# The Gamer's Connection

---

*P.O. Box 102 Grafton, WI 53024 (414) 377-6226*

Welcome to issue number four.

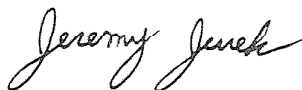

For those of you who are new to The Gamer's Connection, let me introduce myself, I am Jeremy Jurek, the new editor and publisher. Those of you who have been with us since last issue will recall that Mark Kaiser was the editor and publisher and that I was the managing editor. Mark has decided to take advantage of a unique business opportunity and will no longer be gracing our pages with his special brand of wit. In his stead, I have taken up the position as editor and publisher while Denise Schumacher has moved into my old position as managing editor. I think that you will find that she is highly qualified and skilled. She has had a hand in nearly all aspects of the magazine since issue number two.

We have a nice lineup of articles and information for you in this issue. Featured are another installment from Glen R. Dahlgren on his Machine Language tutorial, the final segment of my Formula for Adventure series, a great adventure entitled Arak, Dragon of the North, and the return of our Hints & Tips column. Don't forget to page over to the reviews section and read the first review of the new hit, Rupert Rythym.

As in the past, The Gamer's Connection will be trying to get you, the reader, the whole story behind the latest CoCo news. We have been trying to contact Dave Dies of Diecom Products, perhaps next issue we will be able to report what has happened to his ad in the Rainbow.

Next issue, you can also look forward to two new columns on graphics and program design. The first installment in our fiction department will also be appearing next issue.

Enjoy and take care,

Jeremy Jurek  
Editor/Publisher

# PRESS RELEASES!

---

## AD&D™ CHARACTER'S COMPANION

This timesaving utility, written by Charles Hager, helps in the creating of compatible AD&D™ characters. It includes a dice rolling routine, pick ability, race and class. You can also buy from the Player's Handbook, magic items and spell materials. The program also allows you to save, load, and print character information. (see review on page 44)

Requirements: CoCo I, CoCo II, or CoCo III and disk drive.

Price: \$24.95 plus \$3.00 S/H. C.O.D. add \$2.50. MD residents add 5% sales tax.

Sold By: Gimmesoft, P.O. Box 421, Perry Hall, MD 21128. 1-800-441-GIME

## BASIC UTILITY DISKETTE

The Basic Utility Diskette contains several routines to simplify the development of programs written in CoCo BASIC. Imagine the convenience of having a printed directory slipped inside the protective jacket of each of your floppy disks. Or, of having the computer search two versions of a BASIC program and then provide you with a printout of all the lines of code that are not identical.

Requirements: 64K CoCo I, II, or III, one disk drive, and a printer.

Price: \$19.95 plus \$2.00 S/H.

Sold By: T.E.M. of California, P.O. Box 4311, Fullerton, CA 92634-4311. (714) 871-8210.

## BLACK GRID

This computer adaptation of the Parker Bros. Black Box game was written by Joseph Paravati. The computer hides from 2 to 9 blocks inside the black grid. The player must locate them by shooting rays into the grid. After each shot graphic symbols appear on the outer edges of the grid representing what the rays hit. There are three different play modes available.

Requirements: 128K CoCo III and disk drive or tape.

Price: \$21.00.

Sold By: SPORTSware, 1251 South Reynolds Road, Suite 414, Toledo, OH 43615. (419) 389-1515.

## BURIED BUXX

You shoot holes in the ground with your helicopter to uncover the Buried Buxx and descend into the hole to retrieve them. At the same time you must avoid the bombs being dropped by the airplane and the hidden missiles beneath the ground. (see review on page 45)

Requirements: 32K ECB CoCo I, II, or III, disk drive, and joystick.

Price: \$19.95 plus \$3.00 S/H. C.O.D. \$3.00 additional.

Sold By: JR & JR Softstuff, P.O. Box 118, Lompoc, CA 93938. (805) 735-3889.

## CATALOG ON DISK

This floppy disk has files on both sides (mostly graphic pages) which illustrate some of SPORTSware's most popular products.

Requirements: CoCo III and disk drive.

Price: \$3, which is deducted from the purchase price of any product purchased from the catalog.

Sold By: SPORTSware, 1251 South Reynolds Road, Suite 414, Toledo, OH 43615. (419) 389-1515.

## IRONSIDES & CRIMSON SAILS

This game of strategy and tactics is easy to learn yet difficult to master. It contains five separate scenarios which range from fictional settings to actual simulations of historical naval engagements. Each scenario has completely different map screens, set ups and require different aspects of play.

Requirements: 512K CoCo III with OS9 Level 2 and disk drive.

Price: \$8.95

Sold By: softWAR Technologies, Ameritrust Building, 17140 Lorain Avenue, Cleveland, OH 44111. (216) 251-8085.

## LEONARDO'S PAINTBOX

Leonardo's Paintbox actually writes BASIC graphics routines which can be used as stand-alone programs or can be MERGED into programs which the user writes. This will give the average programmer the capability to program real professional quality graphics.

Requirements: CoCo III, disk drive, and a self centering joystick.

Price: Regular price is \$29.95. Special introductory price is only \$26.95 plus \$1.50 S/H per order. NY residents add sales tax.

Sold By: EZ Friendly Software, 118 Corlies Avenue, Poughkeepsie, NY 12601. (914) 485-8150.

## MAESTRO DISK EDITOR

This program allows the user to view and edit the information stored on his disks. Programs and data may be altered directly on the disk. Files that return ?IO errors or directories that stubbornly display the ?FS error may be fixed. 40 and/or 80-track drives are supported if MAESTRO is run under ADOS or ADOS-3. This package includes the disk editor with its forty-two commands and hi-res display, extensive documentation, and three supporting utilities: CRASH BUSTER, which backs up any standard directory; PADLOCK, which copy-protects a disk internally; and DISKMATE, an all-purpose filing utility. Limited Warranty is included.

Requirements: 32K ECB CoCo I, II, or III, one disk drive, and RS DOS.

Price: \$16.95 plus \$2 S/H.

Sold By: Marc Campbell Innovations, 266 Riverview Dr., Ephrata, PA 17522.

## RUPERT RYTHYM

You must help Rupert infiltrate "Music Box Records" and collect all his stolen notes which are scattered throughout the complex. Ride the crazy elevators and beware of the security robots on patrol. After collecting all the stolen notes you must work out their correct sequence before Rupert can perform his first live concert which will lift him to international fame and fortune.

Rupert Rythym, written by Nickolas Marentes, is a strategy game featuring 17 different 16 color graphic screens and some of the hottest digitized percussion music you've ever heard on your CoCo III. (see spotlight review on page 42)

Requirements: CoCo III, joystick, and disk drive or tape.

Price: \$24.95 plus \$3.00 S/H. C.O.D. \$2.50 extra. CA residents add 6.5% sales tax.

Sold By: Game Point Software, P.O. Box 6907, Burbank, CA 91510-6907. (818) 566-3571.

## WHEEL OF FORTUNE

This popular TV game show takeoff was first written for the CoCo II but recently has been upgraded to take advantage of the CoCo III graphics. Written by Joseph Paravati.

Requirements: 128K CoCo III and one disk drive.

Price: \$21.00. This is also still available for the CoCo II.

Sold By: SPORTSware, 1251 South Reynolds Road, Suite 414, Toledo, OH 43615. (419) 389-1515. ●

# DISKS!

*NOW ONLY* \$4.95

Lots of 10 SS/DD or DS/DD 5 1/4" diskettes plus sleeves and labels!

All orders will be shipped within two days of receipt - **GUARANTEED!** Please include \$1.25 S/H on all orders under ten dollars. All shipping is free on orders over ten dollars, this includes adventures found elsewhere in this magazine.

\* Sorry, no credit card orders will be processed.

Send check or money order to:

*Adventureware Products, 395 Riverview Drive, Grafton, WI 53024*

# Bachelor

Bachelor

A Strategic Simulation

Written By: George Aftamonow

32K ECB Minimum Memory Requirement

CoCo I/ CoCo II/ CoCo III

George Aftamonow of Aftamonow Software has submitted this fun and exciting game. The object of the game is for you, the bachelor, to get a date. This can lead to some interesting and kinky encounters. It is not sexually explicit, but merely allows your imagination to take over where the text leaves off.

The game plays like a "choose your own adventure" book. Whereby the game asks you questions and responds accordingly to your answers. It's a lot of fun and in some instances very exciting. ●

## Valley of the Magi

Presenting our newest mind-shattering escape into the unknown - *VALLEY OF THE MAGI!* Feared by the countryfolk, despised by the holy, and shunned by all that is good and righteous - the shadowed valley lies silent. Everything within its sinister borders seems to have an unnatural, unholy aura throughout. An aura of power....

At the heart of the valley rests the fortress of the Magi, keeper of the Blade of Balinor - sword of swords. Destined to become a classic. *Order your copy today!*

## SUBMISSIONS

*The Gamer's Connection* is staffed by several qualified writers and programmers and is contributed to by many more. Nonetheless, we are constantly looking to find new talent within the Tandy Color Computer market. If you have an area of expertise, or simply feel you have something to offer to the CoCo community, we urge you to consider being published within *The Gamer's Connection*. Any and all articles, programs, fiction, cartoons, etc. submitted will be thoroughly reviewed for publication. However, your material must fit in with the genre of this magazine. If you expect monetary compensation for your work then you must state so when submitting your material. Although, submissions not demanding compensation are more likely to be published, unless the material is of high to very high quality. All submissions not stating the need for compensation will be viewed as appreciated and welcome contributions to the magazine. All work published will be accredited to the original author. Please do not send in public domain material unless you are the original author. Programs must be saved on tape or disk in an ASCII format and an accompanying hardcopy would be most appreciated. Please send all submissions to *The Gamer's Connection - Submissions Dept., P.O. Box 102, Grafton, WI 53024*. If you would like a more detailed explanation of our submission guidelines and policies, please send in a request for such materials or use our customer service line. (414) 377-6226.

# So, You Want to be a Master?

By: *Glen R. Dahlgren*

---

As the smoke cleared, Janthom knew he had had it. He had meant to simply levitate the Master's crystal and had ended up creating a very expensive pile of glass shards. In fact, he had not known that he had the power to destroy an object from a distance. He looked at his staff ROM with renewed awe. In the past weeks he had learned that ROM had many more powers than his teachers of BASIC ever taught him. Now their teachings seemed primitive and simplistic, although Janthom had much more to learn about utilizing his staff.

"Janthom! What was that sound! Art though trying to fix the stove again?", bellowed the Master from a distant room followed by a hearty chuckle.

Janthom winced. He had equal success with the crystal as he did with fixing the house stove. The Master had ended up purchasing a new one, and Janthom had ended up digging a new outhouse ditch. He hadn't been able to sleep without cramps for a week. Surely that punishment was to be a vacation compared to what the Master would bestow on him for breaking his favorite crystal.

"Janthom?" A touch of concern tinged the Master's voice now, "What's going on?"

Janthom froze in horror. Demons and dragons held no terror for him, but the Master got pretty ugly when he was mad. He glanced around the room frantically. He did not know a spell for fixing broken objects.

Maybe if he set it back together, the Master wouldn't notice? One look at the unrecognizable shards dismissed that hope. Blame it on the imp? That ploy held more promise, but it was not Janthom's way to let others take fault for his actions. Besides, the Master's familiar was asleep in front of the new stove. Janthom's shoulders sagged in defeat. He would simply have to take the blame and accept punishment, although the thought alone made him shiver.

The door flew open and the Master entered. One look told all; Janthom had been practicing a new spell and had felt confident enough to try it

on the Master's prize crystal. Something had gone wrong, and that something was named Janthom Vore.

The Master said nothing, but looked at Janthom with a leveled gaze. Janthom stared down at the ground and hoped for a quick death. The Master's eyes started glowing a dark red and his expression twisted to that of rage. "Do you know what thou hast done? Thou hast destroyed the Trinsim Crystal!"

Janthom's eyes darted to the pile of glass and then to the Master's face. The Trinsim Crystal? The Master had never really told him why this crystal was favored. Had he, in his foolishness, destroyed the fabric of reality, or let some unspeakable evil loose upon the world? It looked as if the punishment was to be a little worse than he had first imagined.

"The Trinsim Crystal? What have I done?" Janthom fell to his knees and looked up at the Master with determination. "I will right what is wrong! Tell me what I must do. I will travel to the ends of the world on the quest to fix the Crystal!"

The Master's gaze softened as he looked into Janthom's young and determined eyes. "No, no, Janthom. The crystal was a gift from a sorceress I once knew called Eliness Trinsim, hence the name of the crystal. It had sentimental value only."

As the Master turned and looked at the crystal bits on the floor, he heard Janthom's breath escape him in a sigh of relief. "However, this does NOT mean thou art exempt from punishment, although I think I wilst make practical use

of thy accident. Thou, Janthom, will fix the crystal and later we wilt think about the cost of all of this. I thinkest the swamp could use a bit of draining, . . . ."

Janthom groaned, but the Master continued speaking. "Thou must communicate with thy staff in a way thou never hast before, in order to complete thy task. Before, all thou hast done is tell thy staff to do something with only one or two options to affect its function. The spell I am about to teach thou is dependent, that is, it canst deal with larger amounts of information because it expects more information to be passed. It be variable in its function."

"The spell thou wilt invoke is a general FIX spell. Thou must relay to thy staff what thou wish to fix and how." The Master looked at Janthom's puzzled expression. "Don't worry, thou wilt shortly understand."

After about an hour of preparation, Janthom was still worried. The spell seemed simple in concept, however it required much concentration and attention to detail. The process was as such: visualize the completed crystal and invoke the spell while telling the staff to draw upon the image. If the image fluxed or changed while the spell was in process, the material of the object might be permanently flawed.

Janthom stared at the crystal pieces, trying to remember its original shape. He had done quite a job on it! Closing his eyes, he forced the image to coalesce. He felt the soothing warmth of his staff in his outstretched hands as he mumbled a general USR spell, still focusing his mind on the perfect crystal.

A wind stirred. A slight humming could be heard from the pile of shards. The staff grew more than warm, but Janthom's grip remained so tight it was painful. Beads of perspiration dotted Janthom's forehead as he refused to let the image leave his mind.

And it was done.

Janthom slowly opened his eyes to spy the perfect crystal he had envisioned. A smile grew over his features, and he turned his gaze to the Master. He, too, had a slight smile upon his lips. "Thou hast done well. I was doubtful of thy ability, but thou hast proven that thou art the same student in whom I saw promise that first day."

As the Master gently scooped up the crystal to place it upon the shelf, Janthom's jaw dropped. The Master NEVER gave him compliments, and this was the first time he had ever hinted at WHY he had accepted him as a pupil.

"Yes, very well done. Let us hope thou does as

well on the swamp. The pump be in the shed." The Master looked at him with impatience.

The SWAMP? Oh well. . . who wants to live forever.

Well, it seems as though I got a bit carried away with the story section this column. I view it as a necessary evil (or maybe a vice). I ENJOY writing this column and, at this stage of *The Gamer's Connection*, I have, as yet, no space limitations. Therefore, I take that as creative license to write until I drop. I also view the story section as what makes this column unique; I have already received mail stating that people are not only reading this column, but enjoying it. I assume that my approach has something to do with it. Remember, response to this column is vital. If you have an opinion, one way or the other, share it with us. I don't like writing to a void!

Anyway, let us continue. If you have been following *So, You Want to be a Master?*, you are already familiar with Janthom Vore and the Master, along with this month's topic. If not, I'll give you a short run down. Janthom is a fighting man, trained in all ways of BASIC. He carries his staff ROM and depends on it totally (try to keep up with the symbolism, please). He approached the Master in order to gain knowledge in the mystic area of Machine Language, and was accepted as a pupil. In last issue's column, I discussed the minor integration of BASIC and ML (Maching Language). I will assume that you have read it and are familiar with setting up a BASIC driver with ML subroutines. In this month's column, I will be venturing further into BASIC/ML integration.

Last issue we discussed directly passing a few parameters from a BASIC driver to its dependent ML routine. With the program last issue, you sent two numbers in a BASIC program to the ML routine, multiplied them, and returned them to the BASIC driver. Well, two numbers is, indeed, all one can send, *directly!* It is possible to send more than these one or two parameters to an ML routine, but it is done indirectly. One can send a POINTER to a list or group of data containing much more information.

As Janthom discovered this issue, you can use an ML routine (spell) in a very general sense, as long as your data is specific. Janthom sent an image of the perfect Trinsim crystal to his staff. The staff accessed this image and fixed the shards to their former state. With a BASIC driver and an ML routine, you can do much the same.

There are two basic ways to do this. The first I will be talking about is the VARPTR or the

Variable Pointer. The VARPTR gives you a pointer to an information block of a variable (such as a string or numeric variable; we will be dealing exclusively with string variables for now). The syntax is as such: A=VARPTR(Z\$). A now would hold the address of the info block to Z\$. The only major parts of this info block that you will need are the amount of bytes and the starting address of the actual string. The block is set up as follows: (see Figure A)

The VARPTR (or, in the example, A) would point to this block and not the actual string. In BASIC, you would obtain the actual address of the string by the following formula: ADDRESS=PEEK(VARPTR(Z\$)+2)\*256+PEEK(VARPTR(Z\$)+3). This would take the HEX number found in bytes 2 and 3 inside the information block of the VARPTR and form a decimal address from it (least significant byte times 256 + most significant byte). The number can more easily be drawn upon in ML, however. By passing the VARPTR through a USR, you can obtain the address of the string simply by loading a 16 bit register (such as X or Y) at an offset of 2 from the VARPTR. I will explain this further in example.

The VARPTR is especially nice for hybrid BASIC/ML text-related programs such as adventure games. With this system, you can do all of your text processing in BASIC (it's not fun to do logic with strings in ML) and high-res display the text via ML routines. I will probably be dealing directly with this subject later on. For now, I am going to give a very basic routine that will take a string and dump it onto the text screen. This is no more than a basic memory move, so that certain characters will appear in inverse, and so forth. The aim of the program is to demonstrate how strings can be accessed by ML. The following programs are the BASIC driver and the ML routine of the display. (see Figure B)

I am no longer going to tell you how to deal with the assembly listings. I am going to assume that you either have DISK EDTASM or some other compatible assembler and that you will type the listings in, assemble them, and save them on your own. The BASIC listings can be typed in and saved directly.

After doing all of this, you should have two files on your disk: PRINT/BAS and PRINT/BIN. Run PRINT/BAS. It will automatically load PRINT/BIN and access it. The result should be that the screen will clear and you will see the string defined in PRINT/BAS displayed on the text screen. It is not just a PRINT statement, mind you. That is why some of the characters are inverted. This is normal. You could write a routine

to check for all characters that would normally be inverted by this program, however that is not the purpose of this routine.

The routine itself works as such: the VARPTR address is put into the D register by the ROM routine at \$B3ED (see last issue for why this works). It is then transferred to the Y register. This is always good to do because you will eventually be using the D register for temporary values. X and Y are better for holding addresses. Then B is loaded with the number of characters in the string. Note that this number is contained in the first byte of the VARPTR block. Then X takes the address of the string from the block (bytes 2 and 3). We have now obtained all the information we can glean from the VARPTR; Y is now useless. The rest of the program is a simple memory move, taking the contents of the string and copying them onto the text screen.

I hope you got all of that. There are infinite variations on what can be accomplished by passing strings to ML routines. In this particular example, you can have many different strings be displayed by only one routine! Note that the string in PRINT/BAS can be of any length, as the length is accessed in the ML routine by the VARPTR.

Another process I will now discuss is the simple passing of a pointer of the intended data. This is especially nice with lists or a bunch of variable length data such as graphics or sound. This is accomplished merely by sending the address of this data to the ML routine, for example: A=USR(&H5000). This would tell the ML routine that the data it needs is located at &H5000. Instead of directly sending one number, you have indirectly told WHERE the routine can find a lot of numbers. To try and make this clearer, following are two more programs, the BASIC driver and its dependent ML routine. The driver will pass the pointer to ten 16 bit numbers, in any order. The ML routine will, using a bubble sort method, sort the numbers by value, smallest will be first, etc. After the sorting is done, control will be returned to BASIC and the sorted list of numbers will be printed out. (see Figure C)

The beginning part of the program is very similar to the preceding one. It accesses the address of the list of the numbers and stores it for permanency. It then proceeds to sort the list (assuming 10 values) using a bubble sort. I am not going to go into the processes of the sort itself; it should be fairly self-explanatory and there is quite a bit of literature available to you on sorts and searches. Leave it to say that this is a very simple sort. The whole point of this program is to show you that a larger amount of information can be dealt with, as long as the BASIC program

passes what the ML program expects. A pointer is a very economical way to do just that.

Note that these types of routines are easier to crash (hence Janthom's concentration). The data must be as expected. If, in the first case, I had not passed a VARPTR, I would have had garbage for parameters and chaos as a result. The BASIC program and ML routines must be harmonious, and agree totally with each other. If not, well, you end up with crystal shards.

That's about it for this column. I'm not quite sure what I'll be dealing with for next time, but it's sure to be good. Perhaps I'll get off of concepts and start with practicalities. Wouldn't that be nice? Anyway, until next time, PREPARE THYSELF! ●

## IRONWOOD MANSION

Your godfather has suddenly disappeared from this world. This man, Norman Ironwood, was a highly eccentric millionaire and resided on a small island in a mansion of incredible size. As a provision of his will, before you can collect your inheritance, you must explore the mansion and retrieve the Ironwood family treasures. Be warned, even in this modern day and age, mysterious magics still exist.

This is by far, our hardest adventure ever, which rates this escape into the unknown a *TEM*. Quite a challenge for even the most seasoned adventurer. Logical reasoning and careful decisions will be needed to guide you through this elaborate maze of twisted abnormalities.

# Arak, Dragon of the North

Arak, Dragon of the North

A text adventure game.

Written By: Tracey Williams

32K ECB Minimum Memory Requirement

Type: PCLEAR1

CoCo I / CoCo II / CoCo III

This submission comes to us from Tracey Williams. Can you enter the lair of Arak, Dragon

of the North and stop his rampage? The caverns of his lair are filled with all manner of evil creatures and ancient traps. Will you be able to solve the adventure and defeat the huge Ice Dragon? Tracey doesn't seem to think so.

As an added hint to the brains behind the adventure, Tracey says she has done some correspondence with the Ice Devil and he has helped her with a few areas of the program design. If you liked any of the Ice Devil's previous submissions, you can feel his brand of programming in this difficult adventure. ●

## Warrior King

**NEW!**

Become RASTANN, Warrior King, on the quest to regain his rightful crown, hidden deep within a sinister land. Battle monsters, gain magic and weapons, and travel through harsh wilderness and dark castle dungeons in this medieval realm. From the creator of *Kung-Fu Dude* comes this awesome arcade game for the CoCo III! *Warrior King* uses the most detailed 320x200 16 color graphics and high speed machine code to vault you into a world of fantasy. Dare ye challenge the many perils ahead in order to become WARRIOR KING? Req. 128K CoCo III, disk drive, and joystick. Only \$29.95.

The epic adventure is back! The largest adventure campaign ever seen for the CoCo is again available! A total of six disks of intense graphic adventure will have you playing for weeks! Each section is a two-disk stand alone adventure, but all three together form an epic saga. Quest for the legendary Earthstone in the ancient dwelling of the dwarves while you enjoy the classic graphics that made this trilogy famous! Each adventure can be purchased separately for \$29.95, the lowest price ever, or you can purchase the entire set for only \$74.95! Req. 64K CoCo and disk drive.

"One of the best adventures I have experienced to date!" — 6/86 Rainbow review  
 "The animated graphics are dramatic, detailed, and excellent!" — 11/87 Rainbow review  
 "The adventure of a lifetime. Don't miss out!" — 7/88 Gamer's Connection review

## In Quest of the Star Lord

This is THE graphic adventure for the CoCo III! Unparalleled 320x200 animated graphics will leave you gasping for more! You quest for the Phoenix Crossbow in this post-holocaust world of science and fantasy. *In Quest of the Star Lord* is a full 4 disk sides of mind-numbing adventure! Req. 128K CoCo III and disk drive. Only \$34.95. Hint Sheet: \$3.95.

"A dynamite program! The best graphics I've seen to date on the CoCo III. You have to see it to believe it."

— 8/88 Rainbow review

## Kung-Fu Dude

An exciting arcade game. The BEST karate game ever created for the CoCo! Destroy opponents and evade obstacles as you grow ever closer to your ultimate objective. Spectacular graphics, sound effects, and animation! Req. 64K CoCo, disk drive, and joystick. Only \$24.95.

"The CoCo karate gap has been filled and Kung-Fu Dude does it excellently. I highly recommend it!"

— 2/88 Rainbow review

All programs CoCo 1, 2, 3 compatible, unless otherwise stated

## CHAMPION

Become a superhero in this unique 64K action adventure. Great graphics and sound effects! See 5/87 Rainbow review. Disk \$19.95.

## DRAGON BLADE

Another great 64K animated adventure! Can you obtain the enchanted sword to slay the evil dragon? See 11/86 Rainbow review. Disk \$19.95.

## WHITE FIRE OF ETERNITY

Enter the era of monsters and magic in this splendid 64K animated adventure! See 12/86 Rainbow review. Disk \$19.95.

Personal checks, money orders, and American C.O.D. orders accepted. Include \$2.50 for S/H. \$3.00 extra for C.O.D. orders. PA residents add 6% sales tax. Authorship and dealer inquiries welcome.

# FORMULA FOR ADVENTURE

*part IV*

*by: Jeremy Jurek - Editor/Publisher*

---

We've finally reached the end of the Formula for Adventure series, or have we finally reached the beginning? You decide. Anyway, this issue we're going to tie up some of the loose ends in programming your adventure. If I don't get to the command or area that you'd like to learn about in this issue, drop me a line c/o The Gamer's Connection and I will answer your questions. If space is available in upcoming issues, I will publish the questions and answers in an adventures forum of some sort. Well, it's time we got to work.

Last issue we talked about objects and four possible actions that might be done with them. They were: Look, Get, Drop, and Inventory. Before we got to those commands however, we had to answer six questions about every object in the adventure. The six questions are as follows:

- 1) What is the full name of the object?
- 2) What is the three letter abbreviation used to interact (ie. look, get, drop, etc.) with the object?
- 3) Where is the object found (situation number)?
- 4) Can you get the object (1 for yes / 0 for no)?
- 5) Is the object hidden or visible (1 for hidden/ 0 for visible)?
- 6) What does the object look like (full description)?

These six questions still apply, but don't hesitate to add more if the need arises. The additions could be anything from "Will it burn?" or "Is it magical?". Just keep in mind that you should

only ask the most important question that is common to the greatest number of objects. For example, if the only object in your adventure that will burn is a piece of wood, "Will it burn?" is not a question of all the objects. By simply adding a line that checks for the command "Build Fire" and also checks the player's inventory for the piece of wood, you would save quite a bit of memory, especially if you have one hundred or so objects.

With that behind us, let's move on to the new commands I have implemented in this issue. They are: Buy, Kill, Go, Throw, Open, Light, Search, Unlock, and Move. Above and beyond these commands are sequences of events that may take place as the adventurer enters a situation. Let's look at these special sequences.

## **Special Sequences**

As you glance over the listing of my program this issue, the first special sequence you come across is in line 140. This simply checks the player's current location "D" and the "FO" flag. The FO variable stands for Flashlight On. Stated simply, if the player is inside the house and the flashlight is off, the program will say "It's too dark to see!". Since 140 come before the situation display line 150, as soon as the player enters a room number greater than seven, the new display in line 140 is immediately activated. Line 380 makes it impossible for the player to move about in the dark by negating the only new exit to the east.

The next special sequence found in the program is in line 340. This is an undetectable sequence, meaning the player has no idea that it is happening. All it will do is move object number four, the house, into the current situation number provided the current situation is between two and eight. This enables the player to look at the house in any of locations two through eight without my having to create five separate house objects. There is another object movement section in lines 360 and 370, this shows another technique of object movement by moving the front door of the house from the porch to the entry hall and back again. Personally I prefer the first method for moving objects.

Line 350 is an action sequence. If the player goes east to the house without killing the old man on the porch, the player is shot and killed. The variable BD refers to Body Dead. For future reference, any variable ending with a D pertains to a character that can be killed. PD is the Peddler, BD is the body, and CD is the Counterfeiter.

In line 390 a special branch is called for in situation seventeen if the counterfeiter is not yet dead. It branches to 440, skipping over the movement section. This keeps the player in the room until either the player or the counterfeiter is dead. If the player types anything but "L", <enter>, or Kill Counterfeiter, the counterfeiter kills the player.

For every command except Inventory and GO, lines 440 through 460 will suffice. Line 470 takes care of Inventory while 480 takes care of GO. These won't fit in line 450 because the length of C\$ is not necessarily greater than six. As in "INV" or "GO HOU", the latter has a length of six and does not follow the rules in line 450.

Line 530 will branch to the 980, death by counterfeiter line, if the player types anything but "KILL COUNTERFEITER" or the three letter abbreviations.

If any of my explanations fail to enlighten you, just look at the hard copy listing of the program and by going slowly, step by step, you should be able to break it down into simple terms. Now let's move on to the easier portion of this program, the commands.

## **Commands**

### **Buy (Lines 760-770)**

This is the first command you encounter in the listing, but instead of using it as it should, I've thrown you a curve and by the time you finish reading this article, you should be able to alter it

to suit your needs.

Line 760, stated simply, responds to the player typing "Buy Flashlight" in the presence of the peddler.

Line 770 is the overall response to the player if he or she uses the Buy command in any but the previous special situation. The final line referred to in any special command section will always be the "cover all bases" line.

### **Kill (Lines 780-800)**

Line 780, broken down, does the following: #1 it checks to see if the player is in situation 2, #2 it checks the noun part of the input string for "Ped" to make sure the player is killing the peddler, #3 to see if the peddler is still alive and finally, #4 to check if the player is carrying the machete. The second half of the line updates the variables and tells the player that he or she killed the peddler. Line 790 does basically the same thing.

### **GO (Lines 810-830)**

By breaking down line 810, we see that it checks for the player to be in situation 3 and the noun to be "Hou". The player wants to go to the house. The line responds accordingly and changes the player's current situation number to 4. Line 820 is the same in purpose.

### **Throw (Lines 840-850)**

Line 840 is interesting because after all of the necessary room and object variables have been checked, the machete is removed from inventory and placed in situation 7. The object counter, K, is also reduced by 1.

Line 850, as in many adventures, sends all other Throw commands to the Drop section. So, if the player types "Throw Flashlight", it will respond with "You dropped a Sears Ultrabeam Flashlight.", that is, if the player had the flashlight to begin with.

### **Open (Lines 860-870)**

Line 860 simply checks a different variable than the rest, the OD variable. OD meaning Open Door. If OD is equal to zero, the door will be opened. Otherwise line 870 will tell the player the door is already open.

As a challenge to you, I have left the overall response to this command out of the program. It is up to you to add it. I'd put it at line 875.

### Light (Lines 880-900)

This is essentially the same as Open. Except the flashlight must be in the player's inventory to be turned on. In case you are still confused as to what the light command will do, it simply turns on the flashlight.

### Search (Lines 910-920)

This is getting easier to understand, isn't it? The only difference is that the small house key is safely tucked in room 99, until it is searched for on the piano.

### Unlock (Lines 930-940)

Line 930 makes sure the player is in situation 16, is unlocking the door, has the key, and that the door is locked. Then the direction to the east is opened up into situation 17.

### MOVE (Lines 950-960)

Line 950 is roughly the same as 910, the search line, except that once the trapdoor is found, the down direction is activated to situation 15.

You realize, of course, that I did leave quite a bit of this adventure underdone. It will work fine, but you could add commands like Push, Close and revamp the Buy command to acquire the flashlight.

While writing this, I couldn't stop myself from thinking just how easy the implementation of commands can be. As a matter of fact, the method I have shown you is so simplified that I expect you to improve upon it. Perhaps you too can come up with a method to eliminate or change the way nouns are checked, instead of the old G\$="Noun" in the command If-Then statements.

I do not profess to be an expert at writing adventures, I have simply given you the tools with which to write your own. If there are any specific questions you have concerning how to add or change existing commands, don't hesitate to drop me a note.

Good luck in your chosen task, I wish you well.

## VARIABLE LIST

I\$(X) = Situation description  
A(X,6) = Directions  
O\$(X) = Direction (North, etc.)  
R\$(X) = Single letter direction  
B\$(X,Y) = Object name, three letter abbreviation  
B(X,Y) = Question three through five, situation number?, get?, hidden?  
D\$(X) = Object description  
F\$(X) = Command verbs  
K = Current number of objects in Inventory  
X,Y,Z = For-Next loop  
D = Current situation number  
G\$ = Three letter noun  
C\$ = Command string  
E = Object flag, comma printed if E=1  
FO = Flashlight, off = 0, on = 1  
PD = Peddler Dead, no = 0, yes = 1  
BD = Body on Porch Dead, no = 0, yes = 1  
CD = Counterfeiter Dead, no = 0, yes = 1  
OD = Open Door, no = 0, yes = 1  
UD = Unlock Door, no = 0, yes = 1

## PLOT

Welcome to the House of Murder.

You are a young thrill seeker just returned home from a crazy adventure in the Sahara. After returning to your modest apartment, you call your sweetheart. Her landlady answers the phone and tells you that she disappeared two weeks ago, somewhere near the old Larson place. "The Larson place!" you exclaim, "but that place has been empty for years! Not to mention that it is reported to be. . . haunted.", your voice trails off and you feel that familiar feeling as your heart beats faster and your blood races. Your task before you, enter the Larson place and find your girlfriend if she is there. Armed with your trusty machete "cutter", you prepare to seek out the Larson place. The adventure begins with you, our hero, standing on a dirt road somewhere near the house. ●

## Hints & Tips

Here are some of the most commonly used verbs in adventures today. This is by far not a complete list but perhaps it will help you in times of trouble.

Next issue Hints & Tips will return with more questions and answers to your gaming problems.

APPROACH	ENTER	LOOK	SING
ASK	EXAMINE	MAKE	SIT
ATTACK	EXIT	MOVE	SLEEP
BREAK	FEED	NORTH	SMASH
BRIBE	FIND	OPEN	SMELL
BRIDLE	FOLLOW	OUT	SOUTH
BUY	FORCE	PARRY	SPEAK
CALM	FREE	PET	STAND
CALL	FRIGHTEN	PLAY	START
CAST	GET	POLISH	STEAL
CATCH	GIVE	PRY	STRIKE
CLEAN	GO	PULL	SUICIDE
CLIMB	HELP	PUSH	SWEEP
CLOSE	HIDE	PUT	SWIM
CROSS	HIT	QUIT	TAKE
CURE	HOLD	RAISE	TALK
CUT	HUG	READ	TEMPT
DANCE	JUMP	REMOVE	THROW
DIG	INVENTORY	RIDE	TICKLE
DISMOUNT	KILL	ROCK	TURN
DIVE	KISS	RUN	UNLOCK
DOCK	KNOCK	SAW	UNTIE
DOWN	LAY	SAVE	UP
DRAW	LEAD	SEARCH	USE
DRINK	LEAVE	SELL	WADE
DROP	LIE	SHAKE	WAVE
EAST	LIFT	SHINE	WEST
EAT	LIGHT	SHOOT	WEAR
END	LOCK	SHOUT	YELL

## THE POWER STONES OF ARD

### THE QUEST FOR THE SPIRIT STONE

You're tired, you're hungry, not to mention you're badly injured. No one in town seems to want to talk to you. Your magic sword has stopped glowing, the room is dark, you're out of spells, you can't get your wand to work, you won't swear to it but you may be lost, you have no idea what that last puzzle meant, and you hear something large moving just beyond the only door. The old sage warned you there would be days like this!

"QUEST FOR THE SPIRIT STONE" is an Adventure that will keep you playing for hours. It features single keystroke commands, 16 color graphics, 100% Hi-Res graphics screens, full game save, extensive playing area, level advancement, and the disk is not copy-protected. You choose your character's name, race, sex, and ability scores. The use of arrow keys simplify movement. This one is easy to play but a challenge to complete!

*"Fun and challenging . . . should find its way into many CoCo 3 software collections."*

# Spell Master

Spell Master

A Dungeon Master Utility

Written By: Raymond Mathew Robertson

32K ECB Minimum Memory Requirement

CoCo I/CoCo II/CoCo III

This Dungeon Master utility can be quite useful. If you are trying to create a scroll for AD&D™ scenario, you can use Spell Master to choose a random spell from your choice of class. Some simple modifications can be made to customize this program to any use you may have for it. Perhaps you'd like to choose the level of the spell also, the program is very simple to understand so don't hesitate to modify it. ●

*Editor's note: This program would go nicely with the AD&D™ Character's Companion, see review this issue.*

# DYNAMIC COLOR NEWS (DCN)

## TANDY COLOR COMPUTER MAGAZINE

We are now in our fifth year. The purpose of DCN is to provide instruction on Basic and Machine Language Programming, Computer Theory, Operating Techniques, Computer Expansion, Product Reviews, New Products plus provide answers to questions from our subscribers. Included in each issue are Basic and Machine Language programs plus editorials on various computer subjects. Did you know that the joystick port can be used for many hardware applications such as digital voltmeters and thermometers? We showed how to build these in recent issues. We ran a series showing how EPROMS can be used for containing data and programs. Due to popular demand a Ham Radio section is included. DCN is written in a non technical style and is designed to be a learning tool.

### Some topics covered are:

- \* CoCo 3
- \* Graphics
- \* Vectors
- \* ASCII
- \* Interrupts
- \* Random Numbers
- \* Ramdisk
- \* Data Sorting
- \* Memory Map
- \* Word Processing
- \* Morse Code
- \* Joysticks
- \* Thermometer
- \* Page -1
- \* Graphics
- \* Forth
- \* OS-9 & BASIC 09
- \* Uninterrupted power
- \* Stacking Programs
- \* Memory Expansion
- \* Machine Language
- \* Restoring Programs
- \* Editing Statements
- \* Basic Programming
- \* Architecture
- \* CoCo Heat Problem
- \* Hardware Interface
- \* Video Reverser
- \* EPROMS
- \* Ham Radio
- \* Assembly Language
- \* C

### Some of the programs are:

# (BASICly Speaking)

## Topic: CoCo Audio - The PLAY Command

*By: Randy Larsen Jr.*

Well, let's jump right in and continue where we left off last issue. This time I will cover the remainder of the parameters involved with the PLAY command.

Octaves are actually the tone of the music being played and the concept of octave changes is most easily noted by keying in a few examples and getting the feel for these changes. The syntax for the Octave parameter is by separating the change with semi-colons (;) and preceding a number (1-5) by a capital letter O.

Type in : `PLAY "CDEFGAB" <Enter>`

After listening to this a few times, type in:

```
PLAY"CDEFGAB;O1;CDEFGAB;O5;CDEFGAB"
<Enter>
```

After listening to the second example several times: I am sure you will be able to at least grasp what the Octave change parameter can do for your music. The Octave default is two (Middle-C) on the Color Computer, so keep this in mind when selecting the changes you would like to make.

Well, the next parameter is even simpler than the previous, VOLUME! Remember now, the Volume parameter is not only useful in varying the noise output from your computer - that you can do by adjusting your TV volume or external speaker volume. The Volume parameter is there for you to be able to constantly vary the output level within the song. Using this option, you can easily produce hard-notes, fadeouts, and other quick, or on the other hand, lingering volume changes. The syntax for Volume is the same for Octave, except for preceding a number (0-31) by a capital letter V (and remember to set the change apart using semi-colons. Trust me, it makes music editing much easier). The default value for Volume is right in the middle, at 15.

For example, type in:

```
ZZS="03;V31;L10;A;V8;A;V1;A"
```

Rests are a very important aspect of music composition, and thank Tandy for using a very

simplistic but powerful way of implementing rests. Using the same numeration system I discussed last issue, you can place rests equal to the corresponding notes (whole notes, half notes, etc., all the way to 1/255th notes). The syntax for this is simply placing a capital P between semi-colons and following the P with a number from 1 to 255. If you do not have last issue, here are the most commonly used rests.

1 = Whole note rest

2 = Half note rest

4 = Quarter note rest

8 = Eighth note rest

16 = Sixteenth note rest

Tempo is the speed that the combination of notes is played at. While tempo is something that is actually developed by the musician, a computer is stupid; so, we try and compensate - although the Tempo parameter is difficult to work in on timing your music, you just have to do the best you can. The Tempo parameter is set in the same way as the others except by using a T followed by a number between 1 and 255, with the default being 2. To get a feel of Tempo, try this...

Type in: `PLAY "CDEFGAB" <Enter>`

...and now type in:

```
PLAY"CDEFGAB;T1;CDEFGAB;T5;CDEFGAB
;T250;CDEFGAB"
```

Different, eh? Again though, like I said earlier, finding the right time for your composition will take a lot of trial and error.

Well, that covers all the parameters for the CoCo PLAY command, and I hope my fuller explanations made thing a bit clearer for you novice musicians. The last thing I would like to cover this time would be the execution of sub-strings within a BASIC program - real easy. All this involves is assigning a grouping of parameters to a string variable and being able to execute and re-execute this series whenever you

want. This is useful if you want to play the same set of "music" over at different points (Maybe a sound effect in a game). The simple program below should explain things easily enough.

10 X\$ = "CDEF;V31;CDEF;T5;CDEF;V15;  
CDEF;V5;CDEF;V1;CDEF"

20 Y\$ = "CFCFCF;XX\$

30 PLAY Y\$

Can you see how the music in line 10 is added to line 20 and played in line 30? If not, read it through a few times, taking note of the end of line twenty and it should come through clearly.

Well, in closing I just want to add that I advise you to read the final section on the PLAY command in your Extended Color BASIC manual to get a grasp on a somewhat new and useful way of using mathematics in your music. I don't think I could explain things any clearer than they did there. Take care, and best of luck with your composing!•

# HELLO/BAS

A DISK DIRECTORY UTILITY by Roy C. Pierce (c) 1988

## WHAT WILL HELLO DO

Display Alphabetically Sorted Directory of any Drive. (0-3)	Easy to Read Display.
Print a Hardcopy of Sorted Directory w/Date and Disk Name	ALL BASIC so it won't Mess up your System.

# The Gamer's Connection! ON DISK!

Are you tired of typing in those incredibly LOOONG listings found within your favorite Color Computer magazine? Do you shiver when you look at other magazine's program disk prices? Well, if so, then *The Gamer's Connection* has just what you have been looking for. *The Gamer's Connection* is filled with quality gaming and non-gaming programs every issue. We are offering a special price to our subscribers of only \$7.95 per disk if ordered separately or you can simply subscribe to *The Gamer's Connection* on disk for only \$39.95!! That's for six disks filled with games, adventures, utilities and more! We also plan to throw in other programs not found within the magazine (due to lack of space or whatever). Just think, only \$39.95 can save you all that time and all that money and give you SO MUCH FUN!!

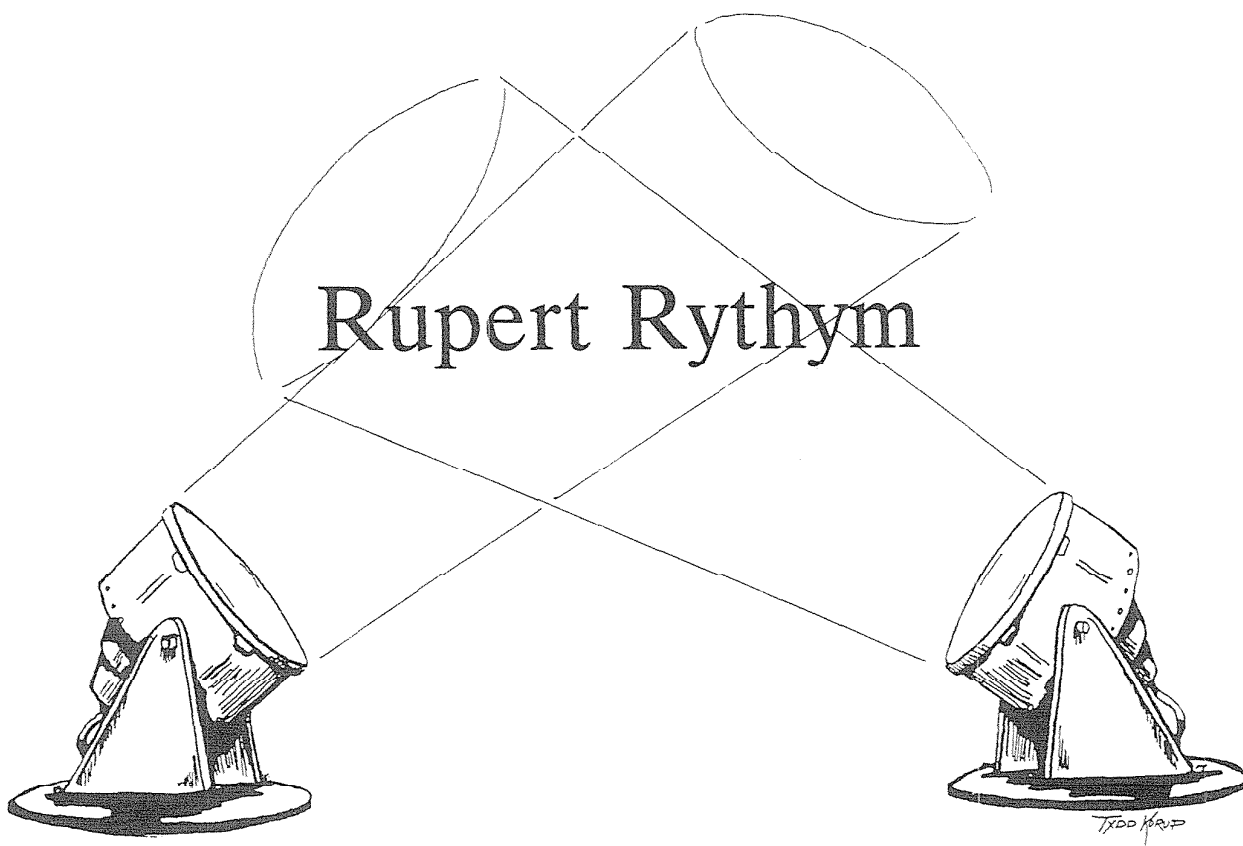

The Gamer's Connection On Disk - Now only \$39.95 per year !!

The Gamer's Connection On Disk - Now only \$7.95 per issue !!

Send your Check or Money Order to: *The Gamer's Connection - On Disk*

P.O. Box 102

## Rupert Rythym

Written by: Nicholas Marentes

Distributed by: Game Point Software

© Copyright 1987, Nicholas Marentes

Class: Arcade Game

Price: \$24.95 plus \$2.50 S/H

Requirements: 128K Color Computer III,  
and one disk drive.

Digitization seems to be the wave of the future. With all the audio digitizers flooding the market, it seemed only a matter of time before someone did a rush job and wrote a game using stupendous sounds and not so great graphics. Well, whoever that person is, I feel sorry for him because Rupert Rythym by Nicholas Marentes combines fantastic digitized percussion with the incredible graphics of the CoCo III.

I have to admit though, that even if the graphics were low resolution garbage, I would still be amazed with the percussion of this new game. I generally do the majority of my programming on my Amiga (Commodore) along with the greater extent of my game playing. My CoCo III was originally bought for my son to use as a

learning and entertainment center, but since Rupert Rythym entered our home all I hear is "Dad, can I use the computer?" My son is disappointed because now my Amiga is collecting dust and our CoCo III is dominated by yours truly. Rupert Rythym has sparked a curiosity in me and now, unfortunately for my family, I spend most of my free time exploring the power of the CoCo III. It amazes me how a 6809 chip can compete with my Amiga which has, I believe, three chips; one for logic, one for graphics, and one for sound. Not to mention the fact that my CoCo cost about \$400 total, including a disk drive while my Amiga cost me \$1000+.

With all of the high quality games I have for my now unused Amiga, Rupert Rythym has equalled all of them in sound effects and tied with many of them for great graphics. I'm sorry I made a \$1000 mistake with my Amiga, but I am excited about the power contained within this tiny white computer.

Who is Rupert Rythym? Rupert is a song writer, he writes mainly percussion songs. The instruction foldout begins with Rupert waking up to answer the phone, it was his manager Bill Boombox calling to tell him that "Hardrock Harry" had stolen Rupert's musical manuscripts. Harry plans to release Rupert's song under his name. His entire future is at stake, Rupert has to get the manuscript back!

Your job is to help Rupert collect all of the stolen notes which are scattered throughout "Music Box Records". This isn't just a gathering mission, however, there are security robots in almost every room. There are two types of security robots to avoid. DROids GuardS or DROGS which patrol the areas Rupert can walk and the Scanner Ball which floats in the air relaying information to the DROGS.

Rupert has two ways in which to protect himself. He has a pocket full of fire crackers which he can use to distract and confuse the DROGS and in his other pocket is a pack of Super Pep Energy Gum. Rupert has ten lives and each of these ten Ruperts has a pack of gum. Each pack holds five pieces of gum. Chewing a piece of gum makes Rupert invisible to the Scanner Ball and DROGS.

Each room of "Music Box Records" has a number of flashing platforms and elevators. You must guide Rupert over each platform to change its color, using the elevators to carry him up and down to different platforms. When every platform in a room has changed colors, Rupert gets a musical component. After each of the sixteen components have been retrieved, you win the game and Rupert will play his first live concert.

The game actually begins in the Master Hall of "Music Box Records". The Master Hall contains sixteen doors all labeled from A to P. Behind each door is a room that contains one of the stolen musical components. After a component is retrieved, Rupert is returned to the Master Hall and on the door of the room he was just in appears a flashing musical note. Rupert can then move on to any room left and search for more components. When all of the components have been retrieved, you must help Rupert swap notes between doors so that each component is on the appropriate door. Simply put, the A component must be on the A door and so on. Once all of the components are properly placed, you may select the play option on the control panel. When Play is selected, Rupert launches into his first live concert, shown on screen!

This high-resolution, high quality arcade game is a gem, I urge you to buy a copy. You won't regret it. Rupert Rythym has some of the best animation and sound that I have ever encountered, it rivals all of the other games on the market today. I can't tell you enough how extraordinary this game is. It's well worth the money. Yes, as you might have guessed, I am a Rupert Rythym junkie. I can't stop playing it and neither will you. ●

# AD&D Character's Companion

Advanced Dungeons & Dragons™ Character's  
Companion

Written By: Charles A. Hager, Jr.

Distributed By: Gimmesoft

© Copyright 1988, Charles A. Hager, Jr.

Class: AD&D™ Utility

Price: \$24.95 + \$3 S/H

Requirements: CoCo III and one disk drive

I have been a devoted disciple of Dungeons & Dragons™ and Advanced Dungeons & Dragons™ for more than eight years. Although I never envisioned myself reviewing anything like the AD&D™ Character's Companion when I applied as a reviewer, I was very excited when Mr. Jurek called me personally and asked me to put this utility to the test with my "special" talents. This was one task I relished in taking on.

To begin with, the package came with two disks and a ten page instruction manual neatly packaged and protected from the ravages of the U.S. Postal Service. The utility itself comes on two disks and occupies three disk sides, that seems like a lot, but if you've ever played the game yourself, you realize just how much information is packed into The Player's Handbook and The DungeonMaster's Guide. I'm wondering just how Charles Hager kept it down to three sides. He has converted quite a bit of information for use on my little CoCo.

Without writing a book on the subject, the best I can do is tell you what is contained in the package and perhaps a little about what the options can do. After booting up with a nice title screen, the main menu comes into view. The options are:

- 1 - Create a character
- 2 - Buy from the normal items
- 3 - Buy from the magic items
- 4 - Buy spell materials
- 5 - Enter a character from paper
- 6 - Update your basic item list
- 7 - Update your magic item list
- 8 - Update your spell components

9 - Update a character's statistics

A - End the program

S - Switch to secondary disk

The secondary disk is full of options like creating spell books, printing an inventory, creating the various necessary files, and killing a character file.

If you play AD&D™, you can see just how valuable this program is. If you are new to AD&D™, I will endeavor to simplify the major components of the menu.

Number 1, create a character allows you to choose vital statistics like strength, intelligence, wisdom, etc. You can choose your race and alignment and also what class you'd like to be: Cleric, Fighter, Magic-User, etc. Numbers 2 through 4 allow you to purchase materials for your character provided you have the necessary funds. Number 5 is very important, it allows you to enter and keep on file a character you may have created and used without the aid of the program. Numbers 6 through 9 are helpful because they let you edit your character and add or delete information based on your adventures.

The documentation that comes with this package does a very fine job of explaining each and every aspect of the utility. So if my descriptions have fallen short in your eyes, by all means, purchase the product and see for yourself just how simple it is to use and how well documented it is. I have personally found this package to be everything I had hoped and more.

If you are an expert player or just a beginner, the Advanced Dungeons & Dragons™ Character's Companion is for you. Most of you have probably tried to create your own simple version of this valuable utility but for accurate record keeping and the ability to control everything about your character, nothing on the market today beats this companion. ●

# Buried Buxx

Buried Buxx

Distributed By: JR & JR Softstuff

© Copyright 1988, JR & JR Softstuff

Class: Arcade Game

Price: \$19.95 + \$3 P/H, CA residents +6%

Requirements: 32K ECB CoCo I, II, III and disk drive

JR & JR Softstuff is a relative newcomer to the Color Computer community. The products sold by JR & JR are the products of two partners, so while the company may seem new to you, these two gentlemen have been programming for some time. What I am here to tell you about is their game entitled Buried Buxx. This is a fast paced arcade game.

You are the pilot of a helicopter. Your job is to retrieve the buried Buxx. The buried Buxx is money buried in the ground. To recover the money, you must fire your guns at the ground to dig a hole toward your objective. Once the hole has been created, center the helicopter above the hole and descend to pick it up. After your helicopter has been loaded with money, simply fly back to the landing pad and drop it off. Once that is completed, you may go after more money. If you run out of shots, just go back to the launch pad and land. Landing your helicopter recharges the guns.

Sound simple, right? Wrong! You see, while you are playing around digging holes for the money, there is a jet plane flying overhead across the screen. This plane's mission is to either drop a bomb on the hole you are digging and cave in the sides to fill it back up or drop the bomb on you. Not only that, there are a number of hidden bombs underneath the ground, so just digging for money you may launch a missile right at your copter.

At the start, the money is plainly visible buried deep within the earth and all you have to do is get right over the \$ sign and shoot away while at the same time dodging bombs that are falling from the plane and using lightning quick reflexes to dodge hidden missiles. This is not an easy game. Guess what happens after you get all of the money on a screen? You go to an even harder level of play with more money and faster missiles.

Once you receive this game in the mail from JR & JR Softstuff, you will have more problems playing it than any game you have ever encountered. It will load perfectly and the instruction manual is nice, but that's the problem. This game works so well that I haven't been able to get past the second level. It is hard! If you like a challenging game, this may even be beyond your skills. I considered myself an expert player of video games until this one came along. In some cases it was just too fast for me. That's the game's hook, it is fast. Perhaps the fastest game I have ever seen. The company's ad says that it is a BASIC/ML hybrid, I am inclined to believe that 99% of this game is written in Machine Language. I can't even begin to describe the speed.

The game is quite good although, as with any product, there are a few shortcomings, well one shortcoming anyway. Namely the graphics. To achieve the level of speed in this game, it seems that the author had to use the PMode 4 of the earlier CoCo's. The resulting game is one that looks like it was written in the very early days of the CoCo. At first it really put me off to the game, but once the action begins, great color is not necessary. The game is written in black and white.

Buried Buxx may not be a great looker, but it is the fastest paced game I have ever seen outside an actual arcade. It is the fastest game I have ever seen for the CoCo to date.

JR & JR Softstuff bill themselves under the phrase "Can't find it? We'll write it!". This is a big statement for a newer company to make, but I think it shows a great devotion to the consumer. Within the folder that Buried Buxx comes in is also a questionnaire for the purchaser to fill out. To ensure a good response from the user, the questionnaire also serves as a warranty for the product purchased. With the questionnaire comes a self addressed stamped envelope. Just drop in the questionnaire, seal the envelope and mail it. What could be easier? JR & JR Softstuff have the edge on many game manufacturers by atleast trying to produce what the public wants or needs, not what they think it needs, what the questionnaire says we need. A commendable effort and I wish JR & JR Softstuff all the luck in the world in their new venture. It doesn't seem that they can fail, Buried Buxx is quality software at a most reasonable price. ●

# Dragon Blade

Dragonblade

Written By: Glen R. Dahlgren

Distributed By: Sundog Systems

© Copyright 1986, Glen R. Dahlgren  
and Sundog Systems

Class: Graphics Adventure

Price: \$19.95

Requirements: 64K ECB CoCo I, II, or III and disk drive.

By now, the name Glen R. Dahlgren is synonymous with action and adventure games. I would like to take this time to tell you of one of his earlier works, Dragonblade! Rather than try to rework the remarkable scenario of this adventure, I will quote from the author himself.

"There was a time of sword and sorcery, when only the bravest of men could destroy the foulest of beasts. This is that time. You are Faernorn, a lad of the half-elf village of Dragonseed, named as such for the ever-present shadow of the Dragon of the Mountain. For years the Dragon has slept, undisturbed, and within this time the village has know a time of peace and tranquility."

"Recently, however, the Dragon has awoke and terrorized the village in a succession of raids which have left much destruction and many dead. Within the most recent attack, Silron, your father and chief of the village, was slain. You are the successor to the office and the duty of somehow stopping the threat of the Dragon has fallen to you."

"Gilrick, the village elder, had approached your father earlier and spoken of a legendary sword, the Dragon Blade which was forged for the ancient Wars of Fire. This blade is said to be the only object powerful enough to destroy the Dragon of the Mount. Your father, though, was a stout-hearted traditionalist and was set to finding a way without leaving the village. He died with that thought."

"You now realize that you must quest for the Blade. It is now your only hope. Receiving an ancient parchment from Gilrick, you find it leads you to the forest of Lore, the home of a witch whose nature is unknown. It is from here that your quest begins."

From the mind of a 'nan who is in the ranks of

Scott Adams, that was the introduction to the adventure. An adventure that will live on and surely become one of the classics.

While the CoCo III does not make the game particularly incredible to look at, especially when compared to Warrior King, it is an accomplishment in the graphics of the CoCo I and II. There are even animated routines contained within the adventure. I remember the scene of a witch stirring her brew while a candle flickers on a nearby table.

I am particularly impressed with the screen as a whole, the screens are created within an archway surrounded by gargoyles or demons. The effect is not unlike looking into a television set. I find this whole idea pleasing to the eye, the whole screen does not flicker and bother the eyes when you leave a room, just the portion contained within the archway changes.

The graphics aside, this is one of the most challenging adventures I have ever played. Questing for the Dragon Blade was fantastic! If you do not own a copy of this game, you are missing out on one of the best adventures around.

I am not trying to convince you to buy this adventure, you have enough sense to do that on your own. What I am trying to do is to give you my views and opinions in the hopes that by looking through my eyes, you will be aided in your decision. Just remember, when you buy an adventure from Sundog Systems, you are buying a piece of history. Glen R. Dahlgren is one of the few last pioneers in the Color Computer game field. By patronizing Sundog Systems, you will enable him to provide us with even more spectacular adventures than this.●

# The Fourth Rainbow Book of Adventures

The Fourth Rainbow Book of Adventures

Distributed By: Falsoft Inc.

© Copyright 1988 Falsoft Inc.

Class: Publication

"The Fourth Rainbow Book of Adventures!", I exclaimed excitedly. My package from The Gamer's Connection Review Dept. had finally arrived. My hands fairly shook as I carried the shiny new parcel to my CoCo III.

Well that's what you'd like to hear, isn't it? How great this product is, well, maybe this review isn't for you. Unlike some reviewers I hold no loyalty to either this publication or any other and its time someone told the whole story. Please, whatever you do, do not take my denial of bias to mean that I dislike this product, read on if you can handle the truth.

First of all, the product and disks come in a nice packaging, the price a mere \$10.95! for a soft cover book? Anyway, the disks for \$14.95! what a bargain. It would seem that if a company had a contest like this one, they'd expect to pay part of the price out of their own pocket, not make the customer cover the entire expense. So, now we have a total of \$25.90 plus shipping or whatever. It just seems a tad pricey. Enough of the cost, on to the real goodies.

I do like an occasional text adventure so with the prospect of fourteen of them in one package it seemed that I would find at least one that I might like. Before I shoot off on a tangent, I'll list the games and their authors with a little synopsis of the basic storyline.

**The Park of Mystery** - Mike Anderson. Overhearing a secret transmission on your CB you decide to go up against the bad guys in a race for \$500,000 in stolen bank loot.

**Captain Rodgers** - Richard Kottke. The victim of amnesia and hopelessly lost in a dismal swamp, can you survive and find the answer? The only clue you have is the name Captain Rodgers.

**General Panic** - Andre Needham. Your mission, steal aboard the USS Techna and stop the terrorists before they can unleash their antimatter payload.

**Aandark II** - Fred D. Provoncha. Fly down to Aandark, planet paradise and destroy the enemy weapon that spells doom for the terran fleet dispatched to stop the invaders.

**Term Paper** - Charles Farris. Find the pieces of your stolen term paper before the final deadline.

**Ghost House** - David Bartmess. Enter the house of Greymoor and search for the treasures rumored to be within, but watch out for the ghosts also reported to lie in wait for the unsuspecting treasure hunter.

**Superspy** - Jeff Johnson. An international spy, you are left alone to figure out the story of the adventure.

**Intrigue** - Jeff Hillison. Can you, the last spy in Berlin, alter the outcome of World War II?

**SDI: Countdown to Doom** - Dr. Eugene Carver. Spies have taken over NORAD in an attempt to sabotage the Star Wars defense program. Unless you can regain control of the mountain, our defense will lie dormant while a foreign country launches a massive attack.

**House Adventures** - Eric Santanen. Lost in a 71 room mansion, can you ever hope to leave?

**Operation: Ocean Master** - Ken Lie. Dying fish on the east coast lead you, a master spy, on a wild adventure to save the fish and possibly the world.

**The Earth's Foundations** - Paul Ruby, Jr. A 3-D sword and sorcery adventure where you must enter a newly formed crevice in the earth and investigate.

**The Parlog Building** - Tio Babich. Escape from the building and the authorities who sought to detain you for selling cocaine instead of the soap powder your company usually sells.

**Life: An Everyday Adventure** - Stephen Berry. Live out real life as you wake up late for the reunion, with a hangover and your water has been turned off. With a start like that, why bother? Because this is real life.

Well, now you have a little information to go on. For now I'll drop the "I hate everybody routine" and give you the scoop. I actually liked most of the adventures. Yes, I know I sound hard to please, but this package had all the aspects I was looking for. What I couldn't find in one adventure I found in another and overall, I am impressed. To those judges who spent their time sifting through the junk to pick these winners, I take my hat off.

The only adventure I wasn't impressed by, wild

# Good Games Trio

Good Games Trio

Written By: Roy C. Pierce

Distributed By: RCPierce Software

© Copyright 1988, RCPierce

Class: Strategy Games

Price: \$19.95

Requirements: 32K ECB CoCo I, II, III

The Good Games Trio by RCPierce Software is just what the doctor ordered. How many times have you tired of the old arcade shoot-em up games? Oh, I know some of you out there will never tire of them, but a few of us become bored with the same old action games. After a while, they lose their appeal and in many cases, their identity. Have you ever forgotten which games had a neat feature all to itself while trying to describe it to a friend? Maybe you forgot the name of the game because it lacked any distinguishable personality. Enter into the picture The Good Games Trio. This is one set of games for your CoCo that will never lose their identity. The games in this package have stood the test of time, up to hundreds of years.

The games are: ADI, Othello, and Connect Five. If you have any experience with any of these games, you may be saying to yourself, Othello? that's a stupid game, I used to play it but... That's exactly what I said when I received the games. After loading up the games and playing them with a friend for a few hours, the old familiar pounding of my heart could be heard as the pace quickened and these mind crunching games took their toll. We have all played games like these and for some reason or another, we simply stop playing them. It's not because we actually disliked them, we just lost our partner or something of that sort. Your mind is probably hungry for the challenge that these games present just like mine was, only I didn't know it. You have the opportunity to grasp the past and once again take up the encapsulation of the games themselves.

## ADI

ADI is a game that originated in the desert of Africa. Originally it was played with camel dung, camel chips, camel droppings, whatever. The game board comes up on a graphics display in black and white. There are two rows of six columns apiece. The top row is player one and

the bottom row is obviously player two. Each column contains four tokens. The object is to distribute each column of tokens clockwise around the board. If the number of tokens you choose is large enough to take your pieces to the edge of the board, the next token will be passed over to the opponent's side of the board and added to his tokens. When this is done, a capture occurs. The game is won by capturing all of your opponent's tokens. As with the other two, this game is very high in strategy and will take some time to complete if you are up against a skilled opponent.

## OTHELLO

Many of you have heard of Othello, for those of you who have not, I will elaborate. While the original version of Othello is played on a 12 X 12 grid, this version is played on an 8 X 8 grid. This grid is smaller, the reason being, the author did not wish the players to take as long as two days to play a game. With the grid reduced, the game is significantly shorter with virtually none of the playability lost. In other words, against a skilled player, you will be hard pressed to win.

The game of Othello is played with black and white chips, tokens in this case. On player is white while the other is black. The game begins with four tokens in the middle four squares of the grid. The upper row of two are white then black and the lower row is the reverse. The object of the game is to surround the opposing player's tokens with yours, thus changing the color of his or her tokens. For example, if there is a horizontal row of tokens with the first token being black and the rest being white, and a black token is placed at the opposite end of the row, the entire row now becomes black. This game saves us the trouble of turning over the captured chips and changing their color. It is by far my favorite game of the trio, although I consider them all of very high quality.

## CONNECT FIVE

Connect Five is a more advanced version of the home game, Connect Four. The board is now flat instead of vertical as in Connect Four, but the game is fast paced and fun for the whole family. Very simply, the object is to place five tokens of the same consistency (hollow or solid) in a row, either vertical, horizontal, or diagonal. This is not as easy as it may sound, you must constantly defend your position by thwarting your opponent's efforts to do the same. While countering his efforts, you must also be on your guard against his plotting. This is a difficult game to be a consistent winner of. If you like the home game, this is a step above.

*The Rainbow, Falsoft, Inc., The Falsoft Building, 9509 U.S. Highway 42, P.O. Box 385, Prospect, KY 40059. (502) 228-4492.*

## Trio

*(continued from page 48)*

The Good Games Trio is a break from all of those worthless arcade games cluttering up your library. If you must play the arcade games, I must tell you that quick reflexes are not the only thing worth playing for. These games expand the mind and in my case, I am proud to review these welcome additions to the Color Computer realm.

The games are recommended for anyone over the age of 10. You don't have to be an intellectual to play these games, they take no more skill or knowledge than does a game of checkers. They are easy to play, but as I have already said, are hard to win especially against a skilled player. Can you win? ●

## Coming Next Issue!

Fiction bordering on reality, Catacomb by Henry Melton. The ultimate in online games, journey through the catacombs with Lunae, in her quest for riches. Face terrifying monsters and watch as she battles the mighty Tor beast, a creature no one has ever defeated.

The only twist is that Lunae is actually Judith, a high school student, who is playing Catacomb through her home computer. Any treasure that Judith finds can be converted into real money in the outside world. If you are skilled, you could actually be paid to play and win the game.

This is the most interesting story that we at The Gamer's Connection have ever encountered.

Next issue you will also be able to welcome two new columns. The first by George Aftamonow, entitled Gamer's Graphic Niche, which will enlighten you to the graphics housed within your CoCo's I, II, and III. The second is by Roy Pierce of R.C. Pierce Software and he is available to answer your questions on BASIC and graphics. He is quite knowledgeable and should prove quite valuable in the future to solve some perplexing dilemmas.

Before The Gamer's Connection came along, Adventureware Products produced many adventures. Next issue the actual BASIC code for their first Advanced Dungeons & Dragons™ type adventure entitled Cirindoloth will be published. If you choose to play, if you dare to play, you will be forced to battle magical creatures, quest for magic, and ultimately battle Cirindoloth himself. Will you survive?

Glen R. Dahlgren will also be back next issue with another fantastic episode from the life of Janthom Vore.
