CORRESPONDENCE

Please address all correspondence to:
Calgary Color Computer Club
P.O. Box 22, Stn. "M",
Calgary, Alberta
Canada T2P 2G9

DISCLAIMERS

The opinions expressed by the authors in the Llist are solely their own and do not necessarily reflect the opinions of the Editor, Executive or Club membership.

While attempts to ensure complete satisfactory results, any mod, fix, patch or other info contained herein is used entirely at the user's risk. The Calgary Color Computer Club and Llist assumes no liability for any damage resulting from such use.

MANDATE

This newsletter is published by the Calgary Color Computer Club which has no affiliation with Radio Shack or the Tandy Corp. The club is a non-profit organization whose members share an interest in the Tandy Color Computer and other MC68xx(x) microcomputers. The primary purpose is to promote the use and understanding of micro computers generally and the 6809 microprocessor in particular.

MEMBERSHIP

Membership is open to all who are willing to observe the Constitution and By-Laws of the Club. Visitor's fees \$3.00 per meeting. One year memberships are available at the meetings. Membership rates: Sr.'s or Jr.'s \$10.00, Regular \$20.00, Families \$30.00. Member entitlements: admission to meetings, voting rights, monthly copy of Llist (except Jul & Aug), use of the Club library and participation in all Club sponsored activities.

COPYRIGHT NOTICE

The material contained herein may not be reproduced in any form without the written permission of the Club. However permission is granted for it's use in other non-profit computer newsletters provided credit is given to the author and this newsletter, and a copy sent to the Calgary Color Computer Club.

SUBMISSION GUIDE AND DEADLINE

Deadline... 2 weeks before monthly meeting. Material received later may not appear until the next issue.

Articles submitted should be on disk in ASCII and UNFORMATED. I will return your disks at the next meeting. Please ensure your name is on the disk and at the top or bottom of the text or the program submitted.

Please make ref to diagram & sketch in text as fig.1, 2, etc. Articles may be uploaded to the LAST CONNECTION BBS. See instructions on-line for upload procedures. Be sure to leave a message to the SYSOP, advising him of your contribution to the list.

FREE ADVERTISING

Free advertising will be given to all Members having Coco related hardware/software computer items for sale. ONLY ORIGINAL SOFTWARE will be accepted for sale adds. The Editor reserves the right to determine size, format, and placement of adds. The normal deadlines apply.

THE LAST CONNECTION BBS PHONE NO'S
(formerly the Ultimate BBS)

For 300 and 1200 Baud.....249-5360
For 1200 and 2400 Baud.....249-5365

FROM THE EDITOR'S DESK

This issue seemed to come upon me all of a sudden, I've been very active with other duties this past month. PLUS four of us were all planning our trip to Atlanta, Bruce, Percy, John Eng and myself. By the time you read this we will have seen and heard it first at the Fest!

Our first meeting of the new season saw only a small membership, it seems that most everyone was out of town or was their a hockey game that night? <grin>.

Well, where are all those questions that you want answered? I didn't receive any mail or phone calls! So there will not be a Q&A column this issue, but I'm still hoping that my new contributor will have his other article ready for this issue.

Is anyone interested in having an extensive demonstration with a video digitizer at one of the regular meetings? If so, lets ask Chuck to put one on for us in the future. I for one would like to see a demo! How about you?

There is one question that keeps on being asked by RS-DOS'ers and that is: "How can I access the back side of my disks (drive 2 and 3)"? Well, first of all you have to have drives that will read side 2 or side 3. Next, type in the following listing:

Listing: "SETUP/BAS"

```
0 REM SETUP ROUTINE
1 POKE 150, x REM PRINTER BAUD RATE 1=9600 7=4800 18=2400 40=1200
  B7=600
2 POKE&HD7C0, &H00 REM sets 6ms step rate
3 POKE&HD816, &H14 REM sets 6ms step rate
4 POKE&HD89F, &H41 REM sets up drive 2
5 POKE&HD8A0, &H42 REM sets up drive 3
```

OR ALL ON ONE LINE AS SHOWN BELOW

1 POKE150, x: POKE&HD7C0, &H00: POKE&HD816, &H14: POKE&HD89F, &H41:
POKE&HD8A0, &H41

Type in one of the above setup routines, save it in ASCII eg:
SAVE "SETUP/BAS", A <ENTER>. Load any program that you would like to access either side of your drives. list the first 10 lines eg:
LIST -10 <ENTER>, (most programs start at 10). make sure that the setup routine line number is not the same as line numbers in the program (if it is, renumber the setup routine).

NEXT; type the following:

```
MERGE "SETUP/BAS" <ENTER>      next  SAVE " program_name " <ENTER>.
VOILA! You now have a program that (when run) will be able to access
both sides of you disks.  - HAVE FUN -
```

That's it for another issue and remember, I could use most any articles that are computer related and some other also. So give me a call or give them to me at the meeting.

Gerry McCleary
Editor

Message From The President

As I write this I'm also formatting/backing up disks and printing labels for a new Eliminator shipment to FHL, and generally scurrying around in my attempt to prepare for the upcoming Atlanta CoCoFest. By the time this is published I'll no doubt be busy catching up on the pile of new stuff that will have accumulated over the CoCoFest weekend. Thank goodness for my CoCo 3 and OS-9, at least I can attempt to keep my CoCo busy with several tasks, though I'm afraid it still manages to keep just ahead of me most of the time!

Atlanta CoCoFest

I expect to see all the new "CoCo 4" entries, including one that I've just recently heard of, from Peripheral Technologies. This one is a little different from the others, but might be just the thing for some who are interested in an OS-9/68000 machine. In addition to the new machines, I think there'll be a new item or two for our current CoCos. I understand Tony DiStefano has been working on a new colour video digitizer for the CoCo... maybe it will be demonstrated at this 'Fest. In any event I'm sure that we'll be bringing back as much information as we can get, to share with the club.

I'm also told that Rainbow magazine will be represented at the CoCoFest, though they're not the hosts this time. From what I've heard so far, this 'Fest will be at least as well attended as the recent RainbowFests have been, with most of the major CoCo hardware and software dealers present. My congratulations to the Atlanta CoCo users who helped put the 'Fest together, and especially to Dave Myers of "CoCoPRO!" for his support.

Social Secretary Volunteer Still Wanted

The club is still in need of a new Social Secretary. Ron Van Hogeand has continued in this post, but would very much like to pass the duties on to someone else. Since he also serves as Disk BASIC software librarian, it is understandable that he'd like to give the coffee responsibilities to someone else. The duties of the Social Secretary are primarily to keep track of the coffee fund and supply the CCCC's general meetings with fresh coffee and soft drinks such as "juice boxes". If you can store the coffee equipment between meetings, carry the equipment to and from meetings, and get the coffee started approximately 15 minutes before the official start of the general meetings, this job is waiting for you. Please contact me if you can help.

Auction

This October meeting has an auction scheduled, and I hope its successful for everyone. I expect there'll be some bargains to be had, but remember... the more you pay, the bigger the club's 10% slice becomes! <grin> Just kidding, really, the club is not in too bad financial shape so just enjoy yourselves and don't worry about bidding outrageously for that well used copy of Dino-Wars!

The club has in its possession a number of items that failed to sell at previous auctions. I'm sure these will be going in bulk quantities for very low prices, so maybe you'll consider picking a few things up so I (and future presidents) don't have to store them? <grin>

Bruce Isted 90/10/01

Attention!! Attention!!

Attention ALL COCO users! It's finally here, the package you've all been waiting for!
Alpha Software Technologies Proudly Presents...

\$59.95

\$59.95

DATA - WINDOWS

User Definable Fields

Define all of your own data fields for YOUR application!

Output Expressions

Expressions, instead of just data fields, can be used for any output operations. Most BASIC-like expressions are valid.

Example:(quantity * unitcost) * .07

Unlimited number of key fields

Any field can be used as a key. There is no limit to how many fields can be used as a key. A separate file is used as an index for each key field.

Automatic sorting by any key field (FAST!)

Data - Window's indexing system uses the popular B-tree data structure for fast retrieval and automatic sorting. Data is always sorted by ALL key fields simultaneously.

Searching by any key field (FAST!)

It is possible to search for records by any key field. This search is super FAST due to the B-tree indexing scheme.

Record Browsing (sorted by ANY key field)

Browsing through records is possible with the arrow keys and from menu options. The B-tree indexing scheme allows record browsing to be sorted by ANY key field!

User definable data windows (database views)

A database is viewed through a special "data window". The data window is a user defined view into the database data. These make accessing the data attractive and user-friendly. Define text fields, input fields and output expressions.

User definable field edits

The "data windows" allow the user to define exactly how the data will look when input or output. This makes data validation easy.

Import/export/merge capability

The ability to import/export data from simple text files allows Data - Windows to communicate with other programs. The merge capability allows data to be easily transferred from one database to another.

Cut/copy/paste capability

Cut/copy/paste capability makes the communication between databases even easier. Cut records from one database and paste them in another!

Conditional printing capabilities

Determine if records should be printed (on reports or labels) with conditional expressions. Most BASIC like IF statement expressions are valid.

Example: (quantity * unitcost) > 500.00 OR rate < 200

Full report generation with conditional printing

Report generation capabilities including output expressions, output editing, multi-line output records, multiple break fields (sub-totals), multiple total fields, and conditional printing.

Full mailing label generation with conditional printing

Mailing label capabilities including output expressions, output editing, and conditional printing.

Multi - Vue interface makes it easy to use

Makes complete use of the Multi - Vue environment, but does not require it to run. If Multi - Vue is not present, All Multi - Vue functionality is duplicated in text mode.

Ready-to-run

Comes with pre-setup databases for a Rolodex, Magazine library, Video tape library, Home inventory manager, and Medical/insurance database.

Software support

We are distributing the DB9-90 file specifications (format used for Data - Windows files) freely. This will promote the growth of products that use this file format standard. We are hoping to make DB9-90 the new database standard for OS9. We will also be providing a programmer interface to the databases for even speedier development.

Growth

Data - Windows is only one part of a planned complete system of software using the DB9-90 format. Currently in the works are:

Data - Merge

A utility for using Data - Windows databases (DB9-90 format) inside of documents for mail-merging.

Data - Developer

A toolkit for developing applications that use the DB9-90 file format specifications. Included will be assembly language, C, and BASIC09 interfaces to DB9-90 databases.

Data - App

A utility for creating Data - Windows stand-alone applications without programming. Develop the system under Data - Windows, then use Data - App to make it a complete stand-alone program that can be uploaded, shared, and even sold!

Data - Forms

A system for creating and printing user definable forms from Data - Windows databases. Use Data - Windows to enter the data, use Data - Forms to print the forms.

HOOKED ON PROGRAMMING? - OR ARE YOU A PROGRAMMING ADDICT ???
=====

By Don Veith

There are people who love computer programming. Quite a few actually. I am one of them: a programming addict. The number of programming addicts is growing geometrically with the sale of affordable personal computers.

If you are a programming addict, perhaps you have tried to explain yourself to friends and family and found you could not. Maybe you have wondered if your addiction is healthy. The ideas presented here will try to explain what the programming addiction is, why people succumb to it, and what may be learned from this phenomenon.

The symptoms of a programming addict are listed below. THE PROGRAMMING ADDICT:

1. Works Late, On Weekends, And At Home.
2. Thinks Programming Is Fun.
3. Cannot Stop Programming.
4. Suffers A Loss Of Time Sense
5. Uses Tell-tale Phrases (and behavior).
6. Possesses A Distorted Sense Of Values.

Programming addicts will work all evening or weekend forsaking other commitments and people, including their own wife and children. It is nothing for one to lose a sense of time and work all night long going to work with a minimum amount of sleep or none at all. Many people find it rather strange that they view their job as fun. Many of them started programming for fun and ended up realizing people would ACTUALLY PAY MONEY to an individual for doing something they enjoy!

Programming addicts cannot stop programming. When elevated to manager positions, the managing task with its paper work and meetings causes great anguish by reducing the programming time available. The never cured addict actually begs his boss not to remove the terminal, which there now is so little time to utilize, from his office. All work and meeting schedules are banished to the Ozone fringe when one of the manager's programmers states the bug in this program cannot be located. It triggers that old nemesis of a heartache called Programmer's addiction. Removing the victim from the pleasurable task at hand, finding a coding error, may cause withdrawal symptoms and will definitely reduce your life expectancy if not accomplished in an organized and careful manner. Have you ever viewed GODZILLA and GHENGIS KHAN At the same moment. My advice is to avoid this type of confrontation. Hidden monsters may arise suddenly in the most timid Programming Addict when a key train of thought is interrupted. Be assured you WILL BE ADDRESSED in a voice that uses words most people are not aware exist. Additionally, YOU WILL BE REMINDED CONSTANTLY for a very long period of time that your 10 level interruption on his Richter Disturbance Scale, maxed out of course, caused the Addict great delay in the search for that elusive rascal of a program bug. Oh yes, a program bug is invisible, cannot be eliminated with the aid of an exterminator, and causes great anguish until located, removed and summarily executed in a correct manner!!

when the dedicated Programming Addict is on the trail of a program bug, nothing will be allowed to interrupt until it has been located. I MEAN NOTHING!! Many Computer Widows will readily attest to the Quest Fervor which TOTALLY CONSUMES AND CONTROLS her resident Programming Addict. No amount of feminine wile or intrigue can overcome THE SACRED QUEST for that damned program code error. Normal reflexes and awareness of the surrounding habitat and its human accessories go totally unnoticed until the Programming Addict announces with great pomp and ceremony, "THE QUEST HAS ENDED!! I have located the dasterdly devil in my quadrempholenic hystersis zouperdroopper dribblrrrz spritzen haufperpeper's secondary auxiliary standby backup secondhand philiphronicking memory chip's controller sync bit address's register entry point!!!! "

Now, if you can identify that piece of computer equipment, you are an absolute and totally dedicated Programming Addict. Imagine what we sound like while whipping our high tech slang onto each other as the uninitiated and technically droll people look at us like nuts headed for the processing plant? Who ever inferred Programming addicts fit any normal mold of humanity!

All kidding aside, programming does provide an outlet for recognition. What can replace the telephone call or personal conversation with someone who has used a program written by you. The comments, " I am using the program you created and its great." Just the fact that YOUR PROGRAM is being used is a sufficient reward for most of us. Conversations with appreciative users is icing on the cake to provide incentive for further program development effort.

The sense of conquest from controlling a device and making it do mundane and routine tasks is another ego motivator. A unique pleasure may be derived from reducing a large complex multi-faceted problem to a simple task. It does require a sense of dedication to the task at hand to undertake, yet let alone, complete the reduction of a complex task into a simple procedure. A programmer's job is finished when the last modification or revision of their work is completed. The programmer was successful and can look back to review the list of accomplishments represented by software created. Very few things in life provide this clearly defined sense of accomplishment.

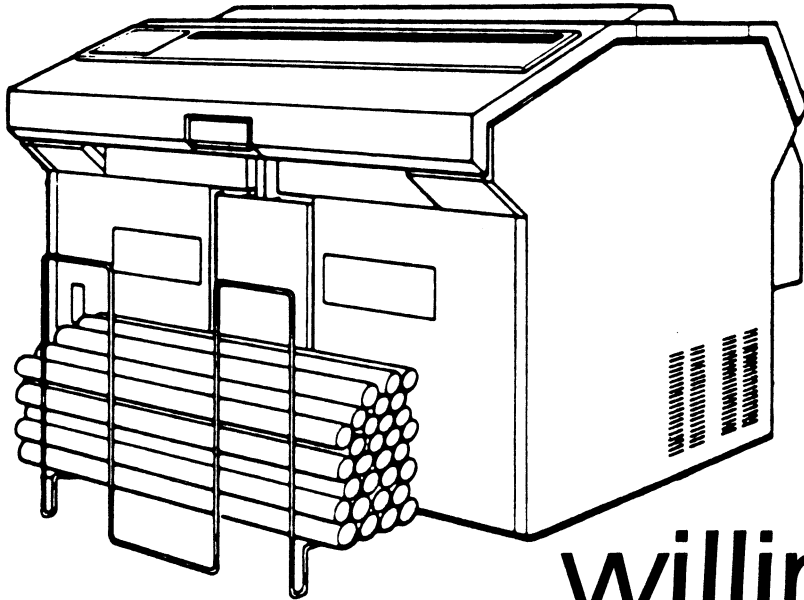

The end result (a program) does not justify a Programming Addict's ignoring their complete surroundings. Remember when you start to hassle your resident computer enthusiast, at least you can always locate him although requests, even pleading pleas for attention or assistance, go completely unheeded. His toy is bringing him home each evening. The communication level, if it existed at all, is at a much lower level than intelligent life had believed was ever possible. Besides, if you cannot get your resident Programming Addict's attention, why not join that nut with their Quest Fervor and find out what is so fascinating about computers. Perhaps a future Forth, Pascal, or Assembly Language Programming Addict is lurking in your own subconscious mind. You will never understand the joys AND frustrations of working with a computer until you personally attempt to use the infernal device. Their role and importance in our world today is increasing.

The idea for this article was taken from "Hooked On Programming"; by Allen Watson; which appeared in the March, 1985 issue of The DEC Professional Magazine. The "Symptoms Of The Programming Addict" and the first two (2) paragraphs were extracted from this article verbatim.

RILEY'S "PLOTTING FOR YOUR SUCCESS"

621 - 8th Avenue S.W., Calgary, Alberta T2P 0W9 Telephone: (403) 297-1111 Fax (403) 297-1191

**Attention
CADD
USERS**

**We're ready
willing and able!**

CADD PLOTTING SERVICE

The world's first 36-inch wide laser plotter
the Versatec 8836.

Riley's Reproductions & Printing Ltd. has always been known for introducing new reprographic services. We are proud to announce the installation of the new Versatec 8836 Laser Plotter.

This exciting NEW service utilizes the latest technological breakthrough in raster plotting, with a 400 D.P.I. (dots per inch) resolution for final prints, together with a 36" wide media width. The 8836 provides the highest quality raster plots available today. The average E size plot takes less than 3 minutes. Therefore, quick turnaround is never a problem for today's fast paced world.

We would like to take this opportunity to invite you to come and see this new technology at our office. To make an appointment or to find out any information, please contact your sales consultant or Tony Unser.

RILEY'S REPRODUCTIONS & PRINTING LTD.
40th ANNIVERSARY 1950 - 1990

"HIGH SPEED" MODEM TRANSMISSION IS NOW AVAILABLE

DISK BEGINNERS CORNER

If you are like the average CoCoist, you get along pretty good with your CoCo. You like to use it, and even know a little Extend Color Basic programming. You also first stored your programs on tape. Then you heard about how much better a disk drive is than a tape recorder, and bought a disk for yourself.

Now, if you're like me (a lazy CoCoist), you don't have too many backups of disk files. And to date, my household (wife and daughter are also CoConuts) have found 63 ways to lose, smash or otherwise glitz disk files. I have accounted for 61 of them.

My personal favorite is to try and make my floppy drive into a hard drive by leaving my floppy with six hours of keypounding saved on it in the drive and turning off the drive and computer. "Oh no," I say as I realize my mistake, and without thinking, turn everything back on to check the disk. Of course, I left the disk still in the machine.

"#***:#"

I know that there are ways to save information on crashed disks, but I don't know how. Hence, this first in what I hope to be a series of articles on disks, and Disk Extended Basic. Hopefully, I will learn about disks, how they work, how to save crashed files, and how to use the disk commands in simple programs. It might be easier to just make backups...Naawwww...

Ok, so let's start at the beginning. You bought a new box of diskettes. Now what? If you try to store some information on a brand new disk, your CoCo gives you an I/O (Input/Output) error message. Why? The drive did not know where to store the information. We have to first initialize the disk so CoCo knows where on the disk to store information. The Disk Extended Color Basic (DECB from now on, OK?) command for this is DiSK INtialize drive #, skip. Type this ;DSKINI 0,4; ;Enter;. Your disk makes a bunch of noise and after a while your screen gives you the old 'OK' prompt. You can now store information on this disk. "So, what," you ask, "happened to the disk?"

Well, CoCo divided the disk up into many compartments and labeled them all so it knows where to put data, and more importantly, where to find it when you want it. Imagine your disk being a very large desk. Coco divided the desk into 34 rows (tracks) with each row having 18 drawers (sectors).

Now, imagine that each row (track) can hold about 6250 marbles (bytes). That means that each

drawer (sector) holds about 338 marbles. Let's get more specific, a disk is then formatted into 34 tracks. Each track contains 18 sectors. That's about 218,750 marbles! Whew! How does your Coco keep track of where those marbles are? How does it know where a particular group of marbles (file) begins or ends?

That's the job of the disk directory. It is the most marvelous thing about a disk. The directory will tell you everything about a given file on the disk. If you know what to look for.

The directory resides on track 17. More specifically, track 17, sectors 3 to 11 hold all the names of the files. A typical directory looks something like this:

FLOWER BAS 0 B 2

FLOWER is the 'filename' of the program. A filename can be any combination of letters and numbers 8 characters or less. BAS is the 'extension' to the filename. It can be any combination of letters and numbers with a maximum of 3 characters. Many programs use the extension to identify that a file was produced by it. For example, a picture file on a disk may have the extension of MAX. This lets you know that it was made by a program named CoCoMax.

Under normal conditions, your extension will read BAS, BIN, DAT, or DOC. These in turn mean a BASic program, a BINary program, DATA file, and DOCumentation.

The next column also tells what kind of file the program is:

- 0 Basic program
- 1 Basic Data file
- 2 Machine language file
- 3 Text Editor source file

The last column gives the total number of granules used to store the program or file. This gives you some idea of file length. What's a granule, you ask?

Well, that's next month's article, along with finding out why your disk has something called a FAT table, and why it's sooo important. We will also look more closely at what some of the bytes of the directory mean. I hope you have enjoyed reading this little article, 'cause I sure had fun writing it. Now if I can only learn how to spell.

- Tim Klesch

ARTICLES WANTED

A revolutionary new computer, conceived by you. The MM/1.

MM/1 Personal System

CPU: 15 Mhz Signetics 68070 with DMA
Graphics: Signetics 66470 VSC with on-board pixel acceleration logic with realtime RLE image decoding; displays up to 256 colors
Palette: Brooktree triple 8-bit DAC for 16.7 million colors
Resolution: 320 x 210 (256 colors) to 720 x 540 (16 colors) with a multisynch monitor (up to 640 x 420 with CM-8)
RAM: 1 MB, 100 ns 256 x 4 DRAM, expandable
Floppy: 3.5" 1.44 MB floppy drive with 3ms track access
Ports: 2 serial (one configurable for MIDI), PC keyboard port, RGB-Analog; expandable
Network Interface: i²C header (cable and driver available separately), transmits at 100-KBaud with up to 127 slave MM/1s
Sound: PC sound through monitor cable for CM-8
Software: OS-9/68000 multitasking operating system with windows, PC File Manager, Sequential Block File Manager, Network File Manager, print spooling, C compiler, Basic, text editor, graphics editor, demos and full utility set

MM/1 Extended System Board

Ports: 1 powered DB9 serial, expands to 2 additional serial ports; 2 parallel; DMA SCSI; DMA stereo sound; joystick
RAM: Sockets for 2 SIMMS (2 - 1 MB SIMMs or 2 - 4 MB SIMMS)
Clock: Realtime clock battery-backed with nonvolatile RAM

For the first time, a community has banded together to design their next computer.

The MM/1 Extended can be financed for as little as \$49 per month! Write or call for details.

Interactive Media Systems, Inc.
238 Catawba Avenue, Davidson, NC 28036
(800) 866-9084

©1990 by Interactive Media Systems, Inc. MM/1 is a trademark of Interactive Media Systems, Inc. Other trade names are trademarked by their

Interactive Media Systems, Inc. listened to hundreds of Color Computer users to shape the MM/1 into your next computer. Thanks to you we have created an expandable and affordable computer that preserves most of your hardware and software investment.

Powered Hardware

Using revolutionary technology, the MM/1 gives you crisp, colorful graphics, exciting sound, and sizzling speed. The same CMOS chip set was chosen by Sony and Philips for their Compact Disk-Interactive devices. The MM/1 is built for the future with its optional 32-bit expansion bus that supports high-speed add-on cards.

Your Personal MM/1 comes with two serial ports for your modem, mouse or printer, a floppy drive with four times the capacity of your Color Computer drives (1.44 MB), and a PC keyboard port. The palette controller brings games and graphics to life with its 16.7 million color palette.

The MM/1 features a 15 Mhz 68070 processor with Direct Memory Access (DMA) for smooth multitasking while accessing floppy and hard disks. Using the built-in network interface and Network File Manager software you can connect and share information among up to 128 MM/1's.

The MM/1 Extended adds two bi-directional parallel ports, one serial port, SCSI host adapter for hard disks, tape drives and CD-ROM, sockets for up to 8 MB of memory, and a real-time clock. The 8-bit stereo sound lets you sample and play music and sound, even your own voice.

Compatibility

If you have an RGB-Analog monitor like the CM-8, a PC keyboard, printer, modem, or Color Computer floppy drive, you save money by using them with your MM/1. The industry-standard hardware offers reliable performance and ensures a wide selection of upgrade options.

Attractability

The \$779 Personal MM/1 is an outstanding value. And for \$49 a month, you can put an MM/1 Extended on your office desk.

effective network using Network File Manager. Back up your hard disk to tape with Sequential Block File Manager. Use the PC File Manager to allow your MM/1 disks to work with PCs. And don't forget to enjoy the demos and graphics software. With all this software included at no charge, you are ready for business and pleasure.

IMS leads the industry in bringing new, affordable software to OS-9/68000. Soon you will be able to choose from programs created by our outstanding IMS Developers Association (IDEA). IDEA members include HyperTech Software, Second City Software, StG Incorporated, Pease Consulting, Bob van der Poel Software, and many others.

Other software available for the MM/1 and OS-9/68000 includes complete accounting systems, advanced graphics, database management, fourth generation languages, and user configurable word processors. IMS is also actively working with Amiga, ST, and UNIX software vendors to bring you the most exciting software available.

Representing you

Interactive Media Systems is the first company to create a sophisticated OS-9/68000 multimedia computer for a wide audience. IMS, in conjunction with IBM, DEC, major universities and the American National Standards Institute (ANSI), is creating national and international hypermedia standards. Our staff comes from major international computer technology firms, and from the Color Computer OS-9 community. The MM/1 and its unique software together make one of the most innovative and sensible systems ever assembled.

Systems

MM/1 Personal (1 MB system board with 2 serial ports, PC keyboard port, RGB-A port, system software, text editor compatible with PC disks, graphics editor, 1.44 MB disk drive, case & power supply) **\$ 779**

MM/1 Pro (Personal with 101 key keyboard) **\$ 859**

MM/1 Extended (Personal, plus extra serial port, two parallel ports, stereo sound port, realtime clock, powered mouse port, joystick port & more) **\$1125**

******* SOFTWARE *****
AND
***** COMPUTER BOOKS AVAILABLE *******

Try your Calgary Colour Computer Club's Library.

The Club Librarians have built up an assorted array of Software and books over the past few years. The Software programs are in both RS-DOS and OS-9 formats. Some of the latest Coco III publications are among the many Computer books in the Library.

This Library is FREE to paid up members. Members must supply media for Software requests. All books materials are lent to members for a one month period. To obtain Library items, please fill in the appropriate form(s) below, and give it to one of the Librarians at the meeting along with any disk or tape for any Software requirements along with your name & 'phone on each disk or tape.

Orders can be picked up at the next meeting. There is no restriction on quantity ordered. While every effort will be made to provide timely service, there may be delays when large orders are submitted.

OUT OF TOWN MEMBERS: Please include return Postage with Order
