COMPUTERWARE[®] PRODUCTS FOR THE COLOR COMPUTER

Radio Shack or TDP-100

HOME & WORK

HOME & WORK

HOME & WORK

3D DRAWING BOARD

Draw a simple or complex object in three dimensions, then rotate, change elevation, size & distance of your object. Educational & entertaining. Extensive documentation, including examples & sample drawings.
cassette. . . \$24.95
disk. . . \$29.95

THE COLOR CONNECTION

This is the easiest and most complete modem package available for the Color Computer.

- * Supports both full & half duplex
- * You designate the required parity
- * MACROS for log-on & auto dial
- * Requires only 16K
- * Big buffer for upload & download
- * Line wrap does not break words
- * 300 baud

cassette. . . \$29.95
disk. . . \$39.95

COLOR SCRIBE WORD PROCESSOR

Scribe is the perfect word processor as well as a great programmer's editor.

Features include: fast change, search, insert, & delete; move & copy of a line or whole paragraphs; text formatting with margin justification, automatic paging, centering, tabs, headings, & footings. You can edit files larger than memory. Works with LCA-47 lower case adapter.
Radio Shack Disk. . . \$49.95

FINANCE PROGRAMS

Two great programs, each with nine options covering loans and investments.
cassette. . . \$17.95
disk. . . \$22.95

ADDRESS FACTORY

Computerize your mailing list for church, business, or clubs. This stores Name, Address, City, State, Zip, & Special Code for each person. You can add, change, or delete information and print either mailing labels or lists. 255 names on disk, 125 on 32K cassette, or 55 on 16K cassette.
cassette. . . \$17.95
disk. . . \$22.95

SEMI DRAW

Your computer's keyboard or joystick draws in 8 colors with semi alpha graphics 8, 12, 24. You can do animation and dump your screen's picture to a printer (Line Printer VII or VIII, NEC 8023A). From 6 years and up!
cassette. . . \$21.95

COLOR DATA ORGANIZER

CDO is a little data base system for small inventory ideas, remember lists, serial numbers, etc. It stores, retrieves, sorts, prints, & totals whatever you want within the two 9 digit numeric and two 16 character string entries.
cassette. . . \$19.95
disk. . . \$29.95

HOME MONEY MANAGER

Organize your income & expenses! Not only can you balance your checkbook but get reports like summary of expenses or income for the month by category. Records up to 480 transactions by date, "paid-to", check number, account number, and amount.
cassette. . . \$19.95

TO ORDER:
Add shipping of \$2 surface or \$5 air/Canada. Visa & MasterCard accepted.

REMARKS

by Bill Sias

I usually hate to go to computer shows, there's nothing for my wife and kids to do while I'm gone all day wandering among all of the amazing new "do-dads", but this year I left the kids at home and took my wife to Las Vegas for the Fall Comdex show. The people who promote Comdex must have been surprised by the response this year since they were forced to open the show almost a half hour early due to the tremendous number of people attending. There are some great advantages to a press pass best of which was that I was able to see most of the exhibits before the show was opened to the general public.

There really wasn't a great deal of Color Computer items on display other than a 3 inch disk drive system from AMDEK Corp, 2201 Lively Blvd, Elk Grove Village, IL 60007 (312) 364-1180. I was surprised that it used the Radio Shack controller. Wico (Consumer Division, Niles, IL 60648 (800) 323-4014) were showing their joysticks and trackballs for the Color and other computers and Kraft P.O. Box 1268, Vista CA 92083 were showing their joystick as well.

Perhaps the most amazing new "do-dad" was the Fujitsu computer 2840 San Tomas Expressway Suite 103, Santa Clara, CA 95051. It contains two 6809s, one as the CPU and another controlling the screen display. I was watching an amazing animated program when the Vice-President hit the break key, sure enough the READY prompt appeared but the stars whizzing past the screen didn't

stop! It seems that the last graphics commands continue to execute even though the BASIC interpreter has entered command mode. I was impressed with the speed of the BASIC, the 512 by 492 pixel graphic screen and the ability to mixed high resolution graphics with text. Although none of the people there would verify it for me its rumored that the 64K version will sell for under \$600 when the FCC approves it (I suspect it will be approved late summer/early fall). They already have a number of slick peripherals for it, again pending FCC approval, such as digitizers and light pens.

I recently upgraded our GIMIX computer to OS-9 Level II, a 19 MB five inch hard disk and 180K of RAM. This move was phase two of our transition to the new computer. The upgrade went amazingly well, in fact the total down time for installation of everything was less than one afternoon. These changes allow us to use the GIMIX as a multi-user system in a much smoother manner. I'm not sure if it's the speed of the hard disk or the extra memory but most of the time it's impossible to tell the difference between one user on Level I and three on Level II (the only time you can tell is when I've got several processes going that as very disk dependant and I forget to lower their priority). The next step in the transition is to upgrade the RAM memory to 512K and bring the number of users up to 6. Not bad for one 6809!

I dont think this guy uses a 6809 but he was cute.

Turn your color computer on to the power of FLEX

NOW FROM THE WORLDS LARGEST SUPPLIER OF SOFTWARE FOR FLEX
COMES FHL COLOR FLEX. JUST LOOK AT THESE FEATURES:

**IF YOU'RE TIRED OF
NO DISK SOFTWARE,
THEN FHL Color FLEX
IS THE ANSWER!**

FLEX is the world's most popular operating system for the 6809 and with over 100 programs, we are the largest supplier of software for FLEX. These programs are NOT games but serious programs for your Color Computer. They range from word processors thru business applications to software development tools. Many Fortune 500 companies use our software. FHL Color FLEX turns your Color computer into a powerful system more capable than systems costing several times as much.

Get on our mailing list, call or send for our complete catalog of over 100 products for FLEX. We're doing exciting things with your color computer!

FLEX NOW ONLY \$99

- HI-RES screen formats
- 16 x 32 and 24 x 51, upper and lower case characters
- 24 x 64 and 32 x 64 upper case
- Full ASCII keyboards
- Easy start-up—just type RUN "FLEX"
- Online assistance just type HELP
- Optionally use a standard terminal and printer
- Advance disk I/O and terminal capabilities
- NO additional hardware required
- We have supported FLEX with more software than anyone else in the world for more than 2 years!

SPECIAL

1. DBASIC, RS Disk Basic under FLEX with a utility to copy RS to FLEX disk \$30.
2. ED/ASM line and screen editor and macro assembler, both more powerful than TSC's, and at the same cost, only \$100.
3. UTILITIES, a set of 12 utilities especially designed for FHL Color FLEX \$50.
4. STYLOGRAPH full word processor. Special for FHL Color FLEX only. \$195.00

Software Catalog

MW OS-9 ASSEMBLER \$125.00

A 6809 assembler specially designed for the OS-9 environment using Motorola standard instruction mnemonics.
For OS-9.

MW INTERACTIVE DEBUGGER \$50.00

A useful tool for testing and debugging machine language programs or testing hardware.
For OS-9

TSC 6809 CROSS ASSEMBLER \$100.00

This assembler runs on 6800 FLEX system with all the features of the 6809 assembler.
For FLEX.

TSC 68000 CROSS ASSEMBLER on 6809 \$250.00

An assembler which runs on a 6809 FLEX system and supports full 32 bit math, macros, and conditional assembly.
For FLEX.

TSC DEBUG PACKAGE \$75.00

This package is a complete assembler language program debugging tool capable of simulating the functions of the MPU.
For FLEX.

TSC RELOCATING ASSEMBLER/LINKING LOADER: Just released for FLEX! \$150.00

BUSINESS APPLICATIONS

INFDMAG Data Base Management \$295.00

Information Management system designed for any specific application for use by the non-computer expert. Capable of handling almost any collection of data.
Requires TSC, XBASIC and FLEX.

RMS RECORD MANAGEMENT SYSTEM \$200.00

Complete DMS in machine language. Uses include accounting, customer or personnel records, and situations which require data entry, data retrieval and updates.

BILLPAYER w/source \$169.95

A series of programs that were designed to fill the need of a household financial system or of a very small business.
In TSC XBASIC for FLEX.

MAILING LIST w/source \$99.00

Enables the user to define and maintain mailing list oriented data bases.
Written for 6809 FLEX and TSC XBASIC.

DYNACALC Object only \$200.00

Faster and more powerful than VisiCalc (tm)! An "electronic" spreadsheet developed to enhance your computer's productivity with a powerful software tool for planning, manipulating data, and probing alternatives.
Written for 6809 FLEX and UniFLEX (\$395.00)

TABULA RASA FLEX \$100.00
UniFLEX \$110.00

Provides for the generating and maintenance of tabular computation schemes used for analysis of business sales and economic scenarios.
In TSC XBASIC for 6809 FLEX

INVENTORY W/MATERIAL REQUIREMENT: FLEX \$100.00
UniFLEX \$150.00

These programs enable the user to define and maintain inventories and include hierarchical materials requirements planning.
Written in 6809 for FLEX.

OSBORNE A/R FLEX \$295.00

An open invoice system, will print ageing reports, statements, etc.
For FLEX and TSC XBASIC.

OSBORNE A/P FLEX \$295.00

An invoice oriented system, will keep track of your vendors and even print checks for you.
For FLEX and TSC XBASIC.

OSBORNE G/L FLEX \$295.00

Uses double-entry posting to reduce off-balance situations. Can post to your accounts from A/P, A/R and the Cash Journal.
For FLEX and TSC XBASIC.

UTILITIES

AUTOTASK w/source \$129.95

Consists of a set of memory resident commands that are aids in the design of user oriented applications programs.
Written in assembler for 6809 FLEX

TOOLKIT #1 Object only \$49.95
w/source \$69.95

Add EDIT to TSC BASIC's, along with DECOMPIL and cross reference.
Written in assembler for 6809 FLEX

TOOLKIT #2 Object only \$49.95
w/source \$69.95

A package of utilities and programs developed to extend the capabilities of the FLEX operating system.
Written in assembler for 6809 FLEX

EXTENDED UTILITIES: Object only \$49.95
w/source \$69.95

A set of 12 utilities that add the final touch to your utilities for FLEX.
Written in assembler for 6809 FLEX

PLOT: w/source \$49.95

Designed to give you neatly formatted plot with the best resolution possible. Will plot histograms, bargraphs, XY plot and others.
Written in TSC XBASIC for 6809 FLEX.

SOME COMMON BASIC PROBLEMS: w/source \$69.95

SCBP will allow you to figure income tax, tax depreciation, amortization schedules and more. From the Osborne book by the same name.
Written in TSC XBASIC for FLEX

SOME PRACTICAL BASIC PROGRAMS: w/source \$69.95

SPBP like the above is from the Osborne book. The work of conversion is done for you.
Written in TSC XBASIC for FLEX.

PASSWORD Object only \$69.95
w/source \$89.95

Will enable you to create a system disk that cannot be booted without knowing the built in password.
Written in assembler for 6809 FLEX

UNIFLEX SIMULATOR FLEX \$100.00
UniFLEX \$110.00

Debug Uniflex assembler programs using TSC Debug and other facilities of FLEX.
For 6809 FLEX.

OS-9 SIMULATOR for FLEX: FLEX \$100.00

Debug OS-9 assembler programs using TSC Debug and other facilities of FLEX. Requires OS9.
For 6809 FLEX.

HELP Object only \$29.95
w/source \$49.95

A data retrieve utility designed to save you time digging through manuals looking for info about computer language commands and statements.
Written in assembler for 6800 or 6809 FLEX

JOB CONTROL PROGRAM Object only \$49.95
w/source \$89.95

Allows you to enhance every other program you own.
Written for 6800 or 6809 FLEX

TSC BASIC: PRECOMPILER FOR 6800-6809 \$50.00

Allows the user to write BASIC programs in a non-standard BASIC source format.
For FLEX.

TSC FLEX UTILITIES \$75.00

A package of additional FLEX utility commands which includes memory dump, prompting delete to name a couple.

TSC FLEX DIAGNOSTICS \$75.00

These utilities are designed for FLEX. Included in the memory diagnostics portion are zeroes and ones test, random pattern test and more. Disk examine, modify and test are also included.

TSC SORT/MERGE PACKAGE \$75.00

A full-disk sort/merge which allows the contents of any size file to be sorted, including random files.
For FLEX.

READTAPE w/source \$54.95

Requires a PIA

Will read TRS-80 Level II BASIC tapes and convert programs to TSC BASIC.
Written for 6809 FLEX.

FULL SCREEN FORMS DISPLAY FLEX \$50.00
UniFLEX \$75.00

This package substantially extends the screen input/output capabilities by providing a table driven method of describing and using full-screen displays.
Written for 6809 FLEX.

GAMES FOR FLEX

ESTHER Object only \$39.95
w/source \$59.95

An enhanced game of Elize in fast machine language. Artificial intelligence in pure 68XX code.
Written in assembler for 6800 or 6809 FLEX

NEW for OS-9!!

DISK/EDIT: \$79.95

Examine and modify OS-9 DISKS with this screen oriented editor.
Written for OS-9.

For FREE Catalog
send legal size SASE with \$.40 stamps.

Software Catalog

OPERATING SYSTEMS

FHL Color FLEX Object only \$99.00

FLEX for the Color Computer: All the power and capabilities of the FLEX operating system for the RS Color Computer.
For 64K Color Computer

LANGUAGES

D/BASIC with FHL Color FLEX \$30.00
later \$40.00

Radio Shack DISK BASIC for FHL FLEX. D/BASIC allows the use of the standard Disk Extended Color Basic under FHL Color FLEX. All disk input and output operations are done through FLEX and are completely compatible with the normal FLEX utilities.
For FHL Color FLEX only.

TSC BASIC For 6800-6809 \$75.00

Supports all of the standard BASIC statements and functions as well as many extended capabilities. For FLEX.

TSC EXTENDED BASIC FOR 6800-6809 \$100.00

Ideal for business or advanced scientific applications where extended math precision and formatting capabilities are essential. For FLEX

TSC PASCAL for 6809 \$200.00

A true native code compiler which produces assembly language mnemonics. For FLEX.

TSC FORTRAN '77: \$275.00

Just released for FLEX - Requires Relocating assembler. \$350 with relocating assembler and linking loader. For FLEX.

MW BASIC09 \$200.00

Acclaimed as the most powerful and friendly high-level language available for any microcomputer. For OS-9.

A/BASIC Compiler: Object only \$150.00

Generates pure, fast, efficient 6809 machine code from easy to write BASIC source programs.
Written for 6809 OS-9 or FLEX

X-FORTH Object only \$149.95

An enhanced and extended version of Fig-Forth that runs under FLEX.
For 6800 or 6809 FLEX.

CC-FORTH \$99.95

For the Color Computer DOS, a language that is 5 to 10 times faster than BASIC.

DYNAOFT PASCAL Object only \$69.95
w/source \$99.95

A fast integer only P-Code compiler ideal for ROMable applications. Powerful enough for the DynaStar word processor.
Written for 6809 OS-9 (\$10 less for FLEX)

MW OS-9 PASCAL COMPILER \$400.00

A comprehensive implementation of PASCAL, it has ability to generate either highly optimized assembly language source code or P-codes for interpretive execution while debugging.
For OS-9.

MW CIS COBOL COMPILER \$895.00

The "CIS" stands for compact, interactive, and standard, making COBOL ideal for microcomputer business applications. For OS-9.

MW FORMS 2 FOR CIS COBOL \$200.00

A COBOL program generator which facilitates fast and convenient development of interactive screen oriented applications.

WORD PROCESSING

DYNASTAR Object only \$149.95

Screen Editor: A powerful menu-driven screen editor equally suited to the tasks of program preparation and document processing. Similar to WORDSTAR (tm).
Written for 6809 OS-9 and FLEX.

DYNAFORM Object only \$149.95
With DynaStar, both only \$275.00

Text Formatter: Provides all the standard features such as pagination, headers and footers with page numbers, single space, double space, bold-face, double strike and more.
Written for 6809 OS-9 and FLEX.

DYNASPELL Object only \$199.00
w/source \$299.00

The most versatile 68XX spelling checker available. Fast and easy to use.
Written in assembler for 6809 OS-9 or FLEX

STYLOGRAPH 2.0: \$295.00

SPECIAL NOW FOR FHL COLOR FLEX ONLY \$195.00

A very powerful, yet easy to use text processing system. This system is cursor-oriented with dynamic screen formatting.
For 6809 FLEX and OS-9.

STYLOGRAPH MAILMERGE \$125.00

For use with Stylograph Word Processing System, will fulfill three different needs.
For 6809 FLEX and OS-9.

STYLOGRAPH SPELLING CHECKER \$145.00

A fast and very easy to use tool that allows even an inexperienced user to eliminate spelling errors from text!
For 6809 FLEX and OS-9.

READTEST Object only \$54.95
w/source \$74.95

A must for all writers and instructors, it reads your text and tells you how well it was written.
Written in assembler for 6800 or 6809 FLEX

TSC TEXT PROCESSING SYSTEM \$75.00

This system allows the use of over 50 commands for special text formatting applications.
Post processor for FLEX.

SOFTWARE DEVELOPMENT TOOLS

CRASMB FLEX \$139.95

CPM's (CPU Modules) FLEX \$25.00
OS-9 \$35.00

Source or binary for the following: 6800, 6801, 6809, 6502, 1802, Z80, and Z8. OS-9 includes 6809 binary.
Will cross assemble source code into object code. (runs on 6809 systems.)
Written for 6809 FLEX and OS-9.

OSM \$125.00

OS-9/FLEX MACRO ASSEMBLER: A fast and versatile macro assembler with ability to define macros, with substantial parameters, conditional assembly directives and ability to change value of a label or symbol. Create OS-9 binary files in FLEX and vice versa!
Written for 6809 OS-9 or FLEX

SUPER SLEUTH 6800/6809 w/source \$99.00
Z80 w/source \$99.00

A set of programs which will enable the user to examine and/or modify binary program files on disk or in memory.
Both written for FLEX, UniFLEX and OS-9.

6502 TRANSLATOR w/source FLEX \$75.00
UniFLEX \$80.00
OS-9 \$85.00

Enables the user to translate 6502 assembler code into 6809 assembler code.
Written for 6809 FLEX, UniFLEX and OS-9.

DEBUGGING SIMULATORS 6805 or 6502:
w/source FLEX \$75.00
UniFLEX \$80.00

Programs which enable user to simulate, examine and/or modify object 6805 and 6502 program files on 6800 and 6809 systems under FLEX.
Written for 6809 FLEX and UniFLEX.

PIC/PID 6800 Translator: FLEX \$50.00
UniFLEX \$60.00
OS-9 \$75.00

Translates 6800 assembler programs to 6809 mnemonics and converts 6809 programs to position independent code and data (Pic/Pid)
Written in assembler for the 6809.

CROSS ASSEMBLER MACROS: FLEX \$50 ea - 3/\$100
UniFLEX \$60 ea - 5/\$120

6800/1, 6502, 6805, 8080/5 and Z80: For use with the TSC Assembler.
A macro text file.

OSM - OS-9/FLEX MACRO ASSEMBLER \$125.00

For FLEX or OS-9, Create FLEX or OS-9 binary files from either FLEX or OS-9. OSM is a MACRO assembler like CRASMB. It is similar to TSC's Assembler, but it has more powerful MACROS. OSM makes it easy to move FLEX programs to OS-9. In OS-9 it gives MACRO capability like TSC's assembler and is compatible with TSC source files. OSM was used by the author to move CRASMB to OS-9.
For OS-9 or FLEX.

Editor \$50.00

ED has all the features of TSC's editor with the addition of screen type editing, MACRO capability, and a math package. Works with files larger than memory. It has many additional features.
For 6809 FLEX.

ASM - assembler \$50.00
ASM is compatible with TSC's assembler. But with more powerful MACROS and conditionals, than TSC's.
For 6809 FLEX.

MW MACRO TEXT EDITO \$125.00

Combines a minimum keystroke text editor with a macro-driven string processing language. A powerful tool for creation, conversion, or reformatting.
For OS-9.

DynaStar

WORD PROCESSING SYSTEM FOR OS-9

OS-9 USERS:

If your computer has a SCREEN and you're still struggling with an editor that only knows about LINES, then obviously YOU don't know about

DynaStar

DynaStar is a powerful, menu-driven screen editor equally suited to the tasks of program preparation and document processing. With the addition of the optional DynaForm print formatter, it is the best word-processing package you can buy for your OS-9 system.

DynaStar Version II is now available and features nonsense "what you see is what you get" editing for virtually any terminal with or without cursor addressing (it must be at least able to go to "home"). To edit, simply place the cursor where you want it, and type. Any printable character you type is entered directly into your text, and any non-printable control character causes immediate execution of an editing command. Single keystroke commands permit movement of the cursor in any direction, by character, tab, word, line, or screen full, and deletion of characters, words (left or right) or a whole line. Two keystroke commands augment this set by moving the cursor to the left margin, top or bottom of the screen, beginning or end of the edit buffer, or the beginning of the next paragraph. You can search for any string, replace with any other, do it again, mark original blocks of text, copy, move or delete blocks, read or write to side-files, set tabs and margins, or center the current line.

DynaStar features automatic word-wrap, and it can right-justify text as you enter it so you will see exactly how it will look *before* you print it. If you later make alterations or change the margins, you can reform the text a paragraph at a time with two keystrokes. For programmers, there is a special automatic indent mode to help you write well-structured code. DynaStar includes a Shell command which lets you do almost anything (including edit another file) without even losing your place in your current document, and it permits editing of large disk files in stages without forcing you to break up your files.

If you want to define more powerful commands, DynaStar includes a macro facility which lets you convert any control character to one or a string of characters of your choice. You can use this feature to create global search-and-replace commands, insert "boiler-plate," or simply re-map your keyboard. You can also provide a

special "start-up string" which is automatically executed whenever you enter the editor to set up modes such as auto-justify, display a directory, define your favorite macros, or re-map the keyboard.

For complete word-processing, we offer our DynaForm text formatter which provides all the standard features such as pagination, headers and footers with page numbers, single space, double space, multiple space, **bold face**, **double-strike**, and underline. DynaForm has its own macro facility with string variables, nested include files, a full merge-print capability for generating form letters and mailing lists, and it can generate an index automatically, sorted alphabetically or by page number. You can call it from DynaStar to proof-print the active edit buffer, or by itself to print a disk file while you edit another.

DynaStar II: OS-9 or FLEX	\$149.95
CCFLEX Version:	\$ 90.00
DynaForm text formatter: OS-9 or FLEX	\$149.95
DynaForm CCFLEX Version:	\$ 90.00
Both purchased together:	\$275.00
Both CCFLEX Versions:	\$175.00

AVAILABLE FOR FLEX 9

DynaSpell

From Dale Puckett

FOR OS-9 AND FLEX

DynaSpell is the most versatile 68XX spelling checker available.

MENU'S MAKE OPERATION EASY. From the menu you may: Print a list of suspect words; Print a list of valid words; Check each suspect word one by one; Read your text, stopping to check suspect words; Use additional dictionaries for more thorough checking or special applications; Build an additional dictionary of newly accepted words; Write correct text file to disk.

While checking you may: Accept the suspect word; Accept and save in the dictionary; Replace with correct spelling.

Designed to be used by the layman, DynaSpell is right at home in the office. Ease of use and speed will recover the cost in days.

22,000 word dictionary covers the first 25,000 entries in the American Heritage listing of the most common English words.

500 built in common words (and, or, the, etc.) and 300 specific to your field, filter the text and allows a large file to processed even in small computers.

MAIL CALL

Dear Bill,

Color Computing is pleased to announce that the LA Color Exchange, LA's first Color Bulletin Board is up and running 24 hours a day! The number is (213) 563-7727. Call it up and give it a try!

Sincerely,
Don Brown

Dear CCN,

We just got the November issue here at George Associates and were both surprised and delighted to see the letter by Paula Giese in which she talks about our forthcoming Color Computer Expansion Unit. Yes, such a thing does exist, and it should be available by the time you print this letter. Ms. Giese described our unit rather well, but we thought we should give you a complete rundown on it from the source. Here it is:

The Expansion Unit can be plugged into the cartridge slot of any Color Computer, regardless of internal memory. No modifications are necessary. The unit contains 64K of RAM, a single/double density disk controller, an 80x25 video display with lower case, full video attributes

10 CCN Feb '83

and assorted graphics characters, and a Z-80A. It also contains another serial port, a parallel port, and two expansion busses for additional circuitry. Options include an controller/-talker/listener capability, and a light pen which will work with both our 80x25 and the CoCo's video.

What can an "Expanded" Color Computer do? For starters, you can run the FLEX, OS-9, CP/M, and UCSD p-system operating systems, as well as Color Basic. These are the standard, "big" machine versions, not reduced-memory, shrunken-screen implementations. Running any of these operating systems is as easy as inserting a disk and booting it up. Yes, "any" CP/M software will run on the Expanded Color Computer, without fuss. In fact, this letter is being written on a prototype running WordStar.

Any standard 5.25" disk drives can be used, offering as much as 800k user storage per drive when using an 80 track, double sided drive. The 64k of RAM we include is in addition to whatever the CoCo has, opening the door to 96 and 128k Color Computers! We are already working on using some of

Mail Call

this extra memory for disk buffering. This, along with an optimized, high speed disk seek algorithm, combines to vastly increase disk access speed. The screen memory and boot ROM are bank switched, so they do not rob from the address space: this is a 64k system which really does have 64k.

The 80x25 display produces composite video with inverted, half-intensity, underlined and blinking characters. A video multiplexer allows either this video or the CoCo video to be displayed on a monitor. Of course, there's no reason why someone couldn't have a TV displaying the CoCo video at the same time a monitor displays the 80x25.

Why add so much power to the Color Computer? We feel the CoCo has a powerful core needing suitable support, which we have designed the Expansion Unit to provide. There is very little a user might need to do that an Expanded Color Computer won't handle, making it perhaps the biggest little computer around.

Sincerely,
Mike Silva
George Associates
PO Box 960
Berkeley, CA 94701

Dear Sirs;

For the Color Computer Users who enjoy their joysticks with games, try this modification to the game "SLITHER" found in the November issue of CCN.

after line 7, insert:

```
8 DEF USR0 = &HA9DE
```

replace lines 510-540 with:

```
501 SA=USR0(0)
502 SX=PEEK(&H15A): SY=PEEK(&H15B)
503 IFSY<5THENDY=-1:C=1:GOTO550
504 IFSY>59THENDY=1:C=1:GOTO550
505 IFSX<32THENDX=-1:C=1:GOTO550
506 IFSX>32THENDX=1:C=1:GOTO550
```

Than you for a fine publication;
Hubert Samm, Jr.
Belleville, IL

Dear CCN,
I was very pleased to read my article in

September CCN. However, a few things were not clear. The unkown symbol is, as some may have guessed, Omega the symbol for ohms. It is a 33 ohm register that is called for in the modification. Also it is not clear which board revision was used. The modification will work on the revision "D" or revision "E" board. Why bother on the "E" board? So you don't have to remove 8 capacitors from the board. You may use the jumpers for "MEM-SIZE" (between the PIA's) and low/high should be on high.

Then, having discovered that I could no longer use my 8K RAM PACK, because of the 64K mod, I did a little more reviewing and now I have three switches on top of my keyboard (and a pilot light). An on/off switch, a reverse video switch and a 64K/96K switch. With a tiny program in RAM PACK, you can access both pages of 32K RAM from BASIC, and with Disk Extended BASIC (24K ROM), 8K RAM in the PAC, and 64K RAM, the CC has 96K (count 'em) memory.

So when I get all the bugs stomped on, we may see another article here. Questions and suggestions are welcome. Write me,
Chris Hawks
307 Sexauer Ave.
Elgin, IL 60120

Dear Bill,

Here is another method of improving the utility of the Extended Basic DRAW statement. How often have you wished for an easier way to use variables instead of constants for any DRAW subcommands? I have a lot. Well, guess what! Yesterday I was looking through the messages on the CompuServe Color Computer Special Interest Group, and I came across a message (I don't remember from who, sorry) mentioning how to do it. I looked into it, and I wrote this letter to detail how to do it to the many CCN readers who don't use CompuServe and/or the CoCo SIG.

Its been there all the time, but Radio Shack just never bothered to mention it in the Extended Basic Manual, or any newsletter. I assume the omission was just another error, like the many others you all have undoubtedly found in the manual.

Enough suspense. It simply is this:

Mail Call

wherever you can use a number in a DRAW string, you can instead use an = sign, followed by the variable name, followed by a semicolon. The variable must be numeric, it must be non-negative, it can be subscripted (and the subscript number can be another variable or constant) and its name can be any number of characters long. The semicolon following the variable must always be included. Here are a few examples; the old way on top, and the variable way below:

Example 1:

```
DRAW "C2L16C3D20"
```

```
C1 = 2:C2 = 3:FL = 16:DN = 20:
```

```
DRAW "C = C1;L = LF;C = C2;D = DN;"
```

Example 2:

```
DRAW "BM50,60;M + 15,-60"
```

```
Z(1) = 50:Z(2) = 60:A = 15:B = 60:
```

```
DRAW "BM = Z(1);, = Z(2);M + = A;,- = B;"
```

(Note that if B = -60, DRAW "M + = A;,-" would give an ?FC ERROR)

I can think of lots of uses for this capability. Among them are the ability to scale shapes in finer gradients than those available with the S command; to make a whole set of shapes (like a graphic alphabet) shorter, wider, taller, etc. By the same amount; and to prevent 'hitches' in lines and corners when using the same shape in 4 and 2 color PMODEs (by using even variables with 4 colors, and even or odd ones for 2 colors).

In reply to Mr. Moade's letter in the October issue, he can find the answer to his disk Vitamin-E deficiency problem in a letter of mine that appeared here a few issues ago, or maybe in 80 Micro. Without going into details, Mr. Moade, unless you are willing to grab a soldering iron and remove C73, C75, and C85 and bypass R73, R74 and R80 (if they aren't dark grey), you'll have to settle with running at normal speed while the disk is attached.

In reply to W.P. Redner's letter, the only way to use as much of 64K as possible with a word processor is to either use a FLEX word processor, or to wait for a 64K version of another word processor, such as Cognitec's Telewriter, which I hear is due out soon. Even with the 64K option installed, unless you can do without all the basic ROM

routines, you only have about 30K of free memory.

One final question. I know that Color Computers are going to be sold in department stores as the TDP100, possibly under the RCA label. Does anyone know any specifics on these computers, such as when they'll appear on the shelves, who will sell software for them in the same stores, who will service them, ect.?

Sincerely,
Alexander Benenson
Rochester, NY

, In addition to Telewriter Cer-Comp has a 64K version of their text processor that gives you a 54K text buffer.

Dear Bill,

Please find enclosed a years subscription to your excellent magazine. A good number of the members of our recently formed (3 months) "Durham 80'C Computer Club" presently have subscriptions to Color Computer News. Do you have subscription discounts for users groups?

Would much appreciate it if you would advertise the existence of our club to your readers in Canada. I am the secretary of the Durham 80C Computer Club and can be reached at 782 Kenora Avenue Oshawa, Ontario, Canada. Looking forward to more great articles and information.

Regards
Brain Smith
Oshawa, ONT

Color Computer News,

Please warn your readers of the potential trouble which the sockets on the Micro Labs RAM/ROM memory extention board can cause.

Of the 4 sockets on the \$24.95 board I purchased - all four had a bad connection in one of the pins.

Its too bad that such an expensive item has to be assembled with such JUNK.

Micro Labs needs a quality assurance program to keep its sales from drooping.

Keep up the good work. The best CC magazine on the market---BY FAR.

(602) 834-0283

BOOTING DOS AND DOS COMMANDS

Last month we looked at a few more advantages of a DOS over ROM BASIC and a few disadvantages as well. This month we are going to look at how FLEX is booted from its disk and we'll start looking at the standard FLEX command utility programs.

Sources for FLEX

But first, let's take a look at who is selling FLEX for the Color Computer (just in case you are ready to buy!). As of this date (Nov. 1982) there are three manufacturers producing adaptations of FLEX for our marvelous little gray computer. Each of these adaptations will certainly have some minor differences. Over the next several months I will try to find out what all of these differences are and report them to you. But, bear in mind, the purpose of this column is to study FLEX, which is what all of these adaptations have in common - not their differences. Yet, I feel responsible to inform you of the special advantages (or disadvantages) of each adaptation.

Current vendors are:

Data-Comp
South East Media
P.O. Box 794
Hixson, TN 37343
(615) 842-4601

Frank Hogg Laboratory
The Rgency Tower, Suite 215
770 James Street
Syracuse, NY 13203
(315) 474-7856

Spectal Associates
141 Harvard
Tacoma, WA 98466
(206) 565-8483
(800) 426-1830

Of the three vendors mentioned above, Spectral Associates has been advertising the coming of their version of FLEX for some time now, but still aren't ready to ship it. But, remember, this is being written in November, and so it may be available by the time you read this.

The other two, Data-Comp and Frank

THE ULTIMATE IN COLOR COMPUTING

For the TRS-80 Color Computer and TDP System 100 Personal Computer

Super "Color" Writer II

By Tim Nelson

The Rolls Royce of Word Processors

The Super "Color" Writer is a FAST, machine code, full featured, character (screen) oriented word processing system for the TRS-80™ Color Computer and ANY printer. The video display is styled after a professional phosphor (green characters on black background) display for hours of use without eye fatigue (optional orange on black). The unique print WINDOW frees you from 32, 51 or 64 character lines FOREVER! This window can be moved anywhere in the text file, up, down, left or right to display the text as it will be printed without wasting paper. You can create or edit Super "Color" Terminal files, ASCII files, BASIC programs or Editor/Assembler source listings. It's simple enough for beginners with 4K and . . . for the professional writer with a 32K disk system and a lot to say, there's plenty of room to say it!

COMPARISON CHART	SUPER COLOR WRITER			THE COMPETITION		
System Size	4K	16K	32K	4K	16K	32K
TAPE: Text space	N/A	7K	23K	N/A	2K	18K
ROMPAK: Text space	2.5K	16K	31K	N/A	N/A	N/A
DISK: Text space	N/A	5.5K	21.5K	N/A	0.5K	16.5K
Right Justify		YES			NO	
Video Window		YES			NO	
Edit any ASCII File		YES			NO	
Programmable Function		YES			NO	

The figures speak for themselves and with professional features like PROGRAMMABLE function string commands to perform up to 28 commands automatically. PROGRAMMABLE text file chaining, PROGRAMMABLE column insert & delete, and right hand JUSTIFICATION with punctuation precedence, the choice is clear but there's still more! In their September '82 issue, "80 MICRO" says, "The Color Computer has finally come of age. Nothing illustrates that coming of age better than this offering (SUPER "COLOR" WRITER) by Nelson Software". The Super "Color" Writer takes full advantage of the new breed of "smart printers" with Control codes 1-31, 20 Programmable control codes 0-255 for special needs. Works perfectly with all Epson, Radio Shack, Okidata, NEC, IDS, Centronics, Citch, Smith Corona, Diablo Etc., Matrix, or Letter Quality Printers.

CHECK THESE FEATURES!!

User friendly • Easy commands • 32K Compatible • Window • Key beep • HELP table • 128 character ASCII & graphics • Mem left and Mem used • Full cursor control • Quick paging • Scrolling • Word wrap around • Tabs • Repeat all functions • Repeat last command • Insert character & line • Delete character, delete to end of line, line to cursor, line & block • Block move, copy & delete • Global Search, Exchange & Delete • Merge or Append files • Imbed Control Codes in text • Underline • Superscripts • Subscripts • Headers, Footers & 2 Auxiliary footnotes on odd, even or all pages definable position • Flush right • Non-breakable space • 4 centering modes: 5, 8.3, 10 & 16.7 (CPI) • Full page & print formatting in text • Single sheet pause • Set Page length • Line length, Line spacing, Margins, Page numbers • Title pages • Printer baud: 110, 300, 600, 1200, 2400 • Linefeeds after CR • Soft & hard formfeed • Works with 8 bit printer fix • and more!

Super "Color" Writer II Disk

The Disk version of the Super "Color" Writer works with the TRS-80C Disk System and has all the features listed above plus many more! Use with up to four Disk Drives. Includes an extended HELP table you can access at any time. Call a directory, print FREE space, Kill disk files and SAVE and LOAD text files you've created all from the Super "Color" Writer. Print, merge or append any Super "Color" Terminal file, ASCII file, BASIC program or Editor/Assembler source listing stored on the Disk or tape. The Super "Color" Writer Disk version has additional formatting and print features for more control over your printer and PROGRAMMABLE chaining of disk files for "hands off" operation. Print an entire BOOK without ever touching a thing! Includes comprehensive 90 plus page Tutorial manual.

TAPE \$49.95 ROMPAK \$74.95 DISK \$99.95
Tutorial only \$15.00 (Refundable with purchase)

ORDERING INCLUDE \$3.00 for shipping in the U.S. & Canada, \$6.00 for Foreign orders. C.O.D. add \$2.00.

Super "Color" Terminal

By Dan Nelson

The Ultimate in Smart Terminals

The Super "Color" Terminal turns the Color Computer into a Super-smart terminal with all the features of VIDEOTEX™ plus much more. COMMUNICATE with Dow Jones & Compuserve and with computers like the TRS-80™ MODEL I, II, III, APPLE etc., via modem or RS-232 direct! Save the data to tape or print it! Reduces ON-LINE cost to a minimum!

FEATURES

10 buffer size settings from 2-30K • Buffer full indicator • Prints buffer contents • Full 128 ASCII keyboard • Compatible with Super "Color" Writer files • UPLOAD & DOWNLOAD ASCII files, Machine Language & Basic programs • Set RS-232 parameters • Duplex: Half/Full • Baud Rate: 110, 300, 600, 1200, 2400, 4800 • Word Lengths 5, 6, 7 or 8 • Parity: Odd, Even or None • Stop Bits: 1-9 • Local linefeeds to screen • Tape save & load for ASCII files, Machine code & Basic programs • Unique clone feature for copying any tape.

Super "Color" Terminal Disk

The disk version of the Super "Color" Terminal works with the TRS-80C Disk system and has all the features listed above plus many more! Use with up to four Disk Drives • Call a directory, print FREE space, kill disk files, save and load text files or BASIC programs • Echo ability in full duplex • Lower case masking • 10 Keystroke Multiplier (MACRO) buffers that can be saved on disk to perform repetitive log-on tasks and send short messages (up to 250 characters each) • Programmable prompt or delay for send next line • Selectable character trapping • Set printer Baud rate to 110, 300, 600, 1200, & 2400 • Operators Manual.

TAPE \$39.95 ROMPAK \$49.95 DISK \$69.95
Operators manual only \$10.00 (Refundable with purchase)

NEW!!

Super "Color" Mailer Correspondence-Mailmerge

The Super "Color" Mailer is a powerful multi-purpose file merging program that uses files created by the Super "Color" Writer II. One of Super "Color" Mailer's most popular uses is producing customized form letters — at a fraction of the time and expense of individually typed letters. With Super "Color" Mailer you can combine a Super "Color" Writer II file containing a form letter with a file containing a list of names and addresses. You can even insert special words and phrases — unique to each addressee — into the body of the letter. Other Super "Color" Mailer uses include creating invoices, printing mailing labels, addressing envelopes, and producing "boiler plate" legal documents out of many different paragraphs. Features include: the ability to selectively print mailing lists by any of up to 10 user definable fields • automatically prints current date • address • salutation • closing • P.S. etc. • prints any ASCII file • justification.

TAPE \$39.95 DISK \$59.95

NEW!!

Super "Color" Disk-ZAP The Ultimate in Disk Repair Utilities

A must for ALL Color Computer Disk system owners. A high-speed, machine code Disk Utility that can copy sectors and tracks • repair directory tracks and smashed disks, etc. Super "Color" Disk-ZAP has a special screen display that displays sector, track and memory contents in HEXADECIMAL and ASCII at the same time with double cursors that can be moved in any direction. With Super "Color" Disk-ZAP you are able to verify or modify disk sectors at will. You can even type right onto the Disk! You can send sector contents to the printer or any other RS-232 device in either ASCII or HEXADECIMAL listing. Search the entire Diskette for any ASCII or HEXADECIMAL string. Comes complete with comprehensive manual.

DISK ONLY \$69.95

COMING
SOON!!

Super "Color" Calc Electronic Spread Sheet

The finest electronic spread sheet and financial modeling program available for the Color Computer — A sophisticated yet easy to use, calculating and planning tool. Project figures into the future to answer the "What if?" questions you face. Create files compatible with the Super "Color" Writer II. Combine spread sheet tables with your documents to create ledgers, projections, statistical & financial reports & budgets.

AVAILABLE AT DEALERS EVERYWHERE. IF NOT, ASK WHY!!

TRS-80 is a registered trademark of the Tandy Corp.

Super "Color" Writer II

A "ROLLS ROYCE" FOR YOUR COLOR COMPUTER

If you are contemplating buying a word processor for your TRS-80C Color Computer or TDP System 100 Personal Computer, look no further!! The Super "Color" Writer is the most powerful and most versatile word processor available. This *user-friendly* program gives you many times the power and speed, and **MORE MEMORY** than any other word processor for your computer. The Super "Color" Writer does it all!

No other program lets you fully use every capability built into your printer, **AND WITH EASE!** *Emphasis, italics, double strike, normal mode, compressed, elongated-compressed mode, and ELONGATED EMPHASIZED ITALICS* are at your fingertips, all within **JUSTIFIED** text. Underlining is a breeze! All the parameters for proper page formatting (margins, page length, etc.) are fully alterable. Yet, without changing a single thing you can print text perfectly the first time.

Don't think for a minute that the Super "Color" Writer II won't work with your letter quality printer. There's no reason you can't give H₂O its proper name or have footnotes. As for bold print, undefining, proportional spacing, super bold or any other printer-controlled function - if your printer has it, the Super "Color" Writer II can do it! You can also freely exchange thimbles or daisy wheels to change to italics, or to a totally different typeface with the pause print feature.

And the Super "Color" Writer II has the exclusive **WINDOW** to make your formatting pleasant and perfect. Enter the window to view your whole text as it will be sent to the printer, **whatever your margins, from 1 to 200 or more!** No longer will you be tied to seeing only 32, 51, 64 or whatever number of characters on a line. You can see that your text is centered, headers and footers are always properly placed, and your columns are correct.

With the Super "Color" Writer II screen editing is a snap; the commands are powerful and hard to forget. You can edit all your BASIC PROGRAMS TOO! With all these features, you must surely agree that this is the "ROLLS ROYCE" of word processors. To learn more, refer to the Nelson Software Systems ad in this magazine. And don't forget that the Super "Color" Writer II is only one important part of the Super "Color" Library, which includes the Super "Color" Terminal, the Super "Color" Mailer, the Super "Color" Disk-ZAP and the soon to be released Super "Color" Calc and Super "Color" Database. No other company gives you such outstanding products and support. You can buy theirs now and ours later, OR you can save your money and get the best from the very start!

This document was prepared using a TRS-80(TM) Color Computer, the Super "Color" Writer II, an Epson MX-80 Graftrax Plus (TM), and an NEC Spinwriter 3510 (TM) to illustrate the great flexibility in formatting allowed by the Super "Color" Writer II.

Spinwriter is a trademark of NEC Information Systems, Inc. MX-80 Graftrax Plus is a trademark of Epson America, Inc. TRS-80 and TDP System 100 Personal Computer are trademarks of the Tandy Corporation.

Flex Corner

Hogg Laboratory, have been shipping for several months now. I now have both of these versions at my disposal and will soon have a good feel for their abilities.

How FLEX is booted

And now, on with the good stuff. Back in the November 1982 issue I stated that most systems which run FLEX use a Monitor ROM to load it from a disk into RAM. However, the Color Computer has no such ROM. Add to this the fact that FLEX-9 (the "—9" indicates tht we are talking about the 6809 version and not the 6800 version) must load at addresses \$C000 thru \$DFFF (the dollar signs mean hexadecimal). But, Radio Shack's DISK BASIC ROM resides at these same addresses. So, how is this conflict resolved?

The answer is really quite simple. By switching the system into the 64K RAM mode all of the BASIC ROMs are disabled and RAM is substituted in their place. The ROMs which span memory address \$8000 thru \$DFFF are replaced with RAM which spans memory addresses \$8000 thru \$FEFF. Switching into this 64K mode is accomplished by writing any data to address \$FFDF. This sets the Map Type bit in the SAM (Synchronous Address Multiplexer) chip selecting the 64K mode (also known as Map Type 1) and deselecting the ROMs. Writing any data to address \$FFDE will clear the Map Type bit in the SAM disabling the upper 32K of RAM, and return the ROMs back into the system's domain (also known as Map Type 0).

Take note, however, that although the above could be accomplished with POKE &HFFDF,0 and POKE &HFFDE,0, the earlier of these two statements will undoubtedly cause your system to crash. Not permanently of course, but you will have to press the Reset switch or maybe even turn power off and back on again to regain control. This is because when the ROMs (which contain the BASIC operating system) are disabled and the upper 32K of RAM is enabled in place of the ROMs, what is contained in this RAM% Junk, that's what!

And, when the BASIC operating system disappears and Junk is substituted in its place, the system will obviously crash.

And so, it becomes clear that this transition from Map Type 0 to Map Type 1 must be done very carefully. In fact, it must be done by a machine language program which resides in the bottom 32K of RAM. This is because the bottom 32K of RAM is the only section of memory that remains stationary when the Map Type transition is performed.

Now things are really going to get deep. We all know from reading the FLEX ads that FLEX can be booted (that is loaded and executed) by simply typing RUN "FLEX". We also know that when we use the RUN command to load a program, this program MUST be written in BASIC. So, what about the machine language program we mentioned above? Simple — the BASIC program which we loaded via the RUN command loads the machine language program from the disk and starts it executing.

This machine language program must consist of at least the following:

- 1) The necessary logic to make the transition from Map Type 0 to Map Type 1.
- 2) A disk driver routine. That is to say a routine to read data from the disk, since the routine to do this in the BASIC system disappears when the ROMs are disabled.
- 3) The logic necessary to load FLEX from the disk into RAM addresses \$C000 thru \$DFFF, plus whatever extra each particular adaptation may require, and to start FLEX executing after it has been loaded.

We now have FLEX up and running. But, there is another problem to overcome — the ROM BASIC disk format is not the same as the FLEX disk format. In other words, ROM BASIC writes data, including the disk directory, on the disk differently than the way FLEX does. This makes the two systems incompatible, yet they both must reside on the disk in order for ROM BASIC to carry out the RUN "FLEX" command and for FLEX to be loaded and execute correctly. How is this done?

It is indeed fortunate that the two systems are different. ROM BASIC stores its system information and disk directory on track 17. FLEX stores its system information and directory on track 0. Because of this difference it is possible for both systems to

Flex Corner

utilize parts of the same diskette. It is, however, still necessary to take additional steps to keep the two systems out of each others hair. This is done in a two fold manner.

First, ROM BASIC's File Allocation Table (FAT) on track 17 of the disk is dummied up so that ROM BASIC thinks that the entire disk is full, even though, in actuality, it is not. If, under ROM BASIC, you execute the DIR command you will see only 1 or 2 small files on the disk. However, since ROM BASIC thinks there is no more available room on the disk it will respond with a DF (Disk Full) error if you try to write any new files to this disk. This keeps ROM BASIC from encroaching upon FLEX's area of the disk.

Secondly, FLEX is kept apart from ROM BASIC's area of the diskette by modifying FLEX's free chain. As we discovered before, FLEX keeps track of disk space by individual sectors instead of by granuals like ROM BASIC does. Files longer than one sector are created by 'linking' two or more sectors together into a chain. The first two bytes of every sector are used by the FLEX system as a 'pointer' to the next sector in the chain. If this pointer equals \$0000 then this is the last sector in the chain.

All unused sectors on a FLEX disk are linked together into a chain called the 'free chain'. On a freshly formatted FLEX disk every sector on the disk is linked into the free chain except for the system information sectors and the directory. Therefore, the entire disk contains only one chain consisting of all the sectors on the disk (except those mentioned) with each sector's pointer set to point to the next physical sector on the disk — and this entire chain becomes the free chain. It becomes the free chain because on a freshly formatted disk all of these sectors are available for allocation to new files.

Since the free chain is the source from which FLEX gets all of the sectors it will allocate to various files, it is possible to keep FLEX out of ROM BASIC's section of the disk. This is done by breaking the free chain at the end of track 16 and setting the pointer in this sector to point to the beginning of track 18, thereby eliminating the entire track 17 from the pool of sectors available to

FLEX.

And there you have it. FLEX and ROM BASIC can now reside on the same diskette and not interfere with one another. Also, the ROM BASIC portion of the disk may be used to boot FLEX into memory and start it executing.

Comparison of commands

As an introduction to our discussion of FLEX's commands, let's compare ROM BASIC's available disk commands with FLEX's. The following is a list of these commands. Obviously, ROM BASIC has many more commands, but, they are not directly relevant to the disk drive. The list indicates which commands in the two systems compare most favorably in terms of disired effect.

ROM BASIC	FLEX
DRIVE	ASN
DIR	CAT/DIR/FILES
?FREE	CAT/DIR/FREE
DSKINI	NEWDISK
BACKUP	COPY/BACKUP
COPY	COPY
KILL	DELETE

Flex Corner

```
/ECHO
/EXTRACT
/FIND
/HECHO
/MAP
/MEMEND
/RUN
/ZAP
```

Note: any command name following a slash (/) is an optional program — most of which are included in the optional Utilities package — and all of which are useful. Also note that an asterisk (,) indicates that this command is available under TSC's BASIC or XBASIC which runs under FLEX.

The FLEX commands

We are now going to begin an in-depth look at FLEX's command utilities. We are going to include the standard utilities that come with all adaptations of FLEX and several optional ones which I find extremely useful as well.

In the dialog that follows, and in my examples, I have used the comma as the delimiter (or separator) between fields (or items). In most cases a space may be used instead of the comma, and so the decision of which to use is left up to you and your preferences.

Command: CAT

We have talked about the CAT command to some degree before. You should recall that it is quite similar to ROM BASIC's DIR command. But, there are many features to the CAT command which we have not yet uncovered. The general syntax of the CAT command is:

```
CAT[,'drive list'][,,'match list']
```

where 'drive list' can be one or more drive numbers separated by commas, and 'match list' is a set of name and extension characters to be matched against names in the directory. Note that the items shown within square brackets ([]) are optional, and need be specified only if you desire their corresponding features.

18 CCN Feb '83

The drive list specification can be handy if you want to list the names of files from more than one disk at a time. For instance:

```
+ + + CAT 0,1
```

will produce a full directory listing of the disks in both drive 0 and in drive 1.

The 'match list' specification is extremely handy for selecting only certain files of interest. For instance, if you wanted to see only those programs beginning with the letter A, then you could enter;

```
+ + + CAT A
+ + + CAT 1,A
+ + + CAT 0,1,A
```

Each example would produce a listing of only those files beginning with the letter A. The first would list files from the current Working drive (we will discuss the concept of the Working drive menu when we discuss the ASN command), the second would list files only from drive 1, and the third would list the files from drives 0 and 1.

To list only the files which are made up of ASCII text, you might type the following;

```
+ + + CAT .TXT
```

Or, to list all BASIC programs which begin with the letters XY, you would enter;

```
+ + + CAT XY.BAS
```

This example would list files with names like XYZ.BAS, XY1.BAS, XY2.BAS, and XYPROG.BAS.

No matter what you specify for the 'drive list' and the 'match list', when the listing is produced, it looks like this:

```
CATALOG OF DRIVE NUMBER 0
DISK:disk-name #num

NAME      TYPE      SIZE      PRT
FLEX      . SYS     30        WD
PRINT     . SYS     01        D
ERRORS    . SYS     09        W
CAT       . CMD     03
COPY     . CMD     06
```

Flex Corner

```
LETTER   . TXT   04
PROG1    . BAS   02
PROG2    . BIN   01
```

FILE#	NAME	TYPE	R	BEGIN	END	SIZE	DATE	PRT
1	FLEX	.SYS		01-01	02-0C	30	17-JUL-82	WD
2	PRINT	.SYS	R	02-0D	02-OD	01	17-JUL-82	D
3	ERRORS	.SYS		02-0E	03-04	09	17-JUL-82	W
4	CAT	.CMD		03-05	03-07	03	17-JUL-82	
5	COPY	.CMD		03-08	03-0C	05	17-JUL-82	

SECTORS LEFT = xxx

FILES = 5, SECTORS = xxx, LARGEST = 30, FREE = yyy

Where 'xxx' is the number of free sectors remaining on the disk and 'disk-name' and 'num' were specified at the time the disk was formatted via the NEWDISK command. SIZE is the number (in decimal) of sectors assigned to the file. PRT is an indication of protection attributes assigned to the file. W indicates that the file is write protected and D indicates that the file is delete protected.

Command: DIR (optional)

The DIR command is similar to the CAT command. The general syntax of the DIR command is:

```
DIR[, 'drive list'][, 'match list']
```

where 'drive list' and 'match list' follow the description given in the CAT command exactly. DIR lists the following information about every file it displays:

- File name and extension
- File number
- Random access indicator
- Starting disk address in hex (track-sector)
- Ending disk address in hex (track-sector)
- File size in sectors
- Creation date
- Protection attributes

In order for the display to look decent you must use a display screen at least 64 characters wide. This wide screen is provided by both vendors now shipping FLEX for the Color Computer. If you use a screen width of less than 64 characters then each line of the DIR listing will wrap onto a second line. The display looks as follows:

```
DIRECTORY OF DRIVE NUMBER 0
DISK:disk-name #num CREATED:
17-JUL-82
```

Command: FILES

The FILES command is similar to the CAT command except that it only lists the file names and extensions. The file names are listed in a columnar form, showing 5 names per line. It does require an 80 character wide display to look good, and so you will probably only use the files command to produce directory listings to your printer. It is handy for generating shorter directory listings than are created by the CAT or DIR commands. The general syntax of the FILES command is:

```
+ + + FILES[, 'drive list'][, 'match list']
```

where 'drive list' and 'match list' follow the description given in the CAT command exactly.

Command: DATE

The DATE command is used to display or update FLEX's date information. The general syntax of the DATE command is:

```
+ + + DATE[, 'month,day,year']
```

where 'month' is the number of the current month (1 thru 12), 'day' is the number of the day within the month (1 thru 31), and 'year' is the last two digits of the current year. As an example:

```
+ + + DATE 11,29,82
```

If you enter the DATE command followed immediately by the ENTER key instead of the date numbers, then the current system date information will be displayed. As an example:

```
+ + + DATE
NOV 11, 1982
```

FLEX CORNER

Next Month....

Well, that's about enough for this month. After all, we don't want to get a headache. Next month we will continue looking in detail at FLEX's commands. 'Til next month....

At press time the following back issues are still available:

1982

All except January and May/June.

1983

January

Each back issue is \$2.95 plus shipping to your area.

There are a few copies of "Color Computer News, The Best of 1981" still available for \$9.95.

ENTER THE FASCINATING WORLD OF GAME WRITER™

A SIMPLE TO USE PROGRAM FOR YOUR COLOR COMPUTER

- For writing super-action video games with motion and sound
- For creating high resolution animated graphics scenes
- For experimenting with color, shapes, motion and sound
- For amateur or professional cartooning or commercial game authoring
- For the absolute beginner and for the expert programmer

GAME WRITER is a programming language with all the features you need to write great VIDEO GAMES. It includes a built-in screen oriented text editor, high resolution color graphics support, any number of player-shapes (SPRITES), a shape pattern editor, full TURTLE GRAPHICS, sound effects, support for joy sticks and much, much more. Each player-shape can be given a program to run which tells it what to do. All the player programs run simultaneously to create fantastic game effects. GAME WRITER IS GUARANTEED EASY TO USE. Even if you have never written a program of any kind you will amaze your family, your friends and yourself with the fantastic things you can do with it. The package includes a GAME WRITER rom pak, a complete easy to read manual and a set of sample programs ready to run. GAME WRITER is a great programming language for a child or an adult. GAME WRITER requires a minimum of 16K. Extended BASIC is not required.

PRICE \$129

Orders must be prepaid via check, money order or major bank card. Phone orders accepted for bank cards only—COD orders not accepted. Quantity discounts available. Orders outside U.S. add \$5 shipping. WA state residents add 6.3% sales tax. Add 2 weeks for delivery if paid by personal check.

32K Machine Language
\$24.95 tape
\$27.95 disc

ARCADE ACTION — How high can you climb? Four full graphic screens. Exciting sound - Realistic graphics. Never before has the color computer seen a game like this. Early reviews say: Just like the arcade - Simply outstanding!

PROTECTORS

Exciting fast paced arcade game that looks and plays like the popular arcade game "DEFENDER",

Wave after wave of enemy fighters drop bombs on your city. Destroy them before they destroy your city. Soon the mother ships appear firing laser blasts at you. Watch for the heat seeking mines.

Your defense includes your laser cannon plus four smart bombs on each of your four ships. A new ship with each 5,000 points.

High resolution graphics with four colors make this new 32K arcade game the one for others to follow.

MACHINE LANGUAGE \$24.95 TAPE \$27.95 DISK

KATERPILLAR ATTACK

Outstanding graphics and sound will end all of those trips to the arcade. So much like the arcade you have to see it to believe it.

16K MACHINE LANGUAGE \$24.95
DISK \$27.95

COLOR GOLF

Now sit at your computer and play nine or eighteen holes. Outstanding graphics in the fairway or on the green. Helps your game.

32K EXTENDED BASIC \$16.95

SOLO POOL

Now play pool with your color computer. Two players. Plays like machine language. Super color. High resolution graphics.

16K Extended Basic \$17.95

MAZE RACE

Maze race is a one or two player game. Play either against the built in timer or against your favorite opponent.

16K MACHINE CODE \$14.95

BIRD ATTACK

A fast paced machine language arcade game. Shoot the birdmen before they descend upon you. Watch out for their bombs!

16K Extended Basic \$21.95

OTHER GREAT GAMES

ALL PROGRAMS REQUIRE 16K
ML = MACHINE LANGUAGE B = BASIC

MOON LANDER • Fantastic Graphics. Land on the Moon if you can. 2 Programs. B \$15.95

DANCING DEVIL • Watch him dance to music or program him yourself. ML \$14.95

WAR KINGS • Battle to save your castle and king. High resolution graphics with outstanding sound make this one a real winner. 16K MACHINE LANGUAGE \$19.95

ADVENTURES

TREK-16 • Travel thru space with Spock and Capt. Kirk. Adventure. Tough! B \$19.95

SHIPWRECK • Escape from a desert isle if you can. Great Adventure! B \$14.95

UTILITIES

COLOR MONITOR - Written in position independent code. (May be located in any free memory). Very compact. Only occupies 1174 bytes of memory. Full Featured. Includes Break-Pointing of machine language programs, register display and modify, memory display and modify, and block memory move commands. Displays memory in hex and ascii format on one line 8 bytes long.

MACHINE LANGUAGE \$24.95

TAPE DUPE — Brand new machine language program that copies any tape effortlessly. Completely automatic. ML \$16.95

DISK TO TAPE - Dump the contents of any disk to tape automatically. ML \$19.95

TAPE TO DISK - Load the contents of any tape to disk automatically. ML \$19.95

MAIL LIST - Maintain a complete mailing list with phone numbers etc. B \$19.95

THE FIXER - Having trouble moving those 600 Hex programs to disk? The fixer will help. Completely automatic. ML \$18.95

TAPE CAT - All new machine language program lists contents of tapes to printer. Make a catalog of your tapes. ML \$17.95

PROGRAM PRINTER UTILITY - This program will list basic programs to your printer in two column format. Saves paper and makes your listing look professional. Disk based. B \$19.95

CHRISTMAS PACKAGE

10 PLUS PROGRAMS FOR \$20.00

All Basic Programs less than \$2.00 each. A real bargain for the beginner. Requires Extended Basic.

RE-INKING THAT L.P.VII CASSETTE RIBBON

by Joseph A. Ryan
P.O. Box 622
Florence, MS 39073

For those with the TANDY Corp. LINE PRINTER VII this could save MONEY. We all know that the going price for the cassette ribbon for the L.P. VII is \$8.65 (plus any taxes), and, as you've all noticed, the suppliers that offer discount prices on cassette ribbons for other printers (both TANDY'S and others), seem to leave out of their listing the L.P. VII printer. Well, you don't have to wait until the ribbon gets dim and then start applying 3-in-1 oil, etc., to the ribbon. No sir.... The cassette comes apart and there is a re-inkable roller inside one of the two cassettes.

First, remove the cassettes, as you are instructed to do, and before laying it on the table - turn 'em over. Now, the cassette on YOUR lefthand side (the one installed nearest the Printhead rest position) has a small gear and a foam wheel inside. Examine this cassette carefully and you'll notice that the bottom (the top now that it's turned over) can be removed by the carefull use of a small screwdriver, or knife blade. Pry gently, as the top is held on by two tits that fit into two holes in the base. When loose, carefully remove and lay aside.

22 CCN Feb '83

Inside you will see that, as the ribbon enters the cassette (after passing the printhead), it goes around a small plastic gear. This gear, in turn, presses against a larger foam wheel. That's the re-inker (you didn't think the short ribbon had all that ink in it, did you). Lift the foam wheel out and apply some inkpad ink (I used CARTER'S #442 numbering machine ink) to it at the top and around the side of the foam. Don't soak it, just a few drops from the brush that comes in the ink bottle will do. It will slowly sink into the foam.

Now, replace the wheel in the cassette by settling the wheel hub into it's cup in the cassette. The top can now be replaced CAREFULLY. When about to snap the top and bottom together take a small knife blade, or a piece of wire, and insert it between the two pieces to assist the other half of the foam wheel hub into the other cup on the top piece. Now you can snap it together. Thats it!

The other cassette, that is installed and removed first (according to the instructions printed on the heel-I mean printer) contains a spring-loaded pressure plate around which

Re-Inking Ribbons

the ribbon is pulled and merely supplies tension to the ribbon cassette system. What happens during operation, is that, as the ribbon is printed on, it is pulled past the advancing printhead and into the lefthand cassette. There, due to the tension on the ribbon, it turns the little gear you saw in the lefthand cassette. This little gear, in turn, both turns the foam, ink-loaded, wheel and in doing so, picks up some ink and applies it to the ribbon itself. Clever, eh?

Now, as long as the ribbon itself (which is probably made out of nylon) doesn't fray, which will eventually happen due to pounding of the printhead pins, you can, when necessary, re-ink again. You won't have to re-ink any more often then you would have to go out and BUY a new ribbon, and depending on the amount you print, could certainly be MUCH cheaper than dipping into the 'ole wallet. Just remember, you don't need more than enough ink to coat the top and bottom of the wheel and brush around the circumference. Too much ink and you may blot your paper, etc., so be stingy with the ink - if its too little, next time apply a little more. Also, save those old cassettes, if you haven't thrown them out, and you can re-ink them and save them (I wrap my spares in Plastic Wrap so the ink doesn't dry out in the exposed ribbon).

Thats it. I hope in these hard economic times I've helped someone with this hardware idea.

HARDCOPY

By Jerry Austin
R#1 box 364
Baraboo, WI 53913

The purpose of this program is to print the 80C graphics screen on a line printer. What is different is that it does not require the printer to have a graphics ROM. It only needs to be able to print Model I graphics characters that are standard in many popular printers. In order to do this it takes the 49,152 screen pixels on PMODE 3 or 4 and converts them into 8,192 Model I graphics characters. The common denominator used is 24 for this conversion. The reason for this is that the screen is by bytes and the Model I graphic characters are ASCII.

Each byte of screen memory displays eight pixels in PMODE 4 or four double width pixels in PMODE 3. A Model I graphic character is made up of six pixels arranged as two across by three down. In order to convert from screen pixels to graphic characters we take the first two bits of the first screen bytes, then the first two bits of first byte in the next line (+ 32 bytes), then the first two bits in the first byte in the third

line (+ 64 bytes) to make up one graphic character. We then do this again with the next two bits in each of the bytes until we have changed twenty-four bits into four graphic characters of six pixels each. The count of the rows is done in Basic and four characters are converted with each count. They are passed to Basic by PEEKing them out of high memory.

The main body of the program is in Basic and provides a cover page and display for a sample printout and also provides the driver for the machine code. It also allows for easy conversion to Disk as the screen memory is in a different location when the Disk system is in use. Also by using Basic in sending the characters to the printer it makes it simple to send a carriage return when it is required.

I used EDTASM+ to write the machine code. There are two parts to this code. The first is a sound routine for the cover page that is 100 bytes long. The second part does the conversions for the printout. The printout

Hard Copy

takes about 4 minutes and prints at about 30 cps. The printout is about the same size as the screen display if you have a thirteen inch monitor. The copy produced is not exactly proportional to the screen but gives a faithful reproduction of its content.

If you do not wish to type and assemble the program yourself I will supply it on tape for \$4.50 to cover postage and handling.

 all, we do the work!

LOOK AT SOME OF THE LETTERS WE RECEIVED FROM OUR SUBSCRIBERS.

"I just thought I'd let you know that your cassettes arrive in good order, load just fine, and I really enjoy your programs!"
 MARION, OHIO

"I was extremely impressed by the first tape I received from you. The added extras are just super."
 WILLOW GROVE, PENNSYLVANIA

"Seldom do I ever write a fan letter. Usually if something is good, nothing is ever said. I just renew the subscription or buy the product instead. T&D is an exception. I subscribe to several cassette computer magazines. Yours is certainly the most creative. The covers are original and clever. The material covered is excellent!"
 PINE BLUFF, ARKANSAS

"I only entered a six-month trial but am already willing to extend my subscription!"
 COLTEWAH, TENNESSEE

ONLY THE BEST SOFTWARE ON TAPE AT THE BEST PRICE (under 75 cents a program...)

Get 12 tapes a year containing over 75 colorful programs — and give your typing fingers a vacation.

A subscription to **CHROMASETTE Magazine** consists of 6 to 8 ready-to-load programs on tape delivered by First Class Mail every month. Programs like Blockade, Drawer, Mansion Adventure, CK Monitor, Append, Germ, and Cataloger.

Give yourself an extended holiday — Get a subscription to **CHROMASETTE Magazine**. Or just take a break and try a back issue (your fingers may never work again)...

**Radio Shack
Color Computer
TDP
System 100**

The Bottom Line:

1 year (12 issues)	\$45.00
6 months (6 issues)	\$25.00
Single Copies	\$ 5.00

Calif. residents add 6% to single copies.
North America — First Class postage included
Overseas — add \$10 to subscriptions and \$1
to single copies. Sent AO rate.

MasterCard/Visa

The Fine Print:

All issues from July 1981 available — ask for list. Programs are for the **Extended BASIC** models and occasionally for disks.

MINE INTRUDER

by Bill Franks
4939 Tunlaw Street
Alex, VA 22312

Mine Intruder is a game which gives you a break from the same old kind of "shoot 'em up" games. Instead of being in outer space or another planet, you stay on earth in a small country town which has a very rich emerald mine. You must get past the perilous boulders and angry miners with deadly picks in order to claim your prize of a very large emerald. This game moves very quickly for a BASIC program because it utilizes the extended BASIC commands of GET and PUT. The exciting arcade type sound effects are made using the PLAY command. The sound effects, however, slow the game execution down about 2 or 3 times slower than possible without them. I prefer the sound effects to the faster speed without them. If you would like the speed then delete all PLAYF\$, PLAYG\$, and PLAYH\$ statements. If you think it is too hard to have to make it back up to the top level after you get the emerald then change the end of line 515 to THEN GOSUB 525:GOTO 645. This

will make you win just by getting the emerald. The neat effects at the end of a game (they're especially neat when you win) are created by going from SCREEN1,1 to SCREEN1,0 rapidly. So far, all my friends and family who have played it have really enjoyed it. I hope you do too.

INSTRUCTIONS

The object of this game is to climb up and down the ladders, get the emerald at the bottom, and get back to the top without being killed 4 times. Each time you are killed, you start at the left side of the level you were on and one of the little men in the bottom corner disappears. When you're out of men, you lose. Use the joystick to move. In order to go up or down a ladder, get right under or over it and press up or down with the joystick. If you or one of the hazards goes off to the left, it will reappear on the right and visa-versa. To reset the game at the end just press R on the keyboard. Have fun!!!!!!!!!!

Mine Intruder

"THE ALTERNATIVE" COLOR COMPUTER DISK SYSTEMS

NOW ONLY 449⁹⁵ 40 TRACK DRIVE **200 K BYTES** USER STORAGE
NOW ONLY 549⁹⁵ 80 TRACK DRIVE **400 K BYTES** USER STORAGE

ROM SOFTWARE

A Full Featured Basic Compatible DOS

INCLUDES: TG-99 Disk Controller w/ CCMD 9 DOS ROM • 40 Or 80 Track Disk Drive • Power Supply • Case • 2 Drive Cable • 9 Disk Utility Programs • CCEDT9 Disk Text Editor • Disk Text Processor I

Manufactured Under License From Tall Grass Technologies

Editor / Assembler CO-RES9

CO-RES9 is a Co-resident Editor/Assembler that will allow you to create, edit and assemble machine language programs for the color computer. It will quickly and efficiently convert assembly language programs into machine code files. It will output machine object code to either cassette tape in a 'CLOADM' compatible format or directly to memory for direct execution.

NOW ONLY

CO-RES9 editor/assembler tape w/manual ~~\$39.95~~ **\$29.95**

R.S. DISK EDITOR & ASSEMBLER Disk w/manual ~~\$79.95~~ **\$49.95**

64K Version now available, Flex not used or required.

System Monitor TRSMON

TRSMON is a 2K machine language monitor program for use in any color computer system. A Monitor is a program which allows the user to directly manipulate the computer. Small programs may be hand assembled and entered into ram and executed. Program execution can be stopped at any point by using breakpoints to see if it is functioning properly or check its status. TRSMON provides all of the standard functions found in most system monitor programs as well as a printer/terminal driver package. Printer and Terminal modes can be used at rates varying from 300 to 9600 baud and can be changed at any time.

TRSMON on tape w/manual **\$19.95**

DATA PACK TERMINAL PACKAGE

- Full Text Buffering
- Terminal Baud Rates 300 To 9600 Baud
- Automatic Word Wrap Eliminates Split Words
- Full/Half Duplex
- Automatic File Capture
- Programmable Word Length, Parity & Stop Bits
- Automatic Buffer Size At Memory Limit
- Save & Load Text Buffer To Tape Or Disk
- Send Files Directly From Buffer Or Disk
- Full Disk Support For Disk Version
- Printer Baud Rates 110-4800
- Send Control Codes From Keyboard
- ASCII Compatible File Format

- Display On Screen Or Output Contents Of Buffer To Printer

We also have a disk version available called "DISKPACK." It includes all the commands mentioned plus commands for disk control. They include: Disk Load, Disk Save, Directory, Send Disk File and Kill Disk File. As usual all files are Basic Compatible ASCII formatted files which are also compatible with our Text Editor and Word Processor programs.

Datapack on tape w/manual **\$24.95**
 Diskpack for R.S. disk w/manual **\$49.95**
 Diskpack for CCMD 9 w/manual **\$39.95**

Introduces

Silly Syntax

a sensational and educational version of a popular party game for the TRS-80* Color Computer...

For 1 to 10 players. Load a story into the computer. The players are asked to supply a noun, verb, part of body, celebrity, etc. which the program uses to complete the story. The story, which is displayed when all words are entered, will be hilarious. Silly Syntax requires 16K Extended Basic (32K for disk version). For \$19.95, you get a user guide and a tape containing the Silly Syntax game and 2 stories. You can create your own stories or order story tapes from the selection below.

Silly Syntax stories — Ten stories per tape.

- SS-001 - Fairy Tales
- SS-002 - Sing Along
- SS-003 - X-Rated
- SS-004 - Current Events
- SS-006 - Adventure/Sci-Fi
- SS-007 - Potpourri

Each story tape is \$9.95. 10% off for 3 or more story tapes. Disk is \$24.95 for Silly Syntax and 2 stories or \$49.95 for Silly Syntax and all 62 stories.

*TRS-80 is a trademark of Tandy Corp.

Auto Run

Auto Run is a utility program for the TRS-80* Extended Basic Color Computer. It is used to add convenience and professionalism to your software.

Auto Run will create a tape which will consist of a machine language loader followed by your Basic or machine language program. With this tape, a simple CLLOADM command will load and start the loader which will load and start your program. You may design a title screen with the graphics editor which will display as your program loads. Also you may record a vocal or musical introduction preceding your program. The Auto Run loader will control the audio on/off.

Basic programs can be set to load anywhere in memory above \$600 (the PCLEAR 0 page).

Software authors: The Auto Run prefix may be appended to your software products.

Auto Run is \$14.95 and includes complete documentation and an assembly source listing.

Tape Information Management System

a user-oriented, easy to use personal database management system with these outstanding features:

- *keeps files of programs, names, addresses, birthdays, recipes, class or club rosters, anything
- *variable record and field lengths
- *phrase substitution editor
- *up to 8 user-definable fields
- *ML sort (up to 3 fields), search and delete functions
- *2 search modes — range and item
- *user-definable printer format, for any printer

For \$24.95 you get the database management system, our full documentation which includes a reference guide and a programmer's guide, and our 1981 Bibliography of articles relating to the Color Computer. Requires 16K Extended Basic. 32K recommended.

Add \$1.00 per tape or disk for postage and handling. Ohioans add 5.5% sales tax. COD orders are welcome. Dealer inquiries invited.

THE CRYPTANALYST'S ASSISTANT

By Bill Williams
1080 Bush Street, Apt. 609
San Francisco, CA 94109

This program is useful in solving the most common kind of cryptogram puzzle, the simple substitution cipher. In this kind of cipher, every letter of the alphabet has exactly one substitute letter, and the cipher is produced by replacing every letter of the original message (the plaintext) with its substitute.

One of the methods for attacking ciphers of this kind is letter frequency analysis. This is based on the principle that frequently occurring letters of the cryptogram probably

stand for frequently occurring letters or ordinary English text (ETAONIRSH) and conversely.

One thing the Cryptanalyst's Assistant does for you is take the frequency count of every cryptogram you type in.

The way the program works is this:

1. First you type in a cryptogram (which you have to get from a newspaper, or a puzzle magazine, or from a friend who has made one up with an enciphering program on the Color Computer).

Cryptanalyst

2. Then the frequency count is displayed.
3. The ciphertext is displayed, double spaced, and you start making trial substitutions, which appear beneath the letters of the ciphertext.
4. You can change the substitute for a letter as often as you like.
5. You can even change the ciphertext if you discover you've made a mistake, and the program will remember and redisplay the substitutes you've made so far.
6. The frequency chart will not fit on the same page as the cryptogram, but you can flip over to another page to see it, and then flip back.

7. When you are finished with one cryptogram, you can do another one.

PROGRAM NOTES:

The Cryptanalyst's Assistant requires either a 16K or 32K Color Computer, with Extended BASIC.

If you run it on a 16K machine, then you must PCLEAR 1 before CLOAD'ing.

If you run it on a 32K machine, you can alter the load point for the machine language subroutines, by changing the '15800' in lines 500 and 40010 to a bigger number.

Happy cipher busting!

```

Build performance into your system

with OS-9[™] software tools

Unix^{*}-based, multitasking, modular, and versatile: these key features are some of the reasons why more 6809 computer manufacturers have selected OS-9 as their standard operating system than any other. And OS-9 has been put to work by thousands of users in almost every conceivable computer application in business, science, industry, education, and government.

Your operating system should not be a barrier between you and your computer. OS-9 is very friendly and easy to use. Its modular structure makes it easy to customize, plus its comprehensive documentation shows you exactly how to interface it to just about any I/O device.

OS-9's advanced features unleash the performance potential of almost any 6809 computer — large or small. In many respects the OS-9/6809 combination is more powerful than many *minicomputers*!

There are two basic versions of OS-9. Both have the same basic features and capabilities. OS-9 Level One runs on small to medium sized systems having up to 64K memory. The Level Two version runs on medium to large size systems having memory management hardware and up to 1 megabyte of memory, and includes record and file locking for multiuser database applications.

Here are just a few reasons why you should insist on OS-9 for your microcomputer system.

Over 40 utility commands
Friendly "Shell" command
Interpreter

Tree-structured multilevel file
directories

Full timesharing support with
log-in and file security
Fast, secure random and
sequential access files
Comprehensive English lan-
guage error messages
Compact real-time multitasking
executive
Hardware or software memory
management
Device independent interrupt-
driven I/O
Fully ROMable for small control
systems
Standard versions available from
manufacturers of most popular
6809 computers

OS-9 PASCAL Language Compiler

most complete and versatile
PASCAL available for the 6809
capable of generating P-code
for interpretive execution while
debugging OR
highly optimized 6809 assembly
language source code output
for maximum speed
"virtual memory" P-code
interpreter lets you run large
PASCAL programs

CIS COBOL *** Compiler

ideal for most demanding
business applications
features ISAM, Debug, ACCEPT/
DISPLAY and Interprogram
Communications modules
retains full compatibility with
CP/M software
meets ANSI 1974 Level One
COBOL standard and is
GSA certified
Also available-FORMS 2 auto-
matic program generator for
easy interactive design of
screen oriented applications.

BASIC09[™] Structured Basic Interactive Compiler

fastest and most comprehensive
full Basic language available
for the 6809
combines standard Basic with
the best features of PASCAL
features compiler speed,
interpreter friendliness and
superlative debugging
facilities
option available: Run B...a
ROMable run-time system for
compiled Basic 09

C Language Compiler

complete implementation of the
UNIX version 7 C language
includes INT, CHAR, SIGNED,
UNSIGNED, FLOAT AND LONG
data types, structures, unions,
standard C library and a full
preprocessor with macro
definitions
generates fully reentrant 6809
assembly language source
code output

Color Computer News

Which was the first magazine to show it's readers how to turn an inexpensive Color Computer into a high-quality 64K 6809 development system?

Which magazine showed it's readers how to turn the Color Computer into a low cost business system using the Flex® operating system?

Which magazine has published more comments to the Color Computer ROMs than any other?

Which magazine is the *original* Color Computer magazine for 6809 users?

Which magazine presents awards to inovative 6809 users?

If you answered Color Computer News to all of the above you are absolutely correct! If not, isn't it about time you subscribed to Color Computer News?

In addition to our games, tutorials, hints and tips we also include monthly columns about such things as FLEX®, OS-9®, comments to the ROMs, beginners BASIC and assembly language programming

Here's what some of our readers say:
I am writing this note .. to tell you I think you are doing a great job and to keep up the good work. C.G. Nashville

I have just borrowed a copy of CCN from a friend of mine and think its GREAT! P.M. Ft Rucker

thank you for rescuing me from "limbo". H.L. Bedford

CCN is a tool I use for a Reference, its more than a magazine.

CCN is the best source of CC information around.

A.B.
New York

Just \$21.00 for 12 informative issues of Color Computer News.

Color Computer News Magna-zine Service.

This New Device Will Give You A Three Weeks Vacation!!!

Well actually, the "vacation" is from the tedium of hand typing the programs published in **Color Computer News**. Even if you are a fairly good typist (i.e. you use *more* than two fingers, and you *don't* have to look at the keyboard!) it would take you about *twelve hours* to type in most of the programs in an average **Color Computer News** issue — and then you have to de-bug the programs on top of that! Save your "finger energy" for scratching your head while you think great thoughts and leave the program typing to the **CCN Magna-zine Service**. We guarantee that our monthly program tapes will save even the fastest typist many hours of frustration!! Relief for your tired fingers is just a **CLOAD** away!

Each month, CCN Magna-zine subscribers receive a top quality digital cassette which contains about a half dozen programs from their favorite CC-80 magazine, **Color Computer News**. American and Canadian subscriptions are available for just \$42.00 (plus \$6.00 first class postage) for a full 12 issues and can start with any issue number you specify. Single issues are also available for the low price of just \$6.00 each plus \$1.00 postage. Subscription postage to all other countries is \$15.00 per year (sent via AO Air Mail). Overseas single issue postage is \$2.00 per tape. (Florida residents add \$.30 sales tax for single tape purchases *only*.)

The **CCN Magna-zine Service** is staffed by people who are highly qualified in cassette tape mastering and production and who use only top quality, custom loaded, all American made digital cassettes. Each tape is *fully* guaranteed for one full year against *any and all* hazards — up to and including the tape being crushed by a falling meteor!! Just return the original tape (or at least the piece with our label on it!) along with \$1.00 for return postage, and that issue will be instantly replaced — no questions asked! Who else offers you such a guarantee???

To start your own subscription to the **CCN Magna-zine**, just fill out the coupon (a photo copy or a plain piece of paper with the proper information is just fine!) and mail it to: **CCN Magna-zine Service**, Box 68, Safety Harbor, Florida 33572. Include your check (personal checks are OK) or money order and be sure to indicate which **Color Computer News** issue you want your subscription to begin with if it is anything other than the next as yet unpublished issue number.

You already *know* about the high quality programming articles that have set **Color Computer News** apart from all other computer magazines, therefore, you *also* know what to expect from our cassette tape version!!! So, don't delay any longer — send in for your own subscription today! Spend your time *computing*, **NOT** typing!!!

YES! Sign me up for a one year's subscription to the CCN Magna-zine! Enclosed is my check/money order for the full amount (including postage) of \$48.00 (domestic and Canada) or \$57.00 (overseas).

REVIEW POLTERGEIST

by Jeff Soh
6 SE 18th Street
Hillsboro, OR 97123

POLTERGEIST

From Radio Shack

Cartridge \$34.95

16K and joysticks required

Poltergeist is a great arcade type game based on the 71 million dollar grossing movie of the same name. Unfortunately it doesn't appear in the RSC-8CC catalog or in the program catalog for the Color Computer, and therefore may be little known. The first place I saw it advertised was in Radio Shack's Pre-Christmas Sale flyer, about three weeks after I got the cartridge. At \$34.95 its well worth it. My friends and family have spent hours playing it.

In general the object of the game is to save Carrol Anne from the Poltergeist. To do so you must survive three levels of game play, with only 3 men, or lives, to do it in.

Level 1

"Can you gather the things you need to rescue Carrol Anne?"

The screen displays the top view of a neighborhood of 62 houses, known as the Westhaven development. You (a little man)

appear in the upper left corner of the screen and must maneuver yourself around the streets and pick up the things you need to rescue Carrol Anne. The items you must collect are: a red ribbon, tennis balls, handkerchiefs, towels and a rope. These items appear as black rectangles in the red houses. To pick up the items you must go to the driveway of the house they appear in and press the joystick button. You will receive 15 points for each item you collect. After you have collected all five items you must go to the driveway of the house containing a flashing blue box and press the joystick button. The flashing box moves randomly to adjacent houses. To complicate things, the streets are traveled by cars. You must duck into driveways and hide around corners to escape their deadly clutches.

You have 30 time units to complete this level. Upon completion you will receive BONUS points. Bonus is awarded as follows: BONUS = time units left on clock times 10 times the number of men you have left.

If you run out of time or are hit by a car, you lose a man. If you have any men left you must return to this level again, and forfeit all

Poltergeist

items previously collected.

There are a couple of flaws with this level. One, sometimes you don't have to be in a driveway to collect an item. Two, if you hold the fire button down, no cars will come out. These are minor flaws and do not adversely affect game play.

Level 2

"Can You Get Past The Stairs?"

The screen now displays a twelve step staircase with you appearing as two feet at the bottom. You must climb all the way to the top step without hitting any obstacles or letting the Poltergeist get you. Each step has an obstacle on it, either a block or a face, which moves randomly back and forth. The Poltergeist starts at the top of the stairs and can travel in any direction, but is delayed when it runs into any of the obstacles. With some tricky maneuvering you can lure it into a group of obstacles and then make a mad dash to the top and receive BONUS points as in level 1, then its off to level 3! If you die, the screen goes black and your feet spiral into the darkness, and you lose a man. If you have any men left you will return to level 1.

I might add, upon entering this level it is a good idea to have your joystick pulled back so that you don't accidentally walk forward right into an obstacle.

Level 3

"Can You Help Carrol Anne Escape?"

You are now in an energy field and the screen displays multicolored lines shooting past you from the distance. You control a "+" on the screen which acts as your site. Ghostly figures will come towards you one at a time and if its a Poltergeist you must shoot it by lining it up with your site and pressing the joystick button. If however it is Carrol Anne you must wait for her to disappear. You get 15 points for each Poltergeist you kill and you must kill eight to complete the level, which isn't easy. Each figure moves toward you faster than the last and you have less time to decide what to do. If you shoot Carrol Anne, miss a Poltergeist or run out of time, you lose a man and if you have any men left, its again back to level 1. If you complete this level you get a special BONUS. 60 time units

are added to the time left on the clock and then bonus points are awarded as in the previous levels. The message "This house is clean!" will appear, and the game is over.

The graphics, sound and game theme add up to make a spectacular game. In fact this is my favorite game cartridge available so far and I hope its an example of the kind of game software we can expect from Radio Shack in the future.

COLOR COMPUTER WEEKLY

NEW!

CAN YOU AFFORD \$1 A WEEK?

The CCW Newsletter will give you this if you can:

- An issue loaded with program listings of all sorts (for just a buck a week—unbelievable)!
- Latest news and information — if it happens on Monday you'll know about it by Friday (for a mere 100 cents a week)!
- Mailed out to you first class every week! (At last a reason to live from week to week)!
- Free software/hardware manufacturer's directory (This alone is worth the price of the subscription, and we even send regular updates to subscribers.)!

All it takes is ten thin dimes a week to bring meaning to your life. Cumulatively we'll take payment in the following ways:

- Charge my Visa or MasterCard at once for the full amount (\$52/year)
- Charge my Visa or MasterCard quarterly at the rate of \$13 every three months
- Here's my check for \$14 for the first quarter, bill me in three months for the next quarter (we have to charge you extra to send out those bills)
- Here's my check for \$52 for the full year hurry and send me my first issue

Telewriter-64™

the Color Computer Word Processor

- **3 display formats: 51/64/85 columns × 24 lines**
- **True lower case characters**
- **User-friendly full-screen editor**
- **Right justification**
- **Easy hyphenation**
- **Drives any printer**
- **Embedded format and control codes**
- **Runs in 16K, 32K, or 64K**
- **Menu-driven disk and cassette I/O**
- **No hardware modifications required**

THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with *true lower case characters*. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.

...one of the best programs for the Color Computer I have seen...

— Color Computer News, Jan. 1982

TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer — 16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays: 64 × 24 and 85 × 24!! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command. The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, *all on the screen at one time*. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing.

RIGHT JUSTIFICATION & HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.

Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

FEATURES & SPECIFICATIONS:

Printing and formatting: Drives any printer (LPVII/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Terminet, etc).

Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dot-graphics, etc.

Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification.

Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.

Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files — create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).

Cassette verify command for sure saves. Cassette auto-retry means you type a load command only once no matter where you are in the tape.

Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.

Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.

*...truly a state of the art word processor...
outstanding in every respect.*

— The RAINBOW, Jan. 1982

PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs \$49.95 on cassette, \$59.95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.)

To order, send check or money order to:

Cognitech
704 Nob Street
Del Mar, CA 92014

Or check your local software store. If you have questions, or would like to order by Visa or Mastercard, call us at (619) 755-1258 (weekdays, 8AM-4PM PST). Dealer inquiries invited.

(Add \$2 for shipping. Californians add 6% state tax. Allow 2 weeks for personal checks. Send self-addressed stamped envelope for Telewriter reviews from CCN, RAINBOW, 80-Micro, 80-U.S. Telewriter owners: send SASE or call for information on upgrading to Telewriter-64. Telewriter-compatible spelling checker (Spell 'n Fix) and Smart Terminal program (Colorcom/E) also available. Call or write for more information.)

Apple II is a trademark of Apple Computer, Inc.; Atari is a trademark of Atari, Inc.; TRS-80 is a trademark of Tandy Corp.; MX-80 is a trademark of Epson America, Inc.

USING GRAPHICS WITH THE MICROWORKS ASSEMBLER

by Jim Moss
519 Whitmore Road
Hastings, MI. 49058

If you've purchased the Micro Works Assembler (SDS80C), you've got a very efficient system for writing 6809 code. While developing your program, all of the following are in the Color Computer at once: an editor program, an assembler, a monitor, your source program, and your object code.

You can enter a program, assemble it, then return to the editor, and repeat the process until the code is debugged. You are not required to use the cassette anywhere in the debugging process, but you will usually want to save your source before testing to protect against a bug in your program destroying the text buffer.

The SDS80C design puts everything that can be in ROM, and uses RAM efficiently by not storing unnecessary blanks. I can fit about 700 program statements into a 16K machine, and that's with reserving 3K for graphics. To use graphics, you've got to find a place for the graphics page. It's possible to protect high memory from the assembler by changing the stack pointer and putting it there (see p.34 of the SDS80C Owner's Manual). But it's easier to just leave the video window where it will be on entering

your program, which is at \$400.

This means that there will not be separate text and graphics screens, as under BASIC, but they will both start at \$400. The text screen ends at \$5FF, but a graphics screen will be longer. A screen for PMODE 1 will occupy \$400 to \$FFF. Since the editor normally puts your source code at \$610, we'll have to change this before typing in text, or loading it from tape.

Enter "=" to go to the monitor. Then enter "M0000" to view memory location 0. Refer to p.24 of the Owner's Manual for an explanation of these fields. Change the "06100610" to "10101010", then enter "*" to return to the editor. The text buffer now starts at \$1010, so \$400 thru \$FFF can be used for graphics memory.

After I figured this out, I cheerfully proceeded to write programs using graphics. I put in the SWI (software interrupt) instruction, as explained on p.23, but when the program reached the SWI, I didn't see the familiar display of registers. My program was interrupted, and the monitor was entered, but I was still in graphics mode! This means you must return to text mode in

AARDVARK

TRS-80 COLOR

OSI

VIC-64

VIC-20

SINCLAIR

TIMEX

QUEST — A NEW IDEA IN ADVENTURE GAMES! Different from all the others. Quest is played on a computer generated map of Alesia. Your job is to gather men and supplies by combat, bargaining, exploration of ruins and temples and outright banditry. When your force is strong enough, you attack the Citadel of Moorlock in a life or death battle to the finish. Playable in 2 to 5 hours, this one is different every time. 16k TRS-80, TRS-80 Color, and Sinclair. 13K VIC-20. \$14.95 each.

ADVENTURES!!!

These Adventures are written in BASIC, are full featured, fast action, full plotted adventures that take 30-50 hours to play. (Adventures are interactive fantasies. It's like reading a book except that you are the main character as you give the computer commands like "Look in the Coffin" and "Light the torch.")

Adventures require 16k on TRS80, TRS80 color, and Sinclair. They require 8k on OSI and 13k on Vic-20. Derelict takes 12k on OSI. \$14.95 each.

CATERPILLAR

O.K., the Caterpillar does look a lot like a Centipede. We have spiders, falling fleas, monsters traipsing across the screen, poison mushrooms, and a lot of other familiar stuff. COLOR 80 requires 16k and Joysticks. This is Edson's best game to date. \$19.95 for TRS 80 COLOR.

PROGRAMMERS!

SEE YOUR PROGRAM IN THIS SPACE!! Aardvark traditionally pays the highest commissions in the industry and gives programs the widest possible coverage. Quality is the keyword. If your program is good and you want it presented by the best, send it to Aardvark.

ESCAPE FROM MARS

(by Rodger Olsen)

This ADVENTURE takes place on the RED PLANET. You'll have to explore a Martian city and deal with possibly hostile aliens to survive this one. A good first adventure.

PYRAMID (by Rodger Olsen)

This is our most challenging ADVENTURE. It is a treasure hunt in a pyramid full of problems. Exciting and tough!

HAUNTED HOUSE (by Bob Anderson)

It's a real adventure—with ghosts and ghouls and goblins and treasures and problems—but it is for kids. Designed for the 8 to 12 year old population and those who haven't tried Adventure before and want to start out real easy.

DERELICT

(by Rodger Olsen & Bob Anderson)

New winner in the toughest adventure from Aardvark sweepstakes. This one takes place on an alien ship that has been deserted for a thousand years—and is still dangerous!

Please specify system on all orders

ALSO FROM AARDVARK — This is only a partial list of what we carry. We have a lot of other games (particularly for the TRS-80 Color and OSI), business programs, blank tapes and disks and hardware. Send \$1.00 for our complete catalog.

AARDVARK - 80

2352 S. Commerce, Walled Lake, MI 48088

(313) 669-3110

Phone Orders Accepted 8:00 a.m. to 4:00 p.m. EST. Mon.-Fri.

TUBE FRENZY

(by Dave Edson)

This is an almost indescribably fast action arcade game. It has fast action, an all new concept in play, simple rules, and 63 levels of difficulty. All machine code, requires Joysticks. Another great game by Dave Edson. TRS 80 COLOR ONLY. 16k and Joysticks required. \$19.95.

CATCH'EM

(by Dave Edson)

One of our simplest, fastest, funnest, all machine code arcade games. Raindrops and an incredible variety of other things come falling down on your head. Use the Joysticks to Catch'em. It's a BALL! — and a flying saucer! — and a Flying Y! — and so on. TRS 80 COLOR. \$19.95.

BASIC THAT ZOOOMMS!! AT LAST AN AFFORDABLE COMPILER!

The compiler allows you to write your programs in easy BASIC and then automatically generates a machine code equivalent that runs 50 to 150 times faster.

It does have some limitations. It takes at least 8k of RAM to run the compiler and it does only support a subset of BASIC—about 20 commands including FOR, NEXT, END, GOSUB, GOTO, IF, THEN, RETURN, END, PRINT, STOP, USR (X), PEEK, POKE, *, /, +, -, >, <, =, VARIABLE NAMES A-Z, SUBSCRIPTED VARIABLES, and INTEGER NUMBERS FORM 0-64K.

TINY COMPILER is written in BASIC. It generates native, relocatable 6502 or 6809 code. It comes with a 20-page manual and can be modified or augmented by the user. \$24.95 on tape or disk for OSI, TRS-80 Color, or VIC.

Assembler Graphics

your program, before you use an SWI.

The sample program shows how to get into and out of graphics, how use SWI while in graphics mode, and how to use the info in "COMMENT CORNER". The April, '82 issue explained that the routine to draw a line is at \$94A1 in the Extended ROM. This program sets PMODE 1, clears the screen, draws a line with the coordinates in LINTBL each time a key is pressed, then again waits for a key to be pressed. If it's BREAK, the program ends, otherwise, it clears the screen and draws the lines again. It's not a useful program by itself, it just demonstrates how to use graphics. (Note: Make the ORG statement, line 2, a comment before using "").

To use the breakpoint (SWI) feature, insert "JSR SWI" instead of just "SWI". The program will then save the registers on the stack, reset to text mode, restore the registers and enter the monitor. You will be able to see all the register, except the

program counter, then do anything you would normally do with the monitor (examine memory, etc.) Enter "G" to return to your program. The program will then resume graphics mode, and return to the statement following the "JSR SWI".

With this set-up, you will see part of the graphics screen has been clobbered. If this is not acceptable, start your graphics screen at \$600, and adjust the start of the editor's text buffer accordingly. This is accomplished by storing "12101210" at memory location 0. Then load the program and change statement 12 to "SCSTRT EQU \$0600" and add "STA \$FFC7" after line 67. Now there are separate graphics and text screens, as in COLOR BASIC, but this costs another 512 bytes of memory.

You now have the basics for developing fast action graphics games in 6809 code. Write some game programs and liberate COLOR COMPUTER owners from slow BASIC games.

CC GRAPHICS DISASSEMBLER AND ARCADE GAME EDITOR

Use up and down arrows to scan through memory and display data tables as a band of graphic pictures. Right and left arrows change byte scan width to frame graphics. Use two horizontal cursor lines to block in desired graphic - program then returns:

- Data table beginning address
- Data table ending address
- Byte width of picture data

Learn ML programming by seeing how your professional games are written. Takes the mystery out of ML animation techniques. Change graphics by modifying small blocks of data. Put a hat on Pac Man, give Orville some teeth, or change your Space Invaders to Cowboy and Indian Raiders. You'll have fun learning. Know where the graphic data tables are. Ideal complement to a MNEMONICS disassembler. Eliminate garbage mnemonics resulting from false code disassembly of data. Tutorial explains how to use \$19.95

3-D TRENCH MASTER

A fast action graphic arcade game featuring 3-D ships eye view of a deathstar in motion. You fly around the rotating deathstar and fight 6 kinds of alien menaces (16K E. B.) \$14.95

FLIP YOUR DISK . . . use both sides.

Double your disk storage space instantly with a Disk "Flip It" Kit. Kit includes 5 1/4" plexiglass locating template and a special punch for cutting both the synchronizing hole and write protect notch. Soft plastic waste catcher collects punchings and protects disks . . . complete with instructions \$7.95

AGFA professional cassette recording tapes - As good as any you'll find anywhere.

- Quiet quality mechanical construction
- Super reliable premium recording tape
- 100% satisfaction guarantee 30 day return privilege

C-10	\$ 8.00 doz.	Cassette labels - pin feed	\$4.00/c

COLOR COMPUTER NEW!

MACRO-80C

The Micro Works is pleased to announce the release of its **disk-based editor, macro assembler and monitor**, written for Color Computer by Andy Phelps. THIS IS IT — The ultimate programming tool!

The powerful 2-pass macro assembler features conditional assembly, local labels, include files and cross referenced symbol tables. MACRO-80C supports the complete Motorola 6809 instruction set in standard source format. There are no changes, constraints or shortcuts in the source language definition. Incorporating all of the features of our Rompack-based assembler (SDS80C), MACRO-80C contains many more useful instructions and pseudo-ops which aid the programmer and add power and flexibility.

The screen-oriented text editor is designed for efficient and easy editing of assembly language programs. The "Help Key" feature makes it simple and fun to learn to use the editor. As the editor requires no line numbers, you can use the arrow keys to position the cursor anywhere in the file. MACRO-80C allows global changes and moving/copying blocks of text. You can edit lines of assembly source which are longer than 32 characters.

DCBUG is a machine language monitor which allows examining and altering of memory, setting break points, etc.

The editor, assembler and monitor — as well as sample programs — come on one Radio Shack compatible disk. Extensive documentation included. **MACRO-80C Price: \$99.95**

YOU NEED COLOR FORTH!!

Why?

- Forth is faster to program in than Basic
- Forth is easier to learn than Assembly Language
- Forth executes in less time than Basic

Forth is a highly interactive language like Basic, with structure like Pascal and execution speed close to that of Assembly Language. The Micro Works Color Forth is a Rompack containing everything you need to run Forth on your Color Computer.

Color Forth consists of the standard FORTH Interest Group (FIG) implementation of the language plus most of FORTH-79. It has a super screen editor with split screen display. Mass storage is on cassette. Color Forth also contains a decompiler and other aids for learning the inner workings of this fascinating language. It will run on 4K, 16K, and 32K computers. Color Forth contains 10K of ROM, leaving *your* RAM for *your* programs! There are simple words to effectively use the Hi-Res Color Computer graphics, joysticks, and sound. The 112-page manual includes a glossary of the system-specific words, a full standard FIG glossary and complete source listing. **COLOR FORTH ... THE BEST!** From the leader in Forth, Talbot Microsystems. **Price: \$109.95**

SOFTWARE DEVELOPMENT SYSTEM

The Micro Works Software Development System (SDS80C) is a complete 6809 editor, assembler and monitor package contained in one Color Computer program pack! Vastly superior to RAM-based assemblers/editors, the SDS80C is non-volatile, meaning that if your application program bombs, it can't destroy your editor/assembler. Plus it leaves almost all of 16K or 32K RAM free for your program. Since all three programs, editor, assembler and monitor are co-resident, we eliminate tedious program loading when going back and forth from editing to assembly and debugging!

The powerful screen-oriented Editor features finds, changes, moves, copies and much more. All keys have convenient auto repeat (typamatic), and since no line numbers are required, the full width of the screen may be used to generate well commented code.

The Assembler features all of the following: complete 6809 instruction set, conditional assembly, local labels, assembly to cassette tape or to memory, listing to screen or printer, and mnemonic error codes instead of numbers.

The versatile monitor is tailored for debugging programs generated by the Assembler and Editor. It features examine/change of memory or registers, cassette load and save, breakpoints and more. **SDS80C Price: \$89.95**

MICROTEXT: COMMUNICATIONS VIA YOUR MODEM!

Now you can use your printer with your modem! Your computer can be an intelligent printing terminal. Talk to timeshare services or to other personal computers; print simultaneously through a second printer port; and re-display text stored in memory. Dump to a cassette tape, or printer, or both. Microtext can be used with any printer or no printer at all. It features user-configurable duplex/parity for special applications, and can send any ASCII character. You'll find many uses for this general purpose module! Microtext is available in ROMPACK, ready-to-use, for **\$59.95**.

PARALLEL PRINTER INTERFACE — Serial to parallel converter allows use of all standard parallel printers. P180C plugs into the serial output port, leaving your Rompack slot free. You supply the printer cable. **P180C Price: \$69.95**

GAMES

Star Blaster — Blast your way through an asteroid field in this action-packed Hi-Res graphics game. Available in ROMPACK; requires 16K. **Price: \$39.95**

Pac Attack — Try your hand at this challenging game by Computerware, with fantastic graphics, sound and action! Cassette requires 16K. **Price: \$24.95**

Berserk — Have fun zapping robots with this Hi-Res game by Mark Data Products. Cassette requires 16K. **Price: \$24.95**

Adventure — *Black Sanctum* and *Calixto Island* by Mark Data Products. Each cassette requires 16K. **Price: \$19.95** each.

Cave Hunter — Experience vivid colors, bizarre sounds and eerie creatures in hot pursuit as you wind your way through a cave maze in search of gold treasures. This exciting Hi-Res game by Mark Data Products requires 16K for cassette version. **Price: \$24.95**

Also Available: Machine Language Monitor ★ 2-Pass Disassembler ★ Memory Upgrade Kits ★ We Stock 64K Chips
★ Parts and Services ★ Books ★ Call or write for information

SO WHAT'S A BBS?

By Shawn Jipp
555 E. El Camino Real #409
Sunnyvale, CA 94086

A BBS by definition means a 'Bulletin Board System'. A computer BBS, then, is a means whereby computer hobbyists may advertise items for sale, exchange information and knowledge, leave electronic mail for one another, post announcements, and more, all via the miracle of Ma Bell, a modem, some communication software, and of course your good old computer and/or terminal. The best thing about all this is that accessing a BBS only costs you the amount of the phone call!

There are many different types of computer bulletin boards out there, each with their own unique personality. Some may specialize in certain topics such as general aviation, genealogy, or even limericks. Others may cater to one type of computer. Some of the more common BBS names are: Connection-80, Comnet-80, Bullet-80, Forum-80, PMS, Conference-Tree, ABBS, CBBS, Living BBS and several others that are less common. There are even some that use CoCo's and other 6809 systems!

Most bulletin boards are written in BASIC

with an assembly language driver handling the I/O through the modem, although some may be written entirely in assembly language.

The standard BBS computer systems include a modem with some sort of auto-answer capability, two to four floppy disk drives (some are lucky enough to have a hard disk drive!), and of course, the computer, which can be anything from a TRS-80 Color Computer to an IBM mainframe.

A BBS is provided as a free service to you, the user, since electricity, diskettes, extra telephone lines, printer paper, and one's time all cost money, the 'SYSOP' (System Operator), of the BBS may sell software and/or hardware through his board to help finance his hobby. This can prove to be excellent source of computer products.

The hours of operation of a BBS may range from 24 hours each day for 365 days each year to just a few hours or so, whenever the SYSOP feels like putting his system "ONLINE". Most however, are online 24

Quality Software Is The Number One Priority At K & K Computerware

LASER TANK — Pit yourself in a game of strategy and excitement against the computer. You must defend your flag from attacking tanks and destroy them before they destroy your flag or you!!! High resolution graphics and four levels of difficulty. Only \$14⁹⁵.

TALEGUNNER — High resolution graphics, extremely fast action 3-D effects. This one looks as if it stepped right out of the arcade. Are you brave enough to defend your ship from attacking rebels? A must for your color computer software library. Only \$14⁹⁵.

SHOOT TO SPELL AND FLASH MATH — An educational package that helps kids learn to spell and educate them on elementary math. An absolute must for adults with school aged children. Joysticks required. Only \$11⁹⁵.

SPACE HARVEST — Pilot your spacecraft above the Planetoid Voltar stealing spacefruit and trying to avoid alien guards and the ground. Fast action machine language program with high resolution graphics. Only \$14⁹⁵.

HORSE RACE — Can you pick the next secretariat among our thoroughbreds? High speed, life like action for people of all ages. High resolution graphics. 16K extended or 32K disk. Only \$12⁹⁵.

SERIAL TO PARELLEL CONVERTER — Have a printer with a parellel port? Tired of waiting for a line list? With this little hardware device you can make your color computer run at any baud rate between 300 and 9600. Let K & K help your printer to go much faster!!! Only \$69⁹⁵.

BLACKJACK — A casino game that puts two players against the beady-eyed dealer of the house. This dealer deals the cards as good or even better than Intellivision. If you have any gambling blood at all this game is a must! Same rules as any Las Vegas casino. High resolution graphics. Only \$12⁹⁵.

ALL GAME PROGRAMS — require 16K extended and joysticks (prices are set for cassette, add \$4⁰⁰ for disk).

PROGRAMMERS!!! — K & K pays the highest royalties for your programs. If your program is good, send it to K & K and receive the best possible coverage!

TRS-80 Color Computer Users — This is only a small listing of what we have to offer. New programs are added each week. Send \$1.00 for our complete catalog.

K & K COMPUTERWARE
37326 Gregory Drive • Sterling Heights, Michigan 48077
Telephone: (313) 264-7345

POLARIS — You are under the ocean in a submarine, attacking planes and enemy destroyers dropping depth charges attempting to destroy your sub. Can you destroy them before they destroy you? This is an extremely fast action machine language program with high resolution graphics. Only \$14⁹⁵.

SUPER-ZAP

SUPER ZAP — Enemy spaceships are attacking from all sides and your mission, should you choose to accept it, is to defend your starbase from the deadly Armada of Pryuss. This will be a dangerous mission since the Pryuss Armada has never been defeated by any humanoid. Action increases as the game progresses. Only \$14⁹⁵.

BUSINESS PROGRAMS

INVENTORY CONTROL — This program contains all the necessary features required for all types of inventories, such as sorting of inventory by stock number. This program will list stock number, description, amount in stock, cost, wholesale, profits. Minimum 16K disk required. Only \$39⁹⁵.

PROPERTY INVENTORY FOR YOUR BUSINESS — This program lists inventory by department, date purchased, property numbers. Gives line list of inventory to your line printer, also this program has the ability to add and delete items. Minimum 16K disk required. Only \$29⁹⁵.

ACCOUNTS PAYABLE — This program inputs outgoing accounts (name, address, city, state), expenditure paid and balance owed. You can also list one account or all accounts to the printer. Minimum 16K disk required. Only \$29⁹⁵.

ACCOUNTS RECEIVABLE — This program inputs incoming accounts (name, address, city, state), capital received, credit limit, date of last payment and lists one or all accounts to the printer. You can also insert or delete accounts. Minimum 16K disk required. Only \$29⁹⁵.

BOWLING SCORED FOR DOLLARS — Do your leagues bowling averages. This program will keep individual scores, team totals, individual averages, team standings, and print all this information to your line printer. Minimum 16K disk required. Only \$14⁹⁵.

What's a BBS?

hours every day. The hours of operation are usually listed somewhere on the BBS itself.

To access a BBS you will need a modem, computer and/or terminal, telephone, and some sort of communications software.

The word modem is an abbreviation of "Modulator - Demodulator". This is a device that converts the binary electrical signals from the computer into audio signals that are then sent over the telephone lines. Several different types are available and the price range varies from \$89 to over \$700. A direct connect modem has a cord that plugs directly into the phone companies modular jack, whereas an "acoustically coupled" modem requires one to place the standard telephone's headset into two rubber "cups" on the modem itself. One of these cups is a speaker, the other a microphone. I suggest that you purchase the direct-connect type as acoustically coupled ones tend to be somewhat more sensitive to room noise and are more clumsy to use.

If you are going to be using an acoustically coupled modem then you will need a standard, old-fashioned telephone. If you plan to use a direct-connect type then you will need a modular jack (consult the phone company if you don't have one already).

As for communications software, there are two major types: "dumb" or "intelligent". An example of a dumb type is Radio Shack's very own videotext. Videotext allows you to communicate with a host computer or BBS, and then after 'logging off', to scroll thru the memory buffer to re-read everything that was displayed during the call. An intelligent program on the other hand, allows you not only to do the above, but also to dump the buffer to a printer after logoff; automatically upload or download basic programs; save programs in the buffer to either disk or cassette; send pre-entered messages to the host computer; save selected portions of the buffer; and more. Very versatile indeed! An example of an intelligent communications program for the Color Computer is Eigen System's Colorcom/E. I personally recommend paying a few dollars more and buying an intelligent one. Color Computer Communication programs range in price from \$29 to \$99.

When you get all the 'goodies' together
64 CCN Feb '83

you will want to try calling a BBS yourself. To call a BBS, simply load in your communications software, dial the proper telephone number, and after your modem detects the distant modem's 'carrier' frequency (CR LIGHT ON), hit the ENTER key a couple of time. After asking for your name, the BBS will then prompt you, displaying menus of what your options are from time-to-time. If you should get lost, try the 'H', '?', or 'HELP' commands. If you don't have a BBS number to call, then you may call mine at (408)-SEE-6809 any time of the day. It is running on a 64K Color Computer with two drives.

After a short time you will be an 'old pro' at bulletin board usage. Don't forget to have fun and.....Happy Hacking!

CASSETTE BOX LABELS

By Richard L. Scales
550 Sommers Avenue
Wabash, IN 46992

Recently, I saw a program that produces label inserts for cassette boxes. It caught my eye because I am constantly aware of how messy (ugly) my box labels are. Let's face it, I just cannot print legibly. Unfortunately the labeling program was for another computer and the printing routines only vaguely resembled something I recognized. Consequently, I sat down and wrote my own program for the Color Computer and Line Printer VII.

It soon became apparent that there could be two concepts as to what is "right side up". This caused me to write two versions so you can take your pick. Choose the one you like best. Listing 1 (see Figure 1), produces a label insert for those of you who store boxes vertically. It permits you to lift the box to see if a particular program is on the tape. Listing 2, (see Figure 2) produces an insert for those of you who store cassette boxes horizontally (flat). You can pull the box out as you would open a drawer and read the program names.

The two programs are the same except for

the lines being rearranged. Therefore I will discuss Listing 1 and refer to those line numbers. Comments will apply to both (except for the line numbers).

Program Listing 1:

Line 40; The spaces after the quote are merely to make a more attractive screen display.

Lines 50-70; The assumption is that your printer is set for 10 characters per inch. If you don't have 10 c.p.i., adjust for your printer. Also adjust Lines 160-200.

Lines 80-90; All those PRINTs are for screen appearance. Two lines are used so the GOTO statement in Line 130 will send you to Line 90, instead of 80. Either will work.

Line 100; Spaces are for screen appearance. Line 110; LINE INPUT was chosen to permit using punctuation when typing the label. If you do not have Extended Basic, change to INPUT, but you won't be able to use commas, etc. The spaces are for appearance (centering on screen) AND to force the cursor down to the next line so your typing

Cassette Box Labels

will not wrap-around.

Lines 120-140; This routine limits length to 20 characters and centers the copy. CHR\$(31) sets the printer to 5 characters per inch. If you don't have the LPVII, change this to the appropriate value.

Line 150; Note the ";;" after L\$. The ";;" suppresses a line feed to maintain proper print-out spacing. The CHR\$(30) returns the LPVII to 10 characters per inch. Again, check your Printer Manual if you have a different printer. In the interest of brevity, the programs lack some routines you may feel are needed. As written, you MUST have your printer connected and ON before typing RUN. You can add the following lines if you wish:

```
45 PRINT:PRINT " PRINTER MUST BE ON AND READY"
```

```
46 PRINT:PRINT " (PRESS ANY KEY TO CONTINUE)"
```

```
47 X$=INKEY$:IF X$="" THEN 47
```

The programs do not provide for printing individual program names. You simply write them down as you store them on the tape. My intent was to improve the appearance of stored boxes. I can live with my awful printing as long as others don't normally see it.

NOW, STUDENTS...your homework assignment is to write a routine (for program 1) that permits printing the individual program names (SIDE A and SIDE B) on the box label. Send your listing to me:

Dick Scales
550 Sommers Avenue
Wabash, IN 46992

DO NOT send me tapes or disks...just LLISTings. I will review your work and send the one(s) I like best to this magazine in the hopes that they will print it (them) in a future edition.

The author of the winning entry may be rewarded with the knowledge that his/her name appeared in print. If you want your LLISTing back or wish me to comment, enclose a SASE.

ARE YOU READY?...YOU CAN DO IT!...GO FOR IT!

HINT: You may find it easier to print Side B program BELOW rather than beside Side A programs.

MISSION:EMPIRE!

NOW FOR 16K
Does NOT require Extended BASIC

Some of the cute is gone, but none of the excitement and playability which made "The RAINBOW" say about the 32K version that

"We recommend MISSION:EMPIRE!"

MISSION:EMPIRE!

for disk or cassette \$19.95

A strategic wargame/strategy game. Starting with one planet, incomplete intelligence and limited resources, you must conquer the rest of your galaxy. The game takes 2-5 hours and is DIFFERENT EVERY TIME! All versions offer the option of saving a game in progress.

Specify 32K disk, 32K cassette or 16K version - the 32K versions require Extended BASIC, the 16K version does not. The disk version is normally shipped on a cassette with instructions for transferring to disk. If you want the program shipped on a disk add \$3.00.

Send check, money order or Mastercard/Visa number (including expiration date and SIGN order). Price includes shipping. PA residents include 6% sales tax.

*All programs require Color Computer™ (Tandy Corp.) or TDP System 100 Computer™ (RCA Corp.).

64K Korner

by Frank Hogg

Dateline: Syracuse New York, December 22, 1982

Time: Midnight

Place: Den

Subject: Desperate attempt to write 64K Korner for February 1983

I called Bill Sias earlier today to find out how much time I had for the deadline for the February issue. He told me that he was hoping that my column was coming in today's mail. When I asked when I absolutely, positively had to have it to him I received all of one extra day. So that is why I'm burning the midnight oil, trying to put this together. I have to send it by overnight mail tomorrow. Oh well, another rush job.

Did you realize that this column started one year ago this month? Time sure flies doesn't it? By the way Kent Myers is the unknown author in last month's column, sorry Kent, for not giving you credit.

In the January issue of "Microcomputing" on page 80 of an article for the TI99/4a is a benchmark between the TI and Atari computers. They also listed the times for TSC BASIC, here they are. Atari 10.8 seconds, TI console 17.7 seconds, TI extended 12.5 seconds, TI latest vs 9.9 seconds and TSC BASIC 3.2 seconds. Horray for the 6809 and TSC. By the way the TI 68 CCN Feb '83

machine is a 16 bitter, an old design 16 bit but a 16 bit just the same. The Atari is a 6502.

Things have been really hopping at the lab. It seems that the \$299 sale on the CoCo along with the Christmas buying spree has really spurred sales of Color Computers and the resultant new owners have been calling for software to run on their new computers. After over 5 years of listening to Z-80 and 6502 users brag about how great their machines are, it sure is nice to have everybody jumping on the 6809 bandwagon. Now they all know why we had 6809's while they were running their rather slow, antiquated computers.

That reminds me. Today I received a call from a fellow, like many calls I've received in the past along this very line. It seems that this guy wanted to buy CoCo's for his school and he had opposition from other teachers that were pushing Apples. He wanted to get some help in convincing his opponents that the CoCo with a 6809 was a better computer than the Apple. As happens in cases like these the other fellows were sold on the Apple, and didn't want to listen to what he had to say.

This is one very hard nut to crack. Apple has been doing one heck of a job selling their computer. The fact that it is based on old

Arcade Action & Adventure

For The TRS-80 Color Computer

reputation: a place in the public esteem or regard; a good name.

The Program Store, one of the original software companies of the '70s, began to develop its solid reputation for selection and service right from the start. Today, it offers the largest selection of software in America, and backs every piece of inventory with the trusted Program Store name.

Voyager I

From Avalon Hill
You're on board a spaceship infested with killer robots in this graphic science fiction game. You must clear the 4-level 144-location ship of robots and arm it to self-destruct. Can you do it and escape before you, too, are blown up? High-speed graphics are presented in 3-D perspective representing your eye's view; with instant switching to floor plan maps. Extended BASIC required.

16K Tape, \$19.95

VC

From Avalon Hill
Can you change history? You command the South Vietnam army; the computer controls the Viet Cong (VC) and North Vietnamese Army. Can you win the hearts and minds of the people, and destroy the VC units in your province? Challenging operational level combat game with hi res graphics.

16K Tape, \$19.95

SHOOTOUT AT THE OK GALAXY

From Avalon Hill
This exciting new game requires fast arcade response and well-thought-out strategy. *Thirty alien warships* have entered your Patrol Zone—can you handle your defense? Are your shields up? Have you checked your energy level? Is your azimuth set? OK then... *Good Luck!*

16K Tape, \$19.95

Death Planet: The Dog Star Adventure

By Lance Micklus from Adventure International
The beautiful Princess Leya has been captured by the evil General Doom. Can you save her, and the Royal Treasury, from Doom and his army? Extended BASIC required.

16K Tape, \$19.95

Avenger

From Cornsoft
Pest control in space is *not easy!* Your Pesticraft is armed with laser and pesticide bombs to vaporize the almost-endless wave of pests. Watch for the AVENGER that tries to stop you. And the birds—filled with attacking droids. Get an extra Pesticraft for each 10,000 points. Requires 2 joysticks.

16K Tape, \$19.95

Kraft Computer Joystick

Developed specifically for game control, cursor control and graphics applications, the Kraft Joystick is quick, easy and convenient to use. With two axis control; choice of "free-floating" or "spring center return" mode, *plus* pushbutton switch, conveniently placed for left thumb operation.

\$84.95

Save \$10.00

\$54.95

Robot Battle

From Spectral Associates
Can you dodge the never-ending horde of robots while avoiding the fatal touch of the Android? Realistic voices and 16 skill levels provide a tremendous arcade type challenge. Does not require Extended BASIC; joysticks.

16K Tape, \$21.95

Monkey Kong *New!*

From Med Systems
Exciting arcade action with delightful animated graphics. You'll need all your speed, skill and manual dexterity for this one! With increasing levels of difficulty, so you won't get bored. For 1 or 2 players, or 2-player split control.

16K Tape, \$24.95

Color Haywire

From Mark Data Products
Hostile robots await you in a series of dangerous rooms. As you fire your laser gun to destroy the robots, be sure not to touch the walls or any objects you find—they are all *electrified!* Don't relax for a moment... the Indestructible Menace is lurking somewhere, ready to demolish everything in his path... and he cannot be destroyed. Fast-paced 1 or 2 player game with great colors and sound. Requires joystick for each player.

16K Tape, \$24.95

Ghost Gobbler

From Spectral Associates
In this new and exciting version of the popular arcade game, use your joysticks to move your Ghost Gobbler through the maze, eating dots and power pills to score points. 8 bonus shapes, super sound, and 16 skill levels. Extended BASIC not required; joysticks.

16K Tape, \$21.95

Phantom Slayer

By Ken Kalish from Med Systems.
You are the Phantom Slayer, assigned to enter the deadly Catacombs and destroy the mutant Phantoms. You're armed with a laser pistol and proximity detector, but be careful—the Phantoms' touch is *fatal!* Real-time machine language game with hi-res 3-D graphics and sound. Multiple skill levels; extended BASIC not required.

16K Tape, \$19.95

64K Korner

technology, runs 3 times slower, and costs several times more than the CoCo doesn't seem to get through to proponents of the Apple.

The only thing I can suggest to say to people like that is this. "If you want to spend three times as much money to buy a computer based on obsolete technology, that runs three times slower, and is harder to program and upgrade, then I have some swampland in Florida I think you may be interested in." What else can you do! Those commercials can brainwash them if they don't watch out and it's impossible to talk someone out of something once they have made their mind up. The only thing you can do is plant a seed of doubt. Maybe they will take off the rose colored glasses and compare the two computers. Most people like this just want you to agree with them, they don't want their applectart upset (pun intended).

I would like to see everyone buy a CoCo, and it's not just for business reasons. The real reason is I'm getting tired of hearing the same old story from people who bought Apples, VICs, TIs and others. They all say the same thing, "Why didn't you tell me what the CoCo could do, I wouldn't have bought this piece of junk". Well what can I say, sooner or later they all come around. Lets hope it's sooner.

NEW COCO PRICE

By now the word should be out that RS has announced the 64K CoCo at the list price of \$549.00. That includes extended Basic too. The 16K regular Basic CoCo will stay at the \$299.95 sale price. Computer Plus is selling them at \$420.00 and \$249. Now that's value for you. Computer Plus had the drive 0 Disk Systems on sale for \$385 in December and if that's still in effect that means that you can get a 64K CoCo with FLEX and Disk system for about \$900 from them. By the way they are dealers for FHL FLEX, as is LEVEL IV. That price is all the more interesting when you stop to think that RS was selling the 32K CoCo for \$750 just a short while ago, and that didn't include the disk system! I guess the pressure from competition got them on the ball. Horray for RS.

TO Radio Shack from FHL

Several people have asked if Radio Shack paid us for using our modification to access

the 64K in the CoCo in the new 64K Color Computers. Well the answer is no they didn't and as a matter of fact they didn't even ask. But that's OK with us. I hereby give Radio Shack the rights to use our modification in their 64K Color Computers absolutely free of charge.

NEW 64K SOFTWARE

From SPECTRUM PRODUCTS

64K DISK UTILITY PACKAGE \$21.95 on Disk.

In response to this column, Bob Rosen from Spectrum Products, 9315 86 Drive, Woodhaven, NY 11421, (212) 441-2807, sent me a copy of their new disk utility package. I haven't had time with the Christmas rush to do little more than give it a quick once over but read on, here is one of those, "Why didn't I think of that" kind of things.

The package consists of three programs, the first of which is the important one. With the "40K" program your CoCo can have 40K of user RAM instead of 32K! How about that! What it does is to relocate the 8K Basic that resides from &H8000 to &H9FFF up above Disk Basic to the &HE000 area. After performing a moverom it then moves the lower 8K to &HE000 and modifies whatever vectors needed and your up and running with 40K. A ?MEM returns 31015 instead of the usual 22823. Of course you need 64K for this to work but it does seem to work very nicely.

The other two programs are a software print spooler that uses the upper 32K RAM as a buffer. I didn't run this but it sounds like it should work fine. This would be better than a Disk spooler because of time saved by not having to write things to disk first, and not having to modify existing program. A PRINT #-2 sends it thru the spooler so programs will run as usual.

The last program is a utility to copy ROM packs, and although it doesn't say, I assume that it runs the ROM pack in RAM after switching to 64K. This should work for any ROM packs that don't have protection (self modifying code that crashes RAM versions). Many of RS ROM packs don't have protection.

Well it's getting close to 2AM and we have a Christmas party at the office that I have to be prepared for. So until next month this is a very tired Frank Hogg signing off.

JUMBLY

By Mick Murray
9730 W. Richard
Franklin Park, IL. 60131

Anyone who has played the popular syndicated game "Jumble" is already familiar with this game. The rules are simple: unscramble the scrambled word in as few tries as possible! There is no time limit involved, but the computer does keep track of attempts at reconstructing the word. One main advantage of this program is the fact that you can rearrange the scrambled letters in any fashion, and have that new arrangement displayed each time automatically. The computer uses the "Inkey" function to check each letter pressed and ignores characters which are not part of the word, while replacing the character location in the original jumbled word the a "-". This aids the player in keeping track of where he is.

One or more players can use this program. The first thing the computer prompts for is whether you want one of the internal data based words, or wish to input your own. Any word between two and eighteen letters are accepted when inputted manually. If the internal data based words are chosen, you are then prompted to input a difficulty level

(from 1 (easiest) to 5 (most difficult)). The computer then will randomly select a word from the data set, check the number of characters and compare this to the difficulty level. If not the requested difficulty level, it will again randomly select another word, and continue this until a word of the proper length is found. This method will allow non-repeatability for the single player who, say, always chooses the same difficulty level.

Once the word is chosen, either data based or manually, the jumbled word then appears on the screen and the player is asked to make his guess. To avoid a quiet and static screen during the wait for input "moving character" sequence is run along the bottom of the screen, accompanied by a soft "tick tock" effect. It is enough of a subroutine to keep the game interesting during the players thinking process, yet subtle enough to not disturb the player while he is reviewing the jumbled word.

Two options are always open to a player; he may at any time choose to "give up" and type a "?" for the correct word, and he may also type a "*" to automatically get a new

Jumbly

word of the same difficulty level. The latter choice was installed into the program in the event that the player recognizes the jumbled word as one he has already played, and wishes a new one.

"Play" and "Sound" routines are used extensively in this program, from each "Inkey" function to "win music". This gives some extra variety in the game.

If the player wishes to delete existing words and input his own in the data file, the program allows for modification. The two important factors in modifying existing words are 1) the player must know exactly how many words he has in the data set, and, 2) he will probably want to include some words from each degree of difficulty. The "RND(N)" command just before the data set is the reason the player must know how many words he has in the data set. The computer will, as stated earlier, randomly select a word by reading, from 1 to RND(N), ("N" being the total number of words in the data set), and using the last word read as the one to be tested for degree of difficulty.

The computer will automatically count the data based words and give the total number of words in each of the five difficulty levels simply by inserting a ' (or REM) as the first statement in line 140. It reads all the words and tallies the data until a "123" is encountered. Therefore, make sure the last word in the last data statement is "123". If the player puts in all new words and finds for example, he has only one or two level 5 words (using the above method), he may then concentrate solely on inputting a few extra level 5 words! Needless to say keep tabs on available memory while inputting new words; if you run out of memory, chances are you'll lose all you've got!

THE COLORQUEST EXPERIENCE

For the TRS-80C and the TDP System 100 Color Computers

Written by Kevin Herrboldt & Tim Nelson

BEYOND THE CIMEEON MOON A real-time science fiction adventure game of mind-blowing magnitude — staged in deep space on a malign, sentient spacecraft. *Written in fast machine code with 3-dimensional high-res graphics and sound.* Choose from a myriad of fates. Survive the laser barrage set up by a quartet of robots bent towards your destruction.

Written by Kevin Herrboldt & Tim Nelson

ADVENTURE TRILOGY A Trilogy of quests featuring 3-D high-res graphics in machine code. First comes ritual combat on the **WORLD UNDER THE CIMEEON MOON**, to test your worthiness as a warrior. Once proven, you will be teleported to **DAZMAR'S UNDERWORLD OF DOOM** to search for the Eye of Dazmar. The **FORSAKEN GULCH** is the final arena, where a wicked idol awaits restoration.

THE NIBBLER & MS. NIBBLER A fast maze chase game featuring the nibbler man and three bumbling predators. *Written in machine code and joystick compatible*, this fun packed game is enjoyed by all. **MS. NIBBLER** is similar to **THE NIBBLER** described above but features a different maze and **MS. NIBBLER** for the ladies.

COMBAT GAMEPACK 3 action packed games featuring lifelike graphics and sound. *EXTENDED BASIC required* **2-1-0 TANK COMBAT** pits two players against each other in 5 different terrains. **STELLAR BATTLE** lets you pilot a flexwing fighter through deep space fighting dorian squadrons. **GALACTIC BLOCKADE** is a favorite two-player arcade game of speed and skill.

VEGAS GAMEPACK The thrills of a Las Vegas casino at home! *Extended BASIC required.* **CASINO CRAPS, 21, ONE ARMED BANDIT, UP AND DOWN THE RIVER, & KENO.** A bank tracks players winnings from game to game.

ORDERING

ALL GAMES ARE \$24.95 for 16K Cassette; \$29.95 for 32K Disk.

Include \$3.00 for shipping in the U.S. & Canada, \$6.00 for Foreign orders. C.O.D. add \$2.00

THE COMPOSER

SPEECH SYSTEMS, A MANUFACTURER OF SPEECH, MUSIC, AND SOUND EFFECT SYNTHESIZERS FOR THE SS-50 BUS, INTRODUCES THE COMPOSER FOR THE COLOR COMPUTER. THE COMPOSER IS A 4 VOICE MUSIC COMPILER WHICH ALLOWS ONE TO EASILY DEVELOP MUSIC. EACH VOICE USES ITS OWN WAVESHAPE TABLE. BOTH A BASIC AND A MACHINE LANGUAGE PROGRAM ARE INCLUDED, NO ADDITIONAL HARDWARE IS NECESSARY. THE COMPOSER ALLOWS THE ORIGINAL MUSICAL SCORE TO BE SAVED. IN ADDITION, THE COMPILED MUSIC MAY BE SAVED AND BEST OF ALL IT MAY BE PLAYED WITHOUT ANY OTHER SOFTWARE. EXAMPLES OF HOW THE COLOR COMPUTER CAN BE USED TO REPRODUCE SOUND EFFECTS ARE ALSO INCLUDED. YOU HAVE TO HEAR THE DIFFERENCE TO REALLY COMPARE, BUT JUST LOOK AT SOME OF THESE FEATURES:

	THE COMPOSER	RADIO SHACK MUSIC
PRICE.....	\$24.95	\$29.95
VOICES.....	4	2
OCTAVE RANGE.....	7	4
WAVESHAPES.....	4	4
MANUAL.....	25 full pages	16 mini-pages
MUSIC INCLUDED.....	YES	NO
TEMPO (SPEED).....	20+	4
DOTTED NOTE.....	YES	YES
DOUBLE DOTTED.....	YES	NO
TRIPLET.....	YES	NO
QUARTER NOTE TRIPLET.....	YES	NO
EIGHTH NOTE TRIPLET.....	YES	NO
THIRTY SECOND NOTE.....	YES	NO

BATAVIA, IL 60510

Double Density Software

COLOR TERM +PLUS+ Look at these features: Operates at 110-19200 BAUD: Half or Full Duplex; 1 or 2 stop bits; odd, even, or no parity; send and receive BASIC & Machine Language programs; word wrap; Edit Buffer; Code & Decode buffer using a user defined key word; save and load buffer to tape. +PLUS+ much more!
16k or 32k Reg. or Ext. BASIC. PRICE \$29.95 (tape)*

—NEW PROGRAMS—

COLOR BIORHYTHM Are you up or down today, tomorrow, or years from now? Find out with COLOR BIORHYTHM. Uses high res graphics. Send the chart to printer. 16k or 32k Ext. BASIC Req.
PRICE \$14.95 (tape)

DD CLOCK Don't forget what time it is when you are programming. The time is displayed in the upper right corner of your screen. Shows hours, minutes and seconds. Beeps every hour. 4k, 16k, or 32k.
PRICE \$9.95 (tape)* Ext. BASIC not required.

Use your MODEM for something other than a dust catcher—play games!

MODEM CHESS Use your Modem and your Color Computer to play chess *over the phone!* Has high res color graphics board and pieces. Make your move, select a message to send, press a button—seconds later your opponent's board is updated automatically. Has audio alerts, let's you know when a move is being made. 16k or 32k Ext. BASIC Req. PRICE \$39.95 (tape)

MODEM CHECKERS Play checkers *over the phone!* Program allows up to 4 jumps to be made at a time, crown pieces, etc. 16k or 32k Ext. BASIC Req.
PRICE \$39.95 (tape)**

MODEM IAGO Play our version of Othello *over the phone!* Make your move, press a key, your opponent's board is updated seconds later! Has a takeback key if you decide you don't like the move you made.
16k or 32k Ext. BASIC Req. PRICE \$39.95 (tape)**

Most programs are Disk compatible. Specify Disk when ordering and add \$5.00 per program. Save money and ask that all ordered programs be loaded on one disk. You pay only for the one disk! Please add \$2.00 shipping and handling on all orders. Texas residents add 5% sales tax. Allow two weeks for personal checks. Your order will usually be shipped within two to three days. We will notify you of any problems within one week. Send orders to: **DOUBLE DENSITY SOFTWARE**, 920 Baldwin Street, Denton, Texas 76201. Phone 817 566-2004.

We are looking for quality software. If you have a program you think is a winner, send it to us. If it meets our standards, you will be paid TOP royalties.

*Machine Language.

**Machine Language Subroutines.

OKIDATA REVISITED

By Robert E. Foiles
53 Cedar Acres Drive
Lancaster, PA 17602

In my search for correct information on the Okigraph option for the Okidata 82A printer, I ran into both good news and bad news.

The good folks at Okidata Technical Support unit in New Jersey were more than happy to be of help. It seems that should someone using the Okidata as the printer for their Color Computer, the Okidata option may or may not be what you are looking for.

First, so we are all on the same topic, the Okigraph option (part #57514901) is a set of proms that convert the Okidata into a "dot addressable graphic" printer. The option gives a resolution of 60 horizontal dots by 66 vertical dots. Under program control, this system will produce illustrations, graphs, charts, or any other material displayed on the screen.

However, somehow in the design of the replacement proms, the "low speed" serial

interface is disabled. If you want to use the option, you might go the route of getting one of the serial to parallel adapter ports; or as suggested by Okidata, use the "highspeed serial board" (part #70000604) to accomplish the conversion.

The good news, at least for the new buyers of the Okidata 82A, is that Okidata has developed a totally new "User's Manual" for the 82A. Again, the good guys at the Technical Support Unit loaned me a copy of the new manual to read.

This is truly a Manual for the user! The material is written in English and does not suffer from the style of some of the "translation" which were written in Japan. The material is well laid out with photos and exploded views of critical areas. The charts are readable and complete.

The Chapter that impressed me the most

COMPUTERWARE[®] PRODUCTS FOR THE COLOR COMPUTER

Radio Shack or TDP-100

PROGRAMMING TOOLS

PROGRAMMING TOOLS

DISK MACRO ASSEMBLER

Macro conditional assembler supports all standard 6809 mnemonics & directives and also conditional assembly, repeat sequences, library files, & a cross reference program. It can handle any size source input file. Radio Shack disk. . \$49.95
FLEX disk. . \$50.00

DISK UTILITIES with REPAIR

These time saving programs also teach you more about the disk. REPAIR fixes deleted or garbaged files. FIND displays starting, ending, & transfer addresses. VIEW displays the contents of an ASCII file. PRINT gives a neat disk directory. MASDEL deletes all files per request. disk only. . \$24.95

RANDOM BASIC for FLEX

Extraordinary file handling capabilities make this BASIC, a standard on most 6809 machines already, a programmer's choice! ISAM, Random, & Sequential file structures. Flexible user input commands and easy output formatting. Extended variable names. Line editor. FLEX disk. . \$75.00

SCRIBE EDITOR for FLEX

A complete program editor for serious programmers. Includes find, search, change, delete, insert commands for characters,

lines, or blocks. Macros and merge capabilities. Editor files larger than memory. Interfaces with text processor for word processing. Great with our Macro Assembler. FLEX disk. . \$50.00

COLOR EDITOR

This cassette package is perfect for small word processing projects or program editing. There are easy commands for search, change, delete, and move, copy, insert for single lines or whole blocks. Your letters or programs can be printed on a printer attached to the RS232 port. cassette. . \$29.95

COLOR ASSEMBLER

This complete 6809 machine code assembler supports all 6809 mnemonics & addressing modes along with standard assembler options & directives. As a two pass assembler, it allows both forward and backward references. Learn assembly language programming! cassette. . \$29.95

PASCAL

Dynasoft PASCAL makes this high level language & experience with structured programming available to small systems. Based on a subset of standard PASCAL, it includes most standard control structures but omits floating point arithmetic. Included are the compiler, P-Code interpreter, program editor, supervisor, sample programs, & 2 manuals. cassette. . \$49.95
disk. . \$59.95

DIAGNOSTICS

Check the six major functions of the Color Computer: 1) Memory, 2) RS-232 I/O, 3) Joysticks, 4) BASIC ROMs, 5) Tape I/O, 6) Sound. cassette. . \$17.95
disk. . \$22.95

COLOR MONITOR

This machine level monitor's keyboard commands consist of a single alphabetic character possibly followed by one or more arguments. Any command can be aborted. Functions include examine & change registers, examine & change memory, initialize memory, set and clear break points, jumps & warm start, binary save & load to cassette. cassette. . \$24.95
disk. . \$29.95

FOXYGRAF

A complete graphics development package for the assembly language programmer. The very comprehensive manual covers the history of graphics, how the Color Computer graphics work, details Radio Shack & Motorola would not tell. You can program with any mode & in any color combination. Foxygraf is relocatable & includes callable routines. cassette. . \$29.95
disk. . \$34.95

TO ORDER:
Add shipping of \$2 surface or \$5 air/Canada. Visa & MasterCard accepted.

Okidata

was the Chapter on Programming the Okidata. This is the first time I have seen in print just how the program lines are to be written to have the Color Computer forward the commands to achieve "Condensed print", "Bold", or "Wide or expanded" printing. (However, when using Color Scripsit for this task, the extra features can not be called from within the text, there are ways, but that is another article.) It also explains the "secret" of programming vertical tabs (codes to skip lines). For those who might be interested, this Chapter also explains how the user may shift from 7 bit data format to 8 bit (or back) and still be able to utilize the block graphic printing ability of the 82A. (When I first got my 82A, I would have given my eye teeth for such information.)

Another "secret" opened to the user is a very complete section on "Making Your Own Interface cables". If your Okidata dealer is across the street and Computer Center is around the bend, this may not be to interesting or important. However, if you live out in the hinter land, this section can save the new user a lot of headaches (and maybe the cost of some new chips if the plug is the wrong configuration).

I was surprised to see in the new edition, right out in the open, a simple chart explaining how to set the switch to allow the 82A to print in one of the ten LANGUAGES it is able to put on paper. (The switch pattern will call forth either German, French, Swedish, Danish, Dutch, Norwegian, Italian, or use the industry standard ASCII, and believe it or not "Radio Shack TRS-80" is listed for a special switch setting).

Another panel of switches allows the user to work with 7 bit or 8 bit code, provide automatic line feed for systems that only send a carriage return code (not a problem for Color Scripsit), and switch selectable data receiving speed (baud rate).

I was so impressed with this new Manual that I almost wanted to run out and buy another Okidata 82A just to get the new manual. While I do not know what the local dealers may want for a copy of the publication, I will note that this Manual has a blue cover and is printed in standard book

style (that is, it is taller than it is wide), this should help you explain what you are looking for in case your dealer does not yet have any in stock. After reading the Manual, I was sure happy that I have the Okidata 82A (and now all I have to do is get my wife to agree that this was a real necessary purchase)!

CCN TIP

The missing edit commands! The following commands can be used with BASIC's editor but are undocumented:

L List line
X eXtend line
I Insert characters
A Abort editing
E Exit
Q Quit
H Hack then insert
#D Delete # characters
#C Change # characters
#Schar Search for #th char
#Kchar Kill all characters up to the #th char
Shift uparrow end subcommand
#backspace backspace # characters
#space bar space forward # spaces

NEW SOFTWARE for TRS 80 Model III and the Color Computer

■ Church Contribution System

designed to simplify and facilitate the tedious chore of recording envelopes. Provides a variety of reports. Maintains its own data-files. Only **\$150**

■ Data Base Manager

designed to help organize all your data and provide you with meaningful reports. Add or delete any information. New files can be created and old information transferred. Only **\$150**

■ Single Entry Ledger

designed as an uncomplicated control of finances for home or small business. Add, delete, edit at any time. Compatible with DBM. Only **\$95**

Write or phone for complete software price list.

2457 Wehrle Drive
Amherst, NY 14221
716/631-3011

NEW!

● **ROML — ROM PAK Loader**

- Save your ROM PAKs (or ANY machine language program) on disk then load and execute with ROML.
- You no longer need to remove your disk controller to execute your ROM PAK software!
- Also allows you to load from disk or tape and execute all machine language programs which are incompatible with the disk system!
- Includes a utility to copy non-protected tapes to disk.
- Note—ROM PAK execution requires good 64K RAM system.
- Copy of article included describing how to access 64K RAM.

Tape: \$25.00 Disk: \$29.00

NEW!

● **PLUS32**

- Unleash the hidden 32K RAM in your 64K system.
- Runs ROM BASIC from RAM where you can modify it!
- Will not crash system if upper 32K is defective or not available.
- Note—Requires good 64K RAM system.

Tape: \$15.00 Disk: \$19.00

NEW!

● **ROMKIL — BASIC ROM disable routine**

- Your choice:
 - Disables DISK BASIC ROM—returning your system to EXTENDED BASIC, or
 - Disables EXTENDED BASIC ROM—returning your system COLOR BASIC.
- Frees up extra RAM.
- System stays in the level of BASIC you select even if you press the Reset switch.
- Turning power off and on returns system to original configuration.
- Allows disk-incompatible machine language programs to be loaded and executed from tape without removing the disk controller.

Tape: \$15.00 Disk: \$19.00

NEW!

● **BANNER**

- Make your TV a moving Marquee with Color BANNER!
- Enter any message and have it move across the screen in GIANT letters in the colors of your choice.
- Control speed, delay and pause from within your message!
- Great for parties and exhibitions!

Tape: \$19.00 Disk: \$23.00

FUN!

● **PAC ATTACK — from Computerware**

- The most popular game for the Color Computer!
- Fast action and brilliant colors!
- All the fun of the Arcade without the quarters!

Tape: \$24.95

BEST!

● **Nelson's SUPER "COLOR" WRITER II**

- By far the BEST word processor available for the Color Computer!
- More Features than any other.
- Supports ANY line printer!
- Excellent quality documentation!

ROM PAK: \$74.95 Disk: \$99.95

WOW!

● **LCA-47 — Lower Case Adapter**

- Provides real lowercase letters with true descenders!
- Compatible with ALL Color Computer Software!
- Provides bright characters on a dark background!
- Superb User's Manual included.
- Easy 5 minute installation!
- Uses NO system memory!
- 1 year warranty.
- Hundreds of owners, all happy!

Assembled and Tested: \$75.00

SAVE!

● **SPECIAL — Save \$25.00 when you purchase Super "Color" Writer II and an LCA-47 at the same time! Order NOW!**

GOOD!

● **PP-16 — EPROM Programmer**

- Programs single supply 2516, 2716, and 2758 EPROMs.
- Program—entire or partial. Auto verify after programming.
- Transfer contents to RAM for modifying or duplicating.

Select Documentation for:

6502

6800

6809

8080/8085/Z80

Interface to:

6820 PIA or 6522 VIA

6820 PIA

6820 PIA

8255 PPI

- Comprehensive documentation booklet contains schematic, instructions for construction, check-out and use, and a well commented assembly listing for the specified MPU.

Note—User must supply the specified parallel interface.

Specify MPU and computer system when ordering.

Complete Kit (includes ZIF socket): \$45.00

PC board only (with documentation): \$25.00

FOLLOW ME GAME

By Charles C. Evans
20 Heywood Road
Westford, MA 01886

As with many buyers, the Color Computer was my first extensive encounter with a personal computer, and I was interested in experimenting with simulation of popular games as a learning project. I wanted a game without complicated rules or arcane complexity, so it could be played with a minimum of continuous instruction by people who have no affinity for computers.

FOLLOW ME is the result of some of these efforts and is a game based on the popular game of Simon (trademark of Milton Bradley Co.) that I have written to run on the Color Computer. SIMON[®], in its Milton Bradley implementation, is a round platter with four translucent plastic sectors, each a different color, in each of the quadrants on its top surface. When the play starts, SIMON selects one of the four sectors at random and illuminates it while emitting a tone. After this action, the player must touch whichever sector lit within a certain time, or a tone is

sounded signifying the player's loss of the round. If the player makes contact in time, then the first sector flashes and sounds again, followed by a second sector flashing and sounding. The player's response must, again, be to touch the two sectors in the proper sequence. If the play is successful, then each new turn plays back the same sequence as previously, with one additional color added. Play continues this way until the player forgets the sequence and fails to press the sectors in the proper sequence, within the time limit of the game.

In the simulation of the SIMON[®] game presented in this article, there are several programming ideas that were devised to solve problems of game simulation that may be helpful to novice game writers. Some elements of the game are easier to implement than they were for the designers of Simon[®]. All of these elements have to do with the Color Computer's ability to display

Follow Me

text on the screen. This makes it convenient to present whatever instructions you might wish to convey to the user, and to report progress and game results. The difficulties that typically arise are those of real time operation making things fast enough. Another that is unique to this particular game is that the colored regions of SIMON® are visible to the player at all times, and the play is shown with lights that are under the colored sectors. Beyond this problem, the SIMON® game has the player touching the colored sectors directly as a response. Some form of substitute input/output methods had to be devised, since the Color Computer has no comparable I/O capability.

The first problem to solve was to resolve the way the colored areas would look on the screen in both their quiescent and illuminated states. Simulation of this the way that SIMON® works is not directly possible because there is no brightness control for colors with Color Basic. The solution I devised to implement the function was to draw an outline of the color around the region (I chose a box) that would represent the colored buttons of the SIMON® Game, and have the computer fill in the area when the color is asserted by the program. I think you will see that it is very effective when you run the program.

The second problem to be addressed was that of accepting the user responses. I elected to use the four upper left keys on the keyboard (1, 2, 3, and 4). Since I didn't want a lengthy set of user instructions on the screen, I decided to present an image of the key below the colored areas that would be visual interactive area of the screen. Once the use of the buttons is explained, play is obvious.

In order for the program to do a good job of simulation, it is necessary for the response speed to be comparable to that of the real game. I tried several schemes for this, and ended up with the technique that is described in Chapter 9 of "Getting Started With Color Basic". It is necessary to print everything on all of the semigraphics lines to maintain the writing speed, and inspection of the program will show how this is done.

The main program loop operates on a table of random numbers that is created in full

before the program runs. This accounts for the slight delay before the program starts. The array size is set to 50 numbers, which has not been needed by any player who has played the game on my computer. Creating the random number sequence in advance causes the program to run with more consistent timing, although it does take more memory space than is likely to be needed. If anyone playing your game gets so good that they can remember a sequence of 50 numbers, then increase the size of the array to a larger number by changing the dimension of the M-array at statement 10 and changing the loop counter at statement 880 to the same number (from 50). When the program runs, the system starts with X = 1 in statement 910, displays the first color and sound in the loop at 920 to 940, looks for congruence between player responses and the random number table in the loop at statements 970 to 1040, and then adds 1 to the x-loop so an additional color and sound will be added at the next play. The test value for "t" at statement 1000 determines how long the player has to respond. You can change this number to shorten or lengthen the play time, or add a skill level routine at the beginning of the program to set this value. I chose not to add this complexity, since the player can shoot for longer sequences as the main game challenge. Most of the other loops in the real time control part of the program between statements 850 and 1220 are self explanatory.

A situation that arose as a bit of a surprise was the way that the random number generator of the Color Computer operates. When the program was the first one run after the computer was powered up, the number sequences always stated the same way. Later, I read an article that described how the Random Number Generator routine of the Color Computer operated, and it will give the same sequence of random numbers from power up in the same program. The cure I devised for this is in statement 780. It depends on the timer value that the system is generating from power up. Since it is executed in the program after power up and loading, the user will have a hard time performing all of the sequences of start up to cheat the system and know in advance what

Follow Me

colors are going to appear on the screen. Statement 780 generates a random number from 0 to 10; this number is used to exercise the random number algorithm of the Color Computer quickly until the player causes the system to exit the loop ending at statement 810. Statement 780 is the only statement using a Basic Command from Extended Color Basic. If your computer lacks Extended color Basic, try:

780 Z=N or 780 Z=(any other number)

The looping of the start sequence will still give some randomness to the input sequence, although a persistent player could count the flashes in the input sequence display to determine how many times the system has looped. Played this way, it is possible to memorize the starting pattern, but it would be a fair amount of work for a good memorizer! My scheme, while not mathematically rigorous, should keep the play different and interesting most of the time.

A behavioral difference between SIMON-® and Follow Me that I did not deal with is that when Follow Me is not waiting for keyboard input, any key pressed will be the next input for the user response. It doesn't take much to get confused if a careless touch of the keyboard should happen, even if the button pushed happens to be the right response, so beware.

An "improvement" that I did no experimentation on was to use all 8 colors of the Color Computer in an "experts" version of the game. A second row of color bars could be created, but the real time speed of the program might be adversely affected. Also, a choice would have to be made between continuing the row of keys versus using the keys below 1, 2, 3, and 4. The system would probably "feel" more natural with Q, W, E, and R as the keys for the second row, but their offset from the top row might prove to be a nuisance. Clearly, some experimentation would help if this should be interesting to you.

Permission to copy this program for personal use if granted by the author if the title and copyright remark statements are included.

GOOD THINGS FOR THE (TM) RADIO SHACK COLOR COMPUTER

WEST BAY COMPANY

POSTPAID

ROUTE 1, BOX 666

WHITE STONE, VIRGINIA 22578

SPECIFY MEMORY

"INVENTORY ONE" (BY ALAN ROUSE) THEY SAID IT COULDN'T BE DONE! BUT HERE IS A GOOD, EFFICIENT, USER FRIENDLY, EASY TO USE INVENTORY PROGRAM FOR SMALL BUSINESS, HOME, CLUBS. MAINTAINS 40 RECORDS IN 16K, 148 IN 32K. PRINTS OUT INVENTORY STATUS REPORT AND REORDER REPORT. KEEP UP TO DATE RECORDS. 16-32K EXT TAPE \$20.00

"GRAPH ONE" - WITHIN SECONDS YOU DRAW 10 DIFFERENT COLOR BARGRAPHS. MAKES YOUR PERSONAL OR BUSINESS PLAN COME ALIVE! INTERACTIVE. NO PRINTOUT. 16-32K EXT TAPE \$12.50

"FILE ONE" IS A SMALL DATABASE PROGRAM FOR FILES AND LISTS, INVENTORY, ADDRESSES. PRINTS MAIL LABELS. IS A KEY PROGRAM, YOUR LIBRARY. 16-32K EXT TAPE-DISK \$12.50

"FAMILY PACK ONE" FUN, EDUCATION. NOT GAMES. USEFUL AT HOME, BUSINESS: FILE-IT, WEEKDAY, MATH-QUIZ, 10-TIMER. SHOW TO FRIENDS. DEMONSTRATE. 16-32K EXT TAPE \$12.50

"SPANISH ONE" YOU CAN LEARN SPANISH! CHOOSE EITHER WORDS OR PHRASES, EITHER SPANISH OR ENGLISH, THEN DRILL ONE TO OTHER. SPANISH: 100 WORDS, 100 PHRASES. ENGLISH: 100 WORDS, PHRASES. PHONETIC PRONUNCIATION (SOUND-ALIKE) SHOWN, EACH WORD. 16-32K EXT TAPE \$12.50

"IDOTHINK" DO COMPUTERS THINK? THESE THREE PROGRAMS WILL WILL MAKE YOU WONDER, PONDER! 32K EXT TAPE \$12.50

Because You Don't Have Colored Fonts®

- * 224 User programmable characters
- * 4 Character sizes
- * Lower case with descenders
- * Combines graphics and text on the same screen
- * Written in fast and efficient machine language
- * Completely interfaces with basic through software
- * Can be easily used in your own marketed program
- * Comes with 6 preprogrammed character sets (disk)
- * MX-80/70 screen dump included free!!!
- * Available in 16K or 32K cassette or disk versions

When ordering please select either 16K or 32K

Cassette Version \$24.95

Diskette Version \$29.95

N.J. residents add 5% tax

RENAISSANCE GAME DESIGNS

A WORD FROM THE SPONSOR

Hi again. This is Month Two in my series of short chats about various Color Computer subjects in these Star-Kits ads. Hope you will find them interesting and useful.

Judging from several phone calls I've received, there seems to be some confusion as to what a DOS (Disk Operating System) can do for you. One recent caller summarized it best when he said, *I'd like to buy your STAR-DOS. Can you tell me how it will help me write better Basic programs?* My answer must have shocked him, because I told him not to buy any DOS. In fact, I myself have talked about a dozen potential STAR-DOS purchasers out of buying it. I don't know whether other DOS vendors have done the same, but I'm convinced that there are many readers among you who have bought a DOS (hopefully not ours) and have absolutely no use for it whatsoever. Let me explain.

To use a disk you need the hardware (a disk drive and controller) and the software (a disk operating system or DOS). In most computers, the controller can do little by itself except load the DOS from the disk into memory. Hence, without the DOS, the disk system is useless. But the Color Computer is unique — its controller has an 8K ROM (Read Only Memory) which acts as an extension to Basic and lets Basic access the disk directly without needing a separate DOS.

Thus, in other computers, you either need a separate DOS on disk to load Basic in the first place, or at least to tell Basic how to access the disk. In the Color Computer, Basic knows how to use the disk as soon as you plug in the controller. Hence, if you only run Basic programs, you have absolutely no need for a separate DOS. (In fact, a DOS just gets in the way of Basic!) So what does a DOS do, you ask?

A disk operating system lets you run machine language programs which use the disk. These can be purchased programs, or programs you write yourself.

But here's another catch. On most other computers, since you must have a DOS to use the disk, everyone writing disk programs simply uses the DOS for the disk functions, since they just assume that everybody has one. But Color Computer disk operating systems are very new. Hence many software suppliers, figuring you don't have a DOS, have gone to great pains to include enough functions in their programs so that you don't need a DOS to run them. (For example, our own SPELL 'N FIX has its own disk routines and does not need any additional DOS.)

So when should you buy a DOS? There are really only two cases: (1) You intend to write your own programs to use the disk, and need some simple way of interfacing to the disk, or (2) there is some specific program you want to run which requires a DOS. For example, if you want to run our DBLS or Disk Sort-Merge (oops... we won't announce that 'till next month), then you will need STAR-DOS.

So, if one of these two cases applies to you, by all means buy one. But don't get one unless you have a real need. And that applies to our STAR-DOS as well as others.

By the way... did you hear the one about the program to translate English to Russian? To test it, they translated *The spirit is willing but the flesh is weak*. The Russian translation came out something like *The vodka is amenable, but the meat tastes bad*.

See you next month.

Pete Stark

SPELL'N FIX

Regardless of whose text processor you use, let SPELL 'N FIX find and fix your spelling and typing mistakes. It reads text faster than you can, and spots and corrects errors even experienced proofreaders miss. It is compatible with all Color Computer text processors, including Telewriter and Radio Shack's Scripsit! (See the review in 80 Micro, November 1982.) \$69.29 in the Radio Shack disk or cassette versions; \$89.29 in the Flex version. (20,000 word dictionary is standard; optional 75,000 word Super Dictionary costs \$50 additional.)

HUMBUG — THE SUPER MONITOR

A complete monitor and debugging system which lets you input programs and data into memory; list memory contents, insert multiple breakpoints, single-step, test, checksum, and compare memory contents, find data in memory, start and stop programs, upload and download, save to tape, connect the Color Computer to a terminal, printer, or remote computer, and more. HUMBUG on disk or cassette costs just \$39.95.

STAR-DOS

A Disk Operating System specially designed for the Color Computer, STAR-DOS is fully compatible with your present Color Computer disk format — it reads disks written by Extended Disk Basic and vice versa. But with STAR-DOS you can use machine and assembly language programs to do things Basic can't. Just \$49.95.

ALL IN ONE — Editor Etc.

Three programs in one — a full function Editor for text or program files; a Text Processor for formatting and printing text files with centering, justification, and paging, and a Mailing List and Mailing Label program which can even generate individually addressed letters for each person (or selected persons) on your mailing list. All this for just \$50. Requires STAR-DOS and 32K.

DBLS for Data Bases

DBLS stands for Data Base Lookup System. A super-fast system for searching for a selected record in a sequential disk file. Supplied with SPELL 'N FIX's 20,000 word dictionary as a sample data file — lets you look up the spelling of any word in under FOUR seconds. Priced at \$29.95. Requires STAR-DOS.

CHECK 'N TAX

Home accounting package combines checkbook maintenance and income tax data collection. Written in Basic for either RS Disk or Flex, \$50.

REMOTERM

REMOTERM — allows full operation of the Color Computer from an external terminal. \$19.95.

NEWTALK

NEWTALK — a memory examine utility for machine language programmers which reads out memory contents through the TV set speaker. \$20.

SHRINK

SHRINK — our version of Eliza, in machine language and extremely fast. \$15.

OXXO

OXXO — our version of Othello, also machine language and fast. \$15.

We accept cash, check, COD, Visa, or Master Card. NY State residents please add appropriate sales tax.

REVIEW-DOODLE BUG

by Lloyd E. Pulley

3826 W. Missouri Avenue
Phoenix, AZ 85019

"Lady Bug, Lady Bug fly away home. Your house is on fire and your kids are alone."

Well in Doodle Bug, there's no house to catch fire, but there are hours of fun and enjoyment. This program, a takeoff of the Arcade game "Lady Bug", is probably one of Computerware's best releases to date.

For those of you who are not familiar with "Lady Bug", a brief synopsis. First you start out with a maze (shades of Pac Man), which your Lady Bug scampers around chomping up "dots", while the "Enemy Bugs" chasing you around trying to eat you. From there the games differ.

In Doodle Bug you have your choice of starting out with from 3 to 6 Lady Bugs. As you move through the maze, you'll run into various items: Letters, Hearts, and Skulls. On each level there are 3 of each in the maze. The letters and hearts change colors throughout the game and are worth varying points and bonus's depending on what color they are when you eat them. By spelling out EXTRA and SPECIAL, you can receive extra Lady Bugs. Eating a skull kills you or an Enemy Bug. Also throughout the maze are turnstiles. A Lady Bug can go through turnstiles whether open or closed but an Enemy Bugs can only go through them when

they're open. So one of the tricks of the game is knowing which way to leave the turnstiles pointing.

This game combines great speed, graphics and joystick control. It also has a Pause key which will freeze the screen while you answer the phone, door, or whatever. I wish more of the programmers would add this feature to their programs.

The program comes on tape at \$24.95 or disk at \$29.95. Since I own a Radio Shack disk drive, I always order my programs on tape and load them onto disk myself. (I find that this is a good practice the way my drive can bomb disks). Computerware has attached a Auto-loader onto the program so that it is impossible to load the program onto disk, even though it will run OK with the disk plugged in. (I suppose this is to hold down illegal copies). But with about 5 minutes time and a little knowhow, you can take the selfloader off and put the program onto disk. Since I don't want to take all of the challenge out of life, I'll let you figure out how to accomplish this.

My family found this to be an excellent program, full of fun and action. With this one, Computerware keeps up its excellent reputation.

KOKOMATH

By Michael J. Himowitz
825 William Street
Baltimore, MD 21230

By now everyone knows that a computer is one of the world's best teaching tools, particularly for drilling youngsters in subjects such as math and foreign languages.

The problem is that children often grow tired of a plain screen display or a program that doesn't reward their efforts. I wrote KOKOMATH to solve that problem with low-resolution graphics, music and a game format. I've tried it out on youngsters ranging in age from 5 to 12, and they can't seem to get enough of it.

Here's what happens. When the program starts up, KOKO the math clown appears and asks the child for his name. When he types that in, KOKO asks whether he wants

to add, subtract, multiply or divide. Then he asks whether the youngster wants, easy, hard or "Brain Buster" problems.

The gimmick is that KOKO is suspended in the air over a tub of water. If the child gets 10 out of 10 math problems correct, KOKO gets a bath. When a child answers a problem correctly, KOKO smiles, rolls his eyes, plays a happy tune and gives him a running score.

If the child types in the wrong answer, he gets a brief frown, a beep or a sad little tune, and the right answer displayed on the screen (the program does not repeat wrong answers). At the end of 10 problems (if all 10 answers were not correct), KOKO gives him a percentage score and asks if the youngster wants another quiz.

KOKO Math

The program will run on a 16K Extended Color Basic machine. Instructions for modifying the difficulty of the problems are listed in remark lines at the end.

This is a fairly long program, and if you don't want to type it in, send \$7 to Michael J. Himowitz, 825 William Street, Baltimore, MD 21230, and I'll send you a copy.

COLOR COMPUTER ENHANCEMENTS

(16K or 32K EXTENDED BASIC REQUIRED)

SORT 1 \$14.95

- Alphabetizes Basic string arrays. (Single Dimension Arrays).
- Strings may be divided into fixed-length-fields and sorted by data in a field.
- Multiple field sorting is possible. (i.e., ability to cause a list of alphabetized states, with peoples names in each state in alphabetical order.
- With this utility in memory with your basic program you can expect a single sort of 300 records to be done in less than 4 seconds.
- Basic subroutine to call this machine code utility and instructions for its use are included.

SORT 2 \$14.95

Same as above except sorts on fields separated by
delimiter characters.

UPLOAD \$9.95

- This is the upload side of DLOAD and DLOADM in Extended Color Basic. Use it to send a basic or machine code program to another ECB Color Computer.
- Programs can be passed directly, thru the RS-232 port, or by phone if both computers are hooked to modems.
- Uploaded program arrives at receiving end ready to save or run or execute, whichever is appropriate. No editing!
- Patch to correct flaw in DLOADM is supplied as public domain software.
- Will not work with protected tapes, programs saved in ascii, programs on disk.
- Instructions included with this machine code utility.

PROGRAMS SUPPLIED ON CASSETTE.

HELP!!

by Dave Clark
11657 Summerhaven
St Louis, MO 63141

Disk users beware!! "\$%&'()*" is not a good program name. Sure it works and once you see it I'm sure you will remember its that jewel that simply would not work no matter what you did. Use descriptive file names - like "TEST1", "TEST2", ETC.

How descriptive can you get in eight characters? No matter how hard you try - you will not remember every file name. And your buddy will not have any idea of what that program does.

The solution is HELP!! This program is a basic version of a scheme provided by Frank Hogg with FLEX. The concept is so simple it hurts. The program simply reads a file looking for a keyword. Once it finds the keyword it displays on the screen each line of text until it finds the next keyword.

The data file is constructed with the keywords starting in position one of the line. Lines with non-keywords must contain a blank. A line of data is a string of characters ending with the ENTER key. If the lines are kept to less than 32 characters the HELP text file can easily be listed if desired. (see LIST program)

The HELP text file can be prepared with any text editor that saves data in text format. SCRIBE from COMPUTERWARE works very well for this purpose. If you don't have a text editor use the BUILD program. But don't make any errors! You can't change the line once it is entered.

What are HELP's disadvantages? Simple! IF the HELP file becomes too large the access time becomes long. But a 4679 byte file with 50 file names described took less than 15 seconds. Not bad for a 16 line program.

REVIEW OF CASSETTE MAGAZINES

by John R. Rindal
409 North Oak Bend Drive
Duluth, MN 55811

When I first bought my computer, in November, 1981, there was not a great deal of software to be had. I had not "discovered" CCN yet and felt that I was alone in the quest for good software. Then one day I happened upon an ad for Chromasette Magazine.

Since the day I received my first issue, I have been "hooked" on Chromasette.

It may be that some of you are not familiar with what I'm talking about. Once a month, a cassette arrives with a number of programs on it. These are "ready to run", that is NO TYPING. Just load and run.

There are now three companies (that I know of) that are in this field. One I've already mentioned, Chromasette. The other two are T & D Software and The Programmer's Institute. (See addresses below).

Now, with software of this order you don't get to choose what programs you get, it's a surprise every month. This is an inexpensive way to purchase good software. Say, you need to purchase a database program. Two

of the three magazines have had some form of database program in the past few months. While these programs may not be exactly what you want, you can rewrite or change the program to fit your needs. This is far cheaper than spending \$20 for a very similar program that you might have to customize anyway. Another plus is the great variety of the programs you receive. Something to please everyone. While you may not need a particular program you get one month you may find a use for it in the future.

All three companies try to give you a happy balance between game, practical, utility, and home use programs. Something to please everyone. The prices vary, ranging from \$45 to \$50 for one year. (Single copies are also available.).

Chromasette, is by far my favorite. Dave Lagerquist is the friendly editor, and provides an excellent product each month. Each program is written by a different individual. This provides for a lot of variety, something which I greatly appreciate. The programs are always excellent, and 99% of

NEW for your COLOR COMPUTER

Release the potential of your Color Computer . . .

Use up to 5 compatible Color Computer cartridges at the same time with the BT-1000 Expansion Interface Unit.

- **The BT-1000 is limitless combinations.** Plug in your disk controller, memory boards, Real Time Clock/Calendar, printer interface, experimental boards—all at one time.
- **The BT-1000 is adaptable.** Up to five functional peripheral cartridges, in your choice of combinations, will run with any configuration, any size memory of the Color Computer.
- **The BT-1000 is flexible.** Four 24-pin sockets hold up to 8K static RAM or EPROM (can be supplied with an extra 8K RAM).
- **The BT-1000 is safe.** It will not overload, overheat or damage your Color Computer in any way.
 1. Has own built-in power supply.
 2. Effectively isolated by a buffered cable.

That's not all Basic Technology has to offer . . .

Record date and time on all programs, files, letters, with the accurate, programmable BT-1020 Real Time Clock/Calendar . . .

- Plugs into your BT-1000 or directly into the Color Computer expansion slot.
- Adds day, date, month, year, hours, minutes, seconds (12/24 hr.)
- Includes internal NiCad battery, crystal controlled to 0.001% accuracy (charges when your computer is on)
- Has 50 bytes of battery backed general purpose memory

All Basic Technology components are first-line quality.

- gold board-edge connectors
- glass epoxy PC boards
- 180-day full parts and labor warranty on all components

Your **Basic Technology** components arrive assembled, tested, ready to plug in and turn on. A comprehensive User/Service Manual is included with complete schematics, PC component layouts, parts lists and hints on mapping your peripheral additions anywhere in the CPU addressable memory. Write for free brochure.

BT-1000 incl. cable \$270

BT-1020 Clock/Calendar \$109

BT-1000 w/8K RAM \$300

Add \$5.00 shipping & handling for BT-1000, \$2.50 for BT-1020. Michigan residents add 4% sales tax. Shipping & handling for residents of Canada, Hawaii, Alaska is \$10.00. Overseas orders add 15%. Check, money order, VISA, MC (give account no., expiration date, phone no.). Personal checks allow 2-3 weeks to clear. COD charge \$2.00 (requires certified check or money order).

GALACTIC TREK

by Rick McDannel
12042 E. 25th Avenue
Aurora, CO 80010

I am sure I am not the only one who has spent hours and hours hacking away at a game written in BASIC only to find out that the result was much too slow to be exciting. Hopefully, with this program I can show one way to make BASIC games more dramatic. I think you will be pleasantly surprised at what a thirteen byte machine language subroutine can do.

The function of the ML subroutine is to scroll everything on the graphic screen to the bottom except the top eight lines which will be used to display the score. The program uses PMODE 1 which requires two pages of memory, in this case memory positions 1536-3072. In PMODE 1 each byte contains four horizontal graphic elements and each graphic line is thirty-two bytes long giving us

98 CCN Feb '83

a 128x96 resolution. The basic procedure for scrolling would be to start with the last byte in the second line from the bottom and put that byte in the same position in the last line. In other words, get the byte in memory position 3040 and put that byte in 3040 + 32 or memory position 3072. After that it is just a matter of decrementing and repeating this process until the last point to be scrolled is reached. This works fine but the result is just not fast enough for this game. To get twice the speed all that needs to be done is to put the bytes two lines down instead of one. The other difference between the basic procedure described above and the subroutine used in "GALACTIC TREK" is that instead of moving one byte at a time, the 16 bit accumulator is used and two bytes are

0008 3AA6                END

LOOP 3A9B START 3A98
```

After running "GALACTIC TREK", the first evidence of the ML subroutine will be seen as the title page scrolls down the screen. Press the fire button on the right joystick to begin the game. The right joystick will control the horizontal movement of the ship. The player starts the game with four ships and is awarded a bonus ship for each complete "TREK". Each completion of the three phases of the game is considered to be a "TREK". The ship's lasers are fired by pushing the fire button. A thousand points must be obtained in each phase in order to proceed to the next.

In the first phase, the player is required to travel through a Zymanian minefield. Twenty-five points are awarded for each mine blown up. The amount of mines on the screen will increase with every one hundred points. The second phase is a little more difficult. The object of this phase is to obtain the precious Zymanian Ore that are also worth twenty-five points a piece. In this phase, the laser acts in the capacity of a tractor beam. To make it a little more interesting the ship will have to travel through a passageway that narrows with every one hundred points. In the final phase the player will meet the Zymanians themselves in the form of a fleet of ships. They may not be very accurate with their lasers, but like the other phases with each

one hundred points the difficulty level increases. In this case the frequency of Zymanian's shots is stepped up. The strategy is to shoot the ships as quickly as possible since each ship shot will be one less that can fire back and less waves of attackers will have to be taken on. The player is awarded fifty points for each ship blown up.

You may notice that many of the objects fired upon will not blowup with the first hit. This is not a flaw, it was put in the program intentionally to make it more challenging. Also, the debris from blown up objects can be just as fatal as the objects themselves. Besides the level of difficulty increasing with every one hundred points, with each "TREK" the difficulty level will increase faster than the preceding "TREK".

After losing all the ships a "GAME OVER" message will be displayed, to play again just press the fire button. The high score will be displayed in the upper right hand corner of the screen.

I think you will find "GALACTIC TREK" an enjoyable and challenging game. If there are any comments or questions, please write to me at the above address. Also for those of you who do not like to type send \$4.95 to cover my costs and I will send you a copy of "GALACTIC TREK" on cassette. A 16K Extended Computer is required for this game.

Galactic Trek

VARIABLE LIST

CT = Counter for 3rd phase
 D = Difficulty level
 EX\$ = Explosion sound
 F-F5 = Flags for 3rd phase
 FX = Firing point for Zymanian ship
 G = Debris for 1st phase
 HS = High score value
 HS\$ = High score string
 J = Joystick value
 L = Length of score strings
 L1\$ = Ship's laser sound
 L2\$ = Zymanian's laser sound
 MX = Mine's horizontal position
 N = Variable used in calculation of difficulty level
 N\$() = Array that contains digits for score display
 PH = Phase counter
 RF = Determines when a Zymanian ship will fire
 SC = Player's score value
 SC\$ = Player's score string
 SX = Ship's horizontal position
 TR = Trek counter
 UF = Zymanian ships
 W = Width of passageway in 2nd phase
 X = Loop counter
 X1 = Leftside of passageway in 2nd phase
 X2 = Rightside of passageway in 2nd phase

IF YOU OWN A COLOR COMPUTER
THEN YOU NEED
THE COLOR COMPUTER TOOLKITS

The software development tools that let you put even more POWER into the already super powerful COLOR COMPUTER. They're full of tools, aids, bells and whistles useful to the BASIC/MACHINE CODE programmer, in friendly, easy to use software packages.

All tools are in the COLORKIT; * tools not in the MICROKIT.

- . LIGHT Characters on DARK Background with CURRENT LINE HIGH-LIGHTING ; or Normal Dark Characters
- . FULL SCREEN EDITOR with: Arrow Key controlled Cursor ; open up space / delete and close up space
- . Enabling selective line RENUMBER / COPY / MOVE / MERGE ; or use Normal EXT. BASIC's line editor
- . PROTECT the current BASIC Program from being wiped out by CLOAD, NEW, etc; or from being LISTED.
- . RESTORE a protected BASIC program / APPEND any number of BASIC programs together easily
- . KLICK on Keypress ; or Normal Silent Keys (Klick Tone modifiable by use of SOUNDn,n Command)
- . GLOBAL SEARCH of COMMAND or TEXT strings in BASIC programs, with WILDCARD character and NEXT "."
- . 9 SCREEN PRINT DELAY's with keyboard override (for slow READABLE LISTing's / DISK Directories!)
- . VARIABLE NAME LIST / String-Byte Memory Usage / Range of FREE MEM / Top of Memory Address Display
- . FAST Machine Code to BASIC DATA Statement CONVERTER for storing Machine Code visibly in BASIC
- . (C)SAVE Address / Backup Tool (Last Filename, Start, End, Execute)
- . Recovery of LOST BASIC Programs after NEW, BACKUP, DSKINI, etc
- . BREAK KEY DISABLE / ENABLE (Pause keys still available)
- . Modified TRON Display (.LN. replaces [LN])

- *. MERGE BASIC with Machine Code Routines so Machine Code "invisible" & (C)SAVE/(C)LOADable
- *. 9 BASIC RUN DELAY's with keyboard override ; SINGLE STEP(S) Mode with Current Line Number display
- *. MEMORY EXAMINE / MODIFY with HEX / ASCII / DEC / DOUBLE DECIMAL output and HEX / ASCII input
- *. Memory BLOCK-MOVE for relocating Machine Code Programs, DATA blocks, etc ; or the KIT itself
- *. TEN USER DEFINED FUNCTION KEYS accessible with <@> ; <NUMBER> (BASIC MACRO's / Block Storage)
- *. Automatic Linefeed for Printer's that don't / double space LISTings, or Normal PRINT
- *. DELETE all Spaces (not in PRINT Strings, DATA or REMARK Lines)
- *. ASCII / HEX Memory DUMPS to Screen or Printer
- *. DELETE all REMARK's (either REM or ' type)
- *. Parallel ECHO of Screen Output to Printer

- . TRANSPARENT to the User, Install it and forget about it until you need it
- . BASIC Runs up to 1/3 FASTER through the Toolkit (5-10% typical)
- . HELP Command Lists all Kit Commands and Current Kit Address
- . Same Program works on TAPE and / or DISK and in 16 / 32 K
- . Entire System Totally REMOVABLE anytime
- . COMPATIBLE with other Utility Packages
- . Green / Orange Text Screen Capability
- . Easily MODIFIABLE Command Syntax

THE KIT's are RELOCATABLE programs that load anytime without bothering your BASIC program or variables or top of memory address. All the tools may be turned on and off at will including the KIT itself.

The tools are available with simple 3 or 4 letter commands entered in direct mode, with the entire instruction set viewable by use of the .HELP command:

```
.VAR .OLD .MMRG .MPRG .BRON .BROF .SCON .SCOF .KLON .KLOF .BROF .DARK
.LITE .PROT .REST .TXON .TXOF .RDLY .PDLY .DELR .DELS .SNLF .DBLF .DUMP
.MEM .BYE .BLOC .ECON .ECOF .MADD .FNIN .HELP .GRL .(next)
```

The COLORKIT is 5 K-bytes with all the tools for \$29.95

The MICROKIT is 2.5 K-bytes minus * tools for \$27.95

On DISK with handy BASIC KIT loader for additional \$5.00

- | | | |
|---|--|--|
| <p>THE GOOD LIFE \$16.95
 The CLASSIC Game of LIFE, with:
 . 64 x 64 4-COLOR symmetrical display (GIC)
 . 3 Selectable Birth and Old Age Colors
 . 15 Modifiable Pre-programmed Patterns
 . Save/Load Life Screens to Tape/Disk
 . Speeds from 8 gen/sec to 1 a second
 . JOYSTICK and / or ARROW Key Input
 . Written in User Modifiable Basic
 . With Machine Code LIFE processor
 . HELP Screen Command List
 . Tape / Disk Compatible
 . Selectable Color Sets
 . X & Y Axis Wraparound</p> | <p>THE DISK COMMANDER \$19.95
 DISK FILE UTILITY with:
 . Single Key VIEW / COPY / LOAD(M) of Files
 . Double Key KILL / RENAME of Files
 . SORT DIRECTORY on Name / Extension
 . PACK DIRECTORY so new files put at end
 . DIRECTORY KEYWORD SEARCH of Filenames
 . PRINT DIR w/ MACHINE CODE addresses
 . RECOVER KILLED Files</p> | <p>DEER HUNT \$15.95
 ARCADE Shoot-em-up SKILL Game
 . Aim for ONLY the DEER
 . Avoid hitting people, cars, train
 . Will NOT Cause Tension Headaches
 . BASIC / Machine Code Hybrid
 . Tape / Disk Compatible</p> |

PREMIUM SOFTWARE FOR THE COLOR COMPUTER

SISI (16K EXT. BASIC) \$9.95

Sisi the fortune telling computer uses data that you input to determine a character reading for you.

COLORHYTHM (16K EXT. BASIC) \$9.95

Plots your biorhythm in hi-res graphics for 15 days.

PRESCHOOL PAK (16K EXT. BASIC) \$8.95

Two preschooler learning drills. Contains ALPHABET & COUNTER. Makes use of hi-res graphics and sound. The kids think it's a game!

MONEY MINDER II (16K) \$14.95

A cassette based personal finance program. Up to 56 user definable budget categories. Printout capability. Menu driven—easy to use.

DISK MONEY MINDER (32K plus disk) \$19.95

Similar to MONEY MINDER II but for use with disk. Easier and faster to use.

REVIEW-HUMBUG

by Ralph Tenny

PO Box 545

Richardson, TX 75080

The most basic tool available for the assembly language programmer is the debug monitor program. Depending upon the capabilities of your debugger, freshly written programs can be simply tested for operation, or, with a really good debug monitor the program can be patched, run in breakpoint or single-step mode, and analyzed thoroughly. Compared with the clumsy and inefficient operations available with BASIC, the debug monitor is almost a miracle.

HUMBUG is an exceptionally complete and well written assembly language debug monitor for the Color Computer. 32 two character commands operate in a straight forward manner, requiring no ENTER key (typical of 6809-based monitors). The user is prompted for any required parameters, and illegal commands or non-hex parameters cancel the entry. HUMBUG requires 4K of read-write memory anywhere in the machine and is totally position independent. It can reside in ROM, and then uses approximately 60 bytes of read-write memory for workspace and 256 bytes for separate stacks.

Let's examine the commands available from HUMBUG, so we can more fully appreciate what all it can do for us:

106 GCN Feb '83 106

AD Formatted ASCII dump, sixteen bytes to a line with each line's starting address printed.

AI ASCII Input. Allows direct ASCII data input from keyboard into memory.

AO ASCII Output. Memory contents are dumped to the screen in ASCII format.

AT Analyze Tape. Analyze Color Computer format tapes and list program name, type of program or data, where in memory it loads, number of bytes and whether it is in ASCII format.

BA Set baud rate to one of five standard speeds.

BR Breakpoint set/reset. Up to four breakpoints can be set or reset, giving exceptionally flexible breakpoint operation.

CO Continue program operation in either breakpoint or single step mode.

CS Checksum is computed over a specified memory area.

DE Disassemble. Object code is dumped in assembly format.

EN End of tape. Sends "S9" over serial port to signal end of S1-S9 checksummed transmission.

FI Find a specified one, two, or three byte number and prints all memory locations

Humbug

where the number is found.

FM Fill specified memory range with a specified character.

HD Hex Dump. Prints a memory dump in hexadecimal, with eight bytes per line and each line preceded by the start address for that line.

HE Help. Prints a menu of commands.

JU Jump. Execute another program with a jump to its start address.

LO Load tape. Upload from another computer over serial port using Motorola S1-S9 checksummed format.

MC Memory compare. Compare two specified memory areas (such as to verify a data move).

ME Memory examine/change. Examine and/or change memory contents from keyboard.

MH Move HUMBUG. Move HUMBUG to another read-write memory location.

MM Move memory. Copy a block of memory to a specified location.

MT Memory test. Performs a simple non-destructive memory test.

MV Memory view. Display any 512 byte block of memory which starts on an even 512 byte memory boundary.

PR Printer. Toggle printer on or off.

PU Punch tape. Send data over serial port in Motorola S1-S9 checksummed format.

RC Register change. Used with RE command to examine and change contents of the 6809 processor registers.

RE Register examine. Prints the contents of all 6809 registers as maintained in the user stack following a breakpoint or single step operation.

RT Remote terminal. Allows the computer to be controlled by a remote computer or terminal, or to control a remote computer or terminal.

SA Save to cassette. Essentially identical to the BASIC CSAVEM command.

SI Serial input. One of three commands used with a remote terminal.

SS Single step. Operate machine language programs one instruction at a time, thus allowing the user to visually trace program operation. Will not work with programs in ROM, and cannot be used in time critical assembly language programs involving software timing loops.

ST Start single step operation.

TF,TH Set terminal mode to full or half duplex operation.

WH Where is HUMBUG? Locate current version of HUMBUG after use of MH command.

Almost any reasonably experienced Color Computer user will be able to learn how to use HUMBUG quickly, thanks to a 30 page handbook which provides a full listing and covers HUMBUG operation in great detail. In addition, there are instructions and commentary on memory usage, compatibility with BASIC and how to protect HUMBUG when BASIC is running. This documentation is superb and very thorough, especially considering the low price.

An experienced assembly language programmer will derive the most benefit from this program, but any diligent user trying to learn assembly language programming will derive much from regular use of the program and careful study of the documentation. In particular, the full listing allows study of virtually all modes of 6809 programming, and the abundance of commands allows a much more thorough understanding of what is happening.

HUMBUG is available for \$39.95 from STAR-KITS, PO Box 209, Mt. Kisco, NY 10549. If you have a Radio Shack disk system, load the tape in the usual fashion, SAVEM it to disk, and run it from there.

I heartily commend STAR-KITS for furnishing a full listing of HUMBUG and for facing the software piracy issue head on. In effect, they say "Here's how to copy HUMBUG; don't give copies away or we will sue you!" Since the user has the listing and very complete documentation, he will derive maximum value from his investment, and the software is much more durable and valuable.

FUN & GAMES

FUN & GAMES

FUN & GAMES

PAC ATTACK

Bring arcade fun to your home! Three little rare earth muggers chase your man relentlessly around a maddening maze as you furiously try to eat up points. Three levels of difficulty and great graphics with sound!

cassette . . \$24.95
disk . . \$29.95

EL DIABLERO

You awake, dazed and confused, in the middle of the desert. You had been learning techniques of sorcery from an old man who lives in these parts. He told you of his enemy, an evil sorcerer, a "diablero." Now your teacher is missing and you are alone! Pure adventure!!

cassette . . \$19.95
disk . . \$24.95

DOODLE BUG

In high resolution graphics your lady bugs hussle through an intricate maze of barriers & turnstiles, trying to earn points by eating dots, letters, & hearts. Enemy bugs buzz after you! Exquisite sound and graphics!

cassette . . \$24.95
disk . . \$29.95

STARSHIP CHAMELEON

Your intergalaxian vessel must defend your planet against evil Gabalatok attack. You have the unique ability to change color at the push of a button to destroy oncoming bombs and anti-matter. Watch out for the semi-intelligent aerial mines that home in on you! Nine levels of play.

cassette . . \$24.95
disk . . \$29.95

MAZERACE & CAPTURE THE FLAG

Two great games in one package! Mazerace is a board type game of chance & strategy. The hexagon matrix is filled with paths & obstacles. You must reach the other side before your opponent. Capture the Flag is similiar but runs in real time and has a different field. You can play with a friend or with the computer.

cassette . . \$19.95
disk . . \$24.95

STORMI

A tempest of a game, Storm is an exciting & colorful experience with 15 different battlefields & 9 levels of challenge. Shoot enough Rainbow Raiders and you earn your way to the next level. Watch out for the millbars!

cassette . . \$24.95
disk . . \$29.95

RAIL RUNNER

Watch Out! Your railroad engineer must scurry over the track of the busiest train switchyard ever, dodging speeding trains & handcars, to rescue the poor little hobos on the wrong side of the tracks! And the clock keeps on ticking!

cassette . . \$21.95
disk . . \$26.95

COLOR INVADERS

You are at the controls of the Space Tank, firing at steller ships and invading critters. Ships burst in air with explosive noise. Alien critters march across the screen dropping bombs & screaming as life is zapped from their fried bodies.

cassette . . \$19.95
disk . . \$24.95

CCMD Review

By Andrew Hubbell

CCMD+, produced and marketed by Cer-Comp, is a disk operating system, (DOS) for the Radio Shack Color Computer utilizing Tall Grass Technologies' disk controller. Physically the system consists of a circuit board approximately 6 inches by 4 inches. One end of the board plugs into the Rom Pac expansion slot on the side of the computer, while the other end has an edge connector structured for the attachment of a cable running to one or more disk drives. The disk drive(s) and connecting cable must be obtained separately you can order them from Cer-Comp along with the controller, use Radio Shack's Color Disk cable and drive, or obtain them from another source, several of which have advertisements in this magazine. In my case, I am using a Heathkit H-17 dual disk drive unit. I had to obtain a cable separately and reprogram the drive jumper plugs, since Heath normally uses different connectors and drive select signals, but the modifications required conform to standard Radio Shack usage for the Models I and II, as well as the Color Computer, so my local computer dealer was able to provide all the

necessary parts and information. With these modifications installed, I plugged in the board, turned it on, and started to run. No problems. I have since discovered, however, that the disk drive cable plugs into the CCMD+9 circuit board upside down when compared to Radio Shack's controller. If you do attach it the wrong way, your disk drives will start to run continuously as soon as the equipment is powered up. It doesn't hurt the equipment, but I would recommend testing first without a disk in the drive. If you get it wrong the first time, just power down and switch it around.

A couple points should be noted about the Tall Grass/Cer-Comp controller board: First, it comes without a case. The equipment runs fine and I have had absolutely no problems from dust, fingers, or anything else contacting the components. However, it does generate some interference with my television, so I am currently looking for a shielded case in hopes of eliminating this problem. Cer-Comp has just recently come out with an optional plexi-glass case, and, though I doubt that its really necessary, I will

CCMD

probably order one soon just to feel more secure.

The second point is that this system uses hard sectored diskettes. (These are the same size as the soft sectored variety used by Radio Shack, but have 11 index holes rather than just 1. This locks the system into a 10 sector per track format. CCMD+9's double density is achieved by using 51 bytes per sector, as opposed to Radio Shack's 256 bytes per sector). Although there is generally no price difference between hard and soft sectored floppies, the hard sectored variety are not as readily available. For me, the nearest vendor of hard sectored media is 50 miles away, while I have several local sources for obtaining soft sectored diskettes (including two Radio Shack stores) at up to 40% less. I can, of course, order the disks from Cer-Comp, or any of several mail-order houses, at a better price, but that wouldn't help if I ever need one right away. The difference in media also guarantees that you will not be able to use any D.E.B. compatible disks under CCMD+9. You may be able to dump the programs to tape and reload under the other system or transmit from one CC to another via the RS-232 ports, but no one will be coming out with a translator program which will read one system's disks while operating under the other. Products like FLEX and OS9, which incorporate their own disk drivers, are simply not available unless/until somebody specifically writes them for CCMD+9.

CCMC+9's software exists essentially on two levels, DOS and BASIC. If you have Extended Basic, as I do, your machine will start at the DOS level. Without Extended Basic, you must first EXEC 49152 to install the CCMD+9 software into your operating system. Typing BASIC at the DOS level returns you to the control of the BASIC ROMs with CCMD+9's additional commands now available.

The BASIC level commands, which may be used either in command mode or within a BASIC program, tend to be rather limited. Essentially they extend the cassette functions to disk. LOAD, SAVE, and OPEN are rather obvious extensions. INPUT, PRINT, EOF, and CLOSE may now be used with positive values to reference disk files.

Two new commands are CHAIN (LOAD and RUN a BASIC program) and REWIND (close a file and reopen it for input). Additionally, any of the DOS level commands can be used by passing it as a CDOS (Call DOS) command string. However, there are no provisions for random access files or machine language programs. The latter could be loaded, saved, and, in some cases, run at the DOS level, but since the EXEC address is neither passed to BASIC nor displayed in directory listings, I have to keep a manual record of it and feed it in to use the program. For example, to play BERSERK, I would type:

```
CDOS"LOAD BERSERK"  
EXEC&H600
```

At the DOS level there are a number of commands available for handling disk maintenance and machine language programs. A few of them can be a bit confusing, however, since they have the same names as BASIC level commands (but, of course, different results). Probably the most scary is NEW. Under BASIC this command initializes the BASIC program space in RAM. Under CCMD+9's DOS, however, this command initializes a disk. I haven't made a mistake with it yet, but it is possible to do so. LOAD and SAVE at the DOS level refer to machine language programs. (In fact, the DOS can not directly locate a BASIC binary formatted program, which can be a real nuisance when I want to REMOVE one from disk). GOTO and GOSUB can be used to transfer control to a machine language program or subroutine, or even into the ROMs. CHANGE will change a program name. ANALYZE is used to display the disk directory, and BASIC returns you to BASIC ROM control. OK checks files for errors. SCMP toggles control of the automatic readback check on disk writes. STRACK alters the logical (though not the physical) characteristics of a disk drive, and can be used to experiment or achieve compatibility with other equipment. Disk drive selection is accomplished by following a command with :N, where N is the number of the desired drive, or the name (up to six characters) of a disk. Incidentally, as I found out by making a few spelling errors, any of these commands can be abbreviated by its

CCMD

first two letters. Subject to this complication, (ie. typing BACKUP gets you BASIC) any command not within the standard set is interpreted as begin the name of a machine language program to be loaded from disk and executed.

The disk directory format consists of: Program name and extension, sector count, link address (used only if a file is fragmented), (RAM) load address and end address, and disk address of the first sector. The program name is limited to six characters, or a slash terminating the name, function as "wild cards", causing some of the commands and utility programs to process any program matching the remaining characters on the name/extension. The sector count, link address and disk address are decimal values, while the two RAM addresses are hexadecimal. (Most numeric input at the DOS level is also in hexadecimal.) The directory very nicely fills up the 32 character screen, but does not show the EXEC address, even though one is retained on disk with the program. The directory can be dumped to a printer, in this same format, by typing ?AN.

Unfortunately about half of the machine language programs I have seen, both games and utilities, fail to run at the DOS level. In fact, some will not even load at the DOS level. (They can, however, be loaded and run at the BASIC level, using the command sequence mentioned earlier.) CCMD+9 points both the User stack and the Direct Page registers to high RAM, where it maintains its scratchpad, and insists that any program to be run at the DOS level restore these registers to these values. Programs which expect to find the DP register pointing to BASIC's scratchpad on page 0, therefore, fail immediately. Furthermore, CCMD+9 appears to use the IRQ interrupt for its own timing control, and several programs hang-up the when they try to generate sound.

Bill Vergona, at Cer-Comp, is currently developing a newer version of the CCMD+9 DOS which emulates Radio Shack's Disk Extended Basic. I have obtained a preliminary copy, on disk, for review purposes. The finished product should be

available by the time you read this article, but I am not sure just how it will be marketed or whether it will totally replace, or simply extend, the present controller ROM. The version I have at this point is not fully complete, and it seems to have a few bugs in it yet, but overall it seems to run fairly well.

To implement the new DOS, I simply insert the disk and type DSKEXT.U. The CCMD+9 prompt then gives way to Radio Shack's familiar copyright notice, with an interrupt driven clock residing in the upper right corner of the text screen. I don't know how to kill the clock other than by going to a graphics screen the documentation for the new DOS is not developed yet. It is stopped, however, during cassette operations. And, probably, also during disk, keyboard, etc. operations which disable interrupts. SOUND doesn't seem to bother it, however. Assuming that it works like Cer-Comp's CLOCK utility program, there will be an adjustable parameter which compensates for these occasional short termed lapses.

Under this newer DOS there is only the BASIC level of operation. LOADM and SAVEM handle machine language programs, which can now be EXEC'd after loading without specifying an address. DIR, KILL, and RENAME now manage the disk directory. Some of the R.S. commands, such as BACKUP, COPY, and DISKI are not implemented in the version I have, though they may be included in the finished version. Cer-Comp's Utility Disk, however, does cover these functions. The commands to manage random access files (FIELD, GET, PUT, RSET, LSET, etc.) have been implemented, however, and seem to work exactly like the similar commands I have seen on other Radio Shack computers.

The documentation for CCMD+9 tends to be a bit concise, but fairly complete. It contains no reference to the physical aspects of the hardware of connections, but does contain a one or two paragraph description and at least one example of each command. It could benefit from a proofreader since there are occasional spelling and grammar errors, along with repeated or missing words and phrases. Some points of command syntax are not clear on an initial reading, but, working from the examples, I was able

CCMD

to get through it all without too much difficulty. A large portion of the manual is devoted to somewhat more technical information about the DOS's internal subroutines and disk interface. Overall, the manual (in fact, the whole system) seems oriented more toward a machine language programmer than a BASIC user. Since the newer, enhanced version of the DOS appears directed more toward BASIC programmers and novice users, this situation may change. It is nice, however, to have the technical information available without having to disassemble ROM's. Bill Vergona also seems quite helpful and willing to share information when questions do arise. Fortunately, he can only be reached in the evening, when the phone rates are lower.

How does CCMD+9 compare with the other DOS's which are available, particularly Radio Shack's Disk Extended Basic? Disk Extended Basic uses 35 track disk drives. CCMD+9, like some of the other non R.S. DOS's allows you to use 40 and 80 track drives, single or double sided. (Of course, the higher capacity drives do cost considerably more.) Its data storage format of 10 sectors per track with 512 bytes per sector yields 200K of storage on a typical 40 track drive or 175K on Radio Shack's Color Disk drives. By allocating file space in sectors instead of granules, the available space is made to go even further. To provide a more meaningful illustration of capacity I loaded a collection of machine language games, ranging in size from 2K to 19K and averaging about 7 or 8K each, onto disk. Under CCMD+9 I was able to fit the first 28 games on a single disk. Radio Shack's Disk Extended Basic, on the other hand, could hold only 19 of these same games on a disk.

What I like best about CCMD+9, however, is that I do not have to give up all of my cassette based software to use disks. Many of the earlier machine language programs either ORG at \$0600 or utilize a graphics screen at the location. (This was originally the start of "user area" RAM, as documented in the Extended Basic Manual.) Since Radio Shack's Disk Extended Basic now uses this location as the start of its scratchpad, the DOS and ML programs destroy each other. Approximately one half

of the games I checked out, and a few of the utilities, simply will not run under D.E.B. CCMD+9, on the other hand, locates its scratchpad at the high end of RAM, and out of the 30 ML games I tested, only Aardvark's Venturer failed to run properly. (I did, however, have to write a short block move header to get Cornsoft's Scarfman onto disk. I also have removed all auto execution headers from the programs. These fixes were required to allow me to make tape backups, as well as to load the programs onto either disk system.) As I mentioned earlier, only about half of these programs can be run at the DOS level. Some of them also fail to run with the new version of the DOS installed apparently in emulating Radio Shack's system Bill Vergona also acquired some of its shortcomings. (The fact that I have only the preliminary version of the DOS may also be relevant here.) But, at least I can make them run, even if the procedure required is a bit inconvenient.

Although I would expect hard sectored disks to be less sensitive to timing differences between drives than are soft sectored ones, CCMD+9's encoding technique seems to be even more sensitive than other systems I have seen. I have experienced some difficulty when trying to read disks on a different drive than that on which they were written. Reversing the order of my two drives eliminated loading problems on my computer, but I still have some difficulty reading the disks on someone else's system. Over the course of several months I have lost a few programs (they get a "DCODE" error when I try to load them) for unexplained reasons, but I have always been able to recopy the same program to the same place on the disk with no other ill effects. I do not know enough about Radio Shack's D.E.B. to tell you its reliability rate, but, judging from what I have read in this and other magazines, it certainly doesn't sound any better. With the Model I's I have worked with, it was not too unusual to lose entire disks, generally as a result of spurious disk writes caused by line voltage transients, static electricity, or turning equipment off while the disk was in the drive. I often forget to pull the disks out before switching power off or on, but have never seen or heard any

COLOR COMPUTER | FLEX* | OS-9† USERS

DO YOU WANT faster running programs (over 100 times faster than BASIC)? A high level language that is also a low level language? A compiler that runs in less than 32K? Assembly language output? Position independent code? Extensive library functions in source assembly code? Periodic newsletters with new library functions? An aid in learning assembly language? Liberal version updates?

C IS DESTINED to become the language of the eighties: A compact, highly versatile, easy to use language, excellent to use to build games, applications, utilities, operating systems, etc.

DUGGER'S GROWING SYSTEMS with over 21 years of experience in computing was first on the market with a 6809 C compiler. The compiler has been extensively tested, revised, and proven.

DUGGER'S GROWING SYSTEMS C is a growing subset of the standard C. Version 1 contains all the necessary C commands (while, if, if else, int, char, etc.). Version 2 contains additional features (float, long, for, goto, etc.).

AN EXTENSIVE LIBRARY in assembly language source is provided (char, I/O, formatted print, file handling, string manipulating, etc.). TRS DOS version also has additional functions which

use the BASIC ROM functions (CLS, POLCAT, floating point, draw, etc.).

ORDER NOW (new low prices)

Move up to C language

CCMD

extraneous disk activity under CCMD+9.

In summary, the choice of a particular disk controller and DOS must be made on the basis of each individual's requirements. CCMD+9 is not a perfect system, but it is a viable choice. Compatibility is both its strongest and its weakest feature. At the present time Cer-Comp has more software available for its disk system than Radio Shack does, though outside vendors, including Cer-Comp, will probably tip the balance in Radio Shack's favor. If we include all existing cassette software, however, Disk Extended Basic again falls considerably behind. At the present time I am waiting for Bill Vergona and Cer-Comp to release the new DOS. (Hopefully, it will be an option, rather than the only system.) Unless I decide to run FLEX or OS9, however, I see no need to acquire Radio Shack's disk system.

Editor's Note: After discussing software with Bill Vergona I discovered that Andrew's copy of the documentation didn't include the command "TIME OFF" which turns off the clock display. I also discovered that Bill and Andrew don't agree on the definition of the term Random access.

™ TRS80 color

From the January 1981 issue of the CSRA Computer Club newsletter:

There was some amusement at the November meeting when the Radio Shack representatives stated that the software in the ROM cartridges could not be copied. This month's 68 Micro Journal reported they had disassembled the programs on ROM by covering some of the connector pins with tape. They promise details next month. Never tell a hobbyist something can't be done! This magazine seems to be the only source so far of technical informations on the TRS-80 color computer. Devoted to SS-50 6800 and 6809 machines up to now, 68 Micro Journal plans to include the TRS-80 6809 unit in future issues.

NOTE: This and other interesting and needed articles for the Radio Shack TRS-80 color computer™ are being included monthly in 68 Micro Journal—The Largest specialty computer magazine in the world!

68 Micro Journal™ was established with one objective in mind; to provide a Magazine FOR 68xx Users BY 68xx Users. Because of a strict advertiser policy, 68 Micro Journal™ has gained a strong following WORLDWIDE because the reader KNOWS what he's getting when purchasing from a 68 Micro Journal™ Advertiser. It has gained a strong User following because most of the material published is contributed BY USERS, and, therefore, is relevant to the Users needs.

Currently, and even before the Color Computer™ hit the stores, 68 Micro Journal™ was devoting more space to the TRS-80C Color Computer™ and information concerning the Motorola 6809 (which is the CPU in the Color Computer™) than ANY OTHER Computer Magazine. Examples Include:

REVIEWS of the three major Disk Control Systems for the Color Computer™, most of the Monitors, Assemblers, and Disassemblers, Word Processors and Editors, "Terminal" Programs (for use with Modems, Communications with other Computers, etc.), and of course, Games.

HINTS for Expanding Memory, Power Supply Cooling, repairing sticky keyboards, disabling the ROM PAK "Take Over", hooking up to Printers, etc.

DISCUSSIONS of the 6883 Synchronous Address Multiplexer, using the Color Computer™ with 64K and 96K memory (which it is ALREADY capable of handling), thoughts on Programming, etc.

I suggest that you subscribe to 68 Micro Journal™, SOON, as many back issues are sold-out.

We still, and will continue to, lead in the type information you need to FULLY UTILIZE the POWER of the 6809 in the Radio Shack TRS-80 Color Computer™.

Radio Shack announces proposal theme for fourth quarter submissions to its Tandy TRS-80 Educational Grants Program.

Radio Shack, a division of Tandy Corporation, is setting the subject for proposals in the fourth submission cycles of the company's Tandy TRS-80® Educational Grants Program as "Unique and Innovative Microcomputer Applications in Education." Deadline for submissions under this theme is March 31, 1983.

The Tandy TRS-80 Educational Grants Programs is designed to encourage and support the successful application of microcomputer technology in U.S. educational institutions. Through the program, TRS-80 hardware, software, courseware and related products totaling \$500,000 per year will be awarded to individuals and non-profit organizations whose proposals are selected in four quarterly cycles as providing the greatest benefit to the American educational community under selected proposal themes. Equipment is allocated based on the recommendations of an impartial Educational Grants Review Board comprised of a number of distinguished educators.

Information kits are available by written request only from:

Tandy TRS-80 Educational Grants Program
Radio Shack Education Division

Fort Worth, TX 76102

THE RIBBONIZER® — FOR FABRIC RIBBON RENEWAL

Dark-as-original print impressions may be obtained by using The Ribbonizer® on used fabric ribbons. Ribbons may be renewed repeatedly until the fabric wears out or the cartridge fails.

Models are designed for popular letter-quality and matrix printers such as NEC, Epson, Radio Shack and Diablo. The black ink supplied is blended to the specifications of major ribbon suppliers and is available separately when an additional supply is needed. Long-life, economy-priced renewable fabric ribbons can be ordered.

The Ribbonizer® retails for less than \$40. For detailed information, contact The Ribbonizer®, Box 1727, Redlands, CA 92373.

PROTECTORS

PROTECTORS is an exciting fast paced arcade game that looks and plays like the popular arcade game "DEFENDER".

Wave after wave of enemy fighters drop bombs on your city. Destroy them before they destroy your city. Soon the mother ships appear firing laser blasts at you. Watch for the heat seeking mines.

Your defense includes your laser cannon plus four smart bombs on each of your four ships. A new ship with each 5,000 points.

High resolution graphics with four colors make this new 32K arcade game the one for others to follow.

DIALOG ANNOUNCES NEW COMPUTER DATABASES FOR ON-LINE RETRIEVAL

PALO ALTO, Calif. — Two new databases covering microcomputer magazines and mini and microcomputer software will be available on-line this winter from dialog Information Services, Inc.

Dialog Information Services, Inc. offers more than 160 databases containing more than 60 million individual records to its customers via a worldwide on-line telecommunications network. Included in the databases are Compendex, with abstracts from more than 3,500 engineering and scientific journals, conference reports and government publications and INSPEC, the largest English-language database covering physics, electrotechnology, computers and control.

Literature and information on DIALOG databases, as well as procedures for initiating service, is available by calling (800) 227-1927; (800) 982-5838 (in California); or by writing Dialog Information Services, Inc., 3460 Hillview Ave., Palo Alto, CA. 94304.

THE COLOR STICK INTERFACE

Now have the best of both worlds! The smooth true feel of control of the Spectrum Stick and the center return feature of joysticks for the Atari. Just plug your Atari game joystick into the color-Stick interface and the other end jacks into the joystick port of your COCO. Use our Joystick Y Adapter to have both joysticks hooked up together. Save \$5 off the regular price of the Joystick Y Adapter when purchased with the Color-Stick Interface. \$19.95

Color Computer News

Which was the first magazine to show it's readers how to turn an inexpensive Color Computer into a high-quality 64K 6809 development system?

Which magazine showed it's readers how to turn the Color Computer into a low cost business system using the Flex* operating system?

Which magazine has published more comments to the Color Computer ROMs than any other?

Which magazine is the original Color Computer magazine for 6809 users?

Which magazine presents awards to innovative 6809 users?

If you answered Color Computer News to all of the above you are absolutely correct! If not, isn't it about time you subscribed to Color Computer News?

In addition to our games, tutorials, hints and tips we also include monthly columns about such things as FLEX*, OS-9*, comments to the ROMs, beginners BASIC and assembly language programming

Here's what some of our readers say: I am writing this note .. to tell you I think you are doing a great job and to keep up the good work. C.G. Nashville

I have just borrowed a copy of CCN from a friend of mine and think its GREAT! P.M. Ft Rucker

thank you for rescuing me from "limbo". H.L. Bedford

CCN is a tool I use for a Reference, its more than a magazine.

CCN is the best source of CC information around. A.B. New York

2MHZ 6809 SYSTEMS

GIMIX offers you a variety to choose from!

38 MB WINCHESTER SYSTEM \$17,498.99

HARDWARE FEATURES:

- ★ 2MHz 6809 CPU
- ★ 512KB Static RAM
- ★ 8 RS232C Serial Ports
- ★ 2 Parallel Ports
- ★ DMA Double Density Floppy Disk Controller
- ★ Dual 8" DSDD Floppy Disk System
- ★ Dual Winchester Subsystem with Two 19 MB 5¼" Winchester Drives

SOFTWARE FEATURES:

- ★ OS-9 LEVEL TWO Multi-User Operating System
- ★ OS-9 Debugger
- ★ OS-9 Text Editor
- ★ OS-9 Assembler

19 MB WINCHESTER SYSTEM \$8998.09

HARDWARE FEATURES:

- ★ 128K Static Ram
- ★ 2MHz 6809 CPU
- ★ 19 MB 5¼" Winchester DMA Subsystem
- ★ 4 RS232C Serial Ports
- ★ 1 MB 5¼" Floppy Disk Drive
- ★ DMA Double Density Floppy Disk Controller

SOFTWARE FEATURES:

- ★ OS-9 LEVEL TWO Multi-User Operating System
- ★ OS-9 Text Editor
- ★ OS-9 Debugger
- ★ OS-9 Assembler

128KB MULTI-USER SYSTEM \$6997.39

HARDWARE FEATURES:

- ★ 2MHz 6809 CPU
- ★ DMA Double Density Floppy Disk Controller
- ★ 128KB Static Ram
- ★ 2 RS232C Serial Ports
- ★ Dual 8" DSDD Floppy Disk System

SOFTWARE FEATURES: Your choice of either UniFLEX or OS-9 LEVEL TWO. Both are Unix-like Multi-User/Multi-Tasking Operating Systems.

56KB FLEX / OS-9 "SWITCHING" SYSTEM \$4148.49

HARDWARE FEATURES:

- ★ 2MHz 6809 CPU
- ★ 56K Static Ram
- ★ 2 RS232C Serial Ports
- ★ DMA Double Density Floppy Disk Controller
- ★ 2 Built-in 5¼" 40tr DSDD Disk Drives (80 Track DSDD Drive Option . . add \$400.00)

SOFTWARE FEATURES:

- ★ GMXBUG monitor — FLEX Disk Operating System
- ★ OS-9 LEVEL ONE Multi-tasking operating system for up to 56K of memory

WINCHESTER SUBSYSTEMS

Winchester packages are available for upgrading current GIMIX 6809 systems equipped with DMA controllers, at least one floppy disk drive, and running FLEX, OS-9 LEVEL ONE or OS-9 LEVEL TWO. The packages include one or two 19MB (unformatted) Winchester drives, DMA Hard Disk Interface, and the appropriate software drivers. The Interface can handle two 5¼" Winchester Drives, providing Automatic Data Error Detection and Correction: up to 22 bit burst error detection and 11 bit burst error correction.

Dual drives can be used together to provide over 30 MBytes of on line storage -- or use one for back-up of the other. (More convenient and reliable than tape backup systems.)

- #90 includes one 19MB Drive, Interface, and Software \$4288.90
- #91 includes two 19MB Drives, Interface, and Software \$6688.91

Contact GIMIX for systems customized to your needs or for more information.
