DYNAMIC COLOR NEWS is published monthly by DYNAMIC ELECTRONICS, INC., P.O. Box 896, Hartselle, AL 35640, phone (205) 773-2758. Bill Chapple, BA, BSE President; Dean Chapple, Sec. & Treas. ; John Pearson, Ph. D. Consultant; Bob Morgan, Ph. D., Consultant.

Entire Contents (c) by DYNAMIC ELECTRONICS INC., 1986. DYNAMIC COLOR NEWS is intended for the private use of our subscribers and purchasers. All rights reserved. Contents of this magazine may not be copied in whole or in part without written permission from DYNAMIC ELECTRONICS INC. Subscriptions are \$15/yr for U.S.A. \$18 Canada, \$30 other foreign.

The purpose of this magazine is to provide instruction on Basic & Machine Language programming, Computer theory, operating techniques, computer expansion, plus provide answers to questions from our subscribers.

The submission of questions, operating hints, and solutions to problems to be published in this magazine are encouraged. All submissions become the property of Dynamic Electronics if the material is used. We reserve the right to edit all material used and not to use material which we determine is unsuited for publication.

We encourage the submission of Basic and Machine Language Programs as well as articles. All Programs must be well documented so the readers can understand how the program works. We will pay for programs and articles based upon their value to the magazine. Material sent will not be returned unless return postage is included. Basic & ML programs should be sent on a tape or disk & comments should be sent as a DAT or BIN file.

## 256K & 512K MEMORY UPGRADES

We are closing out these Banker RAMS by J & R Electronics. These upgrade the older D, E, F or 285 and earlier CoCo 2 computers with 4164 memory chips and a socketed SAM (6883) chip. Features include:

- \* Fast 35/40 Track Ramdisk (2 Ramdisks with 512K)
- \* 32K to 200K printer spooler (400K with 512K Ram)
- \* More than 30 PMODE 4 screens
- \* OS-9 Ramdisk 35-40 track single sided or 40 track double sided with 512K
- \* Memory protected when reset
- \* Toggle switch for 64K mode
- \* Compatible with all software
- \* Complete ready to install

ME-16- 256K RAM           \$89.95  
ME-16A- 512K RAM        149.95

## KOREAN CC-2 256K UPGRADE

Two plug in assemblies will upgrade the new CoCo-2 computers to 256K. Two miniature toggle switches allow independently selecting any one of the 4-64K memories. Features include:

- \* Powerful Memory Manager software allows maximum use of each bank. Use the ramdisk or the second 32K bank.
- \* Load any combination of programs into the banks. Quickly switch from one to the other.
- \* Easy solderless installation requires drilling two small holes for the switches.  
Order ME-18 \$99.95

## 128K MEMORIES

Same as the ME-18 except has one switch and 2-64K memories with Memory Manager Software. Upgrades the new CoCo-2 Computers to 128K. Order ME-10A \$39.95

Upgrades 8-chip 4164 type 64K computers to 128K with Memory Manager software. ME-12 \$39.95

**MEMORY MANAGER** - A complete set of software for managing the second 32K memory bank in 64K or larger computers. Run Basic programs in each bank or use the Ramdisk for program storage. Available free with our memory upgrades. \$21.95 Disk or Tape.

## MEMORY SAVER

Battery backup prevents loss of programs due to power failures. Mounts under keyboard. Consists of dry rechargeable battery, control circuit, miniature toggle switch, and light emitting diode (LED). Will power a color computer for a couple of hours during a power failure.

Order UPS \$49.95

## DISTO RAMDISK

A 256K Ram that plugs into a slot on a Multi-Pak expander. Works with all color computers. Copy a disk into the Ram or make multiple copies from the Ram to disks. No modifications to the computer are required. Software is included \$119.95.

Dyterm -Terminal Program \$9.95  
Disasm-Decimal Assembler \$9.95

Checks, VISA & MC  
Add \$3 Shipping

# A LITTLE MATH

## A LITTLE MATH

One function of the Color computer's 6809 micro-processor is its built in ability to perform arithmetic functions. The 6809 instruction set contains commands that allow the computer to add, subtract and multiply. The A and B accumulator registers are used in all of these math commands. These two registers are 8 bit (one byte) registers that can hold a value from 0 to 255. There are a number of addressing modes that we can use with this math instruction. The simplest method is the immediate mode where we perform a math operation with the data being contained in the register we use and in the program immediately after the instruction.

### EXAMPLE 2+2=4

```
START LDA #2
      ADDA #2
```

After executing this simple program you will find that the A register contains the value of four and we performed a simple calculation. We could also just as well use the B register to perform this addition in the same fashion.

```
START LDB #2
      ADDB #2
```

We might like to perform a math function using a value held in a memory location using what is called the "extended mode". I will use a text screen memory location to hold my programs data.

```
MATH LDA #2      ;LOAD A WITH 2
      STA $400    ;SAVE IN MEM
      ADDA $400   ;ADD CONTENTS
                        ;OF MEMORY TO
                        ;REGISTER
```

We do subtraction in the same way as addition except the value in the register we use will contain the result of our subtraction.

### IMMEDIATE MODE

#### EXAMPLE 5-2=3

```
START LDA #5
      SUBA #2
```

### EXTENDED MODE SUBTRACTION:

5-2=3

```
START LDB #5
      STB $400
      ADDB $400
```

You may recall that the A and B registers can be combined and used together to create the special "D" register. The D register can hold a value of 0 to 65535 and can perform additions and subtractions of higher valued numbers.

### ADDITION IMMEDIATE MODE

300 + 430 = 730

```
START LDD #300
      ADDD #430
```

### EXTENDED MODE

```
START LDD #300
      STD $400
      ADDD $400
```

## SUBTRACTION IMMEDIATE MODE

500-150=350

```
START LDD #500
      SUBD #150
```

## EXTENDED MODE

```
START LDD #150
      STD $400
      LDD #500
      SUBD $400
```

## MULTIPLICATION

Addition and subtraction are pretty straight forward but multiplication is done in a different manner in Assembly language. The number in the B register is multiplied by the number in the A register with the result left in the D register.

## MULTIPLY

10 \* 5=50

```
START LDB #10
      LDA #5
      MUL
      STD RES ;RESULT IN D
      SWI
RES    FDB 0 ;2 BYTE RESULT
```

We can also multiply using the extended mode as follows:

## MULTIPLY EXTENDED MODE

```
START LDB #10
      STB $400
      LDA #5
      LDB $400
      MUL
      STD RES
      SWI
RES    FDB 0
      END
```

Notice that the multiply instruction contains no operand and works directly on the values in the A and B registers. Since the A and B registers are eight bit registers the largest value

that we can multiply is 255\*255=65025. There are routines that are used to perform math functions using higher valued numbers and in a future issue we will examine some of them. There are commands we could use if we wished to add or decrease the A and B registers or memory position by one. These instructions are in the INCREMENT (INC) and The DECREMENT commands and are easy to use. To add one to the A or B register or a one byte memory position we would use the increment command as follows.

## INCREMENT

```
INCA ;INCREMENT A BY ONE
INCB ;INCREMENT B BY ONE
INC $400 ;INCREASE THE VALUE
      ;IN MEMORY BY ONE
```

The inverse of this is the Decrement DEC instruction.

## DECREMENT

```
DECA ;DECREASE A BY ONE
DECB ;DECREASE B BY ONE
DEC $400 ;DECREASE THE MEMORY
      ;POSITION BY ONE
```

There is even a command to add or subtract numbers to the X,Y,U or S registers. This instruction is the LOAD EFFECTIVE ADDRESS (LEA) command. This command adds together a one or two byte number to the value held in the two byte register used in the command.

## ADD EFFECTIVE ADDRESS

```
START LEAX 1X
X REG = X REG + 1
```

## SUBTRACT EFFECTIVE ADDRESS

```
START LEAX -1X
X REG = X REG + (-1)
```

Using this command you can add a number up to \$FFFF and subtract a number up to \$8000. Remember you can use any two byte register you wish by changing the "X"

# CHECKERBOARD FILESORT

© 1986

Put yourself in control! Define your own files - not someone else's. Keep track of addresses, magazine articles, programming hints, whatever. **YOU** decide. Speedy ML routines handle record data entry, editing, review/search features, sorting, and **ERROR** trapping. Numerous hardcopy options: font choices, mailing labels, page formats, and a separate program to convert files for use with most word processing programs! Verify tape saves to insure good data. File appends include ML safeguards against I/O, O/S, and O/M errors!

**32/64K Ext. versions incl.**

\* THE RAINBOW IS A REGISTERED TRADEMARK OF FALSOFT INC.

in the LEA to any register you wish. Another often used command is the ABX or Add B and X together. In this instruction the value in the one byte B register is added to the two byte X index register. The result of this operation is placed in the X register. Remember that since the B register is only one, it is only possible to add a number from 0 to 255 to the X register using this instruction. The ABX command is often used as a fast method for accessing tables. Notice that this command requires no Operand field which makes it execute faster.

## SHIFT & ROTATE

The Shift and Rotate commands can be used to perform a multiplication or division by two. A shift or rotate command works by moving the values in the bits of a register or memory position to the right or left. Moving the value to the right divides the value in half and shifting the value to the left doubles its value. Remember a computer can only work with binary (0 or 1) values.

### SHIFT RIGHT

16 SHIFTED RIGHT = 8

0 0 0 1 0 0 0 0      16  
0 0 0 0 1 0 0 0      8

### SHIFT LEFT

16 SHIFTED LEFT = 32

0 0 0 1 0 0 0 0      16  
0 0 1 0 0 0 0 0      32

If we placed a number in the A or B register and then shifted the appropriate way we would in effect perform a simple doubling or halving of the number.

## NUMBER TIMES TWO

2\*2=4

```
START LDA #2
LSLA          ;SHIFT TO LEFT
```

SHIFTING TO RIGHT DIVIDES BY TWO

4/2=2

```
START LDB #4
LSRB          ;SHIFT RIGHT
```

So far we have only be dealing with what is know as "absolute values" where we consider all numbers to be positive. The computer recognizes signed numbers by testing the Most Significant bit of a byte. If the number is negative, the NEGATIVE CONDITION CODE flag is set. We can use this fact to determine if a number is negative by using a Branch instruction such as BMI (Branch if Minus). In a one byte register such as the A or B register can hold a signed value of +128 to -127 and a two byte registers can have a signed number from +32676 to -32675. The computer doesn 't care if a number is signed or signed it just goes ahead and and performs the math correctly no matter if we wish to use the values as signed or unsigned numbers. Actually our computer only knows how to add. It performs subtraction by doing Two's complement addition. What it does when subtacting two numbers is to complement the second number, add them together, and then set the flags accordingly. The complement of a number is produced by changing the set bits to cleared bits within a byte and visa versa. For example.

92 = 0 1 0 1 1 1 0 0

TWO'S COMPLEMENT

-93 = 1 0 1 0 0 0 1 1

Notice that the zero in the first position is changed to one. This signifies that it is now negative. We'll cover more on signed numbers when we do more math is a future issue of the Dynamic Color news.

One thing we haven't covered yet was how to do division. Since there is no built in division instruction like there is for multiplication we perform division by trial subtraction just like we would using a pencil and paper. Unlike the familiar method of division however, since the numbers we are to work with are in binary we must determine if a number can be subtracted from the dividend leaving a borrow.

```
DIV  LDX #8      ;COUNT=8
     LDA #4      ;DIVISOR
     STA DIVI
     LDD #100    ;DIVIDEND LOOP
     ASLB        ;SHIFT DIV
     ROLA
     CMPA DIVI   ;CAN WE SUBTRACT
     BCS NOT     ;DOES NOT GO
     SUBA DIVI   ;SUBTRACT
     INCB        ;ADD 1 TO QUOT
NOT  LEAX -1,X   ;COUNT-1
     BNE LOOP
     STB ANS     ;B HAS ANSWER
     STA REM     ;A HAS REMAIN
     SWI
DIVI FCB 0
ANS  FCB 0
REM  FCB 0
END
```

Next time we will cover some of the Branch Compare commands. See you then.

# Interfacing Computers

## Joysticks

### Part 2

In this series we have been looking at methods of interfacing color computers with other devices. The principles we have been covering apply to all computers. For example the RS-232 interface we presented will work on any computer with an RS-232 port. This includes IBM clones, Apple, Commodore as well as the portable computers such as the Radio Shack model 100 & 102. The signals at the RS-232 port are the same for all computers.

#### JOYSTICK VOLTMETER

Last month we presented a joystick voltmeter. This allowed us to measure the values of small batteries. We had a resistor divider network that allowed us to increase the range. Remember that the joystick ports are designed for a maximum of 5 volts. If the maximum we are going to measure is 15 volts then the voltage has to be reduced 3 times with a resistor network. Suppose we wanted to measure 150 volts then we would increase the series resistor to give a full scale factor of 30 times or 150/5. For measuring a wide range of voltages, a multi-position switch can be used to switch the input to different series resistors like we showed last month.

#### AC VOLTMETER

Power that comes into homes supplies alternating current (AC). The voltage from electrical generators is alternating. By alternating we mean that it changes from + to - many times a second. The number of times a second it varies is cal-

led the frequency (f). The voltage at any instant can be represented by the following formula:

$$v=A*\text{SIN}(2*\text{PI}*f*t)$$

where v is the voltage at any time t, PI=3.14159, and f is the frequency which is usually 60. A sine wave is shown in Figure 1.

What about measuring ac voltages? First let's give a definition. There is a conversion formula that relates an ac voltage to a dc voltage. A dc voltage has just one value like a battery.

SINE WAVE

Figure 1

#### ROOT MEAN SQUARE (RMS)

The RMS of an ac voltage is equivalent to a dc voltage of the same numerical value. This means that the amount of heat or power generated by the two is equivalent. If the ac voltage has a maximum value of A then the RMS is .707\*A. Also the maximum is 1.414 times the RMS.

An ac voltmeter is generally constructed by rectifying the ac voltage. This means that it is changed into a direct current (DC) voltage. A diode is a device that will conduct in only one direction. If we connected a diode in series with our joystick port, we would only have the positive half of the sine-wave. Now if we connect a capacitor across the output, the capacitor will charge to the peak. This is a dc voltage which we can feed into our joystick port and measure like it were a dc voltage.

Refer to the rectifier circuit in Figure 2. The voltage across the diode is represented as  $V_d$  and is in the range of .5 to .7 volts.  $V_j$  is the output voltage applied to the joystick input. The peak of the ac input voltage is:

$$V_p = V_j + V_d$$

The RMS voltage  $V$  is  $.707 * V_p$ . Let's assume the diode voltage  $V_d$  is .5 volts. Then the following is the equation for the RMS voltage:

$$(1) V = .707 * (V_j + .5)$$

RECTIFIER CIRCUIT

Figure 2

There is much more that we can cover using the joystick ports. For instance we can make a light level meter, thermometer, and power meter. Also voice can be digitized by using one of these ports. One thing nice about the computer is that we can store a set of values to display for each of the joystick values. This means for nonlinear data, the computer can print the correct value. With analog meters sometimes it is difficult to read the values from the calibrated scale.

Next month we will continue. The joysticks have a lot of potential and we want to explore them in more detail.

## DS-69A DIGISECTOR™ THE VIDEO DIGITIZER NOBODY CAN BEAT!

**NEW**

The DS-69A is the best video digitizer available for your COCO at any price. This new, turbocharged version of our original DS-69 Digisector allows your 64K COCO to see clearly into the world of any television picture.

- SPEED!** The fastest — 8 images per second!
- PRECISION!** The highest — 64 levels of true grey scale!
- RESOLUTION!** The finest — 256 x 256 picture elements!
- Compabitibility** Use with a black and white or color camera, a VCR or tuner.
- Compactness** Self contained in a plug in Rompack.
- Convenience** Use with a Y-cable, Multi-Pak, PBJ Bus or plug directly into the cartridge slot.
- Ease of Use** Software on disk will get you up and running fast!

### POWERFUL C-SEE™ SOFTWARE

C-SEE is the menu driven software package included with your DS-69A. Available on disk or cassette, it provides lightning fast 5 level digitizing to the screen, high precision 16 level digitizing for superb hard copy printout and simple keyboard or joystick control of brightness and contrast. Or call our driver routines from your own Basic program for easy 64 level random access digitizing. Pictures taken by the DS-69A may be saved on disk or cassette by C-SEE and then edited with COCO MAX, MAGIGRAPH or GRAPHICOM for special effects. Any of the popular printers may be used to obtain printouts of images digitized by the DS-69A.

#### ONE YEAR WARRANTY

DS-69A Digisector & C-SEE III Software  
 OR your DS-69 &  
 MAGIGRAPH Graphics Editor on disk

 \$ 59.95  
 \$ 39.95

**COCO 3 COMPATIBLE**  
 with  
**MULTIPAK EXPANDER**

## DS-69 DIGISECTOR™ THERE'S ONLY ONE BETTER VIDEO DIGITIZER . . .

And that's the DS-69A. The DS-69 is The Micro Works' original video digitizer, tried and true since 1984. It provides almost all the features of the DS-69A and is now available at a new low price. The DS-69 features;

- SLUGGISHNESS** 2 images per second. Quick enough to freeze all but the fastest moving pictures.
- INCOMPATIBILITY** Brightly colored scenes may be striped when using a color camera.
- INCONVENIENCE** Will not work with a Y cable.

Otherwise, it's a DS-69A. Precision, resolution, compactness, ease of use, software and warranty. Except one last thing.

DS-69 Digisector & C-SEE III Software **\$ 99.95**

Superb Image quality produced by both Digisectors.

# HAM RADIO & COMPUTERS

by

Bill Chapple W4GQC

In this series we are developing software and hardware for ham radio applications. For our readers who are interested in other computer applications, the principles we are covering here can be used for controlling different devices. For example the Morse Code keyer that we presented last month consisted of hardware and software. The hardware was used to drive a relay that keyed the transmitter. This relay could be used for controlling any other device such as a motor or lights. It could control a high power relay for turning on heaters or an air conditioner. The software is similar to any other program we would need to write.

## RECEIVING MORSE CODE

In our Interfacing Computers section we showed how to bring a signal into the computer with our RS-232 interface circuit. Morse code is composed of dots and dashes plus times when nothing is being received. Let's let a star(\*) represent the key down. The representation for W4 will be:

\* \*\*\* \*\* \* \* \* \* \*\*\*\*

W

4

Notice the 6 spaces between the W and 4. This is equivalent to two dashes. Let's formulate the bits as follows:

Dot = 1 time element  
Dot space = 1 element  
Dash = 3 elements  
Dash space = 1 element  
Character space = 6 elements  
Word space = 12 elements

We can decode the bits and form characters and words that can be printed to the screen or to a printer. This involves software. This month we want to take a look at what will be required with software and hardware to have the computer decode and print Morse code. First let's look at the hardware.

## HARDWARE

As we have stated many times, the hardware requirements for interfacing a color computer are few. Look at the interface circuit we used last month for the Morse keyer. The relay could possibly be replaced with a field effect transistor (FET) for the newer solid state rigs.

For receiving Morse code some signal conditioning needs to be done with hardware. An audio signal needs to be run through a filter and rectified to give a dc voltage representing a signal. We can trade off hardware with software by using machine language subroutines for filtering and rectifying. It is not very hard to build an audio rectifier so we may use this approach to simplify the programming.

The audio signal will need to be run into the interface unit. One easy way to do this is to put two jacks on the interface cabinet and connect an external speaker to one of the jacks. Connect the two jacks together and the audio is then available to the interface.

For those who want to build their own, the interface we present last month can be expanded for the reception of

Morse code by adding one chip and some support circuitry. Anyone with a little electronics experience can build the interface and we will show what will need to be added for receiving Morse code.

### SOFTWARE

Basic can be used to decode the bits if a dc level is presented to the RS-232 port. If we include a rectifier in the interface, then we can use basic for restoring the characters. This is probably the approach that will be used.

This month let's look at some programming techniques. As with any program we need to define our objectives. Since we are using a computer why don't we let it automatically track the speed. Also we would like to use our keyer so we need to integrate the two programs into one. Let's look at a procedure for establishing a basic time element. The following formula detects the output from the interface:

```
900 A=PEEK(65314) AND 1:RETURN
```

The dot is the basic time element which varies with speed. How can the length of a dot be determined? The procedure will be to look at the input and advance a counter until the signal disappears. After the signal disappears, we can compare it against a reference to see if the bit was a dot or dash.

Let's expand our subroutine as follows:

```
900 A=PEEK(65314) AND 1:IF A=0  
    THEN 950  
910 B=B+1  
950 RETURN
```

The preceding subroutine will time the bit. The variable B contains the time. This can be compared with a previous time variable to determine if it is a

## HAM RADIO PROGRAMS

This is a collection of 3 programs for Ham Radio use. These are supplied on tape or disk and are Color Computer 3 compatible.

**MORSE** - This program allows a key to be pressed and then sounds the Morse equivalent. The speed is varied with the right and left arrows. It also will send random characters. This is an excellent tool for developing code speed for the the Novice, Technician, or General class licenses.

**DX** - Consists of two parts. The first part allows notes to be typed onto the screen. The second part allows the countries for a letter or number prefix to be displayed. To go from one part to the other press the down arrow. The notes are reprinted after going to the DX section. This provides a way to write notes for your QSO's and eliminates DX station lists.

**ANTENNA** - An antenna design program that calculates the dimensions for a wide spaced Yagi antenna of up to 4 elements. Simply run the program and enter the desired frequency. The dimensions will be printed in feet and inches.

Order HR-1 \$11.95 tape or disk + \$3 shipping

DYNAMIC ELECTRONICS  
BOX 896 (205) 773-2758  
HARTSELLE, AL 35640

dot or a dash. For example if we let the variable C contain the time for a dot then we might want to do the following:

- ```
10 IF B>4*C THEN C=B/3 'ADJUST
   DOT FOR SLOWER SPEED
   REFERENCE
15 IF B<.8*C THEN C=B 'CHANGE
   DOT REFERENCE FOR FASTER
   SPEED
```

Notice that the variable C will contain the dot time. We can use some similar comparisons for timing the spaces. We will also need a variable to contain the character bits, and a look up table to convert the Morse character to ASCII.

Next month we will continue with decoding Morse code. We have received numerous requests for software for other ham radio applications. After we finish the Morse code copier, we will look at other applications.

## BACK ISSUES

Back issues of DYNAMIC COLOR NEWS are available for \$1.95 each, 3 for \$5, or 12 for \$15 pp.

Foreigners other than Canada add \$2 for Air Mail postage.

## OPERATING HINT

For Deleting characters using the extended basic's editor just pres the "D" key for each character. This saves having to count the characters when using the multiple character delete method.

# SCROLLING AROUND

by

John Galus

You are familiar with scrolling of the screen from seeing your text crawl up the screen when it reaches the bottom of the screen. In this article I provide four Assembly language routines that scroll this text screen in all directions UP, DOWN, RIGHT and LEFT. In these routines, depending on what direction we are scrolling, I move the text and then clear the area where the next information would be displayed. For example if we scrolled the screen to the left the right column would become blank. Here we could place new data to give the program the effect as though this information were entering from off the far right of the text screen. I also include a Basic program

that illustrates these four routines by scrolling the words Dynamic Color News around the screen. Be sure to save this Basic program before running it because one error could "crash" the system destroying your work! I leave it up to you to make good use of these routines. For instance you could use them with a word processor type program or a scrolling action game.

## OPERATING HINT

Programs can be stacked by changing vectors in locations 25-28. Do a memory peek and write down the values. Let  $V = \text{PEEK}(27) + 2$ . Poke this value into 25. POKE  $256 * V, 0$ : NEW. The new program can now be loaded. This occupies memory above your first program. You can return to the first program by restoring the original values in 25-28.

## TELEWRITER 64 WORD PROCESSOR

This excellent word processor will handle all of your writing requirements. With its full screen editor, any part of the text can be quickly accessed with the arrow keys. Phrases or paragraphs can be inserted, deleted, or copied to another part of the text. The completed writing can be saved to a cassette or disk or printed on any printer. Features include:

- 3 display formats of 51, 64, or 85 columns x 24 lines
- True lower case characters
- User-friendly full screen editor
- Right justification
- Drives any printer
- Runs in 16K, 32K, or 64K computers
- Menu driven disk and cassette I/O

CoCo 3 Compatible with  
Poke for 32K mode.

Disk \$59.95, Tape \$49.95

### ULTRA - TELEPATCH

Telewriter 64 enhancer that adds features such as block transfer, autokey repeat, overstrike, visible carriage return, in memory disk I/O module, typeahead buffer, fast disk I/O, search & replace control codes, user definable defaults, word delete, disk spooling, key beep, multiple print copies.

Modify the boot program for your parameters. Print to disk with TSPOOL or make multiple copies with TPRINT.

# BASIC PROGRAMMING

In this series we are showing how to write basic programs. We usually give a few programming examples and then have a feature program. Our interest is in writing an address file program that will use the extra memory in 256K or 512K computers. Last month we presented a program that would sort on names, zip code, or telephone numbers. This month we have improved the program and made it compatible with the Color Computer 3.

## HIGH SPEED

There are a few memory pokes that allow the computer to operate at the high speed rate. We want to look at these pokes and explain when the high speed mode can be used. Generally you will be safe if you use the high speed for anything except input/output (I/O) operation. This means that as long as the computer is running a program and is not printing, loading, or saving data then the high speed can be used. We have started using it within our programs and are impressed with the faster speed with which computations can be made. The following is an example of using the high speed mode.

```
10 INPUT"ENTER 2 FOR COLOR
    COMPUTER 3";C3
20 POKE 65494+ C3, 0
30 ?"HIGH SPEED MODE ENABLED
```

To disable the high speed do the following:

```
100 POKE 64595 + C3, 0
110 ?"SLOW SPEED MODE
```

Lines similar to the preceding can be incorporated within your program. We will add this feature to our address file before we are finished.

## ADDRESS FILE with IMPROVEMENTS

We made some improvements to the address file presented last month. First of all we made it compatible with the color computer 3. We did this by eliminating the PRINT @ commands which are not compatible with the color computer 3 in the 40 and 80 column modes.

The second thing we did was to revise the way the first 3 lines are entered into memory. Instead of allocating 15 characters to a line, we now allow any number to be in any of the first 3 lines up to a total of 45 characters. The procedure for entering data is to press the ENTER key when you want a line feed. When you have finished a section press the down arrow. Let's represent a carriage return with \* and down arrow with @. Then the key strokes for an address will be as follows:

```
1 James A. Smith *
  2536 First Ave NE *
  Apt. 7A CR *@
```

```
4 Huntsville @
```

```
5 AL @
```

```
6 35801 @
```

```
7 2058957003 @
```

Notice for the first 3 lines the enter key must be pressed at the end of each line. The down arrow must be pressed at the end of each section. We found this arrangement to work much better than our organization last month because this gives us a variable length for the information. The third line is blank for some addresses. The program counts the number of carriage returns in the first 45 spaces of the

addresses and prints an extra blank line if it is needed to give a total of 6 address lines for printing labels.

Also we added line 6 which automatically relocates the program in lower memory. We removed some comments to save space.

Next month we want to look at merging files. For example can we have 20 of these address files on a disk or ramdisk and create a second group of files that are sorted in order zip codes or names?

## EDITORIAL COMMENTS

This is the beginning of our fourth year. It seems that there is a lot of interest in hardware projects. Last month we had two projects and we are looking at using the joystick ports for various applications. These are very useful ports and we will show many applications for them.

John Galus is continuing on Assembly Language programming. The material this month is very useful. If you are interested in writing machine language programs and subroutines, you should read this section.

For those of you who purchased a new color computer 3 and a multipak expander, you will have to pay to have the expander upgraded. Although the expander is advertised as being compatible, Radio Shack will not upgrade the expander without charging an additional \$35. I don't think it is fair for them to ignore a design goof and charge customers for Radio Shack's error. They try to justify this by saying it is an upgrade. I am printing a letter I received from them.

In our Ham Radio series we are looking at requirements for receiving and displaying characters generated by Morse code. This month we are covering a few principles and will continue

## RENEWAL TIME?

The date beside your name on the address label indicates the last issue you will receive. Send in your renewal if you want to continue receiving technical information on Color Computers. This is the last issue for those with 2/87.

next month. This is an area in which I am involved, and the software and hardware techniques can be applied to other applications.

In our programming series we improved the address file program we have been developing. Our program will handle 200 names but we want to expand it so we can handle 1000 or 2000 names with a disk or ramdisk.

We have an exciting game "GALLOWS" from T & D Subscription Software. This is similar to the popular "Hangman" game and I am sure our reader's will enjoy it.

We are still receiving questions and appreciate them very much. If you have a question please write and we will answer it in our Question and Answer section.

It has been a year since Dean and I were married. She has really been an asset to Dynamic Color News. I used to get so frustrated with secretaries that I about decided that I could do better without one. Dean handles all of our orders, advertising, subscriptions, printing plus many other tasks. If you will compare what we are producing now with what we had a year ago, you can see how we have grown. I want to thank all of you for your support. - Bill-

January 30, 1987

Mr. Bill Chapple  
President  
DYNAMIC COLOR NEWS  
1001 Highway 36 East  
P.O. Box 896  
Hartselle, AL 35640

Dear Mr. Chapple,

I am writing in reference to a letter dated January 12 which you mailed to Ed Juge, director of Market Planning for Radio Shack. I apologize for neglect on our part to provide you with the necessary information you requested concerning the Multi-Pak Interface and the Color Computer 3.

I will do my best to answer your questions and please feel free to print the following in your publication:

There seems to be some confusion among consumers regarding the Multi-Pak Interface upgrade for the Color Computer 3. If you are running dedicated Color Computer 2 software on a Color Computer 3, the Multi-Pak Interface does not need the upgrade. However, if you wish to take advantage of the advanced features of the CoCo 3 and are running dedicated CoCo 3 software, the upgrade is necessary.

Two different upgrades are available, depending on the model of Multi-Pak Interface. If you have interface model #26-3024, a PAL chip should be installed. If you have the newer interface model #26-3124, a satellite PC board should be installed. Any Radio Shack Repair Center will install the upgrade for approximately \$35, including the cost of the upgrade kit, installation and tax.

Please keep in mind that this is an upgrade--not a fix--and costs for the upgrade are not covered by Radio Shack's 90-day warranty on the Multi-Pak Interface.

I hope this clears up any confusion or answers any questions you might have concerning this subject. Please feel free to contact me at (817) 390-3487 if you should have any additional questions or problems in the future.

Thanks again for your support and best wishes to DYNAMIC COLOR NEWS.

Cordially,

Fran McGehee  
Marketing Information Representative

Support Services

## NEW PRODUCTS

This section is available free for producers and dealers of color computer products. These products have not been reviewed by us but are included for our reader's information.

Great Products - CoCo Max II and the CoCo Max III - are getting better !!! Now, Spectrum Projects offers a software and hardware upgrade that allows you to run CoCo Max II on the CoCo III. The kit contains a software patch on disk to modify the CoCo II system and a special replacement PAL chip for the 26-3024 Multi-Pak Interface. (Note- at this time, no patch is available for the Tandy 26-3124 Multi-Pak.) The complete package of software, chip and instructions is only \$29.95 plus \$3.00 S/H U.S. (\$5.00 other). Spectrum Projects, P. O. Box 264, Howard Beach, NY 11414.

## PRODUCT REVIEWS

This section is open to all producers and dealers of color computer products. We will review your product free of charge and write an editorial on the product. We do not use a rating system but will explain what the product does, and what can be expected from it. Any comments about the review from the firm submitting the product will be printed in a later issue.

## DISKMAN

Have you ever wished you had a disk manager that would do all of those nice disk manipulation tasks that are desired? Tothian Software has such a program named DISKMAN. A warning appears at the beginning of the instructions because it is possible to lose data with this type program if improperly used.

However by following the instructions, backup directories can be made of all your disks from which you can restore a lost directory. One disk can be reserved to contain the directories of the other disks. Then if a directory is lost, it can be reloaded from the directory disk. For this to work, a backup directory will have to be saved on the directory disk.

The directories can be placed in alphabetical order. This makes it easy to find a program. No longer do you have to search through all of your files to find a program. You can look for it in its alphabetical location. A nice feature of the backup directory is that a program that has been killed can be restored by loading the backup directory.

Also included is a section that allows a sector to be examined and changed. After entering the track and sector, characters are displayed on the screen with 32 across by 8 lines. You can move to any character with the cursor keys and change it. The value is indicated at the bottom of the screen in decimal and hex. After completing the changes, the new values can be saved to the disk.

Files can be exchanged on the disk directory. This involves marking two files by pressing the space bar. When the second one is marked, the files switch locations on the directory.

The directory catalog can be printed out. If you have a disk that contains the directories of all of your disk, then you can print the directories from the master disk.

In summary we found DISKMAN to be a very good disk manager. The alphabetizing feature makes it easy to locate files, and the disk directory backup feature allows a disk to be restored

## COLOR COMPUTER 3

### 512K MEMORY UPGRADE

Upgrade your Color Computer 3 to 512K. Our plug in board is easy to install and will give you the maximum addressable memory. With 512K you can have two ramdisks with the software below or access it with OS-9 level 2. Order **ME-30 \$119.95 \* REDUCED \***

### 512K RAMDISK

A ramdisk operates from memory just like a disk drive except it is many times faster. The 512K ramdisk allows drive 2 and 3 to be ramdisks. With a one drive system, you can backup a disk to either ramdisk or select either ramdisk for quickly loading programs. Resetting the computer does not erase the ramdisks. Also included is a memory test program. Use our UPS for retaining indefinitely the programs in the ramdisks.

**CC-3 ramdisk \$19.95**

### UNINTERRUPTER POWER SUPPLY (UPS) \* reduced price \*

Just leave your computer on and our UPS will protect your computer's memory when power fails. Programs loaded into your ramdisk will be retained when power fails. Assembly consists of a dry battery, switch, light emitting diode, & electronic control circuit. Easy installation. Mounts inside all color computers.

**UPS \$49.95.**

**Checks, Visa, or MC  
Add \$3 shipping**

**DYNAMIC ELECTRONICS  
BOX 896 (205) 773-2758  
HARTSELLE, AL 35640**

after it has crashed. **DISKMAN** costs \$21.95. For more information contact Tothian Software, Box 663, Rimersburg, PA 16248.

## CHES-32K

If you are interested in learning or improving your chess game then CHES-32 is for you. This high quality game is inexpensive and can provide many hours of entertainment. The program comes either on tape or disk. This is similar to the checkers-32 program which we reviewed in our June 1986 issue.

To start the program enter **RUN "CHES"**. After the program loads, a chess board is drawn on the screen with the chessmen set up. The cursor will be blinking. For a black and white tv press **SHIFT W**. This will make the board and men easier to identify.

The cursor can be moved with the arrows. Press the "F" key to indicate the "FROM" space. Press the "T" key to indicate the "TO" space. After the moves have been defined, pressing "ENTER" will complete the move. The computer then makes its move.

There are several levels of difficulty. These are Novice, Apprentice, Challenger, Expert, Master, and Grandmaster. Chess-32 sells for \$5.95 + \$1 S/H. Applied Machine Intelligence, P. O. Box 358, Salida, CO 81201.

## OPERATING HINT

To double your computer's speed, **POKE 65495,0**. To return to normal speed, **POKE 65494,0**. For the CoCo-3 **POKE 65497,0** to enable double speed and **POKE 65496,0** to return to normal speed.

## QUESTIONS & ANSWERS

These are questions that have been asked us. If you have a question that you would like for us to answer send it to us at Box 896, Hartselle, AL 35640. We will print your answers here. For a personal reply send \$10 with your question.

**Question:** In Reference to your Morse Keyer is there supposed to be an adaptor cable to the CoCo Serial I/O Connector. Your schematic looks like you are using 14 pin header plugs for wires on and off the board. If so would you send me a schematic of the adaptor cable. Also do you have any information on RTTY/CW Software that will work with Kantronics hardware?

**Answer:** The plug on the power supply is not standard. We used a 14 pin header to give us a standard plug. Any other type plug could be used. I am not familiar with the Kantronics hardware interface. If they are using the ASCII port then our software may work. We are going to cover other applications for ham radio in future editions.

**Question:** I just received the January issue of the Radio Shack Color Computer Magazine. I read your article with enthusiasm and would like to have a few questions answered, if possible. I have been a ham radio operator for about one year. I am handicapped and would like to monitor code. I have just purchased a cheap TRS Color Computer 2 (Series #2064065) with 16K. I also have a new CCR-82 cassette recorder. Here are the questions. 1. Can the interface in the January issue be used to monitor code with the proper program? 2. Is 16K enough to monitor code? Of course, bucks

is a problem and I need to use the hardware I now have. Could you list what I need to monitor cw with the hardware I now have or is this even possible? Thanks so much for your help. Ham radio and the computer have opened a new world for me. A s.a.s.e. is enclosed.

**Answer:** See our ham radio editorial in the February 1987 issue. We will be showing how to receive Morse code in the future. A 16K computer will probably be large enough.

**Question:** You have stated that programs can be transferred between two computers if both have terminal programs. How do you save the programs after they are transferred?

**Answer:** This is a good question. The DYTERM program we gave last month allows data to be entered into a buffer. The beginning and ending of the buffer is known. All of the data can be saved as a machine language program. If you want the data saved as ASCII then it is necessary to open a file on disk and write the data into the file. We transfer text and articles from our Model 100 to a color computer and then save it on disk. Also we can transfer files from a color computer to our model 100 to an IBM clone. Computers do not have to be the same type to do this.

## OPERATING HINT

The vector in locations 135-6 determine the screen position of the cursor. The cursor can be moved to any screen location by poking values into these locations. This works with the CoCo 3 in the 32 character display mode,

# CoCo Max<sup>TM</sup> II

**You'll use it all the time and love using it.**

## What is CoCo Max?

Simply the most incredible graphic and text creation "system" you have ever seen. A Hi-Res Input Pack (more on the pack later) is combined with high speed machine language software. The result will dazzle you.

CoCo Max disk system, with Y-cable.

## Is CoCo Max for you?

Anyone who has ever held a pencil or a crayon for fun, school or business will love it. A 4 year-old will have fun doodling, a 15 year-old will do class projects and adults will play with it for hours before starting useful applications (illustrations, cards, artwork, business graphics, flyers, charts, memos, etc.) This is one of the rare packages that will be enjoyed by the whole family.

## What made CoCo Max an instant success?

First there's nothing to learn, no syntax to worry about. Even a child who can't read will enjoy CoCo Max. Its power can be unleashed by simply **pointing** and **clicking** with your mouse or joystick. With **icons** and **pull down menus**, you control CoCo Max intuitively; it works the same way you think.

Don't be misled by its apparent simplicity. CoCo Max has more power than you thought possible. Its blinding speed will astound you.

It lets you work on an area 3.5 times the size of the window on the screen. It's so friendly that you will easily recover from mistakes: The **undo** feature lets you revert to your image prior to the mistake. As usual, it only takes a single click.

Later, we will tell you about the "typesetting" capabilities of CoCo Max II, but first let's glance at a few of its graphic creation tools:

With the **pencil** you can draw free hand lines, then use the **eraser** to make corrections or changes. For straight lines, the convenient **rubber-banding** lets you preview your lines before they are fixed on your picture. It's fun and accurate. Lines can be of any width and made of any color or texture.

The **paint brush**, with its 32 selectable brush shapes, will adapt to any job, and make complicated graphics or calligraphy simple. For special effects, the **spray can** is really fun: 86 standard colors and textures, all available at a click. It's like the real thing except the paint doesn't drip.

CoCo Max will instantly create many shapes: circles, squares, rectangles (with or without rounded corners), ellipses, etc. Shapes can be filled with any pattern. You can also add hundreds of custom patterns to the 86 which are included.

The **Glyphics** are 58 small drawings (symbols, faces, etc.) that can be used as rubber stamps. They're really great for enhancing your work without effort.

Pull down menus

Zoom In

## Control Over Your Work

CoCo Max's advanced "tools" let you take any part of the screen, (text or picture) and perform many feats:

- You can move it around
- Copy it
- Shrink or enlarge it in both directions
- Save it on the electronic **Clipbook**
- Flip it vertically or horizontally
- Rotate it
- Invert it
- Clear it, etc. etc.

All this is done instantly, and you can always **undo** it if you don't like the results.

For detail work, the **fat bits** (zoom) feature is great, giving you easy control over each pixel.

To top it all, CoCo Max II works in color. Imagine the pictures in this ad in color. If you own a Radio Shack CGP-220 or CGP-115, you can even print your work in full color!

There is so much more to say, such as the capability to use CoCo Max images with your BASIC programs, the possibility to use CoCo Max's magic on any standard binary image file. There are also many advanced features such as the incredible **lasso**.

Inside the Hi-Res Input Pack

## Why a Hi-Res Input Pack?

Did you know that the CoCo joystick input port can only access 4096 positions (64x64)? That's less than 10% of the Hi-Res screen, which has 49152 points! (256x192). You lose 90% of the potential. The Hi-Res Input Pack distinguishes each of the 49152 distinct joystick or mouse positions. That's the key to CoCo Max's power. The pack plugs into the rom slot (like a rom cartridge). Inside the pack is a high speed multichannel analog to digital converter. Your existing joystick or mouse simply plugs into the back of the Hi-Res Pack.

## Electronic Typesetting...

You'll be impressed with CoCo Max's capability. Text can be added and moved around anywhere on the picture. (You can also rotate, invert and flip it...) At a click, you can choose from 14 built in **fonts** each with 16 variations. That's over 200 typestyles!

Examples of printouts

## Printing Your Creations

There are a dozen ways to print your work. All are available with a click of your joystick (or mouse) without exiting CoCo Max. Your CoCo Max disk includes drivers for over 30 printers!

# CoCo Max II™

The whole family will enjoy CoCo Max. Here are a few examples of the possibilities.

All these pictures are unretouched screen photos or printouts (on an Epson RX-80).

1 Publish a newsletter or bulletin

5 Over 200 typestyles to choose from! generate flyers.

2 Fun for children while stimulating creativity.

6 A new way to express your imagination.

3 Business graphs, charts, diagrams. Also memos

7 Video portrait (with optional 'digitizer).

9 schematics and floor plans.

4 Junior's homework and science projects. Term papers too!

8 This is a cartoon.

10 Logos and letterheads.

## System Requirements:

Any 64K CoCo and a standard joystick or mouse. (The koala pad and the track ball work, but are not recommended.)  
 Disk systems need a Multi-Pak or our Y-Cable.  
 CoCo Max is compatible with any Radio Shack DOS and ADOS.  
 Note: the tape version of CoCo Max includes almost all the features of CoCo Max II except *Shrink*, *Stretch*, *Rotate*, and *Glyphics*. Also, it has 5 fonts instead of 14.  
 CoCo Max is not compatible with JDOS, DoubleDOS, MDOS, OS-9, the X-pad, and Daisy Wheel Printers.

## Printers Supported:

Epson MX, RX, FX and LX series, Gemini, Star, Micronix, Delta 10, 10X, 15, 15X, SG-10, Okidata 82A, 92, 93, C. Itoh Pro-writer, Apple Image-writer, Hewlett-Packard Thinkjet, Radio Shack DMP 100, 105, 110, 120, 200, 400, 500, Line Printer 7, Line Printer 8, TRP-100, CGP-220. (DMP-130 use Line Printer 8), PMC printers, Gorilla Banana.  
 Color printing: CGP-200, CGP-115

## Pricing

CoCo Max on tape ..... \$69.95  
 with Hi-Res Pack and manual.  
 CoCo Max II (disk only) ..... \$79.95  
 with Hi-Res Pack and manual.  
 Upgrade: CoCo Max to CoCo Max II  
 New disk and manual ..... \$19.95  
 New features of CoCo Max II: 14 fonts and glyphic font, dynamic shrink and stretch, rotate, multiple drive capability, 68 page scrapbook, point and click file load, color printer drivers, full error reporting.  
 Upgrade: CoCo Max tape to disk  
 manuals, disk and binder ..... \$24.95  
 Y-Cable: *Special Price* ..... \$19.95  
 Super Picture Disks #1, #2, and #3  
 each: \$14.95  
 All three picture disks ..... \$29.95

## Font Editor Option

A font is a set of characters of a particular style. CoCo Max includes 15 fonts. You can create new fonts of letters, or even symbols or graphics with the font editor. Examples: set of symbols for electronics, foreign alphabets, etc. .... \$19.95

## Video Digitizer DS-69

This new Low Cost Digitizer is the next step in sophistication for your CoCo Max system. With the DS-69 you will be able to digitize and bring into CoCo Max a frame from any video source: VCR, tuner, or video camera. Comes complete with detailed manual and C-SEE software on disk. Multi-Pak is required.  
 New Low Price Save \$50 ..... \$99.95  
 New: faster DS-69A ..... \$149.95
