## RAINBOW- WRITER SCREEN ENHANCER

The ultimate in hi-res graphics text display. Allows your Computer to *write* text on any graphics screen in *Rainbow* colours

### CHECK THESE IMPORTANT FEATURES:

- User definable 224 character set featuring true lowercase with descenders, improved cursor, slashed zero, Greek math symbols, lunar landers, stick figures, tanks, cars, planes, card suits, etc.
- Supplied character generator program allows easy creation of colored, animated figures to save and use in your own character-graphics programs.
- Works in all PMODES.
- Two character sets for maximum clarity produce 12 character densities. 32 x 16, 42 x 24, 50 x 24, 64 x 24, plus double widths in PMODE 4.
- Pre-loader allows optimum loading in 32K or 64K machines. The 64K selection automatically transfers all ROM (including cartridge) to RAM. Uses 4-5K of memory.
- ML extension of BASIC completely interfaced and transparent incorporating direct conversion of all keys and commands including PRINT @.
- Automatic underline, superscript, subscript, reverse video, top and bottom definable scroll protected options.
- User friendly – easy operation via Status/Help screen, simple commands, no messy peeks and pokes.
- Use all day for hi-density screen displays, graph labels and listings, or incorporate into your own marketed BASIC or ML games, word processors, etc.
- Includes demo program, tape/disk conversion instructions, character generator program, and operators manual.
- Large colored letters for children or video recorders direct from keyboard or program.

YES, I want to easily create dazzling displays with the best SCREEN Enhancer for my DRAGON 32. Please send me the incredible RAINBOW-WRITER at the affordable price of: £19.95 on cassette  
£21.95 on disk

Available from Computer Dealers Nationwide

## How to submit articles

The quality of the material we can publish in  
Dragon User each month will, to a very great  
extent, depend on the quality of the dis-  
coveries that you can make with your Dra-  
gon. The Dragon 32 computer was launched  
on to the market with a powerful version of  
Basic, but with very poor documentation.

Every one of us who uses a Dragon will be  
able to discover new tricks and quirks almost  
every day. To help other Dragon users keep  
up with the speed of the development each  
of us must assume that we made the  
discovery first — that means writing it down  
and passing it on to others.

Articles which are submitted to Dragon  
User for publication should not be more than  
3000 words long. All submissions should be  
typed. Please leave wide margins and a  
double space between each line. Programs  
should, whenever possible, be computer  
printed on plain white paper and be accom-  
panied by a tape of the program.

We cannot guarantee to return every  
submitted article or program, so please keep  
a copy. If you want to have your program  
returned you must include a stamped,  
addressed envelope.

# Editorial

DRAGON DATA MAY BE carrying coals to Newcastle with the American launch of the 64, but the trip should result in some good news for UK users.

The similarities have often been remarked between the Dragon and Tandy's Colour Computer (or Color if you prefer the spelling which reveals the machine's country of origin). What these similarities come down to is that both micros are based on Motorola's 6809 chip and use Microsoft's Basic. In terms of appearance, there's no resemblance. The Dragon has a different shape, a better keyboard and two extra ports (for a monitor and the power pack — the Tandy machine has an internal power supply so the Dragon runs cooler). Inside the box the differences are even more marked — the Dragon houses a truly international collection of chips. So the trip to the US is being made with a different bag of coals, but the timing turns attention to another similarity, one of memory. Tandy has released its 64K Colour Computer just as the Dragon 64 arrives in the US, although here again there are differences — for instance an RS232 port on the Dragon 64 is missing on its Tandy rival.

But it's the Dragon's software that will be particularly well-travelled. Many of the programs sold by Dragon Data (and by market leader Microdeal) came from the US in the first place — and now they're going back to woo the American market. So why should all this coal-shipping be good news for users? If, or when as Dragon Data would obviously prefer it to be written, the Dragon 64 takes off in the US, more software will be written for the machine. And the lure of a bigger market should persuade American programmers to write for the 64 in 32K mode. Tano, Dragon Data's US partner, is already considering American programs for release and persuading independent software houses to convert programs or write new ones.

And because Tandy is a bigger and more established company, Tano is keen to give itself a strong — and different — identity. It has decided to assist user groups and give as much after-sales support as possible. Dragon Data's new managing director, Brian Moore, has already said that a more "open door" policy is on its way on this side of the Atlantic — the UK may follow the US's lead. Coals to Newcastle maybe, but the return cargo certainly looks promising for the UK.

# Letters

This is the chance to air your views — send your tips, compliments and complaints to Letters Page, *Dragon User*, 12-13 Little Newport Street, London WC2R 3LD.

## Random Illusion

IN CASE you have any illusions about random function, try this:

If the Dragon is switched on, switch it off first, then back on. Type in PRINT RND (200) (enter) and note the answer, which should be 100. Type it in again. This time the answer should be 64. Switch the Dragon off and on again and repeat the above. Surprise — you get 100 and 64.

If you want a truly random answer for such things as throwing a dice etc, the secret is to get the Dragon continuously selecting "random" numbers but only printing on demand, such as when any key is pressed. The following routine does just that:

```
10 CLS
15 PRINT "HIT ANY KEY FOR A
RANDOM NUMBER UP TO
200"
20 K = RND (200)
30 A$ = INKEYS:IF A$ =
"" THEN 20
40 CLS:PRINTK:GOTO 15
```

*Ken Reavley,  
Annan,  
Dumfriesshire.*

## Program changes

WITH REFERENCE to the programs published in the September edition of *Dragon User*, may I suggest the following improvements:

**Squash** — In the program as written, no resetting of the player's score per game is made at the end of each game. Thus, if the same player "wins" two games in succession, the second game never ends because the score has already passed 11. Thus an additional line is required:

```
651 SC(1) = 0 : SC(2) = 0
```

**Pentoon** — In this program, the computer's hand is reversed to that of the player and on producing the second card for the computer's hand, the first card is blocked out. This can be overcome as follows:

Delete line 230

```
Add line 241 S = 5: GOSUB
2000
```

Modify line 380 L = 16

It is possible that the computer could deal itself two Aces. As written, the program then gives the computer's hand as the winner when it has actually "bust".

Thus, an additional line is required:

```
435 IF CT>21 THEN CLS3 :
PRINT @ 164, "OOPS!
— I BUST" : FOR A = 1
TO 2000 : NEXT A: YH =
YH+1 : GOSUB 50:0 : GO
TO 500
```

I also found in this program that the in-built delays were not long enough and required increasing for A = 1 TO 2000. Also an additional delay was required:

```
315 FOR A = 1 TO 2000 :
NEXT A. S R Holt,  
Chorley.
```

## 65495,0 success

AFTER READING that Dragon users have been saving programs while the machine is running in its double speed mode (POKE 65495,0), I decided to try and find a way of reloading a program saved at this speed. The good news is that I succeeded in doing so.

The dual speed mode only addresses the machine's RAM and input/output at the faster speed, however by using POKE65497,0 all the machine's memory is addressed at the faster speed. When in this mode there is no screen as the computer steals time from the video chip.

To load a program saved in the double speed mode do the following:

```
POKE65497,0:CLOAD (ENTER)
```

The screen on your computer should show wavy lines and you will have to watch your cassette recorder to check if the program has finished loading.

When the cassette stops, type POKE64596,0 (ENTER)

Your screen should return to normal, with a few characters displayed at random. When you type LIST your program should

appear.

You may find that the program has been corrupted as the cassette interface was not designed to run at this speed, but in general you should be able to recover your program and save it in the normal way.

*G McQueen,  
Tyne and Wear.*

## Program error

IN LESLIE Miles' article, about I/O ports (*Dragon User*, September, P33) there is an error in the sample program which might confuse any readers bold enough to try this project.

When the PIA is first switched on all registers are set to 0. Therefore address P+2 is data direction register B — not A as stated. Also, in order to set the port lines to act as inputs the data direction registers must be set to 0 not 1.

Although the program works as expected, line 20 POKE P+2, 255 is, in fact, addressing DDRB and setting port B to output. Because all bits are 0 at switch-on, port A is automatically set to input.

*D Aylwin,  
Brighton.*

## Manual criticism

A SHORT time ago I came across a magazine listing which I felt I would like to convert to run on my Dragon. Unfortunately, upon reading through it I discovered that it contained a three-dimensional array. Having read my Dragon manual thoroughly when I first bought my computer I remembered that Dragon syntax catered only for arrays to two dimensions.

Nevertheless, I dimensioned it

anyway. Imagine my amazement when the Dragon accepted it. Lo and behold — I discovered yet another bug in the now-notorious manual.

I therefore would suggest to Dragon Data that they sack the person who wrote it and commission a new manual. It really is very serious, because the manual is selling the Dragon short and, after all, it is supposed to help people get the best from their new computers.

In short — nice machine; shame about the literature.

*Cameron Black,  
Glasgow.*

## Memory locations

WHILE POKING around inside the memory of my Dragon 32 I have come across some very useful locations which I thought might be of use to some of your readers.

329 — Lower case on/off.

105/6 — Line number currently being executed.

136/7 — Print @ position in memory.

337-345 — Keyboard check.

426-433 — Name of file being searched for.

434-441 — Name of file being loaded.

226 — 'Play' tempo.

225 — 'Play' note duration.

222 — 'Play' octave.

346-349 — Values of joysticks (0) to (3).

31 — Reserved memory.

*R Brown,  
Coventry.*

## Stopping a listing

MANY PEOPLE have complained about the fast screen listing. The listing can be stopped at any time by using Shift @ and be restarted by pressing any other key. By using Shift @ and P a two-fingered control is possible and should be very easy for games players who don't use joysticks.

The re-viewing is made even easier if you use lower case figures for the REM statements in your programs — one advantage of the inverse lower case figures on the Dragon is that they show up well on a fast scroll.

*P Wells,  
London W10.*

# Software firms getting adventurous with Dragon

THE PRAYERS of users thirsting for adventure are being answered — by Channel 8 Software, Richard Shepherd and Phoenix, among others.

Channel 8 is transferring the celebrated *Mysterious Adventures* — 10 in all — to run on the Dragon.

The games, including the *Golden Baton*, *Time Machine* and *Escape from Pulsar 7*, will be released in January at £9.95 each. Channel 8's address is 51 Fishergate, Preston, Lancs.

Richard Shepherd Software is starting off with two releases, but more will follow if these are successful, including some originals.

First out are versions of Spectrum favourites. *Transylvanian Tower* and *Super Spy*, at £6.50 each.

Richard Shepherd ex-

plained that converting from the Spectrum to the Dragon involved "cutting your code to suit your cloth".

The Dragon versions are faster and have a better range of sound but there were problems with colour combinations. Running text on the hires screen had also proved difficult but ways had been found round this.

In *Super Spy* you have to locate the secret island and then decode the nuclear missile on the island. If you're successful you're rewarded by a rendition of *God Save the Queen*.

*Transylvanian Tower* is a 3D real-time adventure. The tower has five levels, each with 100 rooms — with the order of the rooms and location of objects changing each time you play.

There's also a certain amount of arcade action, as you have a laser gun to blast bats with.

Richard Shepherd Software can be reached at Elm House, 23-25 Elmshott Lane, Cippenham, Slough, Berks.

Phoenix Software is also offering a combination of arcade and adventure thrills — on separate cassettes.

Its twin-cassette *Death Mines of Sirius* is the first in a series of titles, each at £9.95.

In the arcade part of the game you have to master 12 skill levels after which you are given the running code for the adventure cassette.

Also, at the end of each skill level, a clue to the adventure is flashed on the screen.

Phoenix Software's address is Spangles House, 116 Marsh Road, Pinner, Middx.

# Centipede a foothold for Atari?

CENTIPEDE IS the first game for the Dragon from Atari — but others will follow if it is a success.

Atari's software division has converted its arcade games to run on other home micros, including the two Commodore machines as well as the Dragon.

*Centipede* comes on cassette and costs £14.99. This may seem expensive for Dragon software but Atari argues that its games are "second-to-none, therefore the price is not too high in terms of what you get".

Atari is waiting to see how Dragon *Centipede* fares before deciding on follow-ups.

# Dungeon means business

DRAGON *Dungeon* is getting to grips with the business software market following last month's batch of adventures.

Its *Dungeon Software* offshoot has released *Cash-Flow* and *Catalogue, Sort & Mail* — both at £8.75.

*Cash-Flow* is a menu-driven program which will manage money for either the home or a small business. Functions include account and new data balances, setting up and listing of accounts, and output to printer.

*Catalogue, Sort & Mail* is a menu-driven program filing system which sorts data within user-defined parameters.

# Stephen's 32 pays its way

SEVENTEEN-YEAR-old Stephen Hurcombe, of Abbey-dore, Hereford, knows how to make his Dragon pay its way. He's just proved it by winning £1,250 in a national micro-electronics contest. Stephen took first place in the first national *MicroQuest* competition run by Williams and Glyn's Bank in association with MAP, the Department of Trade and Industry's Microelectronics Applications Project.

Entrants, aged between 16 and 21, had to design a new and practical use for micro-electronics in British industry. Stephen incorporated his Dragon 32 into a control system for operating a mortise cutter at his father's firm, which makes storm porches.

Stephen, an apprentice at British Telecom International's Madley Satellite Earth Station, has been interested in electronics since he was 11. He has had his Dragon — his third computer — for just over a year.

He plans to use the prize money to buy more computer equipment and is hoping that, with the assistance of MAP,

Stephen Hurcombe puts his Dragon 32 to work at his father's factory

his idea can be developed commercially.

Another *MicroQuest* competition will be run next year, so anyone interested has plenty of time to plan ahead.

If you've got an idea and can't wait until then, why not try our competition at the back of the magazine? Your idea could win you a Dragon 64 from Dragon Data.

# NEW RELEASES FOR CHRISTMAS FOR THE DRAGON 32

## MIND GAMES COMPENDIUM

Chess, Dominoes, Backgammon,  
Invader Cube and Othello. More  
than £30 of software for just  
£19.95

**SPRINT**  
Convert your BASIC programs into pure smooth  
6809 machine code with 'SPRINT' - the fastest  
complete integer compiler on the market.  
SPRINT will handle all the DRAGON'S sound and  
graphics commands, FOR-NEXT loops, arrays  
strings - the lot! In fact, so that you can compile  
even bigger BASIC programs. SPRINT will compile  
your program straight from tape!  
If you think £14.95 sounds too cheap to believe,  
go along to your local dealer and ask for a demo,  
before you buy.

If your local dealer does not stock  
these products then let us know his

# Adventuring in a big way

SHARDS SOFTWARE has hit the adventure trail in a big way, producing what managing director Stephen Maltz claims to be "the largest adventure ever written for the Dragon 32".

Shards' Pilkington's Diary takes up over 90K of memory and is played in three parts. It

takes the player from the streets of London to a trek across Europe in a mixture of high resolution graphics and text adventure formats.

Says Stephen: "It's a game for all the family. Different parts of the game cater for different members of the family. For example, there's a bit

where fast typing is a help — that's where Mum might come in."

Pilkington's Diary is available now, but the company is working on two others — a fishing simulation and a game called North Sea Oil, actually written by an oil rig worker — for Christmas/New Year.

# Simplicity pays off

THE LIST of add-ons for the Dragon continues to grow — except that now manufacturers are going for simplicity, as can be seen by the latest offerings from Elkan Electronics.

The company's latest accessories are the sort of things that solve the "little problems" that often plague micro owners.

For example, the "Dragon's Eye" could be just the thing for those forgetful Dragon owners who leave their micros to over-heat. It's an on-off indicator that plugs into a spare joystick socket.

It sells at £3.95 and helps you remember not to load a cartridge or disk drive into the cartridge port when your Dragon is still switched on.

Elkan is also marketing a "Dragon's Tail", which can extend your joystick by one metre, for £2.95, and a "Dragon's Fork-tail" which lets you use the joystick port for two purposes at once. This sells at £3.95.

# Help is here for artists

HIGH resolution artists who want to preserve their creations on printouts are being offered more help.

A cassette program from the Dragon 32 Users' Club allows you to draw on the hi-res screen and, when you

are happy with your colour graphics, dump the contents straight on to the MCP40 printer.

This printer is available at a reduced rate to members of the club, whose address is 31 North Street, Wareham, Dorset.

A similar program from Deltasoft can be used with the Tandy CGP 115 as well as the MCP40.

The club's program costs £5.95 while Deltasoft's is £4.95. Deltasoft can be reached at 40 Windsor Road, Doncaster.

Users with a Seikosha

GP100A should try Caveman Computers whose screen dump program also works with the Tandy DMP100.

Caveman's program costs £7.95 — the company is Windy Nook, Gateshead, Tyne and Wear.

## EDUCATIONAL SOFTWARE DESIGNED BY EXPERIENCED TEACHERS

### THE TIGER I.Q. TEST £7.95

Test your own I.Q. (friends too!) or practice for job selection tests. Your verbal, numerical and visual abilities are tested to the full in TWO formal I.Q. tests timed over 30 minutes. Totally in high resolution. Final I.Q. score and assessment plus correct answer sheet.

### THE TIGER GRAND PRIX £7.95

A mammoth education package. 'The Tiger Grand Prix' reinforces learning in Maths, English and General Knowledge for all ages (7-16+) and abilities whilst at play. Over 500 original questions and answers. Fun Quiz and brain teasers for adults too. Supplied on a C12 cassette full of software. Joysticks not required. We are working on an additional module that will allow you to use 'The Tiger Grand Prix' as a teaching aid for any age, ability and subject.

### PLUS: MISSILE DEFENDER £5.75

Fine adaptation of 'Missile Command'. Save the world if you can! Superb graphics and sound. Continuous score, laser energy, etc. Detailed scoreboard after each round. Joysticks required.

More goodies now under development at the Tiger Laboratories. Watch this space!

★★ WANTED ★★ Your entertaining education or games software for cash reward.

Dealer and export enquiries welcome.

### TIGER SOFTWARE

Dept D5, 63 Devonshire Street, Monkwearmouth  
Sunderland, Tyne & Wear. (0783) 484592

ALSO AVAILABLE AT CURRY'S MICRO-C

## MACE by Graham Trott EDITOR ASSEMBLER MONITOR

£29.95

DRAGON 32 CARTRIDGE

### FEATURES

- An 80 page reference Manual describes MACE, the architecture of the MC6809 processor and its powerful addressing modes. The MC6809's 78 basic assembly language mnemonics are also described in considerable detail.
- The EDITOR can ... insert line(s), delete line(s), overlay a line, replace a line, append text to a line, move up and down one line at a time, find a string, change string 1 to string 2, load a file from tape, save a file to tape, print (list) lines, call the ASSEMBLER, enter the MONITOR and return to BASIC.
- The ASSEMBLER can ... Assemble and check for errors, assemble to screen, assemble to printer, assemble to tape, assemble to memory (with or without offset) assemble with a sorted cross reference, and many combinations of these. The assembler also provides TEXTUAL error messages to help locate programming mistakes quickly. When an error is encountered you can INSTANTLY return to the EDITOR and fix it! Motorola standard assembler syntax is fully supported with the following omissions: OPT, MOC, MCL, STL, PAD, SPC, OPT. Macros are not implemented. The programmer may also use local labels and global labels of up to eight characters in length.
- The MONITOR can ... View memory, examine and change memory, insert a character into a range of memory, shift the contents of memory from one location to another, find a byte or a string of bytes in memory, set/clear a breakpoint. A simple hexadecimal calculator is also provided to assist the programmer in working with HEX numbers.
- MACE's EDITOR/ASSEMBLER/MONITOR, DRAGON's BASIC, a BASIC program, an assembly language source program, and the machine code produced by MACE may ALL reside in memory together! You have instant access to any of them.

### REVIEWS

PERSONAL COMPUTER NEWS ..... "I would recommend MACE to anyone who wants to use the Dragon to learn 6809 assembly language or to write serious assembly programs."

PERSONAL COMPUTING TODAY .... "This package has a very professional feel about it..."

### AVAILABLE SOON

An EPROM programmer cartridge for the DRAGON-32 (with or without MACE). Handles 250B, 2516, 2532, 2732, 2732A, 2564, 2764, 27128, 27256, and MCM6704. Rom driven commands include: FILL, MOVE, COPY, VERIFY, PROGRAM, EXAMINE/CHANGE, DUMP, and LOAD/SAVE TO CASSETTE. . . . . w/o MACE: 79.95 . . . w/MACE: 89.95

An MC6821 PEA and BK/10K EPROM socket in a cartridge (with or without MACE). Features LED monitors and LOGIC level control switches for ALL PIA lines. Two debounced push-buttons also provided. IDC header extends signals out to your project. . . . . T.B.A.

• INCLUDES POSTAGE & VAT. VISA/ACCESS PHONE ORDERS ACCEPTED

# Another string to the past cut

ANOTHER STRING connecting Dragon Data to its past is being cut as the company celebrates its first year of independent operation.

Toy-maker Mettoy, a shareholder in Dragon Data and the founder of Dragon computers, went into receivership at the end of October — nearly a year after selling Dragon Data off to a consortium of investors.

Brian Moore, Dragon Data's managing director, received the news with regret, but emphasised that his company would not be affected.

"Dragon Data is a fully independent company and the news of Mettoy's receivership can have no significant effect on the running of this company," he commented.

"We anticipate, therefore,

no change in the continuing growth of this company as a result of the news."

Mettoy's receivers are negotiating sales of the firm's assets, including its 15.5 per cent shareholding in Dragon Data. The other shareholders in Dragon Data have the first option on that holding.

Pru-tech, the high-tech investment division of Prudential Insurance, has the largest holding, with 42 per cent. The Welsh Development Agency is next with 23 per cent. The other shareholdings are all less than Mettoy's.

This consortium of investors was formed last November to purchase Dragon Data from Mettoy, just three months after the launch of the Dragon 32.

Dragon Data had begun life the previous spring as a Mettoy subsidiary.

## Speech synthesis American-style

SPECTRUM PROJECTS of New York thinks it's time you started talking with your Dragon — preferably by buying the Voice Pak it has produced (pictured).

This phoneme-based voice system uses the Votrax SC01 chip synthesiser in a cartridge pack. It costs \$99.95, including postage and packing, and comes with user instructions — but not with an American accent.

The Pak provides automatic or user supplied inflections, plus four programmable levels of pitch "with an unlimited vocabulary". It also contains a text to speech scanner translator and a word manager that will construct and edit user dictionaries.

Bob Rosen of Spectrum

Projects adds: "With a single line of code, Voice Pak adds speech to any Basic program in minutes."

The Pak is a version of a speech synthesiser that Spectrum Projects has been selling for the Tandy Colour Computer.

The company has now had a long relationship with 6809-based systems and has converted other software to run on the Dragon.

For example, it is also offering the Stripper — a machine code utility which strips your Basic programs of such things as REM statements and unnecessary spaces.

Spectrum Projects can be reached at 93-15 86th Drive, Woodhaven, NY 11421, USA.

## EUROSOFT

Auto Run is a utility program. It is used to add convenience and professionalism to your software.

Auto Run will help you create your title screen with the graphics editor. The graphics editor allows you to choose a background colour and border style. Using the arrow keys and several other commands you can draw pictures, block letters and also include text.

Auto Run will generate a machine language loader program to precede your program on the tape. Then, to start up your program, simply type CLOADM to load in the Auto Run loader program, which will then automatically start itself up, display your title screen, load your program and then RUN ..... £9.95

Information Management Systems

A user-orientated, easy to use personal database management system with these outstanding features:

- \*keeps files of programs, names, addresses, birthdays, recipes, class or club rosters, anything
- \*variable record and field lengths
- \*phrase substitution editor
- \*up to eight user-definable fields
- \*ML sort (up to three fields), search and delete functions

- \*2 search modes — range and item
- \*user-definable printer format, for any printer
- \*up to 230 characters per record

For £19.95 you get the database management system, our full documentation which includes a reference guide and a programmer's guide.

### Inspector CLUEseau

Sherlock Holmes Agatha Christie fans — it's finally here — a murder mystery game. Mr Goodbody has been killed in his mansion and you must solve the mystery. WHO committed the murder. WHERE did it occur and HOW was it done? Question suspects, find the secret passage, and break the code to get clues. Hi-Res graphics enhances this excellent game. The computer records the clues you obtain on a clue inventory screen and also provides suspect descriptions at the touch of a finger. A fun game that will sharpen your deductive skills. Every game is different! ..... £7.95

### PATTI-PAK

Two Intermission Screens (Fireworks and chase)  
 \*extra man every 10,000 points  
 \*16K machine language  
 \*invisible maze every fourth screen  
 \*difficulty level auto-increases as you progress  
 \*just like the arcade and more! ..... £7.95

## Silly Syntax

A sensational and educational version of a popular party game

For 1 to 10 players. Load a story into the computer. The players are asked to supply a noun, verb, part of body, celebrity, etc. which the program uses to complete the story. The story, which is displayed when all words are entered, will be hilarious. For £9.95, you get a user guide and a tape containing the Silly Syntax game and 2 stories. You can create your own stories or order story tapes from the selection below.

Silly Syntax stories — Ten stories per tape.

- |                      |                           |
|----------------------|---------------------------|
| SS-001 — Fairy Tales | SS-004 — Current Events   |
| SS-002 — Sing Along  | SS-006 — Adventure Sci-Fi |
| SS-003 — X-Rated     | SS-007 — Polpourri        |
- Each story tape is £7.95.

### DRAGON DISK DOCTOR

Imagine the situation that ALL disk users eventually get themselves into, namely failing to back-up the disk that just crashed. Don't panic, take two aspirins, count to 10 then call for — DISK DOCTOR.

DISK DOCTOR's features include

- \*examine disk
  - text screen display of sector
  - Hi-res Ascii and hexadecimal display
  - printer Ascii and hexadecimal
- \*copy disk
  - copy complete disks, individual tracks and sectors
- \*recover file remove protection
- \*list print directory
- \*tape archive
- \*detailed tutorial and caring for disks

DISK DOCTOR is one software product that no Dragon Disk user will want to be without..... £19.95

# The ultimate adventure for the Dragon 32

An epic three part journey, taking up over 90K of memory. Packed with features, this is the ideal family entertainment. Solve the mystery of the diary before time runs out! You start in the serene English countryside, then travel through the bustling London streets, to further adventures in France, Germany, Italy and Turkey with a thrilling climax in Israel. The most comprehensive adventure yet for the Dragon. With hi-res graphics and text.

**ONLY £7.95 from all good software retailers or send cheque/PO to us at:**

**SHARDS SOFTWARE**

**189 Eton Road, Ilford, Essex IG1 2UR**

# The Dragon family grows

1. **FIRST UP** in our list of "recent discoveries" is a club that has been around almost as long as the Dragon itself. The Droitwich Computer Club has been going since September 1982 and has escaped our notice until now probably only because it is a general computer club rather than just one for Dragon users. But it does have Dragon owners among its members and would certainly welcome more.

Members meet in the Walnut Room of the Norbury House on the first and third Wednesdays of each month. The entry fee the club charges to cover the rent of the room is: children 30p, adults £1.

For information on the club readers should contact A R Middleton at 14 Primsland Drive, Cherry Hill Estate, Droitwich, Worcester WR9 7QR or ring on Droitwich 775 570 after 6 pm.

□ □ □

2. **SCOTLAND ALREADY** has one club for Dragon users, the Scottish Dragon Club in Edinburgh. But, as Stewart Hutchison of Glasgow points out, its position in the Scottish capital makes it a little awkward for him and his fellow Glaswegians. Stewart would like to hear from anyone else interested in forming a club in Glasgow. He can be contacted at 12A Firbank Terrace, Barrhead, Glasgow G78 2PX or on Glasgow 880 5610.

□ □ □

3. **ANOTHER DRAGON** owner hoping to start a users' group in his area is Paul Kennedy of Ware. Paul would like to hear from anybody else interested. His address is 61 Broadmeads, Amwell End, Ware, Herts. Phone Ware 68264.

□ □ □

4. **LIKEWISE** J R Griffin of Slough. He's

## *The British Dragon network grows! This month we discover and take a brief look at seven more clubs for Dragon users*

got a small group going already but is looking for more members. If you're in (or near) Slough and interested write to 1 Garrard Road, Britwell Estate, Slough, Berks or phone Slough 35268.

5. **MEMBERS OF** the Sheffield Dragon Users' Club would certainly appear to be getting their money's worth. Although still fairly small (but growing, we are told) the club has secured 5 percent discount for members at the largest software shop in the area and even produces a monthly newsletter which is issued free to every member. The fees? — Nothing, yet.

Monthly meetings are informal (alternating between a pub and the Sheffield City Polytechnic) and consist mainly of software swapping, "keyboard bashing" and discussions about the latest equipment.

Anyone interested in joining should contact Richard Crampton, 131 Herringthorpe Valley Road, Rotherham. Richard's phone number is Rotherham 851 545.

□ □ □

6. **IN NOTTINGHAM** Dragon users have carved a little niche for themselves in the Nottingham Micro Computer Club. Its Dragon User Group meets Monday evenings at the Congregational Centre, Castle Gate, Nottingham. Guest speakers are often invited to the meetings.

Dragon owners interested in joining the group should get in touch with Mike Johnson, "Rutland", 19 Gateford Close, Bram-

cote Moor, Beeston, Nottingham. His phone number is Nottingham 288 541.

□ □ □

7. **FINALLY, SOMETHING** for those with an interest in the 64. The OS-9 User Group has been set up to promote the development of commercial packages. Equipment available to members will be centred on the new 64 and languages will include Basic 09, Pascal, C, Cis Cobol, Assembler and Sage.

Meetings are scheduled for three times per week: Tuesday and Wednesday 7 pm-10 pm; Sunday morning 10 am-1 pm. Subscriptions will vary according to "status of membership", from junior to commercial.

For further information contact: OS-9 User Group, 1st Floor, 16 New North Parade, Huddersfield HD1 5JP. Telephone 0484 516179 (day) or 0484 864130 (after 6 pm).

**Derbyshire:** Dragon Owners' Club, Dragon Dungeon, PO Box 4, Ashbourne, Derbyshire — publishes *Dragon's Teeth*.

**Devon:** Ian Chipperfield, Brixham Dragon Owners' Club, 22 Brookdale Court, Brixham, Devon — meets every Saturday afternoon.

**Dorset:** Dragon 32 Users' Club, Games and Computers, 31 North Street, Wareham, Dorset — publishes newsletter.

**Essex:** Doug Bourne, Dragon Independent Owners' Association, School House, Nevem Road, Rayleigh, Essex — publishes *The Dragon's Tale*.

**Lancashire:** Melvin Franklin, North-

## Dragon clubnet

**West TRS-80 Users' Group,** 40 Cowlees, Westhoughton, Bolton, Lancs — growing number of Dragon users, meets monthly at Irlam near Manchester and publishes newsletter.

**London:** 68 Micro Group, 41 Pebworth Road, Harrow, Middlesex — publishes *68 Microcosm* and meets on the fourth Tuesday throughout the year in the Regent's Park Library, Robert Street, London NW1, all 68XX owners welcome.

**Staffordshire:** Tony Beckedd, Tame Computer Club, 57 Adonis Close, Tam-

worth, Staffs — an all-user club including 15 Dragon owners, meets fortnightly.

**Wales:** Dragon Users' Club — publishes Stop Press. Dragon Data, Kenfig Industrial Estate, Margam, Port Talbot, West Glamorgan.

**Wiltshire:** R Gould, 39 Cullerne Road, Stratton St Margaret, Swindon, Wilts — interested in forming Club 32.

**Scotland:** David Anderson, Scottish Dragon Club, 1 Walker Street, Edinburgh — regular newsletter.

**South Africa:** Ian McCall invites other SA Dragon owners to contact him at 35 Sliwood Road, Rondebosch, Cape Town.

# Price tags mar the good games

*John Scriven weighs up the pros and cons of yet another month's offering of software*

THIS MONTH'S SELECTION is quite a mixed bunch. Microdeal continues its attempt to rule the world — or, at least, the part inhabited by Dragons — and has five new titles. Dragon Data has released a wide variety of games and educational software, and there are some new names hidden among the old favourites.

In Shark Treasure (Dragon Data), the object is to send divers from a small boat to collect gold bars from the sea-bed. Each diver is controlled by the cursor keys and the response is fast. The problem lies in avoiding the sharks that swim across the screen in both directions. These are not chunky block graphic creatures, but sleek, blue monsters that snap at anything close to their heads. The display is of a very high standard and the game good fun to play, though not really for the squeamish.

I was rather surprised to see the price quoted for this piece of software as being £12.95. I can see the reasoning behind the high price of some utility packages as they can be used to extend the facilities of the computer, but most games have only a limited interest lifetime. Programs for the Dragon tend to be more expensive than those for the Spectrum, but a price of almost £13 is going to discourage many people from buying this tape, no matter how good the content.

Doodle Bug is another expensive Dragon Data program, but at least the fact that it is on cartridge is some small justification for a £20 price tag — but even this is questionable.

A cartridge usually consists of a cheap box, a small circuit board, and either one or two EPROMS. The manufacturing cost cannot possibly be more than £4-£5, and yet the selling price is consistently £10-£15 more than the equivalent tape. Most people I know with a collection of games tapes have no more than one or two cartridges simply because 1 cartridge = 3 cassettes in price terms. If Commodore can reduce its cartridge prices, so can other manufacturers. Lower prices would undoubtedly increase sales.

## Value for money?

What novelty and originality do you get for your hard-earned £20? In the words of Paul Daniels, "not a lot" — certainly not £20 worth. As you switch on, the display looks suspiciously like Pacman, and that is what this game turns out to be. Although the walls have several swing doors, and there is variety in the articles littering your path, it is still a maze-pursuit game like Cave Hunter and Ghost Attack. Someone

at Dragon Data must really suffer from Pacmania. If you don't yet have a version of this old favourite, Doodle Bug can be recommended as having many extra features, but it still doesn't justify the high price.

Better value is achieved with Storm Arrows, which Dragon Data has sensibly priced at £7.95. The display consists of a grid inhabited by hostile arrows. The object is to destroy all eight arrows before they destroy you by firing your "lazer" at them. As laser is in fact an acronym for Light Amplification by Stimulated Emission of Radiation, then "lazer" must have something to do with lazer — "one afflicted with

Spotty Dog has returned.

These are just a few of the things you have to contend with in Crazy Painter from Microdeal. There are eight levels of difficulty, and a high degree of frustration. The unpleasant creatures that try to ruin your brushwork increase in number as the difficulty goes up, and your pots of fresh paint rapidly disappear from the base of the screen. Occasionally, the display changes to paint slowly dripping from the top, and the object then is to prevent it reaching the bottom. Bonus points are awarded according to how long you delay your fate. This is an original idea and makes a pleasant change from the usual space games. To add to your irritation, there is even a rendition of "Whistle While You Work" in the background!

## Cuthbert's welcome return

Last month I looked at Cuthbert Goes Walkabout, with our unfortunate hero attempting to light up the Lunar Landing Pad. Microdeal must be hoping that Cuthbert will become the Dragon equivalent of Horace, whose exploits on the Spectrum are always entertaining. This month, Cuthbert returns on two cassettes, digging graves for his enemies and seeking treasure in the jungle.

Cuthbert Goes Digging is just like Bonka from J. J. Morrison Micros. You control a small figure who scurries from level to level round the screen digging holes in front of the evil Moronians. On luring them into a hole, he has to fill it in quickly before they leap out and electrocute him. The game increases in difficulty as you progress and there is the added complication of running out of oxygen as you race around. You can choose between joystick or keyboard control and the game becomes fast and furious at the higher levels.

Although I preferred "Digging" to "Walkabout", my favourite is Cuthbert in the Jungle. Using the joystick, you control Cuthbert's tiny figure as he runs to the left and right and jumps over logs. When he reaches the side of the display, a fresh screen appears with new hazards that must be defeated. These include pits, quicksands and alligators. Occasionally, Cuthbert has to emulate Tarzan and swing on hanging vines. Farther into the game, he encounters various treasures that have to be brought back before his time runs out. I enjoyed this game a lot, as it is necessary to build up skills in the early stages before you are competent enough to deal with the later hazards. Each time you play, you improve and get closer to ►

a loathsome and pestilential disease", as my dictionary puts it(!) The game itself is fast and exciting and the graphics, although not outstanding, are perfectly adequate for this type of game.

From the hi-tech world of arcade pursuits to more homely surroundings. Imagine the scene — you have decided to paint the floor and it's taken you hours to get it just to your satisfaction. You stand back and admire your work when the neighbours' mongrel, looking rather like Spotty Dog from the Woodentops, comes bouncing in, leaving a trail of footprints. You rush to repair the damage only to discover that you've run out of paint. Returning to the scene with dripping brush, you discover a moth has crawled along the top, a worm has entered from the side and

## SOFTWARE

**Salamander Software, 17 Norfolk Road, Brighton BN1 3AA**

**COMING SOON from the same awesome team:**

**LASER ZONE** \*

*quality software for the Dragon 32,Oric-1 and BBC Model B microcomputers.*

◀ the treasure (or like me, eaten by the alligators). The graphics are superb and the response is very fast — certainly my favourite game of the month.

Towards the end of Star Wars, there is a chase sequence for several minutes down the interminable canyons of the Death Star. This has inspired several games programmers, including the author of Intergalactic Force (Microdeal). The walls and floor rush by as you attempt to drop bombs on to enemy space ships beneath you. Fighters spoil your aim by showering you with highly accurate laser bombs. With special permission from Isaac Newton, you are allowed to suspend gravity for a while as you drop bombs upwards but this is not an easy task. There are two speed options, three skill options, and control is by means of joysticks. If you like arcade games, then you should find this fast and challenging, as well as keeping your trigger finger warm on winter evenings.

### The adventure trail

I have not seen any new adventure programs for some time (I think the editor is afraid he might have to send a search party out after me one month), but this month Microdeal has released Keys of the Wizard. Although this is a text-only adventure, it is played in real time, so you have to be quick to enter your instructions. The display contains detailed room descriptions and exit routes, while the top line gives you constant status reports on your own condition and that of the eight creatures that inhabit the game.

The object is to explore many locations, fighting dangerous creatures and collecting treasures. At the beginning, you can select the skill level from one to three, and the instruction sheet gives a large list of recognised commands. If the game continues for a long time, you can enter QUIET to freeze the action, while you do the washing-up or go for a walk. If you wish, you can save the game status on cassette at that point, or you can type UNCLE (!) to end the game. As with all programs of this nature, it is essential to draw a map as you proceed. This is a well-constructed adventure, and is of a higher standard than the Williamsburg and Jerusalem adventures that Microdeal released earlier this year.

Any more details will give too much

*Storm Arrows: fast and exciting*

away, but if you like unicorns, orcs and jesters, and are skilful with scimitars and mattocks, you will enjoy this game.

If you wish to lure very young minds into the dark world of adventures, then you may wish to consider Circus Adventure from Dragon Data. Rather than being thrown in at the deep end, this is more of a gentle paddle in the black arts. The game is set in a typical circus, and the object is to find the popcorn stand in the minimum number of moves. There are rather basic block graphics to show the trapeze, the tigers cage, etc., and each location has only two exits. The game is aimed at primary children, but only those up to nine or so would play it a lot. If you press BREAK (not disabled) and list the program, you may wonder how Dragon Data can justify the £7.95 price — only 5p more, and you could have Keys of the Wizard.

### Graphics disappointing

A similar criticism can be levelled at School Maze — if the format has to be kept simple as it is aimed at children, then the program should offer better graphics and sound so that you feel you are getting something more substantial for your money. The object of the program is to find a missing computer tape hidden in a school. A map is shown at the start and at various times during play. There are only two exits from each location, and most rooms are illustrated by some block graphics. In the kitchen you can choose what you wish to eat, play tunes in the music room or draw pictures in the art room.

If children of six or seven can cope with Circus Adventure, then those of nine or ten should have little difficulty in playing School Maze. Although these two programs are easy introductions to keyboard

use in general and adventure games in particular, it would be more realistic pricing to put both programs on one cassette.

From programs that are designed for children to use, it is only a small step to educational programs. There are several of these this month, and they fall naturally into two groups. The first of these is that of formal computer assisted learning. Teletutor from Microdeal is a very workman-like set of programs, firmly packaged in a stiff A4 folder. When you pick it up, you can tell they mean business right from the start. It should, however, be admitted that there are only ten sheets of brown paper inside the folder, and two cassettes in a flap in the cover. One gets the impression that this is a slight case of over-packaging, perhaps to justify the high price.

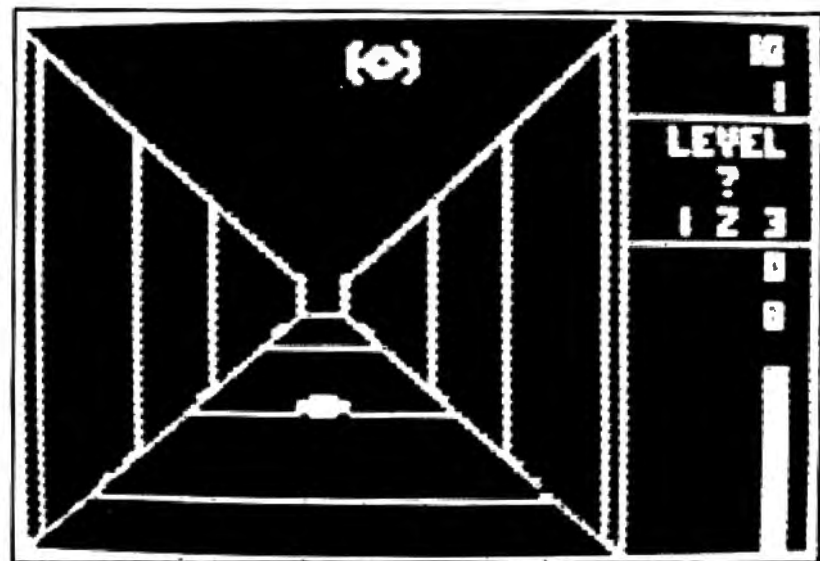

### Do-it-yourself education

The first two programs, Spelling Test and Word Drill, contain sample files on cassette to demonstrate how they work, although in practice you would want to enter your own words. The documentation explains clearly how to do this. The cassette plays a word through the TV speaker and this has to be entered carefully at the keyboard. After the test, the words are shown on the screen and can be copied on to a printer.

Word Drill is a multi-choice vocabulary quiz. Again, the demonstration file shows you how to use the program. The screen format is word, followed by eight selected definitions, from which the correct response may be entered before the preset time limit has expired. The program is menu-driven and easy to use.

Maths Drill covers the four rules (addition, subtraction, multiplication and division), and it has several features — up to six children can use it at once, there are ten levels of difficulty that adjust automatically to the responses, there is a timer function and "smiley faces" are used as a reward.

Estimate follows a similar course to Maths Drill, except that it is designed to practise mental arithmetic. The complete package originates from Tom Mix in the States (a far cry from Donkey Kong!) and has rather obvious American educational tinges — the smiley face, for example, although there is nothing there that would be upsetting for an English educa- ▶

*Intergalactic Force: a good game for arcade addicts*

*Crazy Painter: a pleasant change from space games*

# ARE YOU READY TO TAKE THE NEXT STEP?

## EDIT+ £34.50

EDIT+ is a Full Screen Editor and Programmer's Tool Kit. It's an excellent aid for writing programs in BASIC and is easy to use for the novice as well as the experienced programmer. EDIT+ includes all the facilities of HI-RES. Up to 23 lines of your program are dis-

played on the screen and can be changed by overtyping, inserting, or deleting characters. Functions include: Find String, Change String, Copy Text, Goto Specified Line, Scroll Up Down, Append From Tape and Enter Basic Command. No Dragon is complete without an EDIT+.

## HI-RES £25.30

Plug the HI-RES cartridge into your DRAGON and you will immediately see the improvement. The screen displays 24 rows of 51 characters with proper lower case and BASIC works as normal but with extra features: Selectable

character sets (English, French, German, Danish, Swedish, Italian, Spanish). SPRITE Graphics, Redefinable Characters. Improved keyboard action with autorepeat allows faster typing. Graphics and text can be mixed on the screen. Suitable for educational and business use.

## DASM/DEMON £30.45

It has all the features of both DASM and DEMON in one package. DEMON is the natural-partner to DASM, complementing each other perfectly. Write, test and use

your programmes without the bother of reloading. It is extensively featured in the new book by Ian Sinclair on Dragon Machine Code. It is the ideal combination for the machine code user.

## DASM £18.95

DASM is a versatile assembler, designed especially for ease of use on the DRAGON and allows you to assemble machine code while still retaining the full use of BASIC. Supports all 6809

instructions and modes. Allows any length for labels (the first 5 and the last characters are used). Full support for output to printer. Recommended for the beginner.

## DEMON £18.95

A powerful machine code monitor which allows you to delve into the internals of your DRAGON as well as helping you to debug your machine code programs (and BASIC programs using PEEK and

POKE). Includes: Examine/Change memory, Examine/Change registers, Print Screen, Set Breakpoints, Test Memory.

An essential tool for all machine code users.

## Books and Extras

Introducing Dragon Machine Code by Ian Sinclair	£7.95

# BASIC IMPROVEMENT PROGRAMS

from  
**SPECTRUM PROJECTS**

**BASIC AID** – an indispensable help if you write or modify BASIC programs. Speed program entry through the use of single and control key inputs of 43 common BASIC commands plus Automatic Line Numbering. Merge and Move commands relocate, insert and renumber blocks of code in any part of the program and resolve all branching references in the changed sequences. Redefine any or all keyboard commands and save your most frequently used command definitions for later use. BASIC AID is the programming tool that saves valuable time and effort at only \$49.95 US

\* \* \* \* \*

**THE STRIPPER** – a machine language utility designed to cut the size of BASIC programs for run time efficiency. All remarks in a program are removed and any branch references to the lines are changed. Individual commands are packed into multiple statement lines where possible for dramatic savings of memory, and all unnecessary spaces are deleted from the code. THE STRIPPER can squeeze more performance, data and program from your machine for only \$19.95 US

\* \* \* \* \*

Maths Trek: could encourage children who don't find maths an interesting subject

◀ tionalist. It is, however, not exciting in presentation, and a little restricting in the way in which you can enter answers — in long multiplication, for example. Children would not be over-impressed with it, and it makes no attempt to explain why incorrect responses are not right. If a child already had the various concepts, then these programs would provide a way of reinforcing them, but the responses would tend to be conditioned rather than made with any understanding of the processes involved.

Maths Trek from Dungeon Software attempts to bridge the gap between a drill program and a game. Based loosely on that well-known crew who boldly go, etc., the object is to rise from a lieutenant to a general (I don't know what Captain Kirk would have to say about that!). The screen swops between a view of the bridge of the Enterprise, complete with dials and star-screen, and a status display board showing warp speed and distances to the next star-base. The Enterprise is moved by

successfully answering maths problems in the four rules, square numbers or areas. Various hazards, such as Klingon attacks and Black Holes impede your progress and it takes several missions to complete your rise through the ranks. Although lacking in the excitement of the usual Startrek games, it might encourage children who don't find maths an interesting subject. I feel that if this was used with children, the difficulty level would have to be set rather low. I was asked for the square of 217, and that was only on level 25 out of the possible 50!

**Education leader**

The most professional and carefully produced educational software this month comes from Dragon Data, although the programs were written by Applied Systems Knowledge Ltd. who sell their own software for other machines such as the BBC micro.

Number Puzzler allows you to choose between five different games — addition, subtraction, adds and subs, magic squares and self-test. The first three games use the same format — four sets of noughts and crosses boards that contain numbers between 1 and 99. Using numbers that appear at random at the bottom of the screen, the object is to fill the boards in, in the same manner as bingo. You can play against the Dragon or against a human partner, and the first line of three numbers filled in produces the winner.

In Magic Squares, the computer produces numbers for you to insert in a ▶

# SUPER-DOODLE from gough software

WRITTEN IN BASIC AND MACHINE-LANGUAGE

**THIS IS JUST ONE OF ITS MANY USES.**

If you select A or B, you will hear a rude noise. Select C and you can display "CORRECT" or "SMARTY-PANTS" or anything else you choose.

**DEALER ENQUIRIES WELCOME**

A Graphics Facility using all the graphics features of your Dragon 32 with many more useful extras. Specially designed for you to compile your own presentations, adverts for display in shop windows or stores, education (multiple-choice questions), children's comic strips. Use for general computer-aided design, artistic fun and many other uses. Offers cassette motor and audio control so music or voice recordings may accompany displays.

- ★ Automatically present complete shows from cassette.
- ★ Re-draws displays exactly as you first drew them only at super speed — entertaining to watch.
- ★ Can hold from a few up to 30 sub-pictures (called frames) in memory at any one time.
- ★ Loop round frames in memory for displaying a series of adverts. Timed pauses can be specified.
- ★ Text on graphics — easily typed direct on to your graphics display (available in all graphics modes). Upper or lower case, horizontal or vertical, scaling facility.
- ★ Routine table — create up to 30 shapes in a routine table and re-draw at any location with ease, with optional scaling.
- ★ Screen dump so frames can be used in other programs.

We would need a manual to describe all of its many features — Oh yes — supplied complete with TUTORIAL AND REFERENCE MANUAL.

Please send me ..... copies of SUPER-DOODLE at £12.95 (inc VAT and p&p)

I enclose a cheque/PO for ..... made payable to:

◀ frame on the screen to form a square that is as magic as possible — in other words, one that adds up to the same answer in each row and column, as well as diagonally.

All A.S.K. programs use a symbol of a hand and finger to denote pushing the space bar, and they are all very well error-trapped — only those keys actually needed for a response can be entered. At any time, during the course of the program, you can return to the start by pressing shift and an arrow key.

Hide and Seek is designed to encourage and develop short-term memory and other skills important in learning to read. There are several versions of the program available, but all consist of nine boxes containing pictures of objects and their associated names along the bottom of the screen. You either have to press the ENTER key when a cursor is over the correct box or enter the name of the picture spelt accurately. The pictures are fairly unambiguous and the program clearly achieves most of its stated aims in helping children acquire early reading skills.

### Maths arcade-style

Number Gulper is the closest you could get to an arcade maths game. At the start you decide on whether you are going to use the keyboard or joysticks and then enter the target number. The display changes to a board with a yellow track around which you steer your small gulper. As it passes over various numbers, you can add them to your score as you attempt to reach the target number. The numbers are prefixed by +, -, × or ÷, so you could reach 100 by entering +2, +3, ×4, +6, -1, ×4. At the end, you are raised to a higher level or demoted, depending on how many gulpers you have left. There is also the option for a self test. Children seem to enjoy this program greatly, and as there is a time limit, it encourages fast mental activity.

These three cassettes all cost £10.95, which I feel is rather excessive, but there is no doubt that they are above average and you may feel they would be worth having in an educational collection.

### Oriental flavour

Virgin Records expanded through the 70s from a few retail outlets to producing its own records and now has fingers in several pies throughout the leisure industry. Recently it moved into computer software with a range of titles for different machines. The first Dragon tape I have come across is I Ching. This is a rather esoteric choice for one of their early releases, and may not be particularly accessible to many Dragon owners.

According to early Chinese philosophers, all things that happen in the universe affect all other things — a similar theme was present throughout the tracks on the last Police LP. This interdependence is like seeing the cosmos as a large machine, where all the parts affect the whole and each other. It is like having a brake shoe slightly out of adjustment in a car. This can cause the brakes to pull,

*I Ching: if you're on electronic hippy, this could be an ideal buy*

putting a strain on the steering, the other brakes, the engine and ultimately, the driver. The patterns and changes in the universe can be seen in all things, from the fall of coins to the selection of bundles of plant stalks. Taoist philosophy would not attempt to change the future, merely to "go with the flow" given the state of play at any particular time. These ideas were very popular with hippies in the late 60s.

The original method was to think of a problem, such as "how can I do this review and go to the pub" and to cast three coins or select a bunch of yarrow twigs from a pile. This was repeated six times to build up a hexagram of solid or broken lines. You will realise that there are 2 to the power of 6, or 64 different combinations that can result. The Chinese saw these as symbols of real things, such as thunder over water, or fire over a lake. King Wen wrote down commentaries on each combination. The I Ching is a book that contains these interpretations and it is supposed to offer an intuitive approach to solving the initial question.

The Virgin program gives detailed instructions on the screen, then tells you to think of a question while you press the space bar. A road leading into an enormous arch appears, and the hexagram is built up a line at a time. As the final line appears, the screen shows a description of the hexagram and a brief commentary.

The program is well-written and the displays are clear. I feel, however, that the sort of person who would cast the I Ching would be happier to use coins or sticks in a darkened room, heavy with incense. A copy of the book in translation will cost you the same as the program and give you hours of interesting reading and insight into Taoism and its links with some schools of modern psychology. Just as I have never seen the point of computerised phone books — just as quick to look it up in the paper version — this program seems to be more of a clever exercise than a useful tool. However, if you are an electronic hippy, it might be just what you're after.

To finish off this month, ik yw lk to hear

ab a new pc of software from Dragon Data tt mt mk it faster when yv to tp le/s. Timscrip is designed to recognise two letter combinations that are not in themselves words, and convert them on the screen into normal English. Hence the strange sentence above, which would appear on the screen as "I know you will like to hear about a new piece of software from Dragon Data that might make it faster when you have to type letters." There is a dictionary already supplied on cassette, or you can enter your own, and there are a possible 26 x 26 or 676 combinations to use (less words like on, be, etc.).

As well as this facility, there are limited word-processing features such as automatic word-wrap, line move and delete, and a menu-driven load/save/print option. The documentation is very full, and comes in the form of a 40-page booklet. Although an interesting idea, I would have reservations about its usefulness. It is designed to save time in typing, and yet it would take some time before you felt competent at using the abbreviated forms.

If you think it's worth the effort of learning to use, then it's definitely the sort of program to try out in a shop before you purchase.

### A sign of things to come?

In this collection of software, there is only one true space arcade game. Whether this reflects a changing mood, I don't know. It certainly takes a weight off my shoulders knowing I no longer have to defend the earth from the swarms of aliens that usually descend on my head each month. In some ways, software themes echo the course of Science Fiction movies from the 50s onwards. The philosophy of early flying saucer films was "if it's an alien, shoot it", rather similar to the westerns, where it was a case of "if it's an Indian, shoot it".

Just as heroes in the movies began to have intelligence and sensitivity, so the programs of the future will require you to have more than just a fast finger in order to be successful. ■

# THERE'S NO PRESENT LIKE THE FUTURE.

## THE WORLD'S FINEST PROGRAMMING TUTORIAL FOR ONLY £12.95.

Thousands who own, or would like to own home computers have yet to experience the feeling of discovery that comes when you write your own programs. Yet learning programming can be easy.

'Learn Basic' from Logic 3 is the ultimate development of the method first devised at Strathclyde University - a straightforward, easily understood tutorial written by Professor Andrew Colin and Veronica Colin, authors of Britain's best-selling tutorial package.

Using the method tested by university students and used successfully by over 200,000 home computer users, 'Learn Basic' runs on your own computer and explains everything in clear non-American English without jargon or computer talk. In a matter of hours, you will be writing programs that work.

Essentially, 'Learn Basic' and the rest of the 'Learn Computing' Series that will follow soon are designed for people who want to keep abreast of the computer age. For people who realise that understanding computers is the key to future success, at school, at work and as a parent.

Make your future, and your family's future, richer this Christmas.

Get 'Learn Basic' by Logic 3 - two tapes and a full-size manual for Spectrum or Dragon (others soon) at just £12.95.

At that price, it's a gift.

Buy the Logic 3 'Learn Computing' Series at computer shops and major retail stores all over Britain. In case of difficulty, write to Logic 3 in Windsor.

TO: Logic 3 Ltd, Mountbatten House, Victoria Street, Windsor SL4 1HE.  
 If you would like to know more about using and programming a computer in your home, send this coupon for your free copy of our 16 page explanatory booklet "100 things you wanted to know about computers."  
 It will help you cut through the jungle of computer jargon, and give you news about software developments - even games.   
 Or send for our software catalogue (tick either or both)

- THE KEY TO THE WORLD OF TOMORROW -

DU 12/83A

THE DRAGON 32 has been a very successful machine, with over 100,000 produced in the first year; but in the micro business nothing stands still for long, so Dragon Data has supplemented its range with the Dragon 64. This includes all the features of the Dragon 32, which of course will be very familiar to readers of *Dragon User*, the main additions being 64K of RAM memory, a serial input/output (RS 232) port, and a keyboard autorepeat routine. This machine is essentially the same as the Dragon model available for the past couple of months in the US through Tano (in a co-operative venture with Dragon Data) except that it is built to UK power and TV standards.

### Familiar sights

At first sight the new Dragon 64 looks just like the well-established Dragon 32 as the same case and keyboard are used, although the case is grey instead of beige (to indicate the 'enormous memory' perhaps?) and the number on the logo has changed. A closer inspection reveals an extra socket, labelled "S I/O", has appeared on the left side of the machine, next to the right joystick port, and the old "P I/O" port has been renamed as "PRINTER".

On power-up the familiar start message of the 32 appears and if you PRINT MEM you will be surprised to find that the answer is 24871 — exactly the same as on the old 32. The reason for this is that Dragon Data has taken care to ensure that the new model is as compatible as possible with the old and when you first fire up the 64 you are running a machine which is configured as a Dragon 32.

This means that almost all existing software will run on the new model without modification. We believe that this was a very sensible move as it means that an extensive range of software is instantly available for the new version. All Dragon 32 Basic programs will function correctly, as will any machine code programs which are either self-contained or use complete ROM routines. Problems should only occur where the programmer has broken into a ROM routine in the middle (which is pretty unlikely). Dragon Data says there will be no problems with any of their own software and a quick check of a range of independent offerings did not reveal any difficulties.

### Using extra memory

Of course, at this point you may feel that you have been cheated if you have just paid out good money for 64K of memory, so where is it hiding?

To find the answer you simply enter EXEC as your first command after power-up, when the screen will blank for a couple of seconds, and then the start message will reappear, but now with a blue flashing cursor to indicate a change of mode. Trying PRINT MEM again now reveals that 41241 bytes are available, and if you now enter POKE 25,6:NEW (to delete all the graphics pages) and PRINT MEM again no less than 47385 bytes are at your command for your Basic programming.

To understand how these two modes

# The 64: how it rates

*Keith and Steven Brain  
benchmark the Dragon 64*

are implemented, and more memory can be added to the Dragon, we need to consider a number of factors.

The first is that the SAM chip used in the Dragon can work in two modes known as map type 0 and map type 1. Map 0 will access 32K of RAM and map 1 64K of RAM. In map 0 RAM is accessed in the first 32K addresses and addresses 32768-49151 (&H8000-&HBFFF) and 49152-65279 (&HC000-&HFEFF) are available for the Basic interpreter and cartridge port, respectively. On the other hand in mode 1 only the 64K of RAM can be accessed, so you can have 64K of memory but nothing else!

The standard Dragon 32 can only operate in map 0 but the Dragon 64 can be switched between these two modes. Of course, if you want to run Basic in 64K mode you still have to use 16K of memory to hold the interpreter, so only 48K (less some bytes reserved for system use) will actually be available for program and variable use.

It is possible to expand the memory of the Dragon 32 to 64K of RAM and 'unofficial' upgrades are commercially available (in fact certain early models were apparently shipped with 64K RAM inside but not accessed!).

However, simply adding more RAM does not solve all your problems.

The problem is that the interpreter was written by Microsoft in 'position dependent code' so that it must occupy the same memory addresses as before. If you follow this route you therefore now have 48K of

*The 64 in action: more possibilities*

memory available but it is split into 32K below Basic and 16K above it. This means that it is difficult to access the top portion for Basic programming, although it can be easily used for storing machine code. If you do not want to use Basic at all then you can simply configure to 64K of RAM and use the full memory for machine code programs, alternative languages etc.

### Twin ROMs

How Dragon Data got round this difficulty is revealed by looking inside the 64, where you find that there are two 16K ROMs sitting side by side at the back. In the review machine these were 16K EPROMs but we understand that the final masked ROMs have now been produced.

One of these ROMs is essentially the same as that in the 32, and this is used in 32K mode. The second ROM contains a reassembly of the original source code for the interpreter at higher locations (49152-65279, &HC000-&HFEFF) (the original cartridge port area).

(If you are not familiar with the idea of 'position dependent' code then think about this simple Basic program which will keep printing a message.

```
10 PRINT "HELLO"
20 GOTO 10
```

If you change the line numbers by adding 100 to each and rewriting the lines then the program will crash as there is no longer a line 10.

```
110 PRINT "HELLO"
120 GOTO 10
```

On the other hand if you had used RENUM 100,10 on the original program the GOTO line number would also have been changed so the program would function correctly.

```
110 PRINT "HELLO"
120 GOTO 110
```

In effect the original Basic program was 'position dependent' as GOTO 10 referred to an ABSOLUTE line number. Using RENUM was rather equivalent to reassembly as not only the position of the lines but also the address of the jump in GOTO was changed.)

In the 'official' 64K version of the Dragon the Basic interpreter therefore sits at the top of memory with a continuous 48K available below it for programs and variables. Of course, using two ROMs must have increased the cost but it is a far more elegant solution than trying to patch two separate RAM areas together.

When you EXEC as your first command (or EXEC 48000 at any time) a new bootstrap routine in the 32K version ROM neatly swaps back and forth between map types 0 and 1 and copies the contents of the 64K version ROM into RAM (using the cassette buffer as a temporary store). Although the interpreter is in RAM it is non-volatile and pressing RESET will produce a 'warm-start' so that you remain in 64K mode.

As the interpreter is located in RAM it is possible to modify it (although of course you must take care not to crash the system). You can easily change the Basic keywords, so that the old ones are not recognised but only customised ver- ▶

**...CUMANA ANNOUNCE THE LAUNCH  
OF THEIR NEW DISK DRIVE  
FOR THE DRAGON MICRO...**

The rapidly expanding Dragon Micro market now has a top quality addition, with Cumana announcing the launch of their new disk drives to the eagerly awaiting audience of Dragon Micro users.

Cumana disk drives are designed and manufactured to the highest standards. They have an independent power supply, 12 months warranty, and are fully assembled and tested before packaging. As part of the package Disk Drive A is supplied with the "DELTA" Disk Interface. They are now available — at unbeatable value for money prices — from well known High Street outlets.

Look out for the distinctive Cumana packaging in your High Street today!

# DRAGON 32

## THE RING OF DARKNESS NOW AVAILABLE FOR ORIC-1 48K AND SPECTRUM 48K

The game created to be the most complete, enthralling, addictive and detailed adventure ever written for the Dragon 32. A whole graphic world (of nearly 3,000 travel days) with kings, princesses, mad jesters and dangerous quests will unfold before you. Across ocean, river, mountain and forest you travel to trade in many towns and dare the depths of vast dungeons (more than nine levels deep with over 20 different creatures in hi-res 3-D graphics), in search of fortune and the hidden curse of the Dark Ring. Many hours of mystery, suspense and raw excitement await you.

*"The most impressive adventure tested ... soon displaced breakfast TV in our house." Your Computer (April).*

## DRAGON TREK

Your starship has just entered quadrant 6-8. You are surrounded by eight battle cruisers of the Klingon Empire. Do you fight or run? They launch a salvo of photon torpedoes. You're HIT! Get a damage report. It's OK, the shields are holding, the next move is up to you, but be quick or they will attack again. Hi-res graphics, onboard computer and lag time interaction will have you zapping Klingons until stardate 2477.

*"Excellent value for money."*  
Your Computer

## PEPPER'S GAME PACK

Huge blue mushrooms, mad wizards, bouncing bricks, chessboard strategy, doomed space shuttles and mind teasing codes. They're all to be found on this great compendium of six games (Mushroom Muncher, Nad the Necromancer, Pepper's Breakout, Chessboard, Tracker, Chameleon Run and MasterBrain.)

Selected titles

available from

and good software outlets

## ARTIST'S DESIGNER

Produce intricate designs in hi-res graphics and save them on cassette. Full list of features includes text merging, joystick or keyboard control, circles, paint and shape replication. Ideal for home video captions, education, charts and diagrams.

All prices include p&p, VAT and the WINTERSOFT guarantee of quality and reliability

◀ sions. For example, you could change NEW to NOW to prevent malicious fingers wiping your program by simply POKEing 49289 with the ASCII code for '0' (79). Once you have done this then NEW will only produce a syntax error but NOW will perform a NEW!

This modification will be retained unless you press the RESET button when a checksum routine will discover that the original Basic has been corrupted and recopy the official version back from ROM. (This is a safety device in case your program goes haywire and overwrites the Basic area.) When you switch from 32K to 64K mode the system does not perform a NEW but rather a CLEAR and therefore any program located in the bottom 32K of RAM will be preserved.

### RS232 interface

The serial RS232 interface is hardware implemented through a 6551 Asynchronous Communication Interface Adaptor. This is a very efficient method of transfer as the CPU loads a full byte at a time and can perform other tasks whilst each bit is transmitted.

Two new Basic commands have been added to download ASCII format Basic programs (DLOAD) and machine code files (DLOADM) from a host computer. These function like CLOAD and CLOADM with parameters being optional. The baud rate can be specified at one of seven preset rates (110-9600) with the 'baud rate select' parameter, or set with a POKE command to any of 16 rates (50-19200). The serial data is transmitted and received as one start bit, eight data bits, two stop bits, and no parity bit. The RS232 interface can be manipulated directly from Basic by PEEKing and POKEing the appropriate registers in the 6551 and a brief explanation of how to input and output a character is given.

Although the original parallel I/O port is retained as the default device used by the PRINT#-2 and LIST commands this position can easily be changed and the RS232 interface used to feed serial printers instead by POKE&H3FF,1. Since both serial and parallel printers are now supported it is a mystery why Dragon Data has redesignated the 'P I/O' port as 'PRINTER'!

### Auto-repeat

A keyboard auto-repeat facility has been added in 64K mode, and the delay is easily modified by POKEing RAM at &H11F. This feature has not been included in the 32K ROM, to avoid incompatibilities with existing software, but details are given on how it can easily be added.

Our impression was that the keyboard scan was better with autorepeat enabled so that rapidly pressing keys on the same row did not cause missed characters as sometimes happens on the 32.

The bug in the original 32 ROM which cause all USR calls to be treated as USR0, unless they were preceded by a zero, has been corrected in both modes. In addition the MEM and VARPTR functions have been altered so that they treat their 16-bit result as an unsigned number and therefore do not return negative numbers for values over 32767.

### Documentation

First of all the 165-page book 'An Introduction to Basic programming using the Dragon' by Richard Wadman, which was originally produced for the 32, is included. We feel that this is probably about average for the standard of manuals produced by most home micro manufacturers, now that it has been thoroughly debugged, although that is rather a back-handed compliment.

Secondly, there is a very thin 8-page "Dragon 64 Supplement" which briefly explains the additional features, and gives the memory map in 64K mode. Regular readers will know that adequate documentation is one of our hobbyhorses but we regret that we feel that the information provided with the 64 is rather inadequate and undoubtedly its weakest point.

### You can't win them all

The main disadvantage of moving to 64K mode is that RAM now overlays the cartridge port area so that this cannot be accessed. This means that you cannot operate your disk system (DragonDOS or Delta), or use cartridge utilities, in this mode. Of course, you can load a program from disk in 32K mode and then switch to 64K mode to RUN it.

Although moving up to 64K mode is simple it is not so easy to switch back to 32K mode as no 'reverse bootstrap' is provided and all the Basic pointers must be restored (but no doubt it will not be long before someone provides the answer to that one).

Cassette operations are exactly the same in 64K mode as in 32K mode.

### Conclusions

Will you still need me — when I'm 64? (with apologies to Lennon and McCartney).

Dragon Data is following a policy of vertical development where each new product produces a more 'complete' computer system. The Dragon 64 has been particularly designed as part of a system to appeal to the small business sector where a package containing the Dragon 64, DragonDOS disk system, and the OS-9 operating system is to be offered at a very competitive price, around £500. A major reason for the arrival of the 64 is that 64K of memory are needed to run OS-9.

Of course, success will depend upon the availability of suitable business packages, but Dragon also seems to have that side of things well in hand. Impressive trans-Atlantic word processor and spreadsheet programs running under OS-9 were on display on the Dragon Data stand at the recent PCW show and we understand that these are to be offered at very competitive prices (around £60) in the belief that wider sales are a better way to recoup the heavy costs of the licences than a small volume of high-priced sales. Only time will tell if this move into the business area will be successful but we feel that the machine itself should stand up to the hammering it is likely to get in continuous use.

Our own faithful 32 is now 15 months old and, apart from all its other uses, it has withstood being used as a wordprocessor

for something like a quarter of a million words without a murmur of complaint.

To the home computer user having 'more' memory tends to be a question of "keeping up with the Joneses" or is seen as some sort of 'virility' factor but you should really ask yourself how much memory you really need to run decent programs?

We understand that Dragon Data will continue to manufacture the Dragon 32 and that the Dragon 64 is an addition and not a replacement. It costs some £50 more than the Dragon 32 and if you are a new user trying to decide between them then you must ask yourself how far you intend to ultimately expand your system. If your requirements are for a games machine with perhaps a little serious stuff thrown in then you are probably better off buying a 32 and spending your money on software.

On the other hand if you want to keep your options open, and the extra cash will not break the bank, then you are better opting for the 64 as the facilities allow access to a much wider range of computing possibilities.

If you already have a 32 and your horizons are expanding then the decision is more difficult as you must carefully consider the alternative methods of expansion.

If an RS232 port is your major interest then an add-on cartridge providing this facility for the 32 is available from Cotswold Computers.

Microcare already offers 64K upgrades for the 32, the price of which varies with the particular board type used in your Dragon. Where 64K chips were originally fitted to the Dragon 32 they were only sold by the chip manufacturers as 32K as one half had failed quality control tests. In practice it appears that many of these will actually work effectively as 64K, to the standards required here, and some simple wire links will therefore produce very cheap memory expansion.

Disadvantages of this approach are that you can only run Basic if you produce a tape copy and reload it into its original location, and you may be plagued by mysterious crashes if odd RAM chips are duff.

### Dragon's alternatives

Dragon Data itself looked at two alternatives. The first is to provide an add-on board with another 32K of RAM. This would need to use tape-based Basic like the 'unofficial' upgrades but at least this could be a copy of the 'new' ROM which would be located at the top of memory.

The alternative under consideration is a complete main board swap to effectively produce a real 64. The disadvantage with this approach is that the only parts of the 32 remaining will be the keyboard, power supply and top half of the casing, so it will certainly not be cheap! A figure of £100 has been mentioned and if that is correct we feel that Dragon Data would be better off making some 'trade-in' and 'discount' offer to Dragon 32 owners than getting bogged down in large numbers of labour-intensive upgrades which can hardly be cost-effective. ■

# It's time to have words with your Dragon 32

*Tired of games? Want to give your micro a serious job? Jim Dawson shows how — by turning your Dragon into a word processor*

IT TAKES TIME, a long time, but one can write one's own word processor program for the Dragon 32. Basic runs fast enough to keep up with most typing, and though it uses up a lot of memory the Dragon still has enough left over for a decent sized text file. But Basic does fail badly when it comes to operations, like moving chunks

of text around, that require a lot of PEEK-MODIFY-POKE sequences. This article presents three machine code subroutines which circumvent the main bottlenecks in editing.

There is also likely to be a speed problem in Basic print routines, and so a subsequent article will present a 1K machine code subroutine which offers a preprint line count, right justification with proportional spacing (even of mixed character format lines), some Greek letters ( $\alpha$ ,  $\beta$ ,  $\gamma$ ,  $\delta$ ,  $\pi$  and  $\mu$ ), centred lines and overlining (eg ABORT). Inasmuch as these facilities depend upon the printer obeying the command sequences, ESC J n for paper feed and ESC K n<sub>1</sub> n<sub>2</sub>... to enter dot matrix mode, they may be regarded as dedicated to the Epson MX80 family and similarly commanded printers.

## Print routine

The print routine generates all implicit CR and LF commands and anticipates that character format commands, like HT, ESC W 1 (double width), ESC S 1 (subscript) etc will be encountered in the body of the text. The print routine also expects that there will be a text file header consisting (sequentially) of: the left margin, 11 other horizontal tab settings, nul, the right margin, the line spacing code, and the line count (hi and lo bytes). In the author's program this header starts at 19967 and the text file runs upwards from 20000. They are always saved together on tape as if they made up a machine code program — no attempt being made to use the file commands of Basic.

The machine code routines are all inherently relocatable and may be loaded from Basic by a "Poke &H Data" loop into any reserved part of memory (such as graphics page 1: 1536-3071). If the initial addresses given to the routines are known to Basic as M1, M2... then their calling can also become position independent.

## Enter M1

The first routine, call it M1, carries out a variety of BLOCK MOVE or BLOCK WIPE functions. Before being called it requires four parameters to be poked into it, but as they are not destroyed the routine can be called again with only the changed parameters re-poked. ▶

### BLOCK MOVE & WIPE ROUTINES

0	BE 0 0	BMOV LDX #n	POKE Source
3	10 BE 0 0	LDY #n	POKE Destination
7	C6 0	LDB #n	POKE Mode
9	B6 A0	LDA #B10100000	"Y+" Postbyte
11	54	LSRB	Test Mode Bit 0
12	24 D	BCC MOVE	He wants Block Move not Wipe
14	A7 BC 35	STA 53,PC	Set the Instruction Postbyte
17	B6 B4	LDA #B10000100	"X" Postbyte
19	A7 BC 2E	STA 46,PC	Set Fixed Source Postbyte
22	30 BC E9	LEAX -23,PC	Make X point to S Lo Byte
25	20 16	BR NUMB	Go and make the Wipe
27	54	MOVE LSRB	Test Mode Bit 1
28	24 4	BCC DMDE	Inc Dest wanted
30	B6 A2	LDA #B10100010	Change to "-Y" Postbyte
32	31 21	LEAY 1,Y	and Pre-increment Y
34	A7 BC 21	DMDE STA 33,PC	Set the Instruction Postbyte
37	B6 B0	LDA #B10000000	"X+" Postbyte
39	54	LSRB	Test Mode Bit 2
40	24 4	BCC SMDE	Inc Source wanted
42	B6 B2	LDA #B10000010	Change to "-X" Postbyte
44	30 1	LEAX 1,X	and Pre-increment X
46	A7 BC 13	SMDE STA 19,PC	Set the Instruction Postbyte
49	CC 0 0	NUMB LDD #n	POKE N: Number to be done
52	A7 BC 4	STA 4,PC	Save Hi Byte of N
55	5D	TSTB	Lo Byte Zero ?
56	26 9	BNE LOOP	No
58	B6 0	N HI LDA #n	Is Counter Hi Byte 0 yet ?
60	26 1	BNE CONT	No. Do another 256 moves
62	39	RTS	Yes. Return to BASIC
63	4A	CONT DECA	
64	A7 BC FB	STA -8,PC	Reset Counter Hi Byte
67	A6 B0	LOOP LDA ,X+	or "X" or "-X"
69	A7 A0	STA ,Y+	or "-Y"
71	5A	DECB	
72	26 F9	BNE LOOP	Repeat till B=0
74	20 EE	BR N HI	Then see if still more needed

Program M1: carries out a variety of BLOCK MOVE or BLOCK WIPE functions

# Blood and Thunder!

Adventures for the bolder D32 owner

Mike Meineck's first sagas for the more courageous Dragon-basher. Based on skill and cunning, rather than random elements. (Clue sheets available for trapped adventurers.)

## TEMPLE OF ZOREN

Nobody made it back alive yet, but Terran Security need plans of the defences and a sample of the new Zoreen laser gun.

## THE CRYSTAL CHALICE

The Klarz scattered the shards of the Chalice and darkness reigns supreme over Quorum. A mind-bending Quest for Swords and Sorcery fans.

## TREASURE TOMBE

A real-time graphics adventure set in Merlin's massive tomb complex. Violent death or Arthur's treasure?

£7.95 per adventure from all good Dragon dealers or if in difficulty direct from:

◀ For a block move it needs to know the initial source address S, the initial destination address D, the number of bytes to be moved N (zero OK, but don't try negative), and a command byte M which controls the manner in which the moves are made. If bit 1 (ie 2<sup>1</sup>) of the control byte is clear the destination address will increment as the move progresses. If it is set (M = 2) the destination address will decrement. Bit 2 has a similar effect on the source address and the effect of these two control bits is additive, so that M = 6 will produce a block move with both the source and destination addresses working their way downwards. [The pre-decrement effect inherent in such machine code operations is hidden so that the moves appear to Basic to go with post-decrementing.]

If bit 0 of the Mode byte is set, so that M is any odd number, then a block wipe of the character defined as S (0 to 255) occurs N times to the incrementing destination D.

### Nice effects

As well as carrying out all sorts of rapid rearrangements of the text file this sub-routine may also be used to produce some nice effects on the TV text screen (addresses 1024-1535) — for example, block wipes of red (S = 191) may be used to indicate erased sections of text, and block moves with S and D differing by just 1 may be used to shuffle sections of text or messages left or right.

Note that S, D and N are 16-bit numbers, requiring hi or lo byte pokes. In Basic you need something like:

```
10 X = S : Y = M1 + 1 : GOSUB90 : X = D :
  Y = M1 + 5 : GOSUB90 : X = N : Y =
  M1 + 50 : GOSUB90 : POKE M1 +
  8, M : EXEC M1
90 H = FIX(X/256) : POKE Y, H : POKE Y
  + 1, X - 256 * H : RETURN 'POKE Y, X
```

### Second routine

The second machine code routine, M2, is used to FIND the whereabouts in memory of a sequence of bytes which have been defined as the contents of F\$. The routine needs three parameters: the first and last addresses of the section of memory which is to be searched, and a clue from Basic as to what it means by F\$. For example:

```
50 X = VARPTR (F$) : Y = M2 + 1 :
  GOSUB90 : X = START ADDRESS : Y
  = M2 + 14 : GOSUB90 : X = FINAL
  ADDRESS : Y = M2 + 19 : GOSUB90 :
  EXEC M2 : ADDRESS FOUND =
  256 * PEEK (M2 + 14) + PEEK (M2 +
  15)
```

If the search failed then the result obtained as ADDRESS FOUND will be one greater than the specified FINAL ADDRESS.

The routine assumes that the caller doesn't want to be told if the specified START ADDRESS itself corresponds to an occurrence of F\$. It therefore starts its searching procedures from one address higher up. This makes life easier during multiple occurrence searches: since the routine returns its answer through the same memory location as is used to specify starting address, searches for ▶

### FIND ROUTINE

0	8E 0 0	FIND LDX	#n	POKE VARPTR(F\$)
3	EC B1	LDD	,X++	A = Length of F\$
5	A7 BC 1E	STA	30,PC	
8	27 24	BEQ	NOFS	There is no F\$
10	10 AE B1	LDD	,X++	Address of Initial String Character
13	8E 0 0	LDX	#n	POKE Init File Addr/PEEK Address Found
16	30 1	LEAX	1,X	Skip immediate beginning of File
18	8C 0 0	NEXT CMPX	#n	POKE Final Address of File
21	22 14	BHI	EXIT	Search Failed
23	A6 B0	LDA	,X+	Next Character in File
25	A1 A4	CMPA	,Y	Do Initial Characters Match ?
27	26 F3	BNE	NEXT	No
29	5F	CLRB		Reset Character Counter
30	A6 B5	LOOP LDA	B,X	Next Character in File

◀ further occurrences of F\$ can be carried out by more EXECs without the need for any more POKEs.

### Sneaky tricks

If preferred, the pre-increment can be removed by substituting two NOPS (HEX12) for the two bytes (HEX 30 & 1) of LEAX 1,X operation. As well as its obvious use from the word processor point of view, this routine also comes in handy in the sneaky tricks department for finding out where specific sequences are hidden in memory — parts of program lines for example.

Bear in mind that the routine may hit upon F\$ both on the TV text page and also in the string storage region. Specifying 65535 as the final address for the search is unwise, but the routine will always be saved from going into an infinite loop by the fact that it must at least find F\$ at the place where it is defined. If F\$="" the routine will return to Basic without doing anything.

### TV screen dump

The third routine, M3, takes the next 480 bytes from an upward going text file and dumps them on to the top 15 lines of the TV screen, leaving the bottom line free for editing messages.

The starting address must be poked into M3 + 2 by a 16-bit poke and again there is a mode byte, to be poked into M3 + 11.

Mode 1 dumps any character above ASCII code 31 on to the TV as black lettering on a green background. Only

ASCII control codes 0-31 appear as indirectly related inverse video characters: green on black. It very soon becomes familiar that inverse "MMI" means "CR, CR, HT"!

Mode 2 is similar except that single character commands, like CR, all two-byte ESC sequences and the three-byte sequences "ESC +/-/R/S/U/V/W n" are all blanked and appear as if they had been "space" characters.

The Dragon: your own word processor

In that respect Mode 0 is similar to Mode 2, but it makes everything else except capital letters appear in inverse video. Mode 0 is thus similar to the Dragon's normal method of distinguishing between upper and lower case letters except that for ease upon the eyes all non-capital characters (figures, punctuation, spaces etc) are also rendered as green upon black.

These routines give a direct mapping; no attempt is made to obey command

characters. Having words wrap around the screen isn't ideal, but one gets used to it, and it has the distinct advantage that the direct text file to screen position correspondence greatly eases the writing of the cursor moving and editing routines.

### Various hints

Finally, a few more suggestions, or hints, for a word processor. Start by writing a main menu with choices such as to edit, print, save on tape etc. Then concentrate on making a flashing cursor and poking it around the TV screen (and nowhere else!!!).

Use INKEY\$ to test for single letter commands like the arrow keys, "a" for advance, "-21a" for go back 21 lines etc.

Decide how to insert new text into the file — either split the file at the required point and poke new text (via INKEY\$) into the gap, or poke the new text into a buffer (eg downwards from 32767) and make the split and block insert later.

In the insert or writing mode use the CLEAR key (A\$ = INKEY\$: IF A\$ = CHR\$(12) THEN ...) to define that the next key pressed will be a command not text. Then get other edit commands to work, like deletions, block saves, "5c" for change the next five characters, "f ... CLEAR" for "Find ...".

Perhaps then it will be time to think about printing, but there will still be more to be done with editing — like adding the ability to set up multiple automatic command strings: 100 (Find "1983", Delete, Insert "1984") etc. ■

December 1983 Dragon User 33

# New man in the driver's seat

ONE DAY YOU'RE browsing through the news-stands looking at microcomputer magazines, including *Dragon User*; next thing you know you're managing director of Dragon Data. It couldn't happen to you or me — but it did happen to Brian Moore, who has moved from electronics giant GEC to take over the running of Dragon Data.

But Brian is keen to point out that his appointment does not mean any changes of direction at Dragon Data. The company is still keen both to move upwards in the micro market and to consolidate its position as a leading home computer manufacturer. This means that a Dragon 128 (a working title) is under development, along with a new home computer to maintain the company's attack on the market in which it began.

## Upgrade service

Brian is particularly impressed by the affection many owners have for their Dragons. He intends to repay this affection by being "far more active in terms of our relationship with Dragon users". As part of this he recognises the need to provide an upgrade service for 32 owners and plans to offer various packages enabling this at the beginning of next year, if not earlier.

He also thinks that there is a "reasonable future for the 32, particularly overseas". As well as "keeping the installed base serviced" (including plans for lots of new software) he intends to spread that base by launching new machines, beginning with the 64 which he describes as "a powerful home computer and ideal small business machine".

The arrival of OS-9 operating system on the 64 is regarded as particularly important. "It will make the 64 a very powerful machine indeed," comments Brian. The 64 will then be capable of handling tasks ranging from basics such as word processing to advanced applications such as electronic mail — with more than one task being handled at once. Multi-tasking is the major advantage OS-9 has over Flex, the other main operating system for 6809-based machines. Its major disadvantage is that more applications software is available for Flex. However, Dragon Data argues that though this is the case at the moment, "OS-9 software will catch up with Flex".

This move into business machines involves a marketing change for the company as it will be appealing to a different range of users. Business buyers are more likely to approach dealers than the large chain stores such as Boots which is responsible for the bulk of 32 sales. So

*Graham Cunningham  
talks to Dragon's new  
managing director, Brian  
Moore*

one of Brian's other priorities is "to establish very good relationships with dealers".

Brian is particularly pleased that the 64 is software compatible with the 32. As he puts it: "We like to support our users" — and the decision simplifies retailing for both machines and their software. Similarly software in Basic 09, which arrives with the OS-9 system, is planned to be compatible with the 128.

## Exciting future

Further beyond the 64 Brian prefers not to commit himself at the moment — but talk of machines which Dragon Data itself could use for administration and an interest in pictorial menu systems such as Apple's Lisa indicate the excitement with which he views the future.

Brian's reluctance to discuss the 128 in detail is based partly on the argument that the more he says about it, the more competitors will know. Doubtless another reason is that talk of future projects draws attention away from the already available Dragon — although any wise micro buyer is likely to go for an already established machine which has overcome any initial bugs and has had a good base of software developed for it.

On the subject of the micro industry as a whole and Dragon Data's position in it,

Brian is forthcoming. He thinks that the company is a "real nice business" and enjoys "dealing on a day-to-day basis with up-to-date technology". He finds the industry itself exciting too — the challenge of beating the competition which is trying to do the same to you. Staying at least one jump ahead is the name of the game, although as Brian points out, deciding what exactly you have to stay ahead of can be as difficult as doing so.

The competition may be "a moving base" but you have also to distinguish between "actual and perceived rivals". As he says: "Too often it's only in the small print in advertisements that you find out when something is actually going to be available." Dragon Data's desire to tie in publicity with availability, and to have room to improve on rival developments, are other reasons for Brian's reticence on new products.

The question of when a rival product will be available in quantity is of crucial importance to a company such as Dragon Data. For example, Brian admits that the Electron will be a strong rival to the Dragon 32 — how strong depends on the number of Electrons Acorn can get to the market. Similarly if demand exceeds the supply of Commodore's 64 then the Dragon 64 should benefit. ►

**New books and software are cropping up everywhere.  
Here's the pick of the bunch.**

**TIME TRAVELLER**  
**An Adventure in Time (History)**  
by Sulis Software

Stranded 4000 years in the past, you have to survive the perils of the Bronze Age, Roman Britain and Norman, Renaissance and Victorian England in order to get back to the present. Wild animals, soldiers, priests, princes and germs are after you, and on top of all that, you've got to get your historical facts right before you can slip through the time warp into the next age.

**HOT PROGRAMS TO FEED YOUR DRAGON**

by M.A. Smith and G.P.S. Robinson

This book contains not only the best programs for your Dragon (or Tandy Color Computer) but also a full description of how the programs work, how you can change them, and how you can produce your own programs. The book divides naturally into four sections:

**ADVANCED GAMES.** These include *3D-Sub Hunt* (complete with Radar screen and Sonar), *Golf* — which realistically uses joysticks to control ball speed and direction. **SOUND AND GRAPHICS:** *Synth* — a full sound and music synthesiser with graphical output, also *Drawpack* — line drawing with joysticks, *Logo* — a comprehensive implementation of this new language.

**BUSINESS.** For the business user of the Dragon 32, here is a full *Word Processor*, a *Telephone Call Costing System* and an *Information Retrieval System*. Each of these will turn your Dragon into a useful business tool.

**UTILITIES:** To start with, there is a utility to convert Tandy tapes to Dragon format and vice versa, so you can take full advantage of all available Tandy Color Computer software.

**ANATOMY OF THE DRAGON**  
**Advanced BASIC for The Dragon**  
by Mike James

Contains a detailed anatomy of the DRAGON 32 computer for BASIC programmers. Explains exactly how the DRAGON works and how you can make it work effectively for you. This new information, which does not appear in any other book or manual on the subject, opens up exciting new approaches to programming — and all new technical ideas are illustrated with BASIC programming examples.

**LANGUAGE OF THE DRAGON**  
**6809 Assembly Language**

by Mike James

This is the companion volume to "Advanced BASIC for the Dragon" also written by Mike James and published by Sigma Technical Press. It aims to teach 6809 Assembler Language to anyone with knowledge of BASIC. Each chapter includes examples and many "cookbook" style routines for your immediate use. You will then be able to write programs, in assembler language, that are faster than BASIC programs. This is particularly important for high speed "arcade" style games programs.

If you're ready to move up to assembly language — at home, school or at your work, then "LANGUAGE OF THE DRAGON" will give you the guidance you need.

Features include: Complete assembler written in BASIC and built up throughout the book; look at the problem before learning the answer; emphasise bit patterns as fundamental data type for assembly language; assembly language equivalents of high level language instructions; 6809 machine code instruction set

◀ As Brian points out, both Sinclair and Oric have declared their intentions of moving upmarket — so the competition will be equally fierce for the 128. All this while companies such as Commodore and the giant IBM have made a success of moving down. In fact IBM's PC Junior (code-named Peanut) will be a major rival — when it is available. Brian's opinion is that IBM is likely to delay launching this machine in the UK until demand for its PC has quietened down. He adds: "IBM is very good at marketing, so I'm sure they'll pick the right moment." When they do pick their moment there is no doubt that the PC Junior will sell, regardless of its technical merit. At a time when the list of injuries in the micro industry is growing ever longer, the appeal of IBM's solidity will be even stronger. This list already includes Grundy, Jupiter, Atari, Texas Instruments and Matel — and some observers attempted to add Dragon Data earlier this year.

In September a £2.5 million investment package was announced for the company. At the time it was admitted that summer sales had fallen short of predictions, putting "strains on Dragon Data's immediate cash and borrowing facilities" according to a shareholders' statement at the time. The link between a bad summer and the need for more money coloured reaction to the £2.5 million announcement, so that some people interpreted it as a rescue package. However Dragon Data argued: "Although the fall-off in demand emphasised for us the seasonal nature of this industry, the encouraging aspect was that Dragon held on

to its overall market share." The company also thought that a request for capital was natural at that stage of its development, so the £2.5 million was an investment boost allowing it to gear up for the pre-Christmas sales period.

At the time Dragon Data's shareholders also announced that former managing director Tony Clarke "had previously indicated to the board that he wished to resign for personal reasons". Dragon Data's main shareholder is Prutech, the high technology investment division of Prudential Insurance, which is a shareholder in GEC. The board invited to GEC to provide one of its senior executives as Dragon Data's new managing director — and Brian took over on September 12.

### Optimistic view

He is emphatic that the £2.5 million was an investment boost ("more than enough," he comments) and that the company's cash-flow problems were "very simple and overplayed by the press". He thinks that Dragon Data is "a very successful business" and expects a turnover of £18 to £20 million for the company's first year of operation. As he points out this is very "ambitious growth — the company has come from nowhere to be a leading home computer manufacturer in less than a year".

He continues: "The order book is full and we despatch everything we build." The company has already sold all the Dragon 64s it can produce for Christmas and Brian thinks the machine has been

"very well received in the US".

Before moving to Dragon Data Brian was deputy managing director of a GEC subsidiary specialising in microprocessor-controlled heating and ventilation systems. He has a wide range of experience including engineering, financial management and business applications for computers. He explains that GEC is more a "collection of companies", much more decentralised than firms such as IBM, so he's used to operating "without a cushion". Dragon Data is "much younger and the industry faster-moving" than his previous experience, but "certain things are basic to every business". On the technical side he knows "enough to listen to what people tell me" and thinks that his lack of advanced expertise is a distinct advantage". As he explains: "You need to keep basic business objectives in mind and react fast, rather than keeping your head in the computer box."

Brian is fascinated by the speed with which the micro industry is moving. Talking just six weeks into his new job, he says with relish: "I feel as though I've been here for years, not just because things move so quickly but in terms of the amount I've covered." Brian's not sure how long he will be with Dragon Data (officially he's on "temporary secondment" from GEC), but expects to be there a minimum of six months and has "no plans to leave in the foreseeable future". In that six months he will have acquired a great deal of experience — particularly if that sense of "time distortion" continues. ■

## GREAT SOFTWARE COMES BY CABLE

' Since I introduced my creator's game DRONE to you earlier in the year, their other releases DRAGRUNNER, BACCARAT and CAVE FIGHTER have continued to prove that the best Dragon software now comes by Cable.

Their newest release is TRACE RACE, where you will need great skill to drive your light cycle around the games grid in a life or death struggle with your opponent or against the computer (each cassette has a 2 player game on one side and a solo game on the other).

They have a special Christmas promotion, so why not treat yourself to an EXTRA VALUE DOUBLE PACK. Two 100% machine code games — DRAGON RACER and WASP INVASION have been packaged in a two cassette audio box at a great value price of only £9.99. At this price you can even give them as a present!

For the first time ever you can now obtain our attractive PVC Audio Boxes as a separate item. Those of you who have seen these boxes as supplied with every Cable Software program will know that they provide a tough, dust-free system of storage for your cassettes. Each box holds a cassette complete with the plastic case and at the low price of £1.99 per pack of three, will enable you to build up your own personal library of "book" type cases.

Due to the successful sales of Cable Software programs, some of the programmers are threatening to take a three month holiday in the Bahamas to spend some of the money they have earned in the last few months. This means we may have some vacancies for programmers able to write 100% machine code programs. If you think you may be good enough for this type of programming, send us details of any games you have written — next year it may be you sunning it up in the Bahamas!

May I finally thank you all for the support you gave to my original appeal for recruits to help in the fight against the DRONE armies, and even now, new volunteers are still welcome to join me in this valiant crusade'.

*Pam D'Arcy introduces Chains, a word game to beat the graphics blues*

BEING THOROUGHLY DISGRUNTLED with the apparent bugs in many Dragon graphics programs featured in magazines, I have produced this word game for my family and fellow graphics sufferers. It is based on a card game I played just once as a child, but which made a lasting impression on me. The game consisted of a pack of cards bearing names of railway stations and was a form of dominoes — you added to the last station card played if you could match its last letter(s) with the first letter(s) of one of your station cards. Chains follows that idea, except that it limits the matching overlap to a maximum of two letters.

In order to minimise coding and hence typing agonies I have deliberately omitted vast numbers of possible error checks on the input/detailed instructions/input options through the screen (after all, you can always add to the program if necessary). There are some minor operational points that you can similarly improve upon. The

```
9000 DATA ADVENTURE, ADVANTAGE, ANGUISH, ALIEN, ANTHEM, ALLERGY, CHINA, CHAFE, EMBER, EMI
GRATE
9010 DATA ENGINE, ENVELOPE, ERASE, ERADICATE, EASY, EAST, FEMUR, FETCH, GYMNASIUM, GYPEY
9030 DATA GENEROUS, GENTLEMAN, HYENA, IDLE, IDEA, INANE, INCH, LANGUID, LEGALISE

9060 DATA USHER, USUAL, UMPIRE, UMBRELLA, URGE, URCHIN, LABOUR, LENGTH, ****
```

Figure 1: Data entry sample. The words are jumbled deliberately.

REM statements can all be omitted, too. I have deliberately avoided GOTOs/GOSUBs to those lines for that reason.

Chains is a game for up to nine players (the computer can play, too) with a choice of playing from a maximum of six or nine words each. The computer initially distributes six or nine words (as instructed) to each player selected at random from the available DATA. A further word is then selected at random as the starting word and is displayed on the screen, along with the first player's list of words.

Players in turn select from their lists, numbered from left to right across the screen, to "chain" one of their words to the previous one played by matching its last

one or two letters with the first one or two letters of a word in their list. If a player cannot go and currently holds a less than the maximum (six or nine) number of words, the computer adds a further word to that player's list for his/her next turn. (As the allocation is random, be prepared for a slight delay in response while the computer is hunting for the last one or two words still available for allocation.) If all players are unable to go and have full allocations of words or there are no more words left to be allocated, the game ends with a listing of the number of words still held by each player and the number of words each has played.

A "patience" version is possible ►

330 IF WL(NP)<>0 THEN 100
```

◀ by pressing ENTER in response to the number of players prompt (the same can be achieved by entering "1" player, too).

To get the computer to play, enter "MY TURN" as the player's name. It is fascinating to sit back and watch the action after entering "MY TURN" for all nine names!

The game is as good as its DATA. I haven't included any DATA statements in the program listing as I feel, for entry purposes, it is easier to offer you a list, in English as it were, than have words split over printed lines. Figure 1 shows how easy it is to enter the DATA. I have deliberately presented the words in the lists in a jumbled fashion as a preponderance of "N" words seemed to regularly occur for one player when using alphabetic sequence. The program can cope with words up to 10 characters long (three per screen line).

I suggest that once you have typed in the program, it can be saved as the "master" and appropriate DATA sets be added, each program version being called something instantly recognisable.

### Inbuilt program flexibility

1 **Amount of DATA:** The program copes with a maximum of 100 words (lines 850-880 to increase this). Fewer than 100 words may be used by terminating the DATA with the string "\*\*\*\*\*"

2 **Number of players:** The program automatically calculates the maximum permissible number of players (to a maximum of nine) according to the amount of DATA and maximum number of words (six or nine) each player is to be allocated.

3 **Number of words per player:** The variable "NW" as set up in line 920 determines this (six or nine as required). It is an easy task to edit this line prior to RUN should you want a different version from the one you have saved (quicker than loading a different version, too!). Again, I could have made this an INPUT parameter, but wanted to minimise your code entry task. ■

**Words:** I spent more than a day devising/refining this set, so good luck to you if you can do better! Obviously, the fewer variations you have on word startings/endings, the greater the chances of a successful conclusion.

# GAME TO EARN £1,000?

Just one good marketable game, educational or strategic simulation program could earn you, as author, up to £1,000 as a lump sum if you sell the rights in it to Logic 3 – Britain's fastest-growing company in home computer software.

Or keep the copyright, take a royalty on sales, and maybe earn even more in the long run – our best selling author is currently earning £1,000 per month in royalties.

Logic 3 is now looking for new high quality entertainment and educational software products to run on the leading home computers – particularly Acorn Electron, Commodore 64, Sinclair Spectrum and Dragon.

Write or phone Andrew Goltz at Logic 3, Mountbatten House, Victoria Street, Windsor (07635-57181) to know more.

But soon.

## LOGIC 3

# DRAGON 32 OWNERS

Make your Dragon turn into a real computer with the new Double-Density Delta Disk System.

## The Delta Disk System Gives You

- An affordable disk system.
- Powerful Delta disk commands.
- Lets you produce and handle random access files as easily as serial files.
- Random sequential and indexed file handling.
- Simple plug into Dragon.
- There are no **HARDWARE MODS** needed to run DELTA!
- Easily expandable 480K to 1.4 megabyte ON-LINE storage.
- Full range of business utility and games software **AVAILABLE NOW!**

**DELTA  
DISK  
SYSTEM**

- The price you see is the price you pay. **NO HIDDEN RAM upgrade costs.**
- Uses under 2K of user - RAM as DELTA is held in EPROM.
- Enables programmer to easily produce applications Software which automatically starts up and operates without any intervention from the user.

**FULL  
RANGE OF  
BUSINESS  
SOFTWARE  
AVAILABLE.  
SEND SAE  
FOR DETAILS.**

DELTA CARTRIDGE - contains DELTA disk Operating System, User Manual, demonstration diskette	£120.00
DELTA 1 - DELTA Cartridge, User Manual, a single-sided 40-track (180K) drive plus cable	£320.00
DELTA 2 - as DELTA 1, but with a single-sided 80-track (360K) drive	£355.00
Disk interface cable (supplied with DELTA 1 or 2)	£9.95
ENCODER 09 assembler/disassembler/editor - integral with DELTA	£24.95
HOME ACCOUNTS full home package for DELTA	£14.95
INFORM - Database Management System commissioned especially for DELTA Systems	£39.95

## TOOLKIT FOR DRAGON 32

**NEW**

### PREMIER'S ASTONISHING NEW TOOLKIT FOR THE DRAGON 32 PERFORMS THE FOLLOWING AMAZING FUNCTIONS:-

- FULL screen editor allowing copying, concatenating of lines etc. Fully linked to the DRAGON'S line editor
  - Eight PROGRAMMABLE KEYS - all easily accessed or checked
  - 25 full colour low-resolution graphics screens available with commands for instantly writing to any of them or swapping/moving. **MAKES COLOUR ANIMATION AT MACHINE CODE SPEED** a simple task
  - Full range of ERROR HANDLING commands with several RESUME options.
  - OVER SIXTY NEW WORDS fully linked to your DRAGON BASIC - your new commands become built-in as soon as you plug in the TOOLKIT cartridge.
  - VARIABLE GOTO/GOSUB commands, allowing routines to be called by name. Eg GOSUB TITLE or GOTO FINISH
  - Superb TRACE command which uses top right of screen only, thus leaving graphics/text intact.
  - SEARCH and REPLACE commands for easier program modification.
  - Comes complete with COMPREHENSIVE 40+ page MANUAL
- Available in CARTRIDGE or DELTA enhancement format. £29.95 inc.

**NEW**

- DRAGON Fig FORTH ON DISK FOR DELTA • Executes up to 10 times faster than BASIC • Language extendable by user defined words • Words can even be defined using the FORTH assembler for maximum speed • BASIC and DELTA commands still available from FORTH • Source code stored and can be compiled from disk • FORTH can be saved to disk, including any new definitions
- ONLY £29.95 including MANUAL + Fig FORTH glossary + Model Inc. VAT

### SCRIBE FOR THE DRAGON 32

- FULL UPPER and LOWER CASE direct from the keyboard.
- An enlarged 42 x 24 screen display which gives a superb READABLE text
- Full text display on hi-res screen
- Automatic underline and reverse image
- Up to 255 user-defined graphics
- Precision character position command giving super/subscripts
- Black on white text display option.
- A new Print @ command extending to 1008 thus almost doubling screen area

### ENCODER 09 FOR THE DRAGON 32

ENCODER 09 - is a full symbolic assembler using standard mnemonics and pseudo op-codes. Source code can be incorporated into BASIC programs. The monitor section contains commands to allow memory display, modification and execution. Memory block move, breakpoint handling, full disassembly and a full editor are only a few of its many features. The most powerful assembler-disassembler/editor available for the DRAGON 32. Available as either an integral DELTA fitment or in cartridge. Cartridge £29.95. Disk - see above.

### HIPRINT FOR THE DRAGON 32

HIPRINT - screen dumper  
- will dump the entire contents of your DRAGON 32 high-res screen to a high resolution printer. Can be used for design, display etc. Available at present for EPSON printers only. Other modules to follow shortly.  
Tape £7.95 DELTA disk £9.95.

# ACTIVE SOFTWARE

## FREE PARKING

ONLY ACTIVE SOFTWARE bring you a *unique* version of the all time classic board game, which upholds every tradition of the original, **BUT WITH ONE BIG DIFFERENCE . . . . .**  
**YOUR DRAGON PLAYS AS WELL!!!**  
 And it plays a **MEAN, MEAN** game — using cunning pre-programmed logic, it will match the toughest of opponents.

And that's not all! . . . You can wave goodbye to your Dragon's green on black text! **FREE PARKING** uses 100% *SUPER SMOOTH, SUPER FAST*, Machine Code Graphics throughout the whole game.  
 And there's more! . . . **FREE PARKING** is played with the whole board *permanently* displayed on the hi-res screen, so you can always see your opponents.

AND EVEN MORE!!!

- \* PLAYER STATUS PERMANENTLY DISPLAYED
- \* DETAILED REPORTS AT THE PUSH OF A BUTTON

- \* SAVE GAME TO TAPE
- \* OUTPUT TO PRINTER

**WE DARE YOU TO CHALLENGE YOUR DRAGON! A MASTERPIECE! at £6.90 inc.**

### THE FILING SYSTEM £19.95

Destined to become THE database for the Dragon computer, THE FILING SYSTEM turns your Dragon into a powerful data management system.

Incredibly versatile, it compares with some disk based systems costing well over £100. It features:

- Maximum 300 records per file
- A generous 22 fields per record
- A powerful multiple search on any field or 2 fields
- A powerful sort on any field
- Full Mathematical functions
- Output to printer in label or column format
- Column totalling
- and much more . . . . .

With THE FILING SYSTEM at your disposal, you can effortlessly produce any number of custom databases to suit YOUR requirements.

Professionally written, presented in an 'A4' ring binder, with a comprehensive manual, THE FILING SYSTEM will help with VAT, STOCK, CUSTOMER RECORDS, JOB SHEETS, HOBBIES, HOUSEHOLD ACCOUNTS, etc., etc. We can provide a 'HOT LINE' should you get into any difficulties.

**HIGHLY RECOMMENDED**

### DUPLICATION SERVICE

We specialise in the reproduction onto cassette from your Master, to the highest possible standard. Using real time and high speed duplicating equipment specifically designed for the ultimate in fidelity and efficiency we consider ourselves the very best for any computer programme, or spoken work, if your standards are high and perfection is essential.

Example: C5 both sides recorded 75p each + VAT

**BLANK CASSETTES**

Example: C5's 30p + VAT + Postage  
 Library cases 6p each + VAT

Generous discounts available on duplication and blank cassettes.  
 Price List available on request.

### AVAILABLE SOON

For all of our customers who thought that GAMES 1 TAPE couldn't be equalled  
 WE HAVE DONE IT

**GAMES TAPE 2 SIMPLY AMAZING!!!!**

WITHOUT QUESTION, THE BEST SELLING COMPENDIUM AVAILABLE  
 1000's OF SATISFIED CUSTOMERS

PROFESSIONALLY  
 BUILT RS-232  
 INTERFACES

# £49.95

Use your Dragon 32 to communicate with RS232 devices, i.e. Modems, Printers, Other Computers etc. Fully documented with test programs.

SUPER QUALITY  
 COVERS

An investment at only

# £3.50

NOT CHEAP stretchable loose fitting plastic, but a high quality tough, durable material in matching Dragon Colours. Looks very smart GO ON. TREAT YOUR DRAGON

# Beginner's guide to cracking machine code

*Bruce Devlin provides an introduction to 6809 machine code programming*

HOW MANY TIMES has that Basic program you've written worked far too slowly to give you any excitement? How often have you heard of the speed and excitement of programs written in machine code? How many times have you wondered where to start learning this mystical language? Well look no further — this article is designed to nurse the tender beginner through the first stages in machine code programming.

The first thing to realise about machine code is that we are communicating directly with the microprocessor "brain" of the computer rather than through an interpreter (ie Basic). This explains why machine code is so much faster. Imagine trying to communicate with a Japanese person via an interpreter. It would be much quicker if we were able to talk to him in Japanese. Another important thing to realise is that machine code is byte-oriented. This means that when the computer fetches instructions or data it does so one byte at a time. If we consider a single byte in memory, it may be used for many different things. For example:

1. It may represent a machine code instruction that the microprocessor would read and execute when instructed.
2. It may represent an unsigned number between 0 and 255.
3. It may represent a signed number between -128 and 127.
4. It may represent a character by containing an ASCII code.
5. It may represent eight binary on/off switches.

If the right electrical connections are made to the micro-processor by the manufacturer then the following are also possible:

6. It may cause a character to appear on a video screen.
7. It may cause a pixel pattern (colour or black and white) to appear on a video screen.
8. It may be a port to some electrical equipment.

These are just a few of the uses a byte may be put to at the whim of the programmer.

To demonstrate the difference in speed between machine code and Basic below is a short program which has been written identically in both the languages. (To load the machine code use the machine code loader with this article.)

By dividing the timer result in the Basic program by that in the machine code program you will see how many times faster machine code is for simple calculations.

Not all Basic routines can be performed faster in machine code however. The PAINT command, for example, requires very little interpretation time but quite a lot of execution time.

Enough of the introductory blurb — you are now probably itching to write some code yourself. Strictly speaking, machine code is a series of numbers in memory which the computer understands. Trying to remember which number does which instruction is nearly impossible so a language called "assembly language" is

used to convert phrases we humans recognise (mnemonics) into numbers that the computer recognises (op-codes). The program which runs assembly language is known as an Assembler.

Assembly language consists of a number of lines. Each line can have up to four parts: Label — Instruction — Data — Comment. For example: @LOOP — SUBA — #7 — Subtract 7 from A accumulator.

Label is used to indicate to the assembler that whenever the word @LOOP appears then this is the bit of program we are talking about. In Basic we use the phrase GOTO linenumber. In machine code we use JP label (JP means Jump). Therefore the label can be thought of as a type of line number. The difference is that only the lines that need labels are given them; all others are left blank. In reality the label is equivalent to the memory address where the instruction is stored.

Instruction is the part which is converted into a number and put into memory, telling the computer what to do. In this case SUBA tells the computer to SUBtract something from accumulator A.

Data is the part which is converted into a number and put into memory, telling the computer what information the instruction is to use. This could take the form of a number, an address, a register name, an ASCII character etc. In this case #7 means "the number 7".

Comment is ignored by the assembler and is only there to make life easier for the programmer to follow the program. ▶

10 TIMER =0	10 GOSUB 1000:TIMER=0	
20 GOSUB 100	20 EXEC &H6000	
30 PRINT TIMER : END	30 PRINT TIMER : END	
100 D=&H1000	(C)COPYRIGHT COMPUSENSE LTD 1983 DASM 1.6	
110 D=D-1	6000	1001 ALL
120 IF D<>0 THEN 110	6000 CC1000	1010 LDD #&1000
130 RETURN	6003 830001	1020 @LOOP SUBD #1
	6006 26FB	1030 BNE @LOOP
	6008 39	1040 RTS
	6009	1050 END

This short program — in Basic at left and in machine code at right — shows the difference in speed between the two.

# Action Packed 100% Machine Code Arcade Software for DRAGON 32

## J. MORRISON MICROS **Droids**

**DROIDS:** stop the Droids removing lead shields to release the bombs which will destroy the world

£6.95

## J. MORRISON MICROS **Chess**

**CHES:** 8 selectable levels of skill, cursor control of moves, supports Casting and En Passant.

£7.95

## J. MORRISON MICROS **Crusader**

**CRUSADER:** In quest of the Holy Grail you, our intrepid hero, have to overcome seven increasingly difficult stages to reach your goal. No one has yet made it!

£6.95

## J. MORRISON MICROS **Vultures**

**VULTURES:** Galaxan-type game in which a flock of vultures guard their eggs. Just when you think you've killed them all, the eggs hatch!

£6.95

## J. MORRISON MICROS **Bonka**

**BONKA:** Climb the ladders and dig holes to trap the 'Meemies' before they kill you.

£7.95

## J. MORRISON MICROS **Dragon 2**

**DRAGON 2:** Snakes, Lander and Invaders

3 games for £6.95

**J. Morrison (Micros) Ltd**

### MAURICE MINOR

Out for a quiet drive in your Morris Minor when, you inadvertently wander on to a race track, and find yourself in the middle of a Grand Prix. To turn back against the other cars would be suicide. The only thing to do is grit your teeth, grip the wheel, put your foot down and make for the finishing line and safety. If you can avoid the crash barriers and oil slicks, drive fast enough to avoid being run over by Mario and Nelson behind you, then you can think about overtaking the cars in front. Can you make it before your car falls to pieces? Another superb Arcade style game with animated high resolution colour graphics and sound. Requires one joystick.

A very fast action with accelerator, damage report, timer, six levels of skill and hall of fame. SUPPLIED ON CASSETTE.....

£6.95

All orders despatched by return 1st class post

Callers and Trade enquiries welcome

Available from SPECTRUM and other good software dealers

## J. MORRISON MICROS **Dragon 4**

**DRAGON 4:** Pterodactyl, Torpedo Run and Hornets

# Machine code loader

THE FOLLOWING SHORT program is a useful machine code loader. The best way to use it is by first saving it on cassette, then loading it before you type in one of the example programs.

The program displays the memory location currently being altered along with the previous two and the following two. Using the up and down arrow keys enables you to scroll through memory. (The ENTER key has the same effect as the down arrow key.) To enter a hex digit just press the key and you will see it appears at the right-hand side of the number as it shifts left. To exit from the loader press the CLEAR key. You will be returned to your program.

```
1000 REN**MACHINE CODE LOADER**
1001 CLEAR 200,&H5000
1010 CLS : INPUT "START LOCATION ";LOC
1020 PRINT @128,"DEC      HEX      HEX"
1030 PRINT @160,"ADDR    ADDR    VALUE"
1040 FOR I=LOC-2 TO LOC+2
1050 PRINT USING"#####  % % =  % %";I;HEX$(I);HEX$(PEEK(I))
1060 NEXT I
1070 PRINT @273,HEX$(PEEK(LOC))"<=="
1080 AS=INKEY$:IF AS=""THEN1080
1090 IF AS="^"THEN LOC=LOC-1:GOTO1030
1100 IF AS=CHR$(10) OR AS=CHR$(13) THEN LOC=LOC+1 : GOTO 1030
1110 IF AS=CHR$(12) THEN CLS:RETURN
1120 A=INSTR(1,"0123456789ABCDEF",AS)-1
1130 IF A<0THEN SOUND 100,1:GOTO 1080
1140 POKE LOC,A+16*(PEEK(LOC)AND15):GOTO 1070
```

A typical line that would be entered by the loader is:

```
6000      F67FFF      1010      LDB $7FFF      B=KEY PRESSED
 1         2         3         4         5
```

1 — Address: This is entered at the INPUT statement when the program is running. When entering data, keep a check on the address to make sure it is the same as that given in the listing.

2 — HEX data: Each byte consists of two characters and each should be entered (even if one of them is zero). To key in the data in this example type  
F6 ENTER  
7F ENTER  
FF ENTER

3 — Line number: A quirk of this particular assembler; please ignore.

4 — Assembly language: This is the instruction written in assembly language.

5 — Comment: These have been added to help you follow the program.

◀ The microprocessor "brain" inside the Dragon 32 is a 6809E manufactured by Motorola and is one of the most powerful 8-bit microprocessors on the market.

The 6809 is capable of 8-bit operations (acting on one byte at a time) and some 16-bit operations (acting on two bytes simultaneously).

## Operations in registers

These operations are performed mainly in the registers. These are internal "variables" in which arithmetic and logic is performed. The registers are:

A — This is known as the A accumulator. Simple arithmetic and logic can be performed on an 8-bit number in this accumulator.

B — This is also an accumulator and is identical to A in operation.

D — This is a 16-bit accumulator having A as the first byte and B as the second byte. For example, if A contains &H12 and B contains &H34 then D = &H1234.

S — This is the system stack.

PC — This is the program counter, perhaps the most important register because it tells the computer where the next instruction is in memory. It is updated with every instruction executed.

CC — This is the condition code register. It contains a number of flags which are

updated (if necessary) instantly after every instruction is executed. They are used to indicate what happened after the last instruction (zero answer, negative answer, overflow and so on).

DP — This is the direct page register which will not concern us as yet.

X — This is an index register and is used for indexed addressing. This means that X contains a number which will be used as an address. For example, if X contains &H6A4F and the instruction LDA,X is encountered, then the A accumulator will be loaded from location &H6A4F.

Y — This is an index register and is identical in operation to X.

U — This is the user stack. It is identical in operation to S but is not used by the system.

Now that you know what registers you have, the next thing to learn is what you can do with them. Here are a few instructions for moving numbers: LD, ST, CLR. These are mnemonics (abbreviated phrases) for the following commands.

LD = LoAD — This will load a number into a register. For example, LDA #7 is similar to the Basic statement LET A = 7.

ST = STore — This will store the contents of a register in memory. This is similar to the Basic statement POKE address, A.

CLR = CLear — This will load a register with zero quickly.

The vital thing to realise about machine code is that the variables where you remember things such as the position of a spaceship in a video game or the name of the person using the program are no longer names but memory locations, and the variables that you use for calculating are the registers. For example, if you stored the number of points a player has in location &H6001 and you wanted to add three to it then you could do it like this:

```
1 LDA $6001
2 ADDA #3
3 STA $6001
```

Note that in assembler HEX is represented by a \$ and not by &H.

Line 1 — Load accumulator A from location &H6001. Note that no # sign is present. If the instruction were LDA #6001 then the microprocessor would try and load A with the decimal number 6001 and not load A from memory location &H6001.

Line 2 — ADD the decimal number 3 to the A accumulator.

Line 3 — Store the A accumulator back in location 6001 hex.

## Addressing modes

The way data is given to an instruction is known as the addressing mode. The #n (n is a number) is known as immediate addressing. It means use the number n. The case where an address (or label) follows the instruction is known as extended addressing. It means use the number in this memory location. The following are examples of extended addressing.

LDB 18462 = Load accumulator from decimal memory location 18462.

CLR @TOP = Clear memory location referred to by the label @TOP.

STX \$642 = Store index register X in locations &H642 and &H643. (X is a two byte register; the first byte is stored in &H642 and the second in &H643).

As mentioned before, another type of addressing is indexed addressing. Here, instead of specifying an address, you give the name of a register. Imagine the X register contains the address of a square on the text screen (&H4FF, for example, is half way down on the right hand side), and the B accumulator contains the number 223 (ASCII code for a cyan blob). Storing accumulator B at the location specified by X will cause a cyan blob to appear half-way down the screen on the right-hand side.

7000 8E 04 00 LDX #\$400 — Load X with screen address.

7003 C6 DF LDB #223 — Load B with code for cyan blob.

7005 E7 84 STB ,X — Store blob on screen.

7007 39 RTS — Return to Basic.

## Auto-increment

Another version of indexed addressing is known as Auto-increment (eg STB ,X+). This is the same as before except that after B has been stored, the microprocessor performs X = X + 1; so, in the above example, if STB ,X+ were used, then when RTS was reached the X register would contain the value &H500 (&H4FF+1). Before reading on, work ▶

## LIGHT PEN

DRAGON 32

Introducing a **NEW** program for the Trojan Light Pen. This new **ADVANCED** program includes the following graphics facilities:

- ★ Draw Box
- ★ Draw Circle
- ★ Draw Line
- ★ Draw Picture
- ★ Colour Fill Designated Areas
- ★ Save and load pictures to and from tape

All in Hi-Res Screen in any of four colours.

The following functions are for use on the Text Screen:

- ★ Data entry and processing
- ★ Menu selection and control
- ★ Games playing — the fascinating game of NIM included on cassette

This is a first-class program which gives hints and tips on how to write programs for the pen. Ideal for many educational uses.

**A TOP QUALITY PEN PLUS A FIRST-CLASS PROGRAM FOR ONLY £11.50 including VAT.**

**THE BEST PEN PACKAGE AVAILABLE**

Dealer enquiries welcome.

Send cheque or PO to:

Dept. D.U.7

**Trojan Products, 166 Derlwyn  
Dunvant, Swansea  
SA2 7PF. Tel: (0792) 205491**

## EXCITING GAMES

### Dragontree Programs

#### NEW RAINBOW RUNNER

is a real time 3D Maze Game. using hi-res colour graphics with sound effects. Fast action with increasing degree of difficulty.

Try to escape from a maze of 7 levels & rainbow-coloured tunnels before they collapse. Avoid the tunnels' dwellers. Correct sequence of 7 door keys makes your final escape.

£4.95

#### LUSTANIC

The cruise ship is sinking, the lifeboats are lost, the water deep and shark-infested. How many passengers can you save with your powered raft, as they jump overboard. Fast action, increasing degree of difficulty.

**TANGRAMS £4.95**

Thought provoking, old Chinese pastime of creating silhouettes with pre-determined geometrical shapes.

£3.95

#### BOWLING

10-pin bowling for 4 players with the alley across the screen. Use the Joystick to curve the ball—watch that gully!

£3.95

#### BARTENDER

A data base containing the recipes of dozens of cocktails. Request cocktails based on one or two ingredients, or ask for recipe by name.

£3.95

#### A VARIETY OF CHALLENGING GAMES

to a HIGH STANDARD of COLOUR GRAPHICS with a MAXIMUM DEGREE OF CHALLENGE

#### REVERSI

A nineteenth century board game of strategy (enjoying a recent revival named Othello). Played by two people with the Dragon as referee or pit your skills against the Dragon. You can win if you think.

£4.95

← DECB — B = B - 1.

DEC \$71B3 — Let contents of &H71B3 = contents of &H71B3 - 1.

MUL — Multiply A and B accumulators and store the result in D.

LDD #\$1234 — Let A = &H12 and let B = &H34.

MUL — Let D = &H12 \* &H34 = &H3A8.

When using these functions the results will be 100 percent predictable if all the numbers (including the results) are in the range 0 - 255 (that is, hex FF and binary 1111 1111), but what would happen if we tried:

LDA #6 A = 6

SUB #7 A = A - 7 ??

Let's try the sum in binary:

```

  6 = 0000 0110
  7 = 0000 0111
  ---
 11 = 0000 1111

```

(Work through the sum yourself remembering that to perform 0 - 1 you have to "borrow a 1" giving 10 - 1 which in decimal = 2 - 1.)

### Endless ones

You will see the answer is an endless string of ones. As we have only 8 bits to play with, the number -1 is represented by hex FF. Let's just make certain that this works. The sum  $1 + (-1) = 0$

```

  1 = 0000 0001
 -1 = 1111 1111 +
  ---
 1 = 0000 0000

```

If we pretend to be the computer and only look at the right hand eight bits then we see that this works — the answer is zero. This is known as the twos complement method of storing negative numbers. The method for calculating a negative number is as follows:

Let's take the example 42 (hex 2A). First write out the number in binary 0010 1010. Now invert all the bits 1101 0101 and finally add one 1101 0110 = -42 = &HD6. You will notice that for negative numbers the left-hand bit is always one. I will leave it to you to show that +128 has the same binary representation as -128. This gives us the numbers +127 down to -128 if we so choose. The instruction NEG (NEGate) will turn a positive number into a negative or vice-versa. For example:

LDA 32651 — Load A from memory location decimal 32651.

NEGA — Negate it.

STA 32652 — Store it in location 32652.

### Negation

As with INC and DEC, if we want to negate the contents of memory location 36142 we merely enter NEG 36142 into our assembler.

When arithmetic is performed (whether you choose numbers to be in the range 0-255 or -128 to +127), a register called the condition code register is updated. This register stores information so that decisions can be made by using the branch instruction.

Consider the Basic statement:

20 IF B = 4 THEN GOTO 50

To convert this to a similar machine code statement we use the CMP (CoMpare) instruction. This instruction works exactly the same as the SUBtract instruc-

Name	Mnemonic	condition
carry clear	BCC	carry flag clear
carry set	BCS	carry flag set
equal zero	BEQ	last number zero
greater or equal	BGE	last result $\geq 0$ (S)
greater than	BGT	last result $> 0$ (S)
higher than	BHI	last result $> 0$
higher or same	BHS	last result $\geq 0$
less than or equal	BLE	last result $\leq 0$ (S)
lower than	BLO	last result $< 0$
lower or same	BLS	last result $\leq 0$
less than	PLT	last result $< 0$ (S)
minus	MI	last number negative
not equal to zero	BNE	last number <u>not</u> zero
plus	BPL	last number positive
always	BRA	always
never	BRN	never
no overflow	EVC	overflow flag clear
overflow	DVS	overflow flag set

Branch conditions: (S) indicates a signed (-128 to +127) number.

```

Program 2: a ripple sort program to try on your own.

tion except that the final result is not stored, and only the condition code register is affected. Therefore in machine code we get:

1. CMPB #4 — Perform B = B - 4 and remember result but do not store it.

2. BNE @LINE50 — If the result of the previous statement was zero then go to the line with the label @LINE50 otherwise continue with the next instruction.

The table above shows branch statements along with the conditions about the last instruction that cause them to be true (that is, branch). The branch statement is similar to the Basic GOTO command. The

difference is that the branch statement adds a number between -128 and +127 to the program counter to find the required instruction, whereas the GOTO statement is more like the JMP (JuMP) instruction which physically loads a number into the program counter to get the new address.

### On your own

You should now be able to work your way through Program No 2 which is a ripple sort program. It will ask you to type in a string of letters which it will then sort into alphabetical order. (All listings courtesy of the Micro Centre in Rugby.) ■

# The Dragon and Seikosha—a print partnership

*James Greenall goes into print on the Dragon 32 and the Seikosha GP-100A*

THIS ARTICLE EXAMINES the high resolution graphics dump from a Dragon on to a Seikosha GP100A, a topic touched upon in Keith Brain's article in the May edition of *Dragon User*. It also shows the Dragon user how to use the dump program in conjunction with programs creating designs on the graphics screen.

## The hi-res screen

The Dragon 32 graphics screen is made up of 192 by 256 pixels or dots in the highest resolution mode. Each of these pixels represents one bit in the part of the computer's memory that holds the information displayed on the screen. Each byte is, of course, made up of eight bits. Therefore, each row of dots across the screen takes 32 bytes of memory ( $256/8$ ) and the whole screen takes 6,144 bytes ( $32 \times 192$ ). A pixel is printed on the screen if the bit is set to one.

## The printer

Unfortunately for the user, the graphics mode on the GP100A printer does not correspond to the same type of "bit mapping" as the screen. Whereas on the screen each byte represents a short horizontal line, on the printer this line is vertical. Each "character" printed in graphics mode represents seven bits printed vertically and the eighth bit (the bottom one) of each byte is always set to one. The bits count from 0 to 128 from top to bottom. The printer prints graphics from the instruction `PRINT£-2, CHR$(X)` where X is 128 plus the value of the bits to be printed. For example, one dot printed in the top left-hand corner of the page would be printed by the command `PRINT£-2, CHR$(129)`.

## Compiling print characters

The first print character is therefore made up of the first pixel of each of the first seven lines of screen. To detect whether the pixel is set or not we can use the `PPOINT` command which returns the value of the relevant bit from the display file. The value of these bits then needs to be multiplied by the relevant power of two to compute the `CHR$` value of the graphics character to be printed. This is done by line 1020 of Program 1. X represents the vertical axis and Y the horizontal axis of

the screen display. `PPOINT` detects whether the bit is 0 or 1 and multiplies the result by the relevant power of two working down the screen. 128 (the base value) is then added to the total.

The `FOR . . . NEXT` loops on X and Y repeat the calculation for the whole screen working seven rows at a time (hence `STEP 7`) across and then down.

## Using the program

Type in Program 1 and then `CSAVE` it. To verify the program, rewind the tape and attempt to `CLOAD` it before entering `NEW` or switching off the computer. If the program has not saved satisfactorily, the error report will be displayed but your program will still be in memory. If the program has saved properly you will get the usual `OK` prompt.

Now type in Program 2. This is just a simple graphics program which draws a series of straight lines on the screen crossing each other to form a curve. `RUN` the program and press `BREAK` to return to `Basic`. It is a feature of the Dragon that the high resolution screen is retained until the computer is switched off or the command `PCLS` is used. Thus the loading of a new program or entering `NEW` does not affect the picture which has been drawn. You

may therefore load Program 1 and `RUN` it. A copy of the screen will be produced by your printer.

Whilst a faithful reproduction of your screen, the hard-copy produced does not use the printer to its best advantage as the result uses only 51 columns, little more than half the printer's width. To maximise the effect of the printed output, therefore, it would be more effective if we could double the size of the printed picture and print it on its side.

This is the effect of Program 3. It moves from the top right corner of the screen down computing each bit twice and printing each graphics character twice, thus producing a print that is four times the area of that produced by Program 1.

## Hard copy made easy

The ability of the Dragon to retain its screen as mentioned above makes the production of hard-copy screen dumps very easy. All that is required is that, having run the program to set up the screen, you load and run the dump program. This can be applied to any graphics program in which it is possible to `LOAD` another program without switching off the computer. ■

## PROGRAM 1

```
10 PMODE 4,1:SCREEN 1,0:REM SELECT HIGH RES GRAPHICS MODE
20 PRINT 2-2,CHR(8):REM SET PRINTER TO GRAPHICS MODE
30 FOR X=0 TO 191 STEP 7:REM WORK DOWN THE SCREEN 7 LINES AT A TIME
40 FOR Y=0 TO 255:REM WORK ACROSS THE SCREEN FROM LEFT TO RIGHT
50 A=PPPOINT(X,Y)+PPOINT(X,Y)*2+PPOINT(X-1,Y)*4+PPOINT(X-1,Y)*8+PPOINT(X-2,Y)*16+
6+PPOINT(X-2,Y)*32+PPOINT(X-3,Y)*64+128:REM CALCULATE PRINT CHARACTER
60 PRINT 2-2,CHR(A):REM SEND CHARACTER TO PRINTER
70 NEXT Y:REM START NEXT CHARACTER
80 PRINT 2-2,CHR(13):REM TELL PRINTER TO START A NEW LINE
90 NEXT X:REM START NEXT PRINT LINE
100 PRINT 2-2,CHR(15):REM RETURN PRINTER TO CHARACTER MODE
```

Program 1 (above) sets up the hi-res print routine. To verify it, rewind the tape and attempt to CLOAD it before entering NEW or switching off the computer.

## PROGRAM 2

```
10 PMODE4,1:SCREEN1,0:PCLS
20 FORX=0TO191STEP8
30 LINE(X+64,0)-(255,X),PSET
40 LINE(X+64,191)-(255,191-X),PSET
50 NEXT
60 FORX=191TO0STEP-8
70 LINE(0,191-X)-(X,0),PSET
80 LINE(0,X)-(X,191),PSET
90 NEXT
100 GOTO100
```

Program 2 (above) is a simple graphics program which draws a series of straight lines on the screen crossing each other to form a curve.

Program 3 (below) doubles the size of the printed picture and prints it on its side thus using the printer to its maximum width.

## PROGRAM 3

```
10 PMODE 4,1:SCREEN 1,0:REM SET HIGH RES. GRAPHICS MODE
20 PRINT 2-2,CHR(8):REM SET PRINTER TO GRAPHICS MODE
30 FOR X=255 TO 0 STEP-7:REM WORK ACROSS SCREEN FROM RIGHT TO LEFT 7 LINES AT A TIME
40 FOR Y=0 TO 191:REM WORK DOWN THE SCREEN CALCULATING FIRST HALF OF 7 LINE BLOCK
50 A=PPPOINT(X,Y)+PPOINT(X,Y)*2+PPOINT(X-1,Y)*4+PPOINT(X-1,Y)*8+PPOINT(X-2,Y)*16+
PPOINT(X-2,Y)*32+PPOINT(X-3,Y)*64+128:REM CALCULATE PRINT CHARACTER USING EACH P
IXEL TWICE
60 PRINT 2-2,CHR(A),CHR(A):REM SEND CHARACTER TO PRINTER TWICE
70 NEXT Y:REM START NEXT CHARACTER
80 PRINT 2-2,CHR(13):REM TELL PRINTER TO START A NEW LINE
90 FOR Y=0 TO 191:REM WORK DOWN SCREEN CALCULATING SECOND HALF OF 7 LINE BLOCK
100 IF X>3 THEN A=PPPOINT(X-3,Y)+PPOINT(X-4,Y)*2+PPOINT(X-4,Y)*4+PPOINT(X-5,Y)*8+
PPOINT(X-5,Y)*16+PPOINT(X-6,Y)*32+PPOINT(X-6,Y)*64+128 ELSE A=PPPOINT(X-3,Y)+128:
REM CALCULATE PRINT CHARACTER
110 PRINT 2-2,CHR(A),CHR(A):REM SEND CHARACTER TO PRINTER TWICE
120 NEXT Y:REM START NEXT CHARACTER
130 PRINT 2-2,CHR(13):REM TELL PRINTER TO START A NEW LINE
140 NEXT X:REM START NEXT BLOCK OF 7 LINES
150 PRINT 2-2,CHR(15):REM RETURN PRINTER TO CHARACTER MODE
```

# DIAND SOFTWARE

## SOFTWARE for the DRAGON

**SLAKEBITE** (by David Elliott). A colourful, tuneful and gripping keyboard oriented game. Your snake grows longer by eating numbers, so watch out for obstacles and sharp turns while manoeuvring it. Or it will die! Seven screens of increasing difficulty. Can you reach the seventh screen? We haven't yet!  
Cassette tape £7.95

**SKETCH-A-PUZZLE** (by David Elliott). Your computer sketch pad enabling you to draw and 'paint' four-colour pictures AND there's a twist! Turn your picture into a sliding block puzzle. Shuffle the blocks, then use your skill to re-arrange them into the correct positions. NOT EASY! Save your pictures on tape for future use. 5 pictures included with the program for the less artistic. Hours of creative fun!  
Cassette tape £7.95

**CAT 'N' MOUSE AND SPACE MAZE** (By David Elliott). Terrific value, two exciting maze games on one tape!  
**CAT 'N' MOUSE**. Don't let the cat get you! Confuse it by darting through one of the randomly placed mouseholes!  
**SPACE MAZE**. Featured in 3D. You find yourself in a vast Labyrinth on the planet ZYGON. Can you find your way out?  
Cassette tape £7.95

## ORIC SOFTWARE

**SPACE INVADERS** (by Andrew and Roger Thomas). A super version of the traditional arcade game, highlighting the graphic capabilities of the Oric computer. Can you exterminate the aliens before they land? 4 levels of skill.  
Cassette tape £5.95

Telephone 0474-50677

# OPEN FILE FOR DRAGON USERS

Send us your Dragon programs, beginning with a general description and then explaining how the program is constructed. Take care that the listings are all bug-free, enclosing a cassette and, if possible, a printout. We pay £6 for each bug-free program published, double for the program of the month. If you have any problems with the listings, please send your queries to the appropriate author, *Dragon User*, 12-13 Little Newport Street, London WC2R 3LD.

## Happy birthday

From Luke Adams in Warley

THIS IS A music and graphics demonstration that is ideal for birthday parties, especially if your Dragon was a birthday present.

Part of the program was adapted from W. Slater's "Drawing" routine printed in *May's Dragon User*.

A cake is drawn with the appropriate number of candles, the candles lit and "Happy Birthday to You" played; then, when a key is pressed, the candles appear to go out. This is achieved by switching from the first four graphics pages (which have the cake with candles alight on them) to the last four, which have unlit candles on them.

### Program notes

- 40 INPUTs age.
- 60-120 Draws cake.
- 140 PLAYS tune.
- 160-230 Draws candles and flames.
- 240 Copies graphics.
- 260 Checks keyboard.
- 270 Switches to next graphic screen.
- 280 Infinite loop (press BREAK to end).

## World map

From P Williams in Gainsborough

THIS PROGRAM produces a map of the world on the screen. It would be suitable for use in games or as a basis of a geography lesson.

The program is quite straightforward and utilises the Dragon's Draw facility. Experimenting with the P MODE and SCREEN in line 50 will produce slightly different results.

# TOP QUALITY DRAGON 32 PROGRAMS FROM B&H SOFTWARE

**SPECIAL OFFER FOR CHRISTMAS!**  
Any two programs for only £10  
**IDEAL PRESENT**

**PUB CRAWL (NEW RELEASE)**  
A 100% Machine Code and 100% Hi-res graphic game

### PUB CRAWL • NEW RELEASE •

Has the wife stopped your trips to the pub? Well here's a game that reaches the parts other games cannot reach! You'll need courage to crawl round the town and stagger home without getting either run over or arrested. The more you drink the harder things get as the traffic gets faster and the police come out in more force. A quick burger may work wonders and goes down great guns. Features sound, high score display. A separate instruction leaflet is included making the game all colour, high resolution, machine-code action. It's ready when you are Bob! **£6.95**

### AND ALL BECAUSE . . .

We proudly present our latest release. A totally original game with an amazing nine screens. Loosely based on a television advertisement the idea is to get the choccy's to your beloved's home before she arrives. You must risk life and limb by driving, running, horse riding, motorcycle riding and jumping, hang-gliding, skiing, dangling from a ski-lift and parachuting to the scene. With superb graphics sound effects and high-score chart, the game culminates with an excellent finishing display for those that make it. But will you? **£6.95**

"A highly entertaining game for all the family" . . . *Home Computing Weekly*

### FREE PARKING

The first full-feature version of the extremely popular board game available for the Dragon. A complete simulation including buying, selling, mortgaging, etc. etc. The program makes full use of the Dragon's colour facilities and incorporates some inspired graphics and sound effects. With options for 2-6 players, continually available instructions and the Dragon as banker, the game is terrific for all the family and there will be no missing £500s! **£6.95**

### • SUBMARINE COMMANDER

Navigate the seas to find the enemy with this high-resolution colour simulation. Engage enemy aircraft and ships who will try to torpedo and ram you. Depth charges and under-sea mines add to your problems. You are assisted by torpedoes, periscope view, radar compass, fuel and depth gauges with on-screen displays of ammunition and score. Realistic explosions and sound effects alongside identification sheet, home-coming display, hall of fame and graphic reward for beating the high-score makes this program a masterpiece. TRY IT! **£6.95**

### • LUNAR LANDER AND RESCUE

A brilliant two-part game. Part one is an arcade standard lander which trains you for part two. Here you must rescue lunar engineers in a tortuous cavern. Fuel dump landings and falling stalactites add to the perils of your heroic mission in one of the best Dragon programs available. **£6.95**

"The best version we've seen for the Dragon 32" . . . *Dragon Dungeon*

"A challenging and well-written game" . . . *Dragon User*

"Very good" . . . *Dragon Data*

### ALSO AVAILABLE

A WEEK AT THE RACES **£6.95**  
GRAPHIC TOOLKIT **£6.95**

GEOGRAPHY OF UK **£6.95**  
BLACKJACK/JACKPOT **£5.95**

# Dodge

From A Bowler in South Humberside  
 IN DODGE THE idea is to keep a line moving for as long as possible while dodging an ever-increasing number of dots which appear at random on the screen. The longer you last, the greater your score.

The program also incorporates a list of highest scores and scorers. If a score of

1,500 is reached the game is run again and this total is added to. Note: POKE 65495,0 is used in line 120.

### Program notes

10-100 Prints title and asks for name.  
 110-150 Speeds up program and draws screen.  
 160-190 Sets start position and tests for crash.  
 200-310 Draws explosion and prints scores.  
 320-360 Another go (Y/N)?  
 370-430 Sets line co-ords and dot co-ords and score to 0.  
 440-480 Increases difficulty when

score is 500 and 1000.  
 Run game again if score is 1,500.  
 Tests for arrow key depressions and branches to alter direction of line accordingly.

### Variables

N\$ — Initial name.  
 N1\$ — Highest scorer's name.  
 OH\$ — Old highest scorer's name.  
 PQ\$ — Old second highest scorer's name.  
 N2\$ — Second highest scorer's name.  
 N3\$ — Third highest scorer's name.  
 X — Initial X co-ordinate of line.  
 Y — Initial Y co-ordinate of line.

## M & J SOFTWARE

### "DRAGON ADVANCED PROGRAMMER'S PACKAGE"

For a limited period only we are offering Dragon users a unique opportunity to buy our "Dragon Advanced Programmer's Package" at the incredible price of £15.

We provide the most comprehensive FORTH implementation on the market — just compare our specifications with those of other FORTH packages. You get:

1. The language itself which can access Basic commands from within FORTH programs therefore retaining the Dragon's graphics capabilities.
2. A powerful text editor which can be used not only for preparing programs but also as a limited word processor.
3. A 6809 macroassembler.
4. The fig-FORTH Installation Manual which contains the FORTH source code, glossary etc.
5. A manual containing lots of example programs including the source code for the 6809 macroassembler.

But this is not all!

To complete the package we provide a copy of the "Dragon Companion". This excellent publication contains a full 6809 disassembler, an extensive Dragon memory map, details of how to access extra graphics modes, how to merge programs and lots more.

We can hold the price of the Dragon Advanced Programmer's Package at £15 for only a short time so be sure you do not miss this opportunity to build up your system library.

Should you not wish to take advantage of our offer we will supply the component parts individually:

Dragon fig-FORTH ..... £12.00  
Dragon Companion ..... £4.95

*All prices inclusive of p&p.  
Cheques and POs please to:*

# D-BUG by Stewart Bush

## TRACER MONITOR DISASSEMBLER

£29.95\*  
DRAGON 32 CARTRIDGE

### FEATURES

If you write assembly language/machine code programs or wish to explore the inner secrets of the DRAGON (™) ROM set then D-BUG is the tool for you.

D-BUG is a complete software emulation of the MC6809. This enables D-BUG to maintain full control of the real MC6809 when illegal instructions or program errors are encountered. Gone are the days of frequent system crashes (and program re-loads) that occur with conventional break-point debugging of assembly language programs. Properly used D-BUG will make working with assembly language as easy as BASIC but a lot more rewarding!

D-BUG is **POWERFUL**. It is a program analysis tool that combines a single step tracer, a disassembler, and a system monitor all in one. It even has its own RAM so it does not need to steal one single byte of the DRAGON'S 32K!

D-BUG is **FRIENDLY**. It's 36 commands are instantly available through a menu to simplify use and eliminate system crashes caused by errors.

D-BUG is **THOROUGH**. During program trace it follows the execution of program code on instruction at a time under your full control. As each instruction of the program is executed the contents of all of the 8000 registers are displayed along with a disassembly of the instruction about to be executed. In addition the contents of the locations pointed to by 'A' and 'Y' are displayed along with the address where control will be returned by the next RTS or PULS PC instruction. The current subroutine nest level is also displayed.

D-BUG is **COMPLETE**. Everything you need to analyse and debug a machine code program resident anywhere in the DRAGON'S 32K memory is provided in one ROM/RAM cartridge. D-BUG does not use the SMI instruction for its operation so it is capable of working with program code in ROM. This feature enables you to trace through the BASIC ROM code and see what makes it tick!

D-BUG is **IMPOSSIBLE** to describe fully in this limited space so we will just give you a summary of the available commands: Single step trace; auto-trace; execute current subroutine; disassemble; set breakpoint; set subroutine nest level counter; alter target 'CC', 'A', 'Y', 'X', 'Y', 'U', 'SP' or 'PC' registers; display target registers; memory examine/change; byte finder; fill memory with a HEX char; view memory in HEX and ASCII; calculate relative branch offset; shift blocks of memory (they may overlap); jump to subroutine; write title/notes to printer. Toggle (on/off) functions include: echo output to printer; execute BASIC ROM routines at full processor speed; trace/disassemble; dump registers after each command; display registers after each instruction when in auto-trace; delay between instructions when in auto-trace.

# EDUCATIONAL SOFTWARE

Did you feel your early years in schooling were grey and pointless?

The following programs have been specially written as key aids in the development of your child. Great importance is placed on making education enjoyable with the use of musical and visual rewards.

Each cassette package contains three games of structured programs.

### Example program

**ALPHA** In this game the student is presented with a randomised alphabet and is required to delete the letters in alphabetical sequence by placing a cursor over each letter in turn.

As this is accomplished part of the picture is drawn, then coloured and, as an additional reward, a traditional tune is played.

**CLOCK** A clock face is drawn on the screen and the hands are randomly placed at the 12 major locations. The student reads the clock time and enters it in digital form, 5 to 12 = 11.55.

**WORD 1 & 2** Two games of differing complexity, the student has to identify 'like' sounding words generated on this screen with those displayed.

**SUMFUN** Sumfun is an advanced addition game. Two-digit numbers are drawn on the screen and the student adds them, units first then tens. Each correct answer draws a portion of an animal, then colours it and as an additional reward, a traditional tune is played.

EDUSOFT 1 Alpha, Number, Count..... £5.95  
EDUSOFT 2 Clock, Add, Sub ..... £5.95  
EDUSOFT 3 Word 1, Word 2, Clock ..... £4.95  
EDUSOFT 4 Sumfun, Subs, Mult ..... £5.95

Also available.

**STATISTICS** This 17+K statistics program will sort data and calculate the £4.95

mean, average distribution, standard deviation, variants, arrange mid-range, the median and allow data limits to be set as well as graphically illustrating the results.

ALL PROGRAMS ARE USER FRIENDLY

## GOLD SOFTWARE

11 Wellington Court, Lyndon Close  
Birmingham B20 3NL

# Wizard Software

## NEW RELEASES

**CLOWNS** £7.95

A highly colourful Arcade games pack containing three manipulative and reactive games featuring clowns. All three games are presented in high resolution colour graphics.

**RED ALERT** £7.95

An original machine coded Arcade game, presented in high resolution colour graphics using all nine colours simultaneously, featuring alien spaceships, energy bolts, homing torpedoes and meteor showers. Includes digitised speech. One joystick optional. Five skill levels.

**TIME PORT 1** £8.45

The first in a series of five adult strategy adventure games. Direct your robot and acquire the object that the Keeper will ask for and bring it back safely to the Time Port.

Also available:

Dragon Startrek	£8.45	Smash	£6.95	Sirius IV	£5.95
Evictor	£7.95	Fruita	£5.95	Wizard	£5.95
Aliens +	£7.95	Triplet	£5.95	Galleons	£4.95

All prices inclusive, mail order, cheques or postal orders to:

## How to draw a 3-D bar graph

From R Dodd in Surrey

THIS PROGRAM TAKES 12 values, scaling them down if necessary. The values are then drawn as a 3-D bar graph.

### Program notes

10-50 Titles.  
60 DIM's array for values.  
70-120 Instructions.  
130-160 INPUTs values.  
170-200 Scales values if necessary.  
210-310 Draws graph.  
320-360 Draws axis.  
370-390 PAINTs one face of each of the bars.  
410 Waits for key press.  
420-460 Asks if you want graph dumped to printer.  
480 INPUTs title for graph.  
490-510 Centres title and prints it.  
510 Returns to high resolution screen.  
530 Sets printer to graphics mode.  
540 FOR NEXT loop for moving across the screen.  
550 Sets printer bits by adding appropriate number to the first byte.  
580 Moves down screen seven rows.  
590 Sends carriage return.  
600 Goes back to 540 to start calculating next block of the

screen.

### Variables

X — FOR NEXT loop for entering values.  
B(X) — Array for holding values.  
S — Scale factor.  
S1 — FOR NEXT loop for working out scale factor.  
S2 — FOR NEXT loop for scaling values.

Y — FOR NEXT loop for drawing graph.  
P — FOR NEXT loop for painting bars.  
A — Whether you want a printer copy or not.  
TS — Title.  
SC — X co-ordinate of screen copy.  
SD — Y co-ordinate of screen copy.  
A — Value of byte.

## 747 FLIGHT SIMULATOR

Superbly realistic instrumentation and pilot's view in lifelike simulation which includes emergencies such as engine fires and systems failures. This program uses high resolution graphics to the full to produce the most realistic flight-deck display yet seen on a home computer. There are 21 real dials and 25 other indicators (see diagram). Your controls operate throttle, ailerons, elevators, flaps, slats, spoilers, landing gear, reverse thrust, brakes, etc. You see the runway in true perspective. Uses joysticks and includes options to start with take-off or random landing approach. "A real simulation, not just another game" (*Your Computer*, April 18 '83).

# Turbo

From A Thompson in East Sussex

TURBO IS A game in which you have to drive a car through a lot of slow-moving traffic. You use the left and right arrow keys for movement and to accelerate you press the 'A' key. There are instructions in the program.

In lines 70 and 80 a machine code program is loaded. This is used when you crash. The machine code program clears the screen in every character from 128 to 255 and makes a sound, going up in frequency.

CHEQUE/PO to: E. M. SMITH, 14 UPPER LONGLANDS  
DAWLISH, DEVON EX7 9DB

I thought the hard part was over. After all, three months spent trekking through the Amazon jungle wasn't my idea of fun! But at last I'd found the Temple. The fabulous Crown was almost within my grasp! Then, as the temple door slammed shut behind me I realised the legend was true: the door would only open again for the bearer of the Crown. I had to find it — and quickly. Was it my imagination or was it already becoming more difficult to breathe . . . ?

## INCA CROWN!

A new real-time graphics adventure  
from AB Software

Can YOU find the Crown? Can you avoid the traps set to protect it. And if you DO succeed can you survive the final cruel test . . . ?

On cassette for only £5 including packing and first-class return postage from

## FOR THE DRAGON 32 ACE HIGH

### Machine gun warfare in the sky

Your machine — The Spitfire, eight machine guns, 16 one-second bursts.  
Your target — slow moving Heinkel bombers escorted by formidable Messerschmitt fighters.

Your task — take the bombers apart. Engage the Messerschmitts only if they get in your way.

A high score gives you a second run and a crack at ACE qualification — 25 raiders.  
The alert pilot survives. Accurate aim scores high.

Up to ten minutes violent action.  
Features hi-res graphics, cockpit view, rear mirror, 3D action, realistic sounds, reward system and detailed scorecard.

A quality game using all 32K.  
Not available in or to libraries or club systems.

Fast service £6.95

TUDOR WILLIAMS

15 Summerhill Road, Bilston, W. Midlands WV14 8RD

## The PLOT revealed

I HAVE owned a Dragon 32 computer since May and have got used to most things, but as I owned a ZX-81 before I am not used to the Dragon not having a PLOT statement. What is used instead of this function?

Also, could you tell me how to colour the graphics in once I have mastered them?

*Dominic Grace,  
Cleveland.*

THE DRAGON'S equivalent of a PLOT statement is PSET. In fact this is almost exactly the same as a PLOT except that it also takes into account the colour of the point to be plotted. The correct syntax for the command is PSET(X,Y,C) where X and Y are the co-ordinates and C is the colour of the dot from 1 to 8. This last parameter can be left out, in which case the dot will appear in the last colour used. Another point to note is that the position 0,0 on the Dragon is top left and not the conventional bottom left as for graphs.

The other situation where you may find a PSET statement is on the end of a LINE or PUT command. This simply means set the line or shape to the original colours selected — its partner is PRESET, the equivalent of UNPLOT. This has the same syntax as PSET, except that a colour is not required — the dot is turned off — set to the background colour. Again, this also applies to LINE and PUT statements as well.

## A maths problem

ON MY Dragon 32 (purchased last October) particular mathematical errors occur:

5 ↑ 4 = 625.000001  
5 ↑ 7 = 78124.9999  
5 ↑ 8 = 390625.001  
5 ↑ 10 = 9765625.01, etc.

When operated  $5 \times 5 \times 5$  etc the answers are correct. Perhaps you would be kind enough to comment.

*M Fowler,  
East Cowes.*

SINCE A competition we ran a few months ago, it seems everyone has suddenly noticed this bug in the floating point maths of the Dragon. This is in fact quite

a well-known feature of most Microsoft Basics. The floating point number is held as five bytes in the variables, but when using the exponential function error bits can cause the last decimal place to be + or - 1 out. To avoid this try using  $A=FIX(X \uparrow 4+0.1)$  or alternatively use  $A=X \times X \times X \times X$  which will be a lot more accurate.

## Joystick interface

DO YOU know of any UK-based companies that sell an interface which would allow me to use my Atari joysticks on the Dragon?

*Stephen Ward.*

AN INTERFACE to use Atari joysticks on your Dragon is available. It is called the "Dragon-tamer" and plugs into the normal joystick ports; it will work with most programs except those that require more than left/right/up/down. The interface costs £9.90 and is for one joystick. It can be obtained from Mr MICRO, 69 Partington Lane, Swinton, Manchester, M27 3AL.

If you want a two-in-one adaptor, the US company Spectrum Projects is offering its adaptor direct to UK Dragon owners for \$29.95 in US funds. Its address is 93-15 86th Drive, Woodhaven, NY 11421, USA.

## Rerunning on error

I UNDERSTAND there is no ON ERROR RUN statement on the Dragon, I presume you could do this by POKEing somewhere.

*Sam Wardill,  
Rugby.*

THE DRAGON has no ON ERROR RUN statement or any similar statement such as ON ERROR GOTO. The new disk Basic does have this facility added, but if you want to add your own programs the short machine code routine listed will rerun the program whenever an error occurs.

The routine works by intercepting the error handling routine and jumping to a RUN command. You can locate it anywhere in the memory — I have put it at the top above Basic. You may disable it by typing POKE 401,57 and enable it by typing POKE 401,126.

```
10 CLEAR 200,32749
20 FOR I=1 TO 10:READ
   AS:POKE 32749+I,VAL
   ("&H"+AS):NEXT
30 DATA 32,62,BD,84,1F,
   BD,83,ED,7E,84,9F
40 POKE 402, 127: POKE
   403, 238
50 POKE 401, 126
```

## Concurrent operation

I WOULD like to know if it is possible to use a Dragon disk controller and Rom cartridge (eg the Hi-Res cartridge from CompuSense) at the same time.

Is there an expansion-box available in the UK?

*P Heide,  
West Germany.*

THE DISK drives for the unexpanded Dragon 32 are controlled by an extension to the existing Microsoft Basic. These extra 30 or so commands are held in two 4K eproms in the disk controller cartridge and are addressed from 49152 onwards. This is the same area of memory that most usual cartridges use (including the Hi-Res cartridge), so even if

you got an expansion box to plug more than one cartridge in, only one could be accessed at once. There are none of these available in the UK, but there is one available from the USA for the TRS80CC which may be compatible, but this will not allow you to use disk drives at the same time as any other cartridge.

While on the subject of disk drives, users should also note that 1½K of memory from 1536 to 3071 is used by the mini DOS and so any tapes which load into this area cannot be used either (eg. Frogger, Ninja Warrior, Bonka, etc). As the drives become more generally available most of these games will probably appear on disk anyway.

## Keyboard problem

I DO not understand fully how to read the keyboard in my machine code programs. I have no trouble deciding in which row a key is being pressed but I can only obtain a value of zero from FF02.

Could you please tell me where or how the computer notes the contents of this address as this is halting my machine code writing.

*Patrick Skelton  
Kellington.*

THE TWO locations you need to look at are SFF00 and SFF02. The confusion arises because the first is programmed as an input, but the second is an output — the column select register. You store the data in SFF02 and then compare it to the contents of SFF00 to isolate a single key. The computer stores its own results in the keyboard rollover table from addresses 336 to 345; however, it's no use trying to use this in machine code as it is only updated by Basic.

Unless you want to check for more than one key pressed at a time, by far the simplest way of reading the keyboard is to use the keyscan ROM routine in your program. This is called by many of the cartridges available and is the standard way of reading keyboard input from machine code. The subroutine is used by JSR 48101 and on return the 'A' register will contain the ASCII code of the key pressed. This routine also takes care of the Caps Lock function and always returns the correct value.

## The Prize

THIS MONTH'S prize is a Dragon 64 from Dragon Data. The 64 can use Basic, Pascal and Cobol. It has three operating modes — a 32 mode allowing operation as a Dragon 32; a 48K mode giving 48K Ram and 16K Basic Interpreter; and a 64K mode.

## Contest rules

YOUR ENTRY must arrive at Dragon User by December 23. The winner and solution to the puzzle will be printed in the March issue. You may enter the competition only once. Entries will not be acknowledged and no correspondence will be entered into.

# Use your imagination and win a Dragon 64

THE DRAGON 64 is a new machine, so this month we're taking a new approach to our competition, introducing a two-part puzzle.

First you have to suggest the most interesting application for a Dragon 64 in 60 words or less — let your imagination run free (well, not too free), but try to make your answer match the quality and characteristics of the machine.

The second part of the puzzle involves solving the problem set at the end of this article. But first try your hand at some Dragon-assisted computer games.

The arrival of December 25 will also mean that many a Christmas stocking will be bulging with a new micro-computer. As this time of year is also a time for party games, why not involve your computer in some of these activities?

Of course, there is a wide range of games available on cassette, but it is also possible to program a computer version of some of the more traditional games. Often, only a dozen or so program lines are necessary, and you can make the games as elaborate or as simple as you like. Whereas Aunt Edna might be somewhat out of her depth zapping alien spaceships, she will no doubt enjoy some of the more familiar games. Try this short program:

```

10 DIM TOPIC$(25)
20 FOR N = 1 TO 25: READ TOPIC$(N): NEXT N
30 DATA A FLOWER, A COUNTRY, A BOYS NAME, A DOMESTIC ANIMAL, A T.V. PERSONALITY, A CAPITAL CITY, . . . etc.
40 to 60 (DATA lines as necessary)
70 CLS: PRINT "TO PLAY PRESS ANY KEY"
80 Z$ = INKEY$: IF Z$ = "" THEN 80
90 CLS: A = RND(25): L = RND(26) + 64
    
```

*Tell us the most interesting use you can think of for a Dragon 64 and solve the puzzle by Gordon Lee — and a 64 could be yours!*

```

100 PRINT @ 96, TOPIC$(A): PRINT @ 487, "NOW PRESS ANY KEY"
110 Z$ = INKEY$: IF Z$ = "" THEN 110
120 PRINT @ 271, CHR$(L)
130 Z$ = INKEY$: IF Z$ = "" THEN 130
140 GOTO 70
    
```

The DATA lines 30 to 60 should contain the 25 "topics" used in the game, though this number can be increased if you wish.

To play, the computer selects a topic — say "A FLOWER" — and then chooses at random a letter — for instance "J". The players must then think of the name of a flower beginning with this letter. Sorry, "Jeranium" won't do! Touch a key and the next topic will be displayed. Award a point to the player who is first to call out a correct answer.

Another old party game ideally suited to the computer is Consequences. Each player thinks of a story along the lines of:

"A boy met a girl at \_\_\_\_\_ (place). He said to her '\_\_\_\_\_'; she replied '\_\_\_\_\_'. And the consequence was \_\_\_\_\_."

## October winner

The winner of October's competition and recipient of a modem and RS232 interface from Cotswold Computers and CP Engineering is C T Gallow of Reading. Eight sets of numbers fitted into the grid

1283, 107, 7649, 359; 1259, 107, 7643, 389  
1523, 107, 7649, 389; 1259, 167, 7043, 389  
1409, 167, 7523, 389; 1409, 167, 7253, 389  
1249, 157, 7603, 389; 1429, 157, 7603, 389

The computer should be programmed to store the relevant parts of each player's story in a series of dimensioned arrays. So, for six players the arrays would be set up: DIM BOYS\$(6): DIM GIRLS\$(6): DIM PLACES\$(6), and so on. Each player would then enter his story in turn, prompted by cues — (PRINT @ 0, "ENTER A BOYS NAME").

When this has been done, the computer selects each component part of the story at random from all those entered and prints out the result — putting in the linking words of text to make the complete story.

The beauty of the computer version of the game is that many different stories can be generated from the same sets of data by just re-selecting at random. In theory, at least, there would be more than 46,000 different stories possible with just six players!

If you have any favourite party games, why not try out a computer version?

And now to the second part of our competition, 'Santa's Dilemma'.

'Twas the day before Christmas, and far,  
far, away  
Old Santa was busy with packing his  
sleigh.  
To be on the safe side, so nothing was  
missed,  
He'd taken the trouble to write out a list:

DOLLS — 12996  
SWEETS — 175561  
CAMERAS — 1098304  
PUPPIES — 1311025  
TRUMPETS — 14032516  
BICYCLES — ?

But one missing number caused Santa to frown;  
How many bicycles should he write down?

# FLIGHT SIMULATOR

A REAL TIME GRAPHIC PROGRAM FOR YOUR DRAGON 32

- FULL AIRCRAFT INSTRUMENTATION
- OPTIONAL LANDING/ IN FLIGHT MODES
- NAVIGATIONAL EQUIPMENT
- REALISTIC COCKPIT DISPLAY

YOU ARE A PASSENGER IN A LIGHT AIRCRAFT ON A DOMESTIC FLIGHT. SUDDENLY THE PILOT IS TAKEN ILL, YOU MUST TAKE CONTROL AND TRY TO LAND SAFELY ON THE RUNWAY WITH ONLY YOUR INTUITION AND AN OLD FLIGHT HANDBOOK TO HELP YOU. .

*Colour Option , Hi-Res. Graphics, Sound*

**£7.95**

**Available also for your Dragon 32k from P.S.S.**

**ATTACK 7.95**

ATTACK IS A SUPER FAST, ALL MACHINE CODE ARCADE STYLE GAME FOR YOUR DRAGON 32K.

**TEXTSTAR 12.95**

TEXTSTAR MAY BE USED EITHER AS A WORD PROCESSOR INCLUDING ALL THE USUAL FUNCTIONS OR TO EDIT BASIC PROGRAMS.

**DATAPLAN 12.95**

DATAPLAN IS A DATABASE TYPE FILING SYSTEM WHICH ALLOWS THE USER TO ACCESS, SORT AND PRINT INFORMATION AS IT IS REQUIRED.

**STARTREK 7.95**

THIS VERSION OF THE POPULAR GAME OF STAR TREK PUTS YOU IN COMMAND OF THE SS ENTERPRISE DURING THE WAR WITH THE EVIL KLINGONS.

**DRAGBUG 12.95**

DRAGBUG IS ESSENTIALLY A MACHINE CODE MONITOR FOR THE DRAGON 32K GIVING THE USER EASY WRITING, ENTERING AND DEBUGGING FUNCTIONS FOR MACHINE CODE WRITING. IT INCLUDES ALL THE FEATURES OF PROFESSIONAL MONITORS FOUND ON LARGER MACHINES.

**SPACE SHUTTLE**

DRAGON 32 ARM STAGE

DRAGON 32 FINAL STAGE

BBC Model B DEBRIEF

So you think you can control the most complex piece of flying machinery — well maybe you can but first like all pilots, you must earn your 'wings'!

Space Shuttle is a full feature flight simulator with a difference, the high resolution graphics show you, with dials and gauges, all of the information you will need during your mission into space and the views through the cockpit window are really quite something.

Your mission in this space adventure is to successfully pilot the shuttle through each

of the mission, etc. The initial brief will report you the shuttle is launched and you must control the shuttle and attempt to get into position to allow the functioning

of the shuttle using the remote arm. After close to the doors you are re-entry using the radar as a

plot board you guide the shuttle down into the landing zone and attempt to successfully land the shuttle without the use of engines in the White Sands Desert. After the mission

the debrief screen shows you where you went right or wrong and your points out of 600
