K) cassette for a meager \$20.00. Atari diskette (48K) for \$25.00.

SOFTWARE SUPPORT INC. presents Software
Ldos^c Improved — New efficient improvements for your **Model I/III/IV LDOS^c System**

With Our Program Enhancements You Will Now Be Able To Accomplish:

1. Double the speed of disk operations
2. Reliable fast clock boot (with enhanced hardware — such as the Holmes Sprinter™)
3. Improved dual sided and 80 track disk drive operations.

Model I/III/IV Instapatch™ On Disk \$29.95

Esylst™ — Neatly and automatically print out any number of your basic programs. Page numbering, top of page, skip, no limit to the number of programs printed at one setting. Fast — Easy — Efficient. Use with Newdos^a, Dosplus^b, Ldos^c

For Your Model I/III/IV On Disk \$19.95

DRIVE A HARD BARGAIN™

We have rewritten the book on Hard Drives. Our hard drives are the fastest, the most versatile (Newdos^a, Dosplus^b, and Ldos^c drivers), the most adaptable, (runs on the Model I, Model III and Model IV using the same adapter), but, we must admit, it is the lowest (in cost that is) starting at **\$999.95** for a 5 meg. (formatted) primary and **\$695.00** for a secondary system. All systems come complete with power supply, case, cables and Instapatch™ software drivers for fast-trouble-free installation and operation. **Nothing else to buy!**

Self Test — Automatic Diagnostics

Error Correction — ECC

Daisy Chain up to 40 Megabytes

Warranty — ONE FULL YEAR. Call for details

The Talking Program
Ron Hutchinson
 P.O. Box 28355
 Columbus, OH 43228
 Models I, II, III, 4, 12, 16, and Lobo
 Max-80
 Votrax Type-n-Talk
 \$129.95

by Terry Kepner

The Talking Program is a neat machine-language program that allows visually handicapped people to use a computer. Instead of just sending information to the video display, The Talking Program verbalizes what appears on the screen. Thus, a visually handicapped person can both run and write programs.

The Talking Program integrates itself into your computer's disk operating system (DOS). In addition to this software, you also need the Votrax Type-n-Talk (\$249.95) and its connection cable to give your computer a voice.

Once you install this program and turn on the computer, The Talking Program becomes transparent and you can switch its various functions in and out of use as your needs dictate.

Because the program integrates into the DOS when you execute it, any program that honors the DOS keyboard and video driver device control blocks (DCBs) works with The Talking Program. You're not limited to a few properly patched programs.

Thus, a visually handicapped person can use practically any Basic program because he can hear it. Programming becomes a cinch, as the system verbally echoes every keystroke. You can also use machine-language programs, but they, too, must honor the DOS keyboard and video driver DCBs.

I used The Talking Program on a Lobo Max-80 with LDOS and the Votrax Type-n-Talk unit. After installing the program on my DOS disk and setting it for automatic execution when I boot the disk, I tested it by turning off my video monitor and using the program "in the dark."

I was amazed at how easy it was to learn to use the computer without the monitor. The Talking Program vocalizes everything sent to the video display, including copyright notices.

Hearing the copyright notice also lets you know immediately whether the system is operating correctly. If the drives stop and the Type-n-Talk doesn't say anything, something's wrong.

It takes a while to get used to the Type-n-Talk unit's voice, but an adjustable knob helps by controlling the pitch and speed of the words. Volume is also adjustable.

The All Speech mode (speaking all the words as opposed to spelling them) has a few drawbacks: The program says "uldos" for LDOS, "kimd" for /CMD, and so forth. I quickly learned to switch to all spelling before asking for a disk directory.

The Talking Program has 10 major options, and an additional 16 or 24

Our reviewers use a five-star rating system. One star represents the low end of this spectrum, while five stars represent the spectacular and high end of the spectrum.

commands for reading the lines of your display. F1 switches the program between Voice On and Voice Off modes, and F2 toggles between spelling everything and speaking everything. F3 turns punctuation speaking on and off.

F4 makes the program spell uppercase while speaking lowercase (select this before reading the disk directory), and returns you to speaking upper- and lowercase. ESC1 is speak or spell the current line (depending on F2's setting). ESC2 is speak or spell everything to the right of the cursor, and ESC3 speaks or spells the character under the cursor.

ESC4 speaks or spells this line and goes to the beginning of the next line. ESC5 tells you the current line and column cursor position. You use ESC6 to adjust the speed of the Votrax Personal Speech System, which doesn't have a separate speed control. ESCa through ESCp select display lines 1-16, respectively, for speaking or spelling.

All the computers support these features, but use different control keys since they don't all have function keys available. The II, 12, and 16 also have extra ESC keys, q through x, to take care of video lines 17-24.

Turning the voice off doesn't totally deactivate it. In both modes, the pro-

gram speaks any control or escape key-strokes, such as enter or backspace. If you want to totally disable the voice, you have to reboot the system and disable the program's autoload and execution by holding down the enter key.

The package's only drawback is its documentation, which is poorly written and somewhat disorganized. As a result you have to read the entire manual before you can fully understand what's supposed to happen and how. A severely visually handicapped person would require the assistance of a sighted person for initial setup of the program. Fortunately, The Talking Program's author, Ron Hutchinson, lists his phone number and invites anyone having problems to call him for help.

When I first received my copy of The Talking Program, it worked perfectly. However, when I tried using my LDOS disk instead of Hutchinson's, the initial configuration of the RS-232 port locked up my system.

Phone calls to Logical Systems revealed that Ron and I had different releases of LDOS 5.1.3, and my version

didn't use precisely the same driver locations as his. Logical Systems gave Ron information to make his program compatible with all versions of LDOS 5.1.3.

At this time you get two versions of Ron's program on the distribution disk: the standard version, Talk, and Talk1. Talk1 is a special version for operation with Scripsit.

The Talking Program is a simple-to-use package for converting TRS-80s into talking computers. Although the Votrax speech unit takes getting used to and slows down operation of the computer (which waits for it to speak or spell its present data before sending more), that's a small price to pay for being able to use a computer.

For more information on which programs do or don't work with The Talking Program and on which computers, call Ron Hutchinson. I recommend this program to anyone who is visually handicapped. While not all programs work with it, enough do to make it a worthwhile investment. ■

shortcomings and added some new commands.

Your first step in using Arranger II is to rename all your disks. You must do this if you want to use the program in the automatic update mode.

Whenever you want to update a disk you've previously added to the library, insert it into the drive and enter the Update command with one keystroke. The program goes to the directory, searches the name, and automatically replaces the old data with the updated information. To use this feature, you must give each disk a unique name.

The program also uses the names to sort the disks, so it is advantageous to numerically name the disk (e.g., 001GAMES). You can use up to eight characters, letters, or symbols in any order.

The Filter function can selectively list disks of a certain category. For instance, if you set the condition for disk names to ???GAMES, the program lists only the game disks in your library.

The Rename command makes changing names easy. However, it contains one minor inconvenience when you rename a disk that's already in the master list. You must manually delete the disk in the master list and then add the disk with the new name to the list. The original Arranger did this automatically, and it's a feature that Triple-D should have retained.

Once you've renamed all your disks, you must enter them into the master list. This task is a little cumbersome with only one disk drive because of the necessary disk swapping. One nice feature is that the program never crashes.

If it prompts you to insert the Arranger II disk and you put in your only copy of a great arcade game instead, the program won't destroy your game. It

Arranger II
Triple-D Software
P.O. Box 642
Layton, UT 84041
Models I, III, and 4
\$49.95

by Ronald Cangro

The Arranger II is an excellent disk directory cataloging program for the Model I (with a double-density adapter), the Model III, or the Model 4. The self-booting disk recognizes the computer you're using and configures itself correctly on initialization.

If you own a single-density Model I, you can still order the original Arranger. It doesn't have all the Arranger II's features, but it's still one of the best disk libraries available.

Arranger II has several indispensable features and others that are simply handy. At the top of my list is the ability to recognize all major disk operating system directories; Arranger II treats all disks equally.

This program recognizes my TRS-

DOS, NEWDOS/80, DOSPLUS, and MULTIDOS disks, not to mention LDOS and DBLDOS. It also automatically recognizes single- or double-density disks to provide compatibility with the Models III and I double-density systems.

The program is written in machine language, a big plus for speed. It sorts 1,500 file names in less than 40 seconds! The program and data reside on the same disk, which can store up to 11,000 programs with up to 255 file names per disk.

The Beginning

To use the Arranger II, insert the disk in drive zero and press the reset button. The program checks to see how many drives are active on the system and configures itself accordingly. It works with one to four drives of 35, 40, or 80 tracks. You can also use the 80-track drive to update 35- or 40-track disks automatically.

The main menu (see Fig. 1) gives you an idea of this program's power and flexibility. For those of you familiar with the original Arranger, Triple-D Software has corrected most of its

Command: (U)

Figure 1. Main menu screen.

checks first to see if you entered the right disk, then lets you know in a friendly way that you did something wrong.

The Add command initially enters all your disks. Arranger II prompts you to insert the disk you want to add and automatically does the rest. The program finds the directory, reads it in, displays it on the screen, and then adds it to the Arranger II file.

The program is smart enough to recognize an unformatted disk or one already on file, and lets you know its sta-

tus. You can even print a disk label by pressing the clear key after adding or updating the disk.

In addition to recording the file names on an update or disk add, the program records the number of free grants, disk name, date last updated, disk type (system or data), density, and DOS type. The program doesn't determine the DOS type with a single-density disk, but sets it to SDEN. You aren't allowed a comment line describing the program.

You should have a printer on your

system to take full advantage of this program. However, Triple-D realizes that not everyone has a printer or wants to print out a complete list all the time. Therefore, all the commands display data on the video screen.

If more information is present than can appear on the screen at one time, you can use the arrow keys to scroll up or down through the data. By pressing the clear key, you direct a printout to the printer.

Commands

The View command displays the names of all the disks on file, including the date last updated, type of DOS (if the disk is double density), disk type, and number of free granules available.

The Scan command lets you page through your disk library a disk at a time. The pertinent disk data appears along with all the file names on the disk. You use the plus and minus keys to step through the library one disk at a time.

I find it inconvenient to press the key each time I want to advance to the next disk. It would be nicer to hold down the key for a continuous scroll.

If you want a printout of any individual disk, you use the clear key when the disk appears on the screen. If you want a complete listing of all your disks, press the shift/clear keys simultaneously (see Fig. 2). This is a handy feature.

The Find command searches the file for a specific file name and displays all disks on which it finds that file name. Arranger II also finds partial names. If you enter TEST as the file name, the program finds all file names starting with TEST, including Testing, Test/BAS, and Test/CMD.

This doesn't work if you're looking for file names that end in TEST or that contain only a specific sequence of letters. You can also search for a specific extension, such as /BAS.

The Locate command is a timesaver. It quickly finds the disks that have a specified amount of free space. Arranger II asks you the minimum amount of free space you need, and you answer by entering the number of granules.

It then searches through all the disks and displays those that have at least that much unallocated space. This feature is great when you're trying to find enough space for a particular program.

Another useful command is Produce

Shape your TRS-80 to communicate with any computer you want.

Omniterm is the most flexible, powerful terminal program you can buy. Omniterm lets you adapt your TRS-80 to communicate with 99.9% of the world's computers. Your company's mainframe, for example. Or any other personal computer, time-sharing computer, or communications service.

Omniterm overcomes incompatibilities in screen formats, baud rates, character sets, control codes and file transfer protocols. Seven complete translation tables let you change any character, for complete compatibility of all input and output devices. Omniterm is so flexible, users have even set up their ASCII-coded systems to communicate with EBCDIC-coded systems.

You can send all ASCII characters, even those that aren't on your keyboard. Reformat your screen to neatly accommodate any line length. Run your printer while you're sending or receiving data. And even review data that's scrolled off the top of the screen.

Omniterm's well-thought-out design makes it easy to use. You can get a status display of all functions while on line to tell you what's going on, and make any changes at the same time. You can create a special file of your settings to make it easier next time. You also get X/Y cursor control, single keystroke sign-on and auto-dialing. Even a phone directory. And lots more.

You don't have to be a computer expert to use Omniterm. Just spend a day with what the reviewers call "the best manual in the business." Then if you need help, just call, write, or contact us via CompuServe, Delphi, or Source.

Omniterm is the proven terminal program. The program thousands of people have used successfully. And the one the editors call the "top program available" (*Byte*, *80-Micro*, *Infoworld*, etc.)

Omniterm comes complete with sample setting files, conversion utilities, a practical text editor, seven translation tables, and a 76-page manual with index.

Available at leading dealers, or prompt shipment on direct phone and mail orders. Order Omniterm, for a super-smart TRS-80 that's putty in your hands.

- Only \$95 for TRS-80 Models I, III or 4 (32K memory, one disk minimum). \$175 for Models II, 12 or 16 (64K memory minimum). (In Mass., add 5% sales tax.) MasterCard, VISA, and C.O.D.

Omniterm

Lindbergh Systems

49 Beechmont St., Worcester, MA 01609

**Now Version 1.60 with auto-dial
and log-on direct from DOS!
Plus other new features.**

Alphabetical List. You can output all the file names on the master list in alphabetical order, along with the disk name where they reside (see Fig. 3). You can specify a sort to include only a specific file extension, such as /CMD or /BAS.

As with the other commands, if you want a printout of this data, you can direct the output to the line printer by pressing the clear key. The program formats the data alphabetically by column in three columns of 60 rows per page. If you have more than 180 cataloged programs, the program spaces to the next page and continues printing.

The output on the video display also appears consecutively in rows, and the arrow keys control screen scrolling. A limitation of this command is that it can't specify printer options such as number of columns or lines per page. It would also be nice to have the date appear along with the title and page number.

Several commands new to Arranger II are Delete Disk, Manual Add, and Change Filter. The Delete Disk function lets you remove a disk from the master list.

The Manual Add command lets you type in the name and files of a disk rather than having the program read it automatically. This is useful for protected or nonstandard disks, such as self-booting games. The program sets the rest of the information to a default of protected DOS type, 35 tracks, and zero granules.

The Change Filter command is by far the most powerful (see Fig. 4). It lets you isolate any part of your disk library by setting up conditions based on the disk name, DOS type, disk type, or number of tracks.

A wildcard character selects the disk name. If you want to limit your searches to only those disks with a name beginning with the letter A and a Z in the third character position, you enter A?Z????? for the disk name. Mastering

this command saves you a lot of time.

Toggle and Backup are two miscellaneous commands. Toggle switches from a manual disk name entry to automatic and back again. This is useful when you don't want to rename all your disks. The manual mode requires that you enter the disk name to add or update the disk. The automatic mode, the preferred method, reads the name automatically from the disk directory.

The Backup command lets you make a back-up of the complete program and associated data file.

Arranger II is a high-quality disk cataloging program. Triple-D took care to ensure compatibility and to maintain ease of operation. The program arrived promptly and the company is helpful in providing support. Also, Arranger II's error-trapping is excellent.

Now that I've used this utility, I don't want to be without it. If your library of disks is growing, you need Arranger II. I heartily recommend it. ■

an existing program, VisiCalc. These four spreadsheet stretchers provide additional power and flexibility, including sorting, report formatting, consolidation of templates, and a business forecasting model series.

VisiCalc Business Forecasting Model

The VisiCalc Business Forecasting Model (BFM) is a series of seven templates for the popular spreadsheet program. These seven templates comprise four financial models (with three support templates) that permit business

analysis and forecasting, including the projection of profit and loss, calculation of financial ratios, and balance sheet manipulation.

To use BFM, you need a Model III with 48K and at least one disk drive, VisiCalc/TRSDOS 1.3, and a printer. The BFM software presumes some understanding of both VisiCalc and financial modeling.

BFM is a complex financial analysis tool. It is designed primarily for manufacturing, distribution, and retail businesses doing from a few hundred thousand to several million dollars worth of business per year. BFM would be of little use in your family pickled-marigold preserves business unless pickled-marigold preserves really catch on.

The BFM templates provide an Income Statement to track the performance of a business over a period of time, typically one year; a Balance Sheet, a fiscal snapshot of a firm on a given date; a Statement of Cash Flow for predicting the amount and date of needed capital; and a Financial Ratios statement, a common method for determining a company's performance in its marketplace.

To build these four models, you use three support templates to calculate your business's sales and costs of goods sold,

Why would SofTrends offer its award-winning AIDS-III data management system to the general public at a tiny fraction of its original price? The same version featured in the two-part series, "Inside AIDS-III" (80-MICRO, March & April, 1983)? Simple. To acquaint you with the best, little software-publisher in the business. To order, call (216) 289-2002 and use your VISA/Master Card. Or send your check or money-order for \$20 (shipping included!) to SofTrends, Inc., 26111 Brush Ave., Euclid, OH 44132. Sorry, no C.O.D.'s or P.O.'s accepted for this special offer.

SOFTRENDS

salaries, and assets and depreciation.

The support templates provide data for the four models. Some of the data in each model is used by the other models as well. The sections of a model used by another model are called *drivers* in the BFM lexicon. Drivers make use of VisiCalc's DIF (data interchange format) capability.

As you might expect, the BFM models can be quite large. BFM instructions suggest a minimum of two formatted data disks for building your company's financial models.

Because of its complexity, BFM is best used after studying the manual tutorial. This tutorial takes up 46 of the manual's 102 pages.

The tutorial also uses several sample templates included on the master disk. Together with the written material, these samples provide a walk-through of building four financial models for the fictional ABC Model company.

The sample templates contain most of the data for analyzing ABC Model's performance over a five-year period, and the tutorial's pages provide some additional data and instructions to enter it.

The seven tutorial lessons describe how you build the support templates, save these files, then load them into the appropriate model(s). The last lesson guides you through the complicated, labor-intensive, iterative calculation of interest rates.

The interest rate calculation requires that the program pass information in the Income Statement and Balance Sheet templates back and forth. This is necessary because banks use different interest rates depending on an assessment of the debtor's ability to repay, usually determined by the Balance Sheet.

The BFM models consider Interest Expense to be a cost of doing business, however, and include it on the Income Statement. Correct calculation of this expense can require as many as six exchanges between the two templates.

Each exchange involves saving the relevant figures in a DIF file, exiting the current worksheet, loading the other worksheet, then loading the relevant DIF file numbers. The program makes new calculations and you must repeat the process to return to the other template.

Presumably, other ways exist to calculate interest expense with less work. But for the manager without access to

financial consultants, BFM's capability to make these calculations is an asset.

You can walk through the tutorial in one and a half to two hours. At its conclusion, most managers will have a good grasp of BFM's inner workings.

BFM's two principal strengths are its manual and its parent—VisiCalc.

Professionally prepared by VisiCorp for resale by Radio Shack, BFM benefits from being an application of VisiCalc. You can easily master VisiCalc in a few hours, unlike programming languages that can take years to master for complex applications.

Once you learn its command structure, you can concentrate on the important matters—your data. Most managers are familiar with important data about their firm or department.

A VisiCalc application benefits too from the relatively simple modifications that you can make to a template. Modifying a Basic or Pascal program can be a nightmare, but a spreadsheet is easy to change to suit your own particular need.

To make BFM easy to modify, as well as use, requires a good manual. The BFM manual has three sections. Section one is a 16-page outline describing what BFM does, its component parts, and what you need to operate it.

Section two is an excellent tutorial divided into seven lessons, none of which is too long. Section three is for reference, explaining the formulas used and their rationale.

The writing is cordial, professional, and jargon-free with short paragraphs and lots of individual headings. This makes possible the most comprehensive index I've seen in an instruction manual: six pages and over 500 cross-referenced entries.

BFM has a few weaknesses. It is complex, you can't print most of the models all at once, even in 132-column format, and none of the models are directly suitable for a specific business (not a weakness, but merely an inconvenience since modifications are easy).

These disadvantages are minor in the software business. The three-star rating is only because I believe BFM has limited appeal, mostly confined to managers and accountants of substantial businesses.

Vis/Bridge/Sort

Vis/Bridge/Sort is a VisiCalc utility

that sorts portions of a spreadsheet. It sorts numeric or alphabetic data using as many as five sort keys, and sorts rows or columns.

To use Vis/Bridge/Sort, you need a Model I, II, III, 12, or 16, 48K RAM, a disk drive, and VisiCalc.

The program works with special identifiers surrounding the data you want to sort. You insert these identifiers by opening up the borders of your spreadsheet using VisiCalc's /IR and /IC commands. Vis/Bridge/Sort uses negative numbers to specify a descending sort and positive numbers for an ascending sort.

Once the identifiers are in place, you save the worksheet as a DIF file. With this file in place, you exit VisiCalc and load Vis/Bridge/Sort: You answer a few prompts to tell the program which file to sort, whether you want a row or column sort, and the beginning row/column values.

The utility then takes over, sorting your file and reloading VisiCalc. You now load your old file and a file that invokes VisiCalc's Move command, which rearranges your original spreadsheet in sorted order.

You learn to use Vis/Bridge/Sort by following a manual tutorial that uses a sample data file included on the program disk. The tutorial takes about 20 minutes. In an hour's time, you can sort your own spreadsheets without difficulty.

You get a no-frills, 17-page manual that is accurate and simply written. The program is so straightforward in operation that you need little outside support. (The rest of the microcomputer software world could benefit from looking at VisiCalc manuals generally.)

All is not roses with Vis/Bridge/Sort, however. Its major problem is its price, \$79. This is almost a third the cost of VisiCalc itself and might be too high for all but the most sort-happy spreadsheet jockeys.

Now that VisiCorp, and presumably Radio Shack in time, offers VisiCalc IV with built-in sort capability, maybe Solutions Inc. will lower the price on the product. A \$29.95-\$39.95 range would be much easier to take.

Another quibble I have with this utility is the need to clean up your files after sorting. You must go back to your unsorted file and take out the identifiers if you want to print or reuse the original data. While I understand that this diffi-

culty probably doesn't have a solution, I couldn't help disliking this corruption of my original files.

Nevertheless, if sorting spreadsheets is a function you need in your work, Vis/Bridge/Sort is a valuable addition to your VisiCalc utility library.

Vis/Bridge/RPT

The company that offers Vis/Bridge/Sort offers another VisiCalc utility that provides (within printed reports) variable column widths, decimal point alignment, and segmentation of spreadsheets too large to print on a single sheet of paper—with the option of adding report titles, page numbers, and the date.

The Vis/Bridge/RPT utility also offers a function to create print image (ASCII) files on disk for use outside VisiCalc (telecommunications transmission, inclusion in word-processing reports, and so on).

Vis/Bridge/RPT is even easier to use than its cousin. You only need to insert a single column of identifiers at the top of your spreadsheet to tell the utility how to format your reports. These identifiers specify column width, column justification (left, right, center), digits after the decimal point, and omit or include column.

Once the identifiers are in place, you save the spreadsheet as a DIF file, exit VisiCalc, and load Vis/Bridge/RPT. You then answer nine prompts to print your formatted report.

You can specify a title that optionally prints at the head of each page, carry column and row labels from page to page when printing spreadsheets that don't fit onto single pages, and add page numbers and the date to each page—all by simply answering a few prompts.

Like Solutions Inc.'s other package, the manual is brief but complete. I did not rate this program because I could not fully test all its features. But like Vis/Bridge/Sort, it's a well conceived and executed program; only its price might be called into question.

Viz.A.Con

Viz.A.Con is a VisiCalc worksheet consolidation utility. It consolidates data from different worksheets, for example, to merge sales figures from Canada and the U.S. into a North American data file. The utility also provides report formatting with customized titles, row

and column headings, and footnotes.

The program requires a Model III, 48K RAM, a disk drive, and TRSDOS 1.3/VisiCalc.

Viz.A.Con makes extensive use of the VisiCalc DIF capability. It is a disk intensive program—two disk drives are a practical necessity.

This is an extremely complex system. You must enter a minimum of 21 responses once you enter Viz.A.Con to prepare a new consolidation process. You do this after you create the separate spreadsheets that will be combined and save them in DIF format.

Unfortunately, the problems with this program are so numerous and apparent that it is difficult to imagine its use in a serious application.

The flaws I discovered immediately included that files to be consolidated have to be the same size (if they are not, you have to modify them). Viz.A.Con also prints reports with integer format for numeric data. Printing the data from VisiCalc overcomes this deficiency but adds more steps.

You have to keep notes on a form provided in the manual to keep track of what you're doing. The manual pro-

vides no tutorial and no sample data files to experiment with, and the manual, while extensive, does not explain how to use the program (possibly because no explanation exists).

Viz.A.Con is a classic example of a program that only its author could use. It's a nice try, but it incorporates all the inadequacies that VisiCalc is designed to avoid: rigid, over-repeated prompts; a preoccupation with the mechanics of its operation (you don't see your data for long periods and that makes me nervous); and a lack of flexibility. ■

★★★★★

Model 4 Technical Reference Manual
Tandy/Radio Shack
One Tandy Center
Fort Worth, TX 76102
Hardcover, 389 pp.
\$24.95

by Mark D. Goodwin

Radio Shack has recognized the need to provide Assembly-language programming information by producing an excellent *Model 4 Technical Reference Manual*. This is also a complete reference manual for anyone who wishes to repair or modify his computer.

The *Model 4 Technical Reference Manual* comprises two major parts. Part one provides complete details on the Model 4's hardware, beginning with a brief but thorough description of the general hardware configuration.

This introductory section provides instructions for upgrading to 128K of RAM and for installing the Model 4 graphics board option. Next, the manual presents disassembly and assembly instructions covering the case, CPU board, FDC board, RS-232 board, main power supplies, disk drives, video monitor, and video board.

The remainder of the hardware section provides other information about the CPU board, the disk interface and drives, the power supplies, the video monitor, and the RS-232 board. This includes explanations of each board's major functions, schematics, component layouts, circuit traces, and parts lists.

The second part of the manual is a wealth of information for the Assembly-language programmer. It begins

with explanations of disk organization and files, device control blocks, the drive code table, the disk input/output (I/O) table, directory records, the granule allocation table, the hash index table, and file control blocks.

“The sample programs demonstrate how you can use the SVCs in your own programs.”

The manual then presents programming guidelines covering the restart (RST) vectors; checking the break, pause, and enter keys' status; and interfacing the task processor. Bank selection for 128K machines, and device drivers and filters are other topics of interest.

The rest of the software section explains supervisor calls (SVCs), presents sample programs, and documents a few advanced TRSDOS commands. The SVCs are TRSDOS routines that you can easily implement in Assembly-language programs. The routines cover keyboard input, printer and video I/O, disk I/O, and a host of other useful functions.

The sample programs demonstrate how you can use the SVCs in your own programs. They are quite good and contain sufficient comments to make them clear.

The manual also features an excellent table of contents and a complete index. This manual is definitely worth \$24.95. Its information is essential for the Model 4 hardware enthusiast or Assembly-language programmer. ■

★★★★★

DWP-210 Printer
Tandy/Radio Shack
One Tandy Center
Fort Worth, TX 76102
\$799

by Charles Gulick

Radio Shack's DWP-210 is a superb and, at \$799, competitively priced printer. It has all the quality for which the Daisy Wheel is famous, and the same interchangeable print wheels, but with 100 characters (see Fig. 1) instead of the 124 characters on the DWP-410 and Daisy Wheel II printers.

The DWP-210's 13-inch platen is 2 inches shorter than on its larger counterparts. Its speed is a respectable 200 words per minute. You have the choice of high-quality, multistrike carbon or nylon fabric ribbon cartridges, and you get original and two-carbon capability.

The unit itself has substantial, impressive construction. Its handsome, user-considerate design includes Tandy's new fawn gray case color.

Unless you work with foreign languages, you probably won't miss the 24 characters left off the 210's wheels. And you'll be pleased at some of the characters included, such as the copyright, trademark, and registered symbols.

So what's new? For one thing, the price is dramatically low for a printer of this quality. Judging by its weight (38 pounds, heavier than either the DWP-410 or DW II), this printer is built for serious, long-run performance.

Great news for Color Computer users is that the DWP-210 gives you a choice of serial or parallel interfaces, DIP (dual in-line package) switch select-

!"#\$%&'()*+,-./0123456789:;<=>?@ABCDEFGHIJKLMN OPQR
STUVWXYZ[\]^_`abcdefghijklmnopqrstu vwxyz{|}~°´™®©ç

Figure 1. DWP-210 type font with Courier 10 print wheel.

able. Now the CoCo has a letter-quality printer.

This is the first Radio Shack Daisy Wheel printer to offer both interfaces, though several of the current dot-matrix printers do. The double feature is certainly a boon to desk logistics for anyone with more than one computer.

Besides the CoCo, the 210 interfaces with Tandy Models I, II, III, 4, 12, 16, and the new 100 portable. It offers a switch-selectable baud rate of 600 or 1,200 bits per second.

You can access all function switches, including the DIP set, from the printer's front/top. The DIP switch is neatly concealed under a sliding cover.

An operating panel at front left groups together the on line/off line and pitch select switches, and the power on and alert lights. The printer has a ribbon end photoelectric sensor plus paper-empty and cover-open detect switches.

The ribbon cartridge loads simply and takes just seconds. (By the way, the cartridge provided with my unit was in a Diablo package, which might tell you something.)

Changing the character wheels couldn't be easier—pull back a lever, slip out the resident wheel, and drop in a new one. You do have to remove the ribbon cartridge first.

A Courier 10 wheel comes with the printer, and a variety of other fonts will

“The ribbon cartridge loads simply and takes just seconds.”

be available. The operating manual mentions special wheels, but doesn't describe what they will accomplish. At any rate, a DIP high/low impact switch suggests that something cute is coming.

Print density and type uniformity are excellent, and by Daisy Wheel standards the machine is quiet—around 65 decibels. A “silence cover” is integrated

into the streamlined design.

The DWP has automatic impact control, said to prolong print wheel life, and a bidirectional logic seeking feature that you should enable (DIP switch 6) for maximum printing speed.

One minor flaw: The rear edge of the cover, against which you tear off the printed copy, is not well supported so it takes a little care to assure an even edge. The best way I've found is to position the fingers of one hand lightly on the Plexiglas as you tear, without applying any downward pressure.

You can remedy the only other fault I find with the optional bidirectional tractor feed (26-1443). I'm using fanfold bond paper, and it tends to shift to the right when printing multiple pages. This is a minor inconvenience that I can overcome with a little manual attention.

All in all, the DWP-210 is a very well built and cost efficient Daisy Wheel printer, with all the most desirable features you could expect at its price. It should be able to hold its own against the competition and serve the serious user handsomely for a long time. ■

★★★★★

Soul of CP/M

Mitchell Waite and Robert Lafore
Howard W. Sams & Co. Inc.

4300 West 62nd St.
Indianapolis, IN 46268
Softcover, 391 pp.
\$18.95

by Alan Neibauer

Soul of CP/M can have anybody writing and understanding Assembly-language programs within one hour. For those of you who find low-level languages frustrating and difficult to understand, this new CP/M manual is remarkable.

Soul of CP/M doesn't explain CP/M functions like DIR, STAT, and PIP; it's intended for persons already familiar with the popular operating system.

To get the most from the book, you'll

need a CP/M disk with DDT, Load, and ASM. Model I users with recompiled versions of CP/M will have little trouble applying the logic and sample programs to their system.

But because Assembly language is taught using built-in CP/M system calls, it's difficult to transfer the techniques presented here to some non-CP/M systems.

Organization

Waite and Lafore make learning Assembly language easy because they use CP/M BDOS (Basic disk operating system) system calls that automatically handle most input and output routines. The calls provide a sort of library of subroutines that saves the novice from manually writing these functions into a program. You only have to learn basic calling sequences for each routine to perform complex input/output (I/O) tasks.

By linking the calls with the DDT

debugging program, you almost have an immediate mode like Basic's with which you can experiment. You can write a short Assembly-language program, save it, and run it without the long compilation process. If you make mistakes, you can reload DDT and the program and check for errors.

The opening chapters introduce CP/M and explain the use of several basic system calls as well as a few Assembly-language instructions. By the end of the second chapter, however, you understand the mvi, call, rst, jmp, ora, jz, jnz, pop, push, inr, cpi, and ret instructions. The book covers the Console Output, Get Console Status, and Console Input calls.

To make this progress, the authors explain the use of DDT, CP/M's debugging monitor. They guide you through calling up DDT and placing it in the assemble mode. As you type instructions, the monitor automatically assembles them.

SUPREME RULER

Have you conquered the World lately? Was it a Challenge? If the answer to either of these questions is NO, you obviously don't have SUPREME RULER; You haven't led your own country, managing your economy and controlling the destinies of millions of people; you haven't had the chance to overcome opponents (Human and/or Computer) bent on achieving the same goals.

In SUPREME RULER you must protect your economy (or else risk a recession), support and feed your people, encourage new business, manage government revenues, and control your army. These and many other factors are interdependent, making this a very challenging game/simulation.

Supports up to 9 countries (4 with 16K), either human or computer controlled. The computer plays by all the rules, and makes a worthy opponent in single-player games.

16K and 32K versions together on Cassette, with 40 Page Manual.
32K version (with SAVE GAME feature) on Disk with 40 Page Manual.

PRICE: \$18.50
PRICE: \$20.50

Model I/III

For those of you with 48K: SUPREME RULER PLUS!

The extra memory is filled with many new features, expanded reports, more intelligent computer opponents with selectable "skill levels", and MUCH MORE! Comes with a 50 page manual and a start-up booklet.

Provided on either Disk or Cassette. PRICE: \$26.50

OUR "TRIPLE PROTECTION" GUARANTEE

In today's software world it is hard to tell a good program from a bad one by only a magazine ad, that's why JMG has a warranty plan that will guarantee your satisfaction. Here is our "Triple Protection" guarantee:

- 1) **QUALITY GUARANTEE:** If you are unsatisfied with the software product you have purchased, you may return it (in good condition) within 14 days for a refund, less a \$2 handling charge. (We also ask that you send us a brief letter stating the reason for your return.)
- 2) **UPDATES GUARANTEE:** We always listen to our customers, and we often improve and expand our software products on the basis of their comments. If we make an improvement to a product and release a new version, all our previous purchasers will be notified and offered the update. To receive an update, you only have to return your original disk plus \$1 for shipping costs.
- 3) **MEDIA GUARANTEE:** The diskette or cassette has a Lifetime Guarantee. If yours turns out to be defective, or it fails and you do not have any backups made, then just return the disk/cassette and we'll replace it.

```

Program Listing 1. Assembled program to fill the screen with 80.

For example, to output a character to the screen, place the value 2 in the C register and the ASCII value of the character in E. The call is made to address 5, the console output system call location.

Writing an Assembly-language program to constantly fill the screen with 80 requires calling the routine twice. First, invoke DDT from the system prompt: A> DDT.

The program is written and assembled starting at location 0100, so enter the command a100. Now as you enter Assembly-language instructions, DDT assembles them. The final program appears as Program Listing 1.

Once you write the program, enter a blank line for the next instruction to exit the Assembly mode. The command g0 returns to the system prompt. Save the short program, still in memory, to disk with:

A> save 1 show80.com

You can load and execute the sample program, now saved on disk under the file "show80.com", directly from the system with A>show80.

By using the system call, you don't have to write the actual output (display) routine itself. In fact, you can write simple programs for input just as easily using the Get Console Status routine.

Use of these BDOS functions frees you from much of the mechanics of Assembly language and lets you concentrate on the logic and syntax.

For Model I users with recompiled CP/M, all the locations and calls explained in *Soul of CP/M* would jump to the wrong locations. However, since the Model I system was "moved" up 4200 hexadecimal (hex), adding 4200 to every location and call solves the problem. The short program in Listing 1 works on the Model I in the form shown in Program Listing 2.

As you learn the system calls, add 4200 hex to the entry points. The

```
a4300
4300 mvi c,02
4302 mvi e,38
4304 call 4205
4307 mvi c,02
4309 mvi e,30
430B call 4205
430E jmp 4300
```

Program Listing 2. Listing 1 for the Model I.

sample programs in the text work just as if they were calling the traditional CP/M locations.

Chapter 3 looks into more advanced nondisk system calls and has you write programs inputting data and outputting to both the screen and printer.

Chapter 4 introduces the ASM (assembler). By this time, you're quite comfortable with Assembly language and BDOS routines, so the move to assembling is painless. Assembly syntax and the ORG directive bridge the gap between using DDT and fully assembling programs.

Chapters 5 and 6 detail system calls for opening and writing to disk files, both sequential and random. Because of the powers of DDT, learning how CP/M handles disk routines is relatively easy.

Chapter 7 discusses the file and directory structure, explaining how to retrieve erased files and use wildcards. Stack management and the system bit map are discussed and illustrated in programs.

For those having withdrawal pains from Basic, the eighth chapter deals with merging Basic and Assembly-language programs. The authors cover the subjects of locating Assembly-language programs, passing parameters between Basic and Assembly language, and automatically POKEing hex files for use by Basic programs.

For the truly adventurous, the final

FLURP™

Mainframe Accuracy with a Micro

If you need a multilinear regression package with the accuracy of a number-cruncher, you need FLURP (Flynn Laboratory's Ultimate Regression Package). FLURP has easy data input, disk file archiving, and outputs a complete set of statistics. These include: multicollinearity diagnostics, hypothesis testing, an analysis and plot of the residuals, and more. FLURP is available for 8" CP/M (requires MBASIC), TRS-80 I and III, and soon for the IBM PC.

- My \$99.95 is enclosed rush me FLURP (add \$5.00 for foreign shipping)
- Enclosed is \$29.95 for the manual (credit to the purchase of FLURP)
- Bill company (include purchase order)

CONVERT MOD III BASIC TO MOD 4

- Good News!** The Model 4 is twice as fast as the Model III.
- Bad News!** Model III disk BASIC programs only run at half speed on the Model 4.
- Best News!** "CONV3TO4" will automate many of the changes required to convert Model III BASIC programs to Model 4 BASIC. Your Model III BASIC programs will run twice as fast as they do now, and your manual conversion efforts will be vastly reduced.

In minutes this powerful utility can insert all required spaces, recalculate PRINT@ addresses, adjust TAB () addresses, insert correct exponentiation symbols, and flag and list unresolved line numbers.

Other options enable your programs to run even faster - remove REM's, comments, down arrows, and unnecessary spaces.

Or, format your programs and make them easier to read and debug - insert down arrows and indent between multiple instructions, IF, THEN, and ELSE statements.

I agree. It's foolish to run my Model III disk BASIC programs at half speed on the Model 4. Send me "CONV3TO4" today! Enclosed is my check/money order for \$49.95 plus \$2.00 for shipping/handling (NJ res. add 6% sales tax).

AZTEC C80

A powerful, professional, and portable "C" language development system for TRS 80 Models II, III, 4, 12 and 16

Aztec C80 for the TRS 80 Includes:

- "C" Compiler (Full UNIX V7)
- Relocating Assembler
- Linkage Editor & Librarian
- "C" Source Program Editor
- Extensive Run Time Library with UNIX I/O

Aztec C80 is fully compatible with Aztec C compilers for IBM PC DOS, CP/M-86, CP/M-80, Apple, Commodore 64, and with UNIX V7 "C".

Aztec C is currently in use in thousands of corporations, universities, research centers, and small businesses worldwide. It has been used to implement languages, operating systems, word processors, accounting systems, financial packages, graphics systems, utilities, and games.

Micro C80, a newly released student version of Aztec C, supports the full "C" language and comes with a choice of either "The C Programming Language" by Kernighan and Ritchie or "Learning to Program in C" by Thomas Plum. The student version can be upgraded to the full system.

chapter deals with modifying the CP/M Basic Input/Output System (BIOS) itself for special printer configurations or other tasks. Performing major surgery deep in the heart (or soul) of CP/M is remarkably easy.

The book ends with several useful appendices detailing hexadecimal notation, 8080 instructions, CP/M system calls, and a summary of DDT commands.

Soul of CP/M does have some limitations. It isn't a general Assembly lan-

guage text. Because of its focus on CP/M system calls, you can't automatically run sample programs on a standard Radio Shack computer even if the 8080 and Z80 instructions are compatible.

Since MS-DOS (for 16-bit systems) uses similar system calls, however, the basic theory works if you make changes in the instructions themselves.

If you're using CP/M and wish to learn about its heart and soul, this book is for you. ■

ready to run command files.

The balance of the 8½- by 11-inch manual is approximately 150 pages long, generalized for all versions of the software. Therefore, this includes functions not available for the Model II.

It's well organized, nicely spaced, easy to read, and written in reasonably concise, plain English. I was disappointed by the number of typographical errors that are cosmetic distractions. The table of contents is adequate and the helpful index contains references to all commands in visual and command modes.

Appendix A's details for customization are useful and informative, and follow the sequence of menus you encounter in setting up your personalized editor.

Other appendices contain a help list with explanations of all editing commands, an expanded description of error messages to help you interpret cryptic messages or recover from error conditions, and a reference to two limitations (bugs) in VEDIT.

To handle lines exceeding 258 characters, you need a customized version of VEDIT that you can obtain from Compuview. This shouldn't be a problem under normal circumstances.

The second bug occurs if you try to read a file originated with a word processor, such as WordStar, that sets bit 7 of some characters. You're likely to see a messy display of inverse video and strange characters, and you won't be able to process the file properly with VEDIT.

Conversely, formatted files produced with VEDIT end lines with hard carriage returns like the nondocument WordStar mode and might require considerable editing for satisfactory printout with a WordStar type word processor.

Manual contents are arranged in a friendly and efficient manner. An initial brief overview introduces beginning word processing and visual and command modes.

A tutorial with graphics aids gives sequential steps for use of each visual mode function key and some of the command mode functions you're most likely to use while editing. A quick reference to the appropriate page of this section tells you what you need to know to use each feature.

The next chapter offers more descriptive information for the visual mode. A

Model II, CP/M
\$150

by **Charles R. Perelman**

VEDIT is a full-screen text and program editor that offers you complete keyboard customization and lets you tailor other editing operations to your liking. It's easy to operate, of good quality, and flexible. VEDIT offers many word processing features and responds to your commands quickly.

Produced in various formats for CP/M, CP/M 86, and MS-DOS, VEDIT for the Model II has two ready to run versions, one for Pickles & Trout CP/M and the other for all other Model II CP/Ms.

You can develop your own customized editor with a menu-driven program covering keyboard layout, use of special characters, a wide range of formatting and operational controls, screen parameters, buffer size, and sign-on message.

The beauty of setting up your own keyboard is that you can duplicate commands you've learned for word processing or with another editor for controlling cursor movement and other functions.

You can implement alternate keys for a command. For example, on the Model II you can use the arrow keys and the control key with your favorite letters or numbers for four-way cursor movement.

As soon as you install the familiar controls, you can use the visual mode of the editor without constant reference to the manual. Learning time to use

VEDIT with reasonable speed is minimal.

If you consistently need a particular format or want to implement specific cursor, tab, indent, and similar parameters through use of extended commands, place this information in a special file with INI as an extension. VEDIT calls them automatically on start-up.

In addition to a wide variety of commands for full cursor movement about the screen, to beginning or end of words or paragraphs, for next page or prior page, and to the beginning and end of the text buffer, visual mode includes most basic word processing functions. You can delete characters, the next word, a prior word, the end of a line, or an entire line.

You can also insert, automatically indent, set the right margin, word wrap, format paragraphs, and set text markers. The Undo key is a neat facility that restores a line altered by insertion or deletion (except where you deleted the entire line) prior to additional cursor movement.

You can use 10 text registers for cut and paste operations and VEDIT prints any part of a file. These impressive features give VEDIT a great deal of flexibility. You can painlessly extract from other files or programs for insertion into your current project.

You essentially get screen display on the printer, although you can embed control codes or nonprinting lines for a formatting program.

VEDIT's documentation is a pleasure. A four-page supplement for Model II owners describes the specific installation files, critical customization information, and sample customizations for keyboard and other parameters that coincide with the furnished,

The Next Generation:

SUPERLOG

ADVANCED ELECTRONIC NOTEBOOK
BY KSoft

Over the past two years, LOG Electronic Notebook has quietly been creating a revolution in personal information management. Designed to emulate a familiar pencil and notebook, LOG Electronic Notebook can do for random information what a spreadsheet program does for numbers.

Now, even the best has been improved! KSoft is pleased to announce SUPERLOG, the next generation of the LOG family. SUPERLOG is not a patch! It is a totally rewritten version of the original LOG concept, fully compatible with the LDOS 5.1.3 operating system currently endorsed by Tandy.

SUPERLOG retains all of the versatile features of LOG while adding many new options requested by professional users: Floppy or Hard disk. Any number of LOG files per diskette. 1 to 32767 pages per file. Password protection and error checking. New text editing commands include automatic text Wrap-Around, Expand and Delete for entire lines, a Page Copy command, and an Undo key to reverse editing changes. Cursor motion is more flexible with new key commands plus a Forms simulator. The SEARCH function is greatly enhanced with a Wild-Card character, case-independent search, and multiple word search at 10 pages/second.

Also Note: SUPERLOG is now fully interrupt activated; it may be accessed from practically any foreground task including LDOS Utilities, LBASIC, LSCRIPT, EDAS, etc. with non-destructive return to the foreground program. No other information management program is this versatile!

Write or call Today! We'll be glad to tell you about SUPERLOG and what it can do for you!

SUPERLOG Specify Model I or III. \$119.95
LDOS 5.1.3, 48K, and 2 Drives required.

(Model IV version to be offered soon.)

LOG TRSDOS versions, Models I, III still available.

fairly involved discussion of command mode usage precedes an expanded version of the reference list of commands in Appendix B. This section concludes with reference manual type descriptions, examples (some of which are complex), and comments for each editor command.

The manual is easy to use and quite complete in its coverage. A cardboard Help sheet with editor commands on one side and spaces for keyboard controls on the other, or a Help screen with this information, would be welcome additions.

Using VEDIT

If you've used the CP/M editor ED, you'll feel comfortable with the VEDIT command mode. Most of the same commands perform simple functions, and they generally operate identically. VEDIT goes beyond ED with numerous improvements and an entire series of extended two-letter commands that begin with E and two-letter register commands that begin with R.

Since it's easier to perform common editing functions in the visual mode with control keys, you use editing commands primarily with execution of macros, search and replace functions (a full repertoire including wildcard characters), and beginning and ending edits.

You use extended commands for program parameters that you set once and then forget at the beginning of each new session. Register commands let you accomplish all kinds of multiple file inserts and concatenations.

Perhaps the most outstanding improvement to ED is the powerful command macro function. You create complex combination commands to perform sophisticated search and replace, to set up formats for a file automatically, and to edit multiple files.

For repetitive edit functions or formats, you save a great deal of time by writing and saving a library of macros on disk that you implement for future edit sessions by calling the file name.

Manipulation of 10 text buffers gives VEDIT substantial clout. You can take data from several files and store it in the registers to append to or insert into the current program.

Put previously defined macro files into registers or store macros defined for the present edit in text registers for later use. Calling the register executes the macro. Any buffer is immediately available for readout to the screen or printer

whether it contains text or a macro.

Screen action with VEDIT is noticeably more rapid than with WordStar and similar programs. VEDIT automatically buffers large files to and from disk. The automatic indent feature and insertion capabilities are useful in pulling

“Screen action with VEDIT is noticeably more rapid than with WordStar and similar programs.”

previously written routines into a new program and maintaining a structured outline or indented program format.

When you use the paragraph format function on the last paragraph of the current text, VEDIT has a nasty habit of scrolling all the text off the screen. You are left with a cursor descended several lines into a blank screen.

For further editing, you must use a command to recall the prior page or paragraph, neither of which returns the cursor to the end of the file or the spot from which you started formatting. A similar fate awaits when your ZEND function key flips you to the end of the file.

Unfortunately, the repeat key function that permits repetition of given procedures a specific number of times from the visual mode doesn't work with

the Model II. You can use the repeat key on the Model II with keyboard commands if you have sufficient digital dexterity to reach all the necessary keys concurrently.

Disk Full error messages can make a user weep, particularly since they always occur after two hours of impossible editing and with an impending deadline. VEDIT treats these problems like a champ, letting you close part of the file on your current disk and insert another disk for saving the balance. All screen editors and word processors should have this capability.

If you save your revised file with the original file name, VEDIT designates the old file a .BAK file. Disk directories are accessible without leaving VEDIT, which facilitates working with other files on the same disk. With all these abilities, the VEDIT com file is packed into only 14K.

Compview offers an interesting technical support option that they claim is elected by nearly 40 percent of VEDIT purchasers. For \$50, you receive two new releases of VEDIT approximately six months apart as they continue to upgrade the software.

If you like to patch together programs and text from data in several other files, and want to minimize the time required to become acquainted with a new tool's commands, get VEDIT and customize the visual mode controls to the sequence you already know or the one you've always wanted to use. ■

Lynn Video Instruction Series:
Using TRSDOS 6.0
 Written by Michael Sokolewicz
 Produced by Ron Lynn
 Lynn Computer Service
 6831 West 157th St.
 Tinley Park, IL 60477
 \$39.95 (VHS or Beta format)

by Jim Heid

Using TRSDOS 6.0 is a perfect example of how not to produce a videotape instruction course. This two-hour tutorial on the disk operating system for the TRS-80 Model 4 is poorly recorded, poorly narrated, and neglects to exploit the potential of video instruction.

The Video

The video portion of *Using TRSDOS 6.0* consists of a shot of a Model 4's screen—nothing else. The most action

you'll see is a flashing cursor. No shots show the beginner how to turn on the computer, how to insert a disk, or how to boot the system.

"Using TRSDOS 6.0 is a perfect example of how not to produce a videotape instruction course."

The video doesn't use superimposed titles explaining a command's syntax. Even when *Using TRSDOS 6.0* explains a command that uses a printer, the camera remains trained on the video screen. Worse yet, the camera doesn't show the whole screen at once. When a display fills the screen, the camera pans

slowly from left to right.

The Audio

The audio portion of *Using TRSDOS 6.0* is worse. The sound quality is poor, with lots of popping P's and an overall tinny sound.

The narrator speaks in a monotone throughout. She goes from one command to the next without the slightest pause or change in inflection.

Her delivery is inconsistent, too. Sometimes she pauses for several seconds for no reason; other times she races along.

The audio and video aren't perfectly synchronized, either. Sometimes the narrator starts on a new command while the screen still displays the results of the previous one.

The information presented in *Using TRSDOS 6.0* is accurate, but it isn't geared toward the type of person who would need a video instruction course—the beginner.

REVIEWS

length, and parameter are tossed around without a single definition. Much of the script is awkwardly written and filled with run-on sentences delivered at breakneck speed.

Summary

Video is a powerful instructional

medium, but the producers of *Using TRSDOS 6.0* miss the boat. They try to stuff too much information into the tape. It takes lots of experimentation and reading to fully exploit the power of TRSDOS 6.0. It cannot be taught (or learned) in two hours.

Using TRSDOS 6.0 doesn't tell you

anything that isn't covered in the manual. If you want to learn to use TRSDOS 6.0, get a couple of blank disks, sit down at the computer, open the manual, and try each library command, experimenting as you go. You'll learn TRSDOS and you won't spend \$39.95. ■

by Thomas L. Quindry

Datagraph is a Model I/II/III graphing program that lets you generate high-resolution dot-matrix graphs and plots with specified printers (listed in Micro Software Systems' advertisements). You can also produce pie plots with the pie chart option.

Overall, Datagraph is a worthwhile program. It's versatile and easy to use, and it generates professional quality graphs.

The program does have some drawbacks, however. At times, it generates unnecessary line feed commands, an annoying inconvenience. Also, it always prints the name of the file from which the program draws data on the graph, a feature that should be optional.

System Configuration

For this review, I used the Epson MX-80, MX-100 version of Datagraph with my MX-80-compatible printer. Check with Micro Software Systems to choose the right version if your printer is not listed. More than 14 versions are available for different computer configurations.

Datagraph uses data that you've saved in a VisiCalc Data Interchange Format (DIF) file. If you don't have VisiCalc

and are a fairly good programmer, you can create a Basic program that saves data in DIF format to use with this plotting program.

The Basics

Datagraph is a hybrid Basic and machine-language program. It lets you plot up to 1,000 data points on a graph. You can combine linear plots, stairstep plots, bar graphs, and relative bar graphs on the same graph (see Figs. 1 and 2).

Datagraph's linear plots can incorporate a curve-fitting enhancement that provides more plotting points than the straight-line connection between points you get with conventional linear plots. You can specify the number of points the program interpolates between data points. You also have the option of adding customized labels for the horizontal and vertical axes (see Fig. 2).

"Datagraph lets you plot up to 1,000 data points on a graph."

You can plot graphs in any size from 1 inch by 1 inch to 7 inches by 24 inches. The smaller sizes are limited only by the number of horizontal and vertical divisions you specify.

A key describing the data set and line type or symbol appears at the top of the graph if you name your data set. This lets you draw unnamed reference lines on the graph that don't show on the data key.

You can suppress the grid within the graph if you prefer. This is most useful with bar graphs. Grid lines are solid lines, not dotted.

The program has an auto-scaling function that sets the minimum and maximum values and increments of the X and Y axes. It uses a data statement

within the Basic program to provide rounded scale increments that are easy to determine and are divisible numerical values. This gives you easy-to-read graphs.

You can change the values in this data statement to suit special situations. In addition to auto-scaling, you can specify the minimum and maximum values of X and Y for a graph. This overrides the auto-scaling feature for setting these values if the graph meets certain conditions. The manual describes the reasoning behind this and the procedure in great detail.

Using Datagraph

First, the data you use must be in a DIF format to generate the information you want plotted. I'll assume you're using VisiCalc for this procedure. This is strictly a tabular operation where the program lists information on the electronic spreadsheet in column or row orientation.

The only restriction is that the X and Y coordinates of each curve you want plotted have a one-to-one correspondence (i.e., they must be aligned and parallel to each other on the worksheet). If the X and Y data are distributed along rows, the corresponding values must be in the same column. If column distribution is used, they must be in the same row.

For plotting purposes, the program considers Y the dependent variable and X the independent variable. Plots that contain several curves can use either the same set of X values for plotting or a different set of X values. Thus, one curve can have more plotting points than another. Standard increments between points are unnecessary.

You should also place any specialized horizontal or vertical scale labels on the worksheet at this time. You can use only one set of vertical scale labels, but you can use as many horizontal scale labels as you wish. You can place any other extraneous information you want on

the spreadsheet. Not all the information on the spreadsheet must appear on the resulting graph.

After you include all plotting information on the spreadsheet, you must save it in the DIF format. The VisiCalc manual explains this procedure.

Next the VisiCalc spreadsheet generates a table that provides specifications for Datagraph on how and what to plot. Datagraph produces a file called Form/DIF that provides a ready-made table. All you do is fill in the blanks on this table and save it in DIF format.

This form includes places to enter the graph title, data file you want used, date, vertical and horizontal labels, size of graph, divisions, minimum and maximum scale dimensions (optional), data descriptions, location of data descriptions on the data file (rows and columns), and line type desired.

A feature for the horizontal division specification is selection of a calendar scale. If specified, the months appear in place of the numbers 1-12 on the bottom scale. For numbers greater than 12, the remainder after subtraction of multiples of 12 determines the month.

The most powerful control on the forms page is the line type specification. You choose one of 12 different line types from a symbol table.

Each line type specifies a symbol used for data points, the maximum number of interpolation points, and the symbol used for interpolated points. This is a straight-line interpolation unless you specify the curve-fitting option.

You can generate your own line types and symbols and save them in this file. However, doing so destroys the file supplied with the Datagraph program. You can manually restore the original line types by copying the symbol and other information from the Datagraph manual.

It would have been much easier to create separate symbol files. One more entry on Form/DIF could indicate which file to use.

Use the line type specification on the Form/DIF sheet to specify the type of graph you're plotting. Just giving a number gives you a linear plot. The letter C followed by a number before the line type specification invokes the curve-fitting routine for the number of interpolation points you specify.

The letter S gives you a stairstep graph. The letters B and R produce bar

graphs and relative bar graphs, respectively.

A relative bar graph plots the bar between two points using two sets of data for the Y scale. For both types of bar graphs, you must also specify the relative offset in the horizontal direction. This lets you determine the order in which multiple bar graphs appear on the graph.

The letters V or H specify vertical or horizontal labels to replace the numerical label that normally appears. You

can center horizontal labels on a grid line or between grid lines.

You can also print the horizontal label in regular or condensed mode. If you specify regular mode when you have insufficient space, the program uses the condensed mode. If you don't have enough room for the condensed mode label, an error message appears before plotting commences.

Pie Charts

The letter P generates pie charts. The

Figure 1. Linear and stairstep plots with calendar label option.

Figure 2. Bar graphs and relative bar graphs combine with a linear plot.

Read our

NEWS THIS MONTH

every month.

ALL THE NEWS YOU NEED FOR THE 80'S

80 Micro is news. News like our in-depth coverage of Tandy's Model 100 debut in Boston and its impact on the market. News like U.S. Senator Paul Tsongas' speech on Asian competition and the importance of innovation. News like what's happening at Texas Instruments and why. You'll agree that **80's "NEWS THIS MONTH"** column is the news you need to stay informed.

80 is also a practical journal. It gives you the information you need to expand your TRS-80 computing potential. Information like:

- New product reviews—save valuable time getting the facts and figures on the latest equipment releases.
- Hardware modifications—upgrade your computer and become more familiar with its functions while you save money and increase its value.
- Debugging techniques—**80 Micro** saves time with expert solutions to common and uncommon problems.
- User-application programs—written by readers like you who need programs to maximize the productivity of their machines.

And **80 Micro** doesn't stop there. Every month, from cover to cover, you'll get top rate **REVIEWS**: whether you're buying or just looking, **80** keeps you informed on what state-of-the-art can do for you.

If you want to get ahead with your TRS-80, get **80 Micro**, the news source of the 80's.

YES! Give me the news I need to put me ahead and help me stay there. Send me 12 issues of 80 Micro for \$24.97.

Pie Chart Option costs an additional \$34.95. You can specify different line types for the pie diameter and dividing spokes. Pie charts can be anywhere from 1 inch to 3 inches in diameter.

The same Form/DIF format specifies the information for pie charts. You don't need all the information requested and you should change some of the labels on the Form/DIF spreadsheet form. I made up a Pieform/DIF spreadsheet by making label changes to Form/DIF.

You need two entries for each pie

chart data point: a label entry and a data entry. The main fault I found with pie chart generation is that you have limited space for pie chart labels. If a label is too long, the program truncates it. As few as five characters or as many as 22 characters are available for your label depending on the segment's location on the pie and the pie's size.

All segments of the pie are white. No cross hatching or coloring of segments is possible. I am still impressed with the program, though; the Pie Chart Option is useful.

Problems and Praise

Two annoying conditions exist in Datagraph. First, you must turn on the printer when using the program, so printer initialization results in a line feed. When you go to VisiCalc, another printer initialization to different conditions sends another line feed command. Your page gradually creeps up.

The second problem is the label giving the graph file and date that appears in the upper right corner of the print-out. The program contains a method for suppressing the date but not the graph file. This is relatively easy to change since the label is printed from the Basic program.

The Datagraph manual is difficult to read because of the many enhancements made to the original program. Rather than upgrade its manual, Micro Software Systems has taken the more expedient route of adding sections describing the enhancements.

Thus, some information you read early in the manual is corrected later. It would be more prudent for Micro Software Systems to rewrite their manual than to confuse the user.

Other than the contradictions, the manual does explain what is happening and what to expect. The only confusion I experienced was in using horizontal labels.

When centering labels between grid marks, you must specify an extra label entry. Also, when using numeric labels, you must be sure that VisiCalc specifies a label rather than a value. The manual does not explain these two points.

One serious limitation I see for business graphics is Datagraph's inability to plot logarithms. You can fool the program into producing log plots, but it's no easy task.

Micro Software Systems has done a fine job in programming Datagraph. It is surprisingly quick in generating graphs, and it contains a good selection of error messages. A repeat feature lets you plot as many copies of a graph as you wish. Color plotting is also quite impressive.

The pattern that Micro Software Systems seems to be following is continual upgrade of Datagraph with a corresponding increase in price. The best enhancement they could make is to free the user from having to purchase VisiCalc. ■

C. ITOH
Prowriter

C. Itoh's venerable Prowriter has speed (120 cps), a buffer (1.5K), 10, 12, & 16 cpi (plus a proportional font with correspondence quality) and dot graphics (160x144 dpi). The Prowriter 2 is the 136 column version.
Prowriter \$399.88
Prowriter 2 \$719.88

Silver Reed EXP-550/EXP-500

Here's affordable letter-quality. Silver Reed's **EXP-550** (16 cps) and the **EXP-500** (12 cps) feature Diablo 1610/20 code, sub & superscript, underlining, backspace, 10, 12 & 16 cpi capability...incredible performance & value.

REVIEW DIGEST

Home Accountant, Continental Software, 11223 Hindry Ave., Los Angeles, CA 90045, Models I and III, \$49.95.

"For a reasonable price, this system keeps track of all monthly income and outgo, reconciles bank statements, prints out personal balance sheets and net-worth statements, allows custom search-and-retrieval of any particular transaction, creates professional-looking graphs of your own financial picture and, on some computers, can provide forecasting. It is an accessible, easy-to-learn system that, even on first use, will give anyone a real sense that they are gaining additional knowledge and control of their financial situation." *Personal Software*, November, p. 123.

Electric Webster, Cornucopia Software, P.O. Box 5028, Walnut Creek, CA 94596, Models I and III, \$149.95.

"...After looking at nine proof-reading programs, I have settled on Webster to keep my final copies accurate..."

"...if English 101 is where you caught up on your sleep, then you will appreciate the grammar option.

"Writers...will find the automatic hyphenation a big help; and if

your spelling is less than perfect or if you have ever missed a typo, then you will love this fast and accurate dictionary program." *Creative Computing*, November, p. 108.

TRS-80 Model 4, Tandy/Radio Shack, One Tandy Center, Fort Worth, TX 76102, \$1,999.

"The design of Radio Shack's new TRS-80 Model 4 computer is proof that large corporations can be responsive to the needs of their customers. An enhanced version of the popular TRS-80 Model III, its new features read like a Model III owner's wish list.

"...Given all the new features in the TRS-80 Model 4 and a price that's lower than its predecessor, the popular Model III, it's safe to say that Radio Shack has a guaranteed winner." *Byte*, October, p. 292.

Disk Trendex Stock Market Trend Analysis, Tandy/Radio Shack, One Tandy Center, Fort Worth, TX 76102, Models I and III, \$49.95.

"...This...program provides solidly based statistical analysis of the stock market and of your own portfolio without all the confusion traditionally found in technical analysis software.

"...these programs...are based

upon solid statistical methods used every day by stock market professionals to identify market trends." *Personal Computing*, November, p. 196.

6.0 Plus, Micro-Systems Software Inc., 4301-18 Oak Circle, Boca Raton, FL 33431, Model 4, \$49.95.

"6.0 PLUS takes TRSDOS 6.0 to new heights of utility and versatility. It may very well become the de facto standard utility package for TRSDOS 6.0, at least until the competition catches up." *Basic Computing*, October, p. 79.

Lynn Video Instruction Series: DB-1 Using Profile III+, Lynn Computer Service, 6831 West 157th St., Tinley Park, IL 60477, VHS or Beta Format, \$39.95.

"I found the material to be carefully developed and quite appropriate. They carefully covered all options of the software and even gave some tips that are not in the Profile III+ manual. Much is covered, and more than one viewing is recommended. It does get boring, but a fast-forward button on the VCR will quickly get you to the material that needs a second look." *Basic Computing*, October, p. 83.

CHILD'S PLAY

AN EDUCATIONAL PROGRAM FOR CHILDREN AGES 2 TO 7 YEARS

This machine language program contains fast **animation, sound effects, tunes, and speech**. The speech has two options: it can be generated by computer or by a VS100 speech synthesizer (speech options described later). The program is easily controlled by a friendly menu-man who points to the options that may be chosen. The main menu contains four sections: • **Learn the Alphabet** • **Learn to Count** • **Learn Shapes** • **Learn Words**. Each section contains three subsections which can easily be manipulated, giving twelve games in all. The menu selection is accompanied by a different nursery rhyme tune for each menu.

LETTERS

This option allows the child to select letters at random, match the current letter displayed, or type in the next letter. When a correct response is given, an animation associated with the letter moves across the screen. e.g., Z for Zebra. The computer says the letters also.

NUMBERS

This option allows the child to select the numbers zero to nine at random, match the current number displayed, or type in the next number. Men walk out on the screen equal to the number chosen. This section also contains speech.

SHAPES

This section allows the child to control the menu-man, moving shapes from the left hand of the screen to the right hand of the screen. The first level allows the child to pick up shapes using the spacebar. The second level, in addition, allows the child to control the menu-man with the arrow keys. The third level puts a small 'Bee' on the screen which the child must avoid while manipulating the menu-man and shapes.

WORDS

This final section allows the child to type in letters to form words. The first level asks for a word to be typed in, then to be repeated before another word can be tried. The second level

prompts the child with a word which must be matched before an animation will appear on the screen. The last level shows the animation on the screen. Then the child must type in the correct word before the next animation is shown. This section contains speech also.

SPEECH

The program can be bought as a stand-alone program with computer-generated speech, which uses 'your' speaker amplifier. However, we have also made the program compatible with an 'Alpha Products VS100' speech synthesizer for improved speech quality. (This can be purchased from 'Alpha Products' subject to availability). The speech is not available for a 16K machine.

Software available for the **TRS80* Models I, III, and IV**. Also soon available for the **Timex**. 16K tape (no speech). 32K tape. 32K disk. 48K disk. All programs for: **\$29.95**

(Indiana residents add 5% sales tax; COD add \$2.00)

Tandy

Makes Its Move

by Eric Maloney

For a year now, the TRS-80 world has nervously watched a convoy of computers swing into the fast lane and pass by in a cloud of dust. When, the faithful asked, would Tandy bring out a machine that could compete with the heavy metal taking over the road?

Well, wait no more—the Model 2000 is here. It is unlike anything Tandy has ever produced. And if it lives up to its advance notices, the 2000 will erase all doubts that Tandy is ready to meet the challenge of its super-charged competitors.

The phrase some Tandy executives are using to describe the machine is “ultra-high performance.” The specifications speak for themselves (see Table 1).

The 2000 uses the 16-bit 80186 microprocessor from Intel Corp. and operates under MS-DOS from Microsoft. It comes with 128K RAM, expandable to a whopping 768K. Two disk drives are standard, with 720K storage per drive (that’s about 1.4 Mbytes on two floppies). And it runs at a

The 16-bit Model 2000, with MS-DOS and hi-res color graphics, is Fort Worth’s bid to move into the mainstream and take on the Boys in Blue.

breakneck speed of 8 MHz.

But wait—there’s more. The Model 2000 is capable of 640-by 400-pixel high-resolution color graphics. In hi-res mode, you can display up to eight colors, choosing from a palette of 15. You can also create monochrome graphics. With either the color or mono screen, you

have an 80- or 40-character by 25-line display.

Then there’s the software. Tandy will offer some of the most popular MS-DOS-compatible software available, including Microsoft’s Word word processor, Software Systems’ MultiMate word processor, dBase II from Ashton-Tate, Microsoft’s Multiplan spreadsheet, and the complete PFS business package. In addition, the company will sell a line of MAI/Basic Four accounting software packages, until now available only on the Basic Four minicomputers.

The price? The base unit without the monitor goes for \$2,750 (\$4,250 with the optional 10 Mbyte hard drive), and \$4,197 with the color monitor and graphics capability. Expanding internal memory to the full 768K costs an additional \$1,895. So a complete system, minus the TV/joystick option and the monochrome monitor, will go for around \$6,500 (see Table 2 for the price list).

Editor’s note: This article is not a review, since a review unit was not available at press time. It is based on a demonstration of the Model 2000 and material provided by Tandy.

What's So Different About the 2000?

Nearly every step of the way, the Model 2000 offers something new:

The 80186. The 2000 is one of the first micros to use the 80186 microprocessor. It is, unlike the IBM PC's 8088, a true 16-bit microprocessor, with a 16-bit bus. At 8 MHz, it is significantly faster than the IBM (4.7 MHz) or Tandy's other 16-bit machine, the Model 16 (6 MHz). Tandy says that its benchmark tests show the 2000 to be almost three times faster than the IBM. And they say 80186 object code is compatible with the 8086/8088.

User-accessible expansion. Another first for Tandy is the manner in which the 2000 permits expansion: you do it yourself. The main unit comes with four expansion slots in the back. You slide your expansion board into one of the slots like a tray (see Photo 1 and Fig. 1a). Two lock buttons attached to the board hold it in place.

The slots can be used for the following boards:

- Two 128K external memory boards, each expandable to 256K. (The first 128K expansion kit is installed internally.)
- A hi-res monochrome graphics board.
- A TV/joystick board.
- A DigiMouse/clock board (DigiMouse required).

The hi-res color graphics kit includes chips that you or a Computer Center dealer plug in to the hi-res monochrome board.

Mass storage. The drives are double-sided, double-density thin-lines, formatted 96 tracks per inch. The 720K storage per disk is four and one-half times greater than the Model 4's.

Three graphics options. The 2000 supports medium-resolution color graphics,

hi-res color graphics, and hi-res monochrome graphics.

The medium-res option requires that you have a color television and the TV/joystick expansion board, and gives you 320- by 200-pixel graphics. You can use four of 15 colors at one time.

The hi-res color option requires the CM-1 color monitor, the monochrome graphics option board, and the color graphics option kit. Resolution is 640 by 400 pixels, and you can use up to eight colors (see Photos 2 and 3).

Available colors are black, blue, green, cyan, red, magenta, brown, gray, light blue, light green, light cyan, light red, light magenta, yellow, and white.

The hi-res monochrome option requires the monochrome graphics option board and either the VM-1 monochrome monitor or the CM-1 color monitor. Resolution is 640 by 400 pixels (see Photo 4). You have two shades of white (normal and high-intensity), and you can create reverse-image, invisible, highlighted, and underscored characters.

The keyboard. The keyboard layout is shown in Photo 5. The 12 function keys are programmable, and the caps and number lock keys have indicator lights. The print key prints each character as displayed, while shift/print prints the current screen. The character keyboard is tiered, while the numeric pad is flat for easier use.

The name. Perhaps one of the most telltale changes is one of the most minor: the name. If you look closely at the front of the main unit, you'll notice that the machine is called the Tandy Model 2000 Personal Computer. "Radio Shack" has been dropped from the label. This is, more than anything else, an indication of how much Tandy wants to alter its image of a company that makes computers for hobbyists instead of serious businessmen.

What's It Look Like?

In keeping with the Models 4, 4P, and 12, the Model 2000 has a textured white case. The main unit includes the CPU, the two drives, and the expansion slots, with the power and reset switches mounted on the unit's front (see Fig. 1 for diagrams).

The Model 2000 in a Nutshell

CPU	16-bit Intel 80186
Internal memory (standard)	128K
Internal memory (maximum)	768K
Disk drives	2
Disk storage per drive	720K
Speed	8 MHz
Operating system	MS-DOS 2.0
Expansion slots	4, user-accessible
Graphics options:	
Medium-res color	320×200 4 colors
Hi-res color	640×400 8 colors
Hi-res mono	640×400
Video display (color)	14", 80/40×25
Video display (mono)	12", 80/40×25
External connections	RS-232 Parallel port AC outlet Mono monitor connector
Options	Hi-res mono monitor Hi-res mono graphics Hi-res color monitor Hi-res color graphics TV/joystick interface DigiMouse/clock board DigiMouse 10 Mbyte built-in hard disk Monitor pedestal CPU floor stand

Table 1. Model 2000 specifications and options.

Tandy has designed the Model 2000 to be set up in a number of ways. Normally, the monitor rests on the main unit while the keyboard sits in front. The keyboard includes extendable legs to give it more tilt. When not in use, the keyboard slides under the main unit.

But if you buy the optional floor stand, you can mount the CPU vertically and set it up to eight feet from the keyboard and monitor. You can also buy a monitor pedestal for the VM-1 that both tilts and swivels. Tandy claims that, with the keyboard in your lap and the CPU on the floor, you reduce the 2000's footprint to about 104 square inches, which is about nine inches more than that of the Model 100 portable.

Now for the Software

All discussions of the Model 2000's software must start with its operating system—MS-DOS 2.0.

Tandy's reason for choosing MS-DOS is simple: It is the DOS of choice for the IBM PC and has spawned a huge software base for MS-DOS machines. Thus, the Model 2000 user has immediate access to a variety of off-the-shelf packages.

One has only to leaf through the IBM or general-interest magazines to get an idea of the software base for MS-DOS. Current manufacturers include MicroPro (WordStar, MailMerge, SpellStar, CalcStar), Ashton-Tate (dBase II, Friday!), IMSI (Bisybase, Investment Manager, the IMSI Accounting Series), Pearlsoft (Personal Pearl), Sorcim (SuperWriter, SuperCalc), Perfect Software (Perfect Writer, Perfect Calc, Perfect Filer), and, of course, Microsoft. And it's reasonable to expect that, if the Model 2000 takes off, manufacturers of IBM software will adapt their products to the 2000.

Tandy will start users off with several proven software packages. They include:

- Three word processors. At the high end (\$375) is Microsoft's new Multi-Tool Word. The mid-priced model (\$249.95) is MultiMate from Softword Systems, currently being implemented on the IBM PC. At the low end is PFS's PFS:Write, one of four programs included in an integrated package. (PFS:Write and Word were still under development at press time.)

Photo 1. The Model 2000's expansion boards install easily. The board comes mounted on a tray; you slide the tray into an expansion slot at the back of the CPU case. Two lock buttons on either side of the tray hold the board in place.

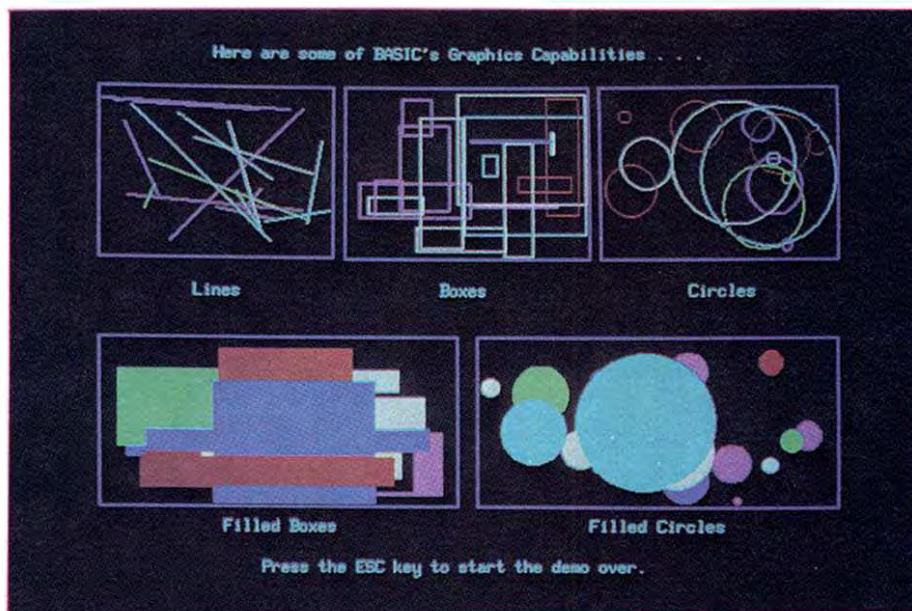

Photo 2. A screen display of the Model 2000's high-resolution color graphics. Shown are geometric patterns developed with GW-Basic.

Photo 3. A screen display of mathematical functions.

1b

1c

● Three electronic filing packages. Leading the pack at \$595 is the venerable dBase II from Ashton-Tate. Also available are PFS:File (\$140) and PFS:Report (\$125), which work together to store data and create tabular reports.

● Microsoft's Multiplan electronic spreadsheet (\$249).

● Under development is PFS:Graph (\$249), which creates graphs and charts from data stored in PFS:File.

● The MAI/Basic Four small business accounting software. These packages have been converted from Basic Four minicomputers. Included are seven integrated modules: General Ledger (\$495), Accounts Payable (\$495), Accounts Receivable (\$495), Inventory Control (\$495), Order Entry (\$495), Purchase Orders (\$395), and Payroll (\$495). The last four were still under development at press time.

● Videotex Plus (\$49.95), an enhanced version of Tandy's communications package.

● In languages, Tandy will offer the MS-Pascal Compiler (\$299.95), the MS-GW Basic Compiler (\$299.95), MS-Fortran (\$349.95), the MS-Assembler (\$99.95), and Cobol.

How compatible will the Model 2000 be with the IBM PC and MS-DOS? Tandy is quick to emphasize that the 2000 is not an IBM clone. Thus, while it will run some IBM software, those programs that hook into the IBM hardware probably will not be compatible. But the 2000 should run any software written strictly under the conventions of MS-DOS 2.0.

The 2000 comes with GW-Basic, an enhanced version of Microsoft Basic. Its extensive support of color and monochrome graphics includes com-

Figure 1. Model 2000 schematics. (1a): The two-drive Model 2000 as seen from the back, with the color monitor option installed on the monochrome graphics board. (1b): Front view of the CPU case. Note the two thin-line disk drives to the right; in accordance with MS-DOS protocol, the drives are labeled A and B. The keyboard connector and the power and reset switches are to the left. (1c): A second rear view of the CPU case. This unit includes the optional built-in hard disk drive with a single floppy disk drive. Note the built-in monochrome monitor interface and the parallel and RS-232C interfaces along the bottom of the case.

BASF QUALIMETRIC™ FLEXYDISKS.® A GUARANTEED LIFETIME OF OUTSTANDING PERFORMANCE.

BASF Qualimetric FlexyDisks feature a unique lifetime warranty, firm assurance that the vital information you enter on BASF FlexyDisks today will be secure and unchanged tomorrow. Key to this extraordinary warranted performance is the BASF Qualimetric standard... a totally new set of criteria against which all other magnetic media will be judged.*

You can count on BASF FlexyDisks because the Qualimetric standard reflects a continuing BASF commitment to perfection in magnetic media. One example is the unique two-piece liner in our FlexyDisk jacket. This BASF feature traps damaging debris away from the disk's surface and creates extra space in the head access area for optimum media-head alignment. The result is a guaranteed lifetime of outstanding performance.

For information security that bridges the gap between today and tomorrow, look for the distinctive BASF package with the Qualimetric seal. Call 800-343-4600 for the name of your nearest supplier.

*Contact BASF for warranty details.

Photo 4. A screen display illustrating the Model 2000's high-resolution monochrome graphics. Shown is an excerpt from Tandy's demonstration program, indicating a possible Model 2000 system setup. The monitor (on its optional pedestal) and keyboard sit on the desk, while the CPU stands on its (optional) floor mount beside the desk.

mands that produce lines, arcs, and circles.

With color graphics, the Paint command tints screen designs, and you can bit-pattern (tile) the design to produce textured graphics. GW-Basic's Get and Put commands insert graphics into dimensioned arrays, which you can put back on the screen to simulate animation.

Other GW-Basic features include screen windowing, music and sound commands, light pen and joystick support, full-screen editing, full RS-232 capability, and a "soft key" utility that lets you define function keys as Basic key words.

(See sidebar for capsules of MultiMate, dBaseII, and MultiPlan.)

The Documentation

The Model 2000 comes with three manuals: an 80-page introduction to the Model 2000, a guide to GW-Basic, and a guide to MS-DOS.

The guides are departures from previous Tandy manuals, coming in 5- by 8½-inch three-ring binders. The Basic manual is 368 pages long, and the MS-DOS manual 296 pages.

Hardware		Software	
Base unit (includes main unit and keyboard, 128K, two drives)	\$2750.00	MultiMate	\$249.95

"THE RESULTS ARE IMPRESSIVE..."

—Dennis Kitz, 80 Microcomputing; 12/82

Langley-St. Clair's* **Soft-View™** Replacement CRT's eliminates the strobe, flicker and fatigue from TRS-80's™.

Now you can upgrade your monitor with the new medium persistence green or amber phosphor tube.

State-of-the-art systems such as IBM™ and Apple III™ do not use the less costly "P4" B&W display tube because it is actually intended for TV viewing and its rapid strobes (60 times per second) cause irritating eye fatigue.

No amount of "green plastic" will solve this problem. But the new **Soft-View** CRT display tube from Langley-St. Clair will.

- Available in slow decay Green or medium decay "European Amber" (the standard in Europe)
- Made with Lead/Strontium impregnated glass that stops X-ray emission.
- Of high-contrast face glass that also stops most U.V. radiation.
- Available in frosted glass with extra Anti-Glare benefits.
- Easily installed...comes with pre-mounted hardware.
- Warranted for one full year against manufacturing defects or tube failure.
- The finest quality double-dark glass phosphor fields to produce dramatic contrast.
- Ideal for Word Processing and Programming, yet fast enough for Games and Graphics.

LSIS **Soft-View™** CRT'S

<input type="checkbox"/> #GN42 Green Phosphor	\$79.95
<input type="checkbox"/> #GN42G Green Phosphor w/Anti-Glare	\$89.95
<input type="checkbox"/> #OR34 Amber Phosphor	\$89.95
<input type="checkbox"/> #OR34G Amber Phosphor w/Anti-Glare	\$99.95

also available:

<input type="checkbox"/> #R22G Red Phosphor w/Anti-Glare	\$139.95
<input type="checkbox"/> #B22G Blue Phosphor w/Anti-Glare	\$139.95

Plus: \$7.00 for packing and UPS Shipping
\$17.00 for Overseas, Parcel Post or UPS Blue Label
Add Sales Tax where applicable.

Photo 5. The Model 2000 keyboard. The non-number keys are tiered down the keyboard, but the numeric keypad keys lie flat.

Tandy will also offer a *Programmer's Reference Manual* for Assembly-language programmers, and will include hardware information in the *Model 2000 Technical Manual*.

(80 *Micro* will review the manuals in a later issue.)

Finding a Place in the Market

Tandy does not consider the 2000 to be an IBM copy. They are selling it, rather, as a high-performance MS-DOS machine.

"It is not in any way an IBM work-alike," says Don White, a product line manager at Tandy. "It is truly a next-generation product.

"In every aspect you could mention, from disk space to graphics, it is superior to anything out there."

Director of Merchandising Ed Juge echoes White's sentiments. "The world doesn't need more IBM copies," he says. "If you want an IBM-like machine and don't want to buy an IBM product, there are plenty of machines just like it."

Juge sums up Tandy's attitude towards IBM thus: "They're a good company. But they're not known for making leading-edge products. I think we got the jump on them this time."

But there is no question that Tandy is aiming the Model 2000 squarely at the IBM PC market. Their benchmark tests compare it to the IBM. Their advertisement includes a Model 2000-IBM PC comparison chart. And IBM naturally comes up in nearly any conversation on the 2000.

Ironically, Tandy will use the software base largely developed by IBM's influence. The strategy, says White, is to go with well-known software that's proven and immediately available.

"The intent is to have the most popular software products available for this machine," he says.

Most of that software, and the software Tandy will offer initially, is obviously aimed at the businessman. But Juge says that Tandy will not sell the 2000 specifically as a business machine. "We won't target it at a specific market," Juge says. "Whether you want a computer for your business or home, if you want MS-DOS with beautiful color graphics and lots of expansion capabilities, this machine is for you."

With the Model 2000, Tandy now covers nearly every corner of the microcomputer market. The Model 4 continues with TRSDOS, the Models 12 and 4 run CP/M, and the Model 16 runs Unix.

"The market is segmented, no question about it," says Juge. "It might stay that way, or it might follow MS-DOS. It doesn't much matter to us."

What remains to be seen is how the TRS-80 computers do against each other. Will the Model 2000 encroach on the Model 4 from one side, while the Model 4P takes away sales on the other? How will the 2000 affect the Model 12? Will it see any penetration outside of business or will the Model 4 and Color Computer maintain the home market?

Again, Juge isn't concerned. "I don't think (the 2000) will have a great effect on the rest of the line," he says. "We feel that each product will stand on its own."

A Final Word

Naturally, no final judgments about the 2000 can be made until people have a chance to see, and the press has a chance to review, the machine. But if the 2000 lives up to its potential, we can expect the company to reestablish itself in the microcomputer marketplace over the next year or so.

And this will be good news to all TRS-80 owners, no matter what system they own. ■

Model 2000 Review Roundup

These three reviews are condensed evaluations of products available for the Model 2000. Although the authors based their judgments on each product's performance with another system, these capsule reviews give you insight into the quality and abilities of MultiMate, dBase II, and Multiplan. Read them for a glimpse of the power available to you now.

MultiMate
Softword Systems Inc.
52 Oakland Ave. North
East Hartford, CT 06027
\$495

MultiMate is one of the better designed and organized word processing packages available. It's a scaled-down mainframe system, so until now many of its features have been available only on dedicated word processors.

For the money, MultiMate offers unparalleled features and is more friendly than the competition. It comes with my highest recommendation because of its quality and, just as important, because Softword Systems Inc. seems prepared to fully support it.

The Package

The package includes three disks, one labeled Boot, the actual word processing software; one labeled System, the help files and printer action tables; and the third labeled Utilities, which contains software to convert ASCII files to MultiMate files and vice versa, a recovery program that attempts to rebuild documents that have lost data because of system error, and an edit program for the printer action tables.

Using the Program

While you start MultiMate from a menu, it's misleading to say that MultiMate is a menu-driven program. Many functions are available through ingenious implementation of the function, numeric, and alphabetic keys in conjunction with the shift, ALT, and control keys. More than 50 functions allow almost unlimited flexibility in moving within text and formatting a document.

Twenty-seven other key combinations available on the regular keyboard and numeric keypad let you invoke functions such as print pitch control, subscripts, superscripts, and so on. An excellent on-line help facility describes which keys do what.

Another impressive feature of MultiMate is the speed with which it moves text around on the screen. Pages don't scroll onto the screen—they appear instantaneously.

MultiMate is a page-oriented word processing system, which means that it stores each page as a separate document on the disk. If the system should crash while you're working on a document, the most damage you'll do is lose the page on which you were working.

Also, page-oriented word processing obviates system memory problems that some packages have because the

entire document doesn't have to reside in memory at once.

Another feature of MultiMate is its ability to add and subtract columns of numbers in a text document. MultiMate can also copy, delete, insert, or move columns of numbers or text.

A key feature of MultiMate is the use of highlighting to demarcate the text you've manipulated. By using the cursor control keys or the various function keys (word, line, sentence, or paragraph highlight), you tell the computer what text to copy or move. That text then appears highlighted on the screen.

MultiMate has a sophisticated and comprehensive list of document formatting features. The program supports most printers found in the home and office. Softword Systems will customize MultiMate to match a printer you own if it doesn't currently support your particular model. They provide a toll-free support line to answer questions on printer support or handle problems you might have with the program.

MultiMate lets you insert printer control codes in your documents. The program supports underlining with the Epson dot-matrix printer, five-line headers and footers, alternate page headers and footers, and automatic page numbering. A merge

function creates form letters that automatically insert variables.

Unique to MultiMate is the ability to instruct files to print at a later date or time. Also, you can request that MultiMate print the document in the foreground or background; if you choose the background option, you can work on a new document while the first one prints out in the background mode. You can also specify the start and stop page numbers.

MultiMate offers a unique record-keeping system to track documents as you create them. When you enter the Create New Document mode, you are presented with a header document screen that lets you identify specifics about the text you're creating, such as the author, system operator, identification key words, and comments. The program automatically enters the creation date and update date.

If you later want to find the document, you can search for it using the fields from this same screen. For instance, you can specify a date or a range of dates by which to search and enter information such as author, operator, or subject. The program locates all documents that meet the search criteria.

MultiMate requires a lot of random-access memory because all the programs reside in memory while you're using the package. Additional memory provides little benefit since the program works on one page at a time.

The only practical way to use this program is with two disk drives. While in theory you could use one drive, there would be little room left on a single disk for a document because the system disk is already almost full (on single-sided drives).

The program isn't copy-protected so you can make back-up copies as required. MultiMate's documentation is conveniently tabbed and well-organized, and the instructions are clear and concise.

Drawbacks

Even MultiMate has a few faults. The cursor moves slowly when moving word by word, which seems odd for a program that otherwise runs so fast. When renumbering a document after making many changes, end-of-paragraph markers sometimes appear in the text at the end of lines.

Also, it is a bit of a nuisance to have to use a third disk for the utilities; given the size of MultiMate, I do not see any alternatives. ■

This condensed review of MultiMate is based on the review by Shawn W. Bryan that appeared in the November 1983 issue of Desktop Computing. Bryan evaluated the MS-DOS version for the IBM PC with 128K of RAM.

dBase II
Ashton-Tate
9929 Jefferson
Los Angeles, CA 90230
\$700

dBase II is a relational data base, which means it is a data base structured like a table. As with any data base, you can categorize and store data in table format and later recall that data according to category or combination of categories.

The program is written entirely in Assembly language and so operates very quickly. It's written in the style of a command-line interpreter so you don't have to wade through a series of menus to get to the desired operation. This feature also lets you write programs in the dBase II data-manipulation language so you can easily set up custom applications or automate a frequently used sequence of commands.

dBase II works with up to 65,535 records in one file. Each record contains up to 32 fields and up to 1,000 characters. However, by employing a Link option, you can treat two files as one for a total of 64 fields and 2,000 characters per record. This translates into a 130-Mbyte file that dBase II can manipulate.

Obviously, you aren't software limited with dBase II, but hardware limited with most microcomputers. Any given field of a record can have a maximum of 254 characters.

You can use two data files simultaneously, and by entering Use followed by a file name, you can substitute a new file for one of the current files. Several commands involve a third file in their operation, providing even more versatility and convenience.

dBase II provides over 50 major commands, most of which allow several options. You can use the majority of these commands interactively, and you can use all of them in the command files to form a structured programming language. However, the casual user can effectively use dBase II interactively with only 11 commands: Create, Use, Append, Locate, Display, Delete, Recall, Edit, Sort, Report, and Quit.

You enter data into dBase II from the keyboard or from other data files by using the Append command. These files can be either dBase II formatted files or in a delimiter-type format.

Similarly, you can write data out in dBase II format or a delimiter-type format with the Copy command. This ability, in combination with chaining capability, lets you conveniently interface dBase II command files to other programs.

A general Report command is available for generating quick table-type reports. There are also cursor positioning commands for special printing needs or custom displays.

You can use data files to update other files, either adding to or replacing data in certain fields if certain conditions (which you specify) are met.

Calculational commands total a given data base's numerical data to another data file or transfer the sums of a designated field to in-memory variables. In both cases, you can embed conditional instructions in the commands to limit their effect.

dBase II also contains a full-screen editor that you can use to edit records and build command files.

You can organize dBase II data bases in either of two ways. Sorting a data base rearranges the records on the file according to any field you specify, which takes time on a large file. You can use successive sorts if you require different levels of organization. If you use this method regularly on a given file, you can set up a simple command file to do successive sorts automatically.

You can also index any given data file on any combination of fields totaling fewer than 100 characters. Indexing a file is considerably faster than sorting it. You only need to index once, since subsequent appends,

LOSE WAIT FAST.™

Don't waste another second waiting for your printer to finish before you can use your computer again. With Microbuffer™ printer buffers you can print and process simultaneously!

MICROBUFFER.™
SO WHAT ARE YOU WAITING FOR?™

Another fine product from  **PRACTICAL PERIPHERALS**

31245 La Baya Drive, Westlake Village, California 91362
(213) 991-8200 • TWX 910-336-5431

edits, replaces, or deletes automatically update the Index file. You can maintain up to seven indexes simultaneously on one file.

Once you index a file, you can use a Find command to locate a specific record. Typical search times on a floppy disk system take under two seconds. Also, a Locate command searches out data whether or not you've indexed a data file, although not as quickly.

If you have two data files with different structures but with at least one common field to serve as a key, you can use the Join command to form a new data file from a combination of the two.

dBase II is well documented with over 350 pages split between a tutorial and a reference manual. It's also well supported and is continually being improved. Several other programs are available to support dBase II, including program generators for quickly building command files, and programs that interface dBase II to other established software packages. All in all, dBase II is an exciting alternative and a program worthy of serious consideration. ■

This review is a condensed version of one by Clyde Lightfoot that appeared in Microcomputing, October 1982. Lightfoot evaluated dBase II for CP/M systems.

Multiplan
Microsoft Corp.
10700 Northup Way
Bellevue, WA 98004
\$275

Microsoft's Multiplan spreadsheet program performs superbly. It's a two-disk package that provides impressive versatility in what-if calculations.

Multiplan's disks are called Boot and System. I found out quickly that the System disk doesn't boot up unless you first load the Boot disk. Afterward, you're asked to insert the System disk and type RETURN. A spreadsheet then appears on your screen.

The spreadsheet consists of 25 rows by 63 columns, for a total of more than 16,000 locations or cells. Cells can contain values, formulas, or labels, and sometimes a combination of these.

Features

You can perform any kind of arithmetic calculation in single cells or by interaction of cells. You can also name individual cells, rows, and columns, and then continue to construct your spreadsheet. For instance, you could ask the program to arrive at costs by adding the columns "Material" and "Labor" and "Overhead," instead of using a much more complicated formula.

All standard statistical functions, such as minimum, maximum, look-up, sum, and others, are available. You will find built-in logical and transcendental functions, such as True, False, Not, Or, If...Then... Else, trigonometric functions, log, and so forth. Multiplan also supports dollar and percent formats not found in other spreadsheets. Additionally, you can sort either alphabetically or numerically.

If you're working with a large spreadsheet, you can divide it into "windows." It's possible to maintain eight active windows at one time, allowing you to keep track of many critical areas simultaneously.

Internal rate of return (of an investment) is one of the more complicated, and sometimes controversial, calculations Multiplan performs. It can solve most internal rate of return problems by iteration. It also calculates standard deviations and net present values.

Multiplan offers various features not available with VisiCalc. Multiplan's scrolling is faster and more versatile, and you can move the cursor in any direction. Cells can contain values plus letters, a dollar, or a percent format. Variable column widths are available.

You can name columns, rows, or whole blocks of data for future reference in calculations. You can lock individual cells or blocks of cells to avoid losing formulas or data accidentally. If you have made changes in your model since you loaded it,

the program recalculates when you ask to save a file.

You can tell the program where to print your model by specifying right and top margins. And you can save print parameters in your model file so you don't have to remember a print format every time you use the program.

The program displays the main menu at the bottom of the screen at all times. This makes it possible, most of the time, to give commands in plain English. A special help menu is available to explain commands further. The menu can be distracting once you learn the commands, and there's no way to get it off the screen, a disadvantage.

Documentation

The Multiplan package includes a handy Quick Reference Guide and a 421-page manual. It's certainly one of the better software manuals—detailed and well-written. But, because of the complexity of the subject matter, many intricate features aren't fully explained. You'll still need hours of experience before you fully master Multiplan.

One of the first things you learn from the documentation is how to make one back-up copy of the software. It's highly recommended that you do this right away. With careless handling, it is possible to lose this one-time ability on the original disk. The System disk is not copy-protected.

If you get stuck, Microsoft operates one of the better telephone support systems in the industry. I had occasion to call the hot line and received prompt, courteous, professional answers to my questions every time.

Multiplan has so many features that it is impossible to describe them all here. As a matter of fact, I have only scratched the surface. It's unlikely that you will come across a legitimate problem in the framework of spreadsheets that Multiplan will be unable to solve. ■

This condensed review of Multiplan 1.06 is taken from the review by G.R. Brieger that appeared in Desktop Computing, July 1983. Brieger evaluated the version for the Apple IIe with 128K of RAM.

Free Post-itTM Note tray from 3M diskettes.

We'll give you a 3M Post-itTM Note tray and a sample pack of Post-it Notes — a \$4.98 value. Absolutely free! Just buy any specially marked box of 3M diskettes and send in the proof of purchase — with 75¢ for postage and handling. Complete details inside specially marked diskette boxes.

One 3M value deserves another.
3M diskettes have long been noteworthy for their unparalleled reliability. A reputation based

on over 30 years experience in manufacturing high quality computer media. Now we're giving you one more good reason to use high quality 3M diskettes.

So buy a specially marked box of 3M diskettes. And send for your free Post-it tray and notes today! Look in the Yellow Pages under computer supplies and parts for the 3M distributor nearest you. In Canada, write 3M Canada, Inc., London, Ontario. If it's worth remembering, it's worth 3M data recording products.

3M hears you...

MS-DOS Overview

by Jim Heid

MS-DOS is the disk operating system (DOS) used by Tandy's new Model 2000 and the IBM Personal Computer and its many clones. The technical differences between MS-DOS and other TRS-80 operating systems are too extensive to adequately cover in a single article; therefore, I'll consider only the major differences you'd encounter.

The two versions of MS-DOS in wide use are MS-DOS 1.X and MS-DOS 2.X. The MS-DOS 2.X series is generally compatible with its predecessors. The Model 2000, like the IBM PC, runs under MS-DOS 2.0.

Commands and File Names

The Table lists the MS-DOS commands and their functions. MS-DOS has two types of commands: external and internal. The code that executes internal commands always resides in memory, while you must load the code that handles external commands from a system disk.

MS-DOS file names can be one to eight characters long, with an optional three-character extension separated from the file name by a period (for example, PINBALL.BAS). MS-DOS lets you use certain special characters (\$, #, %, <, and so on) in file names; non-2000 TRS-80 operating systems allow letters and numbers only.

Another difference found with MS-DOS is that its drives aren't numbered; they're lettered A, B, C, and so on. And the drive letter must appear before the file name, not after it (for example, A:PAYROLL.DAT).

When you use a lot of MS-DOS commands, you can use wildcard characters in your file name. The command DIR *.COM, for example, displays a directory of all files with the .COM extension. Similarly, the command ERASE T?T.BAS erases files named TOT.BAS, TAT.BAS, and TXT.BAS.

One annoying difference between MS-DOS and all non-2000 TRS-80 DOSes is that MS-DOS deals only

with one disk drive at a time. When you boot up MS-DOS, drive A is active, or logged. If you need a file on drive B, you must specify B: in the file name. MS-DOS won't automatically search other drives when it doesn't find a file on the logged drive. (MS-DOS shares this limitation with CP/M.)

MS-DOS also lacks disk names and password protection. Anyone can see, update, and erase your files.

Command	Purpose	TRS-80 Equivalent
CHKDSK	Reads a directory, reports free space, number of files, free memory.	DIR (A)
COMP	Compares two files for differences.	none
Copy	Copies files (supports wildcards). Also appends files and copy to or from a device.	Copy
Date	Changes system date.	Date
DEL	Identical to Erase (below).	Kill
DIR	Displays directory of files (supports wildcards).	DIR
DISKCOMP	Compares two disks for differences.	none
DISKCOPY	Copies an entire disk.	Backup
Erase	Deletes a file from a disk.	Kill
EXE2BIN	Converts files produced by Link program to .COM (command) format.	none
Format	Initializes a disk.	Format
Mode	Sets mode of operation of a printer for a display connected to color graphics adapter or for serial communications port.	Forms
Pause	Pauses system during batch-file execution.	Pause
REM	Displays remarks from within batch files.	period (.)
REN	Identical to Rename.	Rename
Rename	Changes the name of a disk file (supports wildcards).	Rename
SYS	Transfers operating system files.	none
Time	Changes system time.	Time
Type	Displays contents of a file on the display.	List

Table. Summary of MS-DOS commands. The TRS-80 equivalents column lists similar commands found in some TRS-80 DOSes. Some equivalents do not function exactly like the MS-DOS command, but are similar enough for comparison purposes.

Utility Programs

MS-DOS comes with a debugging utility (Debug), a linking program (Link), and an archaic, line-oriented editor (EDLIN).

The Debug program has the usual commands to display and modify memory and register contents, and it lets you execute a machine-language program with up to 10 breakpoints. When Debug encounters a breakpoint, it stops execution and displays the registers, flags, and the next instruction you want executed. The program doesn't support single-stepping.

Debug also edits the contents of a disk file, compares two blocks of memory, fills a block of memory with a given value or values, searches memory for a specific string or value, performs disassemblies, performs hexadecimal arithmetic, and inputs or outputs a byte to or from a given port. Debug is a fairly powerful utility, but no more so than the LDOS or TRSDOS 6.0 debugging programs.

The Link program produces relocatable modules and combines separately produced object modules. It is most valuable to Assembly-language programmers. Its closest relative in the TRS-80 world is LDOS's CMD-FILE and, more distantly, NEW-DOS80's LMOFFSET.

EDLIN is a text editing program most often used to create batch files (do-files or JCL files to the TRS-80 user) and small Assembly-language source code files. EDLIN has limited search and replace capabilities, and not a whole lot more.

Since it's a line-oriented editor, you press the enter key at the end of each line, and you edit lines one at a time. Conversely, a full-screen editor lets you move a cursor around the screen and reformats a block of text if you make deletions or insertions.

MS-DOS

Introduced in the spring of 1983, MS-DOS 2.0 was originally written for the IBM PC-XT, a PC with built-in hard disk drive. MS-DOS 2.0 uses the same commands as its predecessors, and adds a special directory structure that makes it easier to manage the megabytes.

The directory structure is most similar to that of the Unix operating system. It lets you group any related files in their own directories, making file management much easier.

You could, for example, put all your word processing files in one directory, all your payroll files in another, and all your data-base management files in a third. Instead of seeing hundreds of file names scroll by when you display a directory, you see only the file names of the category in which you're interested.

In the pre-Model 2000 TRS-80 world, only TRS-Xenix (available for the Model 16) offered this kind of convenience. (For more information about this type of directory structure, see the "Using Unix-Xenix" series in *80 Micro* (Part I, November 1983, p. 212).)

MS-DOS 2.0 also lets you redirect program input and output. You could tell a sorting program, for instance, to use the output of the directory command as its input. You

could instruct a data-base manager to send its output (which would normally go to the screen) to a mailing list program to be used for input (which would normally come from the keyboard). This technique is called piping, because you can redirect data as if it were going through pipes.

In general, MS-DOS 2.0 seems to be a stepping stone toward what might some day be a multi-user, multi-tasking operating system.

Conclusion

MS-DOS is not the ultimate DOS. Like the computer that first made it famous, it's actually quite conventional. Also like the IBM PC, it's incredibly popular. More software is written for MS-DOS than for any other 16-bit operating system, and that's something to think about for the consumer who's buying a new machine, and for the programmer who's writing a new program. MS-DOS is where it's at.

Moreover, MS-DOS is going somewhere. Version 2.0, with its Unix-like directory structure and flexible device handling, is only a glimpse at the power and flexibility that tomorrow's—or, in the case of the 2000—today's microcomputers offer.

Look for a menu-driven command processor that makes using the system easier for noncomputerists. Look for file and record locking, as well as password protection. MS-DOS will change and evolve as the hardware it runs on changes and evolves, and each new generation will make computers more powerful and easier to use. ■

**WE UNLEASH THE
POWERFUL GRAP**

THE WORLD'S MOST GRAPHICS TECHNOLOGY.

You'll never see Infocom's graphics on any computer screen. Because there's never been a computer built by man that could handle the images we produce. And, there never will be.

We draw our graphics from the limitless imagery of your imagination—a technology so powerful, it makes any picture that's ever come out of a screen look like graffiti by comparison. And nobody knows how to unleash your imagination like Infocom.

Through our prose, your imagination makes you part of our stories, in control of what you do and where you go—yet unable to predict or control the course of events. You're confronted with situations and logical puzzles the like of which you won't find elsewhere. And you're immersed in rich environments alive with personalities as real as any you'll meet in the flesh—yet all the more vivid because they're perceived directly by your mind's eye, not through your external senses. The method to this magic? We've found the way to plug our prose right into your psyche, and catapult you into a whole new dimension.

Take some tough critics' words about our words. *SOFTALK*, for example, called *ZORK® III*'s prose "far more graphic than any depiction yet achieved by an adventure with graphics." And the *NEW YORK*

TIMES saw fit to print that our *DEADLINE™* is "an amazing feat of programming." Even a journal as video-oriented as *ELECTRONIC GAMES* found Infocom prose to be such an eye-opener, they named one of our games their Best Adventure of 1983.

Better still, bring an Infocom game home with you. Discover firsthand why thousands upon thousands of discriminating game players keep turning everything we write into instantaneous bestsellers.

Step up to Infocom. All words. No graffiti. The secret reaches of your mind are beckoning. A whole new dimension is in there waiting for you.

(For more information on Infocom games contact: Infocom, Inc., P.O. Box 855, Garden City, NY 11530.)

INFOCOM™
The next dimension.

For your: Apple II, Atari, Commodore 64, CP/M 8, DEC Rainbow, DEC RT-11, IBM, MS-DOS 2.0, NEC APC, NEC PC-8000, Osborne, TI Professional, TI 99/4A, TRS-80 Model I, TRS-80 Model III.

Touch or Sound Typewriter

by A.J. Barnard Jr. and David Barnard

This touch- or sound-actuated typing program allows physically handicapped persons to communicate using a Model I/III and a printer.

Producing typewritten text is a simple and useful means of communication and documentation. But for many physically handicapped persons, using a typewriter is virtually impossible.

This article presents a revised Model I/III Basic program called TOSTYPER that turns your computer into a sound- or touch-actuated typewriter (see "Voice-Controlled Typewriter," *80 Micro*, December 1982, p. 72). It allows persons with little or no muscular control, but with normal intelligence, to manipulate the screen cursor to type characters through a printer.

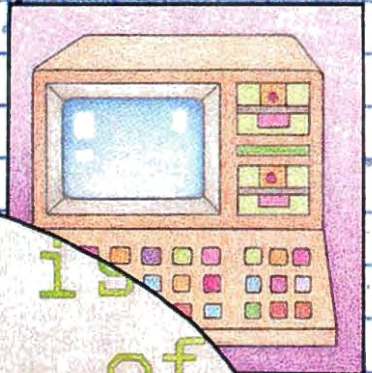

The program's two options let you

use a computer to communicate by uttering a sound or touching any key or the space bar. Once someone boots up the program, the handicapped user can operate independently and gain the satisfaction of composing and communicating through written text.

Sound vs. Touch Control

In the original program, you select the character or command you want by making a sound as the cursor moves through a screen display of the alphabet, some punctuation, and commands. The program picks up the sound through the microphone of a cassette

The system is
the number of
emer... ed;
a onl... e to
erst... rds
nitor... reen,
ysica... o ma
deliberate motions
se a simple switch
nderstand the word
nitor or TV screen
ysically able
erate mot
simple

Collins

recorder operating in the play/record mode. The signal goes to the computer through the earphone jack. An INP (255) command polls the cassette port before the cursor moves from one character to another.

We reduced this sound-actuated control to the subroutine in line 60 of the Program Listing. When it receives a response, the program sets the F flag.

Some handicapped persons, regardless of their ability to utter a sound, have sufficient muscular activity and control to tap with a pencil, press a button, and so on. Our revision allows optional selection of characters by a key press through the routine in line 50;

PEEK(15359)>0 corresponds to an INKEY\$ command.

TOSTYPER (touch or sound typer) is more compact than the original program, placing the character set in an array, using numeric offsets for screen positions, and introducing subroutines and For...Next loops. The program prompts you (or an aide) to select sound or touch control.

Character Sets

To make characters or commands as easy as possible to enter, we arranged the screen display of the character set so that the most frequently used text characters are closest to the home position

of the cursor. Since you use the blank space most frequently, it appears in the home position.

We include two character sets with TOSTYPER. The first, a simple character set, consists of the alphabet (in uppercase), the 10 digits, and some punctuation marks. The second, a full character set, incorporates the simple set and all of the Model I's other printable characters. The full set is shown in Fig. 1.

Both the simple and full character sets are in array E\$ (lines 700-720). Each set is arranged in an eight-column format.

When you first run the program, it installs the simple character set. Select C-SET with the cursor to change back and forth between the simple and full sets. Offset CH has a value of 8 for the simple set and zero for the full set. The program controls screen arrangement (lines 100, 110, and 200) from CH and the H and L arrays, which include the sequence number of the first and last character in each column (line 730).

The Enhanced Mode

To enhance the character set further, you can add some frequently used, two-letter combinations (digrams) to the program. A more effective enhancement involves placing frequently used digrams, trigrams, and common words in an array that you call from the main character set display.

On the main display, each letter that has an enhanced mode appears with a plus sign appended. To get into the enhanced mode (flag EN set) or back to the regular mode, use the cursor to select the XTRA? option. Fig. 1 shows the enhanced mode we developed for the letter E. If you select E+, 15 options beginning with E appear at the bottom of the screen and you select one of these words as the cursor moves through the display. Select Return and only the E registers.

SPACE	N+	T+	R+	L+	.	,	ERASE

On initialization, the program places the combinations and words in array T\$ (lines 550-640), and dimensions it (line 500) for the letters A-Y and up to 16 combinations per letter (NW = 15).

Note the trick in line 550 to avoid including a lot of null elements in the data statements. As the program reads data, it checks for an asterisk. If it finds one, it leaves that element and the remaining elements for that letter empty.

The data we installed in the enhanced mode includes about 40 common digrams that you can't enter more efficiently as single letters, the 21 most frequently used trigrams, the 100 most common words of general English text, and a few additional words useful in personal writing.

As seen in Fig. 1, Return is the first item in a secondary display. If you select it the single letter enters. The secondary display is further arranged by the number of characters and alphabetically. We added wordspace to words that are not also often-used digrams or trigrams—a slash indicates a word space.

In either mode, by holding down a key, or longer sound utterance, you can create a repeating action, thus typing double letters and spaces faster.

Program Operation

When you run the program (printer must be ready), the title page appears as the program counts down from 29 while it loads the arrays. At the end of the countdown, the program displays directions on how you select sound or touch control.

At this point the screen presents three options: Touch, Sound, and Continue. The cursor momentarily stops at each option. Press the spacebar (or any key) to select the option when the cursor is adjacent to it. Then do the same with Continue. From this point on, a handicapped user can operate the program independently.

The program presents you with more directions and allows you to make adjustments. You can adjust cursor speed from slow (1) to fast (10), select a line length of from 15 to 80 characters, and set line spacing. Do this by stopping the moving cursor at the appropriate position.

When you continue, the program starts in the simple character set, dis-

playing characters and commands. The cursor flashes across the top of the eight columns. Respond (in the touch mode) by pressing a key to make the cursor travel down a column with the letter or command you want to execute.

The commands are Adjust, C-Set, XTRA?, Print, and Erase. Adjust brings you back to the adjustment options, and C-Set sends you back and forth between the simple and full character sets. XTRA? displays the enhanced character set with words, digrams, and trigrams for each letter with a plus sign. These commands don't wipe out partial print lines.

The Print command prints out the line of text that you put together. The Erase mode wipes out any errors starting at the back of the line, one character at a time (unless you respond continuously by holding down a key or by making a continuous sound).

Additional Remarks

Refer to Table 1 for the program modules. It is a handy reference if you want to alter or specialize the program.

You can add sound control with an external microphone connected to a tape recorder, thereby placing the recorder farther from the user and reducing concern over room noise. The inexpensive Radio Shack replacement microphone 33-103A is appropriate. It lets you turn the recorder on and off with the slide switch on the mike throat if you plug the two line jacks into the auxiliary and microphone ports.

When you have 32K RAM or more in your system, you can increase the CLEAR 1400 in line 30 (i.e., CLEAR-MEM/3). If you want more words available in the enhanced mode, add them in the data statements of line 560-640. A word should be fewer than seven letters long. For a seven-letter word, there is no wordspace (no slash). You can increase the number of combinations and words allowed for a single letter, from 16 to 22, by changing the value of NW in line 500 because the dimensioning of T\$, reading data to it, and operation of the secondary display all tie to NW. ■

Dot Talk

by Mike Rigsby

Braille is a writing system for the blind that uses raised dots in place of letters and characters. Dedicated, commercially available braille character generators are expensive, so I wrote a Model I/III Basic program called Braille that translates conventional text into braille and prints it on a letter-quality or dot-matrix printer (see the Program Listing).

Braille prints braille text on paper using the impact of the print head to produce the dots. To read the generated text, you have to turn the paper over.

The Program

This program produces Grade I braille only, a simple letter-by-letter translation of text to braille (Grade II braille uses a compacted dot pattern and increases the rate at which you can read material).

This program translates conventional text into braille characters using a standard printer.

Braille supports only lowercase letters, spaces, and periods (see the Figure). The program lets you store and print braille code to and from tape. You can thus produce multiple copies of the same text.

Printers

The ideal printer for this braille system is a converted IBM selectric or daisy-wheel printer. Set the impact force to maximum and use a low-

quality bond paper. You get the best results when you insert four sheets of paper into the printer together.

If you have a dot-matrix printer, don't despair. Use a 9-inch strip of 1/2-inch wide double-stick cellophane tape and latex rubber from household dishwashing gloves. Tape the latex side of the glove rubber and expose the flock-lined side. Tape this to the platen behind the computer paper. This system uses a letter O to produce the impact on the paper.

Program Operation

Braille uses the INKEY\$ function to determine when you've pressed a key. It converts the character you enter to ASCII code and produces the proper dot combination. I programmed Braille to produce only lowercase letters, so the ASCII code for an uppercase letter gets converted.

After you type in 15 characters, the program scans the entered text for a space, at which point it begins printing or recording. More than 20 characters makes the printer overshoot the edge of conventional 8- by 10-inch paper.

The dot pattern produced by this program is readable, but it's slightly larger than the standard size for braille documents. A printer capable of advancing in increments of half-spaces produces nearly perfect braille text. ■

Write to Mike Rigsby at 5164 Sunburst Drive, Norcross, GA 30092.

The Key Box

**Model I and III
16K RAM Cassette Basic
32K RAM Disk Basic
Printer**

Phoenix

an advanced personal computer

Basic \$599 kit (not shown) includes:

- Software compatibility with TRS-80 Model III and Model IV, plus CP/M
- 128k RAM card (64k normal plus 64k bank-selectable), less RAM
- 80 x 24 and 64 x 16 U/L case alphanumeric displays (software selectable)
- Z-80 CPU, with bootstrap ROM and hardware/software selectable 2 MHz and 5 MHz clock
- High resolution 512 x 256 graphics circuitry, with alphagraphics (less 16k high resolution RAM)
- Disk controller for any mix of up to four disk drives (5-1/4" / 8", single/double sided, single/double density, built-in/external)
- Parallel printer and light pen interfaces.
- Built in audio
- Provisions for readily available system ROM
- Tan polyurethane enameled metal enclosure, with power supply
- Standard typewriter keyboard, plus numeric keypad
- CPU board, with six expansion slots
- Parts kit, including ICs, sockets, fasteners and mounting hardware
- Assembly manual

Complete \$1699 kit shown includes:

- High-resolution 12" green screen monitor
- Two SSDD slimline 5-1/4" floppy drives and power supplies
- Hand rubbed, solid walnut end panels
- RS232 Interface board
- System ROM
- 128K system and user RAM
- 16k high resolution graphics RAM

Additional Options

- Single or dual built in slimline 5 1/4" SSDD or DSDD floppy drives and power supply
- Single or dual external slimline 8" SSDD or DSDD floppy drives, enclosure, power supply
- 128k bank selectable RAM board (for 256K total)
- 4164 RAMs
- Monitor
- Color Graphics (available 12/83)
- Light Pen (available 10/83)
- Hard disk host adapter (available 10/83)
- Factory assembled units (available soon)

LOCK OWNER I.D. ON YOUR SCREEN!

Stop unauthorized use!

INTRODUCING... THE COMPU-LOCK

SCREEN EXAMPLE

The Compu-lock is an electronic circuit board that virtually guarantees that no one can access your files or damage important data. With the Compu-lock installed, your computer, on power up, requires the entry of a password before it can be used. Without correct password entry, your computer will only display owner identification.

The Compu-lock can be a very strong theft deterrent, and if your computer should be stolen, the Compu-lock could be the single-most reason that your computer would be returned to you. Easy internal installation requires no soldering or trace cutting. Bold mylar decal, included, warns would be thieves or meddlers.

It has been estimated that the odds of an unauthorized person gaining access to a computer protected by a Compu-lock, with a 6 letter password, is one in 326 billion. Those are excellent odds in your favor!

Tell us exactly how you wish your display to be formatted and choose your own password. The screen display allows you up to five lines of 35 characters each. You may use these lines in any manner you wish to display your ownership identification. Lines may be skipped or not used as you desire. See above screen example. The lines should contain owner and/or company name, address, phone number and, optionally, a drivers license number or other identifiers of your choice. The password may be up to 20 characters long and any keyboard character may be used (including lower case) with the exception of the arrows. We do suggest, for your convenience, that the password you send to us be from 5 to 8 characters long and something that you'll easily remember.

Don't wait until it's too late. Your computer and files are worth the protection that the Compu-lock affords. Mail your order today. Include a check or money order for \$99.95, the password of your choice and a clearly printed or typed copy of how you wish your 5 lines of information to read. Add \$2.50 for postage and handling. California residents add 6.5%. Be sure you give the model number of your computer.

The Compu-lock is available for the TRS-80 models 1, 3, & 4 and soon for other popular computers. Dealer inquiries invited.

HOT CoCo[®]

Guaranteed to make your TRS-80 Color Computer* sizzle with color, **HOT CoCo** magazine is informative, interesting, and *best of all* just for the Color Computer. You'll look forward to **HOT CoCo** month after month because it has something for everyone, from the novice right on up to the expert. **HOT CoCo** gives you:

- PROGRAMMING TECHNIQUES & TUTORIALS—that promise to make you a superior programmer.
- UTILITIES—to save you time and effort on all your routine tasks.
- EXPERTLY WRITTEN COLUMNS—including *BASIC*, *GRAPHICS*, *FLEX* and *GAMES*.
- HARDWARE & CONSTRUCTION—ideas on interfacing and enhancing to make building projects a breeze.
- EDUCATIONAL APPLICATIONS—will stimulate and encourage imaginative thinking in your child.

PLUS

- BUSINESS PROGRAMS—sure to make you a star at the office.
- FEATURES ON COLOR APPLICATIONS—make your computer reach its full potential and get your money's worth from your machine.
- BUYER'S GUIDES & PRODUCT REVIEWS—now you can stop running around comparing prices and products and start running your computer.
- HOME & HOBBY APPLICATIONS—exciting ways to help your computer add enjoyment to your leisure time.
- ANSWERS TO SPECIFIC QUESTIONS—it's like having your own private consultant—free!

Join in the color explosion with **HOT CoCo** today! Take advantage of our money saving offer, 12 issues for \$24.97. A 13th issue is yours **FREE** with pre-payment (check or credit card). Use the attached order form, the coupon below, or call toll free 1-800-258-5473. (In NH. call 1-924-9471)

YES! I want my Color Computer to sizzle with color. I understand that with payment enclosed or credit card order I will receive a free issue making a total of 13 issues for \$24.97.

Upgrade Your Radio Shack Software

Turn your SHACK
into a MANSION

With software enhancements from
BLOCK ISLAND TECHNICAL SERVICES, Inc.

Full value for your money is a New England tradition... a tradition that survives on Block Island today. We have created high-quality software upgrades for Radio Shack's Model II and Model III software packages that will greatly enhance their performance, speed and ease of operation.

Model III Accounts Receivable (26-1555) Upgrade No. 1 (\$24.95)

- Lightning fast machine language sorts 10-30 times faster than your original program.
- Now you can edit the line for your customer account names.
- Set up a price file for your products for easy, transaction data entry. Just enter a predetermined two digit product number and your product's description and price will automatically be entered. User friendly prompts allow you to change the product or price easily.
- Print invoices at transaction entry without printing complete statements for daily billing, increasing cash flow.

Model II Payroll (26-4503) Upgrade No. 2 (\$49.00)

- If you have ever gone on to a pay period without closing the previous period you know how much time it can cost you. With our upgrade it is almost impossible to make that expensive mistake.
- Complete status report of current period, current month, and current quarter displayed at system start up.
- Warning messages notify you if you forget to close out the previous period.
- Complete 941 employers quarterly report. Your option to print out 941 or display it on screen. Input lines to enter your deposits paid.

Write or call today for the above upgrade packages and for a complete list of other Radio Shack software upgrades

FINALLY, THE TAX PACKAGE YOU'D BEEN LOOKING FOR. . .

1983 TAX PACKAGES

Specifically designed for Tax Services, C.P.A.'s and Individuals

ARE YOU TIRED OF. . .

- Working late into the night doing tax returns?
- Making simple addition errors?
- Not being able to utilize your computer?
- Having to pay hundreds of dollars for tax software?

NOT ANYMORE. . . THOSE DAYS ARE GONE!!

WITH OUR TAX PACKAGES YOU CAN. . .

- Double, triple or quadruple your output.
- Eliminate those embarrassing addition errors.
- Have professional looking returns.
- Let your computer do most of the work.
- Have quality software at a fraction of the price.

Our PROFESSIONAL INCOME TAX PACKAGES are very easy to use. All programs are menu driven and each follows the tax forms and schedules line by line. You can review all your figures on the screen and be able to change any of your entries before printing. Produces a printout that exactly fits FORMS 1040 and 1040A (or use with our overlays) and all other FORMS and SCHEDULES printed in IRS Approved format. You can also save client data to disk for later recall.

Our tax programs are designed to run on TRS-80 Models I, III, IV, APPLE II+, IIe and FRANKLIN-ACE computers. All versions require a minimum of 48K memory and one disk drive.

The Taxman Cometh

by Robert Athanasiou

The chance of being audited by the Internal Revenue Service is about the same as that of being hit by a bus. The odds of surviving are also about the same if you can't prove that your deductions are legitimate.

You need good records to protect your cash from the tax collector.

So you think you'll never be audited? Why not be on the safe side with Taxman, just in case?

Taxman can help. The Model I/III program lets you record income and deductions as they come along, and handles the computations. At the end of the year, all you do is push the Y key, and you have a full summary of your form 1040 information.

Even if you don't get audited, Taxman will make your life easier at tax time.

How It Works

Figure 1 shows the screen when you enter data. The program is self-prompting. It records up to 200 entries and lets you scroll them for review. Each data entry column is prompted by a set of underline characters [CHR\$(95)] and directions at the bottom of the screen.

You can backspace to correct wrong entries at any time, as well as delete or insert lines. You enter the amount of your deduction as you would on a calculator, with the decimal point and dollar sign already in place.

When you're in the command mode (see Fig. 2), the arrow keys control screen scroll. You can scroll continuously by holding the up-arrow key; if you press both the shift and up-arrow keys simultaneously, you'll scroll until you press another key. The down-arrow key works the same.

The Key Box

**Models I and III
32K RAM
Disk Basic
Printer**

I inserts a line, and D deletes the line indicated by the cursor. L loads data previously saved and S saves the data under the file name TAXFILE/DAT. P prints the file, without categorizing or summing, for archival or review purposes. Q returns you to Basic while R resumes the program where you left off. Y prints the summary and can be used at any time to let you see how you're doing.

The summarized data for the year to date appears in Fig. 3. (The example is entirely fictitious.)

Inside Taxman

I wrote this program with the help of subroutines from Lewis Rosenfelder's book *Basic Faster and Better*. They cut my programming and debugging time considerably. The book has line-by-line descriptions of the subroutines and machine-language programs used here.

In the Program Listing line 10 speeds up the program by assigning memory locations to the variables in order of frequency of use. Line 10 also specifies that each data line is 63 bytes long, that there is a limit of 200 lines, and that memory above -12600 is saved for storing the data. If you wanted to use a limit of 300 lines, LM should equal 300 and MB should equal -18900. The start of the search routine in line 180 would then change from CEC8 hexadecimal (hex) to B634 hex.

The program uses two machine-language routines. The first is Move Data, which is loaded in line 40 and called in line 7020. In line 7020 the From address is placed in array position US(1), the To address in US(3), the number of bytes to move in US(5), and the method—LDIR—in US(6). A move using the Z80 code LDDR would be represented by -18195 in US(6). The Move Data routine is also called in lines 8130, 8180, 8200, 8220, 8390, and 8410. In each case you need only specify the From and To addresses, the number of bytes, and the method used to move them. Like all of Rosenfelder's routines, it is fast.

The second machine-language program is a Search routine that loads into array SS in line 140. Taxman uses the array C to pass information to the Search routine; that is, the starting position of the search (CEC8 hex), the number of bytes per string (63), and the offset position in the string (3), as shown in line 180. The Search routine finds the search key string, SK\$, specified in lines 1000-1170.

The Search subroutine called in 2010 uses the information in line 2000 to

Figure 3. Fictitious summarized data for year to date.

search for the first occurrence of SK\$, place the string in which it is found in temporary reserve in RE\$, and keep track of how many strings it is to search (LN). This useful Search routine rapidly accumulates the items and subtotals by category.

Lines 500-570 control the data input for each segment of the data line. This input technique is virtually foolproof since you can only enter an I or a D for

the first data item and a member of the set defined by AX\$ for other columns. You can enter only numeric data in the amount column.

Just about the only way you can bug this program is to start entering data without first loading the data already saved on disk. If you trust yourself to remember to load data each time you

Tax Preparers

TAXSTAR

For Model 1/3/4 with 48K and 2 disk drives

- Will do schedules 1040, A, B, C, D, SE, G, W, 6251

FANTASTIC FOUR 4 GAMES for \$10.95

FANTASTIC FOUR is a Plan that any TRS-80 owner can join. For only \$10.95 you'll get four games on disk or tape. That's only \$2.75 per game. The average store Price is \$15.95 a Game! For every month in the Plan, you will receive:

- 1 Arcade Game: 16K. Written in machine language.
- 1 Adventure 32K. Puzzle after challenging puzzle.
- 1 Educ./Puzzle Game 16K. Expands your knowledge.
- 1 Simulation 16K. From gambling to war games.

In a 12 month Plan, you'll get 4 different games every month for a year. And remember, that's only \$10.95 per month. What a bargain!

Send check or money order with the form below to:

FANTASTIC FOUR, 70 West 38th St., New York, NY, 10018. Be sure to put on your return address!

- () 1 month \$21.95 (\$21.95 Per Month)
- () 6 months \$95.70 (\$15.95 Per Month)
- () 12 months \$131.41 (\$10.95 Per Month)
- () Disk () Tape / () Model I
- () Model III

You may cancel your plan at any time and receive a full refund for all the months left. If the games are faulty return them and they will be replaced.

"Any other Pascal is too much hassle!"

Picture this: you want to make a change in a 1000 line Pascal program. You read the source code from disk into a full screen editor and make your changes. You type control Q to quit the editor and R (for run). In 15 seconds, without further disk access, your program has compiled and is executing.

Pascal 80 is so interactive and easy to use that many people have given up Basic completely, even for hasty ten line programs! We do trade some power for interactivity, but at this price you can use **Pascal 80** as a "front" end for another system to have both ease of use and power. Many of our users develop and test their software with **Pascal 80**, then recompile our source code on another system.

Thousands of satisfied users worldwide! (We have a liberal return policy and have had only 2 returns per thousand copies sold.) Many top universities use **Pascal 80** to teach Pascal. (Names on request)

Features — Standard Pascal, writes ASCII source, p-code and com files. Full screen editor, compilation from memory or disk, include function. Pointer variables are addressable (like C). Limitations — Variant records, with, and page not implemented. Mark and release instead of Dispose.

PASCAL 80CPM —
Special introductory price — \$79.
 Requires CP/M 80. 8 inch SSSD, Apple CP/M, Xerox, IBM, Osborne SD formats available. Call for information on other formats. Free brochure.

TAX PREPARERS!

PROFESSIONAL FEDERAL INCOME TAX PROGRAMS

FOR TRS-80 MODEL I, III & IV

- Fast and easy to operate.
- Determines least tax quickly.
- Saves input information on disk—automatic transfer of essential information.
- Batch processing possible.
- Uses IRS prescribed computer generated print outs.
- Prohibits bypassing of mandatory entries.
- Accuracy assured by triple check logic.
- Enter only pertinent lines—faster than line by line.
- Single line correction with automatic update of succeeding totals.
- Professionally used—nationally advertised.
- Overlays available.
- Requires 2 disk drives & 48K.

• BASIC TAX PACKAGE \$165.00 •
INCLUDES 1040, 1040A, 1040EZ
AND SCHEDULES A, B & W
OTHER SCHEDULES \$35.00 EACH
MANUAL \$5.00

"NAMETAGR"

Quality Namebadges and Marking Labels

Turns your computer and dot matrix printer into a HIGH SPEED type setting printing press.

- High visibility 3/8" type for name/nickname
- 8 standard namebadge formats
- Create Logos or special graphic designs
- Marking labels, various sizes up to 2 x 4"
- Super fast entry routine saves time/errors

For meetings, seminars, schools, parties, reunions, personal ID badges, table tents, small signs/notices, etc. only . . . \$79.00

Money Back if not Delighted

Models I and III, 48K, 2 disc drives.

NAMETAGR kit includes:

- Two 5 1/4" diskettes (program and data files)
- 30 "Bulldog" badge holders
- 400 pin-feed namebadge stock (single, 2 1/2" x 4")
- 240 labels (3 1/2" x 1 1/16")
- 120 labels (4" x 1 1/16") and Instruction Manual

Check/M.O. please. (Ohio Sales Tax \$5.35)

Non-US orders add \$10.00

ETS Center 284 216/946-8479

Box 651 35026-A Turtle Trail • Willoughby, Ohio 44094

Continued from p. 101

use the program, delete this from line 500:

```
:IF DS=0 GOTO 8240
```

After you load the data, press R and begin adding new data. Lines 3000-3050 try to keep you from exiting the program before saving your data.

After you have the program running, you can save space and speed up the program by removing the blanks and REMs and combining lines.

Rosenfelder's subroutines are available on disk and are a great buy for the serious programmer. His book and the disks are available from IJG Inc., 1260 West Foothill Blvd., Upland, CA 91786 and several mail-order houses. Radio Shack offers the book but not the disks. ■

Contact Robert Athanasiou at 13 Lawnridge Ave., Albany, NY 12208.

Aerocomp's Proven Best-By Test! The "DDC"

\$99.00
WINTER SPECIAL

"DDC"

Double Density Controller

★ Technical Superiority

At last! A double density controller for Model I with HIGHER PROBABILITY OF DATA RECOVERY THAN WITH ANY OTHER DOUBLE DENSITY CONTROLLER ON THE MARKET TODAY! The "DDC" from Aerocomp. No need to worry about the problems that keep cropping up on existing products. AEROCOMP'S new analog design phase lock loop data separator has a wider capture window than the digital types currently on the market. This allows high resolution data centering. The finest resolution available with digital circuitry is 125 ns (nano seconds). The "DDC" analog circuit allows infinitely variable tuning. Attack and settling times are optimum for 5-1/4 inch diskettes. The units presently on the market use a write precompensation circuit that is very "sloppy". Board to board tolerance is extremely wide - in the order of ± 100 ns. The "DDC" is accurate to within ± 20 ns. The bottom line is state of the art reliability!

★ Test Proven

Tests were conducted on AEROCOMP'S "DDC", Percom's "Doubler A" and "Doubler II" and LNW's "LNDoubler" using a Radio Shack TRS80 Model I, Level 2, 48 K with TRS80 Expansion Interface and a Percom TFD100 disk drive (Siemens Model 82). Diskette was Memorex 3401. The test diskette chosen was a well used piece of media to determine performance under adverse conditions. The various double density adapters were installed sequentially in the expansion interface. The test consisted of formatting 40 tracks on the diskette and writing a 6DB6 data pattern on all tracks. The 6DB6 pattern was chosen because it is recommended as a "worst case" test by manufacturers of drives and diskettes. An attempt was then made to read each sector on the disk once - no retries. Operating system was Newdos/80, Version 1.0, with Double Zap, Version 2.0. Unreadable sectors were totalled and recorded. The test was run ten times with each double density controller and the data averaged. Test results are shown in the table.

★ Features

TRS80 Model I owners who are ready for reliable double density operation will get (1) 80% more storage per diskette, (2) single and double density data separation with far fewer disk I/O errors, (3) single density compatibility and (4) simple plug-in installation. Compatible with all existing double density software.

★ TEST RESULTS ★

MFR & PRODUCT	SECTORS LOCKED OUT (AVG)
AEROCOMP "DDC"	0
PERCOM "DOUBLER II"	18
PERCOM "DOUBLER A"	250
LNW "LNDOUBLER"	202

Note: test results available upon written request. All tests conducted prior to 8-25-81

SUMMER SPECIAL \$99.00

for the Best DD Controller on the market.

"DDC" and LDOS **\$169.95**

"DDC" and Newdos 80 **\$179.95**

Aerocomp's 14 day money back guarantee applies to hardware only. Specials will be prorated. Shipping \$2.00 in Cont. U.S. See opposite page for details. Add \$4.00 shipping & handling for DDC & DOS.

Data Separators

The advances that make the "DDC" great are incorporated in the new AEROCOMP Single Density Data Separator ("SDS") and Double Density Data Separator ("DDS").

★ Has your original manufacturer left you holding the bag?

If you already own a Percom "Doubler A", "Doubler II" or LNW "LNDoubler" or Superbrain, the AEROCOMP "DDS" will make it right. Look at the test results:

MFR. & PRODUCT	SECTORS LOCKED OUT	
	WITHOUT "DDS"	WITH "DDS"
PERCOM "DOUBLER II"	18	1
PERCOM "DOUBLER A"	250	0
LNW "LNDOUBLER"	202	0

Note: Same test procedures as "DDC".
* Trademark of Percom Data Co.
** Trademark of LNW
*** Trademark of Tandy Corporation

**Plugs directly into your existing
Double Density Controller.**

★ "DDS" **\$49.95**
(Use 1791 chip from your DD Controller)

★ "DDS" with disk controller
chip included **\$79.95**

★ Disk controller
chip **\$34.95**

(Shipping \$2.00 Cont. US - see opposite page for details)

Do you need a Single Density Data Separator?

The internal data separator in the WD1771 chip (R/S Expansion Interface) is NOT recommended by WD for reliable data transfer. Do you have any of these problems: Lost data, tracks locked out, CRC errors, disk retry? YOU NEED ONE!

★ "SDS" **\$29.95**
(For Mod. I; shipping \$2.00)

**See opposite
page** ▶▶▶▶▶

PERSONAL CHECKS WELCOME

We'll be happy to accept your personal check with any mail order without any shipping delay.

FREE TRIAL OFFER

Use your AEROCOMP drive for up to 14 days. If you are not satisfied for ANY REASON (except misuse or improper handling), return in the original shipping container for a full purchase price refund. Applies to hardware only. Sorry, we cannot refund on software. We have confidence in our products and we know you will be satisfied.

WARRANTY

We offer a six months warranty on parts and labor against defects in materials and workmanship. In the event service becomes necessary for any reason, our service department is fast, friendly and cooperative. Our goal is 48 hour turnaround on all warranty or repair drives!

100% TESTED

AEROCOMP disk drives are 100% subjected to burn-in and bench test. We even enclose a copy of the test check list, signed by the test technician, with each drive. AEROCOMP means reliability!

ORDER NOW!

Order by mail or call TOLL FREE TO THE NUMBERS BELOW. Please note toll free lines will accept orders only. We accept VISA or MASTERCARD. Be sure to include card number and expiration date. We will not charge your card until the day we ship. Order by mail with credit card or send check or money order. Personal checks welcome. No delay. Order COD. No deposit required but all COD's will arrive cash, certified check or money order only. We'll send a card showing the exact COD amount before your shipment arrives. Shipping is **not** included in the prices shown. Texas residents add 5% sales tax.

A New Constellation

by Charles R. Perelman

You want to invest in a comprehensive word processing package for your CP/M system, so take a look at MicroPro's all-star line-up.

★★★★

WordStar Professional
MicroPro International Corp.
33 San Pablo Ave.
San Rafael, CA 94903
CP/M
\$895

MicroPro International has bundled some of its most popular and valuable word processing programs into a multifaceted package. WordStar Professional consists of WordStar 3.30, MailMerge 3.30, SpellStar 3.30, and StarIndex 1.01. It's a reasonably well-integrated package and, despite its high cost, I think it's worthwhile for both the student and the professional writer.

Installation is menu driven and the programs support most printers. You can select WordStar, MailMerge, and SpellStar from the main menu by pressing a single key. StarIndex is an entirely separate program.

WordStar 3.30

The star of this package is still WordStar, one of the top micro word processors. You get a full panoply of features that give you an almost exact screen preview of the way your text prints out.

Cursor movement and scrolling occur in all directions and include single row or column changes, jumps to the beginning or end of a document, and automatic horizontal scrolling of up to 240 characters. Insert, delete, find, re-

place, and a good range of block functions perform traditional roles.

You can repeat many commands continuously, and you have sophisticated wildcard and global search and replace options. This latest WordStar is noticeably faster than prior releases.

Extensive formatting choices control top, bottom, right, and left margins, tabs, justification, hyphenation, line spacing, single line headers and footers, and page length. If your printer supports bidirectional printing, boldface, double strike, underline, strikeout, strikeover, subscript, superscript, varied character pitch, and line height, WordStar provides these functions through commands you enter in the margins or embed in your document.

Column manipulations and decimal tabs aid your preparation of tables or newsletter-style text.

File commands let you write portions of a file to a new file or insert an entire external file into your current work. Without terminating your edit, you can access the WordStar directory, copy a different file even to another disk, rename, or delete another file.

Theoretically you can print out one file while editing another, but the spooling is partial. Rapidly entering new text interrupts the printer.

Directory displays don't show files with extensions of COM, HEX, SYS, OVR, REL, and \$\$\$; this eases scanning the directory to locate a text file. Since StarIndex doesn't appear in the main menu and all but one of its files

have nondisplay extensions, it's disconcerting not to find an indication of its existence in the WordStar directory.

A document file's length is limited only by disk size with virtual memory techniques. Working file requirements, retention of your original file with a BAK extension, and space for program software on the same disk reduce available space but it's more than sufficient under ordinary circumstances.

One major failing of WordStar is its limited recovery procedures for disk full errors. Saving text at regular intervals is good insurance. MicroPro has numerous reminders throughout the documentation about checking disk space.

WordStar contains good Help screens and brief lists of major commands. You can speed program operation by changing help levels and eliminating some displays as you become more proficient.

The technical manual is free to direct dealers or \$50 to end users. It includes answers to commonly asked questions about WordStar and other MicroPro products, patches for specialized printer needs and unusual installation configurations, and an explanation of the label patcher.

If you have problems applying the technical manual data, telephone the technical hot line. Try to solve your enigma with the manual first, since MicroPro has a large user base and the hot line is frequently busy.

WordStar 3.30's documentation is awesome. The command card for WordStar is logically organized and easy to use. A similar card for MailMerge, SpellStar, and StarIndex gives pertinent data at a quick glance. The documentation includes adhesive labels imprinted with control characters.

The new WordStar manual is attrac-

tively printed on 6- by 9-inch sheets, and comes in a three-ring binder with a jointed cover. Tabs divide major sections. The text is well illustrated, and examples of screen prompts and document output are clear.

The manual breaks involved procedures into numbered steps and describes each in detail. Cross-referencing for related information, an index, a table of contents, and a flowchart guide further enhance the documentation.

A training guide contains 20 lessons divided into three word processing courses at different levels of proficiency. The lessons are readable, logically ordered and grouped, and easy to follow.

WordStar isn't perfect. If you have heavy continuous word processing demands, consider a hardware spooler; concurrent editing and printing operate at a snail's pace. You cannot move to a particular page by number, but you can place up to 10 markers in a document for quick movement during editing.

If you're not using the defaults, you must reset margins, line spacing, justification, and so on each time you edit. Also, WordStar does not support true proportional printing, although micro-justification produces good justified printing.

WordStar doesn't implement glossary features. You can save a single heading or text selection in a separate file and read in as many of these files as you want, but this isn't as effective as a true glossary.

You don't have split screen capability for working on multiple files. Multiple line headers and footers aren't provided. You can't print the file you're editing or any part of it interactively; you must close it first.

In fairness, I don't know of a micro word processor that has all these features as well as those WordStar offers. WordStar remains a premier accomplishment, and I thoroughly enjoy using it.

MailMerge 3.30

MailMerge is a versatile WordStar adjunct. The new ability to match specific sections of a master document to data from a list meeting selected criteria, described as conditional printing, is a very powerful feature.

You prepare your master (e.g., a form letter) with WordStar. Commands preceding the text identify the data file and variables you want merged. In the body of the form, the program delineates generic variable names with ampersands. At run time,

actual list data replaces the variables and MailMerge reforms paragraphs to fit the inserts.

Other MailMerge techniques permit individual determination of variables for insertion. For example, you can prompt the operator for variables on each printout (different addresses for a form letter), or, at the beginning of a file, you can quickly set variables that appear repeatedly throughout a document (the names of parties in a contract, for example).

An alternate method uses a command file like those used in editing macros, but this one is easier. You build up each task with commands, directing access to various text and data files as needed. When run, the program extracts text and data from the different files as required.

You design on-screen prompts for entering variables, inserting paper or envelopes, or changing disks. You can chain or nest files to use boilerplate provisions or to join related text for continuous page numbering.

*“WordStar remains a
premier accomplishment,
and I thoroughly
enjoy using it.”*

Run-time print options on the MailMerge menu are similar to those on WordStar, letting you start or stop printing at any page of the document, print continuous or single-sheet documents, and print multiple copies. If you start MailMerge after the first page of a data file, be prepared to wait as it cycles through each data item prior to your starting page.

I've saved the best for last. Conditional printing gives you some facilities of a data-base management system. You can choose different text paragraphs to match to particular elements of your data file.

You can compare any variable from your data file to alphabetic or numeric expressions based on ASCII values by using equal, greater than, less than, And, and Or delimiters. You can use up to 100 characters in a conditional command.

The result of the comparison then branches the program using If...Then or Except...Then construction. The possibilities are practically limitless,

especially when you add special variables to your data file as sorting or identifier keys.

Since MailMerge uses dot commands of the same type as WordStar and you use WordStar to edit files you want merged, you need prior exposure to WordStar to feel comfortable with MailMerge. The WordStar nondocument mode used for this purpose might be alien to many users.

The documentation is well-done and packaged similarly to WordStar's. It's nicely printed with plenty of graphics, a table of contents, an index, flowcharts, and an excellent discussion of errors and warning messages.

As a bonus, Appendix C contains details on some worthwhile applications. With the four tutorial lessons on MailMerge procedures contained in the WordStar manual, you get excellent samples of MailMerge's capabilities.

SpellStar 3.30

You call SpellStar from WordStar's main menu. Sufficient disk space can be a problem, since you need work file space equal to your original file. The main 20,800-word SpellStar dictionary takes approximately 96K and the overlay (COM) file takes 18K.

Starting your spelling check is cumbersome. After answering a prompt for file name, you must go through two submenus, choose proofing as opposed to dictionary maintenance, set up a main dictionary, and possibly set up an optional dictionary containing specialized terms.

While processing your text, the program updates various statistics such as number of words in the document, words in dictionaries used, and words not recognized. The original SpellStar dictionary does not recognize some common words, such as *tabs*, *cursor*, and *nicely*. The *ly* suffix seems to generate misspelling indicators.

The next step processes the file by marking all unrecognized words. Finally, you move through the file electing whether to edit a marked word, ignore it, pass it for later review, or add it to one of the dictionaries.

SpellStar retains ignore and add-to-dictionary instructions for about the last 15 words, and handles subsequent appearances of any of these words in the same way. In a long document you might rework the same word many times. You make revisions in context as you skim through the document.

Dictionary maintenance lets you create a main or supplemental dictionary, add or delete words, or format a

purchased dictionary. It's possible to list a dictionary's contents on the screen, but you can't print them. The use of customized supplemental dictionaries is valuable and reduces unrecognized words, particularly in specialty areas.

The SpellStar manual is consistent in format with the other programs and contains an index, table of contents, and flowcharts. Presentation of material is not as cogent, perhaps because this is not as mature a product.

Enumerated steps for functions such as creating a dictionary would be helpful. The last two chapters of the WordStar training guide lead you through SpellStar procedures to give you a working knowledge of the system.

Overall SpellStar is unwieldy and slow. It also requires an inordinate amount of disk space for a main dictionary that doesn't recognize many common words. SpellStar has an abundance of handy features, but it takes too many steps to accomplish normal functions.

StarIndex 1.01

StarIndex is an orphan. Unless you know that Format.FMT is a StarIndex file, no sign of it appears in the WordStar directory display. The training guide doesn't offer any lessons in its use.

To access StarIndex with the Run command from WordStar's main menu, you must remember the COM file name (STARINDX) and the syntax. In spite of its neglect, the software is tremendously useful.

StarIndex produces alphabetical indexes, tables of contents, lists of figures and tables, and outlines, with a minimum of hassle.

Creating an index is an extension of the basic WordStar philosophy using embedded print controls and dot commands. You must prepare the file with WordStar before creating the index.

Using WordStar's Find command, you locate and mark any word in your text that you want to appear in your index. If you use the global Find and Replace command with the word surrounded by print control markers, the program rapidly indexes every repetition. StarIndex recognizes the MailMerge command for calling an external file, letting you create a single index for material in multiple files.

With dot commands you can insert a descriptive index item, such as a synonym or classification that doesn't appear in the text, for any page. You designate references as master (main

headings printed in boldface) or general.

You can list subentries or detailed classifications beneath each reference. After running StarIndex, you can edit the output files.

StarIndex has only one print format, a single-column index without any title. Judicious editing with WordStar aligns two index columns to a page, and you

“MailMerge's conditional branching opens up new applications and StarIndex adds a helpful dimension.”

can insert titles, such as INDEX, as headers.

STARINDX.COM and its related files occupy about 56K of RAM. Check disk space before running StarIndex since the program produces three output files: another text file implementing the StarIndex commands, the table of contents, and the index files. All three combined take up somewhat more space than your unprocessed text file.

You use dot commands to produce a table of contents with a main level, up to three subsidiary levels, and separate lists of figures and tables. The program uses the same numbering system in the body of your document as in the table of contents.

Ignoring the table of contents, you can use this system to create outlines or contracts with sequential subdivision numbering. Headings or captions for figures or tables are limited to one line, but you can edit the resulting text and table of contents files to lengthen the captions.

The real versatility of StarIndex is in the options available for making your own default file and altering formats with dot commands. Style, a menu-driven utility, lets you create new patterns to replace Format.FMT. A format file gives consistency to your documents, but doesn't place directives in the text file.

Inserted dot commands override default settings from format files. If you turn off format file print controls and enter all parameters in the text file, you get a picture of the formatting in the text file, but you increase editing time.

Boldface, double strike, elongation, underlining, and insertion of spaces are print control options.

Numbering choices include combinations of upper- and lowercase Roman numbers, Arabic numbers, upper- and lowercase letters, and no numbering for main headings. You can't use Roman numerals for subsections.

Many other options are available for formatting your index, numbering pages, inserting blank pages, and so on.

Clarity and completeness of the manuals need improvement. The form is the same as that of the other programs in this package.

Appendix B (error messages) is rather terse for a beginner. Other appendixes contain a command list, an explanation of StarIndex work files, and a set of documents for the sample file included on your distribution disk.

Prior experience with WordStar is a must for thoroughly understanding the manual and program. Take MicroPro's advice and experiment with the sample file.

The documentation is good, but not as all-inclusive as that for WordStar. A discussion of the structure of StarIndex output files with TOC (Table of Contents), SI (text with print controls), and IDX (Index) extensions and of editing those files is conspicuously absent.

StarIndex integrates nicely with the balance of the WordStar Professional package. It would be more convenient if it were selectable from the main menu and prompted for input and output files.

Other enhancements I'd appreciate include the ability to enter cross references in an index without page numbers, to eliminate the periods and page numbers in a table of contents, to change the periods to other characters, to put parentheses around second and subsequent subdivision characters, to put descriptive headers preceding numbers, and to have more subdivision levels.

Summary

WordStar Professional offers a broad range of valuable word processing features. Overall, it's a quality package, with SpellStar its weakest link. On the plus side, MailMerge's conditional branching opens up new applications and StarIndex adds a helpful dimension. All in all, I recommend it for anyone who has to do a lot of writing. ■

Write Charles Perelman at 1800 Century Park East 1150, Los Angeles, CA 90067.

Tired of swapping Disks from Inventory to Accounts Receivable
to Accounts Payable etc.? Now, one system does it all.

Introducing

The M.B.S. Business Management System

At last a completely Integrated, Menu driven System for:

- **INVOICING**
Opens Customer Files
Opens A/R Accounts
Updates Inventory
Stores Mail List Files
Stores Sales Records
Computes Sales Tax
- **CUSTOMER FILES**
Maintains Order Status
Prints Labels
Prints Customer Balances
Stores Order Amounts
Stores Order Payments
Prints Statements
- **MAIL LABELS**
Stores by Variable File Names
Sorts by Zip Code
Sorts by Name
- **INVENTORY**
Sets Upper and Lower Limits
Generates Purchase Orders
Lists Inventory by Vendor
- **ACCOUNTS RECEIVABLE**
Open A/R Accounts
Generates Monthly Statements
Interest and Non-Interest Accounts
Listing of Accounts Balances
Manually Enter Charges and Payments
- **ACCOUNTS PAYABLE**
Enter Charges to Accounts
Enter Payments to Accounts
List Payable Balances
- **CHECK WRITING**
Print or Record Checks
Maintains Bank Balance
Credit Accounts Payable
Stores Expense Totals
- **FINANCIAL STATEMENTS**
Prints Sales Reports
Prints Operating Statements
Prints Receipts Reports
Modifies Expense and Sales Totals

Yes, now there is a complete business system for the small business man. With our Business Management System, you can increase sales with our mail label function. Complete your Schedule C in as little as 15 minutes. Know what your business is doing, and maintain other important business functions.

This easy to use system comes complete with instruction manual, and diskette on Dosplus mini TDOS operating system with extended Basic, and one year support. All programs are in Basic, and require two disk drives and 48K RAM. If you have waited for the right business software for your business, your wait is over. Our current users love our system and you will too.

Special Introductory Price \$249.⁹⁵

GAMEMASTER

Do you get complaints from your spouse, family and friends that you isolate yourself from them while "playing" with your computer? Do you wish there was a game that could get everyone involved? Do you enjoy creative expressions as well as playing games? If so, we have a unique Program/Game which could be the answer. It's called GAMEMASTER.

This program lets you easily develop and play your own adventure games. It does not create a game which you play against the computer, but creates a game which you the game creator, direct the game play while your computer maintains the game conditions and resolves combat.

GAMEMASTER package includes routines for creating player characters, creatures, items (weapons, armour, implements, or treasures), and environment (time, location etc.). Comes on diskette with sample scenerio. Requires one disk drive and 48k ram.

Tape It Easy

by David J. Trapasso

This utility lets you alter machine-language tapes as easily as Basic tapes. Now you can edit, list, and back up system tapes.

When I bought my Model III, it had no disk drives. I felt comfortable with Basic tapes because I could load, list, change, or develop programs. But I was helpless when it came to machine-language tapes; I couldn't alter transfer speeds, list program code, or create,

change, or back up machine-language tapes.

To solve this problem, I bought an assembler and wrote a Model I/III utility called Tapetility that not only backs up machine-language tapes, but provides many other features. Tapetility

loads machine-language tapes into memory, tests them, writes new ones to tape, verifies the new tape with the code in memory, executes loaded programs, edits tapes, and searches through a tape for a specified program.

Using combinations of these features, you can change tape speed, name, and/or contents, identify program names and their load execution addresses, and generate machine-language tapes of programs you write.

Running the Program

Since many people are unfamiliar with assemblers, I converted Tapetility's machine code to Basic data statements. This lets anyone who can type a simple Basic program use Tapetility. The Basic listing reads the data and then POKES it back into memory (see Program Listings 1, 2, and 3). This takes about 15 seconds, after which you're prompted to execute the program by pushing the break key.

After you type in the utility but before you run it, make sure you save it in case you make a mistake. If you do make an error, you'll have to start all over again since there's no way to get back the Basic listing.

Once you boot up the utility, you can discard the Basic listing after you use the utility to make a copy of itself. The

The Key Box

**Model I and III
16K, 32K, or 48K RAM
Cassette Basic
Disk Basic
Printer Optional**

Introducing SoftPac. A tool for modern man.

Meet **SoftPac** — the remarkable new software package that puts more raw power at your fingertips than anything yet created for the Radio Shack computer.

Integration is the key. **SoftPac** actually combines word processing, information management, spreadsheet calculations, and communications into one fully integrated system. So now you can experiment, recalculate and manipulate data, just by pressing a few keys, in an endless variety of ways. In fact, the only limit to **SoftPac** is your imagination.

SoftCalc the flexible spreadsheet!

SoftCalc . . . faster, better, smarter. Because it takes the guess work out of working with financial numbers. **SoftCalc** is a powerful electronic spreadsheet that speeds planning and budgeting.

SoftCalc's capabilities are numerous. 37 function commands nine operators repetitive task formulating and automatic graphs of your data at the touch of a key.

Whether it's investments, cash flow, inventory, cost estimates, or budgets, **SoftCalc** will help you analyze the impact of decisions before you make them.

SoftBase 5 × 7 file cards electronically!

SoftBase basically, a paper filing system without the paper. With **SoftBase** you can file, retrieve and review information in a fraction of the time it takes to use a

conventional filing system. In fact, almost 50 times faster than popular disk-based filing systems!

With **SoftBase**, you're allowed the freedom to customize your files to your specific needs using our exclusive full-screen cursor control. This gives you the ability to create client addresses, payment records and custom receipts, just to name a few. Manipulation of text is as easy as 1-2-3, using some 30 function commands.

And when you need to find and retrieve records, **SoftBase** sorts through your records electronically, using fast data access through special indexing. **SoftBase** allows you to be as selective as you like, with a variety of text retrieving methods.

SoftWriter Productivity at your fingertips!

SoftWriter the powerful full-screen editor with automatic formatting features. Even an inexperienced typist can sit down with **SoftWriter**, learn a few basic commands, and then quickly turn out perfect professional memos and letters.

With **SoftWriter**, you can correct misspellings or substitute one portion of text for another, even search for words using global or find commands, with just a few keystrokes!

Want to illustrate your **SoftWriter** document with a financial table or graph that's stored in a **SoftCalc** spreadsheet? You ask . . . **SoftPac** performs! In fact, merging

and transferring portions of **SoftBase** to your text document is just as convenient!

And when you're through revising, **SoftWriter** shows you "on-screen" just how your document will look when it's printed. What you see is what you get.

SoftTerm Ease and speed!

SoftTerm the flexible communications program that thinks for you. With **SoftTerm** and your direct-connect modem, you can access data bases, bulletin boards, and other popular information services. **SoftTerm** saves and sends data from either disk or buffer and even transfers data from **SoftCalc**, **SoftBase** and **SoftWriter**, to any other source.

Other **SoftTerm** features such as flexible changing of protocols and auto dial technology are part of the Softronics tradition of high-features and high-performance.

So, there you have it. **SoftPac**. That's Softronics fully integrated package at work for only **\$299.00**.

For the name and address of your nearest **SoftPac** dealer, call 1-918-749-6211.

YORK 10™ CASSETTES

COMPUTER GRADE DATA TRAC BLANK CASSETTES

C-05, C-06, C-10, C-12, C-20, C-24, C-30

From the leading supplier of Computer Cassettes, new, longer length C-12's (6 minutes per side) use the extra few feet needed for some 16K programs.

BASF-LHD (DPS) world standard tape.
Premium 5 screw shell with leader.

Internationally acclaimed.
Thousands of repeat users.

Error Free • Money back guarantee.

500 C-12's or C-10's — 38¢ each
(w/labels, add 4¢ • Shipping \$17./500
500 Boxes 13¢ ea. • Shipping \$10./500

**TRACTOR FEED • DIE-CUT
BLANK CASSETTE LABELS**
WHITE: \$3.00/100 \$20.00/1000
COLORED LABELS • Pastels -
Red, Blue, Green, Yellow, Lavender
\$4.00/100 \$30.00/1000

CASSETTE STORAGE CADDY
Holds 12 cassettes
w/o boxes
Includes edge labels
and index card

RUN BASIC PROGRAMS AT SUPER SPEED WITH ZBASIC 2.2.

THE WORLDS FASTEST TRS-80 BASIC COMPILER from **SIMUTEK**

BELIEVE IT OR NOT WE'VE ADDED MORE NEW FEATURES to the ONLY INTERACTIVE BASIC COMPILER for the TRS-80!

- Speed increases of 10-100 times are typical after compilation.
- Compiled code can be RELOCATED to run anywhere in memory. Code is even ROMable!
- ZBASIC 2.2 NOW SUPPORTS BOTH RANDOM and SEQUENTIAL DISK I/O.
- ZBASIC 2.2 is now a super tool for business programmers: RANDOM ACCESS FILES, and PRINT USING statements are supported as well as a HIGH PRECISION MATH package (with no rounding problems).
- Special BUILT-IN MACHINE LANGUAGE COMMANDS to increase program operation by as much as 1000 times! Special commands are implemented for fast memory searching (CPDR, CPIR), block memory moves (LDIR, LDDR), inputting and printing HEX numbers, inserting MACHINE LANGUAGE into COMPILED CODE, disabling and enabling interrupts, inverting memory, 16 bit PEEKs and POKEs, and stack control, debug and much more.
- ZBASIC 2.2 compiles the ENTIRE PROGRAM into Z-80 machine language. (Not 8080 code or a combination of BASIC and machine language like some other compilers.) Clumsy LINKING LOADERS, and RUNTIME MODULES are not needed; ZBASIC 2.2 creates a ready to run MACHINE LANGUAGE program.
- NO ROYALTIES imposed on registered ZBASIC owners.
- Typical COMPILATION TIME is TWO SECONDS for a 4K program.
- Use TRS-80 Basic to write ZBASIC programs!
- Compile some existing programs with only minor changes. (BASIC programming experience is required.)
- Fully compatible with both the Model I and the Model III. Mod I compiled programs work on a MODEL III, and vice-versa. ZBASIC works with NEWDOS-80, NEWDOS+, DOSPLUS, LDOS, MULTIDOS, ULTRADOS, TRSDOS etc. (Not TRSDOS Mod I double density)
- BUILT-IN and much improved MUSIC and SOUND EFFECTS commands.
- Improved CHAINING for disk users.
- TIME\$ now available on DISK version. (Mod I only)
- ZBASIC 2.2 now has an INPUT @ command (similar to PRINT @).
- The TAB function will now tab 255 columns on a printer. (BASIC cannot tab past column 64.)
- NEWDOS 80 2.0 USERS can use the CMD "dos command" function! (DOSPLUS may use name "dos command")
- NEW and EASIER to use USR COMMANDS.
- New math functions to calculate XOR and INTEGER REMAINDERS of a DIVISION.
- Logical STRING COMPARISONS are now supported.
- The disk commands INSTR, MID\$, ASSIGNMENT are now supported on both DISK AND TAPE ZBASIC.
- DEFSTR is now supported.
- Eight disk files may be opened simultaneously; random, sequential or mixed.
- LINE INPUT#, is now supported.
- Invoke the compiler by simply hitting these two keys: ";-"
- NEW 60+ PAGE MANUAL WITH DESCRIPTIONS AND EXAMPLE.
- ZBASIC 2.2 Comes with CMDFILE/CMD program from MISOSYS, to allow appending or merging compiled programs and machine language programs from tape or disk.

ZBASIC 2.2 DOES NOT SUPPORT THESE BASIC COMMANDS:

- ATN, EXP, COS, SIN, LOG, TAN, and exponentiation. (However, subroutines are included in the manual for these functions.)
- ERROR, ON ERROR GOTO, ERL, ERR RESUME.
- No direct commands like AUTO, EDIT, LIST, LLIST ETC, although these commands may be used when writing programs.
- Others NOT supported: CDBL, CINT, CSNG, DEFFN, FIX, FRE.
- Normal CASSETTE I/O. (ZBASIC supports it's own SPECIAL CASSETTE I/O statements.)
- SOME BASIC COMMANDS MAY DIFFER IN ZBASIC. For instance, END jumps to DOS READY, STOP jumps to BASIC READY etc.
- MEMORY REQUIREMENTS: to approximate the largest BASIC program that can be compiled in your machine (at one time), enter BASIC and type: PRINT (MEM-6500)/2. Remember, you can merge compiled programs together to fill memory.

ZBASIC 2.2 SPEED COMPARISON DEMO

To help give you an idea how fast compiled programs are, we have included this demo program:

ZBASIC 2.2 DEMO PROGRAM

Time to compile and run complete program	: 0 MIN. 2 SEC.
BASIC Execution speed MOD 1, LEVEL II	: 7 MIN. 34 SEC.
ZBASIC Execution speed MOD 1, LEVEL II	: 0 MIN. 18 SEC.
BASIC Program size (WITHOUT VARIABLES)	: 895 BYTES
ZBASIC Program size (WITHOUT VARIABLES)	: 2733 BYTES

(Remember that the ZBASIC program includes an 1879 byte sub-routine package.) Program shown exactly as compiled and run in BASIC and ZBASIC.

```

TRS-80 is tm of Radio Shack, a Tandy Corp.

utility only takes about 1½ seconds to load under the System command at Model III high speed.

Tapetility's utilities use the hexadecimal (hex) number system to be more compatible with machine language. Don't panic if you don't know hex; you'll still be able to use the utilities.

Tapetility runs without modification on any Level II Model I/III with at least 16K of memory. I've provided three versions for different size memories. The program checks to see which machine you're using and takes the proper action.

Memory Requirements

All versions use 1K of memory. To create a system tape after you POKE it in from the Basic program, first read the section titled Operator Messages, then use the Write command by entering a W. Use the addresses listed in Table 1 when the program prompts you for them.

You can use any version of the utility that has the same or less memory as your computer. For example, TAPE16

and TAPE32 (Program Listings 1 and 2, respectively) run on a 32K machine, but TAPE32 or TAPE48 (Program Listings 2 and 3) won't run on a 16K machine. The program sets the memory stack area at 407D hex, the same area the ROM bootstrap routine uses.

Special Features

You can use the break key to return to Tapetility's main menu, even during cassette input/output. This is handy for correcting while using the utility, or for interrupting cassette operations. You can also load and execute a program from the utility, provided the program you're running doesn't use the break key.

Model I users should note that their ROM won't support the break key during cassette input. However, the utility looks for the break key after it reads each byte. This means you can use the break key during input, provided the asterisk is flashing. If the asterisk isn't flashing, rewind your tape slightly, and press the play button to get it flashing again. Cassette output (record) will

break at any time.

If you have a printer turned on while using the utility, all commands and addresses will be logged onto it. Since the program POKES tape names and commands into video RAM, they don't appear on a printout when the program reads them off the tape.

Tapetility comes with the printer disabled, and you shouldn't enable the printer unless one is connected to your computer. If you do, the screen locks up while the computer waits for you to prepare the printer, and you'll have to reload the tape.

If you want to enable the printer function, use the Edit command to change the data at the addresses listed in Table 2. After making the changes, you can use the utility to make a new version of itself.

Command Descriptions

The Load command reads a tape and stores it in RAM, while Test will read a tape but not store the program in RAM.

The Verify command compares tape contents against memory content byte for byte for the addresses specified on the tape. This ensures that the tape code is exactly the same as that in memory. To generate a machine-language tape from the contents of a specified memory block, use the Write command.

The Edit command performs a variety of functions. You can use it to make changes in RAM contents, and for changing, examining, listing, or entering new programs.

The Jump command transfers control of the computer to the program you specified by the transfer address you stipulate. You can also use it to execute a program you load or to exit the utility by specifying a transfer address of 0000.

Operator Messages

All three commands—Load, Test, and Verify—identify the tape the program reads in the lower right-hand corner of your screen. These same three commands, used after the tape is read, print the following:

```
START ADDRESS=XXXX
END ADDRESS=XXXX
X-FER ADDRESS=XXXX
```

where XXXX is a four-digit number indicating the address at which the tape loads and runs in memory. You can then use these addresses to make a back-up tape using the Write command.

Checksum Error indicates a read error. Error XXXX differs from Checksum Error in that it is only generated

Version	Start Address	End Address	Transfer Address
Tape16	7C00 (31744)	7FEF (32751)	7C00 (31744)
Tape32	BC00 (48128)	BFEF (49135)	BC00 (48128)
Tape48	FC00 (64512)	FFEF (65519)	FC00 (64512)

Table 1. Hex load addresses: Decimal in (XXXXXX).

Program Listing 2. Tape32.

DAISY WHEEL New Smith Corona TP-2

True letter quality printer for less than the cost of an office typewriter! Priced \$500 less than other popular daisy wheel printers!

SALE PRICE:

\$449

FEATURES:

- ★ Friction feed
- ★ 15 cps, 120 wpm
- ★ Changeable daisy wheels
- ★ Parallel or serial interface
- ★ Compatible with R/S, Apple, etc

from the Verify command. Here, XXXX represents the hex address where the mis-compare was found. The program then returns to the main menu.

A return to the menu with no error message and a listing of addresses as stated above means the tape code is identical to that in memory.

When the READY CASS prompt appears, prepare your recorder to play or record a tape and hit any key to start.

Tapetility only generates an overlay error message from the Load command

and means that the program just loaded requires an area of memory occupied by the utility. This normally wipes out the utility since you'd be altering its instructions. Tapetility checks for this condition and loads all memory locations specified by the addresses on the tape except those used by the utility. When this occurs, the overlay message appears after the computer finishes reading the tape. The Test command won't generate the message, and the Verify command gives you an Error XXXX message. Use a different version of the utility to solve the problem.

The CASS? prompt is the same as the Model III Basic prompt, and Tapetility requests it before every cassette input or output command. The utility determines which machine you're using and bypasses the prompt on the Model I. Respond by typing an L for low speed or an H for high speed. By reading a tape at low speed and recording at high speed, you can change the speed of your existing tapes for a faster load.

The first prompt for the Write command, Input 6 Character Name = , represents the name you want recorded. Always use a six-character name. For example, if the name of your program is Yours, hit the space bar once after typing the five letters. If you press the enter key before entering any name, the utility uses the name and address read from the previous tape, and bypasses all the following input address prompts:

```
INPUT START ADDRESS =
INPUT END ADDRESS =
INPUT X-FER ADDRESS =
```

Version	Address	Enable Printer	Disable Printer
Tape16	7F38	C3	C9
Tape32	BF38	C3	C9
Tape48	FF38	C3	C9

Table 2. Data addresses for printer function.

Calling All Machine-Language Programs

by David J. Trapasso

Until now, calling machine-language programs from a Basic program was difficult. You either had to load the machine-language program, protect the memory size, then load the Basic program every time you wanted to use it, or convert the binary code of the machine-language program into decimal numbers so they could be POKEd into memory from Basic.

The second method was easier since it involved loading only one tape, but both methods were prone to mistakes.

I decided to write a utility in machine language to solve this problem (see Program Listing 4). This program runs on Level II Models I and III, with at least 16K of memory. It takes the data in any block of memory entered by the user and generates a tape of data statements that Basic can read.

Once you load the Basic data tape, you can write a short POKE routine in the body of the program to read the data, and POKE the machine code back in.

The utility makes a Basic data tape starting with line 10000. Each line holds 10 pieces of data, and lines are numbered in increments of 10. You

can see in Listing 4 that I used the utility on its own machine code to make a Basic program out of itself.

The utility loads at about 4K from the top of the first 16K block of memory. This is useful for those with only 16K of memory available. Any machine-language program larger than 4K won't leave enough room in a Basic program for the data statements needed to represent the machine-language program.

Once you make the data tape, the utility doesn't have to be resident in memory with the Basic program.

Notice line 30 in Listing 4. It shows one way to reserve memory without having to set the memory size every time you run the program.

When you run the Basic listing, it takes a few seconds to POKE in the machine code. After you POKE the program in, it prompts you to execute it by pressing the break key. You could also use the USR function in your program to execute it.

To use the utility, protect the memory so the machine-language program you want to copy is protected. If your code resides below the utility (7000 hex), you'll have to change line 30 of Listing 4 to protect it. You can then load the utility in the

form of the Basic listing and run it.

When you run the utility, it prompts you for the starting address in hex. Enter the four-digit address, using leading zeroes is necessary. If you make a mistake, use the left arrow to correct it or the break key to reenter the entire number.

The utility then prompts you for the end address. After entering it, the READY CASSETTE prompt appears. Set your tape recorder to record and press any key. When the recorder stops, the utility will start again. It's best to make more than one copy to increase the chances that at least one copy will be good.

Make sure you load the data tape in Basic before writing the body of your program. If you don't, you'll have to find some way to merge the two sections of your program. Model III users should make sure they set the cassette speed before they run the utility to know the correct speed at which to run the data.

A good way to practice using the utility is to make a data tape of your first ROM locations. Load the generated tape in Basic, then PEEK the same locations. It's all easier than you think! ■

Now NRI takes you inside the new TRS-80 Model 4 microcomputer with disk drive to train you at home as the new breed of computer specialist!

NRI teams up with Radio Shack advanced technology to teach you how to use, program and service state-of-the-art microcomputers...

It's no longer enough to be just a programmer or a technician. With microcomputers moving into the fabric of our lives (over 1 million of the TRS-80™ alone have been sold), interdisciplinary skills are demanded. And NRI can prepare you with the first course of its kind, covering the complete world of the microcomputer.

Learn At Home In Your Spare Time

With NRI training, the programmer gains practical knowledge of hardware to design simpler, more effective programs. And, with advanced programming skills, the technician can test and debug systems quickly and easily.

Only NRI gives you both kinds of training with the convenience of learning at home. No classroom pressure, no night school, no gasoline wasted. You learn at your convenience, at your own pace. Yet you're always backed by the NRI staff and your

Now training includes either the TRS-80 Model 4 Microcomputer with Disk Drive or TRS-80 Color Computer with Computer Access Card, professional LCD multimeter, the NRI Discovery Lab, and hundreds of demonstrations and experiments. (TRS-80 is a trademark of the Radio Shack division of Tandy Corp.)

instructor, answering questions and giving you guidance.

TRS-80, Model 4 plus Disk Drive to Learn on and Keep

NRI training is hands-on training with practical experiments and demonstrations. You not only learn to program your computer, you learn all about it... how circuits interact... interface with other systems... gain a real insight into its nature. Under NRI's carefully planned training, you even install a disk drive, verifying at each step its operation.

You also work with a professional 4-function, 3½ digit digital multimeter and the NRI Discovery Lab®, performing over 60 separate experiments. Both microcomputer and equipment come as part of your training for you to use and keep.

Same Training Available With Color Computer

NRI offers you the opportunity to train with the TRS-80 Color Computer as an alternative to the Model 4. The same technique for getting inside is enhanced by using the new NRI-developed Computer Access Card. Only NRI offers you a choice to fit your specific training needs.

The Catalog is Free. The Training is Priceless.

Get all the details on this exciting course in NRI's free, 104 page catalog. It shows all equipment, lesson outlines, and facts on other electronics courses such as Electronic Design, Industrial Electronics, Video/Audio Servicing... 12 different career opportunities in all.

Keep up with the latest technology as you learn on the latest model of the world's most popular computer. If coupon has been used, write to NRI Schools, 3939 Wisconsin Avenue, Washington, D.C. 20016.

All career courses approved under GI bill.

FOR TRS-80 MODELS 1, 3 & 4 IBM PC, XT, AND COMPAQ

WHICH ONE?

Which microcomputer word processor lets you create and edit without typing, but *won't* slow down your creative process? Knows when to capitalize the first letter while replacing one phrase with another? Can outdent as well as indent? Will do typesetting at your command, even with proportional characters, right justification and tabbed columns? Lets you use the same (extra-capacity) data disks on IBM PC and TRS-80? And eases your learning with common-sense keystrokes, Help menus, good examples and a professionally authored manual?

Hint: it can integrate to communicate from home to office, and will interface with a database for form letters, data tables, and more!

It's the professional's word processor for your IBM PC, Compaq, or TRS-80 Model 1, 3 or 4:

FORTHWRITE in MMS FORTH

With an unusually powerful set of tools and an unusually easy way of helping you to use them.

All necessary software (FORTHWRITE and the MMSFORTH System), under Personal License for \$425 (IBM PC). Or with FORTHCOM telecommunications module and the DATAHANDLER-PLUS files management system, for \$550 complete. Corporate Site (multiple users) License is available.

May we tell you more?

✓137

The program then prompts for these addresses with the Write command. Enter the addresses for the block of memory you want to copy to tape and the address where program execution begins. If you're making a copy of another tape, simply hit the enter key when prompted to enter the six-character name. If you're creating a tape, such as a copy of this utility after you POKE it in from Basic, you have to enter the name and all the addresses.

To change only the tape name, type in the new name and, when prompted for the addresses, enter the addresses shown on the display after the Load or Verify command.

You must enter all addresses as four digits, and you need to include leading zeroes. Note that the program requests the transfer address during the Jump command and the start address during the Edit command.

To enter a command, enter its first letter. For example, enter a V to use the Verify command or an L to use the Load command. The > symbol that appears after the program displays the menu is the request for command entry. Terminate all user entries by hitting the enter key.

Editing

In the Edit mode, the program first prompts you for the start address of the area of RAM you want to edit. After you enter the four-character number,

the utility displays the following: XXXX = A = BB = CC, where XXXX is the address at which you're currently editing and A is the ASCII representation of the data in that address. The program displays nonprintable data as a period. (Tapetility displays only ASCII characters in the range of hex 20 to 7F hex.)

BB is the actual data in the hex address, and CC is your input, up to two characters long. You have one of the following six options:

- Pressing only the enter key bumps you up to the next RAM address and displays it without changing the contents of the prior address.

- Typing one character then hitting the enter key enters the ASCII character for the key pushed into memory location. You have to enter control ASCII characters such as enter (0D hex) as hex data. The program automatically displays the next location of memory after the enter key is pushed.

- Typing two characters then pressing the enter key changes the contents of the location to the hex number typed in. Again, the program automatically displays the next address. If you type a non-hex character, however, the contents of the location won't change, and Tapetility will print out the same address again. Make sure you look at the address as you edit to see if it increases by one to the next location. If you don't, you could start putting your en-

*TRS-80 IS A TRADEMARK OF RADIO SHACK,
A DIVISION OF TANDY CORP.

The Johnson Law Office Depends on Lazy Writer

“When I opened my law office I needed word processing, but my resources were limited. A local computer store recommended Lazy Writer. I purchased a Radio Shack Model III and Lazy Writer, took them home, and within a day felt very comfortable with them. Lazy Writer was easier to use than the dedicated word processors at my old law firm. Now my law practice has grown and we have four Model III's and a Model IV. We recently bought the new Model IV upgrade for Lazy Writer so we can have the 80 x 24 screen display. Every attorney in the office as well as the law clerks and all of the secretaries are capable of using Lazy Writer. We spend 95 percent of our computer time using Lazy Writer.

“My practice involves a lot of estate work. The average set of estate planning documents is about 50 pages. With the text blocks I've developed, using Lazy Writer and Lazy Doc, it takes three hours for a secretary to complete the forms for a client. At my old law firm, it took six hours on a mag card word processor and five hours on a Wang to do the same thing.”

Robert T. Johnson
Attorney at Law

tries in out of sequence at this point.

- Pressing the down-arrow key then hitting the enter key lists and displays the addresses continuously until you hit any other key. You can continue editing at the point which you stop the listing without having to reenter the address. If you have a printer turned on, you can get a printout of the program.

- Pressing the up-arrow key, then the enter key, takes you to the next lowest RAM address. This doesn't change memory contents.

- Pressing the break key takes you out of the Edit mode and returns you to the menu. After making changes, or entering a program of your own, you can use Tapetility to make a permanent copy.

Making a Back-up Copy

First, load the original copy of the

tape and check for the overlay message. Use a different version of Tapetility if an overlay error occurs and try again.

Then verify the original tape. While not mandatory, it is highly recommended to ensure that the original code is identical to that in memory. If you get an Error XXXX message, load and verify the original tape again.

You can now invoke the Write command to record the program on tape. At this point the back-up tape is complete, but you should verify the back-up to ensure you made a good copy.

You can also use the utilities to make back-up copies of themselves. After creating a machine-language tape of the utility, see the Memory Requirements section on creating a tape after you POKE it in from Basic and Table 1. Read the tape as you would any back

up, then hit the enter key when prompted for the name.

DOS users should be aware that Tapetility will run directly from disk without alteration if transferred to disk using the Tape command. You can use this utility to find the start, end, and transfer addresses of CMD files by transferring the files to tape, then using the utility to load the tape.

Problems

The most common problem with Tapetility is that the tape won't stop. If you're returned to the menu, the problem is a sticky relay. Turning the recorder off solves this problem; if you're not returned to the menu and the asterisks flash, you aren't done yet.

If you are reading a tape and the asterisks aren't flashing, check your volume and/or tone control. Another possibility is that you're reading the tape at the wrong speed.

If you checked this and the asterisks stop flashing but the tape doesn't stop, you might have a bad tape. Apparently, the utility searched for the transfer address at the end of the file and never found it. Try loading the tape under the System command. If it doesn't load there, the utility won't load it. To avoid this problem, hit the break key to return to the menu.

Checksum errors are also a common problem. They can be caused by dirty, magnetized, or misaligned tape heads, incorrect tone or volume setting, a bad copy of the tape, or an incorrect speed setting.

If the tape won't stop after recording, check the asterisk; if it's still flashing, make sure you didn't type in addresses that would send a huge block of memory to tape. This could take a long time, especially at low speed. Use the break key to return to the menu. If you are returned to the menu, the relay is stuck again.

If you suspect a problem with your ROM, use Tapetility to make a tape of the ROM. Use the Verify command to check it with a tape from another CPU.

If you type an incorrect character, use the left-arrow key to correct it. If you already entered the information, use the break key, but you will have to reenter the information again.

If you type a non-hex character, such as the letter O instead of a zero, the utility prompts you for the same information again. ■

LOW PRICE**

NEWSSCRIPT

A complete word processing system based on the editing and text-formatting programs developed by IBM for use on mainframe time-sharing systems.

Retails at \$110.00 **OUR PRICE \$85⁰⁰**

SOS DISK TIMER

Speed-O-Scope drive speed test program used to check drive R.P.M. and to adjust TRS-80 Model III Disk Drives. Allows assurance and adjustment of your disk drives to proper operating speed.

Retails at \$19.95 **OUR PRICE \$15⁰⁰**

BASIC EDITOR

If you do a lot of editing of your BASIC programs, then this is the editor for you!!!

Retails at \$29.95 **OUR PRICE \$24⁹⁵**

*Manufacturers have asked us not to publish these low prices. Please call our toll free number for prices and also get on our free mailing list.

MAS 80

The micro accounting system. Flexible, versatile, user-formatted business system designed for the novice and professional. AR/AP/GL/CK REG.

Retails at \$599.00 **OUR PRICE \$499⁰⁰**

M-ZAL

Release #3—more features than ever before. The most powerful editor assembler ever written. Full-screen editing, linking loader, full macro support and much more.

Retails at \$99.95 **OUR PRICE \$75⁰⁰**

ACCOUNTING PARTNER

Everything you need to make the system go—simply, efficiently, and conveniently. Easy to use, menu-driven programs, all performing integration calculations. Uses extensive error checking and leaves a complete audit trail. GL/AR/AP/PAYROLL
Requires CP/M 2.2

Retails at \$399.95 **OUR PRICE \$299⁰⁰**

OFFER EXPIRES JANUARY 15th, 1984

NEW CLASSICS SOFTWARE

239 FOX HILL ROAD DENVERLE NEW JERSEY 07834 TELEPHONE 201-625-8818

PASCAL 80 TRIAL VERSION

By Phelps Gates and Richard Koch
Program copyright: 1981, 1983 by Phelps Gates.
This diskette will boot in a TRS-80 Model I or Model III

Features Supported in the Trial Version

Variable types: REAL, INTEGER, CHAR, BOOLEAN, arrays,
sets, records and user defined types.
Constants: TRUE, FALSE, MAXINT, PI and user defined.
Operators: +, -, *, /, DIV, MOD, standard comparison and set
operators, AND, OR and NOT.
Functions: ABS, SQR, SORT, SIN, COS, ARCTAN, EXP, LN,
ORD, PRED, SUCC, CHR, ODD, ROUND and TRUNC.
Procedures: READ, READLN, WRITE, WRITELN.
Structures: IF, THEN, ELSE, CASE, FOR, NEXT,
WHILE, DO, REPEAT, UNTIL and GOTO.
Built in files: INPUT (keyboard), OUTPUT (screen) and LP
(printer).

Available for \$10 with no additional purchase.

HARDWARE

for your TRS 80
MODEL I, III and 4

VID 80

A sophisticated hardware addition to your TRS-80 Model III. Adds 80-column x 24-line video display and full 64K CPM support (CPM available separately). Easy to install. Full instructions.

Retails at \$279.95 **OUR PRICE \$229⁰⁰**

With Accounting Partner and CPM 2.2

Retails at \$798.00 **OUR PRICE \$650⁰⁰**

SPRINTER

Shift your TRS-80 into high gear with the Holmes Sprinter Clock Speed Up. Model III or 4.

*Includes sample routine on TDOS

Retails at \$99.50 **OUR PRICE \$79⁵⁰**

64K MEMORY DISK UPGRADE KIT FOR THE MODEL 4

Easy to install with illustrated instruction manual. Upgrade from 16K to 64K of memory.

Retails at \$149.00 **OUR PRICE \$80⁰⁰**

Upgrade from 64K to 128K with PAL.

Retails at \$149.00 **OUR PRICE \$99⁵⁰**

UPGRADE KIT WITH CLOCK

Complete kit with battery backup Real Time Clock. 40/80-track, single/double-sided, single/double-density, 5-8" inch drives—all supported. Compatible with Models III and 4. Complete kit without drives. Drives available at discount prices CALL

Retails at \$357.45 **OUR PRICE \$299⁰⁰**

MICROFAZER

A printer buffer that lets printing take place while the computer is being used.

All specials end
Jan. 15, 1984

64K Parallel **\$229⁹⁵**

128K Parallel **\$309⁹⁵**

Assembly Language Made Simple—Part II

by Hardin Brothers

Assembly language frightens a lot of people. I've seen writers apologize for using it in microcomputing magazines. But after last month's dose of programming ("Assembly Language Made Simple—Part I," p. 74), I hope you're becoming comfortable with Assembly language.

This month, I'll introduce some new opcodes and programming techniques, as well as an easy method of adding machine-language routines to your Basic programs.

Getting Started

The first program draws a border around the screen (see Program Listing 1). It starts by equating the label Video to 3C00H, the hexadecimal (hex) address of the first screen location (line 170). Next, the EQU pseudo-op in line

The lesson continues. Increase your Assembly-language vocabulary while learning to produce sounds and create borders for your screen.

180 defines the character that creates the border. I use CHR\$(191), a full graphics block, for this demonstration, but you can easily change it to some other character by changing the EQU instruction.

Line 200 establishes the ORG of the program at 7000 hex, just as in last month's programs. The program starts on line 220.

The HL register pair points to (holds

the address of) the current screen print position. Line 220 loads HL with the value VIDEO - 1. Note that the assembler can perform simple arithmetic. Most assemblers support addition (+) and subtraction (-), as well as logical AND (&) and shift (<).

Operands for assembler arithmetic include direct numbers and label values. Line 220 asks the assembler to look up the value for Video, subtract 1 from that value, and write the machine code to load the result into the HL register pair.

Line 220 points HL to the first memory location below the screen in order to allow a loop that first increments HL and then prints information on the screen. It may seem more natural to reverse the order of events—print, then increment—but by incrementing HL first, HL always points to the current, instead of the next, print position at the end of the instruction loop. This makes the logic that prints the sides of the screen simpler.

Line 230 loads the B register with

65—the number of print positions across the top of the screen plus the first position in the second row. The B register acts as a counter for the program's first loop, which starts in line 240, with the label Top. First, the program increments HL to point to the next position, then line 250 loads the value of CHAR to that position.

Line 260 demonstrates the first new opcode for this month: DJNZ. Written in full, this instruction is "Decrement B then perform a relative Jump if B is not zero." This is a common and powerful opcode, but you must understand several important implications to use it correctly.

You can use DJNZ only if the B register is set up as a loop counter. There is no equivalent instruction for any other register or register pair. The B register is 8 bits wide. It can hold any value from zero to 255 (binary values from 00000000 to 11111111). When the Z80 chip finds a DJNZ instruction, it first decrements the B register; if the value in B is zero before the decrement, it is 255 afterwards. Therefore, DJNZ can operate a loop one to 256 times.

Relative Jumps

After a DJNZ instruction decrements B the program tests the result to see if it's zero. If so, the loop ends and control passes to the next instruction in memory. If not, the program performs a relative jump (usually backwards) to run a loop.

In last month's programs, all jumps are to an immediate, specific address. A relative jump operates differently. Instead of including a specific address, a relative jump includes a 1-byte offset from the current address. If the offset byte is less than 128 decimal (80 hex), the computer adds the value to the current address in the PC (program counter) register and jumps forward in memory. If the offset byte is 128 decimal or greater, the program subtracts the complement of the offset from the PC register and the value jumps backwards.

In other words, the offset can be between -128 and +127. However, because the PC updates to point to the next instruction before the program performs the current instruction, the effective offset is -126 to +129.

The last few paragraphs are difficult; make sure you understand them, then examine line 260 in Listing 1. Because B was set to 65 decimal before the loop began, the loop from lines 240 to 260 repeats 65 times. When the loop is completed, it fills all of the top video row

and the first position of the second video row. HL still points to the first position in the second row.

The video screen shows 16 rows of 64 characters each. Our program fills the top row and bottom row completely, but only the outside edges of the middle 14 rows. Therefore, in each of the middle 14 rows, we want to print the first and sixty-fourth positions. In line 280, B is set to 14 again as a loop counter. DE is set to 63, the offset from the first to last print position in each row.

The loop for printing the middle of the screen begins on line 300 with the label Middle, and here you meet the second new opcode for this month, ADD. The Z80 chip supports an 8-bit and 16-bit addition instruction. If it adds two 8-bit values, it places one of the values in the A register and, after the addition, the result is set in the A register. If adding two 16-bit values, it places one in the HL register, which holds the result after the addition.

Line 300 adds the present value in the DE register, 63 decimal, to the current value in the HL register. The HL register contains the sum after the addition. The HL register then points to the last print position in the current row after the addition. Starting in line 310, the print character appears at the end of the row, HL increments to point to the

first position of the next row, placing the print character there, and the loop repeats. By the end of the middle loop, the entire top row, the entire left side, and all of the right side except the last row are printed.

The last section of the program, starting in line 360, is similar to the first. It loads the B register with 63 decimal, the number of print positions remaining in the last row (remember that the first position in that row is already printed). Then HL increments and the print character appears 63 times. Finally, in line 410, an endless loop keeps the program from wandering off unattended, and in line 430, the End pseudo-op signals both the program's end and its starting address.

Possible Problems

Assemble Listing 1 (keep the source code) and run it. You should see a white border around your screen. One warning is necessary: If you try to run the program while your computer is in the 32-character mode, the result is unpredictable. On a Model I, the top, bottom, and left sides of the screen print, but not the right side. This is because the 32-character mode only displays characters in even-numbered print positions. With a Model III, the results are even less clear.

Program Listing 2. Screen border as Basic subroutine.

The Model III contains a hardware defect that makes the 32-character mode occasionally malfunction. Any time a program accesses the screen directly in 32-character mode, the results are unpredictable because of a timing problem within the computer.

To avoid the problem, you must include a NOP (no operation) instruction immediately after all instructions that load to or from the screen. NOP forces the computer to do nothing for a short period of time. By putting this short delay into your programs, you can work around the Model III peculiarities. (The Model III timing fault doesn't seem to exist on the Model 4 running in either Model III or Model 4 mode.)

The border around the screen looks nice, but you're probably thinking that the endless loop at the end of the program makes it useless. Yet you can use the program as a subroutine for a Basic program by changing it only slightly. You might want to have the Basic program print something on the screen, and then have the machine-language routine draw the frame to create, for instance, a title screen for a program.

Program Listing 2 is the same as Listing 1 except that the program is now in a form that Basic can use. There are only a few changes. First, change the origin (ORG) value to place the routine as high as possible in 16K memory. If you have more memory available, use one of the alternate ORGs given in the program's comments.

Second, the program starts with a call to 0A7F hex. When Basic invokes a machine-language routine (I explain that process below), it can pass a single value or parameter to the machine-language program. If your machine-language program is expecting a value, it must start with CALL 0A7FH, which places

that value in the HL register pair. Listing 2 allows Basic to specify which print character to use. Line 280 of Listing 2 transfers the least-significant byte (LSB) of the parameter from register L to register A.

Ignore the most-significant byte (MSB) here because a display value can be only 1 byte long. If Basic mistakenly sends a value larger than 255, the program uses only the LSB, and reports no error message.

From line 300 to line 470, Listing 2 is the same as Listing 1 except that the value in the A register prints on the screen instead of the value of the label CHAR. However, line 490 has a re-

“You can use the program as a subroutine for a Basic program by changing it only slightly.”

turn (RET) instruction that needs explanation.

Learning Returns

Basic treats machine-language programs as subroutines. All subroutines must end with some form of a return to pass control back to the original program. Therefore, whenever you write a machine-language program to use with Basic, you should include a RET command at the end of the program. To send a single parameter back to Basic, load the parameter into the HL register pair and return to Basic with the instruction JP 0A9AH. If there is no RET command at the end of Listing 2, Basic can't resume control of your computer.

After you enter and assemble Listing

2 (or modify Listing 1 to look like Listing 2), you need to link it into a Basic program. There are several techniques for doing this. I'll concentrate on the most direct one for now.

Save the source code first, then assemble the program to tape or disk. If you use a disk system, you may want to give the program's filespec an extension other than /CMD since this program won't run from the DOS READY prompt. The most commonly used extension for routines of this type is /CIM (core image file), which indicates that you should load the program into memory but you can't run it directly.

When you're ready to use the program, load it into memory without running it. If the assembled program is on tape, use the System command to load the program, but hit the break key at the following SYSTEM prompt to return to Basic. If the assembled program is on disk, use the Load command from DOS READY before entering Basic.

In either case, you also have to set memory size to protect the program. To calculate the correct answer to the Memory Size? prompt, subtract one from the ORG value in the machine-language program and convert the answer to decimal. You may want to record that value in your program notes.

Your next job is to tell the computer where the program resides in memory, so that Basic can call it with a USR command. If you use Disk Basic, your program must contain the command

```
DEFUSR = &Hnnnn
```

where nnnn is the hexadecimal address of the first machine instruction you want to execute.

Setting the address for tape Basic is more complicated, and is best illustrated with a concrete example. Your goal is to store the address of the routine

Tape

80micro's REVIEW GUIDE

The guide that will save you time and money.

You'll spend more time at your computer and less money for the right product.

80 Micro's Review Guide is the most comprehensive collection of TRS-80* reviews ever compiled in book form. You get 500 hardware, software and book reviews packed with information about:

- Modems
- Games
- Business programs & Word Processing
- Joysticks
- Books on programming
- Printers
- Utilities
- Editor/Assemblers
- Educational software
- Monitors
- Databases
- And more

Don't waste valuable time chasing down the right product. We've done it for you with **80 Micro's Review Guide**, compiled and condensed from the pages of **80 Micro**, the magazine you've come to rely on.

A five-star rating system lets you decide what's best. And each review gives you the product manufacturer's information so you can order and receive your product *fast*.

All for \$7.95

Order now. Use the attached order form, the coupon, or call toll free 1-800-258-5473.

in memory locations 16526 and 16527. Assuming you assembled the program to load starting at 7FE1 hex, take the second byte (last two digits) of that address, 0E1 hex, and translate that value into decimal 225. (There is a handy table at the back of your computer manual where you can look up the values.) Your program needs to POKE that value into memory location 16526. Then take the first byte, 7F hex, translate it into decimal 127, and POKE that value into 16527.

Now include a statement in your Basic program similar to

```
A = USR(X)
```

X contains the value sent to the machine-language program. After control passes back to Basic, A contains the value passed back from your machine-language program.

Program Listing 3 is a short Basic program that demonstrates how a Basic program can use the Listing 2 version of the border routine. Table 1 helps you find the correct memory size and POKE

values to use with your particular system.

I've introduced many new details this month: The rest of the article will be easier. Be sure you have a good grasp on the concepts to this point. Experiment with Listings 1 and 2 to see how you might modify them. For example, you might try printing the border around

“A pattern looks as if it's moving if it is continually offset and reprinted on the screen.”

only the top part of the screen, or add a second border inside the first.

A Marquee Border

Program Listing 4 contains this

month's second program, which sets up a running marquee border around the screen, keeps it moving until you press any key, and then returns control to the Basic program that calls it.

The underlying concept of this program is that a pattern looks as if it's moving if it is continually offset and reprinted on the screen. The program defines three patterns in lines 1010-1140. A graphics block and two spaces compose each, but the order changes in each. Printing the first pattern around the edge of the screen, then the second, then the third, and repeating this process indefinitely, creates the illusion of a moving series of blocks.

Lines 100-250 should be familiar and need no further explanation. The main loop of the program is in lines 260-380, with a routine known as a driver. Subroutines perform all of the real work in this program—the driver is responsible for calling the subroutines in the correct order with a pointer set correctly. The use of such a driver provides structure and clarity to a program, and simplifies debugging.

In this program, the IX register points to the current print character, the HL register pair points to the current print position, DE holds line offset

values, B counts loops, BC holds delay values, and the A register transfers values from the print patterns to the screen.

Starting with line 260, IX points to the first print pattern. The Frame routine then prints that pattern around the screen. The program calls the short Delay routine, and calls GETKEY to check for a keystroke. The computer returns control to Basic if you press a key. The program repeats the same sequence of commands twice, with IX pointing to a new pattern each time.

You see a new opcode in line 380. JR performs a relative (as opposed to an absolute) jump to another part of a program. Like DJNZ, JR can only jump a short distance forward or backward. It requires 1 less byte of memory than JP,

and it allows relocatable, or position-independent, programs, but JR operates slightly slower than an absolute jump.

The first subroutine shown is GETKEY. It is similar to the Key routine in last month's third program. Line 400 shows a new pseudo-op, \$, which means "at this location." The \$ can indicate the value of a label, and the value of relative jumps (for example, JR \$-4 means jump back 4 bytes).

In lines 440 and 450, GETKEY first checks to see if you pressed a key. If you haven't, the Z flag is set and the conditional return, RET Z, sends control back to the driver loop. If you have pressed a key, the program returns to Basic.

A simple return instruction doesn't work because it only returns to the driver loop. Whenever the program executes a call, the Z80 saves the address of the next regular instruction onto the stack before transferring control to the subroutine. The stack is simply a first-in first-out data structure contained somewhere in memory (Basic sets it immediately below the cleared string space).

The classic analogy that describes a stack is a cafeteria plate-holder. Pushing a value (always a 2-byte value) onto the stack is like placing another plate on the pile. POPing a value off the stack is similar to removing the top plate. The SP register keeps track of the current address of the top value on the stack automatically.

Each call instruction pushes the return address on the stack and jumps to the subroutine. If you press a key, GETKEY ignores the first return address—the one leading to the driver—and instead returns to the second address, leading back to Basic. Therefore, the first value is POPed off the stack into the HL register. A RET command then transfers control back to the original Basic program.

The second subroutine, Frame, begins on line 500. It is similar to Listing 1, except it fills the two sides of the screen separately. It first loads each print value into the A register with an LD A,(IX) command, then transfers the values to the screen with LD (HL),A. After each character prints, the program calls INCPTR (line 850) to increment and test the IX pointer. If IX reaches the end-of-pattern marker (a zero byte), IX decrements three times to point back to the beginning of the pattern.

The last section of Frame is the Left routine, where you meet another new opcode, SBC (subtract with carry). The

Table 3. Set-up values for Listings 6 and 7.

Z80 instruction set doesn't include a straight 16-bit Subtract command, so use SBC here. SBC HL,DE subtracts the value in DE from HL, loads the result in HL, and decrements HL by one if the program sets the carry flag. To be sure that line 770 produces the correct result, you must be sure the program hasn't set the carry flag.

The Z80 has two commands that directly affect the carry flag: SCF (set car-

ry flag) and CCF (complement carry flag, which changes it to the opposite of its current status). You can use the two together to reset the carry flag so it doesn't alter the results of the subtraction. However, XOR A does the same thing faster. An exclusive OR (XOR) of the A register always sets the A register to zero, sets the zero flag, and resets the carry flag. This instruction is often a shorthand method of establishing

known values for the A register and both flags.

DELAY, the last subroutine of the program, begins in line 940. It slows down program execution to produce an attractive display. The Z80 operates so quickly that without a delay routine, you lose the marquee effect. Try removing lines 280, 320, and 360 to see how fast the program can operate.

Line 940 loads the BC register pair with a delay value of 1800 hex. If you want to change the delay time, change that value. Then, in a loop from line 950 to line 980, BC decrements one step at a time until it equals zero, when the program returns control to the driver.

The mechanics of checking BC for zero should be familiar from last month. By using the timing codes in your editor/assembler manual you can calculate how long each instruction takes. The Delay subroutine, as written, takes about .08 seconds on a Model III and slightly longer on a Model I.

Since I wrote Listing 4 for use with a Basic program, you have to follow the same procedure you use with Listing 2. The correct values for memory size and setting the USR addresses are in Table 2, and Listing 5 is a short program that

- **DISPLAYS CORRECT SPELLINGS:** If you don't know the correct spelling, EW will look it up for you, and display the dictionary.
- **VERIFIES CORRECTIONS:** If you think you know the correct spelling of a word, EW will check it for you before making the corrections.
- **HYPHENATES AUTOMATICALLY:** (Optional). Inserts discretionary hyphens throughout text.
- **GRAMMAR & STYLE CHECKER:** (Optional). Identifies 22 types of common errors. Makes suggested corrections with the stroke of a key. Runs within EW.
- **50,000 WORD DICTIONARY:** Uses only 2½ bytes per word; add as many words as you wish.
- **FAST CORRECTING:** In as little as 30 seconds, Electric Webster can return you to your Word Processing program, with your text fully corrected and on your screen.
- **INTEGRATES:** into 11 different word processing programs: Wordstar, Spellbinder, Newsprint, Lazy Writer, SuperScript, Scripsit, Electric Pencil, Copy Art, Superscript, Zorlof, and Magic Wand (specify). Begins proofing at the stroke of a key; returns you to word processing automatically.

Post Office Box 6111 Albany, California 94706

Have you seen this ad?

It's about ENB.

Southern Software's new relational database manager for TRS-80 Model I/III, all DOS.

ENB is a treat to use, with an integrated data dictionary to allow totally flexible datastructure (restructure without reblocking the database) and data-interdependencies of any complexity. Variable length fields, no record-length constraints, select on any field. High-level Basic interface (compatible with ACCEL3/4 Basic Compiler), plus file exchange with practically everything (Scripsit, VisiCalc, more). Holds up to 64K data items without data redundancy, spans up to 4 disk drives (or hard disk).

Special Offer

Buy ENB before December 31, 1983 and receive EDIT full-screen Basic editor (\$40 value — you must enclose a copy of this ad!).

Scripsit™ Radio Shack, VisiCalc™ VisiCorp.

Program Listing 7. Sound demonstration.

demonstrates the marquee effect.

Making Noise

The last Assembly-language program this month (Program Listing 6) is a short Sound routine that, like many games, produces tones when you connect the cassette AUX plug to a small amplifier. There are complex Sound routines that allow greater variations in duration, timbre, and pitch. However, this routine is one of the simplest and serves to demonstrate how the TRS-80 produces sound.

Line 220 sets the label Port equal to OFF hex. (To use the Model 4's internal sound speaker, change this to 90 hex.) On Models I and III, you can use port OFF hex as a cassette interface.

The computer normally writes data on cassette by toggling bits zero and 1 of the cassette port, producing both a high and low output. Sending a value of 1 to the port produces the top half of a square wave; sending a value of 2 produces the bottom half. Sending a 1 then a 2 produces a single square wave tone. The length of time it takes to create the wave determines the pitch, with longer times producing lower notes. The number of wave cycles determines the duration of a note.

Line 250 loads the HL register pair with a value sent from Basic. The L register contains the note's pitch, the H register its duration. Since the program stores tone and duration information separately in Basic, you must combine them before sending them to the sound program. Listing 7 is a short Basic demonstration program showing how you might perform the combination.

Line 280 contains the command DI

(Disable Interrupts). If you have a 16K Model I without an expansion interface, ignore this instruction. Otherwise, you must include it to avoid generating a gravel-like sound. Any computer capable of a constantly updated clock display interrupts the program presently running several times a second to update the clock counters. The DI instruction keeps those interrupts from occurring, but causes the clock to lose time.

Line 290 loads the duration count (the number of times to repeat the tone's wave) into the C register. Then, in line 300, the program loads the frequency value into the B register. The program loads register A with a 1, which the program sends to the cassette port with the OUT (PORT),A command in line 320. Then a short DJNZ loop, LOOP2, decrements the B register to zero.

So far, the program has sent half of the wave to the port. Line 340 again loads B from the H register, loads A with 2, sends the new value to the port, and uses another DJNZ loop to form the second half of the wave.

Line 380 decrements the C register once. If its value is not yet zero, it performs a relative jump to LOOP1, and forms a new wave to send to the port. When C reaches zero, it re-enables the interrupts with the EI command in line 400, and control returns to Basic. Although you can make the Sound routine more complex, it is adequate for use in games and for alerting an operator.

Table 3 shows the correct set-up values for the Sound routine depending on your computer type and memory size. Program Listing 6 demonstrates how to read tone values from a data table and

send them to the machine-language routine. Each data line contains two values for the tone's pitch and duration. Notice that the larger a pitch value, the lower the note sounds. Because the machine-language program decrements both B and C before it tests them, a zero (equal to 256) represents the lowest pitch and the longest duration. However, to make the data values easier to manipulate, the program uses only values between 1 and 255.

To calculate relative pitches of notes, you need to know that two notes a half-step apart form a ratio of 1.05946. If you use 255 for the lowest note, the pitch one-fourth higher is $255 / (1.05946)^4$. Round any fractions to the closest integer. If you don't feel like calculating exact note values, experiment until you find acceptable tones.

Note lengths are a function of the pitch value times the duration value. You can reproduce a piece of music by using a duration of 255 for the longest, highest note, and scaling other duration values from there.

Learning More

So far, I have shown you: how to use approximately 20 opcodes and pseudo-ops, the general structure of Assembly language, and one way to add machine-language routines to Basic programs. Most programmers use Assembly language for one of three purposes: to add machine-language routines to Basic, to write stand-alone game programs, or to write utility and application programs.

It is beyond the scope of this series to explore utilities and applications, which are almost always long and complicated. So next month I'll show you some of the structures and programming considerations required to write a stand-alone game, as well as how to use more of the Z80's instruction set. If you want more help writing subroutines for your Basic programs, try reading my column The Next Step in back issues of *80 Micro*. A major purpose of that column is to explore ways of mixing machine language and Basic.

If you subscribe to CompuServe and want to discuss any part of this series, leave me a message on the SASIG message board. Type GO PCS-117 to arrive at SASIG; my PPN is 72165,735. Feel free to join in on discussions other readers start. ■

Write to Hardin Brothers at 280 North Campus Ave., Upland, CA 91786.

70 INCOME TAX PROGRAMS

(For Filing by April 15, 1984)
TRS-80* Models I, II, III, 4, 12 & 16
 (Also for APPLE 3.3 DOS)

FEATURES: —

1. Menu Driven.
2. "Save on Disk"
3. BASIC, Unlocked, Listable
4. Name/SS No. IF-S carried over
5. Inputs on screen before printing
6. I.R.S. approved REVPROC format printing
7. Prints entire Form/Schedule
8. Calculates Tax etc.
9. For Mod. III/4, CONVERT
10. For Mod. 12/16, use 2.0b
11. Use GREENBAR in Triplicate — don't change paper all season!
12. Our 5th Year in Tax Programming
13. We BACK-UP our programs!

For the Tax Preparer, C.P.A., Lawyer and Individual. 70 Tax Programs on 13-5 1/4", Format disks, or on 3-8" Format disks. Order only the disks you'll use. Programmed for easy-use. Follow the Form or Schedule closely. Check-points along the way. Results on screen before printing.

70 TAX PROGRAMS include: Forms 1040, 1040A, 1040EZ, 1120, 1120S, 1065 and 1041. Schedules A, B, C, D, E, F, G, R, RP, SE and W. Forms 1116, 2555, 2106, 2119, 2210, 2440, 2441, 3468, 3903, 4136, 4137, 4255, 4562, 4684, 4972, 4797, 5695, 5884, 6251, 6252 and 6765. Order only the disks you need.

Also we have TAX PREPARER HELPER: includes 12 PROGRAMS such as IN-COME STATEMENT, RENTAL STATEMENT, SUPPORTING STATEMENT, IRA, ACRS, 1040/ES, ADD W-2's, PRINT W-2's and others.

TRY ONE DISK AND SEE FOR YOURSELF. 5 1/4" DISK IS \$24.75; THE 8" DISK IS \$29.75, BOTH POSTPAID.

CASSETTE USERS

From the makers of the famous Lemonaid Loaders ... the greatest cassette accessory you can buy ...

the **PLUM** at \$39 ppd

No more volume juggling when you load your programs on Model I, or on your Model III/IV/100 or CoCo at any baud rate, low, high, or "kwik".

No more plug pulling. Built-in motor control lets you advance tape in PLAY or RECORD at the touch of a button to find programs, to put marker gaps between programs, etc.

Built-in audio output lets you hear where programs begin or end. No more guessing if there is a program on the tape or where. No more guessing if the CTR is working.

Built-in snubber circuit protects your programs from "switch hits" and prolongs computer relay life.

PLUM's size [3 x 2 x 1] doesn't crowd your desk. And there's no line cord. Comes with standard AA battery installed. Automatic on-off for long, long battery life.

The PLUM installs in seconds. No rewiring. No soldering. Anyone can do it. Plugs between your computer cable and any standard recorder including all Radio Shack models.

Money back guarantee. Lifetime warranty on loader module. Order today. \$39 ppd. Add \$3 if COD. Add \$4 for overseas air. Call [417] 345-7643 [9 to 9 exc. Sun.] or write:

Synthetically Speaking— Part I

by David L. Engelhardt

This board gives your Model I/III speech capability. Use it in applications for education and the handicapped. It's a real chatterbox.

Talk isn't cheap, but it's getting cheaper. Once an expensive undertaking, adding speech capability to your 16K Model I or III is now affordable and fairly easy to accomplish.

In this two-part series, I'll show you how to build and use a speech board for your Model I/III. In this part, I cover the theory, construction, and testing of

the board's hardware circuits. Next month I'll go into applications for the handicapped and in education, with programs that convert keystrokes and ASCII string text into synthesized speech.

Although I built this system on a Model III, it also works on a Model I since both computers use the same in-

put/output communications signals (see Table 1). The only difference between the set-up of the two units is that the Model III uses a 50-pin connector and the Model I uses a 40-pin connector.

Parts to Buy

I based the entire speech circuit on the Votrax SC-01 speech synthesizer chip, which costs about \$50. I bought the chip from Micromint Inc. (the addresses of all the manufacturers cited appear at the end of this article).

Since I have an S-100 expansion bus, I built the speech circuit on an S-100 plug-in card. The Photo shows the complete circuit, consisting of the decoding circuit, 8255 controller, SC-01 speech chip, and the amplifier that operates an external 8 ohm speaker. Notice that there's still room left on the S-100 card for future additions to the speech circuit.

The Vector Electronic Co. manufactures the S-100 plug-in card (part number 8802-1). I like to use these cards because the two-connections-per-trace design allows easy point-to-point wiring. The cards plug into an S-100 motherboard manufactured by Wameco Inc. (part

number QMB-12).

The motherboard allows expansion to 12 extra cards, not including the speech board. As it stands, I have the computer interface/clock board in one slot, the port control board in another, and the speech board in a third slot. I still have plenty of room for future expansion. You must provide a 5- and 12-volt power supply to operate the speech board.

If you use a different plug-in card design, chances are it will be smaller. You can still build the speech board using smaller cards, but you may have to split up the total circuit. Using smaller cards shouldn't present any problems as you can easily link them together with ribbon cables. Adapt the required computer signals to your bus configuration according to the circuit schematics.

Port Decoding Circuit

The port decoding section shown in Fig. 1 consists of U1, U2, and two gates of U3. U1 and U2 are two-input, exclusive OR gates that make up the main port decoding section. Switches S1-S6 consist of an 8-DIP-switch (dual in-line processor) package that plugs into a 16-pin integrated circuit (IC) socket with two switches left for future use. Use these switches to set or change the speech ports to the configuration you need, but keep them within the zero to 7F hexadecimal (hex) port limits set by Radio Shack.

I use four ports to operate the speech board via an 8255 programmable peripheral interface chip that controls the Votrax chip. For simplicity, Fig. 1 shows the port decoding signals that consist of everything to the left of the 8255 chip (U4). Figure 2 details the signals that control the SC-01 chip.

I use the 8255 chip as the interface between the Model I/III and the SC-01, due to the SC-01's internal set-up requirements. I'll cover this when I describe the SC-01 synthesizer chip below.

Address lines A2-A7 in Fig. 1 tie to U1 and U2 to decode the base port value. Address lines A0 and A1 tie directly to the 8255 to decode its four internal ports. U1 and U2 turn on and stay selected for a decoding range of four, while address lines A0 and A1 actually perform the internal selection of the four ports within the 8255 chip.

Since I selected ports 16-19 decimal to control the Votrax chip, U1 and U2 set up the base, or bottom, port number (16 decimal) and stay selected while the combination of A0 and A1 make up the actual four ports (16-19) that control the 8255 chip.

U1 makes up the most significant half of the SC-01's base port number. Only one-half of U2 makes up the least significant half of the SC-01's port. The unused gates are available for future use. Select the port number by setting switches S1-S6 to either high (open) or ground. The switches you set to ground actually make up the port's decoded number.

When you don't select the port, the logic state on pin 1 of U3A is normally low. This is because the exclusive OR gate always outputs a logic low whenever either two lows or two highs are on the gate's inputs. Thus, when a decoding switch is open, one of the inputs goes to a high state. If an address line on the other input is high at the same time, it yields a logical low on the output gate

that turns off the decoder.

The decoder section requires only one gate with a low output from U1 or U2 to turn off. Since a logical high is one-half the requirement on pin 1 of U3A to turn on the decoder, all decoding exclusive OR gates must have a logical high output. The exclusive OR gate supplies a logical high output only when both of the inputs on each gate are of opposite states.

For example, I decoded the speech board for ports 10-13 hex (16-19 decimal). Since the most significant port digit is 1 hex, I set switch S4 to ground and leave switches S1-S3 open. Since the least significant hex digit is a zero, switches S5 and S6 are also open. The switches tied to ground apply a logic low to one-half of a gate's inputs while

Sensational Software Breakthrough

What has your computer done for you lately? You bought it to be a powerful and time saving tool. But if lack of good software keeps you frustrated and makes your computer an expensive and idle gadget, the PRODUCER is here to solve your problem.

THE PRODUCER IS A SOFTWARE PACKAGE THAT WRITES PROGRAMS FOR YOU.

Even though you have no knowledge of how to write programs, you now can create impressive, sophisticated and functional software to manage your data. You answer simple English questions, draw your screen on your monitor exactly like you want it, and the PRODUCER writes the entire BASIC program by itself.

The PRODUCER makes the micro computer a useful tool to the novice and saves many hours of programming time for the experienced computer professional. You may never need to buy another program to store and retrieve information, perform calculations and get displayed and printed reports.

"The PRODUCER has proven to be the greatest. I used to spend 70% of my time writing programs to create, maintain, sort and list data. No more. Days and weeks of programming are now reduced to minutes and hours. The PRODUCER has increased the productivity of my custom software firm by 400%. This product is in a class reserved for the best."

A. Copelle, Northbrook, Illinois.

LEARNING TO USE THE PRODUCER

In each TRS-80 version, we have provided a systematic guided tour of the PRODUCER program generator process. For the Model I and III, an audio cassette tape tutorial is part of your package. A fellow PRODUCER owner talks to you as you proceed through each step of the process. The tapes not only teach you the process, they enable you to create a program of your own design while you learn.

We have provided over 200 pages of thorough documentation in the PRODUCER Reference Manual, but we encourage you not to read the manual until after you complete the tutorial. We've had many rave reviews from our users, like this one from S. R. Foster of Pensacola, Florida:

"The Tutorial was an excellent starter. It enabled me to get on with it without days and days of reading. Very helpful."

WHAT YOU GET WITH THE PRODUCER

You will be impressed with the fine quality of the PRODUCER package:

DISKETTE(s) containing the PRODUCER Program Development System.

REFERENCE MANUAL of over 200 pages of extensive, easy to read, well organized material. Attractive hardback 3-ring binder. Color keyed index tabs separate the chapters. Complete alphabetical Index.

QUICK REFERENCE CARD to streamline operation.

TUTORIAL helps, including audio tapes and detailed follow-along outline.

FREE PROGRAM: A home inventory management program (valued at \$60 as a sample) which allows you to use a finished program immediately.

ONE YEAR SUBSCRIPTION To the PRODUCER newsletter.

TECHNICAL ASSISTANCE available by phone, only for registered owners.

For further information on this amazing software breakthrough, see our expanded ad in last month's issue of this magazine.

SERIAL PORT EXPANDER AND MORE

BTA's MODEL 524 MULTI-PORT CONTROLLER is a code activated one to four serial port expander — but that's not all since it has separate and independent UARTS, buffers and handshaking each port can operate with a different configuration, i.e. different baud rates, stop bits, etc. These features also permit two or more devices to communicate with the 524 simultaneously.

Full duplex with EIA RS-232 protocol

Baud rates up to 19,200

Expansion to 16 ports by cascading

Peripheral ports may be configured by user software

One year warranty

• **MODEL 524** \$249.00

• **MODEL 524A** \$279.00

same as model 524 except has 256 byte rx/tx buffers per port

• **MODEL 524 D** \$269.00

same as model 524, plus continuous polling of each peripheral device for data transfer requests. The device is automatically connected when its 'turn comes up'. ON, BUSY and OFF messages are sent to the peripheral device.

• Other models available — Contact us or your dealer for additional information.

BTA BAY TECHNICAL ASSOCIATES, inc.
 HIGHWAY 603, P.O. BOX 387
 BAY ST. LOUIS, MISSISSIPPI 39520
 (601) 467-8231

the open switches apply logical highs.

At the selection of port 10 hex, address lines A5–A7 are logical low giving opposite states on the inputs to the gates. This results in logical highs on their outputs. Address line A4 is high, and since its corresponding switch is low, the inputs are of opposite states and result in a logical high as an output.

The least significant digit using address lines A2 and A3 works the same way as the most significant digit. Since address lines A2–A7 decode the base port (10 hex), the decoder enables no matter what state address lines A0 and

A1 are in. While address lines A2–A7 stay selected to enable the 8255, the combination of address lines A0 and A1 changes to select the four internal ports required to operate the 8255.

Any time the Input or Output command selects a port, the computer generates a corresponding in or out signal. The computer applies these two signals to the gates of U3B and its output goes high in the presence of either one of the in or out signals. The computer applies the logical high output of U3B combined with the decoded port signal to the inputs of U3A to give a logical low

output.

The output of U3A enables the 8255 chip for the Read and Write commands needed to control the SC-01 speech chip. The computer also ties the in and out signals directly to the 8255 to control the direction of data flow in conjunction with the actual Input or Output command. The computer ties the in signal to the RD input and the out signal to the WR input of the 8255. The computer connects all data lines to the 8255 for reading from and writing to the SC-01 synthesizer chip.

You may wonder why U3 is a standard TTL (transistor to transistor logic)

“Through part-swapping and troubleshooting I discovered that the system runs without trouble with a 7400 chip.”

chip instead of an LS (low power Schottky) chip like the others. I discovered through part-swapping and troubleshooting that a 74LS00 doesn't have enough drive capability to enable the 8255. The system either locks up or gets lost when I used a 74LS00, but runs without trouble with a 7400 chip. Please keep this in mind when you buy the parts for the speech circuit.

The 8255 Controller

The programmable peripheral interface, or 8255 (U4) for short, allows configuration to any system or device with little difficulty. You can set it up to

run in three different modes. I opted to run the 8255 in mode zero for the speech board application.

There are 16 possible configurations within mode zero and Table 2 shows these different configurations. Configuration 8 applies to the speech board application. (Get Intel's *Component Data Catalog* for more information on the 8255 interface chip. This book describes in detail the many combinations and configurations available with this chip in all three modes of operation.)

Writing a control word to the 8255 sets mode zero, making two 8-bit ports and two 4-bit ports available. Ports A and B are the 8-bit ports and port C is split in half to create the two 4-bit ports. All outputs are latching outputs and all inputs are non-latching inputs.

For the speech application, decoded port 19 decimal writes the control and configuration word (144 decimal) to the 8255 chip. Decoded port 18 sets up communications with the 8255's internal port C. Decoded port 17 sets up port B and port 16 communicates with the 8255's port A.

Figure 2 shows the ports that control the SC-01 speech chip. Port B, with its latching outputs, sends a code to the SC-01 and stores it there while port C tells the SC-01 to latch port B's contents. Port C also controls the SC-01's inflection inputs. Port A samples an output from the SC-01 to indicate that it's ready for a new phoneme code. I'll discuss phonemes in more detail below.

The SC-01 Speech Synthesizer

The SC-01 is a self-contained chip capable of phonetically synthesizing continuous speech by combining phonemes. This chip can reproduce the 64

different phonemes that emulate the English language using 6-bit access codes.

Sending out these different phonemes at a continuous rate produces synthesized speech. Table 3 lists the 64 different phonemes, their symbols, average duration time in milliseconds, and examples important in creating speech. You can create any word by combining the proper phonemes. I use a Basic program to test the hardware circuits by putting together phonemes to create actual speech (see the Program Listing).

Refer again to Fig. 2. Port B of the 8255 (U4) transfers the 6-bit phoneme code to the Votrax chip. Since the program sets the outputs of port B to latch, the phoneme code stays on the inputs (pins 9-14) of the SC-01 chip (U5) until the program sends a new one. Now that the phoneme code is on the SC-01's input pins, it must latch in through the STB input (pin 7). Latching occurs on a rising edge signal so that the PC0 of the 8255 is set high to latch in the pending phoneme code.

A time delay in the latching set-up time is necessary. The Votrax chip requires at least 100 microseconds to stabilize its internal circuits. After stabilization, the program sets the STB input high to latch in and hold the phoneme code. Due to this latching capability, the Votrax chip is capable of continually sending out the same code until it receives a new one.

Since each phoneme code has its own time duration, it's necessary to know when the SC-01 finishes creating it. This is where the acknowledge/request (A/R) output (pin 8) from the SC-01 comes into play. The A/R output indicates when the program should send the next phoneme. Upon completion of the phoneme, the A/R output goes from a low state to a high state. Since the A/R output is CMOS and the input to the 8255 is TTL, the A/R output doesn't have enough drive capability to operate

the TTL gate. U7 takes care of the interface requirement.

U7 (4049) is a hex inverter/buffer capable of driving two TTL loads. Since it has CMOS input and TTL-compatible output, the SC-01 and 8255 chips are completely compatible. The 4049 inverts the signals, while two gates keep U7B's input the same as U7A's output.

A 4050 CMOS chip also works in place of the 4049. The only difference between the two is that the 4050 doesn't invert the logic signals. Should you use a 4050 chip, you need only one gate. I used a 4049 because I had one available when I built the circuit.

*“You can synthesize
four different voices
or mix sounds together
to change the pitch
of a spoken sentence.”*

Input PA0 (pin 4) of the 8255 constantly scans the state of the A/R output. When the A/R line goes from a low to a high state, it tells the controlling program to send another phoneme to the SC-01 chip. The sequence of events using the phoneme inputs, STB line, and A/R line continues until the controlling program stops sending new phoneme codes.

I1 (pin 3) and I2 (pin 2) represent the inflection inputs to the Votrax chip. These inputs let you change inflection or pitch for a higher- or lower-sounding output. This gives you the ability to synthesize four different voices or to mix sounds together to change the pitch of a spoken sentence.

Because inflection inputs must be at a constant logical state, they require external latches. The latched outputs of

PC1 and PC2 (pins 15 and 16) of U4 provide this function. The gates of U6 act as a buffer between U4 and U5 for the inflection inputs. Notice that the outputs of U6 are tied to 12 volts through 4.7K resistors. The inflection inputs require the same voltage as the SC-01's power supply and U6 provides this interfacing requirement. Remember this because the circuit doesn't function if U6's outputs are tied to 5 volts instead of 12 volts.

Gate U3C is one of two methods that uses interrupts to let the computer know it's time to send out another phoneme code via the 8255. The program sets the state of PC7 (pin 10) to high to enable the interrupt gate. When the A/R line signals the readiness for a new phoneme, its high output combines with PC7's output to give the required low signal for an interrupt.

The other method used is scanning PA0 for the low to high transition. I use this method and scan the PA0 input for a logic change. I set the interrupt usage aside for advanced applications in the future.

The master clock frequency inputs, MCRC and MCX, are connected to a resistor and a capacitor. These two inputs and components reach an oscillating frequency of approximately 720 kHz. This frequency sets up the standard phoneme timing so that, by varying the variable resistor, the voice and sound output change from a low pitch to a high pitch.

If you use the external clock source option instead of the internal one, the MCRC output (pin 16) is tied to ground while the external frequency source is applied to the MCX input (pin 15). Since I use the internal clock, both MCRC and MCX are tied together as shown in Fig. 2. The easiest way to adjust the internal clock is to send out a phoneme code or message and set the frequency for the most pleasing sound. I'll cover this in the testing section of this article.

I tied audio outputs CB, AF, and AO together so I could use them in conjunction with a class A amplifier. If you use these outputs in an amplifier other than a class A amplifier, separate them. I chose class A because it's popular and easy to build. The combined output of the three signals are tied to the amplifier's input shown in Fig. 3.

Figure 3 also shows the speech amplifier circuit, consisting of a pre-amp and a main amplifier. I decided to design an amplifier that could handle speakers larger than those in transistor radios to get better sound quality.

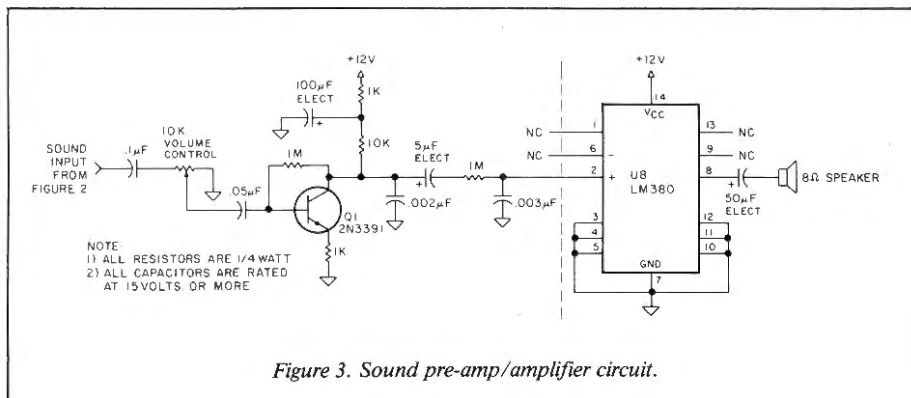

Figure 3. Sound pre-amp/amplifier circuit.

BEST BUY FOR CLEAN POWER:

ELECTRA- GUARD.

MORE SURGE PROTECTION FOR YOUR MONEY.

At \$110 to \$500 a unit, we're the best buy on the market. Guaranteed. We'll clean up every spike, glitch and surge on your power lines for less. Check around. You won't find prices like ours anywhere else. Not for surge protectors built like *these*.

TESTED TOUGH

We build Electra-Guards tougher than the IEEE (Institute of Electrical and Electronic Engineers) recommendations. Every component — diodes, wire, solder, metal case — is top quality and heavy duty.

Our surge suppressors can withstand 150,000 watts of overvoltage. That's tough! We know they're better — and we back them with an unconditional guarantee to prove it.

WHAT WILL ELECTRA-GUARD COST YOU?

It depends on how much electronic equipment you have and the size of your plant. Maybe this will give you an idea: Electra-Guard protects large hospitals for less than \$5000.

Hospitals with *millions of dollars* in CT scanners, X-ray equipment, computers, intensive care equipment and phone systems.

A little Electra-Guard protects a lot of equipment.

Or, figure it this way: Electra-Guard costs less than one day of downtime or one repair.

ELECTRA-GUARD PROTECTS UNCLE SAM, GTE AND BURGER KING.

Electra-Guard stops overvoltage for the Air Force and the Army; for Kentucky Fried Chicken; for the government's Geological Survey Department; for Honeywell, GTE and Burger King. All over America, we keep the circuits humming.

**FREE BROCHURE!
CALL 800-237-6010**

(In Florida: 813-544-8801)

Just call. We will send you a brochure that tells you more about surge suppression and

Electra-Guard. When you call, would you tell us the name of this publication? It helps us know which ads are reaching you.

GENERAL SPECIFICATIONS

Nominal clamping voltage higher

than the peak line voltage

Computer Power Solutions, Inc.
8800 49th Street North, Suite 203
Pinellas Park, FL 33565

The pre-amp section consists of everything to the left of the dotted line in Fig. 3. It conditions the signal from the SC-01 and sends it to the main amplifier section, to the right of the dotted line. Note that the volume control for the speaker is located in the pre-amp section.

U8 (LM380) is an amplifier chip capable of handling speaker loads of up to 2.5 watts with proper heat sinking. A typical 6-inch car speaker shouldn't present any heat problems when used with this amplifier chip. The pre-amp/amplifier circuit is powered from the same 12-volt supply that powers the Votrax chip.

Generating a Phoneme

Here is the sequence of events that creates a phoneme sound. First, enable the external bus with the command OUT 236,16 to allow any input or output from or to the computer (Model III only). The next step is to set the 8255 interface chip to mode zero, option 8, with the OUT 19,144 command. The OUT 17,'CODE' sends a phoneme

code to the Votrax chip through the 8255 (PB0 to PB5). Now consider the required set-up time delay.

If Basic controls the Votrax chip, a time delay loop isn't necessary due to the internal slow speed of the Basic language as compared to machine-language code. If you use machine-language code, the program loads register pair BC with a value and calls 60 hex for the time delay. I use this last method and will describe it under the Text-to-Speech program section next month.

After the controlling program sends the phoneme code to the SC-01 chip, the chip must latch in the code to start the sound output via the STB line input. Port 18 controls the 8255's PC0, PC1, PC2, and PC7 outputs. It always starts the SC-01 chip by making the STB line into a high state.

The value sent to port 18 controls the STB line, inflection levels, and enables gate U3C for interrupt control. The value must always be an odd number to ensure control of the STB line. The phoneme sounds when an OUT 18,X command latches in.

After phoneme generation, the program monitors the Votrax chip to know when to send out another code. Port 16 samples the 8255's PA0 input, which is the same as the A/R line. The program scans the A/R line in a loop until a positive value indicates the Votrax chip is ready for a new code. The Basic command that samples port 16 is A=INP (16). A positive value causes the entire sequence of events to start all over again with a new phoneme until stopped under program control.

Speech Construction

Regardless of the board system on which you build the circuit, be sure to use sockets for all the integrated circuits. Figure 4 shows the component layout of the speech board. Table 4 is the parts list for all the circuits.

Since there are a couple of CMOS chips in the circuit, especially the Votrax chip, take extra precautions to discharge static electricity when handling them. A good rule to practice is never to assemble a project in an area that has a rug beneath your feet. The rug can gen-

NEW

WIBASIC™ "WITTSOFT INTEGER BASIC"

NEW

GENERATE MACHINE CODE USING BASIC!

Machine code runs hundreds of times faster than BASIC - but is difficult and time consuming to write. Basic programs can be written quickly - but run slow! Now you can write and debug your programs in WIBASIC - then compile to high speed Z80* machine code!

POWERFUL

WIBASIC isn't a patch to disk basic - it is a **fully interactive** memory resident interpreter, compiler, and editor! It doesn't use high memory so device drivers, utilities, and USR routines are compatible.

Perfect for generating **GAMES, UTILITIES, USR routines** or other applications that require the speed of machine code. Compiled programs run on the Model I or III using most any DOS! It supports most BASIC statements and functions using **integers and strings** (including multidimension arrays!), but does NOT use floating point operations or functions. It is NOT suitable for business or scientific programming, but could be used to generate USR routines to run with such programs.

UNDERSTANDABLE

Over 100 pages of documentation cover all aspects of the system. From a step by step walkthrough of a sample programming session to modular programming techniques and program chaining for advanced users. We've even documented the subroutine entry addresses to allow assembler programmers to combine compiled and assembled programs!

erate static charges with a potential of thousands of volts that, in dry climates, could easily destroy CMOS chips.

I use Radio Shack wire-wrap for all of my connections. If you use wire-wrap, use a wire stripper to facilitate working with the small-sized wire. I recommend using wire-wrap because it's small, easy to work with, and comes in various colors. I standardized my color coding system so that blue wire is for address lines, yellow for data lines, green for control signals, and red for

power. The color codes make troubleshooting easy.

All of the control signals coming from the computer are labeled in the schematics. How you get them to the speech circuits is up to you. You have two options. You can run them directly from the computer or go through an interface like the one described in the March 1983 issue of *80 Micro* ("Real World, It's About Time!", p. 342).

If you don't build an interface, tie the appropriate signals from the Model III

to the speech circuits directly through a 50-pin edge connector and conductor cable. Use a 40-pin edge connector and conductor cable for a Model I. Table 1 shows the signals and pin-outs of the Model I and Model III expansion buses.

You can buy the 40- and 50-pin connectors from Radio Shack, but you'll have to get the cable from an electronics dealer. Run the appropriate signals to the designated inputs shown in Figs. 1 and 2. For the Model III, be sure to connect all the even cable conductors to ground as shown in Table 1. The Model I doesn't use this configuration. (The article referred to above explains the cable/conductor assembly in greater detail.)

I mount both the 5- and 12-volt regulators on opposite sides of the S-100 card. Be sure to mount these regulators on heat sinks to keep them cool. Install a 5 μF electrolytic capacitor on each regulator's input lead to suppress any oscillations should they occur. These oscillations drop the output voltage to an undesirable value. Install the 100 μF electrolytic capacitor across the SC-01's 12-volt power supply to ground as shown in Fig. 2 to prevent noise from entering the circuit.

Although it isn't required, I highly recommend that you add .01 μF disk capacitors across each integrated circuit's power and ground pins. These ICs sometimes produce noise when they're involved in high-speed switching. The capacitors filter out most of it. I always mount mine on the back side of the S-100 card, soldering one lead directly to the chip's power input pin and the other to the chip's ground pin.

On completion of the speech board, check your circuits carefully for wiring errors, opens, and shorts before you apply power to the circuits. If everything checks out, apply power and measure the 5- and 12-volt supplies for correct operation. It's also a good idea to check each IC socket's power pins for voltage. Take time to read all of the SC-01's socket pins for voltages.

Use a miniature plug and socket to connect the speaker to the speech board as shown in the Photo. Install all of the pull-up resistors as shown in Fig. 2. These resistors ensure correct logic levels between the 8255 (U4) and SC-01 (U5) chips. I install my resistors on 14-pin component carriers to obtain a neater appearance.

With the power off, carefully install all of the ICs. Make sure you set the port address decode switches (S1 to S6) to decode the base port of 10 hex.

SLICK PAGES? NO! GREAT DEALS? YES!

Computer Shopper pages aren't slick because they were designed for one purpose: to put buyers in touch with sellers at the lowest possible cost. This resulted in bargains on new and used equipment and software.

Individuals nationwide are able to list their pre-owned items for only a few dollars. This created hundreds of classified ads in over 100 big 11x14 pages.

And to make sure there were enough buyers for advertisers, the subscription price was set low, too!

So strike your first deal by taking advantage of the low subscription price, 12 issues for \$15. That's a \$8.40 discount off the newsstand price. Money back guarantee. For faster service (MasterCard and VISA) Call 305-269-3211. ✓ 39

Testing the Speech Board

The Program Listing is a Basic program that tests the speech board and sets up the master clock frequency. It is well-commented and follows my earlier discussion on the creation of phonemes. Type in and save the Listing. Turn on the speech board's power. You may hear a phoneme sounding at a constant rate due to the possible erratic power-up condition of the circuits. Type RUN to execute the test program.

The computer should now say "Hello, I am now a talking computer." After this message, the speech board is quiet since the last data value sent consists of the Votrax stop code of 63 decimal.

If the speech board doesn't talk, check the DIP switch to see if you selected the correct base port number. If the problem persists, recheck all your circuits for possible errors. If the board does talk, you can set the master clock frequency.

"When you type RUN to execute the test program, the computer should say 'Hello, I am now a talking computer.'"

Change line 270 in the Listing to RUN. This puts the program into a continuous talk mode. Now run the program and adjust the variable resistor that changes the master clock frequency as shown in Fig. 2. Adjust this resistor to obtain the most pleasing sound pitch. When the sound pitch is set, check the inflection circuits.

To do so, modify the Listing once more. Change line 170 to INPUT "ENTER INFLECTION VALUE";VO. This lets you enter different inflection values to see how they change the voice output. Line 180 ensures that the value is odd between 1 and 7. If you use the interrupt option, add a value of 128 to the 1 to 7 value.

Run the program and enter odd values from 1-7 to hear how the voice changes pitch. You should be able to detect a total of four different voices. I

incorporate the ability to change the pitch or inflection inputs in the Text-To-Speech program, which I'll discuss next month. This lets you change pitch within sentences.

When you order and receive the Votrax chip, you also get the data sheets and a phonetic speech dictionary that gives you the codes to make up numerous words. The values in the data state-

ments located in the Listing were taken from this book. You must, however, go through a conversion process to obtain the correct decimal value for the data statements.

Refer again to Table 3. Note that each phoneme code has a hex value. You must convert this value to its decimal equivalent in order to put it into data statements. To make it easier, I put

Program Listing. Test speech program.

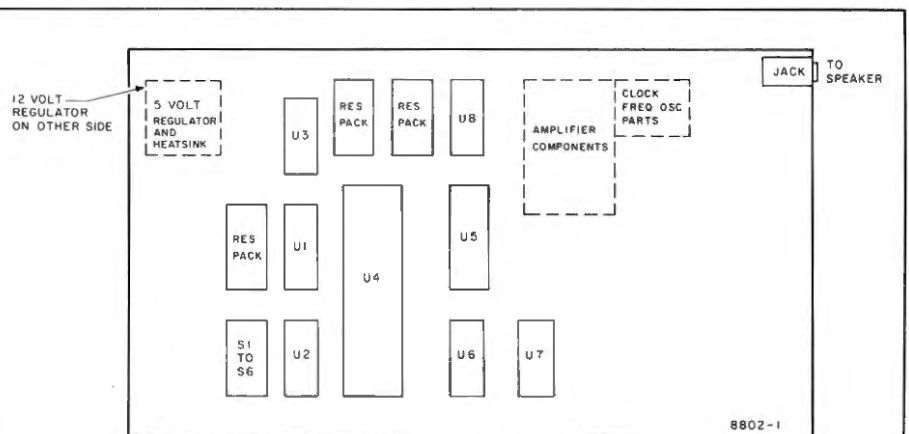

Figure 4. Parts placement for speech board.

the decimal equivalent just to the right of the hex value. Start with the phoneme code 00 and number them from zero to 63.

You can adapt the Listing to run in any Basic program. Just put the subroutine from lines 5000-5080 in your program with the appropriate data statements. Change the data statements and you can apply the talk feature to games, and so on. If the application requires only certain spoken phrases, you can save memory by putting them into data statements, when you use the Text-To-Speech program in next month's issue.

Using Table 3 might seem a little complicated at first, but it gets easier with experimentation. For practice, break the word "hello" down into its phoneme equivalent by using the example word pronunciations given in Table 3.

First find the H sound in the table, phoneme code 1B hex or 27 decimal. The next letter, E, comes closest in pronunciation to that in the word "enlist," so the phoneme code is 01 decimal. Since the next two letters are L's, add two decimal L codes, which are 24,24. The final code for the letter O is 38. The last value should always be the stop code of 63 for any spoken phrase.

Now put the decimal codes 27, 01, 24, 24, 38, and 63 into the first data statement in the Listing. Also, change the E value (line 190) to 6 for the loop count. Run the program and listen to the pronunciation of hello. You may find that some words need a little more work by adding a few extra phoneme codes.

For example, compare the phoneme codes for hello to those in the first data statement in the original Program Listing and you'll see what I mean.

When you get the speech board built and running, you're ready for the software that converts ASCII text to speech, as well as some practical applications. I'll present those next month, along with some instructions on how you can assemble the listings on your particular system. ■

We have CP/M[®] for Radio Shack computers.

2,000 new programs for your TRS-80[®] 12.

CP/M is the runaway leader in disk operating systems, but until now owners of Radio Shack computers have been locked out of the thousands of useful programs that operate on CP/M.

Now you can put the power of CP/M into your Radio Shack TRS-80 II, 12, or 16, and be able to use all the popular and useful software—and hardware—that has been previously out of your reach.

Use any printer.

Instead of being chained to Radio Shack hardware, you'll be able to add a video terminal, any printer (serial or parallel) and several Winchester hard disk drives with storage up to 80 megabytes.

Yes! Send me free information

about CP/M for Radio Shack.

Pickles & Trout[®], P.O. Box 1206, Goleta, CA 93116 (805) 685-4641

Uses only 8.5K of memory.

Since our first version went on the market in 1980, we've condensed and refined it into a compact, easy-to-use system enjoyed by thousands of users.

Besides the standard Digital Research CP/M manual, you'll get the 250-page manual we've developed through our long experience in adapting CP/M to Radio Shack computers. Our manual has lots of examples and an index and glossary.

You'll have your first working disk in ten minutes.

Only \$200.

The floppy disk version of Pickles & Trout CP/M is \$200. The hard disk versions (for Tandy, Corvus, and Cameo) are \$250, except for the multi-user Cameo, which is \$400.

Phantom Disk

by Donald Goss

When the Model 4 first hit the stores, most of us Radio Shack groupies were so dazzled by the 80×24 screen and the promised CP/M operating system that we overlooked the Memdisk feature. Unfortunately, the TRSDOS 6.0 manual that accompanies the Model 4 does a poor job of explaining Memdisk. So I'll describe the use of the Memdisk in random-access files.

The basic concept behind Memdisk—using a bank of random-access memory as a pseudo-disk—is by no means new. Usually referred to as a RAMdisk, it is useful to reduce the thrashing that accompanies a random-access search while simultaneously speeding up the search process.

While writing a data-base program for a small school, I learned how to use the Memdisk feature. Rather than quoting the program as I demonstrate

Use the Model 4's Memdisk utility instead of a real disk to speed random access searches.

Memdisk, I refer only to those aspects that illustrate the feature.

First, you must create and format Memdisk. If you have only one disk drive, Memdisk functions as drive 1. For the purpose of this illustration, I assume that you have two drives (zero and 1) and want to create a Memdisk as drive 2.

From the TRSDOS READY prompt, type SYSTEM (DRIVE=2,DRIVER="MEMDISK/DCT") and press the enter key. Answer the next prompt

with D to indicate that you want to use all 64K of upper memory.

Answer the following prompt by typing D to indicate that you want the pseudo-disk to be double density, then answer the prompt Do You Wish to Format It? by pressing the Y key. After formatting, you'll have 12 cylinders on the Memdisk with 4,608 bytes each, for a total of just over 55K of usable memory.

To access the pseudo-disk with the greatest speed, transfer some of the system modules from your TRSDOS disk to high memory.

You need only the first three modules for the functions associated with random-access files. To transfer these, type SYSTEM (SYSRES=1) and press the enter key. Repeat the command with =2 and =3 to transfer the other modules.

I assume that your program and data are on a disk in drive 1. My project contains a Basic program, named Program/BAS, a data file, Student/DAT and a short, one-record file Count/DAT that holds the counters on a disk in drive 1.

Use the Copy command to transfer the data file(s) over to drive 2, just as if

```

SET *PD CLICK/FLT
FILTER *KI *PD
SYSTEM (DRIVE=2,DRIVER="MEMDISK/DCT")
D
D
Y
SYSTEM (SYSRES=1)
SYSTEM (SYSRES=2)
SYSTEM (SYSRES=3)
COPY STUDENT/DAT:1 :2
COPY COUNT/DAT:1 :2
BASIC
CLS
LOAD "PROGRAM/BAS:1"
RUN
//STOP
    
```

Figure. Build Startup/JCL File.

The Key Box

Model 4
TRSDOS 6.0

it were a real disk drive. It's not necessary to transfer your program to Memdisk. At this point load Basic, load your program, and run it—accessing your data files in drive 2 just as you normally use random-access files.

You'll have to get used to not seeing the disk access lights go on and off periodically and to the speed of file access, which is surprisingly fast.

To simplify all of this, and to eliminate the possibility of errors, I suggest that you put this process into a Build file and execute it with the Do command.

From the TRSDOS READY prompt, type BUILD STARTUP/JCL and press the enter key. Then enter the commands in the Figure, substituting your own program names. I am including the click filter here, since this is unclear in the manual.

After following the instructions in the Figure, hold down the shift and control keys, and press the @ key to end the Build sequence. By typing DO STARTUP/JCL, you can execute all of the commands without error.

You can also set the disk to automatically perform all these tasks during boot-up by entering AUTO DO STARTUP/JCL. That way, after turning on your computer and entering the correct date, you'll have time to pour yourself another cup of coffee while your program executes. Depending on the length of your data files, you should have between 1½ and 2 minutes of execution time.

Make certain that you copy your data back to your data disk at the end of each session. Although you may begin to think of Memdisk as a very real and fast disk drive, when the power goes off, Memdisk's data disappears. To prevent this from spoiling your day, I suggest that you set up another Build file (EXIT/JCL) with the commands:

```
COPY STUDENT/DAT:2 :1
COPY COUNT/DAT:2 :1
```

Then you can set up an orderly exit by typing SYSTEM "DO EXIT/JCL" instead of END, and so file your data away. By doing this, your data is always waiting for you on your next boot-up.

Happy filing! ■

3400 USER[®] NEWSLETTER

Word Processing/Data Base News
for Model III, IV, & 100

3400 USER[®] is the first newsletter devoted primarily to WORD PROCESSING & DATA BASE use for Models III, IV, & 100. It is intensely reader/user oriented on the premise that average users discover outstanding time-saving ideas and want to share. We publish these submitted gems the very next month using simple low-budget printing methods. Includes monthly TUTORIAL on some aspect of word processing/data base you can use NOW, & actually see your investment produce! Corporate product news, bugs & fixes covered promptly! 3400[®] is for "Average Down-to-Earth Word Processor Users" who don't know their Peek from their Poke. 3400[®] is for YOU, the day-to-day user. (If that's actually your secretary... she'll love you for subscribing.) Join up before January 84 & receive our "JUST DO IT!" poster with your first issue. Submissions welcomed. \$24.00 per year, 1st class.

The Bucks Start Here

by N.B. Parrish

You're expecting a tax refund, but you're not sure how to invest it. Use this program to evaluate the options, then enjoy the payoff.

Everyone knows there's no such thing as a free ride. You can, however, come close to getting something for nothing if you know where to invest your hard-earned money. This little Model III program can help (see the Program Listing). With the changes I've noted, this program also runs on a Model II, Model 100, and a Color Computer.

Those of you fortunate enough to receive an income tax refund this year may wonder what to do with it. If you decide to invest it, then additional questions arise.

How can you get the most return from your money investment? Do you invest in tax-free bonds or some other form of tax-free security? Is a fully taxable bond, treasury bill, or regular savings account best for you? Other factors, such as liquidity of assets, may be important to you, but if you want yield, read on.

Enter Uncle Sam

The answers depend on your federal income tax bracket. A while ago, I stumbled on an article in *Changing*

Times called "What is Tax-Free Income Worth to You?" It included a table comparing taxable and nontaxable yields for various tax brackets.

As usual, my bracket and the yield I wanted fell between those listed. In the process of interpolating up, down, and across, I lost my place. And I didn't know what to do about state and local taxes.

Instead of giving up, I wrote a program that brings all these factors together.

The Menu

The main menu has three options. The first calculates the break-even tax bracket for a specific taxable and nontaxable investment. The second option figures the tax-free equivalent of a taxable yield, while the third gives the taxable equivalent of a tax-free yield.

Sample Problem

Say you're in the 35 percent federal income tax bracket and have the choice between purchasing a taxable security yielding 10.55 percent and something that yields 7.75 percent tax-free.

POCKET COMPUTER NEWSLETTER

Sharp
PC-1500
&
Radio Shack
PC-2

A Newsletter for Pocket Computer Fans!

This is a timely, compact, easy reading publication that provides up to the minute information of vital interest to people who use pocket computers -- and who want to know how to better capitalize on their capabilities. We concentrate on the Sharp PC-1500 & PC-1500A and Radio Shack PC-2 & PC-3 models. But we also provide information about newcomers to the field. We report primarily on pocket and hand-held computers that are capable of executing a high level language such as BASIC. Many new models will be introduced in this year.

Especially for Busy People

This is a *newsletter*. It is not a magazine. The material we provide is condensed to 8 to 16 pages per issue. This carefully selected information is presented in an easy to digest format that is readily assimilated by busy people.

Product and Equipment Reviews

As new models and accessories become available we publish forthright reviews as reported to us by actual users. Books, software packages and other kinds of supporting materials also come under our careful scrutiny.

Important Operating Tips and Practical Advice

Every model has its strengths and weaknesses, its ins and outs. Our publication quickly compiles critical information from users and passes this on to you. We show you how to save keystrokes and maximize performance. We often uncover hidden features and are able to tell you about capabilities not discussed in the manufacturer's literature. (We have, in particular, published a wealth of material about the actual machine codes used in the PC-1500/PC-2!)

Lots of Practical Programs

We publish all kinds of practical, useful programs that enhance the use and enjoyment of your own personal unit. In past issues we have presented programs that: convert numbers from one base to another, perform linear regression analysis, plot aviation courses, solve for unknowns in triangulation problems, tally supermarket purchases, do polynomial arithmetic, display a calendar of any month over a 500 year range, perform linear interpolation, calculate amortization, figure tab locations for complex columnar reports, perform simple animation, dump memory, do curve fitting, renumber all or part of a program, and play a variety of amusing games. We are always on the lookout for the highest quality programs to bring to you.

Delivered with a Simple Guarantee

If, at any time, you become dissatisfied with our publication, you may *simply cancel your subscription and receive a refund for unmailed issues.*

Program Listing. Evaluation of taxable and tax-free income.

Using option 3, the computer asks you for your income tax bracket. In this example, enter 35. Next, it prompts you to enter any state or local taxes. If none, simply press the enter key. For this example, assume 7 percent and enter 7. Finally, it asks you to input the tax-free yield (in this case 7.75 percent).

You find that a 7.75 percent tax-free yield in this case is equivalent to a 12.82 percent taxable yield. Which investment would you rather have?

If you deal in bonds, there are other considerations (such as whether you should buy at greater- or less-than-face value, and long term capital gains and losses). If in doubt, see your investment counselor or broker.

Program Conversions

The program listed here is for the Model III, and since there are no laser-zap sound effects or spectacular graphics, it works on most computers with a few conversions.

For the Color Computer, Model II, and Model 100, change all PRINT@ statements in lines 10, 50, 200, 300, and 400 to PRINT statements. Instead of specifying an X value of 1 to 64 in line 500, change it to 1 to 80 for the Model II and 1 to 40 for the Model 100.

For use on the Color Computer change line 500 to:

```
500 PRINT STRING$(32 "=");RETURN
```

See you at the bank. ■

Write to N.B. Parrish at P.O. Box 457, Marathon, TX 79842.

Every Z80 assembly-language programmer needs this book.

Programming in assembly language requires good tools. *TRS-80/Z80 Assembly Language Library*, a complete reference book on TRS-80 Model I assembly language, is the best tool you can find. In over 300 pages, 45 figures, and 75 program listings, author Craig A. Lindley explains the details of Model I hardware and software and shows you how to write programs that squeeze every bit of performance out of your computer. This book will teach you:

- how to use ROM and DOS routines in your own programs
- how to perform disk input/output
- how to access the video display and keyboard
- how to write easy-to-use programs
- how to perform arithmetic operations
- how to use the undocumented Z80 instructions

You'll also learn about disk operating systems, device handling, base conversion, parameter passing, and more.

TRS-80/Z80 Assembly Language Library contains a library of ready-to-run utility programs that are worth many times the book's cost. Included with the book are two Model I TRSDOS-compatible disks* containing utilities for printer formatting and spooling, single-key entry of strings, disk editing, base conversion, password encoding and decoding, and more. You get more than 15 valuable utilities, and the source code files are included, so you can examine, modify, and learn from every program.

Many of the programs also run on the Model III, and

Division of Tandy Corp.
Z80 is a registered trademark of Zilog

those that do not require only minor modification. One of the book's four sections is dedicated to routines and programs that run on any Z80-based system. No matter what Z80 computer you program, this book has something for you.

It's a book that's designed to be used. The text is set in large type, and the book is bound in an 8½- × 11-inch easel-backed binder that stands up next to your computer. So there's no squinting at tiny type and fighting to keep the book open.

The whole package—book, disks, and binder—is yours by mail for the **unbelievable price of only \$34.97**. And if you charge it, you can even call toll-free to order.

TRS-80/Z80 Assembly Language Library. It's the assembly-language book for the '80s.

*Disks do not contain a disk operating system; two disk drives or a disk copy utility are required to transfer the files.

Call **Toll-Free 1-800-258-5473** for credit card orders or send \$34.97 plus \$4.50 shipping and handling to Wayne Green Books, Retail Sales, Peterborough NH 03458. Dealer inquiries invited.

Bill of Fair Repair

by Terry Kepner

One of the decisions Radio Shack computer owners face is whether to buy upgrade equipment from Radio Shack or from a less expensive, independent source. Similar to this decision is whether to modify the hardware in your computer yourself (such as adding a true uppercase/lowercase modification to your Color Computer, or adding non-Tandy memory to your Model III) or take it to Radio Shack.

Radio Shack's Hard Line

In the past, Radio Shack insisted that its customers patronize only Radio Shack company stores or associate dealers when shopping for upgrade equipment. Many times Tandy has said that it can't and won't work on, or provide repair support for, equipment manufactured by outside companies or for modifications made by unauthorized individuals. Tandy used to refuse to repair any modified computers, even when the problem was obviously the Radio Shack equipment and not the modification. This generated ill will and rapid growth of a new "cottage" industry—repairing modified Radio Shack computers.

This new industry has spawned horror stories of modified computer owners and the difficulties they have getting their machines repaired. Stories of burned-out chips, expensive and unending repair trips, and shoddy workmanship abound.

Radio Shack usually advertises a 90-day warranty. This warranty means that Radio Shack makes any repairs required due to manufacturing defects free of charge. Any repairs needed after the warranty period are charged at a basic labor rate, plus the cost of parts.

You void the warranty if you open the case of the computer and install

Here's the low-down on repair costs for your TRS-80—whether Tandy or an independent works on it.

non-Radio Shack equipment or make modifications to the existing equipment. Officially, the repair technicians consider the warranty void if the case has been opened, even if no alterations to the Radio Shack equipment are made. Fortunately, most technicians are more lenient than this official policy.

Change of Heart

Last year Radio Shack relaxed its hard-line stance on repairing out-of-warranty (modified) equipment. Radio Shack now allows its technicians to work on computers that have non-Radio Shack alterations or additions, but only when the non-Radio Shack modifications don't affect the problem being corrected.

This means that if you add non-Radio Shack disk drives to your computer and begin experiencing memory problems, Radio Shack will unplug your drives and test the computer. If the Radio Shack memory is bad, they'll replace it. If the added memory is bad, Radio Shack charges a minimum "check-out" charge, and you must replace the bad memory. (Optionally, the Radio Shack technician can remove the non-Radio Shack modifications and return the unit to its standard setup. There is a charge for this service.)

If, on the other hand, you begin having disk input/output problems with your non-Tandy drives, don't bother asking Radio Shack for help. You have

to go to the company that sold you the disk drives, because Radio Shack works only on its own drives.

This is a reasonable position to take. Radio Shack technicians have repair manuals only for Tandy equipment, and their training is similarly restricted. Just because the foreign equipment is compatible with the Radio Shack computer doesn't mean that the parts, and design, inside the equipment are identical with Radio Shack equipment.

Radio Shack's new attitude makes the decision involving foreign equipment easier. Now you know that Radio Shack will take care of the basic equipment in your computer. You must take care of any unauthorized equipment or modifications.

Repair Rates

This leaves you in a delicate position. The main reason for purchasing non-Radio Shack equipment is cost. But once you have the equipment, how do you repair it, and how do you know what represents a fair repair cost? Saving \$200 by buying a disk drive from someone else isn't much of a savings if you have to spend \$300 to repair it a year later.

Before buying non-Tandy equipment, ask the manufacturer what its policies are regarding repair work, and if it recommends any local technicians who can take care of its merchandise. Most important, ask about technical manuals for the equipment (I strongly suggest you do this. That way when you find a technician, you don't have to wait for him to write the manufacturer for repair manuals before he can begin working on your computer).

When your computer malfunctions, you must determine where the problem lies—in the Radio Shack equipment, or

Desktop Accountant™

FULL-FEATURE, FULLY-INTEGRATED ACCOUNTING SYSTEM

Everything you need to keep the books...at a price you can afford!

Your Bookkeeper, Accountant, and Banker will love you for installing this fine system!

Check these features:

This remarkably-valued Accounting System will manage your company's business records and automate your entire bookkeeping process—from the posting of individual transactions to producing up-to-the-minute Income Statements, Balance Sheets, and other important management reports. Desktop Accountant™ gives you a "Big Company," professional image with printed invoices, statements, and checks. It is user-friendly, completely menu-driven, offers system-prompted data entry, and is compatible with both floppy and hard disks. Feature-rich, and dollar-for-dollar it is the best software value on the market! But don't let the low price fool you. Desktop Accountant™ is not a "cheap" accounting system, only inexpensive. That's because original development costs were recovered years ago allowing us to sell an excellent product in high volume at low prices and still earn a fair profit. This high-quality, reliable software was designed and written in 1975 for small-to-medium sized businesses. Since then, it has successfully proven itself in well over 10,000 companies in all 50 states and in 13 foreign countries. It is also used and recommended by hundreds of bookkeepers, accountants and CPAs, including the regional offices of several famous "Big Eight" accounting firms! No other Accounting System offers you so many features, benefits, and valuable extra services. You can pay more but you can't buy more! Desktop Accountant™ is backed by our 30-day, no-risk, money-back guarantee of 100% customer satisfaction! Call for free literature or order now with complete confidence.

Here's what you get:

1. A professional-quality, full-feature, fully-integrated accounting system.
2. Six-to-fourteen diskettes (depending on your system's disk storage capacity).
3. Four easy-to-follow, self-teaching User's Manuals (over 540 pages) that are highly rated by satisfied users.
4. An exclusive, new audio cassette tape with step-by-step instructions for quick installation and start-up.
5. "Read Me First!" a unique 40-page system guide and start-up aid.
6. Complete sample data and sample reports for practice and training...a big help to new users.
7. FREE 1-year subscription to Users' Newsletter, "Debts and Credits." It's full of tips, ideas, news, and useful suggestions from us and other users. Recent issues have run over 20 pages long!
8. FREE complete Source Code in popular MBASIC so you can easily customize any program to suit your special needs.
9. Telephone "Hot Line" service for helpful installation support, Start-up support, Technical support, and Training support. The quality of our cheerful customer support has been acclaimed "excellent," "first-rate," and "very courteous and professional!" by our users.
10. Access to our growing network of Experienced User Consultants™ in both the U.S. and Canada. These qualified, knowledgeable businesspeople themselves own this fine software and are available to assist you with almost any aspect of installation, training, operation—or even customization, if desired. You'll receive the latest Directory of these helpful Consultants.

Look who's using it:

Here is a sample (taken from our customer files) of the wide variety of businesses successfully using this time-tested, solidly-established, user-proven software:

• Bookkeeping services • CPA/Accounting firms • Construction companies • Wholesale Florists • Retail Florists • Printers • Insurance Agencies • Shopping Centers • Machine Shops • Engineering firms • Software Companies • Computer retailers • Publishers • Financial services companies • Investors • Appliance service firms • Dairies • Boilerworks • University Business School • Catholic Diocese • Baptist Ministers • Sail Maker • Convalescent Hospital • Car Wash • Public Library • Cement Plant • Industrial products manufacturing companies • Mortuary • Coal Company • TV/Film producers and distributors • General Store (in Alaska) • Health services organization • Government Agencies • Record and Tape stores • Trade Association • Graphics firms • Office products companies • Real Estate firms • Oil Products distributor • Instrument Company • Hydraulic Products company • Outdoor Expeditions company • Many types of schools • Chloropractors • Physicians • Landscapers • Law firms • Restaurants • Plumbing Companies • Railroad • Farmers • Banks • Consultants • and many, many, more!

Read What Users Say...

"Two hours after receiving the Desktop Accountant I was up and running live data, and generated an entire month's work and financial statements the following day."

—J.C. Bartels, President
 (accounting firm) Gonzales, Texas

"To get anything better we would have had to spend multiple thousands of dollars. I think it's a dynamite package for the money."

—Bob Cox, V.P. General Mgr.
 (manufacturing company) San Antonio, Texas

A Complete System!

includes all four standard general accounting programs:

GENERAL LEDGER is completely integrated to automatically post end-of-month transactions from A/R, A/P and Payroll. It prints 13 detailed reports for the entire company, and optional Income Statements for up to 99 departments. It produces up-to-the-minute comparative financial statements with current, year-to-date, budget, and last year (month and YTD), showing both dollar amounts and percentages, and presents everything you, your bookkeeper, and your accountant need to know about the company • G/L automatically reconciles all accounts, and maintains extensive, detailed audit trails showing the source of each G/L entry for quick, easy, tracing • Trial Balance includes all transactions • Flexible Chart of Accounts • True double-entry bookkeeping • Master File capacity: 400 Accounts • Monthly Transactions capacity: 1,000 with 200K diskette; 3,500 with 500K diskette; 7,000 per Megabyte with a Hard Disk.

ACCOUNTS RECEIVABLE provides instant, on-line customer account information (both current and aged), with complete, timely invoicing, including open-item (or balance forward) and statement capabilities. It makes the entire billing process fast, easy, and efficient. It quickly identifies your overdue accounts, helps speed collections, helps control your cash flow, and assists you in making better financial decisions. Both detailed and summary customer activity and aging reports are instantly available • Preprinted forms available for invoices and statements • Detailed audit trail • Maintains comprehensive customer data files • Produces 8 reports and documents • Includes automatic periodic customer/client billing option which is ideal for service businesses • Itemized monthly transactions • Master File capacity: 400 Customers • Monthly Transactions capacity: 800 with 200K diskette; 3,500 with 500K diskette; 7,000 per Megabyte with a Hard Disk.

ACCOUNTS PAYABLE maintains complete vendor/voucher history and includes check-writing capabilities. Current and aged payable reports are available upon command. It prepares an extremely useful cash flow/cash requirements report that greatly improves management control of your most valuable resource—cash! It prints checks (on commercially available forms on which your company name, address and logo can be imprinted) with comprehensive check stubs that your vendors will appreciate • Produces 11 reports and documents • Automatic pay selection program allows payment by due date or by discount date • Manual and automatic checkwriting • Check register • Detailed audit trail • Itemized monthly transactions • Master File capacity: 400 Vendors • Monthly Transactions capacity: 800 with 200K diskette; 3,500 with 500K diskette; 7,000 per Megabyte with a Hard Disk.

PAYROLL is a complete, easy-to-use professional-quality payroll system. Be the office hero each week when the checks come out on time! This program calculates payroll for every type of employee (hourly, salaried, and commissioned) and prints payroll checks (with popular, comprehensive check stubs) with an absolute minimum of input. Your company name and logo can appear on these, too. • Stores and reports comprehensive employee and payroll information. • Maintains monthly, quarterly, and yearly totals for reporting purposes in multiple states(!) • Offers user-maintainable Federal, State, and local tax tables(!) • W-2 printing • 941 Reporting • Produces 10 reports and documents • Master File capacity: 400 employees. An outstanding Payroll package!

Produces 42 Reports & Documents:

General Ledger 1. Chart of Accounts 2. Chart of Accounts with summary dollar amounts 3. Chart of Accounts with prior year comparisons 4. Daily Transactions Report 5. Itemized Monthly Transactions 6. Balance Sheet 7. Balance Sheet with prior year comparison 8. Income Statement 9. Income Statement with prior year comparison 10. Departmental Income Statement(s) 11. Departmental Income Statement(s) with prior year comparison 12. Detail report for individual accounts 13. Trial Balance Statement

Accounts Receivable 1. Daily Transactions Report 2. Invoices (with or without preprinted forms) 3. Statements (with or without pre-printed forms) 4. Summary Aging Report 5. Detailed Aging Report 6. Itemized Monthly Transactions 7. Detailed Customer Activity Report 8. Summary Customer Account Report

Accounts Payable 1. Daily Voucher Report 2. Daily Credit Report 3. Checks with Detailed stubs 4. Check Register 5. General Ledger Transfer Report 6. Cash Requirements Report 7. Transaction Register 8. Open Voucher Report 9. Aged Payables Report 10. Detailed Vendor Activity Report 11. Summary Vendor Account Report

Payroll 1. Federal Tax Tables 2. State Tax Tables 3. Payroll checks with stubs 4. Payroll Check Register 5. Monthly Payroll Summary 6. Quarterly Payroll Summary 7. General Ledger Transfer Report 8. Detailed Employee File Listing 9. Produces 941 Worksheet 10. Prints annual W-2 Forms

System Requirements: Either CP/M® or MS-DOS (PC-DOS) • Microsoft BASIC • 64K RAM • Two disk drives or hard disk • 132 column wide carriage printer, or an 8 1/2" x 11" printer with compressed print mode (an Epson MX-80 or similar printer).

100% SATISFACTION GUARANTEE

No-Risk, 30-day Money-Back Guarantee

Order Desktop Accountant and evaluate it yourself for 30 days. Test the performance of each program using our comprehensive Sample Data Files to enter and process data, query accounts, print checks and reports, and more. Review the five User's Manuals, hear the Training Tape, read the users' Newsletter, even call our Technical Support Group with your questions. You must be completely satisfied with Desktop Accountant or you may return it in good condition with the Sealed Master Disk UNOPENED (it installs your live data) for a prompt, courteous, complete refund!

ROCKY MOUNTAIN SOFTWARE SYSTEMS
 Specialists in Accounting Software

in the foreign equipment. Sometimes it's easy, sometimes it isn't. If the problem is with the non-Radio Shack equipment, take your computer to an outside repair technician. If Radio Shack's equipment is at fault, you have a choice: take your computer to a Radio Shack computer repair center or take it to an outside technician. The decision is up to you, and will probably be based on cost.

Radio Shack's policy is that it charges a basic rate for any computer brought in for repair work that's out of warranty (see Table 1). Additionally, if you bring in a peripheral (printer, modem, Vox Box, etc.) at the same time Radio Shack charges an additional \$5 for each peripheral the technician checks out with the CPU. If the peripheral is brought in at the request of the service center, then they don't charge you. If you bring in the peripheral separately, there is an appropriate service charge (see Table 1) i.e., the Vox Box repair service charge is normally \$15. If you bring it in with the CPU for checkout, the charge is only \$5

for the Vox Box, plus \$15 for the CPU checkout.

The policy for installing kits is similar. If you install more than one upgrade kit, the highest labor charge is at list price, while the additional kits' labor charge is discounted by 30 percent. If you are installing multiple RAM or ROM upgrades all at the same time, then Radio Shack charges only the base labor rate for one installation. For example, installing three 26-1102 RAM kits in the same computer has a single labor charge of \$15.

If the equipment has any non-Radio Shack parts or modifications, the rates in Table 1 don't apply. Instead the repair cost is \$15 per half hour. These prices don't include the cost of parts required for the repair.

Table 1 is a listing of the current service charges and checkout charges Radio Shack uses. These prices are subject to change without notice, but if past experience is any indication, the prices should be good for about a year.

Any Radio Shack computer product (catalog #26-xxxx) not listed in Table 1 has a maximum checkout of \$30 for all CPUs and \$15 for all other items. As a matter of policy, any checkout charge billed within 45 days of a repair is credited against the labor charge for that repair. The amount credited does not exceed the labor charge.

The primary use of Table 1, for those with modified computers, is to determine a fair rate for repair work by independent repair technicians. If Radio Shack charges \$25 to align a disk drive, an independent technician shouldn't charge much more (usually, it's less).

If your computer is unmodified, and contains only Radio Shack parts, Table 1 gives you a good idea of what to expect when you take your computer in for repairs. ■

You can reach Terry Kepner c/o 80 Micro, 80 Pine St., Peterborough, NH 03458.

Table 1. Radio Shack computer service charges.

Catalog Number	Description of Service	Service Charge	Checkout Charge

POWERDOT II
by Powersoft

NEW VERSION
RETAIL... \$59.95

SAVE OVER 15% NOW 49.95

The ULTIMATE in graphics design. This version is MUCH MORE POWERFUL than previous versions and includes BETTER documentation as well. New features include AUTODRAW™ and CIRCLE commands. Now allows you to design your own character sets! Includes lots of examples on disk. Your screen is only a "picture window" to a much larger drawing area! You are only limited by disk storage, not memory! Works on EPSON Series (Graftrax or Graftrax+ required) or the C-104 8510 (PROWRITER or NEC version). Now available for DMP 2100, DMP400 and L-P-B. SPECIFY PRINTER

LC COMPILER AND EDAS
By Misosys

LC Compiler Retail \$100
EDAS Retail \$100
SPECIAL BUY BOTH FOR \$139.99

SAVE OVER \$60

Now program in the "C" language compiler subset for LDOS. LC generates Z-80 EDAS IV source code as output. Compiled programs run on both MOD I and MOD III. Save \$60.00 with the best LDOS editor assembler package on the market. Over 200 pages of documentation. Requires 2 drives and 48K.

FOR LDOS MOD I/III

THE TEST GENERATOR
By Big G Software

ATTENTION
EDUCATORS AND STUDENTS

ONLY 34.95

STUDENTS
This program is an ideal study aid for home computer use. A student types in review questions, vocabularies, words, notes, etc. and the computer asks the questions. The student has two chances to answer correctly; the computer gives a score and shows questions answered incorrectly. The student then has the option to replay incorrect answers.

TEACHERS
Type in up to 100 questions and answers to compose a test. The test may be printed in Multiple Choice, Matching, True/False, or Short Answer format. Questions may be printed in order or at random. Answers may be printed as questions and questions as answers. An answer key is automatically printed for each test. Tests may be duplicated using Xerox spirit masters, etc.

GAMEPAK 3
by Micro Mining

ONLY 29.95

3 GAMES FOR THE PRICE OF ONE

This package by James Talley of Kid Venture fame includes 3 games on the same disk. Funny Face is a program that draws over 1 million different faces on the screen as you select the different facial features. You can play "line up" where you select the face from up to 6 like faces, or have the computer draw faces in the automatic mode. Matchmaker is a program like the TV game "Concentration" where you select identical graphics matches from a grid. It keeps a running point score. Repeat After Me emulates the famous "Simon" game where you have to enter a repeat sequence of numbers to match the computer. Sound included. Funny Face alone is well worth the price. Kids will adore this 3 game selection. MOD III

CLEAN SLATE by
Advanced Operating Systems

ONLY 49.95

Retail \$79.95

A very unique word processing package. Clean Slate has many features not found in word processors at twice the price. It allows full customization of printer drivers and direct control of this printer from text. Features user definable repeat keys, non-destructive cursor/graphics print offset, custom keyboard driver and has it's own built in comm program for file transmission and receipt. Can build a separate glossary file and a names list for auto from letter insertion. You can also create and edit assembly source or basic program files. We found a treasure chest of this little known jewel at the right price. Two color documentation in a padded easel binder. It is an outstanding value for this price.

ULTRATERM
by United Software

The Ultimate Communications Package at a Very Reasonable Price

Retail 59.95
Special Sale 49.95

OVER 15% OFF

This communications package is one of the most versatile available. It includes a full featured intelligent terminal program, host program, direct file transfer function and hex conversion utilities for "bulletin board downloading plus." Support for virtually all manual and auto dial modems. Exclusive Ultra Term direct disk file transfer function allows full control from the transmitting computer and unattended operation at the receiving computer. Split screen feature lets you have outgoing messages on the bottom half of the screen while incoming messages are displayed on the top of the screen. Full printer support. Universal ASCII format file transmission and reception with memory input/output buffer supports delays between characters, delays between lines, and prompt controlled transmission for compatibility with virtually all systems. A computer continuously displays the amount of free memory remaining whenever the buffer is in use. Full featured host program that supports PRINT and PRINT graphics from basic, and automatically, re-locates and protects itself in the top of memory is included. Auto Dial phone numbers stored in program with single Key Auto Dial.

MOD I or MOD III

THE HOME ACCOUNTANT™
By Continental Software

An Outstanding Financial Planner

ONLY 69.95

- Maintains up to 100 budget categories
- Keeps track of up to five checkbooks
- Prints checks if desired
- Prints a personal balance statement, income and expense summary
- Prints net worth statement
- Provides fast bank reconciliation
- Allows file extensions on multiple diskettes
- One program handles cash, checkbooks, credit cards and other liabilities and expenses
- Unlimited annual transactions, fiscal or calendar year
- Transactions may be split among different budget categories
- Flags transactions for tax purposes
- Maintains transaction history
- Provides Hi-Res graphics for any category by bar graph
- The program itself does just about everything you'd ask of a personal finance package.
- Popular Computing November, 1982

MOD III

POWERMAIL PLUS
By Powersoft

Retail 150.00
Special 112.50

SAVE 25%

Features Over the Original PowerMAIL

Separates any category for you in any manner you wish. This new version can span drives and may use multiple floppies. The program will sort on any eight levels if you wish. Separates your flags and puts them into another file. Print options. Labels & Listing. One choice is the simple telephone book type listing. Two of the other modes give you not only the listing of names but also either FLAG numbers or the actual FLAG descriptions. The final print mode is what we call the SALESMAN'S NOTEBOOK™. It prints out the whole list or whatever parts you specify with all info including full flag descriptions in each record. Then the word Notes™ is printed with several lines of blank space for making those notes in the field.

Complete diagnostic tests for components of your TRS 80. Separate tests for ● ROM ● RAM ● VIDEO DISPLAY ● KEYBOARD ● LINE PRINTER ● CASSETTE RECORDER ● RS 232-C INTERFACE ● DISK DRIVES ● DISK CONTROLLER ● INDIVIDUAL TESTS AND CONTINUOUS SYSTEM TESTS

MOD I or MOD III

PowerDRAW

by Powersoft

Retail 39.95
Special 34.95

SAVE OVER 10%

A full screen graphics editor. POWERDRAW is 100% assembly language. You can create screens of graphics, save to disk, merge them, run in sequence like a movie, merge text with graphics, and write your own game or business application screens! PowerDRAW saves graphics to disk or tape so that they can be recalled at a later time in the following formats:

- 01: CONDENSED LISTS
- 02: EDAS Source file format
- 03: EDAS/2 Source file format
- 04: BASIC Strings
- 05: BASIC arrays
- 06: BASIC tables
- 07: BASIC data statements
- 08: LDDOS File Format

THE TOOLBELT MOD 4

by Powersoft

49.95

Powersoft does it again with a collection of 16 of the most popular LDDOS TOOLBOX utilities re-published for TRSDOS 6.0 running on the MODEL 4. Now enhance your MOD 4 TRSDOS with this powerful set of utilities. Complete with detailed manual on how to use each utility program to do the many things the TOOLBOX for LDDOS was famous for.

Model 4

GRAPHIT

by Powersoft

ONLY 39.95

A simple, easy-to-use program for portraying graphs on a microcomputer. Creates and uses files in Visicalc DIF format, so it will be able to graph Visicalc data as well! Graphs may be changed at the touch of a key; graph scales can be compressed or expanded. Display and print just one portion of the graph or all of it at once. Extremely user-friendly and contains multiple HELP screens. GRAPHIT will print the raw data and produce graphs on any lineprinter. No special lineprinter options required.

MOD I/III

ELECTRIC WEBSTER

by Cornucopia Software

149.95 SAVE 20%
WITH CORRECTING FEATURE

ONLY 119.95

ENIGMA

by Powersoft

ONLY 39.95

This encryption program is based on the ENIGMA cipher machine used by the Germans in the Second World War. It incorporates the improvements which by the admission of Allied Intelligence who participated in cracking the Enigma code, would have made the system almost completely impenetrable. A 29-character key is used for encrypting textual material yielding over TRILLIONS of possible keys and encoding combinations. A technical description of the German ENIGMA machine and how it is simulated and involved stories given in the manual. The perfect program for students of cryptography, business persons who want to transmit sensitive data over open data links (wire or modem) or E-MAIL lines, and anyone else who wishes to maintain confidential information.

MOD I/III

EPSON™ Driver Compiler

by Powersoft

29.95

This is a program which allows you to construct your own printer character table for an EPSON bit graphics printer, and compile a relocating printer driver which will produce those characters! Character tables can be saved to disk and manipulated in a variety of ways (including rotation of each character 90, 180 or 270 degrees) before the actual compile process. Several example files are included on the disk. This program requires an EPSON MX-80 with GRAFTRAX or GRAFTRAX-Plus, or an FX-80.

Mod I/III

BBS-80

by MicroSystems Software

ONLY 74.95

Your computer becomes a true communications network. BBS 80 allows a person to exchange messages or information via the telephone. Access can be completely public, private to authorized users or limited to certain individuals. BBS 80 can leave messages on another terminal acting as a load bearing member. BBS 80 provides some of the most advanced and most convenient features ever incorporated in a microcomputer bulletin board system including: Users may send private messages that may be read only by the addressee. Multi-level System Security allows up to 15 levels of security in both the message base and the operational database. BBS 80 remembers each regular user and stores terminal information security access levels. Last message entered during last call can be individual user passwords. Users may send private messages that may be read only by the addressee. Multi-level System Security allows up to 15 levels of security in both the message base and the operational database. BBS 80 remembers each regular user and stores terminal information security access levels. Last message entered during last call can be individual user passwords. Users may send private messages that may be read only by the addressee. Multi-level System Security allows up to 15 levels of security in both the message base and the operational database. BBS 80 remembers each regular user and stores terminal information security access levels. Last message entered during last call can be individual user passwords.

MOD I or III

IMPACT

by Powersoft

39.95

An outstanding value for Basic Programmers, IMPACT is a relocatable machine language module that requires no modification to basic, but will do the following: search & replace ● remove remarks ● remove spaces ● remove colors ● remove goto following then ● compress & decompress ● renumber ● trace by line ● or step without destroying screen ● set break points in trace mode ● pin lines ● copy lines with auto return ● move blocks and check for validity ● display memory usage stats ● decode packed string graphics ● copy upper case to lower case strings ● auto save & load from disk and many more.

MOD I/III

CP/M 2.2

by Digital Research and Montezuma Micro

TRS-80 MODEL 4

Only 199.95

Now, run CP/M on your Model 4 and unleash the powerful features resident in your computer. Take advantage of CP/M software such as WordStar™, dBASE II and Multiplan™, along with thousands of others.

- Includes INTERCHANGE™, a utility that allows reading, writing and copying 20 different manufacturers' disk formats such as IBM, KAYPRO, OSBORNE, XEROX, etc.
- Includes MEMLINK™, a unique feature that uses the optional 64K RAM memory as a fast disk drive.
- Complete with all these CP/M utilities: ASM, DDT, DUMP, ED, LOAD, PIP, STAT and SYSGEN.
- Includes MODEM 7, a powerful public domain communications program.
- Supports 80 x 24 video, reverse video, direct cursor addressing and more.
- Utilizes the Model 4 function keys and allows user defined keys.
- FORMAT utility permits up to 52 disk formats to be constructed, all menu driven.
- Ready to run in the standard 64K Model 4. The additional, extra cost, 64K RAM upgrade not required.

Mnemonic Powers

by Dan Robinson

Radio Shack's Model 100 is a chip off the old block, so to speak. It uses a low-powered version of the 8085 central processing unit (CPU) and its instruction set is almost identical to that of the 8080 chip.

Since the Z80 CPU that drives the Models I, II, III, and 4 is upwardly compatible with the 8080, most of the 100's 8085 instructions should be familiar to Model I/II/III/4 Assembly-language programmers. But some significant differences exist. I'll go over them and provide you with a table listing the command mnemonics for each chip.

The primary differences between the chips arise from the fact that the 8085 is short a few registers. It has no IX and IY index registers, and no primed alternate register set. Also, the 8085 has no instruction to directly load the interrupt register. Instead, a pair of RIM and SIM instructions use a bit pattern

in the A register to set the interrupt mask and data bus, and to perform a restart instruction. The restart instructions—numbered RST zero through 7—work from locations in the first 64 bytes of memory.

The 8085 doesn't support relative jumps, and is missing the set and reset bit tests. The miscellaneous instructions that compare blocks and moves are also missing, as are the CB, ED, DD, and FD families of instructions.

In theory, it's possible to use Model I/III utilities such as EDTASM to write assembler code for the Model 100, but you'll have to avoid commands that the Model 100 doesn't support. The object is to send code to the Model 100 through a modem while filtering out unsupported loading codes.

Intel uses its own jargon with the 8085 (MOV instead of LD, for example). Since Z80 terms are currently more familiar to TRS-80 owners, you're likely to see many Zilog words applied to the 8085. Table 1 helps you make the translation. ■

You can reach Dan Robinson at 1625 Higgins Way, Pacifica, CA 94044.

Table 1. Translation of Intel 8085 mnemonics to Zilog Z80.

Intel 8085	Zilog Z80	Description	Intel 8085	Zilog Z80	Description
M	(HL)	Contents of HL register pair	JC nn	JP C,nn	Jump to nn if carry

100 Disks

by Ronald F. Balonis

The Model 100's tape file system is great, but this is 1984 and I prefer disk storage. So I wrote a program called COM/CMD (Program Listing 1) that allows easy file transfer between a Model I/III and the Model 100 and adds manual disk storage to your Model 100.

To use the utility, connect the machines' RS-232 ports with a null modem cable or directly to the Model I if the communications terminal (COM/TERM) switch is set to COM.

File Transfer

To transfer a file from the Model 100 to a Model I/III, get into DOS on the Model I/III, type COM I and the file name, and press the enter key. Then, on the Model 100, type SAVE "COM:88E1E and press the enter key.

After a time, depending on the file type and length, COM/CMD sends the file to the Model 100's RS-232 port and saves it to the Model I/III disk. When the READY prompt and cursors appear on both computers, the transfer is complete.

To transfer a file from the Model I/III to the Model 100, type LOAD "COM:88E1E on the Model 100 and press the

enter key. In DOS on the Model I/III, type COM 0 and the file name and press the enter key.

After a time, again depending on the file type and length, the program reads the disk file and sends it to the Model I/III's RS-232 port. When the READY prompt and cursors appear, the transfer is complete.

The Program

My program is a collection of familiar Model I Z80 routines (see Table 2 for Model III modifications). The program first reads the DOS command line to select input or output mode and for the file name. The program then reads the files, whether input or output, into memory storage and then outputs them according to the mode of operation. In sequence, the routines are: Disk In, Com Out, Com In, Disk Out, Error messages, and the software for the RS-232 port.

The RS-232 stats are set in the software. It ignores configuration switches and sets communications parameters at 9600 baud, 8-bit word length, even parity, 1 stop bit, and XON/XOFF enabled on send to the Model 100 only.

The XON/XOFF, which enables the Model 100 to turn the Model I/III data stream on and off, is necessary to the communication link. Otherwise, the Model 100's housekeeping routines would lose data.

To get a copy of my utility program running on your Model I/III, if you have a Z80 disk assembler, simply key in the source listing and compile it. I use the Misisys modified version of the Radio Shack Series I Editor Assembler—Cassette. Alternatively, key in the hex listing with Debug, then use the DOS Dump command to put a copy on disk. ■

Contact Ronald F. Balonis at 118 Rice St., Trucksville, PA 18708.

The Key Box

The programs in "100 Disks" require 8K RAM on the Model 100, 32K RAM on a Model I or III. The programs in "Rooting Out the Problem" and "Autoliner" run in 8K RAM.

"... your Word Machine is the best bargain I have found in software in my last two years of personal computing"

J. B. Tuscon, AZ

PEL-TEK'S word machine 2.0

only \$20.00

A unique Word Processor for the TRS-80 Mod I/III
32/48K Disk System — different in design, concept,
function and price.

Your SECOND Word Processor shouldn't be a "me too" product but should be useful, economical, and truly different with features like these:

- Easy to learn Commands — great for kids, wives and nervous secretaries
- Graphics mode — to mix graphics with text on the same lines (printer support needed)
- On screen formatting — So what you type is what you print — including centering, word wrapping and tabbing
- Lowercase support — for unmodified Mod I's
- Create and Edit Communications files, like those sent to: from CompuServe
- Exit to D.O.S. and re-enter without losing text even after re-booting!
- Embed any ASCII character 0-255 in text. Supports any printer's special features
- Software forms control — Eject lines, pages, print multiple copies, print time entries
- Written in machine language — printer independent
- And much more

Send self-addressed, stamped envelope for FREE copy of Manual (\$.37 postage, please)

SUPERTAX™

PROFESSIONAL QUALITY PERSONAL INCOME TAX PROGRAMS NOW IN OUR SECOND GREAT YEAR AND STILL UNDER \$30

- Don't wait until April 15. Use SUPERTAX to develop your tax strategy NOW.
- An ABSOLUTE MUST for every personal software library.
- Invaluable for YEAR-END tax planning or for tax return preparation.
- The friendliness and efficiency of these programs are setting standards by which others are judged.
- Highly acclaimed by tax professionals and laymen alike.
- Written by CPA.
- Available for IBM PC, Radio Shack Models I, II, III, 12 and 16, Apple II+, and Kaypro II (all require at least 48K).
- Also available on standard 8" CP/M using Microsoft BASIC.
- Data can be saved on disk.
- Changing any data item instantly changes entire return.
- Subsequent year versions of SUPERTAX available at 40% off.
- Programs are fully prompted and include manual loaded with valuable tax information and guidance.

SUPERTAX I: Using either screen or printer output, SUPERTAX I generates clear and concise summaries of Page 1 and 2 and Schedule A of FORM 1040, allowing you to see at a glance and quickly comprehend your tax situation. This program also prints an OVERALL SUMMARY of the return showing Adjusted Gross Income, Itemized Deductions, Taxable Income, Regular Tax, Income Averaging Tax, Minimum Tax and Payment Due or Refund — all of which are calculated by the program. SUPERTAX I also calculates the moving expense deduction, investment credit, taxable capital gains, political and child care credits, medical limitations, and much more. Input is fast and easy and changes can be made in seconds. This program actually makes tax planning a breeze.

SUPERTAX II: Includes the efficient SUPERTAX I program as well as the more detailed SUPERTAX II program which makes all of the SUPERTAX I calculations, but which also PRINTS THE INCOME TAX RETURN. This program prints Page 1, page 2, Schedules A, B, and G (income averaging) of the FORM 1040 as well as FORM 3468 (investment tax credit) on standard government forms or on blank computer paper for use with transparencies. Any input item can be changed in seconds and the entire return recalculated almost instantly.

SUPERTAX III: This package includes both the SUPERTAX I and SUPERTAX II programs PLUS a program to calculate and print Schedule C of the FORM 1040. Also included is a stand alone depreciation program which calculates and prints your depreciation schedule using both the old rules and the new ACRS rules. Output from the depreciation program is designed to serve as a supplement to IRS FORM 4562.

SUPERTAX I — \$29.50
SUPERTAX II — \$49.95
SUPERTAX III — \$59.95

Add \$2.00 for postage & handling Add \$2.00 if ordering on 8" diskettes. Radio Shack models require 2 disk drives.

Using Escape Codes

To use an escape code in Basic, type

```
PRINT CHR$(27);“*”;
```

replacing the asterisk with the letter in Table 3 after ESC, noting whether the letter is in upper- or lowercase.

To use an escape code in TELCOM, the host computer must first transmit an escape code (ASCII value of 27 decimal or 1B hexadecimal), then transmit the letter after ESC (see Table 3). The host computer should transmit the two characters together with no intervening space.

Special Instructions

Some of the codes in Table 3 require an explanation.

Use ESC T to set up the label line the Model 100 displays when you press the label key. ESC T protects the bottom line from scrolling and prevents the cursor from entering the bottom line. If the cursor is on the bottom line when you issue ESC T, it stays there until it's moved up or past the lower right position on the display.

ESC U unlocks the label line by allowing the cursor to move onto the last line; it does not clear the last line. If you press the label key and issue ESC U, you can print over the label line.

ESC V keeps the display from scrolling. When the cursor is in the lower right position and you've invoked ESC V, characters print over each other. ESC W allows scrolling to reoccur.

Use ESC Y to position the cursor. You must issue two characters after ESC Y: The first one determines the row; the second one, the column where the cursor goes. The cursor is positioned at the ASCII value of the characters minus 32. To move the cursor to row R and column C in Basic, type this command:

```
PRINT CHR$(27);“Y”;
```

Note that column numbers begin with zero instead of 1. The upper left corner is Row 0, Column 0. This method may be more convenient than using the one value in a PRINT@ statement. ■

Contact Scott Jones at 3908 Stoney Ridge Trail, Charlotte, NC 28210.

Table 2. Model III modifications for disk storage program (COM/CD).

The Great Escape

by Scott Jones

Among the data omitted in the Model 100 user's manual are the escape codes, which control screen functions and cursor positioning. Though designed for use in the text editor, you can use the escape codes in Basic programs and with telecommunications (TELCOM) when transmitted from a host computer.

Table 3. Escape codes.

Escape Code	Description
ESC A	Moves cursor up
ESC B	Moves cursor down
ESC C	Moves cursor to the right
ESC D	Moves cursor to the left
ESC E	Clears display and homes cursor
ESC H	Homes cursor (does not clear display)
ESC J	Clears from current position to end of display
ESC K	Clears from current position to end of line
ESC L	Inserts a blank line at the current line; moves text below cursor down a line
ESC M	Deletes the current line; moves text below cursor up a line
ESC P	Turns on flashing cursor
ESC Q	Turns off flashing cursor

DO YOU OWN A STATIC MONSTER?

Static electricity is probably the most persistent problem faced by the average personal/micro-computer user. Static can cause erratic or erroneous data transmission, loss of program, damage to discs and accessories, and even computer component failure. All this is costly, annoying, and unnecessary!!!

The **Static Control Computer Mat** puts static protection at your fingertips where it belongs. Simply touch the mat before touching the computer or any accessories and static is safely drained off to the mat and is sent hurrying off to ground before it can become a problem. There is no ZAP or spark and by periodically touching the mat while operating the computer, you will remain static safe. It is the effective, economical approach to static control in the home or office.

The Static Control Computer Mat.

two and three. The program asks you to key in X left, X right, and epsilon. I keyed in .01, .2, 1E-8. The program iterates, showing successive values. When ABS(F) is less than epsilon, the program displays the root and functional values. You can then run the program for other possible roots.

To check your program, print out the two roots of the log function. The six roots of the trigonometry function displayed show how the plot helps you see close roots and how the bisection method determines them. ■

William R. Harlow has taught at the University of Cincinnati (the Department of Mechanical and Industrial Engineering, 836 Rhodes Hall, Cincinnati, OH 45221) since 1943.

Rooting Out the Problem

by William R. Harlow

Get to the roots of your math problems.

Two short programs for the Model 100, Plot (Program Listing 2) and Bisection (Program Listing 3), help you determine the root(s) of any given function.

Suppose you have an interval I(a,b) and a variable V_{old} associated with it. The equation needed to transfer points to an interval I'(c,d) with associated variable V_{new} is:

$$V_{new} = \frac{(d - c)V_{old} + (b*c - a*d)}{(b - a)}$$

The PSET command of the Model 100 allows 15,360 pixels. I decided to use a horizontal range of five to 235 units and a vertical range of three to 60 units. To establish the horizontal range, let XL and XR be the old values of X-to-the-left; X-to-the-right. Then XP equals $(230*X + 5*XR - 235*XL) / (XR - XL)$. Use a similar expression for the YP. The program tests whether it can plot the axes; then it plots the curve and PRINT@ puts the original ranges at the top of the plot. The program puts the function at line 140 in the form $Y = a$ function of X.

The program includes two examples. When you run the first, $Y = 4*\text{SIN}(3*X) - X^2 + 3$, it asks for XL and XR. I keyed in -4,4. The suggested increment becomes .08. I keyed in .1. Too large an increment spreads pixels out; too small an increment slows the plotting speed. Line 30 gives a reasonable value.

The program then asks for Y below and Y above. I keyed in -15,10. Now plotting takes place reasonably quickly. Line 200 is a loop; press the break key to get control back. A subroutine to select the smallest and largest Y value would add about five lines to the program. If the plot is poor, you can always try again with different values. You can also estimate roots by expanding the plot range.

The Bisection Program

The bisection method, one of the oldest known algorithms to determine a real root, isn't fast but it's fairly foolproof. If a function changes sign in an interval, there is at least one root in that interval and the bisection method will get it. Here is where the plot comes in handy: you can see places where roots occur or are close together and can use the appropriate values.

Line 300 is in the form $F = a$ function of X. Here I used $F = \text{LOG}(X) - X^2 + 4$. X must be greater than zero. The plot revealed two roots: one close to zero and the other between

The Banner Machine

- For the TRS-80 I & III with 32K tape or 48K disk
- For use on the Epson MX-80 with Graftrax
- Uses dot graphics instead of TRS-80 block graphics
- Menu-driven program
- Operation similar to a word processor
- Makes signs up to 10" tall by any length
- 10 sizes of letters from 3/4"-8" high
- Mono or proportional spacing
- Automatic centering; Right and left justifying
- Makes borders of variable width up to 3/4"

™ TRS80 color

From the January 1981 issue of the CSRA Computer
Club newsletter:

There was some amusement at the November
meeting when the Radio Shack repre-
sentatives stated that the software in the
ROM cartridges could not be copied. This
month's 68 Micro Journal reported they had
disassembled the programs on ROM by
covering some of the connector pins with
tape. They promise details next month. Never
tell a hobbyist something can't be done! This
magazine seems to be the only source so far
of technical informations on the TRS-80 color
computer. Devoted to SS-50 6800 and
6809 machines up to now. 68 Micro Journal
plans to include the TRS-80 6809 unit in
future issues.

To get the MOST from your 6809 CPU - This is the
BEST SOURCE! The ONLY Magazine for the 6809
Computer. Months Ahead of All Others!

ULTRA TERM

A FULL FEATURED TERMINAL PROGRAM

The Ultra Term communications package is one of the easiest to use and most versatile communications programs available for the TRS-80. It includes a full featured intelligent terminal program, with all the popular features of competing programs costing two to three times as much, and some new features that can't be found anywhere else at any price. Ultra Term also includes a self relocating host program, and hex conversion utilities for bulletin board downloading. Some of Ultra Term's unique features are:

- Supports both manual and auto dial modems
 - Exclusive Ultra Term direct to disk file transfer mode, allows unattended operation at the receiving computer.
 - Exclusive split screen feature allows simultaneous two way communications without confusion.
 - Line printer support with a 1K print buffer.
 - Half and full duplex support.
 - Universal ASCII format file transfer with a 33K Buffer.
 - A full featured host program.

C:Notes

Autoliner

by Richard Ramella

Autoliner (Program Listing 4) gives the Model 100 an automatic line-numbering capability similar to what Level II Basic provides.

The program lets you specify the starting line number of a program and the increment for each succeeding line. It is most useful when keying in published programs with regular line increments—100, 110, 120, and so on. Autoliner can also handle irregular line numbers—for instance, a line number of 237 in a program otherwise marked by lines in increments of 10.

Autoliner creates a text (.DO) file that becomes the program you key in.

Program Operation

First the prompt Name of Program ? appears. Name the program as you wish. If the name has more than six characters, the text file name becomes the first six characters in the name. This is required because a text file must be named in six or fewer characters.

The next prompt is Starting line number ? and may be any number from zero to 65,529, the highest line number the Model 100 accepts. Type the number and tap the enter key.

The final parameter-setting prompt is Line increment ? and

may be any number from one up. Type the number and tap the enter key.

Now you're ready to key in the program. The prompts appear starting with the first line number and continuing in the increments you set.

An Example

Run the program Autoliner. Answer the first prompt by typing TEST and tapping the enter key. Answer the second prompt by typing 100 and hitting the enter key. Answer the third prompt by typing 10 and pressing the enter key. Line 100 appears with a prompt; answer it REM TEST and tap the enter key. Answer the line 110 prompt by typing PRINT "IT WORKS!" and hitting the enter key. Answer the line 120 prompt by typing ! and pressing the enter key. Answering any line prompt with an ! ends the program.

As it stops, the program announces See TEST.DO for program. TEST is the name of the program you have keyed in.

Then type RUN "TEST" and the program creates and runs a Basic version of the text file. Break into this new program and type SAVE "TEST" and tap the enter key. This puts the program in a Basic (.BA) file where it will be safe. Then type KILL "TEST.DO" and tap enter. This kills the unneeded text (.DO) version of the program.

Don't attempt to run your new program until you have completely keyed it in. It doesn't exist as a Basic program until

One size does not fit all. Our cases are designed for specific hardware configurations. When you put your computer in our case, it fits hand-in-glove. Once your equipment is safely inside the attache-style carrying case, it never has to be taken out again. To operate, simply remove the lid and connect the power. To store your computer, disconnect the power, enclose your disks, working papers, and manuals in the compartments provided, and attach the lid. It's as easy as that.

you end things by typing ! and tapping the enter key.

If you find an irregular number in the listing, answer the line prompt with an asterisk and the program responds New line number and data ?. Answer this by typing the irregular line number and the program information that accompanies it. Then tap the enter key, and the program returns to the regular line increments you specified.

To correct a line, answer a line prompt with the asterisk and then type in the line number you want corrected and the correct version of the line. While useful for short lines, the program doesn't allow the full-screen text editing available when you've turned your program into a Basic file. You can put the same line number twice into a text file, but when you run it as a Basic program, it eliminates the old line and uses the new one.

A few lines at the start serve no purpose other than goof-proofing the program. If your starting line number is 65,000 or more, the program tells you the number of lines with which you have to work. If the increment you choose allows 150 or fewer lines for the program, Autoliner tells you that number. ■

RAM FILES

Disassembler Debug

Several errors appeared in my Disassembler program (September 1983, p. 283) that make it run improperly. The following is a list of corrections:

RCLA in line 20 should be RLCA.

Lines 160 and 170 are the same in the listing. Line 160 should read:

```
160 DATA "LD L,D","LD L,E","LD
L,H","LD L,L","LD
L,(HL)","LD L,A","LD (HL),B"
```

Don't forget that tabs, not spaces, separate the mnemonics and operands.

Line 170 is missing a right parenthesis. "LD (HL,H" should read "LD(HL),H".

Lines 1760 and 1770 should end in RETURN:ELSE RETURN.

Finally, the two spaces in line 10530 in Fig. 1 should be carets for exponentiation (press the shift/6 keys).

I also have a few changes in the mnemonics. When I wrote the program I used Z80 code, but no relative jumps or alternate register sets exist in the 8085. You should make EX AF,AF' and EXX undefined. Leave EX DE,HL, and EX (SP),HL as they are.

All but two JR...@ (including DJNZ @) should be changed to undefined. JR NZ,@ should be RIM and JR NC,@ should be SIM. RIM is the read interrupt mask, and SIM is the set interrupt mask.

I put the equivalent restart commands for the Z80 and the 8085 in Table 1. Their functions are identical.

CR Patch

Most printers have a switch labeled "Auto LF after CR." Most computers (e.g., the IBM PC) require this switch to be off to distinguish between a line feed (LF) and a carriage return (CR).

TRS-80 computers require this switch be on so when

Z80	8085
RST 00H	RST 0
RST 08H	RST 1
RST 10H	RST 2
RST 18H	RST 3
RST 20H	RST 4
RST 28H	RST 5
RST 30H	RST 6
RST 38H	RST 7

Table 1. Restart commands for the Z80 and the 8085.

the computer sends a carriage return, the printer supplies the implied line feed.

If you use two different computers with the same printer, this protocol can be a hassle. We wrote the patch in Program Listing 1 to eliminate this problem.

Model 100 document files have CR/LF pairs embedded in them (try using control/P, control/M, control/P, control/J in Text), but the printer driver strips out any line feed immediately following a carriage return. This patch intercepts the printer driver between each character so it never knows that it just printed a carriage return.

We offer this patch with some trepidation, since it redirects a system jump vector into user memory. It presents no problems under most circumstances, but if you leave it switched on and load a program that clears memory above 62700 decimal, the results are unpredictable, and probably disastrous if you try to print anything.

The programs from the Portable Computer Support Group (PCSG) are an exception to the above caveat. They are fully compatible with this patch, even though they reserve memory above 62700.

Built-in Criticism

Publicity for the Model 100 always emphasizes the five built-in programs, including the editing program, Text; the scheduler program, Schedl; and the address organizer, Addrss.

Schedl and Addrss consist of nothing but the search and find parts of Text, with the rest of the text modification capabilities turned off so you can't accidentally clobber any of your address or schedule information. This is OK, but it's more like one and a half programs than three.

In addition, Addrss only operates on the ADRS.DO file, and Schedl can only operate on the NOTE.DO file. This is quite inconsistent.

Next time around, Tandy should combine Schedl and Ad-

Bar Graph Program

I am looking for a bar graph program for the Model 100 that either produces printable data from the program from "The Year in Review" (August 1983, p. 207) or from another program containing a hard copy print routine.

The program must work on my A.M.P. 120 printer.

*T. Hardy McCoy
7718 D.S. Victor
Tulsa, OK 74136*

Cram Notes

Brad Dixon's Cram 100 program (October 1983, p. 283) is a barrel of fun.

He mentions sound capabilities, so I changed lines 100 and 130 to values other than 2216 for variety. In line 200 I put SOUND0,2: between BEEP: and NEXT.

The best change is to put Avg in addition to Turns and High at the top of the screen. Add G=G+1 to line 40, TT=TT+N to line 200 (before CLS), and add AV=TT/G. I'm looking forward to the expansion of C•Notes.

*David Dunn Thomas
2308 Chetwood Circle #103
Timonium, MD 21093*

Screen RAM Location

While stepping through the Model 100's RAM (24K), I found that the screen RAM is located at 65024 to 65343, inclusive, for a total of 320 bytes.

While I can't POKE characters on the screen, I can PEEK them. Even stranger, the information POKEd to the screen is in RAM, but is not on the screen! I have displayed the keyboard matrix setup in Table 2.

I use Program Listing 2 to PEEK about in RAM. The commands are:

- CTRL to enter a new address.
- SHIFT to add one to the address.
- GRPH to subtract one from the address.

The program displays both the decimal value and the ASCII value if it is printable. The best feature of this program is that it constantly updates information on the screen.

I hope the readers of *80 Micro* can make use of this information.

"Worksheet 100" — A Spreadsheet Program for the TRS-80™ * Model 100 Portable Computer

The "Worksheet 100" works with spreadsheets of up to 16 columns by 40 rows with 24K of RAM or up to 16 columns by 60 rows with 32K. Eight main functions using the programmable function keys plus three entry modes provide large spreadsheet convenience. The "Goto" function, doubling as a "search function", will speedily move the marker to any cell given coordinates, column and row labels or cell contents. Full arithmetic operators plus summation, averaging, maximum and minimum functions are provided.

Worksheets can be saved or loaded using RAM or cassette. A very useful group of worksheet templates (with formulas) is provided ready to load. These are "Expense Report", "Sales Report", "Service Report", "Weekly Schedule", "Personal Tax Worksheet", and "Personal Finances I and II".

The "Worksheet 100" and the seven ready to use templates are supplied on a single cassette and require 24K RAM.

The "Worksheet 100" and seven useful templates—for only \$89.95

NEWS THIS MONTH

From House to school

Micros in class: will Congress foot the bill?

Even before Rep. Pete Stark presented his "Apple bill" to Congress in 1982 (see *80 Micro*, May 1983, p. 340), micros were pouring into America's schools. Now seven other proposals, including one from Radio Shack sponsored by House Majority Leader Jim Wright, have increased the pressure to make computers a classroom prerequisite.

Stark's original bill, which would have encouraged computer makers to donate micros to schools and take the machines' value as a tax write-off, passed the House last year by a 323-62 vote. It stalled in the Senate, amid charges it was mainly a boost for Apple—which was poised to contribute \$200 million worth of IIs, reaping not only the tax break but an enormous market among school officials buying replacements and parents buying computers to use at home.

The California Democrat has reintroduced the "Apple bill," essentially unchanged, as H.R. 701 in the current session. In the meantime, however, Majority Leader Wright has introduced H.R. 2417—which might, considering its technical specifications and Wright's Texas constituency, be described as "the Tandy bill."

While its overall concept is similar to Stark's, H.R. 2417 has several vital differences. One requires that dealers give teachers eight hours of training on donated equipment, this training to take place within "the immediate vicinity of the participating teacher's school." While mileage has not been specified, the training requirement favors Radio Shack, whose 6,500-plus outlets far outnumber Apple or other brands' dealers.

TRSDOS to go: Tandy's new transportable.

The Model 4P

The Model III mode's on a disk instead of in ROM, but the slogan is terrific: Radio Shack's TRS-80 Model 4P, "a microcomputer worth carrying about," reached dealers on Nov. 15. The transportable version of the 64K Model 4 weighs 26 pounds and costs \$1,799.

The 4P's white case contains a 9-inch screen, two slimline 184K disk drives, and a detachable keyboard (with all 70 Model 4 keys, including Control, Caps Lock, and three function keys). Like its deskbound cousin, the 4P offers both a 64-column Model III mode and an 80-column by 24-line display for TRSDOS 6.0

programs, as well as compatibility with Tandy's long-delayed CP/M Plus.

Memory is expandable to 128K. A \$149.95 modem board offers direct-connect 300-baud communications; Radio Shack describes the board as "user installable," which—considering Tandy's famous void-warranty warning against opening a TRS-80's case—is as revolutionary a development as the 4P itself.

The transportable's \$1,799 price is \$200 under the 12-inch-screened Model 4's; with the demise of the Osborne 1, the 4P's closest competitor seems to be another 64K Z80 suitcase, the Kaypro II. The Kaypro currently sells for \$1,595, with 10 CP/M applications programs included. ■

MULTIDOS . . . C.E.C.'s deluxe disk operating system for the TRS 80 Model I and III is now available for your **MAX 80**. MULTIDOS is versatile, fast, efficient, and user friendly and supports the MAX 80's 64 column or 80 column display. MULTIDOS enables the user to Automatically install and remove function key functions in assembly language programs on the MAX 80.

MULTIDOS \$99.95

(Coming soon for your MAX 80 . . . 8" Floppy and Hard Disk Support)

Z'DOS . . . economical disk operating system for TRS 80 Model I and Model III. Forty library commands, supports three densities (Model I version), read/write compatible with most DOS formats and double density boards. Has SUPERBASIC II with 41K of free memory, cross reference, renumber and global editing.

. \$39.95

EBASIC . . . extended disk Basic. Adds high-speed graphics, versatile special functions, twenty-four types of formatted keyboard INPUT, program line labeling, array operations, and multi-key SORT of unlimited arrays. Works with all major DOS systems.

EBASIC \$49.95

ZEUS . . . Assembly language programming has reached a new era. Unlimited nesting of conditional assembly. Unlimited nesting of INCLUDING files. Absolutely will not accept a bad OPCODE. Positively the fastest full featured assembler. Works with all major DOS systems.

Zeus Editor Assembler Introductory Price \$79.95

BOSS / RENUM90 . . . Best operated single stepper. This machine language BASIC program debugging utility allows you to single step BASIC programs, trace in a controlled area on the display, trace to the line printer, save the screen and display variables, control program execution speed, save Basic programs to high RAM and insert breakpoints into your Basic program. RENUM90 allows you to renumber all or part of your Basic program.

On tape or disk, BOSS / RENUM90 for \$24.95 or BOSS only \$15.95

Wright's bill also outlines hardware standards, recommending a system with two 184K disk drives. To skeptics, this translates as "a TRS-80 Model 4"; the system Apple has been giving to California schools includes one 140K drive.

Finally, Wright appeals to legislators' thrift: Apple's plan lets manufacturers write off 200 percent of the hardware's "basis cost" (a bit more than production cost), while Tandy would settle for 125 percent and throw in software equal to 10 percent of the machines' value.

Naturally, the two manufacturers disagree on the bills' pros and cons. Stephen Scheier, director of Apple's Kids Can't Wait program (now distributing micros to California schools), told *InfoWorld's* Scott Mace that the Radio Shack bill "would limit the number of computers we or other manufacturers can offer."

Tandy's director of corporate planning, George Kuhnreich, countered by criticizing Apple's lack of training requirements: "You can't just dump the CPU on someone's desk."

Both the Stark and Wright proposals are currently stalled in committee.

A Full House

Meanwhile, six other computer bills are now crowding Capitol Hill. Rep. Tim Wirth (D-Colorado) would let schools choose their micros as independent shoppers rather than giveaway recipients, with government subsidies for purchase of systems, software, and peripherals. Wirth also advocates training facilities similar to those created by the Defense Education Act after the USSR launched Sputnik in 1957.

His bill, H.R. 3750, attracted 40 cosponsors in its debut before the Labor Day recess, despite an estimated cost of up to \$200 million for each of 10 years.

Rep. Tom Downey (D-New York) has introduced legislation to create computer education and information centers, which would provide some software in addition to teacher training and demonstration facilities.

Finally, Mace writes, Rep. Brian Donnelly (D-Massachusetts) grants the same 200 percent deduction as Stark, but his bill requires companies to make 75 percent of their donations to "schools with students whose parents' incomes are below the national median."

In the Senate, John Danforth's S.

1194, written by the American Electronics Association, has attracted endorsements from the National Association of Secondary School Principals and the National Committee on Industrial Innovation. The Missouri Democrat's bill, which would cost some \$300 million, encourages teacher training and educational research and development, as well as supplying tax breaks for the donation of hardware and software.

Sen. Lloyd Bentsen (D-Texas) has introduced a similar bill. Along with his Apple proposal, Stark has put a

bill identical to Danforth's before the House.

Though S. 1194 has strong support in the Senate, as do Stark, Wright, and Wirth in the House, no single plan seems likely to break out of committee before the others. With legislators torn between election-year economy and rising demand for better education, an alliance between schools, micro manufacturers, and the federal government—an idea reportedly born in early 1982, when Stark met Apple Chairman Steve Jobs on a cross-country plane trip—may be ready to graduate. ■

Remember PMC?

From Model I clones to CP/M boxes.

With the IBM PC inspiring a dozen imitators and the Apple/Franklin copyright lawsuit making headlines (see *80 Micro*, December 1983, p. 258), it's easy to forget that the first microcomputer work-alike was based on Radio Shack's trusty Model I. Today, Personal Micro Computers Inc. is phasing out its Tandy twin in favor of an 8-pound box that gives CP/M power to mainframe terminals—and PMC's president is optimistic that the corporate market will bring better sales than did their TRS-80 copies.

"We're pioneers in the clone field," President Ron Troxell told *80 Micro*. Originally a vendor of printers and peripherals, the Mountain View, CA, firm made its systems debut in 1980 with the \$495 PMC-80, a beige-cased micro with 16K RAM, Level II Basic in ROM, CRT interface, and built-in high-speed cassette deck.

A year later, the PMC-81 appeared: the same machine, with upper- and lower-case standard and a numeric keypad replacing the tape deck, for \$595. Users could upgrade both machines to 48K with a PMC expansion interface, and run all Model I software.

PMC sold its micros through mail order and a small group of about 60 dealers. They didn't sell very many. Datapro Research Corp. of Delran, NJ, estimates that 35,000 of the Model I compatibles are in operation; Troxell, while claiming "that's probably low,"

won't give an official figure.

Is PMC still making 80s and 81s? As of September 13, Troxell indicated the work-alikes aren't long for this world: "Yes, we are [selling them]. We've also introduced a new computer which will take the place of that product."

That may be a little misleading; the new PMC-101 MicroMate is not a personal computer, but a Z80A-based unit with 128K RAM, one 400K disk drive, RS-232 and Centronics ports, and no monitor or keyboard. It operates with any asynchronous terminal, turning a mainframe outlet into a workstation for CP/M Plus software.

"We have targeted the market very accurately on this product to the installed terminal base existent in large corporations and government agencies, where these agencies are looking to add local computing power to their existing mainframe operations," Troxell said.

"They can switch between dumb terminal operation and intelligent workstation operation, where they can do local word processing and spreadsheet, things like that, or any other CP/M program off-line from the mainframe, and also upload information to and from the mainframe.

"There's also a very strong OEM market for this particular product because it's nice packaging," he continued. "It's a simple little thing that provides a lot of computing power at a small price [\$1,195]."

"Built Like A Tank"

Is Your Printer Too Slow?

The Microfazer is a Printer Buffer. A Printer Buffer won't make your printer print any faster, but it will free up your computer while your printer is printing. The computer can dump the information to be printed into the Printer Buffer almost instantly. The Printer Buffer then waits on the printer and passes on the information to the printer when the printer can accept it. The computer is free to do more important things (instead of waiting on the printer). So, instead of spending \$500, \$800, \$1000 or more on a new printer, try our

128K Microfazer Printer Buffer! \$299.95

The old: PMC's EPS-80 word processor.

Considering that corporations are rushing to complete office automation systems from makers like IBM and DEC—and that demand today is for 16-bit rather than 8-bit machines—the MicroMate might be considered an underdog. Nevertheless, Troxell anticipates success when his distributors' salespeople call on data processing managers.

"[The MicroMate] doesn't compete with [the big firms' products] at all," he said. "It really augments the systems that they're providing."

As for software, Troxell sees CP/M Plus (Digital Research's 3.0 version) and the PMC-101's price as offsetting any 16-bit advantages. "We were the first people on the market with a CP/M Plus system delivered," he claimed. "We've been very happy with it. It's a good [operating] system."

"The wealth of software that's available on CP/M right now makes this ap-

proach very reasonable, and something that other CP/M companies have bypassed. Nearly every other CP/M machine on the market is sold with a terminal and keyboard. So there's a huge market, my gosh, there're six million terminals out there."

As for the PMC-80 and -81, Troxell reassures owners, "We'll continue to support the product, provide service and so forth, here. And we're still involved in selling peripherals, printers,

"We're pioneers in the clone field."

disk drives, that sort of thing." In addition, PMC's EPS-80 word processor, a 48K model with both Basic and Electric Pencil in ROM, will be sold at least a while longer at \$795.

Looking to the future, Troxell said, "We're in very good shape. The MicroMate's going to make a very significant impact on PMC sales; as the MicroMate picks up we'll probably phase the others out completely as we expect the MicroMate to be a very good seller."

Beyond that? "All I can say is that the logical direction for everybody is toward 16-bit systems, but it's not practical for us at this time." ■

—E.G.

The new: PMC's MicroMate for CP/M.

UPDATE

The Model I: Staying alive

Vendors vow continued support.

Nothing lasts forever, and three years is forever in the computer industry. Nevertheless, the TRS-80 Model I—the first mass-marketed personal computer—is hanging in there nearly seven years after its introduction, defying both old age and its replacement by newer Radio Shack micros. Perhaps 250,000 of the 300,000 Model I's sold are still in service—and, judging from an unofficial survey, some vendors think the I will survive for some time to come.

The survey, conducted by questionnaire to 69 TRS-80 hardware and software manufacturers and distributors, yielded 18 opinions of the Model I marketplace. A solid majority of respondents described the I as “still viable” for hardware and software sales (57 and 73 percent respectively), and a quarter of them said their business had increased in the past year.

Among hardware vendors, 28 percent said the Model I market was up, 43 percent said it was unchanged, and 28 percent admitted business was down. Model I software seems less popular, with figures of 27 percent (up), 27 percent (unchanged), and 36 percent (down).

The Model I has always attracted hardware buyers, since it's a system designed to be upgraded. Many of today's vendors began as frustrated hackers selling their own solutions to Model I problems—clock speed-up kits, disk storage doublers, gold-plated replacements for unreliable connectors, and so on.

When the Model III appeared in 1980, fixing many of the I's limitations but lacking complete compatibility, Radio Shack's move forward—plus the I's expandable, modular design—opened the door to outside initiative. In a sense, Tandy taught the Model I to fly by pushing it out of the nest.

Is it still flying? Questionnaire responses fell roughly into three categories, describing the Model I in negative, neutral, and positive terms—or, to pick

Swaim: New life for “a dead horse.”

distinctive adjectives, obsolete, adequate, and wonderful.

On the negative side, George Blank of New Classics Software said, “[The Model I] is unreliable and getting more so as time goes on.” In addition to “not reliable,” Eugene Shklyar of XYZT Computer Dimensions Inc. mentioned “slow processor,” “limited memory,” and “not produced any more,” and Arlene Schaffer of Taranto & Associates Inc. said, “Too many problems, too slow, not enough capacity.”

On the other hand, Logical Systems Inc.'s J. Kyle DiPietropaolo pointed out, “The fact that new computers exist doesn't make [the Model I] any less useful for doing the things it is capable of.” Several vendors echoed John Monin of Alpha Products Co., who said the I “does the basic job once the bugs are fixed.”

And some are loyal fans, who see the Model I as a workhorse that still works for technically astute or upgrade-conscious owners. George Geczy of JMG Software International wrote, “Compared to my Model I, the Apple IIe is not so hot.” United Software Associates' John Burgan added, “My Model I does everything my Model III can three times faster [with a speedup mod].”

Rather than comparing the I to younger machines, Theresa Welsh of AlphaBit Communications Inc. summed up TRS-80 pioneers' situation pragmatically: “Our customers like it. Their only worry is lack of service, parts, and software. People will keep their Model I's as long as there's support for it.”

As for that, the prospects aren't all bad. Fifty-seven percent of the hardware vendors claimed their firms had new Model I products coming, as did 55 percent of software respondents.

To companies not already involved, LNW Research Corp.'s Jim Swaim admitted that the Model I has “basically been abandoned in the marketplace. It's simply a dead horse.” For current supporters, though, “the Model I can become a very viable marketing area for someone with a product that makes sense, at a price the user can live with.”

Besides, Swaim added, “The mentality of people who own Model I's is superior from an electronics standpoint, and of course their dedication to the machine is almost legendary.” Age may not count for much in the computer industry, but 250,000 owners pack some clout. ■

—Vester Scott

PULSE TRAIN

Apple sings the blues?

No one expects Apple Computer Inc. to go the way of Atari, TI, or Mattel, but there are some clouds over Cupertino, CA. Apple stock fell from last June's high of \$62 to \$24.25 a share by late September, and fourth-quarter profits were expected to total \$5 million to \$8 million, compared to \$18.7 million a year ago. Still worse, some industry analysts predict that up to 600 Apple employees might be laid off by Christmas.

The trouble, to put it briefly, was that the IIe and III were getting old, the McIntosh was still in the wings, and the Lisa was too expensive. Despite rave reviews for its integrated software, Apple's \$10,000 flagship has been trounced by the IBM PC in corporate sales—and industry analysts like Charles Newton of Newton-Evans Research Co. fear Apple has “too many eggs in its Lisa basket.”

One corporate move, though it scared Wall Street (sending Apple stock down eight points), made sense: a cut in Lisa prices, bringing the system to \$8,190. Apple also began selling an “empty” Lisa for \$6,995, offering its six programs (LisaWrite, Calc, Graph, Project, Draw, and List) individually or as a \$1,195 set.

As *InfoWorld* reported, this made it possible to buy a Lisa package for less than an IBM PC XT with VisiOn software. (The XT has 10 megabytes of hard disk storage to Lisa's five, but Lisa has 1 megabyte of RAM versus the IBM's 256K.)

Even so, buyers are hesitating to spend the money for

Lisa: Low in sales appeal.

Lisa, especially since rumors ever since its January 1983 introduction have promised a similar Apple at a fraction of the cost. The McIntosh, first described as a \$3,000 PC competitor, is now supposedly a \$1,200 rival to IBM's Peanut. January is expected to bring a Lisa-like upgrade for the Apple IIe, perhaps reviving sales of the antique machine.

And there are various rumors about the fate of the Apple III: disappearance (as Apple concentrates on the IIe, McIntosh, and Lisa for the low-, middle-, and high-end markets), a comeback sparked by a new business unit in Cupertino, or anything in between.

Most of all, Apple finds itself (in *Computerworld's* phrase) “swimming in a Big Blue sea.” A crucial part of Lisa's quest for corporate acceptance, the ability to link with IBM mainframes, was postponed when a widely reported deal with Cullinet Software Inc. collapsed, and the harsh realities of the software world have brought about the specter of Lisa owners junking their integrated programs and running MS-DOS with an 8086 card.

Marc Rudov of Venture

Development Corp., Wellesley, MA, and other analysts say that Apple, like Osborne, created a market and then fell behind its changes. As *CW's* Patricia Keefe reports, “Rudov recommended Apple abandon its ‘No. 1 strategy’ and start thinking of itself as ‘No. 2.’ ”

Modem technology patented

For most of 1983, industry watchers were saying that 1984 would be the year of the \$50 smart modem—that lower prices would spark the same boom in telecommunications that cheaper micros have brought to home computing. Now it looks like just the opposite may occur: A Sunnyvale, CA, firm has patented the technology used in many modems. If its claim is upheld, the company can command licensing fees from manufacturers, thereby driving retail prices up.

Michael Eaton, president of Bizcomp, told *InfoWorld* that he thought of the intelligent modem, which automatically switches between command and data status, in

1978. Bizcomp began selling a unit in March 1980, 14 months before Hayes Microcomputer Products introduced its popular Smartmodem.

Besides the Hayes unit, *IW's* John Markoff reports, “virtually all currently marketed personal computer modems that link to the serial interface,” as opposed to being bit-mapped directly to a bus, use Bizcomp's switching technique.

As a result, though the exact amount is a secret, Hayes “has signed a multimillion-dollar licensing agreement” for the use of “technologies... defined in the Bizcomp patent.” And Bizcomp intends to sign up other manufacturers.

“It's not our intent to drive anyone out of business,” Eaton said. “[However,] we expect a lot of reaction [from modem makers] when they realize their product line is subject to licensing.”

As for reaction from buyers, Eaton admits, “Costs will go up because of royalty payments to us.” Kenneth Bosomworth, president of International Resource Development Corp. of Norwalk, CT, calculated that Smartmodem prices would rise 3 to 5 percent.

Others disagree. Bert Weiss, national sales manager for Anchor Automation, predicted Bizcomp would have trouble enforcing its patent: “It's tough to patent a smart modem. I don't think we're using anyone else's designs.”

Bizcomp Marketing Director Bruce Miller, on the other hand, told Markoff that the company would pursue patent users: “If we are challenged, it's safe to say we'll take them to court.”

Few expect the patent to

PULSE TRAIN

make Bizcomp a household word. Hayes and Novation, according to Dan Foley of Dataquest in Cupertino, CA, control 70 percent of the personal computer modem market.

Nevertheless, Foley said, "I think the agreement is significant in the sense that it will provide Bizcomp with a great deal of capital." With the power of the patent, one of the Network Nation's major players may be behind the scenes.

The silicon college

Education via correspondence courses has been around almost as long as the mailbox, but the "electronic university" is an idea whose time has come. According to Ron Gordon, former chief executive officer of Atari Inc., his new venture, TeleLearning Systems Inc., will soon link as many as 5,000 teachers, half a million students, and micros in homes and offices across the U.S.

The San Francisco company plans to offer a 24-hour network giving students 170 courses, with hundreds more planned by late 1984. Its "knowledge module," a 300-baud modem, transfers

lectures, questions, answers, and homework assignments and exams, as well as giving students a high-resolution image of the professor on the other end of the wire.

The modem, the only way to access TeleLearning's network, is available for disk-equipped Apple IIs and IBM PCs (\$229.95) and Commodore 64s (\$129.95), with Radio Shack and Atari versions on the way. Tuition is \$35 to \$250 per course, for lessons ranging from college prep work to accounting and law.

TeleLearning's two selling points are ease of use—its software automatically handles log-on sequences and other protocols and verifies data transmission in both directions—and impressive academic credentials. Gordon promises that the American Medical Association plans to offer at least 100 courses, and "world-famous instructors" will be among those establishing on-line office hours in other subjects.

By "breaking down the barriers of time and distance," Gordon told *Computerworld*, his project will "bring education to millions and millions of people who are unable to have an education." In addition, TeleLearning is offering its software to corporations or existing

schools interested in setting up tutoring systems of their own.

The Reagan Administration likes the idea. U.S. Secretary of Education T.H. Bell attended TeleLearning's initial press conference in Washington, along with James Coyne, head of the White House Office of Private Sector Initiatives.

Said Coyne, "This is like the first day of school for a whole generation of Americans. It's a wonderful new beginning, and we at the White House wish it well and look forward to providing it with assistance."

Osborne U.K. to press on

Osborne Computer Corp. has filed for bankruptcy in California, but the micro may yet survive in Adam Osborne's native England. According to *MicroScope*, Osborne U.K. Managing Director Mike Healy hopes to set up production of the new Executive transportable and introduce the low-end Osborne that never made it to America.

"We have always traded on an arms-length basis with the U.S. manufacturer, and have always paid our way,"

Healy told the British bi-weekly. "We can get supplies of the [Executive], and we can continue trading."

While competition from Compaq and Kaypro is less severe in Britain and Australia, Healy admitted that "credibility is the problem" in keeping afloat as buyers watch his parent firm collapse.

"We have to take steps to protect our customers," he said. "In principle, we could have a 'Made in Britain' label on by February, and I think the Executive and the IBM-compatible Executive are competitive."

In addition, *MicroScope* says, Healy plans to sell the Vixen, the smaller, lighter replacement for the Osborne I that was rumored but never reached the U.S. market.

As for Adam Osborne, *MS* reports that the company founder was using idle post-bankruptcy hours to finish a novel, when not pointing out that his work with the Hayward, CA, firm had been primarily ceremonial since Robert Jaunich became president in January 1983.

Osborne has also been approached by science fiction writer and *Byte* columnist Jerry Pournelle, who's reportedly interested in writing a novel about the company's rise and fall. ■

ARE YOU TIRED OF HEADACHES AND WATERY EYES FROM STARING AT YOUR TRS-80'S HARSH WHITE VIDEO DISPLAY?

Well, a **FATIGUE FIGHTER** optical filter changes that display to a nice, easy on the eyes, green. It is made of hard 1/8 inch thick acrylic for durability, attaches in seconds without tools, and matches TRS-80® styling. So, invest in some relief, get a **FATIGUE FIGHTER** for your Model I, II, or III. It will probably be one of the most used accessories you will ever buy.

Comdex fever

● For some time, people have been saying that the biannual COMDEX shows are getting too big. The expos' sponsor, The Interface Group, has responded with more and bigger Comdexes: a third show on the West Coast, to be held each winter, will join the spring and fall events in 1984. Meanwhile, the Needham, MA, group has joined with the producers of the Consumer Electronics Show to finance a 120,000-square-foot addition to the Las Vegas Convention Center.

● The ADAM chronicles continue. In October, with FCC approval in hand and the \$600 system about to make its delayed debut, Coleco Industries execs were hit with a lawsuit from stockholders, claiming stock manipulation—selling shares in June, when Adam's announcement sent Coleco soaring, while concealing the real or rumored technical defects that surfaced later.

● Remember Cadillac's short-lived V-8-6-4 ENGINE, that ran on more or fewer cylinders depending on power demand? The latest trend in computing is multiple-personality micros. The Seequa Chameleon and Lanier's new Business Processor 1000 each have both Z80 and 8088 processors to run 8-bit CP/M and 16-bit MS-DOS software, and Micro Craft Corp.'s 8-, 16-, and 32-bit Dimension supports its own 68000 CPU and plug-in Z80, 8086, and 6502 cards.

● Half a dozen colleges assigned micros to incoming FRESHMEN last fall; Dallas Baptist College is the first to hand out Model 100s for in-class use. Each of DBC's 500 campus newcomers paid a computer-use fee of \$150 to \$300 to pick up a portable. After paying for four semesters, students will own their 100s, or can apply the fees toward purchase of a larger computer.

● In addition to challenging AT&T in long distance phone service, MCI Communications Corp. is moving into VIDEOTEX: For \$1, an MCI Mail subscriber with a micro and modem can call a local number and send a 7,500-character message to another subscriber anywhere in the U.S. If you're writing to someone who isn't on line, MCI will deliver a printout via the U.S. Postal Service for \$2 or Purolator Corp. for \$6.

● The forecasters at International Resource Development Inc. have given a morning line on the DOS WARS: CP/M-80, they say, will go from running on 58 percent of 1983's micros to 54 percent of 1986's, while MS-DOS' percentage climbs from 29 to 50 and Unix's from 2 to 10. AppleDOS will decline from 24 percent to 10 percent, and the big winners will be Smalltalk- or Lisa-style systems, with 0 percent today but 30 percent in 1986.

● Making the government-endorsed BBC micro has given ACORN 80 percent of the British educational market. The firm has launched a \$3 million ad campaign in hopes of placing its 64K, 6502-based machine in U.S. schools, but its chances seem dim: an Acorn costs \$995 with no monitor or disk drives.

● Speaking of dim, Acorn has proudly announced a new line of NON-SEXIST software, rightly declaring, "Britain is in danger of losing half its talent if girls don't acquire vital computer skills" and planning software that is "more relevant and useful to women." The first feminist release? A gardening program. ■

RUN

THESE COULD BE THE KEYS TO YOUR FUTURE

Unlock *all* the potential of your Commodore 64 and VIC-20* with RUN.

Explore... Experiment... Enjoy... Beginner and expert alike will be taken beyond the manual to the limits of their abilities. Enter your own game programs. Construct a simple hardware add-on. Broaden your scope with unique applications... And... get a 13th issue FREE!

Enjoy key features like these:

- Games for fun & strategy.
- Programming tips help you learn short cuts.
- Candid reviews help you make money-saving decisions.
- Programs to add to your library.
- Instructions & tutorials to increase your skills.
- Hardware & software modifications help your machine work smart.
- Unique applications broaden your scope.

Here's a system-specific magazine written with you in mind. Written by and for the reader to give time-saving, money-saving hints. You'll get instructions and tutorials to increase your skills, and candid reviews to help you make the right decisions. Most of all though, you'll have fun.

Commodore 64 and VIC-20 owners are one of the largest groups of computerists today. Enjoy the benefits of this with your own magazine. Be in control like never before. Order RUN today and get a 13th issue free with your prepaid order (check or credit card) of only \$17.97. Send in the coupon or call toll free 1-800-258-5473. In N.H. call 1-924-9471.

Send me a subscription to RUN for only \$17.97 per year. I understand that with payment enclosed or credit card order I will receive a FREE issue making a total of 13 issues for \$17.97. Save \$2.00 off the basic rate!

Introducing the new RX-80.

A printer this good
could only come from one company.

Epson.

Take a look at the new Epson RX-80 with a critical eye and you'll know what we mean. Epson printers are put together with manufacturing tolerances in the micron range. And meticulously checked for quality — one at a time.

Our reliability rate is approaching perfection. Which means you'll probably never — ever — have a problem with your RX-80.

A real Epson for only \$299.

For a limited time, you can get the RX-80 for only \$299. But just because we made it affordable doesn't mean we've left off the goodies. You get 128 different typestyles with a resolution so sharp you have to look twice to make sure it's dot matrix. You get bidirectional printing, logic seeking, and a speed of

100 characters per second. And you even get programmable forms control, graphics, and a special Quiet Mode to keep the noise down.

This is your printer.

No matter what computer you own — or will own — do yourself a favor and make sure your printer is an Epson RX-80.

We build them to be the finest printers on earth. No matter how small the price.

Number one. **EPSON**
And built like it. EPSON AMERICA, INC.

Project 80, a regular column devoted to hardware projects, premieres in this issue. This month Roger Alford describes how to build a communications interface for your Model I or III.

—Eds.

Hardware that communicates

The ability to communicate with other computer systems and devices makes today's computers versatile. By using a standard interface on a TRS-80, for example, you can communicate with a mainframe computer system, transfer messages and files to and from other personal computers, send data to a printer, and control ongoing processes.

It's surprisingly simple and inexpensive to make such an interface using very large scale integration (VLSI) technology.

A variety of standard communications interfaces define the physical links whereby computers and other devices communicate. Included among these are: IEEE-488 (general purpose interface bus, or GPIB), RS-232C, RS-422, and the Hewlett-Packard interface loop

(HPIL) interfaces. To help complicate things, several standard communications protocols define the format of the communicated data, including asynchronous, binary synchronous (BISYNC), synchronous data link control (SDLC), and higher data link control (HDLC) protocols, among others. After carefully observing the computer industry—not only the communications aspect—I've concluded that there are too many stan-

dards, and too few "standard" standards.

For this project, I've chosen the popular RS-232C interface with the asynchronous protocol. The board I'll discuss contains two RS-232C ports with handshaking and individual baud rate selection, three input switches, three LEDs for output, a beeper and a 16-bit counter/timer. You can use the interface with a 16K Model I or III. The Program Listing lets you use the computer as a terminal with the RS-232C board.

RS-232C Principles

The RS-232C interface standard specifies a logical high in the $-3V$ to $-25V$ voltage range, and a logical low in the $+3V$ to $+25V$ range. Generally, devices using this interface use a DB-25 connector, either male (DB-25P) or female (DB-25S), for the physical interface. I've specified most of the pins on the DB-25 in the RS-232C standard (see Table 1), though in general they aren't all used in any given application. In fact in many, if not most, applications, you use only the ground, transmit, receive, and possibly a handshaking line (for example, clear to send/request to send).

Asynchronous Protocol Operation

Asynchronous communication, probably the most popular low-speed protocol, is quite simple in principle. While asynchronous communication is generally limited to a maximum rate of 19,200 baud (bits per second), the board I'll describe allows up to 38.4K baud.

Figure 1 shows the operation of the asynchronous protocol. Normally, when the computer isn't transmitting characters, the communication line is at a logical high state. When transmitting, the computer adds a start bit to the beginning of the character. The high-to-low transition that results indicates to the receiving device that a character is on the way.

The receiving device must have a clock available with a frequency that is an even multiple of the receive data's transmit rate. Typically, a frequency of 16 times (16X) the transmit rate is used. For example, if the incoming data is being sent at 300 baud, the receiving device will have a 4,800 Hz (300 times 16) clock available. For the remainder of

DB-25 Pin #	Mnemonic	Description
1	AA	Protective ground
2	BA	Transmitted data
3	BB	Received data
4	CA	Request to send
5	CB	Clear to send
6	CC	Data set ready
7	AB	Signal ground
8	CF	Received line signal detector
9	—	Reserved
10	—	Reserved
11	—	Unassigned
12	SCF	Sec. received line signal detector
13	SCB	Sec. clear to send
14	SBA	Sec. transmitted data
15	DB	Transmitted signal element timing (DCE)
16	SBB	Sec. received data
17	DD	Receiver signal element timing (DCE)
18	—	Unassigned
19	SCA	Sec. request to send
20	CD	Data terminal ready
21	CG	Signal quality detector
22	CE	Ring indicator
23	CH/CI	Data signal rate selector
24	DA	Transmitted signal element timing (DTE)
25	—	Unassigned

Table 1. RS-232C connector pin/function breakdown.

Figure 1. Asynchronous communication protocol format.

this discussion I'll assume a 16X clock frequency.

After the high-to-low transition from the incoming start bit, the receiver counts eight clocks (again, assuming a 16X clock) to find the middle of the start bit. It then checks to ensure that

the bit is still low; if it isn't, the receiver assumes line noise and resumes its search for a new start bit.

If the start bit verifies as a low level, the receiver counts 16 more clocks to find the middle of the first data bit (the low-order bit), and stores this bit value in its internal shift register. The receiver then continues to count 16 clocks and read in the data bits until all of them are in the shift register. It also reads in the optional parity bit, if specified.

After the receiver acquires all of these bits, it expects to see a stop bit, which is always a logical high. This helps verify

that it properly found the end of the character, and confirms that the line is high, allowing the next start bit to cause a high-to-low transition.

By reading each bit in the middle of the bit cell, the receiver allows for error between its own 16X clock frequency and the frequency of the transmitter's clock. Even if the frequencies are slightly off, the receiver should still read the correct bit values. The typical variation of transmitter/receiver clock frequencies generally keeps baud rates from exceeding the 19,200 baud mentioned above. At high frequencies even small differences between transmitter and receiver frequencies can cause problems.

You can use asynchronous protocol to send and receive a break—a logical low on the line for a period greater than one character time. Many systems use a break as an interrupt or as an abort.

The receiving device usually detects error types that occur during asynchronous communication, though the processor on the receiving end may ignore them. A parity error indicates that the parity of the received data was not what the receiver expected. A framing error indicates that a character was received without a valid stop bit. An overrun error indicates that a previously received character was not removed from the receiver's shift register before a new character started coming in, resulting in the loss of the former character.

UART Basics

A universal asynchronous receiver/transmitter (UART) is a device that operates with a processor over a parallel bus, but sends and receives data using the asynchronous format I've described. I use a dual UART (DUART) in this project since it has two independent asynchronous communication channels. The following discussion of UART basics also applies to the DUART.

Most UARTs allow for flexibility when setting up. By sending commands to the UART, the processor can usually specify the number of data bits to send and receive (generally between five and eight), the parity of transmitted and received data, or no parity, the number of stop bits on transmitted data, and often other characteristics.

The transmit section of the UART generally has two registers. The register most important for communication is the parallel load shift register; it adds

Quantity	Description	Manufacturer	Part Number
1	Prototype grid board	Radio Shack	276-158
2	20 pF capacitors		
1	Sonalert (see text)	Mallory	SC628

1	40-pin socket connector	3M	3417-6000
1	(50-pin for the Model III)	3M	3425-6000
1	8-inch piece of 40-conductor ribbon cable		
1	(50-conductor for the Model III)		

The 2681 DUART with the 3.6864 MHz crystal, including a copy of the 2681 DUART data sheet and a cassette tape with the terminal routine object files for all common memory configurations, are available from the author for \$32 plus a \$1 shipping and handling fee. Michigan residents should add 4 percent sales tax. Winchester Electronics is located at Main St. and Hillside Ave., Oakville, CT 06779, (203) 274-9981.

Table 2. Dual RS-232C board parts list and ordering information.

WORK SMART

HERE'S HOW TO MAKE FOUR WORKERS OUT OF ONE...

THE BI-TECH MULTIPLEXER

Make your office work easier by adding the Bi-Tech Multiplexer to your Hard Disk. The Multiplexer allows four computers to share the same Hard Disk Data Base.

Bi-Tech's State-of-the-Art Hard Drives are available in 10-, 15- and 20-megabyte formatted capacities and now introducing the first truly reliable 5-megabyte removable cartridge drive. So get it together and let your hard drive work for you and your office.

A Complete System with Four TRS-80 Model 4 Computers, Hard Disk Drive, Multiplexer, Software and Cables.

Starting
as low as

\$8950

*The Bi-Tech Multiplexer is a high-speed parallel device.
Hard Drives and Multiplexers available for most computers.

the start bit, specified parity, and stop bits to the data you're transmitting, and sends the resulting bit pattern out the UART transmit pin at the specified baud rate. The second register is the load register, which the processor loads with the transmit data. This data is transferred to the first register as soon as it's empty. Thus, up to two characters to be transmitted can exist in the UART at the same time. This dual transmit register structure allows maximum compaction of transmitted data, since the start bit of the character in the second register will immediately follow the last stop bit of the preceding character.

On most UARTs the receive section also has two registers whose purposes are similar to those in the transmit section. The computer shunts the incoming data into a shift register where it strips the start, stop, and parity bits. It then places the resulting character into the second buffer register, where it stores it while it transfers new data into the cleared shift register.

Since there are only two receive registers, the processor must be sure to read the characters from the UART before a new character comes into the shift register and destroys the previous character,

causing an overrun error. While in many applications this isn't a problem, since the processor can read the character in the buffer register while it moves the next character into the shift register, in some applications it is, at the very least, inconvenient.

Depending on how fast the data arrives and how much other work the processor has to do, it may not be able to get the data out of the UART in time to prevent problems. To help remedy this, many UARTs, including the Signetics 2681 DUART I'm using, have quad-buffered receivers, consisting of four registers instead of two, giving the processor more time to get the characters from the UART.

The Signetics 2681 DUART

The 2681 DUART from Signetics is a relatively new device that packs a lot of function into a 40-pin chip. The DUART has two independent asynchronous communication channels, an on-chip oscillator (requiring an external clock or crystal), separate internal baud rate generators for each channel, a 16-bit counter/timer, an 8-bit output port, and a 7-bit input port, as well as complete interrupt capability.

In my application I use four of the in-

put ports and output ports as RS-232C handshaking lines, leaving four spare outputs and three spare inputs. Three of the spare outputs drive LEDs you can use as status indicators; the fourth drives a beeper to indicate when the RS-232C has received an ASCII bell character. You connect the spare inputs to a DIP (dual in-line package) switch, which the processor then reads to specify certain set-up options.

The Dual RS-232C Board

The accompanying photo shows the prototype dual RS-232C board for the Model I. Though compact, it has many functions. All of the electronics, except for one inverter and the RS-232C interface chips, are on the 2681, so hook-up to the TRS-80 is simple and straightforward (see Fig. 2).

As drawn, the 2681 takes up the input/output (I/O) addressing locations 00-7F hexadecimal (hex), although the 2681 only uses 00-0F hex. If you have other peripherals in this I/O addressing range (the Radio Shack peripherals use higher addresses), you can decode the addressing to a narrower range as needed. I used the current configuration because it required the least amount of support circuitry—a necessary goal in

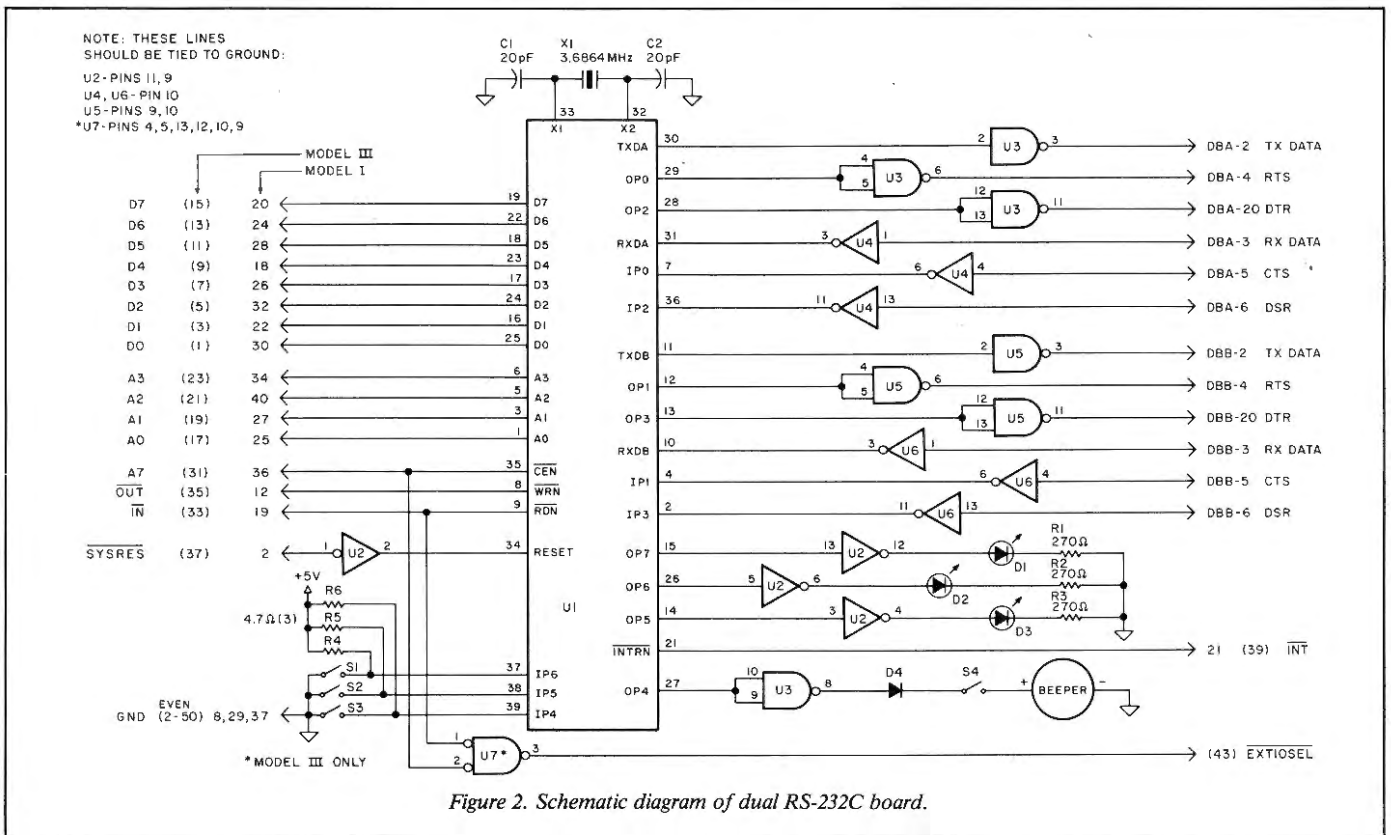

Figure 2. Schematic diagram of dual RS-232C board.

order to keep everything on such a small (2.75- by 3.75-inch) board.

The schematic (see Fig. 2) shows the connector pin numbers for the Model I as well as for the Model III (in parentheses). The Model III also requires one additional signal not necessary on the Model I. In both cases, you connect the interrupt line so that you can use the 2681 interrupts, or the processor can poll the DUART's status register to get the necessary status information. Make sure you know which pins on the board's connector correspond to which pins on the TRS-80 connector; the numbering can be confusing.

The parts list for the board (see Table 2) includes RS-232C connectors—DB-25S's (females), designed for printed circuit board mounting. In a pinch, you can use Radio Shack DB-25S connectors (part number 276-1548). The DUART is available through many electronics distributors, or you can purchase it from Washenaw Digital Systems (see Table 2).

The RS-232C standard specifies devices as either data terminal equipment (DTE) or data communication equipment (DCE), depending upon their function in a system or network. You wire the two types of devices as opposites, so that a one-to-one straight-through cable connects them properly for communication. For example, a DTE device transmits data on pin 2 and receives data on pin 3, while a DCE device transmits data on pin 3, and receives data on pin 2. The connections shown in the schematic (see Fig. 2) are for a DTE device (such as a standard terminal), allowing the board to connect straight through to a modem, for example.

The beeper I used on the prototype board is a Mallory Sonalert, but you can use any 12-volt beeper requiring a maximum of 8 milliamps.

It's interesting to see how much space you can save from older designs by using a new IC like the Signetics 2681. Motorola's board, which has two asynchronous communication channels, uses two 24-pin UARTs, a 24-pin baud rate generator, a large crystal, and a jumper matrix for baud rate selection, covering over 4 square inches of board space, and requiring a fair amount of interconnecting wiring. You can replace all of this with one 2681 DUART and a small crystal, while providing addition-

Photo. Prototype dual RS-232C board.

al I/O capability, greater interrupt flexibility, and a 16-bit timer/counter. The 2681 and its crystal require only 2.4 square inches—quite a savings!

Operation

Once you've constructed the board you'll need three power supplies: +5V (at 150 mA), +12V, and -12V. While lower voltages will suffice in place of the +/- 12V supplies, I recommend the higher voltages, which allow greater communication distance.

Since timesharing on the personal computer has become so popular, I've used this function as the set-up example. The handshaking lines I've provided aren't necessary for this application; I've set the handshaking outputs active (low) in case the remote device is looking for an active signal.

Since there are two independent channels to choose from, you can use one as your terminal output, for example, and the other to communicate with

another device. For now, use channel A for the terminal output and set up channel B similarly.

My Assembly-language program (see Program Listing) is a complete terminal emulator for the Model I or the Model III (with slight modifications) with the dual RS-232C board, using channel A. The first part of the program refers to the set-up of the 2681.

The first byte the program sends to the 2681, 20 hex, goes to command register A (CRA) and resets the channel A receiver. The program then sends 30 hex to CRA to reset the channel A transmitter. A 40 hex byte sent to the CRA resets channel A error latches. The program sends these 3 set-up bytes only as precautions since a computer reset also performs these functions.

After the program sends the reset functions, it sets up the various communication parameters, including the number of data bits and stop bits, desired parity, if any, and the baud rate

Program Listing. Terminal Emulator.

for each direction; it must also specify the necessary interrupt information.

By sending 13 hex to mode register 1 A (MR1A), the program specifies no parity and 8 bits per character, which are standard for most terminals. Then the program sends 07 hex to the same register (now denoted MR2A), to set the transmitter for 1 stop bit; it also specifies that the RS-232C handshaking lines, connected to the DB-25S connectors, are not to be used.

The program initializes the baud rate at 9,600 baud by first sending 0B0 hex to the auxiliary control register (ACR) to indicate that the clock is from the crystal and the baud selection to be taken from set 2. Then it sends 0BB hex to the clock select register A (CSRA) to specify the particular baud rates. The transmitter and receiver can have different baud rates; each nibble of the CSRA byte specifies a different baud rate.

"It beeps whenever it receives a bell character."

The program follows this with a 00 hex to the output port configuration register to specify all of the output bits as general-purpose outputs, then turns on (low) all but one output by sending 0EF hex to the set output port register (SOPR). It sends the interrupt mask to its register (IMR), enabling the transmitter and receiver to begin operation.

Terminal Software Operation

Two of the program's lines depend on your system's configuration: line 530 specifies the top of memory, which changes depending upon the amount of memory in your system; line 500 specifies the starting address of the program, which can be a lower location if you're using a non-disk system.

When you start the program, it clears the screen and puts a sign-on message on the first line. It is initially set at 9,600 baud but you can change it from the keyboard. Several user commands, which make the program more versatile, were necessary to make up for the fact that I used the ROM keyboard encoder routine without a standard control key.

ROAR!

Do tricks with your computer without breaking your wallet's spirit! A subscription to **Chromasette** gets you a tape or disk full of quality programs delivered by First Class Mail every month! Write for more information or, better yet, try a Back Issue. At \$6.00 for 6 to 8 programs on tape (\$11.00 on disk), you'll see just how good and inexpensive **Chromasette** software is.

The Bottom Line:	Tape	Disk
1 year (12 issues)	\$50.00	\$95.00
6 months (6 issues)	\$30.00	\$55.00
Single Issues	\$ 6.00	\$11.00

Calif. residents add 6% to single issues. First Class postage to N. Amer. included. Overseas add \$10 to subscriptions and \$1 to single issues. Send A/C rate. All back issues from July 1981 available—ask for list. Programs are for the Extended BASIC model and occasionally for disks.

Chromasette

P.O. Box 1087 Santa Barbara, CA 93102
(805) 963-1066

All three output LEDs turn on after initialization, but the middle one toggles as the DUART receives characters. If you connect a beeper, enabled with the on-board DIP switch, it beeps whenever it receives a bell character (control/G). The break key sends a break for approximately one-quarter of a second.

The program uses the clear key as a user key. You must press this key, followed by a numerical key, to execute the desired function. Clear/1 enables the line printer, so that the program sends all incoming characters, except most control characters, to the printer. Clear/2 disables the printer so that the program sends it no more input characters.

Clear/3 lets you select a new baud rate. The program displays the current baud rate, along with the available baud options; you need merely press the key associated with the baud rate you want and the program displays the new baud rate.

Clear/4 lets you use the left-arrow key to delete instead of to backspace (it initializes as backspace). Clear/5 restores the backspace function.

Though the simultaneous shift/down-arrow combination usually acts as a control key, a control/Z isn't easily decoded because of the nature of the keyboard decoding software. Consequently, clear/6 is set up to transmit control/Z—somewhat awkward, but it works.

Finally, clear/0 returns you to DOS (the disk operating system)—if you're using one; a DOS isn't necessary to run the terminal program.

The program uses interrupts to process incoming characters, which it places into a memory buffer until the computer can process them. Interrupts prevent the loss of incoming data when the Z80 is otherwise busy—during screen scrolling, for example. If fast data (that is, 4,800 baud or higher) is continually coming in while the screen has to keep scrolling, the full memory buffer can lose incoming characters. The program therefore uses as much of the available memory as possible. ■

Write to Roger C. Alford at Wash-tenaw Digital Systems, P.O. Box 2014, Ann Arbor, MI 48106, or call him between 7 and 9 p.m. weeknights at 313-973-9763.

IT'S HERE!

"CMON" is a machine language monitor program. Using single letter commands, the user program can be executed under full control of "CMON". This gives the programmer the option to see the program as each instruction is executed, making "CMON" invaluable for finding those inconspicuous, and sometimes fatal little gremlins haunting your software. "CMON" is easy to use, and will quickly earn a place in your software library.

FEATURES: STANDARD MONITOR COMMANDS + USER PROGRAM EXECUTION WITH REGISTER DISPLAY. RAM, ROM BREAKPOINTS. READ — WRITE OBJECT FILES TO DISK. DISPLAY TO CRT OR PRINTER. AND MORE.

AVAILABLE ON NON-SYSTEM DISK OR CASSETTE. SPECIFY MEDIA TYPE AND M1 OR M3 FORMAT. (Cassette version coming soon)

COST IS \$23.00 ppd. MONEY ORDER OR CASHIERS CHECK. NO PERSONAL CHECKS PLEASE. SEND \$1.00 FOR SAMPLE PRINTOUTS AND COMMANDS SUMMARY. DEDUCTABLE WITH ORDER

TIED UP BY STRING COMPRESSION? CUT YOURSELF LOOSE WITH TRASHMAN™

THIS PROGRAM IS A MUST FOR EVERYONE WHO USES "BASIC" ON A TRS-80. It reduces string compression delays by 95% or more. You suffer from these delays whenever you run a BASIC program. Your computer locks up for seconds, or minutes, and you

may even think it's "crashed." The keyboard won't work, and until all the strings have been collected, you just have to sit and wait. If you're using your computer for

business, that wastes your money. If you're using it personally, it wastes your time.

TRASHMAN FIXES THE PROBLEM! As soon as you start to use it, those delays will almost disappear. The program is very easy to use, so you don't have to be a computer programmer to take advantage of it. It's written in "machine language" and uses only 578 bytes of memory for itself, plus 2 bytes for each "string" in your program. It works with other machine language programs and all the major operating systems.

IT SHOULD HAVE BEEN BUILT INTO THE COMPUTER IN THE FIRST PLACE, but since it wasn't, look at this chart, and then order your copy today.

# STRINGS	SECONDS DELAY NORMAL	SECONDS DELAY TRASHMAN	PERCENT IMPROVEMENT
10	.1	.1	0
250	11.8	0.7	94
500	45.8	1.6	96.5

SAVE TIME
WITH
FASTER

EASY
TO
USE

FASTER speeds up most TRS-80 BASIC programs by 20-50%. It analyses programs while they run, then displays a simple change, usually one line, to sequence variables so the ROM will find them faster.

You can use FASTER to speed up programs you've bought as well as programs you've written. Since it isn't a compiler, your BASIC programs can be read and changed afterwards. It works on business programs, models, and games. The more complex your program, the better the results. For the past 3 years, FASTER has earned high marks from reviewers and thousands of users:

FASTER is a must for any programmer . . . It is in my opinion one of the best inexpensive utilities available.
80 US JOURNAL (April, 1982)

"If you . . . would like a significant increase in the run-time speed, then buy FASTER." 80 MICRO (April, 1982)
EQUIPMENT: TRS-80 Models I & III, 16-48K Tape or Disk, all DOS's.

\$29.95

QUICK
COMPRESS

This ultra-fast machine language program reduces the size and increases the speed of most BASIC programs. It needs only 276 bytes of memory, and removes the blanks and remarks from even the largest BASIC program in less than 3 seconds. Works with all DOS's, and is especially useful with LDOS, NEWDOS, and Model I TRSDOS.

Models I & III, 16-48K, Tape or Disk \$19.95

SPECIAL:FASTER & QUICK \$39.95

FILE TRANSFER PROGRAMS

TRS → IBM PC or XT
 APPLE → IBM PC or XT

Transfer your TRS Model I, II, III, 4, 12 or 16 files to the IBM PC or XT.

Transfer your Apple II, II+, or IIe files to the IBM PC or XT.

- No more retyping or wasted time
- Fast transfer-baud rates of 110-9600
- File concatenation supported
- Send files of any length
- Make \$\$\$ - the IBM PC is new and software is scarce-take your "new" programs and sell them for \$\$\$.
- Transfer ASCII files, random files, text files, data files, binary files, high level language programs (Basic, Pascal, Fortran, Cobol, etc.), electronic spread sheet data, word processor files, etc.; it all gets transferred!

The File Transfer Program comes complete with all instructions, hardware and software (for both machines)

FILE TRANSFER PROGRAM diskette

(Works with IBM DOS 1.1 or 2.0)

APPLE — \$94.95

TRS — \$89.95

Now - Add External Monitors To Your Model III

Plugging in VIDEO MOD lets you plug in your TV or extra Monitor for Big Screen Viewing and Remote Display.

Great addition for displaying Home Games, Classroom Instructions, and presenting information at Business Meetings.

Standard features include:

- Monitor and/or TV hookups.
- Full 64 character wide screen display.
- Works with any program or operating system.
- No cutting or soldering required for installation.

SAVE TIME SAVE MONEY!

GET MORE WORK OUT OF YOUR COMPUTER WITH PROSOFT'S FABULOUS UTILITIES.

Our programs have proven their worth in daily use by thousands of people since 1980.

ERRATIC DISK DRIVES?

RPM TO THE RESCUE

Find out if your drives need adjustment before you begin to lose files. SAVE on repair bills. This easy-to-use program measures the rotational speed and fluctuations of your disk drives, and warns you if they are running too fast, too slow, or unevenly.

Incorrect or erratic speed is a common cause of unexplained disk errors and loss of data. RPM's documentation explains how to detect and correct these problems quickly and easily. As 80 MICRO (April, 1982) said: "If your drives have problems I recommend RPM before paying to get it repaired."

Customers agree:

"EXCELLENT — Has paid for itself already! Saved the cost of Radio Shack's doing the speed adjust!" (D.M.)

RPM is supplied on disk for the TRS-80 Models 1, 3 and 4 (in 3 mode). We suggest you order a copy before you need it.

RPM \$24.95

NEW!

"Where is that Movie?"

Find it quickly, easily with

VIDEO TAPE TRACKER

Takes the work out of managing your video library: easy to use • stores over 1,000 titles • prints numbered labels • lists by tape and/or title • searches by tape, title, or performer • very fast • ready to use

TAPE TRACKER is a real time saver, and the price is right. Make your life easier, order today.

REMSOFT, INC.

Let Your TRS-80® Teach You ASSEMBLY LANGUAGE

Tired of buying book after book on assembly language programming and still not knowing your POP from your PUSH?

REMSOFT proudly announces a more efficient way, using your own TRS-80® to learn the fundamentals of assembly language programming . . . at YOUR pace and YOUR convenience.

Our unique package, "INTRODUCTION TO TRS-80® ASSEMBLY PROGRAMMING, will provide you with the following:

- Ten 40 minute lessons on audio cassettes
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- Step-by-step dissection of complete and useful routines to test memory and to gain direct control over the keyboard, video monitor, and printer.
- How to access and use powerful routines in your Level II or Model III Basic ROM

AVAILABLE FOR MODEL 1 & 3

REMASSEM (tape) \$74.95
REMASSEM (disc) \$79.95

LEARN TRS-80® ASSEMBLY LANGUAGE DISK I/O

Your disk system and you can really step out with REMSOFT'S Educational Module, REMDISK-1, a "short course" revealing the details of DISK I/O PROGRAMMING using assembly language. Intended for the student with experience and assembly language. COURSE INCLUDES:

- Two 45-minute lessons on audio cassette
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- A booklet of comprehensive, fully commented program listings illustrating sequential file I/O random-access file I/O and track and sector I/O.
- A diskette with machine readable source codes for all programs discussed in both Radio Shack EDTASM and Macro formats.
- Routines to convert from one assembler format to the other.

Presently available for Model 1 only
REMDISK-1 only \$29.95

Dealer inquiries invited

These courses were developed and recorded by Joseph E. Willis and are based on the successful series of courses he has taught at Meta Technologies Corporation, the Radio Shack computer Center, and other locations in Northern Ohio.

6.	14. NICE development
7.	15.
8. Visicalc	16. Entertainment

Selection =>_<

The most friendly user interface utilizing a set of menus. Runs utilities, wordprocessors, games and applications directly from menus. Can be easily modified and customized.

Screens

Format utility

Customer retrieval

Name => _____

Address => _____

City => _____

State => __ zip => ____

Phone => _____

Ref => _____

=> _____

Full screen input/output, editing, formatting and validation, PF keys, messages, full cursor control. Can be used directly from BASIC.

Visicalc^(tm) interface

	A	B	C
	Description	Date	Amount
1			
2			
3	Supplies	08/15/83	\$27.86
4	Parking	08/20/83	\$15.00
5	Shopping	08/20/83	\$73.20
6		Total:	\$116.06
7			
8			
9			

The information kept in the database can be processed by Visicalc.

Special built-in interface allows data transfer from Database to Visicalc.

Database

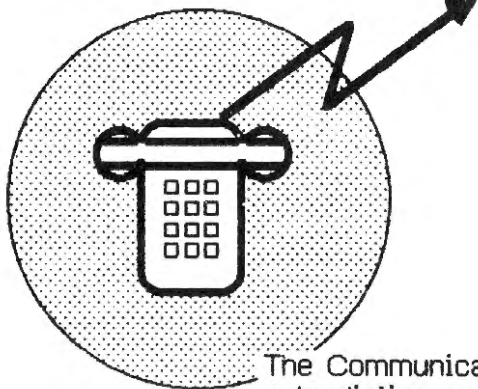

Remarkably universal and efficient data processing system.

Unlimited number of files, true multikey access, no sorting required.

Ideal for personal use and business systems.

Communications

The Communication facility can be used for text and data transfer, auto dialing numbers from the data base, customized protocols, etc. (Communications available 1984; priced separately)

Forms & Reports

Information can be output in a variety of user defined formats. Standard and custom letters, merge with database invoices, inquiries and reports can easily be specified and printed

The System is compatible with TRS-80 mod I/III (min 2 drive 48k) LDOS, NEWDOS/80, DOSPLUS and MULTIDOS

price: **\$450.00**

Finding the Search Solution

by Joseph Trojak

In our December issue, we published "Finding the Search Solution," an article that discussed Mindex and Search, two Assembly-language programs that use signature screening techniques. We inadvertently omitted Program Listing 12; it appears below.—Eds.

Program Listing 12. MAP general routines.

Wayne Green Books

Introduction to TRS-80 Data Files

Learn by doing with this guide to writing a data base manager. This book, with its accompanying software, takes you through a simple mailing list program to teach you about sequential and then random access files. The construction of a DBM and the techniques for moving data to and from disks are discussed. **Book and TRS-80 disk \$24.97** BK7398 approx. 144 pp.

Inside Your Computer

Find out what goes on inside your TRS-80. Inside Your Computer explains microcomputer circuits and how they work. Topics include chips, interpreters, circuits, machine language, binary numbers, algorithms, ASCII code, software, and what they all mean to the computer. Includes many photographs and schematics. **\$12.97** BK7390 108 pp.

TRS-80 as a Controller

Learn to control outside devices with a TRS-80. This book is an introduction to interfacing, with simple, inexpensive projects. Applications include controlling lights and switches, building a small computer, and suggestions for more complex projects. The book applies to the Model III and, with minor conversions, to the Model I. **\$12.97** BK7394 192 pp.

The Rest of 80

Get the 80 Micro articles so good we put them in a book. These 31 never-before-published tutorials and utilities were hand-picked for Model I and Model III users. You'll get graphics sorts, renumbering, Pascal tutorials, and more. Both BASIC and assembly-language programs are included. Complete listings are given, with photographs, schematics, and examples. **\$9.97** BK7392 232 pp.

TRS-80/Z80 Assembly Language Library

Learn to use assembly language on the Model I to its full capacity. Two TRSDOS-compatible disks are included, with programs worth many times the book's cost. You'll learn about TRS-80 hardware and software, general Z80 routines, and TRS-80 utility programs. Examples show you how to apply the information to your everyday programming. Model III conversions are given. \$4.50 shipping and handling. **\$34.97** BK7395 355 pp. Disks included

TEXTEDIT

a complete word processing system in kit form.

by Irwin Rappaport
A WAYNE GREEN PUBLICATION

Computer Carnival

For the Models I and III. These sixty programs for beginners will entertain and educate. Children will find mazes, word games, graphics, puzzles, and quizzes. Card games, logic tests, word and number quizzes, and letter guesses make Computer Carnival a learning experience. The Carnival Companion cassette of all sixty programs is also available. **Computer Carnival and Carnival Companion \$24.97** CC7389 **Computer Carnival \$16.97** BK7389 218 pp. **Carnival Companion \$9.97** TP7389

TEXTEDIT

Build your own word processor with the TEXTEDIT kit. This Disk BASIC system is built in modules, so you can modify them or use only the parts you need. Features include complete editing, search, replace, and count, and upper/lowercase typing on an unmodified Model I. Model III users need the TRSDOS CONVERT utility to use the disk. TEXTEDIT is compatible with any major DOS. It operates with one drive; two drives or copy utility needed to transfer programs to system disk. **Book and disk package \$24.97** CC7387

The Selectric™ Interface

You can turn an IBM Selectric I/O writer into a letter-quality printer for your TRS-80. The Selectric Interface gives you the programs and step-by-step instructions you need for Selectric models 2740, 2980, and Dura 1041. With slight modification, the instructions will also work for other chips. **\$12.97** BK7388 124 pp.

Annotated BASIC, vol. 1 and 2

This two-volume set teaches you the hows and whys of BASIC programming. TRS-80 Level II programs are taken apart and described in detail. Each program is accompanied by documentation, program annotation, BASIC concepts and definitions, and a flowchart. **Volume 1 \$10.95** BK7384 160 pp. **Volume 2 \$10.95** BK7385 125 pp.

Kilobaud Classroom

Learn electronics with this hand-on course. This collection of electronics projects starts with simple concepts and takes you on to building your own small computer. You'll learn electronics theory and get the practice you need to master digital electronics. **\$14.95** BK7386 393 pp.

For credit card orders, call toll-free, 1-800-258-5473. Or send your order on a separate piece of paper to Wayne Green Books, Retail Sales, Peterborough, NH 03458. Be sure to include the book title, order number, and price. Postage and handling is \$1.50 for the first book, \$1.00 for each additional book. Foreign air mail is \$10.00 per book. Check, money order, or complete credit card information must accompany your order. If you have questions about your order, write customer service at the above address.

80 micro's SECOND ANNUAL READER'S CHOICE AWARDS

Like a receding wave, the deluge of Reader's Choice ballots has ebbed to a dribble. No more stacks of ballots waiting to be punched in on Monday mornings. No more smoke rising from the vents of the Model III. From the beleaguered editorial and technical staff of *80 Micro*, here are the results.

We counted fewer write-ins this year, no doubt due to our decision to expand the number of nominees and increase the number of categories to 38. Only three write-ins placed this year: SuperScripsit (how could we have left it out?), Donkey King, and GEAP Dotwriter.

Radio Shack, a natural heavy in the

balloting, took 21 categories and placed 35 times overall. Among the finalists for Model I/III disk operating systems, Radio Shack is noticeably absent.

Heaviest response was for Model I/III disk operating systems, word processors, and utilities. Again this year, the first place winners are NEW-

DOS/80, Scripsit, and Super Utility Plus, respectively.

Each category includes the three top finishers, except in the case of ties or where we could determine no clear third place winner. Although we made no provision for the protest vote, we should mention that there were few. These ranged from blank ballots to a few dirty words (except for Tim Schuyler, of Chico, CA, who taped his ballot to a brick).

A special thanks goes to David Walonick for his efforts in compiling this year's ballots, and thanks to the many readers who mailed in ballots. The results speak for themselves. ■

Days Alive!

On New Year's Day there are only two kinds of people—those who watch football games and those who don't. If you don't, come to the 1984 celebration here in the Fun House. As always, I admit all the kids first. If any room is left after that, we might squeeze in a few adults.

I invite everyone with a TRS-80 *anything* to this celebration. The four programs this month should work on any TRS-80 that you haven't recently dipped in molasses. In truth, I have to rule out Model I, Level I users, but I don't think anyone seriously uses Level I anymore.

We're going to try some games and activities that might tell you some things you don't know about yourself. Spdwr, which is short for speedword, is a game for at least two players. Days Alive! tells you how many

The Key Box

All TRS-80 Models
 4K RAM, Cassette Basic
 32K RAM, Disk Basic
 Color Basic

days have passed since you were born.

Using the figure discovered in *Days Alive*, you can run *A Week of Birthdays* and find out the day of the week on which you were born—or when anything else happened. Last is *Guess Your Name*, in which the computer doggedly tries to find out who you are and does so with great success as long as you give straight answers to its yes/no questions.

As you enter the party room, I must ask you not to blow any horns or clack any clackers. I was up last night celebrating the New Year till nearly 10:30 p.m. and need a little quiet today.

SPDWRD

Player 1 leaves the room or at least turns away from the computer screen. Player 2 types in a secret sentence of fewer than 250 characters, then taps the enter key.

Player 1 returns and taps the enter key. The secret sentence appears on the screen with all vowels left out. Player 2 studies this result and tries to type the sentence as it was originally entered. The TRS-80 recognizes success.

After they argue about the fairness of the tricky secret sentence entered by Player 1, the two players exchange roles.

That's all there is to it, but that's enough. You'll be surprised how giggly some statements become without vowels.

Days Alive!

On some days I am totally uninterested in knowing how many thousands of days I've been alive. I can't even remem-

A Week of Birthdays

"Monday's child is fair of face..." begins an old nursery rhyme. I can never remember what comes after that. Is Tuesday's child gone without a trace? a winner of the race? tied up in lace? solving the case?

I solved the problem by looking up the old poem. I did it because some people like to find out the day of the week on which they were born to determine what qualities or fate they have, based on the rhyme.

I'd say it's a bunch of hooey, except I'm a Saturday's child and I do work hard for my living, so....

Run the program, please. It asks you to give two answers. The first prompt is TYPE THE DAY OF THE WEEK. Type it out fully, using no abbreviations. Use all capital letters.

If you don't know the day of the week, ask your little brother who hates school and always knows how many days until Friday.

Next, answer the question, HOW MANY DAYS HAVE YOU LIVED? If you don't know the answer, go directly back to Days Alive and find

ber what happened on most of those days.

However, I've found that kids enjoy knowing this interesting total of their lives. I hope a lot of people with 2,000-5,000 days of experience get to try this program.

It works simply. Just do what the computer says and no harm will come to you. When you see the prompt NOW WE NEED YOUR BIRTHDATE. ENTER MONTH, DAY, YEAR SEPARATED BY COMMAS, remember that you only need the final two numbers of your birth year.

If you were born on January 16, 1972, you type 1,16,72. In this system, January is the first month of a year, and December is the twelfth month. You can

figure out the numbers for the others.

Next, the program asks you to enter today's date. If you are trying this program on New Year's Day, the answer is 1,1,84.

With that, the lightning-quick computer goes to work and tells you the number of days you've had in your life.

Days Alive only works for birthdays in the 20th century. Any Fun House reader born in the 19th century (or earlier) can send me his or her birth date. I'll figure out the total on an abacus and mail back the answer.

Remember how many days you've lived. You need that total to make the next program run.

out. And in the future don't read so fast!

Then the computer tells you the day of the week on which you were born. If you have any doubt, simply consult a perpetual calendar.

Guess Your Name

At our house we have a dog that will fetch sticks all day long. The computer is like that dog in the way it handles the problem you give it in Guess Your Name.

It keeps trying without losing

interest until it guesses your name. In return, you must truthfully answer its yes or no questions and be patient with it.

The program works with a series of prompts. You answer each one and tap the enter key.

The program first asks you to enter the number of letters in the name it will guess. It gets huffy if you claim that your first name has more than 30 letters in it.

At this point, the program starts trying out letters and asking if each is in your name. If you answer yes to this, the computer shows a row of dashes representing the unknown letters in the name and tries the letter in different positions.

When a letter is in the right place, answer yes. Example:

Your name is Carl. The computer asks, IS LETTER *R* IN IT? You answer yes.

The computer then asks, IS IT IN THE RIGHT PLACE? and displays this: --R-. The R is in the right position, so Carl answers yes. Ruth, of course, would say no. And so it goes until the computer succeeds.

Sometimes I wonder how that rascally computer does it! ■

If you have trouble making any Fun House program work, write me with your problem, sending a listing of the program as it is in your computer or a note telling me the error messages you get and what seems to be wrong. Enclose a self-addressed envelope with a 20-cent stamp, or with coin of your nation equal to the stamps on the outgoing letter. Send all this to me, Richard Ramella, 1493 Mt. View Ave., Chico, CA 95926.

COPYCAT COPYCAT II

THE MOST POWERFUL DISK BACKUP UTILITY HAS BEEN IMPROVED.

Now you can backup virtually all of your protected diskettes. Even the games and utilities that you thought were impossible to copy. COPYCAT II will automatically make a fast, exact duplicate of your original master diskette regardless of protection schemes used, including CRC errors, dual density tracks, mixed sector lengths, false sectors and various other means of protection.

COPYCAT is intended for your personal use only, in making backup copies of your protected software.

COPYCAT runs on a 48K, 2 disk drive, TRS-80 model I, III or 4. Please specify model number when ordering.

COPYCAT I 34.95
COPYCAT II 49.95

Add \$2.00 for postage and handling. CA residents please add 6% sales tax.
 All orders processed within 24 hours. Personal checks require (2) weeks to clear bank.

The Mercedes project

Never disable Break," Mercedes was saying. "The whole point of *WarGames* is that you should never disable Break."

Max and I were standing in the back of Kresge Auditorium on the MIT campus, crowded among the people auditing Mercedes' class in freshman Basic. First-term teaching fellows don't usually attract 450 students.

"Amazing. I thought I knew all about the Print statement," Bill Gates said beside me.

"She didn't just correct my homework assignment. She wrote a whole multi-tasking window routine in the margin," Scott Adams murmured. Ten guys in IBM blue suits nodded attentively behind him, and Steve Wozniak was about to say something when there was a mad scramble to see what Mercedes was writing on the chalkboard.

After class, we dragged Mercedes away from her pupils—"Geez, correcting papers," she sighed. "It's worse than judging the one-line contest"—and had lunch at Quincy Market. Max keeps getting turned down for a Visa card, but I had some money left over from our visit to Peterborough.

"So how's everyone at *80 Micro*?" Mercedes asked with her mouth full. Pizza, lemonade, and chocolate chip cookies. What a combination.

"The editors are putting entries on the Big Board," I said. "Amy Campbell for Fury, and Rob Mitchell for *Arex*."

"Pencil pushers," Max muttered. "I could beat them."

"And they don't have the copy of *Deathmaze* we thought they had," I continued. "What are we going to do about all these letters asking for help?"

"How do I get to level 5? I've been known to mutter 'Inverted telephone' in my sleep! I'm going crazy!" Mercedes read. "Bill McGrath, Philadelphia, PA."

"And we've got letters about *Asylum II* and some other adventures," I said.

"Ask readers who've solved them to write in and become *Gamer's Cafe* consultants," Mercedes suggested. "You guys are going to need a data base you can call on."

"Helping adventurers," Max grouched. "I'm against the whole idea."

"Did you ever find the safe in *Deadline*, Max?" Mercedes asked sweetly.

Max snarled and bit into his pizza. "You know, I missed you guys," Mercedes said.

Back at MIT, Mercedes led us past seven security checks and into the basement of the Lincoln Laboratory. "This Ph.D. project is really neat," she beamed. "The only time I ever got to try any hardware work with you guys was changing a tire."

"What exactly are you doing?" I asked, looking askance at what appeared to be a graphite pile. "Your postcard said you'd borrowed a Model 4 from your dad's Radio Shack dealership."

"It's just an upgrade," she said, punching a combination on buttons beside a vault door. "The professors here liked it when I started doing 80-column software stuff with SilverDOS 6.66, and we started talking about whether 8-bit machines were obsolete and what you could do with a Z80A-based system—"

Here Max and I stopped to gape at the object in the middle of the room ahead, even as Mercedes nimbly stepped over the three-foot-diameter cables attached to it. We'd never seen a Model 4 vibrating and hovering a few inches above the table.

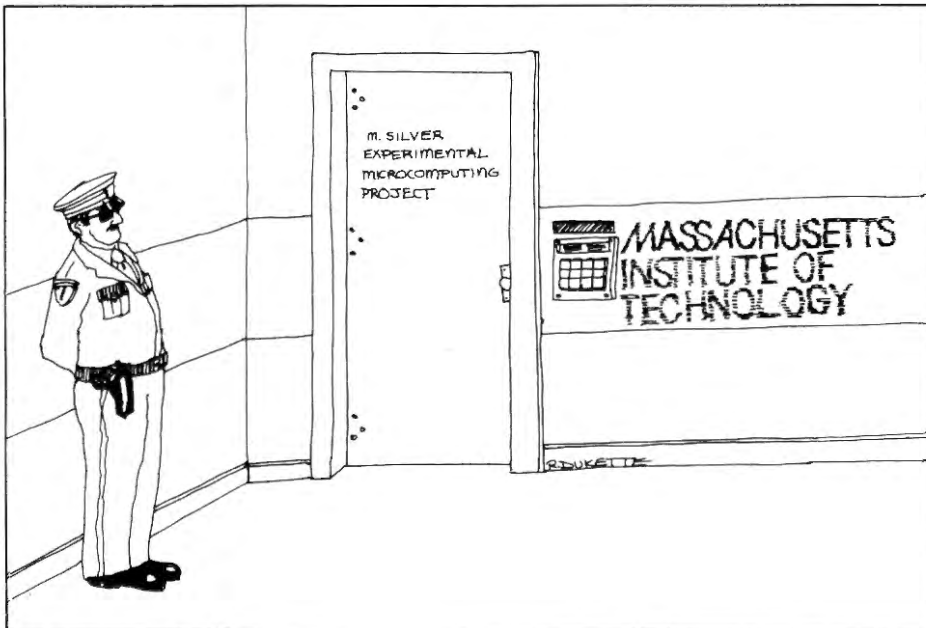

"—so a bunch of us started working on the Mercedes Mach 4," she continued. "Don't touch anything, will you?"

"A 3,000 MHz clock speed," I mumbled.

"Yeah, but it doesn't have a Model III mode," Max pointed out. "Wouldn't boot my Bable Terror disk."

"CRAM," I recalled. "Catalytic Random Atomic Memory."

"Wouldn't give back my Bable Ter-

The GAMER'S CAFE

ror disk, either," Max continued. "Nothing left but the write-protect tab."

"One duodecagigabyte," I said dazedly.

"Shall we look at the mail? Max Marble of Chantilly, VA, writes 'I am not, I repeat, not any relation to Mad Max.' That Cousin Marble. Always such a kiddier."

Mercedes had gone off for a meeting with her advisor, and Max was trying to talk me out of my stupor over the Mach 4.

"Everything's expensive in Brisbane, Australia," he read. "Mike Bach says that a Model 100 without modem is \$1,099 and a copy of *80 Micro* is \$6.70. No wonder Alan Bond spent so much to win the America's Cup."

"Just an upgrade," I repeated. "It's just an upgrade."

"Speaking of which, here's an upgrade to Defense Command from Paul Jacoby of Burnsville, MN," Max

*"That Cousin
Marble. Always
such a
kiddier."*

noted. "You load the game—I guess he has the tape version—and respond to the second *? with /6681. Then, from

Ready, you enter FOR P=28000 TO 28090: POKE P,129: NEXT: SYSTEM and press enter. Respond to the *? prompt with /18750 and you're back in the game.

"This changes the aliens," he read. "Except for the ones that look like T-shirts, they become long rods that reach about halfway down the screen. You have to shoot either straight up the center of the rod or just to the right of it, and be careful not to get between two aliens going opposite directions. And don't stay directly under the Evil Flagship when you hit it.

"Paul says you can replace the 129 with 130 or 131, or, 'for masochists only,' 128," Max finished.

* * * * *

"That 128 is for masochists only," I

*Expert mode: 339,080 (David Smith, Kingwood, TX).

Gamer's Cafe readers are invited to submit their high scores, preferably with screen photos, for these and other Model I/III/4 games. Sorry, but we are no longer accepting entries for Color Computer games and, due to known bugs or ridiculously high scores, the following: Alien Defense, Armored Patrol, Bounceoids, Dig Out, Eliminator, Galaxy Invasion, Liberator, Paddle Pinball, Scarfman, Skyscraper, and Strike Force.

muttered, pulling the van off Route 128 ("America's Technology Highway") and looking for another place to park the Cafe. We'd done brisk business in the Wang Laboratories parking lot at lunch hour, but some security guy had chased us away into the traffic. Four lanes of people looking for a Burger King.

It was our second day in Boston; Mercedes had canceled her office hours and we were discussing our immediate future.

"I think you should hang around here for a while," she said. "I'm supposed to teach Assembly language next and do a couple of graduate seminars, and I have to stay and work on the Mach 4. The physics and engineering departments are going to help with the storage."

"What do you have in there, anyway?" I asked. "Double-density drives? Quad-density drives?"

"My advisor calls them 'warp drives,'" Mercedes shrugged.

"I can imagine," Max said. "Denser than a black hole."

"Don't be ridiculous," Mercedes said. "A light gray hole, maybe. The lab says they should cause only minor sidereal effects in the immediate vicinity of the machine—"

"Getting back to business," I said, "we probably should wait a while before going on the road again. Give players one more month to write us before we take all those games with scores people say are impossible off the Big Board. Cosmic Fighter, Penetrator, Missile Attack, Space Warp, Venture."

"Do you know how to get off Storrow Drive, Rodney?" Mercedes asked. "We've gone under the Arthur Fiedler Footbridge four times."

At that moment, the radio went dead and I jammed on the brakes as a traffic light ahead turned blank. Within seconds, horns were honking and people were leaning out of apartment windows, shouting "Another blackout!"

"Geez!" Mercedes smacked her seat angrily. "This is the second time they've booted the Mach 4 without my being there. I've told them we won't have enough power until we launch Silversat and get the solar panels working. And the microwave transmitter—"

"I think we should stay in Boston for a little while," Max told me.

"I'm not sure it'll be safe," I said. ■

It's a Load 80 year

January, the start of a new year; the Romans symbolized it with the two-faced god, Janus. He looks forward and backward simultaneously, and epitomizes my feelings at this time of year. It is a time to reevaluate the past, then plan for the future.

Looking over my Load 80 collection for 1983, I realize what a blockbuster year it was. From psychological testing tools to stock market analysis programs, we've run them all.

An overview of the highlights has to include the TRS-80 version of Turtle Graphics that ran in February (TURTLE/BAS). This teaching tool lets the youngest of programmers draw on the screen, save his creation, and recall it later.

March was something to roar about—not only did we have the data base management program that won our Reader's Choice Award (AIDS III/BAS), we also featured a LISP compiler (LISP/BAS) that lets you explore this exciting language. (LISP is currently the language of choice among Artificial Intelligence researchers.)

April rounded out your data base manager with subsystems for sorting (MERGE3/BAS), formatting and

printing (MAPS3/BAS), and calculating (CALCS3/BAS). And let me remind you about MINICALC/BAS, the spreadsheet program we ran in May.

August was fun and games. Arcade-type games, adventure games, two-player games, and solitaire games; any way you like to play it, Load 80 had it.

But in September, we got back down to business. Featured that month was a communications terminal package for your Model III/4. The six programs comprising UTERM make your micro a terminal for talking to the big data bases.

But enough, you know what you liked this year. My goal was always (and continues to be) to put together a product containing the most interesting, most functional, and most fun programs run in each month's *80 Micro*. I hope you enjoyed them.

Welcome to New Subscribers

Load 80 cassettes and disks are not like any other software you can buy because they contain a wider variety of programs. But all the programs do not

necessarily run on your computer. The popularity of the TRS-80 encouraged us to make Load 80 support over a half dozen disk operating systems (DOSes), a gaggle of editor/assemblers, and three models of computer (I, III, and 4). This means I can't put together a ready-to-run product (though I try).

You must determine, by reading the Key Box that accompanies each article, whether the program is appropriate for your machine. Sometimes a little manipulation will make a program run on your system. I try to inform you of these changes in my column. In the coming months, I'll try to cover the hows and whys of converting programs from one machine to another.

Before you decide that a program doesn't work, read the article thoroughly. Because our programs are written by our readers, the error-trapping routines aren't always as sophisticated as those in commercial programs. If this is the case, the article tells you how to avoid crashing the program. If you have serious problems, call or write me (if you include your phone number, I'll call you).

We Aim to Please

I am constantly looking for ways to make our product serve you better. Changes this past year include better documentation, a new transfer utility for Load 80 disks, and supplying our machine-language programs in assembled, ready-to-run format. Sometimes, I'm limited in what I can do by the software I have available. For instance, source code provided to me from an EDTASM Disk editor/assembler can't be written to tape. If you're inconvenienced by this, write to me and I'll try to make some special arrangement.

Plans for the future? The title program that appears each month will expand to include information about the programs, instead of just the copyright. Of course, we'll keep abreast of the TRS-80 market, and you may see some changes in our documentation. And as always, we want to provide our subscribers with the best software and support possible. ■

Let your word processing program pay your bills.

Starting Your Own Business

Use your computer and your typing skills to make money with the Home Word Processing Service Start-Up Kit. This informational package describes in detail how to start your own word processing service. It includes a comprehensive manual and several pamphlets, in addition to the software. This software gives you sample start-up, marketing, and operating plans that you can implement in your venture.

Priced at \$29.95, the Word Processing Start-Up Kit comes with a full money-back guarantee and is sold by South Bay Word Processing at 1558 Oro Vista Road, Suite 290, San Diego, CA 92154, 619-575-8381.

Logical Upgrade

The Norcom TC-III is a new replacement logic board assembly for the Model I that provides you with full Model III performance. It features dual-density floppy disk controller, 48K RAM, optional on-board RS-232, parallel printer port, and dual speed cassette I/O. It also has reverse video character set, on-board audio driver for a speaker, and high readability character font.

All known software and accessories for the Model III will run on the TC-III, including machine-language programs. And all cassette, disk, printer, and I/O bus connectors match those on the Model III. The Norcom TC-III costs \$399 and requires installation. The RS-232 option, fully assembled, costs \$50. Both are sold by Northern Technology Corporation, 2350 Brickvale Drive, Elk Grove, IL 60007, 312-860-1772.

Dual Processor Option

The 8088 Dual Processor Option (DPO) is a 16-bit CPU board for your Model II, 12, or 16. It lets you run MS-DOS, CP/M-86, CP/M Plus, Xenix, CP/M 2.2, RM/COS, MP/M II, and Concurrent CP/M-86 on your computer system.

The DPO card contains an Intel 8088 microprocessor for its CPU. The 8088 provides the 16-bit addressing capability, processing power and instruction set of the 8086 while supporting the I/O requirements of the 8-bit bus architecture found in your TRS-80.

Although the DPO card by itself is a single processor unit, when installed in your TRS-80, the combination of this card and the existing Z80

CPU results in a dual processor environment.

The standard 8088 DPO comes with 128K of RAM that you can upgrade to 256K. The DPO resides in one slot in your TRS-80 motherboard and coexists with the resident Z80 board. It can also coexist with Radio Shack's optional high resolution graphics and MC68000 upgrade boards.

Prices range from \$999 for a 5 MHz DPO board with 128K RAM to \$1,649 for an 8 MHz DPO board with 256K RAM. Support for the Radio Shack 8 Megabyte and 12 Megabyte hard disks, including a back-up/restore utility program, is an available option. For further information, contact Veritas Technology Inc., 2375 Zanker Road, Suite 245, San Jose, CA 95131, 408-263-0646.

File Scrambler

Protect your financial projections, R&D reports, and bidding proposals from prying eyes with Super Encryptor, a file scrambling program that operates under MS-DOS and CP/M. The program makes your user files unreadable to anyone

without the correct password. Several levels of security are available, with the highest level requiring from an expert programmer hours of mainframe computer time to have even a chance at cracking the password.

Super Encryptor retails for \$49.95 from Obsidian Computer Systems, 236 North Santa Cruz Ave., Suite 243, Los Gatos, CA 95030, 408-395-7900.

Reader Service ✓ 562

AC Line Filter

The Superguard AC Line Filter/Transient Surge Suppressor is designed to protect your computer, audio equipment, and data from ac line noise, transients, and high-voltage surges. The unit eliminates EMI/RFI common and differential mode noise to 70 decibels, and high voltage and energy spikes to 70 joules (6,500 amps; 780,000 watts).

Made of all UL listed components, the Superguard comes with six 3-wire grounded outlets, six-foot 3-wire shielded ac line cord, 15 amp resettable circuit breaker, main on/off switch, and an indicator light. The off-white painted case is constructed of

Surge Suppressor

Without surge protection, power line fluctuations can be expensive and damaging. You can prevent computer memory loss, destruction of delicate circuitry, and false logic misregistration with Computer Power Solutions' new Electra-Guard System 6. It is a solid-state clamping device that eliminates sub-microsecond overvoltage transients from your electrical circuit.

The System 6 expands your standard outlet to provide six outlets. It can handle six devices with a combined load not exceeding 1,875 watts. A 6-foot power cord gives you extended reach from the wall outlet to your equipment. Continuous pro-

tection is indicated by illuminated red and green lights. When off, the red light indicates circuit failure, while the green light off indicates improper ground.

Compatible with both 50 Hz and 60 Hz power mains, the Electra-Guard System 6 costs \$69.95 from Computer Power Solutions Inc., 8800 49th St., Suite 203, Pinellas Park, FL 33565, 813-544-8801, 800-237-6010.

Tapping Data

The RS-232 Data Tap lets you monitor the data transmitted from or received by your computer and its peripherals. Three RS-232 connectors, one male and two female, let you insert the Data Tap in the RS-232 line. One of the female connectors is supplied for the Tap. You can use this Tap Connector to drive a printer, CRT, or any other receiving RS-232 device.

You can route the main transmit data line, receive data line, or both to the Tap Connector. This connector is set in the loop-back mode so that it doesn't rely on the main line handshake signals for proper operation.

The RS-232 Data Tap costs \$34.95 plus \$1.75 for shipping and handling. For further information, contact B&B Electronics, P.O. Box 475, Mendota, IL 61342, 815-539-5827.

DISK COLORCOM/E

The Intelligent Communications Package

COLORCOM/E, the most popular smart terminal program for the Color Computer, has just gotten smarter. In fact, from now on, we're going to call it The Intelligent Terminal program.

The new **DISK COLORCOM/E** contains a unique **COMMAND MODE** that allows you to set up complete communications sessions in advance. Anything you normally do from the keyboard **DISK COLORCOM/E** can do all by itself. Log-on, log-off, read and store messages, disconnect, transmit and receive files, dial auto-dial modems, — anything! **DISK COLORCOM/E** will even make decisions based upon how the host responds.

Here are some examples of how YOU might want to use the new **DISK COLORCOM/E**.

- Call your favorite bulletin board, download all messages addressed to you, log off, and write the messages to a disk file. AND do all of this with one keystroke!
- Call Dow Jones, log on and get the latest prices on your favorite stocks, and then log off. Again all with ONE keystroke.
- With an Autodial modem let **COLORCOM/E** Make your calls for you at 3:00 A.M. when rates are cheap. Then read the results with your morning coffee.

In addition we've added 64K support and your choice of number of characters per line. Of course you still get the regular **COLORCOM/E** features such as upload/download, graphics, easy storing and printing of data, and much more. For 16, 32 or 64K disk systems.

COLORCOM/E Disk \$49.95

COMPLETE YOUR WORD PROCESSOR

THE RS-232

MODEL III **MODEL 4**

State of the art technology in board design, our direct replacement of Radio Shack's* internal RS-232 board, mounts inside the Model III or 4 on the existing brackets. All cables, screws and complete mounting instructions are included. Non-technical people will find that installation is quick, straight forward and simple requiring less than 15 minutes to complete.

Total compatibility with Radio Shack* and all existing software is maintained. Software programmable baud rates from 50 to 19,200 baud are supported along with programmable word length, stop bits, and parity. May be utilized in either half or full duplex operation.

**Outstanding Value

E-ZEE INKER

**STOP THROWING
AWAY
FABRIC
RIBBONS**

\$39.50

Stop throwing away used fabric ribbons. Re-ink them yourself with the E-ZEE INKER. The E-ZEE INKER can re-ink almost any cartridge type fabric ribbon in only a few minutes. And you can do most reel to reel ribbons with an optional attachment. All without fuss! Without mess!

The E-ZEE INKER uses a proven capillary type inking system. This ink especially formulated to provide many pages of "like new" print from your ribbon. Ink cost is only a few cents per ribbon. Most ribbons can be re-inked three times or more.

Most ribbons are mounted on the E-ZEE INKER in seconds! The E-ZEE INKER is a precision compact machine. It is fully assembled, with complete instructions. The E-ZEE INKER is approximately 6" x 8" x 4" high. And you get two ounces of ink with every E-ZEE INKER. Additional ink may be purchased in 4 ounce bottles.

- Versatile
- Simple to Use
- No fuss...No Mess
- Economical

Model 4 Accountant

Model 4 owners will be pleased to learn that the Peachtree Series 4 accounting software is now available for your system. It consists of a General Ledger, Accounts Payable, and Accounts Receivable.

The General Ledger supports 99 departments, master and subsidiary accounts, optional departmental income statements, automatic posting of transactions from the AR and AP, and user-defined financial reports.

Accounts Payable features cash requirements forecast by due date, aging reports, control reports for audit trails, and distribution of each invoice to up to eight general ledger accounts. The Accounts Receivable supports

balance forward, open credit reconciliation, printing of statements and invoices, and detail or summary aging reports.

The Peachtree Series 4 package costs \$495 for the floppy disk version and \$595 for the hard disk version, both from Compu-Systems Software, 212 Skylark Court, Norman, OK 73069, 405-377-8570.

Subroutine Library

Save hours of programming and debugging time on your Model II, 12, or 16 with USS: Universal Subroutine System from Ramona Enterprises (1133 Taft St., Rockville, MD 20850, 301-340-8100). USS is a Basic language library of over

200 subroutines that perform over 2,000 different operations.

It includes subroutines that create menus, format screens and subscreens, produce graphs, accept and check various inputs, perform benchmark timing, calculate mathematical functions not available in Basic, perform conversions, and many other operations. You can produce boxes, borders, or blinking messages with a single instruction line.

You don't need any machine-language programming skill, and no modifications are made to your operating system or to the Basic language interpreter. The Universal Subroutine System costs \$125 including a 200-page manual with complete instructions, indexes of the

subroutines, and specification sheets for each subroutine. Each sheet contains instructions for use, examples, and restriction.

for the TRS-80 from Micro-Mega

The Original GREEN-SCREEN

The eye-pleasing Green-Screen fits over the front of your TRS-80 Video Display and gives you improved contrast with reduced glare. You get bright luminous green characters and graphics like those featured by more expensive CRT units.

Don't confuse the Original Green-Screen with a piece of thin film stuck to the face of your video tube, such as that advertised by others. The Original Green-Screen is mounted in a full frame perfectly matched to the color and texture of the TRS-80 Video Display. It is attached with adhesive strips which do not mar your unit in any way.

The full frame design of the Original Green-Screen "squares off" the face of your video display and greatly improves the overall appearance of your system.

(Specify whether for Model I, Model III, or Model IV)

THE GREEN-SCREEN..... \$15.95
Add \$1.50 for postage and handling.

Label Your Chip

In the past you've had to hunt around with a magnifying glass to identify such things as Reset, VCC, VMA, Clock, or any of the 64 pins that make up your 68000's pin configuration. Now you can rest your eyes by labeling your 68000 microprocessor chip with labels from Computer System Associates Inc. (7562 Trade St., San Diego, CA 92121, 714-566-3911).

The labels attach directly to the 68000 and line up perfectly with the 16-bit chip's pin-out arrangement. They are clearly numbered and

marked with respect to each pin's function. The labels cost \$13 for a pack of 10.

Inside Super Utility Plus

There's no need to second guess how to properly use Super Utility Plus 3.0 anymore, now that *Inside Super Utility Plus Series 3.0* is available. This guide delves into the intricacies of Super Utility Plus written from the viewpoint of a user, Paul Wiener.

The book describes many of the things that may not be immediately clear to you, explains why you might want to do certain things with Super Utility Plus, how to do them, and details a step-by-step procedure for rescuing disks. There is also a special section for handling various kinds of NEWDOS80 problems as well.

Inside Super Utility Plus does not replace the user's manual, but rather expands on it. It sells for \$19.95 from Powersoft Products, 11500 Stemmons Expressway, Suite 125, Dallas, TX 75229, 214-484-2976.

Rest and Recuperation

Model 4 CP/M

Model 4 owners, relax. CP/M 2.2 is now available for your microcomputer. This operating system requires either 64K or 128K of RAM, and features a configuration program for 35-, 40-, 77-, and 80-track single- or double-sided drives and a Format utility that builds over 52 different disk formats. One special feature of interest is an Interchange utility that reads, writes, or copies over 20 popular disk formats including IBM, Kaypro, Osborne, and Xerox.

Other features include full utilization of the function keys, 4 MHz clock speed, ADM-3A emulation, and re-

Programming or word processing for hours on end is stressful and fatiguing, especially on your legs, feet, and back. One way to reduce this stress is with Rest 'n Roll, an ergonomically designed footrest. The platform is biomechanically designed to interact with your feet by moving when you move—no stooping over to make adjustments. If you flip it over, you'll find 35 birch massager balls to soothe your tired feet.

Made of solid oak or walnut, and weighing a mere 7 pounds, you can take the Rest 'n Roll wherever you go. It costs \$198 from R and R Concepts, 241 Conejo Road,

Read All About It!

If you currently use LDOS 6.0, you'll be pleased to learn that its principal author has written *The Programmer's Guide to LDOS/TRSDOS Version 6*. This 214-page book answers all your questions about LDOS. Topics discussed include disk drive input/output interfacing, the DOS directory structure, disk file access and control, an operating system overview, device input/output interfacing, and interfacing via supervisory calls.

The appendix covers topics such as memory bank switching, system disk boot track, disk load module format,

interrupt task processor interfacing, and eight other topics. The appendix also includes three complete filter programs.

This comprehensive book

costs \$20 plus \$1 shipping from Misosys, P.O. Box 4848, Alexandria, VA 22303, 703-960-2998 (9 a.m.-6 p.m. M-F).

MODEL 4 OWNERS

PEACHPAK 4 ACCOUNTING FOR YOUR MODEL 4

Now, for the first time, TRS-80 Model 4 owners can buy professional accounting software to run under TRSDOS 6.0. This is the Peachtree Series 4 accounting package which has been one of the most popular CP/M based accounting packages for several years. The package includes:

- * **General Ledger**
 - Up to 800 accounts
 - 1000 transactions per period
 - 99 departments / optional departmental income statements
 - User defined financial statements
- * **Accounts Receivable**
 - 500 Accounts
 - 700 transactions per period
 - Posts transactions to GL
 - Mixed open-item and balance-forward accounts
- * **Accounts Payable**
 - 500 Vendors
 - 500 transactions per period
 - Auto or manual select of invoices to pay
 - Prints checks and detailed stubs

All three packages for just \$495.00

These packages have been adapted to TRSDOS 6.0 by Compu-Systems Software and include the standard CP/M packages with the TRSDOS 6.0 diskettes and complete documentation.

NEW PRODUCTS

of Disk Basic. Well, that has changed since the appearance of The Analyst, a utility that speeds up most Basic programs by 15-50 percent.

The Analyst first analyzes your Basic program while it runs. After it displays the results, you simply add a DIM statement to speed up the program. The DIM statement arranges the variables in descending order of frequency. This enables Basic to find frequently used variables more quickly, thus speeding up your program.

The Analyst is available for the Models I and III for \$24.95 (\$26.95 in CA) plus \$2.50 shipping from Modular Software Associates, 209 18th St., Huntington Beach, CA 92648, 714-960-6668.

Filtering Electricity

The Hawk AC Power monitor and Protector protects your computer and its peripherals from voltage transients and surges while filtering electrical noise. It features two LEDs and a switch-selectable audible alarm that instantly signals when a 15 percent power surge or sag occurs.

Small enough to fit inside a briefcase, the Hawk is rated at 15 amps and 120 volts. To use it, plug it into any wall outlet, place the switch into the normal, alarm, reset, or check mode, and plug your equipment into it. The Hawk costs \$195 and comes with a unique insurance program underwritten by Lloyds of London. For more information, contact Electronic Pro-

Bizgraph™ Now for Mod III and 4
The Grafyx Solution™ for your Business

Powerful Graphics. BIZGRAPH is a self-prompting business graphing program designed to work exclusively with Grafyx Solution. Micro-Labs' Grafyx Solution is a plug-in, clip on board which gives you 98,304 points in a 512 x 192 matrix. That's sixteen times as many points as a standard Model III! Improve your business with clear, accurate graphs. Perfect for managers, small businessmen and analysts. The BIZGRAPH package can display Line Graph,

Bar Chart, Pie Chart, Area Plot, Histogram Plot, and Scatter Plot. Data can be entered from the keyboard or disk files - including VisiCalc™.

Quality Grafyx. Select graph type, enter data or file name, select options, and a graph is quickly displayed in amazingly fine detail. Multiple data sets can be combined on one graph. Another unique feature is the ability to display the hi-res screen along with the normal text and low-res screen.

Versatile Grafyx. BIZGRAPH is a flexible program providing automatic

labeling of X and Y axis points using 85 characters/line. Forecasting future trends is possible using line fitting, quadratic, and third order linear regression analysis. Data smoothing using moving averages is also possible. The finished graph can be saved on disk or printed on any of 20 popular printers.

The Grafyx Solution package is shipped from stock and includes the board, 44 programs, and a 54 page manual all for \$299.95. The BIZGRAPH program, sample graphs, and manual is \$98. Shipping is free on pre-paid or COD orders. (Tx. res. add 5% sales tax.)

Look to the Stars

The Greeks and Romans used to look to the stars for guidance and revelations. Ancient mariners depended on the stars for navigation. Now you, too, can look to the stars for fun and recreation with help from the Astronomy Pac. This program enables you to identify and locate any star or constellation in the night sky.

The Astronomy Pac generates its own almanac data

and contains detailed information on 58 of the most prominent stars. This lets you print the location of these stars for any time until the year 2000 from any location on earth. Astronomy Pac's star identification program determines the star and constellation you should observe after you enter the time, date, your approximate position, and the star's height and azimuth.

This astronomy program comes complete with software, instructions, astrolab, compass, and H.A. Rey's book, *The Stars*. It is ideal for both beginner and advanced astronomer. The Astronomy Pac costs \$59.95 for

Model I, III, or 4 cassette, and is sold by Celestial Software, 3010 Warrington Ave., Lakeland, FL 33803, 813-686-3311.

Briefcase-Sized Printer

The problem with most portable computers is that you have to wait until you get back to your home or office to print your notes and letters. All that changes with the Riteman printer. It's a high-quality dot-matrix printer that fits into a briefcase. It measures approximately 3 by 10½ by 14 inches, and weighs 11 pounds.

The Riteman printer prints 120 characters per second in its bidirectional mode, and comes with automatic friction feed. Its high-quality ribbon cassette is guaranteed for one million impressions. Other features include a tractor feed unit with a custom-smoked plexiglass cover, printing starting at one inch from the top of the page, and upper-/lowercase characters with descenders.

Available with Centronics-parallel interface, the Riteman printer is priced at \$499 from Inforunner, 1621 Stanford St., Santa Monica, CA 90404, 213-453-8731.

The Perfect Companion For Your New Portable Computer

There's a new and exciting computer on the block — Radio Shack's TRS-80* Model 100 Portable Computer. It promises to be one of the most significant advances in personal computing of the 1980's!

And, now, there's a new and just-as-exciting magazine specifically devoted to your Portable Computer. It is called **PCM—The Portable Computing Magazine**, and it is published by the same people who bring you the most popular Color Computer magazine in the world — the **Rainbow**.

PCM—The Portable Computing Magazine sells for \$3 per copy and \$28 a year by subscription. If, after seeing your first issue, you find it is not for you, just let us know. We'll happily, cheerfully and immediately refund your entire subscription payment. We're that confident that you'll love PCM. After all, it is **The Portable Computing Magazine!**

WILL CHANGE THE WAY YOU THINK ABOUT YOUR TRS-80!

THE MOST POWERFUL WORD PROCESSOR AND ALL PURPOSE COMPUTER PROGRAM AVAILABLE FOR THE TRS-80.

LOOK AT ALL THESE FEATURES

1. **INSERT** characters, words, lines, paragraphs or other files.
2. **DELETE** characters, words, lines, paragraphs.
3. **COLUMNS**. CopyArt II can be instructed to print your text from one to six columns. Super easy to use! No complicated commands. Great for doing newsletters, magazine layouts etc. **NO MORE CUT AND PASTE!**
4. **SORTING**. Sort lines of text by any field. Sorts up to 650 items in less than 7 seconds. Sort indices, table of contents, names, words or whatever in descending or ascending order. Used with CopyArt's math function it is great for small inventories, Receivables, Payables etc.
5. **Screen widths** from 32-255 characters wide. Screen widths can be changed to allow formatting your text as you want.
6. **MATH**. Built in MATH function for doing calculations on columns or rows. Used with the SORT command, CopyArt II can do a small inventory of 200-300 items, or keep track of small receivables or payables, general ledgers or home financial reports. Super floating point precision up to 32 digits!
7. ***GRAPHICS**. CopyArt has a built in graphics program that allows inserting graphics within your text. Drawings, graphs, illustrations, cartoons etc. may be used within newsletters or company reports. Graphics commands include: Plot between points, Circles, Squares, Fill, Erase, Draw, Move, Pixel cursor controls and more.
8. ***GRAPHIC CHARACTERS**. CopyArt has a built in graphics character generator. Used for typesetting large letters from 3 to 25 times normal size! Yes, you can even print characters down the page as well as across. Black on white or white on black.
9. **JUSTIFICATION** is fully supported. *Proportional spaced justify is supported.
10. ***SUPER or SUB-SCRIPT**.
11. **UNDERLINING**.
12. **BOLDFACTING**.
13. ***CHANGE CHARACTER SIZE or PITCH** within your document. Character size changes for dot matrix printers with capability. Pitch change for daisy wheel printers with capability.
14. **HELP**. Help is available for all the commands at the touch of a key while using the word processor. Super for training inexperienced secretaries. Great reminder for experienced people as well. **MENU DRIVEN Help** for over 45 commands.

Cutting Through the Glare

There's nothing worse than not being able to see your monitor screen because of glare. You can't escape it,

no matter how you turn your head or move the monitor. Well, now you can fight the glare with Panelgraphic Video Filters.

These transparent neutral-gray thermoformed filter panels increase the ratio of the luminance of the excited phosphor to the background without sacrificing your display resolution. Also, a coating of Vueguard 901-AG is applied to the filter to reduce glare. This coating is steel-wool abrasion and chemical resistant. A special transparent coating on the rear of the

filter prevents Newton rings.

Available in a wide variety of colors including green and amber, the video filters cost \$21.56 for a 5-inch filter; \$25.75 for 25 inches; \$31.90 for 12-15 inches; \$44.03 for 19 inches; and \$51.38 for 21 and 25 inches. For additional information, contact Panelgraphic Corp., 10 Henderson Drive, West Caldwell, NJ 07006, 201-227-1500.

Pocket Manager

PocketPert is a graphics project manager program that runs on both the Radio Shack PC-2 and Sharp PC-1500 pocket computers. It depicts the interrelationships of the tasks in your project by graphing PERT and GANTT charts.

Hardwood veneer, all wood printer stand from Woodtec.

You can see the difference that Panelgraphic Video filters make in cutting annoying glare.

find a suitable printer stand. Woodtec makes a hardwood-veneered, all-wood printer and monitor stand for your system. They glue the joints for extra strength and resistance to vibration.

The stands are available in walnut, teak, or oak finish stains and come completely assembled for your immediate use. Prices start at \$38.95 for a 16½-inch wide stand for the MX-80 or FX-80 printers, and \$40.95 for the 24½-inch wide printer stand. Monitor stand prices start at \$44.95 for their 11- by

To use, you simply enter the data describing the best, worst, and expected completion times for each of up to 25 tasks in your project. The program takes over and calculates the critical path and draws the charts on the computer's four-color pen plotter. The critical path through the project is identified and drawn in a different color. The program calculates slack times and 50 percent and 95 percent expected completion times.

PocketPert costs \$29.95 on tape cassette from PocketIn-

CopyArt II

**WILL CHANGE THE WAY
YOU THINK ABOUT
YOUR TRS-80!**

MORE REASONS YOU SHOULD CONSIDER MOVING UP TO OUR COMPREHENSIVE PROGRAM...

15. SUPER EASY TO LEARN editing features. Logical key choices.
16. Hyphenation
17. SPELLING checkers like the 74,000 word Scripsit Dictionary work great with CopyArt II.
18. CHAINING. Chain files together to make books or manuals hundreds of pages long.
19. CENTERING.
20. HEADERS and FOOTERS. You can even put graphics within headers for super page layouts.
21. PAGE NUMBERING. Page numbers can appear at the top or bottom of the page.
22. DOS COMMANDS from within the editor. Kill files, check free space or get directories easily.
23. CUSTOMIZED PRINTER driver. Since your printer has features that other printers don't, CopyArt II will be supplied with the printer driver of your choice below. Each printer driver is custom made to provide you with commands for each of your printer's fine capabilities. If you have more than one printer, order other printer drivers for only \$19.95 each. Printer drivers are available for:
 - Radio Shack LP/IV, V, VI, VII, VIII and Daisy Wheel II
 - Epson MX-80, MX-80/FT, MX-100 with or without grafrax.
 - Okidata Microline 80, 82a, 83a and 84
 - NEC 8023
 - Smith Corona Daisy Wheel TP-1
 - Brother Daisy Wheel
 - C-itho Starwriters and Prowriters all, 85 10A, 1550
 - PMC Printer
 - Centronics 737, 739
 - Diablo 620

OTHERS COMING SOON. Call if you don't see your printer!

24. Unprotected diskette. Unlimited backups can be made.
25. MAILIST/MAILMERGE INCLUDED. CopyArt II comes with a mailist program that stores over 2,000 names on a MOD III diskette. These names can be sorted by any field and have a special field for your code. You can make PERSONALIZED FORM LETTERS that will take the following codes from the mailist and insert them in your text. FIELDS INCLUDE: Mr. or Ms., Last name, First name, Business name, City, State, up to 9 digit ZIP code and your own special 2 character code. ANY OF THESE fields can be inserted within your form letter wherever you want. You can print form letters or mailing labels to all the people on your list or to specific codes only. CopyArt makes it easy.

¿Hablas Español?

Now you can do word processing on your Model I or III in Spanish with Computer Software Curriculum's new Spanish language character generator chip. The computer accesses Spanish characters only when you need them; otherwise, your normal character set appears without any special program loading.

Installation is simple and requires no soldering if you own a keyboard that has been modified for upper-/lowercase. However, if your keyboard still has its original

character set, the installation procedure requires some minor soldering.

The Spanish language character chip costs \$99 for the Model I and \$79 for the Model III from Computer Software Curriculum, 1604 Limestone Trail, Fort Worth, TX 76134, 817-293-2282. In addition to this chip, you can order new character chips in any language within the constraints of the CPU. Write for further information.

Reader Service ↗ 578

The Lazy Writing Method

Lazy Writer, a popular word processing program from AlphaBit Communications Inc. (13349 Michigan Ave., Dearborn, MI 48126, 313-581-2896), is now avail-

CONVERT YOUR TRS-80 MODEL I, III, OR 4 INTO A

DEVELOPMENT SYSTEM

Now you can develop Z-80 based, stand-alone devices such as games, robots, instruments and peripheral controllers, by using your TRS-80 as a development system. The DEVELOPMATE plugs into the expansion connector of your TRS-80 and adds **PROM PROGRAMMING** and **IN-CIRCUIT-EMULATION** capabilities to your system (with or without expansion interface).

Complete instructions and sample schematics are included to help you design your own simple stand-alone microcomputer systems. THESE SYSTEMS CAN BE AS SIMPLE AS FOUR ICs: one TTL circuit for clock and reset, a Z-80, an EPROM, and one peripheral interface chip.

When the In-Circuit-Emulation cable is plugged into the Z-80 socket of your stand-alone system, the system becomes a part of your TRS-80: You can use the full power of your editor/assembler's debug and trace program to check out both the hardware and the software. Simple test loops can be used to check out the hardware, then the system program can be run to debug the logic of your stand-alone device.

Since the program is kept in TRS-80 RAM, changes can be made quickly and easily. When your stand-alone device works as desired, you use the Developmate's PROM PROGRAMMER to copy the program into a PROM. With this PROM, and a Z-80 in place of the emulation cable, your stand-alone device will work by itself.

The DEVELOPMATE is extremely compact: Both the PROM programmer and the In-Circuit-Emulator are in one small plastic box only 3.2" x 5.4". A line-plug mounted power supply is included. The PROM programmer has a "personality module" which defines the voltages and connections of the PROM so that future devices can be accommodated. However, the system comes with a "universal" personality module which handles 2758, 2508 (8K), 2716, 2516 (16K), 2532 (32K), as well as the new electrically alterable 2816 and 48016 (16K EEPROMs).

The COMPLETE DEVELOPMATE 81, for Model I, with software, power supply, emulation cable, TRS-80 cable, and "universal" personality module \$329

DEVELOPMATE 83, Model III/4 version, same as above **\$329**
PM2 PERSONALITY MODULE for 2732A EPROM **\$15**
PM3 PERSONALITY MODULE for 2764 EPROM **\$15**

THE WAIT IS OVER

CP/M[®]

EXCLUSIVELY FOR THE

TRS-80[®]

Model 4

Now, for the first time, unleash the powerful features resident in your Model 4 computer. Open up the vast store of CP/M software such as WordStar[®], dBASE II and Multiplan[™], along with thousands of others.

- Includes INTERCHANGE[™], a utility that allows reading, writing and copying 20 different manufacturers' disk formats such as IBM, KAYPRO, OSBORNE, XEROX, etc.
- Includes MEMLINK[™], a unique feature that uses the optional 64K RAM memory as a fast disk drive.
- Complete with all these CP/M utilities; ASM, DDT, DUMP, ED, LOAD, PIP, STAT and SYSGEN.
- Operates at the 4Mhz clock in the standard Model 4 mode.
- NO HARDWARE MODIFICATIONS. Just insert the disk and boot.
- NO COPY PROTECTION. Backups may be made for your own use and protection.
- The CONFIGURATION program supports a full range of 5-1/4" disk drives: 35, 40, 77 and 80 tracks, single and dual sided in any combination as well as the standard Model 4 drives.
- Includes MODEM 7, a powerful public domain communications program for file transfer and remote data base access such as CompuServ and the Source.
- Supports 80 x 24 video, reverse video, direct cursor addressing and more.
- Utilizes the Model 4 function keys and allows user defined keys.
- Auto Execute command for turnkey applications.
- FORMAT utility permits up to 52 disk formats to be constructed, all menu driven.
- Fast backup routine with verify for mirror image copies.
- All support programs are menu driven for ease of use.
- Ready to run in the standard 64K Model 4. The additional, extra cost, 64K RAM upgrade not required.
- Complete with over 250 pages of comprehensive user documentation.

AVAILABLE NOW FOR IMMEDIATE SHIPMENT \$ 199.95

The full line of MicroPro software is now available formatted for the Model 4 using our CP/M. Each disk is already configured and ready to run. Just install the printer of your choice and go.

THE SELECTRIC™ INTERFACE

Daisy wheel quality without daisy wheel expense.

You need the quality print that a daisy wheel printer provides but the thought of buying one makes your wallet wilt. *The Selectric™ Interface*, a step-by-step guide to interfacing an IBM Selectric I/O Writer to your microcomputer, will give you that quality at a fraction of the price. George Young, co-author of *Microcomputing* magazine's popular "Kilobaud Classroom" series, offers a low-cost alternative to buying a daisy wheel printer.

The Selectric™ Interface includes:

- step-by-step instructions
- tips on purchasing a used Selectric™
- information on various Selectric™ models, including the 2740, 2980, and Dura 1041
- driver software for Z80, 8080, and 6502 chips
- tips on interfacing techniques

With *The Selectric Interface* and some background in electronics, you can have a high-quality, low-cost, letter-quality printer. Petals not included.

Credit card orders call TOLL-FREE 1-800-258-5473. Or mail your order with payment plus \$1.50 shipping and handling to: Wayne Green Inc. Attn: Retail Book Sales, Peterborough, NH 03458.

**ATTENTION TRS-80* OWNERS!
DON'T SCRAP YOUR MODEL I...
CONVERT IT INTO A
MODEL III WORK-ALIKE**

**WITH DISK CONTROLLER,
48K RAM RS-232**
AND ALL OTHER
MODEL III FEATURES**

The Norcom TC-III is a replacement for the entire Model I electronics which perfectly fits into your original Model I enclosure.

Features

- Uses Mod I keyboard, case, monitor & power supply
- Includes full 48K memory, disk controller, printer & external I/O ports same as Model III
- All Model III features plus reverse video & output to drive external speaker with no additional hardware
- Uses Model III Basic ROMS or other EPROMs
- Runs Model III software
- No expansion interface needed—it's all built-in
- RS-232 add-in accessory board available
- Keyboard with joy-stick port available—make your own portable

Assembled & Tested TC-III with Basic ROMS	\$399.00	Factory Conversion of your Model I	\$499.00
Deluxe Keyboard with Numeric Pad	\$99.00		
Deluxe Keyboard without Numeric Pad	\$79.00		
RS-232 Interface Board—fits inside case	\$49.00		

Model III & Model IV Accessories

- Character Gen ROM replacement—18m Font-Rev Video **\$20.00**
- RS-232 Interface Kit—A perfect fit in your computer **\$59.00**

**RS-232 is optional. *TRS-80 is a trademark of Tandy Corp.

CONVERT YOUR SERIAL PRINTER TO PARALLEL

The UPI serial printer interfaces allow an ASCII serial printer to be connected to the parallel printer port on TRS-80 Models I, II and III.

Software compatibility problems are totally eliminated because the TRS-80 "Thinks" that a parallel printer has been attached. No machine language driver needs to be loaded into high memory. VISACALC, SCRIPSIT, BASIC, FORTRAN, etc. all work as if a parallel printer was in use.

The UPI interfaces are completely self contained and ready to use. A 34 conductor cable and connector plugs onto the parallel printer port of the Model I expansion interface or onto the parallel printer port on the back of Models II and III. A DB25 socket mates with the cable from your serial printer. The UPI interfaces convert the parallel output of the TRS-80 printer port into serial data in both the RS232-C and 20 MA. loop formats.

NEW PRODUCT
THE INTRONICS EPROM
PROGRAMMER NEWLY
DESIGNED UNIT ENCLOSED
IN MOLDED PLASTIC CASE

- Plugs into ROM pack slot. Uses tape base software (option of on board ROM)
- No personality modules required
- No switches to fiddle with
- Will program 2500, 2700 and 68700 series EPROM
- High quality zero insertion force EPROM socket
- Gold plated contact (Text Tool™)

REGULAR PRICE \$140.00
 INTRODUCTORY PRICE
 \$110.00

COTTAGE SOFTWARE

PACKER: Machine language program that edits all or part of your Basic program to run faster, save memory, or ease editing. The 5 options include UNPACK—unpacks multiple statement lines into single statements maintaining logic, inserts spaces and rennumbers lines, SHORT—deletes unnecessary words, spaces, and REM statements, PACK—packs lines into maximum multiple statement lines, including all branches, MOVE—moves line or blocks of lines to any new location on program. On 2 cassettes for 16K, 32K, & 48K

For TRS-80 Mod I or III Level II or Disk Basic ... \$29.95
SYSTEM TAPE DUPLICATOR: Copy your SYSTEM format tapes. Includes verify routines. The Model III version allows use of both 500 and 1500 baud cassettes speeds. For TRS-80 Model I or III Level II \$15.95

CASSETTE LABEL MAKER: A mini word processor to print cassette labels on a line printer. Includes 50 peel-and-stick labels on tractor feed paper.

For TR-80 Model I of III Level II & Printer \$17.95
PRINT TO LPRINT TO PRINT: Edits your Basic program in seconds to change all Prints to LPrints (except Print@ or Print#) or LPrints to Prints. Save edited version. For TR-80 Model I or III Level II \$12.95

FAST SORT ROUTINES: for use with Radio Shack's Accounts Receivable, Inventory Control I, and Disk Mailing List Systems for Model I Level II Sorts in SECONDS! You'll be amazed at the time they can save. Supplied on data diskette with complete instructions.

FAST SORT for Accounts Receivable \$19.95
 FAST SORT for Inventory Control I \$19.95
 FAST SORT for Disk Mailing List (specify data diskette of cassette for 1 drive system) \$14.95
 ALL THREE ROUTINES \$44.95

Prices subject to change without notice. Call or write for a complete catalog. Dealer inquiries invited. VISA and Mastercard accepted. Foreign order in US currency only. Kansas residents add 3% sales tax.

Do your own taxes like an expert with TAX/SAVER®

TAX/SAVER® The tax help program for the layman and the professional.

- Privacy.
- Built-in tax aids. Answers questions like "Is my father my dependent?" and "Are my deductions reasonable?"
- Tax regulations programmed in by our team of accountants. Type in your figures and you've done your own tax return.
- Output to video or printer. (Compatible with overlays or NELCO official 1040.)
- Tax deductible.
- Manual: Tax information, lists of deductions, tax glossary.
- **TAX/SAVER®** completes long and short forms, itemized deductions, interest, dividends, business income, capital gains, income averaging, self-employment tax, and the deduction for couples when both work.
- 40% Discount on yearly updates.

Reviews and Users' Comments:

About TAX/SAVER®:

"This is a very valuable tool"

— R. Perry, Personal Computing Magazine, "Tax Preparation Software", December 1981

"This is the perfect program for those doing taxes for others (. . . good for an individual, too!!)"

— B.M., Missoula, MT (Professional Preparer)

About TAX/FORECASTER™:

"VERY HANDY!" — T. Pettibone, "Software Critic", 1982

©Copyright 1983

*Registered trademark of Tandy Corp.

TAX/FORECASTER™, a quick tax planner for 1983-1984, lets you see how financial decisions will affect your taxes. Merely change one or more entries to see your tax refigured.

PROFESSIONAL TAX/FORECASTER™ adds disk storage of client files and income averaging. This tax tool is a must!

Orders will be filled in late January to allow inclusion of new tax laws.

Thornton	"Bars and Stripes Forever."	11/83:104		III	A look at industrial bar codes, with three popular styles for your III.
Thornton	"Check-Out UPCs."	11/83:114		I, III	How to create and print UPC codes.
Trojak	"Finding the Search Solution."	12/83:110		II, III	Search text files faster with signature screening.
Welcher	"Reservation Cancellation."	3/83:276		I, III	Makes a travel agent's work easier.

C•NOTES

<i>Author</i>	<i>Title</i>	<i>Issue:Page</i>	<i>Debug</i>	<i>Model</i>	<i>Annotation</i>
Balonis	"Winning Numbers."	11/83:270		100	A program that increases your chances of winning the lottery.
Balonis	"Program Length."	12/83:246		100	A utility program that computes program length in order to manage memory space.
Barbier	"Nothing's Perfect."	8/83:209		100	A closer look at the Model 100.
Barbier	"Uploading Text to WordStar."	8/83:210		100	Transferring text files to WordStar.
Cloutier	"Disassembler."	9/83:283		100	A disassembler for the Model 100.
Deiningner	"Remote Robot."	11/83:269		100	A program that controls Radio Shack's radio-controlled robot.
Dixon	"Itinerary 100."	7/83:173		100	Keeps your day organized.
Dixon	"Foxfighter."	8/83:200		100	Clear the sky of air-mines suspended over a city.
Dixon	"Mighty Write."	10/83:266		100	A word processing program for the Model 100.
Dixon	"Cram 100"	10/83:283		100	An exciting line-action game.
Eisenberg	"Monitor 100."	7/83:178		100	Taking a look inside your Model 100.

Three Good Reasons To Buy Software From Mumford Micro Systems:

- 1. Quality.** Mumford Micro has been selling software for the TRS-80 since 1978. Nobody survives in this competitive market for that long on poorly written software. Our best references are thousands of satisfied and repeat customers, but if you haven't spoken to one of them, our 10 day money-back guarantee might secure your confidence. Our rate of return? Less than one in 200.
- 2. Price.** Quality software at exorbitant prices is no bargain. Don't be misled by our low prices. Mumford Micro is known for true value in addition to high quality.
- 3. Service.** We are not distributors or "middle men." We are the original producers of every package we sell. If you have a problem with one of our programs, you can often call and talk to the author. On those occasions when a problem cannot be resolved on the phone, prompt technical help is available from a programmer who is intimately familiar with the program you purchased.

INSTANT ASSEMBLER

The **Instant Assembler** is a powerful assembly language development system for the TRS-80. If you are already an assembly language programmer, its unique design will greatly increase your productivity. If you are just getting started, there is no better assembler to help you learn machine language programming. Some of its unique features are immediate assembly, which detects syntax errors as source is entered, and a compact source format that allows you to write programs nearly three times as large as other assemblers in the same amount of memory. It will assemble to disk, tape, or directly to memory for immediate debugging with the built-in debugger, and also produces relocatable code modules that can be saved on disk or tape and linked together in memory for large or modular assemblies. You can quickly switch from assembler to debugger without losing your source. The built-in debugger will step through your programs one instruction at a time, showing each disassembled instruction and its effect on the registers and memory. It will load or save both conventional source files and its own condensed source format.

The **Instant Assembler** package includes six separate programs. The assembler itself includes the editor and built-in debugger. The **Linking Loader** is included in several versions for different memory sizes. A stand-alone version of the debugger (**MicroMind**) is also included. **MicroMind** can be relocated in memory and has commands to single-step, set breakpoints, display or alter registers or memory, find bytes or words, disassemble to screen or printer, convert between hex and decimal numbers, and write SYSTEM tapes. The **Instant Assembler** comes with a comprehensive 65 page instruction manual with many examples.
Specify Model I or Model III. TAPE INTASM 2.1 \$39.95 on tape
Specify Model I or Model III. DISK INTASM 2.1 \$49.95 on disk

TELCOM

Mumford Micro offers two telecommunications programs. **TELCOM I** has most of the features needed to communicate with bulletin boards, time share systems, or for file transfers between two disk-based micros over modems or direct wire. It is menu driven and extremely simple to use. Functions include transmit a disk file, receive a disk file, save received data on disk, examine and modify UART parameters, 8 programmable log-on messages, automatic checksum verification of accurate transmission and reception, and many more user conveniences. Supports line printers, lowercase characters, Xon/Xoff protocol, and programmable character keys.

TELCOM II is an expanded version of this program for the most demanding telecommunications applications. The terminal mode now has a help menu and a large printer spooler for high baud rates. From within the terminal mode you can load disk files into the memory buffer, type into the buffer, transmit the buffer, or view the buffer or data that has already scrolled off the screen. It has 10 different programmable messages that can each be sent with a single command for auto log-on or auto dialing, and 5 different character translation tables.

TELCOM II also includes an error correction file transfer mode which is compatible with the LINC program available on CP/M systems and the IBM PC. **TELCOM II** will exchange disk files with any computer running this protocol (including another TRS-80 running **TELCOM II**), and will automatically detect and correct errors in transmission. Files can be sent to or fetched from an unattended computer. The extreme ease of use **TELCOM I** is known for has not been compromised. Reconfiguration of the programmable features is done internally from clear menus for fast, easy operation. Both versions of **TELCOM** come with complete instruction manuals, which are available separately for \$5 to help you decide which program is best suited to your needs.

Specify Model I or Model III. **TELCOM I** \$39.95 on disk
Specify Model I or Model III. **TELCOM II** \$69.95 on disk

MODEL I CLOCK MOD

The SK-2 clock modification allows CPU speeds to be switched between normal, an increase of 50% or 100%, or a 50% reduction. Speeds may be changed with a toggle switch (not included) or on software command. It can be configured to return to normal speed any time a disk is active and has provisions for adding an LED to indicate when the computer is not at normal speed. It mounts inside the keyboard unit with only 4 necessary connections and is easily removed if the computer ever needs service. The SK-2 has been field proven by 3 years of use, and comes fully assembled with socketed IC's and illustrated instructions.
Model I only. SK-2 \$24.95

DISK INDEX

DISK INDEX will assemble a master index of your entire program library by automatically reading the program names and free space from each disk. The index may then be alphabetized or searched for any disk, program, or extension. It will alphabetize 2400 programs in less than 50 seconds and will find any program out of 2400 in less than 3 seconds. Disks or programs may be added or deleted manually, and the whole index or any selected part may be printed on paper in several different formats. The index itself may also be stored on disk for future access and update. A 48K machine will hold up to 255 disks and over 2400 programs in each file, and you may build as many files as you need. There is no limit to the number of filenames it can read on any one disk. It will run on either a Model I or Model III and catalog disks for either machine regardless of which one is running it, though Model I owners must have double density to catalog Model III disks. It will automatically recognize any DOS and disk density. **DISK INDEX** works with any operating system written for the Model I or Model III except CP/M, and is extremely fast and easy to use.

Specify Model I or Model III. **DISK INDEX VERSION 3** \$29.95 on disk

INSIDE LEVEL II

The Programmers Guide to the TRS-80 ROMS

INSIDE LEVEL II is a comprehensive reference guide to the Model I and Model III ROMs which allows the machine language or Basic programmer to easily utilize the sophisticated routines they contain. Concisely explains set-ups, calling sequences, and variable passage for number conversion, arithmetic operations, and mathematical functions, as well as keyboard, tape, and video routines. Part II presents an entirely new composite program structure which loads under the SYSTEM command and executes in both Basic and machine code with the speed and efficiency of a compiler. In addition, the 18 chapters include a large body of other information useful to the programmer. 80 Micro said "The book has no flaws; it is a perfect gem." Byte Magazine said "I recommend this book to serious machine language programmers."

Includes updates for Model III. **INSIDE LEVEL II** \$15.95

DEMON DEBUGGER

DEMON (for DEbugger and MONitor) is a sophisticated tool with which you can explore and debug machine language programs. It has two modes of operation. In the STEP mode, it "emulates" the operation of the Z-80 and allows you to step through any machine language program one instruction at a time, showing you the address, hexadecimal value, Zilog mnemonic, register contents, and step count for each instruction. The 19 different STEP mode commands include step, step to a branch, run in step mode at a variable rate, run for a specified number of steps, change flags or registers, execute a CALL or RST, set breakpoints in RAM or ROM, and break when a number in a defined range appears in any double register. The 26 commands in the MONITOR mode include hex arithmetic, hex to decimal conversion, block move, fill memory, find bytes, jump to address, disassemble to screen, printer, disk, or tape, load memory from disk or tape, write memory to disk or tape, full screen memory edit in hex or ASCII, and relocate other programs or itself. Screen displays may be routed to your line printer for hard copy. **DEMON** includes a comprehensive 40 page manual with many examples.

Specify Model I or Model III. **DEMON** \$29.95 on tape or disk

8748 ASSEMBLER

Assemble programs for the complete Intel MCS-48 family of microcontrollers including the 8741, 8742, 8748, and 8749 on your Model I, III, or IV. Assembles from a source file written on your text editor directly to an object file on disk. It supports the standard Intel mnemonics and features conditional assembly and listing, complete expression evaluation, ten significant characters for symbols, a complete range of pseudo-ops, and informative error messages. It comes with a comprehensive instruction manual which includes the instruction set for each component and sample listings for arithmetic and I/O subroutines. We also offer plans, schematic, and software to help you build your own inexpensive 8748 programmer. The 8748 is a readily available single chip computer that contains RAM, EPROM, clock oscillator, a counter/timer, and 27 I/O lines in a single 40 pin package. A complete computer controller can be built with this one chip, a crystal, three capacitors, and a five volt power supply.
Specify Model I or Model III. **CASM48** \$74.95 on disk
Plans and software for an 8748 programmer \$29.95 on disk

FORMAN AND WILLIAMS
DOCUMENTATION
SERVICE

We'll evaluate your original program documentation for clarity, user-friendliness, and salability. Then, with your approval, our marketing professionals will edit, revise, or rewrite documentation to help you create a total marketing package for your Basic program.

Send your Model 1 Level II cassette or single-user Model II/12/16 8" floppy diskette, current documentation, program listing, and self-addressed, stamped envelope to

FORMAN AND WILLIAMS
 3387 Del Rosa Ave., North (Suite 113)
 San Bernardino, CA 92404 ✓451

Programs will be returned only if accompanied with sufficient return postage and envelope.

NOTE: We do not evaluate or debug programs

SPECIAL NOTE to Software Manufacturers, Computer Stores, and Mail Order Houses: send #10 SASE and your business card for information on our complete advertising and marketing services.

SYSTEM DIAGNOSTIC

Complete diagnostic tests for every component of your TRS-80™ Model 1, 3 or 4. Tests for ROM, RAM, Video Display, Keyboard, Line Printer, Cassette Recorder, Disk Drives, RS-232-C Interface. Individual tests or continuous testing mode.
 System Diagnostic \$99.95

TYPITALL

The **SCRIPSIT™ Compatible Word Processor**
 TYPITALL is a word processing program which is upward compatible with SCRIPSIT™ for the TRS-80™ Models 1, 3 and 4. TYPITALL includes features like these: Assign any sequence of key-strokes to a single control key. See the formatted text on the screen before printing. Send the formatted text to a disk file for later printing. Merge data from a disk file during printing. Send ANY control or graphic character to the printer. Use the same version on the Model 1 or Model 3. Reenter the program with all text intact if you accidentally exit without saving the text.
 TYPITALL (disk only) \$129.95

TRS-80™ MODEL III
ASSEMBLY LANGUAGE

A complete course in assembly language, written for the **beginner**. Basic concepts, the Z-80 instruction set, complete Model III ROM and RAM information, programming examples, the disk controller, the TRSDOS 1.3 disk operating system, RS-232-C interface.

With the book you can also purchase **Monitor #5**, a comprehensive machine language monitor (specify Model 1 or 3).

Book only \$16.95
 Book and Monitor #5 on disk \$29.95

SMART TERMINAL

The *intelligent* terminal program, with automatic transmission and storage of data, true BREAK key, character translations, cassette and disk files compatible with SCRIPSIT™ and Electric Pencil™. Same program supports both cassette and disk systems.

Model 1, 3 or 4 \$74.95
 Model 2/12/16 (CP/M) Version \$79.95

SMALL BUSINESS
ACCOUNTING

Based on Dome Bookkeeping Record #612, this program keeps track of income, expenses, and payroll (not in cassette version) for a small business.

TRS80 MODEL 4 DOSTAMER 4

Never type another DIR:1, COPY "FILE-NAME":1 TO "FILENAME":0, PURGE "FILENAME":0, LIST "FILENAME":1, LOAD "FILENAME" (F = 3), ... and on and on and on!

Imagine over 200 commands that YOU define, executed with ONLY ONE OR TWO KEYSTROKES! Instant sorted directories with 1 key. Load Basic, protect memory, run your program with 2 keystrokes. List a file to the screen or the printer, print a directory, copy a file from one disk to another, copy the entire disk, and much more.

Your DOS has a lot of great features. The trouble is, you have to remember all those commands. With **DOSTAMER 4** those commands are 1 or 2 keystrokes away. Nothing to remember and nothing to forget, just use it!

We use the SPECIAL features in YOUR DOS for the GREATEST utility you'll ever want. Once you use **DOSTAMER** you'll wonder how you got along without it. Also available Model 1 & 3 for DOSPLUS, LDOS, NEWDOS80, MULTIDOS & TRSDOS 1.3 (even works on LNW & MAX 80) for \$49.95 complete with the easiest instructions you'll find. By the way, **DOSTAMER** is written in FAST Z 80 machine code.

T80-FS1 Flight Simulator

See your dealer!

Available for Model I or Model III. \$25.00 on cassette or \$33.50 on disk (with enhancements) All versions require 16K.

If you order direct, please specify whether you have Model I or Model III (the media are different) and whether you want disk or cassette. Include \$1.50 and indicate UPS or first class mail. Illinois residents add 5% sales tax. Visa and Mastercard accepted.

If you don't yet own a disk, don't fret. You can upgrade anytime. Cassette users may send back their cassette (but not the manual) along with \$10 (first class shipping included) and receive the disk version.

Christensen	"Horse Race II."	2/83:237		I, III	opponent. Revision of a previously published program: Now it's more educational.
Cohn	"Fly Like an Eagle."	A/83:306	8/83:28	I	Be behind the controls of this simulation of a sailplane race.
Collura	"Categories."	A/83:200		I, III	Finding words that match the categories.
Conforti	"Muddy Pig Simulator."	8/83:120		III	Catch the muddy pig, if you can.
Cook	"Android Picture Gallery."	A/83:190		I, III	A game that keeps you dusting up the art gallery.
David	"Light Cycle."	8/83:268		I, III	Rev up your light cycle and paint your video screen.
Dixon	"Foxfighter."	8/83:200		100	Clear the sky of air-mines suspended over a city.
Dixon	"Cram 100."	10/83:283		100	An exciting line-action game.
Efroymson	"Pick a Card..."	A/83:176		I	The computer becomes a magician in this exciting card game.
Finkelstein	"Turret."	3/83:326		I, III	Pit your skills against an oncoming invader.
Fisher	"Prime Mission."	11/83:256		I, III	Save the planet from attacking, vicious prime-numbers.
Gulick	"Peek Pong."	2/83:310		I, III	Playing a fast table tennis game with your TRS-80.
Hague	"Bustout."	6/83:296		CoCo	A Color Computer version of the popular arcade game.
Hanson	"Outbreak."	1/83:216	6/83:22	I, III	A Basic version of the popular arcade game.
Harrell	"Fortran Breakout."	7/83:186	12/83:20	I, III	A popular arcade game converted to the TRS-80.
Hildreth	"Time Warp."	3/83:218		I, III	Destroy all the time gates and live.
Huben	"Music Composer."	2/83:104		CoCo	Store up to 200 notes on your Color Computer and save the music on tape.
Jarvela	"Subterra."	8/83:203		100	Richard Ramella's adventure game gone portable.
Johnstone	"Lost on the Great Barrier Reef."	8/83:92		I, III	An adventure that might leave you stranded.
Karr	"Maze Chase."	8/83:272		I, III	Catch the asterisk before enemies catch you.
Kime	"Batter Up!"	4/83:130		I, III	Playing baseball when you can't get out to the park.
Knight	"Math Hangman."	A/83:274		I, III	Develop your math skills with this game.
Koch	"Lunar Lander."	1/83:188		II	Model II lunar landing game.
Krengel	"Spelling Challenger."	2/83:178		I, III	Three word programs that help increase your spelling skills.
Kupchanko	"Boxer."	2/83:134		I, III	Tests your pugilistic skill in this game that pits you against the computer.
Lake	"Project Deep Dive."	2/83:96		I, III	Guide your sub through a winding tunnel filled with mines and torpedos.
Llamas	"Almazar I."	A/83:288		I, III	A multi-part adventure game.
Lott	"Model II Casino."	8/83:148	11/83:24	II	It's Las Vegas Night for the Model II.
Michaels	"Kings and Castles."	8/83:246		CoCo	Use your warriors to become Monarch of all kingdoms.
Michel	"Ultimate Joystick Interface."	A/83:592		I	A cheap and easy-to-build joystick interface.
Miller	"Byte Cycles."	2/83:132		CoCo	A joystick game ala the light cycle races in TRON.
Mills	"Strip Blackjack."	8/83:256	10/83:22, 12/83:20		Playing for high stakes in this adult version of a computer favorite.
Modney	"Michael's Game."	2/83:208	7/83:22	I, III	Overcoming computer fear with fun programs for children.
Morgenstern	"Maxwell's Demon."	8/83:234		I, III	Learning thermodynamics the fun way.
Norman	"The Lair of Kraken."	2/83:124		CoCo	Travel through an underwater palace, battling the abominable Kraken.
Parks	"Tee-Off."	4/83:108	9/83:22	I, III	A golf game in which you have to contend with the hazards and wind conditions.
Ramella	"Brainstorm."	A/83:213		I	This game challenges you with number sequences.
Riggs	"Soccer Anyone?"	4/83:322		CoCo	A fast-action, two-person game of soccer.
Rogers	"Jet Bomber."	5/83:298	8/83:26	I	A game that features screen-scrolling.
Saisi	"The Poop on PEEK."	3/83:278		CoCo	Give your arms a rest during fast games by using PEEK instead of INKEY\$.
Satterfield	"Attack of the TRS-80."	8/83:226		I, III	Save a lunar colony from a crazed Model I.
Schmidt	"Quest for the Key of Nightshade."	2/83:85		I, III	An adventure game written in Assembly language.
Serotta	"Blackjack."	12/83:247		100	A simulation of the popular casino card game also known as 21.
Skapura	"Collegiate Capers."	8/83:212		I, III	College years relived and remembered.
Sutton	"Color Computer Color Code Combo."	5/83:254		CoCo	A game in which you use logic to guess the color combinations.
Toscani	"Games in Color."	A/83:416		CoCo	Color Computer games that will keep you amused and busy.
Uglum	"Rat Maze."	8/83:110		CoCo	A game that lets you feel like a laboratory animal.
Wells	"Math Countdown."	2/83:160	9/83:22	I, III	A basic-math learning game.
White	"Dogfight."	1/83:192		CoCo	You're a flying ace shooting the enemy's biplanes.
Wood	"Return to the Castle."	4/83:326		CoCo	An adventure game complete with dragons, princesses, and gold.
Wood	"Solitary Maneuvers."	A/83:440		CoCo	The Computer is your opponent in this followup to Colorful Maneuvers.

GENERAL

Author	Title	Issue:Page	Debug	Model	Annotation
Boyd	"Memory Exerciser."	4/83:332		II, 16	Let your computer help strengthen your memory.
Busch	"DROSSDOS:8E."	1/83:342		I, III	KTI takes on the world of disk operating systems.
Busch	"Monkey Business."	5/83:324		I, II, III	KTI strikes again: A novel-writing computer.
Dacus	"Reconcile with Color."	A/83:482		CoCo	Your Color Computer organizes your checkbook and reconciles bank statements.
Deming	"When OK Isn't."	1/83:348		CoCo	Changing your computer's prompts.
Grout	"Twinkle, Twinkle, Little Star."	2/83:270		I, III	Writing graphic poetry on your computer.
Grout	"Apple Core Emulator."	6/83:78		I, III	Shows how your TRS-80 can write and run Apple II software.
Keen & Dischert	"Channels of Communication."	12/83:140		I, III	How to access over 140 TV stations with a satellite dish.
Maloney	"Punklist."	4/83:141		I, II, III, 12, 16	Search for the perfect name for your rock group.

Hello thayuh. This is Eben Flow, proprietor of the Fish or Cut Bait Company, buyer and seller of lobstah bait for 49 years. My hobbies are collecting linoleum samples, squashing flies and playing pac-person on my home computer.

But here on Martinicus Rock, off the coast of Maine, the power can be a tad erratic. So, to cure the brownout and blackout problems, and to keep them spikes and surges off my picture tube, I got me a **MAYDAY** Uninterruptible Power Supply from SUN RESEARCH. Them fellas fixed me up real good and real light on my pocketbook, too. Got me a **MAYDAY** for my mini-calcaputer with a voltage regulator and everything for only 325 clams. They even included the battery in a nice waterproof box. Handy out here, you know. Now, if **MAYDAY** would only keep them sea dogs out of my barrel. . .

MAYDAY - Protection even you can afford!

NEW

FILEMATE II

A most versatile, easy-to-use, menu-driven manager for this truly Random Access Database System

**TRS-80 Model I, III and 4
48K, 2 Disk Drives**

- Create your own file structure
- Instant access to any record
- Select records for processing by attributes using logical AND, OR or NOT
- Transfer data from one file to another
- Merge address list with a form letter
- Edit, Sort, Calculate, Print custom reports
- Revise file structure if needs change No need to re-enter the data
- Up to 2000 records on a 40 track diskette

WITH OUR**

RS232 ANALYZER

Do you have a communication problem with your hardware? We found that many hardware manufacturers use different "standard" pin configurations to hook through RS232 connectors.

For example, a computer and an intelligent printer need to be hooked up, but you are unsure of exactly which signals are used or needed. You simply plug our RS232 Analyzer to the connector on the computer to determine which pins are used for what purpose, then hook the RS232 Analyzer to the printer to find which pin requirements are necessary for the two machines to communicate properly.

The RS232 Analyzer has 9 Bi-Color LEDs to monitor the 8 standard RS232 signals plus one 'spare' LED that can be connected to any pin.

If you find the pin requirements do not match, the RS232 Analyzer can be used, with its internal switches, to match the signals as necessary on the two machines. You can then either rewire the pin connections in the RS232 connectors to match, or leave the RS232 Analyzer permanently wired in the circuit.

The convenient size makes the RS232 Analyzer a very handy tool for anyone with RS232 connector problems.

Also available: Null Modems

SUPER-Q TWO™ PROGRAMMERS' UTILITIES

7 UTILITIES for \$39.95 (Mod I/III, Disk, 32K+)

Chops runtime up to 60% w/o compilers. Q=quick. Cuts development time by as much as 70%. Write like a whiz, Debug like a demon, Run like a Rabbit. Just what you've been looking for.

MAP displays, prints or screen-prints sorted line & variable refs, with **COMMAND VERBS**. Fast!

VAR displays, prints or screen-prints sorted variable **VALUES**. Makes debugging a cinch!

SPEED reorganizes Variable Tables, initializes variables by search freq., for fastest runtime.

COMPRESS streamlines struct'd Basic, reduces memory overhead, allows maximum free space.

SCREEN prints screen or dumps screen to disk.

RENEW 'restores' 'newed' program, even from DOS.

HEX use hex math in dos or Basic command mode.

PLUS: Tutorial 'ELIMINATE GARBAGE COLLECTION'.

NO EXPENSIVE SOFTWARE, JUST FACTS!

SECRETARY, STUDENTS,
YOU CAN'T TYPE BIBS?

Try BIB/RITE

to produce bibliographies in a standard form* to learn or to teach a standard bibliographic form

Prompts for elements and for form, sort by author and by category, merge keyboard and disk or tape input, semiautomatic journal title entry, edit, print with heading, margins, automatic paging.

Maximum of about 150 citations in 48K, 200 for non-disk Basic. Best for fewer than 100 citations. Slow for 150-200.

Available for tape or disk use. Disk recommended. For TRS-80 Model I Level II with lower case, Model III, or Model 4 in Model III mode. Uses about 14K. Need 32K minimum and printer with caps, lowercase, and underline. Apple, CP/M with MBasic, Model II, 12, & 16 versions in process.

One computer, individual user \$45.95 + \$2.50 postage and handling. One computer, multiple users \$150 + \$2.50 postage and handling. Up to 10 user's guides for multiple users, three sent if not specified. User's Guide only (24 pp. 8½" x 11") \$3.50 + \$1 postage and handling. Applies to purchase.

On approval to institutions. Dealer inquiries invited.

NODVILL DIET PROGRAM

\$69.95

"TAKE A BYTE"
 MAINTAIN, LOSE OR GAIN WEIGHT
 With your TRS-80 Double Density Disk Model I/III/4 and
 The NODVILL DIET PROGRAM "Take a Byte"

you can quickly and accurately:
 * Calculate caloric and nutritive food intake
 * Evaluate nutritive value of your diet
 * Compare daily diet to Individual RDA Chart
 * Create personalized daily meals and menus
 * Plan varied daily menus based on sound nutrition
 * Save records of daily meals and menus for future planning
 * Print nutrition charts, food, meal, menu and grocery lists

"Take a Byte" is a Modular BASIC Program

MAIN Program Menu
 (1) Recommended Daily Dietary Allowance (RDA) CHART
 (2) 733 Expandable Random Access FOOD LIST Data File
 (3) 28 Nutritional MEAL LIST Data File Examples
 (4) 7 Balanced DAILY MENU LIST Data File Examples
 (5) GROCERY LIST Program Module
 (6) 25 Page USER'S MANUAL including Charts and Tables

All Data Files can be EXPANDED and MODIFIED systematically and flexibly to reflect your personal diet, your choice of diet book, or your doctor's suggested diet.

For more information: Call: (203) 431-6445
 To Order: Mail a check or money order for \$69.95 to:

TRS-80[™] WOBOS[™] I

WESTERN OPERATIONS

Basic Operating System

WOBOS I is a menu driven, prestructured program in BASIC that provides access to over 30 utility functions during development or actual use of a program. Its unique layout allows you to develop your programs within a well organized environment that provides a very strong foundation to build upon. You always had to start from scratch before but now, after loading WOBOS I, you'll start with several K of subroutines and system utilities. Imagine what this can do for your productivity! WOBOS I is not an accessory to your program. It actually becomes its foundation!

WOBOS I for Model III BASIC		03 01 82 12:34:56	
PROGRAM	MENU	UTILITIES	
1	Your Program A	11	Data List
2	B	22	Sort
3	C	33	Renumber
4	D	44	Append
5	E	55	Memory Dump
6	Graphics Synthesis	66	Map
7	Special characters 0-31	77	Size
8	91-127	88	New Data Entry
9	192-255	99	Device I/O

Illustrated above is the Primary Menu of WOBOS I for Model III. In addition to the features shown, the DEVICE I/O generates a separate 9-choice menu that will allow you to compile, update, sort and output your data files. It also includes a utility that will save both the DATA and WOBOS I on tape and/or disk.

With controllable SOUND!

"Once you've used it, you'll never write another program without it!"

Please specify your complete TRS-80 system when ordering. WOBOS I comes with an Instruction Manual and it is supplied on
- Cassette for all tape systems (upgradable to disk) \$35
- Cassette transferable to disk for Model I disk systems \$35
- Diskette for Model III and Color Computer disk systems \$40

Shipped First Class Airmail at no extra charge if you mention this ad.

MODEL 16 68000 BASIC

TriSoft is pleased to announce the availability of 68K-BASIC for all computers operating under CP/M-68K. Model-16 owners using TriSoft CP/M-68K will find 68K-BASIC to be a valued addition to their system.

68K-BASIC is a BASIC language compiler and run-time system designed to be upward compatible with the features of most other BASIC language implementations. 68K-BASIC has several enhancements not normally found in BASIC that greatly increase the programmer's productivity. At the same time it also makes program maintenance much easier. The major enhancements are:

- 1) Indexed file structure built in
- 2) Alpha-numeric program labels
- 3) Long variable names
- 4) Numeric formatting
- 5) MAPPED variable structures
- 6) Line numbers not needed
- 7) Terminal control independence
- 8) Device independence
- 9) Automatic variable type conversion
- 10) Machine language subroutine calls

Dealers SELL

Selling 80 Micro will make money for you. Consider the facts:

facts:

Fact 1: Selling 80 Micro increases store traffic—our dealers tell us that 80 Micro is one of the hottest-selling computer magazines on the newsstands.

Fact 2: There is a direct correlation between store traffic and sales—increase the number of people coming through your door and you'll increase sales.

Fact 3: Fact 1 + Fact 2 = INCREASED SALES, which means more money for you. And that's a fact.

For information on selling 80 Micro, call 800-343-0728, (In NH Call 924-9471) and speak with Ginnie Boudrieau, our bulk sales manager. Or write to her at 80 Micro, Route 101 & Elm St., Peterborough, NH 03458.

Wayne green books

PUT YOUR TRS-80* IN CONTROL

Interface your TRS-80 to outside devices with **TRS-80 as a Controller**. You can use your computer to control lights, switches, and even a small computer you build yourself.

All it takes is a minimum knowledge of electronics and programming. Circuits are simple. Most programs are fewer than fifteen lines long. The instructions are clear and fully illustrated.

Jerry O'Dell has designed these projects to be both easy and inexpensive. You don't need disk drives, plotters, digitizers or other fancy units.

All you need is a TRS-80 Model III with 16K RAM, Level II BASIC, and a few other parts that you will no doubt find useful at a later date. You can also use a Model I, with the conversions provided. The components you'll need are all readily available.

The book begins with a description of the Model III and Z80 and all the chips, circuits, prototyping boards, and other devices used in TRS-80 interfacing. There are also helpful suggestions throughout for expanding the projects into more complex applications.

BK7394 \$12.97 softcover ISBN 0-88006-061-1
7 by 9 224 pp. Wayne Green Books 1983

For credit card orders, call **TOLL-FREE 1-800-258-5473** or mail your order with payment of \$12.97 each plus \$1.50 per book shipping and handling to: Wayne Green Books Sales, Peterborough, NH 03458.

Bogardus	"CC DLOAD."	3/83:190		I	Linking the CoCo to the I via the DLOAD command.
Borrmann	"Spacemap."	9/83:184		I	A track-by-track disk directory for the I.
Busch	"Nine Programming Tricks."	A/83:56			Shortcuts to faster Basic programming.
Calmettes	"LP VII Screen Printout."	2/83:252		I, III	Reproduces the video display on paper.
Castor	"Cassette Operating System."	3/83:226		I, III	Data base management with a tape-based system.
Chidsey	"Bit Smitten—Part VI."	1/83:316		I, III	Create nice-looking title and credit pages.
Christensen	"Color Correction."	11/83:202		CoCo	A test pattern program for accurate color reproduction.
Cloutler	"Disassembler."	9/83:283		100	A disassembler for the 100.
Collins	"DATATP."	10/83:252		I	A hybrid Basic and Assembly listing that simplifies tape data handling.
Corbani	"Business Graphics."	5/83:326		I, III	Self-documenting subroutines that tell your company's story in graphics.
Craft & Beplat	"Decoding Bar Codes."	11/83:128		III	Programs that let your Model III read bar codes.
Delmarter	"Directory Assistance."	11/83:260		II	A cure for vanishing II/12/16 disk directories.
Deming	"When OK Isn't."	1/83:348		CoCo	Changing your computer's prompts.
Edwards	"Number Your Program Listings."	A/83:208		I	A machine-language routine that numbers the pages of your program listing.
Eisenberg	"Monitor 100."	7/83:178		100	Taking a look inside your 100.
Engelhardt	"Take It Off."	12/83:177		4	How to crack TRSDOS 6.0's password to erase utilities and clear disk space.
Esposito/ Ramhoff/Rowe	"40K Color Basic."	5/83:212	9/83:22	CoCo	Upgrading your CoCo to 40K.
Faulds	"Tape File Manager."	1/83:324		I	Four routines to speed up your buffer's reading and writing capabilities.
Fleck	"Extend Radio Shack's Editor/Assembler."	11/83:248		I, III	Check your object code while using EDTASM.
Gillen	"Robot Reader."	6/83:302		I, II, III, 12, 16	A Basic program that analyzes text and tells you its difficulty level.
Goodale	"Catalog Your Files."	A/83:316		I, III	A cataloging routine that maintains sequential filespecs.
Grimes	"Avoid the Dangers of Dirty Disks."	A/83:238		I	The easy way to keep your disk system clean.
Haan	"Assembly-Language Disk I/O."	12/83:88		III	Mastering Assembly's I/O techniques for more efficient programs.
Heusinkveld	"Color Computer Merge."	2/83:332		CoCo	Concatenate your programs on tape.
Hodgson	"DSAVE."	1/83:232		I	Take the risk out of saving disk files to tape.
Hope	"New Tricks for an Old Dog."	1/83:200	5/83:26	I	Modifications to Hinrichs' word processor.
Keil	"Saving Strings."	9/83:116		I, III	A fast and powerful INKEY\$ routine.
Knight	"Make Your Word(s) Count."	11/83:204		I, III	Find the number of words in a Scripsit file.
Knight	"Directory Information, Please."	A/83:320	2/83:32	I	A flexible disk directory to meet your needs.
Kump	"Mini-Micro Text Editor."	5/83:290	8/83:26	I	A text editor that uses less than 200 bytes.
Mabry	"Profile File Transfer."	7/83:290	10/83:22	I, III	An easy Basic program that puts Profile data in new files.
Miller	"Compress It."	3/83:336		I, II, III, CoCo	Squeeze a 12K program into a 4K computer.
Moyer	"Auto-Dial/Auto-Answer."	A/83:300		I	An addition to your modem that lets your computer answer and dial your phone.
Murray	"Chameleon Code."	12/83:170		I	From Assembly to Basic in the blink of an eye.
Nestor	"Mod II File Transfer Utility."	9/83:268		II	How to transfer disk files.
Norman	"High-Res Alphanumerics."	A/83:469		CoCo	Making your own high-res character sets.
O'Connor	"Transmuter."	2/83:334		I, III	Merge programs and relabel variables.
O'Connor	"Seeker."	3/83:272		I, III	Make PRINT to LPRINT and other changes.
O'Dell	"Relocate Debug."	3/83:358		III	Move Debug so you can tinker with commercial programs.
Ohls	"Flowchart Generator."	6/83:246		I, III	Plan programs more efficiently.
Olney	"Getting the Most from the Model II."	1/83:242		II	Learn to use supervisor calls and other tricks.
Peckett	"6502 to Z80, Bit by Bit."	A/83:130		I	Convert 6502 Assembly programs to run on a Z80.
Perelman	"REM Remover."	11/83:238		I, II, III, 100	Save memory or disk space by removing your remarks.
Perelman	"Mod II Disk Index."	A/83:546	5/83:27	II, 16	Index your disks to eliminate confusion.
Phillipp	"Dvorak Meets Scripsit."	5/83:294		I	Who needed QWERTY anyway?
Pollard	"Fast Tape Operating System."	A/83:220		I	Use disk commands to speed up cassette storage.
Quindry	"NODOS 80."	A/83:96		I, III	Get DOS features on cassette.
Quindry	"Easy Loader."	3/83:260		I	Basic to machine language to CLOAD.
Rappaport	"Smartcat."	A/83:278		I, III	A powerful communications package for your computer.
Ridgway	"Datascopie."	A/83:164		I	Recover data from glitched tapes or see data on tape.
Robinson	"MX-80 Driver."	5/83:125		I, III	Get your Epson to work with SuperScripsit.
Robinson	"Pencil-Plus 2.0."	5/83:154		I, III	Expanding Pencil Plus' capabilities.
Robinson	"Protected Tape Programs."	12/83:132		I, III	Two anti-copy routines that foil cassette predators.
Rohde	"VCMOD."	4/83:210		I, III	A useful editing function for VisiCalc.
Sanford	"Convergem."	2/83:256		CoCo	Adjust the color and alignment of your monitor.
Schechter	"Discipline for the DIR Command."	1/83:298		CoCo	How to get control over the DIR command.
Schweizer	"The Input Specifier."	2/83:328		II	Edit your input and save programs from crashing.
Seymour	"Teach Your Computer to Talk."	A/83:472		CoCo	An Assembly-language program that puts you and your CoCo on speaking terms.
Silver	"Disk Tiny Pascal."	A/83:392			Modifying Tiny Pascal to disk.
Smith	"BASTEP."	1/83:352		I	Catch bugs one step at a time.
Snapp	"The Garbage Collector."	1/83:180		I, II, III	Eliminating string space efficiently.
Sprouse	"Color Disk Directory."	4/83:285	8/83:28	CoCo	A master directory that helps you quickly locate programs and files.
Terre	"FlexCat, Your Basic DBM."	A/83:264	5/83:27	I	A data base that meets all your filing and retrieval needs.
Thornton	"Bars and Stripes Forever."	11/83:104		III	A look at industrial bar codes, with three popular styles for your III.

SOFTWARE for INVESTORS

STOCK MARKET ADVISOR SYSTEM — SMAS 2.0

SMAS employs both fundamental and advanced technical analysis. Its refined procedures that correlate three moving averages and other factors have been validated by applications to both stocks and portfolios.

- Sophisticated procedures yield weekly appraisals of market trend and advisories (with action price ranges) to buy, to sell, to hold, and not to buy specific stocks.
- Data base includes 196 stocks, A/D file, and 4 indexes.
- Data base stocks were selected on fundamentals.
- You can use SMAS' results the very first week.
- Metropolitan papers print data required by SMAS.
- SMAS is menu driven, with both built-in checks for accuracy and efficient utility routines.
- SMAS is especially valuable to investors seeking long-term capital gains. Minimizes emotional involvement.
- SMAS works with Nebula and printer; with TRSDOS, LDOS, NEWDOS/80, & DOSPLUS on TRS-80 (TM Tandy Corp.) Models I and III (48K). SMAS version 2.0 only \$169.95 + \$3.00 for shipping.*

NEBULA STOCK DATA RETRIEVAL

Nebula (Model 1, 48K, one drive, 300 baud modem, RS232, optional printer, TRSDOS 2.3 or LDOS 5.0) retrieves stock, bond, option, and T-Bill prices from Dow Jones Service. Stores symbols in data statements and returned prices & volumes on disk in data file. Automatically disconnects. **Does not need a terminal program.** Dates & times are logged for reconciling service bill. Available either for independent operation (\$52.00 + \$3.00 shipping) or for use with SMAS (Special 1983 combination offer: Only \$199.95 + \$6.00 shipping for SMAS 2.0 and Nebula together)*.

ANDROMEDA STOCK TRADER & CALCULATOR

Andromeda records transactions, including purchase/sale prices & dates, dividends, total cost & net realization. Andromeda does not use special commands. Learning time is nil. When positions are closed, it posts transactions to the sales file. Reports include Active Security and Security Sales Summaries, Portfolio Summary, and a summary table (either 80 or 132 col.) for use with IRS Schedule D. Requires TRS-80 Model I, 48K, one drive with TRSDOS 2.3 or LDOS 5.0. Andromeda is regularly only \$51.95 plus \$3.00 shipping. **SAVE** — Special Introductory Price through Dec. 31, 1983: Andromeda only \$32.50 + \$3.00 shipping.*

*Remittance by VISA, MASTERCARD, cashier's check, or M.O. brings prompt shipment. Shipment is made after personal checks clear (about 3 weeks). Software is sent insured.

TIME SAVING — MONEY SAVING PRINTER BUFFER

SPOOL-Z-Q

Spool-Z-Q accepts characters at computer speed and feeds them to your printer at its much slower speed. This eliminates the time you waste waiting for your printer to finish before you can use your computer.

FEATURES

Spool-Z-Q is perfect for use with all parallel (Centronics standard) printers including Radio Shack printers. Spool-Z-Q is stand-alone, it doesn't steal power from the computer or printer. The many advanced features include automatic internal space character compression, copy and self-test functions, and a special "Pause-on-Formfeed" mode.

SIZES AND EXPANSION

Spool-Z-Q comes in 32K, 64K, and 128K character sizes. Any Spool-Z-Q can be user expanded to 64 or 128K by just plugging in chips — the sockets are already installed. There are no jumpers to fool with either, Spool-Z-Q knows how much memory is installed without being told.

15 DAY TRIAL PERIOD

You may try Spool-Z-Q with your system and, if you aren't completely satisfied, return it within 15 days for a no-hassle full refund.

FACTORY DIRECT PRICES

(Shipping included)
32K — \$219
64K — \$249
128K — \$309

Cable to printer — \$27

Computer Listings of Employment Opportunities

Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • XEROX™

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSARECEIVABLES™

\$99.95

VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

VERSAPAYABLES™

\$99.95

VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSAPAYROLL™

\$99.95

VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

VERSAINVENTORY™

\$99.95

VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSALEDGER II™

\$149.95

VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module.

COMPUTRONICS

50 N. PASCACK ROAD, SPRING VALLEY, N.Y. 10977

* TRS-80 is a trademark of the Radio Shack Division of Tandy Corp. • APPLE is a trademark of Apple Corp. • IBM is a trademark of IBM Corp. • OSBORNE is a trademark of Osborne Corp. • CP/M is a trademark of Digital Research. • XEROX is a trademark of Xerox Corp.

That's what you get with the LNW80 Model 2—undoubtedly the most versatile, powerful and fully equipped microcomputer in its class today. A machine so superior in concept and design, that it will define the standards of microcomputer performance for years to come.

VERSATILITY

The LNW80 2 performs wonders with the most complete library of software available to any microcomputer on the market today. Every LNW80 2 comes complete with this outstanding library of Business Software. **LNW SMALL BUSINESS AND PROFESSIONAL ACCOUNTING SERIES™** General Ledger, Accounts Receivable, Accounts Payable, Payroll; **ELECTRIC SPREADSHEET™**; **ELECTRIC PENCIL™ WORDPROCESSOR**; **MICROTERM™ MODEM PROGRAM**; **CHART EX™ HIGH RESOLUTION BUSINESS GRAPHICS CHARTING PROGRAM**; **CP/M 2.2™**; **DOSPLUS™**; **LNW-BASIC™**; **MICROSOFT BASIC™**. In addition to a comprehensive line of LNW80 2 Software, it is also fully compatible with software from TRS80® (Models 1, 3, 4), CP/M® and Cromemco® worlds—a capability which gives you access to the most extensive and mature libraries of business, scientific, engineering and entertainment software applications. So no matter how far you expand into user applications, the LNW80 2 will expand right along with you.

POWER

The LNW80 2 performs miracles with the computing power of 96K RAM (standard) of user memory matched with a mass storage capability which handles 5¼" floppy disks and 5¼" hard disk drives. And while the unit comes with built-in

controllers for 5¼" and 8" floppy disks (single/double sided, single/double density, up to 4.5 Megabytes capacity), the LNW80 2 also gives you the unique ability to read and write diskettes from a greater variety of other popular computers than does any other microcomputer. So regardless of how big you grow, you will never end up with thumb-twiddling down time while you expand to a more powerful system. The LNW80 2 will always have enough muscle to handle your biggest and toughest jobs.

FULLY EQUIPPED

The LNW80 2 was developed to anticipate the needs of both expansion and compatibility. So the computer was designed with enough built-in features to keep you from having to spend a small fortune as you move down the road to higher levels of user sophistication. Standard features include high and low resolution graphics in both color and black-and-white, an asynchronous serial communication channel, and a wide variety of tape, printer, monitor and hardware expansion ports. In addition, the LNW80 2 contains an array of quality construction features that fully justify its remarkable one-year limited warranty.

So if you're looking for a microcomputer that will satisfy your performance needs as you grow and develop, take a long, hard look at the LNW80 2. It's the one microcomputer built to meet the challenges of tomorrow—for a long time to come. For more information and the name of the dealer nearest you, write or telephone:
