Tired Of Your GENERAL LEDGER?

VERSA- LEDGER

- ★ THE ULTIMATE PERSONAL CHECK REGISTER
- ★ A PROFESSIONAL ACCOUNTING SYSTEM
- ★ A PERSONAL FINANCIAL MANAGER
- ★ A SMALL BUSINESS ACCOUNTING SYSTEM
- ★ A COMPLETE GENERAL LEDGER

FOR YOUR TRS-80 MODEL I, II, III or COLOR COMPUTER • APPLE II • I.B.M. • XEROX • ATARI
ALL MICROSOFT BASIC COMPUTERS

HOW IT WORKS

VERSALEDGER is a complete accounting system that grows as you or your business grows. To start, your **VERSALEDGER** acts as a simple method of keeping track of your checkbook. Just enter your check number, date and to whom the check is made out to. As you or your business grows, you may add more details to your transactions account number, detailed account explanations, etc.

- **VERSALEDGER** can give you an instant cash balance at anytime. (IF YOU WANT IT TO)
- **VERSALEDGER** can be used as a small personal checkbook register. (IF YOU WANT IT TO)
- **VERSALEDGER** can be used to run your million dollar corporation. (IF YOU WANT IT TO)
- **VERSALEDGER** prints checks. (IF YOU WANT IT TO)
- **VERSALEDGER** stores all check information forever. (IF YOU WANT IT TO)
- **VERSALEDGER** can handle more than one checkbook. (IF YOU WANT IT TO)
- **VERSALEDGER** can be used to replace a general ledger. (IF YOU WANT IT TO)
- **VERSALEDGER** HAS AN ALMOST UNLIMITED CAPACITY
 - (300 checks per month on single density 5¼" disk drives such as the TRS-80 Model-I)
 - (500 checks per month on the Apple II)
 - (2400 checks per month on the TRS-80 Model III)
 - (6000 checks per month on the TRS-80 Model II)
 - (3000 checks per month on single density 8" CP/M)
- **VERSALEDGER** will soon have an add-on payroll package. (IF YOU NEED IT)

— CAN BE USED WITH 1 or MORE DISK DRIVES —

INTRODUCTORY PRICE

ON THE COVER.

A computer user is relieving his frustrations by using the new H&E Computronics, Inc. Versaledger Program. The Versaledger represents the first in a new generation of software to be released by Computronics. Versaledger is well documented and made with the beginning computer owner in mind. Although geared toward the beginner, the Versaledger can be expanded to replace any of the present complicated general ledger programs (see inside front cover for additional information).

BITS AND BIECES

Howard Y. Gosman

Software Catalogue #8

Our latest software catalogue is now available and will be sent free to any new or renewal subscribers on request. It is 64 pages long and lists hundreds of software products for all models of the TRS-80 computers. Be sure to get your copy soon!

The variety and quality of software products for the TRS-80 computers are truly amazing. Considering that the machines are only a few years old, we have really covered much ground since this publication was founded. At that time, over three and one-half years ago, you had to struggle to find any software that would do what you wanted. Now you have many products to choose among, and the

important question becomes more how to get the greatest value for your money. We have evaluated every software product that we sell, and we believe that we carry those items that are truly the best of their kind available. We have actually investigated and decided against carrying, or have stopped carrying, a greater number of products than we now carry.

Radio Shack's Repair Policies

Did you know that if you buy a TRS-80 and, for any reason, have to have it repaired under the warranty, the store owner has to pay for the repairs? If you understand that the store owner is also making a profit (over and above the profit made

**EIGHTY
SYSTEM
NEWSLETTER**
every week!

Don't miss a single issue of the new Eighty System Newsletter... published weekly and mailed every Friday by First Class Mail. This is the only publication designed for personnel in the TRS-80* industry, including manufacturers, distributors, dealers and computer users. The Eighty System Newsletter is compiled and edited by Ken Gordon, producer of the National TRS-80* Show, the Eighty/Apple Show, the NJ Microcomputer Show, and publisher of the Amateur Radio Equipment Directory. Here is valuable information in professionally prepared format about TRS-80* hardware, software, peripherals, trends in the industry, and latest news. In addition, each weekly issue contains brief digests of articles related to the TRS-80* system appearing in over 100 computer related and general interest publications. This bibliography will save you both time and money in keeping up with articles in print on the TRS-80* computer system. The Eighty System Newsletter is a must for all active TRS-80* users, plus anyone involved in any way with the manufacturing, distributing or retailing of TRS-80* products.

Subscribe today: Mail the coupon with your check for \$39 for the next 52 weekly issues (sent First Class Mail that's only 75¢ per week.) If for any reason you are not satisfied with the Eighty System Newsletter — we will refund the undelivered portion of your subscription.

THE CRYSTAL BALL

(News and Rumors of Interest to TRS-80™ Owners)

1. Contrary to recent denials, Tandy is currently working on a **TRS-80 Model IV**. News of the new computer may be released any day, although it may not be announced for a long while yet. It will probably be based on the Motorola 68000 microprocessor, a 16-bit processor said to be superior to the Intel 8088 used by the IBM Personal Computer, although Zilog's Z-8000 processor is also under consideration.

The obvious motivation for the development of the new machine is to counter the new IBM Personal Computer. It will be aimed at the high end of the microcomputer market and will probably cost more than the TRS-80 Model II, but users will get a considerable improvement in performance by upgrading to the 16-bit processor. Tandy is considering 8-inch disk drives, with a set of up to four hard disk drives and a word-processing quality printer as standard options.

Software, however, promises to be a major problem, since most existing programs would have to be rewritten for the 68000. This is analogous to the situation Tandy found itself in with the Color Computer, which has very little software compared to the Models I-III, and much of that now available for the Color Computer has been written by outside programmers. Tandy has been making a major push to develop more software, and may try to bring in outside programmers in a more formal way, as IBM has done with its Personal Computer.

2. Tandy is considering developing, or merely "authorizing" a version of **CP/M** for the TRS-80 Model II, in order to allow business customers to take advantage of the software now available under CP/M. This rumor has been heard many times before, however, and all that has yet resulted is claims by

Tandy that its TRSDOS is "superior".

Tandy is also rumored to be working on a version of **Visicalc** for the **TRS-80 Color Computer**.

3. **Apple Computer** has been a publicly traded stock for over a year at this time. When it was first introduced, it was one of the hottest items on the market. Now many people have been forced to reappraise Apple's strength, and it is regarded much more suspiciously by the investment community.

Apple has, nevertheless, maintained a strong position in the personal computer marketplace, despite many problems with its Apple III computer. Now that these problems have been ironed out, its position is likely to remain strong, if not improve. Investment analysts are forecasting a growth rate at between 50 and 70 per cent in 1982.

4. Tandy Corp. has signed an agreement with France's Matra SA to manufacture **TRS-80 Model III computers** in France. This will enable Tandy to sell Model IIIs at a more competitive price in France and other European countries, where import duties and shipping costs can considerably raise the retail price of computers manufactured in the United States.

5. Xerox, Wang, DEC, and several leading Japanese electronics manufacturers are all working on **very low-cost personal computer systems** aimed at the home market. The target price seems to be **under \$1000**. That is, this would be the introductory price of a full 16 or 32K computer system, often including one disk drive. Most companies are using Z-80 microprocessors, but DEC is working with its own LSI-11.

 10% discount for 2 games, 15% for 3 or more
 Games may be played with or without joystick.

SCARFMAN

SCARFMAN

THE LATEST ARCADE CRAZE now runs on your TRS-80.

It's eat or be eaten. You control Scarfman around the maze, gobbling up everything in your path. You attempt to eat it all before the monsters devour you. Difficulty increases as game progresses. Excellent high speed machine language action game. From The Cornsoft Group. With sound.

CAUTION: Played with the Alpha Joystick, Scarfman may become addictive.

SUPER NOVA®

Asteroids float ominously around the screen. You must destroy the asteroids before they destroy you! (Big asteroids break into little ones.) Your ship will respond to thrust, rotate, hyperspace and fire. Watch out for that saucer with the laser! As reviewed in May 1981 Byte Magazine.

GALAXY INVASION®

The sound of a siren is calling you! Invaders are spotted warping toward you. Shift right and left as you fire lasers. A few break formation straight at you! You place your shot must connect! With sound effects!

ATTACK FORCE®

As your ship appears on the bottom of the maze, eight alien ships appear on the top, all traveling directly at you! You move toward them and fire missiles. But the more aliens you destroy, the faster the remaining ones become. If you get too good you must endure the "Flagship".... With sound effects!

COSMIC FIGHTER®

Your ship comes out of hyperspace under a convoy of aliens. You destroy every one. But another set appears. These seem more intelligent. You eliminate them, too. Your fuel supply is diminishing. You must destroy two more sets before you can dock. The space station is now on your scanner... With sound!

METEOR MISSION II®

As you look down on your view, astronauts cry out for rescue. You must maneuver through the asteroids & meteors. (Can you get back to the space station?) Fire lasers to destroy the asteroids, but watch out, there could be an alien FLAGSHIP lurking. Includes sound effects!

THE ALPHA JOYSTICK: ONLY \$39.95

(Model I)

- Features the famous ATARI JOYSTICK
- Works with any Level II or disk system Model I
- Plugs directly into KB or E/I (next to printer port)
- Compatible with any other TRS-80 accessories
- Saves your keyboard
- Fun to experiment in BASIC. Simply use A=INP(0) to read the joystick
- Fully assembled, ready to plug in and use.

Price includes Atari Joystick + Alpha Interface + instructions + demo program. The Alpha Joystick is backed by an unconditional money back guarantee. If you are not delighted with it, return it within 14 days for a prompt and courteous refund.

'LABLMAKR' will be the most useful Utility Program you own. You select from Label Formats to enter and print labels for mailing, marking, routing notes, video/audio cassettes, computer diskettes, book & binder titles, notices, warnings, instructions, emergency Tel/no. reference, bulletin board notices, etc. As useful at home as it is at the office. Whenever you need 1 label in a hurry, or 100, you'll use 'LABLMAKR', knowing the first label will print as perfectly as all the rest.

Four different type styles, including the 3/8" Jumbo type, allow you to design a label best suited for your intended use. As each line is typed in, a preview of the actual printed version is displayed on the screen for your approval. Change it, correct it, print it, save it, or abort. You'll be amazed at the versatility.

'LABLMAKR' opens up a new world of applications for the standard mailing label. Fully prompting, you'll probably never have to refer to the descriptive operating manual. Complete Implementing Instructions allow you to make 'LABLMAKR' a Load-and-Go operation. Written in Fast Basic—just follow the prompts to: Enter, Correct, Save to Disk, Recall, Edit, Delete, Duplicate, Print an Index, Print (1-1000) of any of the 100 labels you can keep on active file. If you need more just insert a new diskette—'LABLMAKR' will store an infinite number of label entries. You can even use 'LABLMAKR' as a distinctive Mailing List program.

Minimum system: TRS-80 Model 1 or 3, 32K, 1 Disk Drive,
Epson MX-80 printer (or Comparable), TRSDOS or NEWDOS.

'LABLMAKR' (on 35-track diskette), Operation Manual, with Starter Supply of Labels \$19.50

continued from page 4

The Japanese companies are considering using the new 3-inch disk drives that have been developed in that country and which sell for under \$100 wholesale, but these may be replaced by newer plastic versions of the standard 5-inch disk drives that can be sold at about the same price. Look for these computers to be announced by this summer.

continued from page 2

by the company) when he sells you the computer, then this may seem like a reasonable expense.

But what happens if you buy a TRS-80 in one state and then move to another? Now when you walk into your local Radio Shack store and present your computer for warranty repairs, a man who has made no profit on your computer has to pay for the repairs, essentially out of his own pocket.

This may seem to be a rare occurrence, but problems have been brewing for some time with regard to Radio Shack's policies because of the large number of mail-order sales of TRS-80 computers through Radio Shack authorized dealers, which are not stores. Authorized dealers sell TRS-80 computers at considerable discounts over stores, usually up to about 15% of the catalogue price. Radio Shack itself has allowed this system of stores competing with dealers to proliferate, and the parent corporation makes the same profit on any of its computers that are sold. The difference in price that you pay usually reflects the fact that the dealers are willing to sacrifice most of their profit margin because of their large volume of sales.

The main problem that customers face, then, is when a computer purchased from a dealer is presented for repair at a local store. The store manager is understandably reluctant to accept the computer for repair, since he has to pay for it himself, and will insist that you send it back to the dealer, often in another state. (People often buy from dealers in other states to avoid paying the sales tax.) The result is frustrated users, unnecessary delays in repairs, and bad feelings toward the local store managers.

Defects in computers are almost always a result of the manufacturing and are not caused by improper handling or care by the dealers who sell the computers. It seems silly for Radio Shack to perpetuate a policy that penalizes local personnel for manufacturing errors. This system may work for most of the items sold in Radio Shack stores, because the chance that a CB Radio, amplifier, or other electronic product will be defective is very slim. But when it comes to sophisticated items like computers, you

MUSICIANS THE POWER IS IN YOUR HANDS!

With **Polyquencers** you will be able to compose and arrange up to 16 channels of music. Your *TRS-80 will play entire compositions back through any synthesizer with the help of a D/A converter and some PAIA 8781 QUASH. Below are some of the features... (Both PAIA 8780 D/A and QUASH kits only \$80)

- *Play music at up to 256 speeds
- *Conserves memory because the fewer channels you use the less memory you use. (Runs in 16K)
- *Throw away your splicing block because you will be able to move whole sections of a tune from one place to another.
- *Insert or delete any part of your compositions.
- *Choose whether you want HARDWARE ADSRS or SOFTWARE ADSRS. If you choose software transients you will be able to DRAW them using the **Ligpen** routine. (included as part of the package) You will have up to 8 channels for transients and 8 channels for bass lines, lead lines etc.

What is a transient? A transient is what gives each type of instrument its' personality. That's why a guitar sounds like a guitar and a piano sounds like a piano. It gives the instrument its' RING.

Just imagine drawing the transient for a trumpet and one channel will sound similar to a trumpet while other channels are playing the sounds of other instruments. You could do WHOLE PRODUCTIONS ALONE. Below are some of the commands....

BE...Begin playing music.	TU...Tune oscillators.
RT...Read tape.	WT...Write tape.
CE...Create mode and edit.	LO...Display tune to LOK at.
PU...Put music in memory	TV...Goto LIGPEN routine.

Two and three letter commands prevent accidental triggering of the wrong commands.

The **Polyquencers** package comes complete with the **Ligpen** routine and interface cable for 199.95 U.S. For a two minute pre-recorded telephone demo PHONE 1-519-735-2995 A stereo demo with complete instruction manual for POLYQUENCERS is available for 10.95 (refunded after you buy POLYQUENCERS)

*For more information on **Polyquencers** write to **SEE-THRU**
For more information on synthesizer HARDWARE write....
PAIA ELECTRONICS 1020 W. Wilshire, Oklahoma City, OK. 73116
Only 199.95 US

Above are transients drawn with **Ligpen**.

NOW YOU CAN THROW AWAY THAT GRAPH PAPER

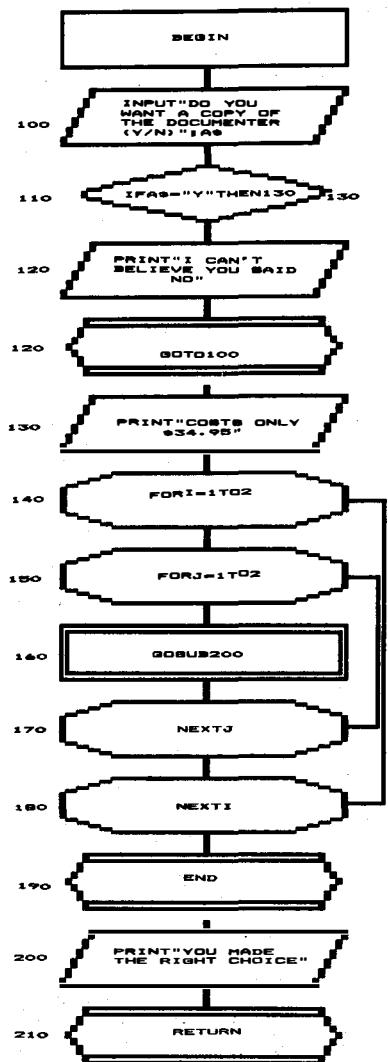

With **Ligpen** you will be able to plot curves and draw pictures simply by moving the light pen across the TV screen. I wrote **Ligpen** using a *PHOTO POINT light pen but any light pen that uses the cassette port (255) would be suitable.

On the normal mode the program will automatically connect the points together to form a continuous line. If you don't want 2 points connected simply type "E". **Ligpen** is extremely fast and only takes a fraction of a second to connect the points.

should consider the repair problems before they ever occur. Users have to establish a relationship with their local store owners or computer centers in order to survive. But at the present time, they also have to pay up to 15% extra for this privilege.

This seems like a problem that could be improved considerably by a few easy management decisions. As Radio Shack now faces stiffer competition from giant corporations like IBM and Xerox, maybe it will rethink some of these old practices in the hope of establishing better relationships with its customers.

Computer Crime

Is your computer equipped with telecommunications equipment that you use to "talk" to computer bulletin boards or time-sharing systems? Do you have teen-age children in your home who also use the computer for these purposes? If so, your computer may be an instrument in one or more of the newer computer crimes that are now appearing more and more in the country. Contrary to the image of computer crime as something carried out by sophisticated inside employees, it is turning out that many of today's perpetrators are high-school or college students who are doing it more for fun than to steal money or cause problems for major companies.

Consider these facts: experts estimate that only one per cent of computer criminals are ever caught, and that only a small percentage of their crimes are even discovered. But the most interesting piece of information is that almost all computer crimes are discovered by getting the perpetrators to confess, usually because they are promised immunity from prosecution if they will help authorities catch their accomplices or help the companies plug up the

loopholes in their operations.

Recently a band of teen-agers managed to:

shut down the Pacific Telephone Company's directory assistance service

obtain records from the California Department of Motor Vehicles

obtain confidential information from a major credit bureau's computer

gain access to their school's computer to change grade transcripts.

In order to accomplish these tasks, the "pranksters" spent hours rummaging through the garbage of major corporations looking for slips of paper with account numbers or other codes to try out on the computers. More daring individuals obtain these numbers and codes by posing as company employees, either on the telephone or in person.

There are now many clubs, electronic newsletters, and computer bulletin boards which people have used to arrange sexual encounters, trade equipment, and to exchange information about these electronic espionage and sabotage techniques. Often, people employ nickname identities, much like CB Radio users. Most of this communication is entirely clean and harmless, but the fact is that most computer criminals use these systems frequently. So if you answered "yes" to those questions above, perhaps you should periodically check up on your youngsters to see what they are actually doing with the computer.

No Beginner's Corner This Month

Due to an illness in the family, Sherry Taylor was unable to finish her *Beginner's Corner* column this month. It will be continued next month.

Dr. Howe reports also that the *Model III Corner* will be continued next month. ■

Then Parallel Process!

CUE is a programmable processor which rapidly accepts from your computer data to be printed and then goes off-line to drive the printer—independent of your computer, which is now free. CUE is better than software spooling since none of your computer's memory, processing power, or disk drives are tied up. CUE is available in parallel, serial, or with both in 2- and 4-port models (connect several printers or computers) with from 16K to 32 K memory. Use as an interface.

LETTERS TO THE EDITOR

An IBM Computronics?

I note that the October 1981 issue of *Computronics* indicates that you might start a magazine or section for the new IBM Personal Computer. I was pleased to read this, since I'm considering the new IBM machine. I currently use a modified (Omikron) Model I 48K with two 8-inch disk drives. It works fine, but I would like to move up to something a bit more sophisticated — possibly try some Pascal and more business applications. An *IBM Computronics* would be great!

Dennis R. Filippone, M.D.
 65 East Northfield Road
 Livingston, New Jersey 07039

Computronics Classifieds?

After receiving *Computronics* for more than a year, I just had to write to you and tell you how much I enjoy reading your magazine. I enjoy the new format, the "color", and the articles.

I have one question: will you be devoting a portion of your magazine for personal classified ads? As you know, you can't TRADE IN your TRS-80 at Radio Shack, and I would like to sell my Model I, Level II and upgrade to a Model III.

I know that if you ever did start carrying personal classifieds, I would send in some things I would like to place in it.

Keep up the great job, your magazine is tops!

Brother Nicholas Lorson
 St. Anthony-on-Hudson
 Rensselaer, New York 12144

Check Maintenance Problems

Please advise me if the Check Maintenance Program contained

in issue #32, pages 8-14, is available on tape or disk. A number of attempts to use this program failed because of numerous error messages. Correspondence with Bill Evans, Jr., the program author, has failed to clear them up.

I would like to correspond with someone who has used the program successfully.

Verne B. Morrison
 9642 Roe
 Overland Park, KS 66207

Model II Compatibility

In the October 1981 issue of *Computronics* (issue #39), there is a program called "Household Security" by Andrew S. Braunstein. I liked it and thought I could use it, but when I tried to put it in my Model II the screen prints were all garbage. I guess it was not written for the Model II. I would like to know if you have a copy for the Model II.

Lawrence A. Gamble
 386 Hobart Drive
 Newark, Delaware 19711

Most programs published in *Computronics* are written for the Models 1 and 3, but we try to maintain compatibility with the Model II wherever possible. The problem of screen printing is a general one that you will face whenever you try to convert a Model I or III program to the Model II, and there are other general problems of a similar nature. In order to help users of all different models of the TRS-80, we will be starting a series on program conversions during the next several months.

TRSDOS 1.2 Errors

In the "Letters to the Editor" of issue No. 39, October 1981, page 12, Mr. Bill Apresti advises that

**LAST CALL FOR CHARTER MEMBERS
RESPOND BY FEBRUARY 28**

SOFTWARE PRICE BREAKTHROUGH!

Join American Software Club and get state-of-the-art name brand software at the lowest price it will probably ever be.

I want to tell you about the most exciting development that has ever happened to your computer. Then I want to extend an invitation. Neither the development or the invitation need cost you a cent.

- It's not a new terminal.
- It's not any kind of peripheral.
- It's not a new language.
- It's all of these.

It's a club. A club exclusively for people who live and breathe computers, like you—and me.

BUILD A SOFTWARE LIBRARY THAT WILL EXPAND YOUR COMPUTER'S CAPABILITIES TO THE LIMITS OF YOUR IMAGINATION.

Each month we bring you the finest and boldest concepts in computer software from manufacturers all over the world, from categories that include education and business to entertainment and home utilities.

Out of thousands of programs available, we select those that make your computer do more of what you bought your computer for. Programs that keep your computer working throughout the day instead of gathering dust on a desk.

ASC keeps your computer functioning and expanding by supplying the vital

software resources necessary for its growth. Software for the business owner, educator, hobbyist, the family. Software that will continually keep your hardware paced with state of the art technology. With an ASC membership you will be assured that your equipment is never rendered obsolete.

OUR NO-OBLIGATION CHARTER INVITATION

When you become a charter member you get:

- Free lifetime membership. Charter members will never pay a penny in membership fees
- Our informative and very candid newsmagazine
- Discounts on all software programs
- Discounts on major brands of hardware and supplies
- Additional discounts for recommending new members
- Software updates as they become available
- BONUS. Free buy, sell, or swap ad in our newsmagazine (on a space-available basis). A real moneysaver.

NO MINIMUM PURCHASE REQUIREMENTS EVER.

Call or send in the coupon now. Mail today.

DISCOUNTS. PROMPT SHIPMENTS.

No more searching through magazine ads and paying top dollar. You save every time you buy. Save on software, hardware, books . . . all computer supplies. For example, next month you can purchase name brand blank diskettes that the "discounters" sell for \$3.50. Our price-\$2.50. That's saving \$10 per box.

HERE'S WHAT MEMBERS SAVED LAST MONTH

	regular price	members price	you save

TRSDOS version 1.1 for the Model III has been replaced by version 1.2 and that the former has several errors.

I would like to point out that version 1.2 does not operate properly with variable record lengths. It destroys part of the file when performing save operations. Version 1.3 is supposed to correct this error.

I have really enjoyed reading your magazine. The hints and information published in it have helped me solve several problems saving quite a bit of money at the same time. The addition of color has made it more attractive. Now it is not only good, it also looks good! Congratulations!

C. Roberto Linde

Model II Conversion

I would like to offer several comments regarding Gordon Speer's article on the Model II.

(1) The proper syntax for an automatic entry to BASIC is: AUTO BASIC LOGO -F:3 -M:61021. This will load BASIC with three file buffers, set memory at 61021, and then run the program LOGO. (Note: this also works on the Model III.)

(2) If further processing is required before running the program, the BUILD command should be used. This lets you create an automatic command input file which can be executed via the DO command. The system executes the commands just as if they had been typed in from the keyboard. This can be done with the AUTO function. For example:

```
BUILD STARTUP <Enter>
```

```
FORMS (W=80) REM: Set width  
to 80 for LPIV <Enter>
```

```
PAUSE Insert Diskette #10  
<Enter>
```

```
I <Enter>
```

```
RENAME INS TO OUTS <Enter>
```

```
BASIC LOGO -F:3 -M:61021  
<Enter>
```

```
<Break>
```

```
AUTO DO STARTUP
```

DO files may be chained and are easily edited. Comments can be included if the proper syntax is used:

COMMAND (options) comment
PAUSE will wait for the operator to press <Enter> to continue. The I tells the system that you have changed diskettes, so that TRSDOS will read the diskette IDs on all drives in the system. (Note: this procedure is applicable to the Model III as well, but with two exceptions: DO files cannot be edited directly, and the I command is not required.)

(3) A few more interesting features of Model II BASIC are:

SYSTEM "SCREEN" copies the screen to the printer and can be executed within a BASIC program.

NAME OLDNAME TO NEWNAME allows you to rename a disk file WITHOUT returning to TRSDOS.

ERASE deletes arrays to free memory or so that they can be reimensioned.

SWAP exchanges values of variables.

HEX\$ computes a hexadecimal value.

SPACE\$ (LENGTH) prints a line of spaces of a given length.

SPC (NUMBER) prints a line of blanks but does NOT use string space.

INPUT\$ (LENGTH) inputs a specified number of characters.

(4) The limitation of 110 baud for ASCII data transfer is not at all realistic! The software Mr. Speer mentions ALREADY exists in the Model II as a TERMINAL utility.

We currently transfer at 300+ baud (the arrow keys on the Model II will speed up or slow down the transfer rate) between a Model II and a Model III. This is not much to brag about, but is quite an improvement over 110 baud.

My limitation is due to the use of a BASIC RS232 driver program in my Model III. This became a necessary evil when my not-so-smart terminal program would not do the job and my resourceful patch for Model I ST80D decided to patch into my DOS! If you think using six different terminal utilities on three different machines can be confusing, just ask me how many DOS's I have for my Model III! (That's another story!)

I hope that these comments will be helpful to Gordon Speer and other users new to the Model II. Maybe the teacher will reconsider and give the Model II a straight A (like he gave a student in his microcomputer class).

A dedicated TRS-80 user,

Robert D. Benson
402 Rose Street
Walnut, IL 61376

Introducing 4.0, the perfect score. The DOSPLUS 4.0 hard drive system is here!

A hard drive without the dynamic new DOSPLUS 4.0 is like an eggshell without the egg. The new DOSPLUS 4.0 is the leading edge—the latest in the line of advanced disk operating systems from MICRO-SYSTEMS SOFTWARE, INC. It's the only current operating system written from the ground up for hard disk operation. Not just a driver but a fully developed system. What that means to you is more bang for your buck! Finally on unlimited TRS-80 for small business. For only \$2995 you get the DOSPLUS "PLUS."

THE DOSPLUS 4.0 FEATURES

- Single volume addressing/Double sided floppies seen as one drive—one file can expand to 5 megabytes
- Hard Disk—disk editing utilities
- Incredible I/O speed
- Runs any combination of densities or tracks
- Also operates 8" drives with special hardware—comes with expanded users guide and complete DOS technical section on I/O calls and DCB organization

"PLUS" MANY OF THE SENSATIONAL NEW DOSPLUS 3.4 FEATURES

- BASIC array sort—multi key, multi array
- Tape/Disk—Disk/Tape utility (with relocotor)
- Input (controlled screen input)
- Random access and ASCII modification on Diskdump
- BASIC checks for active "DO"
- Backup and Format from a "DO" file
- Much improved Backup (More reliable)

\$2995 TAKE YOUR MICRO
TO THE MAX.
ORDER NOW!
COMPLETE

- I/O package much faster (disk access time reduced)
- Repeat last DOS command with '/'/' [ENTER]
- Short directory (filename and extension) available
- Short directory of Model III TRSDOS disks
- Single file convert from Model III TRSDOS
- COMPLETE device routing supported (DOS and BASIC)
- Ability to save BASIC programs directly to another machine's memory (if equipped with DOSPLUS 3.4)

NOTE: The final versions of 3.4 and 4.0 will have almost identical features and documentation.

THE COMPLETE SYSTEM

- Smooth, silent, swift
- Error-free disk I/O
- *Add on up to 4, 10 meg units for a total of 40 megabytes!
- Plugs on the 50 pin data bus.—no loss of floppy drives
- Completely self-contained—just plug it in and go

*10 meg units available Soon.

NOTE: Specify 40 or 80 track when ordering DOS diskette. After initial bootup, user can create any DOS desired.

The first in the industry backed by a lifetime warranty**

**Lifetime warranty on original media

PRACTICAL BUSINESS PROGRAMS

S. M. Zimmerman, Ph.D. and L. M. Conrad

THE GRAPHIC PIE

Copyright © 1981 Zimmerman & Conrad

This program, while very simple in its operation and design, graphically depicts decimal equations or percentages for rapid comprehension and understanding at all ages.

This program will plot any number of divisions of a pie (circle) on the CRT, then copy the results on your printer if you so wish. The accuracy of the drawing is excellent for areas that are .05 (5%) or greater, while smaller areas will lack the same accuracy. One other problem that could arise is the printing of one set of descriptive material over another, most particularly when the division of the pie area is near the vertical.

This program can be used as a teaching aid in school or it can also be found very useful in business applications requiring graphic illustrations.

RUNNING THE PROGRAM

The graphic pie program is very simple to run and is limited to a few questions. After typing RUN and hitting the ENTER key, you will see on the CRT:

THE GRAPHIC PIE
DEVELOPED BY STEVEN M. ZIMMERMAN, PH.D.,
& LEO M. CONRAD 1981

MINIMUM INCREMENTS TO APPROXIMATELY 5%

NUMBER OF PIECES OF PIE ?

Here you will enter the number of sections you wish to divide the pie into. For our sample run we are using five sections, therefore we type in 5 right after the question mark as our answer so it now looks like:

NUMBER OF PIECES OF PIE ? 5

Since we have chosen to divide the pie into five sections we will now be asked to provide a name and a percentage as a decimal for each of the five pieces. Here we have chosen to name the pieces DAVE, BOB, STAN, MOM and DAD, as in a family.

We have set the division of portions of the pie in the decimal equivalent of percentages so they total 100%; .40 (40%), .25 (25%), .20 (20%), .08 (8%), and .07 (7%).

The questions you see appear after you answer how many pieces of pie you wish to divide the circle into will be:

FOR PIECE 1 NAME, PERCENTAGE AS DECIMAL ?

This question will be repeated for each division or piece of pie you have requested. All you have to do is type in the name and the decimal amount after the question as:

FOR PIECE 1 NAME, PERCENTAGE AS DECIMAL ? DAVE, .20
FOR PIECE 2 NAME, PERCENTAGE AS DECIMAL ? DAD, .05
FOR PIECE 3 NAME, PERCENTAGE AS DECIMAL ? BOB, .20
FOR PIECE 4 NAME, PERCENTAGE AS DECIMAL ? MOM, .25
FOR PIECE 5 NAME, PERCENTAGE AS DECIMAL ? STAN, .30

NOTE: Be sure to hit the ENTER key after typing in the name and the decimal amount!

There is an error checking routine at this point. If the sum of the values is not between 95% and 100%, the program will give an error message and force the user to recycle through the above questions. If the sum is within the parameters, you will then be asked if you wish a hard copy (printout). If you answer yes, you will then be asked for some identification information. These questions are:

HARD COPY (Y/N) ?

TITLE, DATE, OPERATOR ?

Here we answered Y or yes to the first question by typing in the Y just after the question mark and then hitting the ENTER key. This sets up the machine to printout on the printer what you will also see on the screen.

In answering the second question we titled the graphic illustration FAMILY, typed it in followed by a comma, then the DATE (MO/DA/YR) we printed the illustration, again followed by a comma, and then we added the name of the person who operated the program. After typing in the name you hit the ENTER key.

When you hit the ENTER key you then found one more question appeared on the CRT:

EXPANDED FORMAT (Y/N) ?

This is the final question before the execution of the program, and it is to give you a choice of NORMAL or

EXPANDED format printing. The NORMAL format is a compressed copy of what you see on the CRT. The EXPANDED format will print the diagram at approximately the same size as you see on the CRT.

Type in your answer, Y for EXPANDED printout format, or N for the NORMAL or reduced format, behind the question mark and make sure your printer is ON and ready to run before you hit the ENTER key.

Because the output fills the CRT you may find the graphics will destroy the descriptive material or informational data written on the screen. You will wish to experiment with different lengths of descriptions and even alternative ordering of the pieces of pie in order to obtain the best picture for a particular application.

Not all Spelling Checkers are the same.

MICROPROOF^{T.M.} stands out!

EASY TO USE: Prepare your text on any Z-80 based micro-computer, using any of a number of popular word processing programs. When you are finished, enter the appropriate command, and MICROPROOF proofreads your document, displaying misspellings and typos on the screen. Then correcting MICROPROOF can display each error separately, requesting you to enter the correct spelling for each. You are also given the option of displaying errors in context or adding words to MICROPROOF's 50,000 word vocabulary. Finally, MICROPROOF corrects your document. All in less than a minute.

Correcting MICROPROOF Screen Display

SPEED is the single most important factor in a dictionary program. All dictionary programs will find your potential errors but if the program is too slow, you are not likely to use it. MICROPROOF's speed is outstanding. It can proof-read a several page letter in 20 seconds.

LOW PRICES: Standard MICROPROOF is available for either \$89.50 (TRS-80® Models I or III) or \$149.50 (CP/M®, TRS-80® Model II and all others). The optional correction feature can be added at any time for an additional \$60.00. Optional patches to integrate MICROPROOF into your word processing software can also be added at any time for an additional \$35.00. (Integration patch not needed for Wordstar®.)

MICROPROOF'S FULL 50,000 WORD VOCABULARY saves you time and allows you greater confidence in the lists of potential errors that MICROPROOF identifies. The mini-dictionary programs, with their 10,000 and 20,000 word vocabularies, have many correctly spelled words omitted from their vocabularies. Consequentially, they identify as potential "errors" many words that are actually spelled correctly; five to ten times as many such words as does MICROPROOF. So, when you use MICROPROOF you will have far fewer extra words to evaluate, a major time savings. There will be less need to look up words in order to verify that they are in fact spelled correctly. The extra 30,000 words in MICROPROOF's vocabulary assures you confidence in the error lists that MICROPROOF generates.

There are other proofreading programs available to choose from. Since MICROPROOF became available in December of 1980, a number of companies have announced programs with small dictionaries. It took us almost two years to develop MICROPROOF. During that time we were able to compress our full 50,000 word dictionary into a manageable size (fits on one single density 5¼ inch disk). And we were able to design a proofing program which operates remarkably fast. The chart below illustrates the comparative advantages of MICROPROOF.

ADVANTAGES OF MICROPROOF

	MICROPROOF DICTIONARY SOFTWARE	OTHERS (Mini- Dictionaries)
DICTIONARY SIZE	50,000 Words	20,000 Words
DISK SPACE REQUIRED FOR DICTIONARY	70,000 BYTES (fits easily on one 5¼" disk)	170,000 BYTES
DICTIONARY ENLARGEMENT	VIRTUALLY UNLIMITED	EXTREMELY LIMITED
SPEED—400 Words	20 Seconds	1 to 5 Minutes
SPEED—3,000 Words	1 Minute	2 to 10 Minutes
CORRECTION FEATURE	Optional	Not Available

MORTGAGE COMPARISONS

Dan L. Ward

The steady rise in home values has given owners some substantial increases in their equity. At the same time, the increases in interest rates have left financial institutions with a lot of money tied up in older low-interest loans. These institutions are now seeking ways to encourage home owners to refinance their mortgages at today's higher rates.

One of the latest strategies is to offer to refinance a mortgage at a higher level, thereby giving the home owner a chance to cash in some of that equity. Here's how it works:

In 1977, a man sought a home with a \$50,000 mortgage for 30 years at 8.5% interest. The lenders now say they will refinance the mortgage for \$60,000 for 30 years at 13.5% interest. Since the borrower has already paid the principle down to \$48,000 over the past four years, he would pocket \$12,000 in the deal (\$60,000-\$48,000).

Another option would be for the individual to keep the old mortgage and borrow \$12,000 using his home equity as collateral. He could do this at 16% interest on a 12 year loan.

Which is cheaper? This program will provide that answer. It calculates the equivalent costs of the two options: (1) keeping the original mortgage and taking an equity loan, versus (2) refinancing the total amount. The answer may surprise you. There is a difference of over \$100,000 in the interest charges for those two examples!

This program only covers the basics. A more sophisticated analysis would include the impact of tax deductions for the interest paid, as well as the investment value of the cash flows. The program also assumes that there is no prepayment penalty or new closing costs. It can obviously be expanded to a more sophisticated model. As it is, it supplies a quick and easy way to make a general comparison.

The program is user-oriented with prompts and instructions. If you or one of your friends are considering cashing in some of your home equity, this program could save you a hundred thousand dollars! Try it and see.

COMPASS SOFTWARE

THE DUNGEON MASTER'S APPRENTICE

CHARACTER GENERATION

RELIEF for Dungeon Masters and would-be Dungeon Masters the world (and other worlds) over. The popularity of role playing games, and particularly of AD&D™, is unquestioned. The real question is how many *more* people would get involved if the systems weren't so time-consuming. The Dungeon Master's Apprentice series solves that and more. In less time than it takes to cast a Wizard Eye, Module 1 - CHARACTER GENERATION creates new player characters following *all* the rules and guidelines of the game system including special abilities, bonuses, penalties, spells, user-defined possessions, skills and more. Simply, everything anyone would use in a campaign is treated, and all without taking the dice or the decisions out of the hands of the participants. We've designed this dual program to run in minimum systems which makes it available to nearly everyone who owns, or will soon own a "personal" computer. And we've written the Dungeon Master's Apprentice in *basic* to allow user-updating as the game system changes. All results are viewable on video-monitor, printable to any system-compatible line printer, and recordable to file for integration with other modules in the series. Future modules dealing with every aspect of the game system are scheduled to be released at eight-week intervals.

Available for TRS-80™, Model I and III. Cassette (16K, LVLII, minimum)... \$19.95 / Disk (32K minimum)... \$29.95

AD&D is a registered trademark of TSR Hobbies, Inc.

MANKALA- The Game of Pits and Stones- brings one of the world's oldest games to its newest medium. For 1 or 2 players, Mankala's two "levels of facility", three display formats and variable game length (number of stones) makes a game that will be interesting and useful for a long, long time. Our numeric format puts the game within the reach of children and helps them to understand how numbers work. While our "small" format simulates every facet of the original and will test both your foresight and your memory in this no-luck-involved game.

Available for TRS-80™, Models I and III, Cassettes (16K, LVLII, minimum)... \$14.95 / Disk (32K, minimum)... \$24.95

MANKALA

THE GAME OF PITS AND STONES

THE LAW

AND

THE PROPHET

Based on Robert Abbott's "New Eleusis", this demanding game for *one to twenty-four* players will test your powers of reasoning and problem-solving as never before. Pit yourself against THE LAW in the solo game or test your wits against your competition in the multi-player game. Written in basic, this program invites experimentation, and instructions for user modification are included. In a classroom setting, the Law and the Prophet is not only an excellent tool for demonstrating induction and "scientific method", but also provides a vehicle for teaching symbolic language and basic programming. If you enjoy the challenge of solving a mystery, this is the ultimate test. *There is a LAW!* Can you discover its nature?

Available for TRS-80™, Models I and III, Cassette (16K, LVLII minimum)... \$14.95 / Disk (32K minimum)... \$24.95

TRS-80 is a registered trademark of the Tandy Corporation.
Cassette versions require 16K *minimum*. Disks require 32K. Model I requires LEVEL II Basic.

STATEMENT OF INCOME

Richard Eidmann

I wrote this small program to assist me in my work as an accountant. The program is limited because it does not allow for correction of mistakes. It prints a professional-looking statement of income, and it loads in less than one minute at 500 baud. It has a few features that I use in all my accounting programs. One of these is the multiple calculator in lines 1240-1330, which allows the user to add 100 figures at that location and then return to the initial location ready to add another 100 figures under another name. In its present form the program runs slowly, but the speed can be greatly increased by packing it.

Another feature is the shorthand listing at lines 1550-1750, which prints a list of shorthand codes for the user. This could be eliminated to save typing time. Just delete all references to it.

Lines 1340-1530 hold the shorthand codes. The user can add any additional codes using the same format. This saves a great deal of typing and insures accuracy. Properly named, I suppose that this program could be called a word processor for numbers. For example, when the program requests the account name you can enter "INT" and it will print interest for that category. When you no longer wish to make any entries under the first section, just hit the "ENTER" key so that a null is recorded by the computer. Then hit the "ENTER" key under AMOUNT and the program will go to the next section. At the completion of the last section the computer will then print the entire report. In lines 1020-1070 the user can enter his own company name. All heading names will be centered by the Z-TAB feature.

This program runs on both the Model I and Model III. I use an Epson MX-80 printer and find that it prints an excellent report in the 80-character mode.

TRS-80™ PROGRAMS SUPER SOFTWARE AT SUPER PRICES

THE ULTIMATE DISK-OPERATING SYSTEM

LDOS™

A completely documented new generation of operating system for the TRS-80. Far superior to any on the market. It is a totally independent device system, capable of device linking, routing, setting, and filtering. LDOS will support 5" and 8" floppies, single/double density, single/double sided, and up to 80 tracks. Full customer service provided with a toll free 800 number. Excellent documentation in a tab indexed manual (over 250 pages). Call or send for more information today.

Available for Model I or III only \$169.00

LDOS™ is a product of Logical Systems Inc.

ALSO AVAILABLE

EDAS 3.5 Model I and III. . . \$79.00
EDAS 5.0 Model II. \$179.00

Host Model II was. \$199.00
now. \$99.00

SUPER UTILITY PLUS

— OVERVIEW —

Copyright ©1981 Breeze Computing, Inc.

SUPER UTILITY PLUS was written by Kim Watt of Breeze Computing, Inc. and is the most powerful program of its kind on the market at this time. This program is a machine language, stand alone program that has its own I/O routines, does not use any ROM or DOS calls, and works on SINGLE or DOUBLE DENSITY systems. **SUPER UTILITY PLUS** performs such a wide range of varied tasks, that it may truly be called "The King of Utilities". It is not required that the disk be in any drive after initialization of the program and user may custom configure the program to suit his individual system requirements.

ZAP does everything your present "zapping" utility does plus many additional enhancements. It will operate on SINGLE or DOUBLE DENSITY systems and will work with most major operating systems that are presently on the market. It has dual cursors (one for ASCII and one for HEX side of the readout) and allows the user to go to the heart of the disk and read and/or modify data in HEX, ASCII, DECIMAL, BINARY, or OCTAL, regardless of whether it is a standard disk or not. The screen printout on Zap displays one sector at a time in HEX and ASCII (as other "zapping" utilities), but also tells user the true and relative track and whether the disk is IBM format or not. Zap also has a search routine that will locate the highest or lowest configured track on the disk and others that will search the disk for a byte list, ASCII string, word list, or even encrypted code. Zap also allows you to display disk sectors, compare disk sectors, copy sector data, zero disk sectors, reverse sector data, sector searches, read ID address marks, or alter data address marks.

PURGE has a full screen editing kill control that allows you to kill files by positioning cursor and pressing one key. Also, Purge has several sub-utilities that allow you to zero out unused directory entries or zero out unused disk granules. In addition, user may kill files by naming the common category of the files (Example: /CMD /BAS /TXT <I> nvisible, <V> isible, etc. or even kill files that begin with a specified letter), and also may compute existing passwords, change the disk name, date, passwords, auto command, or even file parameters (name, passwords, protection levels). Lastly, Purge contains a complete disk directory that indicates all active and non-active files on the disk.

FORMAT is a utility that allows the user to format a disk with; standard format, format without erasing existing data, special format (custom format your disk most any way you want it), build a format track and optionally write it back to any track on your disk, and even contains a software bulk erase utility. The total formatting capabilities of this program are just about UNLIMITED and you may even reformat over a disk or add tracks to an existing disk without destroying existing disk data.

DISK COPY will copy most any standard disk, with or without formatting. The Special Disk Copy enables the user to make a backup of most TRS-80® readable disks that are presently on the market, regardless of any efforts that have been made to protect them from being "backed up". (NOTE: This program WILL NOT copy itself). This program's only intended use is for you to make backups of your legally purchased programs. Please DO NOT use this utility to make "bootleg copies" for others as authors of quality programs deserve their royalties.

TAPE COPY enables the user to perform a wide variety of actions that include the ability to read, write, or verify tapes and even includes a Bit by Bit copying routine that will back up most ANY TRS-80® readable tape regardless of protection attempts made by authors. This utility also is for your own use only.

DISK REPAIR allows you to automatically repair the HIT and GAT sectors, and will automatically repair a Boot. This utility also does a complete Directory Check and will advise you of errors that exist. In addition, this utility allows the user to recover killed files (if the file was killed by this utility or by NEWDOS), read protect or un-read protect the directory, move it to a different location on the disk, or clear unused entries. Lastly, this utility advises you of all inactive files that are on the disk.

MEMORY supplies the ability to display, move, test, compare, zero, exchange, input or output a byte to any port, exchange, jump to, reverse, fill, string search, or even load/write and entire track or sectors to/from memory.

FILE contains the abilities to display file sectors, compare files, copy files, disk directory, free space, file locations, drive status, create files, and clear files from disk. These utilities give you a wide range of powerful commands at your disposal to perform just about any function that you want with files up and including the complete reorganization of your entire disk with all the files re-written in their most contiguous order.

CONFIGURE SYSTEM gives you the ability to custom configure Super Utility Plus to your system. You may select single or double density, in any combination, 5" drives, select your operating system boot of your choice, upper or lower case, high speed clock, single or double headed drives, or even configure your printer.

To order Super Utility Plus, * send check or money order for \$74.95, plus \$2.50 shipping and handling to:

WINDCRAB, HORSEPOWER, and PERMUTE

Gordon Speer

WINDCRAB

Before a pilot leaves on a cross-country flight, he must calculate the effect the wind will have on his speed and direction. The data that he puts into the calculation are the wind direction and velocity, the airspeed of the plane, and the direction he wants to go which is called the bearing. Directions are measured in degrees, clockwise from north. East is 90 degrees, south is 180, west is 270, and north is 360. The wind direction and velocity are supplied by the weather service in a four-numeral code. The first two numerals are the direction in degrees from which the wind is coming, minus the last digit. The last two numerals are the wind speed in knots, or nautical miles per hour. For example, a wind of 2235 is from 220 degrees at a speed of 35 knots. The airspeed of the plane is also measured in knots. Typical airspeeds range from 100 to 160 knots for light planes, up to 600 knots for commercial jets.

From this calculation a pilot obtains the ground-speed and the angle he must crab (fly sideways) into the wind to stay on course. Crab angles are generally on the order of a few degrees. An angle of over ten degrees indicates the presence of strong cross winds. Murphy's law applies here, of course. "The more you are behind schedule, the stronger will be your headwind."

HORSEPOWER

Have you ever wondered how they figure out the horsepower of a gasoline engine? I ran across the formula in some old notes and tried it out with the specifications listed for a 1968 Volkswagen Beetle just to see if it was anywhere near the 53 HP listed in the manual. I could tell you how close it came out, but why spoil all the fun you are going to have finding out for yourself.

The formula is $PLANK/33000$. P is the pressure, that is the air pressure in PSI times the compression ratio. L is the length of the stroke in feet. A is the area of the top of the piston in square inches. N is the number of cylinders. K is the constant which represents the number of revolutions per minute, divided by the number of revolutions per power stroke in each cylinder (1 for two stroke engines, 2 for four stroke engines). The denominator of the equation, 33000, is the number of foot pounds per minute in one horsepower.

If you like history, my hometown of Sterling, IL claims to be the birthplace of the two-stroke-cycle gasoline engine, invented by John Charter back in the 1870's, and manufactured by Fairbanks-Morse in Beloit, WI.

Provide your customers with a **CALENDAR \$9.95** printed calendar (along with standard banker's holidays) of any month of any year...Useful in motivating history students. Holds the same fascination for students as a game. Tape only for Model I or III.

Same features as Calendar. **SUPER CALENDAR** Additionally prints out large "graphics" type wall calendars (tape only) **\$19.95** with memos under each day. Use as a planning calendar with optional disk storage...requires 16K and printer.

MAIL LIST SYSTEM (disk only) \$69.95

Our easy-to-use system will accommodate almost any "custom" requirement of even your most demanding clients. A glance below will show that we are far ahead of any other system in speed, variety of features, and sheer volume of names handled...but don't let that fool you. This system can be used just as easily on one disk for a small Christmas card list.

- Maintain virtually an infinite number of disks all in continuous alph. or zip order...essential for large lists.
- Sort **2320** entries (2 full 40 track double density disks) in only 32K or an incredible **4640** entries (2 full 80 track double density disks) in only 48K!...Made possible with our unique date compression techniques on the Model III.
- Super fast sort by alph. or zip order (8 sec. for 1000 entries)...both orders can exist simultaneously on disk.
- High speed recovery of entries from disk...speed of sort is meaningless if retrieval from disk is slow...ours pulls in over 11 per sec!
- Transfers old files over to our system.
- In zip order all entries with same zip code are also arranged alphabetically.
- Four digit zips have a leading "O" appended on labels.
- Backup data disks are easily updated as entries are created, edited, or sorted...extremely useful!!
- Optional reversal of name about comma for that non-computer, personalized look.
- Master printouts of your list in several formats (not just a reshuffle of the labels). Optionally continuous or page oriented...Your customers will want this!
- All 0's in address labels are replaced by easier to read O's.
- All labels optionally support an "Attn:" line.
- Many user defined fields with plenty of options for **simultaneous** purging and selecting...even allows for inequalities...powerful and easy to use!!
- Continuous display of how many addresses printed.
- Each disk entry automatically "remembers" how many mailings have been made for that particular entry...Can be tied in with purge/select.
- Primarily written in BASIC for easy modification...embedded machine code for those speed sensitive areas.
- Editing is simple and fast...automatic search.
- Optional 9 digit zip.
- Deleted entries have "holes" on disk filled automatically...and alph. order is still maintained!
- Test label printing lets you make horizontal and vertical adjustments with ease.
- Optional "one time" mailing for some selected entries.
- Extensive use of error traps (both operator and machine induced)...even recovers from a power failure during a printout!...recycling on disk errors.
- Patch program allows you to upgrade the system to any DOS.
- Documentation manual available separately for \$3.95.
- Hardware requirements: 32K printer, and 1 or 2 drives.

Football Scouting Report (Disk only) \$89.95

How many high schools and colleges are there within a 75 mile radius of you? Did you know that each is a potential customer at the rate of from \$500-\$1000 per season? Many already subscribe to more expensive (but inferior) computer analysis services of their scouting reports. Using such a service a coach will typically have an opponent scouted several times prior to actually playing them...This series of programs was written to the specifications of a coach with two state championships to his credit. As a result, the emphasis is on producing statistics that will help in predicting what the opponent will do in a given situation...This is a sophisticated set of programs fully equivalent to that used by professional football teams...Hardware requirements...32K, 1 disk driver and printer.

TRY OUR ONE DAY PC BOARD SERVICE

Tic-Tac-Toe (Tape only) \$9.95

Loan amortization schedules are a must for banks, S & L institutions, and accounting firms. You will be able to charge \$5 plus per schedule. Multiply that times the number of all loans your clients make per day...easiest money we know of!...runs in about 2 minutes and achieves pin point accuracy with a built in calendar...This sophisticated program produces an exceptionally professional looking printout.

LOAN AMORTIZATION (Tape only for Model I & III) \$19.95

Interfaces to your own basic programs...sort with the speed of machine code but with the convenience of basic. You don't have to know assembly language programming to use these programs. Just use your disk to merge our short basic programs (with embedded machine code) with your own basic program. Follow our simple instructions to poke several values before making the user call from basic. The pokes will set up a sort of string, integer, single, or double precision arrays. Also ascending or descending order is controlled by a single poke. Use one of two programs to sort arrays of the form A(1) or A(Q(1))...The disk includes 8 simple basic programs that are ready to merge with the main sort programs. Use them for learning and evaluation...Also included is a ready to use basic program (already merged with the ORDER program). Use it to obtain a printout of alphabetized names. This program alone is worth \$19.95.

FAST SORT (handles multiple dim. arrays) and ALPHABETIZER (disk only) \$19.95

Sample Sort Times

8 sec. for 1000 dbl. prec. numbers...50 sec. for 5000 integers. (Ours is one of the only alphabetizers that both ignores non alph. characters and treats upper and lower case alike.)

Sign (Tape only) \$9.95

Produce large (reduced 50% here) attention getting signs with your printer...supports most keyboard characters...will print multiple lines...use alone or interface to your own BASIC program...requires just over 16K and a printer.

PERMUTE

The common Yale tumbler lock is a good example of permutation. It has from 5 to 7 pins which are of different lengths and are lifted by a key so that they no longer block the rotation of the tumbler. The number stamped on the key is sometimes the combination of pin lengths and is only one of many such possible combinations for a given lock design. This program prints all possible key numbers if you give it the number of pins (maximum 7) and the number of possible pin lengths (maximum 9). It also tells how much time will be required to display all the combinations, so you can decide whether to stay for the entire performance.

```

CORRECTION

A program error has been brought to my attention. The bubble-sort method used in CITYSORT (issue #37, August 1981, page 23) has an incorrect FOR-NEXT loop in line 270. This line should read as follows:

```
270 FOR I=N-1 TO 1 STEP -1
```

Otherwise the program will not sort the end of the list. Sorry about that!

CHAINER

Jay R. Newirth

One of the nice features of NEWDOS/80 is the CHAIN command. However, the NEWDOS/80 manual doesn't do a great job of explaining how to use it - thus, the creation of CHAINER. This program allows one to create, edit (change, delete, or insert), save, and load in a chain file for execution by the NEWDOS/80 disk operating system. The program is 90% self documenting, but some important information is provided below.

First, one must know how the CHAIN command is used in NEWDOS/80. The format for a chain function is:

CHAIN,FILESPEC,SECTION . . . or
CHAIN FILESPEC SECTION (i.e., the commas are optional).

FILESPEC is any eight character name (following guidelines for FILESPECs). The FILESPEC must include the extension "/JCL"! The program will supply this extension if one is not given. Although the "/JCL" extension is mandatory, it is not required when the CHAIN command is executed. Thus, the following examples are acceptable:

CHAIN STARTUP/JCL or
CHAIN STARTUP

Either of these two commands will work, as long as a file entitled STARTUP/JCL exists on the disk!

SECTION tells the CHAIN command to start the CHAIN function with the portion of FILESPEC that is named SECTION.... As an example,

CHAIN STARTUP/JCL SECTIONA
tells the DOS to start the CHAIN routine at the portion of STARTUP/JCL that is labeled SECTIONA. By specifying SECTION, one can create a single large master CHAIN file, naming specific portions via the section command (using CHAINER) and then executing only that particular portion of the CHAIN file. This saves you from writing many small CHAIN files.

USING THE CHAINER PROGRAM

(1) CREATE/ADD TO FILE: You will be prompted for a FILENAME (CHAIN/JCL is the default) and the drive to save the file on. If you forget the "/JCL" extension it will be added automatically. With each entry for the CHAIN file, you have six options to choose from:

1: Command is to be displayed on video during chaining.

2: Command is to pause chaining and print any message you type.

3: Command is to define section name (see discussion above).

4: Command is simply a remark statement and has no function in the chaining program.

5: Command is any normal DOS or Level II command to be executed by the CHAIN command.

6: Exits create/add mode.

(2) EDIT FILE: This mode is self-explanatory. You can change, delete, or insert command lines. In the delete mode, you may answer "ENDING LINE" with "ENTER" for a default response of "1". The same holds true for the insert mode.

(3) LIST FILE: You can list the file on the video display or line printer. The graphic codes you see are used by the CHAIN command. They are there purposely. Be sure that the line printer is ready before printing.

(4) SAVE FILE: saves file to disk, and writes the needed code used by NEWDOS/80 to run the CHAIN file.

(5) LOAD FILE: loads a file from the disk into memory. If "/JCL" extension is omitted, it will be added automatically.

Here is an example CHAIN file you may want to create and run to see how the CHAIN command works:

Entry #1: choose option 1, type: CHAIN PROGRAM FOR TRS-80 MODEL I.

Entry #2: choose option 2, type: PRESS <ENTER> when ready to continue.

Entry #3: choose option 4, type: THE FOLLOWING 5 ITEMS ARE DOS/LEVEL II COMMANDS.

Entry #4: choose, option 5, type: DIR

Entry #5: choose, option 5, type: FREE

Entry #6: choose, option 5, type: LIB

Entry #7: choose, option 5, type: CLOCK ON

Entry #8: choose, option 5, type: BASIC LOAD
"CHAINER"

Entry #9: choose, option 6 (exit).

Save this file using function (4) above. Do a CMD"S", then type "CHAIN,FILESPEC" where FILESPEC is the name you used to create the above program. Then sit back and watch!

Does your CP/M** or TRS-80* Word Processor need help?

Aspen Software has the finest document proofreading tools available.

GRAMMATIK™

Beyond Spelling Checking

Spelling checkers are useful, but they are not enough! Grammatik can find many errors that a spelling checker can't. It detects many errors commonly found in text entered on computers, such as doubled words ("the the"), inconsistent capitalization ("STicky shift key"), incorrect punctuation, and others. That's not all! Grammatik also checks your document for good writing style using a dictionary of over 500 misused phrases as defined in many writer's style manuals. It marks and classifies the problems it finds in the document file for easy correction with your word processor, and provides suggestions for correcting the problems. The phrase dictionary can be easily extended to include checking for esoteric jargon or your own pet peeves. Grammatik also collects other stylistic information that can be used to revise the document to improve its readability such as average sentence and word length. It can produce a profile with the number of times each unique word in the document was used, helpful for identifying overworked vocabulary. Grammatik is not only a valuable proofreading tool, it is also a useful learning tool. You will notice significant improvements in your own writing style after using Grammatik for only a short time. Grammatik is fast, easy to use, and works with all popular TRS-80 and CP/M word processors. Model I/III version requires a minimum 32K, 1 drive system. Model II TRSDOS* version requires 64K and 1 drive. CP/M version requires CP/M release 2.2 and 48K.

PROOFREADER™

The Aspen Software Company Spelling Checker.

Don't buy a spelling checker until you've considered Proofreader. Recently, several ads for other spelling checkers have compared themselves to "others". They weren't comparing themselves to Proofreader! Proofreader has all the features you need for checking your documents for spelling errors and typos. Proofreader looks up every word in its 38,000 word dictionary, and does not increase its "vocabulary" by using less accurate root word analysis like some others do. You won't need to spend as much time adding new words as you would with a smaller dictionary. Proofreader is easy to use -- you can start checking your documents immediately. Proofreader is fast -- it can check even your largest document (20 pages or more) in less than 5 minutes! Unknown words are listed on the screen, and can be saved in a file for later manipulation. The Proof-Edit feature (optional on the Model I/III version, included with Model II and CP/M) allows you to interactively correct the unknown words in context. New words can easily be added to the dictionary, and expansion is limited only by disk capacity. Proofreader works with all TRS-80 operating systems and word processors, so if you change systems, you won't need a new spelling checker. On the TRS-80 Model I/III, only 32K RAM and 1 disk drive are needed. Proofreader also works with all popular CP/M word processors. Add up the facts and the low price, and you will conclude that Proofreader is the best value available in spelling checkers.

Aspen Software programs are professional quality, reliable software tools developed for the TRS-80 and CP/M by a Ph.D. in Computer Science. All software is protected by Aspen Software's low cost upgrade privilege for new versions. Other tools include:

— SOFT-SCREEN™, a powerful, state of the art full screen text editor. Over a year in development, Soft-Screen is compatible with all TRS-80 programming languages, including BASIC, FORTRAN, MACRO, Ratfor, and COBOL. Commands are easy to learn, yet versatile and complete to satisfy the most experienced user. Soft-Screen is also available for P&T Model II CP/M.

— SOFT-TEXT™, Aspen Software's text formatter. When used with Soft-Screen, provides a powerful word processing system. Full featured, including automatic pagination, even and odd page headings, underlining, index generation, footnotes, support for

advanced printer capabilities, and much more. Model I/III version supports serial printers at full speed. Soft-Text offers a real alternative for Model II TRSDOS users. Please write or call for more details.

— RATFOR, a structured language preprocessor for Fortran developed at Bell Labs. Aspen Software Ratfor is one of the best versions available, and the only one with a pretty printer option. Totally compatible with Microsoft F80. Includes several extensions, including "case", "string", and conditional compilation. User's manual contains all information needed to learn and write Ratfor programs. Requires FORTRAN.

— PP-RATFOR, a pretty printer. Automatically formats and indents Aspen Software Ratfor source programs. An essential program development tool.

	Model I	Model II (64k,1d)	Model III	CP/M (2.2,48k)	Manual only
Proofreader	\$54.00(32k1d)	\$119.00	\$64.00(32k1d)	\$129.00	\$8.00

both	\$74.00(48k2d)	\$139.00	\$84.00	\$139.00	\$15.00

IMPORTANT: Specify computer model, operating system, memory size, and number of drives when ordering! For CP/M, currently only 8" single density CP/M versions available. Please inquire about other CP/M disk formats. All TRS-80 versions available. Manual only orders can be applied to final purchase. CP/M prices are introductory.

Orders sent postpaid by first class mail. Terms: Cash, check, money order, VISA, or Master Card. NM residents add 4% tax.

Proofreader, Grammatik, Soft-Screen, and Soft-Text are trademarks of Aspen Software.

PRINTER STANDS

End the mess of paper from your desktop printer. Paper is fed from under the printer and allowed to stack neatly behind your machine. Made from the highest quality clear plexiglass, this is a handsome addition to home or office. Available in two sizes - Regular for printers such as MX-80, Microline80, etc. or Large for printers such as MX-100, DataRoyal, DWII etc. Available with extra shelf for quick and easy forms change.

- Regular \$24.95
- Large \$29.95
- Extra Shelf \$ 9.95

MODEL III EXTERNAL DISK DRIVE CASE

When you add disk drives to your Model III TRS-80, put them in the case that was designed for the Model III. This drive case is essential for the office where novice users can become confused with a combination of horizontal and vertical drives. Comes complete with mounting hardware and power supplies for two disk drives and 2 drive cable. Available with and without drives.

- Case without drives \$179.95
- Case w/1 40 track drive \$429.95
- Case w/2 track drives \$654.95

MX-80 RIBBON RELOAD

Replace your worn MX-80 Ribbon with a new, fresh high quality black cloth ribbon. Easy to load in your cartridge. You save over \$10.00 compared to purchasing a new cartridge! Complete with easy to follow instructions. Each ribbon individually sealed in plastic bag for long life.

- \$3.95 each, 12 for \$39.95, 25 for \$74.95
- (COMING SOON . . . COLOR RELOADS!!!)

MODEL III DISK UPGRADE

Upgrade your cassette Model III to disks with this easy to use controller kit from Micro Mainframe! Kit is complete with Controller Board, Switching Power Supply (for 2 internal drives), and complete mounting hardware (for 2 internal drives) and instructions. Just add drives! Supports single or double headed drives!

- Complete kit \$279.95

(CALL FOR LOW, LOW DISK DRIVE AND COMPLETE SYSTEM PRICES!!)

UNITERM

'The Universal Terminal Program'

The FIRST and ONLY terminal program for both the Model I and Model III TRS-80 computers. Written by Pete Roberts, this program will soon become the standard of terminal software. Unique features includes a Handsome binder with over 75 pages of instructions and examples. Free upgrade policy using local Bulletin Boards and MicroNET. Expanded functions such as 'Type to buffer', 'Display Buffer', Define Auto logon, polling, signon, and connect messages! Requires 32K disk system. Only **\$79.95**

ST80III, OMNITERM, SMART80, SMARTIII owners!!! Upgrade to 'UNITERM'! Send your ORIGINAL program disk and receive 'UNITERM' for only **\$29.95!!**

CONNECTION-80 BBS

Run your own Computer Bulletin Board. This software package when combined with your Model I or Model III TRS-80 and an Auto Answer Modem will convert your computer into a mini-times share system. Functions include message leaving, both public and private, message retrieving, Bulletins, Downloading, merchandise, product ordering, chat, etc. This is a full feature system, and well known for excellence among modem users. Only **\$199.95**

NEWDOS/80 OPERATING SYSTEM

The Hottest Disk Operating System for the TRS-80 Model I and III. Version 2.0 with full single and double density support, allows the use of and combination of disk drives types and densities. Full Double density support when used with a Doubler. On the Model I, you can read and write Model III compatible data disks. On the Model III, you can write Model I single or double density data disks for use on the Model I. Includes: Expanded directories, dynamic basic merge and delete, selective variable clearing, enhanced basic editing, Enhanced chaining functions, Superzap utility, Disk enhanced editor assembler and disassembler, and much more. Special Price, **\$139.95**

M-ZAL

This is the most powerful Editor Assembler for the TRS-80 ever written. Features a full screen editor, a menu driven assembler, and an interactive linker which allows the linking of /CMD and /RLD files. Files can be loaded to Disk or Tape! Assembly Language programs like Dick Balcom, and Pete Robert claim that this is the best Editor Assembler on the market! Special Price, **\$129.95**

THE COPYRIGHT KIT

A self-instruction booklet on copyrighting the computer software you write. Includes step by step instructions, sample forms, as well as discussions of copyrights, patents and trade secrets, your rights secured by copyrights, legal remedies upon infringements, material not copyrightable and MUCH MORE! Written by Attorneys. Published by National Attorneys Publications and distributed exclusively through B.T. Enterprises. IF YOU EVER WROTE A COMPUTER PROGRAM, YOU NEED THIS BOOK! **\$12.95**

COPY III

This Model III Utility, written by Dick Balcom, allows you to load system tapes into your computer at either 500 or 1500 Baud and then copy them onto a new tape at either 500 or 1500 Baud. Includes 10 page instruction manual, **\$9.95**

CASOP

The CASOP utility by Paul Spoltore allows you to copy system tapes, find load locations, check for hidden messages, modify program blocks, relocate program blocks, and merge two tape programs together. A sort of 'SUPERZAP' for tape users, **\$24.95**.

MODEL I DISK DRIVE CASES

Clear Cases for your model I disk drives, complete with power supply for 5-1/4 inch disk drives.

Single Drive Case	\$79.95
Dual Drive Case	\$109.95
Triple Drive Case	\$139.95
Quad Drive Case	\$169.95
Smoked Plexiglass Cases, Add 5.00/per drive	

LYNX MODEMS

The finest Auto Answer/Dial Modem on the market! This is a direct connect modem for your model I or III. Does not require an RS232-C interface in your computer! Season Special, ~~\$299.95~~ **\$249.95**

AMBER EASE

Amber filter for your computer. Amber has been shown to be the easiest on the eyes. Easy to install. (Shown on computer above.) Season Special, All TRS-80 Models, **\$19.95**

TIC-TOC-80 MICROCLOCK

A microclock for your TRS-80 Model I. Gives your computer the correct time and date on powerup. Clock is maintained on a lithium battery for long life. Plugs onto the I/O Buss of the TRS-80 Model I and does not require any modifications for most computers. Complete with extensive documentation and a disk with utilities. SPECIAL NOW AVAILABLE IN KIT FORM!

Complete assembled and tested	\$99.95
Kit with P/C board, parts and instructions	\$59.95
Kit with P/C board, parts list and instructions	\$19.95

OTHER MYSTERIES

We carry the full line of IJG 'Other Mysteries' books at discount prices. These books are a must for computer users.

TRS-80 Disk and Other Mysteries	\$22.50 \$19.95
Basic Decoded and Other Mysteries	\$29.95 \$26.95
Custom TRS-80 and Other Mysteries	\$29.95 \$26.95
Basic Faster & Better	\$29.95 \$26.95

DISK BULK ERASER

Use this handy, portable, non-electric disk bulk eraser anywhere you need it. No need for power, as this unit needs no electricity to function. No user should be without one. Available for the amazing low price of **\$4.95**.

DISK STORAGE BINDER

This is a handy 3 ring binder that folds flat for easy use. Complete with 10 plastic pages to store your disks. (Each page holds 2 disks.) Makes transporting your disks as easy as picking up a book! Binder and Pages (Limited time special)

Binder and Pages (Limited time special)	\$9.95
Extra disk pages alone. (each)	\$.50

MODEL III MEMORY KIT

This kit is all that you need for easy installation of an additional 16K or 32K in your Model III. Complete with 8 page instruction book that has been hailed as '... The best instructions we have ever seen ...'. High quality 150ns memory chips make this the best kit available. 16K ... **\$44.95** 32K ... **\$79.95**

Color Computer Corner

Joseph Rosenman

This Month: Screen Displays

When evaluating the limitations and potentials of a computer system, attention must be paid to both the hardware and the software. The obvious side of the hardware evaluation includes such information as: how much memory, what kind of mass storage (cassette, floppy disk, hard disk, etc.), processor speed (1 MHz, 2 MHz, etc.), and of course, type of processor. There are many additional questions that could be asked. The correct matching of the hardware abilities with the "computing application" can often prove to be of critical importance. Most Personal Computers (such as the TRS-80 line) allow a large measure of flexibility in the type of hardware used in the construction of the system. One reason this is so lies in the power of the software included with the system. If you put the Model 1 and Color Computer next to each other for comparison, there are only two significant similarities: they both are manufactured by Radio Shack, and they both include Microsoft Basic.

Are all BASICs alike? Unfortunately (or fortunately), no. BASIC is an acronym for Beginners All Purpose Symbolic Instruction Code. This language was invented (I believe) sometime in the 1960s by Dr. John Kemeny at Dartmouth College. BASIC is an "interpretive" language (as opposed to compiled, assembled, or translated languages). This means that every time a statement (whether entered directly or via program execution) is encountered, it must be interpreted. In a compiled language (such as FORTRAN or PASCAL), the statements are examined and converted into machine code (remember, computers ONLY understand machine code). When running compiled languages, there are always at least two steps involved in the "running" of the program. First, the "source" program must be compiled into an "object" module. Then, the object module must be executed. (Often, there is a middle step where the object module has to be "loaded" into a specific memory configuration. The result of a load, or link-load if several modules are being combined, is known as a "load" module. Thus, a single program might have a source file, an object module, and a load module.)

What is the advantage of such a complicated method of running a program? Speed and flexibility. A Fortran program will run much faster than a Basic program. When the Basic interpreter examines a line of code, it takes as much time to "understand" what the line means whether it is the first time or the one thousandth time that the line is executed! The Basic

interpreter is full of separate machine language goodies that understand discrete portions of Basic code. A single line of code might access tens or even hundreds of machine language routines before it is "executed".

So what's so good about Basic? Like everything else, there are advantages and disadvantages in using Basic. Basic is conversational, and therefore easy to use (especially for beginning computer users). Also, each Basic program requires only one file: the source code. Imagine the mess involved in compiling, loading, and executing a Fortran program on a computer without a disk. With Basic, you can easily run with a non-disk system. This means that computer systems built around Basic as the primary software can also be inexpensive (since a disk system is strictly an option).

So what's so bad about Basic? It's very slow. Also, the source code in Basic is entirely un-structured. (The topic of structured programming is far removed from the topic of this column. Structured programming has to do with the way code is organized, and the way and types of data structures allowed. The only structures present in Basic are the IF/THEN/ELSE and the FOR/NEXT structures. Pascal is an example of a highly structured language.)

How is it possible for BASIC to run on both the Model 1 and the Color Computer, when the Model 1 is a Z80-based computer and the Color Computer is a 6809-based computer? It isn't done with mirrors, I can assure you! The BASICs in both computers expect the same kind of input (source code), and produce the same results. The difference lies in the fact that the BASIC in the Model 1 is written in Z80 machine language, while the BASIC in the Color Computer is written in 6809 machine language. BASIC is a machine language program that expects BASIC source code as its input. Consider an analogy: if either a Frenchman or an Englishman are thirsty, they will ask for a glass of water. Even though English and French are different languages (like BASIC or FORTRAN), both requests will get the same results: a drink. If you have two Englishmen together, however, one may ask for the drink, while the other might write the request down. Both are in English, and both elicit the same result. The difference lies in the medium. If you view speech and writing as two different types of communication, you will see how the analogy works in the case of two different computers. The problem is that the two Basics are usually not exactly alike. This can either be as a result of physical differences between the computers

ALL HARDWARE Model I Lowercase

TRS 80 is a Trademark of Tandy Corp.

DUALCASE

UPPER/lowercase, full time from power-up; NO software; Standard typewriter keyboard operation (shift to UPPERCASE); Control characters can be displayed; 128 Total character set plus full graphics.

ELECTRONIC SHIFT-LOCK

No extra keys or switches. Simply tap either shift key, UPPERCASE lock, normal shift unlocks.

DEBOUNCE

If dirty keys are a problem, this is for you.

BLOCK CURSOR

Easier to locate on a full screen.

SHORT CASSETTE LEADER

For tape based systems.

SWITCHABLE

Disable from keyboard

"THE PATCH" is a trademark of CECDAT, INC.

"THE PATCH" is compatible with any word processor, any DOS and also other languages which use ROM sub-routines.

"THE PATCH" unit plugs into the ROM sockets (does not replace existing ROM). Lowercase does require installation of the extra video RAM (supplied with "THE PATCH").

Detailed instructions guide even the most inexperienced owner to complete installation in about 30 minutes.

(hardware differences), or the degree of "completeness" in the particular version of Basic.

There is a tremendous amount of software in Basic which is readily available to the personal computer user. Unfortunately, if the Basic was written for some other computer, there may well be subtle differences between the two versions. Over the next few columns, I will be explaining how to "correct" other BASICs for use on the Color Computer. To begin, my primary source will be the Model 1. The reason for this choice is that *Computronics* includes much Basic software for the Model 1 in the past, and (I believe that) most Color Computer owners who have another computer probably own a Model 1 or Model 3. This month's topic is screen display.

One instruction in Basic is PRINT @. PRINT @ causes printing to occur at a specific screen location. The Color Computer screen is 32 characters across by 16 lines. This means that there are a total of 512 screen locations (numbered from 0 to 511). The Model 1 screen is 64 characters by 16 lines. The total on the Model 1 is 1024 characters (numbered 0 to 1023). In order to convert the PRINT @ value from Model 1 to Color Computer, use the formula Color Computer = INT(Model 1 / 2). Obviously, Model 1 programs that require the use of the entire line will require reformatting. The Model 1 also has a 32 character per line

mode. In this mode, only even numbered PRINT @s are valid. In this case, the above formula will work without a hitch.

Another way of getting information onto the screen is to use the POKE function to write the number directly into Video RAM. In the Model 1, Video RAM begins at Hex 3C00 (or decimal 15360). The Color Computer Video Ram begins at Hex 400 (or decimal 1024). In principle, it is possible to transpose values from Model 1 down to color computer, but there are several rules that must be observed:

(1) If the Model 1 POKES are outside of the range of 15360 to 16384, they ARE NOT TO VIDEO RAM. This means that these POKES cannot be adapted to the Color Computer.

(2) For every two positions on the Model 1, combine into 1 position on the color computer.

Observe the following sample of code below:

```
FOR I=15360 TO 15360+512 : POKE I,48 : NEXT I
```

```
FOR I=1024 TO 1024+256 : POKE I,48 : NEXT I
```

The first example is for the Model 1, and the second for the Color Computer. They both will fill the top half of the screens with zeros. Consider the case shown below:

FOR I=15360 TO 15360+64 : POKE I,48 : NEXT I
FOR J=I TO I+64 : POKE J,49 : NEXT J

FOR I=1024 TO 1024+32 : POKE I,48 : NEXT I
FOR J=I TO I+64 : POKE J,49 : NEXT J

Again, the first example is for the Model 1, and the second is for the Color Computer. This code will fill the first line with zeros, and the second lines with ones. One further note: if you are POKEing values above 127, the two computers display graphics differently (see the discussion below). Graphic codes will most likely require modification. The Color Computer also has Video RAM above 1535. This RAM is used for the Extended Graphics. Since there is no corresponding "hardware" function in the Model 1 (or most other computers), there is no code that could be translated into Color Computer Basic.

The last function I will discuss is the SET function. In the Color Computer, each "block" that can be SET or RESET is 2 by 2. This means that there are 64 horizontal by 32 vertical points that can be addressed. In addition, each 2 by 2 block can be one of 8 different colors. The Model 1 uses a 2 by 3 format (but, of course, all one color). Therefore, the Model 1 has 128 horizontal by 48 vertical points that can be addressed. The total points on the Color Computer is 2048, while the Model 1 has 6144. In some cases, these graphic blocks are used to form extremely complex shapes. It will often prove very difficult to translate them in a simple fashion. Understanding the way they work will, however, assist the programmer in re-writing the code for the Color Computer. The SET command on the Model 1 has 2 fields, specifying the vertical and horizontal locations.

The Color Computer has a third field indicating the color. The SETs on the Model 1 form the different graphic codes between 128 and 191. The codes between 192 and 255 are space compression codes. 192=0 spaces, 193=1 space, 194=2 spaces, ... 255=63 spaces. On the Color Computer, all the codes from 128 to 255 are reserved for graphic blocks, and there are no space compression characters. You can replace space compression characters by using: STRING\$(#-192," ") where # equals the compression code. The Color Computer also has a PSET command. This operates very much like the SET, except that it SETs a block in the graphic RAM rather than in the text RAM. The PSETs have various different resolutions depending on the PMODE in effect. When altering Model 1 SETs into Color Computer SETs, remember to add the third parameter (for color selection).

In general, it is easy to convert the screen output from one computer to another. The greatest problem occurs in cases where the screen size changes (such as Model 1 64 across to Color Computer 32 across). The discussions about PRINT @, POKE, and SET describe the more difficult problems involved in "transporting" code from one computer to another. It is an unfortunate fact that some programs simply cannot be adapted to another machine because they make critical use of functions specific to the machine they were written for. Usually, you will find that a program can easily be adapted to the Color Computer with a small effort in translation.

PROGRAM PREVIEWS

A. A. Wicks

This Month: Book Review and Program Update

It doesn't seem so very long ago that finding a good text to self-learn BASIC was a rather difficult task. I recall that when my interest in having my own computer began, I was absolutely intrigued by "Instant BASIC" by Jerald R. Brown. Today, there are literally dozens of texts available for those interested in getting into programming with BASIC, either in a modest way, or as a career. This month, we are going to Preview one of these, and also update a recently reviewed program.

Radio Shack has had published under their aegis (Prentice Hall, Inc. printing), "Introduction to TRS-80 Level II BASIC and Computer Programming," written by Dr. Michael P. Zabinski. This rather long-titled book falls into the classification of being for the beginning programmer up to the more sophisticated, who is looking for review and brushing-up on techniques. The text moves into the subject matter quite rapidly; in fact, the first chapter could have probably been omitted without loss, as only a page and a half is devoted to "Getting Started, The Keyboard, and Communicating

with the Computer." Clearly, unless the reader has already been through the Level I or Model III manual, this quick initial exposure might be discouraging. But with some previous exposure, getting to the subject matter this quickly will please the impatient.

Similarly, the next chapter moves along at a rapid pace, covering numerical and character information, arithmetic functions, hierarchy of operations, and types of variables. Throughout this chapter, and the complete book for that matter, important points to remember are highlighted by gray screening (a good memory aid), and all examples are shown as they might appear on a dot-matrix printer. In addition, each program line is commented upon, not as REM lines, but as full explanations.

Chapter 3 has the reader writing simple programs, and these are little programs that provide a great deal of satisfaction to the newcomer, such as computing interest. Within this chapter, many of the computer operating functions are slyly worked in; for instance, all

CONVERT YOUR SERIAL PRINTER TO PARALLEL

NEW MODEL UPI-3 SERIAL PRINTER INTERFACE MAKES IT POSSIBLE TO CONNECT AN ASCII SERIAL PRINTER TO THE PARALLEL PRINTER PORT ON THE TRS-80.

Software compatibility problems are totally eliminated because the TRS-80 "THINKS" that it has a parallel printer attached. NO MACHINE LANGUAGE DRIVER NEEDS TO BE LOADED INTO HIGH MEMORY BECAUSE THE DRIVER ROUTINE FOR THE UPI-3 IS ALREADY IN THE TRS80 ROM! SCRIPSIT, PENCIL, RSM 2, ST80D, NEWDOS, FORTRAN, BASIC etc. all work as if a parallel printer was in use.

The UPI-3 is completely self contained and ready to use. A 34 conductor edge card connector plugs onto the parallel printer port of the model I Expansion Interface or onto the parallel printer port on the TRS-80 III. A DB25 socket mates with the cable from your serial printer. The UPI-3 converts the parallel output of the TRS-80 printer port into serial data in both the RS232-C and 20 MA. loop formats.

ST80-III The Ultimate Communications Package:

Price \$150.00

This is our top of the line communication package. Full disk support including DOS commands have been implemented. ST80-III™ has been on the market for over two years and has become the standard in TRS-80™ communication. This package has been used in a wide variety of applications including use with:

Addressomultigraph, Compugraphics, Spectrometers, and a wide range of Time-sharing computers.

IBM	CDC	ITEL	Honeywell
DEC	WANG	Prime	Data General
Amdhal	RCA	XEROX	GE
Apple	Heath	Northstar	Altos
Superbrain	PET	Cromemco	HP 2000

The package includes the ST80-III™ smart terminal program and nine other communication utilities: Fully documented with easy to follow instructions, ST80-III™ is by far the best terminal product on the market today. Features:

- 1) User configurable communication tables
- 2) Auto Logon
- 3) Last line repeat
- 4) Formatted video (Page, Scroll & Formatted)
- 5) Direct cursor addressing
- 6) File transfer from disk or to disk
- 7) Printer support
- 8) Echo, Feedback & Veriprompt™ verifies data transmitted
- 9) 110 to 9600 BAUD support
- 10) Remote control of Memory open & close, Printer on & off, Video on & off & auto logon
- 11) Help display
- 12) User definable function keys

Host Communications:

Price \$ 50.00

This program is by far the best HOST program you can buy. It supports the PRINT @ statement for the remote TRS-80™ running any of the ST80™ smart terminal programs. All of the ST80-III™ advanced functions are supported by host allowing easy access via BASIC, Fortran and machine language programs. Host features include:

- 1) User defined RS-232 port addressing
- 2) Definable BAUD rates from 110 to 9600
- 3) Definable break (yes/no)
- 4) Allow line feeds
- 5) Commands:
 - a) Turn on RTS (request to send),
 - b) Turn off RTS,
 - c) Receive data only from terminal,
 - d) Receive data only from host,
 - e) Send data only to host,
 - f) Send data only to terminal,
 - g) Operate in dumb terminal mode,
 - h) Operate in ST80™ mode,
 - i) Check CTS status. (clear to send)

This is a self relocating subroutine that can load anywhere in high memory.

of the editing functions. The result is rather painless indoctrination. Chapter 4 moves into branching operations, transfer statements and decision-making statements. Flowcharting is described and thoroughly discussed — this is really one of the better discussions of the subject that I have seen. Error functions are covered in similar detail.

Looping, For-Next, subscripted variables, and error-tracing are discussed in Chapter 5, and Read and Data statements are presented in Chapter 6. The latter subject is presented at considerable length here, with numerous examples and short programs being provided. Anyone having difficulties in understanding this phase of programming will find their problems clarified here, I am sure. This chapter also covers graphing techniques, and includes good explanations of Print Using and Print@. Data storage using cassette recorders is mentioned, but disk storage is not.

All of the Library Functions are very adequately covered in Chapter 7, such as INT, RND, ABS, etc. Chapter 8, in explaining Subroutines, provides several practical example programs such as Blinking Display, and Computer-Aided Instruction. Although graphing was previously discussed, Chapter 9 goes further into the subject of Graphics itself as used in Level II, with eleven pages alone devoted to this material. This detailed information in itself places a high value on the usefulness of this text.

Strings, ASCII codes, string function commands, binary-to-decimal conversion, and INKEY\$ are the subjects of Chapter 10, again with many examples supporting the text.

The several Appendixes provide information that may be used frequently for reference — Error Messages, Reserved Words, and an excellent Glossary of Level II and other BASIC commands, instructions and functions; and numerous other programming and data processing expressions. The Commands within the Glossary are indicated in boldface type, with other expressions in italics. To give some idea of the extent of this Glossary, 221 entries have been provided — a miniature reference document in itself.

Overall, this is an excellent text, with a great deal of useful information and guidance provided at a very reasonable price. The author is a professor at Fairfield University, and a consultant to public schools on computer usage. This is reflected in the lucid and succinct manner of textual instruction throughout the book. If I have any criticism at all of this book, it is that there is what might be considered an excess of practice exercises at the end of each chapter. There are several methods of reinforced learning — one way is by the use of explained examples. There are many here, but more would be better. Another way is by work question exercises. This has its place in the classroom, but the average reader of this book is likely to be the new

TRS-80 OWNERS REJOICE!

Our professional quality software development tools let you program your TRS-80 with more ease and power than you ever imagined possible. Programming will become a pleasure when you use our full screen editors. These editors are not just patched up word processors. They have been specially designed to enhance the BASIC and ASSEMBLER programming languages. Our assemblers provide full screen option menus to relieve you of the burden of remembering command names. Combine user oriented features like this with the finest and most extensive documentation in the industry and you will see why programming a TRS-80 is now better than ever.

T-ZAL: TAPE BASED ASSEMBLER: Assemble to memory or tape. Create relocatable SYSTEM tapes! Includes relocating LOADER pgm. 8 character symbols with XREF. Upgrades to disk when you do!
Mod 3 Cat # 1250-20 \$ 49.95

FULL SCREEN PROGRAM TEXT EDITORS: All CAU full screen editors support four way cursor motion and scrolling with user selectable auto repeat and scroll speeds. Totally visual character insert, delete, and change. Block move, copy, delete. Global find and change. Editor for BASIC also provides automatic line renumbering and 26 user-definable macro keys.

For Tape and Disk BASIC:
Mod 1 Cat # 1010-20 \$24.95
Mod 3 Cat # 1210-20 \$29.95

For Mod 1 EDTASM source files:
Tape Cat # 1010-30 \$24.95
Disk Cat # 1010-31 \$34.95
(Disk version shipped on tape.)

M-ZAL: DISK EDITOR/ASSEMBLER: Modular Assembler Language development system includes full screen text editor, multi-pass assembler, and object module linker. Allows 8 character symbols and source file chaining/nesting with *INCLUDE cmd. Full support for relocation and global symbols. Symbol table with cross reference. Req. 32K Disk system.

Mod 1 Cat # 1050-10 \$149.00
Mod 3 Cat # 1250-10 \$149.00

XBUG: DEBUGGING TOOL & MONITOR: Display/Modify memory and regs. Set up to 10 invisible and transparent breakpoints. Multi-speed single step. Load/Copy/Create SYSTEM tapes. Uses only 2.5K and can be dynamically relocated to any address.

Mod 1 Cat # 1020-10 \$19.95
Mod 3 Cat # 1220-10 \$19.95

Note: these products are not available for level 1 machines.

When ordering specify Model, RAM size, # of disks.

*TRS-80 is a TM of Tandy Corp.

owner of a TRS-80 — a person anxious to get involved in programming, but too impatient to wade through pages and pages of exercise questions. Fortunately, solutions are provided in the back of the book. (I would suspect that Dr. Zabinski had it in mind that this text would receive extensive classroom use.) Unlike many computer instruction books written lately, this book is devoid of "cutesy" humor, which is somewhat refreshing, and leaves the impression that this tome is dedicated to the serious learner.

Production quality of this book is excellent — from slick multicolor soft cover, typeset text, to very impressive layout.

I can recommend this book without hesitation if your requirements fall within its scope, which cannot be better stated than in the Preface: "... suitable for the self-learner or for a one-semester introductory course.... It is for the non-specialist who wants to learn to use the TRS-80 effectively."

"Introduction to TRS-80 Level II BASIC and Computer Programming" — Radio Shack Catalog No. 26-2116. \$9.95

MICROPROOF UPDATE: Shortly after the review for MICROPROOF was published (September), I received from Cornucopia Software a copy of their latest revision to this very fine spelling/typo checking

program. A good program has been made better by several improvements, and you should know about them.

A new file within MICROPROOF called PRINTDIC now allows editing of the expandable dictionary file. It is merely necessary to call this file and all of the words you have added will be displayed. You now delete, change, or add words to the list and use ADDTODIC to put it all in your dictionary. An impressive way to get your special words into the dictionary at any time, for future checking. (There's always the chance you will learn the spelling of the words just by entering them, too!)

Further, MICROPROOF now displays in context. No longer do you need to puzzle and go on a Global Search with your word processor for some word that you may have forgotten just where it occurred. Or, it might be a "non-word" — I used to keep getting "fr." The phrase, "Display Word in Context" now appears on the screen with the other choices given under "Select Appropriate Response." To get the former, type "?" and the word under consideration will appear across the screen with the line in which it occurs. For instance, "of how to use the macine???diskette handling and" — the word, of course, is "macine" (should be "machine"), which is followed by the three

60 GOTO 50
70 NEXT
80 READ ON ! ! !
```

If you attempted to run the above program and were thwarted by a SYNTAX ERROR, you can now stop banging on your computer. The above is simply a bona fide example of a poor attempt at program translation.

As the owner of a TRS-80 MODEL I, II, or III, no doubt you have experienced the frustrating scenario of seeing a terrific program in a computer magazine, only to be prevented by running it when you realized that the MODEL I, II, and III (and ALL microcomputers, for that matter) are not compatible with each other. Although most features of TRS-80 programming, at least, are consistent with all three models, Murphy's Law usually prevails and there is always at least one inconsistency in any program which you wish to run on your on machine.

I will be writing a monthly column concerning program translation to the TRS-80 models I, II, and III. The purpose of this column will be to enable an owner of one of these machines to translate any program written in BASIC to his own computer. I will deal primarily with translation solely among the three TRS-80's. If interest is strong enough, I might also deal with other popular microcomputers, such as the APPLE.

What is it that makes conversion so necessary? The most common problem in converting programs is dealing with graphics. Each of the three TRS-80's has its own method of dealing with graphics. In some way, virtually every graphics statement on the MODEL I, II, or III is different in some way from the statement to do the same thing on a different TRS-80. The character sets for each computer are also different. For this reason, a MODEL III program which uses one of the MODEL III's special character sets will not work on a MODEL I or a MODEL II. Similarly, a MODEL I program which uses PRINT @ statements will not work on a MODEL II without conversion because the MODEL I has 64 columns on its screen, while the MODEL II has 80 columns; therefore, PRINT @ coordinates will not remain constant between these two models.

Disk access is another area which poses a problem in many cases. The MODEL I does not support variable-length records (a special type of file in which the programmer can specify the number of characters which constitutes one "record" — more in a future

month) under TRSDOS, as do both other machines. The MODEL II, on the other hand, does not support the OPEN "E" statement, which opens a sequential access output file to its end. The MODELS I and III, finally, do not support the MODEL II's OPEN "D" statement, which is an alternative form for OPEN "R" (which opens a random-access file).

Next month I will deal with the most fundamental topic in program conversion — the actual program transfer. Entering a 300K program into the computer is not a pleasing thought, but when a microcomputer owner upgrades to a MODEL II or to a MODEL III this is frequently the situation he is confronted with. I will discuss how to transfer your programs directly. This can generally be done by one of two methods: transmitting the program over an RS-232 interface, or converting disks which have differing formats.

In future months, I will cover one topic each month and discuss conversion techniques for applying this to each computer. I presently plan to cover graphics, disk access, screen size difficulties (80 columns vs. 64), and array functions (ERASE, SWAP, etc.).

If you have any comments or suggestions, or if there is a specific topic which you would like to see covered, let me know. All correspondence is welcomed. Simply write to Richard Kaplan, c/o H & E Computronics. ■

continued from page 41

question mark symbols to draw attention to the word in question. At this point you have the opportunity to respond in the same way as for the other alternatives, by correcting the word, leaving it, adding to the dictionary (or to exit the program).

The "fr" I was getting? By placing the cursor at the very beginning of my copy I had inadvertently included the symbol for "flush-right," which was picked up as a "non-word."

The manual has been revised and expanded to explain these new features, and additional information has been provided. Also, the price structure has been revised — downward! — now making it an extremely versatile and useful writing tool for what now must be considered a low cost.

The phenomenal speed of operation of this Z-80 machine language program has not lessened by any means — one minute to proof 3000 words is specified — it seems much faster. MICROPROOF operates with Scripsit™ and Lazy Writer™ for the Models I, II, and III.

VOL. 4 - DISASSEMBLED HANDBOOK FOR TRS-80

Robert M. Richardson

CHAPTER 10

110 BAUD ASCII RADIO TELETYPE TRANSMIT AND RECEIVE PROGRAM

INTRODUCTION

Here we are in the last Chapter of Vol. 4. Concatenating the programs from Chapters 8 & 9; i.e., "putting it all together," for a real honest-to-goodness working 110 Baud ASCII transmit and receive program. The ASCII radio teletype programs are both the simplest, and therefore the shortest, in Volume 4.

WHY DID YOU HOLD OFF THE EASIEST TILL THE LAST ? ? ?

Well Gridley, somehow or other you managed to survive the Morse and Baudot code programs, so we thought that by gradually tapering off on the degree of difficulty towards the end you would realize how "truly easy" code conversion can be. THAT'S CRAZY. I NEARLY DIDN'T SURVIVE CHAPTERS 1 THROUGH 7:

But you DID survive Grid, and that's the proof of the pudding.

COMPLIMENTS WILL GET YOU ANTHING. WHAT DO YOU WANT NOW ?

Well Gridley, all I want you to do now is to "hang in there" till we put both Chapters 8's and 9's programs together into a solid working program. Just a bit more patience and fortitude. WHAT DO YOU MEAN BY THAT ? ? ? I AM ONLY A FIGMENT OF YOUR WEIRD IMAGINATION ! ! ! AREN'T I ? ? ?

Certainly not, Gridley. We have our differences at times, but you have been a real person to all of us since Volume I was written two years ago and you've made many fine contributions.

WHAT CONTRIBUTIONS HAVE I SUPPOSEDLY MADE ? ? ?

1. You have fastidiously kept us from taking ourselves too seriously. Everytime we believe that we are about to reinvent the wheel, you bring us back to the mundane planet earth and put things into proper perspective.

2. The renowned author and our learned friend, Dr.

43

David Lien, used your good services in his bestseller, *Learning Level I*, that has had over 300,000 copies printed to date.

3. My new book, *The Gunnplexer Cookbook — A 10 Gigahertz Microwave Primer*, is even dedicated to you, Grid Gridley.

This brings us full circle, Gridley. What is the difference between reality and imagination? If you imagine something is real Grid old friend, is it truly real?

YES, OF COURSE IT IS TO THE ONE DOING THE IMAGINING !!!

Thank you, Gridley. Don't ever leave us and let us take ourselves too seriously. Enough philosophizing for now. Let's get on with putting these ASCII programs together, together.

ASCII RTTY - PUTTING IT ALL TOGETHER - PROGRAM MODIFICATIONS

We have tried our best to make concatenating Chapter 8's transmit program and Chapter 9's receive program as easy as possible. Changes and modifications are only minimal.

Load Chapter 8's source code into the Radio Shack EDTASM followed by Chapter 9's source code. The first order of business is to renumber the concatenated program using the EDTASM's N100,10 command. You will note that lines numbers 100 through 3620 in the transmit program have NOT changed.

We'll try to cover ALL the modifications in sequential order starting with the transmit program and then proceeding to the receive program.

Change line 900 to:

```
00900 JP Z,MODE ;IF SO, GOTO RECEIVE
MODE
```

Change line 2350 to:

(substitute U*U*U* for RYRYRY)

Change line 3330 to:

(substitute U*U*U*U*U*U*, etc. for ALL the RYRYRYRYRY, etc.)

NOTE: As previously discussed, the U* test accomplishes the same thing, testing all the bits of the ASCII code that are used (7), as does the RY with the 5 bit Baudot code.

DELETE lines 3630-3650 as we will tack lines 3630 & 3640 on to the very end of the combined program.

WHY DO WE HAVE TO DO THAT ? ? ?

You do not HAVE TO, Gridley. If you do though, you will be able to use ALL the memory remaining in your TRS-80 for the "input a message" subroutine in the transmit mode.

DELETE former line numbers 150 through 220 in the receive mode program. If you added the CLS subroutine to former receive program line numbers 225, and 1322 through 1327, DELETE them also as the CLS

subroutine is only used in the transmit section of the program and assures Model III compatibility. Now, renumber the combined program again with N100,10. If all is well, the new receive mode line numbers should appear identical to that shown in the combined program listing in this Chapter, except for a few lines at the program end.

Change new line numbers 3760 & 3870 (these were formerly receive program line numbers 310 & 420) to:

```
03760 JP Z,GO1 ;IF SO, GOTO TRANSMIT
MODE
```

```
03870 JP Z,GO1 ;IF SO, GOTO TRANSMIT
MODE
```

DELETE former receive program line numbers 1300-1330 as they are duplications of the CARRET subroutine in transmit mode.

ADD the following lines to the very end of the program:

```
04750 INPUT1 DEFM 'YOU FORGOT TO INPUT A
MESSAGE '
```

```
04760 DEF B 0 ;MESSAGE DELIMITER
```

```
04770 END W4UCH ;EL FIN = EL BEGUINE
```

Hopefully, the foregoing is the extent of the changes necessary to combine the programs in Chapters 8 and 9.

IF your combined programs are identical to this program list, you will have approximately the following bytes left in MEM available for the "input a message" subroutine:

MEM	16K MEM	32K MEM	48K MEM
BYTES	943	17327	33711
PAGES	.9	16.9	32.9

Pages are figured at 16 lines of 64 characters per line of solid text AND DO NOT include carriage returns. As such, the number of pages may be tripled, quadrupled or more, depending upon the carriage returns per page.

AUTOMATIC TRANSMIT/RECEIVE RELAY SWITCHING

If you wish to use the VAR/80 to switch your transmitter, receiver, and antenna relay from transmit to receive or vice versa AUTOMATICALLY whenever you press the CLEAR key, simply modify this program's output to the VAR/80 so that the latching relay at DBO zero controls your station's T/R switches and/or relays. Chapter 7's last page details the approach we used with the combined Baudot RTTY program. The same approach will work equally as well with this program.

10 MINUTE SEMI-AUTOMATIC MORSE IDENTIFICATION FOR RTTY

The F.C.C. requires that each amateur station operating Baudot or ASCII radio teletype identify itself

once every 10 minutes via Morse code when operating in the CW/RTTY portions of the amateur bands. A minimum of 100 cycles frequency shift is required for this Morse I.D.

Courtesy, and possible forthcoming new regulations, dictates that the call sign of the station being worked also be transmitted. A typical sequence on RTTY would be: "W2CIX/3 IN PITTSBURGH THIS IS W4UCH/2 CHAUTAUQUA NY. MORSE I.D. FOLLOWS" We now have the option of using a hand key, bug, paddle, Morse keyer PCB, or what-have-you to key the Flesher TU-170 terminal unit which has a key jack on its rear panel. The TU-170 outputs a 2225 cycle tone key down and the standard 2125 cycle Mark tone for key up. REMEMBER: the TU-170 MUST have the TTL signal from the VAR/80 inverted by a single gate from a 7404 TTL inverter chip between the VAR/80 and TU-170 unless you wish to transmit an inverted signal (switched Mark and Space tones). The crystal-controlled Circuit Board Specialists AFSK generator does NOT require the 7404 inverter chip. The optional 7404 inverter was described earlier in Chapter 5.

SENDING THE I.D. IN MORSE CODE

Assuming we have a keyer for the TU-170 (any of the varieties previously mentioned) plugged in and ready to go, we would then send the following message in Morse code:

W2CIX/3 DE W4UCH/2 KN

The generally accepted meaning of the KN terminator is: "over to W2CIX/3, we are NOT listening for breakers." If you wish to listen for breakers, then just end the Morse I.D. with a K and give a short courteous listen for any breakers before W2CIX/3 transmits his Morse I.D. (we presume that both stations wish to I.D., one after the other, before resuming ASCII radio teletype operation). IF you DO NOT wish to turn over operation to the station being worked, and wish to continue your RTTY message, just leave off the KN or K at the end of the I.D. and resume transmitting your RTTY message.

As previously mentioned, there are about as many ways of effecting the 10 minute Morse I.D. as one can imagine. They vary from a simple "wind-up" mechanical timer that ding-a-lings at the end of 10 minutes and allows you to manually key in the Morse I.D. on the TU-170, to a modestly simple solid-timer that is re-initialized every time you have sent a Morse code I.D. (see QST magazine for those on the market).

HOW TO SEND THE MORSE I.D. SEMI-AUTOMATICALLY

Overlooking our old motor driven "code-disk" with a photo-electric eye scanning the perforated holes we razor-cut into an old shirt-back piece of cardboard

PONY EXPRESS

Finally

The most complete mailing program ever designed, used for many years by large corporations and organizations

**Now Available for the Trs 80*
Models I and III**

Following are some of the features of

PONY EXPRESS

- ★ Unlimited amount of files
- ★ 1400 records on a Model III 40 track diskette
- ★ Records can be sorted by name, zip code, zip and name, zip and address
- ★ Records can be printed on labels one to five across
- ★ 132 character wide paper
- ★ 80 character wide paper
- ★ or with cheshire format
- ★ Print your own return address labels or any other one to five line message
- ★ Records can be selected by an unlimited amount of selection codes.
- ★ Automatic repeat routines for ease of entering records
- ★ Codes can be used instead of titles for greater efficiency during input
- ★ Unique correction and deletion routines for ease of updating files
- ★ Extensive documentation so that anyone can learn how to use PONY EXPRESS in less than an hour

TOGO AND BENIN. 5V7HL IS BEING VISITED BY KARL, K4YT, WHO WILL BE MOVING TO BENIN TO OPERATE AT TYA11 WITH N4HX. RECENT ACTIVITY HAS BEEN AT 2100Z ON 21275 KHZ. OTHER BENIN OPERATIONS PLANNED INCLUDE TY9ER BY GHIS, ON5NT, NEXT WEEK, 80 THRU 10 CW AND SSB, AND MAY 6 TO 13 BY DJ2BW AND DL8DC.

QATAR. A7XE IS AGAIN ACTIVE. WATCH 7004 AND 21026 AFTER 0200Z. ALSO 15 METERS FROM 1730Z. QSL DF4NW.

TOKELAU. REPORTS FROM ISRAEL SAY THAT ZM7AA SHOULD BE ACTIVE AT ANY TIME. ANTENNAS INCLUDE A 40 METER BEAM.

CEUTA. EA9EU HAS BEEN VERY ACTIVE ON 160 METERS. WATCH 1827 AFTER 0430Z. QSL BOX 103, CEUTA, NORTH AFRICA.

SOUTH SHETLANDS. HF0POL HAS BEEN ACTIVE ON 7001 FROM 0030Z. THIS IS A POLISH RESEARCH BASE ON KING GEORGE ISLAND. QSL SP5EKZ.

SOUTH SANDWICH. THE ONLY OPERATOR AT LU3ZY AT PRESENT CANNOT OPERATE CW. THE TUESDAY AND FRIDAY SCHEDULE HAS RESUMED ON 14212 AT 0100Z.

GUINEA. VK4NIC/3X WILL BE ACTIVE THROUGH THE END OF APRIL AND HAS BEEN ON 3795 AFTER 0400Z.

SOUTH GEORGIA. VP8SU HAS RETURNED TO ENGLAND BUT ANOTHER AMATEUR IS ON THE ISLAND AND WILL BE ACTIVE. GLORIOSO. FR7AI/G AS WELL AS FR7CE ON REUNION ARE ON 28505 FROM 1300Z.

PALMYRA AND KINGMAN REEF. KB7NW AND AD0S HAVE LEFT HAWAII AND ARE DUE TO SIGN PORTABLE KH5 EARLY NEXT WEEK. AFTER FIVE DAYS ON PALMYRA THEY WILL MOVE TO KINGMAN REEF.

DODECANESE. K9QXY/SV5 HAS BEEN VERY ACTIVE, MOSTLY SSB.

GUINEA BISSAU. J5AG WILL BE LEAVING SATURDAY AR

THE NEXT DX BULLETIN IS SCHEDULED FOR APRIL 17 AT 0200 AND 0500 UTC.

FOOTNOTE TO THE 110 BAUD ASCII RTTY PRINTOUT FROM W1AW

The only changes we have made to the foregoing printout is change the 72 characters per line to 62, and add a carriage return between paragraphs, as this program does not decode line feeds. The receiver used was an ITT 3021A digitally tuned unit, the antenna a Hy-Gain 3 element Tri-Bander about 60 feet away from the ham shack with a homebrew 20 Meter preamp mounted on the antenna mast, the transmission line was 7/8ths inch diameter Heliac (tm) from Andrews Corp., the terminal unit was a Flesher TU-170 (straight out of the box and unmodified) and the interface to the TRS-80 a venerable Telesis VAR/80 (serial no. 0009)

that has worked without fault for over 3 years. A special "thank-you" is due Western I/O for their faultless IBM Selectric terminal that printed it out.

CONCLUSION OF VOLUME 4

Chapters 1 through 10 were written during the fall/winter of 1980 and spring of 1981. By the time they are published, late summer 1981, 16 bit microprocessors such as the Z8000 will be proliferating...at least we hope so. Sometime late this year or early next year, Radio Shack will be announcing the Model IV TRS-80 16/32 bit machine. Let's hope they stick with Zilog who are certainly responsible in part for the astounding success of their Models I/II and their younger brother, the Model III.

Every time we believe we have a handle and a modest grasp on a given microprocessor, first Dr. Faggin's revolutionay 8080 and then his remarkable Z-80, the science, technology if you will, leap frogs another giant step forward forcing us to start all over again. Actually, we (and you too) would have it no other way. How very fortunate we are to live in this exciting time of fantastically rapid microprocessor development.

110 Baud ASCII radio teletype (100 words per minute) is over 50% faster than 60 speed Baudot RTTY (61 words per minute) and is coming "down the pike" whether the old time Baudot RTTYers like it or not. 300 Baud ASCII RTTY really flies along at 300 words per minute. Both 110 and 300 Baud ASCII radio teletype are the wave of the future and the future is tomorrow morning. In due course the Baudot RTTY machines will wear out, though we are definitely "not holding our breath" until that happens. Are we a polarized ASCII zealot? Of course not. The most sensible approach is to be able to work both Baudot and ASCII radio teletype and have the BEST of both possible worlds. That is why we have tried to give EQUAL time to both types of RTTY programs in Volume 4.

The differences between the amateur radio and computer buff are far less than we suspected. Both desire to communicate; ipso facto, the rash of computer bulletin board systems springing up daily. All it takes is a relatively inexpensive terminal unit and interface, plus a modest investment in ham gear and you are practically "on-the-air." Welcome to the "wonderful world of amateur radio's unlimited horizons."

COMPUTER SHOPPER, the new buy, sell, and trade publication, is ready to help you with the latest information on personal, small business and large-system computers, accessories and software.

Each ad-packed issue is full of bargains you are looking for. Included are ads from individuals throughout the United States who are selling their good, pre-owned equipment just so they can trade-up to new equipment coming on the market.

But, COMPUTER SHOPPER'S bargains won't be yours unless you subscribe. This useful, money-saving publication can become your way to communicate with other buyers, sellers, and traders all over the nation.

Whether you are a hobbyist or a part-time user, COMPUTER SHOPPER will put you in touch with the nationwide computer marketplace in time for you to take advantage of bargain opportunities.

Have something to sell? A COMPUTER SHOPPER subscriber probably wants to buy it.

Looking for a part, component or even a complete system? A COMPUTER SHOPPER subscriber probably wants to sell it.

COMPUTER SHOPPER is THE marketplace for anything in computers and is read by thousands of people who are ready to buy.

COMPUTER SHOPPER offers a unique format in which classified ads are categorized for fast location of specific items. Combining this with low individual ad rates — 12 cents a word —

makes it the ideal place for buyers and sellers to communicate. And, its mix of individual, dealer, and manufacturer ads enable subscribers to find what they want at the best price possible.

COMPUTER SHOPPER will work for you in other ways, too. If you are just thinking about getting into computers, it can help you learn product availability and prices before you make a decision. And, through the timely ads, COMPUTER SHOPPER will keep you abreast of changes in the market which could create bargain opportunities for you.

BUT COMPUTER SHOPPER cannot work for you unless you subscribe.

Want to look us over first? We'll give you your first issue FREE and then bill you for the next 12. If you are not convinced COMPUTER SHOPPER suits your needs, just write "cancel" on the invoice and return it.

And, to let COMPUTER SHOPPER start working for you right now, with a paid subscription we'll also give you a FREE classified ad to sell your pre-owned equipment or to find equipment you want.

If you don't need to use the free classified ad now, use it anytime during your subscription.

Subscription: \$10/year, 12 issues plus your first free one. Bank cards accepted. Money back guarantee

QUESTIONS AND ANSWERS

Conducted by Hubert S. Howe, Jr.

QUESTION

from Kumphol Khaopravetch, 66-14 Woodside Avenue #302B, Woodside, NY 11377: I have been subscribing to *Computronics* almost a year, and now I have some problems I would like to ask you about. I have a TRS-80 Model I, Level II, 16K computer which uses the cassette tape unit. I would like to buy the printer and floppy disk system from the Heath Company, but I don't know what problems I will face when I interface them with the Radio Shack computer. I think I need to buy the following devices:

1. H-14 Line Printer
2. H-8-4 4-port RS-232C, Serial Interface
3. WH-8-41 Adapter Cable
4. HM-800 Manual for kits
5. HCS-1 Printer Paper
6. Any disk drive device from your suggestion.

Do I need any more devices except those that I mentioned above? I don't have an Expansion Interface. Do I need to buy it from Radio Shack before buying the devices above from Heath, or does Heath have a device that works similar to the Expansion Interface?

ANSWER

The Heath computer has a totally different architecture from the TRS-80. In general, I would *not* recommend that you try to use Heath peripherals with the TRS-80. The only possible exception to this would be the line printer, as long as you can get it with a parallel interface, so that you do not require any additional modifications to hook it up to your TRS-80. Also, make sure that the cable will work and that you can get one for the TRS-80.

If you want to get a TRS-80 disk drive, you *will* need an Expansion Interface. There are so many inexpensive disk drives now available on the market that this will certainly be the least expensive solution, but all of them will require that you first have an Expansion Interface.

Heath makes excellent quality products, especially for people interested in building kits; but if you want to use them, I would recommend that you buy the entire system, starting with the computer, from Heath. That will not only be expensive, it will also take many hours of labor to assemble.

QUESTION

from Theodore van Gelder, 1621 E. Mission Hills Road, Northbrook, IL 60062: I am ready and would like to add to my present system (Model I TRS-80 Level II), but I am confused by the advertising that I read concerning the equipment available.

The TRS-80 Expansion Interface lists for \$559. There

are others offered at \$362. These are for the E. I. with 32K. Do all of these have the same attributes? What do they include and what is missing? *80-U.S. Journal* has an article (July/August 1981, page 21) that starts out with "a 16K Expansion Interface (Radio Shack only)". Is the Lobo E. I. (LK80) equivalent? How about Computer Plus equipment?

Disk drives: will all disk drives operate on all E. I.s? Are they able to produce the same results in the various combinations and arrangements of E. I. and disk drives?

Are printers susceptible to variations depending on the E. I. used? Where can I find the answers to these questions and others that may arise?

ANSWER

First, you can find many different prices for Expansion Interfaces just by checking the various Radio Shack stores and authorized dealers. (You can also save money by buying used equipment.) As long as the equipment is manufactured by Radio Shack, it should all basically be the same (although Radio Shack itself has used different designs for the E. I.). Computer Plus, for example, is a Radio Shack dealer.

One of the most important reasons for the variations in price is the amount of memory in the interface. You can save the most money by buying a 0K interface and installing your own memory chips, which can cost under \$20 for 16K now. This process voids the warranty, however. We really don't know enough about the Lobo or other non-Radio Shack expansion interfaces to know whether they are equivalent or not.

As far as disk drives are concerned, once you have a functioning Expansion Interface with the disk controller, any of the various drives advertised should work. Just make sure that you purchase a system drive for drive zero, or that instructions are included for switching the drive to the proper unit. (Most non-Radio Shack drives have switches allowing you to select whether it is a system drive or not.)

Line printers should *not* be susceptible to variations depending on the E. I. used. Here the problem is more likely to be the cable used, as Radio Shack's standard is slightly different from some others. If you mention that you will be using the printer on a TRS-80, most computer stores or salespeople will know what you need.

QUESTION

from The Bee Hive, 15 Olde Towne, Village Square Shopping Center, Hazelwood, MO 63042: We are interested in more capacity on our disk drives. We now have two RS drives and would like to add a TFD-100 in

single density (for the present). We have TRSDOS 2.2. Can we just add on the TFD-100, or will we need a different DOS (such as NEWDOS)? We would like to have a list of what we would need to make this system work, including prices, and another list assuming we just replace the two RS drives with two TFD-100's. This is a business application and we assume that we should use a data separator.

ANSWER

You will need to purchase a new disk operating system whenever you add on disk drives that have more capacity than the standard Radio Shack 35-track (Shugart) drives. Most disk drives available now have 40 tracks, but the first 35 are compatible with the Shugart drives, so you lose only 5 tracks of data when running under a 35-track DOS like TRSDOS 2.2. Moving up to 80-track drives or to eight-inch disks involves many more substantial changes than from 35 to 40 tracks.

There are many new DOSs that support drives with greater capacity. NEWDOS40, the 40-track version of NEWDOS 2.1, will support 40-track drives. So will NEWDOS80 and DOS PLUS. DOS PLUS will support drives of different characteristics, but all must be the same. As far as we know, NEWDOS80 is the only DOS that presently supports different drives on the same

system.

We would also recommend the Data Separator whether or not you move to new drives.

QUESTION

from Michael Silver, 3613 Purdue Drive, Bakersfield, CA 93306: Is there any way to modify the JKL function of NEWDOS to where it will print graphics as well as alphanumeric? Is there any way to put MICRO-MOVIE on disk via LMOFFSET? Can you please tell me the machine language code to move a 1K block of memory to video memory?

ANSWER

Since the JKL function of NEWDOS goes through the standard line printer driver to print the contents of the screen, if your printer handles graphics with EXACTLY the same code as the video display, it should work. (Don't forget that bit 6 of the video RAM doesn't exist.) If it doesn't, you can patch in a line printer driver that does not do an AND 127 before sending each byte to the line printer.

I'm not familiar with MICRO-MOVIE, so I don't know why you can't save it on disk via LMOFFSET. I would suggest that you run LMOFFSET only to find out its starting, ending, and entry addresses. Then load the program into memory and use the U (unload) com-

mand in Monitor #3 or #4 or the DCV-1 program to move the program to unused RAM space, such as 7000H. Then save the resulting file on disk and try running that. If you are using NEWDOS, make sure that the program doesn't overwrite NEWDOS's keyboard driver at 4589H.

The code to move a 1K block of memory to video memory is as follows:

```
LD    HL,BLOCK    ;BLOCK TO MOVE
LD    DE,3C00H    ;UPPER LEFT CORNER

LD    BC,400H     ;1K IN HEX
LDIR                      ;MOVE BLOCK
```

QUESTION

from Michael Hough, P. O. Box 223, Faribault, MN 55021: I am the owner of a TRS-80 Model I, 48K computer with one disk drive, a line printer II and the lowercase modification. I have several questions:

1. Will the following programs run properly on my system: NEWDOS, NEWDOS+, NEWDOS/80, MON4, Adventure International Adventure programs.

2. When using the TAPEDISK utility program, it is necessary to enter the beginning, ending, and entry point memory addresses in order to transfer a system program from tape to disk. How can I find out what these memory addresses are for different programs? Is there an easier method for transferring programs from tape to disk?

3. What machine language programs (in terms of memory addresses) cannot be transferred to disk from tape and then be executed properly under DOS?

4. Can the following programs be transferred to disk and execute properly under DOS: Micro Chess, In Memory Information, Invasion Force, and T-BUG?

5. When powering up my system, or even while rebooting or resetting it, I am frequently receiving parity errors. This occurs when I try to load any program or when I try to get into Disk Basic from DOS. It does not always happen, but quite often. When this happens, I am forced to use the BACKUP utility program to make a useable diskette again. I have had the disk drive in for servicing where the heads were cleaned and aligned and the drive was checked for errors, and it was determined to be in good shape and returned to me. I am still having the same problem with the drive. I have tried using several diskettes, but the problem keeps recurring. This gets frustrating, because I MUST keep a backup of all my important programs in case this happens. What does a parity error mean? What can I do to prevent it? What might be causing it? Once it has happened, can it be corrected without making a completely new copy of the disk?

6. What is the difference between TRSDOS 2.1, TRSDOS 2.2, TRSDOS 2.3, VTOS 3.0, and NEWDOS 2.1?

7. Is NEWDOS 2.1 the same as NEWDOS, NEWDOS+, or NEWDOS/80?

8. What is VTOS 3.0, and what are its capabilities? Where can I obtain a copy?

9. Would the TRSDOS 2.3 manual be adequate documentation for the use of NEWDOS+?

ANSWER

1. NEWDOS, NEWDOS/80, MON4 and Adventure International programs will all run on your computer. NEWDOS+ is the same DOS as NEWDOS, only it comes with a batch of utility programs not included in NEWDOS alone.

2. The easiest way to find the starting, ending, and entry locations of programs in machine language is via the "L" command in MON4 if the program is on tape, or a program called LMOFFSET available with NEWDOS+ and NEWDOS/80 if on disk. You can also use the "C" command in MON4 to save programs on disk.

3. Machine language programs which load into RAM areas reserved for the disk operating system cannot be transferred to disk and then executed under DOS. Generally, the area to be avoided is from 4000H to 5200H (the bottom of low RAM to 20992). However, you can often use the "U" command in MON4 to get around this problem, provided that you do not use the disk for input and output.

4. I believe that Micro Chess uses the DOS RAM area, but I am not familiar with the others.

5. It sounds to me as if the disk parity errors you are getting could be caused by not opening the disk drive door when turning power on or off. The diskette must not be left in the drive when power is turned on; it can get "zapped". What happens is that the formatting of some system files gets lost, and then the system cannot be read properly so the computer doesn't work. When data is written to a diskette, a two-byte checksum is also written for every sector. If this does not match the checksum computed when the data is reread, the computer knows that the data was not properly read. You may also need to check the alignment of the disk drive (which must be done by a technician at a repair center), and it may help to install a Percom Data Separator, though this helps primarily on the inner tracks. Once this happens, the only practical alternative is to make another backup. Always make backups of important files!

6. TRSDOS versions 2.1, 2.2, and 2.3 are successive revisions of the disk operating system by Radio Shack. 2.2 and 2.3 are virtually identical. VTOS 3.0 now replaced by LDOS, and NEWDOS/80, are completely rewritten DOSs, as is DOS PLUS.

7. NEWDOS 2.1, which is the same as NEWDOS and NEWDOS+, is basically a revision of TRSDOS 2.1, with most of the bugs corrected and some nice new features added.

Sun - Technology, Inc.
Box 210
New Durham, New Hampshire 03855
(603) 859-7110

We honor:

(Manufacturing high technology products since 1970)

8. VTOS 3.0 (now LDOS) is too much to explain here.

Computronics sells NEWDOS, NEWDOS/80, and DOS PLUS. LDOS can be obtained from Logical Systems, Inc., 11520 N. Port Washington Road, Mequon, WI 53092.

9. You would probably need the NEWDOS manual, although most questions are adequately answered in the TRSDOS manual.

QUESTION

from Richard J. Keenan, C.P.A., 2-11 So., Clifton Park, NY 10263: I have a TRS-80 Model I, but I have learned to program in assembly language by the use of Intel's 8080/8085 mnemonics with the 8080 extended mnemonics as found in the well-written book *Z-80 and 8080 Assembly Language Programming* by Kathe Spracklen. I am trying to find a macro assembler which will accept either just 8080 mnemonics or both the 8080 and Z-80 mnemonics (like the TRS-80 Model II Disk Assembler) which can be run on the Model I. Do you know of any?

ANSWER

Unfortunately, there is nothing for the TRS-80 that uses the mnemonics employed by Spracklen. If I'm not mistaken, these refer to the TDL Relocating Macro Assembler made by Xitan, which went out of business a few years ago.

If you want to program with 8080 mnemonics, then the best solution is to use CP/M. The standard version of CP/M comes with an 8080 Assembler, although not a macro assembler. There is a version of Microsoft's M80 macro assembler that runs under standard CP/M, but I'm not sure whether this is available for the Model I version of CP/M. There will soon be a version of Model III CP/M that is compatible with all the rest of the CP/M systems, made by Lifeboat Associates. ■

YOU DON'T NEED AN EXPANSION INTERFACE!

Running out of room?

Increase the memory in your TRS-80 Model I™ or PMC™ to 48K with no external hardware! The INTERNAL MEMORY™ plugs in inside your keyboard case with NO SOLDERING, trace cutting or modifications and can be easily removed at any time. Hundreds of satisfied customers have proven that the INTERNAL MEMORY is reliable, does not cause heat or power supply problems and is compatible with virtually all hardware and software.

IM-1B INTERNAL MEMORY™ (32K) \$85.50 complete (\$59.50 less RAM)
 IM-2 INTERNAL MEMORY™ (48K) \$140.00 complete (\$89.50 less RAM)

SPEED UP your Model I and ADD A PRINTER-

The SPRINTER I™ plugs into the Z-80 socket in your TRS-80™ Model I keyboard unit with NO SOLDERING, trace cutting or modifications. The SPRINTER I equips your keyboard with a standard parallel printer port (extending out the case below the expansion connector) which is driven by the LEVEL II BASIC "LPRINT" command; no software required. In addition, the SPRINTER I will allow your TRS-80 to run at least 2 times faster by increasing the clock rate of the Z-80 CPU (3 times faster if you buy a Z-80B CPU). Special circuitry compensates for slower memory and allows automatic switch-down to "normal" speed for disk operations. If you already have a printer port, the SPRINTER I can be supplied without the printer port at a lower price.

SPRINTER I™ speed-up/printer port (assembled and tested) **\$99.50**

includes special connector for printer cable, installation required.
 we can supply cables for most printers — call or write for details.

All products are guaranteed for 1 year with a 30-day return privilege. We pay regular UPS shipping on pre-paid orders within the continental U.S. Overseas orders add 15%. Canada and U.S. possessions add 5%. Utah residents add 5% sales tax.

Send a S.A.S.E. for more information.

DEALER INQUIRIES INVITED

Prices valid through end of month on front cover

HI-RESOLUTION GRAPHICS FOR MODEL II \$495

E/RAM II SCREEN PHOTO

E/RAM II is a hardware/software package which adds a 512 x 240 high-resolution graphics display to the TRS-80™ Model II. An assembly language driver is provided along with a high quality, fully assembled, printed circuit board which plugs directly into the Model II card case.

The software driver provides the user with useful assembly language subroutines which may be called from any high level or assembly language program. Routines include control functions which can either turn the normal TRS-80™ or the E/RAM II display on or off, erase the screen, or invert the video. Plot functions include SET, RESET or READ a point on the screen. When the LINE function is passed end-point coordinates, an optimized dot raster line is produced at machine language speed.

™ TRS80 color

From the January 1981 issue of the CSRA Computer Club newsletter:

There was some amusement at the November meeting when the Radio Shack representatives stated that the software in the ROM cartridges could not be copied. This month's 68 Micro Journal reported they had disassembled the programs on ROM by covering some of the connector pins with tape. They promise details next month. Never tell a hobbyist something can't be done! This magazine seems to be the only source so far of technical information on the TRS-80 color computer™. Devoted to SS-50 6800 and 6809 machines up to now, 68 Micro Journal plans to include the TRS-80 6809 unit in future issues.

To get the MOST from your 6809 CPU - This is the BEST SOURCE! The ONLY Magazine for the 6809 Computer. Months Ahead of All Others!

HOW ACCEL2 WORKS, PART 2

TRS-80 Model I/III BASIC Compiler

The ACCEL2 program has worked fine! I used it to compile a BASIC WORD PROCESSOR that was published in 80 MICROCOMPUTING in their MAY 1980 issue. It was necessary to go through all of the for-next loops because of the many jumps out of them and make corrections, but when that job was done the program worked fine. I am using it to write you this letter. The final program fits into a 32K machine.

ACCEL2 is amazing! I had bought an Othello game a couple of years ago, but never played it because of the interminably long time (2-3 minutes) it took the computer to make each move - no fun at all. Just for the heck of it I ran ACCEL2 on it, making NO changes whatsoever to the program, and the whole thing compiled at once with no tinkering! It then took about 10 seconds per move, so I added a single statement at the beginning to DEFINIT A-Z, recompiled, and the result is just as good as an assembly-language program - only a couple of seconds per move!

I also wish to state that I think that ACCEL2 is an excellent product. I have modified Scott Adams' Backgammon game to compile under ACCEL2 as an example. The original BASIC program takes 30 to 40 seconds for the average move and can take as much as 4 minutes. The compiled version averages 2 to 3 seconds per move with a maximum move time of 9 seconds (all integer variables). That is significant!!

I'VE BEEN PLAYING WITH ACCEL2 FOR A FEW HOURS NOW AND IT SEEMS TO BE PRETTY GOOD. FOR EXAMPLE, MY LEVEL 2 VERSION OF RADIO SHACK'S CHECKERS GAME DRAWS THE BOARD IN 19 SECONDS AND MAKES THE SECOND MOVE IN 11 SECONDS. THE COMPILED VERSION DRAWS THE BOARD IN 11 SECONDS AND MOVES IN UNDER 7 SECONDS (ABOUT (.5)). A PROGRAM TO GRAPH CHIEF EQUATIONS TOOK 8 SECONDS PER PLOT, WHILE THE COMPILED COPY TAKES LESS THAN 2.

I HAVE COMPILED ONE PROGRAM I USE RATHER FREQUENTLY: IT EXTRACTS INFORMATION FROM A LARGE DISK FILE (1720 64-BYTE RECORDS PER DISK) AND PRODUCES A REPORT. THE INTERPRETED VERSION OCCUPIES ABOUT 4600 BYTES AND TAKES 18 MIN TO EXTRACT INFORMATION FROM ONE DISK. THE COMPILED VERSION TAKES JUST OVER 3 MIN TO PERFORM THE SAME TASK. SINCE A TYPICAL REPORT INVOLVES APPEARING FROM 5 TO 25 DISKS THIS IS A CONSIDERABLE SAVINGS OF TIME.

ACCEL2: 32K TRS-80 Model I/III. Compiles selected subset in all variable types, local and global compilation options, output save to ES/F wafar, disk under TRSDOS, NEWDOS, NEWDOS/80. New functional improvements in place.

AMAZING PROGRAM SPEEDS UP BASIC

Your time is valuable, so why waste it on slow-running BASIC programs? PROFSOFT's "FASTER" will analyze those programs while they run, then show you a simple change (usually one new line) that can reduce run-times by up to 50%.

Accounting systems, financial models, engineering and scientific programs all run faster; so do games. Large, complex programs improve the most, and "FASTER" is easy to use.

THIS ISN'T A COMPILER! Your BASIC programs remain readable and can be changed later on. While your programs run, "FASTER" counts how often each "variable" is used, then shows you the correct sequence for these variables. Afterwards, the computer finds them sooner, so your programs run faster.

Does it really work? Yes! Personal Computing said so in their May, 1981 issue (p. 116); we've received many letters from customers who've gotten 20-50% improvements; and we will make you this offer:

Order "FASTER" now. Try it on your bread-and-butter programs. If you don't get an overall run-time reduction of at least 20%, return it within 30 days for a prompt and cheerful refund.

"FASTER" costs only \$29.95 and runs on TRS-80 Models I and III, 16-48K, tape or disk.

HELPFUL HINTS

REVISED SYMBOL TABLE

When I wrote the SYMBOL TABLE program which appeared in the October 1981 issue, I had a 16K cassette system. Since that time I have expanded my computer to a 48K disk system. One of the first problems that occurred after the expansion was that SYMTAB didn't work on large programs due to the fact that BASIC handles large addresses as negative numbers.

The following is a revised version of SYMBOL TABLE which works on 32K and 48K systems.

```
65000 CLS : PRINT"SYMBOL TABLE PROGRAM"
65002 INPUT "ENTER 0 FOR VIDEO OR 1 FOR PRINTER";Q9%
65004 IF Q9%<>0 AND Q9%<>1 THEN 65002
65006 IF Q9%=1 THEN POKE 16427,62: LPRINT : LPRINT TAB(22);
"SYMBOL TABLE": LPRINT : GOTO 65020
65010 CLS: POKE 16916,2: PRINT @22, "SYMBOL TABLE": PRINT
65020 Q4%=0: Q5%=0: Q6%=0: Q7%=16633: Q4!=0: Q5!=0: Q8%=0
65030 Q8!=PEEK(Q7%)+PEEK(Q7%+1)*256
65040 Q9!=PEEK(Q7%+2)+PEEK(Q7%+3)*256
65050 IF Q8!=Q9! THEN 65110
65051 GOSUB 65510
65052 IF PEEK(Q8%+1)>51 AND PEEK(Q8%+1)<58 AND PEEK(Q8%+2)=81
THEN Q8!=Q8!+3+PEEK(Q8%): GOTO 65050
65055 Q6%=Q6%+1
65057 GOSUB 65500
65060 POKE 16540,Q9%: PRINT CHR$(PEEK(Q8%+2)); CHR$(PEEK(Q8%+1)),
65065 POKE 16540,Q9%

MANUFACTURING CONTROL SYSTEMS

MICS module - Manufacturing Inventory Control
 15 reports for inventory, purchasing, and stock-room control. "Reserved" parts feature.

BOMP module - Bill of Materials Processor
 For "complex product" control of inventory.

SHOC module - Manufacturing Shop Order Control
 Order scheduling and backlog/shipment reporting.

LABP module - Labor Collection/Performance Reptg
 Daily, weekly, and monthly labor reporting by employee, job and overhead accounts, and department and operation. Actual job costing reports.

JCST module - Manufacturing job cost reporting
 Job status and completion reporting with performance to standards. Variance reporting. Overhead determination monthly and year-to-date.

All modules for Models I and III, 32K minimum systems. Master menu driven - full operator prompted. Expandable to fit your growth needs.

Model I modules from \$295, Model III from \$345

MAKE YOUR WORD PROCESSOR DO THE THINGS YOU BOUGHT IT TO DO

SALES MANAGERS: keep a customer list
SECRETARIES: send out customized form letters
BOOKKEEPERS: prepare reports for the boss
WRITERS: maintain, organize and sort bibliographies
BOSSSES: create reports and sort data files

- Use YOUR WORDPROCESSOR: create a mailing list or any data base.
- Join that mailing list to a form-letter with a wide range of options.
- Sort your Name & Address files by any key, even when the last name or zip code are buried in a line!
- Sort 1000 "NAMES". Use up to 20 items per name.
- Insert into the text of a form-letter or report command lines that will change the printing format from one line to the next.
- Use the built-in Wordprocessor to edit a letter, or, CREATE a wholly new letter or report — and — store it in a file that is loadable by your Wordprocessor.
- Personalize form letters as you run! Insert "keys" (words or phrases) FROM THE MAILING LIST! Automatically insert a name or title or a comment.
- Insert any phrase from the keyboard.
- STOP automatically for manual sheet feed!
- SET space for AUTOMATIC sheet feeds.
- Create subsets of your DATA BASE with powerful SELECT-IF software

TIME ...

METHUSELAH™ has time for you
and your TRS-80®

The name Methuselah has always been associated with long life. The Methuselah computer clock board with its 24 hour clock and its perpetual calendar is indeed worthy of the title. Methuselah puts state of the art technology into action with the on board four year lithium battery back-up to keep it running even when your computer is off. That means no more fooling around with the software or hardware "clocks" that become Rip Van Winkles when the computer is reset or turned off.

Methuselah has many other timely features. Software patches keep the DOS and BASIC time and clock commands ticking. Only two screws mount Methuselah inside the expansion interface without soldering, clipping, cutting, or jumpering. There is even a spare I/O port and four different interrupts available for people who love to tinker.

SPECS: MM/DD/YY, HH:MM:SS and day of the week. Four year lithium battery back-up. Crystal controlled timing (adjustable 32.768 oscillator). Twenty four hour clock and perpetual calendar.

This'll Fix 'Em

Do you know any good POKES? For instance, I know one to turn off the video, so that nothing can be put on the screen unless POKEd. This is what to do: POKE 16414,0 to turn it off, and POKE 16414,88 to turn it back on. When it is off, if you want to print something, you need to POKE it, such as in the following line:
10 FOR I=15360 TO 16383 : POKE I,191 : NEXT I
I know a lot of POKES like this; however, I'm sure that I don't know half of the ones that there are. I know a lot of "hungry" TRS-80 owners who would love to have a list of them.

(Thanks to Michael Silver, H. Silver and Associates, 5959 West Century Blvd., Suite 1010, Los Angeles, CA 90045.)

Problem in "BIORHYTHMS"

I was very interested in the "Biorhythms" program by Frank L. Growney, published in the May 1981 issue. After execution, I noticed something different from other Biorhythm cycles. Using my daughter's birthday of 10,29,1965 and a starting date of the same date, the curves looked very good except that the original direction was negative. It is my understanding that biorhythm cycles start in the positive direction.

A modification of program line 920 to the following:
F=INT(-10*SIN(6.28318 etc.

produced the positive curves.

(Thanks to Donald L. Abend, 9217 Washburn Road, Apartment 29, Downey, CA 90242.)

TRS-80/RS-232 ADAPTER: Connect RS-232 printer to line printer port on Mod 3 or Mod 1 Expansion Interface. No software driver required. Leaves TRS-80 RS-232 port free for modem use. Set at 1200 baud, or specify rate (300-9600). TU8014, \$69.95.

MX-80 FRICTION FEED: Upgrade to use single sheet, tractor, or roll paper with MX-80. Install in 15 minutes, using only screwdriver and pliers. No drilling or cutting. FFU/80, only \$69.95

INCOME TAX...

PERSONAL INCOME TAX INTERVIEW PROGRAM written in BASIC by a tax attorney as he would conduct a personal interview to organize taxpayer's data into Federal income tax categories for 1981 tax returns. Program leads the user through an extensive checklist of personal events which can have income tax consequences, giving numerous examples and explanation of tax law for each YES answer.

Covers events such as marriage, divorce, birth, death, employment, lay-offs, retirement, travel, change of residence, accidents, illness or injuries, business ventures, self-employment, education, investments of money or time, prizes, scholarships, insurance recoveries, tax-exempt income, bad debts, etc., as well as the commonly known income items and deductible expenses.

Program also carries out computations for depreciation schedules, joint vs. separate returns, itemized vs. standard deductions, depreciation vs. tax credits, etc., in order to help make important tax decisions. Includes 1981 Tax law changes, references to related areas such as gift and inheritance taxes, trusts, estates, partnerships, corporations, pension and retirement plans, tax-exempt organizations, etc. Includes booklet of useful IRS tax forms, other tax publications, and toll-free phone number of tax attorney. Available on cassette or diskettes for most popular micros. Price \$49.95

A CORRESPONDENCE TIMESAVER

Nadine Willems

This little program is for anyone who resents repetitive chores that keep you from working (playing) at your TRS-80.

The program will print out mailing labels for any envelope that you have to type out frequently during the year. I generally print out 12 of each label, but in some cases I will print out 54 or more. (My labels come in segments of six, single width.) The best results are obtained using a maximum of 4 print lines, and feed 2. With this program I very seldom have to write or type out an envelope!!

Envelopes will look more attractive and personal if you make use of the lower case, and use 12 pitch if you have it. At Christmas, a red ribbon instead of black; use as many personal touches as possible. And of course, you can print out your own return labels.

One word of warning, depending upon your driver, BE SURE THAT FORM FEED IS POKED AT ZERO.

```

5 CLS : X=0 : CLEAR 250 : PRINT          '** Label counter
10 INPUT "HOW MANY LABELS";K
20 INPUT "LOWER CASE ACTIVE";X$:      '** If you have
30 INPUT "NAME";N$                      ' 1/c, USE it
40 INPUT "STREET ADDRESS";A$
50 INPUT "CITY & PROVINCE (NO COMMAS)";C$ '** I'm Canadian
60 INPUT "COUNTRY & POSTAL CODE";P$
    
```

```

70 CLS : PRINT : PRINT "HAVE FIRST LABEL ON LINE 1"
80 PRINT : INPUT "ENTER WHEN READY";X$
90 LPRINT N$: LPRINT A$: LPRINT C$
100 IF P$ = "" LPRINT : GOTO 120      '** Keeps 6 lines
110 LPRINT P$
120 LPRINT : LPRINT : X=X+1 :          '** Label to Line 1
130 IF X < K GOTO 90
140 CLS : PRINT : PRINT "ANOTHER SET? Y/N"
150 X$=INKEY$: IF X$ = "" GOTO 150    '** Level 1 INPUT
160 IF X$ = "Y" GOTO 100
170 IF X$ < "Y" AND X$ < "N" GOTO 140
180 END
    
```

The above program could be easily expanded to maintain a Data File. It would depend on the number of names required. I find it is simpler to type out a list and keep it near my computer.

PENCIL can be used, but I prefer the BASIC for printing out multiple copies. I do use PENCIL for my Christmas Card list—once it's done, it's done, except for a few alterations each year.

Federal Tax Information Tables
State Tax Information Tables
Local Withholding Tax Information Tables

An Overview of the Inventory System

Inventory is probably the most speculative of all of a company's assets. A true measure of the effectiveness of management is the ability with which it supervises the inventory control function.

The Peachtree Software™ Inventory Management System is designed to (1) give you better merchandise control, (2) allow you to lower your dollar investment in inventory, and (3) improve customer service and response.

The System maintains detailed information on each inventory item including the part number, description, unit of measure, vendor and reorder data, item activity, and complete information on current item costs, pricing, and sales. Transactions effecting inventory (sales, receipts, adjustments) may be applied at any time to insure the inventory data is always up to date and accurate.

As with all Peachtree products, the system is interactive, simple to operate, and provides reports that are up to date and comprehensive.

Particular features of the Peachtree Software™ Inventory Management System include:

- Interactive, menu-driven programs
- Self-instructing user documentation
- Long item number - up to 15 characters
- Departmentalizing of items
- Multiple pricing levels
- Processes items on reserve (committed but still in stock)
- Online item query at any time
- Comprehensive management reporting
- Automatic month end file backup
- Recovery routines for hardware failures
- Sample data for demonstration and training

How the System is Designed

The Inventory Management System operates with an **Inventory Master File** which allows for the creation of each inventory item and for the recording of transactions (sales, receipts, returns, reserves, and adjustments) to each inventory item.

The Inventory Master File contains the item number, description and various other data on item costs, prices, reorder levels, vendor reference, and activity. The items within the Master File are entered, changed, deleted, and queried through the **Inventory Master File Maintenance** program. All data on all items may be listed by using the **Detail Inventory Report** program.

Transactions may be applied at any time to the Master File through the **Enter Inventory Transactions** program. An **Update Report** automatically prints during this entry process to provide an audit trail of all inventory activity.

Several reports are available for the maintaining of stock, analysis, and forecasting. These reports include the **Physical Inventory Worksheet**, **Inventory Price List**, **Departmental Summary Report**, **Inventory Status Report**, the **Reorder Report** and the **Period-to-Date** and **Year-to-Date** reports.

At the end of an accounting period (usually a month), and then again at the end of a year, the **End of Period Processing** program is run to update current balances and clear previous balances.

Alpha Byte STORES

(213) 883-8594

31245 La Baya Drive, Westlake Village, California 91362

We built a reputation on our prices and your satisfaction.

We guarantee everything we sell for 30 days. If anything is wrong, just return the item and we'll make it right. And, of course, we'll pay the shipping charges.

We accept Visa and Master Card on all orders. COD accepted up to \$300.00. We also accept school purchase orders.

Please add \$2.00 for standard UPS shipping and handling on orders under 50 pounds, delivered in the continental U.S. Call us for shipping charges on items that weigh more than 50 pounds. Foreign, FPO and APO orders please add 15% for shipping. California residents add 6% sales tax.

We want to take you on a journey — a journey into an age undreamed of when a man's worth was measured by his courage and his cunning. With **STONE OF SISYPHUS**, we have re-created the wonderment of that ancient era. The **Maces & Magic** Series allows you to interact with the adventure on an intensely personal level. You create your own character, giving him (or her) the attributes of strength, IQ, constitution, dexterity and charisma. You then arm and prepare your creation for the challenges ahead. Amazingly, your character will evolve and grow as the journey progresses. Prepare yourself — breathe deeply, and step into the enchantment of the **STONE OF SISYPHUS** and the **Maces & Magic** Series.
