

For superior OS-9 performance, the  
**SYSTEM V**

Provides a 68020 running at 25 MHz, up to 128 MBytes of 0 wait-state memory, SCSI and IDE interfaces, 4 serial and 2 parallel ports, 5 16-bit and 2 8-bit ISA slots and much more. The SYSTEM V builds on the design concepts proven in the SYSTEM IV providing maximum flexibility and inexpensive expandability.

**AN OS-9 FIRST** - the MICROPROCESSOR is mounted on a daughter board which plugs onto the motherboard. This will permit low cost upgrades in the future when even greater performance is required.

G-WINDOWS benchmark performance index for the SYSTEM V using a standard PC VGA board is 0.15 seconds faster than a 68030 running at 30 MHz with ACRTC video board (85.90 seconds vs 86.05 seconds).

Or, for less demanding requirements, the  
**SYSTEM IV**

The perfect, low cost, high-quality and high performance OS-9 computer serving customers world-wide. Designed for and accepted by industry. Ideal low-cost work-station, development platform or just plain fun machine. Powerful, flexible and expandable inexpensively. Uses a 68000 microprocessor running at 16 MHz.

**G-WINDOWS**
