

For superior OS-9 performance, the
SYSTEM V

Provides a 68020 running at 25 MHz, up to 128 MBytes of 0 wait-state memory, SCSI and IDE interfaces, 4 serial and 2 parallel ports, 5 16-bit and 2 8-bit ISA slots and much more. The SYSTEM V builds on the design concepts proven in the SYSTEM IV providing maximum flexibility and inexpensive expandability.

AN OS-9 FIRST - the MICROPROCESSOR is mounted on a daughter board which plugs onto the motherboard. This will permit low cost upgrades in the future when even greater performance is required.

G-WINDOWS benchmark performance index for the SYSTEM V using a standard PC VGA board is 0.15 seconds faster than a 68030 running at 30 MHz with ACRTC video board (85.90 seconds vs 86.05 seconds).

Or, for less demanding requirements, the
SYSTEM IV

The perfect, low cost, high-quality and high performance OS-9 computer serving customers world-wide. Designed for and accepted by industry. Ideal low-cost work-station, development platform or just plain fun machine. Powerful, flexible and expandable inexpensively. Uses a 68000 microprocessor running at 16 MHz.

G-WINDOWS
NOW AVAILABLE FOR
OS-9000

More vendors are offering G-WINDOWS with their hardware and more users are demanding it.

A PROVEN WINNER!

Available for the SYSTEM IV and SYSTEM V computers, the PT68K4 board from Peripheral Technology, the CD68X20 board from Computer Design Services and now, for computers running OS-9000 using 386/486 microprocessors.

OS-9/68000 SOFTWARE

CONTROLCALC - Real-Time Spread Sheet
SCULPTOR - Development and Run-Time Systems
DATADEX - Free Form Data Management Program
VED ENHANCED - Text Editor
