NOW ENTER DATA

GET RADIO SHACK'S BAR CODE

Our Model 100 is the most talked-about, most-wanted portable computer ever! The reason is simple.

We started with a truly portable workstation with five programs built in. A four pound "wonder" that runs on batteries or optional AC adapter, that's small enough to fit in your briefcase with room to spare.

Now we've added still another exciting

dimension to the compact, go-anywhere Model 100.

With the Model 100 Bar Code Reader (26-1183, \$99.95), your data input tasks are made easier and faster than with conventional keyboard data entry.

This optical scanning device is ideal for retail, wholesale, manufacturing and administrative applications. Billing, couponing and inventory control are made more efficient for warehouses and supermarkets. And the tracking and tracing of manufactured goods becomes far easier and more cost-effective.

8K Model 100

59900

24K Model 100

79900
26-3802

QUICKLY AND EASILY READER FOR MODEL 100 COMPUTERS

Even libraries can use the Model 100 Bar Code Reader for document storage, retrieval and tracking.

The pen-like bar code wand is easy to use. Plug it into Model 100's standard bar code reader interface. Load the included cassette software drivers (recorder required) – that are callable from Model 100's built-in BASIC. And then begin scanning bar codes.

Read Universal Product Code, 3 of 9, or Plessey bar code formats that are either lithographed or computer-printed. Read UPC-C, Codabar and Interleaved 2 of 5 bar codes with our Additional

Bar Code Reader program (26-3846, \$9.95). Add our Bar Code Writer (26-3845, \$29.95) and generate your own bar code labels using the Model 100 and any Radio Shack dot-matrix printer.

And the best part of using the Model 100 Bar Code Reader is the Model 100.

With the built-in BASIC, you can create programs to analyze bar code data.

You can then prepare reports with Model 100's personal word processing program.

With the built-in modem, you can transmit bar code files to any host computer.

In addition, Model 100 is an address/phone directory, appointment scheduler, and telephone auto-dialer.

Stop by your nearest Radio Shack Computer Center, participating store or dealer to learn more.

It Reads, Writes and It Paints in 3-D, Keeps and Talks to

It's called "OPEN ACCESS," and it's the result of 60 man-years of effort to create a truly do-it-all, super-program—one that can perform virtually every task you're ever likely to encounter.

The beauty of it is, all that capability resides on a single program. You don't have to re-enter data. Or spend time trying to get unmatched programs to work together.

OPEN ACCESS takes its name from the source of its power—a relational data-base manager that gives you access to more data in more ways than any comparable software.

OPEN ACCESS includes an electronic spreadsheet, 3-D graphics, word processor, appointment scheduler and telecommunications module—all revolving around the powerful information manager.

1

INFORMATION MANAGEMENT—THE MASTERMIND. This advanced data-base manager stores and retrieves multiple files quickly, easily and reliably. What's more, it shares all information with the other programs, so you never have to re-enter the same data twice.

2

ELECTRONIC SPREADSHEET—NUMBER CRUNCHING AND GOAL SEEKING. It helps you produce forecasts, cost estimates and "break-even" points—in seconds, instead of hours or days. Best of all, it allows "goal seeking." Ask, for example, "What sales must I have the rest of the year to net \$1 million?," and OPEN ACCESS will figure it out!

3

3-D GRAPHICS—NOT JUST PRETTY PICTURES. These graphics distill raw data into trends that can be instantly visualized, helping you discern the important facts from a wealth of information.

does Arithmetic. Your Appointments the World.

Because they do not have a dedicated relational data-base manager that can quickly direct massive amounts of data, other programs simply can't do what OPEN ACCESS can. Some don't have a communications program, others no dedicated word processor. None have a time management program.

There's just one conclusion: At \$595, OPEN ACCESS can do more for you than any other comparable business program on the market. Bar none. But the only way for you to be convinced is for you to see OPEN ACCESS work its magic on your work load. So call your local software dealer today, or call us at SPI, at 619-450-1526.

SOFTWARE PRODUCTS INTERNATIONAL

4

WORD PROCESSING—EDITOR EXTRAORDINAIRE! Superior word processors make it easy to correct typos, change words, shuffle paragraphs and format documents. This is one of that breed. Use it to write efficient memos, letters, proposals and reports.

5

TELECOMMUNICATIONS—YOUR LINK WITH THE WORLD. This program gives you access to virtually any other computer system in the world. Not only can you transmit and receive reports from your colleagues, you can also subscribe to special data banks that know everything from GM's stock price to the relative humidity in Genoa. Now that's power!

6

TIME MANAGEMENT—CONSERVING YOUR MOST PRECIOUS RESOURCE. This module helps you keep track of all your appointments, hour by hour, day in and day out. It alerts you to standing obligations, automatically coordinates meeting times with other busy professionals, and lists all your associates on a Rolodex™-like file.

The left bracket, [, replaces the up arrow used by Radio Shack to indicate exponentiation on our printouts. When entering programs published in 80 Micro, you should make this change.

80 formats its program listings to run 64-characters wide, the way they look on your video screen. This accounts for the occasional wrap-around you will notice in our program listings. Don't let it throw you, particularly when entering assembly listings.

Article submissions from our readers are welcomed and encouraged. Inquiries should be addressed to: Submissions Editor, 80 Pine Street, Peterborough, NH 03458. Include an SASE for a copy of "How to Write for 80 Micro." Payment for accepted articles is made at a rate of approximately \$50 per printed page; all rights are purchased. *TRS-80, Scriptit, and TRSDOS are trademarks of Radio Shack, a division of Tandy Corp.

80 Micro (ISSN 0744-7868) is published monthly by CW Communications/Peterborough Inc., 80 Pine St., Peterborough, NH 03458. Phone: 603-924-9471. Second class postage paid at Peterborough, NH, and additional mailing offices. Subscription rates in U.S. are \$24.97 for one year, \$38 for two years, and \$53 for three years. In Canada and Mexico \$27.97—one year only, U.S. funds drawn on a U.S. bank. Nationally distributed by International Circulation Distributors. Foreign subscriptions (surface mail), \$44.97—one year only, U.S. funds drawn on a U.S. bank. Foreign subscriptions (air mail), please inquire. In South Africa contact 80 Micro, P.O. LOAD 80

Load 80 gathers together selected programs from this issue of *80 Micro* and puts them on a magnetic medium for your convenience. It is available on tape or disk, and runs on the Models I, III, and 4.

Load 80 programs are ready to run, and can save you hours of time typing in and debugging listings. Load 80 also gives you access to Assembly-language programs if you don't have an editor/assembler. And, it helps you build a substantial software library.

Using Load 80 is simple. If you own a tape system, you load the Load 80 tape as per the instructions provided. If you own a Model I or III disk system, you boot the Load 80 disk and transfer the files to a TRSDOS system disk according to simple on-screen directions. If you own a Model 4, you must convert the programs from Model III TRSDOS to Model 4 disk using the Model 4 CONV command.

Not all programs will run on your system. Some Model III programs, for instance, will run on the Model 4 in the Model III mode, but not in the Model 4 mode. You should check the key box that accompanies the article to find out what system configuration individual programs require.

This page contains a list of this month's Load 80 programs. If you have any questions about them, call Keith Johnson at 603-924-9471.

Yearly subscriptions to Load 80 are \$199.97 for disk, or \$99.97 for cassette. Individual loaders are available on disk for \$21.97 or on cassette for \$11.47, including postage. Direct subscription problems or orders for Load 80 to Lori Eaton, c/o *80 Micro*, 80 Pine St., Peterborough, NH 03458.

Directory

Lesson

Article: Testing 1-2-3 (p. 70)
System: Models I and III, 32K RAM (Model I uses Listings 1 and 4 only)
Language: Disk Basic

The Automated Courseware Development System writes computer-based lesson and exam programs.

Cassette filespec: B, C, D, E
Disk filespec: LESSON/BAS, GRAPHICS/BAS, MAKER/BAS, STUDENT/BAS

Project Minder

Article: Time Keeper (p. 84)
System: Models I, II, III, 4, and 2000, 32K RAM
Language: Disk Basic
Project Minder tracks how much time your staff spends working on projects for different business clients.
Cassette filespec: F
Disk filespec: PROJMNND/BAS

Digi-Talk

Article: Sound Software (p. 100)
System: Model III, 48K RAM
Language: Assembly
The Digi-Talk speech synthesizer digitizes a recording of your voice and saves it to disk. You can then play it back through an audio amplifier on your Model III.
Cassette filespec: SPECHA, SPEECH
Disk filespec: SPEECH/SRC (source code), SPEECH/CMD (object code). Requires Radio Shack EDTASM

Buffer

Article: USR Friendly (p. 104)
System: Models I and III, 32K RAM
Language: Disk Basic
Use your disk input/output buffers to load USR routine data.
Cassette filespec: G, H
Disk filespec: BUFFIND/BAS, SCRNFILL/BAS

Disassembler

Article: The Missing Disassembler (p. 108)
System: Model 4, 64K RAM
Language: Basic
This disassembler for the Model 4 gives you a source-code display or printout.
Disk filespec: DISASSEM/BAS

Paint

Article: Fill-Ins (p. 126)
System: Models I and III, 32K RAM
Language: Disk Basic/Assembly
Paint fills in any shape that you draw on the screen.

Cassette filespec: I, PAINTA, PAINT
Disk filespec: PAINTUSR/BAS, PAINT/SRC (source code), PAINT/CMD (object code). Requires Radio Shack EDTASM

Print Buffer

Article: Project 80 (p. 146)
System: Model III, 64K RAM
Language: Assembly
Printer buffer control program.
Cassette filespec: BUFFER, PRTBUF
Disk filespec: PRTBUF/SRC (source code), PRTBUF/CMD (object code). Requires Apparatus editor/assembler

Interrupt

Article: The Next Step (p. 172)
System: Model III, 32K RAM
Language: Assembly
This demonstration program uses interrupt-handling routines to create a timer that runs while you're on a bulletin board system or using other programs.
Cassette filespec: INTRUP
Disk filespec: INTRUP/SRC (source code), INTRUP/CMD (object code). Requires EDAS editor/assembler

12 PROBLEMS WITH THIS COUPON.

BE FOREWARNED! Just because we've made Infocom's interactive fiction software compatible with your TRS-80 Model I or Model III computer doesn't mean your problems are over.

In fact, they're really just beginning. Because no other computer software challenges, stimulates, provokes and involves your imagination with quite the power—or the force—of interactive fiction. Once you've experienced it, you're going to be hooked.

HERE'S WHERE YOUR PROBLEMS REALLY BEGIN. The Infocom FOUR-IN-ONE sampler, excerpts

from four of Infocom's classic stories plus a tutorial on how to get involved. The ZORK® trilogy, Infocom's best-selling odyssey of treasure, challenge and high adventure in the exotic and enchanted world of the Underground Kingdom. ENCHANTER™, the inception of a spellbinding series in the Zorkian tradition. SORCERER™, in which you'll gain the power and cunning of a true sorcerer. Or else.

The WITNESS™, a hard-boiled whodunit thriller of the thirties. DEADLINE™, a fast-

paced mystery with time as the enemy. PLANETFALL™, the spectacular comedy of the last frontier.

STARCROSS™, our astounding science fiction mind-bender. SUSPENDED™, the cryogenic nightmare on the edge of the far future. INFIDEL™, high adventure among the pyramids.

EVERYONE SHOULD HAVE SUCH PROBLEMS. So fill out the coupon and mail it right now. It's going to lead to problems—we can't deny it. Ah, but think of the fun.

INFOCOM™

ZORK is a registered trademark of Infocom, Inc. DEADLINE, The WITNESS, STARCROSS, SUSPENDED, PLANETFALL, ENCHANTER, INFIDEL and SORCERER are trademarks of Infocom, Inc.

Table Talk: Comparing the 4/4P, Apple IIc, and PCjr

The technical editors from two of our sister publications met recently to debate the relative merits of the Apple IIc and PCjr.

80 *Micro*, the journal of obsolete computing, was not invited. No matter. We'll see who doesn't get invited to our next cocktail hour. But just as an academic exercise, I drew up a quickie chart that compares the TRS-80 Model 4 with the above-mentioned computers (see Table 1).

I outfitted the three systems with essentially the same components—128K, two drives, and a monochrome monitor (see Table 2). This required upgrading the basic Model 4 from 64K to 128K, adding a monitor and second drive to the Apple IIc, and adding a monitor, second drive, expanded Basic, and DOS to the enhanced PCjr. I also threw in a parallel printer adapter with the PCjr package, since I thought it would be nice to run a parallel printer off it.

The Model 4, as you can see by the table, stacks up pretty well. It undercuts the IIc by \$429 and the PCjr by \$523.

The Model 4 is lacking in a few areas, however. It doesn't have color capability, and it produces only mediocre graphics. But how often does the average user need either? Micros are used these days primarily for word processing, accounting, spreadsheet analysis, and data base management, which use text 98 percent of the time.

(Of course, if you really need hi-resolution graphics, the Model 4 hi-resolution graphics board will give you 640-by-240-pixel resolution for \$249.95.)

If you eliminate color and graphics, the Model 4 comes up short in only one other important area. It has less disk capacity than the PCjr (368K compared to 640K). So be prepared to buy a few more disks. (Another paren-

thetical point: The Model 4 is the only one of the three systems in which you can install an internal hard disk.)

The appropriateness of a system depends ultimately on the user's needs. If you want color and graphics, or

you're a serious game player, the Model 4 isn't for you. But if you're primarily interested in nuts-and-bolts applications, the Model 4/4P beats the IIc and the PCjr in a walk. But you knew that anyway, didn't you? ■

Computer:	Model 4*	Apple IIc	PCjr
Base price:	(\$1,299)	(\$1,295)	(\$999)

These were printed by DOTWRITER on an Epson MX-80.

See What You Can Do With DOTWRITER 4.0!

Now available for the Model 4, too!

DOTWRITER lets you create spectacular, eye-catching letterheads, catalogs, invitations, or even books. It is just what you need to turn your dot-matrix printer into a versatile typesetting machine. And it's available for the Model 4 (yes, in native mode) as well as for the Models I and III.

What is DOTWRITER?

DOTWRITER uses the "bit-image graphics" of your printer to produce the kinds of stunning results shown inside the box. It is a full-function text printing program, so you can inter-mix different character sets, do centering, paragraphs, pagination, magnification, draw horizontal and vertical lines, reversals (white on black), and even print right-justified proportional text.

DOTWRITER includes the printing program, complete documentation, and fourteen useful sets of typefaces (60 to 90 characters in each set). We will also give you the 105-page Letterset Reference Catalog free with your order.

To use DOTWRITER, just write

your text with any popular TRS-80 Word Processor, add the necessary formatting commands, and DOTWRITER will do the rest.

20 more disks are available separately. Each has 3-12 complete typefaces (60-95 characters in each set). These disks cost less than \$25 each, and may be purchased at any time.

If you want to create your own logos, modify our typefaces, or even design entirely new typefaces, then you will also want to order the "Letterset Design System" (LDS). We offer LDS at half-price when you order it along with DOTWRITER. LDS operates in Model III mode on the Model 4.

Versions are available for Epson MX-80 with Grafrax, MX-100 with Grafrax-Plus, RX-80, FX-80, C. ITOH 8510/1550, Microline 84/92/93, Radio Shack's DMP series 200-520 & Gemini 10X, 15X. Please specify printer and computer!

Our print samples were done on an Epson. Sizes vary on other printers. Some of the samples shown here are taken from the additional Letterset disks.

Two disk drives and at least 48K of memory are required. LDS is not available in native Model 4 mode.

Send for free print samples!

We've only shown you a few of the 150 DOTWRITER fonts. If you want the best in graphics printing, we suggest you order DOTWRITER today, toll-free.

Please specify printer and computer when ordering.

DOTWRITER (Models I, III)	\$79.95
DOTWRITER (Model 4)	99.95
Letterset Design System	39.95
Special: DOTWRITER and LDS	99.95
Additional Letterset disks (4-12 per disk)	17.95 and 24.95
Letterset Reference Catalog	10.00

The Premier Word Processor for Your TRS-80 Model I, II, or 4

We are proud to offer you the one Word Processor that will satisfy all your writing needs: ALLWRITE. It sets new standards for text editing and printing, and will give new life to your TRS-80. Let us tell you why...

In an attempt to push the public into expensive 16-bit computers, many manufacturers have been saying that the TRS-80 is obsolete. The truth is that the software, not the hardware, makes the difference. And the best word processor of all is now available *only* on the humble TRS-80, not on those expensive 16-bit machines!

ALLWRITE is based on the proven methods that made NEWSSCRIPT the most popular independently produced TRS-80 word processor, but it also has the speed and new features our customers have asked us for. ALLWRITE will save you time and let you produce the highest-quality, most professional-looking letters, term papers, and reports available on a micro-computer.

Allwrite Can Save You Time!

Reads a 25,000 character file (10 printed pages) from disk in SIX SECONDS... does a global search-and-replace in FOUR SECONDS... outruns even the fastest popular micro-printer.

ALLWRITE'S Screen Handling Makes Word Processing Easier Than Ever

Change text width at any time; wide lines shift left and right as you type. ALLWRITE preserves double-blanks between sentences, uses the entire screen for text, and displays a complete Status Screen at the touch of a key. Scroll by line, partial screen, full screen, to top or end of file, or to any marked point. Move cursor by character, word, tab, line, or screen.

You can set and change on-screen tabs and store them on disk. The print-time tabbing features are incredibly versatile: they allow left, right, and centered tabs, and even line up your decimal points.

ALLWRITE shows you where you forgot to turn off underlining, boldface, italics, or double-width. Special on-screen Preview feature shows page breaks and page layouts... including underlining and boldface... without annoying blinking or screen flicker. In "Summary" mode, ALLWRITE quickly flags formatting errors without

These were printed by ALLWRITE; shown 20% actual size.

wasting time printing all the text. These standard features make document preparation faster and easier than ever!

State-Of-The-Art File Handling

There is no upper-limit on document size with ALLWRITE, because it chains files *backwards* as well as forwards, even across diskettes. Switch from one chained file to another in less than six seconds by pressing two keys. Select portions of other files for inclusion at print time... great for stock paragraphs.

ALLWRITE salvages text from bad disks! If a sector goes bad, you won't lose the entire file, because it will skip bad sectors, read the rest of the file,

TAKES FULL ADVANTAGE OF YOUR MODEL 4.

The model 4 version of ALLWRITE uses the entire 80-by-24 screen. On a 64K machine, you can edit **over 34,000 characters** of text. On a 128K machine, you can edit **THREE FILES AT THE SAME TIME!** The second and third files can be over 32,600 characters each, for a total of **almost 100,000 characters** of text in memory.

and then show you where the lost text belongs. This advanced error recovery turns a disaster into a feeling of profound relief.

User-Definable Soft Keys Reduce Typing Time

You can store 22 phrases or commands at a time into "soft-keys," then press just two keys to retrieve them. This makes frequently-used phrases and formatting controls a snap to use. You can store these definitions on disk and build a library of hundreds of pre-programmed keys to fit every one of your applications.

Our specially-designed templates fit right on your keyboard to let you see your settings at all times. Each template is also a Reference ("Cue") Card, so it is always right in front of you when you need it, without using up valuable screen space.

ALLWRITE Is Easy To Learn

ALLWRITE's commands and control keys are easy to remember because they use the first letters of common English words: 'CE' stands for 'Center,' 'Search' and 'Replace' do just that, and so forth. The on-line HELP menu offers over fifty screens of topics.

NEWSSCRIPT's documentation was acclaimed in every review, and ALLWRITE's 350-page book is even better. Portions of it are designed for beginners, with every feature clearly explained in step-by-step tutorial style. Since you won't always be a beginner, other parts of the book offer advanced topics. There is a cross-reference summary chapter, a 14-page comprehensive index, and a detailed Table of Contents. We've been developing computer programs and manuals for over 20 years, and understand the importance of good documentation.

To make installation easy, we include Tiny DOSPLUS for the Models I and III, and special, pre-tailored versions of both TRSDOS 6.2 and DOS-PLUS IV for the Model 4, all at no extra charge. The Model I and III versions work equally well with all major DOS's.

PROSOFT'S On-Going Customer Support

Perhaps the best reason of all for having ALLWRITE is the continuing support we offer you: friendly, expert, direct support that is unsurpassed in the micro-computer industry. There is no time limit to our support: if you are our customer and you need help, just call or write. We give free updates for 90 days, and charge little or nothing for minor updates thereafter.

Customer Comments

"This is the best software package I have ever received...superb, easy to use, fast, and has more features than the business word-processor at the office." (E.R.L.)

"ALLWRITE will soon be the barometer that others will use to compare their products to. For the money and functions, there is no comparison." (J.G.)

"Your company and products have to be one of the strongest factors I can think of for keeping me with the TRS-80!" (J.R.H.)

"NEWSSCRIPT is the Cadillac of word processors. ALLWRITE is the Mercedes Benz!" (B.E.)

"...a very readable manual." (D.S.)

BENEFITS OF OWNING

★ ★ ALLWRITE ★ ★

If Word Processing is important to you, PROSOFT's ALLWRITE is the best choice you can make. The clean, professional appearance it adds to your letters and reports will make an excellent impression on people. We will be happy to send you free print samples so that you can see for yourself how good ALLWRITE will make you look.

You probably know that quality word processors for CP/M and the IBM-PC sell for \$300-500, and they don't have ALLWRITE's capabilities or speed... or PROSOFT's proven, on-going support. Now, for a fraction of the cost of a new computer, you can have the most complete word processor of all. And you won't have the headaches of starting all over again with a new, different computer.

Note to college students: with its Footnote, Table of Contents and Index features, ALLWRITE is ideal for your reports and Term papers.

HUNDREDS OF USEFUL CAPABILITIES

ALLWRITE comes with just about every useful word processing feature... standard. Here are some highlights: excellent right-justified proportional printing on most printers having that ability; powerful Form Letter and Mailing Label preparation; instant counts of words, characters, lines, changes; block Move, Copy, Delete, Putfile, Getfile, and List; delete by character, word, line, sentence, paragraph, or block; insert and one-key insert; great RS-232 printer support; accepts all 256 ASCII codes from keyboard; intermix pitches on same line (printer-dependent); 1.5 line spacing, 6, 7, 8, 12 lines per inch (printer-dependent); does multiple-columns on all printers; perfect alignment of hanging indents; variables, logic statements, conditional printing; wildcard Directories; integrated with Electric Webster and DOTWRITER for Models I, III, and 4 (these are sold separately); "Legal" line numbering; paragraph, list, and figure numbering; supports most popular printers (all "printer drivers" included); compatible with high-memory drivers; fully explains all DOS and ALLWRITE error messages; wildcard search-replace; tabs, search-replace, other settings remembered across files; word reversal; up to nine levels of boldface; flexible page titles; footnotes at bottom of page or end of document; Table of Contents and Index generation; and PROSOFT's unmatched text formatting and printing capabilities.

Attention NEWSSCRIPT Owners

You can trade in your copy of NEWSSCRIPT at very substantial savings. Please call our technical line for details.

How To Order

You can order by phone or mail. For quickest delivery, call our Technical Support line. Please specify your TRS-80 model (I, III, or 4, 48K, at least two disk drives), and your printer(s). Our price includes normal shipping in the U.S. and Canada. The sooner you order, the sooner you will begin to benefit from the ALLWRITE! Word Processor.

The Dilemmas Persist

John B. Harrell's article, "The DOS Dilemma" (July 1984, p. 48), states that TRSDOS 6.2 comes bundled with the Model 4. That is incorrect; we are currently shipping TRSDOS 6.1.2 with the Model 4.

TRSDOS 6.2 is available separately (catalog number 26-316) for \$39.95.

*Ed Juge
Director of Market Planning
Radio Shack
Fort Worth, TX*

"The DOS Dilemma" faults my favorite disk operating system, MULTIDOS, for not supporting multiple-file selective copying. This is wrong. The VFU/CMD features several modes. The manual (pp. 43-45) describes these features.

Otherwise, Harrell's comprehensive article is a great service to those looking to compare the myriad Radio Shack-compatible DOSes.

*Robert L. Green
Clarkston, GA*

"The DOS Dilemma," fails to accurately state the advantages and disadvantages of the competing DOSes.

Harrell states that NEWDOS80 can't create JCL files. However, NEWDOS80 comes with CHAINBLD/BAS, which does create such files. The other systems offer the Build command in DOS; only CHAINBLD lets you edit previously created files.

The Table indicates that NEWDOS80 lacks a Spool command. It does come with a modified version of Aparat's automatic spooler program.

The Table further indicates that TRSDOS 1.3 doesn't let you reserve memory locations, yet the Clear command with the MEM parameter does this job. Also, options to change keyboard driver parameters are available with the System command.

Harrell states that NEWDOS80 omits a Link command when, in fact, the NEWDOS80 documentation pro-

vides specific examples in its Route command detailing how "the routing is equivalent to the Model III TRSDOS function Dual."

Although it's impossible to say which DOS is best, one should not try to make an accurate evaluation without complete and correct information.

*Andy Levinson
Studio City, CA*

Levinson misses an important point—that "The DOS Dilemma" was not meant as a review, but rather, an attempt to compare the many varied features of these different systems.

I didn't mention the CHAINBLD and spooler features of the NEWDOS80 because they represent third-party software included on the distribution disk as a stop-gap measure to fill a void recognized in this operating system.

Many of Levinson's comments are valid. For example, it's true that NEWDOS80's System command lets you tailor some keyboard parameters. This, however, doesn't allow for the inclusion of a driver for any other peripheral equipment. Nor does it provide full device independence or the ability to manipulate data via filters.

I didn't mention the NEWDOS80's ability to manipulate records of greater than 256 bytes. In fact, it's the only language for the Models I/III/4, other than PASCAL-80, that does this.

NEWDOS80 is a second-generation

disk operating system in the era of third-generation systems. In this respect, it received the highest accolades that it warranted and is still used in many systems.

*John Harrell
Washington, DC*

JCL Files Revisited

Thanks 80 Micro and Raymond E. Wilson for "Command Performance" (June 1984, p. 62). The MAKEDO program is by far the most useful Model 4 utility I've seen in 80.

Only those who've experienced the frustration of re-creating a JCL file because of a single error can appreciate how much time Wilson has saved users with his excellent contribution.

*Wm. N. Smyer,
Mississippi State, MS*

"Command Performance" wrongly states that you can't modify a JCL file. Using Model 4 Scripsit, you can draw and modify a JCL file.

After completing modifications, use the A option in Scripsit to save a file in ASCII format.

*A.W. Read
Ontario, Canada*

Read is correct about Scripsit's ability to edit JCL files. Also, TRSDOS for the Models II and 12 has a Build command that lets you edit files. MAKEDO/BAS has three advantages over other editors. The first is size; space on a TRSDOS disk is at a premium.

The second advantage is cost. The least expensive of the commercial programs, Scripsit, costs about \$100.

The third advantage is simplicity. MAKEDO is designed solely to create and edit JCL files, while other programs have more complex functions.

I developed and used this program before others for the Model 4 existed. The function of both the program and 80 Micro is to help users and programmers use their machines more fully.

*Raymond E. Wilson
Houston, TX*

**IT'S A SMALL MIRACLE HOW HEWLETT-PACKARD
PUT 656K OF MEMORY, LOTUS 1-2-3, WORD
PROCESSING, A TELECOMMUNICATIONS MODEM
AND COMPLETE IBM CONNECTABILITY INTO**

THE PORTABLE.

For years business people had to choose between the power of a desktop computer and the limited capabilities of the first portables. That problem was solved when Hewlett-Packard introduced The Portable.

The Portable is designed with more total memory than most leading desktop personal computers...656K in fact. That includes 272K of user memory. So, The Portable's built-in business software can work with enormous amounts of data.

1-2-3™ from Lotus,™ America's most popular spreadsheet, file management and business graphics program, is permanently built into The Portable. So is Hewlett-Packard's word processing program, MemoMaker. Just press the key and you're ready to work.

The Portable even has a built-in modem and easy-to-use telecommunications software to send

or receive data using a standard telephone jack.

If you use a Hewlett-Packard Touchscreen PC, IBM® PC, XT or an IBM compatible you'll be glad to know that your desktop and The Portable can talk to each other with the simple addition of the Hewlett-Packard Portable-Desktop Link.

The Portable's rechargeable battery gives you 16 hours of continuous usage on every charge.

Finally, you can work comfortably on a full size keyboard and an easy-to-read 16-line by 80-column screen. And it all folds shut to turn The Portable into a simple nine-pound box.

The Portable. A small miracle...perhaps. But then consider where it came from.

See The Portable and the entire family of personal computers, software and peripherals at your authorized Hewlett-Packard dealer. Call (800) FOR-HPPC for the dealer nearest you.

Setting You Free

Send any questions or problems dealing with any area of TRS-80 microcomputing to Feedback Loop, 80 Micro, 80 Pine St., Peterborough, NH 03458.

Q: I read your article in the January 1984 issue ("Bill of Fair Repair," p. 164) with some amazement. I own a Model III with a VR Data controller and drives, an RS-232 board, and 48K of RAM, all of which I installed. With the introduction of the Model 4 I became interested in upgrading.

The local computer center refused to sell me the upgrade unless their technician made the installation (it being too complex for me to handle). With much reluctance, I agreed. I also explained what I had done to my unit, and the manager told me that wouldn't be a problem.

Two days later, the computer center called to say they couldn't make the upgrade on account of the non-Tandy controller board. The upgrade required a modification, according to the manager, and Fort Worth ordered them not to touch the unit.

I called VR Data and told them my story. They told me no modification was necessary, and that Radio Shack was just giving me "a hard time." I bought a copy of the installation manual and found no mention of a modification to the board.

So my question is: Where did you get your information that Radio Shack will work on a micro with foreign parts? (Lou Halpern, Greenville, SC)

A: My information came directly from an "internal distribution information update bulletin" sent to all Tandy stores every six months or so. The last three bulletins have all stated that computers with foreign parts would be serviced, primarily by disconnecting the offending equip-

ment where possible before starting service.

If the customer's complaint can't be isolated to the Radio Shack equipment, then they won't perform the service; i.e., if you're experiencing disk I/O problems, they can't help you since the drives and controller aren't Tandy parts, but they will test memory and all other Tandy sections where possible.

Q: Like J. Haynes of Palmer, TX (April 1984, p. 16), I and five of my friends had trouble accessing disks in drive B with CP/M and Pertex FD200 drives.

I used an oscilloscope and found that a low-voltage spike on the motor start-up was resetting the step direction flip-flops in chip U21. The solution I came up with was to open the trace from pin 2 of chip U5 and insert a 100-ohm resistor from pin 2 to the plated-through hole going to resistor R35, and putting a .1 μ F capacitor across R35. This has fixed all of our FD200 drives.

As for why this happens with CP/M and not with TRSDOS; CP/M thinks it knows where it is (track register) and sends a step order, which is ignored. The track that the head is over doesn't match the new track register

and CP/M locks up. This is also why you have to warm-boot CP/M if you open a drive door or change a disk.

TRSDOS, however, is a bit smarter; if it gets lost, it sends a "home drive head" order, which returns the drive head to track zero, and then TRSDOS steps the head out to the track it wants.

You should make this modification on all drives, even if they work fine now, because they'll fail as the power filters age. (Richard Shelton, Lakewood, OH)

A: Thanks for sharing your detective work and solution.

Q: I'm the proud owner of a Model 4P. While experimenting with TRSDOS 6.1, I discovered that my drives will format 42 tracks. I did this with the command `FORMAT :1 (CYL=42,Q=N,ABS)`. This procedure puts the directory on track 21, but it functions perfectly. You can make a mirror-image back-up if you answer yes to the prompt. The extra two tracks provide an additional 9K of space, particularly useful on drive zero because the DOS takes up so much room. (Eric Burstein, Columbus, OH)

A: You're lucky that your drives will let you use the extra tracks; not all TRS-80 thin-line drives allow more than 40 tracks. Just keep in mind that some of your data or programs might not be accessible if you try the 42-track disks in another Model 4/4P computer.

Q: Regarding N.S.'s letter in the April issue (p. 13)—I've found a way to use SuperScript Dictionary with a document using only two drives. First I kill the demonstration programs to make more room on the system disk. Then I copy my docu-

Newclock-80 \$69.95

The right time at the right price! Keep the time and date with quartz accuracy, even when your computer is off. The backup lithium battery (included) will last for over 2 years. Software on tape or disk, please specify. Use "TIMES" once to set the clock. Use "SETCLK" to set your computer's internal clock (at power up) or use "TSTRING" so that the "TIMES" function reads the Newclock. Connection: Model I: plugs into the keyboard or expansion interface. Model III: plugs into the 50-pin I/O bus. Compatible with all operating systems.

Printswitch \$59.00

Do you have 2 printers? Get a Printswitch. Stop plugging and unplugging those printer cables. With the Printswitch, you can have 2 printers connected to your computer and you can select either one at the flick of a switch. Works with any printer, plotter, or device that uses the parallel printer port. Simply plug the 14 inch Printswitch cable into your computer, and plug your existing printer cables into the Printswitch. This is the nicest unit on the market. Superior quality board with gold plated edge connectors. For Models I, III, 4 and 4P.

Alpha Joystick \$27.95

When it's time for fun, don't be without your Alpha Joystick. Do you know that most action games are Joystick compatible? Stop pounding on your keyboard and enjoy real arcade control. The joystick can also be used with BASIC programs; simply do J=INP(0) to read the joystick position (8 directions and fire button). Model I: plugs into keyboard or expansion interface. Model III, 4 and 4P: plugs into 50-pin I/O bus. The Alpha Joystick comes fully assembled and tested, ready to plug in and enjoy. (Specify Model I, or Model III,4).

Interfacer-80 \$159.00

Low cost input and output device. The outputs consist of 8 relays (rated 2 Amp @125V), easily controlled using "OUT" commands. For example, OUT 0,0 turns all the relays off. Eight LED's show the states of the relays. The 8 inputs are optically isolated, so it's safe and easy to connect external devices (switches, sensors, thermostats, etc.). Simple "INP" commands read the inputs. Connection: Mod I: 40 pin bus. Mod III, 4, 4P: requires 50-pin I/O bus converter (\$39.95), plugs into 50-pin I/O bus. Comes complete with power supply, cable, and detailed manual. (Up to 8 interfacers can be connected to your TRS-80 using our Y- cables).

Analog-80 \$139.00

8 channel 8 bit Analog to Digital converter. Your TRS-80 can read voltages, temperatures, pressures, light levels, etc. • Input range: 0 to 5.1 Volts. • Resolution: 20mV. • Conversion time: 120 microseconds. In BASIC, you can take up to 100 readings per second. • Port address: selectable. Up to 8 Analog-80's can be connected to your TRS-80 for a total of 64 channels! Connection: Model I: 40 pin I/O bus. Model III, 4, 4P: requires 50-pin bus adapter (\$39.95). Comes complete with power supply, cable, and manual.

Special Cables

Disk drive extender cable (8")...C160:\$9.95

Y-Cable for Mod I bus (40 pin): • X2-40...\$29 • X3-40...\$44 • X4...\$59 • X5...\$74
Y-Cable for Mod 3 & 4 bus (50-pin): • X2-50...\$34 • X3-50...\$49 • X4-50...\$64
Disk drive cable (34 pin): • 2-drive...C162:\$32 • 4-drive...C163:\$45
Extension cable, 4 foot: • For printer and drive (34-pin)...C165:\$22

• For Mod I bus (40-pin)...C167:\$24 • For Mod 3 & 4 bus (50-pin)...C169:\$28
Keyboard to E/I (40-pin, 8")...C161:\$21 If this is confusing, send for our Cable Flyer. Our cables are made with high quality gold plated connectors to ensure utmost reliability.

NO RISK

We know that ordering by mail can sometimes be a hassle, but with Alpha, you are fully protected.

- 1) Our 15 day money back guarantee protects you from disappointment.
- 2) All our products are tested on a TRS-80 and warranted to 90 days (parts & labor)
- 3) We ship 90% of our orders within 24 hours.
- 4) We are committed to help you

Green Screen \$12.50

Do your eyes a favor, put on a green screen. Tens of thousands are in use for a good reason: they work. Contrast is enhanced and eye fatigue is greatly reduced. Our green screen is curved; it fits right on the face of the tube. (Fits Models I,II,III,4,12,16)

FEEDBACK LOOP

ments onto it and put the dictionary disk in drive 1. After the dictionary program finishes running, I copy the corrected file onto a storage disk. This works perfectly. (*Blanchard Lee Carter, Los Angeles, CA*)

A■ You misread N.S.'s letter. His problem was getting the dictionary to proofread a document that was larger than the available room on the system disk in drive zero; for example, a file of 100 grans out of the 114 available on a data disk (about 40 grans more than the room left with the DOS and SuperScript). In that case, the DOS Copy command results in a "disk full" error message.

The only way out is a kludge: You have to use SuperScript's Block Copy function to transfer a small enough segment to the drive zero disk, proofread the segment, block copy it to a new file, and repeat until the dictionary has proofread the entire file and you've copied everything to the new file. All in all, a tedious and time-consuming task.

Q■ In the April issue (p. 18), Dave Anderson of Los Angeles had a question about an external RS-232 board for the Model I Expansion Interface. The Comm-80 (Micro-Mint Inc., 561 Willow Ave., Cedarhurst, NY 11516; \$150) is such a device. It plugs into the E.I. expansion port (or the expansion port of the keyboard) and provides a 40-pin bus connector for future expansion, and a Centronics parallel printer port. I bought one a year ago, and have had no problems with it.

Micro-Mint also sells a replacement for the Expansion Interface, which I purchased a year and a half ago. It, too, has given me excellent performance and is totally compatible with all hardware and software for the Radio Shack interface.

Now for my problem. I have two BASF 6016 drives that have been trouble-free except for what appears to be a lazy head load solenoid on drive zero. When I first boot the system from a cold start, the solenoid kicks out, but immediately retracts before the head has time to read data. After three to five resets, or about one minute, the system boots and runs perfectly. If I turn the system off for a few hours, I can look forward to the

problem again about 30 percent of the time. Any ideas? (*John Spitalo, North Canton, OH*)

A■ First, have you tried switching the two drives to see if only one of them has a problem? Second, have you checked the jumper-block for drive-head options to see if the drives are correctly jumpered to load the head? Third, have you cleaned all the drive cable connectors?

If you've tried all these, I'd suggest taking the drives to a technician for a more thorough check-out. If the solenoids are starting to go, it's time for service.

Q■ Would you or any of your readers know how I can hook up my Model III (48K) with my IBM Stand-Alone Composer? The Stand-Alone came out in the early 1970s and produces quality typesetting with font sizes six point to 12 point, and justifies and centers. I can't find anyone who knows of a way to connect the two machines. (*James Lowe, Ridley Park, PA*)

A■ I can't help you there—can anyone else?

Q■ I enjoyed "CP/M III Ways" (December 1983, p. 122), particularly since I've been considering getting a Holmes VID-80 board. Perhaps you can answer a question: With the VID-80 installed, will my Model III version of Electric Pencil use the 80-character by 24-line display? Can I use the 80 by 24 display with any of the new versions of word processors intended for TRSDOS 6.X and the Model 4? (*Richard Peck, Swarthmore, PA*)

A■ The VID-80 supplies the 80 by 24 only to those programs that honor the Model III device control blocks (DCBs) that control the video display. The VID-80 uses its own RAM for the 80 by 24 display, and puts the jump address at the video DCBs. Any program that directly accesses the video memory, bypassing the DCBs, won't use the 80 by 24 display memory on the VID-80 board. Electric Pencil, like most other word processors, uses its own video driver routines, ignoring the DCBs, so it still uses the standard Model III display of 64 by 16.

The Model 4 word processors are designed expressly for TRSDOS 6.X and the Model 4. They won't work at all on the Model III since the methods used to access the keyboard, video, and disk drives are incompatible. Even with the VID-80 board, these programs won't work on the Model III.

Q■ I'm puzzled by a symptom of my Model III with TRSDOS 1.3: When using the MEMTEST program, I get the messages "ROM C Checksum should be 2B91 or 2EF8 or 2F64" and "Your Checksum is 2F84." Something seems to be wrong with my checksum, whatever that is. Can you enlighten me? (*Jose Chaves, Tenafly, NJ*)

A■ A checksum is a method of verifying the condition of a program, file, or memory. There are many ways to compute a checksum, but the one used in MEMTEST (the memory tester) is to start at the first location in a ROM and add up all the binary numbers stored in the ROM until the top of the ROM is reached. The resulting sum is called the ROM checksum. For example, the message "L2 BASIC" is stored in ROM as "76 50 32 65 66 83 73 67", resulting in a checksum of 512 (in decimal).

The Model III uses two ROMs, the A-B ROM and the C ROM. Radio Shack has revised the ROMs periodically to correct errors or slight bugs, and these alterations change the checksum you get with the MEMTEST program; hence the three possible numbers in the message. MEMTEST doesn't take into account a fourth revision to ROM C made after the program was written. The number you got, 2F84, is correct.

If you want to fix MEMTEST to include your computer's correct checksum, use the patch in the next letter.

Q■ If L.L. (December 1983, p. 285) would like his MEMTEST program to show the proper value of 2F84 for his Model III ROM checksum, he should type in the following:

```
PATCH MEMTEST/CMD (ADD=6573,  
FIND=32423931,CHG=32463834)
```

This patch changes the checksum list to include 2F84. (*Pat Maturo, Orange, CT*)

A■ Thanks for the patch.

VOICE

As Well as a Mind

VS-100

**VOICE
SYNTHESIZER**

FOR RADIO SHACK MODELS
I, III, 4P and Color Computer

Introducing
the "No Compromise"
Voice Synthesizer at a
price that speaks for itself!
Price includes synthesizer, module,
power supply, 40 page manual,
editing and demo software.

VS 100
\$ 69⁹⁵

Call our "NEW" Demo Hot-Line

☎ 212 296-0399

And hear it for yourself!

Speaker not included,
add \$5.95

Text to Speech software:

• Talker 1.4.....\$19.95

• Talker 2.0.....\$29.95

An Impressive List of Features:

- Unlimited vocabulary.
- Automatic inflection.
- Proven VOTRAX technology.
- We use the famous VOTRAX SC01 phoneme synthesizer.
4 programmable pitch level.
- Built in audio amplifier with volume control.
- You can add voice to any basic program in minutes.
- Super efficient: one single line in Basic will produce a full sentence!
- Works with any speaker (or add \$5.95 for handsome speaker module).
- Price breakthrough: same performance as units costing hundreds of dollars.
- Voice editor will help you create unlimited number of words, sound effects, etc.
- Hundreds of applications—now cost effective in education, robotics, speech therapy, monitoring, games, aid to handicapped, security, prompting...
- Fully assembled and tested.
- Ready to plug in and talk.
- Plugs into 50 pin I/O bus on Model 3
- As usual our 15-day money back guarantee protects you

Text to Speech Software for the VS-100

TALKER 1.4

- ✓ Unlimited vocabulary translation of English text to speech
- ✓ Very easy to use: In BASIC simply type PRINT "I talk"
- ✓ Reads numbers up to 999 trillion
- ✓ Reads many abbreviations correctly (such as Mrs., Mr., lb., Co., etc.)
- ✓ Very fast machine language program is only 4.5K long
- ✓ Loads in high memory

Only \$19.95. Specify disk or tape

TALKER 2.0

- ✓ Same features as TALKER 1.4 plus:
- ✓ Automatic keyboard echo option
- ✓ Automatic video display echo option
- ✓ Punctuation pronunciation if desired
- ✓ And many control codes for increased versatility
- ✓ Self relocatable program is only 6¼K long
- ✓ New BASIC command: PRINT! prints and talks.

\$29.95. On disk only

Q■ I have a 48K Model III with cassette Basic. Recently, while trying to incorporate a machine-language routine into a Basic program, I encountered a problem: When POKEing the machine-language values into memory locations 32752-32767, using a For...Next loop, I got an overflow error. I avoided this by changing the values to 32751 and 32766 and POKEing the address plus one.

I'm writing because I don't understand why I had to make those changes. I have another program that uses the same technique and it runs fine. What's up? (*M.J. Mockler, Marshfield, WI*)

A■ First, are you setting the top of memory properly by answering the memory size prompt with 32751? Failing to do so could cause big problems as Basic tromps on your machine-language program while you're putting values into memory.

Second, although none of the manuals says this, you're not supposed to POKE anything into the top 2 bytes of memory. These bytes are reserved for Basic. Write to them at your own risk. (This shouldn't make any difference to you, because you have a 48K machine—the upper limit for a 16K is 32767.)

Third, it's possible, if you're using a large Basic program, that it's interfering with the Basic routine that's trying to put the machine-language routine in place. Putting your machine-language program at the top of memory eliminates the possibility of this problem.

The overflow error, when encountered with the POKE command, has three possible causes. The address you're using exceeds the range - 32768 to 32767, the number you're POKEing exceeds the range of zero to 255, or you've done something to the Basic operating system tables in RAM.

Q■ I've noticed that many of your readers request help with problems stemming from poor electrical contacts in the Model I connectors. Cleaning them usually helps, but only temporarily. Poor connectors are also a problem in high-fidelity gear, and Craig Laboratories of Escondido, CA, has come up with an answer: Cramolin, which comes in two solutions. One removes the oxides usually

responsible for poor contact performance and the other coats the contact with an extremely thin protective film. I've used the protective product in a wide variety of applications and it has never failed to solve a connection problem.

I don't know if Cramolin is available directly from Craig Laboratories or not. I bought mine from Old Colony Sound Lab, P.O. Box 243, Peterborough, NH 03458, 603-924-6371. (*Gary Nored, Austin, TX*)

A■ Practically in my own backyard, and I never even knew they were there! A set of two 2-dram bottles of Cramolin costs \$16.

Q■ I recently purchased a Radio Shack double-density board for my Model I and found no installation instructions or circuit diagram. Can you tell me how to install the board in my Micro Design interface? (*Robert Cooke, Columbus, OH*)

A■ Installing the double-density board is easy. Start by unplugging and disconnecting the expansion unit from the rest of your computer equipment. Then remove the cover of your Micro Design expansion unit and locate the FDC-1709 disk controller chip (it should be a 40-pin chip with the letters FDC-1709 on top). Note which way the notch in the chip points—you should find a silk-screened outline of a chip with a small notch under the FCD socket.

Use a nail file, a very small screwdriver, or an IC puller to remove the FDC chip from its socket on the circuit board. Insert the FDC chip into the socket on the double-density board, making sure that the chip's notch matches the one silk-screened onto the double-density board. Check carefully for bent pins or legs that aren't properly inserted into the socket.

Now plug the double-density board into the empty FDC socket on the main board of the MD expansion interface, again seeing that the notches all line up in the same direction. Check to make sure that no pins are bent or misaligned.

Now reassemble the expansion case and reconnect everything. Turn on the system, boot up your single-density DOS, and verify that everything works properly. If your disk won't

boot, stop. Disassemble the system and make sure that you've properly installed the FCD chip on the double-density board (all the IC chip notches should match their silk-screened outlines) and correctly installed the double-density board on the expansion interface board (the FCD chip's notch facing the way it faced before you removed it from the computer). Then reassemble your computer and test it again. If your system still refuses to boot your old system disk, take everything to a technician.

If your single-density DOS works properly, test your double-density DOS (if one didn't come with the board, you'll have to get one). If the double-density DOS works, then you're ready to get to work with almost twice the disk capacity you had before. Good Luck.

Q■ Exactly what do I need to convert my Model III from single to dual disk drive? Will I need a new DOS or will TRSDOS automatically know I have two drives? Once I have a dual-drive Model III, can I easily or cheaply upgrade to a Model 4? (*Andrew Tejral, Ridgewood, NJ*)

A■ All you have to do is buy a second disk drive, no cabinet necessary, and install it in your Model III case. Any competent technician should be able to do it for you quite easily. You might have to get a new drive cable, depending on whether or not your computer has a single-drive or dual-drive interfacing cable. Another possible problem is that the disk drive power supply might not be powerful enough to operate both drives. Only a technician can tell you for sure.

As for upgrading: Converting from a Model III requires replacing the entire logic board at a cost of about \$800. By the time you add the cost of your second drive, you've reached the trade-in value of your Model III against a Model 4. For the \$1100 or so, plus the trade-in value of your Model III, I'd suggest getting a Model 4 right now. ■

Terry Kepner is a freelance writer and programmer, and the vice-president of Interpro. He's been writing about microcomputers since 1979.

Welcome to the second issue of *In Touch*. This month, let's answer some common questions about the VS-100 voice synthesizer.

In Touch The Alpha Newsletter

■ How good is the voice?

We think it's incredible for the price, but you can judge for yourself by calling our 24 hour Demo Line: (212) 296-0399.

■ What does it take to make my BASIC programs talk?

With *TALKER 1.4*, it's simple. With *TALKER 2.0*, it's incredibly easy. If you add an asterisk after a "PRINT" command, the PRINT now speaks. (e.g. PRINT★ "Hello Judy" will speak, not print). If you add an exclamation point instead of an asterisk, the PRINT command will print as usual, and in addition, it will speak! To add speech to your favorite BASIC program simply sprinkle a few "★" and "!" where you want speech. Could it be any easier?

■ Is it compatible with my DOS?

The software and hardware do not rely on any DOS feature, therefore the VS-100 system works with any Model I or III DOS.

■ Do I need any cables?

No, the VS-100 plugs directly into your TRS-80. It uses the expansion port on your computer, so it doesn't interfere with any printer, disk drive, or RS232 device. On the Model 4P, the card edge is recessed; be sure to order the special 50-pin extender cable

■ Do I need an amplifier?

No, the amplifier with volume control is built into the VS-100. All you need is a small speaker; we recommend our handsome mini-speaker (\$5.95).

■ Which port does it use?

All communication between the computer and the VS-100 is done using port 11.

■ Can I purchase the user manual alone?

Yes, it is available for \$5 plus \$1 shipping and handling. (The \$5 is applicable towards purchase of the VS-100).

■ How many words can the VS-100 say?

There are two ways to make speech synthesizers. One is to use a limited look-up dictionary. The VS-100, on the other hand, uses a much more powerful approach: the "text to speech" automatic translator. This means that *any* word will be pronounced. The text to speech translator, with its 400 pronunciation rules, achieves a 96% success rate.

■ Can I get speech automatically, without doing any programming at all?

Yes, Talker 2.0 has very powerful "automatic keyboard echo" and "screen echo" options. Everything that is typed and/or printed on the screen can also be spoken.

We would like to thank all our customers for the very nice feedback that we receive. (Such as the letter at right).

What is your reason for keeping your TRS-80 mute?

To Alpha Products, 79-04 Jamaica Ave., Woodhaven, NY 11421

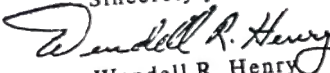

Gentlemen:

I seldom write manufacturers of Computer products. However, I am so pleased with my purchase of the VS-100 Voice synthesizer, I felt I must let you know it.

The unit performs EXACTLY as advertised. The documentation furnished is clear, understandable and straightforward. The disk software seems absolutely flawless in use.

The VS-100 is simple to program and flexible enough in programming to accomplish exactly what I wish. I have incorporated it into all my computer tutorials. Congratulations on your product!

Sincerely yours,

Wendell R. Henry

2000 and Two: Ovation and MS-Windows

Hot Items

Ovation is coming, Ovation is coming! At least, it's supposed to be coming. The long-awaited integrated software package from Ovation Technologies of Norwood, MA, is due to be shipped Oct. 15, 1984.

Ovation representatives were on hand at the Boston Computer Society's June 26, 1984, meeting with prototype copies of their integrated word processing, graphics, and spreadsheet programs (see the Photo).

The what-you-see-is-what-you-get program for the Model 2000 requires 256K of RAM and a hard disk drive, but those factors are apparently deemed minor expenses in corporate businesses, Ovation's major market.

Even allowing for the fact that Ovation's reps had plenty of practice with their package, Ovation seemed easy to learn. Observers described the software as powerful and fast. Ovation is about to release a potentially popular product—they and Tandy must be hoping it's not arriving too late.

Not to be denied its moment in the spotlight at the Boston Computer Society meeting, Microsoft Corp. of Bellevue, WA, showed off its integrated MS-Windows package, one of Ovation's possible competitors.

Using Tandy's Digi-mouse for the 2000, Microsoft's Joe Vetter put MS-Windows through its paces and described the package as "the first multi-color operating environment." The program uses all the features normally associated with Apple's Mac, such as the mouse interface, icons, and pull-down menus, but with color as an additional feature. MS-Windows contains a

edited by Bradford N. Dixon

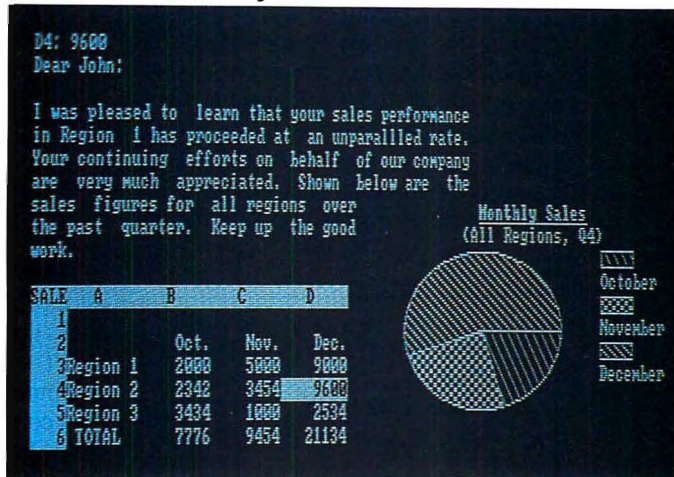

Photo. Ovation: Integrated software for the Model 2000.

terminal program and word processor and supports a graphics device interface for screen printouts. It doesn't require a hard disk like Ovation, but it does need 256K of RAM.

Microsoft is understandably high on its windowing product for the Model 2000 and Vetter feels its usefulness will be even more apparent when a multi-user MS-DOS becomes available.

Tandyland

During the late spring and early summer months, the financial news from the Tandy Towers in Fort Worth, TX, was anything but encouraging. Sales were disappointing for a variety of reasons. Tandy chief executive officer (CEO), John V. Roach, was asked at the above-mentioned meeting of the Boston Computer Society if he thought the financial picture would improve enough to meet his sales expectations. In reply, Roach said, "Sir, sales have never met my expectations."

Commenting further on the sales slow-down, Roach said, "Product shortages due to shifts in product mix

and component availability have been a major factor impacting both our traditional and computer businesses. Additionally, rapid changes in product pricing in the microcomputer industry are affecting sales and heightening the competitive environment in that segment of the business. Clearly, product cycles are more important to Tandy than economic cycles. Some of the current sales slow-down can be attributed to these cycles and we believe that new products and pricing for the fall season

combined with a better in-stock position will enable us to achieve more traditional sales growth rates."

Just about the time Roach made those remarks, Tandy took action by cutting the price of the 64K, two-drive Model 4 to under \$1,300. As for the new products mentioned for the fall season, Roach wasn't talking. Fort Worth watchers will have to wait and see if there'll be something exciting, perhaps a follow-up to Tandy's first MS-DOS micro, or just another variation of Radio Shack's famous stuffed-animal radios.

"Ding-dong—Tandy calling" will probably not be part of the promotion for Tandy's new Home Education Systems division. But, in a sales tactic reminiscent of the Avon lady and the Fuller Brush man, the Tandy Home Education Systems (T.H.E.S.) division began offering in-home demonstrations of a Color Computer 2 package early in July. T.H.E.S. chose 13 cities, including Dallas/Ft. Worth, Atlanta, Denver, San Diego, and New York for the program's roll-out.

The unique shop-at-home service is available only by request from partici-

pating Radio Shack Computer Centers. Tandy hopes to focus the new sales effort on families with preschool and school-age children.

The basic system T.H.E.S. sells is a 64K Color Computer 2 with one disk drive, deluxe joysticks, a modem, and training sessions for two family members at their local Radio Shack Computer Center. In addition to the hardware, customers will get Color Logo and a terminal package for accessing CompuServe or the Dow Jones News/Retrieval Service. Each T.H.E.S. package also offers software bundles from six software groupings designed so a family can "tailor the system to its needs and the ages of the children."

The price for the basic configuration is less than \$1,500. You can get more information about the service from the Tandy Home Education Systems division at 1301 W. 22nd St., Suite 400, Oak Brook, IL 60521.

Meanwhile, Tandy continues its efforts to keep in touch with educators as a corporate sponsor of the National Distinguished Principals program. The program recognizes achievements of elementary and middle school principals in each of the 50 states, the District of Columbia, and Puerto Rico.

Tandy CEO John Roach says, "It is time that the top school administrators who foster an atmosphere in which children develop a lifelong love of learning receive the honor and recognition they have long deserved."

Aside from the goodwill gained by sponsoring this program, Tandy may also reap commercial benefits; Radio Shack's Education division has taught more than 400,000 teachers around the country how to use TRS-80s in the classroom. More than 35,000 schools have received free staff development packages and, through Tandy's TRS-80 Educational Grants program, hardware, software, and other computer products have been awarded to educational institutions.

MicroTrends

Tandy isn't the only microcomputer maker emphasizing the education market. So how have school districts reacted to the sales pitch over the last three years?

According to a survey by Quality Education Data Inc. of Denver, CO, "virtually 100 percent of the school

districts contacted are now using microcomputers." For the April 1984 telephone survey, QED contacted 9,272 school districts with at least 600 students and found 9,068 of them using at least one microcomputer for classroom instruction. That figure represents 97.8 percent of the districts surveyed.

When QED took its first survey in 1981, only 4,990 out of 9,664 districts could claim at least one microcomputer used in classroom activity.

Of course, although microcomputers may have spread to almost all the school districts in the survey, that doesn't mean they're accessible to a majority of the students. According to Jeanne Hayes, president of Quality Education Data, "The estimate of the number of microcomputers ranges

from 300,000-350,000 units so the total number of minutes available for any one student is still far less than would be necessary for true instruction."

It seems that whenever a new computer is announced, diehard computerists wonder how much money they can get for their old machine so they can buy the latest model. The second-hand computer market is an industry that hasn't created much fanfare, but used computers are out there and someone must be selling them.

So how much could you expect to get for your old Model I (assuming the Smithsonian Institution doesn't want any more)? According to a June 18, 1984, article in *InfoWorld*, second-hand Model I's go for the paltry sum of \$110. Model IIs fare better at \$1,200, but that's to be expected.

The *InfoWorld* article doesn't even list a price for a used Model III, which could mean one of two things: people aren't selling their Model IIIs or the computer isn't worth anything on the used computer market. The Model 4 is listed, however, at \$1,340 used.

You won't yet find TV ads showing used-computer salesmen smashing CRTs with a sledgehammer, but if the fledgling used-computer market takes off, you never know.

The personal computer boom is very much an urban phenomenon, according to a study conducted by International Data Corporation (IDC), a computer marketing research firm in Framingham, MA. As of January 1, 1984, the top 25 Metropolitan Statistical Areas (translation: big cities) accounted for 43.1 percent of all personal computer units in the U.S. The top 100 MSAs contained 69.5 percent of all personal computer units (see Table 1).

For the study, IDC defined a personal computer as a microprocessor-based system that is programmable in a high-level language, supports peripheral devices, and costs \$50-\$20,000. The study found 9,525,000 personal computers installed in the United States at a total estimated value of \$16,987,000.

Tandy isn't generally thought of as a major player in the world of data processing. However, according to the June 1984 issue of *Datamation* magazine, Tandy ranked 13th with a data processing revenue of \$945 million in

Metropolitan Area	Units Installed

1983. That ranking represents a rise of three notches from the previous year.

Other microcomputer companies listed in *Datamation's* top 20 were Texas Instruments (17th), Commodore International Ltd. (14th), and Apple Computer Inc. (11th). IBM led the list with data processing revenues of \$35,603 million in 1983 (see Table 2).

Update

The "new and improved" Model 4 from Radio Shack that started appearing on Computer Center shelves early in the summer came under attack from some quarters.

Rumors of a Model 5 were flying throughout the spring, but the real thing was anything but remarkable. For those of you who haven't seen them, the updated Model 4's have a green phosphor CRT and a redesigned keyboard, and the four arrow keys are now clustered between the keyboard and the number pad. The feel of the keys is reminiscent of the Model II, while the layout of the arrow keys is similar to that of Tandy's Model 2000.

Why Radio Shack found it necessary to move the arrow keys remains a bit of a mystery. In fact, some die-hard TRS-80 gamers think Tandy may have done it to strike the final blow to TRS-80 game companies because the new arrow keys are almost impossible to use for fast-paced arcade games. It seems Tandy has finally made the Model 4 a real business machine by all but eliminating its usefulness as a game machine.

Model 2000 owners who have the *Model 2000 Technical Reference Manual* can find mention of an Arcnet board in the block diagram of their system. Tandy's most ambitious business machine would benefit from networking capability, but as yet the company hasn't announced any software or hardware that uses the 2000 in a network. Don White, the Model 2000 line manager, says his group is looking at networking for the 2000, but he says no products will be available in the immediate future.

Model 2000 users will have to wait to see whether Tandy itself will exploit the machine's potential in local area networks or whether third parties will beat them to it.

The lap-size portable market continues to be a hot spot in the micro industry—too hot for some.

Xerox Inc. entered the portable market last fall with their 1810, a \$2,195 entry featuring a 3-line by 80-character LCD screen. Seven months later, Xerox pulled out of the portable business. Sunrise Systems Inc. of Dallas, TX, Xerox's portable producer, cited

problems with the machine's firmware and rechargeable battery.

Future Computing Inc., of Richardson, TX, estimates a 53 percent annual growth in portable sales and expects 250,000 units to be sold this year. In light of this, Radio Shack stands to see continued success with its Model 100 even as the portable market becomes more competitive. ■

The View from The Tower

At the June 26, 1984, meeting of the Boston Computer Society, Tandy's CEO John V. Roach offered some opinions on the direction of the microcomputer industry and how it relates to Tandy's product line in particular. On one issue, the debate over multi-user systems versus networking, Roach said Tandy is looking at both areas to one degree or another. But he indicated Tandy was leaning toward networking for business users, even though the company has no networking capability yet for its Model 2000.

On another matter, Roach predicted that none of the four operating systems now dominating the scene is likely to emerge as the industry standard.

According to Roach, Tandy sees three microcomputer markets: low end, mid range, high end.

The low end comprises micros selling for less than \$1,000. Roach says this segment is growing at a fast pace despite the financial troubles of Texas Instruments, Atari, and Timex/Sinclair. "People are buying low-end machines" said Roach, "but they are looking for machines that offer more utility now. Not just game computers." In Tandy's computer line, Roach listed the Color Computer 2 and the Model 100 kneetop portable.

Roach noted, however, that the Model 100 has two disadvantages that prevent it from making much of a push into the home market. "The Model 100 has a limited price/utility function which limits potential sales in the low-end segment." Almost ev-

erything a Model 100 owner needs is incorporated in the unit's firmware, so a variety of software and utilities for home users isn't necessary.

Tandy's competition in the low end comes from all directions. Commodore, Atari, and the recently reduced Apple II are all major players in the under \$1,000 market. Even the MSX threat from abroad is watched from the Tandy towers. But Roach discounts the role of Japan's MSX operating system, saying, "It's doubtful that MSX will take over and become a standard operating system in the U.S."

In the mid-range segment of the micro market, Roach felt the TRS-80 Model 4 and 4P were important, especially for schools and small businesses. As Tandy sees it, "The Model 4 is a high-volume machine at this time, but its position will slowly give way to 16-bit computers." Roach was quick to point out, though, that Tandy's 8-bit workhorse is not yet obsolete. He mentioned, too, that for most applications a "low-priced 8-bit machine is just as good as a low-volume 16-bit machine."

The most important segment of the micro marketplace is in 16-bit computers. Leading contenders for that market are the IBM PC, Apple's Macintosh, and the Tandy 2000. It's obvious that Tandy is going after a piece of the 16-bit pie with the introduction of the 2000; now that some powerful software is finally getting into Radio Shack Computer Centers, Roach expects Model 2000 sales to start taking off.

Roach conceded that technology is moving so fast that consumers can't keep up. With the emergence of multi-user processors like Intel's 80286, he sees true 16-bit computers (like the Model 2000) becoming standard. ■

THE WAIT IS OVER

CP/M Exclusively for the Model 4

Now, for the first time, you can unleash the powerful features resident in your MODEL 4 computer. Open up the vast store of CP/M software such as Wordstar, dBase II and Multiplan, along with thousands of others!

- Includes INTERCHANGE: a utility that allows reading, writing and copying 20 different manufacturer's disk formats such as IBM, KAYPRO, OSBORNE, XEROX, etc.
- Complete with the following CP/M utilities: ASM, DDT, DUMP, ED, LOAD, PIP, STAT and SYSGEN.
- NO copy protection. Backups may be made for your own use and protection.
- The CONFIGURATION program supports a full range of 5¼" disk drives: 335, 40, 77 and 80 tracks, single and dual sided in any combination as well as the standard Model 4 drives.
- Includes MODEM 7, a powerful public domain communications program for file transfer and remote data base access.
- Supports 80 x 24 video, reverse video, direct cursor addressing and more.
- Utilizes the Model 4 function keys and allows user defined keys.
- Auto execute command for turnkey applications.
- FORMAT utility permits up to 52 disk formats to be constructed, all menu drive.

Full Recovery

David Gobel's method for recovering in-memory Scripsit documents (September 1982, p. 256) doesn't work on my Model III disk Scripsit 3.2, so I made some changes. Once you've loaded the program in memory, you should be able to recover all or most of a document lost through a reset or goof at the keyboard.

Use Debug to enter the code into memory; start at 7AD0 hexadecimal (hex) and end at 7AE1 hex. The code is: 21B8 7DD7 B720 FC22 3853 3E20 3247 53C3 0053. Dump the code onto disk by typing in

```
RECOVER/CMD (START = 7AD0,END =
7AE1,TRA = 7AD0)
```

The next time you lose a document, hit the reset button, then type in RECOVER and press the enter key. When disk action stops, you'll be back in Scripsit. But don't do anything until you've completed this key sequence: press the shift and up-arrow keys, the enter and up-arrow keys, and the shift and down-arrow keys simultaneously. David Gobel's invaluable article explains why this operation works.

*Michael Meyers
12 Hamilton Ave.
Montclair, NJ 07043*

What a Dump!

I'd been looking for a screen dump program like Skip Murrow's DMP 400 screen dump (Tidbit #7, June 1984, p. 143) and was pleased to see it in *80 Micro*. However, I found it necessary to make a few changes.

I added a zero to the first value in line 6030, and, to get a full screen dump, changed the second value to 16320. The line should read:

```
FOR LN = 15360 TO 16320 STEP 64
```

I also had to delete line 6010 to get a full screen dump.

To get the program to print alphanumeric characters, I added these two lines:

```
6073 IFAS>32ANDAS<122ANDDC = 2
THEN6210
6076 IFAS>32ANDAS<122AND(DC = 1
ORDC = 3)THENAS = 224:GOTO6210
```

This program has already done wonders for me.

*Mark Rife
29 Vassar Drive
Dayton, OH 45406*

Wide Open Spaces

I find SuperScripsit's use of the delta symbol to indicate two spaces annoying. Pressing the shift and space bar keys eliminates the delta symbol, but takes time. I came up with two simple patches to get around the problem. The first is for keyboard entries and the second is for ASCII conversions to SuperScripsit format.

For TRSDOS 1.3 users the patches are:

```
PATCH SCR64/CTL (ADD = 7F8A,FIND =
20,CHG = 18)
PATCH SCR35/CTL (ADD = 99C9,FIND =
20,CHG = 18)
```

For LDOS with the Model III, use:

```
PATCH SCR64/CTL (D00,38 = 18)
PATCH SCR35/CTL (D01,30 = 18)
```

And for LDOS with the Model I:

```
PATCH SCR64/CTL (D00,63 = 18)
PATCH SCR35/CTL (D02,AA = 18)
```

I hope readers will find these patches helpful.

*James Reed
9631 Sophora Circle
Dallas, TX 75249*

Double Trouble

Dennis Watters was having trouble getting TRSDOS 6.0 to read and write to a double-sided disk (June 1984, p. 29). To format from a single-sided to a double-sided disk, you type in FORMAT (SIDES = 2). To back up from a single-sided to a double-sided disk, use: BACKUP SYS:0 :1 (S,I) to put track zero on the disk. The command BACKUP \$:0 :1 (S,I) transfers the remaining tracks.

Now I need help. I want to buy a conversion for Montezuma CP/M so it will read a standard IBM-format 8-inch CP/M disk. I have an 8-inch disk controller. Also, I'm looking for patches to eliminate the date, time, and TRSDOS logo on version 1.3.

*Gil Seiler
126 Boas Drive
Santa Rosa, CA 95405*

Help, Please

I waited from April 1983 to January 1984 for Radio Shack to release CP/M Plus for the Model 4; then I traded my Model III for a Model 4 and bought CP/M. I now find that CP/M doesn't work as outlined in the manual and, more important, I've discovered no way to get any one of the "thousands of CP/M programs" onto my disks.

No dealer I've contacted supports the Radio Shack format. I've been unable to buy WordStar or dBase II, and I assume this holds true for any other popular CP/M program I would

READER EXCHANGE

want. In short, I have over \$2,000 invested in a computer and operating system that don't work as advertised and for which there is no software available.

If any reader has found a dealer who can supply commercial CP/M programs on Radio Shack-format disks, I hope they'll contact me.

*Nate Salisbury
610 Madam Moore's Lane
New Bern, NC 28560*

I'm in need of the CP/M and MBasic documentation for Omikron Systems' Mapper I CP/M board. I'll pay any expenses to get them.

*Daniel Wolf
220 Greenlee Road
Pittsburgh, PA 15227*

I have a Model III with two drives and the Radio Shack high-resolution graphics board. It's been fairly easy to get high-resolution graphics on the screen using the Basic software that came with the board, but I can't dump

the screen to my Star Gemini 10X printer; the print utilities supplied by Radio Shack work only with their printers. My printer is of recent vintage and I believe it has Epson-compatible ROMs. Can anybody help with a patch for a screen dump to my printer?

*Larry Patterson
5462 Tattershall Ave.
Westminster, CA 92683*

I have two Tandon 5¼-inch disk drives that I use with a Model I, expansion interface, and Epson MX-60 printer. I also have a TI-99/4A console with Extended Basic. Is there a hardware/software combination to make the disk drives compatible with the TI-99/4A or with a Commodore 64?

*Dudley Brooks
321 E. 12th St., Apt. 11
New York, NY 10003*

Does anyone know of an inexpensive file management program that

can save, sort, and print out bibliographic data in standard reference format? I often use my Model I with disk Scripsit to write academic papers and reports, and I need to sort bibliographic records by subject and author.

You Can Take It With You.

Good News About Mass Storage For Today's Business Pharaoh

Mass storage used to mean a big, expensive unit that wasn't the least bit portable. And guarding against uninvited intruders was a royal pain. Today's business pharaoh can have portability and convenient security in one affordable mass storage system. With 5 or 10 megabyte **removable cartridge** hard disk systems from **Micro-Design**, you can take it with you.

Use hard disk cartridges the same way you use a floppy disk system. Just switch them out as needed — one cartridge for wordprocessing, another for accounting, and another for backup storage. Add additional cartridges whenever you like.

Double duty. With cartridges you get backup capabilities PLUS the benefit of having another full 5 or 10 megabytes of on-line storage added to your TRS-80® Model III or 4.

Fast. Cartridges run as fast, or faster, than fixed hard disk drives. A 5 megabyte backup takes only a few minutes. Switching out cartridges takes just a few seconds.

Convenient and Secure. It's easy to lock-up sensitive files — just remove the cartridge and put it somewhere safe. If you

share a computer with others, everyone can have their own cartridge.

TRS-80® Tandy Corporation.

One year warranty. Network compatible.

463

Unlimited Expansion. No more erasing old data to increase space on your hard disk. Fact is, there's no limit to the amount of off-line storage you can add.

Our **DATA Series** 5 and 10 megabyte cartridge hard disks are external drives available in removable only, or paired with 10, 20, or 33 megabyte fixed drives. Our **SQ Series** features 5 megabyte cartridge drives, in matching external cases or ready for internal installation. They're all plug compatible with no additional hardware required and your choice of operating systems — LDOS 5.1, DOSPLUS 3.5, DOSPLUS 4 or TRSDOS 6.0.

Get the convenience of portability in a mass storage system. Ask your local computer dealer about Micro-Design's versatile hard disk cartridge units. Or, call us for details on our full product line and ordering information. Dealer inquiries invited.

We've got a complete line of mass storage devices, including floppy drives. Prices start as low as \$1549 for a 20 megabyte fixed hard disk drive. Call for our FREE catalog today!

DEBUG

I've made some corrections to the programs MAKEDO/BAS and TRS/JCL from my article "Command Performance" (June 1984, p. 62). The changes should take care of the problems some readers have experienced. For MAKEDO/BAS:

In line 230: Change all RETURN to RESUME 245

Add the line: 245 RETURN

In line 260: Change RETURN to RESUME 275

Add the line: 275 RETURN

In line 390: Change IL% to W - 1

In line 900: Eliminate :NEXT CHK% (at end of line)

Add the line: 905 NEXT CHK%

In the TRS/JCL program, after line 51 add a line with only a Y; this answers the TRSDOS prompt.

The JCL files in the article were presented only as examples; the BASLIST file won't work unless you have the same Basic file names on

disk. Also, the above changes won't work if your drive-zero disk is named Datadisk.

Raymond E. Wilson
7519 Bubbling Spring Lane
Houston, TX 77086

You should make some changes in the Dynaterm terminal program (May 1984, p. 50) in order to free up the control key codes Q and P in the terminal mode. Otherwise, you might run into problems, because most bulletin board services reserve control-Q and control-P for standard protocol. Delete lines 6080-6120 and insert lines 6021-6120 (see the Program Listing). The changes work with versions for the Models I, III, and 4.

Program Listing. Corrections to the Dynaterm program.

Readers should make a couple of changes to Program Listing 4 in "A Better Breed of Basic" (July 1984, p. 94). To get this American flag and national anthem graphics and sound demonstration to work, you must begin line 1 with REM and change all zeroes to O's in lines 221-224.

EASY TO USE **INTEGRATED** SOFTWARE FROM PEL-TEK ■ ALL THREE MODULES, ONLY \$99.00

Word Processing from Pel-Tek

word machine 3.0

FOR TRS-80 48K Mod I/III/4*

Easiest to use Word Processor anywhere

- On screen formatting — what you type is what prints on the printer
- Works with all printers
- Graphics mode for TRS-80 block graphics (printer support needed)
- Embedded forms control — to skip lines, eject paper, terminate printing
- Embedded file retrieval during printout (called from text) allows chaining a document to any virtual length
- Pause feature — enter data into text line fields during printout, great for forms or form letters, especially when used with Multiple Copy feature
- Insert/delete characters, lines, files, anywhere in your text
- Text centering
- Embed ASCII codes in your text to control your printer
- Headers, Footers, page numbering
- "Warm start" from DOS READY
- Line oriented
- Full screen text editing
- Supports unmodified Model I for lower case
- Integrates with Spell Check/Correct and DBLCOM communications packages
- **FREE** . . . INDOOR SOCCER and JUMPY arcade games included!

Proofreading From Pel-Tek

spell check/correct system

Integrates with the Word Machine 3.0

FOR TRS-80 48K Mod I/III/4*

Superb 30,000 Literal Word List

- Includes prefixes, suffixes, many proper names and geographic locations
- Integrates with the Word Machine 3.0 without duplicating files
- Can check ASCII files created by any Word Processor
- Streamlined menu driven operation makes it easier to use than any other Spelling Checker
- Allows expansion of a secondary User Dictionary with words from your text
- Or create/edit your own User Dictionary using any Word Processor
- Expand the main dictionary to up to 60,000 words automatically with words from the User Dictionary (Model III)
- Works with a single disk configuration
- Does spelling checking AND spelling corrections — no extra charge for the corrections feature
- Less than 1/2 the price of any competing TRS-80 product, and performs better based on independent testing
- Integrates with the Word Machine 3.0 with uninterrupted operation

Communications from Saturday Software

dblcom

Integrates with the Word Machine 3.0

FOR TRS-80 48K Mod III/4*

Unique Split Screen for Sending/Receiving

- Split screen feature avoids text "collisions" in Conference or "C.B." modes
- Prepare transmission text lines on bottom screen while normal transmissions are received on upper screen
- Large capture buffer for incoming/outgoing text
- Printer spooling of buffer to save connect time
- Dump buffer to printer, disk or communications line
- Send all 26 ASCII control codes
- Status line shows printer, buffer, and UART status
- Supports 110, 300, 1200 Baud
- Selectable UARTS
- Auto Dialing
- Optional line feed after carriage return
- Optional local echo for half-duplex
- Access to D.O.S. from within the program
- Integrates with the Word Machine 3.0 to create or edit buffer text using Word Processing facilities

“I am amazed at the broad spectrum of technical articles you publish, for both novice and advanced programmers . . .”

If you're still wondering which magazine you should buy for your TRS-80*, here's what **80 Micro** readers have to say about their #1 system-specific information source—

●“Not only is the magazine very professionally done, but I have found something in almost every issue that has been worth the price of the subscription . . .”

*Roger L. Holstege
Millersville, MD*

●“I was greatly impressed by your magazine. I got more useful information from that one issue of **80** than I have from countless other sources . . .”

*John M. Crittenden
Jackson, MS*

●“I have found **80 Micro** to be the most valuable magazine pertaining to home computers on the market . . .”

*William C. Hardin, Jr.
Charlotte, NC*

80 Micro is the magazine for every TRS-80 user—from beginner to advanced. **80 Micro** is full of tutorials, free programs, hardware modifications, new product announcements, product reviews, debugging tips, and more.

And an **80 Micro** subscription is risk-free. *If you're not completely satisfied, you'll be reimbursed for all undelivered issues.* See what **80 Micro** can do for you. It's #1 for a lot of people. Fill out this order form and send it in now. Enclose your payment and get a 13th issue *free!*

A Wave of the Wand: Model 100 Bar Code Reader

by Carl Oppedahl

edited by Ryan Davis-Wright

I first tested the Model 100 bar code reader by scanning some universal product codes (UPCs). I set up the software, got the "Wand Ready:" prompt, and, bravely grasping the wand, scanned the cover of *80 Micro*.

Nothing happened. I tried again. Nothing. Again. Nothing.

Then the Model 100 beeped. There, on the screen, was the number 07447065947. The bar code reader had worked.

As I was to realize later, you need considerable practice to scan bar codes no matter who makes the reader.

Then I pulled out the April issue of *PCM* magazine, and typed in a Basic program that lets you enter bar-coded Basic programs. I turned to a page filled with bar codes and, after two minutes of scanning, had read in an 18-line program without mistakes.

Yes, bar codes are here. And the Radio Shack reader gives you a reasonably priced way to use them.

What You Get

The bar code wand for the Model 100 is made by Hewlett-Packard. The sensor in the tip is a four-terminal device comprising a red LED (light-emitting diode), a phototransistor, and a focusing lens.

Table 1 lists the software Tandy provides. It comes on a noncopy-protected cassette. Each of the .CO files is a device driver, capable of letting the wand read a particular type of bar code.

The UPC driver reads the 12-digit (type A) codes on most grocery items, but does not read the smaller seven-

digit UPCs used on such small and high-volume items as candy wrappers and soda cans. The other two drivers read 3 of 9 and Plessey codes. The former is probably the most widely used code in industry and by the Department of Defense.

The manual says that additional drivers will be available.

How to Use the System

Setting up the bar code hardware is easy: you simply plug the wand into the Model 100's BCR connector. If you're going to use the wand from Basic, your best course is to use one of the drivers. If you're going to read code other than the ones mentioned above (2 of 5, for example), you'll need to write your own driver.

The reliability of a scan depends on both the hardware and software. In this case, both perform well.

UPC codes, for example, appear on plastic, metal, and paper, with varying reflectivity and contrast. The wand does a good job of reading them all. And some codes appear on curved sur-

faces, so that even with a steady hand you'll get some variation of scanning rate. This can only be corrected by the software, and the UPC driver program does it well.

The 3 of 9 driver read the *PCM* program without any problems.

I didn't test the Plessey driver beyond the demonstration code provided with the wand.

The Documentation

The documentation does a pretty good job of introducing the wand and software to the novice. It illustrates machine-language driver routines with demonstration programs

written in Basic.

It is lacking, though, in several areas. First, the manual lacks a full, formal definition of what can happen when you open the WAND: device. Usually, if you attempt to open WAND:, you'll get a function call error. Under what circumstances, exactly, can you open the device? It turns out that you can open it after executing the driver program with the RUNM command, or after loading it with LOADM and calling it with CALL 61824. The manual leaves this unclear. And, there is no index for a reference.

Also, the manual does not adequately warn you about the possibility of overwriting areas of RAM, thus damaging or destroying files. This can happen if you load another program into the area around F199 hexadecimal (hex), which is where the drivers point to. Each driver contains a routine, accessed by a CALL 61807, that protects against such a mishap. Unfortunately, the manual only discusses CALL 61807 in a box on page

12, and doesn't disclose the potential for file destruction. It should include a prominent warning about the necessity of CALL 61807 in the front of the book.

The manual is also less than clear about what can happen when the Basic program accepting BCR data executes the INPUT# or LINEINPUT# commands. If the reading is successful, the software returns the data as a character string in the INPUT# command, much as if a string were input from some other device. If the read is unsuccessful, Basic ignores the wand read. You don't get an I/O (input/output) error as you would for an unsuccessful cassette load.

Suppose you open WAND as file 1. The manual illustrates wand input with INPUT#1,A\$. But can the variable be numeric? The manual is silent on this. (The answer is yes.) And if you input a nonnumeric bar code with a command like INPUT#1,A, you won't get an error message, and the program returns a value of zero.

Suppose you try an OPEN "WAND:" or INPUT# with no wand attached. Again, you won't get an error message.

Is there any difference between INPUT# and LINEINPUT# as far as the wand is concerned? The manual doesn't say, instead lamely referring you to chapter 16 of the Model 100 user's manual, which doesn't mention the bar code reader. As it turns out, INPUT# does what one would think, returning characters only up to a comma or line terminator. For a numeric-

Bar Code Reader

INVENT.BA	1295	Demo inventory maintenance

Table 1. Programs that come with the bar code wand.

only code such as UPC, this means you'll get identical results whether using INPUT# or LINEINPUT#.

Other Warnings

My wand had a disturbing habit—it locked up about one time in 20. After an unsuccessful read, you should release the wand button before trying a second time.

Also, your Model 100 will not automatically shut off when executing a Basic program. Thus, if you're using a Basic program for wand input, it's impossible to protect against battery run-down. An ON WAND GOSUB command would have been nice; then a Basic program could turn itself off after a certain period of time.

You should be aware that the wand draws power from the Model 100. A set of batteries usually lasting 20 hours might therefore last only 14 hours under heavy wand use.

Before you use a wand driver with another program, you must compare the machine-language loading addresses and HIMEM setting to avoid conflict.

Finally, while the plug has special ridges to help it fasten securely, the Model 100 connector does not have corresponding ridges; the wand thus easily pulls loose from the Model 100.

But all in all, the bar code reader will give you a fun, convenient, and reliable way to enter programs or data into the Model 100. Just be sure you reset those RAM vectors after use. ■

A Welcome Guide

by Eric Grevstad

There are two pop preachers of the computer gospel. Puckish, cutesy Peter McWilliams is rich and famous,

widely reprinted in such journals as *People* and *Playboy*, and has recycled his same 50 pages of material into half a dozen books.

Theatrical, madcap Russ Walter is a cult hero, known mostly to Boston-area techies and programmers, who's published nine editions and revisions of one book, *The Secret Guide to Computers*.

Praise, then, to Birkhauser Boston, which persuaded Walter to make the 10th edition a mass-market paperback. It's a little rough around the edges, but the *Secret Guide* deserves a bigger audience than it could ever have as a series of underground pamphlets.

Tasteless Metaphors

Lots of books teach novices the difference between RAM and ROM, but Walter establishes himself on page one as more ambitious and more irreverent: "This book will turn you into a computer expert even if you're an idiot. In fact, some of the most famous computer experts in the world have read this book—and are idiots!"

This jokey tone continues through the whole book, though it's particularly dense in the beginning. There's some introductory nonsense about Walter's sexy young "wife" (a TRS-80), and good-humored drivel about Birkhauser's firing its editorial staff in favor of lobsters.

Walter compares computing with drug abuse—you become a user supplied by a dealer; addicted, you spend more and more for computing thrills. But he abandons the simile for the declaration "This book is about sex" and quips like, "Putting your sheathed treasure into the box's slit can feel quite sexy. But don't shove too hard. Please be gentle!" (He's talking about inserting disks.) As a comedian, Walter makes Joan Rivers look subtle.

VERBATIM DATALIFE DISKS

5" SS/DD	\$23.75
5" DS/DD	\$35.75

ENBase

ENB is a true relational data base manager that can handle data interdependencies of any complexity. Instead of storing data as individual records, ENB uses a linking system to relate data to each other. If your needs are complex, ENB is for you. Data files can span disk drives, including hard disk. (Requires 48K, Allen Gelder Software.)

\$134.95

MAXI MANAGER II

MAXI MANAGER II offers significant improvements over the previous version. It is 20-30% faster and can be used on a hard disk drive. Depending upon your disk space, MAXI MANAGER II allows you to create up to 32,700 records with up to 50 fields each (800 character maximum per record). Print reports in any format you choose, even merges with popular word processors for "non-form" letters. (Requires 48K, Adventure International.)

WRITE FOR OUR FREE CATALOG

MAXI CRAS

Computerize your finances! MAXI CRAS will write your checks, record income and expenses by category, and presents reports you need to analyze your financial activity. Income and expenses may be assigned to any one or more of up to 223 accounts.

\$79.95

The USR* Friendly Modem PASSWORD

Your PASSWORD to the diverse services of information networks such as the CompuServe and local bulletin boards. It has all the features including automatic tone or pulse dialing, automatic answering, and can even adjust to either 300 or 1200 baud. Password has an audio phone line monitor, and is compatible with Hayes Smartmodem commands. Two year warranty. (U.S. Robotics, Inc.)

\$349.95

VOLKSMODEM

The affordable 300 baud modem that speaks everyone's language. Operates at full or half duplex, automatic selection of originate/answer modes. Requires 9 volt battery (not included). Volksmodem is a perfect choice for your first modem. (Anchor Automation, Inc.; Cable is \$11.95 extra.)

\$69.95

PROWRITER

Get the best price on an industry standard dot matrix printer. The PROWRITER gives you speed (120 CPS), 5 character sets, 8 character sizes, proportional spacing, and built-in graphics capability. Operates with friction feed or a built-in adjustable tractor. One year warranty. (C. Itoh 8510, 10" carriage.)

\$389.95

NETWORK

A voltage surge and interference filter that can protect your computer circuitry as well as your valuable data. NETWORK provides four outlets to provide filtered power to your computer's accessories as well. Unique mounting hardware allows the illuminated switch to be placed at the front of the workstation. (Dialight Corp.)

REVIEWS

Compared to his witty industry gossip and techie puns, Walter's sexual humor is sophomoric and sometimes crude. For example, as a metaphor for using the break key, he chortles, "To put the computer out of its misery, you must give it an abortion.... You can cause a moral dilemma for traditional Catholics, who fear giving abortions and are even more afraid of 'pulling the plug.' Is God against abortions for computers?"

That's offensive. If there's one thing right-to-lifers and pro-choice advocates agree on, it's that abortion isn't funny.

After the first 15 or 20 pages, though, Walter settles down to write an excellent introduction to computers in general and Basic in particular.

The even-numbered chapters (2, 4, and 6) contain easy, intermediate, and advanced Basic lessons. Walter takes Basic seriously. Most pages introduce two or three new ideas, and the sample programs become sophisticated quite early—with only Print, Data, and For...Next statements, you're writing a program that creates a nicely tabbed and formatted calendar. The steps after the first program, PRINT 5+2, seem to fly by, but Walter's organization makes them logical progressions.

The odd-numbered chapters discuss computers collectively, specifically, and in terms of applications. If Walter's good at Basic, he's superb at micro architecture. There are a few sweeping statements (he never quite says why 5¼-inch disks are "crum-

my," one of his favorite words), but where McWilliams dismisses silicon as "a fancy word for sand," Walter explains the differences, pros, and cons of NMOS versus CMOS chips in four sparse, sure sentences.

There are also the best, most concise brand-name evaluations I've seen—a page for each of the major manufacturers, with underlined sentences that tell exactly what rookie shoppers should be told (Ataris aren't bad but the company's made fatal mistakes, Apple IIs are primitive but have lots of software, and so on).

The Radio Shack page is a little skimpy; Walter mentions Tandy's marketing clout and various models, but there are too many TRS-80s for him to supply details on each.

Recommendations, Not Applications

Walter sets a good example for readers, following the policy of picking software before recommending hardware. For word processing, he likes the Model 4 because of SuperScript; for business, he endorses anything that runs Lotus 1-2-3. For filing, machinery is less important than PFS:File.

Business applications, along with more detail on micro design, advanced Basic, and other languages, are in Volume 2 of the *Secret Guide*; that's probably why Walter's treatment of applications software in Volume 1 seems sketchy.

The book also has two chapters of rather dated material on computers' moving into human roles—electronic romance from 1965's "computer dating" to 1980's Interlude, psychoanalysis programs such as MIT's Joseph Weizenbaum's Eliza, a lot of computer-generated prose and pictures. It's pleasant reading, but not as information-rich as the Basic and hardware chapters—or the appendices, which supply details of Basic dialect differences for specific machines, plus several first-rate indexes.

Conclusions

This is probably the most intelligent beginner's book in the field. McWilliams can write funny captions for old lithographs, but Walter's the one you'd call in the middle of a debugging session.

The one you'd call, literally. Walter has printed his home phone number in

every edition of the Guide, and welcomes questions 24 hours a day. If he's willing to do that, I'm willing to overlook his dressing up like the Wickied Witch of the West for computer seminars. ■

Spectaculator: A Simple, Tape-Based Spreadsheet

by Mare-Anne Jarvela

If you're a math student or a first-time spreadsheet user interested in a VisiCalc clone and you aren't put off by tape-based software, try Spectaculator. Formerly available for the Color Computer only, Spectaculator now lets you budget, forecast, and do mathematical calculations on your Model I, III, or 4 (in Model III mode).

Though tape-based, Spectaculator was, to my surprise, very easy to use. And its price is a plus: Compare Spectaculator's cost of \$49.95 with VisiCalc's price tag of \$199 and you know it's a bargain.

Spectaculator's spreadsheet comprises 99 columns and 99 rows that accept text, numbers, and formulas. You can enter up to 56 characters per cell (the intersection of a column and row). Numbers can be 16 digits long (with up to six digits to the right of the decimal point). To use long numbers, you change the column width, set at nine characters at the start of the program, using the CW command.

The program's useful Help screen (see Fig. 1) displays all of Spectacula-

tor's commands, with a brief explanation of their function. Press the break key to get into command mode, then the ? key to get to the help screen. (C> is the prompt for a command.) Each command has its own help screen. Pressing the ? key after entering a command provides you with an example of the command's function (see Fig. 2).

Pressing the clear and shift keys makes the cursor backspace and erase characters simultaneously; the left-arrow key lets you change an entire cell entry. The ZW command clears your worksheet so you can load another one from tape or start entering new information.

You can use two commands to enter formulas: RF for row formula and CF for column formula. The option to put an I in front of a formula results in an answer in integers; if you type D instead, six decimal places appear in the answer. The default is two decimal places. SUM adds values from the specified column or row to the figure designated by your marker; SMT gives you cumulative totals and a final total; and SQR produces the square root of the values in the row or column you specify after SQR.

The LI command prints either all or part of your worksheet. The Save op-

tion lets you save to tape and LO loads the file back in.

I found Spectaculator simple to work with and had no trouble loading the tape. The documentation, divided into five sections, is hand-holding throughout. Section 1 shows you how to load and run Spectaculator. The second chapter defines and explains the commands, while part three, a sample session, provides a simple example of how to set up, save, and print an addition table. The advanced session in chapter four includes examples of budgeting, statistics, and geometry. The fifth section contains a quick command and key reference summary.

The manual's examples were easy to follow. I learned to print, save, and load without difficulty. The documentation is enhanced by a handy reference card summarizing Spectaculator's commands. ■

Not So NICE

by R. Walter Steur

XYZT Computer Dimensions Inc.'s NICE is one of the first integrated software packages to hit

the TRS-80 market. Integrated systems are hot items in the 16-bit market and they're emerging for 8-bit computers as well. They comprise several components such as a spreadsheet, word processor, data base manager, or communications module, among which you can shift easily and quickly—Lotus 1-2-3 is the best known example. Unfortunately, the NICE system falls far short of its stated goal of being a user-friendly, ready-to-use system, despite the power of the ICPL language (interactive control and programming language) on which it's based.

What's in It for You

NICE (an acronym for New Interactive Computing Environment) is a menu-driven system that lets you manage a data base and display and print reports and forms. The package also includes a full-screen text editor called Nicepen (a licensed subset of the original Pencil I word processor) and a VisiCalc interface. A development facility helps you create your own screens, menus, data bases, and report formats. A communications facility is expected to be available in 1984.

NICE is an open system, meaning that the user can integrate his own programs into the system. It's presented as being easy to customize.

NICE is based on XYZT's ICPL, an expansion of their interactive control language (reviewed in the June/July 1982 *80 Micro*, p. 64). The sys-

tem nucleus includes the Library Support Option (LSO) module, which manages the creation, access, and control of file libraries. Files can occupy as little as one sector within a library, so LSO is very efficient at handling collections of small files. (LSO was reviewed in detail in the October 1983 *80 Micro*, p. 48).

Overview

The program comes on two single-sided, single-density, 40-track disks. The two non-system disks contain about 175K of program files. As a result, the files don't all fit on a two-drive Model I single-density system.

To initiate NICE, you enter a command line at the DOS Ready level. As the NICE program loads, it displays the computer model number (I or III) and the DOS version you're using. Then comes a full-screen NICE logo with message. Still later an "&ICPL READY" message appears. Finally, you get to see the main menu, 28 seconds (on the Model III) after you enter the command line!

Figure 3 shows the main menu. If you check to find out what the PF keys at the bottom mean, you'll encounter your first significant piece of misinformation in the manual. You're supposed to hold down the PF key combination and press a specified numeral key to perform a variety of functions throughout the system; PF acts like a control key. The manual says the combination is the shift and down-arrow keys, or the control key on the Model 4. But that doesn't work on the Models I, III, and 4. What does work is the shift key with the numeral key.

The first option on the main menu is the NICE tutorial, but more about that later.

Option 3 takes you to the letter menu, from which you can write or edit the sample letter provided using NICE's built-in editor, print the letter, and print a mailing label. If the name and address are in the data base, you can call it for use in the letter or the mailing label using a PF key to find it, but you must know the first few letters of the name.

The Business menu, option 5 of the main menu, appears to provide the primary data base input facility for the system. It lets you enter customer orders of up to five lines, customer names, print short invoices from the order file or from keyboard input, view orders on file, enter or view calls and messages, write and review memos, enter a list of products (with codes and prices), or enter and view business contacts.

Calling option 5 from the Business menu, for example, gives you a cus-

tommer file that includes the customer's name, address, and phone number. Using the PF keys defined at the bottom of the screen, you can view records in the file, or add, update, or delete a record.

The business contacts option of the menu contains a little surprise. The manual doesn't say you can get technical assistance by phone, but the only entry in the business contacts file lists the company name, address, technical assistance phone number, first names of the program authors, and a message urging you to call in case of problems. Apparently it's assumed the user will be able to follow the manual's directions to this point.

The inquiry menu, titled "Inquires" (*sic*), is similar to the menu I described above. Options include orders, clients, contacts, calls, memos, and products. But this menu allows retrieval only, and lists all records in the selected file in abbreviated form. The report option lets you print out all or a group of records from a data file using a header set-up and predefined format.

The VisiCalc menu provides an interface to the VisiCalc program, an editing facility for DIF (data interchange format) files, and a directory of VisiCalc files. Because both VisiCalc and NICE use large amounts of RAM, the interface calls a procedure using DOS* that saves the current NICE configuration in memory to a temporary disk file, loads and runs VisiCalc. You can use the same feature for other programs, such as full-featured word processors. Saving and re-loading the temporary NICE file does take time, however, making it inefficient to jump back and forth between NICE and an applications program.

Option 10 of the main menu gives you a submenu listing specific utilities for four DOSes. (I used DOSPLUS 3.5 for this review.)

The DOS Functions option applies to all the DOSes from this option; you can enter DOS commands or run any program you could normally run from the DOS level. This option includes some enhancements, such as a Move command that copies a specified file from one disk to another and kills the original file. I did find one limitation

\$268

Star Gemini 10X

List \$399, 2 or more, \$263 each.

This is the quality printer that has become the number one seller in the world with Commodore 120 cps, 80-132 column, 96 ASCII characters, dot matrix with true descenders, emphasized, double strike, bit image and block graphics, parallel interface standard and buffer expandable to 8K. A real winner to meet a broad range of your printing needs.

Star Gemini 15X \$418

List \$549, 2 or more, \$408 each.

Get all the Gemini features plus a 15 inch carriage to handle your report and spreadsheet needs.

\$638

Star Radix 10

List \$849, 2 or more at \$628 each.

Radix gives you a dazzling 200 cps for business applications and a beautiful letter quality mode at 50 cps all at the flip of a switch. You also get parallel and serial interfaces as standard, a 16K buffer, auto single sheet feed, a one inch paper tear off feature, bit image and block graphics, and diversified character fonts.

Star Radix 15 \$738

List \$949, 2 or more at \$728 each.

All the amazing Radix features plus a 15 inch carriage to make this a superb business machine.

\$398

Star Delta 10

List \$549, 2 or more at \$388 each.

The Delta is a cut above everything in its class. 160 cps, 80-132 column, both serial and parallel interfaces standard, diverse character fonts and symbols, bit image and block graphics, standard 8K buffer, vertical and horizontal tabs, connects directly to the new Apple IIc with no additional interface. Compare the Delta feature for feature and you'll find it's the best printer for the money.

Star Delta 15 \$588

List \$749, 2 or more at \$578 each.

All the terrific Delta features plus a 15 inch carriage

\$398

PowerType Daisywheel

List \$499, 2 or more at \$388 each.

A true daisy wheel at this amazingly low price. You must see to believe. 18 cps, proportional spacing, print pitch of 10, 12, 15 cpi, parallel and serial interfaces standard, short form tear off, and an Epson and Qume mode that makes it compatible with virtually every personal and business computer.

STAR Gemini 10 \$229 Gemini 15 \$339

Models are new and with full 6 month warranty. Discontinued now but are almost exactly like the X models, with slightly different electronics and 2 3K buffer built in. 100cps, tractor friction. Only a few left.

Introducing The Texas Computer System's IBM Compatible Personal Computer

Why buy an IBM-PC when you can get all the features and a much better keyboard at much less than the IBM costs?

The Model PC-2000 is an IBM look alike but with more functional design, larger standard memory, easier expandability, and lower cost. And it's fully IBM compatible. Compare these outstanding features:

- 2 Double sided/Double density thin line disk drives as standard equipment.
- 128K of RAM memory standard with option of onboard addition to 256K
- Heavy duty 100 watt fan cooled power supply.
- 2 RS-232 Serial ports and one Parallel printer port as standard equipment.
- 5 IBM compatible expansion slots as standard equipment.
- Fully compatible with IBM-PC peripherals and software.
- Keyboard of 96 keys designed for touch typing ease, including Enlarged Enter key, LED lights on cap lock and a separate grouping of arrow keys for easier operation.
- Full one year warranty on logic board.

Just \$1895. Configured with 128K RAM, 2 320K drives, 2 Serial RS-232 and 1 Parallel port, RGB color and composite video output. Compare a similarly equipped IBM-PC at \$2995.

CORVUS

HARD DISKS 25% Off List

5 to 180 megabyte hard disks for IBM-PC, Apple, Eagle, Heath, Zenith, DEC Rainbow, TI-PC.

New Omninet Drive

for IBM and Apple includes Multiuser Disk Server at no additional cost, as well as single user software, 3 tap boxes, manuals and transporter card. Prices begin at \$1575 for 5.5 magabytes. Up to 180 mgs. available.

We will beat any nationally advertised price!

Give us a call for outstanding prices on inventory clearance of printers, interfaces, and other peripherals.

ELECTRONIC SURGE WITH THAT JEWELERS

Curtis electronic surge protectors cost less and offer a lifetime performance warranty while protecting your valuable computer hardware and software from dangerous, potentially damaging powerline overvoltage transients – "surges, spikes, and glitches" – that can cause instant failure or drastically reduce system life. With our specially designed EMI-RFI filters, your system is protected from troublesome office equipment, general hash created by small motors, fluorescent lamps, and the like.

FINE LINES

New high-density bar codes make encoded information more space efficient than its alphanumeric counterpart. Davey S. Thornton describes the dense codes and provides a print utility for two of them, Code 128 and Tandycode.

Bar codes represent an easy, efficient way to store and retrieve information. But until recently, conventional codes like the UPC, 3 of 9, and Plessey codes used space liberally; the code took up more room than the characters it replaced. Recently, however, some high-density bar codes have been developed that use space much more efficiently, facilitating bar code applications such as data-base management and bar-coded program listings (see Fig. 1).

In this article, I'll show you how to print two of these high-density codes, Code 128 and the newly developed Tandycode (see the sidebar for more on Tandycode). In January, I'll provide you with a program that reads these codes. In the end, you'll have a complete Model III/4 bar code software system: an encoder and a decoder. In addition to this software, you'll

need a reader wand and a bar code interface box; you can find instructions for building these in *80 Micro's* June 1984 "Project 80" (p. 170).

Bar Code Basics

Two factors are of primary importance in bar code formats: error detection and data density.

Bar codes contain not only coded information identifying a specific item, but some error-trapping code as well. The two most common types of error-trapped bar codes are known as sparse code and record code.

Until recently, most bar codes provided about the same data density. Recently, however, companies have developed high-density bar codes representing both types of error detection. In

Figure 1. Comparing the density of different bar codes. Each code translates to read "80 Micro." (a.) A conventional-density code, 3 of 9, in standard format; (b.) 3 of 9 in compressed format; (c.) A high-density code, Code 128, in standard format; (d.) Code 128 in compressed format; (e.) Dense Tandycode in standard format; (f.) Tandycode in compressed format.

sparse code, the dense code is called Code 128; in record code, the new codes are HP-41C and Tandycode (see Fig. 1).

Sparse Code

Sparse code encodes binary data using more bits than the identifying data alone requires. In addition to Code 128, 3 of 9, 2 of 5, Codabar, and UPC codes are examples of sparse codes. In each of these codes, the system that represents the data value is overdefined. The 3 of 9 code, for example, can represent a total of 43 characters using 9 bits of data. This means that there are a total of 512 different code combinations possible, of which only 43 are used. Thus the name sparse code—the code has more than enough data bits to identify the item; it also provides error-detecting and error-correcting capability. Thus the major advantage with sparse code is that it's more likely to produce an error-free read. But a significant disadvantage is that sparse code reduces data density, the amount of information you can fit in a finite space.

Record Code

The second encoding method is record code. Record codes have no additional binary bits for error-detection, but they do maximize data density. They leave error-detection to a single record-check algorithm. A record-check algorithm adds the data values in a bar code and checks it against an expected value for that code. If the two values differ, the record-check algorithm generates an error message.

The most common record code is Hewlett-Packard's HP-41C. Another record code will be available soon from Tandy called Tandycode. It takes advantage of the Model 100's built-in bar code wand interface and available software.

Record code's major disadvantage lies in error detection; because it's left to a record checksum algorithm, it's more susceptible to print or intrinsic errors, such as ink spread. Its major advantage is that record code can provide 1,500–2,000 bytes or more of data to a page. Sparse code is limited to fewer than 1,000 bytes of data per page.

You have to compare the two codes to determine which best suits your needs. Tandycode will be the most common method for reading or writing data because of its high data density, but you should use an alternative when accuracy of the read is more important than code density. In such a case, Code 128 is a good alternative.

Code 128

Code 128 can encode the full 128-character ASCII set in one of the most compact sparse codes. Each code comprises three bars and three spaces with a unique start and stop code. Each code sequence contains 11 elements of a .09-inch minimum width. Code parity is defined by even numbers of bars and odd numbers of spaces (see Fig. 2). The pattern of 11 elements holds for all except the stop code, which closes out the code with an extra bar after the third space.

Code 128 has three subcodes (see Table 1) known as Codes A, B, and C. Code A contains all the standard alphanumeric keyboard characters plus control and special characters. Code B includes all upper- and lowercase alphanumeric characters plus special characters. Code C contains a set of two-digit characters from 00-99 decimal.

The last seven characters in Codes A and B and the last three characters in Code C are designated as special characters. They configure the bar code reader and its peripherals instead of being communicated to the user.

Tandycode Specifics

Tandycode consists of a full 256-code binary set or two-digit ASCII set (00-7F hexadecimal [hex]) with 80-FF hex representing European and other special-use characters. Tandycode is a modified version of North American Technology Inc.'s standard text format developed by Walter Banks and Carl Helmers. The standard, which appears in a report titled "Contemporary Applications of Optical Bar Code Technology" (North American Technology Inc., 174 Concord St., Peterborough, NH 03458) provides an in-depth look at individual codes and their applications.

Tandycode code uses both bars and spaces to represent significant data. Either a bar or a space can represent a binary logic 1. The bar or space will be twice the width of a binary logic zero (narrow bar or space). The minimum unit width for a logic zero is .012 inches because that's the minimum the Model 100 bar code reader can read. The expected nominal width is .017 inches.

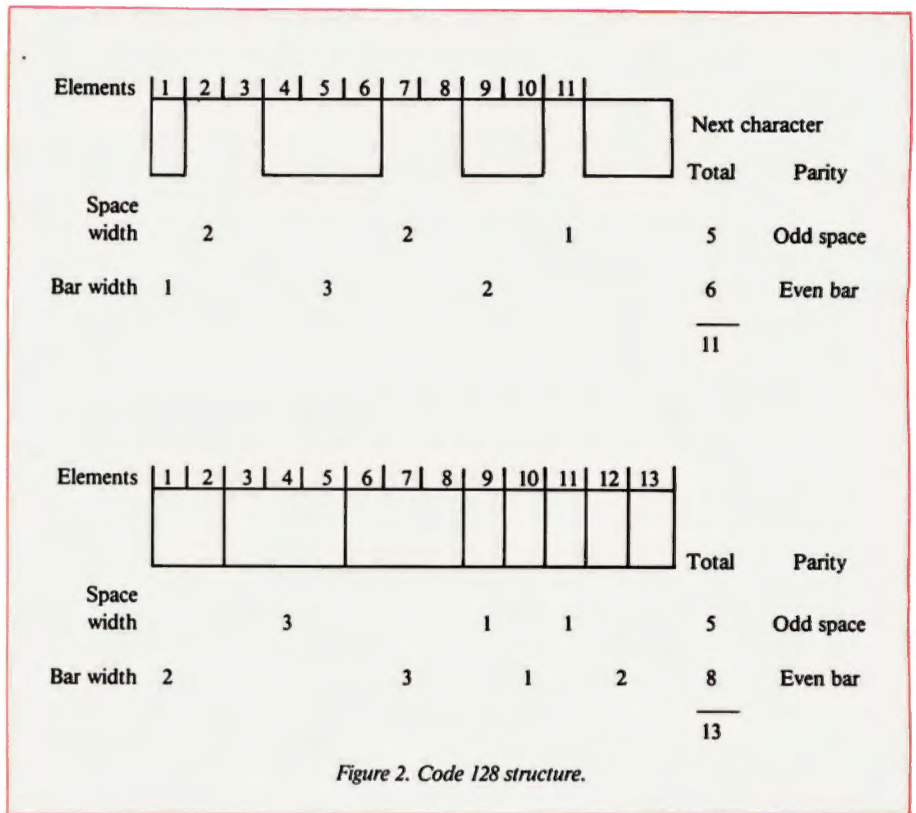

Figure 2. Code 128 structure.

Figure 3. Tandycode page format. Maximum data. Line length 6.5 inches. Note: Bar height nominal = .1 inches ± .025 inches. Eight lines to the inch.

The tolerance for code widths is plus or minus 20 percent based on the formula: tolerance = unit width/5.

The bar or space height is .1 inches plus or minus .014 inches. Given an average of four logic 1's, the average code length is about .2 inches. Using the Tandycode page format shown in Fig. 3, you could have over 2,000 bytes per 8½- by 11-inch page.

Tandycode considers each line as a physical record, and requires that you include the attribute, relative sequence, and checksum bytes with the data (see Fig. 4). The attribute byte tells the system the type of file and other information as shown in Fig. 5.

The checksum algorithm comprises 2 checksum bytes. The first checksum is an 8-bit sum of the attribute byte, relative sequence number, checksum 2, and all the data bytes using end round carry. The code calculates the checksum from this total by using the formula:

$$\text{checksum1} = 1 + \text{remainder of } ((N - 1)/255)$$

Note that this is equivalent to modulo 255 of (N - 1) plus 1 (for a more complete discussion of modulus, see "Check-Out UPCs," 80 Micro, November 1983, p. 114).

The code forms checksum 2 by loading the checksum byte with the relative sequence number, then performing a ring shift left. Next, it exclusive ORs the data bytes to the checksum. The attribute byte concludes the process of shift and XORing data.

The code doesn't perform the ring shift following XORing the attribute byte to the checksum. It then adds checksum 2 to checksum 1. The relative sequence number is a value between 1 and 255, and represents the physical record number for the input file.

Printing the Codes

A program that prints bar codes must effectively store data that represents the code's bars and spaces. Program Listing 1, Barprint (p. 52), prints two code formats: Code 128, where logic 1's print bars and logic zeros produce spaces, and Tandycode, where logic 1's produce wide bars or spaces and logic zeros generate narrow bars or spaces. Demo, in Program Listing 2 (p. 144), is a routine that tests Barprint.

Barprint has two entry points that set up the utility to print either Code 128 or Tandycode (see Table 2). You call these entry points from either Assembly language or Basic, and they pass a value of zero to define compressed print or not zero to define standard-width bar code.

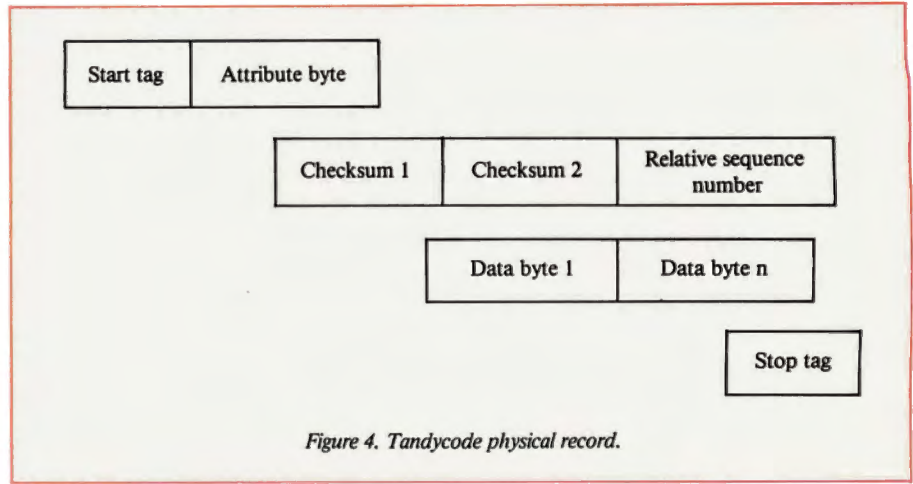

Figure 4. Tandycode physical record.

Bit	Bit Pattern			
	0		1	
	00	01	10	11
0	Machine-language program	Other file	Reserved	Basic program
1				
2	Not last line		Last line	
3	Reserved			
4	Reset			
5				
6				Set
7				

Figure 5. Tandycode attribute byte.

When the program defines Code 128 and sends data, it returns a value that represents the number of characters not printed. This happens because sparse code must use shift characters to tell the system when a code is outside the standard ASCII 128 code set. Every time you use a shift character, the number of characters in the data buffer increases by one.

For example, if the data buffer contains 20 characters and you need three shift characters, the program prints a total of 23 characters. To prevent line length errors, Barprint prints the specified number of characters, then returns the number of characters not printed.

Type in and assemble Listing 1 to create Barprint/CMD. Then type in and save Demo. Initialize the system by running Barprint from DOS Ready. An introductory screen will appear followed by DOS Ready. Go into Basic and run Demo. Demo will now use Barprint to print lines of bar code by calling it from Basic (see Fig. 5 for samples).

In your own applications, you can use Barprint to print bar codes by calling entry points for either Assembly language or Basic (see Table 2). If you use Basic entry, each line of Basic code becomes a data string. The data string must have the line length concatenated to its front (X\$ = CHR\$(Length) + X\$).

New Low Price!

LDOS 5.1

Dear Mom,

The full LDOS
5.1 system at \$69.00
is really something to
write home about!

Love,
ME

The
Master Handicapper™
Series by Professor Jones

EVALUATES FROM RACING FORM!

Age	Gender	Post (Today)
Class	Jockey (Today)	Post (Last)
Condition	Jockey (Last)	Speed
Consistency	Length	Trainer
Earnings	Time of Year	Workouts

And gives you GRAPHIC REPRESENTATION of finish

PROGRAM

GLD. Thoroughbred "Gold" Edition™
 A "Full" featured thoroughbred analysis designed for the professional and serious novice. **\$159.95** complete

EGLD. Enhanced "Gold" Edition™
 "Gold" Edition with complete Master Bettor™ system integrated onto the same disk. This powerful program will transfer all horses and scores to the bet analysis with a "single keystroke."
 (Master Bettor™ included) **\$199.95** complete

GLTD. Limited "Gold"™
 Enables Professional Handicappers to assign specific values to the racing variables "they" feel are important.

PROFESSIONAL HANDICAPPING SYSTEMS

%	%	%
Age 5	Consistency 15	Speed 10
Class 15	Jockey 15	Workouts 10
Condition 10	Trainer 5	Time of Year 0
Earnings 5	Post 10	Consistency 5
100%	Is Everything OK (Y/N)	

Create program weight based on a particular track and fine tune it for maximum win percentage. This program is designed for "ease of use". The user needs no programming experience.

(contains Integrated Bettor™) **\$299.95** complete

GD. Gold Dog Analysis™

The only professional dog handicapper on the market, includes:

- 1) Speed
- 2) Post Today
- 3) Kennel
- 4) Post Last
- 5) Distance
- 6) Condition
- 7) Running Style
- 8) Weight
- 9) All new internal weighting
- 10) NEW class indicator

If you are near a greyhound track, you can't afford not to use this program. **\$149.95** complete

(with integrated Master Bettor™) **\$199.95**

MHH. Master Harness Handicapper™

Professional software designed to provide a thorough analysis of all trotter and pacer races in North America and Canada. Features:

- | | | |
|-----------------|------------------|-------------------|
| Class | Post Positions | Time Finish |
| Driver | Track Conditions | Time Last Quarter |
| Days Since Last | Trainer | Track Rating |

Much of Barprint's power is in its versatility. If you're interested in exploring bar codes further, I'll send you a disk or tape copy of the Barprint ED-TASM source and object files plus a copy of the operating manual for \$15 postage paid within the continental

U.S. Unless you specify otherwise, I'll send a disk. ■

You can contact Davey S. Thornton at 8128 Brucar Court, Gaithersburg, MD 20877.

The Tandycode Difference

by Bradford N. Dixon

People have long recognized the potential of bar codes as a universal format for entering information into, or retrieving information from, a computer. Bar codes save typing time, reduce errors, and quickly transfer data. But a traditional problem with bar codes has been that the code takes up more space than the character it replaces—until now. Tandy has developed its own high-density bar code called Tandycode that offers all the advantages of earlier bar codes but in a significantly more compact format, one that stores 50-100 percent more code per page.

Radio Shack has been marketing a UPC, 3 of 9, and Plessey bar code package (reader wand and printing and reading software) for the Model 100 for over six months. Tandycode's introduction, along with its associated software, makes it possible for the Model 100 to accept text, data, and program listings printed in Tandycode format.

The application expected to garner the most attention is data-base management, in a system involving the Model 100 and Model 4. With a typical set-up, you'll be able to use your Model 100 to collect inventory data from labels printed in Tandycode and then transmit that information to the Model 4, where you can manipulate the data and formulate reports, graphs, and spreadsheets.

Program Listings in Bar Code Format

Bar-coded program listings could signify a new approach to applications software. Magnetic media are only reliable when handled carefully, but a printout of a program in Tandycode would be immune to problems with x-rays, magnetic fields, and rough handling. Consider the savings, too: You'd no longer have to buy costly disks or tapes to reproduce programs; you could simply use a pho-

tocopy machine. Even program upgrades could be mailed to program owners instead of having to pick them up at your Radio Shack Computer Center.

Unfortunately, Radio Shack has yet to decide on the best way to provide Tandycode products while maintaining control over their market—what would stop someone from making 60 copies of a bar code program for his local Model 100 user's group?

"There are many ways we could distribute programs and other material in bar code format," said Stewart Weinstock, Tandy's Model 100 line manager. "We're looking at the possibility of making them available to users in our Computer Centers, or in magazine form, or even as downloads from CompuServe." While Tandycode offers possibilities for convenience and ease-of-use, I can't imagine bringing a Model 100 to my local Radio Shack Computer Center to run the bar code wand across the latest offering from Fort Worth. There must be a better way.

A Model 4 Interface

David Frager, product line manager for the Model 4, said that his people were working on a direct Tandycode/Model 4 interface (rather than relying on the Model 100 to upload data). In the future, Model 4 owners can expect to see commercial hardware and software for reading and writing Tandycode with a Model 4, but no announcements are immediately forthcoming. For the time being, Tandycode use will be limited to Model 100 owners and Model III/4 owners who use Thornton's bar code system.

Bar code enthusiasts should watch to see if Radio Shack tries to make Tandycode a standard format for programming purposes. If Radio Shack plays its cards right, they might set the pace in micro-computer bar code applications. ■

PASCAL -80

The

RUSSIANS

Can't Buy it!

If we wanted to, we could sell our other products to the communists, but the Department of Defense won't let us sell them Pascal 80! NOW you can learn the language that is **too powerful for the Red Army!**

Pascal 80 is the easiest version of Pascal to learn. Hundreds of schools, including top universities are now using Pascal 80 to teach Pascal.

With the editor and compiler in memory, you can compile and run a short program in under 5 seconds. But you also get extensions to Pascal that give you screen control, random access files, calls to machine language and the ability to create turn-key packages. Pascal 80 is a nearly complete subset of standard Pascal, including structured types, records, pointer variables and files.

--TRS-80 Models I, III and 4--
Pascal 80 - \$79 + \$2 shipping
Graphics Extensions for Radio Shack hi-res board - \$39
Pascal 80 Trial Version - \$15

--for CP/M 80 2.2 or 3.0--
Kaypro, LoboMax 80, Apple, Epson Osborne, and other computers.
Call or write for other formats
Pascal 80 CP/M - \$39 + \$2 shipping

Pascal 80 School Package
(TRS-80 or CP/M versions) - \$279

CONVERT MOD III BASIC MOD 4 IBM PC TANDY 2000

If you own a TRS-80 Mod III and have resisted upgrading to the TRS-80 Mod 4, IBM PC, or Tandy 2000 because your software would not be compatible, good news has finally arrived. EMSI offers 3 powerful utilities for converting your Mod III BASIC programs to run on any of these new machines.

The programs are menu driven, very easy to use and automatically translate 95% or more of even your largest BASIC programs in just a few minutes. They insert all required spaces between keywords, recalculate PRINT@ addresses (or replace them with LOCATEs), adjust TAB addresses, correct exponentiation symbols, eliminate unnecessary spaces, remove down arrows, optionally remove REM's, and flag and list unresolved line numbers. User guides explain program operation in complete detail, offer alternatives for revising lines that need manual intervention and numerous hints for easier, more thorough conversions.

CONV3TO4 Converts TRS-80 Mod III BASIC to TRS-80 Mod 4 **\$ 49.95**
Hundreds of satisfied users. Ask to see program review (three stars) at your local Radio Shack Computer Center.

CONV3TOPC NEW! Converts TRS-80 Mod III BASIC to IBM PC* **\$139.95**

CONV3TO2000 NEW! Converts TRS-80 Mod III BASIC to Tandy 2000* **\$139.95**

*Includes convenient diskette formatter and file transfer program so that programs and files may be exchanged between machines without modems. Diskettes and guides are packaged in deluxe three ring binders. User Guides available separately for those who want complete details before ordering entire package (\$5.00 cash or MO only, credited to subsequent package order).

THE RS-232 MODEL III MODEL 4

TRS-80 MODEL III
TRS-80 Model 4
RS-232 SERIAL INTERFACE
MODIFICATION KIT

Manual Number: 1100-0992

Compulogic
1800 SOUTH HAMPTON RD. LB-41
DALLAS, TEXAS 75232
214/390-1332

State of the art technology in board design, our direct replacement of Radio Shack's* internal RS-232 board, mounts inside the Model III or 4 on the existing brackets. All cables, screws and complete mounting instructions are included. Non-technical people will find that installation is quick, straight forward and simple requiring less than 15 minutes to complete.

Total compatibility with Radio Shack* and all existing software is maintained. Software programmable baud rates from 50 to 19,200 baud are supported along with programmable word length, stop bits, and parity. May be utilized in either half of full duplex operation.

STAT21

CASINO BLACKJACK CARD COUNTING STRATEGY SIMULATION AND ANALYSIS PROGRAM

STAT21 IS NOT A GAME. IT ALLOWS YOU TO DETERMINE THE EFFECTIVENESS OF YOUR CASINO BLACKJACK CARD COUNTING STRATEGY AND/OR COMPARE STRATEGIES.

- Fast, 100% Machine Language. Simulates 100+ hands per second.
- Flexible. Virtually any casino blackjack card counting strategy can be simulated. You enter the strategy.
- User friendly. Completely table driven.
- Up to 9,999,999 hands can be simulated.
- Ability to store simulations to disk.
- Simulation results include:

Total Action	High & Low Stakes
Total Stake	Betting Analysis
Stake/Action	Insurance Analysis

- Includes Comprehensive User's Manual.

48K 2 Disk Model III or Model 4 required. Provided on *TRSDOS 1.3 Formatted Disk.

Introducing Super Utility 4/4P.

The indispensable first-aid kit for TRS-80 users only from PowerSoft.

Even the healthiest computer needs occasional "doctoring". And that's precisely what Super Utility 4/4P is for. To help you handle routine check-ups, take care of minor emergencies and perform major surgery with relative ease.

So effective it mends everything but a broken heart.

The latest generation of PowerSoft's highly-rated program contains over 60 different utilities. So you can examine file locations. Reformat without erasing data. Test or manipulate memory. Save valuable data and disks. Revive dead files. And much, much more.

So easy you can perform near miracles in no time.

Version Four enhancements make Super Utility 4/4P easier, faster and more efficient than ever. It boots and loads 50% faster. Utilizes 64K for faster file

copies and backups. It's configurable with most Model I/III/4 operating systems for fast, easy transfer of files. And introduces three function keys, including a user-definable key, for easy, single-stroke operations.

So economical you can't afford to be without it.

At only \$79.95, SU4/4P can be yours. And that includes both a master and backup disk, 148 page manual, binder and full support. The more you know about your TRS-80, the more you'll want SU4/4P. The less you know about your TRS-80, the more you'll need SU4/4P.

So place your order today by calling or writing:

Random Thoughts

Models I, III, and 4 Basic all provide a Random command, but since computers are deterministic, how valid are the numbers they produce? Robert P. Sullivan considers this question and describes how you can test the quality of your random numbers.

When you use the Basic RND command in one of your programs, you expect it to generate random numbers. But how can a computer that does nothing but process a series of finite instructions—instructions that have only one possible outcome—generate truly random numbers?

In this article, I'll look at how random number generators work and the problems involved in creating them. In addition, I'll discuss some methods used to generate random numbers, each of which exhibits specific characteristics; I'll also explain some of the tests available to check the reliability of a generator program. Any prospective program must pass as many of these tests as possible.

The RND and Random Commands

The Models I, III, and 4 use two routines, RND and Random, to generate random numbers. The RND function produces the same sequence of random numbers each time you use it, although the sequence may be so large that you won't realize the numbers are repeating.

You use the Random command in conjunction with RND. Including Random at the beginning of a Basic program changes the initial value the RND function uses to generate a series of random numbers and therefore consistently changes the set of numbers produced.

In both cases, however, the output, called pseudorandom numbers, only approximates randomness. To illustrate this idea, I'll examine the RND command.

Random Number Generation in Theory

When Basic executes the instruction $Y = \text{RND}(0)$, you expect all decimal values between zero and 1 to be equally likely results, and the number returned to be impossible to predict. But while throwing dice generates truly random numbers, a computer, because it does just what it's told, generates only pseudorandom numbers.

Random number generation is not especially important in game programs, but mathematical simulations and modeling programs must approach true randomness very closely.

These programs depend heavily on your random number generator's ability to produce numbers as randomly as possible. This, in turn, determines the quality, or goodness, of a random-number generator.

I've used the RND routine many times, and my results are almost always acceptable. When they're unacceptable, however, you may question the validity of the random number generator. Without the best possible random number generator, the results of a simulation are always subject to question.

Generating random numbers is a stochastic process, that is, it requires that the numbers generated fall within a finite range, that all numbers within that range be equally likely to appear, and that the number that comes up be unpredictable. Rolling a pair of dice is an example of a stochastic process.

How Random Is the Generator?

Computers are deterministic; they do only what you program them to do, so they can't generate truly random numbers. The instruction $Y = \text{RND}(0)$ passes control from Basic to a ROM-based machine-language generator that performs a carefully defined sequence of instructions.

These instructions operate on a starting number, or seed number, and they return the result to the Basic program as the variable Y.

Every time you turn on the computer, it supplies the ROM subroutine with a seed number. Most generators remember the last number generated and use it as the seed for the next execution.

If you know the seed number in a program, you can predict the numbers that the program generates. Therefore, the numbers aren't truly random. The logic in the generator

Illustration by Roger Leyonmark

is unchanging, and always produces a specific series of numbers for a given seed number.

Another reason that your computer can't generate truly random numbers involves its built-in precision. All numbers within a range must be equally possible. If your computer is accurate to six digits, it can't generate numbers larger than six digits long. The number 99.33333 is between 1 and 100, for example, but is not a possible result.

When you type the Basic instruction `Y=RND(0)`, the computer generates pseudorandom numbers that are close to true randomness. The challenge to designing such a generator is to produce output so nearly random that for all practical purposes it is random.

A generator that produces only even numbers or numbers consistently divisible by a constant is immediately suspect, since not all numbers are possible results.

A generator that periodically generates several identical numbers in a row is also unacceptable, as are numbers that alternately rise and fall, like the values of the trigonometric sine function.

A more obscure problem might be a generator that produces quality random numbers, then starts over, producing the same series again. How many numbers a routine generates before it starts to repeat its numbers is known as the period of a generator.

All generators exhibit a period, and much design effort goes toward making the period as long as possible. Generators for business simulation programs require a high level of confidence, and tests of tens of thousands of trials are common. Reliable generators in such cases have periods in excess of several million numbers.

When designing random number generators, you can apply many mathematical tests for undesirable characteristics. Before looking at these tests, however, I'll discuss how to generate random numbers.

Writing a Generator Program

Random number generators fall into three broad categories: additive, congruential, and shift registers. Of these, routines using shift registers are the most reliable.

A fourth, less reliable, method of generating random numbers is the mid-square generator. This method squares a seed number, producing a number larger than required. To generate a six-digit number, for example, the routine squares a six-digit number for a 12-digit

result. It then pulls the middle six digits of the product and returns them as output.

It saves the output as the seed for the next execution. You can easily write this type of generator in Basic, using the `STRING$, MID$,` and `VAL` functions. Although the results appear to be random, they do not hold up under mathematical testing, and so aren't useful for strict simulations requirements.

Additive Generators

An additive generator selects two numbers and adds them together. If the result falls within the range of acceptable output, zero to 128, for example, the program uses this number as the seed. Otherwise, the generator divides the result by 128 and uses the remainder as output.

This technique uses modulo arithmetic, which says that to express a number as a modulo, divide the number by the range and use the remainder. Here the modulo is 128.

The routine divides a number by the modulo until it finds a remainder between zero and 128, conforming to the requirement that the number fall within a finite range. If the additive number exceeds 127, the routine divides by 128 again and uses the remainder.

This type of generator is easy to program and produces what appears to be random numbers within a range. Program Listing 1 demonstrates the additive generator and reveals its flaw.

The program checks for a repeat of the starting seed numbers that signal the end of its period. Once the program starts over again, it's useless as a random number generator. Seed numbers

such as 4 and 8 have a very short period, limiting the program's utility.

A more general approach overcomes this problem. By starting with a table of numbers rather than just two numbers, you can substantially lengthen the period. By using two successive table numbers to generate random number output and replacing one of the entries in the table after each execution, the routine can repeatedly cycle through the table for seed numbers, creating a longer period.

The determination of periods for random number generators is buried deep in statistical theory. The length of the period depends on the computer's word size—the number of bits in your computer.

On a mainframe computer with a 32- or 36-bit word size, a table of 16 numbers has a period of millions of executions. Eight- or 16-bit computers require slightly longer tables for an equivalent period.

The additive generator's advantage is that it's fast. It requires only add functions, while other generators require multiplication. Additive generators are so fast that their large memory requirements for tables are often of secondary importance.

Congruential Generators

These generators are also known as linear transformation algorithms. If you attach an index subscript to the output from a congruential generator to show the output order, the generator will always conform to the following equation:

$$x = a * x + b$$

The next number is the product of a chosen factor times the current number plus a constant. The period of congruential generators depends on the numbers chosen for factors *a* and *b*. Execution is slower than in additive generators because the generator uses multiplication.

Poorly chosen factors can seriously affect the quality of generator output, but relatively small memory requirements and a longer period make this method suitable for many applications.

Program Listing 2 is an example of a congruential generator. It uses the Basic

ANYONE CAN USE OUR SOFTWARE!

MAIL PAC II and CHECKING PLUS represent a new generation of computer software. Our software doesn't even need a manual! Anyone can quickly learn to use either package by following simple, explicit on-screen instructions. But, for those of you who insist -- we've included a complete user's manual as well.

MAIL PAC II FEATURES:

High Capacity --

Stores from one to one million names in Zip Code, Numerical or Alphabetical order. The only limitation is your disk storage space.

Flexibility --

Prints your mailing list on 1, 2, 3, or 4-across labels (with up to 5 user-defined lines on each label) or as a compact, user-designed directory. The record length is completely user-defined, and each field within each of your records is completely variable (allowing storage of any number of characters for any particular address entry). Devote fields to telephone numbers, codes, or even special messages related to each particular name on file.

Powerful --

A built-in word processor allows you to create personalized form letters for each address on your list (or just a particular group of addresses).

Ease of Use --

Create new mailing lists, review existing lists, handle changes of address, delete cancelled names, sort lists, and purge duplicate names from your files. Complete on-screen instructions tell you in plain english exactly how to accomplish all of these tasks.

MAIL PAC II \$99.95

CHECKING PLUS FEATURES:

Complete Check Register --

Checking Plus stores your entire check register in a disk file, and then uses the data to balance your account, track your expenses, and help you make budget projections. Review the entire checkbook, enter checks, deposits, fees and adjustments, mark outstanding checks when paid, and get an instant cash balance at any time. All data can be viewed onscreen or printed out in report form.

Tax Preparation --

Storage of monthly and yearly totals and other important information aids in income tax preparation, for your personal use or for your accountant.

Handles the Details --

Store names and addresses for frequently written checks, then print checks to fit standard window envelopes, eliminating the need for extra typing. You can even store any comment, explanation or other message (up to 255 characters) related to a particular check.

Automatic Monthly Bill Payments --

Enter amounts and names of payees for all of your fixed-cost monthly payments, and then sit back while the system automatically prints checks.

CHECKING PLUS \$99.95

Both Programs Require 48K And At Least One Disk Drive (2 Drives For Higher Storage Capacities). And All Hard Disk Systems Are Supported.

FREE--TRS-80 Mod I,III & 4 programs supplied on DosPlus (minimum system). Complete DosPlus also available.

TIME\$ command to supply a seed number and to measure the time required for number generation. These are helpful techniques for testing. This same generator programmed in machine language is fast and occupies little memory.

Shift Register Generators

The Basic ROM generator in your TRS-80 uses a shift register routine. A shift register generator shifts the current number right or left many times, then XORs it and shifts it right or left again.

The XOR process repeats until the generator outputs a number. Program Listing 3 demonstrates the generation of numbers with the shift register technique.

(A more precise description of shift register routines involves advanced linear algebra techniques that are beyond the scope of this article.)

Using a shift register in conjunction with a congruential generator gives the highest quality random numbers. In this type of routine, the shift register generator supplies a seed to the congruential generator.

Testing the Generator

Many mathematical tests are available to test random number generators. I'll limit my discussion here to the most common tests.

To measure the quality of a generator, you should subject it to as many tests as possible, and make the final reliability decision after it passes all tests. Three of the most common tests are below.

The Serial Test

Your generator must select each number by chance. The serial test checks the degree of randomness between successive numbers to make sure that each number is unrelated to the ones previously generated. Use it to test successive pairs of generator output.

The serial test program defines and sequentially numbers an array relating successive pairs of outputs. For a range of 100, for example, it numbers 10 rows

Learn to Program Like a Professional!

THE COMPLETE BOOK OF RANDOM ACCESS & DATA FILE PROGRAMMING

Written for TRS-80™ I, II, & III - IBM™/PC - APPLE™ M/S - OSBORNE™ - HEATH™ - DEC™ - SUPERBRAIN™ - and all Computers using CP/M with Microsoft BASIC™

The last word on disk random access and file handling techniques, this series is intended for everyone — beginning programmers, businessmen and professionals will learn how to create custom programs to handle inventories, mailing lists, work scheduling, record keeping, and many other tasks, while more experienced programmers will learn advanced, professional programming techniques for faster, more efficient data storage and retrieval.

Although random access file handling is a matter of some complexity, the subject has been treated in a simple and down-to-earth fashion, so that anyone with some small familiarity with programming in Microsoft BASIC will be able to cope with the material. Each stage of learning uses a sample program as a starting point. The programs grow in capability and complexity as the books progress into all of the various aspects of file handling and record manipulation. An extensive effort has been made to keep the material coherent and every program line is explained in detail.

Volume I BASIC FILE HANDLING

- The writing of a Menu to summarize program functions
- Screen format for data entry
- The creation of a basic record
- The FIELD and LSET routines for buffer preparation
- Disk storage of random access records
- Changing or editing stored records
- The LPRINT capability from disk using three different formats
- Sorting the random file
- Searching by name or key field
- Search in "next" or "prior" fashion
- Purging deleted records
- Using disk file data for calculations
- Future expansion of data fields
- Using flags to prevent program crashes
- Date setting, printer on-line and many other routines to make a program run like a commercially written program

VOLUME I \$29.95
 Option Vol. I Program Disk
 TRS-80 Model I/III \$28.50
 TRS-80 Model II \$32.50

Volume II ADVANCED FILE HANDLING TECHNIQUES

- Relational database programming
- Comprehensive self-balancing accounting system with printouts
- Hashcoded data file manipulation -- (probably the fastest method of data retrieval). Hashing the input key and recovery method explained
- Span-blocking techniques allow creation of records longer than 256 bytes without wasted space
- Blocking & Deblocking
- Shell-Metzner sort
- In-place screen editing
- Recovery of deleted record space
- Alpha-index record retrieval
- Fast machine language/BASIC sort
- Linked list record structure and sort-merge, deleted record removal and file reorganization
- Multi-key file reorganization and record searching

VOLUME II \$29.95
 Optional Vol. II Program Disk
 TRS-80 Model I/II/III \$49.95

and 10 columns from zero to nine. It then puts the output from the generator into one of the 100 cells according to its value.

Numbers between zero and .099999 equate to zero, between .100000 and .199999 equate to one, and so on. The program tallies the number of outputs for each array cell and compares program results to the expected results.

Theoretically, after a large number (N) of tallies, N/100 tallies should be in each cell, and no patterns should appear in the final array.

The main diagonals in the array grid should not have tallies higher than the corners, the left side should have as many as the right, no column should be more or less than another, and so on.

The Serial Test's Chi Square Function

The statistical test that evaluates test results is the chi square, or goodness-of-fit test. It tests the results of experimental data against theoretical expectations.

The test squares and averages the successive differences between what you expect in theory and your actual results. The result is a chi square value. Compare this value to the appropriate value in a chi square table to determine the validity of the test.

This test measures how certain you can be that the numbers produced are truly random. This is known as a level of confidence, which usually yields a 90 percent, 95 percent, or in some cases 99 percent certainty of correct results.

When testing a random number generator, experimental results are not often precisely what you predict. In the serial test I expect N/100 counts per cell. The chi square test indicates how much variation from what I expect is due to chance, and how far off from the expected value the cells can be before the generator performs unsatisfactorily.

If the chi square statistic, as calculated from the experimental and expected data, is less than some value found in a chi square table (available in statistical texts), then the experimental data is reasonably consistent with the theoretic-

23 REGWITH	Equal withdrawals from investment to leave 0 over
24 SIMPDISK	Simple discount analysis
25 DATEVAL	Equivalent & nonequivalent dated values for oblig.
26 ANNUDEF	Present value of deferred annuities
27 MARKUP	% Markup analysis for items
28 SINKFUND	Sinking fund amortization program
29 BONDVAL	Value of a bond
30 DEplete	Depletion analysis
31 BLACKSH	Black Scholes options analysis
32 STOCVAL1	Expected return on stock via discounts dividends
33 WARVAL	Value of a warrant
34 BONDVAL2	Value of a bond
35 EPSEST	Estimate of future earnings per share for company
36 BETAALPH	Computes alpha and beta variables for stock
37 SHARPE1	Portfolio selection model-i.e. what stocks to hold
38 OPTWRITE	Option writing computations
39 RTVAL	Value of a right
40 EXPVAL	Expected value analysis
41 BAYES	Bayesian decisions
42 VALPRINF	Value of perfect information
43 VALADINF	Value of additional information
44 UTILITY	Derives utility function
45 SIMPLEX	Linear programming solution by simplex method
46 TRANS	Transportation method for linear programming
47 EOQ	Economic order quantity inventory model
48 QUEUE1	Single server queuing (waiting line) model
49 CVP	Cost-volume-profit analysis
50 CONDPFOT	Conditional profit tables
51 OPTLOSS	Opportunity loss tables
52 FQIOQ	Fixed quantity economic order quantity model
53 FQEQWSH	As above but with shortages permitted
54 FQEQPB	As above but with quantity price breaks
55 QJUECB	Cost-benefit waiting line analysis
56 NCFANAL	Net cash-flow analysis for simple investment
57 PROFIND	Profitability index of a project
58 CAP1	Cap. Asset Pr. Model analysis of project

59 WACC	Weighted average cost of capital
60 COMBPAL	True rate on loan with compensating bal. required
61 DISCBAL	True rate on discounted loan
62 MERGAMAL	Merger analysis computations
63 FINRAT	Financial ratios for a firm
64 NPV	Net present value of project
65 PRINDLAS	Laspeyres price index
66 PRINDPA	Paasche price index
67 SEASIND	Constructs seasonal quantity indices for company
68 TIMETR	Time series analysis linear trend
69 TIMEMOV	Time series analysis moving average trend
70 FUPRINF	Future price estimation with inflation
71 MAILPAC	Mailing list system
72 LETWRT	Letter writing system-links with MAILPAC
73 SORT3	Sorts list of names
74 LABEL1	Shipping label maker
75 LABEL2	Name label maker
76 BUSBKID	DCME business bookkeeping system
77 TIMECLK	Computes weeks total hours from timeclock info.
78 ACCTPAY	In memory accounts payable system-storage permitted
79 INVOICE	Generate invoice on screen and print on printer
80 INVENT2	In memory inventory control system
81 TELDIR	Computerized telephone directory
82 TIMUSAN	Time use analysis
83 ASSIGN	Use of assignment algorithm for optimal job assign.
84 ACCTREC	In memory accounts receivable system-storage ok
85 TERMSPAY	Compares 3 methods of repayment of loans
86 PAYNET	Computes gross pay required for given net
87 SELLPR	Computes selling price for given after tax amount
88 ARBCOMP	Arbitrage computations
89 DEPRSF	Sinking fund depreciation
90 UPSZONE	Finds UPS zones from zip code
91 ENVELOPE	Types envelope including return address
92 AUTOEXP	Automobile expense analysis
93 INSFILE	Insurance policy file
94 PAYROLL2	In memory payroll system
95 DILANAL	Dilution analysis
96 LOANAFDD	Loan amount a borrower can afford
97 RENTPRCH	Purchase price for rental property
98 SALELEAS	Sale-leaseback analysis
99 RRCONVBD	Investor's rate of return on convertible bond
100 PORTVAL9	Stock market portfolio storage-valuation program

cal data. You can then say with the assigned level of confidence that the generator is acceptable.

If the chi square statistic is larger than the table value, the results are inconsistent with the theoretical data. This doesn't prove that the expected results are wrong, only that the results are inconsistent. You must then conduct more tests or change your theoretical data.

While the chi square test is powerful, it has certain restrictions. The number of trials must be large enough to generate a minimum expected result of five counts per cell. This often makes the

number of trials in an experiment high.

When the experiment is complete and the test program has collected the data and performed its calculations, you can compare the calculated value to the table entry at the desired confidence level.

I define the test for this generator so that I expect N/100 counts per cell. The random number generator provides the experimental data. The chi square value shows how well it meets the test.

Program Listing 4 is an example serial test program that calculates the chi square value automatically. I set the value of N (number of trials) to 5,000.

This Basic program takes about 10

minutes to run on the Models III and 4. The large number of trials ensures meeting the limiting requirement on counts per cell. Theoretically, the program should generate 50 counts per cell.

The Frequency Test

In a frequency test, you might, for example, dimension an array at 10, translate the results into zero to nine range intervals, tally each of N random numbers, then tally the generator results into their corresponding cells.

The expected tally in each cell in this example is N/10. The frequency test in Program Listing 5 uses a chi square test to evaluate test results. Comparing the chi square value (experimental data) and the table value indicate how well the generator performs.

Number-of-Runs Test

The number-of-runs test is more complicated. It checks for results that generate too many numbers that successively increase or decrease before changing direction.

The test examines a sample of successive outputs, tallying the number of increasing and decreasing runs and cate-

Give The Clear Choice in TRS-80 Magazines

Give a gift subscription to **80 Micro**. Every month **80** serves as a shopping guide for thousands of TRS-80 users. They know exactly what they need. And they get it, at the right price and from the right place, by reading **80 Micro**'s product reviews, advertising and new product announcements.

80 Micro runs more ads than all its competitors combined. With over 30% of **80** readers buying through mail order, there's no doubt that more and more TRS-80 users are turning to **80 Micro** for shopping advice.

And of course **80 Micro** remains the #1 information source for TRS-80 users. Each issue is packed with columns for the novice and intermediate user:

Reviews—in-depth analysis and comparisons of TRS-80 products that give **80** readers the inside track to sound investments.

Pulse Train—**80** reports on Tandy and the computer industry; product development and improvements, marketing strategy, and trade shows.

New Products—announcements of the latest TRS-80 products; the specs, sources of supply and price.

Project 80—for improving applications and the versatility of the TRS-80 computer.

Easy to Buy

This year give **80 Micro** to all the TRS-80 users on your list. Just send in the coupon now! Or, for faster service call toll-free 1-800-258-5473. In New Hampshire, dial 1-924-9471 to give 12 issues of **80 MICRO** for \$24.97.

gorizing them by length. It then compares the occurrences of specific increasing and decreasing run lengths against expected data using the chi square test.

The formulas to determine how many runs of various lengths to expect (the theoretical data) are available in advanced statistical texts. Program Listing 6 shows an example of a number-of-runs test.

Other Tests of Randomness

Many other tests are available to test random number generators. A gap test tests for the number of "non-d" digits occurring between successive occurrences of some digit, d.

For example, if the first number generated is 50, the gap test looks at the number of trials that occur between the following occurrences of 50. You then use the chi square test to determine the relationship of expected and actual results.

The poker test applies probability calculations for expected values and tests for the counts of one pair, two pair, three of a kind, and other poker hands in hundreds of thousands of groups of five random numbers. Other probability tests generate expect-

ed values for testing against generator output.

The random number generators in ROM in most microcomputers are thoroughly tested and can be used with a high degree of confidence. The temptation to substitute some new generator, especially in simulations, should include as a minimum the considerations I have outlined here.

For simulations run in business, a generator must approach true randomness very closely and exhibit a long peri-

od. Using a generator of unknown properties invites disaster. ■

For more information on random number generation, see Introduction to Mathematical Statistics, by Paul G. Hoel; John Wiley and Sons, New York, NY, 1963.

The **PRODUCER**

The Professional Program Writer.

YOU CAN MULTIPLY YOUR PRODUCTIVITY WITH THIS SENSATIONAL SOFTWARE BREAKTHROUGH

Beginners can now program with no experience necessary.
Professional programmers now have a tool to save days and weeks of time.

THE PRODUCER WRITES CUSTOM PROGRAMS FOR YOU!

Why buy expensive Data Base programs that are only half effective and require the original operating system disk to run the finished program? The Producer is a true stand-alone Program Generator that can create the exact programs you want.

You don't need any previous programming experience since The Producer writes all the code for you. And when the program is finished, it runs by itself without the support of the original operating system run disk.

What Kind of Programs Can The Producer Write?

With the Producer you can create impressive, sophisticated and functional software to manage your data. The only limit is your imagination. You can quickly and easily create programs to manage such things as mail lists, personnel records, inventory control, library catalogs, loan calculations, personal finances, and maintenance schedules.

You may never again need to buy a canned program to perform a needed task related to data storage and retrieval. The Producer can write all those programs for you, including the capacity to do all standard calculations and to generate both on-screen and printed reports. The freeform report generator even allows you to design reports on your preprinted forms.

How Does The Producer Work?

The Producer itself is a sophisticated program based on years of research and development. But The Producer was written with the end user in mind and the program generation process is quite simple.

You can begin by using a planning form designed to help you organize your program ideas. The Producer then asks you a series of simple English questions to enable those ideas to be translated into a program format. You use the computer's arrow keys and graphic characters to draw the data entry screen just the way you want it.

Then with the press of a button, the program generator takes over and does all that complex coding for you in a matter of minutes. The result is a complete program, capable of running by itself. That means your customized programs may be used independently of The Producer. (A feature not possible with Data Base creations.) You may duplicate your Producer generated programs and even sell them for others to use, without paying royalties.

How Difficult Is The Producer Process to Learn?

The Producer software package makes learning simple. For the TRS-80 versions we have provided a complete audio cassette tutorial to take you through each step of The Producer process as you sit at your computer. This hands-on experience not only teaches you the process but allows you to create a program of your own design while you learn. The cassette tapes and the accompanying printed tutorial are all you will need to get started.

Later, if you have need for more specific information, you can turn to the fully indexed Producer Reference Manual. The 200 pages of documentation cover virtually any question you may have so you will never be left guessing what to do next. The Producer package also includes a quick reference card to streamline your program operation and, should you ever need technical assistance, you may call a Producer Software technician for free counsel and trouble shooting.

Is It True That I Can Both Create and Edit At Will With The Producer?

Yes! Unlike most other program generators, The Producer gives you complete freedom to design the screen any way you wish. Experiment, rearrange, "cut and paste" between trial screens. That's the kind of versatility you get. And even after your program is complete, you can change your mind. With The Producer you can edit and refine finished programs without starting over. That's a real time saving.

What Are Some Other Outstanding Features Of The Producer?

- Our B-Tree file structure gives extremely fast access to data, allows global search and replace, data entry by batch mode and automatic file rebuilding.
- The Screen Generator is the best anywhere at any price and gives full screen control including graphics. You can add, insert, or delete, and move blocks of text on screen and between screens.
- All math calculations are supported including subtotals and global recalculations.
- The Freeform Report Generator gives you an amazing versatility to design text placement, interfield calculations, and formats. You can even print reports on your standard forms.
- The Producer package also includes a free Home Inventory program and a one year subscription to The Producer Newsletter.

Owning a computer program that writes programs for you may seem like a science fiction dream. But that's exactly what The Producer does. You can now enjoy professional quality programs, custom written for your specific needs!

Here's a sampling of what Producer users are saying:

"This program has paid for itself over and over." People tell us this repeatedly. First time computer users have successfully been able to generate programs with The Producer that rival the professional quality of programs available through commercial sources.

"There are only two things you need to say about The Producer: it's easy to use and it's powerful!" The woman who told us this had used several computers before but had no programming experience. Now she is saving time, money and effort by creating the programs she needs for her office.

"Owning The PRODUCER is like having a professional programmer on call-24 hours a day. I particularly like the fact that if I design a program to do a specific job today, and later discover it is inadequate to my changing needs, I can regenerate the program with corrections in a matter of minutes." That's right. The PRODUCER gives you the ability to edit or expand your programs in any way you choose.

"The screen generator alone is worth the price! I created a professional data entry screen in minutes just after opening the package." With our screen generator, you are the artist and you are never locked into what someone else has designed for you.

"Howdid I ever live without it." This often heard quote comes from experienced programmers who are now using The Producer to generate programs in a fraction of the time it previously took to them to write programs.

"The Freeform Report Generator is an amazing feature. I never thought a product like this could give me the ability to get reports on my preprinted forms, but The Producer does it all." Yes, you can put the text anywhere on the page you want, do up to 100 interfield calculations, etc. And the Freeform is now a part of The PRODUCER package.

OTHER QUOTES FROM PRODUCER USERS

"The PRODUCER package I received was excellent. The finest software package I have ever purchased. Far beyond my expectations."
S.R. Foster, Pensacola, Florida

"I'm in love with The PRODUCER. It's one of my favorite programs."
R. Selsback, Burlingame, California

"The value of the deal, everything included, was the best I've seen to date."
G. Slusher, Martin, Kentucky

"Excellent! Above and beyond other software."
R. Hapgood, Henrietta, Texas

VERSATILITY

"The PRODUCER is the best all purpose program generator I have used. (We have tried almost all of them). The generated code is bug free, well commented and efficient."
A. Copella, Northbrook, Illinois

"This is by far my number one software and I will use it anywhere and everywhere I possibly can, both personal and in business."
R.A. Neuman, Okemos, Michigan

DOCUMENTATION

"Very well laid out and organized. One of the best I've seen."
J.D. Konkler, Columbus, Ohio

"One of the best I've seen. We write about 20 volumes of material per year. Take it from a pro, it's good."
J. Crespi, Sherman Oaks, California

QUALITY

"Thank you for an excellent program. I agree that The PRODUCER will change the entire concept of program creation in the future. But for now, you stand as the best data base management system I can buy."
E. Sung, Vancouver, B.C.

"I think The PRODUCER will make the software hackers upgrade their products to this high level quality of the PRODUCER. I'm sure you realize that there is a lot of garbage on the market."
D.J. Smith, Lombard, Illinois

TAKE ADVANTAGE OF THIS OUTSTANDING PROGRAM OFFER

The PRODUCER is the most powerful, complete and easiest to use program generator on the market and is priced far below many products that have less than half our features. Your investment will be returned many times over in complete, stand alone, customized programs it can write for you. Now available in a new and enhanced version that includes the amazing Freeform Report Generator. Call today to place your order. VISA, Master Card accepted.

Teachers need no programming experience to produce professional-quality lessons and exams with this simple, self-prompting program generator.

by Peter Savard

My Automated Courseware Development System (ACDS) is an easy-to-use, self-prompting program that teachers with no programming experience can use to write computer-based lessons, exams, and quizzes. Since ACDS is a program generator, the lessons it produces are independent of the ACDS program—you can save an exam to disk and later boot it up on any Model I or III.

ACDS leads you step by step through the development of lessons; in response to program prompts, you choose the test format and enter the questions, answers, instructions, and any text associated with the questions. You can even opt to store a student's test results on disk.

But ACDS isn't limited to the classroom. Parents can use ACDS at home to develop their own educational programs for children, college students can use the system to develop review tests, prospective drivers can put their Department of Motor Vehicles exams on disk to test themselves, and so on.

The System

ACDS comprises four programs. The Lesson Machine (Program Listing 1) writes tests in Basic.

The Graphics Worksheet (Program Listing 2) lets you combine text and graphics on the screen using simple commands.

The Menu Maker (Program Listing 3) produces a menu that displays all the tests on a disk.

The Student Reporter (Program Listing 4), stores a file with the student's answers and progress reports. If you use The Student Reporter under DOSPLUS, you should enter the date at the

Testing

1-2-3

DOS Ready prompt in the format DATE MM/DD/YY. This way, the student data file will include the correct date in its report.

Before you work with The Lesson Machine, prepare the material that you want presented in the tests. When you're ready, insert the ACDS disk in drive zero, press the reset button, and select The Lesson Machine from the main menu. A note for DOS-PLUS users: You have to open more than one file when you get into Basic. Do this by hitting the enter key at the "How many files?" prompt or by typing in BASIC -F:3 at the Basic prompt.

Setting the Lesson's Parameters

You design your lesson's format by answering a series of questions. The first question asks you under what file name you want your lesson stored on the disk. You can enter a name of up to eight characters, but the

first character must be a letter. The master program automatically adds the /BAS extension to your file name, writing it to a Basic file.

The next question asks you to which drive you want the lesson written. You must pick a number from zero to 3.

The third question asks you to give your lesson a title. It can be up to 20 characters long.

Next, you're asked if you want each test question repeated should the student answer incorrectly. If you answer yes, the question repeats itself until the student gets the right answer.

If you opt to repeat test questions, you're asked if you want the material related to the question repeated. If you answer yes, Lesson Maker displays the text that immediately precedes the question, and then repeats the question related to that text.

At the sixth prompt, you can opt to store a student's test re-

sults on disk. Using this option, you establish a record of the student's efforts in a file called Students/DAT. You can read this file using The Student Reporter program.

The seventh question gives you the option of returning to a menu. With this option, you can link your lesson with other lessons by a menu created with The Menu Maker.

Option eight lets you type in up to five lines of instructions for the student. The directions appear at the beginning of the test. Both the procedure for entering the directions and entering lines of text and questions are the same.

The ninth question asks you to define the character that separates the alternate and acceptable responses to the lesson's test questions. You can enter as many alternate answers to a question as you wish. The alternate answers must be separated

by a character not used in the answer itself, and you can't use a space to separate the answers.

The slash character is the default value, but you may use any character as a substitute.

Enter the line increment for the text/question section as your next parameter. Here you're selecting the line-number increment for the Basic program that ACDS writes. The default is 10.

Entering the Text and Questions

After you answer the test format questions, ACDS will prompt you to start entering the actual test text and question-and-answer information. Both are entered in much the same way. You're asked whether you're going to write text, a question-and-answer, or if you want to end the test (the actual prompt appears as: "(T)EXT, (Q)UESTION, or (E)ND?").

If you choose text, you're given 13 lines on which to enter information. You're limited to five lines for each question. After you make a selection, you're asked if you want to display the information on a normal display screen (60 characters per line) or on an expanded-character screen (24 characters per line).

Type in each text or question line exactly as it is to appear on the screen during the test. If you don't need all the lines allocated, type in DONE to end that page or question.

After you enter a question and type DONE, you're asked to enter the answers. Be sure that you include this information right after you enter the question, or the information will appear in the wrong section of the lesson. You can enter as many alternate answers as you wish; they'll all be considered equally correct.

You'll have the opportunity to correct your entries on a line-by-line basis before the program writes the text and questions to disk.

You can enter as many pages of text and questions as you want, in any order, up to the limits of available memo-

CP/M...The Software Key That Unlocks Your Model 4

CP/M is the standard 8-bit Z-80 operating system and many thousands of programs have been written to run under this system. With Montezuma Micro's CP/M you can run these programs on your Model 4/4P. Think about all those nationally known programs you've wanted to use. Programs like WordStar, dBASE II; SuperCalc; MultiPlan etc. With our version of CP/M 2.2 all those public domain programs on bulletin boards across the USA are available for free downloading. CP/M is the missing link that joins all this software to your Model 4/4P. Montezuma Micro's CP/M comes ready to use and requires no hardware modifications. This product has been awarded the best and highest ratings in the reviews and we are continuously improving it with you in mind. With our CP/M you get more than just a DOS. You get the other half of your Model 4/4P.

AVAILABLE NOW FOR IMMEDIATE SHIPMENT – Less Hard Disk Drive Support..... \$169
Optional Hard Disk Drive Support \$ 30

FEATURES

- Full range of floppy drive support. Dual-head and/or 80 tracks.
- Optional Radio Shack hard disk support allows partitioning and selective assignment of logical drives. Easy backup routine.
- Memory drive allows the use of the other 64K RAM bank on 128K machines.
- Modem 7, a powerful public domain communications program furnished at no charge, allows for file transfer and remote database access such as CompuServ and The Source.
- CONFIG is our flexible utility that allows complete control of all operating parameters from menus. Format, read and write more than 30 different manufacturer's disk formats with more being added rapidly.
- Disk Utility Program allows fast format, backups and verifying of ours and other manufacturer's disks.
- These CP/M utilities are included: ASM; DDT; DUMP; ED; LOAD; MOVECPM; PIP; STAT; SUBMIT; SYSGEN; and XSUB.

"WE KEEP YOU RUNNING"

ry. The program doesn't check to see if your lesson takes up more memory than available when run; you have to do so.

The program writes the text lines as Basic Print statements. The Lesson Machine automatically changes all quotes to single quotation marks. When the lesson's written, the program displays on what disk drive you'll find the lesson, and the file name with which you access it.

The Graphics Worksheet

The Graphics Worksheet is more complex than The Lesson Machine. This program has three operation modes: text, graphics, and storage.

In the text mode, a cursor appears in the upper left corner of the screen. You move the non-destructive cursor anywhere on the screen with the arrow keys. If you type a character, it's displayed at the cursor position. Type the @ character, and the next key you press repeats itself until you press any other key. When you finish entering text, press the clear key to return to the options menu.

With the graphics mode, you can draw on the screen using the shift button and the number keys. The numbers 1-4 and 6-9 define the cursor's movement as follows:

Pressing a number moves the cursor one space in the indicated direction. Pressing the shift key and a number draws in the indicated direction. Type five, and the next number you enter repeats until you press another key. Pressing the clear key returns you to the options menu.

The graphics cursor destroys any data it moves over; it's a good idea to do your graphics first, then add the text. You can use the X and Y values of the cursor (in the graphics mode) and the print position of the cursor (in the text mode) displayed at the bottom of the screen as references for future screen modifications.

Graphics Worksheet's Storage Function

The Graphics Worksheet's storage section lets you save the screen you've created. This section offers four options. The first option, Cancel, returns you to the menu, while the second op-

tion, Write, translates your screen into Basic program lines that can merge with a Basic program.

With Write, you're asked for the file name of the screen and the drive number to which you want it written. If that file name already exists you're asked if you want it replaced. You're then asked for the beginning line number and the line increment for the lines to be written.

The Save function creates a file that can be loaded back into The Graphics Worksheet for modifications.

The Load option lets you load a screen which has previously been saved for further modifications.

The Menu Maker

Operation of The Menu Maker is simple. You're asked for the file name and the drive number it's to be written on. You then enter the title of the program as it's to appear in the menu and the file name of the program used to store it on the disk. You'll have the opportunity to make corrections before going on. You can have up to nine entries. If you need less room, type in DONE, thus ending the session.

The Student Data File

The Student Reporter reads the student records file, Students/DAT, created by the lesson programs you produce. If you answered no to the sixth question in The Lesson Machine, no record is created. If you answered yes, the file grows until you delete it.

If you plan to create a menu linking various lessons together, The Lesson Machine writes a line in your lesson program that returns you to that main menu. The line number is 62040 and you'll see the statement RUN "MENU". If you give your menu another name, you must change line 62040.

Screen Designing Tips

To design a screen using The Graphics Worksheet to merge into a lesson from The Lesson Machine follow these steps:

- When writing the test, choose a line increment of 20 at the appropriate prompt.
- Enter one line of text where you plan to merge your screen.
- List the resulting lesson and record the line number of the Print statement where you plan to merge your screen.
- When you write the screen to a file in The Graphics Worksheet, use the line

number you recorded as your first line number and choose a one-line increment.

● Load your lesson program and type in MERGE followed by the file name, where the file name is the same as that you used when you wrote the screen on the disk.

● When the Ready prompt appears, the screen's included as part of your program.

Improving Loading Speed

You can reduce lesson and menu loading times by directly loading them into memory and then saving them back to the disk.

If you want to link these programs together into a menu-driven set, create the menu using The Menu Maker. Then

change line 2000 in each program so that it reads:

```
2000 RUN "MENU"
```

The name in quotations should be the file name of the menu you created. ■

Four NEW Utilities for NEWDOS/80 Versions 2.0 and 2.5

DIRSORT — Alphabetize a disk's directory *ON THE DISK!*
Make searching through a large "DIR" listing a breeze!

UNKILL — Restore a KILLED file, automatically! A long
awaited and much needed utility. A lifesaver!

DFLIST — Display a listing of a disk's KILLED files. These are
the candidates for the UNKILL utility.

RAMSPool — Put printing in the background. Use the
computer's memory as a printer buffer. A real timesaver!

*Each of the utilities is fully Model I/III
and Hard Disk compatible.*

PowerMAIL Plus™

presents the
personalized form letter.

We're making an industry standard even better!

Now your TRS-80
Model I, III or 4 can
combine a form letter
from your word
processor and names
from your mailing list to
create form letters with
the personal touch.
Using PowerMAIL Plus
and the new low-cost
TEXT-MERGE module.
Just think what that
can do for your mass
mailings!

First place winner of
the 80 Micro 1983
Reader's Choice Awards,
PowerMAIL Plus is the
newest generation of
our popular mass
mailing system. With
improved key search,
field lengths, disk I/O
and print routines. It
can even separate and
refile flags.

Of course, it offers the
fast PowerMAIL search
mode that lets you add,
delete and perform full
line editing quickly. Plus
a ten-level sorting
routine. And two dozen
user-defined flags that

enable you to print
subsets and keep track
of every mailing you
produce.

PowerMAIL Plus
prints labels of any style,
and four different
listings, including a
detailed printout called
The Salesman's
Notebook™.

Versatile, easy-to-use,
menu-driven, the system
is available on 5" or 8"
disks. It supports hard
drives as well. And
because it's disk-based,
it will store unlimited
names.

PowerMAIL Plus
... more power and
flexibility than ever
before. And now,
complete with
TEXT-MERGE, it's
only \$179.95!

To place your order,
just write or call today.

WANTED

Scriptit™ or SuperScriptit™ Users ...

Now you can use that fabulous word processor from Radio Shack with your non-Tandy printer! No point in missing out! Your printer CAN work great with SuperScriptit!

PowerDRIVER

These printers are fully supported

EPSON MX-80/100 Series
EPSON FX/RX 80/100 Series
Most all EPSON "compatibles."
C.Itoh 8510 Prowriter
C.Itoh Starwriter Daisy Wheel
C.Itoh A10-20 Daisy Wheel
Okidata 92/93 Dot Matrix

Model 4 Now Supported!

All features of SuperScriptit™ are supported to the fullest capabilities of the printer involved. Drivers are easy to install, easy to use, and no extra commands to learn!

PowerDRIVER Only \$29.95 each
PLEASE SPECIFY PRINTER TYPE

PowerSCRIPT

A HIGH-POWER modification for Scriptit™ from Radio Shack™.

Give Scriptit™ Full Power! PowerSCRIPT is a modification for the original Scriptit/LC™ which allows it to work on Model I or III and gives it the power of many of the newer expensive word processors. Define printer codes for ANY printer. Embed printer codes in the middle of a line! Alphabetized directories! User-definable printer filters! User-definable HELP-FILE! Chain files together at print time from any part of the text. Logical EXIT to DOS, optional automatic line-feed after C/R, FETCH, CHAIN, and KILL command and more! Compatible with most major DOS's. Simply use the enclosed INSTALL program, and you will be up and running in NO TIME! Includes full documentation. Get lots of new features for a very small price!

PowerSCRIPT Only \$39.95

TIED UP BY STRING COMPRESSION? CUT YOURSELF LOOSE WITH TRASHMAN™

THIS PROGRAM IS A MUST FOR EVERYONE WHO USES "BASIC" ON A TRS-80. It reduces string compression delays by 95% or more. You suffer from these delays whenever you run a BASIC program. Your computer locks up for seconds, or minutes, and you may even think it's "crashed."

TRASHMAN FIXES THE PROBLEM!

As soon as you start to use it, those delays will almost disappear. The program is very easy to use, so you don't have to be a computer programmer to take advantage of it. It's written in "machine language and uses only 578 bytes of memory for itself, plus 2 bytes for each "string" in your program. It works with other machine language programs and all the major operating systems.

IT SHOULD HAVE BEEN BUILT INTO THE COMPUTER IN THE FIRST PLACE, but since it wasn't, look at this chart, and then order your copy today.

# STRINGS	SECONDS DELAY NORMAL	PERCENT IMPROVEMENT TRASHMAN
10	.1	0
250	11.8	94
500	45.8	96.5
1000	179.6	98
2000	713.2	98.9

(Note: Not for use with The Home Accountant.)

"... in those programs that use hundreds of strings arrays, the time saved is outstanding." 80 MICRO, Jan. '83

Works great, had 45 sec. delays in printing, now almost no delays. D.T.

"We have installed TRASHMAN in one of our most major programs and it has reduced the run time by over one-third! A.W.L.

TRASHMAN is available on Disk for the TRS-80 Models I & III for just \$39.95

Attention Software Publishers: TRASHMAN may be licensed for use with your packages. Call for details.

FASTER speeds up most TRS-80 BASIC programs by 20-50%. It analyzes programs while they run, then displays a simple change to sequence variables so the ROM will find them faster.

You can use FASTER to speed up programs you've bought as well as programs you've written.

"If you . . . would like a significant increase in the run-time speed, then buy FASTER."

80 MICRO (April, 1982)

Models I & III, 16-48K Tape or Disk, all DOS's. **\$29.95**

QUICK COMPRESS

This ultra-fast machine language program reduces the size and increases the speed of most BASIC programs. It removes blanks and remarks in less than 3 seconds.

Models I & III, Tape or Disk **\$19.95**

SPECIAL: FASTER & QUICK \$39.95

ERRATIC DISK DRIVES?

RPM TO THE RESCUE

Find out if your drives need adjustment before you begin to lose files. **SAVE** on repair bills. This easy-to-use program measures the rotational speed and fluctuations of your disk drives, and warns you if they are running too fast, too slow, or unevenly.

80 MICRO (April, 1982) said: "If your drives have problems I recommend RPM before paying to get it repaired."

Customers agree: "EXCELLENT — Has paid for itself already! Saved the cost of Radio Shack's doing the speed adjust!" (D.M.) Models 1, 3 and 4 (in 3 mode). We suggest you order a copy before you need it.

RPM **\$24.95**

Time Keeper

by Arnold E. van Beverhoudt Jr.

Project Minder is perfect for businesses that manage several projects simultaneously: It tracks the amount of time each employee spends on a project and calculates the total time spent on each project.

Picture a seven-person office handling seven projects for seven clients all at the same time. Some employees spend all their time on one project; some work on several projects during each pay period. The company bills clients by the hour. Consider the amount of paperwork needed to keep track of the total time spent on each project. If your office fits this description, why not let your computer figure the project time totals?

I developed Project Minder for use in my job with a government agency (see the Program Listing, p. 95). It keeps track of the amount of time each employee spends on a particular assignment and totals the time all employees spend on any one assignment. It

also computes the approximate personnel cost of a project.

The program can help public accountants, consultants, lawyers, architects, advertising agencies, and other business people who bill clients on a per-hour, per-day, or per-assignment basis. It runs on the Model I, II, III, 4, or 2000.

Setting Up Record-Keeping Procedures

Some background on my job will help you understand how I developed the program and how it works. My office provides financial assistance to the governments of several U.S. territories, including the U.S. Virgin Islands, Guam, American Samoa, and the Northern Marianas.

Figure 1. Supervisor's assignment authorization form.

The agency has two primary functions: to prepare audits and to provide financial technical assistance by analyzing accounting practices, recommending improvements, and establishing procedures for financial operations.

Almost all of the work we do is for a specific project. For management purposes, we track employees' time on a per-hour basis so we know how much manpower each assignment requires.

When a supervisor initially makes an assignment, he enters the estimated number of man-days required to finish the task and the estimated completion date on an assignment authorization form (see Fig. 1).

Each employee records the time spent on project assignments on a biweekly time report (see Fig. 2). The report is divided into two sections, direct and indirect time.

Indirect time includes hours spent on leave and holidays and on training and administrative duties.

Direct time hours are those devoted specifically to completing an individual assignment. Direct time is further broken down into a series of coded tasks (see Fig. 3). Employees report the number of hours spent on each type of task for each assignment.

The Time Reports

My program provides three reports for direct time worked for each pay period: a summary of the hours each employee works on a particular assignment, the total time the entire office spends on an assignment, and a work history for each employee. You can review these reports on the screen or as a printout.

The detail-by-assignment report gives you basic project assignment information, including assignment number and date assigned, the detailed cumulative time each employee works on each assignment, and approximate personnel costs. Figure 4 shows a printout of a sample report—you'll find the screen display reports differ slightly from the printout versions.

The summary-by-assignment report presents the project assignment number, date completed, estimated and actual man-days required, and total hours

HOWE SOFTWARE PRODUCT GUIDE

SYSTEM DIAGNOSTIC

Is your computer working correctly? **Are you sure?** Find out for certain with System Diagnostic, which has complete diagnostic tests for every component of your TRS-80™ Model 1, 3 or 4.

- **ROM:** checksum tests.
- **RAM:** three tests including every location and data value.
- **Video Display:** character generator, video RAM, video signal.
- **Keyboard:** every key contact tested.
- **Line Printer:** character tests with adjustable platen length.
- **Cassette Recorder:** read, write, verify data.
- **Disk Drives:** disk controller, drive select, track seek, read sectors, formatting, read/write/verify data with or without erasing, disk drive timer, disk head cleaner. Single or double density, 1-99 tracks.
- **RS-232-C Interface:** connector fault, data transmission, framing, data loop, baud rate generator.

Individual or continuous testing mode, reports optionally written to line printer. Separate versions for Models 1, 3, and 4. (Cassette and ROM tests not included in Model 4 version.)

System Diagnostic (specify Model) \$99.95

SMART TERMINAL

The *intelligent* communication program. Use your TRS-80 to communicate with other computers, bulletin boards, information services, time sharing, or for data transmission and reception.

- Memory buffer holds data to be transmitted or received.
- Automatic transmission from buffer
- Automatic storage into buffer
- Character translations
- Data files compatible with word processors and BASIC programs
- True BREAK key
- Create "personalized" back-up copies.
- Model 1/3/4 version supports both cassette and disk systems.
- Model 4 (TRSDOS 6) and Model 2/12/16 (CP/M) versions available.

Model 1, 3 or 4 version \$74.95

Model 2/12/16 (CP/M) version .. \$79.95

HOME BUDGET and CHECKBOOK ANALYST

Combines the functions of a checkbook program with budget analysis, comparisons, monthly and year to date summaries, and projections.

Model 1/3/4 disk version \$59.95

Model 1/3/4 cassette version .. \$29.95

Mod. 2/12/16 or IBM/PC version \$69.95

MAILING LIST

Maintains mailing lists of up to 1328 names per disk file. Add, change, delete or find names. Sort according to data in any fields. Labels printed in 1, 2, 3, or 4 columns with adjustable tabs.

Model 1, 3 or 4 version \$69.95

Mod. 2/12 or IBM/PC version . \$79.95

TYPITALL

The most powerful TRS-80 Word Processor

TYPITALL is a word processor which is upward compatible with SCRIPSIT™ for the TRS-80™ Model 1, 3 and 4. It includes many powerful features, too numerous to list here. Following are some of them:

- Spelling checker with 29,500 word dictionary available.
- Verify 3,500 word document in less than two minutes.
- Send **any** control or graphic/special character to the printer.
- Print text on the screen before going to the printer.
- Send the formatted text to disk file for later printing.
- Merge data from a disk file during printing.
- Print formatted text during editing (spooling).
- Assign any sequence of keystrokes to a single control key.
- Call up 16 HELP screens at any time.
- Move cursor forwards or backwards by character, word, line, or page.
- Reenter the program with all text intact if you accidentally exit without saving the text.
- True Model 4 (TRSDOS 6) and Model 1/3/4 versions.

"If you like SCRIPSIT", you'll probably love TYPITALL." 80 Micro.

TYPITALL demo version \$49.95

TYPITALL complete version \$129.95

TYPITALL with spelling checker \$174.95

TRS-80™ MODEL III ASSEMBLY LANGUAGE

A complete course in assembly language, written for the **beginner**. Contents include:

- The Z-80 instruction set
- TRS-80™ Model III ROM and RAM
- Using the Editor/Assembler
- Reading, printing, and moving data
- Arithmetic operations with integers
- Floating-point and BCD numbers
- Logical and bit operations
- Cassette input and output
- USR subroutines in BASIC
- RS-232-C data communications
- Disk input and output
- The TRSDOS 1.3 disk operating system

With the book you can also purchase **Monitor #5**, a comprehensive machine language monitor and debugger program. (Monitor #5 also avail. for Models 1 & 4.)

Book only \$16.95

Monitor #5 only \$22.95

Book and Monitor #5 on disk... \$29.95

SMALL BUSINESS MANAGEMENT SYSTEM

An integrated package that allows you to use your computer to manage a small business.

- **Order Entry:** enter orders, print invoices, and recall and change invoices from past orders. Use preprinted forms or plain paper.
- **Bookkeeping:** complete general ledger by user-defined categories.
- **Accounts Receivable:** interacts with order entry by invoice number.
- **Inventory:** complete summary of products sold by part number and price invoiced.
- **Installation package** tailors the programs to your business.

Requires minimum 2 floppy disk drives or hard disk; 80-column printer. Available for: TRS-80™ Models 1/3/4, 2/12/16, IBM/PC, Kaypro II, and many other CP/M computers.

All versions \$250.00

SMALL BUSINESS ACCOUNTING

Based on Dome Bookkeeping Record #612, this program keeps track of income, expenses, and payroll for a small business (payroll not included in cassette version). Computes monthly, through last month, and year to date summaries, balance sheet, complete payroll records.

Model 1/3/4 disk version \$59.95

Model 1/3/4 cassette version .. \$29.95

Mod. 2/12/16 or IBM/PC version \$69.95

Figure 3. Direct-time coded tasks.

by task category for each assignment (see Fig. 5).

The summary-by-employee report gives the project assignment number, assignment title, and total hours to date spent on all assignments for each employee requested (see Fig. 6).

Project Minder doesn't develop project assignment schedules or create employee time reports. Employees must still fill them out by hand.

The Program

Project Minder is menu-driven with full prompts at each stage. Independent subroutines are tied to the main menu (see Table 1).

(Note: You need more than one Basic file to run this program; if you're using DOSPLUS, make sure you call for at least two files when you get into Basic.)

To open a file, first enter a pay period date at the prompt. Then select option 2 on the main menu, "Add assignment to existing file." You'll get prompts to number and name the new assignment and list the employees on the project. Once you set up your file, you can use option 4 to enter employee hours by task for each biweekly pay period.

As you saw in Fig. 3, I assigned one-letter codes to each task. Because our agency has two functions, I needed two categories for tasks, one for auditing jobs and one for technical assistance jobs. But the task codes aren't defined within the body of the program, so they can represent anything you want.

The program calculates the personnel cost of an assignment based on an average rate of \$145 for an eight-hour day. You can change that rate by assigning a new value to variable R in line 110. To compute costs by hour, assign R the hourly rate, and change the equation $AC(A) = AD(A) * R$ to $AC(A) = TT(A) * R$ in line 4320.

The program allows a maximum of 10 assignments for each file, and a maximum of 10 employees for each assignment. In line 110 of the Listing, MA equals the maximum number of assignments, and ME the maximum number of employees. If you raise these limits above 10, modify the screen display routine in lines 8000-8610 to handle the line scroll problem.

I arranged data elements in a series of arrays. One-dimensional arrays hold basic assignment data (assignment number and title, data assigned, and estimated date of completion). Two-dimensional arrays handle the name and time distribution data for the employees on each assignment.

Two-character variable names corre-

At JMG Software we feel that we have the best prices for Model I/III/4 Software...
Now, we back that up with a new policy:

WE WILL BEAT ANY OTHER ADVERTISED PRICES FOR TRS-80 SOFTWARE!*

And not only that, but we still offer support that is unmatched in the TRS-80 software industry. We still guarantee satisfaction with the programs we sell, and our satisfaction rate is still over 99%. We also provide technical help whenever possible, and we even publish a newsletter to keep our customers up to date about our products. Simply put, JMG is THE source for TRS-80 software.

ELECTRONICS — SUBLOGIC COMMUNICATIONS — INFOCOM — LYNN
COMPUTING — IJG — CORNUCOPIA — SIMUTEK — AND MORE!

TO ALL SOFTWARE AUTHORS:

JMG Software is actively looking for new programs to carry in our line. If you have written a quality utility, game, business program, or such, then we'd be interested in seeing it. Authors guidelines available on request.

TO ORDER:

When ordering please specify the Model of computer that you own, the exact program(s) wanted, and the method of payment. We accept Check, Money Order, VISA, MasterCard, COD, and Gold. For charge cards, please specify card number and expiry date. Please remember to enclose 2.50 for shipping costs.

OUR "ORDER LINE": (416) 389-6086

If we would have a "Toll Free" number, it would cost us \$2.00 for every call we received; therefore we have chosen another method. Since almost all long distance phone orders cost LESS than \$2.00, we will GIVE you the \$2.00, and you can keep the change! And if you order by mail, ask for our "Toll Free discount", and deduct \$2.00 from your order!

OUR GUARANTEE:

We sell only top-quality software. If, however, you are unsatisfied with a product you have purchased from JMG, you may return it (in good condition) within 10 days for a refund, less a \$2.50 handling charge for programs under \$50 (\$5.00 for programs over \$50). We also ask that you send us a letter stating the reason for your return.

THE FINE PRINT:

Shipping Charges are \$2.50 in North America, \$5.00 overseas.
All prices in U.S. Funds.
Please allow 1 to 2 weeks for Personal Checks to clear.
Add \$1.50 for COD Charges.
Model III programs will also run on Mod 4 in III mode.

by United Software
ULTRATERM NOW 39.95
Version 2.0 w/Auto Logon 49.95
This communications package is one of the most versatile available. It includes a full featured intelligent terminal program, host program, direct file transfer function and hex conversion utilities for bulletin board downloading plus...
● Support for virtually all manual and auto dial modems.
● Exclusive ultra-term direct disk file transfer function allows full control from the transmitting computer and unattended operation at the receiving computer.
● Split screen feature lets you type outgoing messages on the bottom half of the screen while incoming messages are displayed on the top of the screen.
● Full line printer support.
● Universal ASCII format file transmission and reception with memory input/output buffer supports delays between characters, delays between lines, and prompt transmission for compatibility with virtually all systems.
● A counter continuously displays the amount of free memory remaining whenever the buffer is in use.
● Full featured host program that supports PRINT and PRINT graphics from basic and a terminal file, telekeys and graphics from the top of memory is included.
● Auto Dial phone numbers stored in program with single key Auto Dial.

InfoScan is an information utility that is used to organize, store and retrieve any type of useful information in any format.
It combines the features of a word processor, data base manager, and information retrieval and display utility. You compose information records on the screen using the word processing feature, in any format you like. Each record is described by 1-17 character key phrase that you specify. Once created the information file's keyphrases can be scanned as roll the screen using an impressive key scan bracket. You scroll the keyphrases thru the brackets with the arrow keys on your keyboard. When the desired keyphrase is found, you press a single key and the corresponding information record is retrieved from disk and displayed on the screen. The record displays in exactly the same format as you used to create it. You can even design your own forms to "fill in".
MOD I/III MINIMUM 48K 1 Drive

BBS-80 ONLY 74.95

by MicroSystems Software
RUN YOUR OWN BULLETIN BOARD
Your computer becomes a mini communications network. BBS-80 allows a person to exchange messages or information via the telephone. Access can be completely public, private to authorized users, or limited to certain individuals. BBS-80 can leave messages on another terminal acting as a rapid electronic mailman. BBS-80 provides some of the most advanced and most convenient features ever incorporated in a microcomputer bulletin board system including: Users may send private messages that may be ready only by the addressee. Multi-level system security allows up to 15 levels of security in both the message base and the upload/download database. BBS-80 "remembers" each regular user and stores terminal information. Security access levels last message retrieved during last call. Individual user passwords. Users may "upload" or transmit data and programs files to BBS-80. These programs may then be "downloaded" to other BBS-80 users. BBS-80 is self maintaining. Message space is automatically reclaimed when messages are deleted.
MOD I or III

THE HOME ACCOUNTANT ONLY 62.50

By Continental Software
An Outstanding Financial Planner
● Maintains up to 100 budget categories ● Keeps track of up to five checkbooks ● Prints checks, if desired ● Prints a personal balance statement, income and expense summary ● Prints net worth statement ● Provides fast bank reconciliation ● Allows the extensions on multiple diskettes ● One program handles cash checkbooks, credit cards and other liabilities and expenses ● Unlimited annual transactions, fiscal or calendar year ● Transactions may be "split" among different budget categories ● Flags transactions for tax purposes ● Maintains transaction history ● Provides Hi-Res graphics for any category by bar graph.
The program itself does just about everything you'd ask of a personal finance package! — Popular Computing, November 1982.

Figure 7. Models 4 and 2000 conversion.

spond to the data element; AN\$ is the assignment number, and DA\$ is the date assigned, for example. Table 2 lists all the program variables and the field length of each; A indicates alphanumeric fields and N indicates numeric fields. Don't use commas when you enter data in response to a program prompt.

The program limits string variables' lengths to the number of spaces available in the printed reports. If you enter more characters, the program drops the excess.

Project Minder runs as listed on a Model I, II, or III. For a Model 4 or 2000, you need to change only one line (see Fig. 7), but remember you must leave all spaces as they appear in the Listing or the program won't run properly. Model 2000 users can easily add color; Fig. 8 suggests one way to do so. You can add color at the start of each subroutine. ■

Arnold E. van Beverhoudt Jr. works for the U.S. Dept. of the Interior. He has a master's degree in business administration and is a certified public accountant. You can reach him at P.O. Box 56, St. Thomas, Virgin Islands 00801.

You Could Buy Elsewhere. But Why?

	SS/SD	SS/DD	DS/DD
Elephant Bulk Brand	15.90	17.95	22.95
Elephant Boxed Brand	17.95	19.95	25.95
Alpine Bulk Brand	15.90	17.95	22.95
Alpine Boxed Brand	16.95	18.95	23.95

Let's face it. There are a lot of disks you could buy. So while you're looking, ask yourself four questions . . . Do they require a minimum order? At Softronics, there is no minimum order. Do they have a lifetime warranty? Most don't. Ours do. Are sleeves, hub rings and labels included? Some do, some don't. Softronics does. Is shipping free with orders over \$100? At Softronics, it is.

So as you can see, there is a difference. We believe Elephant and Alpine diskettes are top quality with unsurpassed technology built in. And at these prices, with a lifetime warranty, why buy anywhere else?

Softronics Computer Systems

NEW! TRS-80 Model IV 64K or 128K Conversion Kit

Easy to install kit comes complete with 8 each 4164 (200ns) 64K dynamic RAMs and conversion documentation. Converts TRS-80 Model IV computers from 16K to 64K.

TRS-64K2. \$44.95
(Converts from 16K to 64K)

TRS-64K2PAL. \$69.95
(8-4164's with PAL Chip to expand from 64K to 128K)

DIP/IC INSERTER/EXTRACTOR TOOLS

INS-1416 (Inserts both 14/16 pin pkgs.) **\$5.49**
EX-1 (Extracts 8-24 pin pkgs.) **\$2.29**

5 1/4" Diskettes

SSDD = Single Sided Double Density
DSDD = Double Sided Double Density

ULTRA MAGNETICS

Part No.	Description	Boxed	Price
UM51401	SSDD with Hub Ring	10	\$24.95
UM52401	DSDD with Hub Ring	10	32.95

All diskettes are soft-sectored and have hub rings.
Bulk prices available on request.

DISK MINDER

• Attractive, functional disk storage system • 50 (8") or 75 (5 1/4") disk storage capacity • Easy filing and retrieving • Protects disk from dust contamination • Molded from durable smoked plastic with front carrying handle • Size: 7"W x 6 1/2"H x 9 1/4"D • Wt.: 2 lbs.

Part No.	Description	PRICE
DM75	Stores 75 (5 1/4") Diskettes.	\$19.95 each
DM50	Stores 50 (8") Diskettes.	\$29.95 each

We also specialize in integrated circuits, custom cables, power supplies, keyboards, and much, much more!

SuperSCRIPIT Printer Drivers

Easily and automatically attach your printer to SuperSCRIPIT with an ALPS software driver program. Over 100 different printers supported. No need to learn special codes. Call or write for latest Product Review Sheet describing features supported on each printer (underline, bold, proportional, etc.)

\$49 or \$59 each, depending on each printer

Use Memory as Disk* Mod 4(III) \$39

Speed up programs by using your extra memory as a drive. Use MEMDISK as your System Drive, or load files into memory for instant access. Easy to use with 1 simple command. No program changes required to access MEMDISK as if it were a disk drive. An entire MEMDISK can quickly and easily be saved to (or loaded from) floppy disk. Uses 80K of 128K memory (64K on 4P). (LDOS only.)

NEW FOR TANDY 2000

(and IBM PC)

IMPROVE PERFORMANCE & FLEXIBILITY OF YOUR PC APPLICATIONS

Use Memory as Superfast Disk \$49

RAMDISK - Use spare memory as a disk to speed up applications. (You specify RAMDISK size.) Appears to programs as a disk, but gives instant access. Easy to install and use. Superfast!

Directory / File / Backup Tools \$59

1. Display alphabetized 5-column directory listings. View entire directory at a glance on 1 screen.
2. Find a file - search thru all directories for a file name and display all occurrences.
3. Directory Tree - display directory tree structure below any name in easily readable form.
4. Backup only modified files - speed up and automate backup operation. Stores in same format as original for direct access. Great for hard disks!

User Tool Assortment \$59

1. Define a command as one key. Keyboard aid - less typing and faster data entry by defining any command string as 1 key, then press key to perform.
2. Count lines on files. Displays count.
3. Dump files in Hex and character (with scrolling).
4. Change ownership & attributes of files. You can make files hidden, read-only, or reset to original.

Attach a Serial Printer \$49

With 2 easy commands, you can attach a serial printer to the RS232 port. Complete instructions.

More ALPS Tool are available. Call or write for catalog. All products are guaranteed to perform as advertised. We provide full customer support.

GREAT IDEAS IN A DISK

GREAT IDEAS IN A CASSETTE

NOW, you can load the major programs from 80 MICRO—automatically.

LOAD 80 is a collection of the major programs from each issue of 80 MICRO including: tutorials...utilities...games...home-hobby applications...word processing programs...and more. Each program is on a formatted disk or cassette and ready to run...saving you hours of key-in time. And Model III users can now run **LOAD 80** automatically—our new disk transfer system eliminates conversions.

For less than \$2.00 per program **LOAD 80** gives you a library of over 100 quality programs in just 12 months—delivered to your home each month.

Plus, a year's subscription to **LOAD 80** saves you nearly 30% off the single disk or cassette price—that's enough for a year's subscription to 80 MICRO.

Your **LOAD 80** comes complete with user support. Just call **1-603-924-9471** any business day and you'll receive prompt assistance from our **LOAD 80** staff and the 80 MICRO Technical Editors.

To get your time-saving subscription or monthly issue of **LOAD 80** call toll free **1-800-258-5473** (in New Hampshire dial **1-924-9471**). Or fill out this coupon and send it in today.

YES! Save me time. Save me money with LOAD 80.

- YES! I like saving time and money. Send me a year of **LOAD 80** on disk for \$199.97.
- YES! I need this time saver and want to save 30% off the single cassette price. Send me a year of **LOAD 80** on cassette for \$99.97.
- YES! I want **LOAD 80** to save me money. Send me this month's **LOAD 80** disk for \$21.97 which includes postage and handling.
- Of course! I'd be a fool not to order. Send me this month's **LOAD 80** on cassette for only \$11.47. That includes postage and handling.

Foreign airmail please add .45¢ per item or \$25.00 per subscription. U.S. funds drawn on U.S. banks only.

SOUND SOFTWARE

Here's a new approach to speech synthesis—Digi-Talk digitizes speech or music you've recorded on a cassette and stores it on disk. Later, it decodes the digital signal to reproduce your original recording.

Computer-generated speech can enhance the effect of programs in a number of ways. For instance, you can provide vocal program directions or game hints, or supply direct feedback in educational programs.

Incorporating speech into TRS-80 programs usually means overcoming hardware and memory limitations. But I've developed a unique way to circumvent these drawbacks. Digi-Talk, an Assembly-language Model III program, is a software-based speech synthesizer.

The Digi-Talk program takes speech recorded on a cassette tape, digitizes it, and sends it back through the computer to reproduce speech. You can also save your speech to disk in digital format.

To run the program, you need a 48K Model III with an audio amplifier or tape player. The program stores approximately one minute of speech on a 48K machine.

Speech Problems

To reproduce speech on the TRS-80 you must overcome several obstacles. Before I address these, however, I'll explain the concepts behind creating speech.

You can produce speech by varying the pitch and volume of sound waves. By attaching an audio amplifier to your Model III, you can send sound waves through the cassette port.

A simple program can send sounds through the cassette port to produce a tone; changing the rate at which the computer sends the pulses changes the pitch. You can produce simple music using these techniques. The Model III has no volume control, however, and this limits speech capability.

Figures of Speech

The Model III accesses cassette output through port 255. Typing in OUT (255),A in Assembly language sends a value to the cassette port. Typing in IN A,(255) lets you receive a value from the cassette port.

You can send two codes to the port to produce a sound. Sending a 2 turns the pulse on, and sending a 1 turns the pulse off. Alternating quickly between pulse on and pulse off produces a tone.

The statement IN A,(255) lets your computer receive the codes. A 233 in the A register means that the cassette port has detected a sound. Receiving a 232 means that it detects no sound.

To create speech on the Model III, you can monitor the cassette input while talking into the cassette recorder microphone. The computer stores the values it receives and echoes them out through the port to reproduce speech on your audio amplifier.

Practically Speaking

While this is good in theory, monitoring the cassette port for any length of time means storing many numbers that use up memory. When your computer monitors the cassette port as someone speaks into the microphone, it receives many consecutive 233 and 232 values.

Thus, simply setting up a loop with the statement IN A,(255) and storing the values in consecutive memory locations doesn't work. You could retrieve all values and send a 1 or 2 to the cas-

sette port when the values are 232 and 233, respectively, but 48K of RAM will give you only five seconds of memory at most.

Another alternative is to store the values in bits instead of bytes. If the computer receives a 233, it sets a bit in a storage area. If it receives a 232, it resets the bit. This gives you eight times as much storage per byte as the previous method, but stores only 20 seconds of speech.

The best approach is to monitor the port and count the number of times the computer receives one value before it changes.

To do this I created a routine to set the high bit in a data byte if the first value received was a 233, and to reset it if the value was a 232 (see the Program Listing). The other 7 bits are counters.

If the next port value is the same as the first, Digi-Talk adds to the count. Otherwise, it starts a new data byte.

For example, my data might indicate that the program received 20 values of 233, followed by 98 values of 232, then 34 values of 233, and so on. This technique lets your Model III store up to 127 values in a byte. Depending on the pulses produced, that can mean quite a long speech.

Using Digi-Talk

To run the program, type in and assemble the Program Listing. Then connect the black cassette input plug from your Model III to the ear socket in your cassette recorder, and press the record and play buttons. Now connect the gray output plug (the larger gray plug) from your computer to an audio amplifier.

When you run the program, a menu of options appears. Type R to record and start speaking into the recorder microphone. Press the break key to end the recording session.

ONLY NRI GIVES YOU TOTAL COMPUTER SYSTEM TRAINING

Your hands-on training takes you inside your TRS-80 Model 4 computer to install integrated circuits and enlarge memory to 64K.

Built-in monitor displays up to 80 characters for easy word processing and spread sheet programs.

More practical experience as you install double-density floppy disk drive. Software includes TRSDOS®, DOSPLUS®, machine language monitor, and two game programs.

Electronics comes to life on your NRI Discovery Lab®.

Professional 3½ digit multimeter with Action Audio Cassette to talk you through operation and use.

9×9 dot matrix printer completes your computer system.

Model 4 Technical Reference Manual enriches your training.

Bite-size lessons build knowledge and understanding step by step.

COMPUTER • MONITOR • DISC DRIVE • PRINTER • AND SOFTWARE...

It's all included with NRI at-home training in Microcomputers and Microprocessors. And only with NRI training.

If you really want to learn how to work on computers, you have to learn how to work on computer systems. Only NRI includes a complete system with your training...total training that gives you hands-on experience with computers, peripherals, and software.

Get Inside the Famous TRS-80 Model 4 Computer

You'll work with one of the most popular computers ever designed. Learn programming techniques for troubleshooting...go inside to expand its RAM from 16K to a powerful 64K...even install a double density floppy disc drive.

You'll become familiar with computer languages...run software that demonstrates computer operation...even become proficient at modifying programs to fit your business or family computing needs.

Add High Performance Peripheral Printer

Only NRI gives you total system training with the flexible Gemini 10X printer as part of your hands-on learning. Working with it, you'll get practical experience in adding peripherals, learn maintenance and servicing operations. And you'll use it for hard copies of important programs, business records, and word processing.

Understanding Built On Experience

You start with the basics, rapidly build

on the fundamentals of electronics with bite-size lessons to master advanced concepts like digital logic, microprocessors, and computer memories.

You'll use the exclusive NRI Discovery Lab® to see what makes transistors tick, build and test working electronic circuits that duplicate key computer circuitry, construct digital logic circuits that demonstrate computer performance. And, you'll probe into the very heart of your computer using the Discovery Lab and professional digital multimeter included in your training program.

Do It at Home in Your Spare Time

NRI trains you in your own home at your convenience. You learn at your own pace, backed at all times by your own NRI instructor and the entire NRI staff of educators and engineers. They're always ready to answer questions and help you over the rough spots to keep you moving toward your goal.

Free Catalog Tells Much More... Send Today

See all the interactive training equipment you get in this state-of-the-art course in today's technology. Look over the lesson outlines and descriptions of the exciting experiments you'll perform. And look at other high-tech career fields like Robotics, TV/Video/ Audio Servicing and Data Communications.

Mail the coupon today to see how NRI can give you the skills and confidence you need to start a good-paying career as a microcomputer technician.

We accept Money Orders, Bank Wires, Certified and Personal Checks. *Personal Check orders will be processed AFTER bank clearance. *Add 3% for shipping. *Oklahomans add 6% sales tax. *Prices and availability subject to change *All sales are final. *30 day written P.O.'s are welcomed from govt. agencies, schools and Fortune 1000 firms.
Radio Shack is
TM of Tandy Corp.

If you talk too long, the program runs out of memory and crashes. You should be able to speak for 30-60 seconds.

After you press the break key, type P to hear the computer play back what you said. You'll be amazed at the reproduction quality.

To save the speech to disk, type S and a file name. Load it from disk by typing L and the file name.

Last Words

You can use the routines in Digi-Talk in your programs. Remember to leave a large amount of memory for storage. Equate the Data label to the starting memory location of the storage area and call the routines labeled Record or Play.

If you want to compile speech data, note that in the Play routine a data byte

value of zero represents the end of the speech.

If you're interested in changing the playback speed, note that the Play routine contains the statement DEFW 0000 hexadecimal in some lines to create a delay of several microseconds. Deleting these lines speeds up play back, and adding to them slows it down.

If you encounter distortion, try to record your speech more clearly, and eliminate background noise.

I suggest incorporating Digi-Talk into games or educational applications where reading instructions becomes tedious. ■

USR FRIENDLY

This technique for loading USR routines saves time, trouble, and program memory.

You may be put off by USR routines, find them complex and time-consuming, and the very thought of them makes you tense. Relax. I'll explain a painless, no-nonsense way to load USR data using the disk input/output (I/O) buffers.

I call my technique buffer parking. It saves having to set the top of memory or include long data statements in a Basic program, and you don't have to fuss with a program monitor or T-Bug. What's more, it's free: You don't use a single byte of program memory for USR storage.

The Whys and Wherefores

When you load Disk Basic, most operating systems reserve three 256-byte file buffers plus associated data control blocks. Few programs require more than two file buffers for disk file I/O, leaving you with at least one buffer with room for 255 bytes of USR data. You can always open more files if necessary.

Buffer parking has only three requirements. First, you must be able to relocate the machine-language USR subroutine (no jumps or calls to absolute addresses within the routine). Second, you need a random file containing the USR code. Finally, you have to know the addresses of the buffer(s) you'll use.

Try to use decimal form for the USR code. Integer data in least significant byte/most significant byte (LSB/MSB) format makes it hard to tell routines

apart later, because the original machine-language code isn't apparent.

Finding a Parking Space

You can't load the USR data file into a buffer until you find the buffer's starting address. The Table lists the starting addresses of buffers 1-3 for some common DOSes. TRSDOS and NEWDOS80 reserve three I/O buffers when you load Disk Basic. DOSPLUS

3.4D reserves no buffer (zero is default), but you can open three buffers when you get into Basic by typing in BASIC -F:3.

If your DOS isn't in the Table, use my Buffer Finder (Program Listing 1) to locate starting addresses. (If you need only the Table, you can skip to the next section, "Trying It Out.")

To find buffer addresses for your DOS, type in and store Listing 1. Lines

Program Listing 1. Buffer address finder.

The Key Box

Models I and III
32K RAM
Disk Basic

120-140 are for information only; you can omit them if you change 120 to 150 in line 100.

The program sets up a visual key, 1 2 3 4 5, and puts it in a random file named BUFFIND2/FIL. The program prompts you to input a buffer number and a trial address (most buffers are between loca-

tions 25450 and 30750). The program then loads the search key into the selected buffer and displays a 200-byte block of memory beginning at the start-of-search address.

If the key doesn't appear in the displayed block, press any key to move to the next 200-byte block of memory.

Continue until the key numbers appear (see Fig. 1).

The five-digit counter at the top left of the screen represents the starting address of the block. When the search key appears within the block, the digit 1 appears in memory's starting address for the target buffer. Lines 222-225 recognize and validate the key, then print the start-of-search and buffer location addresses at the bottom of the screen.

Even if you want to find all 15 I/O buffers, it should take only a few minutes. After you find each buffer address, press the break key. Then type in GOTO 150 and continue with the next buffer number.

Trying It Out

To create aUSR file, you put theUSR data into an ASCII string and put the string into a random file. The Basic program opens the random file and places the data in the buffer indicated in the Open statement.

```

260 J=USR0(0)
270 GOTO 270
```

End

To demonstrate buffer parking, I'll use a 12-byte machine-language program that fills the screen with a selected alphanumeric character (see Program Listing 2).

The object code taken from the Assembly-language listing is in hexadecimal (hex) format; you must convert it to decimal bytes. The appendix of Radio Shack's Disk Basic manual includes a useful base conversion table. I already converted the hex code in Listing 2 to decimal format.

I've also divided the program by function: Section A creates theUSR file, section B loads theUSR file into an I/O buffer, and section C executes theUSR routine. Sections A and B contain the steps necessary for buffer parking; section C follows standardUSR procedure.

Load the program and run section A to store theUSR data in the file

SCRNFILL/FIL. With the USR routine in the file, run section B by typing in GOTO 150.

The USR routine should now reside in the first 12 bytes of buffer 2. To check it, type in:

```
CLS:FORI=BTOB+11:PRINT
PEEK(I);:NEXT
```

The top of the screen displays the 12 bytes of the USR routine loaded from SCRNFILL/FIL.

Now type GOTO 240 to run section C. Type in a character, and the screen instantly fills. Line 250 prints the character at screen position zero. Line 260 calls the USR routine, which repeats printing the character 1,023 times.

File It

You can assemble any number of machine-language programs into a USR file as long as the total byte count of the routines loaded into any one buffer doesn't exceed 255. If you need more

than 255 bytes, distribute the routines among two or more buffers.

Figure 2 shows a screen display of a typical buffer loaded with 221 bytes of machine-language data representing three separate USR routines. The highlighted decimal values indicate the first byte of each routine; they're the starting addresses you enter in their respective DEFUSRn statements.

It takes only two Basic program lines to load and define the locations of the three USR routines. In this example, the starting address is that of NEWDOS80 buffer 3:

```
80 OPEN"R",3,"USR&/FIL:1":GET3,1:
CLOSE
85 DEFUSR0=26949:DEFUSR1=27011:DEF
USR2=27052
```

That's all there is to buffer parking. Give it a try; it could become one of your favorite programming tools. ■

Leland M. Phelps is a mechanical engineer who has been programming in Basic since 1964. You can reach him at P.O. Box 27, Route 3, Northfield, MN 55057.

Figure 2. USR routines in an I/O buffer (221 bytes).

COPYCAT 3

NOW YOU CAN DUPLICATE VIRTUALLY ALL OF YOUR TRS-80 DISKETTES

COPYCAT 3 will allow you to make an exact duplicate of virtually all of your diskettes even if they are protected. And this includes your games and utilities. COPYCAT 3 automatically analyzes, formats, copies and verifies each track of the diskette you are duplicating. The entire process is amazingly fast, typically less than 70 seconds and even less with verify turned off.

COPYCAT 3 is intended for your personal use only, in making backup copies of your protected software.

COPYCAT 3 will run on the TRS-80 Model 3, 4 or 4P computers.

COPYCAT 3 \$49.95

Please add \$2.00 for postage and handling. CA residents add 6% sales tax. All orders are normally shipped the next business day via first class mail.

The Missing Disassembler

Here's the Model 4 disassembler that Radio Shack forgot—it translates Model 4 object code into more readable source code.

If you've bought a Model 4, you probably know that Radio Shack doesn't offer a disassembler program. And without one, you can't convert your Assembly-language programs into more readable source code. Unless you're good at reading hexadecimal and opcode, you're stuck.

The Model III disassembler is difficult to convert for the Model 4, so I wrote one myself. Disassembler is a 48K Model 4 Basic program that breaks down object code and displays or prints out the source code (see the Program Listing, p. 110).

Using Disassembler

Using the program is easy. You must first know the memory location of the routine you want to disassemble. Enter the starting address in decimal or hexadecimal (hex) format. For hex entries, use the form &HNNNN or NNNNH.

The address must be in the range zero to 65535 (FFFFH). If you answer with a negative number, Disassembler converts it to the correct address by adding 65536. Unless you stop disassembly by pressing the break key, the program continues running; it recycles to 0000 hex when it reaches the top of memory.

For a printout of the disassembled program, turn on your printer before starting. The program tests whether the printer is available and provides output accordingly (lines 200 and 380). This is a handy technique that programmers often use in Model I/III software, but the Model 4 manual doesn't document it.

Disassembler prints each address in decimal, hex, Z80 opcode, Z80 mne-

monic code, and ASCII code (see the Figure for sample output). A hex address indicates absolute and relative jumps. If the program encounters an illegal opcode, it prints "Illegal Command" and beeps.

I wrote Disassembler in standard Microsoft Model 4 Basic, and used no re-

turns to DOS or references to memory addresses. Although I use TRSDOS 6.1, the program should run under any operating system that supports the Model 4 Basic commands. ■

SPECIAL

THE VID-80™ PACKAGE

- Converts your TRS-80 Model III computer and display screen from:
64 CHARACTERS BY 16 LINES to
80 CHARACTERS BY 24 LINES
- Plugs inside your Model III - no modifications are necessary.
- Automatically "patches" most DOS programs over, to run in the new 80x24 mode.

CP/M FEATURE

- This "computer language" option makes available thousands of popular programs.
- Uses a RAM disk to create **instantaneous** disk storage.
- Will read and write 17 different disk formats.

\$39999*

VID 80™ WITH EXTENDED MEMORY OPTION

- Extends your VID-80 and Model III another 64K for a total of 112 kilobytes (K) of storage.
- Reverse Video Module

\$49999*

HEY! Model 100™ — M 10™ — NEC 8201™ Owners! Additional Storage?

portable disk drive™

**3 1/2 inch portable disk drive for the
Radio Shack Model 100 and the
Olivetti M10**

Easy

Comes ready to plug into the computer
No software installation required
Menu driven or disk BASIC operating
system included

Portable

Fits into a briefcase with the computer
Built-in rechargeable battery

Expandable

Additional drives may be plugged in

Efficient

Uses less than 1k of memory

\$499.95

Includes:

The Chipmunk, connecting cables, manual and disk

**a portable micro drive for the Radio
Shack Model 100, the Olivetti M10
and the NEC 8201**

Fast

Faster and easier than bulky cassette tape storage
Up to 50% faster than the PMD-100

Easy

Ready to plug into the computer
Operates on menu driven commands

Compact

Fits into a briefcase with your computer
Built-in re-chargeable battery for the Bullet and the
Computer

Economical

Extra wafer thin tapes store up to 64k per tape

\$299.95

Includes:

The Bullet, manual, wafer tapes, charger, connecting
cables

Now you can learn how to use your color computer for more than just games... with HOT CoCo magazine.

With the right information on programming utilities, debugging, and graphics there's no limit to what you can do with your color computer. **HOT CoCo** gives you that information. It can make your computer a versatile tool that you'll find indispensable. **HOT CoCo** is packed with:

- **Business application programs**—to help you understand what the color computer can do at the office. You can use these applications immediately because they're written in plain English.
- **Home management help**—let **HOT CoCo** show you how everyday chores can be done on your machine. You'll be surprised at just what you can do and just how much time can be saved with your Color Computer.
- **Programming tips & tutorials**—**HOT CoCo** will show you how to program. It's loaded with programming techniques and hints to help the novice and

expert programmer write and improve their programs.

- **New product reviews & announcements**—if you're looking for equipment to expand the use of your computer, **HOT CoCo**

reviews numerous hardware and software products each month. Plus, **HOT CoCo's** new product announcements let you comparison shop at home—spend more time at your computer and less time in computer stores. And **HOT CoCo** is loaded with challenging games to provide hours of fun and excitement for your whole family.

Let **HOT CoCo** show you how much time you can save with your color computer. Order **HOT CoCo** today!

Take advantage of this money-saving offer. Get 12 issues of **HOT CoCo** for only \$24.97. A 13th issue is yours FREE with pre-payment (check or credit card). Use the attached order card, the coupon, or call **TOLL FREE 1-800-258-5473**. **IN NH CALL 1-924-9471**.

YES! I want more use from my CoCo!

Send me 12 issues of **HOT CoCo** for \$24.97 now! I understand that with payment enclosed or credit card order I will receive a FREE issue making a total of 13 issues for \$24.97.

Check Enclosed MC VISA AE Bill Me \$24.97 for 12 issues

Aerocomp's Proven Best-By Test! The "DDC"

\$99.00
WINTER SPECIAL

"DDC"

Double Density Controller

★ Technical Superiority

At last! A double density controller for Model I with HIGHER PROBABILITY OF DATA RECOVERY THAN WITH ANY OTHER DOUBLE DENSITY CONTROLLER ON THE MARKET TODAY! The "DDC" from Aerocomp. No need to worry about the problems that keep cropping up on existing products. AEROCOMP'S new analog design phase lock loop data separator has a wider capture window than the digital types currently on the market. This allows high resolution data centering. The finest resolution available with digital circuitry is 125 ns (nano seconds). The "DDC" analog circuit allows infinitely variable tuning. Attack and settling times are optimum for 5-1/4 inch diskettes. The units presently on the market use a write precompensation circuit that is very "sloppy". Board to board tolerance is extremely wide - in the order of ± 100 ns. The "DDC" is accurate to within ± 20 ns. The bottomline is state of the art reliability!

★ Test Proven

Tests were conducted on AEROCOMP'S "DDC", Percom's "Doubler A" and "Doubler II" and LNW's "LNDoubler"*** using a Radio Shack TRS80*** Model I, Level 2, 48 K with TRS80 Expansion Interface and a Percom TFD100 * disk drive (Siemens Model 82). Diskette was Memorex 3401. The test diskette chosen was a well used piece of media to determine performance under adverse conditions. The various double density adapters were installed sequentially in the expansion interface.

The test consisted of formatting 40 tracks on the diskette and writing a 6DB6 data pattern on all tracks. The 6DB6 pattern was chosen because it is recommended as a "worst case" test by manufacturers of drives and diskettes. An attempt was then made to read each sector on the disk once - no retries. Operating system was Newdos/80, Version 1.0, with Double Zap, Version 2.0. Unreadable sectors were totalled and recorded. The test was run ten times with each double density controller and the data averaged. Test results are shown in the table.

★ Features

TRS80 Model I owners who are ready for reliable double density operation will get (1) 80% more storage per diskette, (2) single and double density data separation with far fewer disk I/O errors, (3) single density compatibility and (4) simple plug-in installation. Compatible with all existing double density software.

SUMMER SPECIAL \$99.00

for the Best DD Controller on the market.

"DDC" and LDOS **\$169.95**

"DDC" and Newdos 80 **\$179.95**

★ TEST RESULTS ★

MFR & PRODUCT	SECTORS LOCKED OUT (AVG)
AEROCOMP "DDC"	0
PERCOM "DOUBLER II"	18
PERCOM "DOUBLER A"	250
LNW "LNDOUBLER"	202

Note: test results available upon written request. All tests conducted prior to 8-25-81

Aerocomp's 14 day money back guarantee applies to hardware only. Specials will be prorated. Shipping \$2.00 in Cont. U.S. See opposite page for details. Add \$4.00 shipping & handling for DDC & DOS.

Data Separators

The advances that make the "DDC" great are incorporated in the new AEROCOMP Single Density Data Separator ("SDS") and Double Density Data Separator ("DDS").

★ Has your original manufacturer left you holding the bag?

If you already own a Percom "Doubler A", "Doubler II" or LNW "LNDoubler" or Superbrain, the AEROCOMP "DDS" will make it right. Look at the test results:

MFR. & PRODUCT	SECTORS LOCKED OUT	
	WITHOUT "DDS"	WITH "DDS"
PERCOM "DOUBLER II"	18	1
PERCOM "DOUBLER A"	250	0
LNW "LNDOUBLER"	202	0

Note: Same test procedures as "DDC".

OUR FAMOUS MODEL I STARTER PACKAGE

If you have a Model I and an Expansion Interface this is what you need to get started with disks. Included is one 40 track single-side disk drive complete with matching silver case and power supply, a 2-drive cable, a TRSDOS 2.3 disk operating system and TRSDOS manual plus all insurance and delivery charges to your door (lower 48 states).

Yours for only **\$239**

We also have the LNW Model I Expansion Interface available. This unit comes with 32K RAM (the maximum) for a system total of 48K, a built-in RS-232C and a one year factory warranty. We have discounted the price of this nationally known unit to only

\$339 delivered

You can add our renown "DDC" double density controller to either the Radio Shack or the LNW E/I for 80% more storage capacity on your drive. Go ahead, you deserve increased density. See the opposite page for the latest details.

\$99

TRS-80 Model III & 4 DISK CONTROLLER and DRIVE KITS

Convert your cassette Model III or 4 to disk operation with one of our complete kits. You receive our own advanced disk controller board with gold plated edge contacts capable of 4-drive operation; our own power supply; plated steel mounting towers complete with RFI shield plus all the cables and hardware necessary. Detailed instructions are included. All you need is a screwdriver and a pair of pliers. Complete kits come with 40 track single-side Tandon drives (TM100-1) or just order the basic kit and pick the drives you want from the selection in the next column.

FREE TRIAL OFFER

Use your Aerocomp hardware product for up to 14 days. If you are not satisfied for ANY REASON (except misuse or improper handling), return it in the original shipping container for a full purchase price refund. **Sorry, this offer does not apply to software. Defective software will be replaced only.** Any hardware/software specials will be prorated and the software will be charged at the regular unbundled price. We have confidence in our products and we know you will be satisfied.

WARRANTY

We offer a one year warranty on parts and labor against defects in materials and workmanship. In the event service becomes necessary for any reason you will find our service department fast, friendly and cooperative. Our goal is 48 hour turnaround on all repairs!

100% BURN-IN and TEST

All our products are burned-in and fully tested prior to shipment. We want you to receive an item ready-to-go. AEROCOMP means reliability!

ORDER NOW!

Call our toll-free number service and place your order. Have your Mastercharge or Visa number ready. We will not charge your card until the day we ship your order. You may order by mail using your credit card, check or money order. Personal and company checks are welcome and cause no shipping delay as long as they are bank printed and the signature exactly agrees with the name printed on the check. We will ship surface COD with no deposit but all COD's require cash or a cashier's check on delivery. Texas residents add 6% State Sales Tax for hardware only. No tax collected on out of state shipments. Canadians add \$20 to your orders if over \$500 for customs documentation.

THE DATING GAME

CP/M Plus for the Model 4 has an annoying habit:
When you answer its date prompt, it records
the following day's date on your disk.
Here's how you can correct the problem.

I waited a year for CP/M Plus for the Model 4. And since I wasn't interested in waiting another year for Radio Shack to fix its bugs, I took matters into my own hands.

Every time you boot up CP/M Plus and enter the date, you encounter a bug. The computer records a date one day later than the one you enter. I isolated and corrected this bug, and I'll show you how. I'll also introduce you to CP/M Plus's Basic input/output system (BIOS). Once you know your way around the BIOS, you can begin to unlock the mysteries of your operating system.

Date Stamping

The date-stamping feature of CP/M Plus records the date and time when you create or access a file. But unless you can get around its bug, all date stamps are off by one day. That can be a real problem, especially for business users who need accurate records of file use.

Of course, you can always ignore the initial date and time prompts by pressing only the enter key. But then if you use date/time stamps, you get the default date, Dec. 15, 1982. That's even worse than being one day off.

CP/M Plus's Date.COM utility is much better. With the Date Set command, you can type in the correct date and time. But Date.COM isn't the ultimate solution. The utility requires an extra step or two, and it doesn't actually eliminate the bug.

The Key Box

Model 4
64K RAM
128K RAM with changes indicated
CP/M Plus

Identifying the Culprit

The first question I asked is why the boot-prompted date doesn't work although Date.COM does. The answer lies in the makeup of CP/M Plus. Digital Research Inc.'s CP/M Plus package includes the Basic disk operating system (BDOS), the command control processor (CCP), and transient utilities such as SID, MAC, Date, and dozens of others. These are all proven programs that run on any computer with CP/M capability.

But the BDOS can't communicate with your computer without going through a BIOS. So Radio Shack had to develop a BIOS specific to the Model 4 to complete the CP/M operating system.

When you boot up and get the date and time prompts, you're within Radio Shack's BIOS. The Date.COM utility, however, is independent of the BIOS as a part of Digital's package. The problem, then, is in the BIOS; so is the solution.

Digging In

I'll begin by exploring part of the BIOS. Be sure that you have a disk containing the symbolic instruction debugger (SID) in the default drive. At the system prompt A>, type in SID. You should see a sign-on message and a pound symbol (#), the SID prompt. Type in DCB00 to get a display of the first page of the BIOS (see Fig. 1).

Now type in LCB00 and you'll see the 8080 mnemonics for the first 11 BIOS instructions. Notice that these are all Jump (JMP) instructions. The first 36 instructions in the BIOS make up the jump table (see Table 1).

All implementations of the BIOS, regardless of manufacturer, must start with a jump table in this order. The jump vectors can vary but their relative positions within the jump table must al-

ways be the same. This lets CP/M's standard BDOS communicate with different BIOSes. In fact, the jump table is the only way the BDOS can communicate with the BIOS.

Now type in LCB70,CB97. Your screen should look like Fig. 2. This is the main cold boot subroutine; remember, the date error occurs during the boot-up process.

Notice that CB98 hexadecimal (hex) is the vector for cold boot as well as for the warm boot. Look on the screen at the instructions at CB85 hex and CB88 hex. They load the warm boot vector into the HL register and then transfer it to CB01 hex, the address of the cold boot vector in the jump table.

In this way, the system initializes itself to prevent inadvertent cold boots. These two instructions form a trap to prevent destruction of data by software calling for a cold boot.

Now for a step-by-step look at the cold boot. First, the instruction at CB70 hex disables interrupts, letting the boot proceed uninterrupted by hardware maintenance routines. Next, the stack pointer is set to 8100 hex.

The instructions from CB74 to CB7E hex set up and invoke a block move. The source address goes into the HL register, and the destination goes into DE. Then the length of the move goes into BC. An LDIR instruction performs the block move.

The ?? symbols at CB7D indicate that the Z80 instruction lacks a corresponding 8080 instruction. When this happens, the uninterpreted instruction combines with the subsequent instruction; in this case, CB7D and CB7E combine to indicate LDIR in Z80.

What does the block move do? When you load the system, the first logical sector, from 100 to 180 hex, contains the CP/M configuration data. The begin-

ning of the transient program area (TPA) is at 100 hex, so this data must move or the first program you load will overwrite it. The instructions at CB74-CB7E hex move the data to a protected area in high memory.

The instruction at CB7F calls a subroutine that initializes page zero, which contains the entry points to the BIOS and the BDOS, as well as to the file control blocks and default buffer. These aspects of CP/M are beyond the scope of this article.

The remaining instructions complete the cold boot subroutine. Take a closer look at the instruction that calls the sign-on routine at E670 hex.

The Bug Exposed

Type in DE670. You're now looking at the page of the BIOS containing the date bug (see Fig. 3).

Type in LE670,E6A2 (see Fig. 4). The first 10 instructions, from E670-E68D hex, initialize some variables in the system control block (SCB), using

*Type in DE670.
You're now looking at
the page of the BIOS
containing the date bug.
The section of code
from E702-E73A
hex is the bug's nest.*

the CP/M configuration data. The SCB is a buffer at the top of the BDOS that contains the system variables, including the date and time (see Table 2).

The next instruction calls the subroutine at E635 hex, which initializes the drive table. E696 hex prints the sign-on message, while the location of the message text is E82C-E99A hex. The instructions from E6A3-E701 hex prompt

you for the date and store your input as six ASCII digits from location E7F6-E7FB hex.

You can check this out by typing in GE6A9,E702 and entering the date at the prompt. The G command runs that section of the program in real time and breaks execution at E702 hex, returning you to the SID prompt (#). Now look at the date buffer by typing in DE7F6,E7FB. You'll see the date you just entered as ASCII digits.

Figure 5 shows the next section of code, from E702-E73A hex. You're looking at the bug's nest. Refer to Table 2, and you'll see that the date is stored in the SCB at location CAF4 hex. The method of storage is the number of days in hex since Jan. 1, 1978.

The instruction at E702 hex retrieves the ASCII code for the year from the date buffer (E7FA-E7FB hex). The subroutine at E7D9 hex converts these 2 ASCII bytes to 1 hex byte. For example, the digits 8 and 4 in ASCII become 54 hex, which is equivalent to 84 decimal.

Table 2. Names and addresses of SCB variables.

The routine tests the year with the ANI 03 instruction to determine if it's odd or even. If it's odd, a flag at E7EB hex increments from 1C to 1D hex. The year then decrements by 4E hex, which corresponds to 78 decimal. At this point, the A register holds the number of years since Jan. 1, 1978: six for 1984.

The instructions at E71B, E71E, and E721 hex set up the registers to total the days per year. The BC register holds the number of days in a regular year (365), and the DE register holds the number of days in a leap year (366).

The next 12 instructions act as a loop for the four-year cycle between leap years. Each time you add days to the HL register, the count of years in the A register decreases. When the A register reaches zero, the sequence jumps out of the loop and stores the number of days in the SCB. If any years remain in the A register at the end of the loop, the loop starts again.

The loop for 1984 begins at E724 hex. The first instruction adds 365 days to the HL register, representing 1978. The A register decreases to five and you skip the conditional jump because the A register isn't zero.

Next, the routine adds 366 days from register DE to HL. This represents 1979, so the number of days should be 365—you have an extra day. If you follow the loop through all six years, you'll see that 1979 and 1983 count as leap years. Here, at long last, is the bug. The instructions at E729 hex and E72E hex are in reverse sequence. Apparently, the programmer forgot to include 1978 in the addition, and started the loop with 1979.

The Fix

Now that you know where the bug is, how do you correct the BIOS? Unfortunately, Radio Shack doesn't supply source files for their implementation of the BIOS. But you've been using a powerful tool all along, the symbolic instruction debugger.

Don't correct the bug until you make a back-up of the system disk you regularly use. (Of course, you shouldn't be using the original disk at all, but a back-up of that disk. So you're making a back-up of a back-up.)

Use COPYSYS.COM to create another system back-up. You need CPM3.SYS and CCP.COM on this disk, so answer Y to the program's prompts. You can use PIP.COM to transfer the CCP. Then, make sure CPM3.SYS is Read/Write.

Set.COM should be in your default drive. Type in SET B:CPM3.SYS [RW], if your working copy is on drive B. Return to SID and load the system files into the TPA by typing in SID B:CPM3.SYS at the A> prompt.

The SID sign-on message should look like that in Fig. 6. The value under "Next" shows the next free address after the loaded program. PC tells you that the program begins at 100 hex, the lowest point in the TPA. These two values indicate that the loaded program occupies the space from 100-3FFF hex. The value under "End" shows the highest address available in the TPA when you've got SID.COM resident in memory.

CPM3.SYS is a reverse-order file; the first page you encounter in the TPA is actually the last page of the system. At the SID prompt, type in D04A0,04CF. Then enter DE720,E74F. You're looking at both the memory image of the bug's nest in the TPA, and the final location after it's loaded.

To get your changes onto disk, you must change the memory image. After you load the CPM3.SYS file at boot-up, the CP/M loader program transfers the modules to their final locations. If you try to save the system to disk from its high memory location, it won't be in proper sequence for the CP/M loader to handle on future boots.

To change the memory image, you replace the DAD D (19 hex) instruction at location 04A9 hex with a DAD B (09 hex) instruction. At location 04AE hex

NEXT	MSZE	PC	END
4000	4000	100	90FF

Figure 6. SID sign-on message.

04A0:	01	11	6E	01	09	3D	CA	38	E7	Ⓣ	3D	CA	38	E7	Ⓣ	3D	..n..=.8..=.8..=
04B0:	CA	38	E7	09	3D	C2	24	E7	22	F4	CA	2A	F6	E7	CD	D9	.8..=.8..*.....
04C0:	E7	21	E9	E7	AF	86	0D	23	C2	45	E7	5F	16	00	2A	F4	.!.....#.E.____*.

Figure 7. Map of corrected memory.

do the reverse, replacing a DAD B with a DAD D. This puts the leap year in its proper place, as the second year after 1978.

Type in S04A9. The SID will echo the location and give the present byte value (19). Type 09. This changes the value at 04A9. Press the period key to get out of the set mode. To change the other byte, type in S04AE. Then type 19 at the prompt, and finally, press the period key to get back to the SID prompt.

Now look at the area again by typing in D04A0,04CF (see Fig. 7). Look at the bytes circled in the figure. You should see a 09 hex at 04A9 hex and a 19 hex at 04AE hex.

You can now save the CPM3.SYS file back to disk with the command WB:CPM3.SYS,100,3FFF. This dumps the entire memory image to a file named CPM3.SYS on drive B. If you forgot to set the file already on the disk to Read/Write, you get a write error and the operation aborts.

Now you're ready to test it out. Remove the disks and turn the computer off, then on again. Insert your newly modified system disk into drive A and boot it up. Enter the date and time at the prompts. When you get the CCP prompt, A>, be sure to have Date .COM in the default drive and type in Date. You should get the right date.

Now that you have a corrected backup, you can overwrite your original back-up CPM3.SYS using COPYSYS .COM. Be sure to set the destination file to Read/Write first. I strongly advise you not to try to modify the original disk supplied by Radio Shack.

Changes for 128K RAM Systems

To correct the date utility in a 128K RAM system, type in the following:

```
SET B:CPM3.SYS[RW]
SID B:CPM3.SYS
S0538
09
.
S053D
19
.
WB:CPM3.SYS,100,5CFF
```

Armed with the utilities I've discussed, you should have no trouble spending hours exploring and experimenting with your Model 4 CP/M Plus. ■

Charles Alexander is a personnel administrator for Ford Motor Company. You can write to him at 188 E. 11th St., Clifton, NJ 07011.

Buy the Best CP/M[®] for Tandy computers.

Pickles & Trout CP/M is the product of over four years of experience with Radio Shack computers — and their users. Thousands of people use it with pleasure. So can you.

IT'S FLEXIBLE

With P&T CP/M 2, you can take advantage of every feature of your Mod II/12/16. Choose from among the 2000 or more CP/M-80 programs now on the market. Use either Radio Shack or Corvus hard disk systems. And use Radio Shack or non-Radio Shack printers, plotters, modems, terminals and other peripherals.

IT'S WELL-SUPPORTED

The fully-indexed P&T manual is understandable and comprehensive. And our experienced support staff is always available to help you.

IT'S COMPACT AND POWERFUL

P&T CP/M 2 packs a lot of power into as little as 8.5 Kbytes of RAM. Its many unique features include a master diskette that automatically copies itself, an easily-used system MENU, 20 special utilities, programmable keys, a full-screen editor, a screen print function, and many extra programming tools.

IT'S A BARGAIN

The floppy disk version of P&T CP/M 2 is only \$200. Hard disk versions are \$250. And no hardware modifications are required.

Order today or use the attached coupon to find out more about the best CP/M for your Mod II/12/16.

Rooting Out ROM Routines

The Model III's read-only memory provides many subroutines you've probably been writing by hand. Here's how you can access them.

When programming in Assembly language, you probably find yourself writing a lot of cumbersome subroutines. If so, you may have been wasting your time. The Model III's ROM already contains many useful subroutines that you can access from your programs if you know their memory locations.

I've compiled several tables that provide this information. The areas I've covered include the keyboard, video display, printer, RSTs, interrupts, device control blocks (DCBs), and ROM exits. Be careful when using ROM calls that aren't documented in your technical reference manual, because disk operating systems sometimes destroy vital memory locations the ROM subroutines use.

The Keyboard

The keyboard is memory-mapped and is located from 3801-3880 hexadecimal (hex). Whenever you press a key, the computer sets the corresponding bit in a specific ROM address. Table 1 shows how the computer decodes each key in memory.

When a program requires keyboard input, the routine accessed at 2B hex converts the keyboard memory into ASCII text. Then, 2B hex jumps to the keyboard DCB, which usually jumps to 3024 hex (unless you or the DOS modifies it). The routine at 3024 hex decodes the keyboard memory into ASCII text and returns control to the user.

Table 2 provides a list of keyboard subroutines that use the routine at 2B hex. For example, the routine at 49 hex waits until you type in a character on the keyboard; it then returns the character to the A register. The routines at 40 hex or 5D9 hex insert a line of text into the buffer that HL specifies. The routines at 358 hex and 384 hex call 2B hex and

49 hex, respectively, but do not destroy the DE register. Use caution with the latter routines, because they don't operate properly from DOS Ready.

When your program needs to detect a key quickly, it must scan the memory from 3801-3880 hex to find a specific bit pattern. The Model III ROM uses this technique to determine when you've pressed the break key. It checks the break key every 30 clock cycles if you include a call to the routine at 2BD hex; this is much faster than using the keyboard driver routine to check keys.

The Display

The video display is also memory-mapped, and it's located from 3C00-3FFF hex. Each byte represents one of the 1,024 character positions on the screen. Table 3 describes the ROM calls and important addresses for the video display.

If you load the video memory with an ASCII character, that character appears on the screen. To print a character on the screen, call the routine at 33 hex. This routine loads the C register with the character from the A register, jumps to the video DCB, and usually jumps to the driver routine at 473 hex. This driver provides screen protection, a blinking

cursor, a definable cursor, and relative cursor positioning (PRINT@). The routine at hex address 473 uses the extra bytes in the DCB to define the cursor character and position.

The Printer

The printer is a port-mapped device at port number 248 (0F8 hex). When the computer sends output to this port, the printer prints a character. Input from this port provides the printer's current status. Table 4 lists the bit patterns for printer status.

When you tell the computer to print something, it calls the routine at 3B hex. This routine jumps to the printer DCB, which, in turn, jumps to the printer driver at 3C2 hex. The driver checks to see if the printer is ready, prints the character, and updates the line and character count in the DCB.

The ROM has two routines that use the routine at 3B hex. The routine at 1D9 hex prints the screen's contents on the printer. The second routine, at 214 hex, sends a carriage return to the printer.

The Restart Commands

The Z80 microprocessor supports 1-byte calls known as restart (RST)

Bit	3801 Hex	3802 Hex	3804 Hex	3808 Hex	3810 Hex	3820 Hex	3840 Hex	3880 Hex
0	@	H	P	X	0	8	enter	left shift
1	A	I	Q	Y	1	9	clear	right shift
2	B	J	R	Z	2	:	break	
3	C	K	S		3	;	↑	
4	D	L	T		4	'	↓	
5	E	M	U		5	-	←	
6	F	N	V		6	.	→	
7	G	O	W		7	/	space	

Table 1. Keyboard memory configuration.

commands. RSTs can call the hex memory locations 00, 08, 10, 18, 20, 28, and 38 hex. The ROM uses the RST command by putting frequently used sub-routines in these memory locations. Table 5 lists information about the RSTs.

Interrupts

The Model III has an elaborate maskable interrupt system that supports easy-to-use interrupts on many of the input/output (I/O) devices. The Model III's hardware allows interrupts in several instances: when the cassette port is high or low (every 33.33 milliseconds), when an interrupt is on the I/O bus, when the RS-232 is ready to transmit, when the RS-232 receives a character, and when an RS-232 error has occurred.

You can enable or disable each interrupt independently by changing the bit patterns on port 224 (0E0 hex). To select an interrupt option, set the appropriate bits on port 0E0 hex (RST 38 hex shows the bit patterns).

When the computer encounters an interrupt, the Z80 executes an RST 38 hex command, which jumps to the routine

at 4012 hex, which normally jumps to the ROM interrupt routine. This routine checks to see what caused the interrupt and jumps to the routine at the appropriate address. When this new routine finishes executing, an RET instruction returns to the task that the computer was executing before the interrupt. Most of these jumps are into RAM, and you can direct them into any machine-language program. Table 6 shows the interrupt vectors.

If you don't want to use the ROM interrupt driver, insert a new routine by changing the address at 4012 hex to that of the new driver. This driver must acknowledge the real-time clock and cassette interrupts and jump to them when necessary. If the routine fails to do this, the real-time clock and the cassette don't reset their interrupt requests, and the computer immediately executes an interrupt and locks up.

The Device Control Block

The Model III accesses most of its I/O devices through its DCB. This area of memory contains 8 bytes of data

002B hex	Instantaneous read of keyboard Exit conditions: A ASCII character (A = 0 if no key is pressed) DE Altered
0040 hex	Wait for a line from the keyboard (with length restrictions). Output goes to screen Entry conditions: B Maximum length of line (excluding enter) HL Points to storage buffer in RAM Exit conditions: C flag Status of the break key (if it was the terminator) B Number of characters entered HL Points to storage buffer in RAM DE Altered
0049 hex	Wait for single character from keyboard Exit conditions: A ASCII character DE Altered
028D hex	Check for the break key only Exit conditions: NZ Set if the break key is pressed A Altered
0358 hex	Nondestructive instantaneous read of keyboard This routine does not work from DOS Ready Exit conditions: A ASCII character (A = 0 if no key is pressed)
0384 hex	Nondestructive single character keyboard wait. This routine does not work from DOS Ready Exit conditions: A ASCII character
05D9 hex	(See 0040 hex) Actual routine of 0040 hex
4099 hex	The most recent character entered
400C hex	Called when the break key is pressed
4019 hex	Caps lock switch. 0 = upper- and lowercase, 1 = no lowercase

Table 2. Keyboard subroutines.

Mac Inker

Re-ink any fabric, ribbon **AUTOMATICALLY** for less than 5¢. Extremely simple operation with built-in electric motor. We have a MAC INKER for any printer: cartridge/spool/harmonica/zip pack. Lubricant ink safe for dot matrix printheads. Multicolored inks, uninked cartridges available. Ask for brochure. Thousands of satisfied customers.

\$54.95 +

Mac Switch

Mac Switch lets you share your computer with any two peripherals (serial or parallel). Ideal for word processors—never type an address twice. Ask us for brochure with tips on how to share two peripherals (or two computers) with MAC SWITCH. Total satisfaction or full refund.

✓ 357

about each I/O device. The first byte specifies whether the device is an input or output device. The second and third bytes point to the driver routine for the device. The rest of the bytes contain the device's parameters. Table 7 describes the use of each byte in the DCB for all the devices.

Each of the device I/O calls I explained earlier (2B hex, 33 hex, and 3B hex) prepares the computer to use its main I/O routine at 46 hex. When the computer calls an I/O routine, it loads the DE register with the DCB address for that device, jumps to the routine at 13 hex for an input device or the one at 1B hex for an output device, and passes control to the routine at 46 hex. This routine finds the DCB driver address and passes control to the device.

The Model III makes it easy for you to intercept the DCB drivers and write a new driver for any customized application. When you're intercepting an output device, the C register contains the character that will be sent to the device. When you're intercepting input devices, load the A register with the character to be returned from the device. To exit both types of drivers, simply execute an RET (Return) command. If the program filters certain characters only, save the old DCB address and jump to it

after the routine is completed.

The Model III ROM offers two powerful subroutines that route and reinitialize the DCBs. Call the routine at 69 hex to reinitialize the DCBs to their original boot-up values. This is especially useful to stop the computer from routing devices.

Calling the routine at 6C hex routes the device at 4222 hex to the one at 4220 hex. Place the name of the device you want to route in each of these addresses. Possible names are KI (keyboard), DO (display), RI (RS-232 in), RO (RS-232 out), and PR (printer). Be careful when

routing devices; an error could be disastrous.

Bit	Status
0	Unused
1	Unused

MODULAR I/O PORT KITS

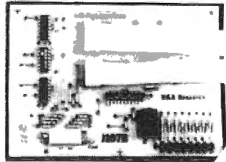

PARALLEL 8 BIT INPUT & OUTPUT FOR MODEL I AND COLOR COMPUTER

MODULAR DESIGN FOR ADDITION OF MULTIPLE PORTS • LATCHED OUTPUT SWITCH SELECTABLE I/O ADDRESS • STATUS MONITORED BY LEDS

(1 J105K FREE FOR EVERY 4 J107K'S ORDERED)	
J107K Complete I/O Port Kit	\$35*
J107A Assembled and Tested I/O Board	\$55*
J107B Bare I/O Port Board with Manual	\$20
J107M I/O Port Assembly Manual	\$ 8
J105K Complete Buffer Board Kit	\$25
J105A Assembled and Tested Buffer Board	\$35
J105B Bare Buffer Board with Manual	\$15
J105M Buffer Board Assembly Manual	\$ 6
J105C Cable (connects Buffer Board to 4 I/O Port Boards)	\$15
J105S Spacers and Hardware for stacking 4 I/O Boards and Buffer Board	\$12
J110A Color Computer Adapter Board Assembled and Tested	\$20

*Subtract \$3.50 from price for kit minus cable

I/O PORT KIT INCLUDES . . .
4.5" x 6" Printed circuit board. All components
Cable (connects to bus expansion port)
Diagnostic software listing (Basic) and Manual
(Requires 5V 100ma supply)

NEW PRODUCT

FOR AUTOMATION

USE YOUR

TRS-80 MODEL III, IV or 4P:

- For direct measurement of: voltage, or alarm conditions
- With one resistor to measure: current, resistance, or 4-20 ma. signals
- With transducers to measure: acceleration, dewpoint, force, humidity, pH, position, pressure, temperature, velocity, viscosity, wind speed or direction
- With interfaces to turn power on/off, control analog voltage, motor speed, temperature, etc.

Note: We also manufacture the Model 100 A/D for the TRS-80* Model 100 Computer MODEL III/IV — A/D, converter and digital interface for your TRS-80* Model III or IV:

- 0 to 4.096 volts full scale (adjustable)
- 12 bit integrating A/D converter (.025%)
- 8 digital inputs, expansion to 24 bits
- 8 digital outputs, expansion to 24 bits
- 3 addressable output strobes

Price: \$880 including software (\$5.00 for manual)

More Features

The Model III ROM contains more exits that let you intercept or completely change the ROM's actions. Most of these exits are designed for the DOS's use, but with care you can use them for any application. Before using any of them, look at a disassembly of the ROM to see what you can and cannot destroy. Table 8 lists all ROM exits and their normal way of return. These exits should be there, assuming no other routines are in place at that address.

Table 9 lists miscellaneous calls, jumps, and memory locations. Each description should give the information you need to access the routine. ■

Write to Bob Covington at 1239 Cheverly Court, St. Louis, MO 63146.

On interrupt:

3365 hex	Vector for cassette high interrupt
3369 hex	Vector for cassette low interrupt
4046 hex	Vector for RTC interrupt
403D hex	Vector for I/O bus interrupt
4206 hex	Vector for RS-232 transmit interrupt
4209 hex	Vector for RS-232 receive interrupt
4040 hex	Vector for RS-232 error interrupt
4043 hex	User defined interrupt (define through hardware)

If ROM routine is not used:

- Check bit 2 of 0E0 hex. If it is set, read 0EC hex
- Check the bits in Table 5 to see what type of interrupt is generated
- Bits are reset for interrupt request

Table 6. Vectors for the interrupts.

		40EA hex	Line where last error occurred
		40F0 hex	Pointer to line where Basic processes error

Table 9. Miscellaneous calls, jumps, and memory locations.

Tidbit #11

I use a cassette-based system and generally store more than one file on a tape. My problem arises when I want to update a file and re-record it over the old code. The tape counter is too inaccurate for me to properly position the record head. So I devised a way to mark the beginning of a program with the PRINT#-1 command and relocate that position with the INPUT#-1 command.

When I dump a file to tape for the first time, I first execute a PRINT #-1, "****" command. This magnetically marks the beginning of the file. The tape stops after execution of this command. Then I execute a command that dumps the file to tape.

To find the same starting point again, I position the tape in about the right spot using the tape counter. Then I put the recorder in the play mode and execute an INPUT#-1;Q\$

command. After reading the sync marker *** into Q\$, the tape stops, right where I originally started recording the file. Now you can switch the recorder to the record mode and execute the file dump command.

You can add this program to any Basic program that already has Load and Dump routines. All you have to do is add the lines to the end of your

program and insert the necessary GOSUB commands.

The program uses the variable X as a flag, and it's set to zero before file transfer by the GOSUBs. You must put the GOSUBs immediately before the commands that read and dump the file to tape, however.

FILL-INS

Filling in graphics shapes on your Model I or III used to be tough work, but not anymore. Paint lets you draw any shape on the screen and fill it in with a touch of the space bar.

Drawing a figure on your screen with a Model I/III graphics program is easy, but filling in that shape isn't much fun. You have to store the graphic in strings, which is cumbersome and wastes memory, or use the Set statement to light each pixel within the shape, which is slow and inflexible. It's even harder to fill in a nonstandard outline you created from the keyboard.

My Paint program makes things much simpler. You draw a shape on the screen, then move to any point within the shape and press the space bar. The program fills in the figure almost instantly (see the Photo).

Drawing the Figure

When you run the program, it automatically draws lines marking the top and bottom of the screen, and lights the point in the center. You use the arrow keys to draw lines; for diagonal lines, press two keys at the same time. You can move without drawing a line or erase a line by holding down the enter key along with the arrow key(s). When you're ready to fill in an enclosed shape, move to any point within the shape and press the space bar.

The Paint routine is fast and the algorithm is highly efficient, so it uses the stack space sparingly. The program passes the location of the point within the shape to the routine by way of a USR statement.

Although the Paint routine is in machine language, you can see how it works by first looking at the algorithm

in Basic (see Program Listing 1). Lines 255-290 form the heart of the program.

The X and Y variables store the coordinates of the point position when you press the space bar. The program first determines whether or not it can move the point to the left; if it can, it decrements the X coordinate and starts again at line 255. Otherwise it tries to move the point up. If it can't move the point up or left, the program checks whether it should save the point on the stack in array S; it does so if the point can move right and down and if it finds the point to the southeast blocked.

Then the program checks whether or not it can move the point right or down; if so, it fills in the point, adjusts the coordinates, and starts over. If the point can't move, the program checks what's been added to the stack. If the pointer is zero, the program has completely filled in the figure. Otherwise, the program removes the last point added to the stack and starts the fill from that point.

Adding Speed

Program Listing 2 replaces the Basic version of the algorithm with the ma-

chine-language Paint routine. It works the same way, but much faster. The program assumes that you've loaded the machine-language code into memory at F000 hexadecimal (hex). You can put it anywhere, but be sure to reassemble the source code if you have a 32K or 16K machine.

Program Listing 3 is the source code for the Paint routine. The algorithm is the same; so is the logic, with a few exceptions. The routine uses the stack as storage. The program saves the pointer in a buffer so it can indicate when no points remain to be filled.

The program stores the current point in the DE register in Y,X format. The TRYL (try left) subroutine pushes it on the stack; the subsequent subroutines pop DE off to obtain the value and push it back on. The Stack routine does the same, then pushes the point once more. If the routine must return to the location, it leaves the point on the stack.

The TRYR and TRYD subroutines first adjust the registers to test the adjacent point, then test it, then readjust to light the current point, and adjust the registers to move to the new point. All

REPAIR CRASHED RSCOBOL & RSBASIC DATA FILES

This utility by BTB, INC. requires no knowledge of RSCOBOL or RSBASIC to attempt an in-place recovery of the primary key index of your data files. Information to assist you in repairing the alternate keys of Cobol files is included. RECOVERY for Models 3 & 4 under TRSDOS 1.3 shipped on a Model 3 data disk is \$105. For Models 2, 12, 16 under TRSDOS 2.0a, 2.0b, 4.1 & 4.2 shipped on a Model 2 data disk is \$108.

We also have Cobol source code for a 5-key Mailing List & 5-key Article Index with printing programs. Both on Model 3 data disk \$25. On Model 2 data disk \$28.

Free shipping within the U.S. Outside U.S. add \$20.00 for shipping. Sorry, no CODs. Texas residents include any required sales tax. Send check or money order to:

LIST/KEY

THE PEOPLE PROGRAM

OF THE PEOPLE

List/Key is a sophisticated list management program dedicated to organizing information about people. Name and address formats can be created with only a few keystrokes.

BY THE PEOPLE

List/Key was crafted by professionals to perform at top speed with maximum simplicity. A thousand entries can be sorted in less than 20 seconds by simply pointing the cursor at one of 24 optional fields.

FOR THE PEOPLE

List/Key can be easily modified for home, business and professional applications. Hundreds of help messages, menus and prompts guide the operator through each step.

TO THE PEOPLE

List/Key can be reviewed at your leisure. We'll send a Demonstration Disk with sample files for only \$25.00.

THE PEOPLE PROGRAM

List/Key can store 5000 entries on your TRS-80 Model 3, 4 or 4P system, using up to 4 disk drives and any standard parallel printer.

The List/Key Master Install Disk comes with a 172-page Reference Manual, Quick Reference Card, and spare disk in a handsome storage box. It's all just \$250.

The People Program is for people like you!

VITAMIN and MINERAL DEFICIENCY CHART

Your computer will analyze your answers to 192 questions concerning your body and then print a chart showing probable deficiencies of 33 vitamins and minerals plus protein and fat. (Such questions as, Do your eyes hurt when you go out into the sun? Is your hair beginning to grey? Do you sleep well? etc etc)

Comes complete with 50 questionnaires, 50 blank Nutritional program forms, instructions on completing the Nutritional forms from your computer generated chart, and an excellent instruction manual and a 5 1/4 inch disk. This program can put you into a business of your own selling nutritional programs.

the Try subroutines remove the current point from the stack after a successful move, replacing register DE with the adjacent point.

I adopted the Test/Set segment of the program from William Barden's book, *TRS-80 Assembly Language Programming* (Radio Shack, 1980). The last section of code replaces a space with an empty graphics block before setting any points, preventing extraneous pixels' being lit and making for neater painting.

You can use the program as is to create graphics, or you can incorporate it

into games, computer-assisted design programs, or applications. It gives your computer some of the graphics power of more expensive machines, and I think you'll find it an enjoyable and handy addition to your software library. ■

David Lewis is a student majoring in computer science at Union College in Schenectady, NY. You can write to him at 80 Micro, 80 Pine St., Peterborough, NH 03458.

CBUG

The ultimate TRS-80 Model 100 debugging utility for assembly language programs and/or subroutines called from BASIC. Requires less than 3K RAM.

Features include:

- Instruction Step
- Call/Instruction Step
- Zero/Fill Memory
- Load Data
- Alter Registers
- Dump Memory & Registers
- Search/Replace
- HEX Math (+ & -)
- Decimal - HEX Conversion
- Display In HEX & ASCII

DISKDIR

An advanced disk/file organizer that provides automatic date stamping of files and disks during adds/updates when utilizing DOSPLUS 3.5 and DOSPLUS 3.5 formatted disks. Automatic reading of disk directory for most DOS directories. Requires 32K - 2 Disk Drive System. Features include:

- Menu Driven
- Searching
- Correction Facilities
- Printing
- Descriptions

THE PERFECT WAVE

Use your TRS-80 to measure distances with sound.

Many of us learned about sonar by watching destroyers hunt U-boats in old World War II movies. The destroyer would send out a sound wave (ping) and wait for an echo (pong). The elapsed time between the sound's transmission and reception told the operator how far away the submarine was, and therefore when to drop depth charges.

The project I'll describe lets you develop a sonar measuring system with your Model I/III. While you probably won't be using your micro to track subs, you can use it for other, more practical, applications. Some examples include measuring volume, aiding divers in murky waters, or controlling quality on an assembly line. In a lighter vein, you can also use the program as a game subroutine to create an invisible joystick.

Besides your TRS-80, all you need for this project is a cassette recorder, an audio amplifier, and a piece of cardboard. The program is accurate to the half-centimeter (about two-tenths of an inch) within a range of about 1 to 80 cm ($\frac{1}{2}$ inch to $31\frac{1}{2}$ inches), but you can increase the range with a more sensitive microphone and stronger amplifier.

The program, Sonar-80, runs on a Model I or III cassette or disk system. Program Listing 1 is the Basic routine, while Program Listing 2 is the machine code that Listing 1 POKEs into high memory. Line 25 automatically saves the memory size, so you don't have to answer the MEM SIZE? prompt in the future.

The Key Box

Models I and III
16K RAM Cassette Basic
32K RAM Disk Basic
Cassette recorder
Audio amplifier or a radio
with phono input jack

Setting Up Your Sonar

Type in Listing 1. Disconnect the AUX and Remote cables from your cassette recorder. Then plug the AUX cable into an audio amplifier or radio with a phono input jack (see Fig. 1). If you own a CTR-41, remove the dummy plug from the MIC jack, too.

Stand the recorder on end and place it face to face with the amp, leaving about 20 cm (8 inches) between the two. Turn the amp on and set the volume to $\frac{1}{2}$. On your recorder, push the record and play buttons while depressing the small record-lock trigger at the rear of the cassette compartment. Type in RUN and press the enter key.

You should now hear a continuous ticking sound and your screen should read:

```
VALUE FROM (HL)=40
DISTANCE IN CENTIMETERS=20
```

Underneath this you should see a line of periods with a cursor sitting on top.

If the program locks up, the chances are you've set the volume too low. Hold down the break key and snap your fingers near the cassette mike to break out of the loop. Set the volume slightly higher on the audio amplifier, and run the program again.

When you've got the program running, move the amp closer to the mike. Notice that the distance and register values drop and that the graphics block moves left. If you move the amp away from the mike, the values increase and the cursor moves to the right.

The Assembly-Language Subroutine

I wrote the business end of this program in Assembly language because it must execute quickly. The machine-language subroutine consists of two parts, a pulse generator and a pulse pick-up. The pulse generator sets the HL register to zero and sends one square wave pulse to the cassette port (OFF hexadecimal).

Figure 1. How the sonar system hooks up.

This pulse goes to the AUX cable connected to the amp and sends out a ping through the speaker.

When the sound wave begins its journey to the cassette mike, the subroutine enters the pulse pick-up mode. The HL register increments and the computer monitors the cassette port for any incoming signal from the EAR cable connected to the recorder. If it doesn't receive a signal, the program loops back, increments HL, and continues to loop until the mike senses the pulse that caused an exit from the subroutine and a return to Basic. The program then returns an accumulated count in the HL register to Basic.

The monitor shows the value returned to Basic, along with the distance between the mike and the speaker. Line 100 of Listing 1 calculates the distance; if it doesn't match the actual distance, change the .7 value in the formula and check the accuracy again. The speaker response in your amp may be different than it is in mine. Position the amp at various locations and measure the distance to ensure that it corresponds to the display.

Now put the recorder in its normal position on a table and turn the amp on its back. Prop a book between the recorder and amp as shown in Fig. 2. This will keep any stray sound from reaching the mike. Turn on the amp and put the cassette in the record mode. Type in RUN and, while holding a piece of cardboard in a horizontal position about 40 cm above the recorder and

Tidbit #12

Here's a simple way to address envelopes with SuperScripts that takes advantage of SuperScripts's user key sequence.

After typing in the last character of your document, leave the cursor in position and print your letter. Then put an envelope in the printer and hit control-U to start the user key sequence. You'll be asked to

name your user function with any digit between zero and nine. Follow the instructions below exactly.

Press the enter key, and hit shift/up-arrow, down-arrow until the cursor sits just ahead of the name and address. Now press control-S and the down-arrow until the cursor is just beyond the address block. Hit control-E, control-B, press the C key, hit shift/down-arrow, press the enter key three times, and press control-R. Now position the cursor in front of the new address block and hit control-S, and move the cursor until it's directly beyond the address block. Hit control-E and move the cursor to the desired address position on the envelope (approximately posi-

tion 3.5). Hit control-M, press the L key, hit control-B, press the A key, hit control-B, press the P key, hit the enter key, then hit control-U.

You've printed the envelope and created a keystroke sequence for addressing future envelopes more efficiently. To print your next envelope, all you do is leave the cursor after the last character of the letter and press the control key along with the user key sequence number you chose earlier. The command sequence is already programmed and will address the envelope as long as your spacing format doesn't change.

W. J. Alford III
Englewood, NJ 07631

amp, press the enter key. You'll notice that the distance is around 80 cm. This is because the distances from the speaker to the cardboard and from the cardboard to the mike are 40 cm each.

Rapidly move the cardboard up and down. Notice that the graphics block mimics this movement exactly. You can think of the cardboard as the submarine, and the recorder and amp as the destroyer.

Applications

I'm sure you'll be able to come up with some ideas on how to use this sonar system. Here are a few suggestions to get you thinking:

- You could set up a speaker mike at an assembly line (see Fig. 3). As the products move past the speaker and mike, the program measures their distance for proper alignment. When an item is misaligned, an alarm sounds and you can remove or adjust the object.

- A diver working in waters with poor visibility could attach a mike and speaker to his face mask (see Fig. 4). The computer would be on board the boat, and distances of objects could be transmitted to the diver through a small ear speaker. Four clicks in the diver's ear might signify that he is 4 meters from an object.

Blind people might use the same concept, although the person would have to carry a small computer around with him.

- You can use this device to check liquid levels in tanks, by bouncing sound

off the liquid's surface (see Fig. 5). This could be especially useful if the tank holds toxic substances.

- Finally, you gamers can use this system to replace a joystick by using a piece of cardboard to move the cursor.

I've kept the Basic program simple to let you adapt it to your needs. The pro-

gram also shows that the cassette port can be used not only as a digital device, but as an analog-to-digital converter for measuring angles, velocities, and distances without extra hardware. ■

You can reach Michael O'Reilly at Condominio El Pueblo No. 102, Apartado 284, 1100 Tibas, Costa Rica.

Figure 4. Divers can use sonar to alert them of dangerous objects in murky water.

Figure 3. The system can be used to help with quality control on an assembly line.

Figure 5. You can use the system to measure volume in vats full of toxic liquid.

WARNIER DIAGRAMS

Warnier diagrams provide the same information as program flowcharts, but in a more readable format.

Before you can key in code, there's the sometimes lengthy, sometimes arduous task of program design. The basic tool used in this process is the flowchart. The familiar diamond for decisions, parallelogram for input/output, circle for connectors, and arrow to map the sequence of events provide a secure and proven system to visually represent program logic. But despite the flowchart's proven worth, better ways to design programs may exist.

One such method is the Warnier diagram. This system employs braces to define the hierarchy of association and operation, an exclusive OR symbol and a Boolean negation symbol to represent the decision process, and a set of strategically placed parentheses to represent the looping procedure.

Warnier diagrams were developed by Jean Jacques Warnier, a French mathematician, to symbolically describe the hierarchy of relationships within static entities such as corporations. The technique was then adapted for program design.

Hierarchy to Program Logic

Consider the theoretical organization chart in Fig. 1. A Warnier diagram for this hierarchy tips the organization chart on its side, and replaces lines with braces (see Fig. 2). The diagram shows that the president overrides all, followed by all three vice-presidents, the five managers (two, one, and two responsible to each vice president, respectively), and then the workers.

Now consider a simple program to print the even integers from 2 through 100. Figure 3 shows a flowchart for this program; the Warnier diagram of the same program would look like Fig. 4.

The flow begins at the top of the left-most brace, and continues down until it

is directed into another brace (whenever a "universal"—something which spawns a brace—is encountered), at which point control enters from the top and exits from the bottom, returning to the point of origin (the universal that sent it into the brace in the beginning). In both the flowchart and Warnier diagram the flow of execution is:

- Start
- Set NUM to 2
- Go into the loop where:

a. Print NUM

b. Increment NUM by 2

● Check the value of NUM; if it is less than 100, then repeat steps a and b until the value exceeds 100, when execution of the loop is ended.

● Stop.

Consider Fig. 5, a strictly theoretical example. The flowchart description shows a process A, an input of B, a decision on the relationship of A to B with branches depending on the out-

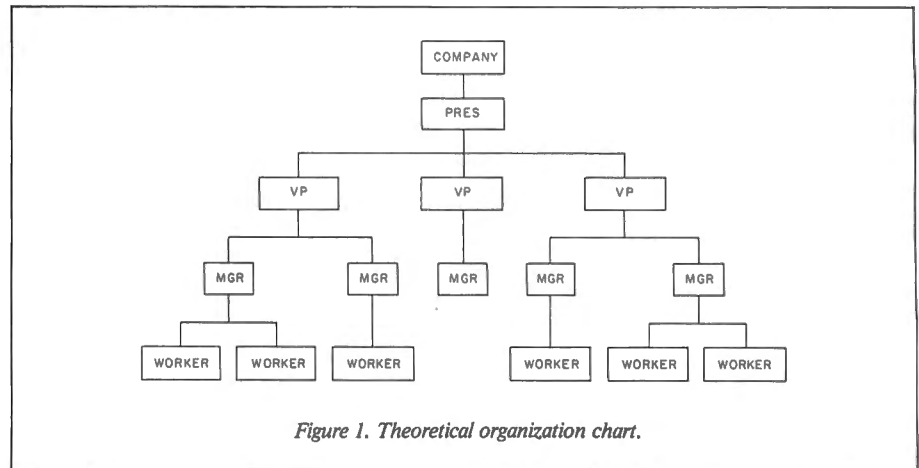

Figure 1. Theoretical organization chart.

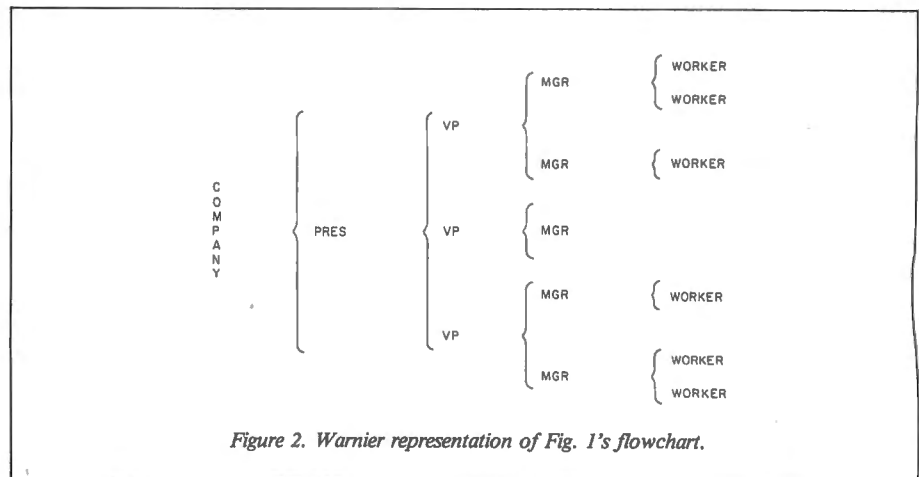

Figure 2. Warnier representation of Fig. 1's flowchart.

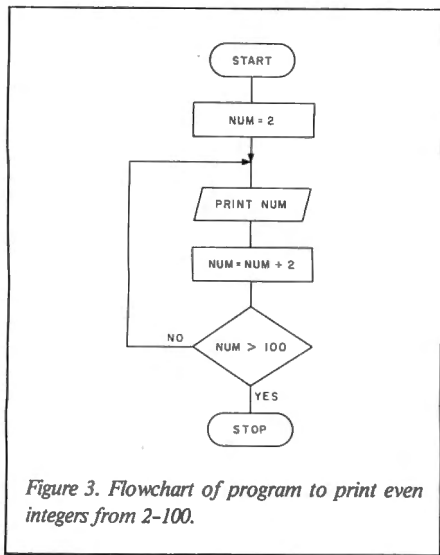

Figure 3. Flowchart of program to print even integers from 2-100.

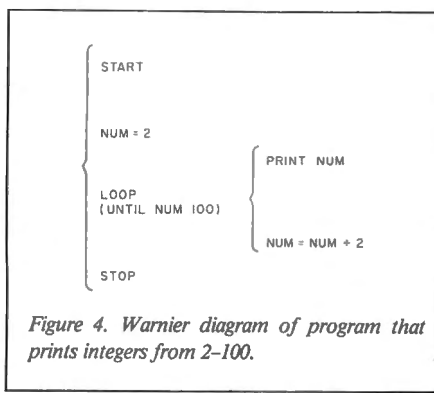

Figure 4. Warnier diagram of program that prints integers from 2-100.

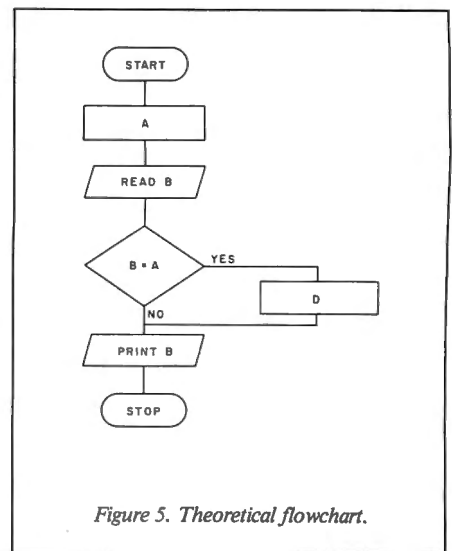

Figure 5. Theoretical flowchart.

come, the printing of B, and finally an end to execution.

The Warnier diagram describes the same thing, but its unique form is demonstrated in Fig. 6.

In this example, the series of executions begins with Start. Next, A is executed and B is read, followed by a decision on the relationship of B to A. If $B = A$, then D is executed; if the negation of $B = A$ is true, no action occurs at this point (Skip) and control drops down to the next statement, Print B. This statement would be executed following D if $B = A$ was found to be true. Finally, the program would stop executing.

The decision statement uses the exclusive OR symbol (the circle with a cross) and the Boolean negation symbol

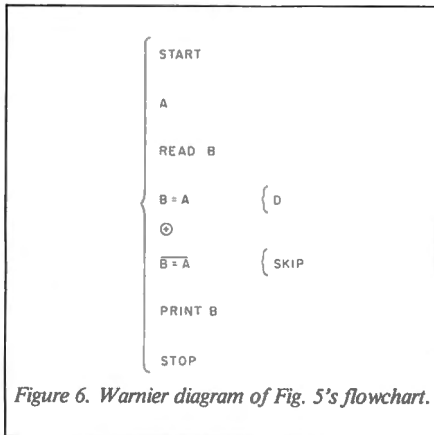

Figure 6. Warnier diagram of Fig. 5's flowchart.

over its second part. It states that if the decision is true, it cannot also be false. Thus, if $B = A$, then it cannot be the case that $B \neq A$ (the exclusive OR concept).

A somewhat more complicated example is found in Fig. 7 and the accompanying Warnier diagram (Fig. 8). Consider the logic of the decision path. If A

$= B$ and $A = 2*B$ and $A = 3*B$, then E is executed. If $A = B$ and $A = 2*B$, but $A \neq 3*B$, then D is executed. The events which follow the various paths are readable and clear. Thus if $A \neq B$, neither E nor D nor C would be executed, only F or G, depending on the condition $A = B/2$.

A few short paragraphs and illustrations will not convert you to the use of Warnier diagrams. But investigate the alternative, and maybe you will adopt them. Matched against flowcharts for more complex programs, they provide a clearer and more readable presentation of program logic. ■

Michael Conwell can be reached at 321 University Drive, East Lansing, MI 48823.

COMPLETE HARD DRIVE ~~\$1095.~~

COMPLETE PRIMARY DRIVES MODEL III IV AND IVP

- TRS-80 Model III/IV 5 Meg Primary..... \$1095.00
- TRS-80 Model III/IV 10 Meg Primary... \$1395.00
- TRS-80 Model III/IV 15 Meg Primary... \$1695.00
- TRS-80 Model III/IV 32 Meg Primary... \$2495.00

MODEL I

- TRS-80 Model I 5 Meg Primary..... \$1145.00
- TRS-80 Model I 10 Meg Primary..... \$1445.00
- TRS-80 Model I 15 Meg Primary..... \$1745.00
- TRS-80 Model I 32 Meg Primary..... \$2545.00

COMPLETE SYSTEM FEATURES

- 120 DAY WARRANTY
- SWITCH SELECTABLE HOST
- HD POWER SUPPLY
- ERROR CHECKING AND CORRECTING
- HD COOLING FAN
- SIZE 8-1/4" X 6-1/2" X 13"
- ALL DRIVES RATED AFTER FORMAT
- COMPLETE READY TO PLUG IN (JUST ADD YOUR DOS)
- SUPPORTS NEWDOS 80 V2.5, DOSPLUS 3.4F, 4.0A, 3.5E, IV RIGID, LDOS, AND TRSDOS 6.0. DRIVERS ARE NOT INCLUDED IN THE PRICE OF THE HARD DRIVE.

SECONDARY DRIVES

(READY TO PLUG INTO YOUR PRIMARY DRIVE)

- 5 Meg Secondary Drive..... \$695.00
- 10 Meg Secondary Drive..... \$995.00
- 15 Meg Secondary Drive..... \$1295.00
- 32 Meg Secondary Drive..... \$2095.00

NEW

HDS Multiplexer

USE UP TO 4 SYSTEMS!

ALLOWS UP TO 4 COMPUTERS TO ACCESS A HDS HARD DRIVE

Includes Master Control Unit and Cable / Host Adapters for externally connecting 2 Computers

\$995.00

MODEL 3/4 BOOT ROM **\$39.95**

ALLOWS YOU TO BOOT DIRECTLY FROM YOUR HARD DRIVE FOR DOSPLUS

Hard Drive Software

- Dosplus 3.4f (Model 1 only) \$99.95
- Dosplus 3.5e (Model 1 drivers for 3.5) \$59.95

- Dosplus IVI (Model 4 drivers for IV) \$59.95
- Dosplus 4.0a (Model 3/4 only) \$99.95
- LDOS (tm) 5.1.x Drivers (Model 1/3/4) \$59.95
- TRSDOS 6.0 (tm) Drivers (Model 4 only) \$59.95
- Newdos/80 Version 2.5 (Model 1/3/4) \$199.00

PC COMPATIBLE HARD DRIVES AVAILABLE NOW!

NOW \$849.

NEW LOWER PRICES!

**FIVE MEGABYTE
HARD DRIVE
\$849.**

**NEW!
HDSII**

Yes, your eyes are not deceiving you, Hard Drive Specialist is now ready to release a second version of their Model III/IV Hard Drive to the general public. The HDSII is the same quality as our other drives, and includes software drivers for DOSPLUS 3.5 and IV. SO WHAT DID WE LEAVE OFF?.... The HDSII drive is not expandable with any of our other HDS Products. That's it! The same reliability and quality for hundreds less.

Model III/4 RS232 Kit \$69.95
(includes all internal cables, Model 3/4 Only)

Model 3/4 Upgrade Kits

All Model 3/4 upgrade kits come with Tandon drives, switching power supply, all necessary cables and hardware, and manuals. All kits come with a 120 day warranty. Memory Kits and sound boards are not included and may be purchased separately.

The No Drive Upgrade Kit (everything but the drives \$215.00)
 One TM100-1, single sided, 40 track drive kit \$379.00
 Two TM100-1, single sided, 40 track drive kit \$549.00
 One TM100-2, double sided, 40 track drive kit \$459.00
 Two TM100-2, double sided, 40 track drive kit \$699.00

Model 1/3/4 Accessories

16K memory upgrade kit (200 ns, Model 1/3) \$14.95
 64K memory upgrade kit (memory only, Model 4) .. \$62.95
 64K memory upgrade kit (memory + PAL Chip ... \$79.95
 Model 4 Sound Upgrade Kit \$19.95

Green Phosphor CRT KIT \$89.95
(anti-glare, slow or fast decay, Model 1/3/4)

Compukit Drive Controller board ... \$99.00
Model 3/4 ONLY

MODEL III TO MODEL 4 UPGRADE \$750.

Converts your Model III into a Model 4 (except for cabinet and disk drives). Includes new keyboard, 64K RAM, sound, and free installation (required). Ship us any working Model III, even if it's not all factory equipment, and get back a Model 4, in your case.

TANDON (FULL SIZE) Disk Drives

Tandon TM100-1 single sided, 40 track, bare \$169.95
 Tandon TM100-2 double sided, 40 track, bare \$239.95
 TANDON (Half-Height)
 TM50-1 20 ms step rate, 40 track, single sided, bare \$149.95
 TM-50-1 6 ms step rate, 40 track, single sided, bare \$169.95
 TM50-2 6 ms step rate, 40 track, double sided, bare \$219.00
 TM65-2 40 track, double sided, bare \$249.00
 Single 5 1/4" power supply and case with extender \$59.95
 Double 5 1/4" power supply and case with extender \$84.95
 Double 5 1/4" Half Height case with extender \$69.95
 2 Drive cable for 5 1/4" Drives (configured add 5.00) \$29.95
 4 Drive cable for 5 1/4" Drives (configured add 8.00) \$39.95
 6" extender cable for 5 1/4" Drives \$14.95
SAVE \$10.00 PER CASE WITH THE PURCHASE OF A DISK DRIVE

Model 1/3/4 Software

Dosplus 3.5 (Model 1 SD/DD or Model 3/4) \$99.00
 Dosplus IV (Model 4 only) \$99.00
 Newdos 80 Version 2.0 (Model 1/3/4) \$149.00
 Mscript (Model 1/3/4) \$79.00
 Electric Webster (Model 1/3/4) \$129.00
 Microterm (Model 1/3/4, IBM PC) \$75.00
 Compukit Doctor (Model 1/3/4) \$29.95

micro[®] COMPUTING

The NEW standard for advanced computing

Microcomputing is the practical journal of advanced computing. It takes you beyond theory to hands-on projects and technical information that you can use every day.

You'll enjoy monthly articles and features like:

- **A major system review.** Learn what the system is like and what its strengths and weaknesses are. Use our benchmark rating system to see how it compares with other microcomputers.
- **Unix.** Our monthly column will keep you updated on this multi-user system which may become an industry standard.
- **Languages.** Stay informed of changes and new applications of sophisticated languages like Assembler, Pascal and Advanced Basic.
- **Telecommunications.** Fast becoming of major importance to the microcomputer industry. Learn how to use commercial and specialized information services.
- **Laptops.** Learn about the systems as they're developed and improved. Stay update on Radio Shack Model 100, The Grid, Xerox 1810, Epson HX-20, NEC 8201 and others.

AND MORE...

No matter what system you're using, **Microcomputing** will give you the complete, technical microcomputing picture.

And you'll want to keep every issue of **Microcomputing** as an objective reference source to help you make informed microcomputing decisions.

Order your subscription to **Microcomputing** today. It's only \$24.97. Include payment with your order or charge it to your Visa, Mastercard or American Express and get a 13th issue free.

For faster ordering call 1-800-258-5473. In New Hampshire call 1-924-9471.

YES...

I'd like to receive the new standard for advanced computing. Send me a one year subscription to **Microcomputing**.

I understand that with payment enclosed or credit card order, I will receive a FREE issue making a total of 13 issues for \$24.97.

Assembling and Running The Printer Buffer

Last month I described a printer buffer's functions and the parts you'd need to build one. This month I'll describe how to assemble the printer buffer and get it running.

When you turn on your computer, resistor R4 and capacitor C1 create an R/C time constant of about 22 milliseconds that sends a reset signal to the Z80 reset input and other board devices. When the reset signal goes inactive, the Z80 executes instructions from location 0000 hexadecimal (hex). You must start the printer buffer firmware (the ROM and the control program) from this location.

The crystal X1, the resistors R1 and R2, and the three gates for the U5 chip generate the clock required to time the system. The Z80's output lines can't directly drive all the board devices, making the buffers necessary to provide the current drive.

U2 and U3 are address line buffers, while U9 buffers various control signals. The U4 chip is a bidirectional data bus buffer, transmitting and receiving data to and from the Z80.

The U7 chip buffers the busy and fault-indication signals coming from the printer and provides a tri-state bus that lets the Z80 check the printer signals. If desired, you can connect the signals, after they're buffered, to the computer (J1).

The PC6 and the PC7

A few things about the operation of the 8255A chip should be mentioned. After you allocate all the necessary signals for sending or receiving data or handshaking, two input/output (I/O) signals still remain: PC6 and PC7. These two signals drive the status LEDs; PC6 drives a "Buffer OK" LED, while the PC7 drives a "Printer Fault" LED. When either goes low, the appropriate LED lights up; otherwise the LED remains off.

Once you set up the 8255A, it handles many functions automatically. When the computer sends a character to it, handshaking takes place automatically. The 8255A signals the Z80's interrupt pin (INT/, pin 16) when it receives a character. The Z80 then reads the character from the 8255A, and the 8255A inactivates the interrupt signal. When the Z80 sends characters to the 8255A for transmission to the printer, the 8255A (with the 74LS161) produces the proper handshaking signals.

The 74LS161— The Digital One-Shot

The 74LS161 (U11) operates as a digital one-shot (monostable multivibrator). Triggered by the 8255A OBF B signal, the 74LS161 uses the CPU clock as its timing signal. Normally OBF B is high, keeping the parallel enable signal (PE/) low (active). This makes the bit values at the D inputs appear at the outputs; the data strobe to the printer, Q2, in particular is high.

When you write a character to the 8255A (port B), OBF B is low, making the parallel enable inactive. This starts the 74LS161 counting (on the rising edge of each clock pulse input). On the clock pulse's rising edge, Q3 is high and Q2 to the printer is low. Four clocks later, Q2 is high again, and the 74LS161 count enable goes inactive. Thus the printer receives a 1.6 microsecond (400 ns/clock cycle \times 4 clock cycles) data strobe pulse.

Dual D-type Flip-Flop

U10 is a 74LS74 dual D-type flip-flop (FF). You use its two flip-flops independently. The FF with the lower pin numbers works as a busy output signal latch. With the buffer reset, the FF's output is high, and the computer registers an active busy signal. This prevents the computer from sending

characters while the buffer initializes itself.

When the buffer control program finishes initializing, it writes a zero to the FF, clearing the busy status. The program can reset it at any time.

Use the second FF (with the higher pin numbers) for the RAM block select. The lower 16K block of RAM shares the address space of the upper 16K with only one block active at one time. On reset, the output of the second FF goes to zero, giving the upper 16K the space. You can change this by writing a 1 or zero to the FF.

Low- and High-Order Address Bytes

Since the dynamic RAMs are 64K-bit devices, they require 16 lines to address all bits. The 16-pin packages the RAMs come in make this difficult to accomplish. To use the smaller package, you have to multiplex the RAM chips' address inputs. With the low-order address byte placed on the eight RAM address lines, the row address strobe line (RAS/) is taken low. This latches the address byte into the RAM chips. The high-order address byte is then put on the RAM address lines, followed by the falling of the column address strobe (CAS/).

To get the timing right, I used a digital delay line (the U29) to produce some of the signals. The 74LS157s (the U12 and the U13) act as 2-1 line switches, from the low-order address byte to the high-order address byte. The dynamic RAM support circuitry

PROJECT 80

refreshes the RAM chips and checks that bus conflicts don't arise when you access the ROM.

The Eighth Bit

Since the Z80 provides only a 7-bit refresh address, I added the U30 and the U31 to provide the eighth bit that the 64K dynamic RAM chips require. The buffer toggles the eighth bit (A7) every 128 refresh cycles.

All read or read/write devices accessible to the Z80 (except the ROM or RAM) appear in the Z80's I/O space. You must access them using In and Out instructions. The Table shows the I/O map used.

Printer Buffer Control Program

The printer buffer queues characters as they're received. A queue is a first-in/first-out (FIFO) logical device. Generally considered a linear data structure, the queue always builds in one direction, without wraparound. The circular buffer I used for this project is like a queue, but it includes wraparound. Figure 1 illustrates the operation of a circular buffer.

Controlling the printer buffer with software is relatively simple. In fact, the most complicated aspect of this particular buffer is keeping track of

THIS EXAMPLE WILL SHOW THE OPERATION OF A 5-CHARACTER CIRCULAR BUFFER, BY QUEUING AND DE-QUEUING THE WORD "PRINTER" AT VARIOUS STAGES.

1.) INITIAL, UNKNOWN STATE. BUFFER IS EMPTY.

2.) THE LETTERS "PRIN" HAVE BEEN QUEUED.

3.) THE LETTERS "PRI" HAVE BEEN DE-QUEUED.

4.) THE LETTERS "TER" HAVE BEEN QUEUED.

5.) THE LETTERS "NTER" HAVE BEEN DE-QUEUED. THE BUFFER IS EMPTY.

Figure 1. Circular buffer illustration.

PROJECT 80

RAM block swapping, and even that isn't difficult.

Figure 2 shows a flowchart for the control program and the Program Listing. Following the flowchart, initialize the buffer before using it. The hardware makes sure that no characters arrive before the software's ready (by using the busy FF described above).

After the reset, it's important to check that the 8255A is stable. If the

8255A isn't stable it might not accept your first commands. By setting up the stack pointer, you ensure proper operation of the printer buffer. The stack pointer operates the interrupts and the subroutines. And, by allotting 20 bytes of RAM for the stack, you'll have more than enough RAM for the program.

Before initializing everything else, include a brief delay loop. Then, after the delay loop, send the program-

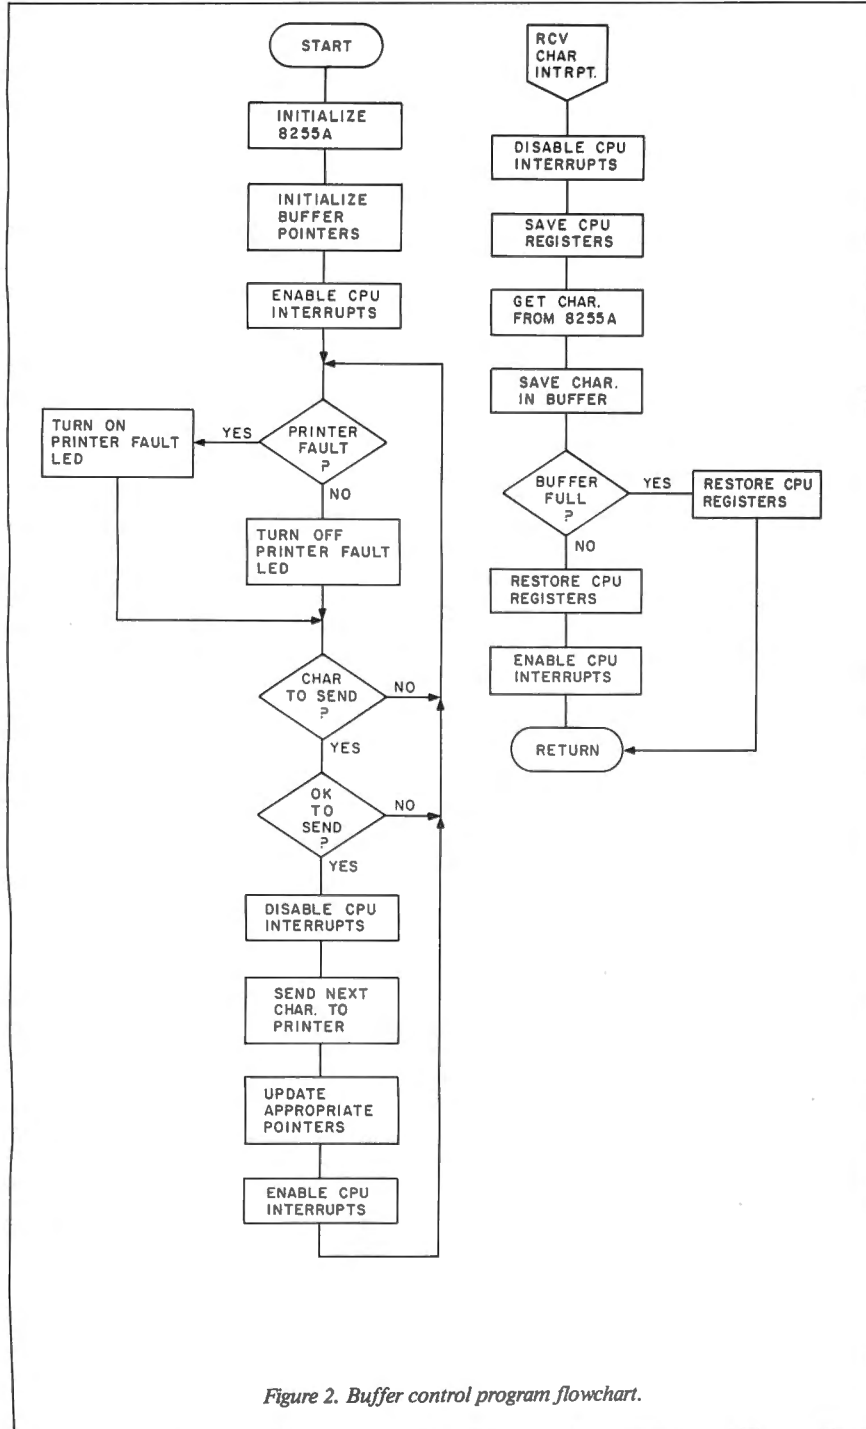

Figure 2. Buffer control program flowchart.

At last . . . School-tested educational software.

PROJECT 80

mable peripheral interface (PPI) set-up command byte. This configures the 8255A for Port A Mode 1 input and Port B Mode 1 output. Then send a 01H to the FF7s for initialization, though the reset should do this.

Set the Z80 interrupt at Mode 1—the only acceptable interrupt for the Z80. The Z80 always vectors to location 0038 hex (in ROM) when set for the Mode 1 interrupts.

The software now initializes the buffer memory pointers. These pointers keep track of where the next character coming in is to go, and where the next character leaving is taken from. Each pointer actually consists of absolute memory address pointer, and a byte specifying the RAM block. There's also a 16-bit count value for the character count, and a flag indicating the presence or absence of at least one character in the buffer.

With the data direction specified for the PC6 and PC7 lines, the "Buffer OK" LED turns on and the "Printer Fault" LED turns off. This enables the PPI interrupts and the Z80 inter-

rupts, completing the initialization and preparing the buffer for operation.

After initialization, the program enters its main loop. The loop checks to determine that the buffer has received a character. If so, it calls the CHR-PTR routine to turn the "Printer Fault" LED on or off. It then determines (using the Zero flag) if the printer can accept a character. If yes, the Zero flag returns set. If the printer's

ready, subroutine SENCHR sends the next character to the printer, or the main loop begins again.

The SENCHR and SERVIC Routines

If SENCHR sends no characters, the program continues looping, looking for characters and updating the "Printer Fault" LED.

If a character is sent to the printer buffer, the PPI interrupts the Z80,

I/O Address Range	Suggested Address(es)	Direction	Purpose
00-7F hex	00-03 hex	I/O	8255A PPI
80-FF hex	80 hex	O	U10—Flip-flops DB0 = Busy out BB1 = RAM block select
80-FF hex	80 hex	I	U7—Printer status byte DB0 = Paper out DB1 = Select DB2 = Fault DB3 = Busy (input)

Table. Buffer I/O map.

UNINTERRUPTIBLE POWER SYSTEMS BY SUN RESEARCH

For complete protection from **Blackout, Brownout, Surge** and **Spike** specify a **MAYDAY** Uninterruptible Power System by **SUN RESEARCH**.

Eliminate costly downtime and lost data caused by those momentary power losses. Protect your software and hardware from damage caused by sudden drops in line voltage. Isolate your computer system completely from the AC wall circuit with a **MAYDAY** continuous (On-Line) Uninterruptible Power System. Give all your components clean 60Hz sine wave power for efficient operation at a price you can afford.

MAYDAY™ UNINTERRUPTIBLE POWER SYSTEMS BY SUN RESEARCH

Available in 150, 300, 600, 1000 and 1500 VA Capacities.

Call 1-603-859-7110

MAYDAY™ Division
SUN RESEARCH, INC.
Old Bay Road
Box 210
New Durham, N.H. 03855

PROJECT 80

and invokes the **SERVIC** routine. By disabling the Z80 interrupts during the **SENCHR** subroutine and again during the interrupt service routine, you avoid potential problems. The **SERVIC** routine saves the main Z80 registers, and gets the appropriate pointer values. It reads the received character and stores it in the proper memory location.

When the **SERVIC** routine finishes its processing, it checks for a full buffer (both pointers being equal). If the buffer isn't full, the registers are restored, interrupts are reenabled, and the control returns to the point where it was interrupted.

If the buffer's full, **SERVIC** restores the Z80 registers, but doesn't reenable Z80 interrupts. Then control returns to the interrupt point. Without reenabling interrupts, the Z80 won't accept any further requests from the PPI.

The PPI receives one more character from the computer, but it holds it (with the busy output signal active) until the buffer can accept characters.

This happens when a character is sent to the printer. Whenever a character is sent out, Z80 interrupts are reenabled, letting more characters be received (as in the **SENCHR** subroutine).

This uses a total of 29 bytes of RAM, leaving $65536 - 29 = 65507$ bytes for RAM storage. Since the 8255A can hold one additional character, the printer's buffering capability is 65508 characters. If you want a few additional bytes, reduce the amount of memory set aside for the stack.

Using the Printer Buffer

Once everything's operational, just plug in the cables and turn on the pow-

er: The printer buffer takes it from there. The system's "Buffer OK" LED message goes on, and the "Printer Fault" LED reflects the status of the printer. Send data to the buffer as if it were your printer. You'll be amazed at how fast the computer comes back—ready for more work. ■

BRICKWARE

If you invest in brick and mortar, then you should invest in our brickware, Investor III™. Designed by real estate professionals to work on the IBM PC or TRS-80, Investor III™ is a comprehensive software package that aids in investment analysis of property, whether commercial or residential, small or large. It shows both the tax **and** cash aspects of an investment opportunity and is flexible enough to allow you to vary a number of key assumptions (such as cash flow, phased investments, multiple mortgages, and tax parameters) and see the results in an instant. So if you are serious about brick and mortar, look at our brickware. It will help you lay a solid foundation for your investment strategy. Contact your local dealer.

Grafyx Solution™ Save \$100.00

High-Resolution Graphics for Model 4/III

Superior Basic. Over 80 commands are added to the Basic language. These commands will set, clear or complement points, lines, boxes, circles, ellipses, or arcs. Areas may be filled in with any of 256 patterns. Sections of the screen may be saved and then put back using any of four logical functions. The hi-res screen can be printed on any of 80 popular printers or saved or loaded to disk without leaving Basic. Labels can be printed in any direction. The viewing area can be changed. The entire screen can be complemented or cleared. Graphics Basic provides dot densities of 640 x 240, 320 x 240, 160 x 240, and 160 x 120, all of which can be used in the same display.

Versions are supplied for TRSDOS 1.3, 6.1, LDOS, NEUDOS80, and DOSPLUS.

Superior Software. The board comes with over 40 programs and files which make it easier to use, serve as practical applications, demonstrate its capabilities, and serve as programming examples. The Grafyx Solution is also supported by a number of optional applications programs: Draw, Bizgraph, 3D-Plot, Matriplot, Surface Plot, Biohythm & USR, and Music.

The Grafyx Solution package is shipped from stock for \$199.95 (reduced from \$299.95). A manual for review is \$15. You may pay by check, COD, or Visa/MC. Shipping is free on pre-paid or COD orders. (Texas residents add sales tax.)

MICRO-LABS, INC. 214-235-0915
902 Pinecrest, Richardson, Texas 75080

✓ 484

Superior Hardware. The Grafyx Solution provides 153,600 pixel elements which are arranged in a 640 x 240 or on the Model III a 512 x 192 matrix. Hundreds of new business, personal, engineering, and educational applications are now possible. The hi-res display can be shown on top of the standard display containing text, special characters, and block graphics. This simplifies program debugging, text labeling, and upgrading current programs to use graphics. The Grafyx Solution fits completely within any tape or disk based Model 4/III. Installation is easy with our plug-in, clip-on board.

Dealers SELL

Selling *80 Micro* will make money for you. Consider the facts:

Fact #1: Selling *80 Micro* increases store traffic—our dealers tell us that *80 Micro* is the hottest-selling computer magazine on the newsstands.

Fact #2: There is a direct correlation between store traffic and sales—increase the number of people coming through your door and you'll increase sales.

Fact #3: Fact #1 + Fact #2 = INCREASED \$ALE\$, which means more money for you. And that's a fact.

For information on selling *80 Micro*, call 800-343-0728 and speak with Ginnie Boudrieau, our bulk sales manager. Or write to her at *80 Micro*, 80 Pine St., Peterborough, NH 03458.

Storing and Retrieving Messages With Your BBS

One advantage of a BBS is that you can satisfy a wide variety of user interests by setting aside different areas of the bulletin board as special-interest sections. For instance, you can establish one section for person-to-person messages, an area for owners of particular computers, a section for public-domain programs, and so on. These divisions allow the user to read only the messages in a desired section. This benefits both the user, who can skip sections of the board of little interest, and to the sysop, who can restrict access to some sections, reserving space for private use.

Last month we introduced the idea of these message centers and described how message information was stored in two places, one for the section number where a message was stored (S2\$), the other for the actual text of the message. S2\$ is bit-mapped, and each bit of the 8-bit byte in S2\$ stands for something different.

We've divided the BBS Express's message board into 15 separate sections, represented in S2\$ as 0123456789ABCDE. This way, you can tag messages for specific sections of the board.

Messages/BBS, our file of headers, stores the section number of an incoming message. Because you can store a number from zero to 15 using only 4 bits of binary data, we'll use the first 4 bits of each byte in S2\$ (bits 0-3) to store the message's section number.

Fortunately, that leaves 4 bits available for other uses. Because you have to know whether or not an addressee has received his message, you can assign that task to bit 4 by using the following code: 1=message received, 0=message not yet received. Thus, if bit 4 is a zero, the addressee hasn't gotten his message.

Since privacy is sometimes necessary on a bulletin board, BBS Express lets you store private messages which only the sender, the receiver, and the sysop can access. You can ensure this

by setting up the code 1=private, 0=public and storing that code in bit 5.

Bits 6 and 7 are left unassigned and are available for future expansion. One possibility is to mark a message as permanent so that it would never be scrolled off the board. Another possibility is to determine whether or not there's a reply to a message.

Bit-Mapping and Binary Format

While it's true that bit-mapping in Basic requires a large code overhead, it is an important technique for any Basic programmer. We're using bit-mapping in BBS Express for tutorial value as well to provide a practical and efficient way to store message information. To better understand bit-mapping in Basic, first consider the system in binary format.

Start by setting S2\$ to CHR\$(0), which is CHR\$(00000000) in binary. This allows the variable to make fresh assignments for each new message. The message is assigned a section number between 1 and 15, which in binary is a number between 00000001 and 00001111.

A logical OR can include the section number in S2\$ without disturbing the other bits. You do this in Basic by executing a logical OR with the ASCII value of S2\$ and the number of the specific section, N%. For example, S2\$ = CHR\$(ASC(S2\$) OR N%).

How does this work? First, assume that N% is 10 (00001010 binary), and S2\$ is 0 (00000000 binary). In binary, ORing N% and S2\$ is 00001010 OR 00001010 or 10 decimal. Thus you've merged the section number into S2\$.

Although you could have achieved the same result by simply executing S2\$ = CHR\$(N%), the technique is what's important as you'll use it later to merge other information into S2\$.

We mentioned earlier that to make a message private, you set bit 5 of S2\$ to 1. This is done with a logical OR as

IN MASSACHUSETTS CALL (617) 486-3193

well. This byte, with only bit 5 set (00010000), translates to 16 decimal. If you execute a logical OR with the ASCII value of S2\$ and 16, all the bits in S2\$ will be unaffected, except for bit 5, which is set.

In binary format, S2\$ is now CHR\$(00001010). 00001010 OR 00010000 = 00011010, or 26 decimal.

The Private flag is set, while the section number remains unchanged.

In a similar fashion, let bit 4 be responsible for marking a retrieved message. Set bit 4 by executing an OR with 32 (00100000 binary). S2\$ = CHR\$(ASC(S2\$) OR 32). In binary, 00011010 OR 00100000 = 00111010, or 58 decimal.

Other methods exist to do the same thing. For example, you can get the same result with S2\$ = CHR\$(ASC(S2\$) + 10 + 16 + 32). But, because you'll be using logical ANDs to retrieve the information stored in S2\$, you should use logical ORs to store it. In other words, what OR has wrought, AND will unwrought.

Start with S2\$ = CHR\$(58), 00111010 in binary. To recover the section number N%, use AND with the ASCII value of S2\$ and 15

*To print the message,
you first must
recover it from
the secret file.*

(00001111 binary). For example, N% = (ASC(S2\$) AND 15), 58 AND 15 = 10, our section number.

Notice that bits 1-3 are unaffected, while bits 4-7 are bypassed. If you turn this around to 11110000, or 240 decimal, you can mask out bits 1-3 and isolate the top 4 bits for manipulation. Looking at this example in binary: 58 is 00111010. 00111010 AND 11110000 = 00110000, or 48 decimal.

Storing and Retrieving Information

All that remains now is to insert a code that transfers information to and from the disk where the BBS stores it. Program Listings 1 and 2 do just this: Listing 1 loads information onto the disk, while Listing 2 removes information from the disk.

In Listing 1, for example, line 3280 calls line 3290 as a subroutine. This

lets the caller leave a message in one of two ways: with the L (Leave) command, or by replying to a displayed message. By creating a subroutine out of lines 3290-3640, you can call information from two places in the program.

Line 3280, the routine for leaving a message, begins by setting S7\$ to CHR\$(0). If line 3290 is called from a Reply command, S7\$ will already contain the high 4 bits from S2\$.

Throughout the program, GOSUB 130 acts as the call to the machine-code Receive section (RCV). GOSUB 130 returns with count equal to the number of characters entered over the communications link or keyboard, while I\$ contains the characters.

Lines 3320-3340 prompt the section number of the message, and assign S6\$ to the digit of that section. S9\$ receives the number of the section, which corresponds with S6\$.

Line 3610 LSETs the information into the file fields and places the assembled record into Messages/BBS, the message log, at record SN, the variable holding the number of messages on the system.

Program Listing 2 recovers the information. The header printing routine will then use this information, which we'll look at more extensively next month.

To print the message number, you first must recover it from the secret file constructed last month. This is done by setting N = VAL (RIGHT\$(2\$,4)). For example, if the file name is MSG0110, then N would be 110.

Since the "To," "From," and "Subject" sections of the message prompt are strings, no conversion is necessary. It is necessary, however, to assign variables so that you can manipulate them later. The variables T\$, TT\$, and S8\$ are assigned the values To, From, and Subject, respectively.

Because of the mask with 240, S9\$ gets the section number from S2\$. You'll want the BBS program to print the digit of the section number, rather than its value. In our example, the section number was 10. Therefore, you want to print "Section: A" not "Section: CHR\$(10)". Because CHR\$(10) is a line feed, there's no need to print it.

Using Basic's MID\$ function, S6\$ retrieves the digit to print. You can see

Program Listing 1. BBS module for writing messages to disk.

End

this process in line 350 of Listing 2. In our example, S2\$ is assigned the 10th character in the string 0123456789ABCDE, which is A.

The high 4 bits of S2\$ will go to S7\$ for the header printing routine to use. This indicates the status of the message, i.e., whether the message is private or public and whether or not it's been retrieved by the addressee.

If ASC(S7\$) AND 32 is 32, the message is private and the program will print a P. If the ASCII value of S7\$ AND 16 is 16, then the addressee has retrieved the message, and the program will print an (X).

The printing routine uses a Boolean variable, PR, to indicate whether the output will go to the printer or the screen. If it goes to the screen, it is then transmitted through the communications line to the caller.

The sysop may elect to have output directed to the printer rather than to the screen with the sysop's Hard Copy option or by invoking the P command after a message appears. Choosing the Hard Copy option from the sysop's menu will set PR to true (-1). This works, assuming that the printer works properly. Line 1230 checks the printer status before allowing output to the printer.

Memory address &H37E8 is the printer status location. A PEEK to this address returns a byte that represents the current state of the printer. Because you're concerned here with the top 4 bytes, you execute an AND with 240. If the statement (PEEK(&H37E8) AND 240)=48) is true AND if PR is true (-1), the message is printed to the line printer instead of the screen.

If the printer isn't ready, ((PEEK(&H37E8) AND 240)=48) will not be true. In this case, PR will go to zero and the message will be printed to the screen.

In next month's BBS Express, we'll deal more with printing, so stay tuned. ■

The BBS Express, 80 Micro's bulletin board system, is open 24 hours a day. Call us at 603-924-6985 to see the finished product.

You can reach J. Stewart Schneider and Charles E. Bowen either through their bulletin board at 606-739-6088 or c/o Saturday Software, P.O. Box 404, Catlettsburg, KY 41129.

for a change!

Because the dBase® Source Code is included with all SBT Accounting Software, you can add a special part number system or change a report format at will—the possibilities are endless. You get control and flexibility that's crucial to a well run business. What's more, every SBT Accounting Program can change and grow with your needs. You can make the changes yourself, or SBT will do it for you quickly and inexpensively.

Completely Integrated

Start with the modules you need now, and add the others later. Best of all, SBT Software works on all computers that can run dBase.

Beyond the Keyboard: Creating Character Graphics

Your computer provides a contingent of variously shaped, ROM-based figures called character graphics. If you know how to retrieve them and how to make them work together, you're on your way to some fancy graphics effects for art, animation, and decoration.

This month I'll travel among these strange creatures of the light and show how you can use them.

Model I/III/4 Graphics

You can generate graphics characters by using ASCII codes 128-191 on the Model I/III/4. Program Listing 1, Character Graphics, is a short routine that displays all but one of the Model I/III/4 graphics symbols; it doesn't display CHR\$(128) since that represents a blank space.

The computer forms each graphics character using a box of six cells, two horizontal by three vertical. The ASCII codes from 128-191 use every combination of lights on and off to create the 64 character shapes.

To see this for yourself, try Giant Blip in Program Listing 2. This program displays an enlarged graphics character of your choice. Type in and run the program. At the prompt, type in a number between 128 and 191 and hit the enter key.

Giant Blip displays the appropriate character graphics in the upper left corner of the screen. Tap any key to try another shape.

Last month I discussed ASCII code and how each character has a corresponding ASCII number. That goes for graphics characters, too. Typing in PRINT CHR\$(187) prints the character graphic 187.

If you type in A\$=CHR\$(187), then type in PRINT ASC(A\$) and hit the enter key, the computer prints the number 187, the ASCII value assigned

to that variable. These techniques are useful for manipulating character graphics.

You can print a string that repeats the same graphics character up to 255 times. Type in CLEAR 1000 and hit the enter key to clear sufficient string space, then type in PRINT STRING\$(255,157) and press the enter key.

The 255 is the number of times you want the computer to print the graphics character, and 157 represents the character's ASCII number. Change these values to produce a desired graphics character and string length.

You can also assign a single value to a string variable: A\$=CHR\$(134). Now make this part of a STRING\$ expression by typing in PRINT STRING\$(64,A\$). To streamline the program, make a variable worth the STRING\$ value: A\$=STRING\$(32,178).

An even more complex approach is to make a string variable equal to three characters. Type in Z\$=CHR\$(134)+CHR\$(135)+CHR\$(136). Then

type in PRINT Z\$ and press the enter key. The computer prints the three graphics characters in a row.

The result here isn't impressive, but by experimenting with this technique you can create new graphics shapes.

Try running Concatenated Graphics in Program Listing 3. The program prints three graphics characters in a row, followed by the corresponding ASCII codes. It then lets you change any of the three characters to create new shapes.

The program starts by prompting you for character 1, 2, or 3. Type in a number, but don't press the enter key. The program then prompts you for an ASCII number between 128 and 191.

The Key Box
Models I and III
Model 4
Model 100

BASIC TAKES

Type in a whole number within this range and press the enter key.

The computer prints three graphics characters at the bottom of the screen with the corresponding ASCII numbers to the right, and returns continuously for a changing value of any of the characters.

By randomly adding three graphics characters, you might, for example, blunder onto the combination that looks like an elephant. But you'll never find it unless you try.

Program Listing 4, 12-Month Bar Graph, shows how to use the STRING\$ statement to print graphs and charts. The program prompts you to title the chart and to input values of 100 or fewer units for each month of the year. As soon as you enter the December values, the program prints the chart. The bar lengths correspond to the values you enter.

Graphics characters also work well for screen ornamentation. Frame, in Program Listing 5, uses three string variables to frame the screen. In lines 130-150 the program assigns the string variables to represent parts of the frame.

Run the program and a frame shape appears. Then hit the break key, type in CLS, hit the enter key, and type in PRINT A\$. Try this for B\$ and C\$ to see how I put the strings together in manageable lengths.

Model 100 Graphics

The Model 100 uses a liquid crystal display instead of the Model I/III/4 phosphor display, and its graphics differ from those of the Model I/III/4. The ASCII numbers 123-159 and 224-255 represent the Model 100's graphics characters. A complete ASCII character table appears on pp. 211-216 of the Model 100 owner's manual.

The Model 100 graphics set uses two- by two-cell graphics characters. Between CHR\$(224), which is a blank, and CHR\$(239), which is a filled box, 16 basic graphics combinations exist.

CHR\$(240) to CHR\$(250) represent characters that create lines for framing. CHR\$(255) is a checkered square, and characters 251-254 are diagonal graphics.

Bat in Program Listing 6 uses the diagonal graphics characters to dis-

190 END

```

End

play a bat flitting back and forth across the screen.

Another animation program, Jumpy, repeatedly prints character strings 147 and 148 to get a jumping effect (see Program Listing 7).

More Animation

Try creating animation using the graphics characters on your system and Template in Program Listing 8. When you type in this listing, use your imagination and fill in the missing ASCII codes.

Template is a demonstration of two-stage animation that contains nine graphics characters. The idea is to create two three- by three-cell figures. The program represents the first figure as A\$(1), B\$(1), and C\$(1) in lines 130-150.

The second animation stage is A\$(2), B\$(2), and C\$(2) in lines 160-180. The program won't work as shown, however. You must replace the X's in the CHR\$(X) statements with the graphics characters' numbers for your machine.

First create a shape on a three- by three-cell grid and make a second shape that relates to the first so that the movement makes sense. Template displays the two animation stages over each other.

Try expanding Template to an eight- by eight-cell grid in five animation stages, or make it larger if you like. Soon you'll have cartoon characters running across your screen.

Animation offers the most interesting use of character graphics, but the applications are endless.

Coming soon: To err is human, but if you want your Basic programs to forgive, don't miss my discussion of error codes next month. ■

You can reach Richard Ramella at 1493 Mt. View Ave., Chico, CA 95926.

Multi-Basic

"The BASIC compiler that compiles both MBASIC and CBASIC" ✓ 215

Now you don't have to give up the features you like about MBASIC to obtain the powerful capabilities of CBASIC. Multi-Basic gives you both.

Multi-Basic works with your existing programs so your current software investment is protected. But just as important, Multi-Basic opens the door to a whole new way of programming. With Multi-Basic you can write very readable, modular and structured programs. Multi-Basic makes program maintenance as easy as it is with Pascal.

In addition to understanding the two most popular dialects of BASIC, Multi-Basic allows you to extend the language even further. You can add your own statements and functions as needed.

Multi-Basic is also compatible with our Pascal and C compilers. This allows your BASIC programs to use routines written in Pascal or C.

In today's fast changing computer business, you need a language as versatile as Multi-Basic. Invest a little time today and save a lot of time tomorrow. You owe it to yourself to see what a difference Multi-Basic can make.

Multi-Basic is available for the TRS80 models I, II, III, 4 and 12; Tandy 2000, IBM PC, and CP/M. It is compatible with TRSDOS, LDOS, NEWDOS, DOSPLUS, MSDOS, PCDOS, CP/M and CP/M plus.

Tackling Some Tougher Pascal Programs

Last month, you learned about Pascal's advanced data types. Now you're ready to put those data types to work in more interesting and complex programs.

To review, arrays are collections of data elements of the same type. Records hold elements of different types. Enumerated types have all possible data values listed in the program's type declaration and the values have an inherent order. Subrange data types contain subsets of larger ordinal data types.

You declare these user-defined data types in the Type section of your program. The showTypes program (see Program Listing 1) demonstrates the use of a number of different data types.

Take a Number

The Matrix Algebra program (Program Listing 2) performs addition, multiplication, and subtraction on two-dimensional arrays.

The program passes arrays by reference to the procedures. As you may remember, when you pass a variable by reference, the procedure can alter its value; you're dealing with the original value of the variable in memory. However, a variable passed by value is also stored in another location, and you can alter it in the procedure without changing its original value.

In this program, you're passing the arrays by reference to save space, not to protect them from side effects; it takes up too much room to store them in two places at the same time.

You do have the option of using global variables instead of passing the arrays to the procedures. But that defeats the primary reason for using procedures. When you use global variables in a procedure, as in the example

below, the routine works only on those variables:

```
procedure addMatrix;
{ uses global variables: i, j, rows, columns as
the size of the arrays and adds matrices A and B
and returns C }
for i:= 1 to rows do
  for j:= 1 to columns do
    c[i,j] := a[i,j] + b[i,j];
end;
```

If you wanted to add matrices D and E, you'd have to write a new procedure. But if you pass the arrays, you can plug any array into the procedure as long as it matches the type declared in the procedure parameter list. So you can add arrays A and B and return C, or add D and E and return F, all with the same procedure:

```
procedure addMatrix (var a,b,c: matrix;
rows,columns: integer);
var i,j: integer;
for i:= 1 to rows do
  for j:= 1 to columns do
    c[i,j] := [i,j] + b[i,j];
end;
```

You can invoke this procedure to add matrices A and B and return the result in C with:

```
addMatrix(a,b,c,rows,columns);
```

or add matrices D and E and return the result in F (with *n* rows and *m* columns):

```
addMatrix(d,e,f,n,m);
```

The ChooseOption procedure of the algebra program uses another advanced programming feature, the variant record. Option is a variant record passed by reference. It has only one field, but that field varies; it can be a number from zero to 4 or it can be one of the elements of the enumerated type OptionType:

```
optionType = (null, add, A*x*B, B*x*A, quit);
```

The variant field has two names, one for each variant. The name option.num indicates a value between

"WORKTOOLS 80" — AN INTEGRATED SOFTWARE FOR THE TRS-80™*

"WORKTOOLS 80" is the "Kernel" for a Small Business Software System with 3 fully file compatible programs in an "Integrated Command Environment": "Worksheet 80", a Spreadsheet Program, "Worktext 80", a Word-processor Program and "Workfile 80", a Data Base.

"WORKSHEET 80" Spreadsheets have up to 64 columns and 66 rows with programmable column, row number, individual column width and decimal place number. Any cell, row or column of cells can be defined by formulas including all arithmetical operators or by special functions such as TOTAL, AVERAGE, MAXIMUM, MINIMUM and PERCENT.

"WORKSHEET 80" features fully programmable format, indentation, centering, hyphenation, headers, footers, auto page numbering and printer control. The MERGE Function allows for Form Letters merging with files made by "WORKFILE 80" and the inclusion of "WORKSHEET 80" Spreadsheets into documents.

"WORKFILE 80" features fully programmable record format and size and will work on Lists, Reports, Spreadsheets, or Ledgers, either created by it or by the other Programs in the System. Has powerful "Data Base" commands such as SEARCH and VIEW/UPDATE.

Besides their own Special Functions and Commands all Programs share Powerful System Commands such as: CREATE, FORMAT, DELETE, INSERT, COPY, MOVE, FIND/REPLACE, LOAD and SAVE.

The soon to be available "WORKPROF 80" — a Proof-Reader and Dictionary Program will complement this first Module of the "WORKTOOLS 80" Software System for only \$39.99.

NOW AVAILABLE FOR TRS-80 MODELS III, IV, MOD.100 32K DISK AND COCO 32K DISK FOR ONLY \$99.99 (California residents add 6.5% tax)! So send check, money order or VISA/MC/AMX number and expiration date to:

PASCALCULATIONS

zero and 4, inclusive. The name option.cmd indicates a value from the enumerated type optionType. Alcor Pascal stores the enumerated type as a value between zero (for null) and 4 (for quit). So, you can enter the value as a number (using option.num) and use it as a command (option.cmd).

To indicate the function you want the program to perform, you type in a number. For example, 1 calls for adding matrices, 3 calls for postmultiplying B by A. A Read statement assigns that value to option.num. Option.cmd has the corresponding command. This makes the program much easier to read—take a look at the case statement at the end of the program. The value of option.cmd determines the case. Option.cmd = add calls one procedure; option.cmd = A*x*B calls another, and so on.

Making the Grade

And now for something completely different: a program that records and prints out student test results (see Pro-

gram Listing 3). An array of 50 student records holds the data, including a student's name (a character array), a letter grade, the number of questions (a subrange type), and a Boolean array containing the student's answers to a true/false test.

You can experiment with additions to the program. For example, it would be handy to have an editing routine in case you enter an incorrect value. Or you could modify the program so it grades the tests. Just enter a special record with an ID value of zero, and name it Key. The program can then compare each student's answers with the key, and compute a grade. If you're working with a multiple choice test, you can even have the routine print out the wrong answers along with the correct answer (see Program Listing 4). ■

*You can write to Bruce Powel

ACCEL3/4

Basic Compiler

For instance, we compiled this benchmark Basic program from a May 1984 80-Micro article (pp. 96-100). We didn't change a line. Compilation took less than 1 second with only 18% code expansion. And what performance results! The program ran 3 TIMES FASTER than the Model 2000, and 20 TIMES FASTER than the original Mod I/III uncompiled version.

ACCEL3/4 is the **PRACTICAL** way to get better performing Basic programs.

- Easy to use, on-line with Basic, quick compilation.
- Ultra-acceptant, accepts the whole Basic language (and many non-standard Basic extensions).
- Huge speedups, programs 2-200 times faster.
- Low code growth, programs only 10-50% larger than original (plus 1.5K runtime module). Can compile 25k + Basic programs.
- No royalties on compiled code.

ACCEL3/4: Mod I/III \$99⁹⁵
all dos + \$2/s/h

EDIT

Full screen editor for basic and SBE programs. Links with Basic for an on-line expert word-processor, FAR better programming productivity. \$40 + \$1⁰⁰ s/h

**3% the cost of a Model 2000!

FOR TRS-80 MODELS 1, 3 & 4
IBM PC, XT, AND COMPAQ

The MMSFORTH System. Compare.

- The speed, compactness and extensibility of the MMSFORTH total software environment, optimized for the popular IBM PC and TRS-80 Models 1, 3 and 4.
- An integrated system of sophisticated application programs: word processing, database management, communications, general ledger and more, all with powerful capabilities, surprising speed and ease of use.
- With source code, for custom modifications by you or MMS.
- The famous MMS support, including detailed manuals and examples, telephone tips, additional programs and inexpensive program updates, User Groups worldwide, the MMSFORTH Newsletter, Forth-related books, workshops and professional consulting.

MMSFORTH

A World of Difference!

- Personal licensing for TRS-80: \$129.95 for MMSFORTH, or "3+4TH" User System with FORTHWRITE, DATAHANDLER and FORTHCOM for \$399.95.
- Personal licensing for IBM PC: \$249.95 for MMSFORTH, or enhanced "3+4TH" User System with FORTHWRITE, DATAHANDLER-PLUS and FORTHCOM for \$549.95.
- Corporate Site License Extensions from \$1,000.

If you recognize the difference and want to profit from it, ask us or your dealer about the world of MMSFORTH.

Double-Action Programming With the Z80 Chip

When you run a program, whether it's in machine language or Basic, it seems to run straight through from beginning to end. As programmers, you might think that a TRS-80's Z80 microprocessor is dedicated to whatever task you're asking the computer to do.

However, the Model I with an Expansion Interface, the Models III, 4, and 4P are really primitive multi-tasking systems. Several times a second, a clock "heart beat" interrupts the Z80 and momentarily forces it to perform one or more tasks quite different from the main program it's running.

You can use this multi-tasking ability to make your computer perform two chores simultaneously. For example, while you're working with one program, you can run a simple timer that triggers a screen display when it reaches a given value. I find this useful when I'm using an electronic bulletin board; I set the timer to tell me when a certain amount of time has expired so I don't run up connect-time or long-distance charges. My timer works with LDOS 5.1.4; you'll have to adapt it to your own DOS (see the Program Listing).

Before fully explaining the program, I'll discuss the theory behind using interrupts on the TRS-80.

Two Types of Interrupts

The Z80 chip recognizes two kinds of interrupts, both generated by the computer or a hardware peripheral. The most common type is a non-maskable interrupt (NMI), meaning you can't use software to make the Z80 ignore it. A low signal on pin 17 of the CPU alerts the Z80 chip to an NMI. When that signal arrives, the Z80 finishes the program instruction it is currently executing, places the contents of the program counter on the stack, and then takes its next instruction from memory location 0066 hexadecimal (hex).

An NMI is the hardware equivalent to the instruction CALL 0066H with

only minor differences. On a Model I, you can only generate an NMI by pressing the reset button, sending the computer into its warm routine. The Models III and 4 use NMIs as part of the disk interface, and their reset buttons are wired to the Z80's reset pin.

Of more interest to most programmers are the maskable interrupts, since you can filter them out of the system. During time-critical tasks, such as disk and cassette access, you can turn off the interrupts with a Disable Interrupts (DI) instruction (0F3H).

In most other situations, you should leave the interrupts on with an Enable Interrupts (EI) instruction (0FBH), which maintains the system clock and opens up a path for other interrupts. The Model I with an Expansion Interface uses maskable interrupts for disk access, the real-time clock, and RS-232 processing. The Models III and 4 use maskable interrupts for RS-232 communications, input/output bus interrupts, the real-time clock, and 1,500-baud cassette operations.

The Z80 chip can operate in three different maskable interrupt modes. You can set the mode with Interrupt Mode 1 (IM1), Interrupt Mode 2 (IM2), or Interrupt Mode 3 (IM3) As-

sembly-language commands. Unfortunately, the hardware in the Models I, III, and 4/4P only supports one mode, IM1. When you turn on or reset your computer, part of its house-keeping (whether in ROM or in the RAM boot of a Model 4) is to set IM1. If you like to wear both a belt and suspenders, add the IM1 command to any program you write that uses interrupts, but it's generally unnecessary.

The hardware uses pin 16 to alert the Z80 chip to maskable interrupts. When the Z80 is in IM1 with interrupts enabled, a signal on that pin makes the Z80 save the current program counter on the stack and then invoke a restart to location 0038 hex (RST 38H), which is essentially the same as a CALL 0038H instruction. The Models I and III ROMs contain a JP 4012H instruction at 0038 hex, so

THE NEXT STEP

that various routines in RAM can handle the interrupt signals.

The first thing an interrupt-handling routine must do is clear the interrupt latch, a hardware gate that shows what generated the interrupt signal. The Model I clears the interrupt latch by reading location 37E0 hex with an

instruction such as LDA,(37E0H). The Models III and 4 do this by reading port 0E0 hex with an instruction such as IN A, (0E0H). The bit pattern in the A register after the read indicates what piece of hardware brought about the interrupt.

Unless you're writing a communi-

cations routine, a disk driver, or an interface program for a custom piece of hardware, you need only be concerned with interrupts that the real-time clock produces. The Model I Expansion Interface includes a crystal-driven clock that interrupts the Z80 40 times each second. The Model III uses the ac cur-

Program Listing. Demonstration of interrupt-handler routines.

End

rent line to generate a clock interrupt 30 times a second. The Model 4 (in either Model III or 4 mode) uses the ac current line to generate either 30 or 60 interrupts per second, depending on the system speed.

By using the clock interrupts, you can write programs that share the Z80 with other programs. Normally, you consider an interrupt-driven program a background task, while the main program executing in memory is called the foreground program. Background tasks include such things as a blinking cursor, type-ahead facilities, and de-spooling a printer file.

If you're using a DOS other than TRSDOS, your manual includes the necessary information for adding interrupt-driven routines. If you're using TRSDOS 6.X, you need the *Model 4 Technical Reference Manual* to find that information. Remember that background tasks need to be short; if they're too long, the foreground program never gets to work.

A Demonstration

Every DOS except TRSDOS 1.3 includes routines to add or delete background tasks (MULTIDOS calls them foreground tasks), though those routines are undocumented in the TRSDOS 2.3 manual. Each DOS handles the routines differently, and I wrote this month's demonstration program for Model III LDOS 5.1.4 because LDOS has the clearest documentation and its routines are the easiest to use to interrupt task handling. Once you understand the program, you should be able to adapt it to your own DOS.

The program displays the current system time and asks for a target time in hours and minutes (it ignores seconds), then relocates the working interrupt task to high memory and protects it there by resetting the `HIGH$` pointer.

If you're unfamiliar with LDOS, you might wonder about the `$` and `@` characters in the program labels. The LDOS manual describes memory locations and routines available to pro-

grammers, and the *Model 4 Technical Reference Manual* continues with these conventions. Any label that begins with an `@` is a DOS routine normally available for access by other programs. Any label that ends with a `$` is a memory location or table that's also available to other programs.

My demonstration program isn't complex, but you need to understand how LDOS (and other DOSes except TRSDOS 1.3) handles interrupt tasks. LDOS maintains 12 slots for clock-interrupt routines. The first eight (slots zero through 7) are low priority; routines added to those slots are called on every eighth clock beat (5 times a second on a Model I, 15 times every 4 seconds on a Model III). The top 4 slots, numbered 8-11, are used for high-priority tasks that are called every clock beat. Some slots are designated for system functions and options, others are available to programmers.

When the hardware clock sends an interrupt signal, the Z80 jumps to 0038 hex, then to 4012 hex, and from

@RPTSK	<4416 hex>	[4043 hex]

Model I TRSDOS 2.3

Has the same tasks at the same addresses as Model I LDOS, though the TRSDOS 2.3 manuals do not document those addresses.

Model III TRSDOS 1.3

Does not have a task processor available in RAM.

NEWDOS80 2.0

@ADTSK	<4410 hex>	[447B hex]
@RMTSK	<4413 hex>	[4413 hex]

DOSPLUS 3.5

@ADTSK	<4410 hex>	[4413 hex]
@RMTSK	<4413 hex>	[4416 hex]

MULTIDOS

@ADTSK	<4410 hex>	[44D2 hex]
@RMTSK	<4413 hex>	[44D5 hex]

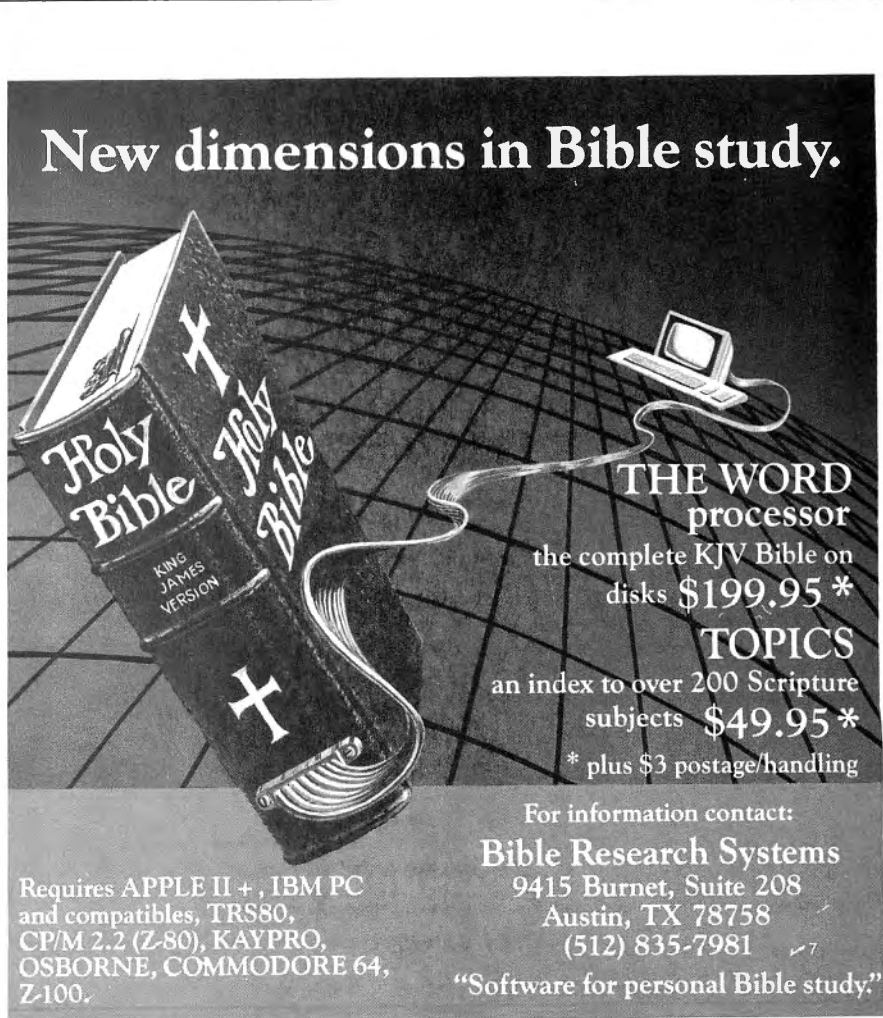

TRSDOS 6.X and DOSPLUS 4.0

@ADTSK	SVC# 29
@RMTSK	SVC# 30
@KLTSK	SVC# 32
@RPTSK	SVC# 31
@CKTSK	SVC# 28

(@CKTSK checks a task slot to determine if it is currently active or unused.)

Table. Interrupt task processor DOS routines. The Model I addresses are shown in the <> brackets. The Model III addresses are in the [] brackets. I used LDOS task names throughout for consistency. See your manual for specific details about your DOS.

READER SERVICE

This card valid until November 30, 1984

A. On average, how many of each issue's program listings do you actually type in?

- 1.0
- 2.1
- 3.2
- 4.3
- 5.4
- 6.5 or more

B. On a scale of 1 (never) to 5 (always), please rate 80 Micro for the following:

- ___ 1. Reviews useful
- ___ 2. Utilities useful
- ___ 3. Business programs useful
- ___ 4. Programs bug-free
- ___ 5. Material understandable
- ___ 6. Articles easy to read

C. What is your major application for your TRS-80? Check one only.

- 1. Word processing
- 2. Business
- 3. Freelance clerical
- 4. Education
- 5. Games
- 6. Hobby
- 7. Other home use
- 8. Other

D. Which of the following peripherals do you own?

- 1. Disk drive(s)
- 2. Printer
- 3. Modem
- 4. Voice synthesizer
- 5. Plotter
- 6. Joystick/game paddles
- 7. Bar code wand/reader
- 8. Light pen
- 9. Cassette recorder

E. Do you own a computer?

- 1. Yes
- 2. No

F. Do you own a computer that is not a Tandy model?

- 1. Yes
- 2. No

G. What type of TRS-80 do you own?

- 1. Model I
- 2. Model II/12
- 3. Model III
- 4. Model 4/4P
- 5. Model 16/16B
- 6. Model 100
- 7. Model 2000
- 8. Pocket Computer
- 9. Color Computer

H. Which of the following operating systems do you use?

- 1. TRSDOS
- 2. LDOS
- 3. NEWDOS
- 4. DOSPLUS
- 5. MSDOS
- 6. CP/M

I. Do you ever write Assembly-language programs?

- 1. Yes
- 2. No

J. If offered a choice, how would you prefer to purchase LOAD-80?

- ___ 1. 6 month subscription
- ___ 2. 12 month subscription
- ___ 3. Longer subscription
- ___ 4. Buying one issue at a time

L. Which of the following columns do you read? Please rate them on a scale of 1 (seldom read) to 5 (always read).

- ___ 1. Side Tracks
- ___ 2. Feedback Loop
- ___ 3. Reader Exchange
- ___ 4. Pascalcalculations
- ___ 5. The Next Step
- ___ 6. Project 80
- ___ 7. New Products
- ___ 8. Basic Takes
- ___ 9. Reviews
- ___ 10. Pulse Train
- ___ 11. 2000 Pulse
- ___ 12. BBS Express

M. If you are not a subscriber please circle 500.

Reader Service: To receive more information from any of the advertisers in this issue of 80 Micro circle the number on the Reader Service Card that corresponds with the Reader Service number on the ad in which you are interested. You will find numbers, preceded by a -, near the logo of each advertiser. Complete the entire card, stamp, drop into a mailbox and in 4-6 weeks you will hear from the advertiser directly.

there to an interrupt-handling routine. That routine (which is a part of DOS) checks the type of interrupt that has occurred; if it's a clock interrupt, the routine sends program control to a task processor. The task processor decides which tasks in which slots should get attention on this clock interrupt, and calls each of those tasks in order. However (and this is where things become a little tricky), the address the task processor finds in the task slot is not the address of the corresponding interrupt routine.

Each task slot contains a 2-byte pointer to a data structure called a task control block (TCB). The TCB begins with the 2-byte address of the interrupt task, and may contain any other bytes of information you want. To get to the actual interrupt task, the task processor first saves all registers (except the prime set and, in the Model I, the IY register) and loads the IX register with the address in the task slot. Then it jumps to the address to which the value in the IX register points. Therefore, the task slots are a set of pointers to pointers to routines.

This double indirection is not sheer madness. In fact, it makes programming much simpler. Your interrupt routine can store information such as counter bytes or internal buffers in the TCB and then find that information with an offset from the IX register. The first byte of such storage is at IX+2 when you call the task program.

LDOS provides four task-handling routines to further simplify programming interrupt routines. The first, @ADTSK, places the address contained in the DE register in the task slot indicated by the value in the A register. A second routine, @RMTSK, removes a task from the slot number indicated by the value in the A register. All DOSes except TRSDOS 1.3 provide these routines (see the Table).

The other two task handlers are unique to LDOS. @KLTSK removes the currently operating task from its task slot. An interrupt program can use @KLTSK to remove itself from a task slot without knowing to what slot it is connected. Finally, a task that wants to modify itself uses @RPTSK. This routine replaces the current address at the beginning of the TCB with the address immediately following the instruction CALL @RPTSK. In a sense, CALL @RPTSK says to the

task processor, "From now on, when you call this task, start with the instruction immediately following this one."

It's much easier to understand how these DOS routines work in practice. In the Listing, line 770 calls @ADTSK to insert the first interrupt routine into task slot zero. Notice how the program sets the DE and A registers before calling @ADTSK.

I wrote the demonstration program as an initialization module plus four separate interrupt routines. The first decrements a counter byte at IX+2 for 30 seconds until the counter reaches zero, then uses @RPTSK to set up the next routine to be called the next time the task processor sends control to this slot. The second routine gets the current time from the system, and compares it digit by digit with the target time. If the times don't match, the program sets the counter byte again, and control returns to the first routine.

If the second routine finds a match, the program sets the third routine's address in the TCB with @RPTSK.

When the task processor calls it, the third routine prints the word TIME in the center of the top video line and installs the final routine with @RPTSK. The last routine replaces the word TIME with four underline characters and checks a system flag to see if you've pressed the pause character (the shift and @ keys). If you haven't, control returns to routine 3. If you have, @KLTSK clears the task slot completely. After the pause, the computer doesn't call any of the routines again.

The Table contains the information about task handling that I've gleaned from the documentation of the current releases of other major DOSes. I haven't tried rewriting this program to run on any other DOS; I'll leave the experimenting to you. ■

INTRODUCING CASINO 21

A serious game of Blackjack for the TRS-80

- Closer to casino play than any other computerized game of Blackjack
- Rules as played in Atlantic City and Las Vegas
- Up to seven players—you play any or all hands
- Splitting pairs, doubling, insurance
- Over 125,000 deals from eight decks

TRS-80 Models I, III, IV Requires 32K, 1 Disk Drive

- \$15.95 • Checks only
- No Charge or COD

(N.Y. residents add \$1.00 for sales tax)

Dixon Road #12, Carmel, NY 10512
(914) 225-0992

TANDY 2000

REASONABLY PRICED SCIENTIFIC SOFTWARE FOR THE TANDY 2000 AND OTHER MS-DOS MICROS

STATISTICS - Menu driven package, easy to use and versatile. Double precision calculations throughout. Routines provided for basic quantities, confidence intervals, correlation, covariance, one and two variable hypothesis and confidence, chi square goodness of fit. Great for laboratory or general use. \$59.95 postpaid.

UTILITIES - Control screen functions and RS-232 from Microsoft FORTRAN. Make assembler programming easy with library of macros handling I/O, video, communications, etc. Both sets included for \$29.95 postpaid.

We do custom scientific programming at reasonable rates for MS-DOS, VAX/VMS, DECsystem-10/20. Write for details or call us at 914-735-8875 (8-5 EST) or CompuServe EMAIL, 72756,477.

Quick Conversion for Model I/III/4 Basic

Now that you're getting more familiar with your Model 2000, you may wonder how you can use the abundant Model I/III/4 Basic software. I rewrote a public-domain utility to create a program called Change that converts Model I, III, or 4 Basic programs to Model 2000 format (see the Program Listing, p. 180).

The Basic Problem

Last month I explained how to transfer VisiCalc files from the Model III to the 2000 across the RS-232 interface using a null modem. You can use the same procedure with Basic programs, as long as you save them as ASCII files.

Change converts a Basic program so you can transfer it to the 2000 in ASCII. I wrote the program for Model 4 Basic; to use it on the Model I/III, replace the Clear statement in line 160 with CLEAR 15000.

Converting a Basic program isn't hard once you understand the program's internal storage. Microsoft Basic scans lines as you enter them from the keyboard (or from a disk or cassette if you're loading an ASCII file), and converts key words to tokens to ease interpretation.

Basic then stores program lines internally and on disk as a linked list of token strings. A null byte (00 hex) terminates each string. Each line contains a pointer that points to the start of the next line; the last pointer is a program terminator of 2 null bytes.

Basic stores key words as 1-byte entities with values greater than 127. It stores characters that don't represent part of a token as individual ASCII character bytes.

Change is a structured Basic program that accomplishes this conversion. It flags any lines containing tokens that it can't properly convert or that function differently because of addressing so you can inspect them.

The heart of the conversion process is the key word table that Change's

Setup subroutine establishes. This table forms a one-to-one correspondence between the key word's numerical representation and the character string for the converted program file. You must enter the table exactly as it appears in the Listing, including the blanks in the strings, to assure correct blank insertion in the final program.

The Token subroutine is the workhorse of the conversion process. It analyzes each byte and decides what special actions the program must take. The subroutine handles the colon, Print, and data statements, and flags the error and questionable tokens.

Change converts Print statements if they contain an @ character after the Print token. The program assumes that the screen size is 16 lines by 64 characters, and preserves it by using Locate statements with the proper row and column numbers formed from the numerical value following the @. Change flags PRINT@ statements containing variables or expressions so you can inspect them.

These PRINT@ statements are the only area of your program that you must adjust to use Change for another MBasic interpreter.

The logic-handling of the PRINT@ statements must be compatible with the target interpreter. For example, the Model 4 has a corresponding PRINT@(row,col) notation, and CP/M machines usually have a corresponding cursor positioning sequence that you can print as a character string. Don't forget to convert the CLS statement to the appropriate screen commands if the target MBasic interpreter doesn't have this command.

Line 2260 adds a line-feed character (CH = 10: GOSUB 280) to each converted line. This is necessary for correct file structure under MS-DOS and CP/M. To use the program with systems that don't require a line feed after a carriage return, remove these two statements from line 2260.

If you'd like a copy of Change on disk, send a self-addressed mailer and a blank disk to me at 1519A Carswell Circle, Bolling Air Force Base, Washington, DC 20336. Specify the DOS and computer you'll be using. ■

TRS80 FREEDOM AT LAST!

Hypercross CPM-TRS80-PC File Transfer

Now you can cross the barrier between disk formats! With **Hypercross** you can **kill and copy** files to/from over 65 different CP/M and 5 IBM PC disk formats on your own TRS80 under your own DOS! You can also **format and DIR** these disks! CP/M includes most well known single and double sided formats including Montezuma 2.2 and Radio Shack 3.0+. PC includes DOS 1.1 and 2.0 ss and ds and Tandy 2000. Automatically corrects for differences in ASCII file formats. You can choose image transfer for binary files. Versions available for Model I, III and IV, needs 48k and 2 drives minimum. Some formats require double sided and or 80 track drives. Model I needs doubler. Specify Model and version required -CPM or PC alone \$49.99, combined deluxe CPM and PC \$79.99 ppd.

New Hyperzap 3.1 Disk Magic!

Hyperzap is more than just another disk copying program. It is the program for analyzing, copying, repairing, creating floppy disks of all kinds. It will copy any TRS80 format as well as disks from many others such as CP/M IBM-PC, CoCo etc. Specially designed to handle mixed density sectors on any track in any sequence. Many features for reading, writing, editing track and sector data. **Hyperzap** is the tool that lets you be in charge.

Make your own self booting disks. Take your own CMD file and turn it into a dual booting Mod 1/III/IV disk.

New feature Autopilot mode allows learning, saving and repeating established techniques. Disk comes with fascinating examples.

Hardware needed: 48k 1 drive minimum, Mod 1 needs doubler. 36 page manual - \$49.99 ppd.

REMSOFT, INC.

THE LIVING TRS-80

For Those Who MUST Know More!

Finally, REMsoft has responded to those who have asked for a **beginning level** tutorial. This course was designed by J. Thomas Evans, Jr., for the person who is just starting to explore the wonderful world of TRS-80 computing. The learning objectives the course was designed to provide:

- Skills in the use of BASIC and its editing capabilities.
- A fundamental understanding of the operation of the Z80 processor within the TRS-80.
- An entry-level knowledge of assembly language with some skill in the use of an editor-assembler.
- An understanding of the choices available in the selection of hardware and software as well as an appreciation for the methods of applying the computer to specific tasks.
- A good understanding of the types and availability of other resources which can provide greater levels of knowledge and skill.

Requires 32K and one disk drive. Available for Model III and Model 4 (in Model III mode).

LIVING TRS (disk) **\$79.95**

Let Your TRS-80® Teach You ASSEMBLY LANGUAGE

Tired of buying book after book on assembly language programming and still not knowing your **POP** from your **PUSH**?

REMSOFT proudly announces a more efficient way, using your own TRS-80® to learn the fundamentals of assembly language programming... at YOUR pace and YOUR convenience.

Our unique package, "INTRODUCTION TO TRS-80® ASSEMBLY PROGRAMMING," will provide you with the following:

- Ten 40 minute lessons on audio cassettes
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- Step-by-step dissection of complete and useful routines to test memory and to gain direct control over the keyboard, video monitor, and printer.
- How to access and use powerful routines in your Level II or Model III Basic ROM

AVAILABLE FOR I, III and 4 (in MOD III Mode)
REMASSEM (tape) \$74.95
REMASSEM (disk) \$79.95

This course was developed and recorded by Joseph E. Willis and are based on the successful series of courses he has taught at Meta Technologies Corporation, the Radio Shack computer Center, and other locations in Northern Ohio.

TRS-80® IS A TRADEMARK OF TANDY CORP.

NEW

for TRS-80 Models I/III/4, a powerful but inexpensive communications program

- works on all DOSs
- continuous print of incoming data or screen print
- XON/XOFF codes can be changed to suit host
- auto dial and auto log-on
- framing, parity, and overrun errors reported.
- handles ASCII or binary files
- large capture buffer
- block or prompted transmissions
- keeps track of time on-line
- use with null modem cable up to 9600 baud

can be integrated with Lazy Writer word processor, or use alone

INTRODUCTORY PRICE \$34.95

CONVERT UR FLOPPYS TO FLIPPYS

5 1/4" FLIP-IT

Self-aligning for making index-hole Cutout It's clean, quick, & easy Accurate, Consistent, & Safe

SAVE \$, Ⓜ
 Use 2 sides of **F**

Apple, IBM, Osborne, Kaypro, TRS 80 and other owners can convert their single-sided 5 1/4" or 8" disks to double-sided disks with FLIP-IT, a new patent-pending converter, superior to any cheap imitations on the market. So simple to use, even a child can make the conversion in less than 30 seconds. No measuring or alignments required. So economical, one FLIP-IT can convert countless disks, doubling your memory each time.

TRS-80™ Owners Can Save Money!

Now Micro-Grip™ is new and improved! Micro-Grip™ IV will give you the friction feed capability that you've been looking for, without the high cost of buying a letter quality printer. We've manufactured a new device to upgrade your old tractor feed system for a fraction of the cost! It is installed with just a screwdriver, and new modifications make adjustments easier than ever! Micro-Grip™ IV has been designed for Epson MX-70/80, RX-80 and printers based on Epson design, such as the IBM PC, Commodore, and H.P. Bill Cole Enterprises is the exclusive manufacturer of Micro-Grip™. Micro-Grip™ — only \$39.95 plus shipping.

You can add friction feed capability to your tractor feed printer for less than \$40!

MICRO-GRIP™ IV

Designed specifically for the Epson MX-70/80 and RX-80 printers.

*NOTE: Micro-Grip™ is not a substitute for a letter quality printer. It is a retrofit mechanism for the purpose of obtaining single sheet correspondence from your tractor feed printer.

#670 Micro-Grip™ IV Wt. 1 lb./ea. \$39.95/ea.

TRS-80™ is a trademark of Radio Shack, a Tandy Corp.

DISKFILE

For dustfree protection of your software, Diskfile provides storage for fifty 5¼" floppy disks. Vertical filing prevents warping. Comes with 5 adjustable dividers with moveable tabs and built-in carrying handle. Compact 8" x 7" x 7".

Suggested List Price — \$29.95

No.	Item Wt.	YOUR COST
#628	3 lbs.	\$19.95/ea.

TERMS & CONDITIONS

A minimum order of 10.00 is required, not including shipping. Prices effective 2/1/84 and are subject to change without notice. Automatic credit is extended to federal agencies, but to keep our prices competitive, we must request payment with orders from all other individuals and institutions. No. C.O.D.'s. Freight charges added to credit card orders. All others shipped freight-collect. CASH ONLY. No merchandise may be returned without prior written authorization from this office. Merchandise ordered in error or not wanted is subject to a 25% restocking charge. Defective material replaced at no charge. All returns limited to a merchandise credit only. Continued from p. 40

to using DOSPLUS commands from this screen: The ICPL system automatically converts the at sign (@) (used by DOSPLUS in routing to a printing and other commands) to an ampersand (&), making such a command invalid.

The communications menu of my version had only one option set-up, that for the Uniterm terminal program. Since I don't own Uniterm, I added menu options for Ultraterm, Ultrahost, and three Ultraterm utilities, using the DOS* procedure for maximum buffer space. This worked quite satisfactorily.

The NICE development facility (option 14 on the main menu) lets you format a screen, menu, or report. The manual includes a tutorial on using the facility. You can use the data base submenu to create and manage data-base files; it includes utilities for printing file control data, merging, and clearing out files, and for re-creating a damaged file index. The ICPL submenu is intended primarily for programmers.

You can go directly from the development menu to NICE Basic, a Basic interpreter with ICPL features added. Basic can execute almost any ICPL function or command, so Assembly-language programmers can write new commands for Basic; for example, you can call an Assembly-language routine instead of resorting to a USR routine.

The last option on the main menu is called Entertainment. Entertainment consists of a submenu with two items, pool and coffee. If you select coffee, the screen shows a menu of four coffee and doughnut items from the "Russian Tea Room" and asks you to make a choice. Any selection results in an out-of-stock message and a request for another choice. This continues three times and then you're told it's closing time. There's no obvious or subtle way to exit the cycle until it's complete, at which point you're returned to the main menu. Pool consists of a dot endlessly and aimlessly bouncing from one bumper to another, with no user control, no instructions, and no way to get out short of pressing the break key. So much for the entertainment menu.

The User Guide is loaded with errors. It's disorganized and scatters information on a single subject. To compound this, the documentation lacks an index.

The NICE Tutorial

According to the manual, if you press PF2 from a menu screen, "you will see a 'HELP' screen containing useful information describing the functions of that particular screen." There are 15 menus in the program as issued, but just three corresponding help screens, for the letter, business, and utilities menus. In all other cases, you get the general help screen, which suggests you go to the tutorial.

Again according to the manual, using an interactive, comprehensive tutorial is the quickest and easiest way to learn the system. But of the 40 screens in the tutorial system, only three are interactive. The others present a summary of the information in the manual in a condensed and, perhaps, better organized form.

The introductory section of the tutorial describes the makeup of the NICE system, reassures the novice that he needn't get involved in the inner workings of ICPL to use the system effectively, and then states that it's necessary to learn only "several" (translation: 26) ICPL commands to write "professional-quality programs" in Basic. Further, you learn that you can use the ICPL procedures supplied to create data-base files, etc., with no programming. You're all excited and eager for more information and suddenly you're dumped into the Russian Tea Room for a coffee break. What frustration! There is one plus to the screen tutorial: It does have the correct formula for using the PF keys.

Nicepen

You can access the Nicepen editor from the menus or from the DOS level. The brief section of the manual dealing with Nicepen summarizes the commands, features, and file management procedures. Although it shows

printing specifications, the manual gives no information whatsoever about their use or even the default values.

The character repeat rate of the Nicepen I used was extremely fast at the normal 2 MHz computer speed and unmanageable at 4 MHz and higher. Because no installation module comes with Nicepen, I had no simple way to adjust the rate; XYZT gave me instructions by phone for slowing it down. Also, I found the right-hand shift key didn't work, at least for the Model 4 in Model III mode. Not being familiar with Electric Pencil, I found it strange to use the shift key/space bar combination as the control key.

Documentation and Support

I can only characterize the documentation as poor. It comes in four separate sections: the User Guide and the LSO, Nicepen and ICPL sections. The on-screen tutorial is a fifth, summary part.

The User Guide, in particular, is loaded with errors—factual, typographical, and grammatical. Some of the screen illustrations are different in detail from the screens they represent. The guide is disorganized and scatters information on a single subject. To compound the problem, the documentation lacks an index. Finally, in an attempt to be ultra user-friendly, the writing becomes so goody-goody that it's condescending.

The ICPL section of the manual is undoubtedly the best of the lot and it's apparent that the authors felt much more at ease writing for programmers than users.

As I mentioned, XYZT provides a phone number for technical assistance. If you're fortunate enough to have someone answer your call, you'll probably get a knowledgeable answer to your question.

Problems and Limitations

One major problem, of course, is the documentation. The authors of this program badly need the assistance of someone who understands the documentation needs of the non-programmer as well as the programmer.

Another major problem is the user programs supplied as models. Certainly they are "ready to run" but they're too simplistic to be useful. What use is a 10-sector letter library with one short

letter in it and only seven sectors left? Or a 10-record data-base file? Granted, the manual does state that you have to create new files to fit the system to your needs.

The data-base system as it stands provides only a primitive search capability. The report facility lets you start printing at the first record that matches a given specification, but you have to determine the number of records to be printed in advance; you can't specify an end to printing by a key match.

The sample customer file lists customers by full names. Because of the requirement that matching start with the first character in the field, John Smith comes before Santa Claus and Thomas Adam would be last! Certainly the user can create a new file in which the first and last names are in different fields with the last name as the key, but my point is that the example file should have had separate name fields.

The authors appear to have underestimated the average user's needs and expectations, while overestimating the user's willingness and/or ability to reprogram NICE to suit his requirements. For example, the tutorial says you can develop a Profile-type data base in about two hours. The authors seem to be unaware that some readers may not even know what a Profile-type data-base file is, let alone how to develop one.

Summary and Conclusion

In order to put the NICE program into perspective, I'll compare it to another integrated program, T/Maker, which runs on the Model 4 with CP/M. The new version T/Maker includes a text editor, full-featured word processor, spreadsheet, list manager, keyboard macro facility, and a relational data base; it lists for \$450.

Now what does NICE offer? It has a subset of a first-generation word processor, a primitive data base manager/report writer, and facilities for creating interactive screens and menus for use with the data files/report writer. The documentation is poor. To put it bluntly, NICE is not even in the same league as the other program.

The documentation totals 202 pages, of which 129 are devoted to ICPL and LSO. Only 73 pages apply to the user-oriented aspects of the system. In essence, NICE is the ICPL

program with a variety of very basic programming examples included. It does not warrant a price much (if any) greater than the \$150 at which ICPL has been advertised and at the current \$325 it is grossly overpriced.

Even as a programmer's tool, I could recommend NICE only at a substantially reduced cost and with significantly improved documentation. It would require a complete rewrite, upgrading, and expansion to be considered a useful integrated software applications program. It is a tremendous disappointment to find that NICE is not all that nice. ■

Serious Graphics For the Model 4

by David L. Engelhardt

If standard Model 4 graphics bore you, try Radio Shack's Hi-Res Graphics Board. Its 640- by 240-pixel display lets you create circles, squares, intricate shapes, and more in great detail. You can even simulate animation with some of the commands available.

To use the high-resolution board, you need 64K of RAM and one disk drive. The software runs under TRSDOS 6.01.02. Unfortunately, the board works only in the Model 4 mode.

What You Get

The high-res board is about the size of a 3- by 5-inch index card, consider-

ably smaller than the Model III's, and plugs into its mating connector on the main CPU board.

The disk you get includes a new version of Basic called BASICG (see Table 2 for a list of commands), eight stand-alone graphics utilities, example programs, and a graphics subroutine library to link graphics capabilities to higher-level languages like Fortran.

The BASICG disk does not contain the system routines to let you use JCL files. You'll have to remove some of the examples on the BASICG disk to free up more space and copy SYS11/SYS from another system disk.

The board uses two screens, one for text and the other for graphics. The SCREEN # command switches from one to the other. You can't display both screens at the same time, but you can simulate a single screen by rapidly switching back and forth. The trade-off may be sync and flicker problems. Machine-language programs might be able to handle such switching more effectively.

The board turns pixels off (black) and on (white). You can get shades by setting different dot combinations. You control dot positions with X,Y coordinates; (0,0) is the upper left corner and (639,239) is the lower right. Getting a dot just where you want it can be tricky; you can't be sure of its exact location.

If you're familiar with GW-Basic, you'll recognize many of the commands in Table 2. I'll briefly describe some of the more important ones:

Circle lets you draw five different types of figures: circles, ellipses, arcs, pie-slices, and points. You create different shapes with different command parameters.

The Get command lets you save graphics displays to an array you designate. The saved contents consist of a rectangular pixel area that is either the entire screen or, with the View command, a portion of it.

Put writes the rectangular pixel area back to the screen. Several logic and action operators—PSET, Preset, Or, And, and XOR—give you different visual effects.

You can simulate animation by saving a small graphics display with the Get command, clearing the screen or area, and putting it back in a slightly different position with the Put com-

mand. However, BASICG isn't fast enough to do this effectively, and you'll notice flicker. The smaller the graphics object, the less flicker you'll get. Animation is better handled with machine language.

You write text to the graphics display with the PRINT #-3 command. Text can consist of string constants, string variables, numeric constants, variables or expressions. You can write in specific directions via the GLOCATE command. Simply set the cursor with GLOCATE before using the PRINT #-3 command, and you can write at an angle of 0, 90, 180, or 270 degrees.

You can draw lines in any style by setting the pixel arrangement in 16-bit groups. For example, the binary number '1000 1111 1111 1000' (&H8FF8) gives you a series of dots and dashes. This feature is useful for enhancing graphics displays.

The dot manipulation commands are &POINT, Preset, and PSET. The first command tests dot positions for an off/on condition, while the latter two set or reset dots respectively. Preset and PSET are actually almost identical; the only difference is that they have different default values. One or the other probably would have sufficed.

You can redefine the screen size or create a viewport with the View command. This is handy if you want to use only a section of the screen for graphics manipulations. You have to create the screen outside the viewport before you redefine the screen size.

BASICG is 6.6K bytes larger than standard Basic. You can run your pro-

grams from either Basic, but you can't run programs with BASICG statements in standard Basic.

Three of the utility programs let you dump graphics to the printer. Unfortunately, you can only use a Radio Shack printer with graphics capabilities. One utility dumps to printers with a 9 1/2-inch carriage, and the others to printers with 15-inch carriages. You should try them all for the best results.

You can save and retrieve graphics displays with the GLOAD and GSAVE utilities from either BASICG or TRSDOS.

The Manual

The manual is more a reference guide than an instruction book, which Radio Shack indicates is what they wanted. It needs more examples, and could be clearer on how to use some of the commands. I found a few typos that are not critical and are obvious when you come across them. Be prepared to spend some time experimenting with the commands as you're learning them.

The manual contains both BASICG and Fortran graphics commands. It says that you can link graphics to several languages, but emphasizes Fortran; it describes each command you would use with Radio Shack's Fortran package (catalog number 26-2219). The commands are the same except for a few syntax and parameter differences.

The documentation also has the source listings for the eight utilities, which I was quite pleased to see; they'll help me with my machine-language routines.

Circle	Draws a circle, semicircle, ellipse, arc, point.
CLR	Clears the graphics screen.
Get	Reads the contents of a rectangular pixel area into array for future use by Put.
GLOCATE	Sets the graphics cursor and the direction for putting characters on the graphics screen.
Line	Draws a line from the startpoint to the endpoint in the specified line style and color. Also creates a box.
Paint &POINT	Paints an area, starting from a specified point. Also paints a specified style. Returns the off/on color value of a pixel.
Preset	Sets an individual dot (pixel) off (or on).
PSET	Sets an individual dot (pixel) on (or off).
PRINT #-3	Writes characters to the graphics screen.
Put	Stores graphics from an array onto the graphics screen.
Screen	Selects the graphics or text screen.
View	Creates a viewport which becomes the current graphics screen.
&VIEW	Returns the current viewport coordinates.

Table 2. BASICG commands and functions.

GCLS	Clears graphics screen.
GLOAD	Loads graphics memory from disk.
GPRINT	Lists graphics on the printer.
GPRT2	Prints graphics display on the printer without 90 degree rotation.
GPRT3	Prints graphics display on the printer without 90 degree rotation.
GROFF	Turns graphics screen off.
GRON	Turns graphics screen on.
GSAVE	Saves graphics memory to disk.

Table 3. Graphics utilities.

Appendices include a command reference summary and some sample programs written in BASICG and Fortran.

Conclusion

I was intrigued by the detail and capabilities of the graphics board. After a while, I found myself wanting to see some programs that use the board's features. Unfortunately, the board doesn't have much software support yet.

I was also disappointed to find that Radio Shack doesn't support the board in the Model III mode. I was unable to find out whether any Model III graphics software will operate the Model 4 board.

If you're ready for high-resolution graphics for either experiments or applications, you should seriously consider Radio Shack's Hi-Res Graphics Board. It offers more graphics than is currently available on the standard computer. ■

A Standard Reference

by John B. Harrell III

An overwhelming amount of technical information on CP/M is available in reference manuals. Unfortunately, much of it is poorly organized, with cryptic explanations of commands and features.

Nanos Systems' Reference Card for the CP/M System will help. It's a detailed, 20-panel pocket reference card that concisely covers the significant commands and features of CP/M-80 (versions 1.3, 1.4, and 2.2), CP/M-86 (for the IBM PC and its clones), and MP/M (a multiuser version of CP/M for 8-bit machines).

About the Card

This card is not an introduction to CP/M and is meant for experienced users. The command explanations are terse but detailed enough to provide adequate information for a quick refresher.

The first two panels are devoted to name conventions. They also provide information on ambiguous file names that many CP/M commands use. Next is a convenient list of the most frequently used file extensions. Last, you get a detailed description of the file control block layout.

After a summary of special keyboard function keys and control functions, the card presents the command summaries, in alphabetical order with concise descriptions of command options. Much of the remainder of the card is devoted to the command descriptions.

The card thoroughly discusses the features of the CP/M assembler, text editor, and dynamic debugging tool (DDT). This is an exceptionally concise run-down of the features these utilities provide.

The card also lists the Basic input/output system (BIOS) and the Basic disk operating system (BDOS) function calls. But be sure that the linkages are correct for your system.

Unfortunately, the card doesn't have information specifically for Radio Shack's CP/M Plus for the Model 4/4P. It also has some misplaced data and omissions. For example, the ASM parameter that prints an Assembly listing file is missing.

Nevertheless, this is a superior collection of information that provides an instant reference for CP/M users. It's far easier to use than most other CP/M documentation. This feature alone makes the card worthwhile. ■

A Strong Link

by Terry Kepner

Micro-Link II is an able Model 4 communications package that uses TRSDOS 6.0 or DOSPLUS 4.0 to take advantage of the Model 4's 80-character by 24-line display, 4 MHz speed, all-RAM mode, and better DOSes.

The package includes the main program, its seven associated overlay modules, and two ancillary utilities (RET/CMD and ABCON/CMD). The overlays maximize the buffer space available (40K) for data transmission and reception.

Program Features and Operation

Micro-Link II provides the features most commonly used in data communications: full- or half-duplex operation; printer on/off control; internal line-feed on/off control (some systems send a line feed with each carriage return); creating, saving, loading, and transmitting log-on messages; uploading to a BBS; transferring files using Christensen protocols (for CP/M computers); sending and receiving binary files; eight 63-character user buffers; reading the display directory; displaying, changing, and saving modem parameters; and clearing, opening, closing, displaying, loading, saving, transmitting, and typing buffer commands.

In addition, you can get a Help menu (a display of all the above commands), clear the screen, or return to DOS. If you decide to return to DOS,

you can later use the special Return program (RET/CMD) to return to Micro-Link II if you haven't executed any DOS commands or programs that overwrite Micro-Link's position in memory.

The buffer options are a little complex. You can transmit data in four ways: the block format sends a control-R to tell the computer you're communicating with to open its buffer, transmits the file, then sends a control-T to tell the other computer that file transmission is complete and to close the buffer.

The Prompt format sends the file one line at a time and waits after each carriage return for the other computer to respond with a prompt character indicating when it's ready for the next line.

Upload operates similarly to the prompt-format transmission but automatically transmits binary files 128 characters at a time.

Christensen protocol is the same as Prompt except that each transmitted line contains 128 characters and a checksum byte. An error results in the retransmission of the "bad" block, providing you with up to 10 retries before aborting the transmission.

You can receive data in three ways: through the automatic buffer, which automatically opens the buffer when it receives a control-R and closes it when control-T arrives; manual operation via clear-B; and Christensen protocol, which sends a prompt character, which you define, to the other computer after each line of data received.

Debug Programs Faster!

DPIT (for Debugging Programs by Interpretive Tracing) is a sophisticated tool with which you can explore and debug machine language programs. In the COMMAND mode, it will step through machine language programs one instruction at a time or a block of instructions, showing you the address, hexadecimal value, Zilog mnemonic, referenced registers contents and referenced RAM contents for each instruction. The 7 different COMMAND mode commands include load a program from disk, output to line printer or video display and define up to 16 different trace limits in RAM. The 19 commands in the DEBUG mode include block move, execute a CALL or RST, fill memory, find bytes, jump to address, memory modification in Hex or ASCII and modify flags or registers. **DPIT** includes a comprehensive manual available only on disk.

GRAMARCY™ The Word Game

For the Tandy 2000™.....\$29.95

If you like playing the word game in your daily newspaper you will love Gramarcy. In this game, the computer will pick a word of seven to eleven letters for you to solve. While you are entering your solution the program will compute the correct answer. You will be scored on the words you form from the letters in the given word. When you finish your list will be scored. If high enough, your score will be saved on a permanent list for that word length.

The program includes a routine which will print all words of four or more letters contained in any word you enter. Another routine to not only add and delete words but also to display any word and all its anagrams is included. Write for more information and program requirements.

Binary files are machine-language programs or compressed-format Basic programs that contain ASCII codes higher than 127. Using the Upload feature, you can transmit a binary file directly, but you must be using 8-bit data words instead of the standard 7-bit word. You can also use the binary file transmission function to convert the binary file to ASCII format (program length is limited to 24K) and transmit it that way. If you receive such a file, you can use the ABCON utility program to convert the ASCII file back to its binary form.

Drawbacks

One disadvantage to Micro-Link is that it uses the clear key as a control key to access its functions (leaving the real control key so you can transmit any special control codes to the other computer). This means that you can't use the DOS keystroke multipliers with Micro-Link.

Another problem is that you can't disable the control-R and control-T buffer control characters when sending data in block format (my Model 100 ignores these characters, and uses control-Z to close the buffer).

The only potential problem is that Micro-Link's disk directory command might have difficulties with 80-track double-headed or hard drives because of the number of files that can be in the directory. In that case, you must exit Micro-Link II, examine the directory, and restart the program. RET/CMD may not allow you to re-

enter the program properly, so it isn't recommended.

The Docs

Micro-Link's documentation is adequate. It's printed on card stock in a three-ring 7- by 9-inch binder. While the manual doesn't have a reference card, you can easily remove page 5 and use it for that purpose.

All in all, Micro-Link II is a good, moderately priced communications program for the Model 4. ■

A New Creation

by Mark D. Goodwin

Pro-Create, Misosys' Model 4 version of its popular EDAS IV editor/assembler, is one of the best such programs on the market. Even the most demanding programmers will find its many advanced features impressive.

The assembler is outstanding—its ability to use macros is by far the best I've ever seen. And the editor will do everything a Radio Shack editor/assembler can, and more.

About Macros and Conditionals

You use macros in source code to replace a repetitive series of instructions. Pro-Create lets you nest macros to eight levels, pass parameters by position or key word, test a passed parameter's length from within the macro, and create labels within the macro that are unique to each invocation of that macro.

Pro-Create also fully supports conditionals. You can thus easily use the same source code to produce many different versions of a program. Furthermore, you can use the conditionals within macros.

The Assembler

The program offers a Get directive for assembling source code files directly from disk. The length of the programs you can assemble is thus limited only by the size of the symbol table and the amount of disk space you have available.

You can use Pro-Create's Search directive to search partitioned data sets for commonly used source code routines. You will, however, need to spend \$40 on Misosys' PRO-PaDS, a

utility that lets you build a library of routines.

These are but the highlights. In addition, Pro-Create offers the ability to assemble core image files, the ability to assemble into memory, interactive linkage to Debug, 15-character labels, binary constants, powerful pseudops, sorted symbol tables, new expression operators, and new switches for controlling listings.

The Editor

Pro-Create's editor looks a lot like that of Radio Shack's editor/assemblers. Its advanced features let you copy and move a line or a block of lines, modify strings globally, save and load source code files in many different formats, display memory usage statistics, and execute TRSDOS 6.X library commands from within the editor's environment.

And More

Here are some of Pro-Create's other attractive features:

- The editor and assembler are co-resident. This can save time, particularly when performing trial assemblies, because you don't need to save the source code on disk before assembling.
- Pro-Create can produce a disk file of all the label references in a program. The XREF utility can then compile a complete cross-referenced listing of the labels. You'll find this useful for tracking down problems in programs that use multiple disk files.
- The manual is well-written and well-organized. Misosys also includes a copy of Micro Logic Corp.'s handy Z80 quick-reference card. ■

The Signalman XII: Talk is Cheap

by Bradford N. Dixon

Because people increasingly use computers as data terminals in telecommunications, a wide range of modems have flooded the micro market. The only problem now is in deciding which one best suits your needs.

Anchor Automation's Signalman Mark XII is one entry you don't want to overlook. It does the same job as such popular modems as the Hayes Smartmodem and Novation Smartcat, but at a lower price.

Your double-density diskettes spin at 300 RPM and hold 4608 bytes per track. That's equivalent to 23,040 bytes per second. So why does backing up take so long?

The problem is slow software.
The solution is ...

RAPIDOS is a new disk operating system that can read or write an entire disk track in a single revolution of the drive. With RAPIDOS, the Rapid Disk Duplication Program can copy and verify a full 40-track double-density diskette and perform a ...

26-SECOND BACKUP

Format, copy, and verify in just 42 seconds.

Great for backing up a stack of diskettes. After you finish one backup, start the next with one key depression.

The Rapid Disk Duplication Program comes with a manual containing operating instructions, explanations of error messages, and a description of the operating system.

Program is available in three TRS-80 versions: Model I version backs up TRSDOS 2.3 disks. Model III version backs up TRSDOS 1.3 disks. Model 4/4P version backs up TRSDOS 6.X disks.

Program diskette and manual for one version: **\$30.00.**

Order additional versions for \$15.00 each. Send check or money order to:

14958 Dyer Street, Sylmar, California, 91342

TRS-80 and TRSDOS are registered trademarks of Tandy Corp.

The Unit

The Signalman is a 300-/1,200-baud auto-answer/auto-dial modem that stores one telephone number and detects dial tones and busy signals automatically. Since you control the modem with your terminal program, you don't need to change internal DIP switches as you do with the Novation Smartcat.

The modem's front panel provides all the operational indicators you need: an HS light showing when the modem is operating at high speed (1,200 baud), a carrier-detect indicator (CD), a send data/receive data light (SD/RD), and a modem-ready indicator (MR). The modem's on/off switch, a feature Novation's Smartcat lacks, is to the right of these lights.

The Mark XII is 6 inches wide, 9½ inches deep and 1½ inches high. It makes a perfect platform for your desk telephone. The plastic case is close in color to the gray of Radio Shack's Models I and III for clash-conscious computerists.

Included in the package is a 6-foot telephone cable, a 110-volt power adaptor, and a 25-pin RS-232 connector already installed and ready to plug into your computer.

Using the Signalman Mark XII

When you turn on the Signalman, it runs a self-check test to make sure its hardware is functioning properly and sends an "OK" message to the screen. The modem's default values are 1,200 baud operation in the full-duplex mode with the automatic answer function enabled. If you're running a bulletin board system using the Signalman, you're ready to go as soon as you turn on the power.

In the auto-answer mode, the Mark XII senses the baud rate of the calling computer and adjusts its own rate to match. It does the same when calling a host computer.

I tested the Signalman in its manual and auto-dial modes to access 80 Micro's BBS and CompuServe. I also used it in the auto-answer mode in conjunction with 80's BBS to receive incoming calls. The modem performed flawlessly.

The Documentation

Telecommunications is exciting, but without good directions from the software and hardware you use, it can also

be frustrating. The 30-page owner's manual is complete and the directions are explicit and understandable. The tone of the manual is educational without being condescending, and it will appeal to computer novices and experts alike.

Anchor Automation includes a command menu in the modem's firmware to make the modem even easier to use (see Fig. 4). They also provide a handy quick-reference command card you can tape to the modem.

Please Hang Up

Hayes Microcomputer Products and Novation have similar and possibly more powerful modems, but they're also more expensive. Mail-order houses list the Hayes Smartmodem 1200 for \$469 to \$539 while the Novation Smartcat 103/212 lists for \$410 in the same ads. The Signalman Mark XII's suggested retail price is \$399, but at least one mail-order house offers it for \$250.

Anchor Automation has a winner in their modem. In a field dominated by Hayes and Novation, the Signalman is one modem that performs all basic functions and more without the higher price. ■

Dot Matrix Printer Interfaces with TRS-80
Featuring a TRS-80 compatible parallel interface, Addmaster Corporation has produced a new dot matrix printer, Model 170. The Interface includes a Centronics-type handshake and DB-25 interface connector, Baudot, and day-and-time clock. The Model 170 provides 18 or 21 characters per line, 6 lines per inch print density, on standard 2 1/2" adding machine tape. Designed to use with personal computers, Model 170 will produce hard and carbonless copies of programs, data or results. Write Addmaster Corporation, 416 Junipero Serra, Dr., San Gabriel, CA 91776 or call 213/285-1121.

EPSON* OWNERS

We get letters on a regular basis from customers saying how much they enjoy receiving our lists.

It's probably safe to say that our lists are different from most of the others in that they are as entertaining as they are informative.

The lists are "slanted" toward the EPSON Printer user but should be of interest to the owner of most any microcomputer printer.

Send us your name and address and we'll send you a rather fat envelope filled with computer oriented offers.

NODVILL DIET PROGRAM

\$69.95

"TAKE A BYTE"
MAINTAIN, LOSE OR GAIN WEIGHT
With the NODVILL DIET PROGRAM "Take a Byte" and a TRS-80 D.D. Disk M I/III/4 or P-C Compatible.

you can quickly and accurately:

- * Calculate caloric and nutritive floor, Intake
- * Evaluate nutritive value of your diet
- * Compare daily diet to individual RDA Chart
- * Create personalized daily meals and menus
- * Plan varied daily menus based on sound nutrition
- * Save records of daily meals and menus for future planning
- * Print nutrition charts, food, meal, menu and grocery lists

"Take a Byte" is a Modular BASIC Program

MAIN Program Menu

- (1) Recommended Daily Dietary Allowance (RDA) CHART
- (2) 733 Expandable Random Access FOOD LIST Data File
- (3) 28 Nutritional MEAL LIST Data File Examples
- (4) 7 Balanced DAILY MENU LIST Data File Examples
- (5) GROCERY LIST Program Module
- (6) 25 Page USER'S MANUAL including Charts and Tables

ALL Data Files can be EXPANDED and MODIFIED systematically and flexibly to reflect your personal diet, your choice of diet book, or your doctor's suggested diet

Your Printstation In Life

The GLP and the Printstation 240, 250, and 354 printers from Centronics Corp. (1 Wall St., Hudson, NH 03051, 603-883-0111) are designed for portability and office work.

The compact, 6.6 lb. GLP dot-matrix printer (\$299) offers block graphics, correspondence- and draft-quality printing, and enlarged, condensed, emphasized, and double-strike print modes and is small enough (13 by 7½ by 2.8 inches) to accompany your Model 4P.

It prints superscripts and subscripts and accepts cut-sheet or roll paper. An optional tractor feed accepts 8-inch fan-fold paper.

The GLP printer runs at 50 characters per second (cps) for draft-quality and 12 cps for correspondence-quality printing.

The Printstation 240 24-pin dot-matrix printer (\$1,495) features normal- and high-density print modes, proportional fonts, and runs with systems that support daisy-wheel printers.

It prints at 160 cps in draft mode (80 cps in correspondence mode) and prints pin-addressable graphics and condensed, enlarged, and emphasized characters.

The Printstation 250 dot-matrix printer (\$1,299) prints in seven colors, generates charts and graphs, and automatically feeds documents. It prints at 185 cps for proportional printing, 160 cps in draft-quality mode, and 40 cps for correspondence-quality mode.

The GLP compact dot-matrix printer is one of four new printers from Centronics.

It also features a bidirectional, logic-seeking print head, pin-addressable graphics, and printer setup and diagnostics controls.

The Printstation Model 354 dot-matrix printer handles fan-fold or single sheets and runs at 220 cps draft mode, 50 cps correspondence mode. Capabilities include proportional printing, margins, automatic centering, bold and shadow print, variable fonts, and pin-addressable graphics. It costs \$2,195 and offers an optional bin feeder.

1-2-3 for the 2000

Tandy's Model 2000 now runs Lotus 1-2-3. Lotus

1-2-3 combines data-base management, spreadsheet, and graphics programs in a single integrated package. The spreadsheet offers up to 2,048 rows and 256 columns, cell and page formatting, statistical, financial, and calendar functions.

You can use spreadsheet data with Lotus' graphics program to create and display bar and line graphs, pie charts, and X-Y graphs.

Lotus' information management program lets you quickly enter or retrieve more than 2,000 data-base records. Data base information is available for statistical analysis, reports, or for spreadsheet models and graphs.

Lotus' Macro Command

Language lets you develop automatic command sequences for faster operation. Lotus 1-2-3 includes an MS-DOS operating system and tutorial programs for the beginning user.

It's available at Radio Shack stores. For more information contact Tandy Corporation/Radio Shack at 1800 One Tandy Center, Fort Worth, TX 76102.

Reader Service ✓ 551

Resolution Revolution

The Grafyx Solution add-on board plugs into your Model III or 4 graphics connector to increase resolution to 640 by 240 pixels.

An enclosed graphics software disk runs under TRSDOS 1.3 or 6.1, LDOS, and NEWDOS80, and contains over 40 programs and files that facilitate board use and provide practical graphics applications.

The package also includes Extended Graphics Basic for creating lines, boxes, ellipses, circles, and arcs. You can fill areas with 256 patterns, change the viewing area, and save screen sections.

The Grafyx Solution (\$199.95) is available from Micro Labs Inc., 902 Pinecrest, Richardson, TX 75080, 214-235-0915.

Reader Service ✓ 558

Plenteous Programs

Programmed Press offers a package of 50 investment-oriented Basic programs (\$100) for the Models I, III, 4, and 2000.

The Grafyx Solution add-on board enhances Model III/4 resolution.

INTEGRATED SOFTWARE FOR MODEL III & IV

See Our Product Review in July '84 Issue of 80 Micro*
(Article by Gary Ludwig)

*I recommend you get your hands on A-B-SEE before its author, David Dahl, realizes how seriously underpriced it is... A-B-SEE is an ingenious, thoroughly professional Model III file editor, word processor, screen graphics, and telecommunications program. Because of its integrated nature and flexibility, this package can do the job of a half-dozen individual utilities and programs.

ADVANCED SCREEN EDITING

FAST HOR/VERT SCREEN EDITING • INSTANT HELP SCREENS
EDITS ANY FILE • USER DEFINED PERSONALITY
MACROS FOR COMPLEX TASKS • BLOCK MOVE - LOAD, SAVE
SCREEN SNAPSHOTS (GRAPHS) • COLUMN EDITING
RANGES, VETOS & STRINGS

*If you're a programmer, your editing tasks have just become much easier.

EXCELLENT DOCUMENTATION

• OVER 200 PAGES
• PROGRAMMED TUTORIAL
• CLEARLY WRITTEN
• EASY TO USE

*The 200-page documentation, contained in a three-ring looseleaf binder, equals in thoroughness any I've encountered...

*I know almost nothing about binary files, but with the superb documentation on A-B-SEE and the step-by-step examples, I looked at and doctored several files I would otherwise be loath to touch.

ON SCREEN WORD PROCESSING

TEXT JUSTIFICATION (LCR) • PARAGRAPHS - INDENTS - MARGINS
PROPORTIONAL SPACING • MODEL III GRAPHICS
PAGE NUMBERING (ANYWHERE) • ODD/EVEN TOP & BOTTOM TITLES
CUSTOMIZES TO YOUR PRINTER • WORD WRAP - AUTO TABS
PARTIAL DOCUMENT PRINTING

*A-B-SEE is so flexible that you can alter almost any parameter of the system... A-B-SEE's special keyboard driver generates all 256 ASCII characters and also stores strings of keystrokes — called "macros" — to perform complex tasks with less input from you.

TELECOMMUNICATIONS

UP TO 1200 BAUD • EXTREMELY FAST SCREEN DISPLAY
MACROS HANDSHAKE WITH HOST • HORIZONTAL SCROLLING SCREEN

FREEBEE PROGRAMS (Source Files Included)

DRAW: HOR/VERT SCROLLING • CONNECT: SUPPORT HAYES SMART-MODEM FEATURES • HELP: FRAME ORIENTED RELATIONAL QUERY DATA BASE • LPRINT: SCREEN IMAGES ON EPSON, PROWRITER, AND OKIDATA (92)

DOS SHELL

• EXEC DOS COMMANDS & RETURN
• EXEC BASIC & /CMD PROGRAMS
• USE MACROS IN PROGRAMS
• SUPPORTS MOST MODEL III DOS

*A-B-SEE is the most fascinating program I have worked with in a long, long time.

A Transportable Thermal Printer

Ergo Systems Inc.'s Hush 80 portable dot-matrix thermal printer (\$159.99) features 80-column bidirectional printing at 80 cps, and comes with an interface and cable.

Hush 80 combines the quietness of a thermal printer with speed and portability.

At 28 ounces and 12 by 5½ by 3 inches, the Hush 80 fits easily into a briefcase. An optional rechargeable battery pack keeps you printing while you're on the road. RS-232 and serial interfaces are available.

The Hush 80 comes with a 100-foot roll of thermal paper and a 9-volt wall transformer/power cable. Printer paper is contained in the unit for greater portability.

For more information

contact Ergo Systems Inc. at 1360 Willow Road, Menlo Park, CA 94025, 415-322-3746.

Storage to the Max

IJK Inc.'s 2.46-megabyte disk upgrade system for the Models III and 4 has enough storage capacity to back up hard disk systems.

The upgrade hardware lets you boot up 48-tracks-per-inch (tpi) disks, and the accompanying software reads and writes in high-density mode (192 tpi) using specially formatted disks. A speed-up kit reduces disk input/output time by half.

The drive features a 500-bit-per-second transfer rate, 3 millisecond track-to-track access time, and a track-following servo to ensure on-track read/write

AUTOPEN WORD PROCESSOR
\$29.50 plus \$2.00 M&H

A powerful word processor in only 2.5K. Save your RAM for text. Featuring:

1. Menu control with defaults.
2. Standard pica, elite, and micro formats.
3. Automatic paging and numbering.
4. Use of continuous forms or single sheets.
5. Multiple copies with personalized input.
6. Basic word processing without special commands.
7. Expanded power using easy to remember commands to:
 - Reset top and bottom margins.
 - Reset side margins and line length.
 - Indent text.
 - Delayed or hanging indents.
 - Center headings.
 - Print page headings.
 - Input text from keyboard.
 - Turn right justification on and off.
 - Set line spacing.
 - Skip multiple lines.
 - Redefine page numbering.
 - Start a new page.
 - Print double width headings.
 - Insert non-printing comments.
 - Stamp pages with file, date, and time.
 - Send printer control codes.
 - Chain files together.
8. Director display for file selection.
9. Buffered typewriter operation without files.
10. Output to tape, phone, files, or RS0232 port.
11. Limited support of underlining and features requiring embedded control characters.
12. Customize to utilize printer features.
13. Print long documents from RAM and/or tape.
14. Counts characters in a document.

Shrinking Basic

Well-commented programs facilitate debugging and clarify program logic.

Multi Form disk trays keep your disks under lock and key.

Once you're familiar with a program, however, these lines lose their usefulness and waste memory space.

Shrink (\$24.95) compresses Basic programs to the smallest possible size without altering program logic and data. It removes remarks and unnecessary spaces, and combines statements into as few lines as possible. You can then run

larger programs and execute programs faster.

If you need to edit a program, Break (\$19.95) puts each statement on its own line. For even clearer listings, Insert (\$19.95) puts spaces before and after each Basic operator and key word.

All three utilities execute from the overlay area of your operating system while

the Basic program resides in memory. No saving and loading is necessary. Load the program once, then insert spaces and break lines for corrections, or shrink it and run it from RAM.

The programs run on the Models I, II, III, 4, 12, and 16. A complete package with all three utilities is \$49.95 from Gulf States Computer Services, 10039 Bissonnet, Suite 130, Houston, TX 77036, 713-270-9003.

TRSDOS Training

You bought a Model 4, and now you must learn how to use it. Radio Shack's disk-based Training for TRSDOS program (\$74.95) introduces new owners to operating systems, disk utilities, file commands, and JCL files.

Developed for Radio Shack by Cdex Corp., Training for TRSDOS is available through Radio

CONVERT YOUR TRS-80 MODEL I, III, OR 4 INTO A DEVELOPMENT SYSTEM

Now you can develop Z-80 based, stand-alone devices such as games, robots, instruments and peripheral controllers, by using your TRS-80 as a development system. The DEVELOPMATE plugs into the expansion connector of your TRS-80 and adds **PROM PROGRAMMING** and **IN-CIRCUIT-EMULATION** capabilities to your system (with or without expansion interface).

Complete instructions and sample schematics are included to help you design your own simple stand-alone microcomputer systems. THESE SYSTEMS CAN BE AS SIMPLE AS FOUR ICs: one TTL circuit for clock and reset, a Z-80, an EPROM, and one peripheral interface chip.

When the In-Circuit-Emulation cable is plugged into the Z-80 socket of your stand-alone system, the system becomes a part of your TRS-80: You can use the full power of your editor/ assembler's debug and trace program to check out both the hardware and the software. Simple test loops can be used to check out the hardware, then the system program can be run to debug the logic of your stand-alone device.

Since the program is kept in TRS-80 RAM, changes can be made quickly and easily. When your stand-alone device works as desired, you use the Developmate's PROM PROGRAMMER to copy the program into a PROM. With this PROM, and a Z-80 in place of the emulation cable, your stand-alone device will work by itself.

The DEVELOPMATE is extremely compact: Both the PROM programmer and the In-Circuit-Emulator are in one small plastic box only 3.2" x 5.4". A line-plug mounted power supply is included. The PROM programmer has a "personality module" which defines the voltages and connections of the PROM so that future devices can be accommodated. However, the system comes with a "universal" personality module which handles 2758, 2508 (8K), 2716, 2516 (16K), 2532 (32K), as well as the new electrically alterable 2816 and 48016 (16K EEPROMs).

The COMPLETE DEVELOPMATE 81, for Model I, with software, power supply, emulation cable, TRS-80 cable, and "universal" personality module \$329

DEVELOPMATE 83, Model III/4 version, same as above \$329
PM2 PERSONALITY MODULE for 2732A EPROM \$15
PM3 PERSONALITY MODULE for 2764 EPROM \$15

Four Ways to Print

Riteman Computer Printers (Airport Business Park, 431 N. Oak St., Inglewood, CA 90302, 213-453-6688) offers four lightweight printers for your TRS-80.

The Riteman Plus dot-matrix printer (\$399) offers both pin-feed and friction-feed printing at 120 cps. It has DIP switches on the outside panel for easy access and uses a cartridge ribbon and a steel cable for

The Riteman Blue Plus fits into a briefcase and prints at 140 cps.

printer movement. A tractor feed is optional.

The Riteman II 160 cps dot-matrix printer comes with 2K (\$549) or 8K RAM (\$599) and uses pin- or friction-feed paper with a tractor-feed option.

Riteman's Blue Plus model (\$499) prints at 140 cps and features Epson

RX-80 FT and MX-80 FT Grafrax Type III modes. The Blue Plus comes with a pin- and friction-feed system. Tractor feed is optional.

The Riteman 15 is a 160 cps bottom- and rear-feed dot-matrix printer for business use. It features front-panel controls, a cartridge

ribbon, and 2K (\$799) or 8K (\$849) RAM.

All four printers include a one-year warranty.

The only way to WIN is to ENTER:

80 Micro's Young Programmers' Contest 1984-1985

Grand Prize \$300 and publication

- 3 1st prizes—\$200 each and publication
 - 3 2nd prizes—\$100 each and possible publication
 - 3 3rd prizes—\$50 each and possible publication
- Honorable Mentions—Free subscription to
80 Micro and possible publication
(These prizes are in addition to our regular article price.)

If you're an aspiring programmer, 18 years or younger, enter **80 Micro's** 3rd Annual Young Programmers' Contest. Your entry must be for the TRS-80 Models III, 4, or 4P only. Programs will be judged on originality, documentation (more on this below), and program elegance. The age categories are 11 and under, 12 through 14, and 15 through 18. All entries will be judged by the **80 Micro** staff.

Rules

1. Final entries must be received by October 1, 1984.
2. All entries must be submitted in a 10 x 13" envelope and must include: typewritten, double-spaced documentation; a printed copy of the program listing; a magnetic disk or cassette containing the program listing, the documentation, and any figures or tables; and a completed entry blank.
3. Documentation should consist of an explanation of the program, its purpose, how to use it, and the necessary software and hardware needed to use it, including disk operating system (DOS) and memory requirements. (If your entry requires unusual hardware configurations, query us before submitting.) Good documentation also points out the interesting algorithms and program techniques used without giving a line-by-line account.
4. Entries must be original and unpublished.
5. All winning entries become the property of **80 Micro**.
6. Your age as of October 1, 1984 will determine the category in which you will be judged. You must not have turned 19 by that date.
7. You may submit as many entries as you like; however, each one must be submitted separately and must include all of the information and materials described above.

NEW PRODUCTS

WORD PROCESSING SYSTEM
 FOR THE TRS-80*

PROSOFT

Prosoft's Allwrite is an advanced word processor for the Models I, III, 4, and 4P.

memory capability and compacts compiled code to accommodate programs much larger than would normally fit in RAM.

Software developed under the p-System on the Model 4 also runs on the Models II, 12, and 16.

Contact PCD Systems Inc., P.O. Box 277, Penn Yan, NY 14527, 315-536-7428 for more details.

Reader Service ✓ 574

Allwrite has a help file of 50 subjects and includes quick-reference cue cards that fit on your keyboard. Allwrite is compatible with Electric Webster 1.7 and DotWriter 4.0. The Model 4 version supports an 80-character by 24-line screen and edits up to three files at a time on a 128K system.

Allwrite is \$249.95 and includes a 350-page manual. For more information contact Prosoft, P.O. Box 560, N. Hollywood, CA 91603, 213-764-3131.

Reader Service ✓ 563

The Write Word Processor

The Allwrite word processor for the Models I, III, 4, and 4P features two-key commands and special "soft keys" to create paragraphs, center text, and invoke other functions.

The package formats tables of contents, indexes, and footnotes, and processes data from several disks as a single document.

Interactive Printing

The Interprinter printer control program works interactively with other programs to control your Epson printer.

It saves the current screen, then displays a menu for print modes, line feeds, variable line spacing, form feeds, form lengths,

Data Guard protects data transmissions on shared phone lines.

and other printer controls. Interprinter also lets you print messages on forms that the host program prints.

After execution, Interprinter restores the host program and its screen. The program runs on the Models I, III, and 4 under TRSDOS 1.3 and 2.3. Special formats are also available.

Interprinter is \$29.95 from Control Data Systems, P.O. Box 151, Asbury Park, NJ 07712, 201-988-1399.

Reader Service ✓ 567

The Data Dilemma

Every time you transmit data over a shared telephone line you risk losing your connection and your data if someone picks up an extension.

Rather than going to the expense of buying a dedicated line, you can install Dataguard (\$39.95). This simple device connects to extension phones to give your modem priority.

Dataguard works automatically and requires no power source. You can select an in-phone model that installs out of sight or opt for a 12-foot snap-in cord model that replaces your current phone cord.

Contact Control Industries (Box 6292, Bend, OR

97708, 503-389-1969) for more information.

Reader Service ✓ 569

CP/M Plus Software

Alpha Technologies (P.O. Box 1908, Huntsville, AL 35807, 205-881-3343) responds to the lack of Model 4 CP/M software by offering popular software packages formatted for CP/M Plus.

Products available include Ashton-Tate's dBase II, dUtil from Fox & Geller, Microsoft's Multiplan, and The Word Plus from Oasis, and others.

Pricing information is available upon request.

Reader Service ✓ 572

The Alternate Text Processor

The EDX text processor and formatter for the Models I and III lets you execute command sequences of up to 128 keystrokes by pressing a single key. The program also features column formatting for keying in program listings and other columnar data.

A scrolling mode has controls for pauses, scrolling speed, and direction. File size is limited only by your disk system's capacity.

BASIC

FOR MODELS I AND III

JUST GOT BETTER

INTRODUCING BASRUM. THE ONLY LINKING LOADER & LIBRARY MANAGER FOR BASIC.

BASRUM is designed to manage the subroutines you write and use in your Basic programs. Like an efficient filing system, BASRUM saves you time, energy, and space. Best of all, it makes your program writing FASTER and EASIER.

HOW DOES IT WORK?

BASRUM lets you store your subroutines in "library" files, separate from the programs that use them. ANY Basic program can then use any routine in any file. You can even load up to 256 routines to a special, protected memory area and use them AFTER you load other Basic programs! Naturally, you can replace or delete any routine from memory at any time.

SUPER BENEFITS!

NOW you can write a subroutine ONCE, store it on disk ONCE ... but use it in ANY program at ANY time, AUTOMATICALLY! Load them once, use them all day. You can CHAIN from program to program, keeping the existing subroutines, variables, and file buffers. Your Basic programs, being shorter, will LOAD FASTER. NEED MORE MEMORY? You can break long programs into shorter modules and "overlay" the modules. BASRUM gives you complete control of WHAT is loaded, WHEN it is loaded, and WHERE it is loaded.

THE NITTY GRITTY.

BASRUM was designed specifically for the models I and III for use with any DOS that is compatible with TRSDOS®. It's overlay structure requires only the top 1600 bytes of memory. There is NO LIMIT on the number of working copies.

SIMPLE ENOUGH FOR THE BEGINNER, VERSATILE ENOUGH FOR THE PRO: IF YOU WRITE PROGRAMS IN BASIC YOU NEED BASRUM.

TO ORDER: Money order, check, VISA, MASTERCARD: \$149.50
Specify memory size: 16K 32K 48K

Select disk format:

Model I: 35 track, single density

Model III: 40 track, double density

Guaranteed to perform as described or your money back. Orders are shipped via air, most within 24 hours. A complete manual is included. Information only? Send self-addressed, stamped envelope.

an innovative word processing system

written in Z80 Assembler by David Welsh

"I would give Lazy Writer my highest recommendation. This is a word processor with sufficient flexibility for any task you care to throw its way, and with sufficient ease of use for virtually any environment. Lazy Writer is one of the good ones."

Stew Schneider On-Line Today June 1984

Lazy Writer was the first system word processor. Since its introduction in 1980, it has been enhanced, updated, polished and extended. It is a family of programs for the business and professional user. Lazy Writer gives you:

- fast, easy, one-key editing
- 10 user programmable keys store keystrokes
- load and edit any file, even BASIC saved as ASCII, and files created by other programs
- printer codes in text can activate any printer function
- built-in communications
- a formatter to preview page breaks and give word count
- multi-line header/footers
- load extension programs without leaving the word processor
- integrates with Electric Webster, "the Cadillac of spelling checkers"

Model I and III come on a mini DOS, but can be transferred to any Model III DOS. An install program does the work for you. Model 4 version has 80 x 24 screen; use it with any Model III DOS or TRSDOS 6. Versions also available for Holmes VID-80 and Lobo MAX-80

NEW PRODUCTS

A Lexan sound cover cuts printer noise in the office or home.

EDX supports pages up to 128 characters wide, and its search and replace feature searches for wildcard entries, including decimal digits or any lowercase character.

The cut-and-paste function has 26 buffers for manipulating chunks of text, and an error recovery system lets you use DOS commands while running the program.

EDX includes a 100-page manual and a disk for \$29.95 plus \$3 shipping. For more information contact The Alternate Source at 704 N. Pennsylvania Ave., Lansing, MI 48906, 517-482-8270.

Reader Service ✓ 556

Printing in Silence

The new office printer works great, but it's so noisy you can't hear yourself think. Instead of putting it in another room, you can put it in a Lexan sound cover and relax.

These lightweight, impact-resistant, attractively designed, plastic noise-reduction cabinets accommodate any printer without interfering with interface connections.

Small fans inside the cabinet keep your printer cool, and top and front doors open wide for easy access. Lexan sound covers start at \$495 and are available from Supply Source, 175 Middlesex Turnpike, Bedford, MA 01730, 800-343-4688.

Reader Service ✓ 570

Programming in pC

The pC programming language and compiler for the Model I/III produces programs that run up to 50 times faster than Basic programs. The pC compiler translates source programs from pC into Z80 instructions.

pC uses structured programming statements such as While and If...Then...Else, and has a library of over 60 functions. Other functions access documented routines in ROM and TRSDOS, and support disk files, graphics, memory management, and strings.

You can redirect input and output files when running pC programs, and you can call pC routines from Assembly-language programs.

The pC package includes a manual and disk with a

Micropower line conditioners protect against brown-outs and surges, regulate voltage, and filter power line noise.

File Merge utility, runtime library, utility library, and pC source code. It's \$99.95 from Allegro Software, P.O. Box 6593, Station J, Ottawa, Ontario, K2A 3Y7, Canada.

PROGRAMMING TOOLS FOR YOUR TRS-80™

INSTANT ASSEMBLER

The INSTANT ASSEMBLER is a powerful machine language development system for the TRS-80. One program contains the editor, assembler, and debugger. It allows you to assemble directly to memory and immediately debug your programs with the built-in single stepping debugger. Quickly switch from assembler to debugger and back again without losing the source code. This feature makes INSTANT ASSEMBLER an excellent learning tool for the beginner and a super fast development system for the experienced programmer. INSTANT ASSEMBLER has many other unique features. It detects syntax errors as source is entered and stores its source in a compressed format that uses only 40% as much memory as other assemblers. It is incredibly fast and will assemble 10K of object code in just 8 seconds. It will also create relocatable code modules that can be saved on disk or tape and linked together for very large or modular assemblies. INSTANT ASSEMBLER comes with a comprehensive 65 page instruction manual and is available in several versions for different machines. The CP/M version does not run on all machines so inquire before ordering.

TAPE INTASM 2.1 for Model 1 and 3 \$39.95
 DISK INTASM 2.1 for Model 1 and 3 \$49.95
 DISK INTASM 3.0 for Model 4 \$69.95
 DISK INTASM 3.0 for CP/M \$69.95

INSIDE LEVEL II

This book is a comprehensive reference guide to the Model 1 and Model 3 ROMs which allows the machine language programmer to easily utilize the sophisticated routines they contain. Concisely explains set-ups, calling sequences, and variable passage for number conversion, arithmetic operations, and mathematical functions, as well as keyboard, tape, and video routines. In addition, the 18 chapters include a large body of other information useful to the programmer. 80 Micro said "The book has no flaws; it is a perfect gem." Byte Magazine said "I recommend this book to serious machine language programmers."

INSIDE LEVEL II \$15.95

DEMON DEBUGGER

DEMON (for DEbugger and MONitor) is a sophisticated tool with which you can explore and debug machine language programs. The STEP mode has 19 different commands and will step through machine language programs one instruction at a time, showing you the address, hexadecimal value, Zilog mnemonic, register contents, and step count for each instruction. The MONITOR mode has 26 different commands including a labeling disassembler. DEMON is available on tape or disk and includes a comprehensive 40 page manual with many examples.

DEMON 1.0 for Model 1 and 3 \$39.95
 DEMON 2.0 for Model 4 \$39.95

DISK INDEX

DISK INDEX will assemble an alphabetized index of every disk in your collection. Simply put each disk in the computer one after another, and DISK INDEX will quickly read the program names and free space left. It will recognize any DOS and disk density (except CP/M) and catalog disks for the Model 1, 3, and 4. The whole index or any selected part may be displayed on the screen or printed on paper in several different formats. Display modes include programs grouped by disk name, by program name, disks in order of decreasing free space, and by program showing the number of backup copies of each one. The index itself may be stored on disk for future access and update. A 48K machine will hold up to 255 disks or over 2000 programs in each file, and you can create as many files as you need. DISK INDEX comes with a comprehensive 28 page instruction manual.

DISK INDEX 3.2 for Model 1, 3, or 4 \$39.95

TELCOM

Mumford Micro offers two telecommunications programs. TELCOM I has most of the features needed to communicate with bulletin boards, time share systems, or for file transfers between two disk-based micros over modems or direct wire. It is menu driven and extremely simple to use. TELCOM II is an enhanced version of this program, which also supports the LYNC protocol which will automatically detect and correct errors in transmission. Files can be sent to or fetched from an unattended computer. The instruction manuals for both programs are available separately for \$5 to help you decide which program is best suited to your needs.

TELCOM I for Model 1, 3, or 4 \$39.95
 TELCOM II for Model 1 or 3 \$69.95

MODEL I SPEED UP

The SK-2 is a hardware modification for the Model 1 that allows CPU speeds to be increased by 50% or 100%. Speeds may be changed with a toggle switch (not included) or on software command. It can also be configured to return to normal speed any time a disk is active. It mounts inside the keyboard unit with only 4 necessary connections and is easily removed if the computer ever needs service. The SK-2 has been field proven by 3 years of use, and comes fully assembled with socketed IC's.

SK-2 \$29.95

ORDERING: Ten day money back guarantee. Include \$2.50 for postage and handling. California residents add 6% sales tax. Visa, MasterCard and COD orders accepted. SPECIFY MODEL NUMBER. Dealer inquiries invited.

Introducing the Most Powerful Business Software Ever!

TRS-80™ (Model I, II, III, or 16) • APPLE™ • IBM™ • OSBORNE™ • CP/M™ • KAYPRO™

FREE--TRS-80 Mod I, III & 4 programs supplied on DosPlus (minimum system). Complete DosPlus also available.

The VERSABUSINESS™ Series

Each VERSABUSINESS module can be purchased and used independently, or can be linked in any combination to form a complete, coordinated business system.

VERSARECEIVABLES™ **\$99.95**
 VERSARECEIVABLES™ is a complete menu-driven accounts receivable, invoicing, and monthly statement-generating system. It keeps track of all information related to who owes you or your company money, and can provide automatic billing for past due accounts. VERSARECEIVABLES™ prints all necessary statements, invoices, and summary reports and can be linked with VERSALEDGER II™ and VERSAINVENTORY™.

VERSAPAYABLES™ **\$99.95**
 VERSAPAYABLES™ is designed to keep track of current and aged payables, keeping you in touch with all information regarding how much money your company owes, and to whom. VERSAPAYABLES™ maintains a complete record on each vendor, prints checks, check registers, vouchers, transaction reports, aged payables reports, vendor reports, and more. With VERSAPAYABLES™, you can even let your computer automatically select which vouchers are to be paid.

VERSAPAYROLL™ **\$99.95**
 VERSAPAYROLL™ is a powerful and sophisticated, but easy to use payroll system that keeps track of all government-required payroll information. Complete employee records are maintained, and all necessary payroll calculations are performed automatically, with totals displayed on screen for operator approval. A payroll can be run totally, automatically, or the operator can intervene to prevent a check from being printed, or to alter information on it. If desired, totals may be posted to the VERSALEDGER II™ system.

VERSAINVENTORY™ **\$99.95**
 VERSAINVENTORY™ is a complete inventory control system that gives you instant access to data on any item. VERSAINVENTORY™ keeps track of all information related to what items are in stock, out of stock, on backorder, etc., stores sales and pricing data, alerts you when an item falls below a preset reorder point, and allows you to enter and print invoices directly or to link with the VERSARECEIVABLES™ system. VERSAINVENTORY™ prints all needed inventory listings, reports of items below reorder point, inventory value reports, period and year-to-date sales reports, price lists, inventory checklists, etc.

VERSALEDGER II™ **\$149.95**
 VERSALEDGER II™ is a complete accounting system that grows as your business grows. VERSALEDGER II™ can be used as a simple personal checkbook register, expanded to a small business bookkeeping system or developed into a large corporate general ledger system **without any additional software.**

- VERSALEDGER II™ gives you almost unlimited storage capacity (300 to 10,000 entries per month, depending on the system),
- stores all check and general ledger information forever,
- prints tractor-feed checks,
- handles multiple checkbooks and general ledgers,
- prints 17 customized accounting reports including check registers, balance sheets, income statements, transaction reports, account listings, etc.

VERSALEDGER II™ comes with a professionally-written 160 page manual designed for first-time users. The VERSALEDGER II™ manual will help you become quickly familiar with VERSALEDGER II™, using complete sample data files supplied on diskette and more than 50 pages of sample printouts.

SATISFACTION GUARANTEED!

Every VERSABUSINESS™ module is guaranteed to outperform all other competitive systems, and at a fraction of their cost. If you are not satisfied with any VERSABUSINESS™ module, you may return it within 30 days for a refund. Manuals for any VERSABUSINESS™ module may be purchased for \$25 each, credited toward a later purchase of that module. All CP/M-based Computers must be equipped with Microsoft BASIC (MBASIC or BASIC-80)

Langley-St. Clair's* **Soft-View™** Replacement CRT's eliminates the strobe, flicker and fatigue from TRS-80's.™

Now you can upgrade your monitor with the new medium persistence green or amber phosphor tube.

State-of-the-art systems such as IBM™ and Apple III™ do not use the less costly "P4" B&W display tube because it is actually intended for TV viewing and its rapid strobes (60 times per second) cause irritating eye fatigue.

No amount of "green plastic" will solve this problem. But the new **Soft-View** CRT display tube from Langley-St. Clair will.

- Available in slow decay Green or medium decay "European Amber" (the standard in Europe)
- Made with Lead/Strontium impregnated glass that stops X-ray emission.
- Of high-contrast face glass that also stops most U.V. radiation.
- Available in frosted glass with extra Anti-Glare benefits.
- Easily installed...comes with pre-mounted hardware.
- Warranted for one full year against manufacturing defects or tube failure.
- The finest quality double-dark glass phosphor fields to produce dramatic contrast.
- Ideal for Word Processing and Programming, yet fast enough for Games and Graphics.
