GUARDIAN

You've played "DEFENDER" at the arcade, but you've only seen the "attempted copies" for your Color Computer!
Now get the real thing!

Check these features:

- 1.) The Landers aren't suddenly just "there", they implode out of particles!
- 2.) Not just "Beeps" but stunning sounds!
- 3.) Explosions **just** like the arcade with no skimping!
- 4.) Thrust flame behind your ship.

... and many more!

Order now by check, M.O., C.O.D., or see your dealer...
(If he doesn't have it yet, send him to us!)

\$27.95 — Tape / \$29.95 — Disk

Add \$1.50 per order for postage and handling. California residents add 6%.

QUASAR ANIMATIONS

1520 Pacific Beach Drive
San Diego, CA 92109

FEATURES

- 12/One More Computer** by Jyym Pearson *(General)*
Learn why an Adventure programmer feels the Color Computer is more of a Ferrari than a Pinto.
- 18/GOTO SCHOOL** by Dr. Paul Kimmelman *(Education)*
Teachers! Ever wonder what a computer can really do for you and your students? Let a computer-literate educator fill you in.
- 22/Indoor/Outdoor Thermometer** by Theodore Hasenstaub *(Construction)*
Hey, it's really cold outside—and in here! Just how cold is it? Turn your Color Computer into a fancy thermometer.
- 30/Flexible Amortization** by Mel Seder *(Finance)*
Make your banker jealous with this program that will make any amortization program easier.
- 33/Custom Color** by Dennis Kitsz *(Hardware)*
Ever wished your computer could produce characters in Kata Kana? Dennis shows us how—and doesn't stop there.
- 48/GO SUB Destroy** by Robert Toscani *(Game)*
Sub Destroy for 4K machines—what more could a fleet captain want? Many difficulty levels—and this game has them.
- 52/Learning Games** by David Stevens *(Education)*
These spelling and state capital teaching games are too much fun to restrict to kids.
- 60/Wide Printing** by Robert Lake *(Utility)*
Color Scripsit takes on a new look with this w-i-d-e printing program!
- 66/RECOVER!** by Kenneth Van Camp *(Utility)*
No...no! Don't hit that Reset button! Oh—too late. Or is it? This program can help you out of an otherwise tight situation.
- 71/Dissecting Your ROM** by Jake Commander *(Tutorial)*
The second of a 12-part series examining the Color Computer ROM, bit by bit.
- 78/Cliché** by George Aftamonow *(Game)*
Here's a game that will show off your computer at parties, and keep your guests laughing and guessing.

DEPARTMENTS

- 4/PEEK (08,83)**
Your guide to the issue.
- 10/INKEY\$**
Letters from our readers.
- 84/REVIEW\$**
A look at the MC-10, Game Writer, Armadillo Bug, and others.
- 92/NEW:PRODUCT\$**
- 96/END OF FILE**
On software piracy and user groups.
- 96/FOR...NEXT (09,83)**
Looking ahead to next month's issue.

Skyline Software

PUBLISHERS OF QUALITY MICROCOMPUTER SOFTWARE

PAGE PLUS — Attention BASIC programmers! Here is the software you've been waiting for! Up to 56 K available from your BASIC programs. This utility, written by Chris Hawks, does the memory management necessary to utilize the two 32K banks of memory. Easy enough for any 'intermediate' level BASIC programmer to use. Includes documentation and demo programs to show you how to use PAGE PLUS to get the most out of your computer. Works with 64K tape or disk systems.

Cassette \$27.95 Disk \$29.95

MDISK — Hal Snyder's latest breakthrough for the 64K Color Computer! MDISK lets you use the upper 32K of memory for rapid storage and retrieval of programs and data. Whether you own an actual disk drive or not, MDISK puts the 'hidden' 32K to work for you as a 'virtual disk,' with capability to save and load up to 15 programs, view a directory of files stored in 'page 1', kill unwanted page 1 files, execute BASIC or machine language directly from MDISK, chain to a BASIC program while preserving data already created, and more. These functions are available not only under manual keyboard control, but from programs in progress as well, permitting high-speed swapping of programs or data. Unlike many 64K utilities, MDISK doesn't copy BASIC to RAM. This greatly increases the amount of workspace available to you (by 22K in a disk system). MDISK is written in position independent code, and will work on disk or tape based 64K systems. Full documentation included.

Cassette \$27.95 Disk \$29.95

ROMBACK — Why pay more? The easiest to use ROM-pak dumping utility available! At the best price, too! Comes with full documentation, including detailed patching instructions to allow several popular 'problem' cartridges to run from tape or disk. Stop plugging and unplugging your disk controller! Don't blow any more SAM chips or 6809Es! Use ROMBACK, and run those programs from tape or disk instead. Works with any 64K Extended BASIC tape or disk system.

Cassette \$16.95

QUICKSORT — A machine language sort routine specifically designed to be used by BASIC programmers. This utility will speed up those programs where a BASIC sort is just too slow. Great for mailing lists and databases. Can be incorporated into many existing programs as well. Written in position independent code, works on tape or disk systems. 16K required.

Cassette \$12.95

64K BOOT/PAGER — Two 'must have' utilities for the 64K Color Computer owner. The 64K Boot allows you to modify BASIC by moving it from ROM to RAM. The PAGER is a menu-driven utility allowing you to manually page between the 32K banks of memory, copying BASIC or data from one page to the other. The complete assembler source code for both programs is included, so you can see how it's done! Both programs are written in position independent code and run on 64K tape or disk systems.

Cassette \$19.95

STRUCTURED MACROS — An assembly language programming tool for users of the Macro-80C assembler, by the Micro Works. Structured macros come close to transforming your assembler into a high-level language. Your programs become more understandable and debugging is simplified. Commands include IF, ELS, ENDIF, IFTST, IFCC, WHILE, ENDWH, REPEAT, and UNTIL.

Disk \$19.95

WIZARD'S TOMB — A text and graphic adventure that the whole family can play! Like no other that you've played before. Up to four players can be involved in the attempt to enter the Wizard's Tomb. 16K and Extended BASIC required.

Cassette \$12.95

WIZARD'S TOMB, PART II — Takes up where Wizard's Tomb left off. Now that you've found the treasure in the Wizard's Tomb, try to find your way through the ten levels of the catacombs! Good luck—you'll need it! 32K and Extended BASIC required.

Cassette \$15.95

WIZARD 64 — If you've got 64K, then this one's for you! Uses both 32K pages of memory for graphics and action — combines the features of Wizard's Tomb and Wizard's Tomb Part II into one great game. Challenging enough for adults, yet entertaining for younger players too. 64K Extended BASIC required.

Cassette \$21.95 Disk \$23.95

**All Software Available on 3" AMDISK Cartridges — \$4 additional

I'm writing this in May. The magazine and all our minds may be on August, but the calendar actually reads May. I moved here to Maine just a few short weeks ago, and it has done nothing but rain since I got here. I tell you this so you will better appreciate our cover shot of Dennis Kitz: his arrival from Vermont brought the only bit of sunshine I've seen since I moved here, literally and figuratively. Maybe I've been spending too many late nights at the office, but Dennis' visit was a true joy.

Dennis has an air of controlled insanity that can brighten up even the gloomiest of overcast days. After executing a charming pratfall across the office carpet, and gobbling about two pounds of sweet goodies from the local bakery, Dennis showed me his latest modification for our machine—video screen type fonts is the best way to describe them (GOTO 33). You'll want to indulge in this hardware addition, and let your eyes feast on Kata Kana.

GOTO 12 to discover whether you bought a Ferrari or a Pinto computer model. Jyym Pearson, adventure programmer extraordinaire, has a definite opinion on this question.

On the line of opinions, computers and education have always been a combination that raises strong feelings in parents and teachers. Dr. Paul Kimmelman is a computer-literate educator; better than that, his school system is a test site for computer educational software. GOTO SCHOOL (GOTO 18) is the first in a continuing column about education. We think you'll find it *very* helpful.

Jake Commander's ROM Disassembly continues—GOTO 71. Kenneth Van Camp has a nice utility to help you recover programs when you accidentally hit the Reset button (GOTO 66). And Ted Hasenstaub can show you how to turn your computer into a thermometer (GOTO 22).

Amortization—a word we all learn to fear. Mel Seder has a program that will make *any* amortization program easier to use (GOTO 30). He swears it will make your banker jealous—so keep it hidden!

Don't you admire computer printouts that do nice things with spacing? They look, somehow, more professional, more sophisticated. Robert Lake (GOTO 60) has a program for us that will let you do wide printing with Color Scripsit.

August is the hot end of the summer. On hazy August days, all I want to do is sit back with a glass of cool lemonade and—play games! And then—play more games! The best games are those I can play on my Color Computer, of course.

Ever play Sub Destroy on someone else's computer? Here's a 4K version by Robert Toscani with enough difficulty levels to keep us all on our toes (GOTO 48). GOTO 80 for a party game designed specially by George Aftamonow to show off your computer and let an entire party full of guests play at once. For games that will also teach you and the kids something (school's right around the corner—rats!), GOTO 52. Just because these games were written for kids, don't sell them short. If you like Jumbles or Hang-Man, you'll love these games. I flunked every one of them.

Don't forget to check out our REVIEW\$ section. An enterprising group of hard-bitten computerists in Ohio have spent all day and all night working hard to discover what the new MC-10 can do (GOTO 84). They believe it will do a lot more than first meets the eye—and here's a quick run-down of their first findings. But don't stop there—a lot more follows...

TRS-80C[®] and TDP 100[®] SPECIALISTS

COLORFORTH[®]

IS THERE LIFE AFTER BASIC? Yes! with COLORFORTH, a new, high level language for the color computer. COLORFORTH, a figFORTH compiler, has an execution time as much as 10 to 20 times faster than Basic, and can be programmed faster than Basic. COLORFORTH is highly modular for easy testing and debugging. COLORFORTH has been specially customized for the color computer and requires only 16K. It **does** not require Extended Basic. When you purchase COLORFORTH, you receive both cassette and RS/DISK versions, the figEDITOR and an extensive instruction manual. Both versions and 75 page manual, all for only \$49.95

PCFORTH

FORTH for the IBM PC[®] and Zenith Z-100[®]. All the features of COLORFORTH, but customized for the IBM and Zenith Z-100 personal computers. Requires 32K and MS/DOS or IBM/PCDOS. On 5-1/4" SSDD diskette. Complete with 75 page manual, just \$59.95

NEW!

MASTER MIXOLOGIST[®] The Bartenders' Guide

This disk based program for the color computer contains recipes for over 150 of your favorite bar drinks—both alcoholic and non-alcoholic. MASTER MIXOLOGIST is menu driven for ease of use. Requires 16K and one RS/DOS drive. Get this one today, it will be great for your next party \$19.95

ARMADILLO BUG[®] MACHINE LANGUAGE MONITOR

More and more programs are appearing in magazines written in Machine Language. Now with ARMADILLO BUG, you can easily enter Machine Language programs without a lot of time consuming "pokes". ARMADILLO BUG is an excellent system for beginners to learn to write and debug their own Machine Language programs as well. This package includes: Memory examine and change; Move; Punch and Load; Fill commands; and more! Runs in 16K, and **DOES NOT** require Extended Basic. Complete on cassette with printed manual. Just \$14.95

COLOR BIORHYTHMS

This is a neat BIORHYTHMS program you can use to chart the future (or past). Includes High Resolution graphics **without** Extended Basic being required. Runs in 16K. On cassette, with instructions \$10.95

THE TOP-RATED COCO WORD PROCESSOR:

Colorware researched the word processors available for the Color Computer. We came to the very same conclusion that so many review articles have! Telewriter-64 is, by far, the superior word processor for the Color Computer.

Why is Telewriter so much better than the others? For one thing, it has overcome the 32x16 character display limitation of the Color Computer. No small feat, Telewriter accomplishes this by generating its own set of characters in software. You select 51x24, 64x24 or 85x24 character displays by merely issuing a format command. If you have ever used a word processing system, you know how important it is to be able to see a good portion of your text on the screen.

Telewriter-64 also generates true lower case characters. This is much preferable to the reverse characters that merely "represent" lower case letters in other co-co word processors.

Telewriter-64 is feature packed. Besides the standard features

found in any word processor, Telewriter also includes: user-friendly full-screen editing, rapid cursor and scrolling control, page jump, right justification, menu-driven disk or cassette access, compatibility with spelling checkers (such as Spell-and-Fix), and a clever double check that asks the user "Are you sure?" before executing any operation that would kill any sizeable amount of your text.

Telewriter-64 runs on any 16K, 32K, or 64K system (extended Basic not required) and works with

printer. There is even a "typewriter" mode which sends typed lines directly to your printer.

With advanced word processing software such as this, your color computer becomes a truly powerful word processing system, with a price that makes sense for the personal user.

Beyond impressive capability, Telewriter-64 simply makes any kind of writing a pleasure. It is a truly sophisticated system that is marvelously easy to learn and enjoyable to use.

TELEWRITER-64

any printer. It has all of the control codes necessary to take full advantage of all of the features in any

GHOST GOBBLER

From Spectral Associates, this "Pac" theme game is the best of it's type. Brilliant color, action and sound, just like an arcade gobble your way to glory, but watch for those ghosts! Get in on the wild fun of this game craze now. Requires 16K. Tape: \$21.95, Disk: \$25.95

DONKEY KING

DONKEY KING

You simply can not buy a more impressive game for your color computer than this new wonder from Tom Mix. The graphics, sound, and animation are all just astonishing! There are four different graphic screens and each is endless fun. Requires 32K. Tape: \$24.95, Disk: \$27.95

GHOST GOBBLER

PROTECTORS

There are several good versions of the "Defender" theme available for the CoCo. None, however, rival this one from Tom Mix. No other game matches the detailed graphics and sheer excitement of this top seller. Requires 32K. Tape: \$24.95, Disk: \$27.95

INTERGALACTIC FORCE

Your space fighter roars into the Death Corridor. Lock-on and blast the enemy fighter from the sky. Now try dropping one into Death Star's narrow exhaust vent. It takes skill and guts. Good luck! With "Star Wars" theme song. From Anteco. Requires 16K. Tape: \$24.95

ANDROID ATTACK

Spectral Associates' very well done "Berserk" type game with some interesting added features. Each cassette contains both the 16K and 32K version. The 32K version has voice output! Plenty of action. Tape: \$21.95

CREATURE FEATURE

From Color Software, comes a lightening swift shoot & dodge the enemy game. It's clever cross between "Robotron" and "Berserk" themes, with bullets flying everywhere. Solid, shoot-em-up-fun. Requires 16K. Tape: \$17.95. Disk: \$19.95

FROGGER

Just released by The Cornsoft Group, this is the officially licensed version from Sega, the arcade manufacturer. It has it all! 4 lane super highway, snakes, turtles, logs, alligators, etc. Lots of action and laughs! Requires 16K. Tape: \$19.95

THE COLORCADE

SUPER JOYSTICK MODULE

ONLY \$19.95

★ **It's a Joystick Interface**

Now you can connect any Atari compatible joystick to your CoCo. These sticks are extremely rugged and provide very fast response and real arcade type action. They will improve the play of almost any game. The difference will amaze you!

★ **It's a Rapid Fire Module**

Press the fire button on your joystick and get a great burst of fire instead of just a single shot! Adds tremendously to the many shooting type games that do not have repeat fire. With variable burst speed.

★ **It's a 6 ft. Extender Cord**

THE ATARI

ONLY \$8.50

well proven joystick, the Atari is known for being rugged and reliable. It gives good response and is the standard among home video players. Now at a great price! Use with module above.

ZIRCON VIDEO COMMAND

ONLY \$14.95

A GREAT BUY!

This one has received outstanding reviews. Its unique design fits the hand beautifully and it has the truly fast and positive response needed for high speed play. Actually out-performs some joysticks that cost \$50 or more.

WICO FAMOUS "REDBALL"

THE BEST YOU CAN BUY

\$34.95

The high performance joystick from the people who make them for the arcade machines. Built to take the abuse of even the most enthusiastic player. This is the best! Wico #15-9730. Use with module above.

Money, Money

I enjoyed the article by Paul Detwiler: "How to Borrow Money." That's one of my favorite subjects! His program is one of the better ones I have seen, and the shortest, too. When I saw the listing I was very surprised to see how few lines he used.

Unfortunately, the Color Computer has built-in rounding errors, that usually cause problems with math programs. (Maybe the 1.1 ROM has fixed that?) Also, mortgage amortization tables don't always agree from publisher to publisher, and a program writer has to decide which book to use as a guide for his testing.

Paul's program will agree in monthly payment figures with the tables we use in Arizona only about half the time. We use the tables put out by the Financial Publishing Company of Boston. Also, the rounding errors can cause Paul a problem as early as payment 2. Note that the principal and the interest (\$404.29 and \$30.66 — see Figure) don't add up to the monthly payment (\$434.94). Also, the previous balance of \$4598.39 (after payment 1) less payment 2's principal of \$404.29 doesn't come out to the next balance (\$4194.11) as shown.

Almost all the programs I have seen have these problems. Just a few cents

off, but still — off. A sure tip-off that something is not right is when the final payment zeros out the loan. In real life, this just never happens. The final payment is almost always something a little less than a regular payment.

I did learn a few tricks from Paul's program, and was able to improve my program with the ideas. I use my program in my real estate business and had to work on it for many long hours until it was right. It had to agree 100 percent with the book if I wanted to be able to give printouts to my clients.

Here is a line to make Paul's program produce Financial Publishing Company monthly payment figures. It just rounds 999 out of 1,000 payments up one cent.

```
115 MP=INT(MP*100+.999)/100
```

Here is a one-liner that displays the rounding error (1.0 ROM):

```
10X=X+.01:PRINTX:GOTO 10
```

Paul still has The Color Computer's built-in rounding problems to overcome in his program.

Tom Garcia
Tucson, AZ

magazines that run program listings on a printer that makes this "rearrangement." — Eds.

Disk NOTECARD

Since NOTECARD was published, I've acquired a disk drive and have discovered that a few minor changes are required to make the program fully compatible with the disk. The changes and an explanation follow:

When NOTECARD is used with Disk Extended Basic, the values of LO in Lines 490, 540, and 550 must be increased by 2048. The values should be 4399 in Lines 490 and 540, and 4400 in Line 550. Any program which uses POKE to put shapes on the graphics screen will need similar changes. Disk Extended Basic moves the start of graphics screen memory up 2048 bytes to make room for additional system memory and the disk input/output buffers.

Homewood, IL

New Club

We are pleased to announce the Metropolitan Greenville (SC) Color Computer Club formed in January of this year, and already almost 50 members strong. The MGCCC serves the interests of present and prospective Color Computer owners in the entire western South Carolina region. As a group, we are totally committed to computer literacy among ourselves and within the community. Members enjoy a lively exchange of computing information, free language programming, and hardware tutorials as well as a biweekly club newsletter. Meetings are held every Tuesday night at 7:30 at the Plain Elementary School in Simpsonville, SC.

Anyone wanting more information about this dynamic organization may contact me any time at (803)876-3928 or 3812, or write to P.O. Box 6, Gray Court, SC 29645.

My Version

RF Fix

I got rid of the RF problem in my Color Computer by inserting a Radio Shack TV interface filter in-series with the line between the TV and the switch; clearest picture I ever saw.

You should tell us that the Up Arrow in your programs is printed as a caret by the DWII. Also, shift Down Arrow gives you an open bracket [, and shift Right Arrow gives you a closed bracket].

Seth Paul
Bristol, RI

It's true; our printer produces carets in place of up arrows and left and right brackets [] for Shift-left arrow and Shift-right arrow respectively. Readers should be aware of this, in The Color Computer Magazine and other computer

Telewriter-64™

the Color Computer Word Processor

- 3 display formats: 51/64/85 columns × 24 lines
- True lower case characters
- User-friendly full-screen editor
- Right justification
- Easy hyphenation
- Drives any printer
- Embedded format and control codes
- Runs in 16K, 32K, or 64K
- Menu-driven disk and cassette I/O
- No hardware modifications required

THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with *true lower case characters*. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.

...one of the best programs for the Color Computer I have seen...

— Color Computer News, Jan. 1982

TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer — 16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays: 64 × 24 and 85 × 24!! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command.

The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, *all on the screen at one time*. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing.

RIGHT JUSTIFICATION & HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.

Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

FEATURES & SPECIFICATIONS:

Printing and formatting: Drives any printer (LPVII/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Terminus, etc).

Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dot-graphics, etc.

Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification.

Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.

Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files — create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).

Cassette verify command for sure saves. Cassette auto-retry means you type a load command only once no matter where you are in the tape.

Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.

Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.

...truly a state of the art word processor...
outstanding in every respect.

— The RAINBOW, Jan. 1982

PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs \$49.95 on cassette, \$59.95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.)

To order, send check or money order to:

Cognitec
704 N. Nob Ave.
Del Mar, CA 92014

Or check your local software store. If you have questions, or would like to order by Visa or Mastercard, call us at (619) 755-1258 (weekdays, 8AM-4PM PST). Dealer inquiries invited.

(Add \$2 for shipping. Californians add 6% state tax. Allow 2 weeks for personal checks. Send self-addressed stamped envelope for Telewriter reviews from CCN, RAINBOW, 80-Micro, 80-U.S. Telewriter owners: send SASE or call for information on upgrading to Telewriter-64. Telewriter-compatible spelling checker (Spell 'n Fix) and Smart Terminal program (Colorcom/E) also available. Call or write for more information.)

Apple II is a trademark of Apple Computer, Inc.; Atari is a trademark of Atari, Inc.; TRS-80 is a trademark of Tandy Corp; MX-80 is a trademark of Epson America, Inc.

One More Computer

by Jyym Pearson

BY THE FALL of 1982 the situation in my household was becoming critical: we had just been blessed with a new arrival to the family, bringing the total to nine. Our two-bedroom apartment was ridiculously crowded.

The circumstances are not quite as bad as they sound, however, since only three members of the family are human (myself, my wife Robyn, and our daughter Kristen). The rest of the family are all computers, and the new addition was a Radio Shack Color Computer.

I am a freelance adventure game software author using a number of publishers across the country. At this time I have 10 programs on the market or in the works. Since my wife and I do all our conversions, and since all the programs run on several machines, I've been accumulating computers for four years.

Included in my collection are a TRS-80 Model I, Atari 800, Commodore 64, Apple II, Timex/Sinclair, NEC 6000, and now a Radio Shack Color Computer has joined the brood.

My interest in the Color Computer goes back to its initial release. I cut my digital teeth, as it were, on a TRS-80 Model I, and when Radio Shack released a machine with color capability and hires graphics I was very interested. My initial reaction was negative, however, as soon as I saw the price. I thought, "How much computer can they sell for \$499?" That was about the price I paid for my first Model I with 4K back in early 1978, and the Color Computer boasted color graphics and sound. What I had expected (and wanted) from Tandy was a color Model III, with built-in RGB monitor, drives, intelligent video with separate memory mapping and firmware, and all at a price to compete with the Apple II.

A closer scrutiny revealed that there was more to the Color Computer than the price suggested. Multiple graphic modes, 1500 baud cassette I/O, D/A and A/D conversion capability and built-in RS-232. But the clincher was the CPU. It seems that no matter how much we dislike *some* of Radio Shack's decisions, there's one thing you have to give them credit for — they can really pick a micro-processor. One of the drudgeries of programming the Apple, Atari and Commodore machines is the 6502 processor, which has two good points — it's cheap and it's fast. The speed advantage is largely offset by the fact that you have to write a large number of program lines that on any good processor would be

Please turn the page

ZEUS

ZEUS — It's fast and furious as you become the WIZARD fighting off the Thunderbolts of an angry ZEUS. Your Cone of Cold will destroy a thunderbolt and your shield will protect you — for a while. This is the best and highest speed arcade action we have ever done. Difficulty increases in wave after wave, providing hours of challenging fun and a game that you may never completely master. Commodore 64, Vic20 (16k expander), and 16k TRS-80 Color Computer. (ALL MACHINE CODE!) \$19.95 tape \$24.95 disk. (Tape will not transfer to disk.)

SEAWOLFE — ALL MACHINE CODE In this high speed arcade game, you lay out patterns of torpedoes ahead of the attacking PT boats. Requires Joysticks, at least 13k RAM, and fast reflexes. Lots of Color and Sound. A fun game. Tape or Disk for Vic20, Commodore 64, and TRS-80 Color. NOTE: tape will not transfer to disk! \$19.95 Tape — \$24.95 Disk.

QUEST — A NEW IDEA IN ADVENTURE GAMES! Different from all the others. Quest is played on a computer generated map of Alesia. Your job is to gather men and supplies by combat, bargaining, exploration of ruins and temples and outright banditry. When your force is strong enough, you attack the Citadel of Moorlock in a life or death battle to the finish. Playable in 2 to 5 hours, this one is different every time. TRS-80 Color, and Sinclair, 13K VIC-20. Extended BASIC required for TRS-80 Color and TI99/A. \$14.95 each.

32K TRS 80 COLOR Version \$24.95.
 Adds a second level with dungeons and more Questing.

ADVENTURES!!!

The Adventures below are written in BASIC, are full featured, fast action, full plotted adventures that take 30-50 hours to play. (Adventures are interactive fantasies. It's like reading a book except that you are the main character as you give the computer, commands like "Look in the Coffin" and "Light the torch.")

Adventuring requires 16k on Sinclair, and TRS-80 Color. They require 8k on OSI and 13k on VIC-20. Now available for TI99. Any Commodore 64.
 \$14.95 Tape — \$19.95 Disk.

ESCAPE FROM MARS (by Rodger Olsen)

This ADVENTURE takes place on the RED PLANET. You'll have to explore a Martian city and deal with possibly hostile aliens to survive this one. A good first adventure.

PYRAMID (by Rodger Olsen)

This is our most challenging ADVENTURE. It is a treasure hunt in a pyramid full of problems. Exciting and tough!

Dungeons of Death

Dungeons of Death — This is the first D&D type game good enough to qualify at Aardvark. This is serious D&D that allows 1 to 6 players to go on a Dragon Hunting, Monster Killing, Dungeon Exploring Quest. Played on an on-screen map, you get a choice of race and character (Human, Dwarf, Soldier, Wizard, etc.), a chance to grow from game to game, and a 15 page manual. 16k Extended TRS-80 Color, 13k VIC, Commodore 64. At the normal price for an Adventure (14.95 tape, \$19.95 disk), this is a give-away.

Dealers — We have a line of about 100 original programs for the machines listed here. We have High speed Arcades, Quality Adventures, Word processors and Business Software for Small machines. Better yet, we have excellent Dealer support. Phone for information.

Wizards Tower

WIZARDS TOWER — This is very similar to Quest (see above). We added wizards, magic, dragons, and dungeons to come up with a Quest with a D&D flavor. It requires 16k extended color BASIC. 13k VIC, Commodore 64, TRS-80 16k Extended BASIC, TI99/A extended BASIC. \$14.95 Tape, \$19.95 Disk.

Authors — Aardvark pays the highest commissions in the industry and gives programs the widest possible advertising coverage. Send a Self Addressed Stamped Envelope for our Authors Information Package.

Send \$1.00 for Complete Catalogue - Please specify system on all orders - \$2.00 Shipping Charge on each order

AARDVARK L.T.D.
 2352 S. Commerce, Walled Lake, MI 48088 / (313) 669-3110
 Phone Orders Accepted 8:00 a.m. to 4:00 p.m. EST. Mon.-Fri.

Continued from page 12

found in the micro-code inside the chip.

When I heard the Color Computer contained the 6809 I was excited. The 6809 is a state-of-the-art eight-bit processor. It contains all the register power of the 8080/Z-80 family, plus the indexing and memory manipulation advantages of the 6800/6502 family. It's a true "best of both worlds" machine. It even has mini and mainframe tricks thrown in, like auto-increment and decrement, plus 16-bit relative jumps for totally relocatable code. Despite its capabilities, however, I still couldn't justify buying the Color Computer. My reason had to do with the software industry itself.

Freelance Woes

Any freelance author or publisher has to answer one key question concerning each computer system: Have enough units sold to support a market? The greatest hardware package in the world does not guarantee a successful computer system. As we're finding out in today's market, the bottom line is units sold. Until there are enough machines in use no publisher or author can risk his time developing software for a system with an uncertain future. The next couple of

years is going to see a shake-out in the home computer field as the market saturates. The home video game market is entering a similar stage right now, as anyone who owns Warner Communications stock will tell you. Some computers are going to bite the dust: it's inevitable.

For the first year after the release of the Color Computer I got the same feedback from all my publishers: "We know a market must be there, but we can't get a handle on it!" Tandy didn't help matters by their policy towards second-source software and making available accurate sales figures. It seemed that many of the Color Computer buyers did not visit computer stores or read computer magazines so the software marketers could reach them. Consequently, the attitude among publishers and authors

through 1981 was, "Let's wait and see what happens." That wait *could* have killed the Color Computer. Many of you Model I converts will remember the 1981 period when even major magazine publishers were asking the question, "Is the Color Computer dead?"

Things remained at a stalemate until the summer of 1982. At that time I received a phone call from Mark Sprague at Adventure International, one of my publishers. "Listen Jyym," he said, "It really looks like the Color Computer is taking off, we'd like you to consider it." Mark started the ball rolling for me, and when I began getting the same positive views about the Color Computer from other publishers, including Med System/Intelligent Statements, I stopped by Radio Shack and picked up a 32K Color Computer with Extended Basic.

Up and Running

Three weeks later my first converted adventure was running on the 6809. Now, with five games down and three to go, I've really come to appreciate the capabilities of the Color Computer (and keep in mind that I haven't programmed a single line in Extended Basic). I work with Editor-Assembler, so Basic fans

PRODUCTS FOR YOUR RADIO SHACK

COLOR COMPUTER

NEW!

MACRO-80C

The Micro Works is pleased to announce the release of its **disk-based editor, macro assembler and monitor**, written for Color Computer by Andy Phelps. THIS IS IT — The ultimate programming tool!

The powerful 2-pass macro assembler features conditional assembly, local labels, include files and cross referenced symbol tables. MACRO-80C supports the complete Motorola 6809 instruction set in standard source format. There are no changes, constraints or shortcuts in the source language definition. Incorporating all of the features of our Rompack-based assembler (SDS80C), MACRO-80C contains many more useful instructions and pseudo-ops which aid the programmer and add power and flexibility.

The screen-oriented text editor is designed for efficient and easy editing of assembly language programs. The "Help Key" feature makes it simple and fun to learn to use the editor. As the editor requires no line numbers, you can use the arrow keys to position the cursor anywhere in the file. MACRO-80C allows global changes and moving/copying blocks of text. You can edit lines of assembly source which are longer than 32 characters.

DCBUG is a machine language monitor which allows examining and altering of memory, setting break points, etc.

The editor, assembler and monitor — as well as sample programs — come on one Radio Shack compatible disk. Extensive documentation included. **MACRO-80C Price: \$99.95**

SDS80C — Our famous editor, assembler and monitor in Rompack. Complete manual included. **Price: \$89.95**

PARALLEL PRINTER INTERFACE — Serial to parallel converter allows use of all standard parallel printers. You supply printer cable. **PI80C Price: \$69.95**

MICROTEXT — Get printouts while using your modem! Also download to cassette. General purpose terminal Rompack. **Price: \$59.95**

YOU NEED COLOR FORTH!!

Why?

- Forth is faster to program in than Basic
- Forth is easier to learn than Assembly Language
- Forth executes in less time than Basic

Forth is a highly interactive language like Basic, with structure like Pascal and execution speed close to that of Assembly Language. The Micro Works Color Forth is a Rompack containing everything you need to run Forth on your Color Computer.

Color Forth consists of the standard FORTH Interest Group (FIG) implementation of the language plus most of FORTH-79. It has a super screen editor with split screen display. Mass storage is on cassette. Color Forth also contains a decompiler and other aids for learning the inner workings of this fascinating language. It will run on 4K, 16K, and 32K computers. Color Forth contains 10K of ROM, leaving your RAM for your programs! There are simple words to effectively use the Hi-Res Color Computer graphics, joysticks, and sound. The 112-page manual includes a glossary of the system-specific words, a full standard FIG glossary and complete source listing. **COLOR FORTH ... THE BEST!** From the leader in Forth, Talbot Microsystems. **Price: \$109.95**

GAMES

Star Blaster — Blast your way through an asteroid field in this action-packed Hi-Res graphics game. Available in ROMPACK; requires 16K. **Price: \$39.95**

Pac Attack — Try your hand at this challenging game by Computerware, with fantastic graphics, sound and action! Cassette requires 16K. **Price: \$24.95**

Berserk — Have fun zapping robots with this Hi-Res game by Mark Data Products. Cassette requires 16K. **Price: \$24.95**

Adventure — *Black Sanctum* and *Calixto Island* by Mark Data Products. Each cassette requires 16K. **Price: \$19.95** each.

Cave Hunter — Experience vivid colors, bizarre sounds and eerie creatures in hot pursuit as you wind your way through a cave maze in search of gold treasures. This exciting Hi-Res game by Mark Data Products requires 16K for cassette version. **Price: \$24.95**

have experienced pleasures with the powerful Extended Basic ROM I haven't yet reached.

The current industry view is that the Color Computer is not just *going* but *hot*. You Color Computer owners are going to be seeing a lot of software for your machine in the next year, so get your charge cards ready. And now, with Tandy licensing good outside software through Radio Shack stores, the Color Computer's future is bright indeed!

A question I'm often asked is, "With all those computers you have, which do you like best?" I pass on that one, it's something each person must answer himself, according to his needs. I can answer this question though: "How does the Color Computer stack up with the bunch?" The answer is, "Damn well!"

Sure, the Color Computer doesn't have the hi-res color power of the Apple II, but then, neither does the Atari 800, as anyone will tell you who has seen the same hi-res adventure on both machines. The Color Computer doesn't have the graphic animation hardware of the Atari 800, but then neither does the Apple II, as any programmer will tell you who has programmed arcade games on both machines. The Color Computer doesn't have the memory or sound flexi-

bility of the Commodore 64, but then neither do the Atari or Apple, as anyone will tell you who has stuck \$600 worth of ALF boards into his Apple to get the same sound synthesis power that a \$500 Commodore 64 has. There is one thing the Color Computer has over Atari 800, Apple II and Commodore 64. It comes in a 40-pin integrated circuit, sitting quietly on the circuit board of your Color Computer: The 6809 microprocessor.

Moving from Apple, Atari or Commodore to the Color Computer is like climbing out of a Pinto into a Ferrari for the machine language programmer. If you think by that I'm saying you can't totally appreciate the Color Computer's capabilities unless you get into machine language, you're right. The 6809 is a beautiful machine, and I invite anyone who is serious about computing to investigate the world of machine language. You'll find the horizons are unlimited compared with working with an interpreter like Basic ROM. (It will also give you something to bring up when talking with the local Apple, Commodore or Atari expert. You'd be surprised at how fast you can lose those guys when you start talking about autoincrementing, 16-bit indirection, 5-bit or register offsets, unrestricted base page, dual stacks, 16-bit

relative jumps and hardware multiplies.)

As for the Vic 20, Sinclair/Timex, T.I. and Atari 400, they really don't stack up to the Color Computer. The 400 comes closest and it has severe hardware limitations unless you are willing to modify it.

I've enjoyed programming the Color Computer very much. It's a beautiful machine that can hold its own with the best of them. It is also one of the greatest computer values, cost versus performance, on the market today. Remember; if Basic starts to limit you, get a copy of a 6809 machine language book (I used *6809 Assembly Language Programming* by Lance Leventhal), a good Editor Assembler (EDTASM from Radio Shack is a good cartridge-based utility), and take the Ferrari out of the garage and leave the Pintos behind.

By the way, we've now moved into a three bedroom home with one large room just for the computers. Only one problem so far: if I leave all the machines on at night, in the morning I find the CRT's are full of text. It seems that the machines sit up all night hurling insults at each other with self-generated Print statements. I guess as long as there are computers there will be rivalry between the machines and their owners. Right? I wouldn't have it any other way. ■ ■ ■

Lowest Price Ever on the Professional Keyboard — \$69.95!

- No soldering, cutting, or gluing required — plugs right in!
- New, improved version — better layout, lighter touch. (See photo)
- High quality construction assures reliable operation.

by Macrotron

Versakey — a Multifunction Keyboard Driver Utility — \$9.95

- Auto repeat, n-key rollover and type-ahead
- May define up to 128 strings of up to 80 characters each
- F1 functions as DEFINE, F4 as CTRL
- Supplied on cassette, may be copied to disk
- Assembly language source listing included

Introducing the Premium Keyboard — \$89.95

- Attractive low profile
- Extended Radio Shack layout
- Silk-smooth feel — uses ALPS keyswitches

Keyboards carry a 90-day limited warranty. Include your computer's PC board type, if known. Otherwise, include the complete catalog number and serial number.

A Color Computer Enhancement

If you think your TRS-80 Color Computer is a great little system, just wait until you add disk drives!

Increase Your Storage Capacity

Now you can turn your Extended BASIC Color Computer into a complete disk system at an unbelievably low price! Add your first disk drive and get quick and easy access to 156,672 characters of user storage for your program and data files. Or use our Color Computer disk software (right) for word processing, forecasting and planning, filing and more.

Easy Installation

Simply plug the Color Disk Drive controller Program Pak™ into your computer's cartridge port. The Color Disk Operating System is completely contained in the controller Program Pak, so the full 156K-byte disk capacity is available for on-line storage.

Circle No. 13 on Reader Service Card

Everything You Need

When you purchase your first drive, you get one 5 1/4" double-density, 35-track floppy disk drive, plug-in Program Pak cartridge with cable, one blank 5 1/4" diskette, reference manual and operator's instructions. The included cable allows up to two drives on a system.

Expandable Color Disk System

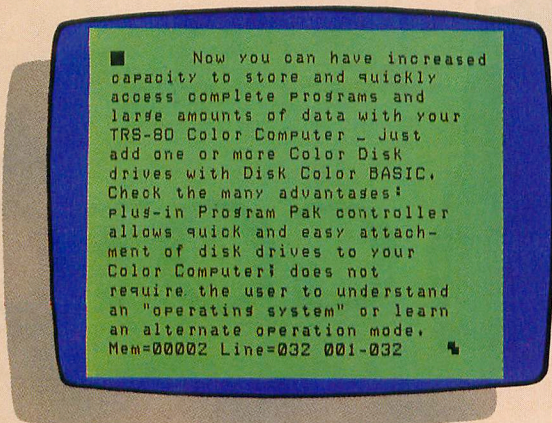

You can add up to three more drives for a total disk storage capacity of over 626,500 characters. And you can upgrade your TRS-80 Standard Color Computer to use disk drives with our Extended BASIC ROM Kit—also at a new low price of \$79.95 (26-3018, plus installation charge). The kit was \$99 in Cat. RSC-9.

GOTO SCHOOL

this article and in the next issue of **The Color Computer Magazine**. It should suffice to say that Bill Gattis (Radio Shack's Education Director) and his staff have prepared us to meet the educational needs of students, teachers, parents, and even our children at home, with a variety of programs and some exciting future plans. Even more important is the fact that the Color Computer has a big part in those plans.

I receive many questions asking what color educational software is available for the Color Computer, and which programs are the "best." There are many fine programs available for educational use; my colleague, Dave Macali, and I will be reviewing programs for you in future issues. Dave and I spend considerable time working with these programs and constantly receive teacher and student reactions to them. Just be comfortable at this time knowing there are currently many excellent educational programs available for the Color Computer and many more coming in the near future. Also, don't forget games: Who said the computer was only for learning and not for fun?

Some final thoughts about this column. I would like to have a monthly question/answer and suggestion section. Bear in mind that this column is not intended to describe the technical operation of the computer. We want to help

JOIN THE STAFF of **The Color Computer Magazine** with extreme pleasure. As a school administrator whose schools have implemented the use of Color Computers, I have witnessed the rapid growth of computer use for education. It must also be emphasized that using the computer for educational purposes has not been restricted to schools. How many of you are working with programs in your home to teach yourself or your children? There is really no longer any question about the value of computers in education. The claim that computers are a fad is shallow and lacks evidence. A more important

consideration is how the computer is used for education, and with what types of programs.

There is little doubt that many teachers have used the computer only as an "electronic flash card," not its most appropriate use, but still an important aspect of computer education. Unfortunately, the rapid growth of computer use, declining prices, and the information explosion have surpassed many educators' ability to keep pace in this technological age. Fortunately, Radio Shack has recognized this problem and made a substantial investment with "America's Educational Challenge," a topic I will discuss later in

teachers, parents, and individual computer users with questions about how to use the computer for educational purposes. I will also be telling you about many fine books and home instructional materials available about computers in general and the Color Computer specifically. These materials will help the home computer user become computer literate. Some of the materials include cassettes which are helpful for the daily commuter or someone who prefers to listen to instructions. Who knows, we may even devote a column to "learning styles and the computer?"

Finally, a few words on LOGO, an easy to learn programming language. Some people consider LOGO a "children's programming language," yet George Gerhold, the co-author of Color LOGO (Radio Shack's version), has used it in his college classroom with some very interesting results.

I believe Color LOGO is the most important software available for Color Computers used in schools. This opinion is not intended to diminish the importance of other fine educational software, only to emphasize the importance of children being able to creatively explore LOGO. Because of my strong feelings on this matter, each month a portion of this column will deal with LOGO. Send me your programs, ideas, ways it is being used, or criticisms. I intend to develop a forum for LOGO as a regular part of the magazine. Naturally, creative programs will be published, with your permission. Please enclose a cassette or disk with your documentation.

America's Educational Challenge

By now, most of you have read or heard about Radio Shack's program to help all elementary and secondary teachers in the United States achieve a basic understanding of computers and their applications. Because of the magnitude of this endeavor, I have decided to review the program in two parts. The first part appears in this issue and will include a description of the program and a summary of Part I, *Educational Applications of Microcomputers*. Next month I will review Part II, *Introduction to Microcomputers*.

Last April Radio Shack mailed to every school in the United States a package that included: an educator's handbook describing how microcomputers are used in schools; a basic computer literacy package designed to teach elementary computer concepts; a secondary-level

textbook designed to illustrate programming concepts; examples of what several school districts are doing with computers; a certificate for three free classes on Basic programming and educational uses of computers; an order form for a full staff-development program.

The staff-development program includes two audio-visual presentations, *Educational Applications of Microcomputers* and *Introduction to Microcomputers* for use in teacher workshops (both of these programs will be reviewed in this column); information describing available educational software; five certificates entitling teachers to two free

classes in Basic programming and a workshop on educational computer applications, and a sample comic book from the series that has been distributed to schools on a regular basis.

Obviously, this was a massive undertaking. Radio Shack is to be commended for its efforts to help our teachers become more knowledgeable about how computers are used. Further, it is extremely important that our nation's youth be properly educated about computers. Radio Shack's contribution will be a major step toward helping educators assume this responsibility. ■ ■ ■

AMDISK III "B"™

The Amdisk III "B"™ by Amdek is a TRS-80 compatible two drive system.

It will provide years of reliable service and offer the convenience of protected 3" media.

The J & M Disk Controller™ pictured above is fully compatible with the Radio Shack Color Computer.

\$499. for the Drive System includes cable.
List price for the J & M Disk Controller is \$145.
Allow \$10. for postage and handling.

Super "Color" Library™

For the TRS-80 Color and TDP System 100 Personal Computers

No matter what kind of problem you are trying to solve with the Color Computer, there is a program in the ever-expanding integrated, **Super "Color" Library** that will give you the solution; Faster, Better, Smarter!

Every Library program features **MEMORY-SENSE** to determine your computer's memory, from 16 to 64K, and adjusts automatically to maximize work space. All programs, except the **Super "Color" Speller** and **Super "Color" Disk-ZAP**, feature a true lowercase display with below line descenders. Each program has been written specifically for the Color Computer in fast machine code to be totally compatible for optimum performance — Something a motley assortment of programs from diverse sources or a passel of overpriced, wallet-FLEXing software from a bygone era simply can not achieve.

The **Super "Color" Library** has all the power, speed, dependability and compatibility you will ever need so build your library a volume at a time or put the full power of the complete library of problem solvers to work right away.

— NEW! —

64K
Compatible

Super "Color" Writer II™

VERSION 3.0 By Tim Nelson
THE INTELLIGENT WORD PROCESSOR

32x16 &
51-64-85x21&24
WITH REAL
LOWERCASE
DISPLAY

The **Super "Color" Writer II** is for those who desire the best. It is the most powerful, fastest, most dependable and versatile word processor available for the Color Computer, from 16 to 64K. The **Super "Color" Writer II** has features for the most demanding professional, yet it is easy enough for newcomers to master.

Of course the **Super "Color" Writer II** has all the features you would expect from the highest quality word processor, such as a clear, crisp and readable professional display with your choice of display colors, 9 display formats; standard 32x16 & 51-64-85x21 & 24 with real lowercase descenders; full 4-way cursor control, sophisticated edit commands, the ability to edit any BASIC program or ASCII textfile, seven delete functions, locate and change, wild card locate, a real block move & copy, word wrap-around, programmable tabs, display memory used and left, non-breakable space, multiple headers and footers, dynamic text formatting, comprehensive format parameters, use with ANY printer at any baud rate from 110 to 9600 baud, automatic justification, automatic pagination, automatic centering, automatic flush right, underlining, superscripts, subscripts, pause print, single-sheet pause, optionally print comments, append text files, available in a ROMPAK cartridge for maximum work space, but that's only half of the story. No other program can even begin to compare in features with the **Super "Color" Writer II**.

Check These Exclusive Features

MEMORY-SENSE adjusts to computer's memory (16-64K) for maximum work space; **TYPE-AHEAD**, **TYPAMATIC KEY REPEAT** and **KEY BEEP** for the pros; 3 **PROGRAMMABLE FUNCTIONS**; **AUTO PHRASE INSERT**; **COLUMN CREATION**; **TEXT FILE LINKING**; **HELP MENU**; **A TRUE EDITING WINDOW IN ALL 9 DISPLAY MODES**; **TRUE FORMAT WINDOW** to display line lengths up to 255 characters, with horizontal and vertical scrolling to replicate the printed page including centered lines, headers, footers, page breaks, page numbers, margins, giving a perfect printed document every time. Also makes hyphenation a snap; **TRUE AUTOMATIC JUSTIFICATION** for neat, even left and right hand margins; Ability to use **CHARACTER CODES** for printing special characters available with your printer; freedom to embed as many **PRINTER CONTROL CODES** as desired anywhere in the text, **EVEN WITHIN JUSTIFIED TEXT**; 90-plus page tutorial manual.

ADDITIONAL DISK FEATURES: Read a directory, Display free granules, Save with Automatic Verification, Load and Append ASCII files and BASIC programs, Kill files, and Link files from disk for continuous printing. 54K bytes of workspace available with a 64 K system. Only the best offers all of these features.

TAPE \$69.95

32x16 & 51-64-85x21&24 Display With Lowercase Descenders And **16** Thru **64K** Too!

NEW Super "Color" Calc™

ELECTRONIC SPREADSHEET By Kevin Herrboldt

Now you can answer those "What if?" financial projection, forecasting, budgeting, engineering and calculating questions with precision, speed and power using the **Super "Color" Calc**, truly the finest electronic worksheet and financial modeling program available for the Color Computer, from 16 to 64K. Now every Color Computer owner has access to a calculating and planning tool rivaling VisiCalc™ containing all its features and commands and then some. You need only change one variable and you instantly see how that change affects your assumptions. You can even use VisiCalc templates freely with **Super "Color" Calc!** Combine spread sheet tables with **Super "Color" Writer II** documents to create ledgers, projections, statistical and financial reports and budgets.

Features include: 9 display formats; standard 32x16 & 51-64-85x21&24 with real lowercase descenders * MEMORY-SENSE to adjust to computer's memory (16-64K) for maximum work space; Full-size 63x256 worksheet * Easy to use * HELP Menus to make learning faster * Machine code speed and high precision * Total flexibility in calculating * Up to FOUR VIDEO DISPLAY WINDOWS to compare and contrast results of changes * Sine and Cosine functions, Averaging, Exponents, Algebraic functions, and base 10 or 16 entry * Multi-layered Column and Row Ascending and Descending sorts * Locate formulas or titles in fields * Easy entry, replication and block moving of frames * Global or Local column width control up to 81 characters each * Create titles of up to 255 characters * Typamatic Key Repeat * Key beep * Type-ahead * Print up to 132 column worksheet * Prints at any baud rate from 110 to 9600 * Print formats savable along with worksheet * Enter control codes for customized printing.

DISK FEATURES: Read a directory; Display free granules; Kill files, Save with Automatic Verification; Load files; Append disk files for complete worksheet printing. 54K bytes of worksheet space available with a 64K system.

Tutorial and sample templates are supplied with the program.

ROMPAK \$89.95 **DISK \$99.95**

Disk requires 32K for lowercase display.

Super "Color" Disk-ZAP™

By Tim Nelson

Now the dreamed-of repair of I/O errors is a reality. The **Super "Color" Disk-ZAP™** is the ultimate repair utility for simple and quick repair of all repairable disk errors. Designed with the non-programmer in mind, the **Super "Color" Disk-ZAP™** will let you retrieve all types of bashed files, including BASIC and Machine Code programs.

This high-speed machine code disk utility has a special dual cursor screen display to show HEXIDECIMAL and ASCII displays simultaneously. You are able to: Verify or modify disk sectors at will * Type right onto the disk to change unwanted program names or prompts * Send sector contents to the printer or any other RS-232 device * Search the entire disk for any grouping of characters * Copy sectors * Backup tracks or entire disks * Repair directory tracks and smashed disks * Full prompting to help you every step of the way * 50-plus page Operators Manual which helps you simply and quickly fix the vast majority of disk errors, and teaches the rudiments of disk structure and repair.

AVAILABLE ON DISK ONLY \$49.95

Operators Manual only \$10.00 (Refundable with purchase)

Super "Color" Terminal™

THE FINEST TERMINAL PROGRAM ANYWHERE!

Version 3.0 By Dan Nelson

The best has become even better, with many new features including 9 display formats; 32x16 & 51-64-85x21&24 with real lowercase descenders, plus compatibility with the 64K Color Computer. This user-friendly program makes communicating with ANY computer a breeze even for a newcomer. Communicate using your modem with all the popular information services such as Dow Jones, CompuServe, The Source, and local BBS's, clubs, friends, or the main-frame at work. You can also communicate directly with other microcomputers, such as the TRS-80 I/III, II, other Color Computers, Apples, IBM PCs, etc., via RS-232 without using a modem. Save the information or PRINT IT!

FEATURES: MEMORY-SENSE to adjust to computer's memory (16-64K) for maximum work space; Selectively print data at baud rates from 110 to 9600 * 54K of data storage with 64K disk system. 128 character ASCII keyboard * Automatic graphics mode * Word mode (word wrap) for unbroken words * Send & receive **Super "Color" Writer II, Database & Calc** files, ASCII files, Machine Language & BASIC programs * Set communications baud rate from 110 to 9600, Duplex: Half/Full/Echo, Word length: 5 6 7 or 8, Parity: Odd/Even or None, Stop Bits: 1-9 * Local linefeeds to screen * Save and load ASCII files, Machine Code & BASIC programs * Unique CLONE feature for copying any tape * Lower case masking * 10 Keystroke Multiplier (MACRO) buffers to perform repetitive pre-entry log-on tasks and send short messages * Programmable prompt or delay for send next line * Selectable character trapping * Files compatible with other Library programs.

ADDITIONAL DISK FEATURES: Works with up to four Disk Drives; Call a directory, Print free space, Kill disk files, Save with Automatic Verification and Load textfiles or BASIC programs; Save and Load KSM'S to the disk.

TAPE \$49.95 **ROMPAK \$59.95** **DISK \$69.95**

Operators Manual only \$10.00 (Refundable with purchase)

NEW Super "Color" Database™

This high speed machine language program including true lowercase displays fills all your information management needs, be they for your business or home. Inventory, accounts, mailing, lists, family histories, you name it, the **Super "Color" Database** will keep track of all your data.

The **Super "Color" Database** features MEMORY-SENSE to adjust to computer's memory (16-64K) for maximum work space. It is structured in a simple and easy to understand menu system with full prompting for easy operation. Your data is stored in records of your own design, each divided into as many fields as you need. All files are fully indexed for speed and efficiency. Full sort of records is provided for easy listing of names, figures, addresses, etc., in ascending or descending order. The math package performs arithmetic operations and updates other fields which is especially useful when used as an order entry and invoicing system. You can create reports, or lists for mailings, or whatever. Create files compatible with the **Super "Color" Writer II and Terminal**. Up to five different print formats are available, and control codes may be imbedded for customized printing.

Indoor/Outdoor Thermometer

by Theodore Hasenstaub

AFTER WEEKS OF BATTLE and endless hours, you finally succeeded in defeating Zorac and his Leithium Forces. Your score tops the 1,000,000 mark, and you still have four Star Cruisers left; now what will fill your leisure time? Let's give this a moment's thought. Remember — you own a full-fledged computer, not just a glorified game machine. So, why not unleash a little of its power?? Unplug those joysticks and let's get started.

Remember I said a full-fledged computer. Let's look a little closer: your Color Computer has a fantastic Basic language incorporated into its ROM (even more powerful if you have Extended Basic). It

also has its own RS-232 serial port built in, enabling it to communicate with the outside world (an option on many computers). Not enough yet? How about digital to analog circuitry? You guessed it, the Color Computer has its own built right into it. This is the area we will use for this application.

Basically, digital to analog circuitry lets you convert electrical analogs into the digital information your Color Computer understands. A simple design lets you attach a variety of devices to the joystick ports, which will set up these electrical analogs (comparisons). Thermistors, photo cells, transducers and solar cells are a few of the devices you might plug in.

How Does An Analog?

I won't go deeply into how the Color Computer accomplishes analog comparisons, but here is a general, easier to understand approach. On page 85 of *Getting Started With Color Basic*, you will see diagrams of the joysticks. Notice

that you have four rotational axes, two on each joystick. The axes positions are designated as follows: the right joystick horizontal axis position as JOYSTK(0); the vertical axis position as JOYSTK(1); the left joystick horizontal axis position as JOYSTK(2); the vertical axis position as JOYSTK(3). These four values designate from which input channel the Color Computer reads information. This information is provided from potentiometers (pots), which are just variable resistors that are enclosed inside the joystick cases. When you change the joystick position you also change the position of the pots. Depending on which way you move them, you are either increasing or decreasing resistance.

A 5-pin DIN plug is used to plug devices into the joystick ports (see Figure 1). A voltage of about 5 Vdc is supplied on pin 5. Pin 5 is wired to one side of each pot. Pins 1 and 2 are the input lines (to the Color Computer), connected to the center lugs of the pots. One side of each pot is then connected to ground (pin 3). The pots are connected together me-

Continued from page 22

chanically so any movement in any direction changes the resistance in the joystick circuit. This is what it's all about; a change in the voltage due to a change in resistance, which can be referenced to a known voltage (pin 5).

The analog (voltage) is fed in via the input channels (pins 1 and 2) to a channel selector which is programmable for the channel that the Color Computer is to read. It then goes to a comparator to reference the voltage input with that of the digital to analog converter. Approximate by means of the PIA chip, as an integer between 0 and 63. This integer is the Color Computer's conclusion of the analog presented to it from its input channels. The reason for this range of integers is that the Color Computer uses a six-bit digital to analog converter (a shame they didn't use an 8-bit, which would give us integers from 0 - 255), thus allowing a maximum output of 111111 binary or 63 decimal. This somewhat limits the range in calculating different value tables.

Checking the Outside

Enough information on how the joystick ports function: what are we going to do with all this information? How about building an indoor/outdoor thermometer? An evening's work and about \$15.00 of materials will do it! All we do is substitute the pots with other devices that will change their resistance. The device we will use should change its resistance as temperature rises and falls. Such a device is called a Thermistor.

A *thermistor* is a semiconductor that decreases in resistance as temperature increases, and increases in resistance as temperature decreases. They come in a wide range of sizes, shapes, and resistance ranges. Their values are rated in ohms at 25 degrees Celsius, so a 10k

Color Computer Flex* OS-9† Users Move up to C Language Compiler

*OS-9 is a trademark of Microware, Inc.
†FLEX is a trademark of Technical Systems Consultants, Inc.

DO YOU WANT faster running programs (over 100 times faster than BASIC)? A high level language that is also a low level language? A compiler that runs in less than 32K? Assembly language output? Position independent code? Extensive library functions in source assembly code? Periodic newsletters with new library functions? An aid in learning assembly language? Liberal version updates?

C is the language of the eighties; accepted by IBM and Bell Labs for system development; a compact, highly versatile, easy to use language, excellent to use to build games, applications, utilities, operating systems, etc.

DUGGER'S GROWING SYSTEMS with over 21 years of experience in computing was first on the market with a 6809 C compiler. The compiler has been extensively tested, revised, and proven.

DUGGER'S GROWING SYSTEMS C is a growing subset of the standard C. Version 1 contains all the necessary C commands (while, if, if else, int, char, etc.). Version 2 contains additional features (float, long, for, goto, etc.).

AN EXTENSIVE LIBRARY in assembly language source is provided (char, I/O, formatted print, filehandling, string manipulating, etc.) Color Computer version also has additional functions which use the BASIC ROM functions (cls, polcat, floating point, etc.).

Color Computer/25

ohm thermistor is said to have 10k ohms of resistance at 25 degrees Celsius. Prices vary from a couple dollars to over \$15, depending on the thermistor's ability to give a constantly proportional reading at any given temperature. Such thermistors are referred to as being linear; low-priced thermistors are not linear, but work very well with the Color Computer's digital to analog circuitry.

The thermistor circuit (see Figure 2) incorporates a voltage divider, to reference the differences in voltage due to the changing resistance of the thermistor. When wiring the thermistor, make sure that at least one of its leads is well insulated so you won't get a false reading if it touches the other. I used a small piece of shrink tubing to accomplish this. The numbers in Figure 2 correspond to the pin connections on the joystick plug. I used 15 feet of two-conductor wire for the probe leads. I would assume that longer leads could be used without significantly changing the resistance in the circuit. After assembling the probes, slide another piece of shrink tubing over the probe end, so that about 1/4 inch of the probe is visible. This will protect its fragile end.

The range on this thermometer is +2 degrees Fahrenheit to about +118 degrees Fahrenheit, with an accuracy of 3 degrees. You may want to try other value thermistor and resistor combinations to narrow its range and increase its accuracy. I used a fifth-degree polynomial to plot the temperature curve instead of reading data statements into the program with all the necessary temperatures and analog to digital conversions. The graphic routines in the program are set to print any temperature from -99 degrees Fahrenheit to +118 degrees Fahrenheit, even though the thermometer will only show temperatures from

-30 to +110 degrees Fahrenheit. If you decide to change the range you will have to redefine the temperature curve with your own readings; the function I wrote will not be accurate.

Plug one of the probes into the right joystick port to read indoor temperature, and the other probe into the left joystick port to read outdoor temperatures. Next, place the probes in their respective locations. The program uses the INKEY\$ function exclusively. All user input is done by one-key entry. Load and run the program (Extended Basic is required). After the title screen, press any key to continue. Next press an I or an O for the temperature reading you desire. The screen will display a thermometer, and the mercury climbs to the correct temperature. It will also display the temperature in graphic integers.

The next time someone uses the old cliché "It was so cold...!" you won't have to answer "How cold was it?" You will already know. ■ ■ ■

Summer Programming Project

We decided to give you something to do this summer: write an original game for the Color Computer. It can be an adventure, simulation, arcade, or any type of game imaginable. It can be written in Basic or assembly language. It can be long or short, it's all up to you. Just make sure you get it to us by Labor Day, September 5, 1983.

Entries should be submitted on cassette tape or disk with clearly written instructions for use. All entries will be held until October 1, 1983. For the return of entries not selected for prizes, include a self-addressed stamped envelope with you program. All winners will be announced in December's issue of **The Color Computer Magazine**. Entries will be judged by **The Color Computer Magazine's** editorial staff. All decisions are final.

Send as many entries as you like to:
The Color Computer Magazine
 Summer Programming Project
 Highland Mill, Camden, ME 04843

GRAND PRIZES

Aardvark Software	(2) \$100 gift certificates
Adventure International	(2) \$125 gift certificates
Avalon Hill	Shoot Out at the OK Galaxy# Breakthru+
Chattanooga Choo Choo	(2) \$25 gift certificates
Cer Comp	\$100 gift certificate#
Chromasette Magazine	(2) six-month subscriptions
Cognitec	(2) Teletwriter 64 word processors
The Color Computer Magazine	(2) paid publication, one- year subscription
Computerware	(2) \$100 gift certificates
The Data Man	(2) \$25 gift certificates (2) Visualizer program writing aids (2) Blank keyboard overlays

Classical Computing	(2) Speak Up! voice programs
DSL Computer Products Eigen Systems	Cassette player/recorder# Colorcom/E terminal program# Basic Aid+
Harmonycs	(2) \$25 gift certificates
Homebase Computer Systems	(2) \$75 packages of all Homebase products
Inter+ Action	(2) \$25 gift certificates
International CC Club	(2) 2-year memberships
Intracolor Communications	Colorpede#
Jarb Inc.	Gemini X printer#
Micro School Programs	Color Text+
The Micro Works	\$50 gift certificate#
Micro Technical Products	Rommel game# Banner program+
Nelson Software Systems	(2) Adventure Trilogy games
Prickley Pear Software	(2) \$50 gift certificates (2) T-shirts
The Program Store	(2) \$25 gift certificates
Radio Shack	(2) Drive O disk drives with controller
Real Software	(2) \$100 gift certificates
Soft City	(2) US Robotics Micro Link 300 direct connect modems with cable
Spectral Associates	\$25 gift certificate#
Spectrum Projects	(2) \$25 gift certificates
Sugar Software	(2) \$25 gift certificates
T & D Software	(2) half-year subscription to software service
TCE Programs	(2) Packages of three programs
Tom Mix Software	(2) \$50 gift certificates
Zeta Software	Wormtube game#
+ Basic winner only	# Machine language winner only
1st Runners-up	Paid publication and a one-year subscription to The Color Computer Magazine.
	Prickley Pear T-shirt
2nd Runners-up	Paid publication in The Color Computer Magazine.
	Prickley Pear T-Shirt

Talk is Cheap!

You want your color computer to talk,
but how much will it cost?

\$50 . . . \$100 . . . \$200 . . . NO!

HOW ABOUT \$29⁹⁵?

SPEAK UP!™ is a machine language
Voice Synthesizer program for your
TRS-80 Color Computer.* It is
100% software. Nothing else to buy.
Best of all, YOU can make
basic programs talk!

16K and 32K versions on one cassette.
Has text to speech capability.

*T.M. Tandy Corp.

16k minimum

It's easy to use, and will say
virtually anything!

Talk really is cheap!

Reviewed in the April issue of *Rainbow*.

MIND YOUR OWN BUSINESS WITH HOMEBASE™

The TRS-80* Color-Computer DATABASE ENHANCED

Database Management, Word Processing and Spread Sheet Calculations in One Integrated Package

Business Applications

- Real Estate
- Ledgers
- Mailing Lists
- Single Letters
- Memos
- Phone Lists
- Form Letters
- Charts
- Business Reports
- Inventories
- Income Tax Preparation
- Property Maintenance
- Property Rentals
- Receivables
- Payables
- Order Entry
- Business Contacts
- Appointments
- Client Profiles
- Document/Article Indexing
- Lab Reports
- Personnel Records
- Student Grades
- Budgets

Homebase is Easy to Use

- No programming required. All options are displayed in menus. HOMEBASE automatically requests all required data and edits every entry.
- All commands are single key stroke.
- Full screen editing for text entry.
- Complete cursor control for entering names, titles, notes, comments and all other data.
- Over 100 pages of well organized and easy to use documentation with complete descriptions of every command, and examples.
- Requires 32K of memory, DISK BASIC and only one disk drive. No equipment modifications required.
- Fast response to all commands including search and sort.

Enhancement:

- A tutorial/demonstration file with step-by-step instructions.

Custom Report Writer For Data Management Files

- Merge data management files with text files
- Print one document per data record.
- Print one document for multiple data records by using a data field as a key for matching records.
- Use all printer control options.
- Print multiple copies.
- Print selected data records.
- Store multiple formats on a single TEXT file.
- Alter formats while using the REPORT WRITER or TEXT PROCESSING program.

Data Management

- Define 50 data fields, including a comment field, in a single record. Dates, time of day, phone numbers and dollar amounts are automatically formatted. You may also define 24 scratchpad data fields not contained within your data records.
- Reorganize records by moving data fields within records or by moving records within a file. You may sort records in ascending or descending order using record names you assign or data values.
- Manage files by searching, deleting, clearing, duplicating, and displaying any data or record. Add, subtract, multiply, divide, or summarize any data field. Use any command on a single record or selected group of records. You may also selectively process any single data field or group of data fields.
- Print files using automatic

formatting with options to print report titles, a report date, page numbers, record names, and data field names. Print all or selected data fields or records.

Enhancements:

- Variable length alpha/text data fields.
- Use 1 or 2 disk drives.
- Range search for alpha/text data fields and record names.
- Calculator mode for entering new data field values while performing calculations and automatically displaying the results of calculations.
- Extended sort which permits sorting on any position within a comment alpha/text data field.
- Separate printer drivers for NEC and OKIDATA printers.

Text/Word Processing

- Define 250 screens of text you can search, sort, display, or print. Reference or select records using

- record names you assign or by searching for any word or phrase within text records.
- Edit text by duplicating, moving, clearing, searching and replacing, deleting, or reordering entire records of text or portions of text records. Print the text record appearing on the screen to review before final print.
- Format labels, memos, letters, and other documents for printing with embedded printer controls for paging, skipping lines, and changing character fonts. Program controls provide for setting; right and left margins, lines per page, page width, horizontal tabs, and line spacing. Reuse control settings or change when desired. Print multiple copies. Merge text records to produce a form letter for an address file.

Enhancements:

- Use 1 or 2 disk drives.
- A separate printer driver for NEC and OKIDATA printers.
- Page numbering.
- Print page headings.
- Page backwards or forwards.

Utilities for Data Management and Word Processing

- Generating new files from old files.
- Merging files.
- Duplicating files.
- Moving data between files.
- Summarizing files.
- Moving files from diskette to diskette using a single drive.
- Saving files to cassette and reloading from cassette.
- File synchronizing.
- Print disk directory

Enhancements:

- Rename files.
- Extended summarize and update.

Flexible Amortization

by Mel Seder

AT BEST, most amortization programs require that the compounding periods used in the calculations are tied to the payment intervals you enter. This quiet piece of software lets you enter the compounding periods for a year by responding to the prompt.

The screens have been carefully designed (I know someone out there will improve it, anyway) and provide you with all the information you need to decide whether you should get that disk drive.

If the amount of payment calculates a fractional part of a cent, the payment is rounded up to the next highest cent and the applicable adjustments to principal reduction and balances are made accordingly by the Color Computer.

Caution: Do not, under any circumstances show this to your banker. He will be calling you with questions all the time, as the tables he has probably don't provide him with the power and flexibility of this program. ■ ■ ■

Program Listing. Amortization

BY NOW YOU KNOW that your TRS-80 Color Computer is no toy, but have you ever tried convincing a skeptical friend of that? Just one look at the square button keyboard and the ungainly inverse video used to represent lowercase characters is a guaranteed turn-off for the self-ordained computer sophisticate. Next month I'll tackle the keyboard problem with three different solutions; this month's column offers a way to build true, permanent, software-free lowercase for your computer.

Many programs offer software lowercase. Frankly, I've heard all the arguments for software-generated lowercase (redefinable characters, varying line length, etc.) and against hardware (voiding the warranty, the cost, construction time and debugging). Nevertheless, I remain convinced that hardware is the best solution, mainly because I resent giving up 7K of memory just for a software answer. The Lowerkit uses not one byte of your computer's memory, never needs re-loading, and has a restore switch for whenever you need Radio Shack's original character display.

For me, the Lowerkit is the original true solution to the lowercase question, and has a long and curious history. (Dramatic music in.) It is a true story; names have not been changed to protect the innocent. It began when I first squinted at the Color Computer's pretend lowercase. I became suspicious... (music fades).

A Lowercase Solution

One of the economies which resulted in the low price for a powerful color graphics computer was Radio Shack's decision to use a single video display integrated circuit in place of a cluster of integrated circuits. This is no small matter, for the job of any computer video section is multifold: to provide the character information itself — in the correct order — by extracting the ASCII (American Standard Code for Information Interchange) character codes from memory and converting them into dot patterns. The video section must also provide both vertical and horizontal synchronization signals (called "sync") to lock the television or monitor onto a stable display of the letter

Parts List

Z1	2716-1 EPROM, used as character generator
Z2	74LS593 counter
Z3	74LS73 flip flop
Z4	74LS04 inverter
Z5	74LS157 multiplexer
Z6	74LS157 multiplexer
Z7	74LS 86 exclusive-OR gate
Z8	74LS125 tri-state buffer

C1-C3 0.1 mF bypass capacitors
R1-R2 1k ohm, 1/4 watt resistor
R3 470 ohm, 1/4 watt resistor

Miscellaneous:

24-pin integrated circuit socket
40-pin integrated circuit socket
40 standoff pins (Snap-Strips)

Optional:

R4 1K ohm, 1/4 watt resistor
S1 SPST toggle switch

Part Availability

Available from Green Mountain Micro, Roxbury, VT 05569, telephone (802) 485-6112:

Assembled and tested Lowerkit, \$79.95

Complete kit of parts, \$49.95

Printed circuit board only, \$20.00

2716-1 EPROM with standard character generator, \$20.00

CHARIT programming software on tape, \$15.00

EPROM programming from a CHARIT tape, \$25.00

Samtec Snap-Strips, 7 cents per pin

(Lowerkit is a trademark of Green Mountain Micro.)

dot patterns. And finally, it must provide multiple color information signals that are combined into a screen color display. Furthermore, combined color and high-resolution graphics demand additional electronic definitions that distinguish between alphanumeric characters and colored dots, lines, and circles.

The 6847 Video Display Generator (VDG) performs all these tasks, but with limitations. It permits a resolution of 256 by 192 dots in eight colors — less than some other video systems — and has only 64 ASCII characters built in. By means of a video inversion signal, these 64 black-on-green letters can be extended to 64 green-on-black letters; 96 are used by Basic. To view all 128 characters, plus the 128 "semi-graphics," try this:

```
10 CLS:FORX=0TO255:POKE1024+X,  
X:NEXT  
20 PRINT@256;  
30 FORX=0TO255:PRINTCHR$(X);:NE  
XT  
40 GOTO40
```

Astute readers will notice two things: first, CHR\$(0) to CHR\$(31) in line 30 do not print on the screen, and second, the order of 32-character groups is different in the POKE and PRINT versions. The POKE version places the characters on the screen exactly as they appear in the 6847 VDG by forcing them into the video memory; on the other hand, the PRINT version lets Basic translate which are used and where they should go according to the legitimate ASCII positions — symbols from 32 to 63, uppercase from 64 to 95, and lowercase from 96 to 127. The computer's data bit 6 is used for video reversal, and data bit 7 performs the alphanumeric/semigraphic selection.

So it turns out that the Color Computer's character display system is more than the 6847 VDG — it is actually a combination of hardware and software. Any external lowercase generator has to acknowledge these circumstances, and that fact eliminates any simple, plug-in replacement character memory. But there is an answer: I noticed that the 6847 VDG — very new to me when I first tried to find a true lowercase solution — had one connection marked INT*/EXT. I decided to explore further... (Tense music under).

Implementing an External Display ROM

In theory, adding an external character generator to the 6847 VDG alone is a simple task; it was designed for such ex-

pansion. There are three requirements: the external character generator itself; correct selection of EXT on VDG pin 31, and proper timing for character dot-row selection on the screen. Motorola's data sheet describes the External mode as using "an external character generator as well as a row counter. Thus, custom character fonts and graphic symbol sets with up to 256 different 8 x 12 dot 'characters' may be displayed."

Additionally, the Color Computer arrangement demands that data bit 7 de-select the external generator and reselect the internal system (for graphics), and that either the character generator ROM or the data lines be adjusted to accommodate the "ASCIIization" (made by Basic) of the 6847's internal characters. And finally, the entire unit should be switchable, permitting it to be defeated whenever the original display is needed.

The complete schematic for the Lowerkit is shown in Figure 1 (p. 36). The VDG is intercepted and connected to several outboard integrated circuits. The actual external selection is done by a pair of multiplexers (Z5 and Z6, type 74LS157). A multiplexer is similar to a traffic light — only one group of data vehicles may pass through the electronic intersection at a time. In this example, eight data lines are switched from the internal mode (multiplexer A inputs, pins 2, 5, 11 and 14) to the external character generator (multiplexer B inputs, pins 3, 6, 10 and 13). In charge of selection is data bit 7 (DD7, pin 40 of the original VDG connection) together with the alphanumeric/graphic select line (A*/G, pin 35). When alphanumeric mode is chosen, the signal from DD7 (inverted by the 74LS04, Z4) passes through the 74LS125 buffer (Z8).

I'll first describe the creation of the semigraphic display, which forms an electronically "normal" computer. If DD7 is high, semigraphics are selected; the multiplexers Z5 and Z6 connect the A inputs to the Y outputs (pins 4, 7, 9 and 12). By following data lines DD0 through DD6 from the socket, you can see that these seven signals pass through the multiplexer directly to the VDG. The eighth A input is held high, passing through an inverter, and opening up one Z8 buffer to the INV signal (pin 32) and the INT*/EXT signal (pin 31).

In other words, when semigraphics are selected, all signals move normally to the VDG, as if no external circuits were in place. The computer reacts like an unmodified Color Computer. The situation is the same when high-resolution graphics are selected (A*/G high).

Please turn the page

Continued from page 34

When DD7 goes low — which happens when alphanumeric characters are to be printed on the screen — the B inputs of multiplexers Z5 and Z6 are connected to the Y outputs, and routed to the VDG. Seven dots are output from character generator (Z1) lines D0 to D6, as selected by the address inputs A0 to A6 (more on this arrangement later). The computer's video display is made up of 16 lines of 32 characters; each character is created from 12 rows of dots and eight columns of dots. Because Z1 must know which set of dots to output to the screen for each line, a counter is set up which counts from 1 to 12 in binary. Each dot row is selected in turn.

The counting is carried off by the combination of a 74LS93 binary counter (Z2) and a 74LS73 flip flop (Z4). Z2 normally counts from one to 16; display scan lines are selected one at a time by a horizontal synchronization clock (HS*) coming from the computer socket's pin 38. The count is properly reset by a row preset pulse (RP*, pin 36), so that the count never gets to 16, restarting from zero after character row 12. Counting through characters stops completely when the video display beam is off the screen; the field sync (FS*, pin 37) guides the Z2 in doing this. Counting begins again when the first character to be displayed on the screen is fetched from memory, initiated by DA0 (pin 22).

The final electronic work must deal with the conversion process accomplished by the Basic software. As I mentioned earlier, the internal character generator only uses six bits of data to create 64 characters, and these characters are arranged differently from the normal ASCII positions. I had two options: to rearrange the character generator at the time of programming, or to provide an electronic rearrangement. Though it might have saved an integrated circuit to select the non-standard pattern for the character generator ROM, I chose to perform the electronic rearrangement. The purpose was to accommodate commercial character generators, for those who wished to use them.

To make the character generator look like the VDG, then, the lowercase must be swapped with the control characters, and numbers swapped with lowercase; uppercase remains the same. The 74LS86 XOR gate (Z7) configured as an exclusive-NOR gate swaps the signals that enter address line 5; DD5 is inverted and given to address line 6.

What does it all mean? Simply that the

The Original FLEX for Color Computers

- * Upgrade to 64K
- * RS to FLEX, FLEX to RS file transfer ability
- * Create your own character set
- * Automatic recognition of single or double density and single or doubled sided
- * All features available for either single or multiple drive systems
- * Settable Disk Drive Seek Rates
- * Faster High Resolution Video Display with 5 different formats
- * Save RS Basic from RAM to Disk
- * Move RS Basic to RAM
- * Load and save function on FLEX disk
- * 24 Support Commands 12 with Source Text

Languages Available

Pascal, Fortran, RS Basic, RS Assembler, TSC Basic, TSC Assembler, Relocating Assembler, Macro Assembler, Mumps

If you are tired of playing games on your TRS-80™ Color Computer, or find that you are handicapped by the limitations of the RS BASIC in trying to write a Program that will allow you to actually USE the Color Computer as a COMPUTER, YOU ARE READY TO MOVE UP TO THE FLEX9™ Operating System. If you want to have REAL PROGRAMMING POWER, using an Extremely Powerful Business BASIC, PASCALS, C Compilers, a full-blown Macro Assembler with a Library capability so you are not continuously "reinventing the wheel", YOU ARE READY TO MOVE UP TO THE FLEX9™ Operating System. If you would like to see if YOU REALLY COULD USE A COMPUTER IN YOUR BUSINESS, or begin to make your Computer start PAYING IT'S OWN WAY by doing some Computer Work for the millions of small business around you, such as Wordprocessing, Payroll, Accounting, Inventory, etc., then YOU ARE READY TO MOVE UP TO THE FLEX9™ Operating System. How?? DATA-COMP has the way!

DATA-COMP's FLEX9™ Conversion for the TRS-80™ Color Computer was designed for the SERIOUS COMPUT-

ER USER; with features like greatly increased Display Screens, WITH Lower Case Letters, you can put a FULL Menu on ONE Screen, or see SEVERAL Paragraphs at the same time; with features like providing a FULL Keyboard so you have FULL Control of your Computer AND it's Programs NATURALLY, without needing a chart to see what Key Combination will give you what function; with USER ORIENTED functions to make using the Operating System natural, like having the Computer AUTOMATICALLY determine what type of Disk is being used in what type of Disk Drive and working accordingly, rather than you have to specify each and every thing for it, or like having the Computer work with the Printer you have been using all along without you having to tell the new Operating System what is there; etc., etc., etc.

DATA-COMP has everything you need to make your TRS-80™ Color Computer WORK for YOU; from Parts and Pieces to Full, Ready To Use SYSTEMS. DATA-COMP designs, sells, services, and SUPPORTS Computer SYSTEMS, not just Software. CALL DATA-COMP TODAY to make your Computer WORK FOR YOU!

SOFTWARE AUTHORS WANTED

Spellbinding?

Of Course!
And Educational Too!

"Hello, I'm Merlapple™ the Wizard. My friends and I from Follett Library Book Company are helping grade school children all over the United States build logic, math and language skills through six unique programs designed for the Radio Shack TRS-80 color Computer.

These widely-acclaimed, award winning games from The Learning Company capture the fancy and test the reasoning processes of boys and girls ages pre-school through thirteen. Using both high and low resolution graphics, the games range from easy to "mind-boggling", each offering a distinct challenge to its players. "How-to-play" enactments contribute to program understanding while both graphic and musical feedback enhance learning.

The six outstanding programs offered include Juggles Rainbow™, Bumble Plot™, Bumble Games™, Magic Spells™, Moptown Hotel™, and Moptown Parade™.

To order any or all of the above programs, please return the order form below.

Circle No. 26 on Reader Service Card

Installation in the new revision (called E1, E2, F, 285 or — as Radio Shack dubs it — NC) is a little trickier. The VDG has been moved slightly, and the computer's plastic support post is once again in the way. Rather than redesign the board (again!), I opted for instructions on how to cut out the support post. Here they are:

1. Clamp a single-edged razor blade in the jaw of a heavy pair of pliers, and

Photo 1. Lowerkit circuit board, as designed for the original Color Computer circuit boards. By altering a support post and metal cage, late-model Color Computers can accept this plug-in lower case module.

Photo 2. Holding a razor blade between heavy pliers, and heating it with a propane torch.

Photo 3. Melting through the support post with a hot razor blade. The soft plastic melts easily, and the support will pull directly out.

P.O. BOX 256-C • HOLLAND, MICH. 49423

heat the razor blade in a propane torch (Photo 2).

2. Hold the support post, and press the hot blade against it. It should take two heatings of the blade to melt cleanly through the post (Photo 3).

3. Lift the post off and clean out any plastic bits that may have dropped off.

Next, the memory case cover has to be trimmed slightly to fit. Pull the case straight up, with firmness. The metal straps bent underneath will eventually let go. On the back left corner of this metal cage, mark out a rectangle 1/2 inch side-to-side, and 1 3/4 inches front to back. With metal snips and pliers, trim and bend the metal cage to this new shape. Replace the metal shield, slide your hand under the board, and bend the metal tabs over. The Lowerkit will not fit in place conveniently; see Photo 4. If you don't live in an apartment building, and if the rest of your family doesn't object, you can remove the shield completely. It will increase the radio-frequency interference (surprisingly little, I discovered), but will make installation easier.

"The Lowerkit character generator can create many unique characters or combinations."

Now a word about the Snap-Strips. These are terrific for their application, but they are by no means durable under constant use. If they are bent, they will break; so once the Lowerkit is inserted, remove it only if your computer needs to be returned to Radio Shack for repair. The switch-out option is provided when the original character set is required, so removing the Lowerkit is not necessary.

Carpentry for the switch-out option is simple. An ordinary SPST switch of the type sold by Radio Shack (number 275-624) fits admirably between the cassette and serial jacks at the back of the computer. Just snap off the plastic piece on the case top, and fasten the switch between the two jacks.

Final Comments

The Lowerkit character generator, being a simple programmable memory, can create many unique characters or combinations. Aside from the sets which I've created — game characters, Kata Kana, European, APL, math symbols, Greek, etc. — you can make up customized symbols for displays, games, etc. By using a low-insertion-force socket or ex-

PERSONALIZED INSTRUCTION ON PERSONAL COMPUTERS

4K Color Basic

by Robert Toscani

GO SUB Destroy

Submarines, depth charges and excitement abound in this 4K game.

SOME MONTHS AGO I saw a game called Sub Destroy in another computer magazine. It required 16K and Color Basic, and was a conversion from a Model I game. There were a number of things I didn't like about it, and I thought it could fit into 4K. So, without further ado, here is 4K Sub Destroy.

There are three subs that move from left to right on your screen, and your white ship. You control your ship with the arrow keys to move left and right, and with the down arrow to fire depth charges. The subs will shoot torpedos back at you, but they have bad aim. If they hit you three times, your ship sinks.

The Listing starts at line 2, where you are asked for a difficulty level. The subs will fire more often at the higher levels. In fact, at level ten there will be a torpedo on the screen at all times.

Line 3 sets initial variables. AV is used for the sound when the ship is sunk and B is the value for the ship's position. Lines 5 - 7 draw the ship and the three subs. The ship has blank characters in front and back, and the subs have blank char-

s in front. When each new figure is
n the blank characters are also
n and erase the old figures.

ne 11 sends the program to three
UB routines that pick the sub's initial
ing point. They also will be called to
a new depth each time a sub comes
es the trip across the screen. I'll go
to the subroutines at those lines.

ine 12 checks the keyboard. Line 13
ves the ship left if the left arrow is
shed, and line 14 moves it right if the
ht arrow is pushed. Line 15 stops the
ip from moving off the level chosen for
Line 16 fires the depth charge, but
nly if no other depth charge is still in
lay. You can move the ship at any time
ut can fire only one charge at a time. D
s the variable that checks that condition.
f D is 0, then no charge is currently in
play; if it is 1, then a charge has been
fired.

Line 17 prints the ship. Line 18 sends
the program to the routine that moves
the subs, and line 19 prints the three
subs. Line 21 checks to see if a torpedo
has been fired. If it has, it sends the pro-
gram to the routine to update its move-
ments, or else it checks to see if a torpedo
should be fired. L is the controlling varia-
ble.

Line 22 sends the program to the
depth charge update routine if a depth
charge has been fired. Line 23 prints the
number of times you have been hit, and
how many subs you have sunk (variables
T and S, respectively). Line 24 cycles the
whole thing back to the INKEY\$ instruc-
tion.

We now start with the subroutines.
Lines 25 - 35 pick the sub's depth and set
the sub at the left of the screen. Each sub
is controlled by two variables. For in-
stance, the first sub is located with varia-
ble E, and is stopped when it gets to the
other side by I. In lines 36 - 37, I keeps
a count of how many times the sub
moves. When I reaches 26, the sub has
crossed the screen and it is erased, a new
depth is picked, and the sub reappears
on the left and starts moving again. Lines
39 - 44 do the same for the other subs.

Lines 45 - 50 print the depth charge
and check to see if it is at the same posi-
tion as any of the subs. If it isn't, lines 51
- 53 erase the charge, move it down,
erase it for good if it has reached the bot-
tom, and allow the player to fire a new
charge. If the charge has hit a sub, a
damaged sub is printed, a sound is
played, the score is increased, a new
depth is picked, the old sub is erased, and
a new one appears on the left. All this is
controlled by lines 54 - 63.

Line 66 starts the torpedo firing se-
quence. A number from one to ten is
picked at random, then the data num-
bers are read (up to the difficulty level

you picked). If the numbers match, a tor-
pedo is fired. The higher level you pick,
the more numbers will be read, and the
greater chance there is of a number
matching.

Lines 72 - 74 pick the sub to fire the
torpedo. Lines 75 - 77 print the torpedo,
erasing it to move it up, and if it reaches
the surface without hitting your ship,
erasing it for good. Line 78 checks if it
has hit your ship; if it has, line 79 tells you
this and checks whether you have been
hit three times. If you have, you are sunk
(lines 81 - 84 sink you). The game then
ends.

Simple? Perhaps a reader can design a
way to make the subs fire more than one
torpedo at a time or to do it when close
to the ship while still staying within 4K.
Until then, have fun. ■ ■ ■

Learning Games

by David Stevens

16K
Color Basic

- *Unscramble*
- *Hangman*
- *Flashcards*
- *States and Capitals*

THE THREE GAMES which draw the most attention in my third grade classroom are Hangman, Unscramble, and Flash. My students even stay in from recess to play them. I thought you readers might enjoy all three games written into one package. It is a rather long listing, but provides three good, educational games to improve your child's (or your) own spelling.

To use the spelling programs, once you have typed in the words you want to practice, Run the program. You have three choices: Scramble, Hangman, and Flashcards. Choose the game you want by pressing the letter indicated on the screen.

In Scramble, the screen presents a scrambled word that you must type in correctly. You work against time de-

picted by a burning fuse bomb.

In Hangman, a traditional set-up appears on the screen. Type a letter—if it's in the word, it appears in the correct place on top of the screen. If the letter is not in the word, a part of the hanged man is drawn and the rejected letter is listed at the bottom of the screen.

In Flashcards, a word is flashed quickly on the screen. The user then types in the word he saw flashed. An incorrect entry produces a screen with the correct word.

Further instructions are presented before each game. Return to the menu by pressing the Break key.

To change the words which come with this program, simply type Lines 30 and 40 over again, inserting your words. Be sure you have 50 words for the computer to read, or edit Line 50 from: WD\$(50)

to: WD\$(n), and change Line 70 from: FOR RD=1 to 50 to: FOR RD=1 to n. Don't type in the REM statements because there won't be enough room left over on a 16K machine to Run the program properly.

I put a timing device into these programs (a fused bomb) so my students wouldn't fall sleep using them. If you would like to eliminate this threat, simply defuse it by changing Line 310 from: FD=2 to: FD=0. Then be sure to select "speedy" for fuse speed and don't get more than three in a row wrong. This program features a self-adjusting fuse, and if you get three in a row right the speed will shift up to the next speed until it reaches speedy. The fuse will reverse in the same way if you get three in a row wrong.

States and Capitals Quiz

Tom McClellan

This year I'm asking my third grade class to learn the United States states and capitals, one group at a time. I wrote this program so that non-Extended Basic machines could use it as well. I don't know if it will fit on a 4K machine, as I don't have one to try it on.

When you run the States and Capitals quiz, the computer will randomly put the capital of a state or a state name on the screen. The user has to match the given name with its complement.

The program checks each letter as it is entered, and provides immediate feedback if you type an incorrect letter.

This program will provide you with clues if you are totally stumped for the first half of the word. Simply type any key; if it is wrong the computer will ask whether you want a clue. There is a score card at the end to let you know how you did during the session. ■ ■ ■

COLOR COMPUTER SOFTWARE

COMPLETE YOUR WORD PROCESSOR

SPELL—RITE

THE Cassette Spelling Verifier

You've got the best word processor. Now complete your system with the best spelling verifier. Spell-Rite is a convenient, fast way to insure that all of your documents are letter perfect. Spell-Rite was designed specifically for cassette-based word processors. Like Yours!

Spell-Rite is easy to use, completely menu driven.

Spell-Rite is Fast! You can verify a 1000 word document in under 9 minutes - including cassette I/O.

Spell-Rite is complete. It comes with its own 10,000+ word dictionary which you can expand. Also included is a superb manual.

Spell-Rite works with any word processor that generates ASCII tape files, such as Color Scribes, Super Color Writer and Telewriter 64. 32K of RAM and Extended Basic are required.

Cassettes and manual \$59.95

DISK BASIC AID

DISK BASIC
MADE BETTER

Your Color Disk Basic is one of the most powerful Basics on any computer. Add Disk Basic Aid and it also becomes one of the easiest to use! The Basic Aid package will make developing and entering Basic programs a snap. Here are just *SOME* of the great features Basic Aid contains.

- Full Screen Editing
- Automatic Line Numbering
- 2 Key entry of Basic keywords
- Cross Reference
- Automatic Key Repeat
- User definable keys

PLUS. Label support! This unique Basic Aid feature is a vast improvement in the Basic language. Label any line you want and use that label in all calls to that line. Forget about line numbers, just call routines by name like this:

"ON A GOTO ENTERCHECKS, PAYABLES, EXIT"

A real time saver. And for transportability Basic Aid will convert all labels to line numbers.

These and other great features make Basic Aid a 'must' for anyone who writes or modifies Basic programs. Basic Aid runs on 32K or 64K Disk systems. It comes with complete documentation and our new, heavy duty keyboard overlay.

Disk Basic Aid \$49.95

SPECTRUM — STICK

Put the joy back into color computing with the Spectrum Stick. This heavy duty joystick gives you a true feel of control. And it comes with an extra long cable and power on/off LED.

"...the feeling of this joystick is superb." March 1983, 80-Micro TX: add sales tax \$39.95

Send check or money order for total purchase price, plus \$1.50 S & H. Charge cards: Include all embossed information.

- Spell-Rite
- Spectrum Stick
- Disk Basic Aid
- Send Free Catalog

NATIONALLY ACCLAIMED PROGRAMS FOR THE TRS-80[®] COLOR COMPUTER[®]

TALKING SPELLER Use your 80C as a spelling tutor. You record a list of words. The Talking Speller plays the words back, waits for an answer, and keeps score **\$19.95 T★**

TALKING GRAPHIC DEMONSTRATION Like no other Computer Program that ever existed! Your CoCo will talk to you with a beautiful musical background and tell all about himself while displaying dozens of action packed hi-resolution graphic demonstrations. Programs RUN non-stop for 12 FANTASTIC minutes from 1 CLOAD.

"This demonstration is MANDATORY. You and your CoCo deserve this program." Quote The Rainbow **\$24.95 T★**

THE DISK DOCTOR Cure that sick feeling and utter frustration caused by CRASHED I/O ERROR and UNREADABLE disks. Will SALVAGE M/L, BASIC, DATA, ASCII, even MPP Pictures. Menu driven for easy use. 100% visible operation lets you see what you are doing. Automatic SALVAGE to NEW disk. All in OPEN BASIC! **\$49.95 D★**

THE DIRECTORY DOCTOR Provides preventative medicine against crashed disks. Easy as ABC — build a spare directory track and exchange it for a garbled track when needed. All menu control **\$49.95 D★**

MPP-TUTORIAL Programming tool of the professionals — "lets you EASILY create superior graphics without using the tedious DRAW, PAINT, LINE, PSET, CIRCLE, etc. commands. I have seen the results, and they are INCREDIBLE — If you want to see and use the full graphic potential of your CoCo, this program is — REQUIRED!" Quote Chromasette **\$34.95 T or D★**

EL CASINO Three STARTLING action packed hi-res graphic games that have received RAVE reviews. All programmed with MPP. **DICE GAME** The ONLY crap game that allows 4 players to make 12 Field Bets before every roll. **BLACK JACK** Gives you the FAMOUS CARD COUNTER sold for hundreds of dollars elsewhere. **SLOT MACHINE** looks like a \$30,000 Casino machine. Sounds like one, too. Adjustable pay-off. All three games **\$34.95 T or D★**

★T = 16K EXTENDED

YOUR COLOR COMPUTER JUST GOT WHEELS!

REVOLUTION!

REALISTIC...

Developed by an experienced race driver, *Revolution* reproduces the actual feeling of being behind the wheel of an authentic race car. Designed with the utmost attention to detail, its unprecedented measure of control turns your Color Computer into a challenging test of skill and precision. There are no funny monkeys, strange alien creatures or creeping oil slicks. *Revolution* pits you against yourself... competition in its purest form.

INNOVATIVE...

Revolution comes ready to run with a selection of cars and pre-designed courses. But unlike other computer and arcade games, its basic parameters can be changed by the player, making *Revolution* an unbeatable challenge.

SOPHISTICATED...

Revolution is fully menu driven and has fast, high resolution machine language graphics. PLUS, *Revolution* utilizes the advanced file access capabilities of the Color Computer to automatically store and retrieve all of your lap records and save the tracks you've designed.

A COMPUTER GAME AHEAD OF ITS TIME!

For 32K Disk \$24.95 Requires Joysticks
For 32K Cassette \$21.95 & Extended BASIC

16K Extended Color Basic

Wide Printing

by Robert C. Lake, CDP

COLOR SCRIPSIT is a fine Radio Shack word processing program. It has many features commonly found only on more expensive products. For example, it is highly screen-oriented; it allows on-screen movement of the cursor: up or down, left or right. Text appears on the screen the same way it will be printed. If the expected line width is greater than the screen width, Color Scripsit gives you a moveable window through which to view the text.

This product also includes commands that allow global replace, ghost hyphens, automatic headers and footers, flexible tabbing, and many other advanced features. Color Scripsit is menu-driven and extremely user-friendly.

What Color Scripsit does not boast is the ability to use many of the features available on modern printers. Even the inexpensive Radio Shack LP VII, for example, allows for wide and narrow printing. Many printers offer several fonts, pitches, etc. None of these capabilities are available to the Color Scripsit user.

My Basic program is an attempt to partially remedy this deficiency in an otherwise useful product. The MOVSCRIP program listing moves Color Scripsit to user RAM (starting at 24576) in a 32K system and then modifies it to allow use of the wide and narrow printing capabilities of many printers.

Since the *modified* version uses about

8K (including about 1K bytes for possible further changes), it leaves sufficient space for slightly more than 23,000 characters. Although written for a 32K system, the program can be easily changed to put Color Scripsit at 8192, leaving about 7K bytes for the user with a 16K Color Computer.

The following procedures will produce a machine language tape that you can CLOADM and EXEC when you want to run a wide-printing version of Color Scripsit.

- Key in and inspect the Basic program MOVSCRIP in Program Listing 2. When correct, CSAVE the program.
- Looking at your Color Scripsit cartridge from the bottom, push back the sliding door and you will see 14 metal teeth. Tape over the right-most of these teeth. This disables the auto-start mechanism.
- With your computer off, insert the cartridge.
- Turn on the computer. The normal Basic logo should appear, and you will not be in Color Scripsit.
- CLOAD the MOVSCRIP program that you had previously saved.
- RUN MOVSCRIP. The program prompts you for the additional steps required.

The Color Scripsit code is modified at 26155 to set the memory size to 24576 and at 28142 to branch to new instructions at 31000. Program Listing 1 is an assembly language listing showing the instructions used to allow wide printing. The new code traps each character before it is printed. The wide-printing function toggles are off or on if a special control character is found. If the printer is then in the wide-print mode, the wide printing function turns on.

As written, the program uses the percent sign (%) as the control code. The control character can be changed, however, by POKEing the ASCII value of the desired character into location 31003 before executing Color Scripsit from RAM (e.g., POKE 31003, ASC("&")). When the control character is found, a CHR\$(31) or CHR\$(30) is sent to the printer to set the wide or narrow print modes, respectively. If your printer uses other codes, POKE the wide-print code into locations 31023 and 31056 and POKE the narrow-print code into location 31014 before execution. Once the appropriate POKES have been made, you can EXEC and/or CSAVEM your personalized version by:

```
CSAVEM "SCRIPMOD", 24576, 32000, 24576
```

To use the modified version of Color Scripsit produced by the program, CLOADM and EXEC the machine-language tape produced by the program (or by the CSAVEM above if you changed

any of the codes). When you want double-width printing, surround the appropriate word(s) with percent signs. Also, leave a space or other character (which will not be printed) between each letter so that Color Scripsit can correctly compute the margins and the alignment of the lines. I use an asterisk between letters. This lets me use Color Scripsit's search and replace feature if I change my mind about print width. To put an alignment code on the line, put it outside the percent signs (%), or strange things may happen!

Here is an example of a phrase to be wide printed:

```
%T*E*X*T% %H*E*A*D*I*N*G%
```

Notice how the asterisks between the letters trick Color Scripsit into correct positioning. To avoid potential problems with line-feeds being lost (skipped) or page-breaks not being honored, enclose each word to be wide-printed in its own set of percent signs (as above).

Running Color Scripsit from RAM could allow for a wide variety of other useful modifications. An obvious extension would be to use the control character as an escape code followed by another character that selects print fonts, widths, tabs, or other print options.

COLOR COMPUTER* **UPGRADE**

The Platinum Work saver®

...Programming Made Easy

FULL SCREEN EDITING OF BASIC PROGRAMS

With the PLATINUM WORKSAVER'S editor, there's no more counting the numbers of characters to delete or change, or wondering if you deleted too many or too few. You see the whole line as it's edited. Changes, deletes and inserts are automatic and the cursor can be moved anywhere on the screen.

FULL SCREEN EDITING OF NUMERIC AND STRING ARRAYS

But that's only the beginning! The editor (Written in machine language) also comes with a short, two line BASIC subroutine that will allow you to use the full screen editor on your numeric and string arrays. This is the springboard you need for developing your own VisiCalc™ or word processor.

NUMERIC KEYPAD

We've solved another Color Computer weakness. Press a control key and letters J, K, L, U, I, O, P become number keys 1-7. Numbers 8-0 remain in their normal positions. The keypad numbers are clearly labeled on the overlay.

SINGLE KEY ENTRIES OF BASIC WORDS

So, the PLATINUM WORKSAVER makes it easier to write useful programs and edit them, but that's not all! Entering programs is a breeze with single entry of over 80 basic words, on a beautifully designed KEYBOARD OVERLAY, color-keyed to function. No need to memorize or consult a conversion chart to find a word.

PROGRAM CHAINING AND DYNAMIC DEBUGGING

Now you can write, enter and change programs easily, but what about debugging? This is the frustrating, time consuming aspect of programming and frankly, the Color Computer doesn't help you much... you have to start the program over each time you make a change. But not with the PLATINUM WORKSAVER!! With it you can change, delete, add and rearrange or join lines. The special reserved key is excellent for copying or moving parts of lines to other lines... plus, you can even LOAD A WHOLE NEW PROGRAM without disturbing the data you've created.

A COLOR COMPUTER* MACHINE LANGUAGE ENHANCEMENT PACKAGE THAT PROVIDES:

- Dynamic full screen editing of BASIC programs.
- Dynamic full screen editing of numeric and string arrays. The advanced user will be able to write VisiCalc™, word processor etc.!
- Single key entries for 80 commands and functions.
- Functionally laid out plastic keyboard overlay.
- Numeric Keypad conversion.
- Automatic line numbering.
- Best value per dollar than any other enhancement package available.

THE PLATINUM WORKSAVER INCLUDES:

- Enhancement program, including a sample mini-word processor, on a high-quality Agfa Cassette.
- Fully labeled acetate keyboard overlay
- Complete instructions
- Loads in seconds, takes 2.2K

The PLATINUM WORKSAVER costs \$35.00 plus \$3.00 S&H (NY residents add tax). To order write:

RECOVER!

Hit your Reset button and lost your program?
Don't panic—this program will find it and fetch it
back for you.

by *Kenneth Van Camp*

16K Extended Color Basic

THE TRS-80 COLOR COMPUTER is a good quality machine. But the Reset button is a problem area on many of them.

When you press this button, the computer should respond by clearing the screen and giving an OK prompt. Sometimes the computer gives its start-up message instead. If you had a program in memory before this happened, it appears to be wiped out; typing LIST or RUN yields only an OK.

A quick diagnosis of the problem suggests a power interruption, clearing all memory and starting fresh. The program seems to have vanished. Fortunately, this is not the case. The program is still in memory and can easily be retrieved.

A bad reset is similar to entering a NEW command. The program is not actually erased; instead, a special code is put into memory to tell the computer no program exists.

My program, RECOVER, finds this code and puts it back the way it was before losing your program. Everything will return to normal, as if no interruption had occurred.

RECOVER works for a faulty reset or an accidental NEW command, and can recover Basic or Extended Basic programs.

I have included two listings of the program; one in Basic and one in assembly language. The Basic listing is the only one necessary; the second is for readers who want to understand how the program

works. Do not type in this second listing.

The easiest way to use RECOVER is to get a copy of **The Color Computer Magazine** monthly tape, which contains every program published in that issue. Information on obtaining this tape can be found elsewhere in this issue.

When a reset problem occurs, the first step is to position this tape. The way you load it will vary, depending on your memory size and level of Basic (see Table 1 for details).

Extended Basic users should note that if the special PCLEAR 0 mode was used by POKEing 25,6, then follow the instructions for non-Extended Basic.

When you get an OK from the load command, type EXEC and press Enter. Your program is recovered.

Extended Basic programmers won't need the CCM tape; they can simply type in and RUN the program. To do this, enter the Basic listing. Double check the Data statements, then RUN the program once. Position your tape and press play and record.

After you have saved a few copies, RECOVER will always be ready. When a reset problem occurs, just CLOADM "RECOVER" and EXEC. This should provide a speedy recovery from your lost program blues.

Assembly Language Notes

Here are a few notes to help assembly

language programmers understand RECOVER.

- RECOVER is written in relocatable code so it can reside anywhere in memory.

- Locations \$19 and \$1A hold a pointer to the first byte of the Basic program, plus one. (I'll call it FWA+1.)

- Locations \$1B and \$1C hold a pointer to the last byte of the Basic program, plus one (LWA+1).

- In Basic's special coding, each new line of the program begins with a zero byte, followed by the address of the next line's first byte.

- Basic marks the end of a program (and the beginning of variable storage), by placing zeros in the last three bytes of the program: LWA-2, LWA-1, and LWA.

- When a faulty reset or NEW command occurs, Basic resets the LWA pointer to FWA+3 and places three consecutive zeros in FWA, FWA+1, and FWA+2. *No other memory is changed.* However, the last two of these three zeros are written over the address of the program's second line. The first task accomplished by RECOVER is finding the second line of the program by searching for the first zero after FWA+3. The address of this second line is then stored at FWA+1, FWA+2.

- The second task accomplished by RECOVER is to find the true end of the program by searching for three consecutive zeros beyond the presently stored LWA. The address of the byte following the

third zero is stored in \$1B and \$1C. It is also stored in \$1D and \$1E, and \$1F and \$20 to move the end of variable and array storage to the end of the program which is where Basic assumes they start).

Unfortunately, this clears all variables from memory.

The *Color Computer Tape Loader* will run this program on all systems; as listed in the magazine, Extended Basic is required.

Introducing "EQN" from **JTJ Enterprises**. Designed by an engineer for professional people.

"EQN" is unequaled in complexity verses ease of use because:

- It is a program that writes a program.
- An equation solver which solves up to 24 consecutive equations in 16K and can be easily adapted in larger machines for greater capacity.
- Using a worksheet format the user simply names categories then defines fields using those category names.
- The program solves the equations for single data points or can vary the input over a range to produce tabular results.
- The functions available are: +, -, *, /, sin, cos, tan, atn, fowers, exponents, logarithms. You can make full use of parenthesis and also use colons to allow more than one equation to define a field.
- Labels, definitions and data may be saved on tape thereby allowing larger problems to be "chained".

"EQN" is ideal for people in industry, science, and education.

"EQN" is a new level concept brought to you by **JTJ**.

PRICKLY-PEAR SOFTWARE

QUALITY PROGRAMS FOR YOUR COCO & TDP-100

PROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTHERWISE NOTED.

ALL NEW THIS MONTH

Disk Zapper!!!

This great utility is unique in the Color Computer field. It gives you the ability to **format and copy disks with up to 40 tracks**, instead of the usual 35. In addition, when copying a disk it will not crash when it encounters a bad sector. Instead, it tries to read the sector five times and then continues, so you can retrieve most of the data from even a worst case disk, where the directory track is physically damaged. These features alone make this program invaluable, but it will also copy any track and sector to any other (Make a copy of your directory up on track 36 where BASIC can't get to it!!!) and allows you to display the contents of any part of the disk on the screen, where you can examine the information directly and make any changes you want using a full screen editor. Your changes are automatically made on the disk as you scan thru the sector. There are also many other applications of this powerful utility which are fully described in the extensive documentation. This is both a programmer's tool and a means to protect your expensive disk software collection by backing up your disks and your disk directories. **DISK ZAPPER!!!** requires 64K and one disk drive. Copy procedure requires two drives. **\$34.95**

Music Box

A 100% machine language program that lets you EASILY compose (or type in from sheet music) your favorite song in FOUR PART HARMONY, and assign a different instrument to each voice. Hear the flute on the high parts, the bass on the low, and the cello and clarinet on the others. Or, if you prefer, use one instrument for several voices. This program makes it easy to key in your songs, and they sound great!! You can play them either backward or forward when you get them done, and you can save them on tape to be loaded in later. You can easily write pieces that will run for several minutes. The program comes with a song by BACH, and when you hear it I think you will agree that this song alone is just about worth the price. You won't believe the music coming out of your TV!! The program comes with lots of instructions to help you along, and you will find yourself playing your first masterpiece in a very short time. Requires 16K with any BASIC. **Cassette - \$24.95**

Prickly-Pear Mailing List

We hope you waited for this mailing list program, 'cause you'll be mad at yourself if you didn't!! This program has six fields for Name, Address, City and State, Phone number, Zip code, and Code. You can sort alphabetically by last name whether you type your entries with the first name or last name first. You can sort in Zip Code order. You can search your file on any field you like. You can easily add or delete entries. You can print any entry — or all entries — or all entries meeting your search criteria. You can print a phone number list. You can print your labels either one or two across the page. And best of all, you can do all these things with up to 1500 records on a single drive system. Oh yes, all screen display is in full upper and lower case letters on your choice of a green or white background with no adaptors needed. To use this mailing list you need 32K Disk Basic and one disk drive. It comes with very complete instructions and is a truly "User Friendly" program. **\$49.95**

FOR DISK VERSIONS ON AMDEK CARTRIDGES, ADD \$5.

Your Personal check is welcome - no delay. Include \$1.50 shipping for each program ordered. (Shipping free on \$50.00 or larger orders). Az. residents add 6% sales tax. Orders shipped within two days.

Dissecting Your ROM

Color Basic ROM explained. The second of 12 articles.

by Jake Commander

LAST MONTH JAKE presented us with part one of his disassembly. Each month he'll cover a little more than 1K of disassembly, building up a full reference on 16K Extended Color Basic. Jake apologizes for the crypticness of some of his comments: They were kept short and to the point, as they were originally meant only for his own use. Also, to keep the overall picture in mind, he had to work fast. The following is a repeat of some of his other comments:

"The disassembly is just the way you'd get it by using the disassembler presented last month, with one exception. Relative branches are shown jumping to absolute addresses in order to leave more space in the comments column.

Where the code isn't really machine code but is ASCII text or tables, the comments will make this clear. No attempt is made to clean up the disassembly to make it appear more like source code. It will look just as output from the disassembler looks.

"Where trick pieces of code are used, this will be commented, too. For instance, it's possible to jump into the middle of certain codes and have a different instruction carried out than appears in the disassembly. An example of this is the code at \$A304 which appears as CMPX #\$9E97. Notice that if this code is jumped to at location \$A305, the MPU will execute a LDX<\$97 instruction. This can be used by a sneaky machine code programmer to mask certain code. It isn't

done for secrecy, but it saves a jump over the unwanted op code. Once again this will be commented where it occurs.

"All this may give a false impression. The comments are not at their most useful at each and every op code. They give the best idea of the working of the code when you take a step back. Like an artist viewing his work, too close a view doesn't give the right picture. So, don't take each commented op code too literally, but try to get a picture of each section of code that performs a particular function. That's another reason why some comments remain cryptic."

So here we are: Round Two. This portion of ROM deals with cassette I/O (program and data), INKEY\$, and cursor positioning for PRINT @.

COLOR-FORTH

Including SEMIGRAPHIC-8 EDITOR + UTILITIES

- Disk and Tape utilities
- Boot from disk or tape
- Graphics and Sound commands
- Printer commands
- Auto-repeat and Control keys
- Fast task multiplexing
- Unique TRACE function in kernel
- CPU CARRY FLAG accessible
- Clean INTERRUPT handling in HIGH-LEVEL FORTH
- Game of LIFE demo
- ULTRA FAST: written in assembler
- Directions included for installing optional ROM in disk controller or cartridge
- Free Basic game "RATMAZE"

KEYBOARD OVERLAYS

Many programs are supplied with keyboard overlays to help you keep track of the various commands used by the program. Now you can add overlays to your own programs or to commercial programs that did not come with this feature. Die cut to fit the standard Color Computer keyboard. Dealer inquiries for blank or custom printed overlays are invited.

CAT. NO. HW002 99¢ each

COCOCOPY

This all M/L Program will copy BASIC or M/L programs including most Auto Start Programs. It will supply the beginning, ending and offset addresses and allow you to change the load address for M/L programs. I/O errors are ignored so that bad tapes can be corrected. Programs can be renamed and the motor/audio functions are controlled from the keyboard.

TOM MIX SOFTWARE

• FOR THE COLOR COMPUTER & TDP 100 • 3424 College N.E., Grand Rapids, MI 49505 (616) 364-4791 •

NEW

"THE FROG"

(C) 1983

16K MACHINE LANGUAGE
\$27.95 TAPE
\$30.95 DISK

ARCADE ACTION

This one will give you hours of exciting play... Cross the busy highway to the safety of the median and rest awhile before you set out across the swollen river teaming with hidden hazards. Outstanding sound and graphics.

THE KING

1982

32K Machine Language
\$26.95 tape
\$29.95 disk

ARCADE ACTION - How high can you climb? Four full graphic screens. Exciting Sound - Realistic graphics. Never before has the color computer seen a game like this. Early reviews say: Just like the arcade - Simply outstanding!

NEW

"YAAZEE"

(C) 1983

16K MACHINE LANGUAGE
EXT. BASIC

\$19.95

Yaazee is a 2 player game using five dice to get the best poker hand. After game is loaded flashing digit below player number determines which player rolls dice at the start of the game.

PROTECTOR

Exciting fast paced arcade game that looks and plays like the popular arcade game "DEFENDER". Wave after wave of enemy fighters drop bombs on your city. Destroy them before they destroy your city. Soon the mother ships appear firing laser blasts at you. Watch for the heat seeking mines.

\$24.95 TAPE \$27.95 DISK 32K MACHINE CODE

COLOR GOLF

Now sit at your computer and play nine or eighteen holes. Outstanding graphics in the fairway or on the green. Helps your game.
32K EXTENDED BASIC \$17.95

SPACE SHUTTLE

1983

32K Ext. Basic

\$28.95
TAPE
ONLY

This program gives you the real feeling of flight. Full instrumentation complete to the max. Actual simulation of space flight. **32K Ext. Basic**

"TRAPFALL"

By **KEN KALISH**
(C) 1983

ARCADE ACTION

The "Pitfalls" in this game are many. Hidden treasures, jump over the pits, swing out for alligators, beware of the scorpion. Another game for the Color Computer with the same high resolution graphics as "The King."

16K MACHINE LANGUAGE
TAPE \$27.95
DISK \$30.95

KATERPILLAR ATTACK

Outstanding graphics and sound will end all of those trips to the arcade. So much like the arcade you have to see it to believe it. Requires Ext. Basic.

16K MACHINE LANGUAGE \$21.95
DISK \$24.95

OTHER GREAT GAMES

ALL PROGRAMS REQUIRE 16K

MOON LANDER•Fantastic Graphics. Land on the Moon if you can. 2 Programs. Ext. Basic **\$17.95**

DANCING DEVIL•Watch him dance to music or program him yourself. Machine Language. **\$14.95**

WAR KINGS•Battle to save your castle and king. High resolution graphics with outstanding sound make this one a real winner. 16K Machine Language **\$17.95**

ADVENTURES

TREK-16•Travel thru space with Spock and Capt. Kirk. Adventure. Tough! Ext. Basic. **\$17.95**

SHIPWRECK•Escape from a desert isle if you can. Great Adventure! Ext. Basic. **\$14.95**

ESCAPE FROM SPECTRE (Graphic Adventure)•You are a secret agent for British Intelligence sent on a mission to obtain the secret nerve gas formula being developed by S.P.E.C.T.R.E. to destroy the world. 16K Ext. Basic **\$17.95**

Cliché

FRIENDS GATHERING AT my house for a party or informal get-together are invariably drawn to my computer, looking for entertainment. Most computer games, however, can be played by only one, or at the most, two users at one time. Looking on during a game soon loses its entertainment value for the rest of the gathering.

I decided that a game for a group was needed, and set out to develop one. CLICHE was the result. It isn't an exciting *adventure game*, but it is a great party game for a group, and lets everyone see some of the graphics the Color Computer can present.

After an introductory graphics and music presentation of credits and program title (Lines 10 – 140), game instructions are printed on the screen (Lines 150 – 270). The program presents a diagram representing a familiar cliché; players try to determine which cliché is represented. The body of the program uses text screen (Lines 280 – 1050) and graphic screen (Lines 1060 – 1350). Players do not have to enter a response, but the program will verify an answer or give a correct answer upon request. Closing graphics and music follow (Lines 1360 – 1510).

To play CLICHE, load the program and Run it. The screen will present a set of four clues for four clichés in a graphic depiction. Players must look at the relationship each part has to the other in order to guess the answer. Pressing the number of the cliché you are working on will bring the correct answer onto the screen. Pressing the C key will present a new set of clichés to guess. An example of the type of graphic depiction to expect is presented in the *screen instructions* that appear when you run the program.

CLICHE uses 8K and requires Extended Color Basic. ■ ■ ■

Greenville, South Carolina 29606
(803) 233-2700

PRESENTS

COLOR-STICK

The ORIGINAL interface for
the TRS-80*
Color Computer to let
you use the famous:

ATARI* JOYSTICK'

Just plug your Atari or Atari like joystick (the Color-Stick enables the use of most joysticks made for the Atari) into the Color-Stick interface and then plug the Color-Stick into an empty joystick port.

The Color-Stick can improve scores 50% and more while making some games more exciting and fun to play.

Don't settle for cheap imitations. Only the ORIGINAL Color-Stick's small inline design allows you to just plug your joystick into it and forget it. The Color-Stick becomes a part of your joystick so it does not interfere with your game playing. In addition Color-Stick returns a full value of '63' for the right and down directions, even when using two joysticks and even in the diagonal directions, the others don't.

NOW Color-Stick has a new low price.....

Color-Stick interface \$12.95 each
two for \$22.95 (less joysticks)
Atari joysticks \$9.95 each

BETTER SOFTWARE COMPANY
P.O. Box 16842 — Sta. B
Greenville, South Carolina 29606
(803) 233-2700

Don't miss out order the ORIGINAL. Send your check or money order or better yet call today and order your Color-Stick.

Add \$2.00 per order shipping and handling. Bank cards welcomed (please include expiration date). Orders paid by cashiers check, money orders, bank cards and C.O.D. are shipped within 48 hours. Personal checks please allow 1-2 weeks. C.O.D. orders add \$1.50 extra. S.C. residents add 4% sales tax. *TRS-80 is a registered trademark of Tandy Corp. Atari is a registered trademark of Atari, Inc.

SOFTWARE

The Official
ZAXXON
by SEGA

(from Datasoft)

Probably the most incredible arcade game ever is now available for the Color Computer. **NOTE:** this is the official ZAXXON, not an imitation!

32K Tape or Disc ~~\$39.95~~

Now Only **\$29.95**

THE KING

by Tom Mix Software

Four full graphic screens. Exciting sound and realistic graphics. Never before has the color computer seen a game like this.

Tape **\$26.95**

Disc **\$29.95**

SKY-DEFENSE

Can you survive the first wave of attack? Or the next? Or the next? Only your joystick will ever know! Features horizontal flight in highres graphics, and fast-paced action. Machine language; joystick required. 16K..... **\$12.95**

BIGNUM

If you dislike seeing numbers like 1.23045 E 23, and wish you could have **all** the accurate digits instead, then BIGNUM is for you. Add, subtract, multiply, divide and raise BIG numbers to BIG powers and get totally accurate results. Even if you are satisfied with an approximation, without this program the Color Computer would return an "OV ERROR" with this problem: 34↑45. BIGNUM returns the entire 68 digit result! Accurate to 1,024 digits in 16K & about 3,068 digits with 32 RAM.

16K..... **\$9.95**

HARDWARE

16K-32K UPGRADE KIT

Kit includes 8 200 ns #4116 Factory Prime Chips, piggybacked sockets, SAM socket, and "32K" button to replace the 16K on your computer's case. Easy to remove. Instructions included **\$25.95**

The Composer

by Rich Parry
Speech Systems
38 W. 255 Deerpath Rd.
Batavia, IL 60510

\$24.95 Cassette
\$29.95 Disk

IT'S EXPECTED that certified accountants will review payroll and spreadsheet software, business executives will review path management programs, and working engineers will review engineering applications packages. Finally, even professional writers are evaluating text editors. So why not, at last, have a musician review a music generation program?

I can think of three possible answers, based on most of the music software I've seen: nobody thought of it (unlikely); nobody could find a musician to do it (less likely); or nobody dared (my choice). "The Composer," an excellent program written for the TRS-80 Color Computer by Speech Systems' Rich Parry, is the best piece of music software in an overall miserable lot. The program deserves an A-plus for technique, but an F for musicality.

The lack of musicality isn't Rich Parry's fault, and if you happen to like any of the music programs marketed for small computers, then you'll love this one. Read no more; buy it.

Music Theory by Kitsz

Now that's said; if you're still with me, consider that the problem is this: if we're talking about music, let's talk about music. In the early days, personal computers were scorned for their limited memory and inability to do a decent job on usual "computer tasks," such as accounting or engineering calculations (remember Apple Integer Basic or TRS-80 Level 1?). It was an admitted problem. The small machines have grown up in capability, growing up to respectability. Long strides have been made from the KIM-1 to 64K Visicalc.

But music isn't Visicalc; it's a sophisticated sensory as well as intellectual process. Unlike painting or sculpture, it does not wait for us to come to it; it plays as we listen—in its time. Unlike agglomerated arts such as television, it cannot contrapose form, color, image, sound, and words into an emotional/intellectual

mélange. It is sound, and in sound the operant phrase for three decades has been fidelity—"hi-fi." Of course, computer-generated musical sound is faithful to nothing, because it is not a reproductive form. It originates, it does not regenerate.

Yet I suggest that, since in programs such as "The Composer" traditional harmonic and scale patterns are used, there should be—my opinion, remember—a "fi" to the musical constructs to which we have been acculturated. In other words, it should sound good.

Don't get me wrong; I am definitely not against electronic music or electronic realizations of other music. I've been composing for 17 years, and have used every means at my disposal to achieve the sound I wanted, including the conception, design and construction of acoustic and electronic instruments of all kinds. At least two dozen of my compositions are purely electronic. That's not the difficulty I have with microcomputer sound programs.

The trouble is the sound. The hardware of small computers is simply incompetent to produce music: Period. Effects, yes. Tones, yes. Even recognizable melodies and harmonies. But music, no. If I dared market accounting software

which did its math as accurately as microcomputer music programs produce music, I would be laughed out of the business—if not personally lynched by an angry mob of pin-striped business managers.

The philosophical dilemma is that music, an art form, is treated in our educational system as an ephemeral part of the program. It seems unimportant that the ancient Greek civilization, which we seek to emulate in so many other ways, treated music as second only to mathematics in the order of universal values. Background music, cheap entertainment, and a misplaced sense of democratization have conspired to make music as a whole our societal vaudevillian. No matter; even as simple musical entertainment, microcomputer music programs are vacuous, sterile, and, as a whole, unpleasant.

If that is my given—you've got my bias now, right?—then how does "The Composer" rank with the rest of this kind of software?

Back to the Review

It is, in fact, quite good. The music editor follows the dreadful tradition of

Setting The Standards

WHAT THEY ARE SAYING ABOUT COLORPEDE

"...forefront of the pack..." **the Rainbow**, Dec. '82 "...an outstanding offer." **N. Vernon, IN** "...the best graphics I have seen to date." **Erie, PA**
"It is great!" **Dayton, OH** "...the best graphics and playability of any color computer game." **McKeesport, PA**

COLORPEDE

This truly outstanding engineer designed, 100% machine language game with multi-colored high resolution characters and fast action will challenge the most avid arcade buff. Can be played by 1 or 2 players controlled with joy sticks or key board. Joy stick control is fast, smooth and accurate. As COLORPEDE slithers through the toad stools, you attempt to destroy the COLORPEDE, knock out the menacing Bouncing Bug and eliminate toad stools while accumulating higher and higher scores. Demonstration mode with top 5 scores. Pause feature. For 16K Color Computer and TDP-100.

Cassette — \$29.95 Disk — \$34.95

INTRODUCING

ROBOTTACK

Ultra fast arcade action with colorful high resolution graphics. You are the super human who must fight off the attacking robots and save the remaining humans from destruction. You have super powers, can shoot in any direction and move anywhere on the screen to accomplish your vital mission.

Engineer designed, 100% machine language. Can be played by 1 or 2 players with joy stick control. Top 5 scores displayed. Pause feature. For 16K Color Computer and TDP-100 with joy sticks.

Cassette — \$24.95

FOR THE COLOR COMPUTER & TDP-100

breaking a coherent visual score into note-names and rhythmic values, and then creating long lists of this anonymous and distinctly unmusical-looking data. I am no fan of this computer-bound tradition, although I admit to using it in my own software (more out of laziness than anything else); but I am still looking for the program that provides an interactive compiler with the musical score displayed as a horizontally scrolling stream. (Anyone listening?)

Once the music has been entered as a list of letters and numbers, the compiler is set to work. For a long piece in four-part harmony (about a minute of music), three to five minutes of compilation are needed. The piece can be played either through the television speaker, or by hooking an amplifier to the cassette output connector. The music can be transposed to other keys (it must be recompiled), sped up or slowed down (it must be recompiled), or edited (it must be recompiled). Do you sense a complaint? Since the compiler is not interactive, every minor change requires another three-to-five minute wait.

I can't say whether this process can be made faster, though I would hope it could. No programming information is provided on the internal organization and operation of the editor, compiler, or playback routines, nor is a simple way of creating a cassette back-up copy permitted. (Since my cassette version of "The Composer" arrived with the record-lock-out tabs intact, I managed to erase part of the program.) Unhappily, this requires that the original tape be used every time any music is to be created. Disk users, on the other hand, can make copies in the usual way.

The resulting sound is somewhat in tune (better than most), and the compilation is correct. The sound, however, is

gritty—best when played through a low-fi television, worst when fed through an amplifier. The reason for this are twofold: processor speed versus memory economy, and digital-to-analog quantization noise.

The Color Computer microprocessor slowness results in a certain grittiness, and contributes to the occasional slipperiness of the intonation. More problematically, the Color Computer uses a 6-bit converter, resulting in very high noise figures (S/N of worse than 40 dB), as compared to—just for illustration—the Sony PCM digital recorder which uses a 14-bit (optionally 16-bit) converter, giving 90 dB or better signal-to-noise ratio. (If you're interested in theoretical details, you can obtain reprints of *Micro/Sonics*, my column for *Programmer* magazine).

In summary, "The Composer" is a solid program, well-constructed, accurate, and reasonably versatile. Rich Parry is to be commended on the work and the documentation, with the few reservations I've noted. It is state-of-the-art software for the Color Computer, and an excellent technical demonstration.

— by Dennis Bathory Kitz

Armadillo Bug

Armadillo Int'l Software
PO Box 7661
Austin, Texas 78712

ARMADILLO BUG is a Basic program written for Color Computers with minimum 4K memory. It will work with or without Extended Basic. If you are beginning to work with machine language or would like to use machine language programs listed in books or magazines, this program will help.

Armadillo Bug loads from cassette with a CLOAD "ARMBUG" command. The program opens with a menu when run. You can examine memory, jump to a memory location, clear the screen,

move blocks of memory, fill blocks of memory, save memory to tape, or load from tape. Each is achieved by the program's organized use of the PEEK and POKE commands.

The EXAMINE command lets you see or change the contents of any memory address. Memory is referred to and displayed in hexadecimal notation. (This is the base 16 number system usually used in machine language programming.)

By changing the memory contents you can enter a machine-language program, then, using the JUMP command, you can run the program you just entered.

The MOVE command lets you move blocks of memory from one area of the computer's memory to another. You might use the EXAMINE command to change the memory corresponding to the video screen and draw a picture. You can move that picture to another part of memory and store it there.

The FILL command fills blocks of memory with specific bytes. Filling the block of video screen memory between 0400H to 05FFH with 41H will fill the screen with the letter A.

Once you enter a machine-language program into memory you can save it to cassette tape. It is important to realize that the program on the tape can only be loaded back into memory with Armadillo Bug's LOAD command. Also, the LOAD command will only work with programs saved using Armadillo Bug.

An interesting feature of the LOAD command is called offset. When you load, for example, a picture saved previously, you are asked where you would like the information loaded. This does not mean a machine-language program which was designed to run in one part of memory can be made to operate at another.

The documentation is although short, but takes the user through each command and includes plenty of sample uses. The text is easy to understand and well-written. The samples included give the user a thorough understanding of the uses and operation of Armadillo Bug.

Armadillo Bug organizes the Basic PEEK and POKE commands and makes them easier to use. Although of some help to a beginner, this program is limited in its usefulness to more advanced users as a monitor or debugger. The functions normally associated with a monitor, such as placement of breakpoints to stop execution or register displays to see the value of registers (machine-language variables), are noticeably absent.

— by Mark Robinson

COLORSOFT™ BUSINESS SOFTWARE

AT LAST! BUSINESS SOFTWARE DESIGNED FOR THE COLOR COMPUTER

- ★ MAKE YOUR COLOR COMPUTER A WORKING BUSINESS PARTNER ★
- ★ ALL PROGRAMS ARE MENU DRIVEN AND USER FRIENDLY ★
- ★ PROFESSIONALLY WRITTEN AND FULLY TESTED ★
- ★ AFTER-THE-SALE SUPPORT ★

COLORSOFT™ GENERAL LEDGER

COLORSOFT™ General Ledger is ideal for the small business man who wants to take advantage of the time saving benefits of computerized accounting procedures. This package is designed for the businessman who is knowledgeable of accounting principles and who wants a computerized accounting system with greater user control. The features and options of this package compare favorably to higher priced software.

FEATURES

- *** USER FRIENDLY AND FULLY MENU DRIVEN ***
- *** UP TO 96 USER DEFINABLE RECORD CATEGORIES ***
- *** USER FLEXIBILITY IN ACCOUNT DESIGN AND ENTRIES ***
- *** DETAILED USER'S MANUAL WITH SAMPLE TRANSACTIONS ***
- *** APPROXIMATELY 800 ACCOUNTS RECEIVABLE/PAYABLE FILES ***
- *** STYLED FOR THE ACCOUNTANT/BOOKKEEPING ORIENTED USER ***
- *** MENU PROMPTS MAKE ENTRIES EASY, FAST, AND EFFICIENT ***

COLORSOFT™ General Ledger is an integrated, journal-type double entry accounting package for a small business that includes General Ledger, Accounts Payable, and Accounts Receivable programs. Outputs of the system include an income statement, balance sheet, accounts payable and receivable status lists, accounts payable and receivable aging reports, journal reports, account listing and a closing summary. During each user established accounting period (monthly, quarterly, annually, etc.), it will handle accounts of up to \$1,000,000.00 for approximately 800 accounts payable/receivable. Accounts are automatically numbered and each transaction is carried separately so that an account number will correspond to a specific purchase rather than a specific vendor/customer.

Requires 16K and a Single Disk Drive.
PRICE: \$129.95

COLORSOFT™ SMALL BUSINESS ACCOUNTING

The COLORSOFT™ Small Business Accounting package is ideal for the small businessman who wants to take advantage of the time saving benefits of computerized accounting procedures. This package is designed with this person in mind and as such, extensive computer or accounting experience is not required. The feature and options of this package are comparable to much higher priced software.

FEATURES

- *** USER FRIENDLY AND FULLY MENU DRIVEN ***
- *** USER DOES NOT NEED TO BE AN ACCOUNTANT ***
- *** UP TO 32 USER DEFINABLE RECORD CATEGORIES ***
- *** DETAILED USER'S MANUAL WITH SAMPLE TRANSACTIONS ***
- *** USER IS PROMPTED FOR COMPANION ENTRIES AS REQUIRED ***
- *** APPROXIMATELY 800 ACCOUNTS RECEIVABLE/PAYABLE FILES ***
- *** MENU PROMPTS MAKE ENTRIES EASY, FAST, AND EFFICIENT ***

COLORSOFT™ Small Business Accounting is an integrated, ledgerless accounting package for a small business that includes Accounts Payable, Accounts Receivable, Sales, and Purchase Order programs. Outputs of the system include an income statement, balance sheet, check register, accounts payable and receivable status lists, and accounts payable and receivable aging reports. During each user established accounting period (monthly, quarterly, annually, etc.), it will handle sales of up to \$1,000,000.00 and approximately 800 accounts payable/receivable. Accounts are automatically numbered and each transaction is carried separately such that an account number will correspond to a specific purchase rather than a specific vendor/customer.

Requires 16K and a Single Disk Drive.
PRICE: \$149.95

COLORSOFT™ MANAGEMENT SKILLS SERIES I: BEING BOSS

"BEING BOSS" is a collection of six programs and is the first in an ongoing series of computer assisted management development tools. Those who can benefit include corporate executives, managers, heads of teams, group leaders, supervisors, foremen, teachers, and parents. In fact, anyone who must take a leadership role can benefit from these programs.

- A. REFLECTIONS - a self evaluation guide
- B. ASSERTIVENESS - taking control as a leader
- C. MANAGEMENT STYLES - how to approach the leadership role
- D. DECISION MAKING - how to handle decision making
- E. COUNSELING - helping others solve personal problems
- F. STRESS CONTROL - taking care of yourself

Each program is in a multiple choice questionnaire format where the user is queried as to a response to a specified management situation. Tutorials help the user learn new management skills and insights. The programs include voice annotation from the author, Mr. Terry Barker. "BEING BOSS" is based in part on his forthcoming management books "BOSS TALK" and "THEORY C."

The series, "BEING BOSS", offers to the user the latest in management skill development concepts and should prove to be an invaluable TOOL for anyone who wishes to reach their full potential as a leader. The author has condensed week long intensive workshop material into this outstanding package. The accompanying user's manual is very well written and is easily understood by anyone.

Requires 16K and cassette.
PRICE \$89.95

COLORSOFT™ ACCOUNTS RECEIVABLE

COLORSOFT™ Accounts Receivable is a full stand-alone accounts receivable system. It is also suited for integration into the COLORSOFT™ Small Business Accounting package. Accounts Receivable does not require the user to be an accountant; in fact, this is a highly user friendly system designed for daily use by the small businessman. The features and options of this system compare favorably with much higher priced software.

FEATURES

- *** PROVIDES ACCOUNT AUDIT TRAIL ***
- *** ACCOUNTS ARE CARRIED BY CUSTOMER ***
- *** USER FRIENDLY AND FULLY MENU DRIVEN ***
- *** PREPARES INVOICES AND MAILING LABELS ***
- *** USER DOES NOT NEED TO BE AN ACCOUNTANT ***
- *** DETAILED USER'S MANUAL WITH SAMPLE TRANSACTIONS ***
- *** MENU PROMPTS MAKE ENTRIES EASY, FAST, AND EFFICIENT ***

COLORSOFT™ Accounts Receivable provides the user with detailed audit trails and history files on all transactions by a customer. It also prepares invoices, mailing labels, aging lists, customer history reports, and an alphabetized customer listing. The user can define discount/net terms for commercial accounts and finance charge and minimum payments for revolving accounts.

Requires 16K and a Single Disk Drive.
PRICE: \$89.95

TRS-80 Micro Color Computer

Radio Shack
One Tandy Center
Fort Worth, TX 76102
\$119.95

RADIO SHACK has just given birth to a 29½ ounce baby brother to the Color Computer, called the TRS-80 MC-10. Designed to compete with computers such as the VIC-20, Sinclair/Timex 1000, and the Texas Instruments TI-99/2, the MC-10 is loaded with features that will please the experienced computer hobbyist, while maintaining a price low enough to remain accessible for the general public. For the price, we believe the MC-10 is a better buy than its competitors.

Hardware

The MC-10 packs a lot of power in its 2 inch by 8.5 inch by 7 inch shell. The video display generator is identical to that in the Color Computer: a Motorola 6847. The screen is hardwired for both text and graphics to start at memory lo-

cation \$4000. Micro Color Basic, used in the MC-10, does not support high resolution graphics, but by using machine language the programmer can get all the graphics modes possible with the Color Computer. The text screen is the familiar black on green; POKE 32768,64 provides the user with black on red. Lowercase is achieved, as in the Color Computer, by a Shift 0 command.

The keyboard seems to be the primary area of cost reduction. The MC-10 has an undersized calculator-style 48-key keyboard. Some of the keys are in annoying places; for example, the Control key is in the same spot most computers put their

right shift key. For those who are used to the Color Computer's layout, other

32768-49151	6847 VDG
49152-57343	Not Used
57344-65535	Micro Color Basic

Table 1. General Memory Map

poorly located placement is the Break key and the four arrow keys. On the plus side, the keyboard does have positive tactile feedback, unlike the Sinclair Computer. Some keys also have graphics symbols, which can be embedded in strings simply by pressing the Shift key along with the letter key. Another nice feature of the keyboard is that Basic words are assigned to individual letters on the keyboard, as on the Sinclair machine. For example: to use the word PRINT in a Basic program, the user can type either: control 9, ?, or PRINT (on the Sinclair, Basic words cannot be entered letter by letter).

The memory map for this computer was not available from Radio Shack at the time of this writing, but we believe we have a fairly accurate map derived from our experiences with the computer. This map is shown in Table 1.

One of the nicest features of the MC-10, that puts it out of the class of the other small microcomputers, is the built-in RS-232C serial interface. According to the users manual, the port is compatible

Switchable Expansion Is Here

A PERFECT COMPANION FOR COCO
The key to versatility is the new **BT-2000 COMPANION**. •Load 5 cartridges and enjoy the benefits of Push-Button selection. •**SAVE** CoCo's connector. INTERNATIONAL COLOR COMPUTER CLUB

Main Office

2101 E. Main St., Henderson, Texas 75652

Canadian Branch

96 Carleton Dr. Saskatoon, Saskatchewan S7H-3N6

WORLD'S LARGEST COLOR COMPUTER CLUB

HERE ARE SOME GOOD REASONS FOR JOINING

- 1). FREE PROGRAMS.** Good programs written by our members are contained in the library, in the newsletter, and on the new member tape.
- 2). NEWSLETTER.** A "magazine" sized newsletter (last issue 80 pages), with programs, tips, data, reviews, articles and much more.
- 3). NEWSLETTER TAPE.** A tape of all the programs appearing in the newsletter is available from the library for \$2.00 (to members).
- 4). CLUB LIBRARY.** The club maintains a library of programs, books and Radio Shack ROMpaks. The programs are member written and are yours to keep, there is a small fee to cover postage and tape (\$2.). The books and ROMpaks may be checked out for 3 weeks at a time (extensions possible).
- 5). DISCOUNTS.** Get large discounts on many software and hardware items for CoCo from some of the MAJOR companies. Also discounts on subscriptions to the RAINBOW, CCN and Chromasette magazines.
- 6). ADVERTISE FREE.** Members may place ads of up to 1/4 page per issue in the newsletter FREE. (The ad must be computer related.)
- 7). BORROW PARTS.** Don't wait weeks for the parts to come in from Radio Shack! Just check them out of the Club's Parts library and return when yours arrive.
- 8). SURPRISE.** You receive a "New member" package containing many useful items.
- 9). GET HELP.** This is the world's largest Color Computer Club. With members in almost every field of expertise. So if you have a problem with the Color Computer, we can almost always get you the answer. Put your problem on the Club's Bulletin Board, write, or call.
- 10). FIND FRIENDS.** As a new member, you will receive a list of the members in your area whom you may contact for CoCo talk.

HOW TO BECOME A MEMBER

Write to the club for an application, there are no conditions for membership other than agreeing to obey the rules, being interested and paying the dues. The membership dues are \$30.00 per year and we believe you get more than your moneys worth. You can save more than the \$30.00 in discounts the club offers you. Example: Subscription to the RAINBOW, 25% off of regular subscription rates. Some members have told me that the new member tape alone is worth the \$30. It contains 10, very good programs. Some of the programs contained in the library are, Accounts Receivable, General Ledger, Inventory, Sales file and ticket program with automatic Inventory update (for 32K with 2 disc.)

Circle No. 56 on Reader Service Card

with the Color Computer, has a baud rate of 600 bps (bits per second), one start bit, seven data bits, two stop bits, and no parity. When outputting to a printer, the computer is automatically set for 132 columns with a carriage return at the end of the line, as in the Color Computer.

Radio Shack has strayed away from the 6809 CPU in the Micro Color Computer. They did, however, stay within the 6800 family. The new processor is a Motorola 6803, a direct descendant of the 6801. Some of the features of the 6803 are listed in Tables 2 and 3.

The cassette interface on the MC-10 is almost fully compatible with the Color Computer. We have had success transferring machine language programs written in 6800 code from the Color Computer to the MC-10. Limited success has also been achieved transferring Basic files in ASCII format from the Color Computer to the MC-10, but not from the MC-10 to the Color Computer. One last difference between the two interfaces is the fact that the MC-10 does not shut the tape recorder off when it is not loading or saving.

AUDIO ON	JOYSTK
AUDIO OFF	MOTOR ON
CLOSE	MOTOR OFF
CSAVEM	OPEN
EOF	USR

Table 4. Micro Color Basic

Software

The Basic interpreter for the MC-10 was written by Microsoft, and greatly resembles non-Extended Color Basic on the bigger machine. A complete list of all the Basic commands and functions in Micro Basic, along with the commands unique to each computer, are listed in Table 4. As mentioned before, Micro Color Basic has no provisions for high resolution graphics, but in Program Listing 1 we show how you can accomplish high resolution using POKEs. We have obtained a complete disassembly of the Basic interpreter using Philip Lucido's FLEX program "Dynamite" (Phil is our club president), and in future articles we will disclose more of this information, along with some useful programs.

Many programs written for the Color Computer will run on the MC-10 with little or no modification necessary, as long as the original programs do not require graphics. Although 6809 and 6800 machine code are different, their source code is similar and should be able to be adapted to each other.

The documentation for the MC-10 is sketchy but adequate. In Chapters 1-4, the manual goes into details of how to set up and operate the computer. In Chapters 5-16, a Basic tutorial is given which is better than that provided for the VIC-20 and the Sinclair/Timex, but is not as good as the Color Computer's. The Appendix has sections on sample programs, error codes, ASCII, trouble-shooting, systems specifications, and a command summary. Unfortunately, nothing is mentioned with respect to machine language, ROM entry points, or system variables. Also included is a handy reference card which beginners may use until they get used to Basic.

Performance

Speed is the primary attribute of the MC-10. In our benchmark tests, shown in Program Listing 2 and 3, the MC-10 performed almost 20 percent faster than the Color Computer. Although the exact clock speed is unknown, we suspect that a high clock speed would be the only way a 6803 can beat a 6809.

The cost of the MC-10 is \$119.95. For an additional fee of \$49.95, 16K of RAM can be added. This brings the cost of a fairly powerful microcomputer down to the level where nearly everyone can afford one. ■ ■ ■

Time Teacher

Crystal Software
6591 Dawsey Rd.
Rock Creek, OH 44084
(216)474-7626

Time Teacher is a learning aid for ages 5-11. It displays a traditional and a digital clock using high resolution graphics, and shows the correlation between the two. Time Teacher reinforces and assists children in learning how to tell time by having them convert the time displayed on a traditional clock into digits. Some adult guidance may be needed at first. There are six skill levels which are incremented automatically. Young children are rewarded with a star for each skill level they complete. There is also a detailed progress report with the student's name that can be displayed at any time on the screen or printer. This program requires 16K Extended Basic, and is available on cassette for \$16.97.

Circle No. 70 on Reader Service Card

FUNDFILE

Parsons Software
118 Woodshire Drive
Parkersburg, WV 26101

FUNDFILE is a stock market portfolio and account management program. It is a valuable tool for organizing and keeping track of investment records. The program is simple to use, menu driven and written in Basic. It creates files for up to 900 transactions and up to

50 stocks or funds. It stores the historical account records, and reports asset value, realized and unrealized capital gains, dividends, adjusted costs, long and short-term capital gains, etc. It requires 16K Extended Color Basic, printer optional, and is available on disk for \$27.95.

Microcomputers Can Be Kid Stuff

Hayden Book Company, Inc.
50 Essex Street
Rochelle Park, NJ 07662
(201)843-0550

Microcomputers Can Be Kidstuff enables young people to learn about microcomputers and about how to use them productively. Written by Anna Mae Walsh Burke, the book prepares youngsters to begin using Basic and Pilot, with clear descriptions and explanations of microcomputer hardware and software. Information on writing programs, saving programs on disk or cassette, and using commercial software is also provided. The author's insight on microcomputers takes the reader from games to problem solving. Also included is a glossary of microcomputer terms and a checklist with a set of rules that helps youngsters understand microcomputers. The book is paperback, 120 pages, and costs \$8.95.

Super Color Terminal

Nelson Software Systems
9072 Lyndale Avenue, South
Minneapolis, MN 55420
(612)881-2777

Super Color Terminal, version 3.0, is an advanced data communications program available for the TRS-80C Color Computer and TDP system 100 Personal Computer. You can use it to communicate with all popular information services, such as Dow Jones; CompuServe; The Source; and local BBSs and clubs. You can also communicate with other Color Computers, Apples, IBM PCs, etc., via RS-232 or direct connect. The Super Color Terminal creates files totally compatible with other programs in the Super Color Library. SCT will work on any size Color Computer from 16K on up. The ROMpak version offers a full 61K of buffer space in a 64K machine, and up to 51.5K are available with a disk system and 53K with a tape system. The Super Color Terminal also offers a choice of eight hi-res displays, 32 by 16, and 51, 64 and 85 by 21 or by 24, with real lowercase descenders. The user is also provided with word wrap-around. It also supports automatic color graphics communications so you can receive pictures from bulletin boards and information systems. Other features include overcase masking, selectable character trapping, Xon/Xoff and programmable upload prompts. The user can change word length, parity, duplex status, and stop bits. It supports link and cassette I/O to save and load ASCII files, machine

code and Basic programs, and allows printing of buffer contents. With a disk version one can save, load, kill, and rename disk files, and read a directory. The Super Color Terminal also provides 10 keystroke multipliers, each up to 255 characters long, for automatic message transmission. The Super Color Terminal is available for \$49.95 on tape, \$59.95 on ROMpak, and \$69.95 on Disk.

The Animator

Data Port
P.O. Box 94
Grand Island, NY 14072

Create high resolution graphics the easy way with The Animator. Use your joystick to position the cursor on the video grid, select a color, and fill in the squares to create enlarged images. When you are satisfied with the picture you have created, use the built-in compiler to transform the image into its decimal equivalent, which can be POKed or otherwise loaded into memory to create hi-res pictures. Decimal code can be listed on printer or CRT. Extended Basic and joysticks are required. The Animator is available on tape for \$19.95.

Traffic

Crystal Software
6591 Dawsey Rd.
Rock Creek, OH 44084
(216)474-7626

Traffic is a fast-action challenging video game in which a player must forge his

sugar
& software

Auto Run is a utility program for the TRS-80[®] Extended Basic Color Computer. It is used to add convenience and professionalism to your software. Auto Run will help you create your title screen with the graphics editor. The graphics editor allows you to choose a background color and border style. Using the arrow keys and several other commands you can draw pictures, block letters and also include text.

Auto Run will generate a machine language loader program to precede your program on the tape. Then, to start up your program, simply type CLOADM to load in the Auto Run loader program, which will then automatically start itself up, display your title screen, load your program and then RUN or EXEC it.

Also you may record a vocal or musical introduction preceding your program. The Auto Run loader will control the audio on/off.

Basic programs can be set to load anywhere in memory above \$600 (the PCLEAR 0 page). Software authors: The Auto Run prefix may be appended to your software products.

Auto Run is \$19.95 and includes complete documentation and an assembly source listing. Requires 16K Extended Basic.

Galactic Hangman

A great new twist to the popular, educational word guessing game for the Color Computer. Large (700 words) and sophisticated vocabulary. Or enter your own words, your child's spelling list, foreign language vocabulary, etc.

Outstanding high resolution graphics, animation and sound effects.

For \$17.95 you get both the 16K and 32K versions of Galactic Hangman.

SUGAR SOFTWARE

Tape Information Management System

A user-oriented, easy to use personal database management system for the TRS-80[®] Color Computer with these outstanding features:

- * keeps files of programs, names, addresses, birthdays, recipes, class or club rosters, anything
- * variable record and field lengths
- * phrase substitution editor
- * up to 8 user-definable fields
- * ML sort (up to 3 fields), search and delete functions
- * 2 search modes — range and item
- * user-definable printer format, for any printer
- * up to 230 characters per record

For \$24.95 you get the database management system, our full documentation which includes a reference guide and a programmer's guide, and our 1981 Bibliography of articles relating to the Color Computer. Requires 16K Extended Basic. 32K recommended.
1982 TIMS Bibliography — \$9.95

Silly Syntax

A sensational and educational version of a popular party game for the TRS-80[®] Color Computer.

For 1 to 10 players. Load a story into the computer. The players are asked to supply a noun, verb, part of body, celebrity, etc. which the program uses to complete the story. The story, which is displayed when all words are entered, will be hilarious. Silly Syntax requires 16K Extended Basic (32K for disk version). For \$19.95, you get a user guide and a tape containing the Silly Syntax game and 2 stories. You can create your own stories or order story tapes from the selection below.

Silly Syntax stories — Ten stories per tape.
SS-001 - Fairy Tales SS-004 - Current Events
SS-002 - Sing Along SS-005 - Adventure/Sci-Fi
SS-003 - X-Rated SS-007 - Potpourri
Each story tape is \$9.95. 10% off for 3 or more story tapes. Disk is \$24.95 for Silly Syntax and 2 stories or \$49.95 for Silly Syntax and all 62 stories.

Add \$1.00 per tape or disk for postage and handling. Ohioans add 5.5% sales tax. COD orders are welcome. Dealer inquiries invited.

The Talking Speller

Superior Graphic Software Products
P.O. Box 451
Canton, NC 28716

The Talking Speller uses the capability of the Color

Computer to control a cassette recorder from within a Basic program, and play back through the list of spelling words through the monitor speaker. Teachers or parents can enter a list of spelling words, then record the words. The Talking Speller will play back the word, wait for a response from the keyboard, and keep score of the student's performance. After three wrong attempts, the correct spelling is displayed with appropriate sound effects. In a noisy classroom setting, earphones may be substituted for the speaker to provide individualized testing or drill and practice. The Talking Speller is all menu driven, and very easy for even inexperienced persons to use. Recording the spelling lists is a step by step process, with screen prompts for each activity. Play back and testing is equally easy. The speller requires Extended or non-Extended Basic, and is available on tape for \$19.95.

Circle No. 76 on Reader Service Card

Kaleidophone

New Salem Research
West Main Street
New Salem, MA 01355

The Kaleidophone lets you interface to any hi-fi and see the music on TV. It's easy to install — just plug into the headphone jack on the hi-fi and the joystick port on your computer. Besides the hardware (which includes all necessary plugs and cables), you receive a free issue of *Kaleidophonics*, a cassette magazine of programs for the Kaleidophone. The current

issue consists of more than a dozen display programs in Basic (just choose them from a menu) plus nine machine language routines for high speed effects. There's also an instant program feature — just type in letters on the keyboard to create a whole new display program in seconds. You can also program it yourself in Basic or machine language. Ten pages of detailed instructions are included. Kaleidophone requires 16K, Extended or non-Extended Basic, and is available for \$49.95.

END OF FILE

ociety has always glorified the pirate. Everyone knows fantastic tales of pirate adventures, from Bluebeard to Captain Hook. Every kid has fancied himself a pirate sailing the open seas. The software pirate is a different story, however. Unquestionably, *software piracy* is the ugliest phrase in computer jargon.

For the past two months **The Color Computer Magazine** has featured stories of TRS-80 User Groups. It is our intention to support the continuation and formation of user groups, as the best way to share information and learn more about your computer. But, there is an aspect to user groups that we don't support—the illegal sharing of copyrighted software.

Not all user groups are guilty of this; hopefully most are not. Shawn Jipp explained in his June article that his group worked hard figuring out how to create and use a club software library without violating copyrights. Most club officers I have spoken with have sought to be honorable about the rights of software authors and manufacturers. It's not easy—after all, the primary purpose of user groups is to share.

Most computer users have seen, used, or owned unauthorized software at sometime. It seems the problem is more prolific among TRS-80 users than users of other systems. The reason for this is both complimentary and ominous. The compliment refers to how active, widespread, and resourceful TRS-80 users are. The bad aspect is that some software manufacturers have stopped or won't consider publishing TRS-80 software as a consequence.

Many disgruntled software vendors point an accusing finger at user groups as the reason for rampant piracy. While a blanket condemnation is not fair, it is not difficult to see their point.

Imagine the scenario: A user group of 30 people is having their monthly meeting. A new blockbuster game has come out a week before the meeting. One of the group's members bought the game, and brings it to the meeting. Everyone plays and loves it. Before next month's meeting, someone has figured out how to break the game's security technique. By the end of the meeting the group's 30 members all have illegal copies of the game. The software vendor made one sale and now 30 people have the game. The software's author made a percentage of that one sale, yet 30 people are enjoying his work.

Worse than that scenario is another, where the user group takes money from its treasury to buy the one copy to place in their software library. Someone makes a copyable version and all a member has to do is check the piece out of the library, then go home and make his own. The vendor and author still have their one sale. What makes this scenario worse than the first is that the group's intent was to buy for the sole purpose of illegal distribution of the game.

Now, take that hypothetical example and multiply it by 10 user groups; the vendor and author now have 10 sales and 300 users. Sales are cut even deeper, while the user number increases.

How realistic are these scenarios? *Very*, if you ask a software vendor. *Unfair*, if you ask a user group member. Both are sincere in their response; and both are probably right.

Steve Bjork performed a programming wonder for Data Soft with his "Zaxxon." Within a week after its release an independent bulletin board operator had broken the protection scheme and placed the game on his download section for all to have, for the price of the phone call to his BBS. Imag-

ine the thoughts and feelings that went through Steve's head when he heard about it. Imagine the Data Soft folks' thoughts the next time they consider buying the software license to an arcade blockbuster.

Big Five software decided a while ago not to produce software for TRS-80 computers because of piracy. They produced quite a few enjoyable game programs for the Models I and III, but because of rampant piracy, they couldn't make enough money to justify the cost to produce the software.

What happens? Software prices rise to increase profit margins to compensate for stolen sales. The honest user pays for someone else's theft. But then the problem escalates.

Higher prices mean the good guy will buy less software. Or, even worse, he'll obtain a pirated copy himself next time. With higher prices causing less sales, software vendors and authors turn away from the Color Computer, and we're left with a lower quality of software.

Although I use games as an example, the problem is not isolated to game software.

The search for a solution to software piracy has progressed very little since the problem was first discussed years ago. No matter how a vendor attempts to make his software uncopyable, people break through. Besides, protection routines anger and frustrate the honest user because he can't make legitimate back-ups of software he has paid for.

The answer lies somewhere deep within the conflict. It is my belief that if vendors want to take the wind out of a pirate's sails, he must realize that protection and prices will do little to stop piracy. People will always be able to break through protection routines. At the same time, users need to express their concerns to vendors.

If vendors and users don't find common ground soon, both will lose. Color Computerists have no quality software available to them. Vendors will not have a receptive marketplace to sell their goods.

Whether user groups are the worst offenders or not, it should become their responsibility to help vendors stem the growth of the piracy problem. A dialogue between user groups and vendors is needed. Color Computer users and vendors have similar interests in the continued success of the Color Computer. We would like to hear from all those concerned: it's time to start the ball rolling. — K.L., Editor

FOR...NEXT (09,83)

SEPTEMBER MEANS back to school for children and a lot of our readers who are in the educational field. It also means that parents will be helping their children with study habits, homework, and school projects. Much of that homework will find its way into the Color Computer you have at home, as more and more schools see the need for computer literacy.

To make this easier for kids, teachers and parents, you'll want to be sure you read the back-to-school issue. Jean Plesser has a new column for computing kids that's almost as neat as peanut butter. A teacher for the Asa Adams school in Orono takes a look at Logo. We also have examples of educational programs from Shirley Georgi.

For those of you who don't need education, The Sorcerer will be back with more mind-boggling games, Commander's Disassembly will continue, Kitsz has an upgrade modification planned, and a host of other surprises that will keep you busy for hours.

MORE GRAPHIC PROOF!

Radio Shack's TRS-80[®] is #1

Get the Graphics Advantage. These new peripherals let you explore an exciting dimension of your Color Computer... *Graphics!* They're three more reasons why Radio Shack's TRS-80 is the best supported micro-computer in the world!

FP-215 Flatbed Plotter/Printer. This intelligent, four-color, single-pen graphics device draws charts and graphs using BASIC ASCII command codes and parameters, and prints text horizontally or vertically using the BASIC LPRINT command. Parallel and Color Computer-compatible serial interfaces. Cat. No. 26-1193, \$995.00

NEW LOW PRICE! CGP-115 Color Graphics Printer. Cut \$50! Ultra compact—only 2¹⁵/₁₆ × 8¹/₄ × 8¹/₂"—yet produces beautiful graphics in red, blue, green and black on standard 4¹/₂" roll paper and prints alphanumeric at 40 or 80 characters per line. Built-in commands simplify drawing and plotting. Parallel and Color Computer-compatible serial interfaces. Was \$249.95 in Cat. RSC-9. 26-1192, \$199.95

GT-116 Graphics Tablet. Instant graphics at the touch of a pen! What you draw or trace is read into your TRS-80 Color Computer. Compatible with Extended BASIC graphics commands. Menus and other options simplify data input. 26-1196, \$349.95

We're Your Graphics Headquarters. Discover how to turn your Color Computer into a complete graphics system. Stop by your nearby Radio Shack Computer Center, store or participating dealer to get a "hands on" demonstration of these peripherals.

BECOME AN INTREPID SPACE ADVENTURER...

by William Muk

CoCo version by Roger Schrag

Atari version by John Anderson

Far beyond the known galaxies, you venture deep into the vast reaches of outer space. But you are not alone! In a flash, without so much as a how-do-ya-do, they're in hot pursuit and you're left to do before you're done unto. **Can** you elude your pursuers? **Will** you elude your pursuers? And who **are** these guys anyway? Find the answers to these and other compelling questions in AREX. See your dealer today!

AREX . . . Coin-op arcade realism at home for 1 to 2 players.

...OR FLY HIGH IN THE WORLD OF HIGH FINANCE

by George Schwenk

TRS-80 version by Dave Simmons

CoCo version by Roger Schrag

"Yas, after purchasing diamond mines in South Africa, oil wells in Saudi, and rare beer cans in Walla Walla, Washington, I had begun to wonder what other trendy commodities remained to be added to my swelling portfolio. Then a snip of a ticket girl dared to tell me (ME, Hartley J. Wormsflather III!) that my flight was overbooked. To avoid future misunderstandings, I bought the airline."

"I think I'm on to something profitable here."
Hartley J. Wormsflather III

AIRLINE . . . A no-holds-barred strategy game for 1 to 4 players.
