THE TANDY TRS-80[®] MODEL

The Ultra-High Performance MS-DOS Personal Computer That Operates at Twice the Speed of the IBM PC

Our remarkable Tandy 2000 delivers much more than other 16-bit MS-DOS based computers. More speed. More disk storage. More expansion. Higher resolution graphics. But that's not all. You also get the quality and support that have kept Tandy Corporation in the forefront of the microcomputer industry from the beginning.

Higher-Speed 16-Bit Microprocessor

The Tandy 2000 is dramatically faster than other 16-bit MS-DOS computers. In actual benchmark comparisons, the Tandy 2000 performed almost three times faster than the IBM Personal Computer. The higher operating speed lets you finish bigger jobs in less time.

Increased Storage Capacity

Each of the two Tandy 2000 disk drives stores over four times as much information as a standard IBM PC drive, and twice as much as a TI Professional drive. If you need even more storage, choose our Tandy 2000 HD with a built-in hard disk.

Get a Better Picture of Things

The Tandy 2000 video monitors and graphics options let you easily create stunning, highly-detailed business charts and graphs. Our color graphics have twice the resolution of the COMPAQ Portable or IBM PC color graphics, and twice the number of colors.

Compare the Model 2000 to the IBM Personal Computer

Price Comparison†	Tandy 2000	IBM Personal Computer
Base Unit	\$2750	\$2104
2nd Drive	Included (720K)	\$529 (320K)
Monochrome Monitor	\$249	\$345
Display/Printer Adapter	Included	\$335
128K RAM	Included	\$165
RS-232	Included	\$120
MS-DOS 2.0	Included	\$60
Total Cost*	\$2999	\$3658
Feature Description	Tandy 2000	IBM Personal Computer
Internal Memory	128K Standard	64K Standard
Disk Capacity Per Drive	720K	160K or 320K (optional)
Microprocessor Clock Speed	8 MHz	4.7 MHz
True 16-Bit Microprocessor	Yes (80186)	No (8088)
User-Available Expansion Slots*	4	2
Graphics Options		
Color Resolution	640 x 400	320 x 200
Number of Colors	8	4
Monochrome Resolution	640 x 400	640 x 200

*Comparable IBM configuration with monochrome adapter and display, communications adapter, two 320K disk drives and 128K RAM. †Manufacturer's pricing as of 9/1/83.

2000 PERSONAL COMPUTER

The Tandy 2000 Adds a New Dimension to the Most Advanced MS-DOS Software Around

Choose From the Hottest Names In Software

Rapidly becoming an industry standard, the MS-DOS operating system lets us bring you the most popular programs around. Programs like dBase II, Microsoft-Multiplan, PFS:File, MultiMate. And many more already acclaimed by the entire microcomputer industry. The four software "wheels" above illustrate the outstanding programs available. Each "slice" in the top wheel represents typical applications—electronic filing, word processing, spreadsheets, communications and more. The corresponding slices on the lower wheels portray the programs available for each application family. For example, we have an excellent line of small business accounting software from MAI/Basic Four—general ledger, accounts payable, accounts receivable and more. These flexible programs have already been proven in thousands of applications worldwide. More programs are under development, including Microsoft's state-of-the-art MS-Windows operating environment. You can view several "windows" at once—files, letters, graphs and more—and exchange information between them.

Radio Shack®
The biggest name in little computers®
 A DIVISION OF TANDY CORPORATION

Room to Grow for the Future

The Tandy 2000 has many standard features that cost extra on other computers. Aside from obvious cost advantages, that leaves more expansion slots open for your future needs. Add additional memory, a hard disk drive, our Digi™-Mouse and more. And you can install most options yourself.

A Milestone in Ergonomic Design

The Tandy 2000 is as spectacular outside as it is inside. The attractive modular system adapts to your environment to assure maximum comfort and productivity. With the optional floor stand, Tandy 2000 occupies much less desk space than other personal computers.

Total Service and Support is Close at Hand

Our extensive network of Radio Shack Computer Centers gives you complete hardware and software support directly from the manufacturer, not an independent computer dealer. On-site and carry-in service is available nationwide.

The Future of Personal Computing

See the Tandy 2000 and its popular line of software today at over 1000 Radio Shack Computer Centers and participating stores and dealers nationwide. Ask for a hands-on demonstration and you'll never want to let go.

Send me the Tandy 2000 brochure.

Imagine... a letter quality printer
compatible to your TRS 80

Introducing the **JUKI** MODEL 6100

Letter Quality, Daisy Wheel Printer/Driver Software Specifically Developed For Use With The TRS-80™ And SuperSCRIPSIT™ !!!

\$699⁰⁰

All control codes must be preceded by a <CLEAR>

UNDERSCORE	<CLEAR> <>	UNDERLINES EVERYTHING
BOLD PRINT	<CLEAR> <>	GEE IT LOOKS BOLDER
SHADOW PRINT	<CLEAR> <>	THIS SHADOW IS WILD HUT
1/2 LINEFEED F	<CLEAR> <>	I LOVE SuperSCRIPSIT™
1/2 LINEFEED R	<CLEAR> <>	Ca(OH) ₂ + H ₂ SO ₄ → CaSO ₄
PAUSE PRINTER	<CLEAR> <>	I HATE PAUSING.
TOP OF FORM	<CLEAR> <>	

Now you can enhance your TRS-80™ Model III word processing system with the JUKI 6100 letter quality printer and driver software package.

Totally compatible with the TRS™ Model III when used with the SuperSCRIPSIT™ word processor, the Model 6100 is a sophisticated printer with all the advanced features of a higher priced unit. And the JUKI Model 6100 printer driver software package can be added to the TRS 80™ Model 4 system as well!

Utilizing a 100 character daisy wheel drop-in system, the Model 6100 prints bi-directionally at 18 cps, has 10/12/15 pitch, proportional spacing, and a 2k buffer memory expandable to 8k. Operating on a linear induction motor for accurate positioning, the logic seeking Model 6100 performs superscript, subscript, bold/shadow printing, double strike, underlining and has graphic capabilities.

Also, the Juki printer is lightweight and conventional in design, has low noise level, is easy to maintain, and features a self-testing function. And the printer driver software is available on diskette for either parallel or serial interface.

But the dream is not over...with a low price tag of \$699.00 and driver software diskette for less than \$25.00 you'll have top quality performance for a remarkably affordable price.

To master the computer, master the software

Challenge your ability. Take charge of your computer. Take pride in the results.

You've invested in the computer. Now invest in yourself. Writing your own software lets you define your own boundaries, broaden your problem-solving resources and puts you in complete command at the keyboard. It's challenging. It's exciting. And now it's easier than ever before with Self-Study Computer Courses from Heathkit/Zenith.

Master today's most powerful contemporary languages including Microsoft BASIC, PASCAL and FORTRAN. And learn the popular CP/M and MS-DOS operating systems, too. When you need to know, we'll take you as far as you want to go.

For more information, send for our FREE colorful catalog below or circle the reader service number.

Our colorful catalog is FREE! If coupon is missing write: Heath Company, Dept. 335-162, Benton Harbor, MI 49022.

This symbol  indicates that the program is available on cassette or disk. For details, see our Load 80 ad, p. 35.

The left bracket, [, replaces the up arrow used by Radio Shack to indicate exponentiation on our printouts. When entering programs published in 80 Micro, you should make this change.

80 formats its program listings to run 64-characters wide, the way they look on your video screen. This accounts for the occasional wrap-around you will notice in our program listings. Don't let it throw you, particularly when entering assembly listings.

Article submissions from our readers are welcomed and encouraged. Inquiries should be addressed to: Submissions Editor, 80 Pine Street, Peterborough, NH 03458. Include an SASE for a copy of "How to Write for 80 Micro." Payment for accepted articles is made at a rate of approximately \$50 per printed page; all rights are purchased. Authors of reviews should contact the Review Editor, 80 Pine Street, Peterborough, NH 03458.

Dennison

Nothing pleases me like machinery that holds up over time. That's why I keep my VW. And buy Sony stereo equipment. And use a Hermes typewriter. They are the stuff of which domestic tranquility is made.

The office is another matter entirely. I have little choice over what equipment we get. For starters, we're here to cover the TRS-80, and are therefore obliged to keep a certain number of Radio Shack products around. We get other equipment through trade agreements with advertisers. Still more is bestowed on us by the purchasing department.

The result is a real hodge-podge of electronic paraphernalia. Sometimes I marvel that any of it works. Yet with a few notable exceptions we've done pretty well.

Curious about how much broken equipment we actually have, I recently rummaged through our Closet of the Dead. I exhumed two Model I's, three PMCs (and eight PMC drives), a gutted Centronics 704, a MicroCompatible buffer, and three cassette recorders. In addition, a burned-out Centronics 739 is in the shop for repairs.

I then checked out our functional equipment. It includes one Model I, one Model II, eight Model IIIs, two Model 4's, one Model 4P, one Model 16B, three Model 100s, two Model 2000s, and one PMC-81. Our working printers include an Epson MX-80 with Grafrax, an Olivetti Praxis 30, a Gemini 15, a Radio Shack Line Printer V, and an NEC Spinwriter. Also in use are two Novation modems, two cassette recorders, a Houston Instrument plotter, nine electric typewriters, a Mayday power supply, an IDE printer switcher, and a coffee maker.

(I make no claims for how *well* the above equipment works. The liquid that comes out of the coffee maker, for instance, could strip the paint off your car.)

Our worst debacle was undoubtedly with our PMCs. We bought four in early 1982 because they were cheap. By the end of 1982, we were down to two. Today, we have one.

My most memorable PMC experience came one Monday morning when I stumbled into work and turned the machine on to do some word processing. The screen went blank. Then smoke started curling from the keyboard.

That, I knew, was a bad omen.

A second PMC blew its power supply the next week. That reduced us to two. Then a couple of the video controllers went, along with one of the interfaces. Five of the eight disk drives dropped dead. We were swapping so many parts back and forth that we didn't even bother to screw down the cases.

Finally, we managed to piece together one working PMC. I use "working" here in the most liberal of senses. It usually powers up. Disks will boot most of the time. And all of the keys still work. We've got it hooked up to our slow, noisy Praxis (a marriage that somehow seems appropriate), and it serves adequately as a dedicated word processing station.

On the other end of the spectrum sits my favorite piece of equipment, the NEC Spinwriter. It's going into its fifth year, cranking out listings day in

and day out, and it's been down only three times.

The MX-80, too, is a workhorse. It's funny how the success of a company is reflected in the reliability of its products. Take Epson and Centronics. We've had the MX-80 for a year and a half without so much as a check-up. The 739 has required major repairs twice in the same time.

The LP V is another machine that has earned my respect. It's as big as a bathtub and sounds like a lawnmower, but it rarely fails to do what we ask.

What about all of our TRS-80s? Well, the Model I has seen better days. It has made "spontaneous reboot" a part of our everyday vocabulary. Programs hang up if somebody sneezes in the next building. Sometimes the tech editors have to load a program half a dozen times before they can get it to run. This has not led them to look fondly on cassette software.

The Model IIIs chug along, except for the ones we obtained through a mail-order house. Their drives run like three-legged horses. A good, hard slap will occasionally get them going. Otherwise, we have to wait until a full moon, and perform druidic rituals.

The other computers are too new (or, in the case of the 16B, too unused) for us to tell how durable they'll be. I'm worried about the Model 2000s, though. They seem fragile. They don't look like they can be kicked around like the Model IIIs can. Maybe it's the color. Gray reminds me of metal utility shelves; white reminds me of cheap plastic furniture.

All things considered, I can't complain too much. Most of our equipment does what it's supposed to do—sometimes a little more, sometimes a little less. It doesn't give me as much security as my Volkswagen, but I suppose it gives me as much as I can ask for.

Although I wouldn't mind a better cup of coffee in the morning. ■

The Answer is... NEWSSCRIPT!™

THE WORD PROCESSOR FOR BUSINESSMEN AND PROFESSIONALS

With ongoing support directly
from us

A FEW OF NEWSSCRIPT's 200 STANDARD FEATURES:

- FORM LETTERS WITH MERGING OF NAMES AND ADDRESSES
- GIVES SUPERB APPEARANCE TO YOUR FINAL DOCUMENTS
- COMPREHENSIVE MANUAL WITH TUTORIAL AND EXAMPLES
- CENTERING, TOP/BOTTOM TITLES, INDENTS, PAGINATION
- UNDERLINING, BOLDFACE, DOUBLE-WIDTH, ITALICS+
- SUB/SUPER SCRIPTS, RIGHT-JUSTIFIED PROPORTIONAL+
- CREATES TABLE OF CONTENTS, SORTED INDEX
- "LEGAL" LINE NUMBERING
- SCREEN GRAPHICS, SPECIAL PRINTER SYMBOLS+
- SEARCH/REPLACE GLOBALLY OR WITHIN LINES, COLUMNS
- BLOCK MOVE, COPY, DELETE, INSERT, FILE MERGES
- AUTOSAVE, WHOOPS, DIRECTORY, KILL
- SUPPORT FOR ALL LISTED PRINTERS IS INCLUDED **
(NO PATCHES INVOLVED) **
- SUPPLIED READY-TO-RUN ON "TINY" DOSPLUS
- ALSO RUNS UNDER NEWDOS 80, LDOS, MULTIDOS, TRSDOS

NEWSSCRIPT 7.1:	\$124.95
Mailing Labels Option:	29.95
Special: NEWSSCRIPT + LABELS:	139.95
Daisywheel Proportional Option:	49.95
"Pencil"/"Scripsit" File Converter:	24.95
NEWSSCRIPT Manual & Reference card only:	29.95
Electric Webster + Correction Feature:	149.50
Hyphenation Feature for Electric Webster:	49.95
Grammatical Feature for Electric Webster:	49.95
Dotwriter 3.0:	79.95
Dotwriter + Letter Utilities:	99.95
6.0 PLUS-Micro Systems Model 4 utility pak	49.95

REQUIRED CONFIGURATION:

48K TRS-80, MAX-80, LNW, or compatible, with one or more disk drives. Specify Model I or Model III.

† some features work only if your printer has the mechanical capability.

** Daisy Wheel Proportional is an extra-cost option.

TO ORDER, CALL NOW,

TOLL-FREE: (800)

824-7888, Operator 422

For orders, information, or names of nearby dealers: (818) 764-3131, or write to us.

Order from your Software dealer or from:

PROSOFT® ✓98

Dep't. C, Box 560 No. Hollywood, CA 91603

TERMS: VISA, Mastercard, checks, money orders, COD. No P.O.'s accepted. Most orders shipped within 24 hours. Please add \$3.00 for surface UPS in U.S.A., or \$6.00 for UPS Blue Label. Add \$6.00 in Canada, \$15.00 overseas air shipment, 6½% sales tax in California.

BUILT-IN SUPPORT FOR MOST POPULAR PRINTERS†, INCLUDING:

Anadex, Brother, Centronics, C.Itoh, Diablo, Epson, Gemini, Microline, NEC, Prowriter, Qume, Radio Shack (LP 1-8, DW2, DMP-C 410, DWP 200-2100), Smith Corona, Teletype, Typewriter, anything compatible with any of these, and many others, parallel and RS-232.

SPECIAL AVAILABLE OPTION: Right-justified proportional for Diablo, F-10, Qume, Spinwriter, etc. Requires "Daisywheel Proportional" Option plus NEWSSCRIPT.

REVIEWERS AND USERS AGREE:

"NEWSSCRIPT" is the best word processor I have seen . . . unsurpassed in printer control . . . no other TRS-80 word processor can match its ability to format text . . . its editor is fast, easy, and powerful." (80 MICRO, Oct. 1982)

"Your phone information system and the prompt and courteous staff that you provide to help your clients . . . are worth the cost of the system." (V.H.H.)

"Better than cold beer on a hot day!! Thank you!!" (R.S.)

"What a program. So easy to learn and easier to use. I waited too long before ordering!" (P.J.M.)

"... takes the TRS-80 to a new level of text handling . . . very user-friendly . . . superb documentation, adaptability to many printers and operating systems . . . a standard against which other TRS-80 word processing programs will be judged." (SOFTSIDE, Dec. 1982)

"... ongoing support second to none, with superb documentation." (80 U.S. Journal, Feb. 1982)

National Modem Blues

Regarding the Pulse Train article, "Oklahoma Modem Blues" (November 1983, p. 285), Southern Bell is on shaky ground by attempting to enforce a virtually forgotten 1965 tariff at a time when modem users all over the country are using information networks and bulletin board services (BBS).

Southern Bell could have revised the tariff before enforcing it, thereby reducing the number of irate customers and lawsuits they inevitably face.

At \$36.95 per month, who can justify using a BBS, or paying information service time, especially with long-distance rates?

If this is not stopped, it will spread to other states, and you'll be printing another news article, titled "National Modem Blues," in the near future.

*Darryl Conrad
College Place, WA*

Extend Coverage

In the November 1983 Side Tracks column (p. 6), Eric Maloney stated that nearly half of *80 Micro's* subscribers still own Tandy's original Model I.

Is it not, therefore, ironic that in the very same issue, the utility "Extend Radio Shack's Editor/Assembler" (p. 248) is the only article for 16K Model I, Level II, cassette-driven machine owners like myself? And wouldn't you know it, the lengthy source listing is one of the few not included on the Load 80 cassette!

*Baron de Beer
Monrovia, CA*

WordStar Review

Charles R. Perelman's unreasonably favorable review of MicroPro's WordStar (January 1984, p. 108) might mislead a novice into an unwise purchase. WordStar is a powerful

word processor, but other word processors cost much less and are easier to learn and use.

Contrary to what WordStar's promotional material says, what you see is not what you get. Switching from 10-pitch to 16-pitch type between paragraphs looks O.K. on the screen, but WordStar doesn't print the margins properly.

Also, if you expand the typeface in the middle of a line, it looks fine on the screen, but WordStar loses track of the right margin when printing. WordStar's support of special printer features and typefaces is poor.

Communications with the printer for printer typefaces is also complicated. In contrast, a novice can fully install all the features of a new printer in NewScript in about two minutes.

WordStar's commands are difficult to remember, since they are rarely mnemonic. To re-form a paragraph, why use a B instead of an R, as logic would suggest?

The fact that people can and do learn how to make efficient use of WordStar is a testimony to the flexibility, persistence, and adaptability of its users in spite of poor design.

If WordStar were introduced in the current software market, it wouldn't make it at half the price. If WordStar is a premier accomplishment, as Perel-

man says, it is an accomplishment in marketing, not in usability or cost-effectiveness.

Del Mar, CA*

Bad Advice

The patch published in the December Input column (High Speed POKE, p. 16) puts a program running in the Model 4's Model III mode into 4 MHz. Unfortunately, Mr. Stuart included no patch for disk I/O, which also runs at 4 MHz.

Saving a file of more than 25 records makes the disk operating system lose track of where it is writing and results in a blown directory. The disk is useless because the patch writes a block of data over the directory file.

Printing such patches may be well-intentioned, but the average hacker is not an Assembly-language programmer, nor does he understand the disk operating system that he is affecting.

I feel strongly that this type of thing should be well tested by *80 Micro* before publication.

Futuraware
Nashua, NH*

CP/M Review Reviewed

I must take issue with the two glowing reviews of Omikron CP/M for the Model III by Terry Kepner and John Harrell in the December 1983 issue (p. 61).

I ordered this product shortly after its announcement and waited several months for delivery. When it arrived, I found that the documentation was for a Model I, not a Model III.

Also, you can't use lowercase without a hardware modification, and a dozen useful utilities described in the manual were missing on the distribution disk. The CBIOS provided with the Model III system doesn't support double density and is full of bugs, and

a promised utility to convert TRSDOS files to CP/M format has also not materialized.

Omikron assured me that they would fix everything and would mail me a new distribution disk. I have attempted to contact Omikron twice since then, but have received no response.

Harrell and Kepner describe features and user support lacking in my experiences with Omikron. Because the Omikron CP/M modification has no documentation and no software support, it is useless to me. I hope that Terry Kepner and John Harrell will share with us the secret of getting all that information and support out of Omikron, or perhaps offer copies of those wonderful utilities to those of us who have paid for them and so far have received nothing.

*Gary Lee Phillips
Chicago, IL*

The Authors Respond

I am sorry that you had problems with Omikron; however, my review reflects the software as I received it.

*Terry Kepner
Peterborough, NH*

I must stand fast and defend Omikron for their fine products and their reputation for supporting their users.

I reviewed a system for the Model I that I received from Omikron last summer. It worked perfectly and all the utilities mentioned in the Digital Research documentation were present. The heart of the system is the documented features in the DRI manuals.

Five of the 17 programs described in the Software Comments section of the user's manual aren't included on the distribution disk. However, Omikron states in the same section of the

manual that some of the programs in that section don't come with the distribution disk—these programs are available on an accessory disk.

Omikron replaced the programs and utilities deleted from the disk with more useful specialized utilities.

I have experienced no problems with the CBIOS routine. Furthermore, I have not found the deficiency in the Model I keyboard driver described by Mr. Phillips.

Obviously Mr. Phillips has had a bad experience with Omikron. However, my dealings with them have been smooth. I hold Omikron in high regard.

80 ALERT

Occasionally, 80 Micro receives letters from advertisers who have changed their status, or from readers who have had difficulties with our advertisers. Most of these problems are resolved to the satisfaction of all parties, but some problems appear to be insoluble.

As a service to our readers and advertisers, 80 Alert posts the names of advertisers we are unable to reach, or who have changed their address or status. Anyone who has current information about a manufacturer or distributor, or who has an advertiser complaint, should write to 80 Alert, c/o 80 Micro, 80 Pine St., Peterborough, NH 03458.

Since publishing the February 1983 Alert on Omikron Systems (1127 Hearst St., Berkeley, CA 94702), 80 Micro has been deluged by reader complaints against the company.

Although Omikron issued refunds to customers who complained to 80 Micro a few months ago, they have not guaranteed refunds to all their customers or delivery of advertised products.

Readers who continue to have problems with Omikron should contact us through this column.

80 Micro has received numerous complaints regarding Micro Price (1100 East Hector St., Conshohocken, PA 19428). Micro Price advertised computers and accessories in 80 Micro but is not delivering products or issuing refunds.

Readers ordering products from Micro Price received charges to their credit card accounts from Freedom Technology (119 N. 18th St., Philadelphia, PA 19103). 80 Micro contacted Freedom Technology, and they stated that they are no longer associated with Micro Price. We are unable to obtain further information from either company and have cancelled Micro Price's advertisements.

As of Jan. 1, 1984, Prosoft assumed manufacturing and distribution of Dotwriter, a graphics word processor. Prosoft (P.O. Box 560, N. Hollywood, CA 91603) now provides support and en-

hancements to registered owners of Dotwriter.

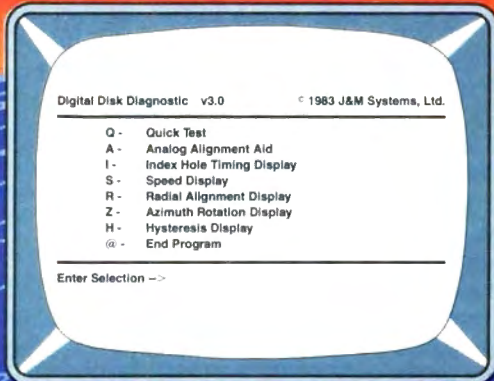

Autel Electronics (146 Wisconsin N.E., Albuquerque, NM 87108) no longer handles sales of Graphics Enhanced Basic. Larry Wiles, of Wilesoft (12100 Rosemont N.E., Albuquerque, NM 87112, 505-299-1275) is now accepting orders by mail or phone.

Briefcase Portable magazine (560 S. Hartz Ave., Suite 447, Danville, CA 94526), a publication for Model 100 owners, solicited subscriptions in several national magazines, including 80 Micro. However, the company notified us that they will be unable to produce the magazine.

David Gourley, representing *Briefcase Portable*, told 80 Micro that he hopes to offer subscribers either refunds or subscriptions to another Model 100 magazine, *Portable 100*. Readers with questions should call David Gourley at 415-820-8149 or contact *Portable 100* at P.O. Box 250, Camden, ME 04843.

DISK DRIVE ANALYSIS PROGRAM

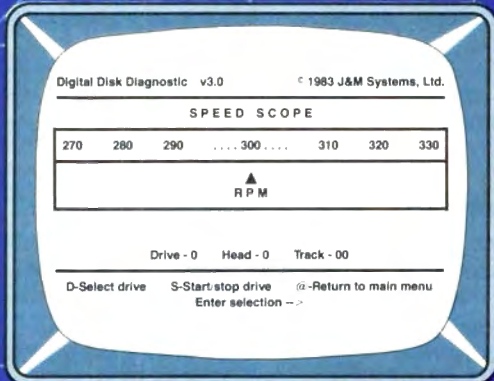

... A UNIQUE APPROACH TO DISK RELIABILITY!

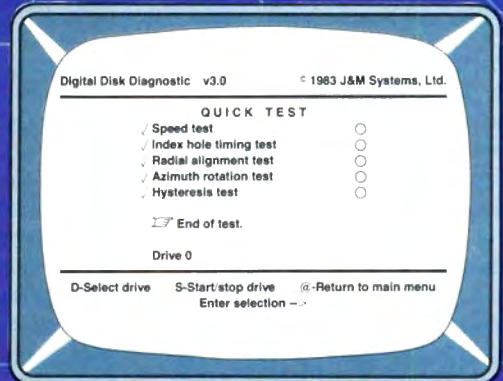

Select any one of seven tests to perform preventive maintenance or to isolate problems. Simple, single-letter commands make DDA easy to use! Use DDA to align the head, adjust the index hole detector, or adjust the speed.

Use the DDA Radial Alignment Test to check the head alignment of your drives. No need for an oscilloscope or other expensive test equipment!

Check the motor speed of your drives. Or, you can even use the Speed Test to adjust the drive speed. No need for any test equipment!

Use the Quick Test to quickly and automatically test five of the most important performance parameters of your drive. Monitor your drives for long term drift. Isolate problems quickly and automatically!

PROTECT YOUR DATA.

Now you can make sure your data is being recorded properly by the use of the revolutionary *Disk Drive Analysis Program (DDA)*!

The *Disk Drive Analysis Program* from J & M Systems, tests your disk's performance and calibration without any additional equipment! It measures your disk's performance and displays it on your screen.

This is the most comprehensive disk diagnostic program available for your TRS-80

microcomputer. You can even adjust drive alignment while watching the display!

Spot problems BEFORE they endanger your data! If you own a disk drive, you NEED the *Disk Drive Analysis Program*!

Now Available For The TRS-80 Microcomputer.

J & M SYSTEMS IS THE DRIVING FORCE!

J & M SYSTEMS, LTD. ✓ 101

Send any questions or problems dealing with any area of TRS-80 microcomputing to *Feedback Loop*, 80 Micro, 80 Pine St, Peterborough, NH 03458.

Q: I've been sorely disappointed to find that my SuperScript and Dictionary programs require a third disk drive for the Dictionary on a data disk document. As a professional writer, I want to put long documents on data disks to keep them separate from my other work and in one piece.

Is there any way to combine SuperScript commands, the Proofread option, and Dictionary on one disk (there's room, I've done it) and make the programs work? It seems that the problem is that the INSTALL/BLD file automatically kills SPEDIT:1, CHECK/CMD:1 and copies PROOF/CTL:0 to PROOF/CTL:1. But by this time they're all on drive zero.

I tried changing the drive number in the INSTALL/BLD file, but I get a File Not Found error when I attempted to use it. Can you help? (N.S., Green Bay, WI).

A: You won't like this, but Radio Shack says it can't be done. In fact, they say you can't fit all the necessary files for both SuperScript and the Dictionary program on drive zero at the same time. WORD/USR is required since it grows as you tell the Dictionary program to learn words.

They suggest that you ignore the SuperScript instructions about using the Dictionary program and use the Dictionary program instructions to use the program as a stand-alone. Put your document files on drive zero with TRSDOS, and the Dictionary program and files on drive 1.

Has anyone else tried combining SuperScript and Dictionary on drive zero and succeeded?

Q: Referring to W.K.'s letter (July 1983, p. 368) we make an 80-track version of TRSDOS 1.3. This DOS will format, back up, etc., to 80 tracks. The stepping rate is 6 milliseconds (ms), but if this is too fast, a patch program (STP6T030/BLD) changes the stepping rate to 30 ms. Furthermore, a TRSDOS version of Superzap is enclosed so that you can transfer password-protected programs to the 80-track disk from a 40-track disk, if a 40-track drive is connected to the computer (e.g., as drive 2).

E-C Data Inc. (Tornevangsvej 88, P.O.B. 116, DK-3460, Birkerød, Denmark, phone: +45/(0)2/818191) is a Tandy importer and distributor. In the Scandinavian countries, where TRS-80s are used almost exclusively professionally, the standard disk configuration is single-sided 80-track. (E-C Data, Birkerød, Denmark).

A: Thanks for the disk and the information. I'm sure you're going to hear from many people wanting to buy an 80-track version of TRSDOS.

Q: I have been trying for several months to locate a source for the disk version of Microsoft's Level

III Basic. The advertisements I've seen for it list a very useful set of functions not available on Radio Shack's Disk Basic: Menu, Chain, Common, Dump, and several other editor enhancements. I'm particularly interested in the Chain and Common commands.

I would appreciate any leads to a Microsoft dealer from whom I could purchase this program. (J.B., Glenview, IL).

A: Have you tried writing to Microsoft Consumer Products (10700 Northup Way, Suite 200, Bellevue, WA 98004, 213-828-8080)? If anyone has Level III Basic, they should. Before you buy it, though, have you considered just buying a new DOS? LDOS and DOSPLUS both have the two commands you're interested in, plus many more.

Q: I have a Model I with two 35-track drives, an expansion interface, an Epson MX-80, and Radio Shack's Modem II. My drives have been acting up; they've even erased the directory on the disk. I was wondering if a program to restore disk directories exists. The computer also has a tendency to reboot suddenly. I've cleaned all the contacts, but with no luck. Please help. (A.W., Montreal, Canada).

A: First, if the directory track has really been totally erased and not just damaged, there's no hope of rebuilding it. You would have to know the locations and lengths of all the files on the disk. Scanning the disk, track by track, wouldn't help since you'd also see the remains of previous, deleted files still on the disk. Also, you would have to know if any given file was in one or more segments. All in all, a very tough and almost impossible task.

On the other hand, if the directory

FEEDBACK LOOP

has just been damaged by the DOS (HIT sector, GAT, or one of the directory entries), then you can use Kim Watt's Super Utility Plus to go directly to track 17, examine the directory, modify it, and then write the corrected information back to the disk. Super Utility Plus even has utilities to repair the HIT and GAT tables with the press of a button. If the actual entries are damaged, you should see enough information left intact to allow you to rebuild the entry correctly. Information on how to do that sort of thing is available in the IJG book *TRS-80 Disk & Other Mysteries* (see address at the end of the column). Super Utility Plus is sold by Powersoft (11500 Stemmons Fwy., Suite 125, Dallas, TX 75229, 214-484-2976, \$74.95).

Q: I have a 48K, two-disk drive Model III. I use my computer for data management, and think I've found one I like: Profile III Plus from Radio Shack. My problem is that I previously purchased Scripsit, which doesn't work with Profile III Plus. Only SuperScripsit works with it. Other than buying SuperScripsit (an additional \$200 expenditure), do you or your readers have a solution? (W.D., Somerdale, NJ).

A: I haven't run across any better or cheaper solutions. Does anyone know of a possible patch for either Profile III Plus or Scripsit that would make them integrate and work together?

Q: I'm writing in response to J.J.W. of Columbus, IN, who asked about a listing of the Model I Level I ROM (May 1983, p. 384). I have disassembled the contents of the ROM and would be happy to send him a copy. The listing is about 45 pages long. (D.D.W., Cedar Falls, IA).

Here's a copy of my old Level I listing which Racet Computes used to sell. It has some comments by them, and I've made a few pencil scratchings in it myself.

It's interesting to note that a large portion of the code appears to have been lifted from Li Chen Wang's Palo-Alto Tiny Basic, published in *Dr. Dobb's Journal* in its first year of publication. The *Dr. Dobb's* article, and comments in the accompanying list-

ing, can help you understand Level I Basic if you keep track of where the code is the same and where it differs.

An examination of the code seems to reveal no hooks into RAM, such as the jump vectors of Level II. In fact, the programs TBUG and EDTASM cheat to get control! They CLOAD right over the stack area of RAM, putting their entry point where the CLOAD routine expects to POP its return address. So instead of returning to the Basic interpreter, it goes to EDTASM, or your own special-purpose program. (C.M., Dayton, OH).

A: I've forwarded your letters, comments, and disassembly to J.J.W. Thanks for taking the time to drop me a line.

Q: I'm having a problem using 8-inch drives with my 48K Model I. I have two 5¼-inch drives, an LNW 5/8 double-density controller, a Holmes Engineering speedup kit, DOSPLUS 3.4D, two Tandon DS/DD 8-inch drives, an LNW cable adapter, and a two-drive cable with all pins connected. The system is configured with a 35-track 5¼-inch unit as drive zero and the 8-inch DS/DD units as drives 1 and 2.

The problem crops up when using Copy or Transfer: I get Lost Data During Read errors. This occurs most frequently with Verify On, and occasionally with Verify Off. The errors occur only when copying from 5¼- to 8-inch disks or 8- to 8-inch disks; never when going from 5¼- to 5¼-inch disks or 8- to 5¼-inch disks. I also get an occasional Directory Write error when copying from 8- to 8-inch disks.

The 8-inch units arrived with a below-par power supply; however, the problem still exists after bringing the power supply up to specifications. My technician is stumped. (H.W., Albany, GA).

A: Sounds like the difficulty could be the timing in the 8-inch drives. Most copy routines read the data just written for verification. Any discrepancies are reported. The original Model I used a poor timing technique to transfer data from the computer to the disk drive, resulting in Data Lost errors.

This timing problem was associated with the data transfer rate from disk to computer and the rotational speed of the disk drive; they were closely

matched. For soft sector disks, the drives would send out pulses whenever the sense hole passed the detector. If you were unlucky, the pulse would occur before the computer could clear data from the FDC chip register RAM. Result: destroyed data, and the error. The doubler board should have corrected that problem, and did, or you'd be having difficulties with the 5¼-inch drives as well.

I don't know what to suggest, except to contact the LNW and Tandon people and ask for their help. I would guess that the problem is a conflict between the timing of the disk drives and the doubler board. (Are you sure the 8-inch drives are set to the proper rotational and timing specifications?)

Does anyone else have any suggestions?

Q: I have a dual-drive 48K Model III that I use as a remote terminal to the University of South Florida's IBM. Their operating system (WYLBUR) allows for full screen editing if you use a commercial terminal such as a Televideo 912 or IBM 3101.

Is there a terminal program that makes the Model III emulate one of these two terminals, with all their respective features? (G.A., Zephyrhills, FL).

A: I don't know of any emulation programs for the Model III for those terminals. Does anyone else?

Q: Is there an electronic spreadsheet program for my Model I that is equal in performance to the enhanced VisiCalc for the Model III? It appears that Model I owners are stuck with version I of Radio Shack's VisiCalc, unless they upgrade to CP/M. (Christopher Jensen, West Point, NY).

A: I'm afraid I can't help you, I don't know of any spreadsheet programs for the Model I with the enhanced features of the Model III version of VisiCalc. From my research, the closest contender is Microsoft's MULTIPLAN, but I don't know if it's available for the Model I, although it is available for CP/M.

Q: I have a great checkbook program that I've used for several years on my Model I Level II computer. The program came from Exatron.

GIVE YOUR COMPUTER A VOICE

As Well as a Mind

**VS-100

- Talker 1.4.....\$19.95
- Talker 2.0.....\$29.95

An Impressive List of Features:

- Unlimited vocabulary.
- Automatic inflection.
- Proven VOTRAX technology.
- We use the famous VOTRAX SC01 phoneme synthesizer.
4 programable pitch level.
- Built in audio amplifier with volume control.
- You can add voice to any basic program in minutes.
- Super efficient: one single line in Basic will produce a full sentence!
- Works with any speaker (or add \$5.95 for handsome speaker module).
- Price breakthrough: same performance as units costing hundreds of dollars.
- Voice editor will help you create unlimited number of words, sound effects, etc.
- Hundreds of applications—now cost effective in education, robotics, speech therapy, monitoring, games, aid to handicapped, security, prompting...
- Fully assembled and tested.
- Ready to plug in and talk.
- Plugs into 50 pin I/O bus on Model 3
- As usual our 15-day money back guarantee protects you

Text to Speech Software for the VS-100

TALKER 1.4

- ✓ Unlimited vocabulary translation of English text to speech
- ✓ Very easy to use: In BASIC simply type PRINT "I talk"
- ✓ Reads numbers up to 999 trillion
- ✓ Reads many abbreviations correctly (such as Mrs., Mr., lb., Co., etc.)
- ✓ Very fast machine language program is only 4.5K long
- ✓ Loads in high memory

Only \$19.95. Specify disk or tape

TALKER 2.0

- ✓ Same features as TALKER 1.4 plus:
- ✓ Automatic keyboard echo option
- ✓ Automatic video display echo option
- ✓ Punctuation pronunciation if desired
- ✓ And many control codes for increased versatility
- ✓ Self relocatable program is only 6¼K long
- ✓ New BASIC command: PRINT! prints and talks.

\$29.95. On disk only

FEEDBACK LOOP

My problem is that it won't work on my upgraded 48K dual-disk Model III. I can load and save the program easily, but trying to run it just locks up the computer.

I'm anxious to get this program up and running. Enclosed is a printout of the first few lines of program logic flow. Can you help? (Harvey Hunter, Bainsbridge Island, WA).

A: The problem is that your program contains POKE and PEEK commands. On the Model I these were probably required to get the program to interface properly with Exatron's Stringy Floppy system. On the Model III these commands mess up the computer, since the linkage points in the Model I and Model III are in different locations.

I would first remove the POKE and PEEK commands and see what happens. You will have to be selective about what you remove, however, since it's obvious that some of the POKES are used to put machine-language subroutines in string variables, notably R\$, G, H, S\$, and Y\$. These are indicated by the use of the VARPTR command. Start by removing the POKE and PEEK commands one at a time until you can get the program to run at least partially. Then just experiment.

Q: Have you ever published a disassembled listing of the Model I ROM? Have you ever published a disassembler? I'm interested in scrolling information on my screen while keeping a stationary header. (Glen Myers, Meridian, MS).

A: No, we've never printed a disassembly of the Model I ROM, but a disassembler was published in the July 1981 issue ("A Basic Disassembler," p. 244), with an update in the February 1982 issue (p. 28).

As for scroll protection, refer to the February 1982 issue for an article on that subject. ("As the Screen Scrolls," p. 264).

Q: I have a 48K Model I with two Pertex FD200 40-track drives, the Percom Doubler, and the Omikron Mapper I. TRSDOS works fine, NEWDOS80 1.0 and 2.0 work fine, and so does the double-density.

CP/M works fine on drive A, but whenever I access drive B by any com-

mand, it takes 21 seconds before getting anything to show up on the screen. Once the read starts, it works fine as long as the light stays on (copying from drive to drive is fine once it starts). If the light goes out, another 21 seconds pass before the drive completes the access.

I've cleaned all the contacts, removed and installed the Omikron and Percom boards, swapped drives, and tried the Terminal Resistor Pak on drives A and B. I get the usual reply from Omikron and Radio Shack: "It must be something wrong with their equipment because we've never had that problem before."

I took the case off drive B and watched the read/write head during the 21 seconds; it doesn't move. Once it does, I start getting information on the screen. (J. Haynes, Palmer, TX).

A: The only question I have is: Do you mean that no matter which drive is in the B position, you get the same result, or do you mean that only the one drive has problems, regardless of its position?

If the first is the problem, have you checked your drive cable for problems? What about the disk controller edge card connection? Is it clean? Are you using a keyed cable (Radio Shack cables have pins removed from the connectors so that the position of the drive on the cable determines the drive number)? Or are you using a full cable (no teeth pulled)?

Since you say everything works fine in a normal TRSDOS environment, I'd suspect the Omikron board, if the disk cable checks out okay. But I can't really offer any more than that because I don't know much about the setup of the Omikron board.

If the problem is just one drive always fouling up, the problem is probably the drive itself.

Q: In the June 1983 column you printed a letter from a reader in Port Richey, FL (p. 349) complaining about video swaying. I had a similar problem with video jiggling, which I suspect may be common and your readers should know about.

Shortly after buying my Model I, I noticed that the video display sometimes shook. I also noticed that the problem would go away if I tapped the video plug socket. I took the unit to

Radio Shack several times, but several days after getting the computer back, it would act up again.

After the warranty expired I opened the computer case and traced the problem to a noisy trimmer potentiometer (R20), used to locate the display horizontally. Cleaning the potentiometer with contact cleaner solved the problem. (Bill Premerlani, Scotia, NY).

A: Thanks for the information.

Q: This concerns a short program you had in the June 1983 Feedback column (p. 346). The program was designed to assist in converting from hexadecimal to decimal and back. I had no trouble with the first part (decimal to hex), but the second has a symbol in line 330 that I can't find. The symbol is the left bracket [. Is this a typo? What is the correct symbol?

I began purchasing *80 Micro* because I can convert so many of the programs to Applesoft with the *Radio Shack Conversion Book*. (Frank Grimes, Hot Springs, VA).

A: The symbol is supposed to be an up arrow, for exponentiation. Due to a flaw common to all printers, the up arrow is printed as a left bracket. For your conversion, substitute the proper Applesoft character for raising a number to a power.

Q: I have a Model II and an Epson MX-80 printer. I get a random six-line skip in printing both program output and in listing programs. Any ideas? (Robert Goodman, Houston, TX).

A: Are you sure it's random? In a program listing, your MX-80 automatically makes a line feed and carriage return when any line exceeds 80 characters. So, even though your Model II thinks it's sending 60 lines per page, it's actually sending more than 60 lines if any of those lines exceed 80 characters. (Are you using the Forms command?)

The other possibility is that the MX-80 is performing a form feed after receiving a control character sent by the Model II, which you may not notice being sent.

I can't really say more with the sketchy information you gave me.

FEEDBACK LOOP

Q: I've found that in this business of computer repair, there are as many methods of repairing as there are technicians.

Mr. R.G. of North Hollywood, CA (July 1983, p. 364), has an interesting problem concerning a Model I with a 35-track drive. He didn't mention whether or not he has the expansion interface with the buffered cable. I have found that the buffered cable can also cause the problem he described.

Sometimes the crimp connections at the box can work loose, making intermittent connections which translate to noise. One crude way to test for this is to grab the cable and shake the black buffer box up and down. If loose connections are the problem, the computer locks up. It's also possible for the ICs in the black box to go bad. There isn't much to the buffered cable, so you might as well try to fix the problem yourself. If you can't, just buy a new cable. If you do fix it, you've saved yourself about \$70.

RAM problems can also cause the same problems. With RAM selling for as little as \$15, every computer owner should have a spare 16K set. And don't forget that there are many different ways for RAM to fail, so no one test will prove RAM to be good, it can only prove when RAM is definitely bad. (Ron Kiyomura, Huntington Beach, CA).

A: Thanks for your suggestions.

Q: Other than Radio Shack, are there any other suppliers who make an RS-232 board that plugs into the Model I expansion interface? (Dave Anderson, Los Angeles, CA).

A: To the best of my knowledge, no one else makes an RS-232 plug-in board for the Model I. There are several manufacturers who make outboard RS-232 boards, but most require some type of additional expansion box for the board.

Q: I've just encountered a problem with my Model III computer. I purchased two programs, Home Accountant and The Nodvill Diet Program, and both refuse to work right. Each time I try to open a file through the main menu, I get a Bad File Mode error. I took these programs to a friend and tried them on his

machine, and they ran perfectly. Any ideas? (Jentzen Bull, New Bern, NC).

A: The error message you get means that you either don't have any disk file buffers available, or that the files the program is trying to open are of the wrong type (the program is trying to use a sequential file as a random file, or vice versa).

In the first case, how do you answer the Files? prompt? If you're using TRSDOS, just pressing the enter key should open three files for you, but if you're using another DOS, it might not open any buffers for disk I/O unless you specify a number.

The other case might just be an accident. The programs are trying to use a file name for input or output of a file that already exists, but of the wrong type. Did you put these programs on a disk with other programs, ones that might conflict with your programs?

Check out these possibilities before concluding that your computer is broken.

Q: I have an old-style Model I (three satellite ROMs) with a late-model expansion interface: The Patch and The Font from Hacks in Texas. It has worked fine until recently when I added a half-size 1 5/8-inch disk drive. It lasted about three hours and then refused to read or write. I returned the drive to the place of purchase and got a replacement. The new one worked while it was cool, but when I tried to back up my DOS it gave me "Cannot Backup Due To Error." From then on it has refused to work right.

I took the drive to a friend's house and tried it out on his keyboard (my drive and interface) and everything was OK. But when I tried to use my keyboard with his interface and disk drives, I got the same errors as with my system.

We took apart my keyboard, checked the voltage on R10 and R5, and set them to the voltages specified in the technical manual. Unfortunately, that didn't help. I've cleaned all the contacts and don't know what else to do. (E.A. Tampasis, Decatur, IL).

A: The first thing to do is to get an IC puller and remove Hacks' The Patch and The Font. With these removed, try your computer disk system. If it works, the problem is a

conflict between Hacks' chips and the disk system. If the problem still exists, you'll have to take the system to Radio Shack and ask for their assistance. Assuming that you've made no other alterations to your computer system, these are your only solutions to the problem.

Q: J.H.H. in the July Feedback Loop (p. 366) complains about the automatic form feed on Scripsit. This is caused by the default command for the page length and can be controlled by specifying a page length before printing (this isn't a solution, just a suggestion).

I have often limited the bottom margin and page length when specifying the instructions at the start of a document. If it still goes beyond, I use the command sequence BREAK, P, comma, P. This helps, but it doesn't solve the problem. (Ralph Anderson, Holton, KS).

A: Thanks for the advice.

Terry Kepner is a freelance writer and programmer, and the vice-president of Interpro. He's been writing about microcomputers since 1979.

THE WAIT IS OVER

CP/M[®]

EXCLUSIVELY FOR THE

TRS-80[®]

Model 4

Now, for the first time, unleash the powerful features resident in your Model 4 computer. Open up the vast store of CP/M software such as WordStar[®], dBASE II and Multiplan[™], along with thousands of others.

- Includes INTERCHANGE[™], a utility that allows reading, writing and copying 20 different manufacturers' disk formats such as IBM, KAYPRO, OSBORNE, XEROX, etc.
- Includes MEMLINK[™], a unique feature that uses the optional 64K RAM memory as a fast disk drive.
- Complete with all these CP/M utilities; ASM, DDT, DUMP, ED, LOAD, PIP, STAT and SYSGEN.
- Operates at the 4Mhz clock in the standard Model 4 mode.
- NO HARDWARE MODIFICATIONS. Just insert the disk and boot.
- NO COPY PROTECTION. Backups may be made for your own use and protection.
- The CONFIGURATION program supports a full range of 5-1/4" disk drives: 35, 40, 77 and 80 tracks, single and dual sided in any combination as well as the standard Model 4 drives.
- Includes MODEM 7, a powerful public domain communications program for file transfer and remote data base access such as CompuServ and the Source.
- Supports 80 x 24 video, reverse video, direct cursor addressing and more.
- Utilizes the Model 4 function keys and allows user defined keys.
- Auto Execute command for turnkey applications.
- FORMAT utility permits up to 52 disk formats to be constructed, all menu driven.
- Fast backup routine with verify for mirror image copies.
- All support programs are menu driven for ease of use.
- Ready to run in the standard 64K Model 4. The additional, extra cost, 64K RAM upgrade not required.
- Complete with over 250 pages of comprehensive user documentation.

AVAILABLE NOW FOR IMMEDIATE SHIPMENT \$ 199.95

The full line of MicroPro software is now available formatted for the Model 4 using our CP/M. Each disk is already configured and ready to run. Just install the printer of your choice and go.

"WE KEEP YOU RUNNING"

There's Nothing New At Home

The low-end market looks to a quiet '84.

edited by Eric Grevstad

Commodore's 264: Something old, something new.

When Coleco's Morton Handel told *USA Today*, "1984 is a return to reason and rationality," English majors frowned at his redundancy but industry analysts nodded in agreement. The home computer market, after a rollercoaster of sales and shakeouts in 1983, is settling down for a conservative new year.

The first trend in home computing, to which Handel was referring, is stable prices. Even amid mass marketers like K Mart or

Toys R Us, sobering memories of TI and Mattel misfortunes and IBM's discount-defying PCjr prices have effectively ended 1983's price wars.

Low-end micros are inexpensive, but they're no longer so cheap as to cut profits or make buyers think in terms of toys. Commodore has more or less established standards of 64K and \$200; no successful entrant offers less memory, and none has a lower price. Customers want more than 16K computers, and they're suspicious of \$100 ones.

Second, today's home computers aren't technical marvels. High-end systems like Tandy's Model 2000 are racing to blaze new design trails, but low-end manufacturers seem agreed that 8 bits plus a few bells and whistles will do fine.

There's a possible exception—this summer could bring limited U.S. availability of Britain's Sinclair QL, which promises 128K RAM, two tape storage drives, built-in word processing, spreadsheet, graphics, and data base programs, and Motorola's 32-bit 68008 CPU, all for \$499. Other than that, though, the most innovative machine in the field is IBM's PCjr, dull as a blue business suit except for

its 8088 CPU and four-figure price.

The industry's new conservatism was highlighted at Las Vegas' Consumer Electronics Show (CES) in January, where a much less staid company than IBM—Commodore—showed a long-awaited machine that turned out to be equally conventional.

Of the three leading low-end contenders, two—Commodore and Tandy—are sticking to their guns. The third, Coleco, is trying to recover from shooting itself in the foot.

The New Commodores

Besides rumors of money problems, unhappy dealers, and revolving-door management, Commodore gossip had centered for months on the successor to the best-selling C64 home computer. Some industry insiders predicted a bundled hardware system similar to Coleco's Adam; others expected a 16-bit, 256K micro for \$500. More cautious onlookers mentioned the "Commodore 128."

And there was a lot of talk, even as the \$200 C64 was stomping low-end rivals into oblivion, that Commodore would drop it overnight, that the new machine would be incompatible, and that the growing C64 support and

software industry would be stranded.

As it turned out, the gossipers batted about .500. The new Commodore 264, introduced at CES, comes with software but no hardware. It doesn't replace the C64, which will continue as Commodore's low-end machine (no one gives a nickel for the VIC-20's chances of continued production). And it's not C64 compatible, even though in many ways it's a re-packaged version of the

older model.

There's the same 64K RAM, though more of it's available for use (60K for Basic programming), and the keyboard's a bit different (seven function keys, a help key, and cursor movement keys arranged in a diamond pattern). Also, the C64's sprite graphics and advanced sound capabilities are missing, as the 264 is intended for serious applications instead of games.

The biggest difference between the new and old Commodores is firmware: The 264 was code-named TED, after its Text Editing Device chip. While an "empty" one will sell for around \$300, models in the \$500 range will feature built-in word processing or spreadsheet programs.

The top of the line, the V364, has a novel feature: speech synthesis, with a 250-word vocabulary for such remarks as "Good shot" or "Your printer is not ready." A more powerful vocabulary can be loaded from cartridges or disks.

In addition, Commodore promises a wide range of cartridge, disk, and tape software, including a 1-2-3 imitation called 3-Plus-1 (which offers a word processor, spreadsheet, DBMS,

When you need uncommonly good software, Smallware™ delivers.

Whatever your Radio Shack® computer, we have the utilities and enhancements just for you.

If you're a Radio Shack computer owner who wants speed, versatility and ease-of-use (and who doesn't?), take a moment to review our list of enhancements, extensions and utilities.

Developed by The Small Computer Company, creators of Profile®, these important tools will dramatically improve your operation by broadly expanding capabilities—simply and efficiently.

MONEY BACK GUARANTEE

These highly sophisticated, simple-to-use products have been developed to meet and exceed the most rigid standards. If not completely satisfied, return all unopened disks for a full refund.

Smallware, Propack and Quikback are trademarks of The Small Computer Company, Inc. Profile and Radio Shack are registered trademarks of Tandy Corporation.

Tandy's CoCo 2 was a Christmas bestseller.

and graphics) and a mini-Lisa environment called Magic Desk.

The 264 and V364 were almost unstaged by Commodore's founder, president, and chief executive officer, Jack Tramiel, who announced his resignation from the firm on Jan. 13. Tramiel, who's made Commodore's reputation as a price-slashing, president-shuffling company, said that its booming success (\$1 billion in 1983 sales) called for a "professional executive" rather than an entrepreneur at the helm.

At press time, his successor was said to be Marshall Smith, U.S. chief executive officer of the Netherlands' Thyssen-Bornemisza, a shipbuilding and transportation firm.

The New CoCo

Radio Shack doesn't release sales figures, but the Color Computer apparently had a sensational Christmas. Gossipers' estimates of seasonal CoCo sales range up to 800,000 or more units, thanks to price cuts for the regular and Extended Basic versions of the 16K Color Computer 2 (down to \$159.95 and \$199.95 respectively).

To stay competitive with Commodore in the new year, Tandy replaced the original CoCo, selling for \$399 in its white-cased, 64K incarnation, with a 64K version of the compact CoCo 2.

The CoCo 2 doesn't come with software, but it could do a lot to end Tandy's reputation for premium pricing: For \$259.95, \$60 more than a C64 picked up at a discount house, buyers can get Radio Shack's 6,500 U.S.

Coleco is struggling against a brushfire of reports describing Adam as an Edsel.

stores and service outlets behind them.

Coleco Versus Coleco

Finally, service was very much on Coleco's mind, as Adam's manufacturer added a network of repair centers, operated by Honeywell, to its toll-free buyers' phone line. Coleco is struggling against a brushfire of reports describing Adam as an Edsel; stories of Adams dead in their boxes are everywhere, and *Consumer Reports* tried four units and couldn't get the word processor to work in any of them.

J.C. Penney Co. said it canceled its order for Adams after machines "repeatedly failed to meet quality standards." Penney then dropped out of home computer sales altogether, saying that it couldn't compete with discount chains and toy stores.

Financially, then, home computer makers are playing it cool (see "Great, Good, Fair, Poor," later in this section, for figures); technically, they're polishing existing designs. As for buyers, the new conservatism adds up to one thing: People have stopped wondering or worrying about home computers, and have started simply using them. ■

Clash of the Titans

Big Blue, meet Big Bell.

Tandy and Apple are mighty rivals, but a duel should begin soon that'll make theirs look like a petty squabble: The one company big enough to worry Big Blue, AT&T, is heading full-tilt into the computer business, and IBM has launched a crash program to meet the challenge.

Belatedly turning to computers after its Jan. 1 divestiture broke its iron grip on telephone service, AT&T plans to introduce 30 computer business products in 1984. The powerful 3B minicomputers the Bell System companies use will be available to outsiders for the first time, and a desktop version of the 3B, expected in April or May, might be the IBM PC's nemesis.

(The *Wall Street Journal*, overlooking such entries as Apple's Lisa and Tandy's 2000, reports, "Some analysts say [the 3B] represents the first serious challenge to IBM in the desktop market.")

In addition, AT&T is moving quickly to market by putting its stamp on established products. Their logo will appear on equipment supplied by Convergent Technologies, a Santa Clara, CA, manufacturer of micros and superminis sold under Burroughs, NCR, and other brand names.

AT&T has also bought 25 percent of Olivetti, gaining access to the office equipment firm's sizable sales and distribution network in Europe, and is rumored to be planning a cooperative

Last month's Pulse Train promised a look at MS-DOS software publishers and their plans for Tandy's Model 2000. That story will appear next month, in the first of *80 Micro's* special Model 2000 sections.

agreement with Wang Laboratories Inc.

"We'll be making product announcements all through 1984," AT&T Information Systems' Tom Holub told *InfoWorld*. "We know where we think the money will be in the future. We know where we have a unique capability."

Of AT&T's forthcoming lineup, Holub said, "It's mostly business-oriented stuff. It's not really home-computer kinds of things. But the expertise we have can lead us into other markets as well."

Besides expertise, AT&T has history behind it. The company's hardware resources, with their ties to Bell Laboratories, are awesome; its 32-bit Bellmac microprocessor, for instance, is said to beat any Zilog or Intel chip on the market.

As for software, AT&T has the clout to make its operating system an industry standard. To frighten an IBM executive these days, don't say "Boo," say "Unix."

According to the *Journal*, "About 150,000 skilled computer programmers and professionals have learned Unix in school and are devoted to it." The Bell Labs-designed DOS has been gaining steadily in the multi-user office market; over 50 manufacturers license Microsoft Corp.'s version, Xenix, alone.

According to Kenneth Bosomworth, president of International Resource Development Inc. (a Norwalk, CT, market research firm), Unix's success is bad news for IBM. "It has now become important to IBM that Unix, or at least the AT&T version of Unix, not become an industry standard that will dictate IBM's future hardware and software," Bosomworth told *Micro MarketWorld*.

To that end, he said, IBM shifted in late December from an uncoordinated software development strategy, with different groups of engineers working on Unix versions for different IBM machines, to a concerted effort to develop a proprietary operating system—or, more accurately, three proprietary operating systems for each of IBM's three main hardware configurations, codenamed Nina, Pinta, and Santa Maria.

The trio, Bosomworth says, will consist of "software superstructures,

capable of running other operating systems beneath them, including MS-DOS and a new Unix-like design." Nina, said Bosomworth, is scheduled for launch in the third quarter of this year, aboard IBM's new multi-user micro called Popcorn.

On the hardware front, there's talk that Big Blue will counter Tandy's and others' 80186 micros with a second-generation PC, built around Intel's even hotter 80286. The 80286 has multi-user capabilities; whether the new PC is the same machine as Popcorn is unclear.

Until Nina, at any rate, IBM is climbing aboard, or at least trying not to be run over by, the Unix bandwagon: Personal Computer Interactive Executive, a \$900 system scheduled for April debut, is a Unix look-alike developed for IBM by Interactive Systems Corp. of California.

Whether due to AT&T paranoia or not, IBM's move to its own operating systems comes as no surprise. Industry gossipers and jealous competitors have said for a year that IBM would eventually drop Microsoft and go it alone.

Microsoft, for its part, is preparing for whatever the two titans do. Future versions of MS-DOS are expected to become more and more like Xenix. ■

Swimming, Boating, and Beeping

TRS-80s go to camp.

by Mike Benton

In the old days, parents went to plush vacation resorts and kids went to woodsy summer camps; today, both Club Med and Camp Wehauken give lessons in Basic. This summer, almost 100,000 children and adults will attend computer camps featuring hands-on practice in everything from Logo and Assembly to word processing and robotics. At over 30 camps, the machines they'll put their hands on will be TRS-80s.

If you or your children are considering a computer camp this summer, one that features Radio Shack micros might be a good choice. You'll learn more about TRS-80 programming and problem-solving tricks and tech-

niques, and you'll be able to apply your new skills as soon as you get home. Also, many camps try to provide the latest equipment, letting you try out new programs and peripherals before you buy them.

And, since you already know the basics of booting up and running TRS-80-compatible software, you'll have a head start on other campers during the first few days, and can get right to work on programming and special projects.

To help you choose a TRS-80 camp, here's an alphabetical (by state) listing of 33. Some of these offer Apples, IBMs, or Commodores in addition to Model IIIs, 4's, or CoCos; some use Tandy machines exclusively.

Prices quoted are per session. Contact the camps for details and their latest dates and prices before making your summer plans.

California

Concord (Lake Tahoe area): Odyssey Academic Camp, 5007 Concord Blvd., Concord, CA 94512, 415-687-6851. Ten one-week sessions (\$345), mid-June to mid-August. Sessions may be combined for extended stay.

Modesto: Foothill Horizons, 801 County Center Three Court, Modesto, CA 95355, 209-571-6596. Three five-day sessions (\$200), mid-June to mid-July. Weekend stay between combined sessions, \$40. Some financial aid available; discount for additional students from the same family.

Connecticut

Lakeside (Bantam Lake): Awosting Camp for Boys, Ebner Camps Inc., Bantam, CT 06750, 203-567-9678. Full session (\$1,795) June 1-Aug. 25; two half sessions (\$950) June 1-July 28, July 29-Aug. 25.

Simsbury (Westminster Prep School): National Computer Camps, P.O. Box 585, Orange, CT 06447, 203-795-9667. Five one-week sessions (\$360), early July to early August. Each additional week, \$390 including weekend stay.

Washington (Mt. Tom Lake): Chinqueka Camp for Girls, Ebner Camps Inc., Bantam, CT 06750, 203-567-9678. Full session (\$1,795) July 1-Aug. 25; two half sessions (\$950) June 1-July 28, July 29-Aug. 25.

Computer campers: Nature hikes through RAM.

Georgia

Atlanta (Oglethorpe University): National Computer Camps, P.O. Box 585, Orange, CT 06447, 203-795-9667. Four one-week sessions (\$360), early July to early August. Each additional week, \$390 including weekend stay.

Illinois

DeKalb: NIU Computer Camp at DeKalb, College of Continuing Education, Northern Illinois University, DeKalb, IL 60115, 815-753-1454. Seven one-week sessions starting in mid-June. Residential sessions \$270; day sessions \$230.

Oregon: NIU Computer Camp at Loredo Taft. Same address and prices as above.

Louisiana

Monroe: Northeast Louisiana University Computer Camp, Mathematics Dept., NLU, Monroe, LA 71209, 318-342-2186. Two one-week sessions (\$175) in June.

New Orleans: Loyola University Microcomputer Summer Camp, Box 14, Loyola University, New Orleans, LA 70118, 504-865-3530. Four two-week sessions (\$325) beginning in June. Some scholarships available; discounts for two or more students from the same family and for additional sessions taken by the same student.

Ruston: Louisiana Tech Computer

Camp, Continuing Education, Box 3182, Ruston, LA 71272, 318-257-3848. Three two-week sessions, June 3-15 and July 8-20 (for overnight campers; \$450) and June 18-29 (for commuter campers; \$250).

Maine

Oakland (Belgrade Lakes region): Camp Manitou for Boys, 10 School Masters Lane, Dedham, MA 02026, 617-329-8048. Four-week (\$1,345) and eight-week (\$2,300) sessions throughout the summer.

Minnesota

St. Paul (Bethel College campus): CompuCamp, 5810 W. 78th St., Minneapolis, MN 55435, 612-835-0064. One-week (\$425) and two-week (\$850) sessions, June through August. Each additional week for combined sessions, \$390. Family, group, and early sign-up discounts available.

Mississippi

Hattiesburg: University of Southern Mississippi Computer Day Camp, Division of Continuing Education, Southern Station, Box 5056, Hattiesburg, MS 39406, 601-266-4189. One three-day session (\$100) in June. Camp meets from 9 a.m. to 3:30 p.m. daily; campus housing is available at extra cost for students who cannot commute (parent, counselor, or teacher must accompany overnight camper).

Hattiesburg: University of Southern Mississippi Computer Week Camp, same address as above. One one-week session in June; \$125 for day students, \$175 with campus housing.

Missouri

St. Louis: National Computer Camps, P.O. Box 585, Orange, CT 06447, 203-795-9667. Four one-week sessions (\$360), late July to early August. Two-week session including weekend stay, \$750; each additional week, \$390.

New York

Adirondack (Schroon Lake): Camp Saskatchewan, 162-41 Powells Cove Blvd., Beechhurst, NY 11357, 212-767-8557. Four-week (\$1,100) and eight-week (\$1,950) sessions, July and August.

Dix Hills (New Hills School): Compu-Day Camp, 645 Half Hollow Road, Dix Hills, NY 11746, 516-586-4020. Two-week day sessions (9 a.m.-4 p.m.), June 25-Aug. 31. Each session \$300 without transportation, \$355 with transportation from Long Island.

Poughkeepsie: Marist Computer Camps, Marist College, Poughkeepsie, NY 12601, 914-471-3240. Three two-week sessions (\$795), early June to mid-August. Sessions may be combined. Limited financial aid available.

Saratoga Springs (Skidmore College campus): Computer Discoveries, Office of Special Programs, Skidmore College, Saratoga Springs, NY 12866, 518-584-5000 ext. 264. Two-week day sessions throughout July; costs from \$80 to \$140, depending on course work selected.

Westchester County: Mercy College Summer Computer Workshops, 555 Broadway, Dobbs Ferry, NY 10522, 914-693-4500 ext. 350. Two one-week sessions in July (\$170 each, \$325 for both). Camp is held from 9 a.m.-4 p.m. daily. No overnight campers.

Ohio

Cleveland (Ursuline College campus): National Computer Camps, P.O. Box 585, Orange, CT 06447, 203-795-9667. Four one-week sessions (\$360), early July to early August. Each additional week, \$390 including weekend stay.

Wooster (College of Wooster cam-

ANYONE CAN USE OUR SOFTWARE!

MAIL PAC II and CHECKING PLUS represent a new generation of computer software. Our software doesn't even need a manual! Anyone can quickly learn to use either package by following simple, explicit on-screen instructions. But, for those of you who insist -- we've included a complete user's manual as well.

MAIL PAC II FEATURES:

High Capacity --

Stores from one to one million names in Zip Code, Numerical or Alphabetical order. The only limitation is your disk storage space.

Flexibility --

Prints your mailing list on 1, 2, 3, or 4-across labels (with up to 5 user-defined lines on each label) or as a compact, user-designed directory. The record length is completely user-defined, and each field within each of your records is completely variable (allowing storage of any number of characters for any particular address entry). Devote fields to telephone numbers, codes, or even special messages related to each particular name on file.

Powerful --

A built-in word processor allows you to create personalized form letters for each address on your list (or just a particular group of addresses).

Ease of Use --

Create new mailing lists, review existing lists, handle changes of address, delete cancelled names, sort lists, and purge duplicate names from your files. Complete on-screen instructions tell you in plain english exactly how to accomplish all of these tasks.

MAIL PAC II \$99.95

CHECKING PLUS FEATURES:

Complete Check Register --

Checking Plus stores your entire check register in a disk file, and then uses the data to balance your account, track your expenses, and help you make budget projections. Review the entire checkbook, enter checks, deposits, fees and adjustments, mark outstanding checks when paid, and get an instant cash balance at any time. All data can be viewed onscreen or printed out in report form.

Tax Preparation --

Storage of monthly and yearly totals and other important information aids in income tax preparation, for your personal use or for your accountant.

Handles the Details --

Store names and addresses for frequently written checks, then print checks to fit standard window envelopes, eliminating the need for extra typing. You can even store any comment, explanation or other message (up to 255 characters) related to a particular check.

Automatic Monthly Bill Payments --

Enter amounts and names of payees for all of your fixed-cost monthly payments, and then sit back while the system automatically prints checks.

CHECKING PLUS \$99.95

Both Programs Require 48K And At Least One Disk Drive (2 Drives For Higher Storage Capacities). And All Hard Disk Systems Are Supported.

FREE--TRS-80 Mod I,III & 4 programs supplied on DosPlus (minimum system). Complete DosPlus also available.

pus): Computer-Math Camp, College of Wooster, Wooster, OH 44961, 216-263-2239. One 12-day session (\$525) from mid-June to early July.

Oklahoma

Okarche: Country Computer Camp, Route 4 Box 84, Okarche, OK 73762, 405-263-7701. One-week sessions (\$265) beginning in mid-June.

Norman: University of Oklahoma Computer Camp, Dept. of Mathematics, University of Oklahoma, Norman, OK 73019, 405-325-3410. One two-week session, late June to early July. Tuition is free; \$15 charge for text materials. Students who cannot commute may stay in campus housing for \$12 per night (meals extra). Students are encouraged to bring their own TRS-80s to camp if they have one.

Oregon

McMinnville (Linfield College campus): National Computer Camps, P.O. Box 585, Orange, CT 06447, 203-795-9667. Five one-week sessions (\$360), early July through August. Each additional week, \$390 including weekend stay.

Otis: Westwind YWCA Camp, 1111 S.W. 10th Ave., Portland, OR 97205, 503-223-6281. Three one-week sessions (\$220), July through August. Financial aid available.

Portland: YWCA Computer Day Camp, 1111 S.W. 10th Ave., Portland, OR 97205, 503-223-6281. One-week sessions (\$75), held for 2-3 hours, Monday through Friday. Financial aid available.

Pennsylvania

Beaver Falls (Geneva College campus): CompuCamp, 5810 W. 78th St., Minneapolis, MN 55435, 612-835-0064. One-week (\$425) and two-week (\$850) sessions, June through August. Each additional week for combined sessions, \$390. Family, group, and early sign-up discounts available.

North Springfield: YMCA Camp Fitch, 17 N. Champion St., Youngstown, OH 44501, 216-744-8411. Two two-week sessions (\$490), late June to early July.

Reeders: Camp Akiba, Box 400, Bala Cynwyd, PA 19004, 215-649-7877. One eight-week session (\$2,700), June 26-Aug. 17.

Vermont

Hancock: Killooleet, Sarah Sanford Road, Bridgewater, CT 06752, 802-767-3152. One eight-week session (\$2,400), late June to late August. Scholarships available.

Switzerland

Gstaad: Village Computer Camp, CH-1296 Coppet, Switzerland, phone 022-762059. Three two-week sessions (\$700), July through early August. ■

Mike Benton is author of The Complete Guide to Computer Camps and Workshops (Bobbs-Merrill Publishing Co., 1984, \$10.95), from which these listings are adapted.

Who's the Best?

Z80 micros strike back.

I'm thinking of buying a computer. Which one's best?" It's a question neighbors and novices ask every day, and one that doesn't have a definitive answer. The honest response is to ask, "Best for what?" Different micros suit different budgets and applications.

Nevertheless, Auerbach Inc., a Pennsauken, NJ, publisher, has attempted to answer the eternal question—and, incidentally, declared that the TRS-80 Model 4 is the world's sixth best computer for spreadsheet analysis, and seventh best for word processing. No other Tandy model made the top 10, but neither did any IBM or Apple computer.

Auerbach passed judgment in two reports, rating micros' value for spreadsheet use and word processing. (A third report, tallying systems for graphics applications, is coming soon.)

To minimize the apples-and-oranges factor, Auerbach specified "optimum systems" for each category that included at least 64K of memory, dual disk drives (one for spreadsheet work), an 80-column upper- and lowercase display, and a daisy-wheel printer. Besides seeing which machine met those specs for the lowest price, the judges gave bonus points for such extras as more RAM or hard disks, juggling those options' prices as well.

While Tandy's super-powered Model 2000 was too new for inclusion, Auerbach's totals favored 8- over 16-bit systems. Inexpensive desktops built around Z80 or Z80A processors took seven of the 10 top-five places in the two contests.

For word processing, the publishers deemed the Kaypro 10, offering CP/M and a 10-megabyte hard disk, the best value. Columbia's MPC, an 8088-based IBM clone, finished second, and three more CP/M systems—the Toshiba T100, Sanyo MBC 1250, and Kaypro II—rounded out the top five. The IBM PC placed 22nd, and the Apple IIe 36th.

In the spreadsheet race, IBM PC clones—Sanyo's MBC 5500 and the Eagle PC—were first and third. The Toshiba, however, was second, and its Z80A cousins (SKS 2000, Sanyo MBC 1200, and Model 4) fourth through sixth. The PC and IIe were rated 30th and 47th respectively.

Though Auerbach kept its tallies separate, the Toshiba T100's silver and bronze medals would make it the closest thing to an overall winner—and, except for better graphics and double-sided drives, the T100's specs match the Model 4's. Even in today's MS-DOS world, it seems, you can go a long way with a Z80A and 64K RAM. ■

Great, Good, Fair, Poor

Fourth-quarter finance.

Four of the leading players in the home computer field released their sales and profit figures for the last quarter of 1983, and the results were what you might expect. Radio Shack and Commodore are doing terrific business, Coleco faces an uphill struggle with Adam, and Atari is struggling to stay alive.

Commodore was proud to break the billion-dollar mark in 1983 sales, but Tandy Corp. nearly matched that in the fourth quarter alone. Fort Worth's sales for the last three months of the year were \$898.3 million, up 15 percent from the previous year's \$778.2 million.

Net income for the quarter was

Learn to Program Like a Professional!

THE COMPLETE BOOK OF RANDOM ACCESS & DATA FILE PROGRAMMING

Written for TRS-80™ I, II, & III - IBM™/PC - APPLE™ M/S - OSBORNE™ - HEATH™ - DEC™ - SUPERBRAIN™ - and all Computers using CP/M with Microsoft BASIC™

The last word on disk random access and file handling techniques, this series is intended for everyone — beginning programmers, businessmen and professionals will learn how to create custom programs to handle inventories, mailing lists, work scheduling, record keeping, and many other tasks, while more experienced programmers will learn advanced, professional programming techniques for faster, more efficient data storage and retrieval.

Although random access file handling is a matter of some complexity, the subject has been treated in a simple and down-to-earth fashion, so that anyone with some small familiarity with programming in Microsoft BASIC will be able to cope with the material. Each stage of learning uses a sample program as a starting point. The programs grow in capability and complexity as the books progress into all of the various aspects of file handling and record manipulation. An extensive effort has been made to keep the material coherent and every program line is explained in detail.

Volume I BASIC FILE HANDLING

- The writing of a Menu to summarize program functions
- Screen format for data entry
- The creation of a basic record
- The FIELD and LSET routines for buffer preparation
- Disk storage of random access records
- Changing or editing stored records
- The LPRINT capability from disk using three different formats
- Sorting the random file
- Searching by name or key field
- Search in "next" or "prior" fashion
- Purging deleted records
- Using disk file data for calculations
- Future expansion of data fields
- Using flags to prevent program crashes
- Date setting, printer on-line and many other routines to make a program run like a commercially written program

VOLUME I\$29.95
 Option Vol. I Program Disk
 TRS-80 Model I/III\$28.50
 TRS-80 Model II\$32.50

Volume II ADVANCED FILE HANDLING TECHNIQUES

- Relational database programming
- Comprehensive self-balancing accounting system with printouts
- Hashcoded data file manipulation -- (probably the fastest method of data retrieval). Hashing the input key and recovery method explained
- Span-blocking techniques allow creation of records longer than 256 bytes without wasted space
- Blocking & Deblocking
- Shell-Metzner sort
- In-place screen editing
- Recovery of deleted record space
- Alpha-index record retrieval
- Fast machine language/BASIC sort
- Linked list record structure and sort-merge, deleted record removal and file reorganization
- Multi-key file reorganization and record searching

VOLUME II\$29.95
 Optional Vol. II Program Disk
 TRS-80 Model I/II/III\$49.95

\$101.2 million, compared to \$93 million a year ago. For the last half of the year, the first half of fiscal 1984, Tandy reported profits of \$160.9 million on sales of \$1.48 billion.

Commodore has a long way to catch up, but is growing faster. The C64 maker reported over \$425 million in fourth-quarter sales, more than double the previous year's \$176 million. Similarly, estimated profits were nearly \$50 million, more than twice

the late 1982 figure of \$23 million.

Commodore said it filled only 50 to 60 percent of their holiday orders. The unfilled orders, plus continued "tremendous" demand, should segue nicely into sales of the new 264 due this spring.

Coleco, on the other hand, produced only a fifth as many Adams in 1983 as it originally predicted. The West Hartford, CT, company shipped 95,000 copies of its \$750 system,

blaming the trickle on delays due to re-design, debugging, and parts shortages.

While Coleco expected to show an overall profit for 1983, it admitted an unspecified loss in the fourth quarter. Also, beyond reassurances of "a quick return to profitability" in 1984, the firm wouldn't tell analysts at Las Vegas' Consumer Electronics Show what the projected profit would be or how many Adams it planned to ship.

Adam's future may have brightened, though. At CES, Coleco unveiled a \$400 disk drive and \$200 modem, scheduled for release in the second quarter, and announced a version of Digital Research Inc.'s Personal CP/M and a plug-in attachment letting Adam run some IBM PC software, both planned for late 1984.

Atari's position was the opposite of Coleco's: a fourth-quarter profit (\$1.2 million), but a hefty \$536 million loss in the last nine months overall. Representatives of Atari and its parent firm, Warner Communications Inc., spent a lot of time at CES denying rumors that Atari would bail out of the home computer business.

James Morgan, Atari's new chief executive officer, told the *Wall Street Journal* that "the company is definitely turning around," helped by "strong demand" for the 600XL and 800XL and some new business policies.

For instance, retailers can no longer brand Atari products "defective" and return them to reduce inventories, a trick that Morgan said cost Atari over \$75 million last year. Now, all returns must be matched by an equal purchase of new items.

As for the non-appearance of Atari's high-end 1450XLD, Morgan spoke candidly: "The history of Atari and this business has been filled with announcements of products that weren't ready, and things were never done right on schedule. If we're going to be a reliable company, we aren't saying anything until we know we can deliver it."

And, if you overlook the fact that 1983's prices were half 1982's, Atari's video game consoles sold well—1.3 million in December, compared to 1.4 million a year earlier. Or, as Warner's Geoffrey Holmes put it, "pretty good for a product that everyone says is dead." ■

END BYTES

- As if reports of Adam bombs weren't enough, **COLECO** faces attack on a different front from *VideoPrint*. The Norwalk, CT, newsletter, in a deadpan joke designed to get into End Bytes, deplores forecasts that 5 million personal computers and 4 million Cabbage Patch dolls will be sold in 1984, surpassing the birth of 3.8 million actual children.

"The present trend toward home computers and away from children," *VP's* Debra Hurd points out, is a self-defeating business strategy, since "after about the year 2040, there won't be anyone to buy the computers." Hurd suggests that Coleco, a "major offender" due to its promotion of "Cabbage Patch Kids and home computers, instead of real children," donate equal time for TV ads aimed at stimulating increased procreation.

- Can you imagine the *New York Times* buying the rights to *Galaxy Invasion*? One of Britain's leading **NEWSPAPER** publishers, The Mirror Group, is marketing three firms' Commodore, BBC, and Spectrum programs as "MirrorSoft," selling in retail stores and through *Daily* and *Sunday Mirror* mail-order.

- Speaking of the *Times*, computer columnist Erik Sandberg-Diment gave another rave **REVIEW** to the IBM *PCjr's* chiclet keyboard. "When it comes to letting your fingers do the walking," he wrote, "on the *PCjr* they have all the grace of a rubber-kneed centipede. Two pages into a manuscript, and I was looking for a pad and pen with which to finish my story."

- **FRANKLIN** and **APPLE** have settled their differences (see *80 Micro*, December 1983, p. 258). The clone manufacturer agreed out of court to pay \$2.5 million and begin using its own ROM instructions instead of Apple's copyrighted ones. The deal ends both Franklin's Supreme Court appeal and Apple's campaign for an injunction halting Franklin sales.

- Apple's Australian subsidiary, however, has lost to **WOMBAT**. A federal judge there, ruling on Apple's attempt to ban the Taiwanese-made clone, said just the opposite of last fall's Philadelphia decision in the Franklin case: that programs in ROM are not protected by Australian copyright law. The ruling might make U.S. manufacturers hesitate before selling products Down Under.

- Zilog's trusty **Z80** chip, mainstay of the TRS-80 lineup, continues to wave the 8-bit banner. Zilog and Toshiba have teamed up to produce low-power CMOS versions of the microprocessor, and the chip maker, American Microsystems Inc., and Digital Research Inc. have agreed to produce a Z80-based single-chip operating system processor that includes DRI's Personal CP/M. The easy-to-use ROM version of the DOS, Digital claims, will eliminate the need for a second disk drive in many personal or portable micro designs.

- If you were Datasoft, a leading Apple game publisher, how would you compete with Electronic Arts' **CELEBRITY** software (such as "Julius Erving and Larry Bird Go One-on-One")? You'd introduce "The Dallas Quest," an adventure featuring J.R. Ewing and family, and "Bruce Lee," a game inspired by the late kung fu superstar. ■

Star Gazing

I've converted Adron Lilly's astronomy program ("What's Up and When," October 1983, p. 114) to run on a Model I. The changes work on all the Model I operating systems I've tried: MULTIDOS, NEWDOS80, and DOSPLUS 3.4.

Change lines 1130, 1170, 1300, 1330, and 1340 to:

```
1130 CLS:S=PEEK(16449):MT=PEEK
(16450):H=PEEK(16451):YR=PEEK
(16452):D=PEEK(16454):M=PEEK(16453)
' READS TIME/DATE INFORMATION
1170 YR=PEEK(16452):IFYR=84 ANDM
>=3 THEN E=E+1 'LEAP YEAR
1300 CMD "CLOCK ON"
1330 PRINT@270,STRING$(32,32):PRINT
@270, "ENTER HOUR TO LIST="";:LINE
INPUTP$:P=VAL(P$):IFP$=""GOTO
1330
1340 PRINT@718, "WHAT TYPE.....="";:
LINEINPUTP2$:P2=VAL(P2$):IFP2$=""
GOTO1450 'PRINTS RIGHT POINTING
HAND IN MENU
```

I set line 1300 to turn the clock on in DOSPLUS 3.4; check your operating system's manual to change the command.

*Carl Pawl
721 16th St.
Santa Monica, CA 90402*

Gemini Driver

Dan Robinson's SuperScripts MX-80 driver ("MX-80 Driver," May 1983, p. 125) needs only minor changes to work with the increasingly popular Gemini 10X and 15X printers. Change lines 1300, 1940, and 2460 to read as follows:

```
1300 LD A,01H
1940 LD A,54H
2460 LD A,1BH
```

And add the following two lines:

```
2462 CALL PRTCHR
2464 LD A,40H
```

*Kenneth D. Grimm
Sweet Briar College
Sweet Briar, VA 24595*

Simple Screen Dump

I've discovered an alternative to long subroutines for saving a screen to disk. Since the Model III memory maps the screen (in locations 15360-16383, or 3C00-3EFF hexadecimal [hex]), you can use a conventional memory dump to save it.

With NEWDOS, use CMD "DUMP NAME,15360,16383" to save the screen in the file NAME, and CMD "LOAD NAME" to display the saved screen.

TRSDOS, however, does not allow dumps involving memory addresses below 24576 (6000 hex). And executing a Basic Dump command returns you to TRSDOS—not the calling Basic program.

Use the following one-line subroutine to avoid these problems:

```
49000 OPEN "R",1,S$:FIELD1,4ASS1$,
252ASS2$,S3$="":S1=VARPTR(S3$):
S2=15360:FORS3=1TO5:S4=252+244*(S3
=5):POKES1,S4:POKES1+1,(S2AND255)
:POKES1+2,S2/256:LSETS1$=CHR$(1)+
CHR$(S4+2)+MKI$(S2):LSETS2$=S3$+
MKI$(514):PUT1:S2=S2+S4:NEXT:
CLOSE1:RETURN
```

Store the dump file name in S\$ and execute a GOSUB 49000 command. The routine requires about 300 bytes of memory; the program shouldn't open any file in buffer 1 while it calls the subroutine. To redisplay the screen, simply type in CMD "L",S\$.

The subroutine accepts any character; you can save and redisplay what's on the screen without modifications.

Argentina*

Better Blackjack

I've made some improvements to Paul Serotta's blackjack program ("Blackjack," December 1983, p. 247). First, if you and the computer have blackjack, the computer displays an RG error. To correct this, change line 250 to:

```
250 IFCT=21ANDPT=21THENPRINT@
CP,HCS;:GOSUB2210:GOTO145
```

To prevent you from doubling down unless you have 11 points (rules are rules), change line 4000 to:

```
4000 IFCR>20RPT<>11THENPRINT@280,
"YOU CAN'T DOUBLE NOW!!";:SOUND
7500,20:SOUND13000,20:FORDL=1TO1000:
NEXTDL:PRINT@280,SPACE$(38);:
RETURN
```

To play a few games in a row without running the game every time, take the "END" off line 3010 and add the following lines:

```
3020 PRINT"PLAY AGAIN?"
3030 A$=INKEY$:IFAS=""THEN3030
3040 IFAS="Y"ORAS="y"THENPM=
1000:GOTO145
3050 IFAS="N"ORAS="n"THENEND
3060 GOTO3030
```

Help Wanted

I just finished building the Mikrokolor interface for my Model I ("The 80 Goes Color," May 1983, p. 90). I even bought several TMS 9918A video display processors to make extra boards for my friends.

There's only one problem. The 9918 uses the NTSC video standard

READER EXCHANGE

of 525 lines, but my Australian television uses the PAL 625-line standard.

The boards make great conversation pieces, but I'd rather use them in my TRS-80. Does anyone know of an interface that converts NTSC to PAL? If so, I'd like a circuit diagram too.

*John Scarborough
31 Stewart St.
Parramatta 2150
N.S.W. Australia*

I need a subroutine for my Model III that produces all the combinations possible with two arrays of up to five elements each. Can anyone help?

*Bill Huffman
P.O. Box 5065
Alexandria, LA 71301*

Help! I need a schematic diagram to fix my 80 Graphix high-resolution board, made by Programma International Inc. I think the repair shop smoked mine. When I turn it on, the screen flashes a scrolling set of 30-40 characters and then goes blank.

Also, does anyone have a routine to prevent Automated Simulation's Tuesday Morning Quarterback from locking up on my Model I? The sound routine in line 40 hangs up on coin toss.

*Gary D. Huston
3751A Mt. Vernon Place
Lima, OH 45804*

Can someone tell me how to convert Waldo Boyd's and John Ethern's Dvorak keyboard program ("The Dvorak Keyboard," December 1980, p. 66) so it will run on my Model III?

*Andrew F. Zarchy
11034 Wrightwood Place
Studio City, CA 91604*

Error Trap

In our January 1983 New Products column we misquoted the price of the Rest and Roll footrest. It retails for \$99, not \$198, and is available from R and R Concepts, 241 Conejo Road, Santa Barbara, CA 93103, 805-966-0101.

The box for frequently needed numbers on p. 29 of the January 1983 issue contains the wrong address for IJG Inc. The correct address is: IJG Inc., 1953 W. 11th St., Upland, CA 91786, 714-946-5805.

DEBUG

EPROM Bugs

I've discovered a bug in the program that accompanied my article, "Build an EPROM Programmer" (June 1983, p. 200). The problem is in line 292; the instruction STA RST (a Reset command) should be eliminated or replaced with NOP instructions.

When the EPROM fails the Verify routine, this statement resets the programmer. If you answer the CONTINUE VERIFY? question positively, all subsequent reads will take place at EPROM location 0000.

Removing the Reset command at line 292 allows subsequent reads to occur at the proper EPROM location, and reset when the program returns to the menu.

If you have the source code on tape or disk, simply delete line 292, assemble the program, program it into an EPROM defined in the first part of the article, and use this new

EPROM with your programmer.

If you don't have the source code, place a blank EPROM in your programmer and select the Input Data option. Use 01E3 for a start address and 01E5 for a stop address.

Type in 12 (an NOP code) for data at all three locations, then select the Program ROM function. Use the same start and stop addresses as above, and where the menu returns, select the Move Buffer function.

Use C000 for a start address and C001 for the stop address. Select Program ROM again, using 0000 for start and 01E2 for stop.

When the menu returns, select the Program ROM option once again, using 01E6 for start and 05B7 for stop. When the menu returns for the last time, use the newly programmed EPROM for your programmer.

Stratford, NJ 08084*

Tax Manna

My program, "The Taxman Cometh" (January 1984, p. 100), has a bug. To make the printout option (<P>) work, change lines 4000 and 4010 to:

```
4000 LZ=0:PRINT@LI,CHR$(30);  
STRING$(LV-1,13);  
4010 LT=1:GOSUB7010:GOSUB8380:  
A1=63:GOSUB5000:LPRINTAN$:IFLZ=  
LNTHEN8040ELSELZ=LZ+1:GOTO4010
```

Also, several people have called me with problems in line 2010. The line is correct as listed in *80 Micro*; I think the problem lies elsewhere. Be sure you have nothing loaded in high memory and that you use a 48K machine. Always start the program from a cold boot.

Last, check line 8010 and make sure you haven't entered a line 8195. The printout in *80 Micro* makes -18195 look like a new line.

Anitek's LeScript: Writing with Style

by Eric Grevstad
80 Micro staff

Model 4 owners who've been limping along in Model III mode might pounce on LeScript as one of the first 80-column TRS-80 word processors. That's fine, but saying LeScript has an 80-column by 24-line display is like saying a Porsche has four wheels and a spare. It doesn't begin to do justice to the program's power and versatility. I don't think there's a better Model 4 word processor around.

It's also unfair to speak of LeScript as only a Model 4 word processor.

Basically, LeScript is an updated, supercharged version of Zorlof, Anitek's \$70 sleeper that's attracted a small but loyal following in the Model I/III world.

The nonsystem LeScript disk, put in drive 1, transfers its files to any Model 4, III, or Max-80 DOS disk in drive zero. Versions of LeScript are also available for LNWs, PMCs, and Model I's; there's even a LeScript/UC for those with uppercase only.

I tested LeScript briefly on a 48K Model III. The maximum file length was shorter than that of a Model 4 (17,661 bytes, compared to 24,573 and 90,109 on 64K and 128K Model 4's). The display was only 64 columns wide and lacked the word "LeScript" at the top right. Also, LeScript's screen flicker, a minor problem on the 4, was more obvious on the III.

Other than that, LeScript works admirably on the older machine, though it comes into its own on the 4. Not only can Model 4 owners exploit the wider display, but they can use ei-

edited by Lynne M. Nadeau

Photo. LeScript in action. (Photo by Suzanne Torsheya.)

ther of two command keys, control and clear, located at opposite ends of the keyboard.

This excellent feature lets you enter nearly any LeScript command with one hand. (When describing commands in this review, I'll say clear.) Also, the 4's function keys give one-finger access to three of the most frequently used functions.

The manual doesn't mention that LeScript won't fit on a standard TRSDOS 6.0 or 6.1 disk. The two main files, LeScript/CMD and LeScript/DVR, take about 27K, with the sample text and form letter files adding another 22K if you want them. Purge a few TRSDOS 6.x files such as TAPE100 and the useless mailing list, and CONV :1 :0 puts LeScript on your system disk with no trouble.

Digital Fuel Gauge And Trip Odometer

LeScript's screen display tells you all about what you're writing. Text

scrolls through the lower 21 lines; the top three lines are devoted to information about the current file.

The first line displays the file name and line width, in addition to a continuously updated count of words, lines, and free memory. While editing a very long file, I found I had to take my hands off the keyboard for perhaps 10 seconds to let LeScript's count catch up to my insertions and deletions, but it's still an invaluable feature.

Presumably, you'll set the line width to 80 columns for writing and editing, and change it to 60 or so for printing. Pushing the clear and equals-sign keys moves the cursor to the status area for such alterations.

However, you can set widths of from five to 252 columns, press clear-J (rejustify), and LeScript adjusts its display accordingly—using only part of the screen, or using the screen as a window that moves horizontally along wide lines.

This is a little bizarre and horizontal scrolling causes screen flicker, but if you write long lines of Basic, you'll appreciate it. (LeScript can read and write Basic, ASCII, and Apparat and Radio Shack EDTASM as well as its own files, and also read Scripsit and Zorlof.)

The second status line displays your search and replace values. Clear-S and clear-R move through the text, finding one string of up to 28 characters and replacing it with another. Clear-A does the process for the entire file automatically, deletes all occurrences of a string, or inserts a string at the cursor (if the replace and

search fields, respectively, are blank).

The third status line occasionally flashes messages for problems or commands that require confirmation (Disk Not Ready, Once More to Exit to DOS). The rest of the time, it displays a WordStar-like line of dots and numbers that indicates the file's line width and tab settings.

Writing Right Along

LeScript has a bit of flicker on the line you're typing, and the cursor blinks rapidly. You can go into insert mode (clear-I) to slow it down bearably. However, for the most part, writing and editing with LeScript is a pleasure.

Cursor movement and scrolling are fast and precise, whether with the arrow keys alone or in moving one page (20 lines) up or down or to the top or bottom of a file. The Model 4's F1 key duplicates clear-T, the top-of-file command, and F3 equals clear-K, the tab.

LeScript marks, moves, copies, and deletes blocks of text easily. You can also save blocks, like whole files, to disk and insert them in other files. Clear-G, the Get or Load command, doesn't overwrite text already in memory; space permitting, it inserts the new file at the cursor.

The program also keeps pace with high-speed typing, although I found a quirk while holding down the shift key. Pressing P and T rapidly or at once produces a clear-T, taking you to the top of the file.

LeScript is in some ways a line-oriented rather than screen-oriented word processor. If you notice a mistake in the last word on the line above the current one, you cannot back up and correct it. Backspace (the left-arrow key) stops at the left margin; you must use the up-arrow key, then the shift key and right-arrow key to reach the end of the previous line.

Anitek president Peter Ray told me this is intentional; apparently many people lean on the left-arrow key rather than using it with the shift key to reach the left margin. Conventional backspacing lets them overshoot their mark.

Similarly, clear-L (delete line) removes everything from the cursor to the right margin, but doesn't bring up the following line to close the gap on

LeScript

Anitek Software Products
P.O. Box 361136
Melbourne, FL 32936

<i>Easy to use?</i>	★★★★☆
<i>Good docs?</i>	★★★☆☆
<i>Bug free?</i>	★★★★☆
<i>Does the job?</i>	★★★★☆

screen. Scrolling a page or hitting clear-J does that.

While it leaves apparent gaps in text, LeScript won't tolerate actual ones. If you like to leave two spaces between sentences, or use several spaces to indent text, you're out of luck. LeScript, vigilantly justifying everything, automatically erases any more than one space between other characters.

You do have slightly awkward ways around this: Pressing the clear key and the space bar and enter key, respectively, produces blank and end-of-sentence characters that LeScript leaves intact. To print a file with two spaces after periods, I wrote it with one, then used the search and replace function to change periods to periods plus sentence enders.

You can also indent text and set tabs with printer command lines (beginning with clear-;), like the one at the top of a file in which you set margins, line spacing, and so on. Setting a tab involves finding its location on the line and entering TAB47 or whatever. It's not as easy as moving the cursor and pressing TS in Scripsit, but LeScript does have a dozen default tabs suitable for most applications.

To make up for these inconveniences, LeScript offers other dazzling features. Not only does the program print form letters, it prints letters for all entries in your data file or only those with identifying markers.

And, for small form-letter jobs or

words or phrases you use frequently, its keystroke-multiply function programs up to 55 keys (shift/clear-A, shift/clear-B, and so on) to insert items of any length from a LeScript/KSM file.

The latest version, Ray says, supports KSM macros, letting a keystroke replace a series of commands (such as loading a file and moving the cursor to a desired point within it) as well as phrases.

If you don't have a KSM file, shift-clear commands produce an impressive set of European and special characters, from brackets to umlauts. More impressive still, LeScript displays subscripts, superscripts, boldface, underlining, and italics on screen—italicized words, for instance, flash on and off, alternating with slashes. Clear-8 rennumbers Basic and EDTASM programs, and clear-9 toggles a Model 4 keyclick.

File-Handling Magic

If LeScript is good (once you learn its minor idiosyncrasies) at writing or creating files, what it does with existing files is amazing. It's more powerful than some DOSes.

At any time during writing and editing, clear-D (F2 on the Model 4) calls a directory that's better than TRSDOS's. It contains every file on any desired disk, with each file's name, date, length in bytes and granules, and free disk space. From the directory, you can load a file or kill one or more to clear space, and then return to your text without losing a letter.

You won't even lose text in an accidental reboot; type `LESCRIPT *` from DOS Ready, and your unsaved file reappears.

If that doesn't impress your friends, show them the view (clear-V) function, which displays text on the screen the way it'll look on paper, including width and line spacing; left, right, or full justification or centering; page breaks; headers; and footers. If you don't like the format, change the specs and look at your document again; LeScript lets you rejustify and review all day long.

SuperScripsit owners who've struggled to mate their program with non-Radio Shack printers will be awed by LeScript's printing power. A printer command line at the top of

GREAT IDEAS IN A DISK

GREAT IDEAS IN A CASSETTE

NOW, you can load the major programs from 80 MICRO—automatically.

LOAD 80 is a collection of the major programs from each issue of 80 MICRO including: tutorials...utilities...games...home-hobby applications...word processing programs...and more. Each program is on a formatted disk or cassette and ready to run...saving you hours of key-in time. And Model III users can now run **LOAD 80** automatically—our new disk transfer system eliminates conversions.

For less than \$2.00 per program **LOAD 80** gives you a library of over 100 quality programs in just 12 months—delivered to your home each month with your copy of 80 MICRO.

Plus, a year's subscription to **LOAD 80** saves you nearly 30% off the single disk or cassette price—that's enough for a year's subscription to 80 MICRO.

Your **LOAD 80** comes complete with user support. Just call 1-603-924-9471 any business day and you'll receive prompt assistance from our **LOAD 80** staff and the 80 MICRO Technical Editors.

To get your time-saving subscription or monthly issue of **LOAD 80** call toll free 1-800-258-5473 (in New Hampshire dial 1-924-9471). Or fill out this coupon and send it in today.

YES! Save me time. Save me money with LOAD 80.

- YES! I like saving time and money. Send me a year of **LOAD 80** on disk for \$199.97.
- YES! I need this time saver and want to save 30% off the single cassette price. Send me a year of **LOAD 80** on cassette for \$99.97.
- YES! I want **LOAD 80** to save me money. Send me this month's **LOAD 80** disk for \$21.97 which includes postage and handling.
- Of course! I'd be a fool not to order. Send me this month's **LOAD 80** on cassette for only \$11.47. That includes postage and handling.

Foreign Airmail please add \$25.00 per subscription.

your text, containing a code such as K4 or K53, loads the correct driver for one of 60-odd printers (listed in the manual) from the LeScript/DVR file.

With its replacement of complicated escape or control codes with on-screen aids such as blinking italics, LeScript rivals new MS-DOS programs such as Microsoft Word, which is powerful enough to drive a phototypesetter. With its ability to handle proportional spacing and different margins, headers, and footers for odd and even pages, it could almost produce a ready-to-bind book on a desktop printer.

Bells and whistles, by the way, slow you down; LeScript does more than other word processors, and needs more time to do it. In Model III benchmark tests, LeScript loaded a 1,000-word file in 10.3 seconds to Scripsit's 5.3, and printed it in 3:31 as opposed to 2:51.

LeScript's manual is tough to get through and of average quality at best. The information's there, but its organization is poor: Commands are listed in alphabetical order, clear-A followed by clear-B, rather than in order of function. The five commands that delete text are scattered through the alphabet. Some vital information is buried in the appendix.

And, though the manual contains occasional touches of wit, the sample form letter material—in which Mrs. Hellen Housewife buys a dishwasher while Miss Sally Somethingelse of 38-24-36 Waahoo Court buys a bikini—is sexist and stupid.

You'll find better writing in Anitek's newsletter, a year's subscription to which provides LeScript owners with 30 days' handholding and inexpensive upgrades. The newsletter promises CP/M and possibly MS-DOS versions of LeScript.

When it comes to TRSDOS, though, LeScript offers power that many CP/M and MS-DOS programs can't match, and it offers it at a terrific \$129.95.

Ordinarily, I'd conclude an enthusiastic review like this by saying I rushed out and bought the product for my personal use. To be honest, since my review copy of LeScript was free, I didn't do that.

I bought a Model 4P to use with it. ■

Doctoring Your Disk Drives

by Wynne Keller

The Disk Drive Analysis System provides a set of excellent diagnostic tests that give Model III or 4 owners the power to thoroughly examine their own drives and pinpoint any problems. Knowledgeable owners can also attempt repairs. The only tools you need are a screwdriver and hexkey.

You must have a Model III or 4 to load the programs, but you can test any other drive by attaching it to the computer as drive 2. The program tests single- or double-sided drives with 40 or 80 tracks in single or double density format.

Two disks come with the system. You load the diagnostics program into memory, then remove that disk so that all drives are available for testing.

The second disk is the test disk, which you insert into the drive you want to analyze. This disk contains various test tracks that check for clamping, speed, index hole timing, read sensitivity, head alignment, directional seek, head rotation, and analog alignment. It also provides a quick test for a 30-second overall diagnostic to find problem areas so you can perform more specific tests.

Using the Program

On boot-up, a main menu displays all the tests available. You can change drives at any time, start and stop tests, and, for double-sided drives, select which head to test.

The program graphically displays test results on the screen. Comparing the graph with pictures in the manual makes it simple to tell when you have a problem. While adjusting the drive, you can keep the test disk spinning and watch the changing condition of the drive on screen.

Test Types

The clamping test checks the quality of the disk hub. If the hub is worn, the disk will rotate unevenly. If the test isn't properly clamped, all other test results are misleading, so this is the first test the program runs. A worn disk, bent spindle, or gross head misalignment can make the drive fail the clamping test.

<i>Bug free?</i>	★★★★★
<i>Does the job?</i>	★★★★★

The spindle speed test measures rotational speed. A pointer on screen indicates the drive's speed in RPMs along with the acceptable limits. You adjust drive speed with "a variable resistor on the servo board." The manual explains how to distinguish the servo board, but, unfortunately, it doesn't describe how to make the adjustment. You cannot adjust some newer drives and must return them to the manufacturer if the speed is off.

The index hole timing test produces a similar graphics display. Adjusting the timing in this test requires moving the photodetector assembly until you achieve proper timing. This is explained clearly in the manual.

Read sensitivity and head alignment tests determine proper head alignment. A dirty head, among other things, causes problems here. The manual suggests you clean the drive heads if your drives don't pass muster, then rerun the tests. Unless you're very knowledgeable, you'll need to refer to the drive manufacturer's manual to adjust alignment.

The hysteresis and head rotation tests measure other head alignment factors, but the manual contains no advice regarding repairs if your drives fail these tests. Presumably, these problems require qualified technicians.

For users who have an oscilloscope, an analog alignment aid is also available on the program disk.

Documentation and Backing up the Disks

The manual is cleanly printed and

bound into a booklet with glossy heavy-paper covers. The pages are prepunched to accommodate a three-ring binder.

The manual contains a chapter on each test, with a clear explanation of how each works, diagrams of good and bad test results, and a description of their significance. Some chapters also include instructions for adjusting the drives.

The Dyan test disk provided with the program might become worn with use. You cannot copy it, but the disk contains spare tracks for some of the tests. You can quit using the primary set of tracks and go to the alternate set when the primary set fails.

Wrap-up

This program takes a lot of the guesswork out of computer malfunctions. Even if you have no desire to open your drive case, running the tests helps you become a more informed consumer when you face the technician.

The Disk Drive Analysis System is the tool that can make at-home disk drive maintenance a reality. You take risks, of course. The program documentation gives only general guidelines; it is neither a step-by-step repair manual nor a course in electronics. However, some cautious experimentation can achieve excellent results and renew your disk drives. ■

**Target PlannerCalc:
Finances for the 4**

by Mark D. Goodwin

Target PlannerCalc is Tandy's first Model 4 spreadsheet program and it's an excellent one, especially considering its moderate price. PlannerCalc is packed with advanced features and it's easy to use.

Using PlannerCalc

In its full-blown configuration, PlannerCalc provides a 128-column by 512-line spreadsheet. This gives you a maximum of 65,536 individual cells that hold either numeric data or formulas.

Column sizes range from two to 30 characters and you can vary the width of each column in the spreadsheet. In

Target PlannerCalc

★ ★ ★ ★

Tandy/Radio Shack

Does the job? ★★★☆☆

addition, you can specify up to 10 column headings of up to 80 characters in length.

Unfortunately, the labels for columns and lines are limited to 12 characters each. While I found 12-character column labels adequate for most purposes, many reports, such as check registers or sales journals, require descriptive line labels where this maximum becomes limiting. This limitation, coupled with PlannerCalc's lack of labels within cells, is, in my opinion, a serious weakness.

As with VisiCalc, you initially enter data, formulas, headings, and labels at a command-mode level. PlannerCalc provides a versatile editor, but it performs some disk operations that create long delays in the editing process, and this reduces the editor's utility.

PlannerCalc supports most of the arithmetic operators and functions found in other spreadsheets. It also supports conditional operators and functions that let you make "what-if" calculations. With all of PlannerCalc's operators and functions at your disposal, it's easy to build simple or complex formulas to meet your needs.

PlannerCalc provides two different calculation modes, immediate and deferred. The immediate mode recalculates the spreadsheet each time you alter an entry. The deferred calculation mode recalculates the spreadsheet only when you tell it to. Although PlannerCalc performs calculations very fast, the deferred calculation mode

saves a considerable amount of time when you're working on a large spreadsheet.

PlannerCalc's display is well organized and attractive. You can scroll through the spreadsheet rapidly, and you can split the display either horizontally or vertically, a useful feature for comparing figures physically far apart in the spreadsheet.

Printing a PlannerCalc spreadsheet is easy. First, PlannerCalc presents a menu of printer defaults for parameters such as which lines and columns you want printed, the maximum number of columns per page, and your printer's line length. You can quickly change any default with the PlannerCalc editor and once you start the printing process you can abort it at any point.

By their very nature, most spreadsheet programs are difficult to use. PlannerCalc is an exception. It accepts plain English syntax commands and formulas. A sample PlannerCalc formula looks like:

LINE 6 COSTS= SUM OF UTILITIES
THRU TAX

This is far less complicated than the cryptic syntax other programs use.

PlannerCalc also provides Help screens for virtually any subject. These serve as a useful and complete quick-reference tool.

Documentation

The PlannerCalc manual is laudable. While it was written with the novice in mind, it doesn't insult the intelligence of the more experienced computer user.

The first chapter provides instructions for making a working copy of the PlannerCalc disk, getting the program up and running, accessing the Help screens, and exiting the system. Then the manual guides you through using the PlannerCalc system.

Once you have a thorough knowledge of the basics, the manual leads you through more advanced topics: creating your own spreadsheets, constructing simple and complex formulas, editing, formatting, and printing the final product. The manual ends with a dictionary of PlannerCalc commands, a complete list of error and warning messages, and an extensive index.

OMNITERM COMMUNICATIONS

Award Winning Software!

Reader's Choice Awards
1st place for data communications
80 Micro Jan, 1984

Top Rated
Microcomputer Software Letter
March, 1983

"OMNITERM is a beautifully designed program..."

Software Review March, 1983

"It has become the standard for TRS-80 terminal software."

80 Micro June/July, 1982

"The documentation is excellent."

80 Microcomputing April, 1982

"OMNITERM [is] a contender for the title of best in its class."

Byte Feb, 1982

"I have to applaud the craftsmanship evident in the OMNITERM package."

Infoworld Oct, 1981

"OMNITERM has my vote as the top TRS-80 program available today."

Microcomputing June, 1981

OMNITERM, the professional communications package, has been winning top ratings from reviewers and users since 1981. We think we know why.

SMART TERMINAL EMULATION AND FILE TRANSFER

OMNITERM turns your personal computer into a terminal which can communicate with any other computer system, mainframe, minicomputer, or microcomputer. OMNITERM can put you in touch with your company's mainframe, for example, or your branch offices, clients, customers, and suppliers. You can send and receive files using the popular XMODEM protocol, run programs, use electronic mail systems, access remote data bases and information services. The applications are limitless.

COMPATIBILITY AND COMPLETENESS

OMNITERM is a full featured program which offers complete control of the RS-232 settings, user definable carriage return, line feed and echoing, translation tables for all 256 characters, character and line pauses as well as XON/XOFF. These and many other possible settings guarantee that OMNITERM will communicate with any remote system using any modem including smart modems for autodial and logon.

DESIGNED WITH USERS IN MIND

OMNITERM is run from a single main menu which keeps the user in control. You can run your printer, review the text which has scrolled off the screen, automatically dial and logon with a smart modem, and store all settings in a file for easy access. Whether you are a first time user of communications software or an expert, OMNITERM makes it easy to get the job done.

BUY WITH CONFIDENCE

OMNITERM comes with complete, professional documentation and free telephone support. There are sample settings files for several of the most popular information services and default settings to make it simple to get started. You can buy OMNITERM with confidence since it is proven software that has been winning praise from reviewers and users since 1981.

Conclusions

PlannerCalc works exactly as documented and appears to be bug-free. The program's label limitations are its only serious weaknesses. Otherwise, it's a model spreadsheet program. ■

dataCure Salvages CP/M Disks

by Charles R. Perelman

The dataCure system is a unique software tool that regenerates portions of physically or electrically damaged CP/M disks. Overall, the program works fine, but dataCure only repairs disks you've initialized with the program itself.

dataCure uses a sophisticated software error-correction algorithm to

dataCure's Protection routine creates the special files needed to duplicate the original data. If problems arise later on a protected disk, the Rewrite routine attempts to re-create the correct data by writing over the damaged disk sectors.

If Rewrite doesn't work, use Cure to block out bad sectors by transferring them to a special file placed in User 15. Then write a good copy of the defective data into previously unused sectors.

The Verify routine checks a disk for files changed since you protected the files, leaving the disk unaltered.

Using dataCure

dataCure is easy to use and doesn't require installation. It has both menu and single-line command modes. By calling a CP/M Submit file at the end of one of your programs, you can automatically update disk protection for critical data files.

While you should always back up important files, dataCure provides added security. Unfortunately, the more data you have, the longer the protection process takes. In general, protection takes from a minimum of several seconds to a maximum of between three and four minutes for a full, double-density, 8-inch disk.

dataCure is intended primarily for CPUs with a 4MHz or faster clock rate. Colorado Online furnishes a patch for Kaypro and other computers using a slower clock speed.

The Help screen, accessible from the main menu, provides a good, single-screen program summary. Prompts and error messages are reasonably clear and informative. The manual and the distribution disk include program tutorials and demonstrations.

Evaluation

dataCure works as represented, but it's not a panacea. The program does not affect any existing disks that have Basic disk operating system (BDOS) or other errors since you did not initialize them prior to file creation.

dataCure corrects a maximum of approximately eight sectors of 1,024 bytes or 16 sectors of 512 bytes. More extensive damage is beyond its present capabilities and causes failure or uncertain results.

I deliberately altered sectors on a disk with a magnet. dataCure rewrote read errors as long as the system was not overloaded.

Generally, if the sectors are on a single track or in the same physical position on sequential tracks and do not exceed the critical number of bytes, dataCure does the job. This is the typical situation for small scratches and damage caused by pointed objects or small magnets.

If Colorado Online expands dataCure's capability to handle more extensive file changes, it will have many applications of greater interest to end users.

You still need the protection of off-site storage for distribution disks. You can't protect them with dataCure unless you're willing to destroy your master, initialize it with dataCure, and re-create the master from the copy. Initializing a disk with dataCure completely obliterates any prior contents.

Documentation and Support

The manual comes in an 8½-inch by 11-inch three-ring binder. It's well spaced and clearly printed on heavy paper. Explanations are clear. The manual contains sufficient redundancy with few enough topics so that the table of contents and sectional divisions are sufficient without an index.

Colorado Online markets dataCure by mail only, and they provide free updates. The company supports dataCure by phone and through user newsletters.

The program apparently still has some bugs in it, but within the limitations I've described, it worked fine on my Model II.

Continued on p. 223

store information necessary for duplicating the disk and directory data in two special files that require about 5 percent of the original file space. If you damage a few sectors on a working master, you can usually replace them quickly with dataCure. This saves you from creating a new master from the distribution disk.

Program Abuse

To use dataCure, you must initialize a disk with the program after you format it but before you write files to it. After you copy or change a file,

"THE RESULTS ARE IMPRESSIVE..."

Langley-St. Clair's* **Soft-View™** Replacement CRT's eliminates the strobe, flicker and fatigue from TRS-80's™

Now you can upgrade your monitor with the new medium persistence green or amber phosphor tube.

State-of-the-art systems such as IBM™ and Apple III™ do not use the less costly "P4" B&W display tube because it is actually intended for TV viewing and its rapid strobes (60 times per second) cause irritating eye fatigue.

No amount of "green plastic" will solve this problem. But the new **Soft-View** CRT display tube from Langley-St. Clair will.

- Available in slow decay Green or medium decay "European Amber" (the standard in Europe)
- Made with Lead/Strontium impregnated glass that stops X-ray emission.
- Of high-contrast face glass that also stops most U.V. radiation.
- Available in frosted glass with extra Anti-Glare benefits.
- Easily installed...comes with pre-mounted hardware.
- Warranted for one full year against manufacturing defects or tube failure.
- The finest quality double-dark glass phosphor fields to produce dramatic contrast.
- Ideal for Word Processing and Programming, yet fast enough for Games and Graphics.

What's so good about

CP/M may be the industry-standard operating system for 8-bit computers, but that doesn't necessarily make it the best. George Antunes examines its shortcomings, and why you should approach CP/M with caution.

Somehow, a substantial portion of the Radio Shack community has the notion that CP/M (control program for microprocessors) is an operating system superior to TRSDOS and other popular Radio Shack-compatible DOSes. It isn't, and I'll tell you why. In addition, I'll discuss why a Model I/III owner might want to upgrade his computer to run under CP/M and I'll describe how you go about it.

CP/M Versus TRSDOS and Company

The impression that CP/M gives your Model I, III, or 4 applications beyond your wildest dreams or supersedes those available with TRS-80 DOSes is a false one. Granted, a lot of excellent applications software exists for CP/M systems, but CP/M 2.2 is far from a state-of-the-art operating system. Rather, it's a plain, reliable, low-memory-overhead operating

system with some distinctly irritating attributes.

People buy CP/M either because it comes with their computer or because it has a huge amount of quality software that runs only under this system—not because it is an exceptional operating system in itself.

If you're familiar with Micro-Systems Software's DOS-PLUS 3.4, Apparat's NEWDOS80 2.0, Logical Systems' LDOS, or even Radio Shack's TRSDOS 1.3, CP/M's poor documentation, its backward command syntax, and its general lack of sophistication will surprise you. I'm not one to tout Radio Shack products, but as an operating system, CP/M 2.2 makes TRSDOS look great. In my book, TRSDOS wins in both documentation and performance.

Most users consider the CP/M documentation as the most obtuse and confusing in the industry. This fact, combined with the commercial popularity of the system, has spawned

by George Antunes

many introductory books explaining CP/M. (I recommend *The Osborne CP/M User Guide*, by Thom Hogan [Osborne/McGraw-Hill].)

Recently, Digital Research, which manufactures CP/M, published the rewritten CP/M documentation set (originally six pamphlets photo-offset from a daisy-wheel typewriter) integrated into one document, typeset, and issued as a paper-bound book. It's a vast improvement, but in terms of style and content it's still less than what you'd get from Radio Shack.

If you cut your teeth on TRSDOS, many CP/M features will strike you as bizarre. Some CP/M command syntax is backward. For instance, you'd normally copy a file from the original disk to the second disk. With CP/M, you do the reverse.

Other than some backward command syntax, you'll find CP/M uncomplicated and easy to learn (assuming you have

an introduction-to-CP/M book). The DOS has only six commands, listed in Table 1.

To perform other functions, you must go to utilities outside the DOS. The major CP/M utilities are STAT, which displays information about disk files and free space, and PIP, which copies files. Also included with CP/M is DDT (a Debug monitor), a primitive text editor, an 8080 assembler, and a few odds and ends. That's it.

You can see how unimpressive that is compared to DOS-PLUS 3.4's 30 powerful commands, 15 utilities, two Basic interpreters (one of which has many enhancements and extended features), programming utilities that renumber and cross-reference code, an enhanced program editor, and an extremely powerful sort routine that you can call from Basic.

Duplicating these features in CP/M 2.2 (including disk-zap editors, file editors, cross-reference utilities, fast sorts, and the

Microsoft Basic interpreter) would be very expensive.

Bones About It

CP/M 2.2 is a bare-bones operating system. It performs the necessary functions reliably, and that's all. Few features and a general lack of sophistication epitomize CP/M.

For instance, the DIR command tells you the names of files on a disk, but doesn't tell you anything about the size of the various files, when you created or last updated them, or how much free space remains. To access disk file information, you have to use the STAT utility with a cryptic STAT d:*. * command.

Take the case of running MicroPro's WordStar. If you try to save too large a piece of text for the free space on the disk, a no-space message appears and the system hangs up. To get out, you

have to execute a cold boot, forfeiting any text you had in RAM. A more sophisticated operating system would catch this and let you insert another disk to save the file.

CP/M also has cryptic system messages. For example, "Bdos Err on c: Select" means that you've tried to access a drive that doesn't exist on your system. An equally terse message could be more informative: "Drive c not available." CP/M 2.2 error messages are a major improvement over those of version 1.4, but many are still unclear.

My favorite strange fact about CP/M is that it's marketed with neither the ability to format disks nor the ability to invoke a back-up utility. You must format all disks before writing data on them, but Digital Research markets CP/M with no formatting capability.

Fortunately, most people don't pur-

ERA	Erases (kills) a file
DIR	Calls up a file directory
REN	Renames a file
SAVE	Saves a file to disk
TYPE	Displays an ASCII file on the CR.
USER	Lets you access separate space in a disk directory (mostly for 8-inch drives)

Table 1. CP/M's six commands

chase CP/M directly from Digital Research, but from a licensed vendor who modifies it to run on popular 5¼-inch-drive machines. Most of these vendors include a formatting program with CP/M. Many manufacturers also include a back-up utility for copying the contents of entire disks. Radio Shack's CP/M 3.0 has both formatting and back-up utilities.

Still other CP/M vendors throw in additional utility programs, and a few modify the CP/M user interface to be more communicative and tolerant (called custom BIOS).

But if you don't own a popular 5¼-inch system and you want to use CP/M, you still have some options. You can add an 8-inch drive to your computer and transfer the program, or send the software (on an 8-inch disk) to your system company and pay them to transfer it to the proper disk. You can also buy a modem program and transfer the software over an RS-232 port from a system with an 8-inch drive and communications program. Finally, you can buy some utilities that let your computer read and write in popular 5¼-inch formats.

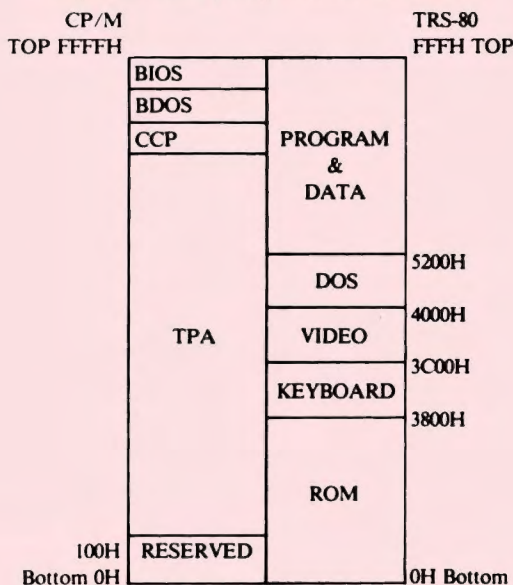

Nonetheless, CP/M is the most widely used operating system for 8-bit microcomputers. It's not fancy; it's terse, but it works.

Is CP/M for You?

You've seen many ads, and heard much talk proclaiming the benefits of modifying your computer to accept the CP/M operating system. But how do you identify a real need for CP/M, and if you do decide to add CP/M capability, how do you go about it?

Most Radio Shack users have no need for CP/M. Radio Shack supports several of its own operating systems with a wide variety of applications software. If, however, you're frustrated with the existing software available to

Comparative Memory Map of CP/M and Model III

*Reserved: this 256-byte area holds CP/M system vectors—a set of important address locations used by various components of CP/M.

*TPA: the transient program area is where programs and data are located when a program executes. In most CP/M implementations on 64K this is approximately 58K in size.

*CCP: the console command processor is the part of CP/M which receives direct commands from the user and sends system status and activity reports to the user.

*BDOS: the Basic disk operating system handles all tasks and transactions involving disks.

*BIOS: the Basic input/output system handles all I/O devices such as drive controller, terminal, and printer. This section of CP/M is machine specific; it is revised for each new type of computer implementing CP/M. For this reason the exact amount of memory which CP/M occupies varies by type of computer. Together the CCP, BDOS, and BIOS take up about 6K of memory.

Figure. Comparative memory map of CP/M and Model III.

OURS DOES ONE THING RADIO SHACK'S DOESN'T;

SAVES YOU \$500.

The Apparat hard disk subsystems for the TRS-80 Model I & III computers give you the high performance, complete compatibility and top value you demand.

These systems use the most advanced 5¼" Winchester technology with transfer rates up to 5 Mbits/sec. and an average access time of 85 msec. And you can add a second

drive in the future if your needs grow.

The Apparat hard disks offer complete compatibility with the model III, just plug it in and you're ready to work. They are fully supported by NEWDOS/80 2.5 and RS LDOS 5.1.3.

Top performance and compatibility doesn't have to mean a high price. The disks are available in four

configurations; 5 Mb at \$1,489, 10 Mb at \$1,735, 15 Mb at \$1,945 and the 26 Mb at \$2,499. These prices offer you top value in a hard disk sub-system. Prices include all required components and software.

For more information write Apparat, Inc., 4401 S. Tamarac Parkway, Denver, CO 80237, 303/741-1778. Dealer inquiries invited.

Radio Shack and TRS-80 are registered trademarks of Tandy Corp.

 **Apparat, Inc.**

you or, more important, if you have specialized needs, then you should consider CP/M.

You're a candidate for CP/M expansion if you can identify a superior application that runs only under CP/M. An abundance of CP/M software exists for specialized business and professional applications. For instance, if you're looking for a manufacturing inventory and cost accounting system for a small factory, or an integrated medical records, accounting, and medical supplies inventory package for a veterinary office, CP/M is the way to go.

But adding CP/M to access yet another spreadsheet program or general accounting package isn't worth the bother, unless the program offers important features not found in standard Model I/III software. Any experienced Radio Shack user who adds CP/M simply for its qualities as an operating system is likely to be disappointed.

If you do decide to add CP/M to your system, you should look for the features outlined below:

- 64K RAM (minimum)
- 80-column by 24-line display
- Double-sided, high-capacity drive support.
- Microsoft Basic (MBasic)
- Extra CP/M utilities, including reading/writing in multiple formats

Memory, Disk Storage, and Screen Display Concerns

In some ways the need for 64K of RAM and an 80-character by 24-line video display are related. Both are a result of differences in the Radio Shack memory configuration and standard CP/M memory configuration.

A CP/M enhancement has to re-address the random-access memory in the Model I/III to get rid of the addressing space that the ROM occupies. It must also move the screen display (which is memory-mapped from 3C00 to 3FFF hexadecimal [hex]) to a neutral location.

CP/M requires memory from 0000 to 00FF hex for system vectors (analogous to ROM addresses under TRSDOS) and from 0100 hex to the top of memory (FFFF hex in a 64K machine) for data, program code, and about 6K of CP/M routines. In a Model I/III this means serious memory relocation. (See the Figure for Model III and CP/M memory use.)

Two other points to consider are the Model I/III's ROM memory map and video display. The Model III has only 48K of programmable memory (RAM); an additional 14K of its addressing space works in conjunction with the software in read only memory (ROM). If CP/M takes up 6K of RAM, that leaves only about 42K for programs and data, space known as the temporary program area (TPA).

A TPA of 42K is too small for serious applications programs. To make CP/M installation in a Model I/III effective, you must add at least 16K more RAM to get enough TPA to run many CP/M programs.

The Model I/III maps a video display space of 400 hex in memory starting at 3C00 hex; any data written to those ad-

Any Radio Shack user who adds CP/M simply for its qualities as an operating system will be disappointed.

dresses automatically appears on the screen. This puts the screen in the middle of the space CP/M uses for the TPA.

To run standard CP/M software, you must move the screen display out of memory reserved for data and programs. In addition, if an 80-character by 24-line display is included, you must double the video memory size.

The standard Model I/III screen display takes up 400 hex of memory, or 1,024 decimal—exactly enough memory for a 64-character by 16-line screen display. The problem is that CP/M evolved in a world where terminal video displays were at least 80 characters wide by 24 lines long. As a result, most CP/M applications programs assume an 80-column by 24-line display that requires 1,920 decimal memory in a memory-mapped system. Some programs, such as MicroPro's WordStar, let you select a 64-column by 16-line screen, but most CP/M software requires an 80 by 24 display.

CP/M handles communications with a CRT through an input/output (I/O) port—a special access mode independent of the main memory space. The CP/M CRT screen display doesn't require address space overhead like that of a Model I/III. Implementing an equivalent CP/M 80 by 24 screen display on a Model I/III requires 1,920 bytes of memory that is transparent to the main memory map.

You can reformat your Model I/III display in two ways. One option is to re-address the video memory so it occupies 2K of protected RAM at the top of main memory, like the Lobo Max-80 does. However, this method reduces the TPA by about 2K.

Alternatively, you can physically add an extra 2K of dedicated video memory accessed through an I/O port, leaving the TPA intact. This is difficult and expensive to do, but it produces the largest possible TPA.

Any way you accomplish it, setting up an 80-column by 24-line screen display on a Model I/III is no simple task. Model I owners have an even tougher time—they have to add a high resolution monochrome monitor (the standard monitor won't work with an 80 by 24 display).

Once you solve the screen display problem, you have to determine which CRT terminal your CP/M package emulates. Make a point of asking vendors. This is important because most CP/M applications programs require that you specify the terminal brand and model so that your program sends the proper control codes for cursor movement and the like.

If possible, examine the documentation of the programs you want to use before you choose a CP/M card. Check to see with which terminals the software interfaces, and be sure the CP/M package you select lets your computer emulate at least one terminal listed in the docs.

Some terminals offer many features; others are unadorned. If intelligent cursor positioning, reverse video, high/low intensity highlighting, and so on are important to your application, find a CP/M terminal emulation card that supports these features.

In addition to memory and screen display, you should think about the data storage requirements of the anticipated application. Many business

SoftPac

Integrated Software for your TRS-80

Meet SoftPac — the remarkable new software package that puts more raw power at your fingertips than anything yet created for the Radio Shack computer. Integration is the key. SoftPac actually combines word processing, information management, spread sheet calculations, and communications into one fully integrated system. Data is transmitted from one program to another at the touch of a key. Don't worry, SoftPac doesn't cheat by using disk files, it transfers data through memory. This means that SoftPac is fast and easy to use! Perhaps the single reason why you should own SoftPac is that all updates to the package are free! The SoftPac program package includes the Master and Backup diskettes, and over 200 pages of documentation. This includes hundreds of models and examples! Just look at all those features in each SoftPac program!

SoftWriter

Insert characters, words, lines, paragraphs, screens & more. Delete characters, words, lines, paragraphs, screens & more. Variable Margin widths from 1 to 255 and Right Justification. Simple Arrow key movements with automatic text scrolling. Automatic Line Centering and Word Wraparound supported. Block Copy of text from 1 to 1000 characters instantly. Block Copy and Deletion of text from 1 to 1000 characters. Global Find and Replace commands with Wild Cards supported. Automatic Key Repeat and two control keys for command access. Whoops feature to prevent deletion of valuable text. Transmit and Receive text from any other SoftPac program. Save part or all of a document in the SoftWriter memory. Merge two or more files together to form one document. Complete spelling checker to correct any misspelled words. Underline, Emphasize, Subscripts, Superscripts, Correspondence, variable character sizes, form feed, page numbers, left margin, right margin, page length, line length, all printers supported. Complete printer control codes allow you to cut & paste text. Automatically counts the number of letters, words, & sentences. Split screen viewing of any file on your data diskette. Type ahead of any keyboard character or command supported.

SoftCalc

Text and Character entry into any position for labeling. Easy cursor movement using the Arrow keys and Control keys. Block cursor movement to each corner of the spread sheet. Automatic key repeat and type ahead of any character typed. Replication and Forecasting command for value prediction. Deletion of Labels or Numbers in any Column, Row, or Position. Sorts any Column or Row in Ascending or Descending order. Print any portion of the spread sheet to any standard printer. Move a Label, Number, Position, Column, or Row instantly. Calculate the Total of any Column or Row on your spread sheet. Set up financial models with cross referencing of values. All standard math functions supported including Trig functions. Many Engineering and Scientific functions fully supported. Integrate & merge SoftCalc data into any other SoftPac program. Instant scrolling of the screen during Row or Column movement. High resolution screen supports 8 column width & 14 Row depth. Instant on-screen graphs of your data in Bar or Pie plots. Complete error trapping routines prevent loss of any data. Simple operation with complete prompting on the command line.

SoftTerm

Variable Screen Width from 1 to 255 with Word Wraparound. Printer Output supported with High Speed Printer Spooler. Carriage Return and Line Feed Suppression command supported. Upper/Lower command converts all uppercase text to lowercase. Echo Keyboard command for incoming and outgoing characters. Input Buffer and Output Buffer command to a 10,000 byte buffer. Place text from other SoftPac programs in the SoftTerm buffer. Transmit text to other SoftPac programs from SoftTerm. Send all ASCII characters and re-program the keyboard. Complete translation tables for incoming, outgoing, & printer. Review data that has scrolled off the top of the screen. Communicate with any system including a EBCDIC-coded system. Change the Baud Rate, Parity, Stop Bits, and Word Length. Automatic count and display of all transmit and receive errors. Automatic dialing, Hang Up, Directory, and Pause features. Complete Modem & RS-232 test command for hardware analysis. Transmit and Receive Basic and Binary files from any system. Save all current SoftTerm settings to your data diskette. Nulls supported for incoming, outgoing, and printer characters. Several supplied setting files for your printer and keyboard. Special commands allow buffer transfer and Cold Startups.

SoftBase

Set up files using customized forms generated by the data base. Use Multiple forms in any portion of the SoftBase program. Use all or part of a form in a file with control commands. Select the Full Screen Text Editor mode for data entry. SoftBase does not limit you to a specific field or entry size. Read any file using the file name or the Wild Card feature. Correct any file instantly using the Full Screen Editor mode. Delete any file from the data base with the touch of a key. Read Multiple files on screen and print each file to a printer. Search for a file by the letter, word, sentence, and more. Locate any file in the data base in under 1 second at any time. Review selected portions of each group of 10 files on screen. Print one, all, or selected files to any standard printer. Insert text from any SoftPac program into a SoftBase file. Transfer text from any SoftBase file to other SoftPac programs. Print mailing labels and merge SoftBase files with SoftWriter text to generate form letters using any portion of the file. Memory command displays available memory and unused files. Complete Error Trapping routines and High Speed operation.

and professional programs use disk overlays that automatically swap in and out of RAM while you use the program. These programs require a substantial amount of disk storage. For example, MicroPro's WordStar and Cornucopia Software's Electric Webster spelling package take up most of a double-density, double-sided, 40-track drive.

In addition, many applications, such as inventory or accounting programs, involve large data files that a single-sided, 40-track drive can't handle.

Every application has its own requirements, but the double-sided, 40-track drive is the minimum acceptable configuration in most business settings.

After thinking this through, you might find that your application requires the higher storage capacity of 8-inch drives or a hard disk. Whatever your needs, make sure that the vendor you choose has an implementation of CP/M that can control the drives you need in your specific application.

Basic Needs

Don't overlook the need for Basic in your CP/M package. The CP/M package that comes from Digital Research includes an old 8080 assembler, but no Basic. As a Radio Shack regular, you're used to an enhanced Basic on your operating system, so you might not inquire about this option.

If the CP/M package you want doesn't include Basic, you'll have to buy it separately. The CP/M version of the Microsoft Basic interpreter lists for about \$350. The other commonly used CP/M Basic, C-Basic 2, lists for approximately \$150. Radio Shack sells this for the Model 4 at \$99.

Either way, the extra cost is substantial. Fortunately, most CP/M boards on the market for the Model I/III include MBasic as part of the package. But check before you buy.

Utilities, Disk Formats, and File Compatibility

Because CP/M is a low-frills operating system, ancillary utilities take on a more important role than in most Radio Shack-compatible DOSes. A good set of utilities helps keep you sane and even happy when using CP/M. Digital Research doesn't supply utilities, but they're available from many other sources. In addition, you'll find many utilities in the public domain.

Investigate the utilities included with each CP/M product. Utilities aid in file management, let you copy disks (remember an unenhanced CP/M has no back-up command), and do myriad housekeeping activities.

Since no standard 5¼-inch disk format exists, you want a version of CP/M that reads, writes, and formats in a variety of popular disk formats. Finding one is the challenge.

A partial solution is to have a system format compatible with one of the major vendors, like Kaypro or Morrow, that can also read and write in a variety of CP/M formats. Remember, the key word here is format. Simply because you can read and write in different formats doesn't mean you can format a new disk.

*Most CP/M boards
for the Model III
include MBasic as
part of the package.
But check before you buy.*

If my friend with a Kaypro sends me a disk, I can read from it and write to it with my CP/M. However, I can't send something to him unless he supplies me with a disk formatted for his Kaypro system. Still I'm lucky to be able to read and write in his format; most CP/M 5¼-inch systems are single format and can't communicate with other system formats.

Some versions of CP/M offer selection of more than one format, but advertisers don't provide enough information for consumers. You should request product information from vendors, and carefully examine statements in ads and product announcements concerning alternative disk formats. Follow up by phone to resolve any ambiguities.

If possible, choose a version of CP/M that allows choices in reading from, writing to, and formatting disks. If your application involves transporting data files from current Model I/III disks, make sure that the CP/M you buy supports that format or has utilities

to convert files between CP/M and Radio Shack disks. The only software I know of that's not bundled with a CP/M package and that supports such file conversion is from XXXX and it sells for \$149.

Once you resolve the issue of disk format compatibility, you face the problem of file compatibility. Many Model I/III programs such as word processors, data-base managers, and spreadsheets store information in non-ASCII files that are incompatible with the file structures used by comparable CP/M programs. Simply because you can read a disk under CP/M doesn't mean you can transfer its data files in a useful form.

If you use The Small Computer Company's Profile III+ on a Model III and want to implement Ashton-Tate's dBase II, you must rekey existing data files. This can be tedious and expensive. Similarly, many other spreadsheet programs can't read VisiCorp's VisiCalc files.

You can save VisiCalc data in the special DIF format that some CP/M spreadsheets can read (e.g., SuperCalc), but not all CP/M packages support the DIF format. Without support for DIF files, your existing data files are unreadable. Don't assume file compatibility unless you see it demonstrated.

An analogous set of problems pertains to programs written in Basic. You can solve the problem of reading a TRS-DOS disk under CP/M, but you still can't read a Basic program under MBasic. CP/M's MBasic compresses files to save disk space. In the process, MBasic replaces Basic commands such as GOTO, Print, and Clear with special codes or tokens.

MBasic and Microsoft Disk Basic use different values for Basic keywords, so using MBasic to read a program saved in Disk Basic results in hopelessly scrambled code. However, you can use MBasic to read Basic programs saved as ASCII files. Because of syntax differences between MBasic and Disk Basic, the program probably needs revision before you can execute it, but some utilities available convert Disk Basic commands into MBasic syntax.

and price, keep in mind that, if you own a Model III, either Radio Shack or an independent dealer can upgrade it to a CP/M-compatible Model 4 for about \$1,000.

Radio Shack makes the upgrade for \$800 plus an installation fee. Adding CP/M 3.0 to a Model III costs about \$150. (Upgrading a Model III using the CP/M boards currently on the market is cheaper, but all lack one or more of the Model 4's features.) Remember that this gives you a new keyboard, 80-column by 24-line display, full Model III compatibility, TRSDOS 6.0 from Logical Systems, MBasic from Microsoft (which I assume will be patched to run in CP/M as well as Model 4 mode), and 4 MHz speed in any mode.

A number of independent dealers also offer upgrades, and for less money. But most of these involve some non-Radio Shack components that Radio Shack Repair Centers will not service. These upgrades include an 80-column by 24-line screen, 128K RAM, Microsoft Basic, CP/M 3.0 hardware, and a 4 MHz processor. The new CPU runs Model III applications involving limited I/O, sorts, spelling checks, and statistical analyses at twice the III's normal speed.

Only one CP/M manufacturer, Holmes Engineering, claims its CP/M software runs with the Model I/III in the high speed mode. All other manufacturers report that their boards are incompatible with high speed operation, or aren't sufficiently reliable in high speed mode to recommend such use. If 4 MHz operation is important to your application, you should consider buying a Model 4.

Radio Shack offers CP/M 3.0 for the

Model 4, the latest implementation of this operating system. The currently advertised, non-Radio Shack CP/M add-on boards offer version 2.2 (see Table 2 for a comparison of CP/M 3.0 and 2.2 features).

CP/M 3.0 is supposed to be upwardly compatible with version 2.2 (i.e., if a program runs under 2.2 it also runs under 3.0). This isn't always the case, however.

Most, but not all, CP/M applications programs run under version 3.0. In some instances, applications software is incompatible with CP/M 3.0 because of shortcuts taken by the applications programmer. Make sure the software you want is compatible with the version of the operating system you will be installing.

Digital Research markets CP/M 3.0 in two versions. One uses bank-switched memory and requires a minimum of three 32K banks (a total of 96K). The other, expurgated, version runs on a 64K system without bank switching, but lacks many of version 3.0's nicer features and has a smaller TPA than CP/M 2.2. You should consider CP/M 3.0 only if you'll use it in a bank-switching environment. Radio Shack's CP/M 3.0 uses 128K for bank switching.

CP/M 3.0 (which Digital Research also calls CP/M Plus) adds a few features important for business applications, like stamping the time and date on files. It also includes additional utilities that are popular in the public domain. CP/M 3.0 even has a Help file with on-screen prompts and explanations.

Digital Research now includes its macro assembler as a standard CP/M

3.0 feature, and you don't need to log new disks. In addition, it features an improved user interface, more extensive error trapping, and clearer error messages.

However, the main feature of CP/M 3.0 that sets it apart from version 2.2 is its ability to expand RAM by bank-switching extra memory, and the use of extra memory to speed up program execution through more efficient, direct file disk I/O calls. Programs with extensive random-access data files should run at least twice as fast under CP/M 3.0. If the faster CPU speed and faster direct file processing are not important in your application, one of the expansion boards might be quite sufficient for your needs.

Be prepared to pay a bit more for CP/M software than you usually do for TRS-80-compatible software. Historically, prices for CP/M applications programs run two to three times the price of comparable programs for the Model I/III. If you need the software, make the sacrifice and buy from a dealer who supplies good support. After all, software capability should be your reason for acquiring CP/M in the first place. ■

George Antunes is an associate professor of political science and director of the College of Social Science Computer Applications Laboratory at the University of Houston. He is also a computer consultant. Write to him at the Department of Political Science, University of Houston, University Park, Houston, TX 77004.

THE RISE OF CP/M

by George Antunes

In spite of its limitations, CP/M has risen as the undisputed leader among operating systems for 8-bit CPUs. To help you understand why, I'll review the context in which CP/M entered the industry.

Gary Kildall, president of Digital Research, CP/M's parent company, wrote much of what is now CP/M 1.4 in 1973 to demonstrate Shugart floppy-disk drives. By 1976 the microcomputer industry was coming into existence, but using available systems to do real work was a problem; each manufacturer had his own disk formatting and operating systems that were, of course, incompatible with one another.

A more serious problem, however, was that the existing software and hardware didn't work dependably. Furthermore, there were severe software incompatibilities that required extensive program rewrites for each new computer.

By comparison, the CP/M operating system worked reliably. It featured dynamic allocation of disk space for data files, and published system input/output routines that let Assembly-language programmers customize particular applications.

In addition, CP/M was relocatable; you could implement the same version on systems with memory capacity of from 16K to 64K. CP/M provided a more or less machine-independent environment for applications software. All CP/M systems with 8-inch drives could read and write IBM single-sided, single-density disks, which greatly simplified marketing and distributing software.

As the only operating system to offer these features, CP/M 1.4, released in 1977, became a terrific success. To put it another way, even a minimal standard was better than no standard.

CP/M went out in front early as one of the only operating systems with enough disk space for small business applications. An active user's group of hobbyists and hackers developed a large amount of software in the public domain that contributed to this success.

The fact that the disk format was compatible across computers from different manufacturers also helped, as did the fact that CP/M ran on the 8080, 8085, and Z80 CPU chips (the 8085 and Z80 accept 8080 code, the language in which CP/M is written). Commercial software manufacturers soon generated more CP/M compatible software than that for any other operating system.

The power of the CP/M software base was so strong that even owners of Apple and Commodore machines, which use the CP/M incompatible Mostek 6502 chip, converted to CP/M by adding a compatible CPU chip.

Manufacturers like North Star and Heath, which had compatible CPUs but originally promoted their own DOS, merely reconfigured CP/M to run on their existing systems.

Either way, manufacturers who had operating systems competing with CP/M did not fare well. By the time 5¼-inch drives became an important factor, manufacturers had to offer CP/M if they wanted to sell to the small-business market.

Gradually, even manufacturers of 8-bit operating systems targeted for commercial applications either offered CP/M or went under. Radio Shack was the only major manufacturer to go it alone by supporting only its own DOS. This year, however, they lost that distinction by announcing CP/M for the Models II, 4, 12, and 16.

Digital Research has a history of licensing vendors to offer CP/M for various systems. The vendor is then responsible for modifying the software, and for documenting any utilities or enhancements that he provides.

The only disk format that Digital Research officially supported is the original 8-inch, single-sided, single-density IBM format. Since 8-inch drives were standard for business systems, this caused no problems. You could exchange software and data in the single-sided, single-density format and write it back out to a more exotic format.

Digital did not support any other formats—8-inch double-density, 8-inch double-sided, and all 5¼-inch disks. Individual companies defined these formats according to their needs and whims. Consequently, in 1982, declining sales of 8-inch drives, and the market surge of high-capacity 5¼-inch floppy- and hard-disk systems, caused problems for CP/M users.

Without a 5¼-inch floppy standard, software manufacturers and distributors make available scores of different, incompatible formats. For instance, Lifeboat Associates, a prominent distributor of CP/M software, supplies their products in virtually any known format. If you want a product they don't handle, or if you want to buy from a discount distributor, you're in trouble.

Despite the chaos, sales of 5¼-inch disk systems continue to grow and CP/M continues to increase its market share in the small business and professional applications on 8-bit CPUs. The arrival of the Model 4 and Radio Shack's promise to support CP/M now generates new interest in CP/M among the TRS-80 community. ■

Everything from to AZ

Threaded lists quickly organize your array entries in alphabetical order, regardless of the sequence in which you input them.

If you've ever inserted an item into a Basic program's ordered array, you've probably wasted time waiting for the program to rearrange data and make room for the new entry. You can eliminate that wait by using threaded lists to alphabetize your arrays.

Threaded lists let you quickly insert items into, or delete them from, ordered lists while maintaining alphabetical sequence. Threaded lists use no time-consuming data movements, sorts, reorganizations, or garbage collection routines. And they work with any TRS-80.

The Threaded List Concept

Threaded lists consist of two parts, a full list and a free-element list. The full list is alphabetized by what you can think of as an imaginary thread running through the list, connecting all the items in order. The free-element list accepts any insertions in the list you want to make; a second imaginary thread connects the blanks in the free-element list.

To get a better idea of how threaded lists operate, look at the list in Fig. 1. It's divided into its two components. The first segment is filled with names

(the full list), the second contains blank spaces (the free-element list). Each name in the full list has a physical successor (not necessarily in alphabetical order) and a logical successor (ordered alphabetically).

You can run a thread through the list (the dotted line in Fig. 1) to connect the names alphabetically. Another thread

connects the blanks in the free-element list.

Suppose you want to add the name Krane to this list. A threaded list program places Krane in the first empty space in the free-element list. Then, starting at the first name alphabetically (Able), it traces a thread until it finds the name that logically belongs just be-

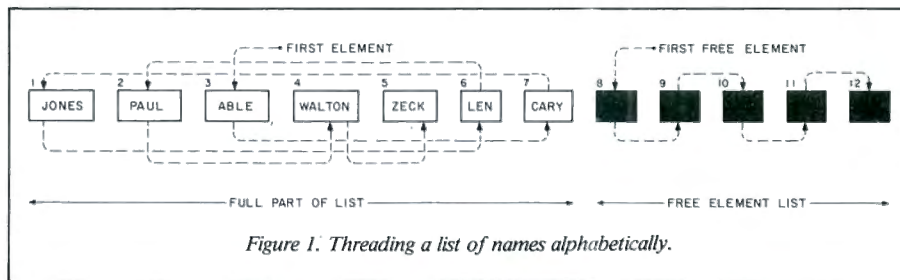

Figure 1. Threading a list of names alphabetically.

Figure 2. Threading Krane into the list.

Figure 3. Deleting Cary from the list.

The Key Box

Any TRS-80
16K RAM Cassette Basic
32K RAM Disk Basic

Variable	Function
A\$()	List holding data elements (names, in this example) that you want to reference and use in an ordered fashion.
S1	Pointer to current data element in list A\$ or subscript of A\$().
S0	Pointer to (subscript of) logical element prior to A\$(S1).
S2	Pointer to (subscript of) logical element following A\$(S1).
FE	Pointer to (subscript of) first free element in list A\$.
F	Pointer to (subscript of) the first logical element in list A\$.
NL(i)	Thread or list of pointers that link the physical elements of A\$ together in logical order. Consequently, NL(i) represents the pointer to (subscript of) the element that logically follows A\$(i). Since the last logical elements in the full and empty parts of A\$ have no successors, a value of 99999 is assigned to the pointers from these elements.

Table 1. Variables that are functional to the threaded list technique.

Physical Position	List Element	Next Logical Position
i	A\$(i)	NL(i)
1	Jones	6 F=3 (First logical element in A\$)
2	Paul	4
3	Able	7
4	Walton	5 FE=8 (Pointer to free first element of A\$)
5	Zeck	99999
6	Len	2
7	Cary	1 if S1=2 then S0=6, S2=4
8		9
9		10
10		11
11		12
12		99999

Table 2. Here's how the variables in Table 1 are assigned for the data in Fig. 1. In this case, List A\$ is 12 elements long.

Subroutine	Purpose
Initialize	Initializes the empty space list and nominal values for all other pointers and variables (lines 10110-10130).
Get	Retrieves the next logical element in list and resets pointers (lines 10300-10315).
Insert	Inserts a data element into the list, reassigns free space, and resets pointers (lines 10400-10455).
Delete	Removes a data element from the list, reassigns free space, and resets pointers (lines 10500-10590).
Top	Positions current element at the top of the list and resets appropriate pointer (lines 10200-10215).

Table 3. Description of list maintenance subroutines.

Procedure	Program Code	Program Lines
Add a name alphabetically to the list	A	140-170
Delete (kill) a name from the list	K	200-230
Go down and print next lower element	D	350-365
Go up and print next higher element	U	400-430
Search for a name and set pointer to it	S	450-490
List entire list on video screen	L	300-330
End program	E	125

Table 4. List-handling procedures.

Listing continued

fore Krane (in this case, Jones).

Now, it runs a thread from Jones to Krane, and from Krane to the name that was previously the logical successor to Jones (Len). The solid line in Fig. 2 shows these new connections. Notice that the free-element list now has a new first free element, a new blank.

When you want to delete a name, you must also redirect some threads. For example, to delete the name Cary, the program bypasses it by running a thread directly from Able to Jones. The space Cary occupied is now the first free element in the free-element list, whose thread has been accordingly rearranged. The free-element list begins at this new blank, and a thread runs from this space to the one that was previously the first free element.

By redirecting threads through empty spaces, you link successive holes left by deletions. These holes are the first spaces used for insertions; you don't lose spaces through deletions. The solid lines in Fig. 3 show the new threads after deletion.

A Sample Threaded List Program

I've included a sample program that uses a threaded list to create and manipulate an alphabetical list of the names in

JMG SOFTWARE ANNOUNCES THE MODEL I/III/4 SPRING SUPER SOFTWARE SALE!

ASSEMBLY LANGUAGE PACKAGE

**EDAS & Disassembler III
together with smal-LDOS.**

A complete assembly language package, EDAS is the most advanced Editor/Assembler available, and DSMBLR III is the most advanced Disassembler on the market. They are a must for anyone doing serious assembly language work, and they are also ideal if you are just starting; as you become more proficient, you will find more use for the advanced features available. You'll never outgrow them, and you won't find a more powerful combination on the market today.

RETAIL PRICE: \$197.00
SALES PRICE: \$166.50

Smal-LDOS is a version of the LDOS operating system, with many powerful features as well. It is required when using EDAS on Models I/III. If you already have smal-LDOS or LDOS, then you may deduct \$47.00 from the sale price. Also deduct \$47.00 if using Model 4 TRSDOS-6 (please specify when ordering).

THREE REASONS WHY JMG SHOULD BE YOUR SOURCE FOR TRS-80 SOFTWARE:

- 1) **QUALITY** We guarantee the quality of the programs that we sell, and we have a 99% satisfaction rate.
- 2) **SUPPORT** Programs we sell are fully supported by both the Publisher AND JMG Software.
- 3) **PRICE** All products we sell are at a 10 to 30 percent discount.

WORD PROCESSING DISCOUNTS

We've not only gathered together the best word processors available for TRS-80s, but we are slashing their prices in our Super Sale: our prices below already reflect a discount off the retail price, but we will give you an ADDITIONAL 10 percent off!

TAKE AN ADDITIONAL 10% OFF ANY OF THESE:

Program	List	JMG
LAZY WRITER	\$175.00	\$149.50
w/Options Pkg.	\$214.95	\$173.50
NEWSSCRIPT	\$124.95	\$114.50
w/Labels Optn.	\$139.95	\$124.50
LE SCRIPT	\$129.95	\$118.50
ZORLOF II	\$69.95	\$61.50
ELECTRIC WEBSTER	\$149.95	\$129.50

THE PROGRAMS ARE ALSO SOLD SEPARATELY:

EDAS	(List \$99.00)	\$89.50
DSMBLR III	(List \$39.00)	\$34.50
smal-LDOS	(List \$59.00)	\$53.50

A limited version of the powerful LDOS operating system.

ALSO AVAILABLE:

LDOS 5.1.4	(List \$129.00)	\$114.50
A powerful and versatile operating system for Models I and III.		
SUPER UTILITY +	(List \$79.00)	\$64.50
A highly praised and very useful disk utility package.		
FM for LDOS	(List \$39.00)	\$29.50
A "File Manager" for file handling and moving in LDOS.		

PLUS... BASIC Utilities, LDOS Support, and more!

All programs are available in Model I and III versions. LAZY WRITER and LE SCRIPT are available in Model 4 versions also. They are all great programs, and each has received excellent reviews. ZORLOF II is the "economy" model, with less features but a great price. ELECTRIC WEBSTER is a spelling checker that integrates with all the above programs. Can't decide which one to buy? Call or write for our free "Word Processor Information booklet" for more details on each. (10% discount offer expires April 15, 1984.)

All Work and No Play?

SUPREME RULER PLUS \$26.50

Our best selling program, a simulation/strategy game for one to nine players. By far the best game of its type available today. Requires 48K; supplied on Disk or Cassette.

WRITE FOR OUR FREE CATALOG!

TO ORDER: Please specify Model of computer, amount of memory you have, program(s) wanted, and method of payment. For Word Processors, please specify printer brand also. We accept Check, Money Order, VISA, MasterCard, COD, and gold.

Please enclose \$2.50 for shipping costs. We accept orders by phone or mail.

OUR "TOLL FREE" NUMBER:

As they say, nothing is free. Every time you call "Toll Free", it costs the other end \$2.00. Since almost all long distance phone orders end up costing LESS than \$2.00, we'll GIVE you the \$2.00, and you can keep the change! And if you order by mail, ask for our "Toll Free discount", and deduct \$2.00 from your order!

OUR GUARANTEE:

We sell only top-quality software. If, however, you are unsatisfied with a product you have purchased from JMG, you may return it (in good condition) within 10 days for a refund, less a \$2.50 handling charge for programs under \$50 (\$5.00 for programs over \$50). We also ask that you send us a letter stating the reason for your return.

*JMG SOFTWARE
INTERNATIONAL*

THE FINE PRINT:

Shipping Charges are \$2.50 in North America, \$5.00 overseas. All prices in U.S. Funds. Please allow 1 to 2 weeks for Personal Checks to clear. Add \$1.50 for COD Charges. Model III programs will also run on Mod 4 in III mode.

Fig. 1 (see the Program Listing).

This program demonstrates how the variables and subroutines accomplish many list-handling tasks. I include detailed comments in the listing to clarify the thread-linking procedures.

To use a threaded list program, you must first define all the variables and subroutines relevant to the threaded list technique. Table 1 identifies the variables and subroutines in the sample program. Table 2 shows how these variables would be assigned to the names in Fig. 1.

Lines 120-490, which make up the main program, handle the list-processing procedures cited in Table 4. Lines 1000-10590 contain the subroutines and related pointers that alphabetize the list (see Table 3). These subroutines maintain the system of pointers (vari-

ables S0, S1, and S2) that reference your location in the list. S1 points to the current element, S0 points to the prior element, and S2 points to the next element. Proper rotation of these pointers is necessary for moving up or down the list. Coordinating these pointers with NL() is essential to deleting, inserting, and maintaining control of the free-element list.

You'll notice that this program demonstrates a trivial application. With ingenuity, you can modify it to work as a Basic word processor, a mailing list program, or some other type of data management system. ■

Write to Ed Levy c/o Pel-Tek, P.O. Box 1026, Southampton, PA 18566.

ARRANGER II

FOR THE TRS80 MODEL 1, 3 OR 4
DOUBLE DENSITY

WORLD'S FINEST DISK CATALOG FILING SYSTEM

ARRANGER II is a VERY fast 100% Z-80 machine language self contained master disk catalog filing program that AUTOMATICALLY records disk name, date, density, DOS, free grams/bytes track count and type of disk (data or system) in SECONDS, or almost ANY disk REGARDLESS of DOS, density or track count or **YOUR MONEY BACK!**

ARRANGER II can:
 *Use single, multiple, or double headed drives
 *Record 250 diskettes up to 250 files each
 *Add or update any disk in seconds
 *Add disks manually, semi-automatically or fully automatic
 *Rename a disk at any time ... in seconds ... or delete it
 *Print disk labels
 *List your disk names or file names to the screen or printer in almost any manner you choose!
 *Find any program in less than 10 seconds!
 *Sort 1500 files in 15 seconds!
 *Sort by any extension
 *Scan disks or files starting at any point
 *Search for any file using an 8 character wildcard or extension
 *List all files alphabetically to the screen or printer
 *Filter mode to look, search, print or sort only selected files

ARRANGER II is completely independent. I can even back myself up.
 We believe the **ARRANGER II** to be the Finest, Fastest, Easiest to use disk catalog filing program on the market! Available in one version for both Model 1, 3 and 4 in double density for \$49.95.

**The Original
ARRANGER I \$29.95**

Reviewed Sept. '83 *Basic Computing* +\$3 Shp.
 Limited printing capabilities, reduced file capacity but still reads almost anything. (upgradable) single or double density.

ARRANGER II \$49.95

Reviewed Jan. '84 *80 Micro* + \$3 Shp.
 World's finest catalog program, double density

TRS80 MODEL 4

DOSTAMER 4

Never type another DIR:1, COPY "FILENAME":1 TO "FILENAME":0, PURGE "FILENAME":0, LIST "FILENAME":1, LOAD "FILENAME" (F = 3), ... and on and on and on!

Imagine over 200 commands that YOU define, executed with ONLY ONE OR TWO KEYSTROKES! Instant sorted directories with 1 key. Load Basic, protect memory, run your program with 2 keystrokes. List a file to the screen or the printer, print a directory, copy a file from one disk to another, copy the entire disk, and much more.

Your DOS has a lot of great features. The trouble is, you have to remember all those commands. With **DOSTAMER 4** those commands are 1 or 2 keystrokes away. Nothing to remember and nothing to forget, just use it! We use the SPECIAL features in YOUR DOS for the GREATEST utility you'll ever want. Once you use **DOSTAMER** you'll wonder how you got along without it. Also available Model 1 & 3 for DOSPLUS, LDOS, NEWDOS80, MULTIDOS & TRSDOS 1.3 (even works on LNW & MAX 80) for \$49.95 complete with the easiest instructions you'll find. By the way, **DOSTAMER** is written in FAST Z 80 machine code.

EXEC Interpreter, a supercharged version of TRSDOS's Build command, lets you edit the command file, stack commands on one line, specify conditional execution, and more. By Douglas Payne.

Radio Shack's TRSDOS Build command is a handy utility that lets you execute a file of DOS commands with a single Do command. But if you want to make a change in the command file, you can't simply edit it; rather, you have to re-create the entire file. TRSDOS is further limiting in that it makes no provision for conditional execution or for substituting parameters into file commands.

EXEC Interpreter (see Program Listing 1) solves these problems and gives you a number of additional features to boot. It lets you execute a group of DOS commands with a single command line, simplifying disk back-up, formatting, and other processing tasks. EXEC Interpreter optionally displays the commands as it executes them.

The command file also accepts sequenced line numbers like those in Basic, and you can annotate the file with comment lines; EXEC Interpreter ignores both of these.

In addition, you can specify up to nine parameters, or arguments, when executing the file, and the program can substitute them into any of the lines in the file.

If a DOS error occurs, EXEC Interpreter lets you terminate execution before it reaches the end of the file. You can display messages during execution, or temporarily suspend execution to allow for user intervention.

Finally, EXEC Interpreter can automatically pass data to a program or conditionally execute commands in a file, depending on the value of one or more of the arguments passed to it. The Example on p. 60 shows an execution file.

File Format

To create an execution file, use any suitable editor that processes ASCII text. You can use the Build command, Disk Basic, EDTASM, or a text editor such as Scripsit or Edit80 from Microsoft (10700 Northup Way, Bellevue, WA 98004). When you use Disk Basic, save the file with the A option (type SAVE "filespec",A). EXEC Interpreter's default file extension is /EXE, but you can use any other extension.

Maximum line length is 80

BRICK by BRICK

characters, not including the line numbers and terminating carriage return. EXEC Interpreter considers lines starting with a semicolon as comment lines.

All other lines in the file consist of an optional label, followed by either a DOS command, a control statement, data for simulated keyboard input, or a null string.

Labels consist of a dash followed by a string of non-blank characters. The first character must be a letter from A-Z, followed by one or more non-blank characters. EXEC Interpreter does not differentiate between upper- and lowercase letters.

Also, EXEC Interpreter uses only the first letter of the label, so you can have a maximum of 26 labels. You can use a label on a line by itself, or on a line containing additional text. I use labels in the If and GOTO statements described below.

Control Statements

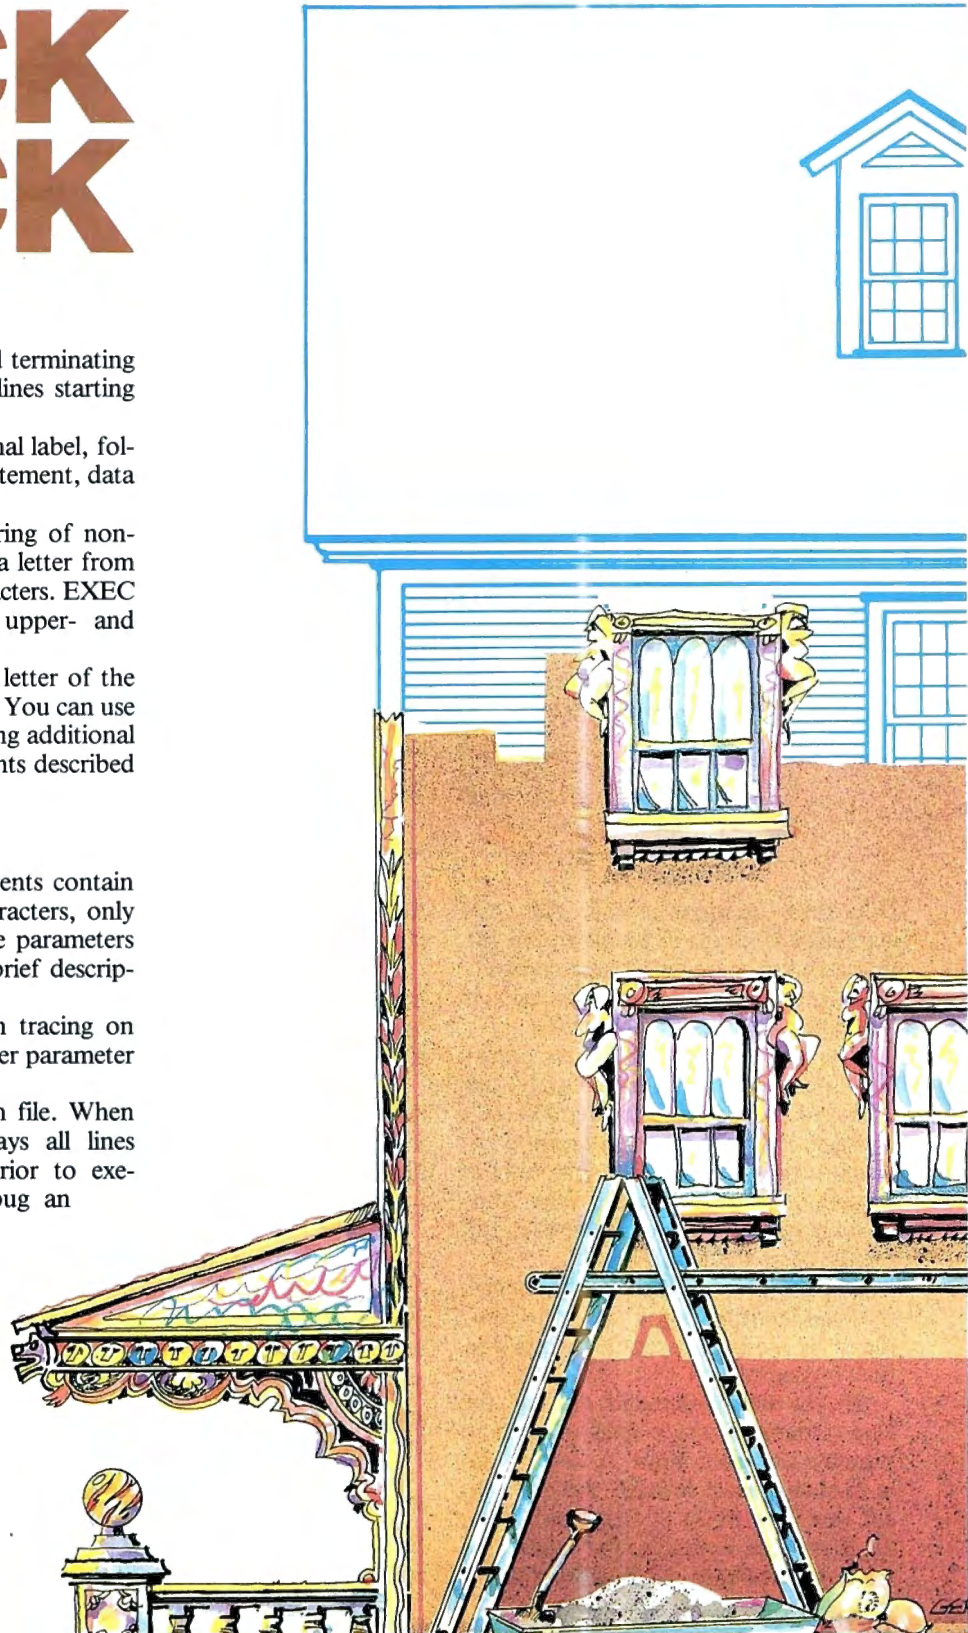

The following execution file control statements contain an ampersand and a string of non-blank characters, only the first of which is significant. Zero or more parameters separated by blanks follow. Table 1 gives a brief description of each command.

The Trace command, &T, turns execution tracing on and off. &T or &T Y turn tracing on. Any other parameter (such as &T N) turns tracing off.

Tracing is off when you start the execution file. When tracing is on, the EXEC Interpreter displays all lines in the file, including inserted arguments, prior to execution. You can use this command to debug an execution file. For example, you can check to make sure the program substitutes arguments as you intend.

&Q (or &Q Y), the Quit command, terminates execution if a DOS error occurs. Using any other parameter continues execution regardless of errors. This is the default setting when you start the execution file.

The program displays all

Example. Test execution file.

```
File = TEST/EXE LRL = 256      REC = ASCII

00100 ; This is an EXEC test file.
00110 ;
00120   CLS
00130   &QUIT YES
00140   &IF .&1 <> . -OK
00150   &IF .&2 <> . -OK
00160   &IF .&3 = . -HELP
00170 -OK
00180   &IF .&1 = .? -QUESTION
00190   &WAIT EXEC testing ...
00200   CLS
00210   &DISPLAY The name of this EXEC file is &0.
00220   &DISPLAY You entered the following arguments:
00230   &DISPLAY '&1', '&2', '&3', '&4', '&5', '&6', '&7', '&8', '&9'.
00240   &IF .&1 <> .CREATE -FREE
00250   &WAIT Insert a SCRATCH diskette in drive 1.
00260   &DISPLAY I will now create a file called TEST/DAT:1.
00270   CREATE TEST/DAT:1 (LRL=0,REC=3)
00280   &WAIT Press Break if you want to check this.
00290 -FREE
00300   &IF .&2 <> .FREE -LIB
00310   &WAIT I will now display the free space on drive 1.
00320   CLS
00330   FREE :1
00340 -LIB
00350   &IF .&3 <> .LIB -EXIT
00360   &DISPLAY The following is a list of TRSDOS commands:
00370   LIB
00380   &GOTO -EXIT
00390 -HELP
00400   &DISPLAY You didn't give any arguments, so here is an explanation:
00410   &DISPLAY
00420 -QUESTION
00430   &DISPLAY The format is:
00440   &DISPLAY
00450   &DISPLAY EXEC TEST <?/CREATE> <FREE> <LIB>
00460   &DISPLAY
00470   &DISPLAY If arg1 is ?, this explanation is displayed.
00480   &DISPLAY If arg1 is CREATE, TEST/DAT:1 is created.
00490   &DISPLAY If arg2 is FREE, free space on drive 1 is displayed.
00500   &DISPLAY If arg3 is LIB, a list of TRSDOS commands is displayed.
00510   &DISPLAY If you want to omit any of these, use # instead.
00520   &DISPLAY
00530 -EXIT
00540   &QUIT NO
00550   KILL TEST/DAT:1
00560   &DISPLAY
00570   &DISPLAY EXEC testing complete.
EOF
```

DOS error messages in full. The Quit command is useful in an execution file that executes more than one command, when some commands depend on the outcome of previous commands.

The Wait command, &W, temporarily suspends execution and displays the strings of characters following &W as a message. Press the break key to stop execution; press any other key to resume execution. You can use the Wait command if you need to change disks in the middle of an execution file.

&D, the Display command, displays the message following it. Use this command to monitor execution when you turn tracing off.

&S, the Stack command, and &E, the End command, stack lines of data to simulate keyboard input. A stack of data lines must start with &S and end with &E (see lines 18-23 of Program Listing 2). When the executing file reads data from the keyboard, all lines from &S to

&E pass to the program currently running.

EXEC Interpreter discards stacked lines when the execution file does not request keyboard input. This feature provides optional input to a program.

The Break command, &B, terminates the next line in the execution file with the break character 01 hexadecimal (hex) rather than the normal carriage return. Edit80 requires input in this form.

&I, the If statement, and &G, the GOTO statement, alter the normal sequential flow of execution. The GOTO statement has the form:

&G -label

Execution continues at the line with the specified label, rather than at the next line in the file.

The If statement has the form:

&I operand1 relop operand2 -label

Table 2 shows the different relational operators (relops). The If statement

functions similarly to its counterpart in Basic.

When the given relation between the two operands is true, execution resumes at the specified label. Otherwise it continues at the line following the If statement. Each of the two operands is a string of non-blank characters.

If both operands are numeric (consist only of decimal digits), the program conducts an unsigned numeric comparison. When either of the operands contains a non-numeric character, the program performs a string comparison using the standard ASCII collating sequence.

If one string is shorter than the other, the program pads the shorter string on its right with enough blanks to make the lengths equal. Do not put strings inside quotation marks.

Argument Substitution

You can enter up to nine arguments

Command	Description
&T	Trace command.
&Q	Quit command.
&W	Wait command.
&D	Display command.
&S	Stack command.
&E	End command.
&B	Break command.
&I	If statement.
&G	GOTO statement.

Table 1. Description of execution file control statements.

Operator	Definition
=	Equal to
<>	Not equal to
<	Less than
>	Greater than
<=	Less than or equal to
>=	Greater than or equal to

Table 2. List of relational operators.

when running the execution file. To do this, type in:

```
EXEC filespec arg1 arg2... argn
```

Here, "filespec" is the name of the execution file. Each argument is a string of up to 23 non-blank characters. The program truncates longer arguments.

EXEC Interpreter references the arguments in the execution file with &1-&9. When the program finds a digit following an ampersand in the file, it replaces these two characters with the corresponding argument. &0 holds the name of the execution file as entered on the command line.

If you enter no corresponding argument, the program replaces the &n with a null string. If you want to leave out an argument in the list and have more arguments following, use a pound sign (#) in its place. The interpreter replaces the pound sign with a null string.

If you need an ampersand followed by a digit in your file, use a double ampersand. For example, if you want to use the literal string &3 without substitution, use &&3. The maximum line length after you substitute arguments is 100 characters.

Listing 1 continued

Example File

Program Listing 2 is an execution file called CC/EXE that I used to compile a program written in the C language. It optionally creates an executable command file, and runs it. I numbered each line for the purpose of illustration. These numbers aren't part of the actual file.

This execution file can have from one to five arguments. The first one is either the name of the file you want to compile or a question mark. When you enter no arguments or when the first argument is a question mark, the program displays a brief explanation of the execution file.

The second, third, and fourth arguments are the optional names of additional libraries that the linker uses. When the second argument is NO-LINK, execution ends after the assemble step. If the fifth argument is NOGO, the command file does not run.

Lines 1 and 2 are comments. Line 3 ends execution if a DOS error occurs. Lines 4 and 5 explain the form of the execution file command. The periods in front of the two operands of the If statements prevent an invalid form of the statement.

If you enter no first argument and you don't use periods, the statement &IF &l=?-HELP becomes &IF = ?-HELP after argument replacement. With the periods, it becomes &IF .= ?-HELP, a valid form of the If statement.

EXEC Interpreter substitutes arguments, if any, directly into the line. Typing EXEC CC or EXEC CC ? lets execution continue at the label -HELP, and displays an explanation of the execution file.

Line 7 invokes the C preprocessor, which produces a file with extension /C80. Line 9 invokes the C compiler to compile the file. Line 10 erases this file, since it is no longer necessary. The compiler produces an assemble file with the extension /MAC.

Line 11 suspends execution so you can insert the disk containing the assembler and linker programs. When you press any key, execution resumes at line 12. Line 13 starts the assembler, and line 14 erases the assemble file.

Line 15 determines whether or not the second argument is NOLINK. If it is, control passes to label -EXIT in line 33, the last line in the file. This bypasses the linker step. Again, I put periods before the If statement operands to prevent errors.

Line 17 runs the linker, giving it the library RUNLIB and argument 1 as parameters. Lines 18 and 23 pass lines

CABLES
We manufacture a great number of different cable assemblies to connect most anything to anything else. Call us with your specific needs. We might have it on the shelf. All at discount prices, of course.

RIBBONS
We have more ribbons than you do, so please call us when you need some. We try to carry types to last here. They're cheepest too.

BUY FROM US RIGHT NOW!

Our large inventory can not be listed completely. Please call if you do not see what you want. Chances are we have it. Because of the time lag in magazine advertising, prices are subject to change without notice. Price reductions will be applied along automatically. Your company and/or personal checks are welcome and will not delay your order. We use TeleCheck. Please observe these requirements and your order will be shipped without delay. The check must be drawn on a USA or Canadian bank and payable in US Dollars. It must be a bank printed check and contain your street address and telephone number. The signature must EXACTLY match the name printed on the check. That's all there is to it. In addition, we accept American Express, Mastercard, Visa, Cashiers Checks, Wire Transfer, and we also ship COD. God's and motor freight shipments may require a deposit. Some special items require deposits. ALL COD's require cash or cashiers check on delivery. Company and/or personal checks can NOT be accepted in payment of COD shipments. Credit cards are not charged until we ship your order. Shipping charges are not included in our prices unless otherwise indicated. No State Sales Tax collected on out-of-state shipments or software. If you order by SPM your order will be shipped the NEXT DAY if stock is on hand. Due to the nature of this business there are NO REFUNDS ON SOFTWARE REPLACEMENTS. We will be PROVIDED FOR DEFECTIVE SOFTWARE ITEMS, provided we are notified within ten days of delivery of the merchandise. If you have a particular problem please call us for help and instructions.

Listing 1 continued

19-22 to the linker as keyboard input. This lets you use extra libraries to complete the link. Line 22 tells the linker to create a command file and exit. Line 24 erases the assembler's /REL file.

Line 25 checks whether you entered NOGO as the fifth argument. If you did, control passes to label -EXIT without running the command file in line 27.

The GOTO statement in line 28 bypasses the comments in lines 29-32. Lines 6, 8, 12, 16, and 26 give messages at the beginning of each major step in the execution file, providing a progress report during execution.

If you run the execution file by entering EXEC CC MYPROG CLIB PRINTF # NOGO, the major steps of the process are as follows.

Line 7 becomes PRE MYPROG to invoke the preprocessor. Line 9 becomes C80 MYPROG to run the compiler, and line 10 becomes KILL MYPROG/C80.

Line 13 runs the assembler with M80 MYPROG=MYPROG, and line 14 erases the assemble file with KILL MYPROG/MAC. Line 17 becomes L80 RUNLIB,MYPROG to run the linker. Lines 19-20 pass CLIB and PRINTF to the linker as though you entered them from the keyboard.

Since the fourth argument is a pound sign, line 21 becomes a blank line. EXEC Interpreter passes line 22 as keyboard input MYPROG-N-E:CMAN to the linker. Line 24 becomes KILL MYPROG/REL.

The fifth argument is NOGO, so line 25 passes control to label -EXIT. Because this is the last line in the file, the execution file process ends.

This example uses expanded forms of labels and control statement keywords for clarity. You can use the single-letter short forms if you have limited memory. Only the first letter of a label or control statement is necessary; the interpreter ignores the rest of the word.

Compiling a C program involves a lot of keyboard input and consumes a lot of time. By using this execution file, I can perform the entire process with one command. Assuming that no errors occur, I then have the original source file and the command file on disk.

Since the program erases the intermediate files produced by the preprocessor, compiler, and assembler, you don't have to worry about running out of disk space. In fact, if you have all the necessary programs in your drives when starting the execution file, you can omit the Wait command in line 11 and run the whole process unattended.

The Example on p. 60 is a test file

that illustrates the use of arguments; the DOS commands CLS, Create, Free, and Kill; and the interpreter commands If, Wait, Display, and Quit.

Program Logic

EXEC Interpreter occupies 2K bytes in high memory. The beginning address is F800 hex in a 48K system. On a 32K machine, it's B800 hex.

The interpreter reads the file into memory, does some preprocessing, and relocates the file adjacent to itself in high memory. This method ensures the availability of low memory for other programs.

EXEC Interpreter is not recursive, so you can't invoke it from within an execution file.

Starting at label EXEC (line 01060), the initialization code places hooks at various locations in the system so the interpreter can trap the system calls that the programs running in the execution file use.

The EXEC routine saves the arguments from the command line in the high-memory PARS table. EXEC Interpreter then reads the execution file into low memory, one line at a time. When EXEC finds a labeled line, it saves the line's relative position in the file in the label table LABTAB. The program doesn't retain the actual label; it uses the first letter of the label as an index into the table.

When the program reaches the end of the file, it relocates the lines upward in memory and overlays the part of the EXEC routine's initialization code that it no longer needs. This frees up more memory.

The program sets the system variable MEMEND to protect the relocated file and the interpreter. Although most programs use this variable to indicate the highest available memory, some might not. If they don't, the interpreter won't work.

Then the program adjusts the label table entries to contain the real memory addresses of the labeled lines rather than relative offsets.

The main loop of the interpreter starts at label EXMAIN (line 02840) and has 64 bytes of stack space available. It reassigns the stack pointer each time it goes through the loop. The loop processes each line of the execution file through a call to PRCLIN. This routine performs argument substitution.

The CHKCTL routine handles the execution file's control statements. If a line passes to DOS as a command, the routine first copies that line to the DOS command text area. Some programs

OKIDATA

Microline Family

The Okidata *Microline* family offers TRS-80 users a wide range of features for almost any application. All *Microline* printers are made with the same rugged materials and care. No matter which printer you select, you've chosen one of the best printers made.

The **Microline 92** (160 cps) is ideal for word processing. It features 10, 12 & 17 cpi, a correspondence font, double-width, emphasis/boldface, sub/super scripts, underlining, pin/friction feed (tractor is optional on the 92) & dot-addressable graphics (120 x 144 dpi). The 93 is the 136 column version. Parallel interfaces are standard; the RS-232C interface is optional.

The **Microline 84** (132 col) is the Step 2 version, featuring 200 cps at 10, 12, & 17 cpi (w/ double-width), all with a correspondence mode & dot addressable graphics. Parallel or RS-232C interfaces available.

The **Microline 82A** (120 cps) is a data cruncher. Features 10 & 16 cpi (5/8 double-width). Dot-addressable graphics are optional. The 83A is the 136 column version.

address this area directly to get parameters, rather than going through the HL register pair. The CMDDOS system routine executes the command and returns control to EXMAIN to process the next line of the execution file.

When the program reaches the end of the file, EXEND in line 03230 restores all the patches made during initialization into the system and returns to DOS.

The LBTBLD subroutine in line 03460 adds a label to the label table. It stores the relative offset of the line in the table's file.

The PRCLIN routine in line 03800 processes the next line of the execution file. The routine calls CHKARG to perform an argument substitution. PRCLIN builds up a text line for the main part of the interpreter, and when you've turned tracing on, it displays the line after argument substitution.

The CHKCTL routine in line 04290 and the PRCCTL routine in line 04460 check for and process the special control statements. Since processing If statements requires a lot of time, the program handles it separately in the IF-PROC routine (line 05440).

During If statement processing, the

ANNOUNCING the premiere of

jr[®]

Learning to use your *IBM PCjr* becomes easy and fun with *jr* magazine. Because *jr* keeps things simple, the whole family will *learn and understand while they enjoy themselves*.

jr will explain how the *PCjr* works and guide you step-by-step in setting up your system. Most of all *jr* will answer your most important questions month after month...like

- **What can I use my *PCjr* for?** *jr* magazine will teach you how to prepare household budgets, balance your checkbooks, do your taxes and organize schedules and lists.

- **What about the kids?** From kindergarten to college, *jr* helps the kids with educational programs in every subject area.

- **Are there more serious uses for *PCjr*?** Yes! You'll improve your own business skills by learning about word processing, spreadsheets and graphics.

- **What about having fun with *PCjr*?** Relax and enjoy all the latest games with your whole family.

Plus:

- **What programs should I choose for the *PCjr*?** *jr* magazine will tell you what programs on the market will run on the *PCjr*, and which ones won't. Plus what new programs are on the way. *jr* will evaluate them before you buy.

Order your subscription to *jr* today and you'll get the special charter subscription rate of \$14.97. That's 25% off the basic subscription rate! Plus, with your pre-payment of check, American Express, Visa or Mastercard we'll send you a FREE issue making a total of 13 issues for \$14.97.

Take advantage of this incredible charter subscription offer. Mail the attached card, the coupon or call TOLL FREE 1-800-258-5473. In New Hampshire call 1-924-9471... TODAY!

Sign me up as a charter subscriber to *jr*. I understand that with prepayment of check or credit card I'll receive a FREE issue making a total of 13 issues for \$14.97. Save \$5.00 off the basic rate!

INCREIBLE!

That's what people say to our offer of a powerful data management system on diskette, with manual.

Winner of 80 Micro's Reader's Choice Awards, AIDS-III allows you to enter, organize and isolate data, and print formal reports and labels. It can sort, merge and compute, with performance that matches software many times its price.

\$20.00

How can SofTrends offer all this for \$20? Frankly AIDS-III, constantly refined since 1980, no longer represents our most advanced technology. But it's still being employed by more than 10,000 users. Once YOU begin using AIDS-III, you'll be convinced of SofTrends' superior performance, regardless of price.

492

Ask us about AIDSPLUS

To order, phone (216) 289-2002 and use your VISA or MasterCard. Or send your check for \$20 (shipping included!) to SofTrends Inc., 26111 Brush Ave., Euclid, OH 44132. Sorry, no COD's or PO's accepted for this special offer.

Listing 1 continued

program scans and evaluates the two operands, the relational operator, and the label. When both operands are numeric, the program makes an unsigned numeric comparison.

When the operands aren't numeric, the program compares the strings. When the result of the comparison is true, the program alters the current EXEC routine line pointer, CURLIN, to change the flow of control.

The GETLAD routine in line 06400 searches the label table for a label and returns the address of the labeled line. CNVLAB converts a character label to a binary label table index in line 06660.

The EVALOP routine in line 06840 determines whether an If statement's operand is numeric or a string. RELOP (line 07060) returns a numeric value for a relational operator.

NMEQ, NMNE, and so on up to NMLE determine the result of a numeric comparison. The program precompares the two numbers by subtracting one from the other. These routines re-

turn a zero or non-zero value in the A register to indicate a false or true condition for the relationship.

STEQ, STNE, and so on up to STGE compare strings and return a value in the A register like the numeric comparison routines.

The CHKARG routine substitutes arguments in line 08830. It uses the number of the argument to obtain the argument string from the PARMs table, then inserts the string into the text line in place of the &n token.

The KBDINT routine in line 09330 runs whenever a program running from within the execution file requests keyboard input. If the &S statement has stacked a line, the next character from that line returns. Otherwise, the program calls the regular system keyboard driver to get the next character from the keyboard.

The program invokes the ERTRAP routine in line 09740 when it calls the DOS error handler. The A register contains the error codes. Under TRSDOS,

TIED UP BY STRING COMPRESSION? CUT YOURSELF LOOSE WITH TRASHMAN™

THIS PROGRAM IS A MUST FOR EVERYONE WHO USES "BASIC" ON A TRS-80. It reduces string compression delays by 95% or more. You suffer from these delays whenever you run a BASIC program. Your computer locks up for seconds, or minutes, and you

may even think it's "crashed." The keyboard won't work, and until all the strings have been collected, you just have to sit and wait. If you're using your computer for

business, that wastes your money. If you're using it personally, it wastes your time.

TRASHMAN FIXES THE PROBLEM! As soon as you start to use it, those delays will almost disappear. The program is very easy to use, so you don't have to be a computer programmer to take advantage of it. It's written in "machine language" and uses only 578 bytes of memory for itself, plus 2 bytes for each "string" in your program. It works with other machine language programs and all the major operating systems.

IT SHOULD HAVE BEEN BUILT INTO THE COMPUTER IN THE FIRST PLACE, but since it wasn't, look at this chart, and then order your copy today.

# STRINGS	SECONDS DELAY NORMAL	PERCENT IMPROVEMENT TRASHMAN	PERCENT IMPROVEMENT
10	.1	.1	0
250	11.8	0.7	94
500	45.8	1.6	96.5
1000	179.6	3.5	98
2000	713.2	7.8	98.9

"FANTASTIC!!! My huge database used to lock up during searching, scrolling, etc. (1,000 strings). Now the true power is unleashed!!!" (L.L.)

"... if delays are annoyingly frequent, then TRASHMAN is the answer, and at the price, it does not take many operating delays to justify it's purchase." (COMPUTRONICS, March, 1983)

TRASHMAN is available on Disk for the TRS-80 Models I & III for just **\$39.95**.

Attention Software Publishers: TRASHMAN may be licensed for use with your packages. Call for details.

**SAVE TIME
WITH
FASTER**

**EASY
TO
USE**

FASTER speeds up most TRS-80 BASIC programs by 20-50%. It analyses programs while they run, then displays a simple change, usually one line, to sequence variables so the ROM will find them faster.

You can use FASTER to speed up programs you've bought as well as programs you've written. Since it isn't a compiler, your BASIC programs can be read and changed afterwards. It works on business programs, models, and games. The more complex your program, the better the results.

For the past 3 years, FASTER has earned high marks from reviewers and thousands of users:

FASTER is a must for any programmer . . . It is in my opinion one of the best inexpensive utilities available."
80 US JOURNAL (April, 1982)

"If you . . . would like a significant increase in the run-time speed, then buy FASTER." 80 MICRO (April, 1982)

EQUIPMENT: TRS-80

Models I & III. 16-48K Tape or Disk, all DOS's.

\$29.95

**QUICK
COMPRESS**

This ultra-fast machine language program reduces the size and increases the speed of most BASIC programs. It needs only 276 bytes of memory, and removes the blanks and remarks from even the largest BASIC program in less than 3 seconds. Works with all DOS's, and is especially useful with LDOS, NEWDOS, and Model I TRSDOS.

Models I & III, 16-48K. Tape or Disk

if the program has set bit 6 of the error code, it displays a detailed error message. Otherwise only the error number appears. I set bit 6 to force a detailed error message.

If &Q forces exit on error, set bit 7 and alter the return address so the interpreter's exit code regains control after the program displays the message. If you don't set bit 7, control returns to the system after the program displays the message.

The CMTRAP routine in line 09970 traps calls to the system routine, COMDOS. COMDOS runs a DOS command, but doesn't return to the caller. The interpreter pushes a return address and uses CMDDOS so it regains control when the command is complete.

GETREC (line 10120) and GETBYT (line 10440) read in the execution file from disk, one line at a time.

The rest of the subroutines in the program are string-handling utilities. NEXTWD scans to the start of the next word in a line. NEXTBL finds the next

blank character in a line. The interpreter treats tabs as blanks.

SKIPBL finds the next non-blank character, and CHKBL determines whether or not the next character is a blank or a tab. SKIPLN bypasses line numbers at the beginning of a line. All the above routines check to make sure that the pointer doesn't advance past the end of the line.

INCPTR (line 11300) increments a pointer in the HL register pair and compares it to the value in the DE register pair. CPYSTR (line 11460) copies a string that the HL register pair addresses to a location that the DE register pair addresses. A blank or carriage return character terminates the string. CVBIN in line 11600 checks whether a character string is all numeric. If it is, the program converts it into binary numbers. ■

You can reach Douglas Payne at 58 Brendawood Crescent, Waterloo, Ontario N2J 4J5, Canada.

ERRATIC DISK DRIVES?

RPM TO THE RESCUE

Find out if your drives need adjustment before you begin to lose files. **SAVE** on repair bills. This easy-to-use program measures the rotational speed and fluctuations of your disk drives, and warns you if they are running too fast, too slow, or unevenly.

Incorrect or erratic speed is a common cause of unexplained disk errors and loss of data. RPM's documentation explains how to detect and correct these problems quickly and easily. As 80 MICRO (April, 1982) said: "If your drives have problems I recommend RPM before paying to get it repaired."

Customers agree:

"EXCELLENT — Has paid for itself already! Saved the cost of Radio Shack's doing the speed adjust!" (D.M.)

RPM is supplied on disk for the TRS-80 Models 1, 3 and 4 (in 3 mode). We suggest you order a copy before you need it.

RPM \$24.95

THE BASIC UNSCRAMBLER

NEW from the author of DOTWRITER!
THE ESSENTIAL DOCUMENTATION
PROGRAM FOR BASIC

- Lists programs in readable form
 - Makes it easier to follow BASIC
 - Self-document your own programs
 - Self-document others' programs
 - Very easy to use, excellent prompts
 - Assign names to subroutines
 - Use long names for variables
 - Saves names to separate disk file
 - Doesn't change original program
 - Flags GOTO's and GOSUB's
 - Indents loops, IF/THEN
 - Indents multiple loops, IF/THEN
 - long lines broken BETWEEN cmdns
 - Remarks made neater, easier to read
 - Cross-references with each line
- *Written as FAST MACHINE LANGUAGE program
Requires TRS-80 Model I or III, 48K, disk

WHEN YOU TYPE "TALLY"

you get what you
thought those
"CALC" programs
would give you:

- easy to use
- simple and logical
- totals by item and category
- every category named
- built-in sorts
- clear documentation

Customers told us:

"Looks like just what I need to keep track of Income & Expenses in my Real Estate appraisal business." (L.E.)

"Just what we need for In-house Budgets." (N. Ariz. Univ.)

"TALLYMASTER" is everything you advertised and more. I'm having a lot of fun learning the features." (L.C.)

"Well-packaged, clear instructions, easy to use." (G.L.G.)

And, '80 MICRO gave it a Five Star review: "I recommend Tallymaster to every user who wants a good, easy, accurate bookkeeping system, and to anyone interested in home or small business budgeting and bookkeeping." (July, 1983)

All this for only **\$79.95**
(TRS-80 Models I, III, 48K, disk)

Also available for IBM PC:
128K, disk. Has Function Key support and an even faster sort.

BECK DOUBLE DENSITY DISKETTES

SINGLE SIDED **\$2.19** / **\$2.79** DOUBLE SIDED
ea. ea.

Our message to you is simple. If you like the quality of Dysan, Verbatim, 3M, et al, you'll like the quality of Beck soft sector, 5 1/4" flexible diskettes. The only major difference is cost. We're less expensive. In fact, a lot less expensive.

Why does Beck cost less?

Our philosophy is: Excellent quality and reliability, at a cost that beats the jackets off other diskettes. We can do it because we (1) put our money into the product, not mega-marketing schemes and fancy packaging; and (2) sell our money-saving 25-diskette pack to you direct via a toll free order line, so you get fast, door-to-door service efficiently.

When you buy Beck, you've got the best.
Beck Quality. Beck Reliability.
And, of course, Beck Price.

1D, soft sector 5 1/4" diskette \$2.19 each
2D, soft sector 5 1/4" diskette \$2.79 each

For IBM, Apple, TRS and 97% of popular microcomputers.

What about quality and reliability?

At Beck, our success as a diskette manufacturer depends upon our ability to provide you with a fully reliable, quality diskette - every time. For that reason we take no shortcuts. You get the best because we are committed to excellence. Every diskette is manufactured to very strict quality standards. We test and retest 21 times throughout the manufacturing process to insure compliance with no less than 42 rigid specifications. We make sure you get the very best - a 100% certified, 100% error free diskette.

Our satisfaction money-back guarantee and full **7** year warranty are proof of our commitment to excellence and confidence in our product.

APRIL SPOOL

**Have your computer do double-duty—
this software spooler prints documents
while you do other work.**

Instead of idly sitting by while your computer directs a printing operation, use my software-based spooler to free up your machine for other tasks. My program temporarily stores all of your text in the disk file and shunts it to the printer as the printer buffer empties. In the meantime, you can copy or run other programs, use your directory, or use your editor/assembler.

My Assembly-language spooler program uses about 1.2K of memory and requires Radio Shack's Editor/Assembler. It runs on a Model I or III with 16K of memory and one disk drive. It automatically boots up on either system.

Spoolers

Spoolers come in two varieties: hardware and software. A hardware spooler contains memory chips that store the data you want to print. While a hardware spooler is efficient, it's also expensive.

A software spooler does the same thing as a hardware spooler, but it uses your computer's internal memory instead of independent memory chips. It reads text, stores it in blocks in disk memory, and sends it in blocks to the printer. The program repeats this process until all your text has been printed.

The Key Box

**Models I and III
16K RAM
Disk Drive
Assembly Language
Editor/Assembler
Printer**

Running Spooler

To load Spooler, type in and assemble the code in the Program Listing. If you use NEWDOS, you can execute the program from DOS Ready. If you use TRSDOS, enter either Basic or a program such as the Series 1 Editor/Assembler to activate the program.

To run the program, press the shift/down-arrow and S keys simultaneously (control-S). The program displays the prompt:

FILESPEC →

Enter a file name. The program saves your spooled text under the file name you specify. If an error occurs during disk input/output (I/O), the program displays the appropriate error message.

Once you enter a file name, Spooler sends data destined for the printer to your disk file. This includes data sent using the commands LPRINT, LLIST, NEWDOS's JKL, Print from DOS, or any print routine that uses the ROM LPRINT driver. The program doesn't operate with any program that has its own printer I/O (such as Scripsit).

Spooler lets you break out of an LPRINT command on your Model I. If you try to send data to the printer while it's off line, hitting the break key aborts the program. The Model III aborts automatically under the same circumstances.

Program Operations

The program breaks down into two stages: spooling to memory and despooling to the printer. While the spooling portion of the program stores data you want to print in memory, the despooler sends data from memory to the printer.

To send your file to the printer (despool), press the shift/down-arrow and the D keys simultaneously (control-D). This closes the file and activates the despooler.

When the program finishes despooling the file, it kills the file to free up disk space and prepares to spool another file. If you dump to the printer while the program is running, the despooler pauses while your dump prints out, and then it reactivates.

You can locate Spooler anywhere in memory, as long as you reassemble it at the new location, but you should keep it as high in memory as possible. This leaves more memory for other tasks. The locations I selected leave room for other programs you might need to put in high memory.

Line Description

The program first reserves memory for its own use. Lines 2200-2800 reserve space for variables. Line 2900 reserves 256 bytes for the DOS. Line 2900 provides extra space for the DOS when your computer reads or writes anything to your disk drive.

Line 3000 reserves 256 bytes for the program's text buffer. Rather than constantly reading data off the disk, the program reads and stores it in 256-byte sections. The program prints the section, and then reads in another section until it prints the last section.

Line 3100 reserves 50 bytes for the DOS to open and close files.

To determine whether the program is running on a Model I or III, line 3200 reads memory location 0202 hexadecimal (hex) from ROM. When the location contains the value 28 hex, the program identifies the system as a Model III and saves the value of zero in that memory location. When the location

Listing continued

does not contain the value 28 hex, the program writes a 1 to that location.

Lines 4000-4600 set the DOS's high-memory pointer so the DOS won't write over the program.

Line 4700 clears the spooler buffer by filling it with zeros. This ensures that the program doesn't print any erroneous data. Lines 4800-5500 initialize the program variables.

Lines 5600-5900 route the ROM's keyboard driver to the program. This lets you check for keyboard input such as control-S and control-D. Lines 6000-6100 route the ROM's printer driver to the program, letting you send data to disk that would normally go to the printer. The program then exits to DOS in line 6200.

The keyboard interrupt routine comprises lines 6300-9000. Line 6300 contains the address of the normal ROM keyboard scan routine after you run the program. Lines 6400-6500 swap the normal and alternate register sets so that the normal registers are unaltered when the spooler returns to the interrupted program.

The program then calls a routine that determines if the program needs to read data from disk, and calls again to send data to the printer if the spooler is on. The program then calls to determine if the spooler should be turned off.

Lines 6900-8700 check for control-S or control-D. If you've pressed either command, the program branches to the appropriate section. Line 8800 restores the registers and returns to whatever the program interrupted.

The next routine (lines 9100-11000) interrupts the LPRINT routine and sends the data either to disk or to the printer. When it sends data to a disk, the program jumps to line 10400 to write that byte to disk. The program jumps to line 9400 when it sends data to the printer.

The PRTEST routine lets you break out of LPRINT. When the printer goes off line, the program loops until you put the computer on line again, and then continues printing. When you hit the break key, the program jumps to 06CC hex and exits to Basic.

Control-S sends the program to the routine at line 11100. This sets a flag indicating that the spooler is on so you won't accidentally spool two files at the same time.

Lines 11300-11400 print the filespec prompt. Lines 11500-11700 let you enter up to 23 characters for the file name. Lines 11800-12100 create the file. After creating the file, the program returns to the caller.

Lines 13000-13900 print whatever error might have occurred. The program sets bits 6 and 7 in the A register so it can display the error name instead of the error number.

Lines 14000-15200 kill the file when the program finishes despooling. Once the despooler runs out of data, it reads an end-of-file error (error 28), kills the file, and despools the last segment of data to the printer.

Control-D sends the program to the routine at line 15300. This routine sets the variables and tells the computer it's ready to despool to the printer. It also closes and reopens the file each time the program reads the data so the despooler reads the file from the beginning.

Lines 16300-18700 transfer data from the disk to the text buffer. When despool is not active, lines 16300-16500 return the program to the caller. Lines 16600-16800 return the program to the caller when the program has read all the data from disk.

Once the program passes these two checks, it clears the text buffer (line 16900) and reads the data from the disk into the buffer (lines 17000-18000). When the program has read all the data, it sets variables that tell the computer not to read more data and returns to the caller.

Printer Routines

Lines 18800-20800 do the despooling. This routine tests to see if the program is ready to despool and, if so, computes the address for the data you want to print and puts it into register A. If the program is not ready to despool, the routine returns to the caller.

Line 20900 saves the character you want printed and makes sure the printer is ready to receive data. It then sends that character to the printer and returns to the program. That's the key to the despooler.

The standard LPRINT routine hangs up if it senses that the printer is not ready to receive data, making your computer unusable. Spooler keeps trying to send the same character to the printer until the printer is ready. When the printer isn't ready, program control returns to you so you can use your computer for other tasks. By constantly trying to send data, the computer appears to do two tasks at the same time.

Lines 22900-23200 check the printer's status. If the printer is on line and ready, the program sets the Z flag.

The last major routine (lines 24900-25200) sends out the last 256-byte chunk of data to the printer. Once the program has reached the end of the data and kills

the file, this routine prints the last 256 bytes in the text buffer. It also despools the data, resets some variables, and returns control to you.

The routine in lines 26700-27200 clears the text buffer contents to zero. If you try to output a character code zero (null character), nothing prints. Since the last buffer read might not contain the full 256 bytes of text, the zeros fill in the extra space.

The routine in lines 27300-27800 prints a message that HL points to at the current cursor position. The message terminates with character code zero to signal the end of the message. Since the spooler is linked to the key-

board driver routine, it only prints when Basic scans the keyboard. Under certain conditions, however (such as under heavy computation), the program might appear to slow down. This is because Basic does not scan the keyboard as often when it is computing.

I could have used the internal clock to despool, but certain programs might shut it off. Since Basic scans the keyboard constantly, I find this the best alternative. ■

You can reach John Cominio at 626 Tortoise Way, Satellite Beach, FL 32937.

ADVANCED ELECTRONIC NOTEBOOK

BY KSoft

Over the past two years, LOG Electronic Notebook has quietly been creating a revolution in personal information management. Designed to emulate a familiar pencil and notebook, LOG Electronic Notebook can do for random information what a spreadsheet program does for numbers.

Now, even the best has been improved! KSoft is pleased to announce SUPERLOG, the next generation of the LOG family. SUPERLOG is not a patch! It is a totally rewritten version of the original LOG concept, fully compatible with the LDOS 5.1.3 operating system currently endorsed by Tandy.

SUPERLOG retains all of the versatile features of LOG while adding many new options requested by professional users: Floppy or Hard disk. Any number of LOG files per diskette. 1 to 32767 pages per file. Password protection and error checking. New text editing commands include automatic text Wrap-Around, Expand and Delete for entire lines, a Page Copy command, and an Undo key to reverse editing changes. Cursor motion is more flexible with new key commands plus a Forms simulator. The SEARCH function is greatly enhanced with a Wild-Card character, case-independent search, and multiple word search at 10 pages/second.

Also Note: SUPERLOG is now fully interrupt activated; it may be accessed from practically any foreground task including LDOS Utilities, LBASIC, LSCRIPT, EDAS, etc. with non-destructive return to the foreground program. No other information management program is this versatile!

Write or call Today! We'll be glad to tell you about SUPERLOG and what it can do for you!

SUPERLOG Specify Model I or III. \$119.95
LDOS 5.1.3, 48K, and 2 Drives required.

(Model IV version to be offered soon.)

LOG TRSDOS versions, Models I, III still available.

KSoft (601) 992-2239

318 Lakeside Drive Brandon, MS 39042
Mastercard and Visa accepted.
Add \$5.00 for shipping and handling.

WE COULD SHOW THE OLD WOMAN WHAT TO DO WITH THE SHOE.

INVESTOR III™ makes rhyme and reason out of real estate investing.

Now you can maximize your real estate profits and avoid questionable ventures with the help of Investor III™.

Investor III™ was conceived and developed by a real estate company. So it's practical and comprehensive. Ready to meet the needs of the average investor or professional user with capabilities like pro-forma, "what-if" analysis, cash flow before and after taxes, depreciation and more.

Yet Investor III™ is as simple as Mother Goose — you can learn to use it in less than one hour.

So whether you're looking at a multi-million-dollar high rise or a cozy rent house with some unique qualities, Investor III™ can help you determine the wisdom — and profitability — of your choice.

Write or call for more details today. Investor III™...for investments that fit. And that's no fairy tale.

Good Software is proud to announce an easy-to-use amortization package — the Amortizer III™.

A Division of The Goodman Group, Inc.
12900 Preston Rd., Dallas, Texas 75230 (214) 239-6085
Compatible with Radio Shack TRS-80 and IBM PC.
Investor III™: \$249.00 plus \$5 shipping and handling.
Amortizer III™: \$49.95 plus \$5 shipping and handling.
American Express, MasterCard and Visa accepted.
Dealer inquiries invited.

Making dollars and sense out of information.

CONVERT MOD III BASIC TO MOD 4

Good News! The Model 4 is twice as fast as the Model III.

Bad News! Model III disk BASIC programs only run at half speed on the Model 4.

Best News! "CONV3TO4" will automate many of the changes required to convert Model III BASIC programs to Model 4 BASIC. Your Model III BASIC programs will run twice as fast as they do now, and your manual conversion efforts will be vastly reduced.

In minutes this powerful utility can insert all required spaces, recalculate PRINT@ addresses, adjust TAB () addresses, insert correct exponentiation symbols, and flag and list unresolved line numbers.

Other options enable your programs to run even faster - remove REM's, comments, down arrows, and unnecessary spaces.

Or, format your programs and make them easier to read and debug - insert down arrows and indent between multiple instructions, IF, THEN, and ELSE statements.

I agree. It's foolish to run my Model III disk BASIC programs at half speed on the Model 4. Send me "CONV3TO4" today! Enclosed is my check/money order for \$49.95 plus \$2.00 for shipping/handling (N.J. res. add 6% sales tax).

BUGS From Outer Space

BY ROGER SMITH

PRESS <CLEAR> TO PLAY

Part II of 80's arcade hunt for alien insects.

Editor's note: "Bugs from Outer Space" is a six-part tutorial on writing machine-language games for the Models I and III. Each installment represents a self-contained component (or components) of the final game. The first installment appeared in March 1984 and the last will appear in August's annual games issue.

Some last-minute improvements in the main program left March's and this month's listings (MAIN1 and MAIN2) without an execution address, causing a system reboot at startup. To fix this bug, change line 02570 from END to END (tab) ENTRY.

(All photos by Suzanne Torsheya.)

The Key Box
Models I and III
16K RAM
Assembly Language
Editor/Assembler

While you've been admiring the introductory and title screens (March 1984, p. 82), the deadly bugs from outer space have been getting closer. You'd better add two more modules to your machine-language arcade game: displaying the score and building your mobile laser base.

Knowing the Score

The first subroutine in Program Listing 1 (TEXT2A) displays the current score and the record high score. The game stores both scores in binary coded decimal (BCD) format, where each byte contains two decimal digits; the score display routine shows the value the HL register points to at the video location to which DE points. The value appears as 3 BCD bytes, allowing six-figure scores.

The subroutine that increments the score (INCSCR) adds the BCD values indicated by DE and HL. The program stores the current score and the high score in 4 bytes, the last of which stores any under- or overflow from the INCSCR subroutine.

Listing 1 also contains a number of important tables, used mostly by routines in later versions of the game. The Base table stores the location of the game's mobile laser base, and the Bombs

table stores the locations of the bugs' artillery. BUG1, BUG2, and BUG3 are tables that store the locations and direction codes for the bugs themselves.

Another table, INIT, contains the initial values for PARAMS, itself a table that stores several 1-byte parameters that various parts of the program use. The main program moves the INIT values to PARAMS before each game, and initializes IX to point to the PARAMS table. This lets the program address any byte within the table as an offset from the IX pointer.

Moving and Shooting

MBASE, the first routine in Program Listing 2 (TEXT2B), moves your laser base left and right. Two bytes in the parameter table control how often the program actually executes the routine.

One of the bytes is set by a counter (labeled One in the program) whose value the program decrements each time it calls MBASE. If the counter holds a number other than zero, the game returns to the main program; if it stores a zero, the program resets the counter to a constant value—this is the second byte in the parameter table that controls how often the program executes MBASE.

Photo 1 (left). Results of last month's Bugs program: the title screen. Photo 2 (above). Time-lapse exposure of shots fired from the laser cannon; the cannon actually shoots just one bullet at a time.

When the counter reaches zero and it's reset, the MBASE routine continues execution by checking to see whether you've pressed the left- and right-arrow keys. If you press either arrow (but not both), the program tests the left arrow. If you happen to be pressing the left arrow, the program sets DE to 1. Otherwise, it sets DE to -1.

BASEM moves the base in the direction that DE indicates, and erases the base and updates its position. After a check to keep from running off the edge of the screen, the program redraws the base at its new location.

While Bugs gives you unlimited ammunition, it takes some time to reload the laser; BASEX, the routine that fires your laser cannon, allows only one shot on the screen at a time and returns to the main program if a shot is present. A counter forces a slight delay between shots.

If no shot appears on screen and you press the space bar, BASEX sets flags for the shot-fired sound and between-shots delay. Subtracting 63 from the base location yields the shot location, directly above the top of the base. The TEMPW routine stores the location and the Shot routine stores the next shot location.

Program Listing 1. TEXT2A, score display subroutine and tables.

```

Listing 1 continued

Photo 3. Screen shot of the final game. A spider bug rains deadly bombs while star and saucer bugs hover threateningly. Note the current and high scores at the top left and top center of the screen, respectively.

SOUND1 generates the sound of your shot, testing the shot-fired flag and returning if the flag is zero. Otherwise, it decrements the flag and calls SOUNDX.

SOUNDX, introduced last month, generates the sound of a shot through the cassette port. It requires that the Introduction subroutine initialize A' to 1 or 3. SOUNDX swaps A' and A, sending the former to the cassette port. Then the program toggles the lower 2 bits of A' (which control the cassette output line voltage) and restores A.

Once your shot leaves the cannon, the MSHOT routine takes over, erasing and relocating the shot until it leaves the screen. If you hit something (to be precise, if the screen location under the shot contains something other than a blank), the TEST7 subroutine searches the bug tables to see whether you've hit any bugs. If so, it adds the bug's location to the explosion table, determines its value, and updates and displays the score.

Elsewhere in Listing 2, the SCRTAB routine stores the score values (in BCD) for each of the three bug types. ATKSCR stores the values for attacking bugs, and Ships records the number of bases left.

MINUS1 is a constant, also in BCD, representing a value of -1. EXPLOD is a subroutine that adds the address in DE to the explosion table, and EXPTAB stores the addresses and durations of explosions.

You don't need to type it in; just change last month's MAIN1 source code to match it. If you entered all the comment lines of that listing, all you do is remove some of the semicolons.

Assemble all the listings, then load all the object code files, including last month's TEXT1 module (but not MAIN1; each month's main program replaces all earlier versions). Then execute the assembled main program to begin Bugs.

After the introduction and title screens, press the clear key and the screen will "melt" as before. Then your base appears at the bottom of the screen, with the current score and high score at either end of the top of the screen.

You can use the left- and right-arrow keys to move the base, and the space bar to fire a shot. Everything will move quickly because you haven't yet added the other routines.

You've finished just in time. The bugs from outer space have entered the galaxy, and should be here by this time next month. ■

Contact Roger Smith at 267 Seminole Trail, Crestview, FL 32536.

So Far, So Good

Program Listing 3 (MAIN2) is the second version of the main program.

SOFTWARE PRICE WAR

\$19.95

These are complete software systems supplied to you on a **TRSDOS 1.3** system diskette. All systems fully menu driven — user friendly just insert diskettes, reset and go. Systems are supplied with full documentation (although most users report that they don't read it).

Easy backup from main menu.

This is a sample of my mail

"Your PAYROLL program is great — I use it for all my accounts — it's quite a time saver." Hampton, NJ

"I received your PAYROLL program yesterday and was impressed by it. Hence I am enclosing a Cashier's check for..." Jacksonville Beach, FL

"A friend showed off his possession of your check register system to me and I want a copy for my personal use." Bloomington, IL

"We have received the first two programs and have found them to be quite sophisticated and are anxious to try another. Please accept my order for..."

Durango, CO

All systems are written for Model III or Model IV in Model III Mode.

LYNN'S PAYROLL SYSTEM

Complete record keeping & payroll calculation. To include your state's unemployment tax & forms, detailed 941 form, prints paychecks & W-2's.

Accounting write-up version available.

LYNN'S ACCOUNTS RECEIVABLE SYSTEM

Single entry — open invoice system. Prints invoice and statements. Built in aging report.

LYNN'S CHECK REGISTER SYSTEM

Prints checks. Register for any month, reconciliation statement.

1,000 checks per month— 220 expense accounts.

LYNN'S TRSDOS UTILITY PROGRAMS

For TRSDOS 1.3 includes short directory (file names only), cursor directory (allows cursor access to CMD, BASIC, and "DO" Files), and a 2K Print Spooler. Menu installs utilities on existing TRSDOS Diskettes.

LYNN'S E-Z MAIL SYSTEM

Sort by name, zip code, state. 2,500 names. E-Z edit.

AND NOW THE BEST PART

ANY SYSTEM ONLY \$19.95 EACH.

Plus \$3.00 shipping per order. (add \$1.65 for C.O.D.) Ill. residents add 6¼% sales tax. (The **TRSDOS** alone is worth **\$14.95**)

Joe Lynn

The PRODUCER

The Professional Program Writer.

59

Sensational Software Breakthrough

What has your computer done for you lately? You bought it to be a powerful and time saving tool. But if lack of good software keeps you frustrated and makes your computer an expensive and idle gadget, The PRODUCER is here to solve your problem.

Now you can design and produce professional quality programs that meet your exact specifications and you don't even need to understand programming at all.

What exactly is The PRODUCER?

The PRODUCER is a program development system that writes software. If you have a need to store and retrieve information, perform calculations on your data, and get displayed and printed reports, you can design the exact format you need and The PRODUCER will write that program for you. In short, it is the most simple, practical, and versatile program generator ever put on the market.

What can The PRODUCER do for you?

■ **The PRODUCER makes programming easy.** If you can answer simple English questions and push buttons, it will do all the hard work for you. It helps you conceptualize your program, gives you complete freedom in drawing your screen, lets you edit until you are satisfied, and then writes all the BASIC code for you to produce a stand alone finished program.

■ **The PRODUCER can save you hundreds of hours of time.** Why labor over hammering out BASIC code when you don't have to? It provides a short cut for you to go directly from your custom idea to a finished program. Many professional programmers are now using the PRODUCER to quickly write programs for sale. You can do that too. Why spend weeks looking for programs to do what you need? Why struggle with the complex task of writing them yourself? Let The PRODUCER go to work for you and give you exactly the programs you want.

■ **The PRODUCER can save you big bucks.** How many data storage programs do you own? How much did you pay for them? It's likely The PRODUCER could have written all of them. With The PRODUCER, you may never again need to buy such programs. Add to that the advantage of having customized programs, the ability to edit them at will to suit your changing needs, and your ability to sell the programs The PRODUCER writes for you. That is really a big dollar savings that continues to grow and grow.

■ **The PRODUCER makes you more productive.** Of course you will save time that can better be spent doing other things. But your creativity also will be unleashed. With The PRODUCER as your partner, your computer will at last become the valuable tool you bought it to be. And you will get much more accomplished.

■ **The PRODUCER can turn you into a professional.** It writes complete, stand alone programs that you, as a licensed PRODUCER owner, can sell without paying royalties. And if you already are a pro, it can make you more of one. The PRODUCER writes fully commented BASIC code so you can use it as a building block to customize your own specialized software. The PRODUCER has the best screen and input module available anywhere at any price.

"The PRODUCER is a very impressive software package. It is well worth the money. While other micro owners are printing mailing labels, I am now selling them programs to use. I now have more time to spend enjoying my computer."

V. E. Ryberg, Bloomington, Illinois

How Do You Learn to Use The PRODUCER?

We recognize that most people learn best by hearing and doing, rather than through reading alone. That's why we have included a complete audio cassette tutorial as part of The PRODUCER TRS-80 Model I & Model III versions. One of your fellow PRODUCER users talks you through the step by step lessons. The tapes not only teach you the process, they enable you to create a complete program of your own design while you learn.

Of course the program documentation of over 200 pages is a very thorough and readable reference manual to answer any questions you may have. But we encourage you to treat it as a reference manual only. We have provided the tutorial as a quick and easy way to get started. That's an advantage seldom provided by any software package.

"The tutorial was an excellent starter. It enabled me to get on with it without days and days of reading. Very helpful."

S. R. Foster, Pensacola, Florida

Continued

WHAT DO YOU GET WITH THE PRODUCER?

This impressive package includes:

DISKETTE(s) containing PRODUCER Program Development System.

REFERENCE MANUAL of over 200 pages of extensive, easy to read, well organized material. Attractive hardback 3-ring binder. Color-keyed index tabs separate the chapters. Comprehensive alphabetical index refers to specific chapter subsections.

QUICK REFERENCE CARD

OWNER REGISTRATION CARD

TUTORIAL SESSION including audio cassettes and detailed follow-along outline, written and produced by a fellow user.

HOME INVENTORY MANAGEMENT program: (\$60 value) included free as a sample, allowing you to use a finished program immediately.

ONE YEAR SUBSCRIPTION to The PRODUCER newsletter.

TECHNICAL ASSISTANCE, available by phone only to registered PRODUCER owners.

59

HOW THE PRODUCER WORKS

You will be impressed with the ease of operation and the amazing versatility of features you get with The PRODUCER. The documentation is thorough, the screens are clear and readable (see at right) and with the help of the audio cassette tutorial, you will move quickly through the steps outlined below and be turning out finished programs in no time.

Steps in Developing a Program

■ Planning:

The PRODUCER provides a helpful planning form that you can print on your own printer. It helps organize your thoughts in creating a tailor made program to meet your needs.

■ Screen Creation:

The PRODUCER gives you complete freedom to create a screen for your monitor on which you will enter data for your program. To create the screen, you follow these six simple steps:

1. **Draw the Screen** using arrow keys to form the configuration you desire. Enter large graphic letters and borders with a single key stroke. Store up to nine trial screens as you experiment. Edit at will until you are satisfied.
2. **Define Message Areas** on your screen by selecting where The PRODUCER's messages to you will appear.
3. **Define Input Fields** by answering The PRODUCER's questions about where you want to enter data. You specify the length of each area or field as well as the acceptable characters in each field.
4. **Define Display Fields** by selecting any area of the screen where you want to show the results of calculations done on your data.
5. **Define Custom Prompts** by selecting an area where help messages to yourself may be displayed.
6. **Save Your Results** by assigning a working name for your program and saving it to disk.

■ Editing Data:

The PRODUCER allows you to edit any part of the program you have created: screen field names, lengths, prompt areas, etc. You may type in any help message as a custom prompt to help you operate the program. Calculations can be created easily, using actual field names. And you can use the contents of any numeric field and all math operations including logical operators.

■ Making BASIC Code:

Press a key and sit back to watch The PRODUCER do all the work of creating BASIC code for your program. The program lines will appear on your screen and complete error checking is done for you.

■ Building Reports:

With the amazing new Freeform Report Generator, virtually any report is available to you. It works with any size paper. You are allowed up to 100 calculations within the report. And you can specify the exact position of any text information to any position on your paper (even preprinted forms, checks, etc.). It's an amazingly versatile tool.

■ Building the Program:

Put the finishing touches on your program by selecting cursor type, size, flashing speed, auto messages, custom logos, etc. After you make your selections, press a key and your entire finished program is created in less than five minutes. That's all there is to this remarkably simple program generation process.

What Kinds of Programs Can Be Written?

Just let your imagination run wild. Here are just a few we've heard about: Home Inventory, Checkbook Balancer, Teacher's Gradebook, Loan Calculator, Small Business Payroll, Book/Record/Video Library Catalog, Membership/Mailing List, Photo File System, Writer's Notebook, Amway Distributor's Inventory, Sales Call Log, Commodities Market Tracker, Small Business Inventory, Student Notebook, Auto Maintenance Record, etc.

TECHNICAL INFORMATION

The PRODUCER provides many advanced features which allow you to do "magic" with the programs you create. We invite you to compare its features with any product on the market.

The SCREEN GENERATOR

- *Use the full screen (all lines and column positions)
- *Create a professional well organized screen with graphics
- *Save up to 9 separate screens in memory at one time and get instant access to each
- *Move the cursor to any location on the screen
- *Repeat bars/lines/graphics to define certain screen areas
- *Access an instantly available Help Menu of all Screen Editor commands
- *Insert and delete any character with a single keystroke
- *Clear or erase selected areas of any screen
- *Insert and delete whole lines on the screen
- *Center any text on the screen
- *Move any rectangular block of text anywhere on the screen (block move)
- *Create titles with a single keystroke large graphic letter alphabet
- *Move portions of screens between different screens (cut and paste)
- *Save any number of screens to disk at any time
- *Re-call any screen from disk any time
- *Create BASIC lines to re-create any screen

FILE and RECORD HANDLING

- *Rapidly access records with BTREE File structure
- *Search for a record with only the first few letters of the name or key (partial key) (Example: locate PRODUCER by typing PR)
- *Recall and edit duplicate and multiple keys (Example: Several last names may be the same on a file and you can find and edit them individually)
- *Fully edit any part of a previously entered record
- *Recover unused space automatically upon deletion of a record
- *Enter data very fast with the special batch mode
- *Repeat immediately any record after it's been entered, eliminating time consuming sorting and indexing
- *Rapidly access any record anytime (2-4 seconds average)
- *Globally search and replace data in certain fields in selected record range
- *Automatically rebuild any file to meet new specifications. No need to re-enter data when a file needs to be restructured.
- *Balance any BTREE file automatically to reorganize and speed up file access time
- *Recover from power failure and easily rebuild files that have been damaged. Avoid laborious re-entry of long data files

**SCREEN ORIENTED INPUT
and EDITING of DATA**

- *Insert and delete characters at any position in any field. No "back to start" retyping of data
- *Move forward or back to previously entered fields to edit using the arrow keys. Totally non-destructive cursor. Does not require re-entering of each data field
- *Move within any field using the arrow keys
- *Move instantly to any field with Control G command
- *Exit from input/edit mode at any point allowing immediate escape from data entry mode. Allows partial information to be entered for each record without the annoying, time consuming need to press ENTER for each blank field not used at the time of entry
- *Duplicate field information from a previous record with one keystroke. No need to re-enter duplicate information, addresses, etc on consecutive records
- *View a custom prompt, your own custom reminder or help message for each field with 1 keystroke
- *Erase each character typed automatically
- *Enter data as fast as you want, even if you are a speed typist
- *View visible display of automatic field length restrictions
- *View prompts for each field showing number of characters allowed

PRINTED REPORTS

- *Create up to 9 separate reports at a time in a finished program
- *Generate any number of reports you want (no limit)
- *Select reports by name from a report menu in the program
- *Select from six different automatic report formats including custom mailing labels
- *Instantly print reports by key with no time consuming sort necessary
- *Sort and print any other (non key) field with the fast machine language sort
- *Sort only records that meet your search criteria
- *Sort on more than one field if desired
- *Use any restrictions or search criteria to determine which records will be included in a report
- *Use any number of multiple search criteria (including logical) (Example: You can search for all the males who are single, and drive a car that are over 24 years old but less than 35 years old)
- *Send any special command to your printer before or after any report
- *Specify any line length needed and any page length desired
- *Select single line or multiple lines per record, even one page per record
- *Total any fields during the report (running totals)

ADVANCED CALCULATIONS

- *Globally recalculate any field in any or all records. (Example: If file is a list of gold assets and the spot price changes, each separate asset may be recalculated with a new value for the spot price)
- *Use all math operations including exponentiation and trigonometry
- *Use logical calculations such as And, Or, Not, etc.
- *Use any level of parenthesis in calculation formulas
- *Save results in any field and display results in any field
- *Store temporary results in several extra memory slots
- *Pass calculation results between records
- *Determine the exact order of calculations
- *Display or save results at your option in the finished record

OTHER ADVANCED FEATURES

- *Edit any part of any program without starting over or redefining the entire program
- *Create screen and input modules only (for professional programmers)
- *Create Calculate-only programs with the easy desk-top super calculator program
- *Design custom logos for your program
- *Control cursor type, size, flash speed, etc.
- *Design custom prompts or help info for any field

FREEFORM REPORT GENERATOR

Formerly a PRODUCER option, now part of the standard package. An amazingly versatile data processing tool, far surpassing other products on the market.

- *Specify column and row of every heading and field
- *Allow up to 100 of interfield calculations, even string calculations
- *Include any text anywhere on the screen
- *Keep sub-totals on any field and print at any time in any format
- *Format any numeric fields anyway you wish
- *Print reports on pre-printed forms, checks, etc.
- *Create form letters with merged field data, with no word processing necessary
- *Put any field anywhere on the page. No limitations

The
PRODUCER

WHAT ARE PRODUCER USERS SAYING?

We get comments by phone every day from satisfied users who are excited about what The PRODUCER has done for them. Here is a sampling of what we are hearing.

"How did I ever live without it." This often heard quote comes from experienced programmers who are now using The PRODUCER to generate programs in a fraction of the time it previously took to code a program.

"This program has paid for itself over and over." People tell us this repeatedly. First time users of computers have been able to successfully generate professional quality programs with The PRODUCER that rival the capabilities of commercial applications.

"There are only two things you need to say about The PRODUCER: it's easy to use and it's powerful!" The woman who told us this had used several computers before but had no programming experience. Now she is saving time, money and effort by creating the programs she needs for her office.

"Owning The PRODUCER is like having a professional programmer on call--24 hours a day. I particularly like the fact that if I design a program to do a specific job today, and later discover it is inadequate to my changing needs, I can regenerate the program with corrections in a matter of minutes." That's right. The PRODUCER gives you the ability to edit or expand your programs in any way you choose.

"The screen generator alone is worth the price! I created a professional data entry screen in minutes just after opening the package." With our screen generator, you are the artist and you are never locked into what someone else has designed for you.

"The Freeform Report Generator is an amazing feature. I never thought a product like this could give me the ability to get reports on my preprinted forms, but The Producer does it all." Yes, you can put the text anywhere on the page you want, do up to 100 interfield calculations, etc. etc. And the Freeform is now a part of The PRODUCER package.

OTHER QUOTES FROM PRODUCER USERS

"The PRODUCER package I received was excellent. The finest software package I have ever purchased. Far beyond my expectations."
S.R. Foster, Pensacola, Florida

"I'm in love with The PRODUCER. It's one of my favorite programs."
R. Selsback, Burlingame, California

"The value of the deal, everything included, was the best I've seen to date."
G. Slusher, Martin, Kentucky

"Excellent! Above and beyond other software."
R. Hapgood, Henrietta, Texas

VERSATILITY

"The PRODUCER is the best all purpose program generator I have used. (We have tried almost all of them.) The generated code is bug free, well commented and efficient."
R.A. Copella, Northbrook, Illinois

"This is by far my number one software and I will use it anywhere and everywhere I possibly can, both personal and in business."
R.A. Neuman, Okemos, Michigan

DOCUMENTATION

"Very well laid out and organized. One of the best I've seen."

J.D. Konkler, Columbus, Ohio

"One of the best I've seen. We write about 20 volumes of material per year. Take it from a pro, it's good."

J. Crespi, Sherman Oaks, California

QUALITY

"Thank you for an excellent program. I agree that The PRODUCER will change the entire concept of program creation in the future. But for now, you stand as the best data base management system I can buy."

E. Sung, Vancouver, B.C.

"I think The PRODUCER will make the software hackers upgrade their products to this high level quality of the PRODUCER. I'm sure you realize that there is a lot of garbage on the market."

D.J. Smith, Lombard, Illinois

PRODUCER PROGRAMS RUN BY THEMSELVES

PRODUCER created programs are stand alone, Microsoft BASIC programs which do not require The PRODUCER to run, once completed. They can be LISTed and modified. You might even learn to program by careful examination of the LISTings--but you really don't need to know anything about programming to create and run your own custom generated software with The PRODUCER.

CRAYON DELUXE & SCRIPTR — 1/3 OFF SALE !!!

The word processor of the future is here today and at an affordable price! **Crayon Deluxe** is a complete Bit-Image word/graphics processor which creates stunning visual effects using custom text and graphics. No matter which word processing system you now use, **Crayon Deluxe 2.0** does all the things your word processor can't! (*Deluxe Version 1.0 while they last - \$40.00 with 2 Fonts!*)

- Specialty Fonts & Shapes
- Standard Text Processing
- Just... Block Moves & Word Wrap
- Prints All Foreign Languages
- 18K Full Screen Editor (Z-80)
- Full & : Page Scrolling
- Superb Manual W/Examples
- 18K Font Design Utility (Z-80)
- Custom Logos (Newsprint)
- Cartoons & Basic Screens
- Programmable Centering
- No Wait Printing! (logic seeking)
- 24,000 Character Library
- True Mirror Images
- Easy To Learn & Use
- Super Fast Text Entry
- Multiple Mail Labels
- Hang. Indents, Bibl. & Outlines
- Prints as Shown On Screen
- Line Drawing Graphics
- 19 User Def Chars 1 Keystroke
- Automatic Wide Entry Mode
- 3 User Selectable Underlines
- Business Forms & Graphs
- Draws Angles, Patterns & Lines
- Inversions Mid-Line
- Chars. To 40 x 127 Dots
- Custom Borders & Graphics
- 3 Programmable Tab Lines
- Tone Beeps & Signals
- 3 User Selectable Overlays
- Sub & Superscripting

AVAILABLE FOR ALL MX + FX printers with **Graphtrax** - All PROWRITER and 8510A and NEC 8023 and All GEMINI 10 + 15. Comes with 130 page loose leaf manual, Fontmaker Utility, 5 fonts (1500 characters). **PRICE = \$150.00 \$99.00 Disk Mod 1,3,4. + \$4 Ship. & Hand.**

Brush	Heritage	Digital	Outline	Borders	Shapes
RST 	ABCDEF abc 	ABCDEF ABCDEF BSU 	def ef 		

Scriptr - Turns **Scriptsit** into a full word processing system by providing complete printer support for the following printers MX 80 + FX 80 - LP-4 + 8 - DMP 200 + 400 - DW2 - PROWRITER - CIOTH 8510A - GEMINI - MICROLINE - FEATURES on most versions include Emphasized, Double Strike, access all available typesstyles, change character widths, sub and super script, pausing, dot linespacing changes, Editing, Macro's, DOS Reentry, Send any Code to printer, Supports (ALL **Graphtrax** Functions, — most **Mid-Line**), **DIAL-A-PRINT**, Form letters, Print to video only for trial pagination and much much more. Available with versions for **Models 1,3,4 on DISK/CASSETTE for \$40.00** with teaching programs and a 66 page manual. (*Print samples available on request*)

REDEVELOPMENT PROGRAM

Here's a simple utility that converts Model III Basic programs to Model 4 format and pinpoints potential trouble spots, too.

Converting Model III Basic programs to run on your Model 4 can be tedious; the most time-consuming process is inserting spaces to delimit Basic keywords. I wrote a handy utility, Convert, that does the work for you. Convert not only delimits Basic keywords with spaces, it also cross-references and lists all errors and potential errors in the converted program (see the Program Listing).

Using Convert

You can easily assemble Convert with an editor/assembler. Because of the program's length, you should carefully check your work for typographical errors. Once you're sure no errors exist, make copies of the source and object codes. Produce a copy of the object code on a TRSDOS 6.0 disk and name it Convert.

In Basic format, save any program you want to convert (SAVE "MYPROG"). Once saved, move it to a TRSDOS 6.0 disk that contains the Convert program. If your Model III program is on a TRSDOS 1.3 disk, you can move it with the TRSDOS 6.0 CONV command. If saved on an LDOS 5.1 disk, you can move it with the TRSDOS 6.0 Copy command. Once you successfully move the program, you're ready to use Convert to generate Model 4 Basic code.

At TRSDOS Ready, type in CONVERT MYPROG. Convert automati-

cally saves the converted program to the same name and sends a cross-referenced list to the video display. If you type in CONVERT MYPROG (P=Y), Convert translates the program MYPROG and sends a cross-referenced listing to the printer. Typing CONVERT MYPROG (X=N) converts the program MYPROG with no cross-referenced list or printout.

Error Cross-Referencing

The Figure illustrates a typical cross-referenced list. The first column indicates a command-word error. The second column indicates whether the error is fatal (*) or potential (?). Line numbers in which there are errors appear adjacent to the appropriate command error. If a line appears more than once in a row, that line has multiple errors.

Command	Model III Basic	Model 4 Basic
Clear	Erases all variables and reserves string space	Erases all variables and reserves high memory
CLOAD	Loads a Basic program from the cassette recorder	Does not support cassette operations
CMD	Provides miscellaneous routines	Does not recognize
CSAVE	Saves a Basic program on the cassette recorder	Does not support cassette operations
ERR	Incompatible error codes	Incompatible error codes
Error	Incompatible error codes	Incompatible error codes
For	Loops once before checking validity of For...To values	Checks validity of For...To values before attempting to loop
If	Then is optional in an If...Then statement	Then is required in an If...Then statement
INP	Incompatible port assignments	Incompatible port assignments
Input	Can read data from the cassette recorder	Does not support cassette operations
Name	Various uses	Does not recognize
Out	Incompatible port assignments	Incompatible port assignments
PEEK	Incompatible memory map	Incompatible memory map
Point	Tests graphics pixel	Does not recognize
POKE	Incompatible memory map	Incompatible memory map
POS	64-by-16 screen format	80-by-24 screen format
Print	Can write data to the cassette recorder	Does not support cassette operations
Reset	64-by-16 screen format	80-by-24 screen format
Reset	Resets a graphics pixel	Does not recognize
Set	Sets a graphics pixel	Does not recognize
System	Loads machine-language object code files from the cassette recorder	Executes TRSDOS commands and returns to TRSDOS
USR	Can call a ROM routine	Incompatible memory map

Table. Model III and Model 4 commands compared.

The Key Box

Model 4
32K RAM
Assembly Language
Editor/Assembler

For example, in the Figure you see a potential error cited in line 00010 concerning the clear statement. Lines 00100, 00200, 00300, and 00400 all have fatal errors regarding the set statement, and line 00300 has two such errors.

The Table lists the command errors

the Convert program finds and explains their different meanings in Model III and Model 4 Basic. ■

Write to Mark D. Goodwin at Star Route 79, Box 103, Orland, ME 04472.

```
CLEAR ? 00010
SET * 00100 00200 00300 00300 00400
```

Figure. A sample cross-referenced list. Column one indicates command-word error, column two indicates a potential (?) or fatal (*) error, and the third column shows line numbers in which these errors appear.

Program Listing. Convert.

RUN

THESE COULD BE THE KEYS TO YOUR FUTURE

Unlock *all* the potential of your Commodore 64 and VIC-20* with RUN.

Explore... Experiment... Enjoy... Beginner and expert alike will be taken beyond the manual to the limits of their abilities. Enter your own game programs. Construct a simple hardware add-on. Broaden your scope with unique applications... And... get a 13th issue FREE!

Enjoy key features like these:

- Games for fun & strategy.
- Programming tips help you learn short cuts.
- Candid reviews help you make money-saving decisions.
- Programs to add to your library.
- Instructions & tutorials to increase your skills.
- Hardware & software modifications help your machine work smart.
- Unique applications broaden your scope.

Here's a system-specific magazine written with you in mind. Written by and for the reader to give time-saving, money-saving hints. You'll get instructions and tutorials to increase your skills, and candid reviews to help you make the right decisions. Most of all though, you'll have fun.

Commodore 64 and VIC-20 owners are one of the largest groups of computerists today. Enjoy the benefits of this with your own magazine. Be in control like never before. Order RUN today and get a 13th issue free with your prepaid order (check or credit card) of only \$19.97. Send in the coupon or call toll free 1-800-258-5473. In N.H. call 1-924-9471.

Send me a subscription to RUN for the regular subscription price of only \$19.97 per year. I understand that with payment enclosed or credit card order I will receive a FREE issue making a total of 13 issues for \$19.97.

MISOSYS

PRO-fessional Software for Model 4

PRO-CESS: A maintenance tool for CMD files. Allows you to append 2 or more files, reorganize, and offset. Extract LIB members. \$40

PRO-CREATE: editor and assembler gives nested MACROS, includes, and conditionals. A powerful tool that is easy to use. \$100

PRO-CURE: Transfer files to DOS 6.x from selected CP/M media. Supports Xerox, IBM, Kaypro, Lobo, Osborn, etc. formats. \$50

PRO-DUCE: Disassemble directly from disk files or memory. Source output generates 100% labels and handles data. \$40

PRO-GENY: A 4-function utility package loaded with power: DOCONFIG; MEMDIR; PARMDIR; and SWAP. A must for JCL users. \$40

PRO-HELP: On-line reference card at your fingertips. Screens for DOS and BASIC. Create your own custom HELP files, too. \$25

PRO-LC: This is our C-language compiler now compatible with DOS 6.x. Includes the PRO-CREATE macro-assembler package. \$150

PRO-MACH2: Provides total user control over DOS allocation of file space. Includes MAPPER, ALLOC, CALC, and HANDY. \$40

PRO-PaDS: A utility to build and maintain partitioned data sets. Collect small programs into one and save disk space. \$40

PRO-ZCAT: A menu-driven diskette catalog program. Handles 255 disks and up to 2226 files per catalog file. Fast! \$30

PRO-ZGRAPH: A pixel-graphics screen editor used to create screen images for BASIC, ASM programs, or printing. \$50

THE PROGRAMMER'S GUIDE TO TRSDOS VERSION 6, by Roy Soltoff is the definitive answer to interfacing the DOS. Six chapters and Appendix with three complete filters in ASM source. \$20

U.S. Shipping: PRO-LC, \$5; PRO-CREATE, \$4; All others \$2. COD add \$1.50. VA add 4%. VISA/MC.

DISnDATA

Only
The Disassembler That Even
Tracks Down DATA!!!

- Outputs: instead of the meaningless "equivalent".
" H37F7 DEFM 'Cass?' " AB25 LD B,E
DEFB 03H " LD H,C
LD (HL),E
LD (HL),E
CCF
JR NZ,\$+5 ", etc.

- **AUTOMATICALLY** identifies such data areas.
- Outputs fully-labeled Radio Shack or APPARAT EDTASM-format code to display, printer, cassette, or disk (Printer output fully paginated.)
- Relocates itself to any desired RAM area, up or down by as little as one byte or as many as required.
- Loads programs from cassette or disk and displays entry points.
- Runs on TRS-80 Model I (Level II), Model III, or Model 4 (in Model III mode), 16K or more, cassette or disk.

#1354-12 (Model I/III cassette, Version 2) \$34.95
#1354-22 (Model III/4 diskette, TRSDOS format, Version 2) \$39.95

* Registered Trademark, Tandy Corp ** Registered Trademark, APPARAT, Inc

REPLiCAS

- Copies virtually all formats of cassette files!!!
- **AUTOMATICALLY** senses input cassette density!!! (Model III)
- Allows Mod. III user selection of output density, each file.

#1366-10 (Model I/III cassette) \$19.95

Professional Software for both Novice and Expert

To order, phone (513) 435-4480
(M-F, 9 a.m. - 5 p.m. EST), or

Omniterm Mod II	139.95
LNW Doubler 5/8 w Dos +	194.95
LNW Doubler 5/8 w/o Dos	159.95
LNW System Expansion II	329.95
SBSG Accounting Modules Model 1 or 3	175.00
Model 2	250.00

SPECIAL — Verbatim disks

5" SS/DD	\$23.75
5" DS/DD	\$35.75

TALLYMASTER

Designed to help those running a business or household. It is easier to learn than most spreadsheet programs and includes complete documentation and an on-line HELP command. Handles up to 702 expense or income categories. (By Prosoft, requires 48K, 1 disk drive)

\$64.95

T80-FS1 FLIGHT SIMULATOR

The realism of "out-the-window" flight is yours with this challenging simulation by SubLOGIC. It is written in machine language and is capable of a 3 to 6 frame per second display. Flight characteristics are similar to the Piper Super Club. Outperforms other simulators costing over \$100,000.

Model 1 or 3 Tape Version — \$22.50
Model 1 or 3 Enhanced Disk — \$29.50

WORD PROCESSING

Lazy Writer 3.4	139.95
LeScript	109.95
Zorloff II	58.95

NewScript

Newscript 7.1	99.95
Newscript 7.1 plus Labels	114.95
Newscript DW Proportional	39.95
Newscript File Converter	19.95

Electric Webster + Corrections	119.50
Elec. Webster Grammar	39.95
Elec. Webster Hyphenation	39.95

—SAVE AN ADDITIONAL \$35.00—

When you purchase your US Robotics modem from AMI we will give you an Omniterm Mod 1/3 at \$35 off the retail price—**\$65.00**

OMNITERM

The best "smart" terminal package available for the Model I/III. It's menu driven and includes a text editor, four conversion utilities, and setting files to access all of the popular data bases such as CompuServ, the Source, Dow Jones, etc. User defined keys and automatic reformatting of data to the size of your screen are only two of many extra features.

\$79.95

LNW80 II COMPUTER

System complete with monitor and 2 disk drives. Includes DOSPLUS 3.5 and CP/M 2.2. It's ready to run!

\$1,995.00

- Free Shipping on Orders over \$100
- Toll Free Order Line
- 24-Hour Shipping for Items in Stock
- Friendly, Honest, Reliable Service
- Free Use of Credit Cards
- Large Selection-Call for Items Not Listed

We accept Visa, Master Card, check, cash, money orders, and COD. In the 48 continental States add \$2.50 for UPS standard shipping, we'll pay shipping if your order is over \$100. Alaska and Hawaii orders are charged actual shipping charges. COD orders are charged an extra \$2.00 and require cash or certified check on delivery. POs accepted upon approval.

When ordering by mail, include your telephone number, credit card information, computer model, memory size, and number of drives. Colorado residents add appropriate sales tax (6½% in Denver).

Prices are subject to change without notice.

ENTER HERE

This machine-language program eliminates unnecessary string data entry delays.

Perhaps the weakest link in Basic applications programs is the input of string information from the keyboard. This can be especially troubling when the program limits input string length.

For example, suppose a program requires that you input your name, address, and telephone number. A commonly used technique for entering such string data looks like this:

```
200 INPUT "ENTER FULL NAME,
ADDRESS, AND PHONE";NM$
210 IF LEN(NM$)>25 THEN PRINT "ENTRY
TOO LONG":GOTO 20
```

This method could more than double the time normally required to enter the information; you either have to count an item's characters before entering them, or enter the item and face the possibility of having to reenter it.

I decided to devise a better input format. I wrote a Model I/III technique called STRINPUT/CMD that offers the following features:

- The screen continuously displays the information already entered, and how much of the allotted entry space remains;
- You can continuously alter or totally retype input information before you press the enter key;

- All keyboard entries are permitted, including the use of commas and semicolons; and

- It is flexible enough to use in a wide variety of situations, anywhere on the screen.

STRINPUT Operation

STRINPUT (see Program Listing 1) is a stand-alone machine-language program that loads into low memory and relocates its working module to the highest available RAM location. STRINPUT honors all user programs loaded into high memory that reset the high-memory indicators stored at 4049 to 404A hexadecimal (hex) in the Model I or 4411 to 4412 hex in the Model III.

After relocating itself, STRINPUT sets the top of memory to 1 byte below the routine's entry point. STRINPUT's beginning location is important; it sets the Basic program's user call location. See the Figure for the definition of Model I/III user calls.

After you load STRINPUT into memory, it waits for a Basic program call. Once called, STRINPUT produces a line of graphics characters equal to the length of allowable input. The program displays these characters at the current

screen cursor location stored in Basic.

If you properly set STRINPUT's internal parameters, the program displays other graphics characters before and after the input area. The program then displays a flashing cursor at the beginning of the string area, and waits for you to enter information.

STRINPUT recognizes all text characters, including the up arrow and punctuation characters. The shift/zero (upper-/lowercase) toggle on the Model III and modified Model I performs as usual. In addition, STRINPUT recognizes three control characters: the left arrow, shift/left arrow, and enter keys.

Pressing the left-arrow key erases the last character typed. Pressing the shift/left-arrow keys erases all the currently typed information and resets the cursor to the beginning of the string input area. And pressing the enter key terminates input and returns control to the Basic calling program.

The program doesn't recognize the break or clear keys, the down-arrow key for line feed, or the right-arrow key for tab. It does, however, accept the up-arrow key as an exponentiation character—not as an upward line feed.

STRINPUT uses CHR\$(95) for the fill character indicating how much

GOD CREATED THE WORLD IN SIX DAYS THEN RESTED

... WE AT COSMOPOLITAN CONTINUE ...

We work round the clock to bring you the finest utility programs in the world.

MULTIDOS . . . The most compatible, user friendly operating system on the market. Easy to learn - easy to use. Most efficient Disk BASIC interpreter. Execute any DOS commands from BASIC. Dual dimension string sort. Includes BOSS to give you the ultimate debugging tool for BASIC programs. Automatically executes most commonly used LIB commands with one keystroke. Contains DDT, ZAP, Mem test utility, Minidos - these utilities and others do not require the use of high memory. Automatically reads single density, double density, Model I and Model III diskettes, and is compatible with all popular double density boards.
Price \$99.95

MULTIDOS MAX-80 . . . SUPERBASIC has grown again. Has an unpacker as well as a packer for BASIC programs. Dynamically changes string space without using variables. Unbelievably enhanced BOSS trace function displays instruction before it is executed. More shorthand commands. Complete LABEL support. Intelligent premature exit from FOR-NEXT loops. Has eleven additional key word commands. "Break" key as well as error trapping and still leaves the user with an incredible 42K bytes of free memory! MOD 4 BASIC PROGRAMMERS, EAT YOUR HEART OUT!
Introductory Price \$99.95

ZEUS - Our mighty Z-80 Editor Assembler

THE ZEUS EDITOR

- Displays a page of text with a single keystroke.
- Built in hex-decimal-label calculator.
- Reference lines by number or label.
- Checks each new line for validity when entered.
- Loads/saves source text in EDTASM, ASCII, and ZEUS formats.
- Single keystroke scrolling, reverse paging and forward paging.

**F
A
S
T**

THE ZEUS ASSEMBLER

- Assembly of source text from memory and/or disk source files.
- Multiple expressions on the same line with DB, DEFB, DM, DEFM, DW and DEFW pseudo-ops.
- Conditional assembly with IF, ENIF and IF NOT pseudo-ops.
- COMM pseudo-op for comment block on object file.
- 16 bit operations for Multiplication, Division, Addition, Subtraction, OR, Exclusive OR, AND, Left and Right shift, and Modulo (remainder of division).
- Pause and single step assembly listing.

ZEUS . . . Works with all popular DOS systems, a special version with added features available for MAX-80 MULTIDOS. Excellent assembly language development system.
Only \$79.95

EBASIC . . . Enhances Disk Basic with commands, that draw lines or boxes, or blocks, or cubes, or circles, with a single instruction. Creates wide ranges of sounds. Can fill screen with a specified byte in one instruction. Calculates expressions stored in a string. Formatted input. Labels Basic program lines. Simplifies reading data into an array with one statement. Set all array elements equal to any value. Multi key sort of unlimited arrays. Works with all popular DOS systems. Please specify DOS.
Price Only \$49.95

Z'DOS . . . and economical disk operating system for the TRS-80 Model I and III computers. Forty library commands. Model I version supports three densities, is read/write compatible with the popular DOS formats and double density boards. Has SUPERBASIC II with 41K of free memory, cross reference, renumber, and global editing. The Model III version is totally read/write/copy compatible with the Model I version.
Only \$39.95

BOSS/RENUM 90 . . . Best Of the Single Steppers. BOSS will single step BASIC programs, trace in a controlled area on the display, trace to the line printer, save the screen and display variables, control program execution speed, save BASIC programs to high RAM, and recognizes users inserted breakpoints to execute 1 of 7 functions. RENUM/90 will renumber all or part of your BASIC program.
BOSS/RENUM 90 (tape only) for \$24.95 or BOSS (disk only) \$15.95

**F

Continued from p. 107

room the Basic program allots to a particular string. CHR\$(149) is the beginning delimiter character, CHR\$(170) the ending delimiter character, and CHR\$(143) the blinking cursor. You can change these by POKEing the desired values into the locations set forth in the Table. The Table also lists the line numbers where you can make permanent character changes.

It should be noted that if you set the beginning delimiter character to zero, no delimiter is displayed and the string input area begins at the current Basic cursor location. Otherwise, the beginning delimiter is at the Basic cursor location, and the string input area begins at the next screen location.

After you've entered information using STRINPUT, the program returns control to the Basic calling program with a value equal to the start of the string's buffer location. The Basic program then translates the string information into a string.

Using STRINPUT

Call STRINPUT with the program statement Variable 1=USRn (Variable 2) if you want a line feed on return to Basic. If you don't want a line feed, use Variable 1=USRn (Variable 2);. The program should start at memory location Variable 1 and read the string into a string variable until it encounters a line feed/carriage return (CHR\$(13)). A simple subroutine will do the job.

Program Listing 2 (DEMO/BAS) provides several examples of how you can use STRINPUT. Lines 1000-1005 set the subroutine that does the program's hard work. If you don't need a line feed/carriage return, you should enter the subroutine at line 1001; otherwise, enter it at line 1000. Line 1003 reads the resulting string into TT\$ until it encounters CHR\$(13).

To use DEMO, initialize STRINPUT from DOS or with the tape System command. As noted above, the program resets the necessary memory pointers; just enter Basic and run the program.

DEMO also shows how you can use STRINPUT in applications involving entry of string information from the keyboard (lines 1100-1130). Included is

For disk systems:

Model I:

DEFUSRn = 256*PEEK(16458) + PEEK(15457) + 1

Model III:

DEFUSRn = 256*PEEK(17426) + PEEK(17425) + 1

For tape systems:

Model I:

100 U1 = PEEK(16457):U2 = PEEK(16458):U1 = U1 + 1:IFU1 =

256 THEN U2 = U2 + 1:U1 = 0

200 POKE16526,U1:POKE16527,U2

Model III:

100 U1 = PEEK(17425):U2 = PEEK(17426):U1 = U1 + 1:IFU1 =

256 THEN U2 = U2 + 1:U1 = 0

200 POKE16526,U1:POKE16527,U2

Figure. Model I/III user call definitions.

Character Type	Original Value	POKE Location = Entry Location +	Line Number for Permanent Changes
Beginning Delimiter	149 = 95H	86	1140
Ending Delimiter	170 = AAH	101	1230
Fill	95 = 5FH	96	1200
		181	1660
		236	2010
		251	2120
		274	2260
Cursor	143 = 8FH	142	1470
		161	1560

Table. POKE locations for modifying STRINPUT graphics characters.

an example of a simple screen form (lines 309-998).

STRINPUT Features

Several of STRINPUT's features need further discussion. Lines 330-690 represent a relocation routine that determines the top of memory, moves the program there and adjusts the Basic memory pointers accordingly. This module can be used in machine-language programs that don't contain instructions with absolute addresses (such as Jump or Call instructions). Relocate STRINPUT with the instruction LDDR, so the increment of movement may be less than the total length of the program.

The program stores the input string in a buffer area beginning at the location stored in 40A7 hex. Basic sets this buffer aside for temporary storage of keyboard input. We use the buffer for two reasons. First, it obviates the need to reserve another buffer area within the program. And second, if used properly, the buffer is protected from other uses.

Using Basic's keyboard input buffer requires diligence. You should convert the string input stored there to a Basic

string variable immediately on return from the USR routine—before keyboard input changes the information.

The STRINPUT subroutine in Listing 2 makes this conversion. As soon as the USR routine relinquishes control to Basic, line 1003 reads the input string information into TT\$, protecting the data stored in the input buffer.

Using a semicolon after the USR call to prevent a line feed when leaving STRINPUT requires manipulation of Basic's pointers. Ordinarily, a semicolon after a USR call results in an error when the program returns to Basic, so the program must interpret the semicolon before returning. Lines 2350-2380 determine whether a semicolon is present. If not, the program produces a line feed before returning to Basic.

If a semicolon is present after the USR call, a line feed doesn't occur. So, before the return, lines 2400-2510 adjust the pointers that Basic maintains while the USR call is executing. ■

Listing 2 begins on p. 112

Works with all joystick games.

Model IV: order model III version

\$59.95 NEWCLOCK-80

Wouldn't it be nice if your computer could always boot up with the right time and date and then stay accurate. Newclock-80 will enhance your Model I or III system with powerful clock/calendar/timer functions.

Using LSI (large scale integration) and custom circuits, Newclock-80 provides MO/DATE/YR, HR:MN:SEC plus AM/PM and day of week and even takes care of leap years! It continues to keep time and date with quartz accuracy when the computer is turned off or experiences a power failure. A single battery lasts over 2 years.

Compatibility: Newclock-80 is compatible with any operating system, including DOSPLUS, NEWDOS, LDOS. With its fully decoded circuitry it will work with any other hardware you may own. Bus expanders are available.

Installation is very simple, no tools, no disassembly, no soldering. Just plug it in, that's all. There is no power supply or messy cable. Newclock-80 plugs into the rear of the keyboard ③ or side of the Exp. Int. ②. Model III Newclock fits the 50 pin card edge (underneath) ①

The Software: Newclock-80 is as easy to use as it is to install. "SET", a Basic program, is used only once to set the time and date and select 12 or 24 hour format. "TIMESTR", also in Basic, patches your computer "TIME\$" function to read Newclock-80. It also adds "TIME\$" to keyboard-only systems, a short routine is simply "poked" into low memory.

Newclock-80 uses 12 ports (176 to 188): 6 for the time, 6 for the date. The data is conveniently stored in decimal form, no conversion is needed. You can read or modify any digit using simple Basic "INP" and "OUT" statements.

No risk trial. Order your Newclock-80 today, see how easy it is to install and operate then decide within 30 days if you want to keep it. If for any reason you are not delighted with its quality and performance, you may return it for a prompt and courteous refund.

Your unit will come complete ④ with software on tape, detailed instructions, handy reference card, and a 90 day warranty. Specify Model I or III. Software is also available on disk: add \$5. Lithium battery (not included) available from RADIO-SHACK (#23-162) or add \$1.50 to your order.

Thanks to outstanding engineering and efficient manufacturing, ALPHA Products is once again able to offer a great product at a surprising price. Order your Newclock-80 at no obligation today.

NOW MODEL I AND MODEL III!

Now Model III users can take advantage of the ALPHA I/O system too. Our new MOD III/I BUS CONVERTER allows most port based Model I accessories (such as our ANALOG-80, INTERFACER 2 and INTERFACER-80) to connect to the Model III bus. MOD III/I BUS CONVERTER, complete with all connectors, only \$39.95.

PRINTSWITCH

Have 2 printers on line at all times and select printer 1 or 2 by means of a conveniently located switch. End the problem of constantly plugging and unplugging printer cables. PRINTSWITCH is a compact module that plugs onto the parallel printer port of your TRS-80 and provides an edge connector for each of your two printers. It works with any two types of printers: dot matrix, daisy wheel, plotters, TRS-80 converted electrics, etc. Assembled, tested, ready to use with connector and instructions. For Model I or III (please specify). ONLY \$59.00

SUPERIOR QUALITY REPLACEMENT & EXTENSION CABLES

Highest quality cable and high force, gold plated contacts ensure the utmost in connection reliability.

- 1 KEYBOARD TO EXPANSION INTERFACE \$21.
 - 2 DISK DRIVE CABLE FOR 1 OR 2 DRIVES \$32.
 - 3 DISK DRIVE CABLE FOR 3 OR 4 DRIVES \$45.
 - 4 DISK DRIVE CABLE EXTENDER \$22.
 - 5 PRINTER CABLE EXTENDER \$24.
 - 6 40 PIN BUS EXTENDER - 2 ft. \$22 4 ft. \$24
- Custom cable configurations are also available. Call us.

YOU ASKED FOR IT: "EXPANDABUS" X1, X2, X3 AND X4. CONNECT ALL YOUR TRS-80 DEVICES SIMULTANEOUSLY on the 40 pin TRS-80 bus. Any device that normally plugs into the keyboard edge connector will also plug into the "EXPANDABUS". The "X4" is shown with protective covers (included). The TRS-80 keyboard contains the bus drivers (74LS367) for up to 20 devices, more than you will ever need. Using the E/I, it plugs either between KB and E/I or in the Screen Printer port. Professional quality gold plated contacts. Computer grade 40 conductor ribbon cable X2...\$29 X3 \$44 X4 \$59 X5 \$74. Custom configurations are also available. call us

ANALOG-80: A WORLD OF NEW APPLICATIONS POSSIBLE

8 DIGITAL MULTIMETERS PLUGGED INTO YOUR TRS-80!!! Measure Temperature Voltage Current Light Pressure etc. Very easy to use, for example, let's read input channel #4 10 OUT 0.4. Selects input #4 and also starts the conversion 20 A=INP(D). Puts the result in variable A. Voila! Specifications: Input range: 0-5V to 0-500V. Each channel can be set to a different scale. Resolution: 20mV (on 5V range) Accuracy: 8 bits (5%). Port Address: jumper selectable. Plugs into keyboard bus or E/I (screen printer port). Assembled and tested, 90 day warranty. Complete with power supply, connector, manual. ONLY \$139

TIMEDATE 80: REAL-TIME CLOCK/CALENDAR MODULE

Keeps quartz accurate time for 3 years on 2 replaceable AAA batteries (not included). Gives MO/DATE/YR DAY of WEEK HR MIN SEC and AM/PM. Features INTELLIGENT CALENDAR and even provides for Leap Year. This compact module simply plugs into rear of Keyboard or side of Expansion Interface (may be slipped inside E/I). Includes cassette software for setting clock and patching to any DOS (including NEWDOS 80 2.0). Optional Y connector allows for further expansion. For Model I. Fully assembled and tested. Complete with instructions and cassette. ONLY \$95.00 Y option, add \$12.00

GREEN SCREEN WARNING

IBM and all the "biggies" are using green screen monitors. Its advantages are now widely advertised. We feel that every TRS-80 user should enjoy the benefits it provides. But **WARNING:** All Green Screens are not created equal. Here is what we found:

- Several are just a flat piece of standard colored Lucite. The green tint was not made for this purpose and is judged by many to be too dark. Increasing the brightness control will result in a fuzzy display.
- Some are simply a piece of thin plastic film taped onto a cardboard frame. The color is satisfactory but the wobbly film gives it a poor appearance.
- One "optical filter" is in fact plain acrylic sheeting.
- False claim: A few pretend to "reduce glare". In fact their flat and shiny surfaces (both film and Lucite type) ADD their own reflections to the screen.
- A few laugh. One ad claims to "reduce screen contrast". Sorry gentlemen but it's just the opposite. One of the Green Screen's major benefits is to increase the contrast between the text and the background.
- Drawbacks: Most are using adhesive strips to fasten their screen to the monitor. This method makes it awkward to remove for necessary periodical cleaning. All (except ours) are flat. Light pens will not work reliably because of the big gap between the screen and the tube. Many companies have been manufacturing video filters for years. We are not the first (some think they are), but we have done our homework and we think we manufacture the best Green Screen. Here is why:
- It fits right onto the picture tube like a skin because it is the only **CURVED** screen **MOLDED** exactly to the picture tube curvature. It is Cut precisely to cover the exposed area of the picture tube. The fit is such that the static electricity is sufficient to keep it in place! We also include some invisible reusable tape for a more secure fastening.
- The filter material that we use is just right, not too dark nor too light. The result is a really eye pleasing display. We are so sure that you will never take your Green Screen off that we offer an unconditional money-back guaranty. Try our Green Screen for 14 days. If for any reason you are not delighted with it, return it for a prompt refund.

A last word: We think that companies, like ours, who are selling mainly by mail should list their street address, have a phone number (for questions and orders), accept CODs, not every one likes to send checks to a PO box, offer the convenience of charging their purchase to major credit cards. How come we are the only green screen people doing it? Order your **ALPHA GREEN SCREEN** today. \$12.50

DISK DRIVE EXTENDER CABLE, FREE YOUR MINI-DRIVES.

End the daisy-chain mess once and for all. Fits all mini-drives: Percom, Aerocomp, Shugart, Micropolis, MTI, Vista, Pertec, Siemens, BASF. Easy to install: just remove the drive cover, plug in the EXTENDER CABLE and replace the cover. Now you can change and move your drives without disassembly. Keep the cover on and the dust out. High reliability gold plated contacts, computer grade 34 conductor cable. Tested and guaranteed. Get one for each drive ONLY \$8.95

INTERFACER-80: the most powerful Sense/Control module

- 8 industrial grade relays: single pole double throw isolated contacts; 2 Amp @ 125 Volts. TTL latched outputs are also accessible to drive external solid state relays.
- 8 convenient LEDs constantly display the relay states. Simple "OUT" commands (in basic) control the 8 relays.
- 8 optically-isolated inputs for easy direct interfacing to external switches, photocells, keypads, sensors, etc.
- Simple "INP" commands read the status of the 8 inputs. Selectable port address. Clean, compact enclosed design. Assembled, tested, 90 days warranty. Price includes power supply, cable, connector, superb user's manual. \$159

NEW MATH— OLD ORDER

Convert those confusing reverse Polish notation equations to more conventional algebraic format.

Jan Lukaszewicz, a noted Polish logician, developed a means of arranging mathematical equations in symbolic logic sequence more than 30 years ago. His new format for math expressions was dubbed reverse Polish notation (RPN). Unlike algebraic equations, where mathematical operators appear in conventional computational sequence, equations using reverse Polish notation have the numbers before the operator. For instance, $3 + (4 * 5)$ becomes $4 5 * 3 +$.

RPN works well with computers because it takes advantage of the way computers store and manipulate numbers to streamline the calculating process. The computer languages Forth and Lisp, as well as some scientific calculators, use this parenthesis-free notation, but I've always found it confusing.

I wrote a short Model I/III Basic program that solves this problem by converting RPN to the more familiar order-of-operations form of algebraic

logic (see the Program Listing). It also gives you the decimal value of an RPN expression.

You can use any digits and standard arithmetic operators ($* + - /$) with my program.

RPN

In reverse Polish notation, each mathematical symbol operates on only two numbers at a time. This makes RPN well-suited for computers because they store numbers in stacks. A stack is an area in memory similar to a stack of dishes; the last item a computer places on a stack is the first item it takes off.

Many compilers convert an arithmetic expression in Basic, such as $3 + 4 * 5$, to machine code by first converting it to Polish notation. Another pass compiles the expression into machine language.

As an example of RPN, take the expression $4 5 * 3 +$. The computer places the digits 4 and 5 on the stack and multiplies them, with a result of 20. Then the computer places the 3 on the empty stack and adds it to the previous number, 20, to produce 23.

In the expression $6 7 8 * +, 7$ and 8 are the top two numbers on the stack. The computer multiplies them, and adds 6 to the result.

Here are a few examples to help you appreciate RPN's logic and under-

Program Listing. Converting reverse Polish notation.

stand how the program transforms expressions:

● 1 2 3 * + equals 1+(2*3) equals (2*3)+1 equals 2 3 * 1 +.

● 1 2 3 4 5 / + - * equals 1*(2-(3+(4/5))).

● 5 4 * 3 4 / + equals (5*4)+(3/4).

The Program

In the Program Listing, the PEEK (14591) in line 30 is equivalent to an INKEY\$ function. The algorithm that converts the RPN equation simulates the stack, but uses string values.

The program compiles the decimal value in the simulated stack A(X) using pointer G, and forms the standard arithmetic expression in A\$(X) by manipulating string values. It then adds any digit or set of digits to the next stack position, ignoring blank spaces.

The program splices arithmetic operators between the top two strings on the stack, and bumps the stack pointer down. When it completes the original string, it places the whole expression in A\$(1), and the decimal value in A(1). ■

COPYCAT II

THE MOST POWERFUL DISK BACKUP UTILITY HAS BEEN IMPROVED.
 Now you can backup virtually all of your protected diskettes. Even the games and utilities that you thought were impossible to copy. COPYCAT II will automatically make a fast, exact duplicate of your original master diskette regardless of protection schemes used, including CRC errors, dual density tracks, mixed sector lengths, false sectors and various other means of protection.

COPYCAT is intended for your personal use only, in making backup copies of your protected software.
 COPYCAT runs on a 48K, 2 disk drive, TRS-80 model I, III or 4. Please specify model number when ordering.

COPYCAT II 49.95

Add \$2.00 for postage and handling. CA residents please add 6% sales tax.
 All orders processed within 24 hours. Personal checks require (2) weeks to clear bank.

Character Cache

Here's the key to unlocking 10 unusual characters in Scripsit that you can display on the screen or print out.

Serendipity has played a part in some important discoveries. Daguerre accidentally discovered photography when he left an exposed photographic plate in a cupboard with some mercury. And Fleming's discovery of penicillin was nothing more than a botched laboratory experiment. On a more humble scale, chance has looked kindly on me, too: I accidentally discovered a way to display and print some previously inaccessible characters with Scripsit.

I was typing a letter one day and used the word "year." I was hitting the keys at my usual fast and furious pace, and "yea}r" appeared on the screen. After a little experimentation, I found that pressing the y, e, and a keys simultaneously gave me the right brace. When I printed out the file, the brace showed up on paper, too.

I became so intrigued that I did some further experimentation to find that I could use other three-letter upper- and lowercase combinations to produce both the left and right braces ({}), left and right brackets ([]), the plus-or-minus sign (\pm), the Spanish tilde (\sim), a vertical divider (|), the circumflex ($\hat{\ }^$), a diagonal slash that slopes to the right

(\), and the underline character for blank spaces. I've listed the three-letter combinations and their outcome in the Table.

You can generate these characters on either a dot-matrix or a daisy-wheel printer. In either case, you have to do so through Scripsit. I've used this technique successfully on Qume and C. Itoh daisy-wheel printers, but you might have problems with other systems. For example, I've found that if you use a Model I, the brackets, circumflex, and slash all appear on the screen as arrows, but print out properly with a daisy-wheel printer.

Some dot-matrix printers, such as the Radio Shack Line Printer V, won't underline or print the circumflex, and instead substitute arrows. You'll have to experiment to determine your system's capabilities.

Applications

The applications for these characters are limited only by your imagination. You can substitute braces for parentheses to give your prose a distinctive look. Braces also determine working order in mathematics problems.

Use brackets for interpolations within parentheses, in legal documents, for stage directions, in translations, and so on.

The plus/minus sign is a useful mathematical symbol, but it's used so rarely in word processing that it doesn't appear on daisy wheels, and most dot-matrix printers can't print it.

You can, however, use the plus/minus sign as a forced space symbol to prevent compression when you transfer material to non-Scripsit word processing systems. Scripsit, however, ignores

the plus/minus sign when printing; it will not force a space.

The underlining created in Scripsit is not true underlining, but you can use it for fill-in-the-blank exam questions.

Since you can't print the tilde or circumflex above a letter in Scripsit, their use is limited to fancy border designs.

Last, I use the vertical line as a left border in justified text; it makes for a very neat page.

Creating Characters

You can create the characters described here with Extended Basic, provided your DOS has a search and replace function. DOSPLUS, for example, replaces a number, letter, or character in any program with ASCII character codes.

CHR\$(123) and CHR\$(125) are the codes for left and right braces. Once you have a program with the braces (or any other characters) imbedded in it, save the program in ASCII. You can call it into Scripsit as a block with braces intact.

If you'd rather not bother with blocks or pressing three keys at once, you can use a Basic program to convert the greater-than and less-than symbols (<>) into braces (see the Program Listing). You can alter the program to produce any of the other characters.

Since Scripsit uses the greater-than sign to define document formatting lines, you can only use the program for modem transmission.

The characters will also appear in Scripsit's bottom format line (SPECIAL COMMAND?). To do a search and replace with one of them, search and delete the unwanted string of letters. Since y and q rarely appear near

The Key Box

40 OPEN "O",#2,FS+"-FIX"
50 IF EOF(1) THEN 130
60 LINE INPUT#1,X$
70 FOR I% = 1 TO LEN(X$)
80 IF MID$(X$,I%,1) = " <" THEN MID$(X$,I%,1) = CHR$(123)
90 IF MID$(X$,I%,1) = " >" THEN MID$(X$,I%,1) = CHR$(125)
100 NEXT I%
110 PRINT #2,X$
120 GOTO 50
130 CLOSE 1,2
140 END

```

each other in the same word, this shouldn't be a problem.

Addendum

I've also discovered that you can use the enter key in the special command line. Pressing control-X lets you search and replace all the enter symbols in your text.

And I've been trying to find the cents sign without success. But it's on my daisy wheel, so there must be a way; I'll keep trying. ■

AZTEC C80

A powerful, professional, and portable "C" language development system for TRS 80 Models II, III, 4, 12 and 16

Aztec C80 for the TRS 80 includes:

- "C" Compiler (Full UNIX V7)
- Relocating Assembler
- Linkage Editor & Librarian
- "C" Source Program Editor
- Extensive Run Time Library with UNIX I/O

Aztec C80 is fully compatible with Aztec C compilers for IBM PC DOS, CP/M-86, CP/M-80, Apple, Commodore 64, and with UNIX V7 "C".

Aztec C is currently in use in thousands of corporations, universities, research centers, and small businesses worldwide. It has been used to implement languages, operating systems, word processors, accounting systems, financial packages, graphics systems, utilities, and games.

Micro C80, a newly released student version of Aztec C, supports the full "C" language and comes with a choice of either "The C Programming Language" by Kernighan and Ritchie or "Learning to Program in C" by Thomas Plum. The student version can be upgraded to the full system.

Relaxed Syntax

Artificial Intelligence isn't quite here yet, but this natural-language data base gives you an idea of what's to come in interactive software.

Artificial intelligence (AI) is an area of computer applications that's currently garnering a lot of attention. The goal of AI proponents is to get computers to mimic human thought capabilities—learning, reasoning, and self-correction. To date, no working system of artificial intelligence has been developed, but I've devised a Model I/III natural-language data-base interface called Friend that creates the illusion of intelligence by applying a set of rules to a problem and generating meaningful responses.

My data base contains information for amateur radio operators, but you can tailor the program to fit your needs.

Program Operation

Amateur radio operators (hams) often encounter distant signals they're unfamiliar with and so can't identify. My program stores the international radio stations used in Central America, South America, and the Caribbean. If you encounter an unfamiliar signal, you can query the database in plain English and it will identify the signal's place of origin.

For example, if you detect a signal at 4255 kHz and enter that information, the program displays the station's call sign, city, and country of origin.

Each data-base record contains the following information about a station: radio frequency, call sign, modulation, band width, country-of-origin name,

and city-of-origin name. The key fields for data-base query include radio frequency, call sign, modulation, and country name.

The program's natural-language capabilities make special syntax and commands unnecessary. Friend searches through natural-language text strings for key words and parameters. You can enter queries in the same language you use to question another person. For example, if you type in "Who uses call sign CHF?" the program responds with "Canada Halifax."

Natural-language queries usually result in a specific response. But you can also enter parameters alone. If you enter CFH, the program makes a broader, tabular response: "104255 CFH CW 1.5 Canada Halifax."

The program can process queries with one or two parameters. Examples of single-parameter queries include:

- Who uses modulation FSK;
- Show me the signal plan for Peru;
- What call signs are used on modulation FSK;

- Which frequencies use ISB; and
- Where is call sign CFH used.

Examples of dual-parameter queries include:

- Who uses call sign APO and modulation CW;
- Who uses frequency 6379 and CW;
- What call sign does Peru use on 12307 kHz; and
- What modulations does Peru use on frequency 12307.

Self-Updating

If the program is unable to isolate the parameters in your entry, or if it finds more than one potential substring that matches the characteristics of a parameter, the program asks you for assistance. It stores your responses for later use (W\$, WN%).

When you complete the program's queries and the next prompt appears, type END and the program writes the updated word file to disk.

Friend also has a trace feature that identifies the function it's executing. To

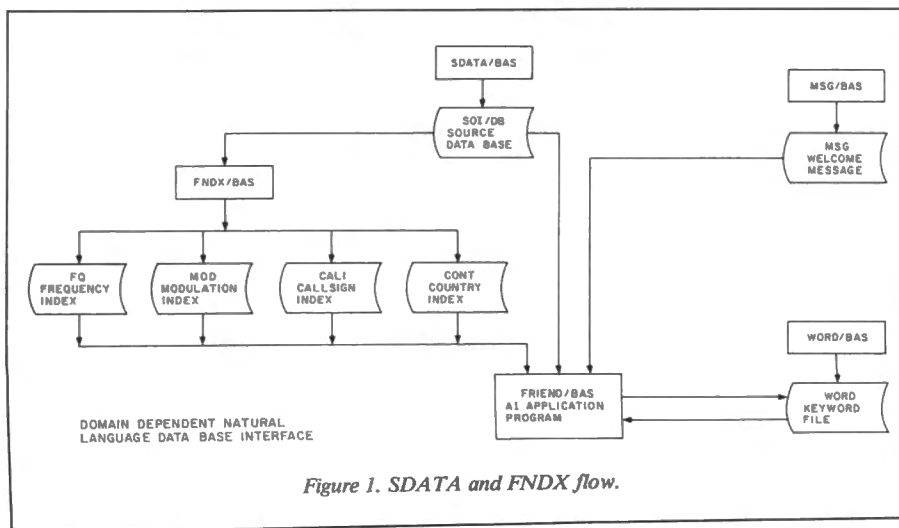

Figure 1. SDATA and FNDX flow.

The Key Box

Models I and III
48K RAM
Disk Basic
TRSDOS

make this possible, the program POKES a single letter into display memory (15423) preceding the execution of selected subroutines (see Table 1).

Programming Friend

You must type in two support programs and two interface programs before running Friend.

The first support program, MSG, builds a welcome file (see Program Listing 1). MSG writes the display every time you run the interface programs.

The second support program, Word, provides the seed words used in parsing natural-language strings (see Program Listing 2). But you only have to run Word once; when the interface encounters new natural-language words, it updates the word file for subsequent use.

The two interface programs translate your queries and provide responses. The first interface program, SDATA (see Program Listing 3), creates the random file SOI/DB, reads elements from the data statements, pads data items to standard field lengths, and creates database records and writes them to disk (see Fig. 1).

The second interface program, FNDX (see Program Listing 4), generates the ordered indices for radio frequency, callsign, modulation, and country name (see Fig. 1).

After you've typed in these four programs, you can type in Friend (see Program Listing 5).

Program Development

The key to the program is its domain dependence. I had to define the domain, or environment, in which the program works before beginning the natural-language interface.

I entered the data-base elements necessary for a query-response format as data statements in SDATA.

SDATA writes four records to each disk block. This structure provides each data base with a block number (1-N) and a record number (1-4). The inter-

Letter Subroutine

I	Initialization
R	Ready for query
P	Parses input text
L	Loading search index
S	Executing binary search
F	Searching for frequency parameter
M	Searching for modulation parameter
C	Searching for call sign parameter
N	Searching for country name parameter

Table 1. Traced subroutines.

DISKS ONLY \$1.79

We buy thousands of bulk disks each month for our own duplication and sales. We would like to offer these disks to you at tremendous savings. These are Super Quality disks guaranteed for life. If they ever go bad send them back and we will replace them FREE. Try some, if you don't like them return them.

100 DISKS TYVEK SLEEVES	\$179.95
10 DISKS TYVEK SLEEVES	\$19.95
10 DISKS WITH COLORED PLASTIC SLEEVES	\$21.95

FAMILY TREE

Track down your pedigree with the fast and easy methods provided by FAMILY TREE, the exciting genealogy program. You may be surprised and enchanted by the interesting people you find at the roots of your own family.

It will store separate data for each particular relative, along with that person's mother and father, their sex, date of birth, place of birth, date of marriage, place of marriage, date of death and place of death.

MODEL I/III Tape or Disk (32K) \$29.95

SUPER DOS

SUPERDOS alters your present TRS-DOS master, expanding its capabilities. With SUPERDOS you'll be able to bypass any password protection, get rid of mandatory clock and date operations and save precious time booting the system, backing up disks and executing files. No more error 13 messages. It will tell you in English what kind of error happened. In addition to all of this, you can make as many backups of VISI-CALC and SCRIPSIT as you want. . . \$19.95

TRANSFER TO MSDOS IBM/TRS 80

Transfer a great new utility that allows the owner of a TRS-80 Model I/III/4 to read and write to a disk made on a MSDOS computer. This includes IBM PC, PC Jr., and SANYO 550.

Transfer will even take a compressed basic model III program, insert all the spaces around key words and copy the ASCII program to an MSDOS disk. Transfer will format an MSDOS disk on a Model I/III/4. Transfer will read any MSDOS version 1, (40 Track), Single Sided disk.

All you need is a Model III or 4 with 2 disk drives or a Model I with a doubler and 2 40 track disk drives.

Transfer will format a 40 track disk which can be read by the Tandy 2000. The Tandy 2000 can only write to an 80 track disk so you will not be able to read any disks from the 2000 unless you have an 80 track drive.

Transfer for the Model I/III/4

MICHTRON PASCAL-\$75.50

A Super version of Pascal, complete in every way. Faster than either Radio Shacks Pascal or the Alcor Pascal.

Michtron Pascal supports full floating points, supports 60 standard keywords, it has 32 non-standard key words most specially designed for the TRS-80. Supports peek, poke, print @, and inkey among others.

Comes with Editor, Compiler, Interpreter, Translator, and a run time system.

This is normally a \$150.95 Pascal for a limited time we are offering it at 1/2 price for only \$75.50. Try it, if you do not agree that it is the best Pascal available for the TRS-80, you may return it.

SANYO

We are dealers for the Fantastic Sanyo 550. A great 16 bit computer, that comes with 1 disk drive, 128 K memory, color Graphics, Word Star and Calc Star and costs only \$995.95. Write for more information. We changed to Sanyo, shouldn't you???

SCREEN DUMP

Lets you print any graphics or text on the screen using an EPSON, or Prowriter printers.

Disk only

PRICE BREAKTHROUGH

New!

Diskette "Give-A-Way?"
Judge for yourself!

New!

10 pack in Library Case — **New Low Price**
SS/DD — with hub ring

Introducing the NEW Tabor 3¼" Disk Drive
Storage 737,280 Bytes — 2 in one Case **\$ Call**

SOFTWARE SUPPORT INC. presents Software
Ldos^c Improved — New efficient improvements for your **Model I/III/IV LDOS^c System**

With Our Program Enhancements You Will Now Be Able To Accomplish:

1. Double the speed of disk operations
2. Reliable fast clock boot (with enhanced hardware — such as the Holmes Sprinter™)
3. Improved dual sided and 80 track disk drive operations.

Model I/III/IV Instapatch™ On Disk \$29.95

Esylst™ — Neatly and automatically print out any number of your basic programs.
Page numbering, top of page, skip, no limit to the number of programs printed at one setting. Fast — Easy — Efficient. Use with Newdos^A, Dosplus^B, Ldos^c

For Your Model I/III/IV On Disk \$19.95

DRIVE A HARD BARGAIN™

We have rewritten the book on Hard Drives. Our hard drives are the fastest, the most versatile (Newdos^A, Dosplus^B, and Ldos^c drivers), the most adaptable, (runs on the Model I, Model III and Model IV using the same adapter), but, we must admit, it is the lowest (in cost that is) starting at **\$999.95** for a 5 meg. (formatted) primary and **\$695.00** for a secondary system. All systems come complete with power supply, case, cables and Instapatch™ software drivers for fast-trouble-free installation and operation. **Nothing else to buy!**

Self Test — Automatic Diagnostics

Error Correction — ECC

Daisy Chain up to 40 Megabytes

Warranty — ONE FULL YEAR. Call for details

face program uses these numbers to acquire specific records from the disk file.

Friend's access technique is a binary search of key elements' ordered indices. The program extracts key items and block/record numbers for the index from the data base. The program then sorts the index and writes it to disk.

You can see the natural-language interface's flow in Fig. 2. The program accepts the natural-language text input and parses the string, removing noise

words. Friend then identifies key words, isolates parameters, validates them, and pairs them with actual key words or key words implied in the text.

After parsing, the program forms the structured query syntax, determines response content, and executes the query to acquire the necessary physical data records.

The program reads records to determine whether or not they contain the data to satisfy any logical AND condi-

tions implied by the text. Friend generates responses from those records that satisfy query requirements.

Routine Autopsy

Friend initializes in lines 70-200, establishing the tables used for storing the binary search access indices (I\$), pointers in the physical data base (P%), the Word file used in parsing (W\$, WN%), and program variables.

This section also reads and displays

Program Listing 1. MSG.

the welcome file (MSG), and reads and loads the word file (Word).

The main processing loop in lines 210-340 generates the screen prompt, accepts the natural-language query, and parses the text.

It also accesses the word file and removes noise words from the input string. When Friend finds key words, it updates the output table and removes the key words. It then passes what remains of the input text to the appropriate subroutine for isolation and verification of query parameters.

Once the program parses all noise words, keywords, and parameters, it executes the data-base query and output subroutines. When the program completes the output subroutine, it clears control variables and executes the main processing loop again.

Lines 350-510 contain the binary search subroutine. This routine loads the ordered index specified by the contents of I% (1 equals frequency, 2 equals modulation, 3 equals callsign, and 4 equals country name).

The program uses the query parameter contained in KY\$ to search the index, setting variable F% to -1 if it doesn't find a match. Variable P% contains the array pointer value for the match.

The subroutine for accessing data-base physical records is in lines 560-720. It accesses the records in the SOI/DB disk file. In the event of multiple matches in the data base, the subroutine passes the query parameter (KY\$) and location pointer (P%) to locate the first entry in the index that matches the parameter.

The program acquires the block/record numbers from table P% for each match, and reads the records from disk.

Prior to accessing the actual records from disk, the response-option subroutine processes table PO%, and sets variables X% and AI% to allow for the implied output format.

Friend then reads data-base records and passes them to the output routine where the required data is displayed.

End Notes

The interface stores only one index because the infamous garbage collection routine provided with normal Basic periodically gathers all free string space. As a result, with all four indices in memory and running under normal Basic, some queries might take as long as 10 minutes. ■

VOICE SYNTHESIZER FOR APPLE AND COMMODORE

NEW!

JE520P

JE520CM

Over 250 word vocabulary affixes allow the formation of more than 500 words. Built-in amplifier, speaker, volume control, and audio jack. Recreates a clear, natural male voice. Plug-in user ready with documentation and sample software. Case size: 7 1/4" x 3 3/4" x 1-3/8" H.

APPLICATIONS: Security Warning, Teaching, Instrumentation, Telecommunication, Handicap Aid, Games.

The JE520 VOICE SYNTHESIZER will plug right into your computer and allow you to enhance almost any application. Utilizing National Semiconductor's DIGITAL TALKER™ Speech Processor IC (with four custom memory chips), the JE520 compresses natural speech into digital memory, including the original inflections and emphases. The result is an extremely clear, natural vocalization.

Table with 3 columns: Part No., Description, Price. JE520CM For Commodore 64 & VIC-20 \$114.95. JE520AP For Apple II, II+, and IIx \$149.95.

13 1/2" L x 4 1/4" W x 3/4" H

18" L x 7 1/4" W x 1 1/2" H

21 1/2" L x 9 8/10" W x 3 3/8" H

Misumi 54-Key Unencoded Matrix All-Purpose Keyboard. SPST keyswitches, 20 pin ribbon cable connection, low profile keys, features: cursor control, control, caps (lock), function, enter and shift keys. Color (keycaps): grey. Weight: 1 lb. KB54..... \$14.95

71-Key ASCII Cherry Keyboard. 7 bit parallel ASCII with strobe, 11 key numeric keypad, SPST mechanical keyswitches, 15/30 card-edge connector. Features: escape, control, cursor controls, plus ten additional function keys. Color white. Weight: 2 lbs. Spec. included. KB1801..... \$29.95

106-Key 8-Bit Serial ASCII Keyboard. Numeric and cursor keypad, 10 user definable keys, 7 LED function displays, Security lock, N-key rollover. Uses Intel 8048/8748. Color: white w/black panel. Documentation included. Weight: 6 1/2 lbs. KB139..... \$59.95

Power/Mate Corporation REGULATED POWER SUPPLY. +5VDC @ 3 Amp / +6VDC @ 2.5 Amp. Input: 105-125/210-250VAC at 47-63 Hz. Output: 5VDC @ 3.0 Amps/6VDC @ 2.5 Amps. Line regulation: 0.05%, Load reg: 0.1%. Open frame mounts on any 1 of 3 surfaces. Size: 4 3/4" L x 4 3/4" W x 2 1/4" H. Weight: 2 lbs. EMA5/6B..... \$29.95

Power/Mate Corporation REGULATED POWER SUPPLY. +5VDC @ 6 Amp / +6VDC @ 5 Amp. Input: 105-125/210-250VAC at 47-63 Hz. Output: 5V @ 6A/6V @ 5A. Line reg: 0.05%, Load reg: 0.1%. Open frame mounts on any one of three surfaces. Size: 5 1/4" L x 4 3/4" W x 2 1/4" H. Weight: 4 lbs. EMA5/6C..... \$39.95

POWER SUPPLY - 5VDC @ 7.8 AMP 12VDC @ 1.5 AMP SWITCHING. Input: 115VAC, 50-60Hz @ 3 amp/230VAC, 50Hz @ 1.6 amp. Fan volt/power supply select switches (115/230VAC). Output: 5VDC @ 7.8 amp, 12VDC @ 1.5 amp. 8 foot black power cord. Size: 11 1/2" W x 13 1/2" D x 3 1/2" H. Weight: 6 lbs. Part No. PS94VSS..... \$39.95

POWER SUPPLY 4-Channel Switching. Microprocessor, mini-computer, terminal, medical equipment and control applications. Input: 90-130VAC 47-60Hz. Output: +5VDC @ 3A, -5VDC @ 1A, +12VDC @ 1A, -12VDC @ 1A. Line reg: ±0.2%, Ripple 30mV p-p, Load reg: ±1%. Overcurrent protection. Adj. 5V main output is 10%, 5-3/8" L x 1-7/8" W x 4-1/16" H. 1 1/2 lbs. Part No. FCS-804A..... \$69.95 each

Switching Power Supply for APPLE II, II+ & IIx™. Can drive four floppy disk drives and up to eight expansion cards. Short circuit and overload protection. Fits inside Apple computer. Fully regulated +5V @ 5A, +12V @ 3A, -5V @ 5A, -12V @ 5A. Direct plug-in power cord control. Size: 9 1/8" L x 3 1/2" W x 2 1/4" H. Weight: 2 lbs. KHP4007..... \$79.95

DISKETTES AND ACCESSORIES

Table of diskette products. Columns: Part No., Description, Stock, Price. Includes Ultra Magnetics 5 1/4" and 8" diskettes, SK (ESK)E - 5 1/4" Diskettes, and Ultra Magnetics - 8" Diskettes.

DISKETTE ACCESSORIES

Table of diskette accessories. Columns: Part No., Description, Price. Includes Disk Minder, Diskette Envelopes, Vinyl Pages, and Mail Pak™.

8" FLOPPY DISK DRIVE

- Single-Sided, 77 Tracks, 400/800K Bytes Capacity, Industry Standard.

The FDD100-8 Floppy Disk Drive (Industry Standard) features single or double density. Recording mode: FM single, MFM double density. Transfer rate: 250K bits/sec, single density, 500K bits/sec double density. The FDD100-8 is designed to work with the single-sided soft sector IBM Diskette II, or eq. disk cartridge. Power: 115VAC @ 50-60Hz, ±24VDC @ 1.7 amps max., ±5VDC @ 1.2 amps max. Unit as pictured above (does not include case, power supply, or cables). Size: 8.55" W x 14" L x 4.5" H. Weighs 12 lbs. Incl. 96-pg. manual.

FDD100-8 .. \$169.95 ea.

5 1/4" APPLE™ Direct Plug-In Compatible Disk Drive

- Uses Shugart SA330 mechanics + 143K formatted storage + 35 tracks - compatible with Apple controller. Complete with connector and cable - just plug into your disk controller card. Size: 5 1/2" L x 3 3/4" W x 8 1/8" H. Weight: 4 1/2 lbs. Part No. ADD-514 \$195.95

5 1/4" TEAC DISK DRIVE

Single-Sided Half-Height 5 1/4" Drive. Single or double density. 48 TPI - 40 tracks - 6ms track to track - 5V power consumption - Brushless DC direct-drive motor - 160Kbytes formatted storage - One year warranty parts and labor. Double your work space with the TEAC 5 1/4" FLOPPY DISK DRIVE. Because the TEAC FDD55A Drive is half the height of conventional drives, you can fit up to four TEAC drives in the same space where two conventional drives fit. Or, have room for two floppy disk drives and a hard disk drive. Includes operating manual. Requires: +5VDC @ 55A and -12VDC @ 2A. Size 5 1/4" x 8" D. Wt. 3 lbs. FDD55A..... \$249.95

5 1/4" SHUGART DISK DRIVE

Double-Sided Half-Height 5 1/4" Drive. Single or double density. 48 TPI - 40 tracks - 400Kbytes formatted storage - 6ms track to track - Brushless DC direct-drive motor - One year warranty parts and labor - Media and controller compatible with the industry's largest and most experienced engineering sales and service organization, the SA455 is the smart solution for a wide range of desktop applications including operation manual. Requires: +5VDC @ 7A and -12VDC @ 75A. Size: 5.88" W x 1.53" H x 8" D. Wt. 3.3 lbs. SA455..... \$259.95

5 1/4" PANASONIC DISK DRIVE

Double-Sided Half-Height 5 1/4" DRIVE. Shugart SA455 Equivalent. Single or double density. 48 TPI - 40 tracks - 6ms track to track - 327Kbytes formatted storage - One year warranty parts and labor. The JAS51 is perfect for word processors, personal and portable computers, small business computers and terminal add-ons. Includes operating manual. Requires: +5VDC @ 5A and -12VDC @ 1A. Size: 5.88" W x 1.53" H x 8" D. Wt. 3.3 lbs. JAS51-2..... \$239.95

DISK DRIVE CABLE CUSTOM

We stock a wide variety of signal cables and 3 power cable kits to meet your disk drive requirements. We also customize cable assemblies for many other applications. Call for a price quote.

IBM MEMORY EXPANSION KIT COMPAQ COMPATIBILITY

SAVE HUNDREDS OF \$\$\$ BY UPGRADING MEMORY BOARDS YOURSELF! Most of the popular memory boards allow you to add an additional 64K byte increments. The IBM484 Kit will populate these boards in 64K byte increments. The kit is simple to install - just insert the nine 64K RAM chips in the provided sockets and set the two groups of switches. Directions are included.

IBM64K (Nine 200ns 64K RAMs) \$49.95

EXPAND YOUR MEMORY

TRS-80 to 16K, 32K, or 48K. **Model 1 = From 4K to 16K Requires (1) One Kit Model 3 = From 4K to 48K Requires (3) Three Kits Model 3 = From 4K to 16K Requires (1) One Kit. **Model 1 equipped with Expansion Board up to 48K Two Kits Required - One Kit Required for each 16K of Expansion -

TRS-16K3 *200ns for Color & Model III \$12.95 TRS-16K4 *250ns for Model I..... \$10.95

TRS-80 Color 32K or 64K Conversion Kit. Easy to install kits comes complete with 8 ea. 4164-2 (200ns) 64K dynamic RAMs and conversion documentation. Converts TRS-80 color computers with D, E, F, G and NC circuit boards to 32K. Also converts TRS-80 color computer II to 64K. Plus DOS or OS-9 required to utilize full 64K RAM on all computers. TRS-64K2..... \$44.95

UV-EPROM Eraser

8 Chips - 51 Minutes. 1 Chip - 37 Minutes. Erases 2708, 2716, 2732, 2764, 2516, 2532, 2556. Erases up to 8 chips within 51 minutes (1 chip in 37 minutes). Maintains constant exposure distance of one inch. Special conductive foam liner eliminates static build-up. Built-in safety lock to prevent UV exposure. Compact - only 9.00" x 3.70" x 2.60". Complete with holding tray for 8 chips.

DE-4 UV-EPROM Eraser ... \$79.95 UV-11EL Replacement Bulb ... \$16.95

4-Digit Fluorescent Alarm Clock Kit

Bright 4-digit 0.5" high display • 10 minute snooze alarm • AM/PM indicator • Automatic display dimmer. The JE750 Alarm Clock Kit is a versatile 12-hour digital clock with 24-hour alarm. The clock has a bright 0.5" high blue-green fluorescent display. The display will automatically dim with changing light conditions. The 24-hour alarm allows the user to disable the alarm and immediately re-enable the alarm to activate 24 hours later. The kit includes all documentation, components, case and wall transformer. Size: 6 1/8" L x 3 1/4" W x 1 1/4" D. JE750 Alarm Clock Kit..... \$29.95

CLONE I

CLONE III

Dear Customer:

If you care about TIME, you need Clone. Why did you buy your computer? If you are like us, you need your computer to save you time. You follow proper programming procedures and backup everything twice. THIS TAKES TIME! If you use more than one disk operating system, IT TAKES TIME. At the end of our programming day we have at least 8 disks to backup twice. With the disk backup utilities that came with our disk operating systems, formatting and verifying that many disks could take 64 minutes, not to mention the amount of time that it took to initialize and answer the opening inquiries for the various disk operating systems we use. Now we use the Clone duplication system and the entire process takes less than 23 minutes. Clone is so reliable at verifying that we never worry about having a bad duplication. We are sure you know that a disk which has not been properly verified might cause problems you would not detect for months. Clone is so advanced that passwords, densities or different disk operating systems don't affect its efficient operation. Clone is so flexible that we are also able to duplicate Atari 400, Atari 800, TRS-80 Color Computer as well as TRS-80 Model I, III, or IV disks. Clone is so sophisticated that if it encounters a damaged disk and is unable to read it, you can ask it to keep trying, take it's best guess, or give up. Most backup utilities just give up. Clone's error messages will explain exactly what the trouble is. Finally, Clone IS FAST! It takes just 1 minute 25 seconds to format, duplicate, and verify a disk that used to take us 4 minutes to complete.

We are sure that everyone who owns a TRS-80 Model I, III, or IV would benefit from owning the Clone duplication system. Clone will become an indispensable part of your programing library. Unlike copying utilities, Clone will have a lasting usefulness which is not dependent on any other program's availability. That is why we at Gibberman Enterprises are proud to offer you Clone I for TRS-80 Model I or Clone III for TRS-80 Model III or IV.

Sincerely,

James Schoengarth
Marketing Director
Gibberman Enterprises

HARDWARE REQUIREMENTS

CLONE I OR CLONE III
TRS-80 MODEL III, IV OR
TRS-80 MODEL I WITH LN DOUBLER OR PERCOM DOUBLER ONLY
2 DISK DRIVES OR MORE
32K RAM OR MORE

NOTE: A MODEL I WITH SINGLE DENSITY MAY ALSO BE USED,
HOWEVER YOU WILL ONLY BE ABLE TO COPY STANDARD
MODEL I SINGLE DENSITY DISKS!

Survival Kit for the 80's

Don't program without it.

Technology in transition. Changes in hardware, software, disk systems, printers and modems—the list goes on. It's all happening so fast. How do you survive in the fast-paced computer world?

With the help of 80 MICRO, the largest single source of information for your TRS-80*. It's required reading for those who want to discover:

- TUTORIALS—To help you become a better programmer whether you're a beginner or an old hand.
- UTILITY PROGRAMS—Designed to let you get the most from your system.
- NEW APPLICATIONS—In science, business, and the home.
- NEW PRODUCT REVIEWS—Straightforward evaluations of state-of-the-art hardware and software that give you the facts before you buy.
- NEW GAMES—Scores of innovative new games offering a real challenge and lots of fun.

With 80 MICRO in hand you won't just survive. You'll prosper in the Age of the Computer.

Subscribe today. Use the coupon below, the attached card, or call toll free 1-800-258-5473. In NH call 1-924-9471.

Yes, I want to subscribe to 80 MICRO. Send me 12 issues for only \$24.97**. I understand that with payment enclosed or credit card order I will receive a free issue making a total of 13 issues for \$24.97.

80micro's REVIEW GUIDE

The guide that will save you time and money.

You'll spend more time at your computer and less money for the right product.

80 Micro's Review Guide is the most comprehensive collection of TRS-80* reviews ever compiled in book form. You get 500 hardware, software and book reviews packed with information about:

- Modems
- Games
- Business programs & Word Processing
- Joysticks
- Books on programming
- Printers
- Utilities
- Editor/Assemblers
- Educational software
- Monitors
- Databases
- And more

Don't waste valuable time chasing down the right product. We've done it for you with **80 Micro's Review Guide**, compiled and condensed from the pages of **80 Micro**, the magazine you've come to rely on.

A five-star rating system lets you decide what's best. And each review gives you the product manufacturer's information so you can order and receive your product *fast*.

All for \$7.95

Order now. Use the attached order form, the coupon, or call toll free 1-800-258-5473.

(Outside U.S.A., and in N.H. call 603-924-9471)

Do your own taxes like an expert with TAX/SAVER.®

TAX/SAVER.® The tax help program for the layman and the professional.

- Privacy.
- Built-in tax aids. Answers questions like "Is my father my dependent?" and "Are my deductions reasonable?"
- Tax regulations programmed in by our team of accountants. Type in your figures and you've done your own tax return.
- Output to video or printer. (Compatible with overlays or NELCO official 1040.)
- Tax deductible.
- Manual: Tax information, lists of deductions, tax glossary.
- **TAX/SAVER.®** completes long and short forms, itemized deductions, interest, dividends, business income, capital gains, income averaging, self-employment tax, and the deduction for couples when both work.
- 40% Discount on yearly updates.

Reviews and Users' Comments:

About **TAX/SAVER.®**:

"This is a very valuable tool"

— R. Perry, Personal Computing Magazine,
"Tax Preparation Software", December 1981

"This is the perfect program for those doing taxes for others (. . . good for an individual, too!!)

— B.M., Missoula, MT (Professional Preparer)

About **TAX/FORECASTER™**:

"VERY HANDY!" — T. Pettibone, "Software Critic", 1982

© Copyright 1983

*Registered trademark of Tandy Corp.

TAX/FORECASTER™, a quick tax planner for 1983-1984, lets you see how financial decisions will affect your taxes. Merely change one or more entries to see your tax refigured.

PROFESSIONAL TAX/FORECASTER™ adds disk storage of client files and income averaging. This tax tool is a must!

Orders will be filled in late January to allow inclusion of new tax laws.

Aerocomp's Proven Best-By Test! The "DDC"

Double Density Controller

★ Technical Superiority

At last! A double density controller for Model I with HIGHER PROBABILITY OF DATA RECOVERY THAN WITH ANY OTHER DOUBLE DENSITY CONTROLLER ON THE MARKET TODAY! The "DDC" from Aerocomp. No need to worry about the problems that keep cropping up on existing products. AEROCOMP'S new analog design phase lock loop data separator has a wider capture window than the digital types currently on the market. This allows high resolution data centering. The finest resolution available with digital circuitry is 125 ns (nano seconds). The "DDC" analog circuit allows infinitely variable tuning. Attack and settling times are optimum for 5-1/4 inch diskettes.

The units presently on the market use a write precompensation circuit that is very "sloppy". Board to board tolerance is extremely wide - in the order of ± 100 ns. The "DDC" is accurate to within ± 20 ns. The bottom line is state of the art reliability!

★ Test Proven

Tests were conducted on AEROCOMP'S "DDC", Percom's "Doubler A" and "Doubler II" and LNW's "LNDoubler" using a Radio Shack TRS80 Model I, Level 2, 48 K with TRS80 Expansion Interface and a Percom PFD100 disk drive (Siemens Model 82). Diskette was Memorex 3401. The test diskette chosen was a well used piece of media to determine performance under adverse conditions. The various double density adapters were installed sequentially in the expansion interface.

The test consisted of formatting 40 tracks on the diskette and writing a 6DB6 data pattern on all tracks. The 6DB6 pattern was chosen because it is recommended as a "worst case" test by manufacturers of drives and diskettes. An attempt was then made to read each sector on the disk once - no retrys. Operating system was Newdos/80, Version 1.0, with Double Zap, Version 2.0. Unreadable sectors were totalled and recorded. The test was run ten times with each double density controller and the data averaged. Test results are shown in the table.

★ Features

TRS80 Model I owners who are ready for reliable double density operation will get (1) 80% more storage per diskette, (2) single and double density data separation with far fewer disk I/O errors, (3) single density compatibility and (4) simple plug-in installation. Compatible with all existing double density software.

SUMMER SPECIAL \$99.00

for the Best DD Controller on the market.

"DDC" and LDOS **\$169.95**

"DDC" and Newdos 80 **\$179.95**

★ TEST RESULTS ★

MFR & PRODUCT	SECTORS LOCKED OUT (AVG)
AEROCOMP "DDC"	0
PERCOM "DOUBLER II"	18
PERCOM "DOUBLER A"	250
LNW "LNDOUBLER"	202

Note: test results available upon written request. All tests conducted prior to 8-25-81

Aerocomp's 14 day money back guarantee applies to hardware only. Specials will be prorated. Shipping \$2.00 In Cont. U.S. See opposite page for details. Add \$4.00 shipping & handling for DDC & DOS.

Data Separators

The advances that make the "DDC" great are incorporated in the new AEROCOMP Single Density Data Separator ("SDS") and Double Density Data Separator ("DDS").

★ Has your original manufacturer left you holding the bag?

If you already own a Percom "Doubler A", "Doubler II" or LNW "LNDoubler" or Superbrain, the AEROCOMP "DDS" will make it right. Look at the test results:

MFR. & PRODUCT	SECTORS LOCKED OUT	
	WITHOUT "DDS"	WITH "DDS"
PERCOM "DOUBLER II"	18	1
PERCOM "DOUBLER A"	250	0
LNW "LNDOUBLER"	202	0

Note: Same test procedures as "DDC".

* Trademark of Percom Data Co.
** Trademark of LNW
*** Trademark of Tandy Corporation

**Plugs directly into your existing
Double Density Controller.**

★ "DDS" **\$49.95**
(Use 1791 chip from your DD Controller)

★ "DDS" with disk controller
chip included **\$79.95**

★ Disk controller
chip **\$34.95**

(Shipping \$2.00 Cont. US - see opposite page for details)

Do you need a Single Density Data Separator?

The internal data separator in the WD1771 chip (R/S Expansion Interface) is NOT recommended by WD for reliable data transfer. Do you have any of these problems: Lost data, tracks locked out, CRC errors, disk retry? YOU NEED ONE!

★ "SDS" **\$29.95**
(For Mod. I; shipping \$2.00)

**See opposite
page** ▶▶▶▶▶▶▶▶

DISK DRIVES

PERSONAL CHECKS WELCOME

We'll be happy to accept your personal check with any mail order without any shipping delay.

FREE TRIAL OFFER

Use your AEROCOMP drive for up to 14 days. If you are not satisfied for ANY REASON (except misuse or improper handling), return in the original shipping container for a full purchase price refund. Applies to hardware only. Sorry, we cannot refund on software. We have confidence in our products and we know you will be satisfied.

WARRANTY

We offer a six months warranty on parts and labor against defects in materials and workmanship. In the event service becomes necessary for any reason, our service department is fast, friendly and cooperative. Our goal is 48 hour turnaround on all warranty or repair drives!

100% TESTED

AEROCOMP disk drives are 100% subjected to burn-in and bench test. We even enclose a copy of the test check list, signed by the test technician, with each drive. AEROCOMP means reliability!

ORDER NOW!

Order by mail or call TOLL FREE TO THE NUMBERS BELOW. Please note toll free lines will accept orders only. We accept VISA or MASTERCARD. Be sure to include card number and expiration date. We will not charge your card until the day we ship. Order by mail with credit card or send check or money order. Personal checks welcome. No delay. Order COD. No deposit required but all COD's will arrive cash, certified check or money order only. We'll send a card showing the exact COD amount before your shipment arrives. Shipping is **not** included in the prices shown. Texas residents add 5% sales tax.

Shipping & handling \$2.00 per controller

- ★ MOUNTING KIT w/o Drives & Controller . . \$99

Shipping & handling \$4.00 per kit

The Sound of Musikon

Think you have some musical potential?
Use Musikon to write and play your own composition,
or develop variations on classical pieces.

Beethoven would roll over. Chopin would fall flat. But you can make music on your computer. Musikon lets aspiring musicians compose, edit, and play back compositions—or play the masters—on a 48K disk-based Model I or III.

Preparations

Musikon requires extensive set-up. The final, working program is actually a combination of three programs—the main program (see Program Listing 1), a program that reserves a 5,100-byte string for note storage (see Program Listing 2), and a program that creates Musikon's music generator (see Program Listing 3). Program Listing 4 contains the lines owners of 48K cassette-based systems must change in Listing 1 to use Musikon.

Table 1 lists Musikon's variables, and Table 2 lists its subroutines.

Program Listings 2 and 3 are short Basic programs that each produce a single line of source code you insert into Program Listing 1. (The way in which these programs develop the source code isn't pertinent here; simplistically, the Basic program POKes a machine-language program into upper memory. You can get a better idea of how and why by examining the commented source code in Program Listings 5 and 6.)

To create the 5,100-byte note-storage

string that becomes line 40 in Listing 1, you must first type in and run Program Listing 2. Save memory at 64000 and enter from line 40 on. To run Musikon on a 32K or 16K system, save memory at 48500 or 32000, respectively.

If you retain Listing 2's remark statements, be sure to include lines 30 and 31. Line 40 must be the first line in the program.

After all the preparation, run Listing 2. Respond to the string length prompt with 5100, and the program returns to Basic with a 5,100-byte string in line 40 as its only line. You can list the line and save it to disk or cassette.

After you run Listing 2, type in Listing 3 incorporating line 40 created by Listing 2. Then run the program from Listing 3 to get Musikon's music generator, creating line 20 in Listing 1. Do not try to list Listing 3, as the source code in the Basic program will generate garbage on the screen.

Then delete all but lines 20 and 40 in Listing 3, and type in Program Listing 1 around these lines, omitting my remark statements.

Before you run Musikon, make sure you connect a speaker to your computer. I connect a cable from the computer's cassette port to an Archer (Radio Shack) mini-amplifier/speaker, using the gray plug that normally goes into the cassette recorder's auxiliary plug. Alternatively, you can use the cassette recorder's speaker by plugging the gray

plug into the recorder's microphone jack.

New Music

Run the final version of Listing 1 to begin Musikon. After a few seconds of initialization, the program displays the main menu (see Fig. 1).

The first time through the program, you should select option 1 to enter new music. Musikon includes traps to prevent you from selecting option 1 or 2 when you have music stored in memory or options 3-7 without music in memory.

Once in option 1, Musikon gives you two suboptions. Reply N for the first option, which lets you change the tune of entered music by as much as 4/10 of an octave higher or lower—you haven't entered any music to tune.

The second suboption displays a guide for note duration and note entries above the prompts for your first note entries. The guide includes five example notes, with each note's duration number (DN), value, and meaning—whether it's flat, sharp, or natural.

Musikon first prompts you for the duration (DN) of each note. A DN of 2 sounds a note or rest twice as long as a DN of 1, a DN of 4 produces a note or rest twice as long as a DN of 2, and so on, up to the highest DN of 240. Table 3 contains example durations in terms of musical note division.

If you press the enter key after the duration prompt appears, you'll get a note of the same duration as the previous note. Make sure your last entry was a note or you'll have to recover from a temporarily lost keyboard entry mode.

Musikon lets you substitute lower durations when your music requires accelerated passages and higher durations

About HOLMES ENGINEERING, INC.

- All Holmes Products come complete with easy to follow installation and trouble shooting guides and our technical group is available for support as required. (Monday thru Friday 8 a.m. - 12 noon (MST))
- Installation can be performed with out system modifications, soldering and little or no technical background.
- MORE DETAILED PRODUCT INFORMATION IS AVAILABLE UPON REQUEST.
- 90 DAY WARRANTY.

ORDERING INFORMATION:

- Add shipping and handling charges of: \$9.00 for PMD100, and MF-1, pkg. USA, \$15.00 Canada & 15% for Overseas.
- Prices subject to change without notice.
- Payment by cashiers check, money order, cash, Visa or Mastercharge. Personal checks subject to 3 week clearance.

Variable Definition

|       |                                                                         |
|-------|-------------------------------------------------------------------------|
| A\$   | 5,100-byte string for music data                                        |
| A0    | Start of A\$ in memory                                                  |
| A     | Memory location in A\$ to pack a byte                                   |
| A!    | Holds A if less than 32767                                              |
| B%    | Tempo value for B register                                              |
| C     | Pitch change to tune at user's option                                   |
| C%    | Tempo value for C register                                              |
| CP    | Fundamental pitch derived from C                                        |
| CT    | Define tempo POKEs in B and C registers                                 |
| D     | Entered duration values                                                 |
| F1    | Flags guide option                                                      |
| F8    | Flags editing deletion and insertion routines                           |
| FB    | Flags duration entry errors                                             |
| FL    | Flags return to options menu                                            |
| I,I9  | For...Next indices                                                      |
| J     | Counts bytes from A0 to pack next value                                 |
| JE    | Classifies errors in repeat entries                                     |
| JN    | Holds number of consecutive 3-byte spaces left in memory for note entry |
| K2,K3 | Screen position for prompts                                             |
| K9    | Holds total memory left for note entry                                  |
| KF    | Flag for repeat function                                                |
| L     | Line index                                                              |
| L\$   | Note designation                                                        |
| N     | Index for note and duration arrays                                      |
| N1    | Value of N to start editing routines                                    |
| N2    | Value of N to start packing in A\$                                      |
| N3    | Value of N to end packing in A\$                                        |
| N8,N9 | For...Next loop indices                                                 |

Variable Definition

|      |                                                                 |
|------|-----------------------------------------------------------------|
| NE   | Entry number at end of repeat                                   |
| NI   | Entry number at end of piece                                    |
| NL   | Number of key-ins per keyboard entry                            |
| NM   | Highest value of N reached in editing                           |
| NN   | Number of deletions or insertions                               |
| NO   | Multiple of 256 for determining P                               |
| NS   | Entry number at start of repeat                                 |
| NX   | Counts the 3 bytes from J to pack note entries                  |
| O\$  | Holds main option selection                                     |
| P    | Holds note and duration decimal values for POKE into A\$        |
| P()  | Fundamental pitch of chromatic scale's 12 notes                 |
| Q    | VARPTR location of vibrato flag                                 |
| QV   | Holds vibrato flag                                              |
| R    | Octave/numerical value of third character in Z                  |
| S\$  | 169-byte string containing music generator and reverse scroller |
| S0   | Location S\$ in memory                                          |
| S,SS | Indices releasing keyboard entries and flashing cursor          |
| T    | Tempo choice                                                    |
| V    | Location for screen duration and note display                   |
| V!   | Temporary calculated value of V                                 |
| VC   | Screen position for editing cursor                              |
| W    | Holds editing cursor                                            |
| X,Y  | Strings holding keyboard entries                                |
| Y()  | String array with legal one-key entries                         |
| YD   | Duration portion of Z()                                         |
| Z()  | Array holding duration and note entries                         |
| Z    | Note portion of Z()                                             |

Table 1. Variables list for Musikon.

when it requires retarded passages. For example, durations of 13-15 (instead of 16) create accelerated quarter-notes, and durations of 17-19 simulate retarded quarter-notes.

You can also create trills, arpeggiated chords, and cadenzas by using DN values of 1 or 2 for 1/64 or 1/32 notes. (Remember your beats-per-measure requirement.)

For example, if your music requires a triplet of eighth notes (see Fig. 2) for one quarter-note (DN=16), divide the three consecutive values as 5, 6, and 5.

After you've chosen a duration, Musikon prompts you for note entry. Press the R and the enter keys if you intend a rest; see Table 4 for the three or four characters you can enter for notes.

Musikon automatically gives each note vibrato similar to a horn, but if you don't want vibrato, type N and press the enter key. For example, CN3 is a note in natural C of the third octave. CN3N is the same note without vibrato. Figure 3 shows representative quarter-notes and their designations with vibrato.

Musikon lets you backspace over errors, provided you haven't entered them. Otherwise, you can edit them later.

You can repeat a passage, placing it at the end of your presently entered notes, by pressing P and the enter key in response to the duration prompt. If you know the entry numbers of the first and last notes in the repeated passage, type Y and enter them. If you don't, press F to see a listing of the notes you entered.

You can also press A to abort the repeat mode and return to the duration prompt for the next note.

To end your composition, type in E and press the enter key when Musikon prompts you for your next duration entry. If you type E accidentally, select option 3 when the main menu appears.

### Music on Disk

To read music from disk, select option 2 from the main menu and follow the prompts. Once Musikon packs your data into the program, it returns to the main menu.

Option 3 lets you append notes to the end of a piece. I often edit bad entries in a piece before it's done; option 3 lets me continue composing.

Figure 3. Example staff of quarter-notes.

| Line Number | Function                                                         |
|-------------|------------------------------------------------------------------|
| 60          | Tuning option selection                                          |
| 100         | Keyboard entry of music data                                     |
| 160         | Find packing values for duration and note                        |
| 260         | Calculate and POKE least significant byte of note pitch into A\$ |
| 280         | POKE into A\$                                                    |
| 300         | Calculate P( ) for 12 notes of chromatic octave                  |
| 310         | Break down Z( ) to D=duration and N=note                         |
| 320         | End keyboard entries                                             |

| 460         | Display series of duration and note entries                      |
| 470         | Delay subroutine                                                 |
| 480         | Find A—the location to pack entries                              |
| 1500        | Determine one-key keyboard entries                               |
| 1510        | Determine four- or five-key keyboard entries                     |
| 2050        | Load data from disk                                              |
| 2150        | Save data to disk                                                |
| 2500        | Pack music data                                                  |
| 3000        | List data on screen                                              |
| 3500        | List data on printer                                             |
| 4000        | Primary editing subroutine                                       |
| 4060        | Subroutine for insertion editing                                 |
| 4090        | Subroutine for deletion editing                                  |
| 4140        | Editing cursor motion                                            |
| 4160        | Maintain cursor span for editing                                 |
| 4170        | Set screen for editing                                           |
| 4200        | Keyboard entry for duration and notes                            |
| 4210        | Keyboard entry for notes                                         |
| 5300        | Packing problem codes                                            |
| 6000        | Provide help                                                     |
| 9000        | Determine tempo                                                  |
| 10000       | Play music                                                       |
| 11000       | Trap unwanted clearing of memory                                 |
| 12000       | Initialization subroutine                                        |

Table 2. Subroutine list for Musikon.

Option 4 lets you re-tune your music higher or lower in pitch by as much as 4/10 of an octave. Musikon's entire board of six octaves retains the proper equally tempered relationship after tuning.

If you append (option 3) or insert (option 6) additional notes, Musikon packs them at the new tuning.

Option 5 provides a listing of entry numbers, durations, and notes for all entries. Press the S key to display your current selection on the screen. Press B to scroll back, and press any key but R to scroll forward. The R key returns the program to your entry before selecting option 5.

Type P to print your data. Musikon

| DN | Musical Equivalent |
|----|--------------------|
| 1  | 1/64 note          |
| 2  | 1/32 note          |
| 4  | sixteenth note     |
| 8  | eighth note        |
| 12 | dotted eighth note |
| 16 | quarter note       |
| 32 | half note          |

Table 3. Example durations in musical note division terms.

| Character  | Meaning                 |
|------------|-------------------------|
| A-G        | Notes A-G               |
| N, F, or S | Natural, flat, or sharp |
| 1-6        | Octave 1-6              |
| Enter key  | Vibrato                 |
| N          | No vibrato              |

Table 4. Characters for note entry.

prints in five-column sections, up to 80 columns wide.

Option 6 lets you edit your music by changing, inserting, or deleting notes. Enter the numbers of the notes you want to edit and Musikon displays a list of entries including the numbers you selected plus a pointer.

Use the editing instructions displayed on the screen to place the pointer over the entry you want to edit.

Press the C key to change an entry. Enter the correct duration when prompted, or the same duration if you want to change only the note.

Type I to insert notes. Musikon asks for the number of notes you want to insert and displays the maximum inserts memory space allows. The program provides duration and note prompts until your inserts are complete and then returns to the main menu.

To make deletions, press D. The process for deletions is similar to that for insertions. The program asks how many deletions you want to make and dis-

Figure 4. Example entries for "Glow Worm."

| ENTRY | DURATION | NOTE | ENTRY | DURATION | NOTE | ENTRY | DURATION | NOTE |
|-------|----------|------|-------|----------|------|-------|----------|------|
| 0     | 16       | BF4  | 85    | 12       | R    | 170   | 12       | R    |

Figure 4 continued

plays the maximum allowed by total entries in memory. To recover from an unintended deletion, press zero when prompted for the number of deletions.

Musikon renumbers entries after deletions and insertions.

To end your editing and return to the main menu, press the E key. You can select option 3 to add musical data to the piece, but be careful not to choose option 1 unless you want to erase all the music in memory.

To save music to disk, simply respond to the prompts in option 7.

To play music you've loaded from disk or created on the keyboard, select P from the main menu options. Once again, check to make sure you hooked up an amplifier to your computer.

After you type in P, Musikon lets you set a metronome tempo (the number of beats to a quarter-note) from 40-400 beats to a minute. Model I owners should change constant 102250 in line 9020 of Listing 1 to use this metronome tempo range.

I often use a slow tempo (40-70) to check new compositions for bad entries. When your music sounds right, save the music to disk using option 7.

Musikon also provides an alternate method for saving music data. Press E to exit from the main menu options, and when READY appears, type in DELETE 50-160 and press the enter key.

Then you must edit line 9040. Delete everything after the first quotation mark, type in the title of your music to end at the second quotation mark, and press the enter key. Type in SAVE and your title between quotation marks. When you next run this program, Musikon will display the title while playing the music.

### Small Problems

When entering a long composition, the computer occasionally hangs up for a few seconds while it rearranges string storage space.

The program lessens this inconvenience by giving you a clean slate each time you select option 1 or 2. You can help by doing all your change editing in option 6 before performing any deletions or insertions.

If the notes you want to change are more than 10 entries apart, type E after the first change and select option 6 again to return to the next set of changes.

### Glow Worm

I've included the Musikon listing for Paul Lincke's "Glow Worm" as a demonstration program (see Fig. 4).

(Load-80 subscribers will get Chopin's "Fantasy Impromptu" already packed into Musikon's Play option.)

"Glow Worm" has many examples of legato and staccato effects. Notes 203-205 are sixteenth notes (DN=4) played legato. Note 206 is also a sixteenth note, but played staccato because a DN=2 is followed by a rest of DN=2. Note 206 is also followed by six staccato eighth notes, created by dividing the DN=8 into 4 for a note and 4 for a rest.

Notes 193 and 196 are examples of quarter-length arpeggiated chords. The duration of the chord totals 16; the first two notes are each a DN=2 and the final note is a DN=12.

You can save time by using the repeat function (R) to enter notes 125-163 at note entry 164, and 265-304 at entry 325. ■

Contact Merton Davis at 3A Palmetto Arms, Camden, SC 29020.

Tired of swapping Disks from Inventory to Accounts Receivable to Accounts Payable etc.? Now, one system does it all.

*Introducing*  
**The M.B.S.  
Business Management System**

At last a completely Integrated, Menu driven System for:

- **INVOICING**  
Opens Customer Files  
Opens A/R Accounts  
Updates Inventory  
Stores Mail List Files  
Stores Sales Records  
Computes Sales Tax
- **CUSTOMER FILES**  
Maintains Order Status  
Prints Labels  
Prints Customer Balances  
Stores Order Amounts  
Stores Order Payments  
Prints Statements
- **MAIL LABELS**  
Stores by Variable File Names  
Sorts by Zip Code  
Sorts by Name
- **INVENTORY**  
Sets Upper and Lower Limits  
Generates Purchase Orders  
Lists Inventory by Vendor
- **ACCOUNTS RECEIVABLE**  
Open A/R Accounts  
Generates Monthly Statements  
Interest and Non-Interest Accounts  
Listing of Accounts Balances  
Manually Enter Charges and Payments
- **ACCOUNTS PAYABLE**  
Enter Charges to Accounts  
Enter Payments to Accounts  
List Payable Balances
- **CHECK WRITING**  
Print or Record Checks  
Maintains Bank Balance  
Credit Accounts Payable  
Stores Expense Totals
- **FINANCIAL STATEMENTS**  
Prints Sales Reports  
Prints Operating Statements  
Prints Receipts Reports  
Modifies Expense and Sales Totals

Yes, now there is a complete business system for the small business man. With our Business Management System, you can increase sales with our mail label function. Complete your Schedule C in as little as 15 minutes. Know what your business is doing, and maintain other important business functions.

This easy to use system comes complete with instruction manual, and diskette on Dosplus mini TDOS operating system with extended Basic, and one year support. All programs are in Basic, and require two disk drives and 48K RAM. If you have waited for the right business software for your business, your wait is over. Our current users love our system and you will too.

**Special Introductory Price \$249.<sup>95</sup>**

## GAMEMASTER

Do you get complaints from your spouse, family and friends that you isolate yourself from them while "playing" with your computer? Do you wish there was a game that could get everyone involved? Do you enjoy creative expressions as well as playing games? If so, we have a unique Program/Game which could be the answer. It's called GAMEMASTER.

This program lets you easily develop and play your own adventure games. It does not create a game which you play against the computer, but creates a game which you the game creator, direct the game play while your computer maintains the game conditions and resolves combat.

GAMEMASTER package includes routines for creating player characters, creatures, items (weapons, armour, implements, or treasures), and environment (time, location etc.). Comes on diskette with sample scenerio. Requires one disk drive and 48k ram.

**Price \$39.<sup>95</sup>**

# Gold Plug 80

TRS-80 + MOD I, III, COCO,  
TIMEX 1000, OSBORNE,  
T199/4a others

COCO MODULE INSTALLATION AVAILABLE

Eliminate disk reboots and data loss due to oxidized contacts at the card edge connectors.  
**GOLD PLUG 80** solders to the board edge connector. Use your existing cables. (if gold plated)

## COCO Disk Module

Ground tab extensions

- COCO Disk Module (2) \$16.95
- Ground tab extensions INCL \$7.95
- Disk Drives (all R.S.) 29.95
- Gold Disk Cable 2 Drive 39.95
- Four Drive Cable

**new**  
SPECIAL PRICE

The **GOLD PLUG 80** extends the existing connection 1/2". The ground tab extensions extend the ground tabs 1/2" to contact the ground clips. The ground reduces the RFI interference to the monitor.

- GOLD PLUG 80 Mod I (6)** \$44.95
- Keyboard/EI (mod I) 15.95
- Individual connectors \$7.95
- GOLD PLUG 80 Mod III (6)** 48.95
- Internal 2 Drive Cable 29.95
- Mod III Expansion port 9.95

**new**

## POWER LINE PROBLEMS?

### SPIKE-SPIKER® ...THE SOLUTION

Protects, organizes, controls computers & sensitive electronic equipment. Helps prevent software "glitches", unexplained memory loss, and equipment damage. Filter models attenuate conducted RF interference. 120V, 15 Amps. Other models available. Ask for free literature.

#### DELUXE POWER CONSOLE \$89.95

Transient absorber, dual 5-stage filter, 8 individually switched sockets, fused, main switch, & lite

#### QUAD-II \$59.95

Transient absorber, Dual 3 stage filter, 4 sockets, lite

#### QUAD-I \$49.95

Transient absorber, 4 sockets

#### MINI-II \$44.95

Transient absorber, 3 stage filter, 2 sockets

#### MINI-I \$34.95

Transient absorber, 2 sockets

# End Your Indexing Worries Forever!

New Index Compiler\* ends tedious writing and sorting on 3x5 cards. Make each entry once, then with simple commands this amazing program sorts, alphabetizes, combines entries, edits redundancies, and prints out your index!

Index Compiler \$85.00 with documentation

Order Your Copy Today!

**COMPRESS**  
Division of Van Nostrand Reinhold  
P.O. Box 102, Westworth, NH 03282  
803-764-5831/5234

\*Index Compiler is designed for the TRS80 Model I or III, level II computer with 48k memory, 2 disk drives, line printer, and lower case modification.

Orders must be prepaid. Full money back guarantee if not satisfied!

✓ 311

- **DISPLAYS CORRECT SPELLINGS:** If you don't know the correct spelling, EW will look it up for you, and display the dictionary.
- **VERIFIES CORRECTIONS:** If you think you know the correct spelling of a word, EW will check it for you before making the corrections.
- **HYPHENATES AUTOMATICALLY:** (Optional). Inserts discretionary hyphens throughout text.
- **GRAMMAR & STYLE CHECKER:** (Optional). Identifies 22 types of common errors. Makes suggested corrections with the stroke of a key. Runs within EW.
- **50,000 WORD DICTIONARY:** Uses only 2½ bytes per word; add as many words as you wish.
- **FAST CORRECTING:** In as little as 30 seconds, Electric Webster can return you to your Word Processing program, with your text fully corrected and on your screen.
- **INTEGRATES:** into 11 different word processing programs: Wordstar, Spellbinder, Newsprint, Lazy Writer, SuperScript, Script, Electric Pencil, Copy Art, Superscript, Zorlof, and Magic Wand (specify). Begins proofing at the stroke of a key; returns you to word processing automatically.

of spelling checkers  
80 Microcomputing, 9/82

**VOTED #1:** For the second straight year, Electric Webster was voted the #1 spelling checker in the 80 Micro Reader's Choice Awards. (1/83, 1/84)

"The most helpful program I've found is Electric Webster. After looking at nine proofreading programs, I've settled on Webster ..."*Creative Computing, 11/83*

### ACCLAIMED:

"Electric Webster is the best. Just read any review in any magazine and I don't believe that you will find even one disagreement to that statement." *CINTUG, Cincinnati's Users Group Mag., 4/83*

"Now there's a program called Electric Webster that would let me write to Presidents and Kings and never feel embarrassed. Miss Mulberry would give Electric Webster an A+, and so will you." *Computer User, 1/84*

Performance "Excellent"; Documentation "Good"; Ease of Use "Excellent"; Error Handling "Excellent". *Info World, 8/82*

## SOFTWARE TOOLS

**MicroComm** - RS232 terminal program with upload, download and printer features. Works with the SOURCE and COMPUSERVE. Includes HEX/ASCII conversion utility

**BCross** - Produces a cross reference list of all variables and line numbers in a BASIC program. Includes a listing utility, good for all programs, ideal for packed programs.

**RollCall** - Mini Data Base Manager Designed for club and organization membership control. Make up mailing labels, membership and committee lists. Sorting features included

**PrintPac** - 7 useful printing programs. Generate banners, block lettering for title sheets or view graphs, mailing labels, product labels and initialize printer settings. For MX-80 & others.

# Restored ART

Model 4 Basic lacks three Model III graphics commands—Set, Reset and Point. Now you can access them.

**M**odel 4 Basic is a powerful Basic interpreter, but it lacks graphics commands. To remedy this, I've written three machine-language subroutines that perform the Set, Reset, and Point functions. I include all three subroutines in a single program called Graph (see Program Listing 1).

## Setting Up Graph

You can easily assemble Graph with an editor/assembler. For those of you who don't have one, I've included Program Listing 2, which POKES the subroutines into high memory.

Set the high memory pointer to FF86

hexadecimal before executing Listing 2. To do this from Basic, type in CLEAR, FF86; from TRSDOS Ready, type in MEMORY (H=X'FF86'). The program produces a CMD file of the subroutines, once they're in high memory.

## Using the Subroutines

You access the three subroutines using the Call command and the syntax given in the Table.

The Figure presents a job control language (JCL) file that automatically sets the high memory for the program and loads it into RAM. To execute the JCL file, type in DO GRAPH from TRSDOS Ready.

Program Listing 3 demonstrates how you can use these routines in your own programs. If you type in this program, you'll notice that every third line looks squashed. I suspect that this squashing effect is necessary to accommodate the Model 4's 80-column by 24-line display. However, the squashing shouldn't hamper your programming as long as you keep it in mind when designing your graphics. ■

*Write to Mark D. Goodwin at Star Route 79 Box 103, Orland, ME 04472.*

```
BUILD GRAPH/JCL <enter>
MEMORY (H=X'FF86') <enter>
LOAD GRAPH/CMD <enter>
//EXIT <enter>
<control><shift><@>
```

*Figure. A sample JCL file. Type in these commands at the TRSDOS Ready prompt and save them. When you want to run the Graph program, simply type in DO GRAPH at the TRSDOS Ready prompt.*

| Command             | Function                                                                                                                                                 | Example                                           |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|
| CALL SET(X,Y)       | Sets a pixel at the coordinate specified by X and Y.                                                                                                     | SET=&HFFB3<br>X>=0 and X<=159<br>Y>=0 and Y<=71   |
| CALL RESET(X,Y)     | Resets a pixel at the coordinate specified by X and Y.                                                                                                   | RESET=&HFFA2<br>X>=0 and X<=159<br>Y>=0 and Y<=71 |
| CALL POINT(X,Y,PNT) | Tests a pixel at the coordinate specified by X and Y. The result will be returned as:<br>PNT = -1 if the pixel is set.<br>PNT = 0 if the pixel is reset. | POINT=&HFF87<br>X>=0 and X<=159<br>Y>=0 and Y<=71 |

In the above examples, variables X, Y and PNT must be integer variables. However, their variable names can differ; I use X, Y, and PNT here as illustrations. You can also use different variable names for Set, Reset, and Point.

*Table. Subroutine syntax.*

## The Key Box

**Model 4  
16K RAM

## SEND AND RECEIVE MORSE CODE

- TRIPLE SPLIT SCREEN
- SPEED: 1-200 WPM

This 4.5k assembly language program runs on your TRS-80™ Model I, III, or 4. The decoded Morse Code is displayed on the screen and may be printed. The keyboard buffer is active while either sending or receiving. The output is either tone or keyed. I/O is via the cassette interface. The program runs from tape or disk (TRS-DOS 2.3 or 1.3). Use it "on-the-air" or for code practice.

*satisfaction guaranteed or your money back*

Cassette with booklet only \$19.95 postpaid.

## CHILD'S PLAY

### AN EDUCATIONAL PROGRAM FOR CHILDREN AGES 2 TO 7 YEARS

This machine language program contains fast **animation, sound effects, tunes, and speech**. The speech has two options: it can be generated by computer or by a VS100 speech synthesizer (speech options described later). The program is easily controlled by a friendly menu-man who points to the options that may be chosen. The main menu contains four sections: • Learn the Alphabet • Learn to Count • Learn Shapes • Learn Words. Each section contains three subsections which can easily be manipulated, giving twelve games in all. The menu selection is accompanied by a different nursery rhyme tune for each menu.

#### LETTERS

This option allows the child to select letters at random, match the current letter displayed, or type in the next letter. When a correct response is given, an animation associated with the letter moves across the screen. e.g., Z for Zebra. The computer says the letters also.

#### NUMBERS

This option allows the child to select the numbers zero to nine at random, match the current number displayed, or type in the next number. Men walk out on the screen equal to the number chosen. This section also contains speech.

#### SHAPES

This section allows the child to control the menu-man, moving shapes from the left hand of the screen to the right hand of the screen. The first level allows the child to pick up shapes using the spacebar. The second level, in addition, allows the child to control the menu-man with the arrow keys. The third level puts a small 'Bee' on the screen which the child must avoid while manipulating the menu-man and shapes.

#### WORDS

This final section allows the child to type in letters to form words. The first level asks for a word to be typed in, then to be repeated before another word can be tried. The second level

prompts the child with a word which must be matched before an animation will appear on the screen. The last level shows the animation on the screen. Then the child must type in the correct word before the next animation is shown. This section contains speech also.

#### SPEECH

The program can be bought as a stand-alone program with computer-generated speech, which uses 'your' speaker amplifier. However, we have also made the program compatible with an 'Alpha Products VS100' speech synthesizer for improved speech quality. (This can be purchased from 'Alpha Products' subject to availability). The speech is not available for a 16K machine.

Software available for the TRS80™ Models 1, III, and IV. Also soon available for the Timex. 16K tape (no speech). 32K tape. 32K disk. 48K disk. All programs for.

# Oops ... WRONG DISK

You'll never write data to the wrong file with this utility to identify your Model III disks

The rhythm of exchanging disks with either single- or multi-drive Model II systems while executing multi-swap routines can hypnotize even the most seasoned computerist into hitting the wrong key at the wrong time. It was just this experience that led me to write a simple routine that you can incorporate into Basic programs to identify your disks.

## Disk ID

The Basic statement

```
OPEN "D", 1, "XXX:0(RED)"
```

opens a file called XXX on the disk in drive zero no matter what the name of the disk. (RED) identifies the disk name, but only the Copy command looks at that name. All other commands ignore it. Basic programmers need a way to check the name of the disk once it's booted up.

Program Listing 1 (DISKID/CMD) shows the Assembly-language routine that calls SVC 15 and then returns the name of the disk residing in the drive you specified in the Basic calling routine.

The program assembles at the usable top of RAM for a 64K TRSDOS 2.0 system. The simplest way to incorporate it is to debug the 22 hexadecimal (hex) bytes of machine code into RAM ad-

resses EFEA to EFFF hex.

At the TRSDOS Ready prompt, type DEBUG ON and press the enter key. Then type DEBUG and press the enter key. When the question-mark prompt appears, press the M key. When A= appears on the screen, type EFEA, which then appears in the top left of the screen. Then press the F1 key. The cursor will flash over byte EFEA.

Enter the hexadecimal code in the Figure. When you've entered the code D5-C9, press the F2 key. Press the O key (not the zero key). At TRSDOS Ready, type:

```
DUMP DISKID/CMD START=EFEA,END=EFFF
```

Finally, build this routine into your Basic programs, calling it with the user (USR) function (see Program Listing 2). Line 100 calls the subroutine to high

RAM, line 110 protects it from Basic, and line 120 defines the entry address.

Line 140 represents a neat way to pass the disk drive number to the subroutine, the zero simply being a dummy character; line 150 transfers program control to the machine-language subroutine, which reads the selected drive and returns the disk name to the caller in variable ID\$.

You can also think of the USR0 as a function call in:

```
PRINT USR0(ID$)
```

You might want to build the fragment shown in Program Listing 3, or something like it, into your Model II Basic programs. ■

You can reach C. David Wilson at P.O. Box 272, Madawaska, ME 04756.

WORD PROCESSING ON YOUR TRS-80 BECOMES CHILD'S PLAY WITH  
**Using Scripsit**  
by William James Haga

320 pages  
8 1/2" x 11"  
Illustrated  
Paperbound  
\$21.95 1983

Finally, a comprehensive, simple-to-understand book that teaches you how to use SCRIPSIT, the most powerful, easiest to use word processing program for its price. USING SCRIPSIT shows you exactly how to use SCRIPSIT with your TRS-80 Model III or Model I (separate explanations are provided for each model). Each procedure is broken down into simple-to-follow numbered steps. Exercises, examples, "Common Mistakes" sections, and boxed-off notes to readers all help you learn by doing.

**Using Scripsit** has an easy-to-use, 4-part format:  
**I. For first time users**, Chapters 1-8 move you through the fundamentals of setting up your TRS-80, using a disk, writing on the video screen, using editing commands, and printing a document. By the time you reach Chapter 8, Chapter 2 will seem like child's play. **II. For the experienced user**, Chapters 9-15 explain SCRIPSIT techniques you'll use again and again—advanced editing methods, block moves, search techniques, hyphenation, creative formatting, filing documents on disks, and using DOS commands. **III. Beyond standard uses**, Chapters 16-19 reveal SCRIPSIT's special capabilities—how to merge VISICALC with SCRIPSIT, send text by phone, use SCRIPSIT to control a typesetter, create personalized form letters, write programs in BASIC, and print special formats. **IV. Appendices** help you with troubleshooting, define technical jargon, and provide sources of additional information.

Thoroughly tested, each procedure in USING SCRIPSIT was tried repeatedly by the author and tested by a group of first-time users. If a procedure didn't work, it wasn't included. The consensus? USING SCRIPSIT makes using SCRIPSIT child's play!

# Every Z80 assembly-language programmer needs this book.

Programming in assembly language requires good tools. *TRS-80/Z80 Assembly Language Library*, a complete reference book on TRS-80 Model I assembly language, is the best tool you can find. In over 300 pages, 45 figures, and 75 program listings, author Craig A. Lindley explains the details of Model I hardware and software and shows you how to write programs that squeeze every bit of performance out of your computer. This book will teach you:

- how to use ROM and DOS routines in your own programs
- how to perform disk input/output
- how to access the video display and keyboard
- how to write easy-to-use programs
- how to perform arithmetic operations
- how to use the undocumented Z80 instructions

You'll also learn about disk operating systems, device handling, base conversion, parameter passing, and more.

*TRS-80/Z80 Assembly Language Library* contains a library of ready-to-run utility programs that are worth many times the book's cost. Included with the book are two Model I TRSDOS-compatible disks\* containing utilities for printer formatting and spooling, single-key entry of strings, disk editing, base conversion, password encoding and decoding, and more. You get more than 15 valuable utilities, and the source code files are included, so you can examine, modify, and learn from every program.

Many of the programs also run on the Model III, and

TRS-80/Z80 Assembly Language Library is a Wayne Green publication  
TRS-80, TRSDOS, Model I, Model III are registered trademarks of the Radio Shack  
Division of Tandy Corp.  
Z80 is a registered trademark of Zilog

those that do not require only minor modification. One of the book's four sections is dedicated to routines and programs that run on any Z80-based system. No matter what Z80 computer you program, this book has something for you.

It's a book that's designed to be used. The text is set in large type, and the book is bound in an 8½- x 11-inch easel-backed binder that stands up next to your computer. So there's no squinting at tiny type and fighting to keep the book open.

The whole package—book, disks, and binder—is yours by mail for the **unbelievable price of only \$34.97**. And if you charge it, you can even call toll-free to order.

*TRS-80/Z80 Assembly Language Library*. It's the assembly-language book for the '80s.

\*Disks do not contain a disk operating system; two disk drives or a disk copy utility are required to transfer the files.

Call **Toll-Free 1-800-258-5473** for credit card orders or send \$34.97 plus \$4.50 shipping and handling to Wayne Green Books, Retail Sales, Peterborough NH 03458. Dealer inquiries invited.

# You Can Design Electronic Circuits The Easy Way

## With Programs for Electronic Circuit Design

Use your microcomputer and *Programs for Electronic Circuit Design* help you select the correct value for each component in an electronic circuit. The programs are adaptable to most microcomputer systems and are also available on disk for the Apple, IBM and TRS-80. Each chapter contains a program involving several different types of applications that use the same electronic components.

The thirteen programs can be used individually, or they can be combined, using a master menu, as explained in the book. The book provides documentation for the programs, and some of the programs refer to schematics and diagrams in the book.

If you have an elementary knowledge of electronics and familiarity with the basic components, you will find *Programs for Electronic Circuit Design* an invaluable aid in circuit design.

Topics covered include:

- resistor, capacitor and inductor circuits
- circuits that have combinations of resistors, capacitors and inductors

- series and parallel circuits
- Ohm's law computations
- voltage dividers
- impedance and frequency computations
- phase angles

- operational amplifiers
- 555 timers
- filters
- transistor circuits

*Programs for Electronic Circuit Design*

# DUMP SITE

Store up to three full screens of data  
in your Model I/III's video memory,  
then dump them to your printer.

**T**his screen dump routine for the Models I and III costs nothing, requires very little memory, and integrates easily into any program.

The routine fools the Basic interpreter into thinking it holds a screen full of string data stored in memory. Instead of defining a string array as located in the high memory pool, the program defines its location in video memory. In short, the data strings become what ever appears on the screen.

While I've written the program for text, you can modify it for graphics.

## Representing Strings in Basic

Each string variable is represented internally by a 1- or 2-byte variable name, a 1-byte length counter, and a 2-byte address pointing to the location in memory where the string begins. For a simple variable such as A\$, the program stores this information along with other simple numeric variables as shown in Fig. 1.

The VARPTR command gives N as the variable address (see Fig. 1). If you type PRINT VARPTR(A\$), you get the value of N. If you type PRINT PEEK(VARPTR(A\$)), you get the contents of the length-of-string box (see Fig. 1).

The program stores array variables similarly, except that a header block follows the variable name, providing information about the array size.

A table of 3-byte entries like boxes N, N + 1, and N + 2 in Fig. 1, one block for each element in the array, follows the header block. With array variables, VARPTR gives the same information: it points to the byte containing the length of the string. The only difference is that N - 1 and N - 2 don't contain the variable names.

To set up an array to represent the

contents of the video screen, first dimension a string array 16 elements long:

```
10 DIMAS(16)
```

The lengths are set to zero, and the addresses point to somewhere in high memory where Basic keeps a pool of memory reserved for building and storing strings. This is the memory set aside by the Clear NNNNN command, where NNNNN represents the number of bytes set aside for string storage.

To make this routine work, replace the length and address bytes Basic set up to represent the location and length of the 16 strings A\$(1)-A\$(16) with your own lengths and addresses. The addresses represent the starting address of each of the 16 lines of the video screen, and the lengths are all set to 64 characters, the length of one line of video. So every time you ask for the value of an element of A\$(N), you get the line of text or graphics on line N of the screen.

A simple loop sets up the lengths and addresses (see Program Listing 1). In line 20, I% is an integer variable; that is, the program stores its value in 2 bytes, making it easy to POKE its value into the array address locations as you go along. The address of the first character of the first video line is 15296 minus 64. Line 30 loops through 16 elements of A\$( and line 40 makes each string 64 bytes long.

With each successive iteration, I% increases by 64, representing the address of each successive video line (see line 50). Like the 2-byte address you need, the program stores the I% variable internally, so POKE the 2 bytes of I% into the appropriate locations N + 1, N + 2 (line 60).

Typing in the loop takes about three minutes and a few hundred bytes.

Here's what you get for your effort: At any given moment, the A\$ permanently stores the entire contents of the video screen, so long as an element of the A\$ array never appears on the left side of an equals sign in a string equation.

Try the following experiment: Clear the screen, then type THIS IS THE FIRST LINE OF VIDEO and hit the break key. The program displays:

```
THIS IS THE FIRST LINE OF THE VIDEO
>_
```

Now type PRINTA\$(1) and press the enter key. You should see the top line of video printed over again. Type

```
FOR I=1 TO 16:PRINT A$(I):NEXT
```

Press the enter key and watch what happens.

If you want to save the screen from inside a program, add 100 DIM B\$(16) and the subroutine:

```
1000 FOR I=1 TO 16:B$(I)=A$(I):NEXT
RETURN.
```

The subroutine in line 1000 snags the entire contents of the screen from the A\$ array and keeps it in B\$, where successive changes on the screen have no effect. You can get a printout of the 16 strings or the screen at any time. You can also store a screen of prompts, graphics, or data, and later recall it for reference—the applications are unlimited. I use an array of 256 elements to store 16 screens full of text for a text editor.

# COST-EFFECTIVE, TIME-SAVING SOFTWARE for INVESTORS

## STOCK MARKET ADVISOR SYSTEM — SMAS 2.0

SMAS employs both fundamental and advanced technical analysis. Its refined procedures that correlate three moving averages and other factors have been validated by applications to both stocks and portfolios. SMAS is different.

- Sophisticated procedures yield weekly appraisals of market trend and advisories (with action price ranges) to buy, to sell, to hold, and not to buy specific stocks.
- Data base includes 196 stocks, A/D file, and 4 indexes.
- Data base stocks were selected on fundamentals.
- You can use SMAS' results the very first week.
- Metropolitan papers print data required by SMAS.
- SMAS is menu driven, with both built-in checks for accuracy and efficient utility routines.
- SMAS is especially valuable to investors seeking long-term capital gains. Minimizes emotional involvement.
- SMAS works with Nebula and printer; with TRSDOS, LDOS, NEWDOS/80, & DOSPLUS on TRS-80 (TM Tandy Corp.) Models I and III (48K). SMAS version 2.0 only \$169.95 + \$3.00 for shipping.\*

## NEBULA STOCK DATA RETRIEVAL

"I paid \$1,000 for an equivalent program for my Apple!"

Nebula (Models 1 & 3, 48K, 1 drive, 300 baud modem, RS232, optional printer, TRSDOS 2.3 or LDOS 5.0) retrieves stock, bond, option, and T-Bill prices from Dow Jones Service. Stores symbols in data statements and returned prices & volumes on disk in data file. Automatically disconnects. Does not need a terminal program. Dates & times are logged for reconciling service bill. Available either for independent operation (\$52.00 + \$3.00 shipping) or for use with SMAS (Special 1984 combination offer: Only \$199.95 + \$6.00 shipping for SMAS 2.0 and Nebula together).\*

## ANDROMEDA STOCK TRADER & CALCULATOR

Andromeda records transactions, including purchase/sale prices & dates, dividends, total cost & net realization. Andromeda does not use special commands. Learning time is nil. When positions are closed, it posts transactions to the sales file. Reports include Active Security and Security Sales Summaries, Portfolio Summary, and a summary table (either 80 or 132 col.) for use with IRS Schedule D. Requires TRS-80 Model I, 48K, one drive with TRSDOS 2.3 or LDOS 5.0. Andromeda is regularly only \$51.95 plus \$3.00 shipping.

\*Remittance by VISA, MASTERCARD, cashler's check, or M.O. brings prompt shipment. Shipment is made after personal checks clear (about 3 weeks). Software is sent insured.

Table. Command descriptions.

## Running the Sample Program

My scaled-down screen editor sample uses strings to capture the screen contents (see Program Listing 2). Though editing is possible with this technique, my demonstration program doesn't support it.

To run the sample screen editor, familiarize yourself with the key instructions (see the Table), press any key, and wait for the top line to clear to the word "Begin." Then start typing and get the idea of what the cursor keys do. You can type anywhere on the screen at

Program Listing 1. Loop for string lengths and addresses.

```
20 I%=15296: '
30 FOR J=1 TO 16: '
40 POKE VARPTR(A$(J)),64: '
50 I%=I% + 64: '
60 POKE VARPTR(A$(J))+1,PEEK(VARPTR(I%)): '
70 POKE VARPTR(A$(J))+2, PEEK(VARPTR(I%)+1): '
80 NEXT J: '
```

End

Listing 2 continued

will. When the first screen fills, press the clear key; the screen clears and prints the second screen message. Continue typing until you want to print out or fill up three screens, whichever comes first.

When you fill three screens, the program asks if you want to print. If you don't, the program presents you with the first screen again. If you do want to print, or if you initiated printing by depressing the enter key earlier, the program asks how many spaces to indent each line, how many lines per page to allocate, and then line-prints the stored text.

That's all there is to it. After the program prints your screen, it returns to page 1, and you can continue to enter and print more text.

One word of caution: using the format

AS(3)= "123" +

changes the pointer and counter for the AS element so that it no longer points

to the video screen. You'd have to P-O-K-E the proper parameters to restore the screen-saving function.

### Variations on a Theme

I wrote the code in lines 10-80 in the subroutine in Program Listing 1 with clarity in mind. For maximum speed and minimum space, try the version in Program Listing 3.

Another program variation is to include only a portion or window of the screen for storage. Setting up eight array elements produces the top half of the screen; setting N=32 in line 10 and changing line 30 to read K=K+N+N gives you only half of the screen. Setting K=15328 and N=32 as in the last modification results in the right half of the screen. You can easily think of other options. ■

You can contact Gregg Weissman at C.N.P. Inc., 72 Fifth Ave., Suite 602, New York, NY 10011.

# ROUTINE ACCESS

You're no longer limited to a single USR routine in Level II Cassette Basic. This utility gives you access to up to 10 such routines.

**Y**ou can make your Level II tape- or stringy floppy-based system more powerful than it is now with access to up to 10 USR routines. Normally, this number of routines is available only with machine-language patches or through Disk Basic. But with the utility presented here, you can invoke the routines through Level II Basic itself.

Standard Level II Basic allows only one USR. You POKE the entry address of your machine-language routines into

memory locations 16526 and 16527 (408E hexadecimal [hex] and 408F hex). If you want to use more than one routine—say a search routine and a sort routine—you have to POKE the entry address each time you change from one routine to the other. It would be easier (and would often save memory) to POKE the entry addresses for several routines simultaneously and then call them when necessary.

## Disk Basic Words

If you're familiar with Disk Basic, or if you've ever looked at a program written for disk, you've noticed a number of Basic words that aren't used in Level II Basic. Level II ROM recognizes Disk Basic words like CVI, LOC, and CVS. It even sets aside a table of addresses for them in RAM. But the code that implements these Basic words isn't there. If you attempt to use them in your program you'll get an L3 error (Disk Basic only).

It's these Disk Basic words that let you access multiple USR routines. The key is the table of jump addresses in RAM located between 16722 and 16805 (4152 hex to 41A5 hex).

Three bytes represent each Disk Basic word. Initially, these all contain a jump to the ROM routine that prints the L3 error message. If you POKE a different address into the proper place (see Table

1), you can use many of these Disk Basic words and their syntax just like USR. For example, instead of:

```
100 POKE 16526,44: POKE 16527,2: X=USR(0)
you can use:
```

```
100 POKE 16723,44: POKE 16724,2: X=CVI(0)
```

These two program lines produce the same effect, including passing variables to and from the routine if necessary. Try it. Take any program you have that uses USRs. Change every occurrence of POKE 16526 to POKE 16723. Change POKE 16527 to POKE 16724. Finally, change USR to CVI. Run the program. If you didn't make any typing errors, it should work exactly as before.

Table 1 lists all the POKE locations for the Disk Basic words that work exactly like USR. Together with the USR this makes for 10 possible machine-language routines in a Level II program. To use any of them, simply substitute the locations given and POKE in the same value you would have POKEd into 16526 and 16527. Then use the Disk Basic word instead of the USR.

## The Listings

Program Listing 1 substitutes the Disk Basic words for USR. Line 10 POKEs a 7-byte machine-language routine into the Remark line. All the routine does is take the number you pass to it, double it, and return it—showing

| Words | POKE Locations |
|-------|----------------|
| CVI   | 16723 16724    |
| CVS   | 16729 16730    |
| CVD   | 16735 16736    |
| EOF   | 16738 16739    |
| LOC   | 16741 16742    |
| LOF   | 16744 16745    |
| MKI\$ | 16747 16748    |
| MKS\$ | 16750 16751    |
| MKD\$ | 16753 16754    |
| (USR  | 16526 16527)   |

Table 1. Disk Basic words and POKE locations.

Model I and III  
16K Cassette Basic

MICRO DESIGN INTRODUCES

# REMOVABLE

## WINCHESTER HARD DISK SYSTEM

For the TRS-80, IBM & Apple Computer

### FEATURES

- Approximately nine times faster than standard floppy disk drives
- Mix & Match Fixed & Removable drives for a custom system
- Up to 45 megabyte on-line storage • Built-in error detection & correction.

Starting At **\$1799<sup>95</sup>**

## MICRO DESIGN

6301 Manchaca Rd. Suite B • Austin, TX 78745

Tex. Res. Call 512-441-7890

# 1-800-531-5002

# UPGRADE

## Micro-Designs System-Upgrade for the TRS Model III and 4

The Micro-Design TRS-80 upgrade includes Micro-Design's exceptional MDX-6 disk controller board, one 40 Track Disk Drive, necessary installation cables and hardware. Will also control external 8" Disk Drive Systems.

that you can pass variables back and forth to a machine-language routine using the Disk Basic words.

Program Listing 2 is a short routine to save and restore your screen. It was written by Hubert C. Borrmann and appeared in the February 1981 issue of *80 Microcomputing* (p. 236). I have rewritten it slightly to make use of the Disk Basic words and to allow for 32K and 48K machines.

### More Routines

Another useful machine-language routine is built into the Level II ROM at memory location 0556 (022C hex). (The LSB=2 and the MSB=44.) This routine blinks an asterisk on and off in the upper right-hand corner of the screen. If your program requires much time to swap strings or read data statements, you can use this time to ascertain if the computer is operating and not stuck in an endless loop. Just add a line like this to your program:

```
100 POKE 16723,44: POKE 16724,2
```

Then insert

```
<any variable> = CVI(0)
```

in your loops. For example:

```
110 FOR X = 0 TO 500: B = CVI(0):
READ B: POKE AD + X, B: NEXT
```

You can use many routines without any knowledge of Assembly language by POKEing from data statements within your Basic program.

If you are using Cassette Basic, you should limit yourself to the shorter routines which you can POKE from within your Basic program. Having to load a long system tape before loading your Basic program probably wouldn't be worth the effort.

However, the Entrepo Stringy Floppy and some of the fast tape programs let you load machine-language programs from within your Basic program. In this case you can create your machine-language file using the editor/assembler or by POKEing it into memory and save it to tape or a stringy floppy wafer separate from your Basic program.

I am using this method regularly with a long mailing list program I wrote. The program uses Disk Basic words to access sort, search, string compression, and input routines—merrily passing string pointers, and so on, back and forth. I have yet to run into a problem using the Disk Basic words from the table instead of USR. ■

Contact Wayne King at 36 Sickles St., Apt. 2D, New York, NY 10040.

**NODVILL DIET PROGRAM**  
\$69.95

**"TAKE A BYTE"**  
MAINTAIN, LOSE OR GAIN WEIGHT  
With your TRS-80 Double Density Disk Model I/III/4  
and  
The NODVILL DIET PROGRAM "Take a Byte"

You can quickly and accurately:

- Calculate caloric and nutritive food intake
- Evaluate nutritive value of your diet
- Compare daily diet to individual RDA Chart
- Create personalized daily meals and menus
- Plan varied daily menus based on sound nutrition
- Save records of daily meals and menus for future planning
- Print nutrition charts, food, meal, menu and grocery lists

"Take a Byte" is a Modular BASIC Program

MAIN Program Menu

- (1) Recommended Daily Dietary Allowance (RDA) CHART
- (2) 733 Expandable Random Access FOOD LIST Data File
- (3) 28 Nutritional MEAL LIST Data File Examples
- (4) 7 Balanced DAILY MENU LIST Data File Examples
- (5) GROCERY LIST Program Module
- (6) 25 Page USER'S MANUAL including Charts and Tables

ALL Data Files can be EXPANDED and MODIFIED automatically and flexibly to reflect your personal diet, your choice of diet book, or your doctor's recommended diet.

Let Your TRS-80®  
Teach You  
**ASSEMBLY LANGUAGE**

Tired of buying book after book on assembly language programming and still not knowing your POP from your PUSH?

REMSOFT proudly announces a more efficient way, using your own TRS-80® to learn the fundamentals of assembly language programming . . . at YOUR pace and YOUR convenience.

Our unique package, "INTRODUCTION TO TRS-80® ASSEMBLY PROGRAMMING, will provide you with the following:

- Ten 40 minute lessons on audio cassettes
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- Step-by-step dissection of complete and useful routines to test memory and to gain direct control over the keyboard, video monitor, and printer.
- How to access and use powerful routines in your Level II or Model III Basic ROM

AVAILABLE FOR MODEL 1 & 3

REMASSEM (tape) \$74.95  
REMASSEM (disc) \$79.95

**LEARN TRS-80® ASSEMBLY LANGUAGE DISK I/O**

Your disk system and you can really step out with REMSOFT'S Educational Module, REMDISK-1, a "short course" revealing the details of DISK I/O PROGRAMMING using assembly language. Intended for the student with experience and assembly language.

COURSE INCLUDES:

- Two 45-minute lessons on audio cassette
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- A booklet of comprehensive, fully commented program listings illustrating sequential file I/O random-access file I/O and track and sector I/O.
- A diskette with machine readable source codes for all programs discussed in both Radio Shack EDTASM and Macro formats.
- Routines to convert from one assembler format to the other.

Presently available for Model 1 only  
**REMDISK-1 only \$29.95**

**HI-SPEED TAPE FOR MODEL I**

Data transfer to/from unmodified CTR-41, CTR-80 or CCR-81 cassette recorders at 7000 baud.

- SAVE & LOAD Basic programs 12X faster
- WRITE & READ system programs  
Load 12K program in less than 20 sec.
- CATALOG tape contents by name/size  
Six (6) character program/file names
- PUT & GET hi-speed interface to Basic  
Access/store data up to 50X faster
- USER'S MANUAL with many examples  
Requires Level II ROMs
- Error correction for high reliability
- Uses inexpensive cassette tapes
- Does not interfere with 500 baud mode
- Switch between hi-speed and normal mode
- Assembled & tested — guaranteed
- Complete installation instructions
- Test programs for checkout

# MODEL-16 FORTRAN-77

TriSoft is pleased to announce the availability of SVS FORTRAN-77 under TriSoft CP/M-68K for the Radio Shack Model-16 computer. This FORTRAN implements the full ANSI-77 standard and is not the subset FORTRAN-77 available on most microcomputers.

Full ANSI-77 FORTRAN on a 68000 based computer gives the user the power and flexibility of a mainframe computer at a fraction of the cost. FORTRAN has been the primary language for scientific, mathematical and statistical applications for many years. A vast wealth of programs already exist for a variety of applications but require a mainframe environment. FORTRAN-77 running under TriSoft CP/M-68K provides a suitable environment to allow the user to take advantage of these programs.

In addition to supporting the full ANSI-77 standard, the FORTRAN package allows you to link in routines written in DRI 'C' and 68000 Assembly languages.

SVS FORTRAN-77 is a native code compiler. This combined with the efficiency with which it was designed provides very fast execution speeds.

## Calling Wall Street

by Thomas L. Robb

While stock market trading prices fluctuate daily, the Model 100's display remains the same—making it difficult to cram stock quotations from the Dow Jones News/Retrieval Service into the 8-line by 40-column screen.

Few information utilities are set up to work with such a small display. Dow Jones in particular doesn't support the XON/XOFF protocol needed to stop the flow of data from the host. But with DJN/R.BA (Program Listing 1) you won't have to speed-read scrolling stock statistics: The program displays one quotation on the screen at a time.

### Making the Connection

You can access the Dow Jones via the Model 100's TELCOM program in two ways. If Tymnet is your packet switcher, you're in luck: Tymnet supports the XON/XOFF protocol. In response to the log-in prompt, simply type control-R before entering DOW1;. Control-S (or the pause key) stops the scroll; control-Q restarts it—even with a TELCOM line status parameter of D (disable XOFF). In fact, I always use the parameter M711D, 10 since I don't find M711E, 10 useful in programmed access or the TELCOM mode.

Another way to get a readable columnar display of a single stock quotation (see Fig. 1) when using the Dow Jones stock quote reporter is to enter the command //SIZE32. (//SIZE40, which represents the default screen format, would display 80 characters in two word-wrapped lines, each of up to five stock quotes in columns, one per line.)

Before using DJN/R.BA, insert the 9-pin direct-connect modem adapter cable plug into the phone connection at the back of the Model 100. Plug the RJ-11 telephone jack into the beige adapter on the modem cable, then, to keep the telephone connected, plug the RJ-11 jack on the silver cable into the phone (optional).

Remember to put your local Tymnet telephone number in line 1402 of the program and your password in line 1730.

When you run the program, it auto-dials and signs onto the Dow Jones service via the Tymnet packet switch network. It then displays a screen (see Fig. 2) to prompt you for the symbol of a particular stock. If, for example, you type in IBM in response to the prompt, the program displays the screen depicted in Fig. 3.

|                |         |
|----------------|---------|
| STOCK          | IBM     |
| BID/CLOSE      | 120 1/2 |

Figure 1. Columnar stock quotation obtained using TELCOM with format //SIZE 32.

To end the program, depress the enter key without a stock symbol (see line 620). My remark statements should help you analyze the program.

### Problems

The program can hang up. Line 635 requests input from the modem port. If it receives none, control never passes to the next statement. In Model 100 Basic, even with a hardware clock, this program doesn't time-out communications input.

If nothing appears on the screen for 30 to 40 seconds when you're using DJN/R.BA, reset the computer and run the program again. You won't lose your data since I set up the Quote.DO file (see line 636) to capture all the two-way communications between the program and the host. Using the text editor, you can re-create the data exchanges up to the hung condition.

### Graphing Stock Statistics

My related program, Graph.BA (see Program Listing 2), also accesses Dow Jones, then gathers historical stock data and graphs the monthly volume and closing price for a selected stock on the Model 100's screen.

You can obtain monthly historical stock data for common and preferred stocks and warrants from 1979 to the present. Available markets include the New York, American, Pacific, Midwest, and national Over the Counter (OTC) stock exchanges. Since the national OTC doesn't carry a monthly closing price, I set up the query (line 627) to exclude a national OTC stock request and to request New York stock exchange data (the 1 following the semicolon). A 2 identifies the American, 3 the Pacific, and 4 the Midwest stock exchanges.

On the graph, double vertical bars represent volume data (the right vertical axis); horizontal dashes represent closing prices (left vertical axis). I omitted units of thousands (000) on the volume scale. The program uses the ON MDM GOSUB command, rather than INPUT or LINE INPUT commands, to capture modem input. Through this logic, you can detect time-out conditions and request retransmissions, thereby avoiding hung programs.

I chose to alternate between two interrupt routines—using one that, during stock transmission, writes the received characters to a RAM file, Quote.DO (see line 390), and the other that, during sign-on and sign-off, doesn't write to the RAM file (see line 380). Even at the slow transmission rate of 300 baud, the combined number of statements you can execute in the program's wait loop (lines 630–635) and the interrupt loop (line 390) is limited. If you require more logic in either

### The Key Box

The programs in "Calling Wall Street" require 24K RAM. The programs in "North by Northwest" and "Graphic Results" run in 8K RAM.

loop, you can begin to drop input characters from the RAM file (file 3).

As in DJN/R.BA (Program Listing 1), set up your local Tymnet telephone number (line 1402) and Dow Jones password (line 1730) in Graph (Program Listing 2) before you run the program.

Once you've selected Graph from the main menu, it makes the Dow Jones connection and then prompts you for a stock symbol and a year. The program goes into a timing loop, and if the computer receives no modem input before the loop is over, the program detects a time-out condition.

During normal operation, there will be about a 30-second wait while the program collects data in the temporary file Quote.DO. (You need an available slot for this file in your directory.)

The program then generates and displays the graph. If you hear a beep during the sign-on or data collection phase, the program has timed-out or received garbled data and will request a retransmission. The program terminates after three unsuccessful retransmissions.

The program is in an INKEY\$ loop (lines 728-730) when it displays the graph. Depress any key to return to the stock symbol prompt, and then the enter key to terminate the program. The program signs-off, disconnects, displays the connect time and charges, deletes the Quote.DO file, and then returns to the main menu.

Dow Jones News/Retrieval returns a footnote to indicate a special situation associated with the returned data. For example, in the graph of IBM for 1979, a stock split occurred. If the stock symbol in the lower left of the screen is flashing, depress any key to display the footnote.

**The Bottom Line**

Accessing Dow Jones during prime time (between 5 a.m. and 6 p.m.) costs 90 cents per minute; at other times, the rates drop to 15 cents per minute. ■

Contact Thomas L. Robb at 2632 Sumac Ridge, White Bear, MN 55110.

**WILL CHANGE THE WAY  
YOU THINK ABOUT YOUR TRS-80!**

**THE MOST POWERFUL WORD PROCESSOR AND ALL PURPOSE COMPUTER PROGRAM AVAILABLE FOR THE TRS-80.**

### LOOK AT ALL THESE FEATURES

1. INSERT characters, words, lines, paragraphs or other files.
2. DELETE characters, words, lines, paragraphs.
3. COLUMNS. CopyArt II can be instructed to print your text from one to six columns. Super easy to use! No complicated commands. Great for doing newsletters, magazine layouts etc. **NO MORE CUT AND PASTE!**
4. SORTING. Sort lines of text by any field. Sorts up to 650 items in less than 7 seconds. Sort indices, table of contents, names, words or whatever in descending or ascending order. Used with CopyArt's math function it is great for small Inventories, Receivables, Payables etc.
5. Screen widths from 32-255 characters wide. Screen widths can be changed to allow formatting your text as you want.
6. MATH. Built in MATH function for doing calculations on columns or rows. Used with the SORT command, CopyArt II can do a small inventory of 200-300 items, or keep track of small receivables or payables, general ledgers or home financial reports. Super floating point precision up to 32 digits!
7. \*GRAPHICS. CopyArt has a built in graphics program that allows inserting graphics within your text. Drawings, graphs, illustrations, cartoons etc. may be used within newsletters or company reports. Graphics commands include: Plot between points, Circles, Squares, Fill, Erase, Draw, Move, Pixel cursor controls and more.
8. \*GRAPHIC CHARACTERS. CopyArt has a built in graphics character generator. Used for typesetting large letters from 3 to 25 times normal size! Yes, you can even print characters down the page as well as across. Black on white or white on black.
9. JUSTIFICATION is fully supported. \*Proportional spaced justify is supported.
10. \*SUPER or SUB-SCRIPT.
11. UNDERLINING.
12. BOLDFACTORING.
13. \*CHANGE CHARACTER SIZE or PITCH within your document. Character size changes for dot matrix printers with capability. Pitch change for daisy wheel printers with capability.
14. HELP. Help is available for all the commands at the touch of a key while using the word processor. Super for training inexperienced secretaries. Great reminder for experienced people as well. MENU DRIVEN Help for over 45 commands.

**CopyArt II** Continues on  
the next page...

# SIMUTEK

Computer Products Inc.

SIMUTEK COMPUTER PRODUCTS INC., 4807 E. SPEEDWAY BLVD., TUCSON, AZ 85712, (602) 323-9391  
DEALER, DISTRIBUTOR, & PRINTER/MANUFACTURER INQUIRIES INVITED  
TRS-80 and Script II are TM of Radio Shack & Tandy corp.  
\*Indicates printer must have capability to do function.

**MORE REASONS YOU SHOULD CONSIDER  
MOVING UP TO OUR COMPREHENSIVE PROGRAM...**

15. SUPER EASY TO LEARN editing features. Logical key choices.
16. Hyphenation
17. SPELLING checkers like the 74,000 word Scripsit Dictionary work great with CopyArt II.
18. CHAINING. Chain files together to make books or manuals hundreds of pages long.
19. CENTERING.
20. HEADERS and FOOTERS. You can even put graphics within headers for super page layouts.
21. PAGE NUMBERING. Page numbers can appear at the top or bottom of the page.
22. DOS COMMANDS from within the editor. Kill files, check free space or get directories easily.
23. CUSTOMIZED PRINTER driver. Since your printer has features that other printers don't, CopyArt II will be supplied with the printer driver of your choice below. Each printer driver is custom made to provide you with commands for each of your printer's fine capabilities. If you have more than one printer, order other printer drivers for only \$19.95 each. Printer drivers are available for:

- Radio Shack LP, V, VI, VII, VIII and Daisy Wheel II
- Epson MX-80, MX-80/FT, MX-100 with or without grafrax.
- Okidata Microline 80, 82a and 83a
- NEC 8023
- Smith Corona Daisy Wheel TP-1
- Brother Daisy Wheel
- C-Itoh Starwriters and Pro-writers all 85 10A, 1550
- PMC Printer
- Diablo 620

OTHERS COMING SOON. Call if you don't see your printer!

24. Unprotected diskette. Unlimited backups can be made.
25. MAILIST/MAILMERGE INCLUDED. CopyArt II comes with a mailist program that stores over 2,000 names on a MOD III diskette. These names can be sorted by any field and have a special field for your code. You can make PERSONALIZED FORM LETTERS that will take the following codes from the mailist and insert them in your text. FIELDS INCLUDE: Mr. or Ms., Last name, First name, Business name, City, State, up to 9 digit ZIP code and your own special 2 character code. ANY OF THESE fields can be inserted within your form letter wherever you want. You can print form letters or mailing labels to all the people on your list or to specific codes only. CopyArt makes it easy.

**WILL CHANGE THE WAY  
YOU THINK ABOUT  
YOUR TRS-80!**

26. **SIMPLE CURSOR** commands. Simply use the arrow keys to move your cursor around the text. The screen will scroll both vertically and horizontally. Shift arrows take you to the beginning or end instantly.
27. **HI-Resolution graphics** supported.
28. **COMPLETE MARGINS CONTROL.** You tell CopyArt II what margins you desire. You can even change margins within the same text. You may also have parts of your text with 2 columns, some with one etc. It's super easy to use.
29. **BASIC PROGRAMS** can be edited easily. CopyArt is really useful for inserting graphics within quoted strings to give your programs super animation without the hassle of calculating the CHR\$( ) of the graphics!
30. **VISCALC** files can be loaded into CopyArt II to be manipulated easily. Great when you want to accompany your Visicalc reports with written reports, **GRAPHS** and **BOLDFACING** etc. Visicalc reports up to 255 wide can be loaded.
31. **SPECIAL SCRIPSIT FILE LOADER.** Allows you to load your old Scripsit files without having to save them in ASCII. Copyart will also load Pencil files and other normal ASCII files.
32. Similar to Scripsit. If you have used Scripsit, you can use Copy Art in minutes.
33. **CONTROL CODES.** Lets you insert special printer control codes in your text. **CODES** between 0 and 255.
34. **BLOCK MOVE.** Simple and powerful block move. Lets you move paragraphs or lines of text around easily. No complicated marker settings required.
35. **FIND/REPLACE/REPEAT.** Lets you find a string of characters and replace them with any other string of characters up to 20,000 times! **WILDCARD** search also supported.
36. Professional Manual in easy to understand English.
- Copyart II requires a TRS-80 Model I or III, (or PMC-80 or LNW), 48K and 2 disk drives, now works with 4 and 4P.

**CopyArt II THIS PROGRAM DOES IT ALL!**

PLEASE SPECIFY which COMPUTER and PRINTER you have when ordering.

Copyart 11 with one printer driver ..... 99.00  
Additional printer drivers ..... 19.95 each

Copyart I owners. Updates available. To registered owners for \$15.00.

## EXPANSION TO GO

Battery powered interface for the Model 100. Gives Analog and Digital I/O capabilities to your Radio Shack or NEC portable. Whether in the lab or in the field, Data Acquisition and Process Control are now more affordable than ever. Easy to program using BASIC input and output statements.

Complete PL-100 System \$498 includes:

- Expansion Chassis (holds 3 boards)
- Combination I/O board with
  - 16 Channel 8 Bit Analog Input
  - 4 Channel 8 Bit Analog Output
  - 4 Analog Level Sense Inputs
  - 16 Bits Digital Output
  - 16 Bits Digital Input
- Battery Charger / AC Adapter
- 2 Empty expansion slots
- Interface Cables

- Uses rechargeable batteries
- Provides power to the Model 100
- Expansion boards available:
  - High Accuracy 12 Bit Analog I/O
  - 16 Bit Digital I/O
  - Combination Analog & Digital I/O

## North by Northwest

by Smith Harris

If you're a traveler, you may often wonder how far your current position is from your destination, or in what direction your destination lies.

If you're working with distances of less than a few hundred miles, you can answer these questions fairly accurately with a large-scale map. However, when the distance between your destination and current position is more than a few hundred miles, the distortion caused by the curvature of the earth on the flat surface of the map becomes significant.

I wrote an 8K RAM program, *Navigate.BA*, that accurately determines the distance between any two locations on the surface of the earth, as well as the compass bearing from the first to the second location (see Program Listing 3).

It does so by solving the spherical triangle whose apexes are at your current location, the north pole, and your destination. Spherical triangles, as the name implies, are triangles drawn on the surface of a sphere. They have three angles, like the more familiar plane triangles, but the resemblance stops there. Their sides are segments of great circles and their geometry is more complex than that for plane triangles.

## The Program

To use *Navigate*, enter the names of the two locations and their respective latitudes and longitudes in degrees and decimal fractions of a degree, prefixing south longitudes and east

Program Listing 3. *Navigate.BA*.

# StatPac™

## Statistical Analysis Package

A complete data manager and statistical analysis package similar to mainframe SPSS\*.

StatPac's features include:

batch processing, variable and value labels, select if, recode, recode if, compute, compute if, sort cases, list cases, write subfile, frequencies, descriptive statistics, crosstabs & chi-square, correlation & linear regression, t-test for matched pairs or independent groups, multiple regression, one and two-way anova, two kinds of multiple variable response.

StatPac can handle fixed or free format data files and 2000 cases with up to 255 columns of information per case. Statistic selections and printing options are available on all analyses including graphics and paper saving ecology feature.

latitudes with a minus sign.

The computer then solves the triangles and displays the distance between the two locations in international nautical (airline) miles, statute miles, and kilometers. Navigate also indicates the compass bearing from the first to the second location on a 360-degree basis (zero degrees is north, 90 degrees east, 180 degrees south, and 270 degrees west).

The program takes the mean circumference of the earth as 24,860.51 miles, making one degree equivalent to 69.05698 statute miles. It converts statute miles to international nautical (airline) miles and kilometers using conversion factors given in NASA publication SP-7021, *The International System of Units—Physical Constants and Conversion Factors* (1 nautical mile equals 1.150778 statute miles and 1 kilometer equals 0.621371 statute miles).

I chose to express latitudes and longitudes in degrees and decimal fractions of a degree because I find it easier to estimate locations on a map in this manner rather than using minutes and seconds. If you prefer to use minutes and seconds, convert these quantities to decimal fractions of a degree by dividing minutes by 60 and seconds by 3,600. The computer does the conversion for you if you change line 100 to:

```
100 PRINT "LATITUDE OF ";A$;"(DD,MM,SS)(-IF SOUTH)";
INPUT N,M,S
```

and insert line 105 as follows:

```
105 N=N+M/60+S/3600
```

You should similarly modify lines 110 through 130.

A word of warning is in order. Don't try to fly from New York to San Francisco using the compass bearing obtained in

the program. Although it's correct, you must constantly make course corrections to follow a great circle. Otherwise, you'll never get to your destination; instead, you'll follow a path called a loxodrome around the globe in ever-decreasing spirals, approaching but never reaching one of the poles. (You can find out more about great circles, loxodromes, and navigation in general in an encyclopedia.)

Navigators involved in great-circle sailing can easily adapt the program for a pocket computer. It saves a lot of tedious calculations with log tables. ■

*Smith Harris can be reached at Route 4, Box 59, Gray, GA 31032.*

## Graphic Results

by Emmett Carmody

It's often useful to see a graphic representation of how a change in quantitative variables produces different results. I've written two Basic programs that produce illustrative graphs using results from problem-solving routines.

Program Listing 4, Pie.BA, displays a pie chart relating three variables to an available total quantity. Program Listing 5, Bar.BA, lets you solve an equation for X in terms of four variables or constants, A, B, C, and D, and presents a bar chart relating X to a desired maximum. You can change any of the variables to try and get closer to the maximum value.

### The Pie Chart

Lines 20–60 in Listing 4 draw a circle on the right side of the screen using the PSET command. Quantity A in these lines is the angle in radians, whose value increases in steps of 0.1 radians from zero to 6.28 (or two times pi). Quantity R is the radius, set at 30 pixels.

Line 70 asks you for the total quantity of whatever your concern may be (budget dollars, man-hours, supplies, people surveyed, or so on). Input items A, B, and C in line 80. If the sum of A, B, and C exceeds the total, line 90 alerts you to the fact and gives you another chance to input values. If you take up too many lines entering values, the circle is pushed off the screen.

Statements 100–250 draw the pie divisions. Line 110 makes the initial cut, and line 130 converts each item to degrees and percentage. Line 140 computes the angle to place the label of the pie section; line 150 computes the angle of the cut.

Lines 160 and 170 find the point X2Y2 on the circumference of the circle corresponding to the angle figured in 150. Lines 180 and 190 do the same for the point X3Y3—the point where you place the sector label.

A Print@ statement in 240 puts the identifying letter on the screen as close as possible to X3Y3. Lines 200 through 220 find the appropriate character block number (each character block consists of a 6- by 8-pixel rectangle).

Line 230 draws each pie cut; line 240 prints each label. Lines 260 and 270 print out the percentages figured in line 130 and what is left over (if anything). Line 280 keeps everything on the screen. To solve another problem, break and run again.

Listing 3 continued

# Got a great new program up your sleeve?

## If you write programs, we need each other.

We know that some great software is being developed between the hours of midnight and 6:00 AM, in the silence of America's homes. If you're one of those disk-driven writers, buttoning up by day and hunkering down by night, take heart. Fame and fortune could be right around the corner.

## You'll hear from us in 30 days.

I/O WARE is looking for innovative programs for the home and small business markets: word processing, graphic arts, finance, planning, home budgeting, "how-to", etc. Programs that will run on the Commodore 64 (Disk or Tape); IBM PC and PC Jr. (Disk); Apple II (Disk); TRS-80 I, III, IV (Disk), and Color Computer (Disk or Tape). You'll receive our decision in 30 days. If you have what we're looking for we'll immediately send you an advance of *at least* \$250.

And that's just the beginning. I/O WARE can give you the kind of exposure (and royalties) you've been dreaming of.

*The I/O WARE Professionals:  
Duane Manseau, Jim Eastman, Tom Cullity  
"We're looking for great new software."*

## See your name up in bytes.

Every program needs professional documentation, packaging, distribution, and promotion. That's our job. We'll transform your program into a polished, and successful software package.

I/O WARE is part of the team of computer experts publishing the leading computer magazines in the country. Which means your program will have access to major national advertising, direct mail, and hundreds of retail outlets across the country.

## So hit us with your best shot—today.

Because we're putting together a very strong line of software. Fast. And there's a good chance you could be a part of the team. Just call Tom Cullity at our software hotline, 603/924-9897, and let us know what you have up your sleeve.

## We'll put a cash advance in your pocket.

**I/O WARE INC.**  
Peterborough, NH 03458  
Attention: Tom Cullity

If you need to change the number of pieces in the pie, change lines 80, 90, 120, 260, and 270. If you make too many slices, the labels will print over each other. Also be careful not to enter small quantities adjacent to one another when inputting data. Quantities representing 5 percent or more of the whole should print adjacently without problems.

If you want to get really fancy, figure out how to change the label radius (the constant, 21, in lines 180 and 190) so that labels won't over-print when adjacent in small sectors.

### Bar Chart Program

Listing 5 presents a visual indication to accompany the calculated result. Start with an engineering, financial, or mathematical equation. In lines 20 through 50 enter a needed or estimated maximum value, and the value of the variables and constants on which the unknown depends, and change lines 40 and 50 to contain the equation you want to solve.

The listing presents an example with X, the unknown, and a function of four other quantities—A, B, C, and D—for which you input values as the program runs.

Line 60 rounds the answer to two places. Lines 80-160 draw a linear scale at the top of the display; the maximum value entered at line 20 prints at the right, zero at the left. The loop in lines 130-150 computes and prints intermediate scale values.

Program Listing 4. Pie.BA.

```

1 'Pie Chart Program - PIE.BA
2 'Given a total and 3 quantities whose
 sum is less than the total, this
 program will graph a pie chart and print
 percentages.

280 GOTO 280

```

End

The ASCII 239 graphic, a solid block, makes up the bar. The value of X indicates the number of blocks used (170-200). When X exceeds the maximum, lines 180 and 250 substitute ASCII 234 to form a dashed bar and alert you.

All values and the equation itself appear below the bar graph in 210 and 220. The program then prompts you to press the space bar to change input. It also asks which variable you want to change. You can select A, B, C, or D and provide new input (lines 260-380). Operation then transfers back to line 40 and the program computes and graphs another solution.

You can easily adapt each of the programs for other applications using pie and bar charting. ■

## File Expansion

Line 10 of my BKUPDO program ("Backing Up the 100," February 1984, p. 190) has a problem. As it appears in the listing, the MAXFILES=2 statement nullifies the preceding DIM statement. To allow more than 10 files in the backup list, retype line 10 as:

```
10 CLEAR2E3 :MAXFILES=2 :DIMF$(19)
```

*Bryan R. Leipper*  
714 Terre Court  
Reno, NV 89506

You can overcome this problem if DJNS lets you ask for an unlimited number of quotes at a time; you could forget the M and the series of equals signs after each batch and type one AM: at the end.

I'm waiting to hear from DJNS on whether this is a technical limitation. I suspect, however, that the problem is directly related to how much can fit on the Model 100 screen.

*Alf L. Erickson*  
509 Flamingo Drive  
Fort Lauderdale, FL 33301

## Log-On Sequences

Here's a list of auto log-on sequences for the Model 100 (see the Table). It covers the Dow Jones News Service (DJNS), The Source, CompuServe, and the Official Airline Guide (OAG). I developed them for Tymnet, Telenet, Uninet, and for direct connection to CompuServe. When you use the sequences, you should substitute your local access numbers in place of the Fort Lauderdale numbers in the Table.

Since the sequences take up a small amount of memory, I built all 11 into my ADRS.DO file. Now if one line is busy, I can quickly dial up another number.

Also, you can incorporate an unlimited number of stock quote requests into the auto log-on sequence by typing in your list of five stock symbols followed by AM (see the Table). Then, before you type in the >: characters, type a comma, six or seven equals signs, five more stock symbols separated by spaces, and an AM.

When you have finished your queries, press the right-arrow and colon keys. For example, to get a quote for General Motors, type ?A,GMAM before pressing the last right-arrow key.

This procedure gives you a lot of automatic stock quote requests using a minimum of memory. However, since you only type <: after the last batch of requests, only the last batch comes to your computer in the terminal mode. The earlier batches hit the Model 100 while it is in the entry mode, so you can view them as they cross the screen, but you can't send them to the printer or download them.

## To Err Is Confusing

Most TRS-80 computers identify errors in Basic programs in plain English terminology. The Model 100, however, displays only an error code, along with the line number in which the error occurs. To find out what the error is, you have to look up the code's definition.

I wrote a program called Codes that solves this problem (see the Program Listing). Type in your own programs using lines 1-5998. Line 0 traps errors by switching the program flow to line 5999 and defining the error.

Codes catches all coded errors, but not undefined errors. You might want to include owner's manual page-number references to the errors. After you have the program running, you can delete lines 0 and 5999-7000 before printing or saving your program.

## Super Text

I recently discovered how to set a left margin when printing on my Epson FX-80 with the Model 100's text processor. To generate the escape code for all Epson printers, type CHR\$(155). In Basic type CHR\$(27).

On the Epson, you generate a left margin by typing CHR\$(27);"1";CHR\$(n), where n denotes the number of spaces you want to indent. When using the ASCII character

## RAM FILES

code tables from page 211 of the Model 100 manual, CHR\$(155) is (GRPH)k. This gives you a left-arrow control character.

Next, type a lowercase L, and press control-M to create CHR\$(n). You then have a 13-space left margin, the minimum you can set since the control characters A-L leave no recordable character on the screen.

For a margin of 13, Type (GRPH)k 1 and press control-M at the top of your text. The computer displays a left arrow, a lowercase L and a carriage return symbol. These codes will not appear on your printout or interfere with your text formatter code.

You can set elite spacing on the Epson RS-80 and FX-80 by pressing escape-M. Generate the escape function by typing (GRPH)k followed by an uppercase M. The printer now prints in the elite mode. You can also use this technique to print double-width, condensed, emphasized, italicized, superscripted, and subscripted type.

State-of-the-Art Performance From Your Model III/IV for \$89.95

- ADVANCED SCREEN EDITING
  - Fast hor/vert scrolling
  - Instant Help Screens
  - Edits any file /BAS- /CMD
  - User defined personality
  - Macros for complex tasks
  - Screen snapshots (graphs)
  - Column editing features
  - Ranges, Vetos, & strings
  - Block move, load, save
- ON SCREEN WORD PROCESSING
  - Text justification (L.C.R.)
  - Paragraphs - indents - margin
  - Proportional spacing
  - Odd/even Top & Bot titles
  - Page numbering (anywhere)
  - Model III graphics
  - Customizes to your printer
  - Word wrap, auto tabs
  - Partial document printing

- DOS SHELL
  - Exec DOS cmds and return
  - Exec BASIC & /CMD prgrms
  - Use macros in programs
- TELECOMMUNICATIONS
  - Up to 1200 Baud (interrupt)
  - Horizontal scrolling screen
  - Macros handshake with host

- FREEBEE PROGRAMS (source files included)
  - CONNECT: Supports Hayes SMARTMODEM features
  - DRAW: Hor/vert scrolling screen graphics editor
  - LPRINT: Screen images on EPSON, PROWRITER, and OKIDATA (92)
  - HELP: Frame oriented relational query Data Base

# T80-FS1 Flight Simulator

**See your dealer!**

Available for Model I or Model III. \$25.00 on cassette or \$33.50 on disk (with enhancements) All versions require 16K.

If you order direct, please specify whether you have Model I or Model III (the media are different) and whether you want disk or cassette. Include \$1.50 and indicate UPS or first class mail. Illinois residents add 5% sales tax. Visa and Mastercard accepted.

If you don't yet own a disk, don't fret. You can upgrade anytime. Cassette users may send back their cassette (but *not* the manual) along with \$10 (first class shipping included) and receive the disk version.

# An Easy Way To Organize

## Learn to write your own data base manager

**I**ntroduction to TRS-80 Data Files is a book-and-disk combination that teaches the basics of writing a data base management program for your TRS-80. Your program will help you organize any data you need to keep—whether it's your income tax records, household expenses, or a mailing list or inventory for a small business.

**I**ntroduction to TRS-80 Data Files will teach you the programming techniques you need for writing a data base manager. You'll start with new terms, then go on to sequential and random access files—how they work, their advantages and disadvantages, and how you can use them. You'll see a mailing list program built in sections, first using sequential files, then random access, so you can examine all the parts that make up a data base manager. There is also a section on modifications, which allows you to use the book with the Model I or Model III and gives suggestions for adapting it. All the program listings are included in the book, along with sample printouts.

**T**he Introduction to TRS-80 Data Files package—book and disk—is just \$24.97. Your do-it-yourself program will give you a data base system customized for your needs. It will have all the capabilities you need, without giving you too much power and eating up memory you could use to store data. Best of all, it will make you a better programmer.

Learn by  
doing it yourself.

# CONTROL YOUR COSTS AND MAXIMIZE YOUR PROFIT

**T**o make a profit, you have to know what your costs are. *Low Cost Costing* is a book-and-software combination that will help you determine production costs for your small business, using your Apple, IBM PC, or TRS-80.

Whether you're a company president, controller, production manager, or anyone responsible for production, you can increase your profits once you know what you're spending. *Low Cost Costing* shows you how to analyze your costs using your profit-and-loss statements and your microcomputer. Once you've found them, you can:

Cut your costs.

Adjust prices for maximum profit.

Set marketing and manufacturing strategies.

Predict the results of changes in volume and fixed or variable costs.

Determine why some products sell and others don't.

The *Low Cost Costing* book and disk are packaged in a

# Fastdance: Three Seconds Of Your Favorite Tunes

**A**s sold, TRS-80 Models I and III can't carry a tune, and sound capability can be a useful feature. You can use it to indicate errors, to signal an ASCII bell character (see Project 80, January 1984, p. 197), and to provide music for games.

So this month I'll tell you how to construct a tune-generator board that lets you select one of 25 tunes or one of two chimes, all under software control (see the Photo). You can interface the board to the Model I or III without minimum memory requirements or an expansion interface.

The tunes, one- to three-second renditions of popular melodies, won't entertain you by themselves, but they can enhance game-playing and impress your friends.

## The Melody Synthesizer

The tunes are short because General Instrument originally designed the main chip for this project, the AY-3-1350, as a doorbell tune generator that plays a different melody at each door in the house (see Table 1 for the parts list and ordering information).

All 25 tunes and two of the three chimes are available on the board (see Table 2). The chip differentiates among them through the various combinations of letters (A-E) and numbers (1-4) in codes defining the tunes.

The AY-3-1350 operates on a single +5V (volt) power supply and allows simple TTL-level (transistor to transistor logic) interfacing.

## Constructing the Board

The Intel 8255A programmable peripheral interface (PPI) used as the microprocessor in this project lets you latch specified bit patterns to the AY-3-1350 for tune selection and play commands, and gives the computer access to a status line that indicates when a tune is playing. You use only

Photo. Tune-generator board.

half of the 24 available input/output (I/O) lines on the 8255A (see the Figure).

As is typical of previous projects in this column, the address decoding section, consisting of a 74LS138 chip and a pair of inverters, lets you choose the address range of the 8255A. I used the configuration indicated on the schematic by dotted lines (see the Figure). The software I'll describe later assumes this configuration (a port address range of 0C hexadecimal [hex] to 0F hex). I've included these and other possible addresses, determined by connecting the 74LS138 enable lines before or after the respective inverters, in Table 3, where slash marks represent the respective inverted address output from the inverter.

A 74LS04 chip is necessary only if you use both address decoding inverters. As I have noted on the schematic (see the Figure), a NOR gate (74LS02) with the two inputs tied together (or one input tied to ground) can substitute for an inverter. (I didn't use a 74LS04 on my board [see the Photo] simply because I used only one ad-

dress decoding inverter.)

This project requires a fair amount of analog circuitry, so be careful when connecting leads. Identify which leads are the emitter, base, and collector of a transistor, and the anode and cathode of a diode—confusing them is a common mistake in analog circuitry construction. You can use a speaker of any size; the larger the speaker, the greater the sound. Incidentally, while you can select pitch and speed, you can't adjust the volume, so I don't advise a huge speaker; my 3-inch, 8-ohm speaker works well (see the Photo).

You can combine the 4.7k pull-up resistors on the 8255A outputs in a single in-line package (SIP) as I've done, or use separate resistors, as specified in the parts list. If you've built any of my previous projects, you can use the same board-to-computer interconnect cable and will need only a new male header on the board.

## Operating the Board

A single +5V power supply at 250 milliamperes (mA) runs the generator. Turn on the board before you turn on

# PROJECT 80

the computer to eliminate possible bus-loading problems from the 8255A and to reset the 8255A properly with the TRS-80 reset strobe.

You can operate the entire board from Basic through simple OUT and INP instructions. Keep in mind that, for this discussion, I'm referring to the 0C-0F hex range (port addresses 12-15 in decimal). Most of the operations will be writes to the 8255A, though there is also a status line that is

read to indicate tune-playing status. The 74LS74 flip-flop creates the status line, which goes low when a tune is playing and returns high once the tune is over.

Access the letter and number lines on the melody synthesizer via the 8255A output lines (see the Figure). To select a tune, first determine the letter of the tune (see Table 2) and bring low the 8255A port A line corresponding only with that letter. Repeat

| Code | Tune                 |
|------|----------------------|
| A0   | Toreador             |
| B0   | William Tell         |
| C0   | Hallelujah Chorus    |
| D0   | Star-Spangled Banner |

Table 2. Tunes and chimes available through the AY-3-1350 melody synthesizer chip.

this procedure for the number portion of the code on port B of the 8255A.

For example, to select "Beethoven's Fifth" (code D2), write a 17 hex (23 decimal) to port A of the 8255A, selecting the AY-3-1350 D line, and a 0D hex (13 decimal) to port B to select the 2 line. The values of the unused port bits (PA5-PA7 and PB4-PB7) are irrelevant.

To start the tune, the AY-3-1350 Backdoor line must be brought low (port C, bit 0). Now look at the status line on port C, bit 4. Wait for the line to go low, indicating that the tune has begun. Once the tune starts, it's safe, as well as necessary, to raise the Backdoor line; otherwise, the tune repeats. If the program needs to know, you can continue to monitor the status line and determine when the tune is over, that is, when the line returns high. After the status line has gone high, you can select and play another tune.

To access the port lines on the 8255A, set the ports up with a com-

# PROJECT 80

mand word sent to the command port (15), telling the 8255A what mode it's in as well as which lines are inputs and which are outputs. (The reset default is Basic I/O mode; all lines are inputs.) The proper command word for the

8255A in this application is 88 hex (136 decimal), which tells the 8255A to remain in Basic I/O mode and to make all lines outputs—excluding the upper four lines of port C, one of which is used to read in the playing-status line.

| E2  | E3  | Address Range |
|-----|-----|---------------|
| A6/ | A5/ | 4C hex-4F hex |
| A6/ | A5  | 64 hex-6F hex |
| A6  | A5/ | 0C hex-0F hex |
| A6  | A5  | 2C hex-2F hex |

**Computer Case Company**

# WE MAKE A GREAT CASE FOR YOUR RADIO SHACK.

**RS204**

One size does not fit all. Our cases are designed for specific hardware configurations. When you put your computer in our case, it fits hand-in-glove. Once your equipment is safely inside the attache-style carrying case, it never has to be taken out again. To operate, simply remove the lid and connect the power. To store your computer, disconnect the power, enclose your disks, working papers, and manuals in the compartments provided, and attach the lid. It's as easy as that.

We sell them for less since we make them ourselves. Do you really like the mess and inconvenience of unwinding and dumping this type ribbon into a wastebasket or put on a newspaper and re-winding it into your cartridge? We don't know why these are being sold. Computers should simplify your life, not make it more complex just to save a few pennies. You are welcome to order these if you cannot afford our EZ-LOAD™ INSERTS, RELOADS, or NEW CARTRIDGES. But BEWARE! You now know how to avoid disappointment. One more caution: be sure to check the length of any ribbon BEFORE you buy it. For instance, an MX 100 ribbon should be 30 yards long, not 20 as in the MX 80.</small> |

**WORRIED ABOUT ORDERING BY MAIL?** Relax. We've been in business for many years and can please the smallest and largest account. You receive some of the finest ribbons available made of our own exclusive IMAGE PLUS +™ fabric and carbon film. Our ribbons fit your printer exactly. COMPARE. But BEWARE! We order all our competitor's products and are amazed at what we get. We use the latest state-of-the-art production equipment and are blessed with a fine, dedicated staff. We guarantee everything we make, period. Our ribbons are made fresh daily and our goal is to ship your order within 24 hours. Write for our brochure, price list, and newsletter, INK SPOTS™.

When the command word is sent to the 8255A, all outputs go low (I don't know why it was designed that way!) so the first thing after the 8255A should be a write of 255 to port C (14) to stop the music. Usually, a tune plays when the 8255A is set up.

After you've set up the PPI, you can send a value to any port merely by writing it to the port address: 12 for port A, 13 for port B, and 14 for port C. The bit pattern written out to port A, for example, will appear on the port A output lines that go to the letter inputs on the AY-3-1350.

Two chimes are available to the TRS-80. To access the first chime (simple chime) merely bring Door3 low, instead of the Backdoor line low (port C, bit 1); the tune code set up is irrelevant. To play the descending octave chime, proceed as for a normal tune, but keep all port A lines high.

My sample program illustrating the operation of the tune-generator board

displays a menu of available tunes, and plays the selected tune or chime when you enter the corresponding menu number (see the Program Listing). It includes an option for all 25 tunes to be played consecutively. The names of the tunes are in a specific order in the data statements, letting you determine the correct tune code by using a few simple calculations. When the tune is over, the program displays the menu again. ■

*NOTE: The following are changes in the January 1984 Project 80 project, "Hardware That Communicates," p. 197:*

*1) Better design practice dictates that you reverse the three LEDs (D1-D3) and tie the corresponding current-limiting resistors (R1-R3) to +5V instead of to ground. If you use a CMOS device, such as a 74HCT04, either configuration would be an*

*equally good design because of the symmetrical outputs of CMOS devices.*

*2) Users without an expansion interface should add three lines to the communication program:*

```
01392 LD A, 0C3H ;GET JUMP
 OPCODE
01394 LD (INTVEC),A ;STORE IN
 VECTOR LOC.
01396 LD A,(37ECh) ;CLEAR FDC
 STATUS
```

*Tapes purchased from the author include these lines.*

*3) The following power supply connections for the board ICs were overlooked in the schematic:*

```
U1 Pin 20 is GND; pin 40 is +5V.
U2,U7 Pin 7 is GND; pin 14 is +5V.
U3,U5 Pin 7 is GND; pin 14 is +12V, pin
 1 is -12V.
U4,U6 Pin 7 is GND; pin 14 is +5V.
```

*For further information send your questions and a self-addressed, stamped envelope to Roger C. Alford, c/o Washtenaw Digital Systems, P.O. Box 2014, Ann Arbor, MI 48106.*

#### Z80 MATH ROUTINES !

VPM Math Pak provides multiple precision floating point math routines in Z80 and 8080 code. Use in your own programs and pay no royalty if resold. Commented source code in EDAS format, demo program, and instructions. Zeus Editor/Assembler is the perfect companion.

VPM Math Pak ..... \$69.95  
ZEUS Editor/Assembler .... \$79.99

#### BASIC LAZYFONT

If you can write an LPRINT statement and you have an Epson or Prowriter printer, you can use the new BASIC version of LazyFont. Created as a driver for Lazy Writer, LazyFont can now be combined with BASIC programs to print custom graphics. Create your own, use GEAP fonts, or use the eight FREE FONTS that come with LazyFont. Comes on mini MULTIDOS.

BASIC version LazyFont .... \$49.95

#### ATTENTION VID-80 OWNERS

If you've installed a Holmes Engineering VID-80 board in your Model III, now you can use the Lazy Writer word processor and get 80 x 24 characters. Works on any Model III DOS.

Lazy Writer for VID-80 .... \$175.00

# Game Over: Max's Last Report

This is the last installment of the Gamer's Cafe.

There's really no point in continuing. Mercedes is home in Baltimore, doomed to the life of a normal pre-teen. Rodney wanders aimlessly through the dark corridors of time. I alone am left to tell the tale.

So I'm going to tell it, and then head into the sunset.

As Rodney explained in his last column, we had taken Mercedes to Logan Airport. We were both still stunned by her sudden transformation. One moment she was writing a disassembler in Pilot on a HoJo's placemat, and the next she didn't even know how to boot a TRSDOS disk.

"Poor Mercedes," I said. "Her ROMs blown by the power surge of puberty."

"It was the Mach 4," Rodney mumbled. "That monster, that—that Godless beast—"

"Take it easy," I said. "At least we know they'll never get the thing up and running without Mercedes."

Despite my calm exterior, I, too, wondered if the Mach 4 had claimed its creator as its first victim. How many months had Mercedes been working obsessively on the project? A normal person would have lost an oar a long time ago. But then, we had never thought of Mercedes as normal, which perhaps was our big mistake.

We arrived in Cambridge and quickly went to the Mach 4 bunker deep beneath the earth. The only person there was Wilbur, the last in Mercedes' long line of student assistants. He was in the control room playing a holographic version of Galaxy Invasion. It was a little frill Mercedes had given the Mach 4 during a coffee break one afternoon.

"Hi," he grunted.

I looked up at the TV that monitored the Mach 4 in its chamber. There it sat, humming luminescently, like something out of a "Lost in Space" rerun.

"Has it acted up today?" I asked.

"Nothing serious," he said. "Burped around noon. Blew out the Green Line down to Copley Square."

I glanced at Rodney. He was staring at the monitor, transfixed. For the first time I noticed that he was pale, and that little beads of sweat were forming on his brow.

"That horror," he said. "It must be destroyed. It must be destroyed before it destroys us all."

"Huh?" Wilbur said, and looked up for the first time.

"Don't mind him," I said. "He's had a rough week." I turned to Rodney. "Don't worry about it. In another couple of weeks, they'll be selling the Mach 4 for parts."

Wilbur perked up. "Oh, no," he said brightly. "Haven't you heard? Those guys from Washington found someone to finish the project."

I felt my heart sink into my socks. "What?" I said. "Why, that's absurd. No one can finish the Mach 4 now. The operating system isn't debugged yet. And the warp drive controller isn't complete. Only Mercedes knew the software well enough. Only Mercedes—"

I stopped. Voices were coming from the hall. One was that of Dr. Gruber, Mercedes' adviser. I didn't recognize the other. But something about it made me nervous. It was thin, high-pitched.

Like a child's.

"Hello Max, Rodney," Dr. Gruber said. "I'd like you to meet Cleo. She's going to finish the Mach 4 for us."

I nearly fainted. Cleo wasn't a day over 11.

"I've heard about you," she said.

THE INTERNATIONAL VIDEO GAME OF THE YEAR COMPETITION  
HERALDS THE "NEW AGE" IN VIDEO/COMPUTER GAMES

**\$175,000 TO BE WON**

CREATE A NEW VIDEO  
GAME AND YOU COULD  
MAKE YOURSELF A  
MILLIONAIRE

**AND THAT'S  
JUST FOR  
STARTERS!**

Create a brilliant, new video game and you could be on your way to becoming a millionaire. This fantastic competition, organised by I.R.P. (The International Register of Independent Computer Programmers Ltd) and the famous Mark McCormack International Management Group, offers programmers and inventors the opportunity of a life time. There are huge, immediate cash prizes and the on-going revenue of 10% of the sales of all games to distributors throughout the world, plus the chance to appear on an international TV show. Your skill and imagination could bring you fame and fortune!

**\$100,000 FIRST PRIZE!** **PLUS FIVE \$15,000 RUNNER-UP PRIZES!**

Devise a totally original new video game in one of these categories: SPORTS, SIMULATORS, ARCADE, STRATEGY, ADVENTURE/FANTASY or a special section which covers programmes that are not necessarily games but have outstanding Educational or Entertainment merit. We'll also be announcing a number of 'MERIT' awards which will be entitled to carry the message 'An International Video Game of the Year MERIT AWARD' on their retail packaging. It's a great challenge. And the rewards, both financially and in terms of prestige, are tremendous. This is the most exciting competition ever for creative computer and video enthusiasts.

**YOU'RE A TV STAR TOO!** All six winning games and their inventors will be featured on an internationally distributed, spectacular TV special. That's going to make your name!

**HOW TO ENTER**

Just send in your game, or games, programmed on cassette for any popular home computer. Use the coupon, today, and we'll send you all the facts you need.

**CLOSING DATE FOR ENTRIES IS 31st MAY 1984**

To: IRP Limited, Pinewood Film Studios, Iver, Bucks, England.

IT  
REALLY  
WORKS  
!!

**WOW!**

**FILE TRANSFER PROGRAMS**

You really CAN use your VISICALC files on the IBM and compatibles. In fact your Visicalc files once transferred with our package can be used on the IBM under VISICALC, MULTIPLAN or 1-2-3! You can also transfer programs and data to the IBM.

- No more retyping or wasted time
- Fast transfers - 110-9600 baud
- Send files of any length
- Transfer ASCII files, random files, text files, data files, binary files, high level language programs (Basic, Pascal, Fortran, Cobol, etc.), electronic spread sheet data, word processor files, etc.; It all gets transferred!

**MODELS SUPPORTED:**

TRS Model I, II, III, 4, 12, 16, 100 (or compatible machine) APPLE II, II+, IIe, III (or compatible machine) IBM PC, XT, PC Jr. (or compatible machine) PC DOS 1.10, 2.00, 2.10) Machines running CP/M

**ALSO:**

LNW, FRANKLIN, BASIS, CORONA COLUMBIA, EAGLE, COMPAQ - call for others

The File Transfer Program comes complete with all instructions, hardware and software.

**FILE TRANSFER PROGRAM  
\$129.95**

Plus \$2 shipping & handling  
 CA residents add 6.5% sales tax  
 State computer models when ordering

*Big Board continued*

"Tough luck about Silver. Well, the job looks pretty routine to me. I already cleaned up some of the I/O routines. Boy, what a kludge. Didn't anybody teach her about flow-charts?"

"Mercedes didn't need flow-charts," I said indignantly.

"Would have saved us a lot of trouble. No matter. I've been building my own VAX. This'll be a piece of cake in comparison. After all, it's only a microcomputer."

"Only a microcomputer?" Rodney, suddenly aroused, grumbled.

I looked at Cleo, then at Dr. Gruber, and said, "Where'd you find this brat?"

He cleared his throat. "Well, she's a bit overbearing," he admitted. "But she's got talent. And she's the only one that can handle the Mach 4."

"I've got six Ph.D.'s," she boasted. "When I was three, I built a fully operational scale-model UNIVAC out of

old transistor radios. Last week, I developed a data communications network for the Western hemisphere that will be immune from the electromagnetic pulse of a nuclear exchange."

"I'm really sorry about this," Dr. Gruber said. "But we had no choice. After all, Mercedes is, well, how should I put it—"

"Baked," Cleo finished. "But I probably would have had to clean this mess up anyway."

"What loyalty," I said. "What concern. Mercedes has a little lapse, and she's tossed aside like an old printer ribbon."

"Hey," Wilbur interrupted. He was pointing to the monitor. "What's he doing in there?"

We all looked up. Rodney had somehow slipped away unnoticed. He was in the Mach 4 chamber, waving a steel pipe menacingly at the machine.

Dr. Gruber and I ran down the hall. The great vault door was open. We

could hear the Mach 4 vibrating. Inside, Rodney was running about wildly, the pipe poised for action.

"The end is near!" he shouted, and charged the machine.

"Good God," Dr. Gruber breathed. "We'll all be killed!"

Rodney's first blow glanced off the platinum case and struck an adjacent control panel. Sparks flew. A bolt of electricity jumped from the Mach 4 and gouged a chunk of concrete from the wall next to me.

"Let's get out of here," Dr. Gruber said. He pushed me into the hall and pressed a button. The steel door slammed shut.

In the control room, Wilbur and Cleo stared aghast at the monitor. Rodney was going for the Mach 4's VDT. His pipe glowed yellow like something out of *Star Wars*. A blue halo enveloped him. The walls around us began to shake.

"The computer!" I said. "It's

fighting back!"

"I wanna go home," Cleo whined.

"Shut up or you'll be grading Intro to Basic assignments next semester," Dr. Gruber snapped.

Suddenly Rodney froze. The blue halo grew until it filled the whole room like smoke. Rodney became translucent, then transparent. Then he disappeared.

We stood silent.

"Wow," Cleo said. "A time displacement. Sucked into the fourth dimension. Maybe I underestimated this thing."

\*\*\*\*\*

That's about all there is to tell.

The Mach 4 was fortunately beyond repair. I went on a crazed month-long binge, wandering the streets of Boston drinking tequila milk shakes. When I came out of my stupor, I called Mercedes and gave her the news. She cried and apologized for making the Mach 4, even if she no longer understood

how or why. I told her not to worry about it.

"Say," she said as we were about to hang up. "Was this Cleo that great?"

"Bah," I said. "You would have cleaned her clock. You were good, kid—real good. You could do hex to octal conversions faster than a PDP-11. You could build a disk drive from old inner tubes. You were the best."

But as I talked, I thought of Cleo, and in a way was glad that Mercedes was just a normal kid.

Oh—the van. Unfortunately, I left it in a metered zone and the city towed it. I had to sell the computers to pay for the fines and storage charges. Then I offered the van to the Smithsonian, but they didn't want it. So I sold it for \$75 to a pump jockey at Eddie's Filling Station.

Actually, I didn't sell all of the computers. I kept the PMC ½. I hooked it up to a car battery, put it on a park bench in the Boston Common, and booted Lunar Lander. Then I walked away. When I got to Boylston Street, I turned around for one last look. Dust was falling on a cold and grey day. Flakes of snow were drifting in the wind. I could still see the PMC's flickering screen. It cast its ghostly green light across the months, to the time when I first met Rodney and Mercedes. We'd embarked on a heck of a journey together. Now, it was finished.

I turned my back and headed for the subway.

As for me, I'm going to hit the road again. But who knows? Maybe some day I'll buy another computer. And get a van. And find some people to ride across country with, playing games and writing a magazine column.

Stranger things have happened. ■

# Unmasking the Disk Access Conspiracy of Silence

Novice programmers often feel they're facing a conspiracy of silence regarding how to use machine language to directly access disk files. Assembly-language programming books rarely cover the topic, and magazine articles often either ignore it or make it much more difficult than necessary.

Take heart: writers aren't intentionally leaving you out in the cold. Even disk access from Basic can be confusing, and most Assembly-language books stick to introductory material.

One problem people have in discussing machine-language disk access is that it is actually two topics in one: You can either use DOS calls to create and handle files, or you can directly access the disk through the floppy disk controller, in essence creating your own tiny operating system.

The situation is further complicated by inconsistencies between operating systems, confusing documentation supplied with some operating systems, problems of disk density and track numbers, and fundamental differences between Model I and Model III disk hardware.

In order to keep this month's column within the covers of this magazine, I'll limit my discussion to DOS-supported direct disk access under TRSDOS-compatible operating systems (which means most Model I/III DOSes). The demonstration routine (see the Program Listing) should explain the first steps of the process and also help you better understand the technical section of your DOS manual.

If you want to bypass the DOS completely and use direct disk access, I recommend you read Michael Wagner's *Machine Language Disk I/O & Other Mysteries* (IJG Inc., Upland, CA 91786).

## Terminology

The link between your program and a disk file is established through a data structure that the TRSDOS manual

calls a data control block (DCB). Since DCB is also the abbreviation for device control block (which is a region of low memory used by the system to control keyboard, video, and printer I/O), I'll use the alternate term, file control block (FCB), what some writers refer to as an input/output block. All other terminology in what follows is based on the TRSDOS manuals; your DOS might use slightly different words.

The FCB need not be located in a particular area of memory, but you must protect and maintain it during disk access. Before you open the file (i.e., before you establish a link between your program and the file), the FCB must contain the complete file-spec of the disk file.

While the file is open, the FCB holds information about the file, including which disk it is on, the length of its records, the next record number and last record number, and the location of the last valid byte in the last sector of the file. When you close the file, DOS returns the file name to the FCB. If you are using TRSDOS 1.3, allocate 50 bytes for each FCB; most other operating systems require only 32 bytes.

You must also establish a 256-byte file buffer somewhere in memory. The DOS uses this buffer to transfer an image of each sector, one at a time, from the disk to memory. After you open the file, the FCB stores the buffer's address.

Each disk file stored in the directory has a logical record length (LRL). If the LRL is 256, then each sector comprises a logical record. If the LRL is a lower value (it can't be greater than 256), you must provide a third memory area called a user record (UREC) equal to the logical record length.

DOS moves each record to the UREC for you. Since the LRL is stored in a single byte both in the directory and in the FCB, the computer represents a record length of 256 bytes with a zero.

To keep ROM and DOS routine names separate from those in your own programs, use a special symbol. In the following discussion, I'll follow the convention of the TRSDOS 1.3 manual and prefix all such routines with a dollar sign; LDOS uses an "@" symbol instead. Since many assemblers don't support such signs, I've excluded them from my listing.

### Processing Procedure

The technique for accessing a file is reasonably straightforward. First, set up space for the FCB, file buffer, and (if necessary) UREC. Then move a filespec to the FCB by calling the DOS routine \$\$SYNTAX, which will make sure you've used a legal file name. (Both LDOS and NEWDOS use the routine at the same location, 441C hexadecimal [hex], to move the filespec to the FCB. Each, however, uses the OPEN and INIT routines to check your syntax for a valid filespec. Model I TRSDOS 2.3 doesn't document the address of this DOS routine.)

Next, use either \$OPEN or \$INIT to open the FCB and allow access to the file. \$OPEN opens files that already exist; \$INIT creates new files. Otherwise, they're the same.

Now you can get records from the

file with the \$READ routine. If your program calls \$READ repeatedly, you can read successive records in the file. If you wish to read a particular record, use \$POSN. \$POSEOF automatically points to the last record in the file. \$REWIND takes you to the beginning of the file, and \$BCKSPC sets the file pointer to the previous record.

If you change records, or create new ones, you need to write them back to disk with either the \$WRITE or \$VERIFY routine. The only difference is that \$VERIFY reads each record back after you've written it to disk to ensure that it's copied your data correctly. Finally, before your program ends, the routine restores the directory entry with a call to \$CLOSE.

Most operating systems, including TRSDOS 1.3, have other DOS utility

calls, but essentially, that's all there is to it. Remember that your program operates with data on a byte-by-byte level, which, while powerful, can be disastrous if you haven't removed all the bugs from a program. Never test your program with crucial data files; the opportunity for catastrophe is too great.

To demonstrate how these techniques can work, the listing shows a utility that is a variation of the List command. From DOS Ready, enter "DISPLAY filespec"; the computer displays the file on the screen in 1K blocks. After you've examined a block, press any key to display the next block; if you wish to terminate the display, press the break key.

After displaying the last block, the program returns to DOS Ready. This program works equally well with TRSDOS 1.3, LDOS 5.1.4, and NEWDOS80 2.0. You'll have to modify it to make it work with some other systems.

### Program Explanation

The Equates section of the program, lines 220-320, uses the TRSDOS 1.3 names for disk-handling routines. The addresses for most other Model I/III operating systems are the same though the names may vary.

When you execute any command program from DOS, the HL register pair points to the first non-blank character in the DOS command line following the program name when the program begins. The Call to \$\$SYNTAX in line 390 assumes that the program has correctly positioned HL. If the routine successfully moves the filespec from the command line to the FCB, it sets the zero flag. Otherwise, there's been an error, and the program jumps to its error-handling routine.

Before you call the \$OPEN routine, the HL register pair must point to the file buffer, and the DE register pair must point to the FCB. Also, the B register should hold the logical record length you want to use for this file access. To display four full sectors at a time, this program must set the LRL to 256; therefore, it loads the B register with zero in line 470.

Unfortunately, TRSDOS 1.3 has a bug in it that makes it ignore the value in B when you open a file. Instead,

# CRB Microtools

**TRSTUM** Tape Reproduction System **TRSDUM**  
Tape or Disk  
Utility for Model 1, 3, 4

- Read, Write, Verify tape or disk files
- Read and Write any TRS-80 std. protocol tape
- Automatically identifies file type (e.g. BASIC, SYSTEM)
- Change tape file name as desired
- Change speed of tapes, if desired (Mod 3, 4)
- Select cassette port 0 or 1 (Mod 1)
- **OFFSET** memory load addresses automatically
- **UNOFFSET** load addresses, if offset
- Displays full operational status plus . . .
  - diskette directory
  - load map (start-end address sets)
  - Name, Length, Format of files loaded
  - Start, End, Execute addresses of programs
  - Error messages, if any
- Automatic tape/disk protocol conversion
- Single disk-drive copy capability
- Archive disk files on tape to save diskettes
- Run tape programs from disk (Tape SCRIPSIT, EDTASM, games, etc.)
- All disk features require TRSDUM

**TRSTUM** — for cassette-based systems **ONLY \$16.95**  
**TRSDUM** — for TRSDOS disk systems **ONLY \$17.95**

Please specify Model 1, 3 or 4  
and add \$2.00 postage and handling.

TRSDOS always opens a file with an LRL equal to that stored in the disk directory. Lines 510-540 overcome this problem by removing the old LRL from the DCB and replacing it with zero, fooling TRSDOS into acting as if the file has a record length of 256 whether or not it does.

After clearing the screen, the outer loop of the main program, LOOP1, reads and displays four sectors of the file at once. The inner loop, LOOP2, calls the \$READ routine and detects disk errors.

End-of-file and read-past-end errors are not considered errors in this program; instead, they're indications that the program has displayed the complete file. If either of these errors occurs, the program jumps to the Done subroutine; if any other error occurs, the program invokes the Error subroutine, the internal error-handling procedure.

What types of errors are likely to occur? With a program this simple, the only disk errors you should see are those involving unreadable sectors on the disk, such as a parity error or an error indicating "Sector Not Found." The Error routine first closes the file, then displays the error message (as opposed to the error number) and returns to DOS Ready through DOS's \$ERRDSP routine.

Whenever a DOS file-handling routine can't complete its task, it resets the Z flag to NZ and returns an error code of between zero and 64 in the A register. To display the error, your program must use \$ERRDSP. If you don't change the A register, the error number appears and control passes to DOS Ready.

If you set bit 6, the entire error message appears, not simply the error number. If you set bit 7, the message or number displays, and control re-

turns to your program. Line 810 ORs the error number in the A register with 40 hex so the message is displayed and the computer returns control to DOS Ready.

You can't leave this program without closing the file (short of pushing the reset button). Even if your program only reads data from a file without writing anything new, always close your files before ending a program in either machine language or Basic. If you write to, or extend, a file, you must close that file or the program won't update its directory and your next access of the file may end in chaos.

This program does let you stop execution before viewing the last sectors. Lines 740 and 750 check to see if you've pressed the break key. If you have, they call the closing routine, Done; if not, the program displays the next four sectors. However, because Done also waits for a keystroke, you must press the break key and any other key to return to DOS Ready.

For anything other than a home-grown utility, this double keystroke would be unacceptable, and most programmers would write a second closing routine. I didn't include a second routine in order to keep the structure of the program as clear as possible.

You should see a pattern in the disk-access sections of the program: point the DE register to the FCB, adjust HL and B as needed, call the disk-access routine, and check for an error. Strictly speaking, you don't need to reset the DE register as often as I've indicated in the program, because most of the disk access calls return with DE unchanged.

The extra 6 bytes seem minimal, and the 10 t-states wasted during each disk access are miniscule compared to the time required to move information between the disk and memory. You're better off using those few extra bytes and t-states to produce clear, easily debugged code. A long and complex program that assumes register contents is likely to make false assumptions.

## Program Enhancements

While the demonstration program can be a useful utility, I only intend it to get you started. Writing a primitive

## THE NEXT STEP

zap utility, or any machine-language program for disk files, isn't much more difficult than this. The best way to learn to write machine-language programs that access disk files is to experiment, but observe two precautions.

First, never use important data files. Second, be sure to use back-up disks. Until you've completely debugged your program, you can cause irretrievable damage to disk files by unintentionally altering data.

Although using sequential files is easier than using random files in Basic, the opposite is true in machine language. Fixed-length records are easier to manipulate because you and your program always know each record's length. Special format disk files generated by NEWDOS80 are particularly difficult to manipulate in machine language.

### A Personal Note to Readers

I appreciate your letters, both written and electronic, about items in The Next Step. Your ideas and questions about the programs I've presented here have helped me learn more about computers and have generated ideas for many of the columns.

Because of the amount of mail I receive, I cannot send a personal reply unless you enclose a stamped, self-addressed envelope. Readers from outside the U.S. should include an international reply coupon instead.

Some of you have asked me to write about a particular topic "next month." The mechanics of magazine publishing make such a request impossible to fulfill. I must write these columns far in advance of the magazine's publication date. By the time you read this, I will have completed my July column.

Also, if you write to me via CompuServe, I'd prefer to receive the comments on the message board of the Software and Authors' Special Interest Group (GO PCS-117) rather than by e-mail. For one thing, the SIG message editor is easier to use than e-mail's. For another, if I can't answer your question, others in the SIG probably can.

Leave your questions addressed to me on section zero of the message board. Feel free to join in discussions started by other readers. ■

# MOST WANTED LIST

## SUPER UTILITY PLUS 3.2

"THE JAWS OF LIFE" rated FIVE STARS in the Oct. '83 80-MICRO! A MUST-HAVE program if you have disks, as reviewed by all the TRS-80 magazines. They all agree that SU+ is a standard in the industry. This new version is the ULTIMATE and features better documentation. Includes directions for use on the Mod 4.

\$79.95

## PowerMAIL PLUS

The most powerful mailing/information system yet for the TRS-80. Runs under most current DOSes as well as hard drives. 100% machine language for maximum speed. Features 24 definable "flags", 10 level sort, mounting new data disks, and machine compatible data files. It also "converts" many other mailing programs' data to PowerMAIL+ format. Eliminates re-typing!

Only \$150 each

Please specify:

MOD V/III  
MOD 4 TRUE Mod 4 Mode!  
MOD II/12/16 (Comes on DP-II Kernel System)

## POWERDOT II

A GRAPHICS BREAKTHROUGH! The ULTIMATE in graphics design. This version is MUCH MORE POWERFUL than previous versions and includes BETTER documentation as well. New features include AUTODRAW™ and CIRCLE commands. Now allows you to design your own character sets! Includes lots of examples on disk. Your screen is only a "picture window" to a much larger drawing area! You are only limited by disk storage...not memory! Works on EPSON Series (Graftrax or Graftrax+ required) or the C. Itoh 8510 (PROWRITER or NEC version). Coming soon for DMP-2100, DMP-400, and LP-8.

\$59.95

## POWERDRAW

A full screen graphics/text editor. Allows you to design your graphics and merge them with your BASIC or assembly program in SIX different formats. The files may be used alone or chained together for animation effects. MANY programs being produced commercially today incorporate POWERDRAW graphics! No royalties to pay, and they're easy to do! Has received EXCELLENT reviews in many magazines.

\$39.95

## POWERDRIVERS for use with SuperScript™

Allows you to use ALL of SuperScript's™ features with your EPSON, PROWRITER, or F-10 STARWRITER printers! Includes patches for running SuperScript on LDOS with floppy or hard drive. Now includes DISKFILE driver. Save formatted text to disk now!

Only \$29.95 each

Please Specify:

PowerDRIVER/P - C.Itoh 8510 PROWRITER  
PowerDRIVER/E - EPSON or GEMINI Series  
PowerDRIVER/F - C.Itoh STARWRITER (Leading Edge)

## The TOOLBOX for LDOS™

"The utilities to perfect LDOS™" are available in PowerSOFT's TOOLBOX. You also get patches and filters to make your system manageable! "The TOOLBOX should be part of every LDOS™ users' system," quoted from Sept. '83 80-MICRO, who gave TOOLBOX a FOUR STAR rating!

\$69.95

MOD I or MOD III Protected Media

InfoScan is an information utility that is used to organize, store and retrieve any type of useful information in any format. It combines the features of a word processor, data base manager and information retrieval and display utility. You compose information records on the screen using the word processing feature, in any format you wish. Each record is described by a 17 character key phrase that you specify. Once created, the information lists, which can be scanned as a list on the screen using an impressive key scan feature. You scroll the keyphrases in the brackets with the arrow keys on your keyboard. When the desired keyphrase is found you press a single key and the corresponding information record is viewed on disk and displayed on the screen. The record displays in exactly the same format as you used to create it. You can even design your own forms to fill in.

A stunning visual presentation utilizes the display window technique. Menu keyphrases list, displayed text, and status information are displayed in a series of display windows on your screen. Impressive graphic display panels are used to enhance the visual presentation of the product and your information.

Your computer becomes a mini-communications network. BBS-80 allows a person to exchange messages or information via the telephone. Access can be completely public, private to authorized users or limited to certain individuals. BBS-80 can leave messages on another terminal acting as a rapid electronic mailman. BBS-80 provides some of the most advanced and most convenient features ever incorporated in a microcomputer bulletin board system including: Users may send private messages that may be ready only by the addressee. Multi-level system security allows up to 15 levels of security in both the message base and the upload/download programs. Lists to BBS-80. These programs may then be "downloaded" to other BBS-80 users. BBS-80 is self maintaining. Message space is automatically reclaimed when messages are deleted.

MOD I or III

A very unique word processing package, Clean Slate has many features not found in word processors at twice the price. It allows full customization of printer drivers and direct control of the printer from text. Features user definable repeat keys, non-destructive cursor, graphics print offset, custom keyboard driver and has it's own built-in comm program for file transmission and receipt. Can build a separate glossary file and a names list for auto from letter insertion. You can also create and edit assembly source or basic program files. We found a treasure chest of this little known jewel at the right price. Two color documentation in a padded easle binder. It is an outstanding value for this price.

# FUN HOUSE

## Secrets

by Richard Ramella

This is the final Fun House column, and that's not an April Fools' joke. It's time for all of us to do other things.

If you have a Color Computer at your house, I invite you to drop by Elmer's Arcade, a game column in *HOT CoCo*. Also, soon Wayne Green Books will publish a collection of Fun House programs for the CoCo and MC-10.

Writing Fun House for 20 months and hearing from nearly 800 readers has been a very nice experience for me. Lots of mail comes to the Fun House. It keeps me from getting lonely in the evening, when everyone leaves the amusement park and I have no company except Willamina, the laughing mechanical lady. She appreciates my jokes but never tells any of her own.

I'm always happy to get letters from people who visit here because I get ideas for new Fun House attractions from what people write.

For instance, a boy wrote from Florida to ask how he could make it so only he could run his programs. I sent him the little program that appears this month as Lockout.

Then I started thinking about secret things I enjoyed when I was a kid: hide and seek, invisible writing, codes, diaries, secret handshakes, pig Latin, and other confusing languages. . . .

Why are most kids that way? I think it's because, in a world where kids are told what to do more often than they tell adults what to do, it's fun to have a few secrets. No harm in that!

Let's try some Level II Basic programs for the Models I and III. Every one of them has to do with secrets in some way.

Lockout lets you keep others from running your secret programs. It's far from perfect protection, but you'll never know how good it is until you try it.

Ghost Guard shows you how to put an invisible code in a program. The person who tries the program without knowing that code might not figure out how to run the program.

Shutdown is a funny routine that provides a secret entry code. The code is different every time, but you always know it.

Cryptonice is a kind of word chopper that takes a plainly

written sentence and mixes it up in a code you can unmix. Decoder for Cryptonice is just that.

Displacement Code puts a plain statement in a code that includes the secret key for decoding it.

### Lockout

You should type in this short program at the beginning of another program you want to keep secret. You might have to renumber its lines so it ends before the other program begins.

When a spy (read that as your little brother) tries to run the program, a prompt asks the user to type his or her age and tap the enter key. This isn't an honest request. The computer doesn't want any number.

It wants the secret code, which is the word CODE. You can change it to your own secret word. If it doesn't get the word CODE (or your own word) as the answer, the program ends.

### *The Key Box*

Models I and III  
4K Cassette Basic  
32K Disk Basic

How does someone stop this from happening without knowing the secret? All you do is LLIST the first few lines of the program and peek at the code, plainly stated in line 140, so this won't stop anyone for long.

## Ghost Guard

Looking at this short routine, you wouldn't think it's so amazing. In fact, it won't even run right as it appears in the listing. But I'm going to tell you how to make a code invisible.

After you type in the program, do exactly as I instruct. As best you can, watch the screen to see what happens.

Type EDIT 130 and tap the enter key. Tap the space bar five times. Tap the letter I. Hold down the shift key and tap the left-arrow key once. Tap enter. That's all.

What happened? Line 130 now says A\$ + "Z" but it's fibbing. It really equals the letter A, then a back space, then the letter Z. All you see is the Z.

To prove the A is there, type EDIT 130 and tap the enter key, then tap the space bar repeatedly until you come to the end of the line. You will see the A appear, then disappear.

When you run this routine, it asks you to enter the secret code. If you enter the letter A, the program continues. If not, it ends.

This method isn't perfect either. If you LLIST the program on a line printer, the A shows up. But it is a confusing little item, isn't it? Feel free to substitute another letter or keyboard symbol for the A. After all, it's your secret entry symbol.

270 IF A=1 THEN PRINT "BEEP "; ELSE PRINT CHR$(32);
280 GOTO 260
290 REM * REGULAR PROGRAM WOULD BEGIN RUNNING HERE."
300 END
```

*Shutdown.*

You must put this program and the next one, Shutdown, before the starting line of the program you want to protect.

## Shutdown

What's nice about Shutdown is that it provides an entry code that is different almost every time and that you don't know before you see it. The secret is that you know where it's going to be.

When you run Shutdown, three lines of random letters appear on the screen. Then the program asks: ENTRY CODE?

The answer to this prompt is always the first letter in the second row.

Some people can program in Basic quite well, yet don't know much about the PEEK command. And Shutdown uses the PEEK command in a sneaky way.

If you enter the wrong code letter, the program says: "INTRUDER! THE PALACE GUARD HAS BEEN ALERTED." Then it displays the word BEEP every so often until you tap the break key.

If you enter the right code, the program goes to line 290.

To fit this onto another program you want to hide, make the far right command of line 190 read GOTO and the number of the first line in the real program.

## Cryptonice

Here's a simple code maker,

and the program that follows it breaks the code.

After you type RUN and tap the enter key, the program asks you to type in your secret message in 250 or fewer letters. Then it mixes up the letters of the message the same way every time. It shows you the encoded

message and the program ends.

You can read this code without using the decoder program. When the code appears on the screen, fit a strip of paper to the line of letters so the paper is as long as the line of letters. Then fold the strip in half. Put the strip below the line of letters so its left edge points to the first letter.

The letter above and to the left is the first letter in the unencoded message, and the letter above and to the right of the strip is the second letter. When you know these letters, move the strip to the right one letter and read the left and right letters again. Keep going until the message is clear. You'll get the hang of it.

### *Displacement Code.*

## Decoder for Cryptonice

So you can try this program, I've encoded a few messages using Cryptonice. To use the program, type RUN and tap the enter key. When the program asks you to type the coded message, try these. Do one at a time or it won't work.

- TEIEQENSISFRMDGSA TDWH  
C UE AL O AAACRA AN
- PRT ODI HR O IDI U H A A  
TLNB AG IIAEGL SWEYUFN  
TBTTEMPWSSOE YLREJM
- RCADRMLAI ELYNC ELWIHR  
AEL SARAL IEFLOO

In the last code, the last character is a zero, and the next to last one is the letter O.

## Displacement Code

Here's a code that you don't need a program to decode—a displacement code.

When you run the program, it explains how it works. You choose a number from one to nine. The encoded version skips

past the uncoded letter that number of characters in the alphabet to substitute the letter it finds.

When the coded version appears, a three-digit number is to the left of it. The numbers on either end are dummies. The middle number tells you how many letters forward the program has displaced the coded message.

For example, you choose the number 1, then write your message. To decode, you must go one letter back in the alphabet. The word MOM appears, coded as NPN.

Also, if a letter displaces past the Z in the alphabet, it goes to the A at the beginning and keeps counting. For example, a V displaced forward eight letters would become a D.

If you have trouble getting a Fun House program to work, write me: Richard Ramella, 1493 Mt. View Ave., Chico, CA 95926. I'll try to help if you include a stamped, self-addressed envelope and say what the program is doing wrong.

Now, turn your back and count to 100 slowly. When you turn around, I will be gone. ■

# The Final Word On Reload 80

This is the last Reload 80 column. While *80 Micro* will still provide Load 80, we've improved Load 80's self-documentation to the point that programs are much easier to load and run, obviating the need for an ancillary column. For instance, Title/BAS, the copyright program that introduces each Load 80 installment, contains hints on running the individual programs. And we now supply Load 80 on Super-Move, the disk transfer utility, so your monthly disk runs on either a Model I or III without conversion. You can transfer the programs from the source disk to any TRSDOS disk.

If you buy the Load 80 cassette to

*We supply Load 80 on Super-Move, so disks run on a Model I or III without conversion.*

transfer your programs to disk, you know how to use the CLOAD command from Disk Basic, the Tape command to transfer /CMD files, the TPSRC command to move /SRC EDTASM files, or some version of the LT command from your editor/assembler to load odd-format /SRC files.

If you run a tape-based system, you've used the CLOAD and System commands to get your Basic and /CMD programs, and you've loaded source code listings into your editor/assembler using the L command. But, whether you buy Load 80 on disk or cassette, you have to read the magazine to run the programs.

Be careful not to confuse programs written for disk systems with those written for cassette systems. Changing a Basic program isn't always a big project, but machine-language programs tend to be system-specific. If the author claims his program is "transportable," then simply changing the originate (ORG) statement should do the trick. Cassette programs can originate from 4000 hexadecimal (hex); disk programs must not reside above 6000 hex. The article will tell you if the program is transportable.

Moving machine-language programs between the Models I and III is an unlikely proposition. It requires thorough knowledge of both Model I and Model III ROMs, an intimate knowledge of the original program, and probably many hours of work. If you're that proficient at machine-language programming, you might as well start fresh rather than convert.

## Future Support

Even though this column is ending, Load 80's technical editor will be available to answer your questions, either by phone or by mail. And Lori Eaton (603-924-9471) will still provide assistance with any subscription problems you may have. ■

*Editor's note: Consult the Table of Contents every month to locate the Load 80 directory.*

# IT HAD TO GO SOMEWHERE.

There's no reason to deprive you of solid microcomputing information just because it wouldn't fit between the covers of *80 Micro*. Here's the answer—**The Rest of 80**—31 of the best tutorials and utilities, hand-picked from the overflowing files at *80 Micro*. These never-before-published articles for the Model I and Model III were just too good to let them get away. Here are just a few of the chapters you'll find:

- An Unlistable, Unbreakable Program*
- Adding Commands to BASIC*
- Programming in Tiny Pascal*
- Line Drawing*
- Automatic Master Disk Directory*
- Faster Loading for the Model I*
- ASCII Converter*
- A Better LDOS KSM*

And more on BASIC, Pascal, and assembly language! Every program is of the same high quality you wait for every month in *80 Micro*. Now try **The Rest of 80**—a welcome addition to your computer library.

# VOTED ONE OF THE TOP THREE EDUCATIONAL PROGRAMS OF 1983 BY 80 MICRO READERS!

Find out what *80 Micro* readers discovered long ago. . . Typing Teacher by Instant Software Inc., is one of the best educational programs of 1983!

This complete seven-part package takes you from initial familiarization with the keyboard, through typing words and phrases, to complete mastery of the keyboard.

On-screen diagrams show you the correct placement for fingers and the programs include practice sessions to develop coordination. Your computer becomes a bottom-

less page for typing practice. The lessons are tailored to the keyboard, but train you to use any standard typewriter.

Advance from the awkward hunt and peck method to smooth, free-flowing, touch typing with the Typing Teacher program.

Available for the TRS 80:

|                        |       |

## dataCure's Audience

Publishers who use protection schemes requiring duplication solely from the distribution disk will find dataCure helpful for customers who damage disks and would otherwise have to return the distribution disk.

For end users, dataCure is useful with a working master, as an added precaution for archive disks put into storage, or as protection against copying an entire back-up disk with limited physical or electrical damage.

Assuming that you use a three-disk back-up system and have BAK extension files, how often will you use dataCure to recover data? If you have only a few bad sectors, dataCure will probably repair the disk faster than making a new copy. For extensive damage, you'll need to resort to your back-up disk.

You can buy a lot of back-up disks for the cost of dataCure. If Colorado Online improves the software so that it regenerates large data files, dataCure will be immensely practical. In the meantime, you might save some time correcting disk errors, and it's fascinating to see this program re-create information on damaged disks. ■

## The Model 100 And the Market

by Carl Oppedahl

Tele-Stock lets someone unfamiliar with computers, and with the Dow Jones News Service, track daily variations in the prices of up to eight stocks. The program calls the Dow Jones News Service, obtains the latest trading statistics for the specified stocks, and updates a history file for each one. Tele-Stock is a fine program—easy to learn, easy to use, and pleasing in its results. I recommend it to anyone interested in the stock market.

You can initiate the phone call to Dow Jones manually or instruct the program to make it at a specified time.

You can then use function key F3 to display and graph the accumulated information on each stock, going back up to 30 trading days. If you have a

printer attached, you can print the display with function key F4.

You can also back up the stock information to tape and reload it using function keys F5 and F6. Finally, you can easily change parameters such as stock symbols, log-in sequence, and time for delayed update (function key F7).

## Operation

Tele-Stock is a 300-line Basic program that loads into about 10K of RAM. A small file called PARAM.DO contains the log-in sequence and the stock symbols. You create another do-file to contain the history information for each stock symbol.

Tele-Stock uses a straightforward sequential ASCII file structure; files contain variable-length fields separated by commas. In the event of garbled data (e.g., due to a bad phone connection), this lets you repair the data files through the built-in Model 100 Text program.

Tele-Stock incorporates a number

of nice features. If you ask it to call Dow Jones on a Saturday or Sunday, it asks if that is really what you want,

FINALLY, THE TAX PACKAGE YOU'D BEEN LOOKING FOR. . .

## 1983 TAX PACKAGES

Specifically designed for Tax Services, C.P.A.'s and Individuals

### ARE YOU TIRED OF . . .

- Working late into the night doing tax returns?
- Making simple addition errors?
- Not being able to utilize your computer?
- Having to pay hundreds of dollars for tax software?

**NOT ANYMORE. . . THOSE DAYS ARE GONE!!**

**WITH OUR TAX PACKAGES YOU CAN. . .**

- Double, triple or quadruple your output.
- Eliminate those embarrassing addition errors.
- Have professional looking returns.
- Let your computer do most of the work.
- Have quality software at a fraction of the price.

Our PROFESSIONAL INCOME TAX PACKAGES are very easy to use. All Programs are menu driven and each follows the tax forms and schedules line by line. You can review all your figures on the screen and be able to change any of your entries before printing. Produces a printout that exactly fits FORM 1040 (or use with our Plastic overlays) and all other FORMS and SCHEDULES printed in IRS Approved format. You can also save client data to disk for later recall.

Our tax programs are designed to run on TRS-80 Models I, III, IV, APPLE II +, IIe and FRANKLIN ACE computers. All versions require a minimum of 48K memory and one disk drive.

| TAX PACKAGE I                                              | TAX PACKAGE II                                         | TAX PACKAGE III                                                                            | TAX PACKAGE IV                                                                                                                                                                      |                                                                                              |

# HOWE SOFTWARE PRODUCT GUIDE

## SYSTEM DIAGNOSTIC

Is your computer working correctly? Are you sure? System Diagnostic has complete tests for every component of your TRS-80™ Model 1, 3 or 4.

- ROM: checksum tests
  - RAM: three separate tests.
  - Video Display: three tests.
  - Keyboard: every key contact tested.
  - Line Printer: three tests, variable platen.
  - Cassette Recorder: read, write, verify.
  - Disk Drives: disk controller, formatting, read/write/verify data, disk drive timer, head cleaner. Single or double density, one to ninety-nine tracks.
  - RS-232-C Interface: connector, data transmission, framing, data loop, etc.
- System Diagnostic ..... \$99.95

## TYPITALL

The SCRIPSIT™ Compatible Word Processor for the TRS-80™ Model 1, 3 or 4.

- Assign any sequence of keystrokes to a single control key.
- Print to the screen before the printer.
- Send the formatted text to a disk file.
- Merge data from a file while printing.
- Print ANY control or graphic character.
- Same version runs on Model 1/3/4.
- Reenter program with all text intact if you accidentally exit without saving it.
- Read your old SCRIPSIT™ files.

"If you like SCRIPSIT, you'll probably love TYPITALL." 80 Micro.

## REVIEWS

since the stock exchanges aren't active on either day. Similarly, a request to load from tape to main memory, which might destroy current data, won't proceed without a second confirmation by the user.

The displays and submenus are well suited to the novice, taking full advantage of menus and function keys. The Microsoft Basic statements for the LCD such as Line, Print@, and PSET make pleasing graphs of stock price and trading volume.

You connect, dial, and hang up the telephone line through Basic Call statements invoking ROM subroutines. The called routines are listed on pp. 199-202 of the Model 100 user's manual.

This emphasizes one of Tele-Stock's fine design features—it uses no unpublished ROM calls. Since Radio Shack is unlikely to change published ROM call addresses, the Tele-Stock program will not be invalidated by inevitable ROM updates.

However, Tele-Stock does what it's advertised to do—no more and no less. It doesn't add up the total worth of your portfolio (though it would be easy enough to modify the program to do so), nor will it calculate price/earnings ratios or predict stock trends.

It gently introduces the nervous first-time user to Dow Jones News Service. After watching the computer log in several times, you will be tempted to try logging in, first to get the same price quotations Tele-Stock gets, and later to try the many other services Dow Jones offers.

### Using Dow Jones

To use Tele-Stock, you must sign up for an account with the Dow Jones News Service. You can call the toll-free number in the Tele-Stock manual, or send in the application form (which allows one hour of free service) included with the direct-connect modem cable.

Dow Jones assigns you a password that you must provide to the Tele-Stock program, and sends you a number of booklets and other materials, most of which you don't need to understand to proceed with the program.

The calls Tele-Stock places should not cost much. The charge incurred with Dow Jones is small, since the call is brief: less than a minute, at 20 cents

per minute. The phone call might be the predominant cost, though if you are in a city served by Tymnet, Telenet, or Uninet, you are only billed for a local call.

### Back-up

Two chapters of the manual are devoted to making back-up copies of the various data files and explaining the program's well-designed tape save and tape load functions. Fortunately, Tele-Stock is written so that making a tape back-up of all data files only requires pushing a single function key. Reloading the taped data to RAM also requires only one keystroke.

The good, user-oriented save and load functions are important for back-up purposes and as an aid to freeing up memory and directory space in the Model 100. For example, with Tele-Stock and the data files in place, you might have as little as 3K left in a 24K machine. Furthermore, 10 of the available 19 file names are occupied.

When you want to use the Model 100 for other programs, you can easily save the Tele-Stock data files to tape, kill them from memory, and reload them later.

A statement in the user's manual forbids the purchaser to make even a single back-up copy of the main program, Stock.BA. Instead, you can purchase back-up copies from Tele-soft for a unilaterally determined nominal fee.

### Documentation and Support

The 27-page manual gives such clear instructions that the untrained user is in control of the program within half an hour. Furthermore, the program prompts are self-explanatory and you're not likely to need the manual again after one or two sessions.

The manual doesn't explain that some sophisticated switchboards do not respond to the Model 100's rotary-dial pulses. Thus, your Model 100 might not be able to autodial the Dow Jones call. You must either arrange for a direct outside phone line or be content to dial each call manually.

Also, if you have a call waiting feature, any incoming call results in a half-second interruption of the phone connection to transmit the beep signal. Unfortunately, this interruption loses some 15 characters, enough to mess

Continued on p. 228

# Three Good Reasons To Buy Software From Mumford Micro Systems:

- 1. Quality.** Mumford Micro has been selling software for the TRS-80 since 1978. Nobody survives in this competitive market for that long on poorly written software. Our best references are thousands of satisfied and repeat customers, but if you haven't spoken to one of them, our 10 day money-back guarantee might secure your confidence. Our rate of return? Less than one in 500.
- 2. Value.** Quality software at exorbitant prices is no bargain. Mumford Micro is known for true value in addition to high quality.
- 3. Service.** We are not distributors or "middle men". We are the original producers of every package we sell. Orders are filled promptly and if you have a problem with one of our programs, you can often call and talk to the author. On those occasions when a problem cannot be resolved on the phone, prompt technical help is available from a programmer who is intimately familiar with the program you purchased.

## INSTANT ASSEMBLER

The Instant Assembler is a powerful assembly language development system for the TRS-80. If you are already an assembly language programmer, its unique design will greatly increase your productivity. If you are just getting started, there is no better assembler to help you learn machine language programming. Some of its unique features are immediate assembly, which detects syntax errors as source is entered, and a compact source format that allows you to write programs nearly three times as large as other assemblers in the same amount of memory. It will assemble to disk, tape, or directly to memory for immediate debugging with the built-in debugger, and also produces relocatable code modules that can be saved on disk or tape and linked together in memory for large or modular assemblies. You can quickly switch from assembler to debugger without losing your source. The built-in debugger will step through your programs one instruction at a time, showing each disassembled instruction and its effect on the registers and memory. It will load or save both conventional source files and its own condensed source format.

The Instant Assembler package includes six separate programs. The assembler itself includes the editor and built-in debugger. The Linking Loader is included in several versions for different memory sizes. A stand-alone version of the debugger (MicroMind) is also included. MicroMind can be relocated in memory and has commands to single-step, set breakpoints, display or alter registers or memory, find bytes or words, disassemble to screen or printer, convert between hex and decimal numbers, and write SYSTEM tapes. The Instant Assembler comes with a comprehensive 65 page instruction manual with many examples. Specify Model I or Model III. TAPE INTASM 2.1 ..... \$39.95 on tape  
Specify Model I or Model III. DISK INTASM 2.1 ..... \$49.95 on disk

## TELCOM

Mumford Micro offers two telecommunications programs. TELCOM I has most of the features needed to communicate with bulletin boards, time share systems, or for file transfers between two disk-based micros over modems or direct wire. It is menu driven and extremely simple to use. Functions include transmit a disk file, receive a disk file, save received data on disk, examine and modify UART parameters, 8 programmable log-on messages, automatic checksum verification of accurate transmission and reception, and many more user conveniences. Supports line printers, lowercase characters, Xon/Xoff protocol, and programmable character keys.

TELCOM II is an expanded version of this program for the most demanding telecommunications applications. The terminal mode has a help menu and large printer spooler for high baud rates. From within the terminal mode you can load disk files into the memory buffer, type into the buffer, transmit the buffer, or view the buffer or data that has already scrolled off the screen. It has 10 different programmable messages that can each be sent with a single command for auto log-on or auto dialing, and 5 different character translation tables.

TELCOM II also includes an error correction file transfer mode which is compatible with the LYNC program available on CP/M systems and the IBM PC. TELCOM II will exchange disk files with any computer running this protocol (including another TRS-80 running TELCOM II), and will automatically detect and correct errors in transmission. Files can be sent to or fetched from an unattended computer. Both versions of TELCOM come with complete instruction manuals, which are available separately for \$5 to help you decide which program is best suited to your needs.

Specify Model I or Model III. TELCOM I ..... \$39.95 on disk  
Specify Model I or Model III. TELCOM II ..... \$69.95 on disk

## MODEL I SPEED UP

The SK-2 clock modification allows CPU speeds to be switched between normal, an increase of 50% or 100%, or a 50% reduction. Speeds may be changed with a toggle switch (not included) or on software command. It can also be configured to return to normal speed any time a disk is active. It mounts inside the keyboard unit with only 4 necessary connections and is easily removed if the computer ever needs service. The SK-2 has been field proven by 3 years of use, and comes fully assembled.

Model I only. SK-2 ..... \$29.95

## TYPESETTERS

Call or write for information on our TRS-80 to Compugraphic support package that will allow you to set type with your word processor and create disks on a Model 3 or 4 that will run in your Compugraphic typesetter.

## DISK INDEX

DISK INDEX will assemble a master index of your entire program library by automatically reading the program names and free space from each disk. The index may then be alphabetized or searched for any disk, program, or extension. It will alphabetize 2000 programs in less than 60 seconds and will find any program out of 2000 in less than 3 seconds. Disks or programs may be added or deleted manually, and the whole index or any selected part may be printed on paper in several different formats. You can quickly display the free space left on each disk and the number of copies of each program in the index. The index itself may also be stored on disk for future access and update. A 48K machine will hold up to 255 disks and over 2000 programs in each file, and you may build as many files as you need. There is no limit to the number of filenames it can read on any one disk. It will run on either a Model I or Model III and catalog disks for either machine regardless of which one is running it, though Model I owners must have double density to catalog Model III disks. It will automatically recognize any DOS and disk density, and has special modes to support unusual configurations of LDOS and NEWDOS. DISK INDEX works with any operating system written for the Model I or Model III except CP/M, and is extremely fast and easy to use. Specify Model I or Model III. DISK INDEX VERSION 3.2 ..... \$39.95 on disk

## INSIDE LEVEL II

INSIDE LEVEL II is a comprehensive reference guide to the Model I and Model III ROMs which allows the machine language or Basic programmer to easily utilize the sophisticated routines they contain. Concisely explains set-ups, calling sequences, and variable passage for number conversion, arithmetic operations, and mathematical functions, as well as keyboard, tape, and video routines. Part II presents an entirely new composite program structure which loads under the SYSTEM command and executes in both Basic and machine code with the speed and efficiency of a compiler. In addition, the 18 chapters include a large body of other information useful to the programmer. 80 Micro said "The book has no flaws; it is a perfect gem." Byte Magazine said "I recommend this book to serious machine language programmers."

Includes updates for Model III. INSIDE LEVEL II ..... \$15.95

## DEMON DEBUGGER

DEMON (for DEbugger and MONitor) is a sophisticated tool with which you can explore and debug machine language programs. In the STEP mode, it "emulates" the operation of the 2-80 and allows you to step through any machine language program one instruction at a time, showing you the address, hexadecimal value, Zilog mnemonic, register contents, and step count for each instruction. The 19 different STEP mode commands include step, step to a branch, run in step mode at a variable rate, run for a specified number of steps, change flags or registers, execute a CALL or RST, set breakpoints in RAM or ROM, and break when a number in a defined range appears in any double register. The 26 commands in the MONITOR mode include hex arithmetic, hex to decimal conversion, block move, fill memory, find bytes, jump to address, disassemble to screen, printer, disk, or tape, load memory from disk or tape, write memory to disk or tape, full screen memory edit in hex or ASCII, and relocate other programs or itself. Screen displays may be routed to your line printer for hard copy. DEMON includes a comprehensive 40 page manual with many examples.

Specify Model I or Model III. DEMON ..... \$39.95 on tape or disk

## 8748 ASSEMBLER

Assemble programs for the complete Intel MCS-48 family of microcontrollers including the 8741, 8742, 8748, and 8749 on your Model I, III, or IV. Assembles from a source file written on your text editor directly to an object file on disk. It supports the standard Intel mnemonics and features conditional assembly and listing, complete expression evaluation, ten significant characters for symbols, a complete range of pseudo-ops, and informative error messages. It comes with a comprehensive instruction manual which includes the instruction set for each component and sample listings for arithmetic and I/O subroutines. We also offer plans, schematic, and software to help you build your own inexpensive 8748 programmer. The 8748 is an inexpensive (\$15) single chip computer that contains RAM, EPROM, clock oscillator, a counter/timer, and 27 I/O lines in a single 40 pin package. A complete computer controller can be built with this one chip, a crystal, three capacitors, and a five volt power supply.

Specify Model I or Model III. CASM48 ..... \$125.00 on disk  
Plans and software for an 8748 programmer ..... \$29.95 on disk

## BIB/RITE

to write, maintain, learn, and teach bibliographies in a standard form\*

Prompts for elements and for form, sort by author and by category, merge keyboard and disk or tape input, semiautomatic journal title entry, edit, print with heading, margins, automatic paging.

Maximum of about 150 citations in 48K, 200 for non-disk Basic. Best for fewer than 100 citations. Slow for 150-200.

Available for tape or disk use. Disk recommended. For TRS-80 Model I Level II with lower case, Model III, or Model 4 in Model III mode. Uses about 14K. Need 32K minimum and printer with caps, lowercase, and underline. Apple, CP/M with MBasic, Model II. 12 & 16 versions in process.

One computer, individual user \$45.95 + \$2.50 postage and handling. One computer, multiple users \$150 + \$2.50 postage and handling. Up to 10 user's guides for multiple users, three sent if not specified. User's Guide only (24 pp. 8 1/2" x 11") \$3.50 + \$1 postage and handling. Applies to purchase.

On approval to institutions. Dealer inquiries invited.

up at least one stock history file. For this reason, the manual should advise you against using phone lines with the call waiting.

Tele-Stock is unlikely to require much user support. It's easy to use, and probably won't require updates, since it uses only public ROM calls. Like all other stock analysis programs, it requires rewriting if Dow Jones changes its protocols or output formats.

In any event, a phone number appears on the manual and Telesoft answered when I called, so it appears that they intend to provide customer support.

**Criticism**

Telesoft should display a version number as part of the opening screen, and any patches applied should increment it. When the manufacturer is trying to help a user over the phone, this is helpful information.

Tele-Stock works with both a direct-connect modem cable and an

acoustic coupler. When you use the acoustic coupler, you can't use the automatic dialing feature. Telesoft could easily enhance Tele-Stock to determine if the DIR/ACP switch is in the ACP position by checking bit 5 of input port 179.

Then, if you select automatic updating (which requires automatic dialing), it could display a message indicating that the function is available only with the direct-connect cable. Similarly, if you select manual updating, the program would not ask whether you want automatic dialing.

The Dow Jones service expects callers to be in the originate mode. Thus, whenever you select Dow Jones updating, the program should check the position of the ANS/ORIG switch, asking you to change it if it is in the wrong position. You can do this by checking bit 4 of input port 179.

Also, like all graphing routines, the Display function scales its vertical axis based on the range of values to be graphed. Tele-Stock maintains a

record of the highest and lowest prices and highest trading volume to ensure that none of the plotted values goes off the graph.

When the program receives each new day's values, it discards the oldest values. Unfortunately, the program doesn't re-evaluate high and low values, so an extreme stock value of many months ago will needlessly compress the graph of recent data.

This is not as bad as it sounds. Many stocks don't vary greatly in value. For a stock that does, you can always delete the stock from memory and reenter it using the parameter-change function; this eliminates the old extreme high and low values. You can also use Text to enter the history file for that symbol and change the offsetting high or low value.

One minor annoyance is that Tele-Stock changes all the Basic function key labels. If you select Basic on return to the main menu, none of the function keys work. Even pressing the reset button does not restore them.

## BUY VISICALC ENHANCERS from SOLUTIONS

Saves me many hours every time I run long reports  
October 1983 Popular Computing

Sort does exactly what it promises  
InfoWorld September 5, 1983

**SYMPTOM:** Desperate need to sort the rows or columns of a VisiCalc spreadsheet

**R<sub>X</sub>:** SORT™ from SOLUTIONS

**SYMPTOM:** Bleary Eyes from trying to print a good looking report from VisiCalc

**R<sub>X</sub>:** REPORT™ from SOLUTIONS

### SORT

- Sort the rows or columns of your VisiCalc spreadsheet
- Formulas and values move with each row or column
- Sort alphabetically or numerically
- Sort in ascending or descending order
- Use up to four additional keys to break ties or specify secondary sorts

Both are Available for TRS-80™ Models III/12/16, III, Apple™ II + IIE, III with Business Basic and for the IBM PC™ and compatibles.

### REPORT

- Print with variable width columns
- Segment large spreadsheets into multipage reports
- Repeat columns and rows and multipage reports
- Eliminate unwanted columns
- Align decimal points
- Center or justify labels and values
- Add titles and page numbers to your report
- Write reports to disk for later printing or transmission

### Solutions, Inc.

Basic reloads its function keys by itself sooner or later, but I haven't figured out how.

During the updating routines, the program displays the message *Connect successful*. Since I sometimes receive this message when the connection is unsuccessful (for example, with the ORIG/ANS switch in the wrong position), a different message might be in order, such as *Connection proceeding* or *Carrier detected*.

At a few points, the program asks you to make a selection numbered 1, 2, 3, and so on. This is a little confusing since you're not sure whether to push a numerical key or a function key.

Telesoft could remedy this by using letters or by arranging for Basic to scan both the function keys and the numerical keys. However, each remedy would use up more of the limited Model 100 RAM.

I emphasize that these criticisms are all minor. Overall, Tele-Stock is a useful program. ■

## Dostamer: Soothe The Savage DOS

by Mel Patrick

**D**ostamer is a neat little utility that lets you execute most DOS commands on your files with a single keystroke. It's menu-driven, the menus are easy to create or modify, and the time you save in typing in extensive command parameters makes this program worthwhile.

Dostamer works by establishing a set of programmable buffers to which you assign DOS commands. By executing a call to those buffers while working on a file, you invoke a command.

### Formatting and Running Dostamer

The Dostamer disk contains six programs: the Dostamer driver program, two example menu files, a program that customizes the main program and modifies menu files, a program that tells you the size of machine-language

files, and a program that lists your files and their lengths.

The menu in Fig. 1 is an example of Dostamer's first screen with all the available options. From the main menu, you press the clear key to access

## 101 Business Letters

Ready to Use...  
On Disk...  
FINALLY...

- NO WRITING!
- NO TYPING!
- NO DICTATION!
- PRINT A PROFESSIONALLY WRITTEN LETTER IN SECONDS!

## FINALLY . . .

- Save time
- Keep Business correspondence up to date
  - Improve company image
  - Speed up collections
  - Increase mailing response
- Respond promptly to all customer and prospect queries
  - Promote new business
- Keep in touch with clients and vendors

No typing needs, because each letter is complete and ready for addressing.

Personal revisions are easy, because Gold Letters is accessible by all major word processing programs.

Ready to use in minutes, with no programming or typing necessary.

Your complete 101 Gold Letters software package includes a 5 1/4" or 8" diskette, a binder containing hard copy versions of all 101 letters by category, and instructions for using the Gold Letters.

Available in CP/M, MS/DOS and PCDOS.

Price for entire package: Diskette binder, 101 categorized letters and instructions. \$159.00

Add \$5.00 shipping & handling costs. CA residents add 6% sales tax.

the user menus. Figure 2 is an example of a typical user menu that was included with Dostamer.

Another set of commands is available at the user menu. The Table provides a complete list of the commands available. You can design each user menu with a total of 13 commands (A-M) and you can develop up to 10 user menus. Add this to Dostamer's main menu selections and you have an

impressive library of 143 commands at your disposal. As an additional feature, you can annotate the commands with remarks.

Using Dostamer couldn't be easier. Executing most commands takes a single keystroke; more complex commands, like making a file's attribute either visible or invisible, require two keystrokes.

Dostamer superimposes a graphics

block over the first file name on the menu. You move the indicator block around the screen with the arrow keys. The file name under the block is considered the active file and any commands you execute affect that file.

## Impressions

To date, I have yet to find an omission or oversight in Dostamer, let alone a bug. The error-trapping covers every contingency and, unless you overwrite the main program, control always returns to Dostamer.

I used Dostamer formatted for NEWDOS80; CDC plans Dostamer versions for DOSPLUS, MULTIDOS, and LDOS. In addition, they have a new Model 4 Dostamer with enhanced features that include reverse video and function keys.

CDC obviously designed Dostamer with simplicity in mind, and in that they're successful: Dostamer is easy to program and easy to use. ■

## Copy Protection From FPS-3

by William R. Gouge

**T**he FPS-3 (front panel simulator for the Model III) claims to back up any protected software by using a hardware interface. I found this product easy to install and well worth its price.

FPS-3 consists of a printed circuit board that you install in your Model III, two miniature toggle switches, and a disk-based monitor program. The circuit board contains a 2K RAM chip that stores the utility monitor once you load it from disk. This board measures 3 inches by 2½ inches and has a 1½- by ¼-inch notch at one end.

### Installation

The FPS-3 arrived by parcel post about a week after I sent a money order for its purchase. After reading the installation instructions, I got my screwdriver and started my stop watch.

You install the FPS-3 board by first removing the Model III case and the metal shield covering the main computer board. You then remove

|         |                                                                                  |
|---------|----------------------------------------------------------------------------------|
| Enter   | Executes the file and recognizes some file extensions                            |
| Break   | Exits to NEWDOS80 Ready                                                          |
| Space   | Pages the directory display if necessary                                         |
| Shift/@ | Kills the active file                                                            |
| 0-3     | Displays disk drive directories                                                  |
| C       | Copies the active file to another drive                                          |

## TRSDOS 6.X™ or LDOS™ Users

Our ToolBox for LDOS™ was rated **FOUR STARS** in the Oct '83 80-MICRO as a package to "perfect the use of LDOS". We now have it for the Mod 4 as well! These new disk utilities are intended for TRSDOS 6.x or LDOS 5.1.3/4 only! Unlike SU 1, these will work on any combination of single/double sided drives and hard drives! They will work with Mod 4, Mod I or III, single or double density, ALL media formats, including 8 in. drives on a MAX-80. Also works with the Radio Shack, or any hard drive configured for use with LDOS or TRSDOS 6.x.

Utilities include disk repair, disk check, extensive zipper for disk, memory, or files, verifiers, comparers, filters, mapping, password manipulation, password removing, mass file moving, mass file killing, erasing, exercising, search/replace, etc. Each utility also contains a built-in "HELP" command, in case you get lost. All utilities are machine language, contain excellent documentation, and disk is unprotected.

# Surface Plot

Now for Mod III and 4

## The Grafyx Solution™ with Depth

**Outstanding Grafyx.** SURFACE PLOT lets you broaden your imagination by creating amazing three-dimensional views with Grafyx Solution. Micro-Labs' Grafyx Solution is a plug-in, clip-on board which gives you 98,304 points in a 512 x 192 matrix. That's sixteen times as many points as a standard Model III! Another unique feature is the ability to display the hi-res screen along with the normal text and low-res screen.

**Flexible Grafyx.** SURFACE PLOT allows you to enter an equation of the form  $Z=F(X,Y)$  where Z is the height above the surface for a given X, Y coordinate. For example, entering the equation  $Z=10-X^2$  draws a hill. The final picture can be viewed from any position in space so you can see an image from underneath, above, or even inside a hill or valley on the plot surface. You can also specify the size of the resulting image.

**Complete Grafyx.** The program automatically removes hidden lines for

best results. The documentation contains complete instructions and sample equations so that you will have your computer hard at work without delay. The finished plot can be saved on disk or printed on any of 20 popular printers.

The Grafyx Solution package is shipped from stock and includes the board, 44 programs including an 80-Column display driver and Extended Graphics Basic, and a 54 page manual all for \$299.95. The SURFACE PLOT program, twelve hi-res pictures, and manual is \$39.95. Shipping is FREE on pre-paid or COD orders. (Tx. residents add 5% sales tax.)

464 MICRO-LABS, INC. 214-235-0915  
902 Pinecrest, Richardson, Texas 75080

one of the ROM chips from the processor board and install it in the FPS-3 board.

Plug the FPS-3 board into the now empty ROM socket on the Model III processor board. Then you make three other connections to the main computer board via color-coded wires with spring type clips. Installation requires no soldering.

The instruction sheet says to test the normal operation of the computer and reinstall the case if everything checks out. The operational check was fine, but I had trouble trying to put the radio frequency shield back on the main computer board. The ROM chip installed in the FPS-3 board was too high to clear the shield and allow a proper fit.

Since I use the computer with my ham radio equipment, I wanted to re-install the shield if possible. I used some metal shears to cut the corner of the shield until the ROM chip cleared. Even with this shield modification, the computer was back together in less than half an hour.

You can drill holes in the computer case to accommodate the two toggle switches, or route the cable through the hole on the bottom of the computer that you normally use for the RS-232 board. Since I don't have the RS-232 installed, I chose the latter method.

Of the two switches connected to the FPS-3, the larger is the

*Does the job?* ★★★★★☆

ROM/RAM switch and the smaller is the non-maskable interrupt (NMI) switch. One side of each switch is painted red for identification purposes. For normal Model III operation, both switch handles point away from the red side.

#### Back-up Procedures

To make a back-up, first insert the FPS-3 disk in drive zero and hit the reset button. Select option D from the menu to load the disk version of the FPS-3 monitor.

Flip the ROM/RAM switch to the red position when the screen fills with

exclamation marks. When the screen goes blank, type in GC400, and flip the ROM/RAM switch back to normal position. The menu will reappear. Now remove the FPS-3 disk from drive zero.

Insert a disk in drive zero that you've previously formatted with TRSDOS. Select option B from the menu to write a special boot routine to the disk. This will eventually contain the new copy of your program. Remove the formatted disk from the drive.

Next, insert the protected software to be copied in drive zero and hit the reset button. After you load the software, remove the disk.

Once again, put the formatted disk in drive zero. Flip the NMI switch to the red position, then flip the ROM/RAM switch to red. The screen will clear, then display all register contents.

Now, you press the enter key. When the screen clears, press the D key. This dumps the ROM and RAM contents to disk. All this takes fewer than 25 seconds.

Finally, return both switches to their normal positions. You can now hit the reset button to boot the new back-up copy of your once-protected software.

#### Comments

The disk you've just created will not contain a conventional directory,

MagiCheck can be used for your Personal or Business Checking Account.

It handles up to 8 separate checking accounts and can produce Profit & Loss Statements for up to 199 ledger categories.

#### MAGICHECK'S OTHER FEATURES INCLUDE:

so you can't copy it using conventional copy and back-up programs that are part of most DOSes. However, special disk copy utilities such as Trackcess and Super Utility Plus can make copies of the new disk.

You can make more than one copy of a program without going through the whole FPS-3 process from the beginning. You can have two or more formatted disks on hand for writing a special boot and jump back after you make one complete back-up instead of booting the first copy.

You can use this program to make tape copies of protected software distributed on disk. Most steps still apply except you need to select T as your option instead of D. A screen prompt requests your selection of tape baud before the program starts the dump. It takes about 13 minutes to make a 500-baud copy of a program.

The FPS-3 program also contains a monitor utility that might be of interest to machine-language programmers.

This software/hardware combination from J.E.S. Graphics fills a gap left by software copy programs. The hardware installation and operating instructions are clear and easy to follow.

The combination performs exactly as the advertisements claim and the \$50 selling price makes FPS-3 a good value. I recommend this product to anyone who owns protected software and wants the security of making back-up copies for his own use. ■

### Stock Tracker: Take a Risk

by Ameer Eisenberg  
80 Micro staff

Some people consider investing in the stock market just a step above playing the tables in Las Vegas, and in one sense they're right: The stock market can be a gamble. But with

## Stock Tracker

★ ★ ★ ★

**H & H Trading Co.**  
P.O. Box 549

*Does the job?* ★★★★★★

some sage advice and a little luck, you might hit the jackpot.

H & H Trading Co. has come out with a product designed to give you at least a fighting chance: Stock Tracker, a software package that gives you stock buying and selling tips based on a technical analysis of stock market trends.

Unlike the conventional analysis most people make when following inside stock information, technical analysis claims to remove chance and emotion from stock evaluation and replace them with profits.

Any investment program is only as good as the theory on which it is predicated. Stock Tracker is based on Joseph E. Granville's On-Balance Volume theory. You remember Granville—he's the Wall Street analyst whose opinion is so highly regarded that when, in July 1983, the *Granville Market Letter* suggested that investors sell all their stocks, the market went into a decline so sharp that it's come to be called the Granville Crash. Could 200,000 investors be wrong?

David K. Howard, an investment adviser registered with the Securities and Exchange Commission, has modified Granville's equations into a volume force technical analysis for individual securities. Stock Tracker is the computerized version of Howard's volume force system.

The volume force theory "holds that (a stock's) volume patterns pre-

## ANNOUNCING: CLEANER 80

### The System That Makes Your Cleaning Kit Worth 15 Times The Price You Paid For It.

Cleaner 80 is a software program designed to give you your money's worth — and more — when it comes to cleaning the disk drive head of your TRS-80 computer.

With this system, you can get up to 400 cleanings out of each disk drive head cleaning kit — instead of the 26 cleanings specified by the manufacturer. That's 15 times the number of cleanings you would normally be able to achieve.

**Order yours today.** Please specify whether you need the TRS-80 Model I or TRS-80 Model III version.

cede price patterns." This is in keeping with that bedrock of economic theory, the law of supply and demand. The system determines trends in stock prices based on the amount of shares traded as well as the stock's closing price.

Sustained buying (accumulation) and sustained selling (distribution) affect the price of a stock. Charting a stock's accumulation or distribution can predict when a stock price will change significantly (break out) and whether it will increase or decrease in value.

This theory doesn't take into account insiders' tips or economic events. In short, it circumvents all question of *why* a stock moves in favor of predicting *when* it will move. While other investors buy or sell according to the latest news releases, volume force disciples acknowledge only the power of the market itself.

### The Package

Stock Tracker's software is a series of Basic programs that you call from a menu displayed by the software's main program. The program analyzes your data and presents the results in eight different reports and three different graphs. You can view these reports and graphs on your video screen or print them on paper. The graphics are limited only by the infamous TRS-80 character set, not by the program.

The most exciting report Stock Tracker offers is the current action

trading signals. This is the one that tells you when to buy or sell. Additionally, the program can write reports summarizing the entire history of your portfolio or of one specific stock.

Last Day reports review the most recent actions you've taken. Decision tables contain the overall data the computer uses to generate trading signals for each security. In short, the program gives you the information in almost any form you'd want.

The manual explains interpretation of these reports. H & H Trading Co. also publishes a periodic newsletter (*Market Tracker*) that helps clarify Howard's volume force theory. The price of a subscription is not included in Stock Tracker's purchase.

The most up-to-date version of this program includes an enhancement package (an additional \$195) that lets Stock Tracker interact directly with the Dow Jones News/Retrieval Service. Options are available for receiving the daily quotations with the machine attended or unattended.

To use these features, you need a modem (one with auto-dial if you want the computer to operate unattended) and a Dow Jones account.

### Documentation and Error Handling

Stock Tracker comes in a brown loose-leaf folder that includes the program's disks and a 70-odd-page manual. The manual is a masterpiece of clear and precise instructions. It assumes you have no previous experi-

ence with computers. To this end, careful directions tell you where to find the computer's On button, how to back up a disk, and which buttons to press when.

All this requires a lot of words and a lot of reading. The authors, while apologetic for the amount of work the investor must do, are uncompromising in regard to its necessity. "Before you do anything else," they begin, "READ THIS MANUAL." That's good advice.

H & H Trading Co. suggests that you run the program from TRSDOS, but it worked fine with my DOS-PLUS 3.5. The package has the drawbacks of any complex Basic data-handling program; its disk input/output (I/O) is slow and it spends a lot of time loading information from and writing information to disk.

On the plus side, this program's self-documentation is excellent. At all times, the video display tells you what to do next and how to input information.

The program's error-handling is superb too. If you make a mistake, the program either doesn't accept the data or sends you back to the previous menu. And in case of a program crash, the on-screen message tells you where the program terminated and how to find out what your DOS's cryptic error message really means.

Crashing this program is tough to do. I spent a lot of time making every mistake I could think of. Did the program want a formatted data disk? I fed it a blank disk. Did it call for numerical input? I typed in letters. Through it all, the Stock Tracker software responded with careful corrections and never damaged my data. This is good programming.

### Summary

Despite the growing number of market analysts advising investors to use home computers to evaluate their portfolios, few stock analysis programs are available for the TRS-80. This one is excellent, if expensive, software packaged in an attractive format.

Because it is a precision tool, Stock Tracker demands that the investor spend some time learning to operate it. However, I don't believe it could be any simpler to use. I heartily recommend the software.

## Find Your Career Direction

by Christine Adamec

**C**areer Directions is an impressive self-assessment program that pinpoints possible career opportunities based on an analysis of your goals, your work preferences, and your resources. The program bases its recommendation on a data base of 460 possible careers, ranging from 4-H Club agent to zoologist. Then it helps you devise a plan to get there.

While this program is aimed at high school students, I'd recommend it for college students or anyone entering or reentering the job market. You might

also want to use it to reassess your own career goals.

### Program Use

Career Directions is exceptionally easy to use. After you boot up the disk, the program automatically loads itself. From that point on, prompts lead you through the necessary responses.

The program is divided into four major areas of inquiry: career assessment, career analysis, career exploration, and career planning.

Career assessment consists of a series of eight easy exercises. The first breaks careers down into classes that include scientific, artistic, humanitarian, leadership, and so on. The program delineates your choices by asking you questions that pinpoint a field that might be right for you.

For example, the program defines artistic as "creative expression of feelings and ideas." Types of artistic work include writing short stories or articles, announcing radio and television programs, playing a musical instru-

ment, acting or dancing, and creating or critiquing art works. The program then asks you if you would like to do this type of work and you respond yes or no.

## REVIEW DIGEST

**Supertax III**, Rockware Data Corp., P.O. Box 401710, Dallas, TX 75240, Models I, III, and 4, \$59.95.

"...You have to know what you are doing when using these programs; all sorts of ridiculous input are allowed. Supertax blithely absorbed one-digit social security numbers, negative numbers of dependents, and IRA contributions far beyond those allowed by law. Even though most users will know better, having error traps built-in can be a convenience.

"...The Supertax programs do what they claim, and accurately. All are handy to have....Those who do only their own taxes, but who want to track their tax progress throughout the year, might find this program useful." *Computer User*, January, p. 23.

**TRS-80 Model 16B**, Tandy/Radio Shack, One Tandy Center, Fort Worth, TX 76102, \$4,999 (256K, one floppy-disk drive).

"The Radio Shack TRS-80 Model 16B computer is a good competitor in the race to computerize America's small businesses. Its drawbacks for an unsophisticated user relate to the traditional Unix user interface and the lack of any real help to a novice from the large stack of manuals shipped with the system. Its advantages include good initial software offerings and the support of a very large company with many dealers and service centers....the Model 16B appears to be a very good choice for people who need a small Unix development environment. Radio Shack has done a good job on the machine, and it deserves serious consideration." *BYTE*, January, p. 288.

**Quickpro + Plus 2**, ICR FutureSoft, 1718 Kingsley Ave., Box 1446, Orange Park, FL 32067, Models I, III, and 4, \$149.

"...Quickpro + Plus 2 lets you write programs as though you were

using a simple word processor, without having to know a single thing about Basic or any other language. It is menu-driven, for maximum user-friendliness.

"...Quickpro + Plus 2 isn't for everybody; it is not much use for games or such. But it is highly useful in many areas of business...., education...., and home and hobby uses..." *Creative Computing*, February, p. 256.

**Micro-WYL**, Overbeek Enterprises, P.O. Box 726, Elgin, IL 60120, Models I and III, CP/M, \$29.95.

"Micro-WYL is a line-oriented text editor...that is an excellent tool for entering and editing computer programs.

"...While it may be slightly less easy to use than some of the screen-oriented text editors, it is powerful, fast, and responsive. It is a well thought-out product with a logical command structure, and is a very good buy at \$29.95." *Computer User*, January, p. 75.

# REVIEWS

After you complete each exercise section, the program summarizes your responses and asks you if you're satisfied or would like to repeat the exercise. Thus you can readily correct a hasty answer.

The second exercise contrasts different types of work, such as working with people and operating machines. Then, according to your preferences, you choose either the first or second entry, or "C" if you don't like either choice. One drawback to the program is that it doesn't provide an option should you like both types of work. It seems that choosing one of the jobs rather than option C gives you a wider career choice at the end of the program.

Other exercises in this section ask you to select the subjects you enjoy(ed) in school and which kinds of work activity you prefer (e.g., creative, unusual work or repetitive tasks). You must also rate yourself on general learning ability and verbal and numerical skills.

Then the program asks how much weight you're willing to lift—up to 10 pounds or over 100? And do you want to work mostly inside or outside? Or no preference?

The last exercise in this series asks you how much time you're willing to invest in preparing for a career. Are you willing to go to a vocational school, a college, or graduate school?

During the career analysis portion of the program, it analyzes your responses and tells you for which occupations you're suited. You can print out the results or read them off the screen. This phase takes about five minutes.

The printout summarizes the information you've provided in the exercises and then prints out a list of potential jobs for you, from those requiring the most education to those requiring less than you specified. My printout gave me a total of 23 possibilities (see Fig. 3).

If you want to investigate any of these careers, go back to the main menu and select the career exploration option. Each career has a number code that you type in to learn what school subjects, work situations, and so on that career involves.

I explored city manager (number 169) and found this career falls under the leadership category. School sub-

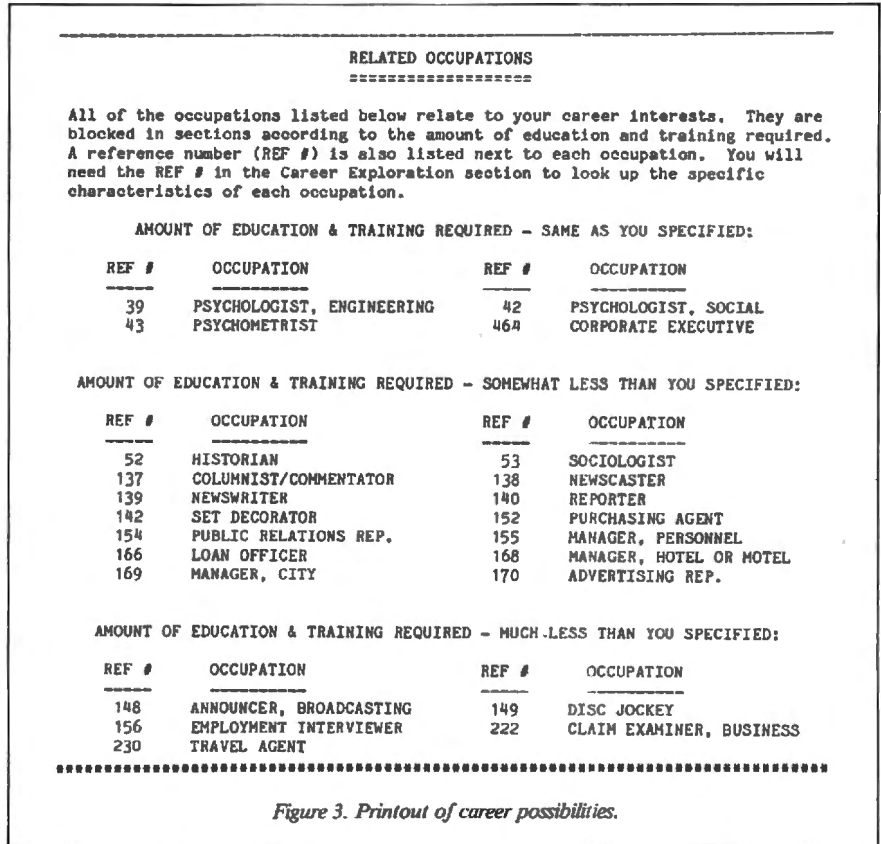

Figure 3. Printout of career possibilities.

jects I'd need to take included language/English, social studies, mathematics, and office courses. I'd have to deal with people, perform duties that change frequently, and plan and direct entire activities. I'd also have to express proficiency in general learning, and verbal and numerical skills. The program predicted I'd have to spend over two years and up to four years on education.

The career planning section asks questions such as whether you want to go to college and for how long. If your career requires a college degree, you decide what's important to you in a college—cost, location, size, availability of financial aid, ROTC, coed dorms, and so forth.

If you want to start work right away, other exercises ask you who might give you references and where you should check for jobs (with suggestions such as newspaper ads and employment agencies). It even asks prospective job applicants questions like: Is it OK to bring a friend to an interview? Is it important to be on time? Should you discuss salary right away? The answers might seem obvious, unless you're preparing for your first job interview.

## Evaluation

I liked this program; it not only makes you consider questions you might not have come up with on your own, it provides a framework of guidance in career planning. I recommend it for high school students from grades 10 to 12, and for college freshmen and sophomores.

I asked a high school guidance counselor to try this package, and she was impressed by its thoroughness and simplicity. Also, its \$89 price tag is within the budget of most school systems. Back-up disks cost \$10. High schools, colleges, and other organizations can request free 30-day demonstration disks.

Any adult anticipating a career change might also find the program highly useful.

The user's manual is detailed and, because the program's so easy to use, almost superfluous. But it might reassure an inexperienced user. It lists each career field in the data base and contains a brief philosophy of the program.

Although Career Directions does not require a printer, it's probably more useful in a school setting if students can get a printout. ■

### Drive Away Dirt

Clean Runner, a menu-driven disk drive cleaner for single- and double-sided drives, is available from Discwasher.

Clean Runner works without chemicals and uses a lint-free cleaning surface bonded to a 5¼-inch polyester disk to direct the drive heads to a new track for each cleaning. In less than 30 seconds, it cleans away magnetic oxide and dust particles that build up on disk heads.

At \$24.95 each, Clean Runner provides 20 cleanings. For more information, write Discwasher, P.O. Box 6021, Columbia, MO 65205.

Reader Service ✓ 551

Keep your heads clean with Clean Runner, a disk drive cleaner on a 5¼-inch floppy disk.

### Meet Oscar

Oscar (Optical Scanning Reader) is a low-cost optical bar code scanner from Databar Corporation. Powered by four D-cell, batteries, the 4 by 3-inch, 18 ounce unit interfaces with your TRS-80 through its cassette port.

The bar code scanner costs \$80 and comes with an introductory software support magazine. Software for Oscar is available in bar code format in a \$10-an-is-

sue magazine or as stand-alone software at \$9.95. Databar boasts an extensive software library for applications in home education, games, money management, science and hobbies, health, law, and general interest.

Oscar will be marketed through many large department stores, bookstores, and computer and software stores, as well as through several national catalogs. For more information on Oscar or the nearest retailer, write Customer Service, Databar Corp., 10202 Cross-town Circle-Eden Prairie, MN 55344.

Reader Service ✓ 552

### The Emperor's New Disk Drive

Logical Systems Inc. is the emperor, and your Model I, III or 4 is the peon that thinks it has access to a new disk drive. For double-sided, 40- or 80-track drives, or for hard drives, DiskDISK creates logical drive partitions that act as files on the physical drive.

DiskDISK lets you perform all system functions; even mirror-image back-ups function normally.

This disk-within-a-disk system doesn't restrict reading and writing to DiskDISK files. You can segment your hard drive as logical floppy drives, and keep groups of related files together, making back-ups and file maintenance a breeze.

DiskDISK is available for the Model I/III and Lobo's Max-80 running LDOS 5.1. LS-DiskDISK runs on the Model 4 under TRSDOS 6.X. Each version is \$99 plus \$3 shipping and handling.

With Oscar's help your TRS-80 can read bar code programs.

For more information or for a free catalog, contact Logical Systems Inc., P.O. Box 23956, Milwaukee, WI 53223, 414-355-5454.

Reader Service ✓ 559

### Smith-Corona Goes Dot Matrix

Smith-Corona has entered the dot-matrix market with the introduction of three near-letter-quality printers.

The 132-column D-300 (\$795) boasts a printing speed of 140 characters per second (cps). In addition to a standard 9- by 8-dot ma-

trix, the D-300 offers a near-letter-quality 17 by 16 mode. The printer has both friction and tractor feed, and parallel and serial interfaces.

The D-200 (\$595) and parallel-interface D-100 (\$395) are 80-column printers. They operate at 120 cps and 100 cps respectively.

All three printers offer a choice of six pitches, emphasized or elongated print, and bit-image graphics. They are available from Smith-Corona, 65 Locust Ave., New Canaan, CT 06840.

Reader Service ✓ 561

Smith-Corona's D-300 dot-matrix printer offers 140 cps print speed.

# RUN BASIC PROGRAMS AT SUPER SPEED

## WITH ZBASIC 2.2.

THE WORLDS FASTEST TRS-80 BASIC COMPILER from **SIMUTEK**

### BELIEVE IT OR NOT WE'VE ADDED MORE NEW FEATURES to the ONLY INTERACTIVE BASIC COMPILER for the TRS-80!

- Speed increases of 10-100 times are typical after compilation.
- Compiled code can be RELOCATED to run anywhere in memory. Code is even ROMable!
- ZBASIC 2.2 NOW SUPPORTS BOTH RANDOM and SEQUENTIAL DISK I/O.
- ZBASIC 2.2 is now a super tool for business programmers: RANDOM ACCESS FILES, and PRINT USING statements are supported as well as a HIGH PRECISION MATH package (with no rounding problems).
- Special BUILT-IN MACHINE LANGUAGE COMMANDS to increase program operation by as much as 1000 times! Special commands are implemented for fast memory searching (CPDR, CPIR), block memory moves (LDIR, LDDR), inputting and printing HEX numbers, inserting MACHINE LANGUAGE into COMPILED CODE, disabling and enabling interrupts, inverting memory, 16 bit PEEKs and POKEs, and stack control, debug and much more.
- ZBASIC 2.2 compiles the ENTIRE PROGRAM into Z-80 machine language. (Not 8080 code or a combination of BASIC and machine language like some other compilers.) Clumsy LINKING LOADERS, and RUNTIME MODULES are not needed: ZBASIC 2.2 creates a ready to run MACHINE LANGUAGE program.
- NO ROYALTIES imposed on registered ZBASIC owners.
- Typical COMPILATION TIME is TWO SECONDS for a 4K program.
- Use TRS-80 Basic to write ZBASIC programs!
- Compile some existing programs with only minor changes. (BASIC programming experience is required.)
- Fully compatible with both the Model I and the Model III. Mod I compiled programs work on a MODEL III, and vice-versa. ZBASIC works with NEWDOS-80, NEWDOS+, DOSPLUS, LDOS, MULTIDOS, ULTRADOS, TRSDOS etc. (Not TRSDOS Mod I double sided)
- BUILT-IN and much improved MUSIC and SOUND EFFECTS commands.
- Improved CHAINING for disk users.
- TIME\$ now available on DISK version. (Mod I only)
- ZBASIC 2.2 now has an INPUT @ command (similar to PRINT @).
- The TAB function will now tab 255 columns on a printer. (BASIC cannot tab past column 64.)
- NEWDOS 80 2.0 USERS can use the CMD "dos command" function! (DOSPLUS may use name "dos command")
- NEW and EASIER to use USR COMMANDS.
- New math functions to calculate XOR and INTEGER REMAINDERS of a DIVISION.
- Logical STRING COMPARISONS are now supported.
- The disk commands INSTR, MID\$ ASSIGNMENT are now supported on both DISK AND TAPE ZBASIC.
- DEFSTR is now supported.
- Eight disk files may be opened simultaneously; random, sequential or mixed.
- LINE INPUT#, is now supported.
- Invoke the compiler by simply hitting these two keys: " -"
- NEW 60+ PAGE MANUAL with DESCRIPTIONS AND EXAMPLE.
- ZBASIC 2.2 Comes with CMDFILE/CMD program from MISOSYS, to allow appending or merging compiled programs and machine language programs from tape or disk.

### ZBASIC 2.2 DOES NOT SUPPORT THESE BASIC COMMANDS:

- ATN, EXP, COS, SIN, LOG, TAN, and exponentiation. (However, subroutines are included in the manual for these functions.)
- ERROR, ON ERROR GOTO, ERL, ERR RESUME.
- No direct commands like AUTO, EDIT, LIST, LLIST ETC, although these commands may be used when writing programs.
- Others NOT supported: CDBL, CINT, CSNG, DEFFN, FIX, FRE.
- Normal CASSETTE I/O. (ZBASIC supports its own SPECIAL CASSETTE I/O statements.)
- SOME BASIC COMMANDS MAY DIFFER IN ZBASIC. For instance, END jumps to DOS READY, STOP jumps to BASIC READY etc.
- MEMORY REQUIREMENTS: to approximate the largest BASIC program that can be compiled in your machine (at one time), enter BASIC and type: PRINT (MEM-6500)/2. Remember, you can merge compiled programs together to fill memory.

### ZBASIC 2.2 SPEED COMPARISON DEMO

To help give you an idea how fast compiled programs are, we have included this demo program:

### ZBASIC 2.2 DEMO PROGRAM

|                                          |                  |
|------------------------------------------|------------------|
| Time to compile and run complete program | : 0 MIN. 2 SEC.  |
| BASIC Execution speed MOD 1, LEVEL II    | : 7 MIN. 34 SEC. |
| ZBASIC Execution speed MOD 1, LEVEL II   | : 0 MIN. 18 SEC. |
| BASIC Program size (WITHOUT VARIABLES)   | : 895 BYTES      |
| ZBASIC Program size (WITHOUT VARIABLES)  | : 2733 BYTES     |

(Remember that the ZBASIC program includes an 1879 byte sub-routine package.) Program shown exactly as compiled and run in BASIC and ZBASIC.

```

## NEW PRODUCTS

*Little powerhouses on the prairie: These 6-volt rechargeable batteries give you and your Model 100 more freedom.*

### The Prairie Away-from-Home Companion

Go ahead, knock that battery off Robert Conrad's shoulder. With Prairie Power you'll never again have to buy an alkaline cell for your Model 100.

Prairie Power is the first external rechargeable battery for the Model 100. The lightweight, palm-sized units with 6-foot, 6-volt cables come in three sizes that outlast any alkaline batteries' 20-hour charge.

The 8-amp unit (\$34.95) can power the Model 100 continuously for over 150 hours, the 5.5-amp battery (\$29.95) supplies 100 hours of power, and the 2.6-amp unit (\$21.95) supplies 50 hours of power.

The charger costs \$10.95. Order through Bluestem Productions, Box 334, Wayzata, MN 55391, 612-471-7795.

### Stop That Surge

A typical home's electrical devices can experience over 2,000 power spikes and voltage surges a year that could cause severe component damage, misindexed files, data loss, and related problems. To help protect your home electronics, RKS Industries Inc. (4865 Scotts

Valley Drive, Scotts Valley, CA 95066, 800-892-1342; in California, 408-438-5760) has developed SurgeSentry products.

A two-outlet model (\$89.50) and five-outlet system control unit (\$149) use a three-stage, three-way common mode design to shield equipment from voltage spikes and ground-wire transient surges. SurgeSentry lets only the normal voltage through, sending any extra to a power dissipater.

The circuit board detects power spikes in less than 5 picoseconds (compared to the 5 nanoseconds used by conventional surge suppressors) and stops them at levels of up to 1.5 million watts.

Reader Service ✓ 558

*The Surge Sentry stops power spikes of up to 1.5 million watts.*

### What a Baud!

Speed up your Model I tape input/output (I/O) to 7,000 baud. The HHCI Tape System, interfaced to your Level II ROM, reads and writes data through unmodified CTR-41, CTR-80, or CCR-81 cassette players, from Basic programs up to 50 times faster than the normal 500 baud ROM routines. It saves and loads programs 12 times faster. You can select high

# BASIC

FOR MODELS I AND III

# JUST GOT BETTER

## INTRODUCING BASRUM. THE ONLY LINKING LOADER & LIBRARY MANAGER FOR BASIC.

BASRUM is designed to manage the subroutines you write and use in your Basic programs. Like an efficient filing system, BASRUM saves you time, energy, and space. Best of all, it makes your program writing FASTER and EASIER.

### HOW DOES IT WORK?

BASRUM lets you store your subroutines in "library" files, separate from the programs that use them. ANY Basic program can then use any routine in any file. You can even load up to 256 routines to a special, protected memory area and use them AFTER you load other Basic programs! Naturally, you can replace or delete any routine from memory at any time.

### SUPER BENEFITS!

NOW you can write a subroutine ONCE, store it on disk ONCE ... but use it in ANY program at ANY time, AUTOMATICALLY! Load them once, use them all day. You can CHAIN from program to program, keeping the existing subroutines, variables, and file buffers. Your Basic programs, being shorter, will LOAD FASTER. NEED MORE MEMORY? You can break long programs into shorter modules and "overlay" the modules. BASRUM gives you complete control of WHAT is loaded, WHEN it is loaded, and WHERE it is loaded.

### THE NITTY GRITTY.

BASRUM was designed specifically for the models I and III for use with any DOS that is compatible with TRSDOS®. It's overlay structure requires only the top 1600 bytes of memory. There is NO LIMIT on the number of working copies.

**SIMPLE ENOUGH FOR THE BEGINNER, VERSATILE ENOUGH FOR THE PRO: IF YOU WRITE PROGRAMS IN BASIC YOU NEED BASRUM.**

TO ORDER: Money order, check, VISA, MASTERCARD: \$149.50  
Specify memory size: 16K 32K 48K

Select disk format:

Model I: 35 track, single density

Model III: 40 track, double density

Guaranteed to perform as described or your money back. Orders are shipped via air, most within 24 hours. A complete manual is included. Information only? Send self-addressed, stamped envelope.

*Clyde lets your computers communicate with each other and share peripherals.*

speed or standard tape operation with a switch.

The system has an error-correcting technique boasting an error rate of less than 1 in 2 million bits. The assembled and tested system with installation instructions and a user's manual costs \$49.95. You can purchase the user's manual separately for \$8.95 (with credit for that amount toward purchase of the complete system).

For more information,

contact HHCI Tape Systems, 725 Idlewild Road, Bel Air, MD 21014, 301-838-7692.

Reader Service ✓ 565

### Clyde Controls Computers

If your expanding computer system has problems sharing printers and other peripherals, or if your computers can't communicate, Clyde has the answer.

Clyde is a line-switched

network controller. While one computer uses the printer, another can use a modem or other device. Clyde shunts device control between computers, and establishes the proper computer link for data communications.

This RS-232 switch box sells for \$149.50 from About Time Computerware, 2054 University Ave., Room 209, Berkeley, CA 94704, 415-845-6920.

Reader Service ✓ 562

### Briefcase Secrets

If your Model 100 files aren't always suitable for public disclosure, Code Keeper, a cassette-based passcode program, keeps your secrets undercover. It secures all files in RAM from prying eyes, and prohibits anyone without the correct password from running a program. Not even the break and reset keys can crack Code Keeper.

Code Keeper also provides a handy feature: If you inadvertently leave your 100 behind, it displays your name and phone number when someone turns on the machine.

Code Keeper uses 1K of memory and sells for \$25 from Sherman Electronics, P.O. Box 63-04, Miami, FL 33163, 305-944-2111.

Reader Service ✓ 556

## GIVE YOUR PRINTER A FACE LIFT WITH DOTWRITER 3.0

120 faces, to be exact. That's how many styles and sizes are available for use with this flexible, fully featured graphics text formatter. You can print beautiful letterheads, inter-mix type styles, and even create new ones. Right-justified proportional printing, type sizes from 1/8 to 1 inch, and reversals (white on black) are supported, along with extended word processing features.

DOTWRITER includes the printing programs, a dozen type faces, and a facility to design your own character sets right on the screen. 15 more disks, each with 3-10 complete character sets, are available separately. The optional "Letterset Manipulation Utilities" let you get even fancier.

DOTWRITER can be used with any TRS-80 word processor, such as NEWSRIPT. Versions are available to support the Epson MX-80 with Graftrax, MX-100

with Graftrax-Plus, RX-80, and FX-80; the C. ITOH 8510/1550; the Microline 84/92/93; and Radio Shack DMP 200/400/500, and 2100. Please specify your printer when ordering!

Limited ad space allows us to show you only a few of the 120 DOTWRITER fonts, but free print samples are available on request. If you want to improve the appearance of your output, we suggest you order DOTWRITER today, toll-free.

Equipment: TRS-80 Model I or III (4 in III mode), 48K, 2 disks.

## CONVERT YOUR PARALLEL PRINTER TO SERIAL

The SPC SERIAL to PARALLEL interfaces convert serial ASCII data into parallel format for use with Centronics type parallel printers. The SPC interface accepts serial data from your computer. The 36 contact ribbon connector plugs into your parallel printer. Can be used to add a second parallel printer port to computers which reliably support both serial and parallel printers.

SPC-CC for TRS-80 Color Computer \$59.95

Model SPC-1 for use with other Computers includes the following Switch Selectable Options.

- 7 or 8 Data Bits per serial word
  - Odd or Even parity for serial word
  - Parity or No parity for serial word
  - 1 or 2 Stop Bits per serial word
  - 300, 600, 1200, 2400, or 4800 BAUD
- SPC-1 \$89.95

All prices U.S. funds. VISA, MASTER CARD, COD, Purchase Orders accepted from schools, major corporations, and government agencies. Shipping and Handling on U.S. orders \$4.00. Ten day return period. Ninety day warranty.

## NEW PRODUCTS

*During a power-out, Electra Guard System 200VA supplies 200 watts of power for 20 minutes.*

### More Power to You!

If you live in a potential blackout/brownout area, protect your data with the Electra Guard Standby Power Supply System 200VA (175 watts, 1.5 amperes). In case of emergency, it instantly supplies 200 watts of power for 20 minutes.

At 6 by 11 by 13 inches with audible alarm, the unit has line and battery fuses, and a low battery cut-out to protect against overloads. The unit sells for \$499.95 from Computer Power Solutions Inc., 8800 49th St. N., Suite 203, Pinellas Park, FL 33565, 800-237-6010 (813-544-8801 in Florida).

### Network Notion

Although you may never need a network of 254 computers, it's nice to know your Model III/4 system has that capability. Olympus-80 Computer Systems' Thor, a local area network with a Model III/4 interface, provides polling for up to 254 computers, printers, modems, or other peripherals and plenty of Winchester disk storage.

The two-serial-port network lets computers of different manufacturers share data files, and offers several types of operating systems. It operates at up to 800K

bytes per second.

Ribbon or round communication cable connects computers up to 4,000 feet apart; you can easily add more user stations. Rated at 110/220 volts ac, 50/60 hertz, 25 watts maximum, Thor works with any Winchester disk system, including cartridge disk drives.

A typical four-user installation including 200 feet of cable, four host-interface cards, one network intelligent controller, and a 15 megabyte hard disk drive costs \$6,568. For more information, contact Tom Psillas, Olympus-80 Computer Systems, 869 Mill St., E. Berlin, CT 06023, 203-828-0359.

### The Model 16BP

Radio Shack, encouraged by the success of the Model 4P, has introduced a transportable version of its multi-user office system. The Model 16BP features a base unit and two DT-1 data terminals, all with 9-inch screens and detachable keyboards. Now three traveling workstations can share the same TRS-Xenix files.

The Model 16BP is built

# CONVERT YOUR TRS-80 MODEL I, III, OR 4 INTO A DEVELOPMENT SYSTEM

Now you can develop Z-80 based, stand-alone devices such as games, robots, instruments and peripheral controllers, by using your TRS-80 as a development system. The DEVELOPMATE plugs into the expansion connector of your TRS-80 and adds **PROM PROGRAMMING** and **IN-CIRCUIT-EMULATION** capabilities to your system (with or without expansion interface).

Complete instructions and sample schematics are included to help you design your own simple stand-alone microcomputer systems. THESE SYSTEMS CAN BE AS SIMPLE AS FOUR ICs: one TTL circuit for clock and reset, a Z-80, an EPROM, and one peripheral interface chip.

When the In-Circuit-Emulation cable is plugged into the Z-80 socket of your stand-alone system, the system becomes a part of your TRS-80: You can use the full power of your editor/ assembler's debug and trace program to check out both the hardware and the software. Simple test loops can be used to check out the hardware, then the system program can be run to debug the logic of your stand-alone device.

Since the program is kept in TRS-80 RAM, changes can be made quickly and easily. When your stand-alone device works as desired, you use the Developmate's PROM PROGRAMMER to copy the program into a PROM. With this PROM, and a Z-80 in place of the emulation cable, your stand-alone device will work by itself.

The DEVELOPMATE is extremely compact: Both the PROM programmer and the In-Circuit-Emulator are in one small plastic box only 3.2" x 5.4". A line-plug mounted power supply is included. The PROM programmer has a "personality module" which defines the voltages and connections of the PROM so that future devices can be accommodated. However, the system comes with a "universal" personality module which handles 2758, 2508 (8K), 2716, 2516 (16K), 2532 (32K), as well as the new electrically alterable 2816 and 48016 (16K EEPROMs).

The COMPLETE DEVELOPMATE 81, for Model I, with software, power supply, emulation cable, TRS-80 cable, and "universal" personality module ..... \$329

DEVELOPMATE 83, Model III/4 version, same as above ..... \$329  
PM2 PERSONALITY MODULE for 2732A EPROM ..... \$15  
PM3 PERSONALITY MODULE for 2764 EPROM ..... \$15

around the same 256K, hard-disk-equipped Model 16B as Tandy's desktop network. Both the base unit (expandable to 768K RAM) and terminals have high-impact plastic cases and built-in carrying handles; 15 feet of non-detachable cord joins each terminal to the base.

The ideal system for today's teams of traveling executives, the Model 16BP costs \$7,995 at Radio Shack Computer Centers.

### Hostile DOSES

An enhancement to the Model 2000's MS-DOS, Vicious Systems Inc.'s S/M-DOS (\$299.95) adds utilities and commands to stymie the most resourceful programmer. Hackers will enjoy hours of frustration as S/M-DOS' directory of discipline (BOOT, CHAIN, and CONFORM) whips programs into shape; for Model I/III/4 owners, the CONV utility transfers TRSDOS 1.3/6.0 files into Aramaic.

Besides S/M-DOS, Vicious Systems offers TUE-DOS/80 (\$129.95), an operating system that works only on Tuesdays, and 6.0 Enhanced (\$79.95), a collection of irremovable utilities that ensures there'll be no space for even the tiniest files on Model 4 or 4P system disks.

All products are available from Vicious Systems Inc., 323 Rude Road, Cruel & Unusual, NJ 07039.

### More Printer Innovations

Mobius Ribbon Inc., makers of the Manu-Script 60 personal correspondence plotter featured in April 1983's *80 Micro*, have announced an upgraded version, as well as the fastest

dot-matrix printer in computing history.

The Arachnid 95 (\$575) is a plotter that crawls like a giant, noisy spider over a piece of paper taped to the desk, offering two-color graphics at 2 by 5 dots per inch. Its speed pales by comparison to the Rapidot 2000 (\$1,395), the first correspondence-quality printer that prints at an astounding 2,000 characters per second.

The Rapidot's secret? Its single, nondirectional print head with a 720- by 2,750-pin matrix, capable of printing an entire 8½- by 11-inch page (up to 80 by 25 characters, each made of 9 by 11 dots) in one second. The Rapidot's built-in Z8 microprocessor lets it accept text from your computer and program the 1,980,000 pins, ready to zap the complete page onto paper, in less than 40 minutes.

Both printers are available from Mobius Ribbon Inc., 30 Pica Drive, Hardcopy, PA 15230.

### Very Personal Software

Program your own fate or make a dream come true with this line of interactive, real-world, stimulation programs. Choose from an infinite library including these fantasies: Save Your Marriage (\$79.95), Find Mr. Right (\$59.95), Get Discovered by a Talent Scout (\$39.95), Age 29 Revisited (\$1,200), Be Born Again (\$10.95), and Climb the Corporate Ladder in a Single Bound (\$12,950). Integrated and specialized fantasies are available by special order.

These Model I/III/4 32K disks come handsomely clad in white jackets, from Fantasy Island Software, Rourke Bungalow, Tattoo, HI 54321. Fantasy Island

## NEW PRODUCTS

The Icebox 1, 300/1,200 baud modem, has dual host and dual printer capability.

Software offers technical support for its fantasies but cannot guarantee specific outcome.

### Devolutionary Software

Humus Software Corp. announces the release of 3-2-1, the world's first segmented software package. 3-2-1 includes a database manager, a spreadsheet program, and a graphics program, sepa-

rated into three different packages. Each comes on its own disk, and you must manually transfer information from one program to another.

In addition, the special-function keys are entirely different for each program, and you must learn three distinct operating procedures to use the software.

Humus plans three add-ons, called 6-5-4, that will include a word processor, a communications package, and a mailing list program.

Contact Humus Software Corp., 80186 Carbuncular Drive, Cleveland, OH 00000.

### Multi-Function Modem

The Icebox 1 212a is an intelligent 300/1,200 baud duplex modem with memory for 52 32-character/digit telephone numbers or log-on messages and five dialing procedures.

The unit distinguishes between a busy signal, human voice, or modem answer tone, and adjusts baud rate according to the receiving modem.

Its host/peripheral switch lets you send data from your terminal to the modem or to your printer. In the dual printer configuration, send data to the modem or to either of two printers.

The dual host configuration lets you transfer data to a printer from one host, while another host sends data to the modem.

Priced at \$970, the Icebox 1 is available from Arctic Data Corporation, 1839 1st Ave., Prince George, BC V2L 2Y8, Canada, 604-562-5240.

### Futures Shock

Futures, a menu-driven game of buying and selling commodities, can take you from rags to riches (or vice versa) on your disk-based 48K Model III.

You choose a cash amount and the game gives you a choice of five commodities, updating the price every minute. You make transactions or check on a commodity's past history.

## UNINTERRUPTIBLE POWER SYSTEMS BY SUN RESEARCH

For complete protection from **Blackout, Brownout, Surge and Spike** specify a **MAYDAY** Uninterruptible Power System by **SUN RESEARCH**.

Eliminate costly downtime and lost data caused by those momentary power losses. Protect your software and hardware from damage caused by sudden drops in line voltage. Isolate your computer system completely from the AC wall circuit with a **MAYDAY** continuous (On-Line) Uninterruptible Power System. Give all your components clean 60Hz sine wave power for efficient operation at a price you can afford.

### MAYDAY™ UNINTERRUPTIBLE POWER SYSTEMS BY SUN RESEARCH

Available in 150, 300, 600, 1000 and 1500 VA Capacities.

## THE RS-232

**MODEL III                      MODEL 4**

State of the art technology in board design, our direct replacement of Radio Shack's\* internal RS-232 board, mounts inside the Model III or 4 on the existing brackets. All cables, screws and complete mounting instructions are included. Non-technical people will find that installation is quick, straight forward and simple requiring less than 15 minutes to complete.

Total compatibility with Radio Shack\* and all existing software is maintained. Software programmable baud rates from 50 to 19,200 baud are supported along with programmable word length, stop bits, and parity. May be utilized in either half of full duplex operation.

### Profile Plus to Go

Now you can access your Model II Profile Plus while you're on the road or working at home. Industrial Standard Software's package, Comm-100 (\$120) lets you access your data base over a phone line with a Model 100 and an auto-answer modem.

It gives you the power to read data formats from Profile, define a screen for the Model 100, and inquire, update, or add to your Profile disk.

Other features let you use up to five screen formats, 84 fields per screen format,

84 search categories, and password protection.

For product information, write Industrial Standard Software Sales, 6043 Hudson Road, Woodbury, MN 55125, 612-738-7852.

# PUT YOUR TRS-80\* IN CONTROL

Interface your TRS-80 to outside devices with **TRS-80 as a Controller**. You can use your computer to control lights, switches, and even a small computer you build yourself.

All it takes is a minimum knowledge of electronics and programming. Circuits are simple. Most programs are fewer than fifteen lines long. The instructions are clear and fully illustrated.

Jerry O'Dell has designed these projects to be both easy and inexpensive. You don't need disk drives, plotters, digitizers or other fancy units.

All you need is a TRS-80 Model III with 16K RAM, Level II BASIC, and a few other parts that you will no doubt find useful at a later date. You can also use a Model I, with the conversions provided. The components you'll need are all readily available.

The book begins with a description of the Model III and Z80 and all the chips, circuits, prototyping boards, and other devices used in TRS-80 interfacing. There are also helpful suggestions throughout for expanding the projects into more complex applications.

### More from Less

Increase your computer's memory, tape, floppy- or hard-disk capacity by 25 to 166.67 percent by using less space to store data. Data Compactor, a how-to manual with disk, contains 26 demonstration programs and 28 mergeable subroutines using Basic source code for the Disk Basic interpreter. Many principles apply to other languages

such as Cobol, Fortran, PL/1, and Pascal.

Included are non-system disks for the Model III/4/4P (\$69.97) and Model II/12/16/16B (\$74.97) containing all demonstration programs and subroutines. These are also available in CP/M formats.

## DIFFERENT TRACK

### You're Grounded!

The perfect gift for the hacker who has everything is this athletic-looking, conductive wrist band. The elastic polyester 3/4-inch band fastens with a hook and loop for a comfortable, snug fit on the wrist. It is available in two color-coded sizes: brown for wrists up to 6 1/2 inches in diameter, and blue for wrists up to 8 inches around.

It creates less than 10<sup>3</sup> ohms resistivity on the interior. A coiled grounding strap with a 1 megohm resistor snaps on the top of the band. Straps are available in 4- and 6-inch lengths.

Aptly named the CP407 Elastic Wrist Band, the 6 1/2-inch band with 4-foot grounding strap sells for \$15. For ordering information contact Charleswater Products Inc., 93 Border St., W. Newton, MA 02165, 617-964-8370.

**"Any other Pascal is too much hassle!"**

Picture this: you want to make a change in a 1000 line Pascal program. You read the source code from disk into a full screen editor and make your changes. You type control Q to quit the editor and R (for run). In 15 seconds, without further disk access, your program has compiled and is executing.

**Pascal 80** is so interactive and easy to use that many people have given up Basic completely, even for hasty ten line programs! We do trade some power for interactivity, but at this price you can use **Pascal 80** as a "front" end for another system to have both ease of use and power. Many of our users develop and test their software with **Pascal 80**, then recompile our source code on another system.

Thousands of satisfied users worldwide! (We have a liberal return policy and have had only 2 returns per thousand copies sold.) Many top universities use **Pascal 80** to teach Pascal. (Names on request)

Features — Standard Pascal, writes ASCII source, p-code and com files. Full screen editor, compilation from memory or disk, include function. Pointer variables are addressable (like C). Limitations — Variant records, with, and page not implemented. Mark and release instead of Dispose.

**PASCAL 80CPM — Special introductory price — \$39.95**

Requires CP/M 80, 8"SSSD, Epson, Kaypro, Apple CP/M, Morrow formats available. Call for information on other formats. Free brochure on request. ✓ 256

## NEW PRODUCTS

doubling as a protector when carried in a briefcase or bag.

The Poco stand sells for \$17.95 (add \$2 shipping) from Diskus Products, 6003 Bandini Blvd., Los Angeles, CA 90040, 213-726-3088.

Reader Service ✓ 568

### Line Interrupt

Lapcom, a Model 100 telecommunications utility, lets you view, copy, and kill files, and check free memory space without disconnecting the phone line.

Menu and function keys give you quick access to operations—including displaying the file directory, executing Basic commands, or checking the time. It not only automatically calls and disconnects, uploads and downloads files, and directs output to the printer, it also displays, stores, and prints text simultaneously while downloading.

These features aid in memory management and control interaction while you communicate with a host computer. An annotated source code is included.

Lapcomm sells for \$39.95 on cassette and includes a manual. Write or phone PocketInfo Corp., P.O. Box 152, Beaverton, OR 97075, 503-649-8145.

Reader Service ✓ 569

### Educational Software

Diversified Educational Enterprises (725 Main St., Lafayette, IN 47901, 317-742-2690) offers three 32K Model I/III/4 programs for elementary-school students.

Balance (\$70), a preda-

tor-prey simulation, lets you manipulate food supply, carrying capacity, environmental conditions, and external pressures, and displays results in tabular and graphic output.

Niche (\$60), an ecological game, asks students to place one of five organisms in its proper ecological niche, specifying environment, range, and competitor.

Math Skills (\$40) contains two programs. Pirate requires the student to use deductive logic and math to find a hidden treasure in a 10 by 10 matrix. Rounding drills a student in rounding numbers. All programs come with a manual and supportive material.

Reader Service ✓ 570

### Keyboard Quarterback

Gridiron Offense/Defense (\$29.95) is a 32K Model I/III football simulation that lets you call the plays. Analyze and stage your own Super Bowl contest where you pick the teams and plan the strategy based on real statistics.

You can play your favorite professional, college, or high school teams, or create your own dream team using actual or ideal player statistics.

The software supplies data files for all the Super Bowl teams and provides updates. Use your own numbers to prepare a data file for your favorite teams.

Then kick off!

A 16K cassette version (\$24.95) is also available from Windcrest Software Inc., P.O. Box 423, Waynesboro, PA 17268.

# Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • KAYPRO™

**FREE**--TRS-80 Mod I, III & 4 programs supplied on DosPlus (minimum system). Complete DosPlus also available.

## The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

**VERSA RECEIVABLES™** **\$99.95**  
**VERSA RECEIVABLES™** is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. **VERSA RECEIVABLES™** prints all necessary statements, invoices, and summary reports and can be linked with **VERSA LEDGER II™** and **VERSA INVENTORY™**.

**VERSA PAYABLES™** **\$99.95**  
**VERSA PAYABLES™** is designed to keep track of current and aged payables, keeping you up-to-date with all information regarding how much money your company owes, and to whom. **VERSA PAYABLES™** maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With **VERSA PAYABLES™**, you can even let your computer automatically select which vouchers are to be paid.

**VERSA PAYROLL™** **\$99.95**  
**VERSA PAYROLL™** is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with results displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the **VERSA LEDGER II™** system.

**VERSA INVENTORY™** **\$99.95**  
**VERSA INVENTORY™** is a complete inventory control system that gives you instant access to data on any item. **VERSA INVENTORY™** keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print purchase orders directly or to link with the **VERSA RECEIVABLES™** system. **VERSA INVENTORY™** prints inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

**VERSA LEDGER II™** **\$149.95**  
**VERSA LEDGER II™** is a complete accounting system that grows as your business grows. **VERSA LEDGER II™** can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software**.

- **VERSA LEDGER II™** gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

**VERSA LEDGER II™** comes with a professionally-written 160 page manual designed for first-time users. The **VERSA LEDGER II™** manual will help you become quickly familiar with **VERSA LEDGER II™**, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

### SATISFACTION GUARANTEED!

Every **VERSABUSINESS™** module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any **VERSABUSINESS™** module, you may return it within 30 days for a refund. Manuals for any **VERSABUSINESS™** module may be purchased for \$25 each, credited toward a later purchase of that module. All CP/M-based Computers must be equipped with Microsoft BASIC (MBASIC or BASIC-80)

**To Order:**  
**Write or call Toll-free (800) 431-2818**  
**(N.Y.S. residents call 914-425-1535)**

- add \$3 for shipping in UPS areas
- add \$5 to CANADA or MEXICO
- add \$4 for C.O.D. or non-UPS areas
- add proper postage elsewhere

That's what you get with the LNW80 Model 2—undoubtedly the most versatile, powerful and fully equipped microcomputer in its class today. A machine so superior in concept and design, that it will define the standards of microcomputer performance for years to come.

## VERSATILITY

The LNW80 2 performs wonders with the most complete library of software available to any microcomputer on the market today. Every LNW80 2 comes complete with this outstanding library of Business Software. **LNW SMALL BUSINESS AND PROFESSIONAL ACCOUNTING SERIES™** General Ledger, Accounts Receivable, Accounts Payable, Payroll; **ELECTRIC SPREADSHEET™**; **ELECTRIC PENCIL™ WORDPROCESSOR**; **MICROTERM™ MODEM PROGRAM**; **CHART EX™ HIGH RESOLUTION BUSINESS GRAPHICS CHARTING PROGRAM**; **CP/M 2.2™**; **DOSPLUS™**; **LNW-BASIC™**; **MICROSOFT BASIC™**. In addition to a comprehensive line of LNW80 2 Software, it is also fully compatible with software from TRS80 (Models 1, 3, 4), CP/M and Cromemco worlds—a capability which gives you access to the most extensive and mature libraries of business, scientific, engineering and entertainment software applications. So no matter how far you expand into user applications, the LNW80 2 will expand right along with you.

## POWER

The LNW80 2 performs miracles with the computing power of 96K RAM (standard) of user memory matched with a mass storage capability which handles 5¼" floppy disks and 5¼" hard disk drives. And while the unit comes with built-in

controllers for 5¼" and 8" floppy disks (single/double sided, single/double density, up to 4.5 Megabytes capacity), the LNW80 2 also gives you the unique ability to read and write diskettes from a greater variety of other popular computers than does any other microcomputer. So regardless of how big you grow, you will never end up with thumb-twiddling down time while you expand to a more powerful system. The LNW80 2 will always have enough muscle to handle your biggest and toughest jobs.

## FULLY EQUIPPED

The LNW80 2 was developed to anticipate the needs of both expansion and compatibility. So the computer was designed with enough built-in features to keep you from having to spend a small fortune as you move down the road to higher levels of user sophistication. Standard features include high and low resolution graphics in both color and black-and-white, an asynchronous serial communication channel, and a wide variety of tape, printer, monitor and hardware expansion ports. In addition, the LNW80 2 contains an array of quality construction features that fully justify its remarkable one-year limited warranty.

So if you're looking for a microcomputer that will satisfy your performance needs as you grow and develop, take a long, hard look at the LNW80 2. It's the one microcomputer built to meet the challenges of tomorrow—for a long time to come.
