## Subscriptions To COCO ADS

Recieve 12 issues of COCO ADS for only \$10.00 / \$16.00 first class mail. Full of articles of interest, all for your TRS80 Color Computer. Also, space for your comments, by a reporter kit.

CLASSIFIED ADS - Are only \$.15 per word with a \$2.00 minimun. Please use a separete sheet of paper for your classified ad.

DISPLAY ADS are available. Please send for the current rates.

RENEWALS - There is a date in the upper right corner of your address label, this is the date your last COCO ADS will be sent. In order to keep them coming, please send in your renewal with that label. There will be no other notice sent for renewals.

Yes, I would like to subscribe to COCO ADS.

# PROGRAM OF THE MONTH

By Eric G. Robichaud

How many times have you sworn that you'd clean up your computer area, or straighten out your software library? I believe that there isn't really a computer user out there that hasn't been overcome, at one time or another, by a state of chaos that has gotten out of hand. A few weeks ago my personal insane asylum had reached it's chaotic best when I had no idea where anything was anymore.

It's just one of those things that creeps up totally unexpected; a diskette here, a book there, and soon my computer room looks like Oscar Madison's bedroom.

A few weeks ago I was looking for one of my programs, to show a friend, and searched in vain for it for what seemed to be an eternity. Fed up with not having any order to things, I decided to take drastic steps to organize my software library. Never again would I be caught not knowing where to find something!

Enter "DCAT"... (Dramatic music fades in). "DCAT" is a database program that will keep track of a software library (oh.. how convenient!). "DCAT" is fully menu driven, and allows total manipulation of the information in the quickest, easiest way possible. I've also included full error trapping, and "back doors" for the likes of myself who can easily trash valuable information. If there's a way to kill something, I'll find it!

"DCAT", incidentally, stands for "disk cataloger". "DCAT" is used to enter the titles of programs or full diskettes in your software library. I have numbered all of my diskettes, so I also include the number of the diskette, and any other quick, useful information.

"DCAT" will alphabetically sort out a file if requested to (file may be entered in another order, and left alone though), and will allow full editing of the file.

To get the program up and running, type in the listing for "DCAT.BAS" and save it on disk. Next, type in the program called "DCATTITL.BAS" and save it on disk also. Now RUN the second program ("DCATTITL.BAS") which will generate the title screen, saving it to disk as "TITLE/SCR". From now on you will only need to RUN "DCAT" to get the program up and running. Make sure, however, that if you

copy "DCAT.BAS" to another disk that you also copy "TITLE/SCR" to the other disk, since it will be called by the main program.

When running the program you are presented with a text graphics title screen such as was discussed in last month's article. Pressing any key will prompt you for the current date. The date is not overly important, but is just used when making a hardcopy of a file, to label the printout. This helps keep track of the most current printout.

After entering the date you are given the main menu. The program is generally self-prompted and self-explanatory, and therefore should be quite easy to use. Option 1 from the main menu is used to enter a disk title. You may continue entering titles until you hit <ENTER> on a new line. This will return you to the main menu. If you accidentally hit <ENTER>, just select option 1 again, and continue inputting the titles. As a matter of fact, hitting <ENTER> at any prompt will return you to either the main menu or the Edit menu depending on what function you are doing. Therefore, if you make a mistake, or want to abort a function (unsure of the information), simply hit <ENTER> and no information at all will be altered, and you will be brought back to the current menu (now isn't that nifty?).

Once the information is entered, you may sort it alphabetically (option 9) or leave it in the order that you entered it.

To view the information, select option 4. Viewing is very nice because you may either sit back and watch the computer go through all of the titles (referred to as a record) one at a time with a slight pause between each, or you may hit the <SPACE BAR> to jump immediately to the next record. Hitting the <LEFT ARROW> key will bring you back to the previous record. Hitting "X" will abort the data display routine, and bring you immediately back to the main menu, and hitting "E" will put you into Edit mode on the current record. So, if you notice a spelling mistake, simply hit "E" and you'll be in edit mode on that record!

While displaying the file, you are updated as to the total number of records (titles) in the file, and which record you are currently viewing.

The edit selection (option 2 from main menu) has three sub-functions. You may select to either edit one record, edit all records, or delete one record. If you opt to edit all records, each record is presented one at a time for you to enter a new title. Selecting option 2 to edit one record will prompt you to enter the number of the record to edit. If you don't know the number, hit <ENTER> to abort, return to the main menu, and select option 4 (list file) to display the file on the screen.

Selecting option 3 from the edit menu will prompt you to enter the number of the item to delete. Upon entering the number that item will be deleted, and all of the items above it will be brought down, closing the gap left by the deleted file. The size of the file will, of course, be decremented by one. This means that if you want to delete items one and two, deleting number one will cause number two to be dropped into the hole left by number one (and three to drop to two, and so forth..), and therefore you would want to delete number ONE again.

Selecting option 5 from the main menu allows you to load in a file from disk. Never use an extension when saving or loading; "DAT" will automatically be issued. Stay, of course, within the eight character limit. (But never fear; it won't let you do more anyway!) The nice feature about loading files is that you may merge files together. If there is a file in memory and you try to load in another file, you will be asked whether to erase the current file and replace it with the one on disk, or to merge the two together.

To save a file, you may do something similar. Selecting option 6 from the main menu will ask you for a name to save the file under, and will do a straight save to disk. Selecting option 7, however, will allow you to save a PORTION of the file! Just answer the prompts that ask which section of the file to save. So you may merge multiple files together, or separate one file into multiple ones! This gives added flexibility to keeping your database.

Option 8 is to erase a file, and just clears memory and allows you to start entering items again in a new file. It does verify that you want to proceed before it erases everything from memory.

The printer function (option 3) prompts you to enter a title. Simply enter a short word or two to label the printout, such as "GAME SORT" or "UTILITIES" so that you can identify the listing. The printout will be

automatically formatted so that every page of the printout is numbered, titled, and dated at the top of each page. Perforations in the pages are skipped, and a margin is kept. The beginning of the program contains REM statements (apostrophes) that comment on how to configure the two control codes for your printer. I have the program set up to print the header on each page in elongated mode. Simply change the strings at the start of the program to set up the control codes for your printer. You may also set up the baud rate for your printer by entering the appropriate value withing the printer routine. That section is also well commented for ease of use.

To end execution of the program, simply hit "E" from the main menu.

Upper and lowercase input are generally recognized, to allow ease of use on the CoCo3. A WIDTH 32 command is placed at the beginning of the program make sure everything runs smoothly on the CoCo3. I programmed this in the 32 column mode so that CoCo1/2 users may use this program also. Simply remove the WIDTH 32 command on a CoCo1/2. A friend of mine used a program called "EZ BASE" to keep a catalog of his files. "EZ BASE" is a general database program, and therefore allows multiple fields. My program only allows one field per record, because I didn't deem it necessary to have more than one. "EZ BASE" is good for some purposes, but not for cataloging a software library. I have included a nice, quick little converter program to allow those of you who use "EZ BASE" to quickly and easily convert your files over to "DCAT" so that you don't have to re-enter them all by hand. Just type in the third program listing, called "EZREADIN.BAS", save it to disk, then run it. It will ask you for the filename to load in (the "EZ BASE" file), it will convert it, then it will ask you what to call the "DCAT" format file. It is best to select a different name for the new file, to make sure that the new file doesn't overwrite the old one; never destroy the old file until you are certain that your new one is perfect!

The advantage of "DCAT" is that it does more than "EZ BASE", it prints headers on every page, it allows quicker movement through a file while displaying the data ("EZ BASE" takes decades to get to the end of file!), and "DCAT" does a lot less disk accesses, and saves disk space.

The last two points I find very important. "EZ BASE" accesses the disk with every file it lists to the screen. Hundreds

of accesses every time you use the program; I find that to be unnecessary wear and tear on the drives. Also, my friend had converted a 12 granule long "EZ BASE" file over to my format, and found that my format only used one granule!!!! At that rate, you can store an awful lot of data with "DCAT" as compared to "EZ BASE".

All of this, of course, is not to say that "EZ BASE" is not a good program, but IS to say that it isn't good for this purpose. So, if you do happen to use "EZ BASE", I've included a converter for you. If you use another program, let me know and I will see if I can write a quick and easy converter for you to use.

One note, however: Don't ever use commas in your titles! Those of you who program in BASIC will know that RS DOS uses commas to separate files on a disk. If you use a comma in your title, it will think that IT put the comma there, and that it was intended to mark the separation of files. I could have written a routine in the "EZ BASE" converter to search out and destroy all commas, but they are hardly ever used anyway (most people realize that it's a computer sin to use them), and the added routine would slow down the conversion process immensely.

Well, you now have a good program (yes, I'm biased) to catalog your full disks, and major programs. There is no excuse now for you not to be able to find any program in the snap of a finger, or to have a full list of everything to show to someone.

Currently I am working on a machine language program to read in and catalog individual programs from a disk directory, to do the same sort of thing with them. The directory sorts and the entire disk sorts (like "DCAT") are the only two types of sorts you should ever need.

If you use another program to do the same thing as "DCAT", try "DCAT" just the same; I find it very easy to use, and very quick, by comparison.

Now that I've extolled the virtues of my program, let's move onto a few broader, unrelated topics (Time for me to rant and rave on a potpourri of diverse information). I would like to note that if you are using a patched version of Telewriter-64 and begin experiencing problems with it such as the program locking up and your disk drive(s) going on indefinitely, your joysticks are the culprit. This has been mentioned before, but it is an often encountered phenomenon, and one often doesn't remember that little line of text. Simply center your joysticks (no

need to totally unplug them) and the symptoms should disappear. It seems that if certain values are held in the joystick registers, the program will go spastic.

A relative of mine also claims that the joysticks influence the artifactual colors when booting up graphics on a CoCo1/2. I think it's safe to say that just about everyone has seen, at one time or another, the famous graphics boot-up screen asking to hit <RESET> if the colors are wrong, or else hit <ENTER> (or something along those lines). I had written a program to do this for my Uncle, which he incorporated in the boot up procedure for any program that used artifactual graphics. He claims, however, that with CoCoMax II and several other games, programs, etc. that centering the joysticks will allow consistent color arrangements every time the computer is powered up. My CoCo3 has obsoleted my "grey box" so I haven't verified this myself, but I felt it was worth mentioning as a possibility.

For those of you that have been waiting for good graphics on the CoCo3 to begin to proliferate, you may smile, now that Color Max 3 has been released. Color Max 3 is a graphics editor that was written by Greg Miller and Erik Gavriluk, and is being marketed by Computize, Inc. Color Max 3 works in a manner very similar to the ever popular CoCo Max and CoCo Max II programs. It is a "point-and-click", icon environment, with pull-down menus and the works.

I have downloaded two utility programs from Delphi, both written by Greg Miller. One of them is a utility to load and save hi-resolution graphics screens on the CoCo3, and the other is a program called "GALLERY.BIN". "GALLERY" works in a similar fashion to Erik Gavriluk's Apple Macintosh picture converter; "GALLERY" displays a list of all of the MGE format pictures on the screen, and allows you to "point-and-click" which picture to view. Using this utility, I have had the pleasure of seeing many of the first CoCo3 hi-res pictures to come out, and I am really looking forward to seeing Color Max 3, and the great graphics that are already beginning to abound. If you haven't seen these programs, they are "Freeware", and are definitely worth looking into.

Now I would like to quickly touch on telecommunications (...this guy really jumps around!). For those of you who are on Delphi, you may reach me under the username EGROBICHAUD. If you are a Delphi subscriber, drop a line to me and say hello; I check in there often.

# TELE-DIRECTORY

Computer Tele-Directory was written as an alternative to the regular old Telephone/Address Book. It can hold up to 150 names and phone numbers. It is a rather easy program to operate.

The Input function is for entering and adding names, addresses, and phone numbers, when you finish entering all of your names type "END" at the name prompt. When this is done the directory will automatically sort the names and phone numbers in alphabetical order. The search function along with the print-out directory functions are rather self-explanatory. The "transfer list to disk function" is used to save the list. The "read in list function" is used to read in a list. The "clear memory" function is used to clear all phone numbers out of memory. And last but not least, the "end program" function terminates the execution of the program.

I believe that you will find that My Computer-Tele-directory a very useful program. If you don't want to type in the program I can send you a disk with the program on it. If you have any questions you may write me at:

303 Choctaw Street  
Enterprise, AL 36330.

# ARTICLES ARE WELCOME

ARTICLES ARE WELCOME and will be published if it is of interest to COCO owners. Please send it in on any ASCII word processor program tape or disk. They will be returned to you with a gift. If you don't have a word processor program, just drop us a letter and ask for a REPORTER KIT. We will send you a program you can enter your report and return the data to us. We do need it saved ASCII to use on a special printer. SENT TO :

# 512K UPGRADE FOR COCO III

READ ENTIRE FILE BEFORE ATTEMPTING THIS

\*\*\*\*\*WARNING\*\*\*\*\*

OPENING THE CASE WILL VOID THE MANUFACTURER'S WARRANTY. IF YOU WOULD LIKE TO UPGRADE AND KEEP THE WARRANTY IN EFFECT, BRING THE COMPUTER INTO AN AUTHORIZED RADIO SHACK SERVICENTER.

Do not attempt this expansion unless you have some knowledge of electronics!

This upgrade is assuming you are using a Radio Shack 512K Board!

ALWAYS DISCONNECT ALL POWER BEFORE OPENING CASE!

1. Remove all power from unit.
2. Remove any cartridges from expansion slot.
3. Turn the computer over and place it on a soft surface thereby preventing damage to the keyboard and top cover.
4. Remove the 4 shorter screws towards the front of the computer, and the 2 longer screws towards the back of the computer.
5. Observe the orientation of the wire connector which is attached to the keyboard. Disconnect the keyboard connector at CN2 on the main PCB.
6. Observe the orientation of the power transformer connector. Disconnect the power transformer 3-pin connector at CN7 on the main PCB.

7. Remove the 2 shorter screws and the 2 longer screws holding the main PCB to the bottom case cover. If necessary remove the shield from the PCB by removing the 16 rivets which attach it to the PCB.

This is a figure of the computer's main PCB:

8. Next, remove the (4) four IC's labeled (IC16 - IC19) from the IC sockets of the PCB (see figure), desolder capacitor C65 (82 pF ceramic) & remove it.

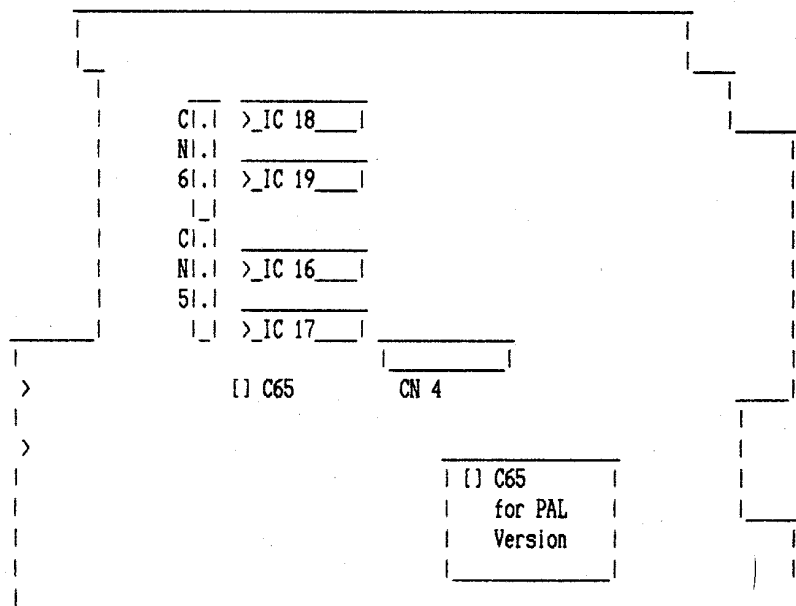

9. The upgrade comes with (3) three nylon standoffs which are inserted into (3) three corresponding holes of the RAM card to match (3) three corresponding holes in the PCB board.

10. Align the pin socket of the RAM card over CN4 through CN6, then slowly lower the board into the connectors.

11. Snap each stand-off into the corresponding hole on the computer PCB.

12. Connect the computer's AC cord and signal cables to a TV monitor and run the following program to verify proper operation of 512K:

```
10 WIDTH 40:PALETTE 0,0:PALETTE 7,63:CLS8
20 POKE&HFFD9,0
30 FOR A=&H00000 TO &H5FFFF STEP 512
40 D=RND(255)
50 LPOKE A,D
60 B=LPEEK(A)
70 LOCATE 10,1: PRINT"ADDRESS=";A
80 LOCATE 10,4: PRINT"DATA=";D
```

'>' indicates notches

```

90 IF B<>D THEN 130
100 NEXT A
110 LOCATE 10,10: PRINT "RAM TEST IS GOOD!"
120 POKE&HFFD8,0:END
130 LOCATE 10,6: PRINT"ERROR!"
140 POKE&HFFD8,0:END

```

If the above program prints "RAM TEST IS GOOD" then you're in business, you may reassemble the unit in the reverse order of disassembly. If you get an ERROR then recheck all of the above steps.

If you have followed the above procedures correctly and you still can't get a good result you may have purchased bad memory chips (it happens).

One other note it may be advisable to buy an upgrade with NEC memory chips as some of the other upgrades have been known to "heat up" during use.

If you are using a multi-pak interface it is advisable to upgrade it also, as you could have trouble with accessing the disk drive(s).

## THE ASTRO FORTUNE TELLER

The Astro-Fortune-teller is finally here...

Over 20 years of astrological research and 4 years of programming have produced the ultimate Product for your Colour Computer. NEVER BEFORE HAS THIS MUCH EFFORT GONE INTO ONE PRODUCT FOR THE COLOUR COMPUTER !!! The Astro - Fortune - Teller is so big, it fills an ENTIRE disk ! It is over 150 K long, yet loads by modules, so it will run on anything from a 32K CoCo to a 512k CoCo 3.

Send  
Sase  
For Free  
Catalog!

The Astro-Fortune-Teller is great at Parties, works more reliably than ANY other Astrology Program, on ANY Computer ( even IBM ), and will tell your fortune with amazing accuracy.

To order your copy send  
\$19.95 (a steal at 69.95)

## Review Corner

By:

Michael E. Salsbury  
177 Sunview Drive  
Beaver Falls, PA 15010

This month: "Lunchtime" from Novasoft, P.O. Box 201, Ada, Michigan 49301. Cost \$18.95 tape, \$21.95 disk, and \$3 S&H. Mich. Res. add sales tax.

If you have ever played the arcade game "Burger Time" then you know what "Lunchtime" from Novasoft is all about. If you don't, let me explain. In this game, you are "Peter Pepper" the burger chef. It is your job to build hamburgers. Each level is a maze of floors, ladders, and burger parts. Running through this maze are your enemies, the pickles, hot dogs, and eggs. You can damage your enemies one of two ways. First, you can shake pepper on him (hence your name) but not too many times since you have a limited pepper supply. If you'd rather (and you'd better), you can squash your enemies under falling burger parts.

If that's confusing, let me explain further. The burgers you make come from parts (bun, meat, lettuce, etc.) That lie in columns in the maze. Let's say that you run over the bun on the bottom of a maze. The bun will be pushed down through the floor to the waiting "burger box" below. Let's say that you next run to the top of the maze and run over the topmost bun in a column. What will happen then is that this bun piece will drop a level in the maze, push down the burger part below it, which will push down the one below that, etc. until the bottommost burger part is sitting at the lowest level in the maze. In other words, if a burger part falls on another, that part will drop a level onto the next part, which will do the same. This chain reaction stops when either an empty level of the maze is reached, or the bottommost part falls into the burger box. After you have caused the last of the burger parts to fall into the box, the screen will be completed and you'll get a new maze and more burger parts to push around.

As you would expect from Novasoft, Lunchtime has fine hi-res graphics and good sound. Joystick response is smooth and consistent, and game play is fairly fast-paced. It is a lot of fun, and if you enjoy the game Burger Time, I doubt you'll ever get tired of this one. Considering most of the arcade games out there on the market, this one is reasonably priced, too. Very reasonably priced.

I have no real complaints about the game, although I personally do not enjoy it as much as I did Moneyopoly (which I reviewed before). It is a quality piece of programming work and is certainly worth adding to your collection.

## Discoveries. . . .

When I first began to outline my article, "Discoveries" this month, it became clear that the subject would be Delphi and as I began to list the benefits, the steps that are needed to get online and the hardware required, it came to me that this had already been done by a number of different people and I would only be repeating statements and comments made by others, over and over again.

Another approach was needed and I soon realized that one aspect of Delphi that was not immediately apparent, is the brotherhood of communication between all of us with a common interest. One might expect the common interest to be CoCo, and that is certainly the vehicle used to express ourselves, but the excitement, the bond, the need, goes a lot deeper than a piece of hardware.

By this time, most of us have seen many other computers grow up and some, like the Amiga, offer superior graphics while others can provide more memory, faster access, better keyboards and on and on.....

Much of the hardware that is available now isn't so expensive that we probably could find a way to get whatever we want and certainly programming is abundant for almost anything that you want to do, for whatever machine.

My feeling about ourselves and why we love this machine, why we continue to feed it and develop its capabilities, far beyond anything the manufacturer allowed that it was able to produce, reminds me of my early days with my first car.

I was given a 1934 Plymouth, in 1947, by my Father as my first car. Well you know, what I really wanted was a 1936 Ford with a V8 engine.

His consideration was that the Plymouth had hydraulic brakes while Fords then still had mechanical brakes and you were lucky if you could get more than three wheels to respond at any one time on the Ford. Well, I wasn't interested in stopping, I only wanted to go, which the Ford did very well.

So, in my embarrassment, and since I was the only one in school that had a car that would stop as well as go forward, I began to develop the other features of the car that were appealing. I gave it a new paint job, I reupholstered the interior, which, at that time, was cloth rather than

plastic. My friends and I took the engine apart and rebuilt everything, polished everything, painted everything and generally made that little car more than it could be, and, just because everyone said it couldn't do it, we raced every Ford in town and actually beat a few. It turns out that Chrysler gave the little Plymouth a very strong second gear and the miserable four cylinders could wind past the Ford's second gear. That's before they found out the Ford box would house the old Lincoln Zephyr gears, but that's another story.

So what we are doing here is something that everyone said couldn't be done. We have our own national SIG, we have software that comes in from everywhere, it's hard to imagine how many people are writing articles for CoCo. We've had magazines and still have magazines, though for me, there doesn't seem to be the same excitement in the magazines compared to the beginning days when every issue offered new and startling revelations.

What's new and startling now appears online with Delphi. There are downloads and uploads, there are conversations with people that you would not expect would have time to talk with you, writers, publishers, programmers, people whose articles we read and who give us the wonderful toys to play with. Please don't get me wrong, I subscribe to every magazine that still produces anything even remotely related to CoCo and if it were not for this little magazine, I wouldn't have anywhere to send MY articles. And now with Delphi we have a fantastic experience, it seems to open up the space around us and, with the CoCo III, it's as though you've just started over, and, unlike the days of '82 when everything was new, we come into this new media armed with a strong working knowledge of our computer and what makes it go. Also there is a realization that we are not at any kind of dead end.

Actually, there doesn't seem to be any end in sight, what I do experience on Delphi is a sharing, a joining, a feeling of discovery again and an excitement that hasn't been around for awhile.

The cost isn't so great either, you can get there by Telenet or Tymenet, and this link will be paid for by the Delphi charges. At first, though, I racked up a fairly healthy bill until I got control of myself. You should be able to spend one or two hours a week online without too much pain. What you get is a chance to break out of the isolation so many of us feel with our hobby. It's like going to a convention and suddenly realizing

that there are so many other CoCo people out there. Can you imagine how many applications DMV gets every year for "6809" license plates? I know, it sometimes doesn't feel that way when we sit alone at 3:30 AM pounding away at this much modified little machine.

Another big plus is the availability of free terminal software for Delphi being offered by supporters of the SIG. This is legitimate, free software produced by real authors, for use in accessing Delphi.

Now, to be clear, Delphi doesn't exist solely for CoCo users, it's true there are other computers around and some of them even are able to talk to each other and so they too are offered a modicum of space to play their games and insignificant little things that other computers do, while leaving the important work to the CoCo SIG.

Okay now, after accessing Delphi, one can go through half a dozen menus to get to CoCo SIG, but it's very easy to modify your access settings on Delphi that will allow you to go directly to the SIG without going through all those other menus and you can actually tailor your SETTINGS to take you directly to MAIL when you first logon, if you choose.

I like to go to MAIL first to see what Eric Robichaud has written me, or what Marty Goodman has to say (This is what's known as name dropping), before going to see WHO's online and JOINing the FORUM. You can get answers there that would take six months to get from letter writing. People seem to open up and offer intelligence online that you couldn't buy anywhere in town.

Okay, that about does it this time. Don't forget I will burn an Eprom for you with your version of DOS, and I like ADOS, send me a SASE for more information about this. I have a new supply of 27128s and if you need 24 pin chips, I have 68764s and 66s.

Here's something neat that you can experiment with for Ultra TW. 64:

```
11 FOR T = 1 TO 6
  :READ A, B
  :PALETTE A, B
  :NEXT
  :DATA 12,64,13,0,9,0,11,0,8,64,10,64
```

This is a means of altering the screens for menus and text editing. Load "T" and insert this line.

There is a lot more to be done with this and I invite all of you to work on possible screen settings. This information came to me from Bob Van Der Poel, who has given so much to make TW work for us. I would like to share your results with everyone and we'll enter the best in this column.

### DEPHI FOR COCO NEWS

A Color Computer monthly magazine. Editorials include Basic & Machine Language Programming, Hardware Modifications, Games, Ham Radio, New Products, Product Reviews, Answers to Question, plus much more. We cover subjects such as using a joystick port for a digital Voltmeter or Thermometer, putting basic programs in EPROMS, and writing useful Programs such as a Ramdisk or Address File Programs. **Free Sample. \$15/yr. \$18 Canada & Mexico, \$30 other foreign.**

**ME-30** 512K expander for CC-3 with dual ramdisk software & chips. **\$99.95**  
**ME-30B** Wired board & software **\$49.95**  
**41256-150** nanosecond chips **\$2.25**  
**Dual CC-3 RAMDISK** **\$17.95**  
**MEMORY SAVER 2** (new)-Battery backup for all color computers **\$39.95**  
**DYPRINT** (new)- Two programs for printing banners or blown up PMODE 4 pictures using standard print. **\$19.95**

Many other products. **Free Catalog.** Checks, Visa & MC Cards. Add \$3 ship.

**DYNAMIC ELECTRONICS Inc.**  
Box 896 (205) 773-2758  
Hartselle, AL 35640

# MAGNAVOX PROFESSIONAL

## **8CM515 RGB/ Monitor 80**

**17% Larger Screen than Standard 12" Monitors •** 14" tube provides larger screen size without an appreciably larger footprint.

**RGB TTL, RGB Analog, Composite Video Inputs •** make monitor compatible with all three standard video signal types.

**Green Raster Display Switch •** emulating monochrome performance for text applications, this switch disables the monitor's ability to display anything other than green light — a feature normally found on more expensive products.

**Etched Faceplate •** the CRT face is treated with a special glare-reducing process to help eliminate eye fatigue caused by reflections from the monitor face.

**Dark Glass CRT •** the tube glass used in this product incorporates a special dark background material which helps to improve image contrast and reduce operator eye strain — a feature normally found on more expensive products.

**640 Dots of Resolution (Horizontal) •** in RGB, the monitor system will display 640 dots of image resolution on each scan line, the minimum number required to display 80 characters.

**240 Lines of Resolution (Vertical) •** the monitor will produce 240 vertical scan lines, standard for RGB use.

**Displays 9000 Characters, 80 x 25 •** this monitor system will display 25 lines of 80 characters each.

**Comb Filter on Composite Input •** when used with a composite input signal, the monitor's comb filter improves the resolution quality of the visual image.

**Line Level Audio Input •** provides convenient connection to a VCR or any device which generates a line level audio signal.

**Image Size and Position Controls •** located on the back panel, these controls allow the user to adjust both the size and position of any image displayed on the CRT, assuring compatibility with computer and other video devices.

**Built-in Tilt Stand •** allows the user to adjust the viewing angle to suit personal preference.

**Two Year Parts and Labor Warranty •** solid evidence that this is a reliable product, nationally supported by Magnavox.

**ONLY  
\$299.**

**+  
\$10 S&H**

**Component  
TV Tuner  
\$79.95**

**\$5<sup>+</sup> s+h**

## A DETACHED KEYBOARD FOR THE COCO

First, let me ramble on a bit about how this project came about...

For a couple years I've had ideas about putting my CoCo in a bigger box with several of the "extras" in there with it, like the modem, disk controller, etc. But after getting such a box (like the PC clones use), I found that the chore, while possible, would be difficult, and really more than I wanted to get into... but, the idea of the external keyboard lingered in my brain, but I really didn't see much use for it, until one day when I was looking at the "mess" on my computer desk! I mean a real mess... there was the CoCo, with the MPI sticking out the side, all the stuff in the MPI, with their associated cables (CoCoMax, RS232 pack, digitizer.....), WOW, whatta mess!

Then the solution trickled out of my brain... why not move all the mess elsewhere, out of the way, and use an "external keyboard" as the only piece of gear on the desk (plus the monitor, of course).

By this time I had progressed to a new CoCo III with the CMB monitor, and could just "see" the new setup... it would be GREAT!! And great it is, for me at least. I hope it works as well for you, and you can get some good out of my information, or at least part of it... and if you come up with some addition, or improvement, let me know...

OK, now on to the nitty-gritty. There are a few items that you will have to get before you start the project:

1. Decide if you want to use your CoCo's keyboard, or leave it in the machine, and use another for the "external". I left my original in the CoCo III (not hooked up though), just to keep dust, etc. out of the machine. You may order a replacement keyboard through your friendly(?) local Radio Shack. The part number for the CoCo keyboard you want to use (II or III) can be determined by just having the Radio Shack personnel order for a catalog 26-3127 (CoCo II), or catalog 26-3334 (CoCo III).

2. You must also get some "ribbon cable", you know, the flat stuff that goes from the disk

controller to the drives... except that the cable you use will only have 16 wires, unlike the 34 the disk unit uses. I can't say exactly how much you'll need, but in my case, 5 feet is plenty. There will be a drawing (remember, I'm NOT an artist) with this info to show how my stuff is finally setup, after having it in two or three locations.

3. The hardest thing for me to find was some small pieces of the plastic with the conductive traces "printed" on it... like the end that plugs your CoCo ("F" board or later) keyboard into the circuit board socket. You may be able to clip some off an old keyboard, or other kind of electronic equipment... I found an old "ODDOSEY" game at a garage sale that had several inches of the stuff in it. I re-enforced a small strip by putting some thin plastic on it with double sided tape... the drawings will show what you need to make as a "coupler"... I'll call it a coupler, because it couples the new keyboard cable connector to the one in the CoCo.

4. The next special thing you need is a pair of keyboard sockets just like the one that is in the CoCo where the keyboard plugs in. DO NOT try to unsolder one from a CoCo... their little legs are too fragile to make that operation much of a possible success. Order them from Radio Shack National Parts - - the part number is AJ-7567, and tell the person ordering that it is for a Catalog 26-3334 or 26-3127 CoCo. You may even find that ordering a couple extra is desirable, as you may end up making more external keyboards, or in case one gets broken - - remember I said the little legs are quite fragile...

5. And the final item, a neat enclosure for your external keyboard. Although I was never very impressed with the ADAM computer, I guess that fact multiplied a couple zillion times is what we have to thank for the neatest little keyboard "box" you'll ever find for your project, and they are CHEAP! Several places advertise the Adam keyboard, but some of them are only the actual keyboard, and do not include the keyboard enclosure. If you can't find one, try; JAMECO Electronics, 1355 Shoreway Blvd., Belmont Calif. 94002 - - Phone 415-592-8097. The last time I

purchased from them, they had 'em for only \$9.95 - ask for "KB75".

6. The rest of what you'll need are the usual hardware hacker goodies, soldering iron, fine solder, small nippers, etc. In addition, a coping saw, or similar will help trim out the case, and if you want it to match the rest of your CoCo stuff, get some ALMOND Krylon spray paint - Kmart usually has it for a couple bucks a can. Remember wood?? You know the stuff that things used to be made out of before plastic? - well, you'll also need a couple small pieces of wood, and four flat head wood screws - the sizes are noted in the instructions.

Have fun, and good luck

->>> DISCLAIMER <<<- Please be aware that there are some concerns about the undertaking of this project... First, the CoCo must be opened, which will put an end to any warranty you may have left. In addition, due to the use of cutting tools, and exotic adhesives, I will not be responsible for any damage to the CoCo, external keyboard, fingers, etc. Anyone who has some mechanical, and basic electronic knowledge, should be able to easily accomplish the project - but - if you have any reservations about the procedures involved, it would be best to get some outside help. I also cannot be responsible for and damage, physical or electronic, that the project may cause to any of your CoCo system.

I have used the external keyboard, exactly as described in the text and instructions, for several months, and have encountered no problems with the system.

#### \*\*\*\*\* Step by Step Instructions \*\*\*\*\*

STEP ONE - After you have obtained the Adam keyboard assembly, remove the six screws from the bottom of the keyboard enclosure - KEEP THESE SCREWS! You'll need them when you put the thing back together. When you have the enclosure opened up, remove everything from the inside (except the "on" LED), and see if you can find someone who collects "electronic junk", as that is what comes out of the enclosure - more on the LED later. Now set everything aside except the enclosure top... it should look like the layout in Figure 1.

STEP TWO - Look at figure 2... all the shaded areas must be removed. I used a coping saw to do the major cutting, then cleaned 41

everything up with a utility knife and some fine sandpaper. You may also remove the Adam label and clean all the "sticky stuff" from where it was attached. If all has proceeded normally, the enclosure top should look like Figure 3 now... DO NOT be concerned about the small area NOT removed from the lower left and the lower right.

STEP THREE - OK, now we move on to Figure 6, the wood blocks... you'll need to make two of these. The dimensions in the drawings are very close to what they should be. The 3/8" should actually be equal to the thickness of the CoCo keyboard, not including the "mounting flanges". The blocks may be of any type wood, whatever you can get, but one consideration is that they be hard enough to hold the CoCo keyboard mounting screws, and the surface which will be exposed through the enclosure top is sanded smooth, so it will look nice when the whole thing is painted.

STEP FOUR - Figure 4 shows where the two blocks are to be mounted... the width of the opening after they are in place should be just a "frog-hair" wider than the width of the CoCo keyboard, where it will protrude through the opening. The blocks are to be fastened to the inside of the enclosure, in their proper place, with some kind of adhesive. I found that a "thick" version of "super-glue" worked fine... don't try to use plain super-glue, it is too thin, and will set before you can get the blocks properly placed. A source for the "thick" variety is a supplier of model airplane stuff - the hobby shops in your town should have it - ask for thick "Hot-Stuff" or "Zap". When working with this type of adhesive, be very careful!! I've been using it in construction of Radio Control models for several years, and have seen modelers who have glued their hands to tables, to model airplanes, fingers to fingers, and the worst case... a guy got some in an eye, and almost LOST IT!! - - BE CAREFUL!!

STEP FIVE - When the enclosure top is finished - blocks glued in, etc. - it is time to give it the finish paint job. The Almond Krylon is an exact match for the enclosure bottom, so you only have to paint the top! This color should also match the rest of your CoCo system, if it is recent vintage. When the paint is dry, mount the keyboard with four screws... flat head wood screws of about 6 or 8 size, and 3/8" long should work fine. Be sure to place the CoCo keyboard in the

enclosure, and correct any "ill-fitting" before you put the screws to it!

STEP SIX - Prepare the ribbon cable by separating each wire, at each end, for about 1", and then strip and tin about 1/4" of each wire. With the cable ends prepared, get the two AJ-7576 connectors, and solder one to each end of the cable, as shown in Figure 5. If you're real careful doing the soldering job, and apply only enough solder to each wire (and connector pin) to make a good connection, you probably won't have to use any insulation on the soldered connections - the assembly will be stiff enough to keep connections from touching one another. One caution... look at the female side of the sockets, and be sure they match on both ends of the cable... you'll see little protrusions on the inside top or bottom - be sure top on one end is also top on the other, or bottom to bottom - just so they both have the same side up when the cable is laid flat on your workbench (or floor), or whatever.

STEP SEVEN - The final sub-assembly is the "coupler", the little plastic conductor that will attach one cable end to the CoCo connector (the one already installed in your CoCo). Once you've found some of this stuff, just prepare a short (1/2" or so) section that will plug into one end of the cable you made, and the CoCo socket. The connector at the other end of your cable will be where the "external" keyboard plugs in.

STEP EIGHT - Check all your work carefully - especially the soldering! If all looks well to you, it's time for the "smoke test"... My friends hate it when I tell them that! That is, unless it's my machine we're working on! Anyway, it's time to see if all works OK. Be sure all power to anything you are working on is OFF! I guess the best way would be to just hook up the CoCo to a display, and leave the drives, etc., disconnected 'till you are sure all is OK. Plug the external keyboard into the cable (the keyboard enclosure bottom may be left off), and plug the other end into the connector on the CoCo... when you apply power, the keyboard should do as the one in your CoCo originally did... if not turn everything off and try flipping the cable over (both ends, of course). When you are sure everything is OK, turn the system off, and finish the enclosure. The cable should exit at the center of the back side - I cut a small area away where the top and bottom meet to feed the cable through. Also put a short "Z" bend in the cable, inside the enclosure

to serve as a strain relief. Use some sticky tape to hold the cable inside the enclosure, taped to the bottom of the metal plate of the CoCo keyboard.

STEP NINE - Replace all screws, etc, and you are finished! I didn't make a drawing of my setup, but it is as follows: I have a computer desk with an "adjustable shelf" hutch about 30" high (Foremost brand), and have my CoCo III and multi-pack interface on the top shelf of the hutch, with the back sides facing me... that way, the stuff is off my desk, and the CoCo Cassette, Serial, and Joystick jacks are right where they are easy to get to, and the power and reset buttons are easily accessible, but not easy to accidentally get bumped. In front of me I have the new external keyboard, and behind it is my CM-8 monitor on a Radio Shack (of course) adjustable monitor pedestal - there is just room above this for a shelf, where my modem sits. To the immediate right of the "shelf center" are two evenly spaced shelves - the center area has my disk drives, and the rest serves as storage for disk boxes, joysticks, and other miscellaneous clutter. The external keyboard cable goes back to the right of the monitor, up the backside of the hutch, and into the front (facing back now) of the CoCo III (the CoCo case is not screwed in place).

Now back to that "power on" LED on the keyboard... I wasn't able to figure out how to hook it up easily. Extra wires, etc. would have had to be fed from the CoCo to the keyboard, and it just didn't seem worth it... so - if anyone asks me why it isn't lit, I just tell them that it is wired as a "programming error detection" indicator, and it just hasn't ever come on since I got the new CoCo III!! I actually think a couple of guys believed me...

Hope this info has been of some help to you...

## DETACHED KEYBOARD

# TOTHIAN SOFTWARE

PRESENTS A NEW GAME

## BUG BUSTER

Bugus computerum has infested your entire COCO system. If you don't act immediately, the situation will become hopeless. If you have the courage to buy some bug spray and come face to face with this dreaded foe, then brace yourself for a fight to the finish as you attempt to clear the bugs from your disk drive, ROM, RAM, power supply, and printer. Each time you think you have succeeded, they come back stronger than ever. The entire game loads into a 64K COCO; only one game screen at a time loads into a 32K computer. Disk Drive, Joystick, and 32/64K required. Introductory price on Disk only - - - - - \$19.95

## SUMMER SPECIALS

ART GALLERY - 32K disk program designed to show off your COCO art collection, complete with machine language special effects. Regular price \$19.95. For the summer only \$14.95

COCO LIFE PLUS - Three programs with five versions of the game of Life. 32K ECB+ML Tape or Disk. Special price \$24.95

ECHO PLUS - ML text and graphic screen dumps for RS DMP. Disk version 32K. Tape version includes both 16K and 32K. Tape or Disk. Regular price \$19.95. Special price \$14.95

DISKMAN - Backup, reorganize, alphabetize RS disk directories. Examine and change sectors. Catalog and print disk files. 32K Disk. Regular price \$21.95. Special price \$16.95

TIME MASTER - Party fun. On-screen or printed calendars, biorhythms, human compatibility, more. 16K ECB tape or disk. Regular price \$19.95. For the summer only - - - - - \$14.95

SOUNDSCOPE - Make sound waves visible with LO, HI, or ULTRA resolution. Tape recorder required. 16K ECB + ML. On tape or disk. Regular price \$19.95. Summer special - - - \$14.95

TEACHER PAK PLUS II - Create multiple choice, matching, true/false, completion, and short answer tests. Both weighted and regular grading, seating charts, alphabetizing, and statistics. 32K Tape or Disk. Regular \$47.95 For the summer only - - - - - \$42.95

Specify tape or disk on order. PA residents add 6% sales tax Add \$3.00 for COD or UPS shipment. For the COCO I, II, III

TOTHIAN SOFTWARE, INC.  
BOX 663  
RIMERSBURG, PA 16248

INTERNATIONAL COLOR COMPUTER CLUB  
17710 MOSS POINT DR SPRING, TX 77379

The (all new) International Color Computer Club was formed to help people get to know the Color Computer and how it operates, to make available to it's members all the information about the Color Computer that we can find, including information which Radio Shack isn't willing to give you. To make programs available so you may extend your library.

Programming is difficult to learn, and the club is a place you can turn to for help with problems you might have in writing a program of adapting a piece of hardware. We can-not solve all problems, but with hundreds of other members with expertise in every aspect of the Color Computer, we can solve most on them.

New members will receive a new member kit which contains all the programs which are in the current library of programs (165 programs to date), data on the CoCo, and a poke & peek book, all to help you along with your programming.

New members will receive a subscription to COCO ADS, (if you now have one, it will be extended) which is the clubs newsletter to its members. Members may place unlimited FREE classified ads in COCO ADS (one per month) and a discount on all display ads.

You are asked to donate some of your programs you wrote to help increase the library. These programs are available to you FREE, with a small charge for postage and blank tape or disk cost. You also may download programs from the clubs own BBS.

A list of other COCO members will be furnished to you that are in your area.

I hope you have found this informative and decide to join our club. We would really like to have you. I'm sure that you will find the benefits of the club worthwhile. All this for only \$30.00 per year.
