The Best Money Can Buy . . . HDS Floppy Drive Controller Board

Features *

- * Gold Plated Edge Cards
- * Dual Selectable ROM Sockets
- * Compatible with COCO I & II
- * 120 Day Warranty
- * Double and Single Density

DOUBLE SIDED

Drive 0 Complete	\$199.
Drive 1 Complete	\$129.
Drive 0 & 1 Dual Drive	\$319.

Reduce your I/O errors with the Hard Drive Specialist Floppy Drive Controller for the Color Computer. Gold edge card connectors, advanced design, and the absence of potentiometers make it the best available. Our newest version controller allows the use of either (two 24 pin ROMs), or (one 24 pin and one 28 pin ROM). Using this board with the standard Radio Shack ROM gives you 100% compatibility with all Radio Shack software.

- Completed and Tested Board with Radio Shack ROM \$99.**
(Includes Case, and DOS Instructions)
- Completed and Tested Board without ROM . . . \$79.**
(Includes Case)
- Bare Board with Instruction manual \$30.**
- Parts Kit For Bare Board without ROM \$30.**
- Radio Shack ROM (current version) \$20.**
- Radio Shack ROM 1.0 \$40.**

ADOS ROM (24 or 28 pin PROM) \$40.

ADOS is a product of SpectroSystems of Miami Florida and is fully supported by the author. The HDS version of ADOS supports 2 drives, 40 track, 6ms trk-to-trk drives only, either Single Sided or Double Sided.

TKBUG Monitor and DOS 1.0 on PROM (24 or 28) \$40.

New, unique CoCo software monitor in ROM designed for a minimum of key strokes and fully compatible with the 1.0 version of disk basic. Features 33 single key commands, allowing the user to quickly display and screen edit RAM in either hex or ASCII format. Also allows the user to dump screen or memory to printer, set break points, alter baud rate, set 64K RAM mode, and more, TKBUG by TOMMY KEETON.

LETTERS TO THE RAINBOW

Questions? ... We have the Answers!

Editor:

I am retired and have been paying into an IRA account. How much is this account worth now? I am going to sell the house that I bought in 1974. How much is it worth today? I need to pour concrete. How much will it take?

All three questions were answered by the April 1986 RAINBOW. Thanks CoCo and RAINBOW.

*W.E. Pendergrass
Danville, KY*

Editor's Note: Glad you liked our Home Help Issue. Programs referred to can be found on pages 70, 79 and 162.

BACK TALK

Editor:

This is in response to M.S. McPherson's letter in the April 1986 issue [Page 9] about the program by the Delbourgos that creates the image of the earth's rotation (August 1985, Page 73). The spinning of the earth can be easily adjusted by a slight change of Line 180 of Listing 2 (*Pageturn*). By changing the number 40 in the section of the line that says, "FORT=1TD40", you can speed up or slow down the rotation. The smaller the number, the faster the rotation. My preference is "FORT=1TD190". I hope this helps slow down the spinning of Mr. McPherson's world.

*Barb Karr
Risingsun, OH*

\$C0 can be Valid

Editor:

In "A Disk Tinker's Device" in the March 1986 issue (Page 88) Martin Goodman questions the validity of \$C0 in the GAT. There are two situations where \$C0 is valid.

The first situation occurs when a BASIC program opens two sequential output files for the first time. File number one's first

GAT byte is initially \$FF. This makes sense because file number one's size is initially undefined. A problem arises upon opening sequential output file number two. The routine that scans the GAT for free granules (\$FF's) might accidentally assign to file number two the same granule that was assigned to file number one. To avoid this, file number one's GAT byte is changed to \$C0. Its granule is no longer marked free. If the file is closed before any data has been written to it, the first GAT byte will be \$C1 because EOF information is written to the file.

Direct access files are similar except that \$C0 is initially assigned as the file's first GAT byte. Unlike sequential files, when a direct access file is closed the GAT byte can still be a \$C0. Why? A record doesn't have to occupy an entire sector, its size is user definable and a file can have zero records in it, thus occupying no space. A \$C0 GAT byte reserves the granule for the file until the first record is written. Why did they choose this method? Disk BASIC design philosophy stressed speed. The GAT is loaded into and read from RAM to speed up GAT intensive operations. The fastest way to define a zero record count and reserve additional granules using only the GAT is by marking them \$C0.

On another subject, I have written several professional grade programs for the DISTO 80-column adapter. Interested parties may write to me at P.O. Box 126, 06403, or call (203) 723-8237.

*John C. Gazy
Beacon Falls, CT*

Cold Shoulder for EDTASM+?

Editor:

Thank you for William Frame's letter in the April 1986 issue [Page 7]. I have well over \$2,000 in my CoCo and all I see is more money going out.

EDTASM is a good program. I've used all of Mr. Schrag's patches, so I have Disk EDTASM+. But, what good is it? All that time and I can't use the *Digital Aquarium* program. Heck, I can't even use D. Lendowski's Vaders!

Maybe what this shows is that Tandy makes the computer but that's it. Face it, a beginner is going to choose EDTASM because of the cost. We are not all machine language programmers.

I can't say anything bad here. You do what you must, but there are thousands of us with EDTASM+ only.

When Bill Barden, Jr. says EDTASM+ is what we're going to use . . . well, that shows me the program is not junk and it deserves more respect than it gets.

Will Computerware's Macro Assembler plus XREF (Disk BASIC) allow me to assemble the *Digital Aquarium* listing, which was written on the Micro Works 80C? How do I get *Micro Illustrator* to SAVEM to another disk or get the pictures dumped to my CGP-220? I have OS-9. Do I have to get OS-9 screen print utilities? There's nothing in the instructions or program that tells how to get a printer dump. Please help! My address is 525 6th Avenue N #1, 59401.

*Jay Thomas
Great Falls, MT*

RAINBOWfest Praised

Editor:

This is to say thanks for having RAINBOWfest in Palo Alto. That made it possible for my daughter and me to attend our first one. We enjoyed seeing some of the faces that go with the names on the articles we read. Please don't let the unfortunate weather keep you from having another one in northern California.

I want everyone to know about Moreton Bay Software. John Nielson and his company put customer service and satisfaction above everything else, whether in person or over the phone. You can count on them to resolve any problems. The *Hotslot* program is great fun for us would-be-high-rollers!

*Norma V. Doyle
Alameda, CA*

TOP RATINGS
HOT COCO MAGAZINE
SEPTEMBER 1984 AND MAY 1985

NEW
DISK FILE
TRANSFER VIA
XMODEM

YOU COULD FALL IN LOVE WITH **AUTOTERM!**

IT TURNS YOUR COLOR COMPUTER INTO THE

WORLD'S SMARTEST TERMINAL

**AND
MOST
LOVABLE**

GOOD LOOKIN'

AUTOTERM shows true upper/lower case in screen widths of 32, 40, 42, 51, or 64 characters with no split words. The width of 32 has extra large letters. Scrolling is forward, backward, and fast. Block graphics pictures are displayed automatically and can be scrolled.

The screen's top line shows operating mode, unused memory size, memory on/off, and caps-lock on/off. It also gives helpful prompts.

SWEET TALKIN'

KEY-BEEP can be on/off. Unacceptable keystrokes cause a lower pitched BOP! This ERROR-BEEBOP can be on/off.

Talks to other computers with Full or Half Duplex; Baud Rate of 110, 150, 300, 600, 1200; Parity as even, odd, mark, space, none; 7 or 8 bit Word; any Stop Bits; all 128 ASCII characters; true line Break; XON/XOFF protocol; and optional line-at-a-time transmission. Able to send and receive text, block graphics, BASIC and ML programs. A 64K machine holds up to 45,000 characters (33,300 in HI-RES).

DUAL PROCESSING lets you review & edit while more data is coming in.

XMODEM for disk file transfer.

Fully supports D.C. Hayes and other intelligent modems.

Talks to your printer with any page size, margins, line spacing, split word avoidance. Embed your printer's control sequences for boldface, underlining, etc. Narrow text can be automatically spread out.

You'll also use Autoterm for simple word processing and record keeping

You can display directories, delete files, transmit directly from disk, and work with files larger than memory. Easily maintain a disk copy of an entire session.

Compatible with TELEWRITER (ASCII) & other word processors.

SMOOTH WALKIN'

AUTOTERM moves smoothly and quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text, download information, file it, and sign-off; then edit the received data, print it in an attractive format, and/or save it on file.

Editing is super simple with the cursor. Find strings instantly, too! Any operating parameter, such as screen width, can be altered at any time. Uncompleted commands can be cancelled.

PUTTY IN YOUR HANDS

The word processor can be used to create, print, and/or save on file your personal KSMs. They let AUTOTERM act like you. For example, it can dial through your modem, sign-on, interact, perform file operations, & sign-off; an entire session without your help. KSMs can answer the phone, prompt the caller, take messages, save them, hang-up, and wait for the next call. The KSM potential is unbelievable!

**NO OTHER COMPUTER IN
THE WORLD CAN MATCH
YOUR COCO'S AUTOMATIC
TERMINAL CAPABILITIES!!!**

WHAT THE REVIEWERS SAY

"AUTOTERM is the Best of Class."
Graham, *RAINBOW*, 6/83

"The AUTOTERM buffer system is the most sophisticated — and one of the easiest to use..."
Banta, *HOT CoCo*, 9/84

"Almost a full featured word processor..."
Eilers, *RAINBOW*, 11/84

"AUTOTERM's excellent error-handling routines, thorough documentation, and logical, easy-to-use command structure make it stand out."
Parker, *HOT CoCo*, 5/85

HINTS AND TIPS

Editor:

I would like to inform Canadian CoCo users of the ACCESS Timesharing System. It is similar to Delphi and CompuServe only it's Canadian and much cheaper. The cost is \$5.95 an hour CDN including all charges. There is a special CoCo SIG on the system so we can all communicate. To log on, call up your local Datapac number and type the following:

```
49700019 (ENTER)
(ENTER)
HELLO DEMO.DEMO (ENTER)
```

This gives a description of the system and the option of signing up online. You may also call them at (514) 342-8147. I hope to see more CoCo users on the system soon.

*Kanti Dinda
Kingston, Ontario*

Printer Upgrades Available

Editor:

RAINBOW is great! In the March issue you printed my question and soon after I got five good answers.

I asked for information on an upgrade for the Epson RX-80 printer to allow it to print near-letter quality as in the current LX-80 model. Here's where you can get an upgrade kit for \$59.95: Dresselhaus Computer Products, 837 E. Alosta Ave., Glendora, CA 91740, phone (818) 914-5831. The product is called the "Fingerprint Letterwriter." Kits are also available for the Epson FX series for \$79.95.

*Paul Whiting
Madison, WI*

Timing Subroutines

Editor:

Here's a tip on timing subroutines. First, type in and run:

```
10 TIMER = 0
20 X = TIMER
30 PRINT X
```

This gives a readout in $1/60$ seconds of how much overhead the test lines take. Write it down. Insert program subroutine between lines 10 and 20 (put them into the program at odd-numbered positions so they can be removed later). Subtract the overhead (first figure obtained) from the second figure. This tells how long the routine takes to run in $1/60$ seconds. Multiply by 60 to get seconds. This could be included in Line 30.

*B.R. Pogue
Lake Havasu City, AZ*

RAINBOW ON DISK Vote

Editor:

I heartily endorse the suggestion to have a RAINBOW ON DISK subscription. I also request that you publish a comparison chart

for database manager programs, similar to that done for printers a few issues back.

*James M. Green
Jacksonville, FL*

Belated Congratulations

Editor:

What happened to "CoCo Cat" in the April 1986 issue of RAINBOW? Has he run away? I see that Jerry McKiernan has been promoted from assistant art director to art director beginning with the February 1986 issue. A belated congratulations!

*William T. Grace
St. Joseph, MI*

REQUEST HOTLINE

Editor:

I am interested in purchasing any trivia on cassette tapes. I have searched all over and can only find them on floppy disks. Please help. Write to me at 25517 Yale, 48125.

*Steve S. Massey
Dearborn Heights, MI*

Can You 'Spare' any Bowling Software?

Editor:

I am trying to locate software to handle my bowling league records. I would also like to be able to keep records for tournaments in which three, four or five games are bowled. I have a 64K CoCo. If you or any of your readers have such a program or know where this type of software is available please let me know. I would be interested in hearing about or seeing a sample printout of bowling league software. My address is 2416 Main Street, P.O. Box 78, 44856.

*Nancy F. James
North Robinson, OH*

Ups and Downs

Editor:

I have been following biorhythms for several years now using a book written by Bernard Gittelson entitled *Biorhythms — A Personal Science*. I have found several programs in other computer magazines that profess they have a program for biorhythms, but to no avail. These programs don't even come close to comparing to the charts in Gittelson's book. Perhaps you have a past issue of your magazine that has a program for a biorhythm chart. My address is 1101 Tyler, #23, 66612.

*R.D. Phillips
Topeka, KS*

Editor's Note: See the reviews "Biorhythm and Mine Field" February 1982, Page 10 and "Biorhythm" June 1982, Page 52. Also "How's Your Day? Need Biorhythm help?" November 1981, Page 6.

Family Ties

Editor:

I am looking for a good genealogy program for a 64K Color Computer 2 . . .

*Kyle Johnson
Cantontown, FL*

Editor's Note: We suggest "All in the Family Tree," February 1984, Page 78 or *Ancestors 2.0* from Autumn Color Software, which was reviewed on Page 218 of the November 1984 issue.

New Address

Editor:

If anyone has questions about or wants a copy of my program, *Guppy Graphics*, from the October 1985 issue, Page 106, send \$6 to my new address: 739a 16th Avenue, 94118. I'm sorry the RAINBOW ON TAPE version didn't work. Also, I hope you put out RAINBOW ON DISK soon.

*Jim Kent
Dancing Flame Software
San Francisco, CA*

Delphi Line

From: BOSIB::COLOR
To: EDITORS
Subj: IDEA

How about a section for "K-BYTERS"? They are small programs like one-liners, but can have any amount of lines in them and can only take up 1K of memory.

*Royal O'Brien
Riverside, NJ*

INFORMATION PLEASE

Editor:

After many hours of trying to modify the screen dump for the excellent *CoCocad* program by Peter Kerckhoff (October 1985, Page 130), I give up.

Mr. Kerckhoff was of great help in sending me the modifications for the DMP-type printers, however, even those did not work with my DMP-105. The modification printed in THE RAINBOW (February 1986) will not work using my DMP-105 printer. I would like to know if anyone has made a machine language print routine that works using the DMP-105 printer for *CoCocad*. My address is 1137 Caddock, 68008.

*R.W. Harper
Blair, NE*

A Touching Request

Editor:

I just purchased a touch pad. They come with almost no documentation. I would greatly appreciate it if someone could send

me some information and/or program suggestions. Send information to 741 Alicia Walk, Apt. E, 44306.

*Keith Selbee
Akron, OH*

Editor's Note: See "Joysticks, Touch Pads and Digitizing the World" on Page 224 of the January 1986 issue.

OS-9 Upgrade

Editor:

I bought my 64K Extended BASIC CoCo 2 about five months ago. Your magazine has encouraged me to upgrade with an FD-500 disk drive and a DMP-105 printer. And I have also made the commitment to OS-9.

I am using the tape version of *Elite*Word* and I plan to upgrade to the OS-9 version soon. But, there are times when the program hangs up and I see a rampant cursor bar flashing back and forth on the last line of text. If anyone is using *Elite*Word* OS-9, I would appreciate hearing from them, since I am not sure which OS-9 word processor to use. Write to me at 10-B Summer Street, 94102.

*Shawn Thomas
San Francisco, CA*

Get in Touch

Editor:

I would like to contact someone who has a communication program for the DCM-3 modem. I have the *Color Disk Scripsit* for the DMP-105 printer, and I also have some games for the CoCo. Anyone interested please write to me at 4421 NW Second, 33126.

*Walter Traini
Miami, FL*

Editor's Note: Any communications package should work.

Voltage Change

Editor:

I now have a Disk Extended Color BASIC 1.0, 32K CoCo. I bought a new CoCo 2 and cannot get my disk to operate. I understand they have changed the voltage to the control. Is there some way I can adapt my old control to operate with the new CoCo 2?

*Ronald M. Pierce
Ft. Lauderdale, FL*

Editor's Note: Tony DiStefano describes how to build a 12-volt power supply for the CoCo 2 in the April 1984 issue on Page 149.

Using DMP-105 Fonts

Editor:

I have found Tandy's *Color Scripsit* to be very useful. However, I was disappointed when I found it impossible to utilize the various fonts available from my DMP-105 printer. Am I missing the obvious or has anyone found a way around this problem?

*Jerry Dummer
Los Alamos, NM*

Editor's Note: You might try poking control codes to the printer immediately before running *Scripsit*. This assumes you are using the disk version of *Scripsit*.

Calling Modem Programmers

Editor:

I recently bought a Radio Shack DCM-5 modem. The manual says the modem can be programmed for automatic operation. It describes automatic as "having the modem call another computer at a desired time." I would like to use this feature to transmit files, but I don't know how. I don't know assembly language and the modem can only be programmed when it is in a terminal program with the settings at seven data bits and full duplex. If anyone knows how to do this, please let me know. My address is 435 8th Street NE, 33881, phone (813) 293-5648.

*Thomas C. King
Winter Haven, FL*

Double Duty Drive

Editor:

Please tell me if it is possible to use both sides of a double-sided disk in a single-sided disk drive. I have a Radio Shack slim-line Drive 0 and I've tried cutting the write-protect notch on the opposite side of the disk. I've been able to cut a pretty good duplicate of the notch on the other side and in the correct location. My 64K CoCo keeps telling me I/O Error when I try to format that side of the disk. I've heard of people who have single-sided disk drives using both sides of double-sided disks. How can this be done?

*Jose Garcia
Mooresville, NC*

Editor's Note: See "Downloads," April 1986, Page 225, for the answer to this question in reply to a letter from Kevin Gibson.

EPROM Changes

Editor:

Is there any program for the CoCo so when it is turned on it automatically loads a program from disk? If anyone has any program like this, I can be reached at #8 Sylvan Heights, 52601.

*Scott Lindsey
Burlington, IA*

Editor's Note: Check out our "Cooking with CoCo" series beginning in July 1984 and ending in February 1985. What you want will require that the changes this series makes be burned into an EPROM.

Reading Bar Codes

Editor:

Where can I get a Bar Code reader that is usable on my upgraded CoCo 2 with double disk drive? I prefer a wand, although

other versions might do. I want to scan, then print out information with a small Tandy thermal printer. Write to me at 2927 Allen, 63104.

*Barbara Gardner
St. Louis, MO*

Selling Programs

Editor:

I am an assembler at an electronics firm and have written a program to print the disk directory. I would like to sell the program but I don't know how to go about it. Any advice would be a great help.

*James C. Anderson
Ft. Atkinson, WI*

Editor's Note: We suggest you call or write to the various software houses. You might find one who might be interested. You are always invited to send it to us. See "Submitting Material to Rainbow" on Page 120 of this issue.

KUDOS

Editor:

A special thanks to Fred Scerbo for his *Title Maker* program [Page 157] in the March 1986 issue. I had been unsuccessfully trying to do that with joystick and keyboard programs. I am the membership director for the London CoConuts Computer Club and we promote your magazine whenever possible.

*Doug Tompkins
London, Ontario*

BULLETIN BOARD SYSTEMS

Editor:

I would like to inform your readers of my COBB's BBS #41. It is online from 8 a.m.-8 p.m., CST, seven days a week, 300 Baud, no parity, eight bits and one stop bit. The number to call is (501) 857-3138.

*Perry Parsons
Corning, AR*

● This is to announce a new BBS. The Classified Connection is online 24 hours a day at (619) 566-1745. Users may access 300 Baud only. The board is primarily dedicated to TRS-80 Color Computer users. The emphasis being buy/sell/trade hardware and public domain software and assorted other articles in a swap-and-shop forum. There is a unique art forum for the submission of public domain artwork written by Color Computer users and downloadable in XMODEM format.

*Bill Kennon
San Diego, CA*

● Our TBBS is running 11 various CoCo sub-boards with four separate up/download software bases. Members receive a monthly newsletter that contains a BBS list, pokes page, news section with the latest happenings from CompuServe, Delphi and other branches of the CoCo world. We will also be holding monthly meetings where

What Happens When You Own A COLORCHESTRA™ MIDI SEQUENCER?

*All Of A Sudden, Synthesized Music Production,
Editing And Recording Becomes Very, Very Simple.*

COLORCHESTRA, (from the author of CoCo MIDI), links together your Tandy 64K Color Computer and MIDI equipped keyboard synthesizer or rhythm drum machine and makes it simple to create masterpieces of music.

By incorporating menus and graphic icons, all there is to recording in real time is pushing a few keys.

A. Select track recording icon.

C. Simply play keyboard and hit break key when done.

B. Select starting measure, time signature, tempo and recording track.

THAT'S IT!

Once the track is entered, auto correction, transposing, and filtering may be implemented. And **COLORCHESTRA™** works with you to record up to **8,000 notes** utilizing as many as **16 tracks...awesome.**

But it doesn't stop here - **COLORCHESTRA™** is crammed with a myriad of other outstanding professional features...

- ✓ Solo capabilities on any track.
- ✓ Tempo range from 30-250 beats per minute
- ✓ Audible and visual metronome
- ✓ Programmable measure locator
- ✓ Sequencer will record from any MIDI Channel (1-16)
- ✓ Each track can output to any MIDI channel (1-16)
- ✓ Records full spectrum of MIDI data including program changes, pitch bends, all 128 MIDI controllers (modulation wheel, breath controller, sustain pedal, etc.)

- ✓ Will sync to drum machines
- ✓ MIDI thru on input
- ✓ Programmable time signature
- ✓ Track looping capability
- ✓ Real time velocity modification
- ✓ All 16 tracks can be titled
- ✓ Software filter removes specific MIDI parameters from recorded music such as pitch bend, program change, velocity data, modulation wheel, MIDI controller
- ✓ Simple music text editor
- ✓ Transposition of notes up or down any number of octaves in half steps
- ✓ Auto correct feature for timing errors
- ✓ Stores composed music on tape or diskette
- ✓ Works with any disk operating system (Radio Shack, JDOS, ADOS, etc.)

THE COLORCHESTRA SYSTEM PACKAGE

HARDWARE

Encased between clear plastic panels and hand finished american walnut is **COLORCHESTRA's** sequencer board. Not just the edge connector, but every circuit trace is plated in 7 mil gold for optimum interface connection.

Two dependable, heavy duty 8' MIDI cables with metal jacketed end connectors are included.

SOFTWARE MEDIA

In addition to the hardware cartridge and cables, the **COLORCHESTRA™** System Package includes type set documentation in its own ring binder for easy reference and updating.

And for your convenience, both tape and diskette are supplied-so, if you need a back up it'll be there.

COLORCHESTRA™. A simple answer to your MIDI music production and **HORIZON** puts it all together for an introductory price of **149.95.....**

COLORCHESTRA™ system complete - \$149.95. Call any day (ex. Sun.) to order. We ship same day. We accept check, COD, Visa, Master Card. Shipping add 3.00, COD add 2.00. Louisiana residents add 7.8 sales tax. Call for audio demonstration.

San Jose, CA*

• Would you please announce the completion of The French Underground BBS. Its down time is weekdays 3 p.m.-7 p.m. (Central time zone) and weekends 10 am.-7 p.m. The number is (319) 388-0381.

*Dave France
Davenport, IA*

• Fast Trackin' BBS has a new phone number. Call me at (502) 365-7771. We are still in operation 24 hours a day; currently running at 300 Baud.

*David Guess
Princeton, KY*

• Bob's Corner BBS is up 24 hours a day. It is a Colorama Version 3.04 and has been running over a year. It has a small users log of 70 callers. We have online games, up/downloads, full magazine, graphics, story, large message base, open club section and a sub-BBS for amateur radio operators. Call (617) 889-0777 BBS, (617) 889-0056 Voice.

*Bob Bohn
Chelsea, MA*

• The Frisky CoCo BBS is a 300/1200 Baud system, online 24 hours a day, seven days a week and has downloads of all kinds. It is an extensively modified Colorama (Ceretek Inc.). Call (816) 436-2904.

*Jerry Oliver
Kansas City, MO*

• Introducing Colorama, online from 7 p.m. to 12 midnight daily. Call (601) 795-8915. For more information call before 7 p.m. for voice.

*Joe Polk
Poplarville, MS*

• My BBS runs on a 64K 'E' CoCo, four drives, Deluxe Pak, Hayes 1200 and a homemade hardware clock. ASCII and XMODEM transfer is available with 30-40 programs online for downloading along with hints, reviews, bulletins, games and trivia. New users are not limited to any activity except writing on the system. We are up and running 24 hours a day, seven days a week, 300/1200 Baud, eight data bits and can be reached at (603) 485-8682.

*Dave Bean
Allentown, NH*

• The Hotel BBS operates 24 hours a day, seven days a week. We feature SIG sections such as a health, gourmet, magazine, want ads and a great download section that has Mike Ward's *Mikeyterm 4.0* (c) online to download. Give us a call at (718) 381-2209.

*Mike Sileo, Jr.
Glendale, NY*

• I would like to inform your readers of a BBS in the Westchester-Rockland-Putnam area. The BBS supports a variety of systems including CoCo. It includes many SIGs and even a UFO section. The boards are up from

6 p.m.-7 a.m. weekdays and 24 hours on weekends; has a download section for CoCo and IBM. Call (914) 776-2424.

*Jolly Roger
Lake Carmel, NY*

• Announcing The Utopia Network #1 BBS. We are using our own written software. To log on use 300 Baud, full duplex and even parity. We have over 200 programs available for download and several other features. The hours of the BBS are from 7 p.m. to 6 a.m. every evening.

*Bruce Uher
Coshocton, OH*

• I would like to announce a BBS called the FUN BBS. It has movie reviews, top 10 music, supports up/downloading, has on-line games and more. It runs on a three-drive CoCo with 64K. The number is (412) 378-7825 and is usually up 24 hours a day.

*Robert Chalupa
Aliquippa, PA*

• I would like to announce the changing of CoCo Palace's number. The new number is (615) 581-9752. Voice calls will be taken on (615) 581-2904. I am changing to a new BBS program. I am also interested in starting a national club for SysOps. Address all correspondence to 936 Hall Drive, 31784.

*Marty Cline
Morristown, TN*

• The Salt City CoCo Club announces it has a BBS — runs 24 hours a day, seven days a week, 300 Baud, seven bit, no parity. Call The Data Warehouse at (801) 487-6787.

*Salt Lake City CoCo Club
Salt Lake City, UT*

• Announcing the online operation of the Bellingham CoCo Bulletin board from 10 p.m. to 7 a.m., seven days a week. Call (206) 734-5806.

*Roger Alexander
Bellingham, WA*

• Announcing Uncle Dave's BBS in operation at 300 Baud, 24 hours a day, seven days a week. Supports up/downloading and various message bases. Call (414) 843-4029.

*David Buehn
Salem, WI*

• I would like to announce the start of the Wizard's Keep BBS. The number is (604) 752-2480. It runs 24 hours a day at 300/1200 Baud.

*Jason Cikaluk
Qualicum Beach, British Columbia*

• I would like to inform your readers of the all new Micro Ads BBS. We operate 24 hours a day, seven days a week. Parameters are 300 Baud, eight data bits, one stop bit and no parity. Phone (604) 832-8772.

*David Coldwell
Salmon Arm, British Columbia*

• CoBBS #63 is online and running 24 hours a day. This system supports up/downloading, two message bases, for sale sections and much more. Call (705) 328-0703. If the system is down for housekeeping, etc., the phone online is not answered to ensure charges are not made.

Envelope of the Month

*Bert A. Kelso
Taylor, MI*

I have seen a great deal about “desktop publishing” in the past months and, I suppose, the ultimate bombardment came just the other day when we received a baker’s dozen promotions for Apple’s new Macintosh.

I don’t know what it cost to produce the package, but — based on what we pay for much more modest mail campaigns — I would guess it was in the neighborhood of \$10 each. That means Apple spent about \$130 sending Falsoft and its associated companies promotion material trying to convince us that the Mac could be used in place of our typesetting equipment. With the exception of a few printing shops, I know of almost no one who uses the still-very-slow Mac for typesetting.

Hooked up to an Apple LaserWriter printer (which, incidentally, costs much more than an HP or Corona LaserJet) you can get acceptable “type,” but at a slow speed. And digitized images are a poor second to photographs. Color? Forget it.

There is, however, a magazine that was founded on the general principle of desktop publishing. You are reading it. For the first year, THE RAINBOW was done entirely with a Color Computer and a dot-matrix printer. Can you still do this? Well, ask all the people who use their CoCo for newsletters of all types.

After several years, I see Apple as still trying to find a niche for its Mac. So far, no go. A computer, after all, has two purposes. The first is to make things easier for its human companion. The second is to make things enjoyable. No one will ever convince me that a Mac does these things best — simply because it works so slowly. And, if it is slow to react, I can hardly say it is enjoyable. Many of Mac’s games are good, but good games don’t suffice for lack of other attributes.

I think Apple should just let Mac go away quietly. Or reduce the price drastically. And that would be easy: I could have saved them \$130 just by telling them not to send us 13 mailers for something we are hardly interested in using.

Speaking of mailings, our policy is that we make just one for subscription renewals. No, we’re not like some other magazines that run a series of six or so mailings to get your renewal. I always find those renewal notices a bore and “tune out” on them after a while. After all, I figure that, eventually, they make their “last, best offer” and it is silly to renew before then.

We don’t take that attitude. Instead, we figure you like THE RAINBOW (most of you seem to) and if you get a notice to renew, you will. We do include a note that says the notice you’re getting is the *only* one you’ll receive.

Since we seem to have one of the best renewal rates in the industry, maybe we do something right. On the other hand, every month we get notes from people who let their subscription lapse and want us to pick it back up with the issue after the last one they got. This frequently happens when someone sees the new issue on the newsstand or at a friend’s home.

We can’t do that. The reason we are able to keep our subscription price where it is is because we mail all our magazines at the same time on a second class permit. It costs a couple of dollars to mail one first class — and that’s more than the profit on a whole year. (Yes, we will mail first class when you miss an issue.)

So, please, send in your renewal notice when you get it. That way, you’ll be sure to keep THE RAINBOW coming without a break.

A few months ago I made a comment in our sister publication, **PCM**, that our cover story (December 1985) on the Tandy 3000 and 600 marked the first time I knew of that Tandy Chairman John Roach had appeared on the cover of a computer magazine.

I was jumped all over by Eric Maloney, editor of *80-Micro*, because his magazine had Roach on the cover a couple of years ago. A correction was duly made in **PCM**. Eric’s letter was to the point on the need for accuracy in journalism.

So, it seems fair-to-middlin’ strange to see *80-Micro* describe a simple upgrade for the Color Computer as the “long-awaited successor to the Color Computer 2” in its May issue. Talk about negative commentary: *80* went through a short list of all the things Tandy did not change.

One phone call, Eric, would have told you this was not the new Color Computer. It is just an upgrade. Seems everyone knew about it but you.

I am sorry to see this happen, since it reinforces the magazine’s disinterest with the CoCo, which dates back years to the time *80-Micro*’s founder and then publisher Wayne Green forecast the “death” of the machine that went on to be Tandy’s top seller. I am even more sorry because now that *Hot CoCo* has folded, *80* purports to support the CoCo.

To paraphrase Henny Youngman: “Support like this, I don’t need.”

— Lonnie Falk

Telewriter-64™

the Color Computer Word Processor

- 3 display formats: 51/64/85 columns × 24 lines
- True lower case characters
- User-friendly full-screen editor
- Right justification
- Easy hyphenation
- Drives any printer
- Embedded format and control codes
- Runs in 16K, 32K, or 64K
- Menu-driven disk and cassette I/O
- No hardware modifications required

THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with *true lower case characters*. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.

...one of the best programs for the Color Computer I have seen...

— Color Computer News, Jan. 1982

TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer — 16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays: 64 × 24 and 85 × 24! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command.

The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, *all on the screen at one time*. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing.

RIGHT JUSTIFICATION & HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.

Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

FEATURES & SPECIFICATIONS:

Printing and formatting: Drives any printer (LPV7/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Termet, etc).

Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dot-graphics, etc.

Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification.

Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.

Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files — create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).

Cassette verify command for sure saves. Cassette auto-retry means you type a load command only once no matter where you are in the tape.

Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.

Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.

...truly a state of the art word processor...
outstanding in every respect.

— The RAINBOW, Jan. 1982

PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs \$49.95 on cassette, \$59.95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.)

The Universal MacInker(s)[™] are here

Re-ink any Fabric
ribbon automatically
for less than

5¢

Now one **Universal Cartridge MacInker (UC)** re-inks all fabric cartridges and one **Universal Spool MacInker (US)** re-inks all spools. We have **MacInker(s)** dedicated to specialized cartridges, zip pack, harmonica etc. Over 1000 printer brands supported. Use your **MacInker** to re-ink your dry, fabric cartridges (for less than 5 cents in ink) and watch the improvement in print-out quality. Our new, residue-less, lubricated, dot matrix ink yields a darker print than most new ribbons. Or get any of our basic ink colors: brown, blue, red, green, yellow, purple and use **MacInker** to create and/or Re-ink your own colored cartridges. We have uninked or colored cartridges for the popular printers and ribbon re-loads for any printer. Operation is extremely simple & automatic with new, twin drive electric motor that supports CW and CCW rotating cartridges. A good quality fabric ribbon of average length can be re-inked almost indefinitely. In our tests one re-inked Epson* 80 ribbon has outlived the estimated life of the print-head!! We receive consistent & similar feedback from our customers. As of August 85 we have over 40,000 MACINKER(s) in the field, in 5 continents (220 V motors available). **MacInker (UC) is \$60.00.** Cartridge drivers are **\$8.50/ea.** We still have our first generation, dedicated **MacInker(s)** for most popular printers. Prices start at **\$54.95** with most units below \$60.00. **MacInker** has been reviewed, approved and flattered in most magazines and even in the NEW YORK TIMES and the CHICAGO SUN TIMES.

BUILDING JUNE'S RAINBOW

Welcome to CoCo Country

Recently, we were calling people throughout the building to come hear some movin', groovin' CoCo musical arrangements. I taunted the managing editors of our sister publications with, "Let's see your machine match that!" Rock 'n' Roll!

Truly, I had not realized any computer could jam that way — I'm talking driving-beat, get-down sound. CoCo's musical state of the art is a long way from PLAY statement Chopsticks. Unfortunately, for several selections, the "listing" (if one even existed) would run many magazine pages and would be helpful only to those who happen to have a given CoCo composer program.

Luckily, we also have solid material that can be shared. But, since these arrangements are all quite long, what we have done is run enough of the program code in the magazine to play the first few bars, to show you how it's done, and then included the entire file on RAINBOW ON TAPE. We don't like to put anything on RAINBOW ON TAPE that isn't in the magazine, but we believe you'll understand and forgive us this slight transgression, since doing otherwise would deprive you of some great stuff.

Carrying our departure from the norm a bit further, we also included some non-CoCo-generated music on this month's RAINBOW ON TAPE. We think that "Shadow of the Rings" by Becky and Dave Matthews is quite well done and, since it is their own original work, we have reproduced it on our tape service to go along with the graphics they also created. A quite intriguing, off-the-wall, multi-media work, I think you'll agree.

So, music takes many forms with the CoCo. One area that seems to be overlooked, however, is music about the CoCo! I mean, why not? I have an entire record album of C.B. radio songs that are so hokey I consider them classics. And, every time our Music and Sound issue of THE RAINBOW rolls around, I chide myself for not having written at least one tongue-in-cheek, just-for-fun CoCo song.

You see, I do have some songwriting credentials — however shaky or suspect they may be. A decade ago, former RAINBOW senior editor Courtney W. Noe and I put our middle names together and the country music team of Willard and Earl was born. Out of that concerted, two-week venture came "Come on Over for a Pick-Me-Up, My Woman Just Put Me Down" and the ever-popular "They Got Tums for the Tummy, and Contact for Your Cold, But There Ain't No Pain Reliever for the Soul," plus some lesser-known hits.

My creative inspirations always lean toward that lyin', dyin', cheatin', cryin' life-in-the-emergency-lane music. And, the way we carry on about our CoCo, it's time we set our words to music. How about "Ballad of the CoCo Widow," or "I'm Proud to be a CoCo-LoCo's Daughter," huh, huh? Let's see, "The Keyboard Bounce Blues"? Maybe not. Or, "Send Me the EPROM You Just Burned In." Whew, baby. Heavy stuff, eh! Here's a bound for glory classic, for sure: "I Dreamed I Was There in Hardware Hacker Heaven."

No, this isn't a contest. But, if you send in a goody, and Lonnie's out of town a few days, it just might get printed. Heck, send us just the title if you want; if it brings a chuckle, or twangs the old heart strings, we'll share it with the CoCo World. No reason it has to be country, but don't count on getting into the Tom T. Hall of Fame with some punk rock stuff!

Yee-Hah! I'm on a roll now, "These Boots Are Made for DOSes," or "I've Forgotten More Than You'll Ever Know About C." Look out Nashville! "You Gotta Walk That Silicon Valley" sounds Top 40 to me. How about "Does RFI Sometimes Waver Through the Bedposts Late at Night?" Or, "I'm Proud to be a CoCo-ee from Muskogee." Or . . .

Ending with my usual refrain: To keep up with the beat and in tune with the times, I invite you to join with those who subscribe to THE RAINBOW (Use our new orders only toll free number: 800-847-0309). We celebrate our fifth anniversary next month — We were CoCo when CoCo wasn't Cool!

— Jim Reed

Have you yet subscribed to **COCO TIME**

A monthly magazine on tape and disk

Now every month you can get 8-10 ready-to-run utilities, programming tips & hints, business applications, home management, tutorials, and educational programs. Also a Buy 'N Sell section and much, much more. **NO GAMES, ONLY REAL STUFF!**

THOUSANDS OF PROGRAMMERS USE THESE UTILITIES DAILY. SHOULDN'T YOU?

UTILITY ROUTINES for the TANDY & TRS-80 COLOR COMPUTER (Vol. 1)

This powerful book for Basic and ML Programmers, includes program explanation, memory requirements, and an annotated source listing for the utility routines given below. These routines if bought individually will cost you HUNDREDS OF DOLLARS.

These are 100% Position Independent ML Utilities and require no ML programming knowledge.

COMMAND KEYS: Access most Basic commands with 2 keystrokes.

CURSOR STYLES: Create OVER 65000 Cursor Styles.

FULL LENGTH ERRORS: Get full length error messages.

KEY CLICKER: Ensure key input accuracy.

PAUSE CONTROL: Put Basic/most ML programs "on hold."

REPEAT KEY: Repeat ANY key. 5 different key speeds.

REVERSE VIDEO (Green and Red): Eliminate eye strain.

SPOOLER (16K, 32K, 64K): Don't wait for those printouts, 32K Spooling Butter in 64K.

SUPER SCROLLER (64K Only): Save and examine everything that scrolls off the text screen.

AND MUCH, MUCH MORE!

Compatible with 16K/32K/64K ECB/Cassette and Disk Systems and CoCo I and CoCo II.

500 POKES, PEEKS 'N EXECS for the TRS-80 COLOR COMPUTER

NEVER BEFORE has this information of vital significance to a programmer been so readily available to everyone. This book will help you 'GET UNDERNEATH THE COVER' of the color Computer and develop your own HI-QUALITY programs, SO WHY WAIT?

This book includes POKEs, PEEKs, and EXECS to:

- Auto start our Basic programs.
- Disables most Color Basic/ECB/Disk Basic commands.
- Disable BREAK KEY, CLEAR KEY and RESET BUTTON.
- Generate a Repeat-Key.
- Merge two Basic programs.
- Transfer Rompaks to tape (for 64K only).
- Speed up your programs.
- RESET, MOTOR ON/OFF from keyboard.
- Restart your Basic program thru the RESET BUTTON.
- Produce Key-Clicks and Error-Beeps.
- Recover Basic programs lost by NEW, ?10 ERRORS and faulty RESET.
- Set 23 different GRAPHIC/SEMIGRAPHIC modes.
- Set 15 of the most commonly used Baud Rates.
- Allow you more plays in 23 of your favorite arcade games.
- AND MUCH, MUCH MORE!

COMMANDS COMPATIBLE WITH 16K/32K/64K COLOR BASIC/ECB/DISK BASIC SYSTEMS and CoCoI and CoCoII.

Nothing Phone-y about It: Ma Bell Trips the Light Fantastic

By Becky F. Matthews

Welcome to CCTV (CoCo TV)! Before loading this program type PCLEAR B (to free two Hi-Res graphics screens), then load *OnHold*, run it, and feel free to sing along. This is a simple animation program with telephones dancing to music, but the results are quite entertaining. The speed-up POKE is used in Line 10, so be sure to delete it if your computer won't handle it. There are two kinds of music statements and two kinds of animation used in *OnHold*.

Lines 55-85 use the text screen to print the words to the song chorus and sound the appropriate note for each word.

Becky Matthews and her husband, David, live in Nashville, Tennessee, and do free-lance work in electronics, computers and music.

Lines 90-190 draw one telephone on Hi-Res graphics screen PMODE 4,1. GET it and use PUT to "stamp" seven more phones on the screen. Lines 125-135 paint the phones. Line 145 copies the phones to the second graphics screen, PMODE 4,5. Line 160 draws straight legs on the PMODE 4,5 phones. Lines 170-180 draw legs in various dance positions on the PMODE 4,1 phones.

Lines 195-250 comprise the "slow dance" routine. This routine is performed four times (Variable P in Line 200). Using GET, a phone is chosen randomly from the PMODE 4,1 screen (lines 200-205) and is "stamped" using PUT (Line 225) to each phone position in PMODE 4,5. Each time this routine takes place, 'Y' is decremented by two (Line 210). This moves the rows of telephones higher on the screen. When 'Y' is less than 33, the screen is cleared with Color C (Line 215) and the next phones return to their original screen

position (Y = 40). Line 230 sets 'Y' up to PUT the bottom row of phones. Line 235 sets 'Y' back to the top row of phones.

Lines 255-265 make up the "fast dance" routine, which simply flips between PMODE 4,1 and PMODE 4,5. To change the speed of the fast dance, change the value of 'T' in the two timing loops in Line 260. Variable S tells how many times the pages are flipped. Subroutine 270 (lines 270-280) makes a telephone ring sound effect.

Line 50 causes the dance sequence to start again (GOTO 30), so use BREAK to stop the program when you've seen enough dancing telephones. Don't forget to type POKE 65494,0 when you're done to slow the CoCo back to normal speed.

(Direct questions about this program to the author at 2415 Smith Springs Road, Nashville, TN 37217. Please enclose an SASE for a reply.) □

This program sets the songwriter's stage by providing blank sheet music — you just fill in the notes . . .

The Music Maker's Accompanist

By Barry McNeice

Music Paper uses the dot-addressable mode to print blank sheet music with the DMP-105 printer.

Data statements for poking the title screen are tucked away at the end of the program. Line 30 reads past the main body of data, so the title screen POKES are read only once.

Line 70 checks to make sure the printer is ready. I got this helpful hint from Justin Snyder in the December 1984 RAINBOW letters section. The routine for "freehand drawing" in lines 150 through 230 was taken directly from the DMP-105 owner's manual.

Each page holds five lines of music with bass and treble clefs. There should be plenty of room between lines for lyrics to your song. I hope this program helps make song writing just a little easier.

(You may direct questions about this program to the author at P.O. Box 1248, Yakima, WA 98907, phone 509-457-8865 from 8 a.m. to 5 p.m. PST. Please enclose an SASE when writing.)

Barry McNeice lives in Yakima, Washington, and is employed as a rubber stamp maker. A novice programmer, his hobbies include music and the CoCo. He is involved with the Yakima CoCo Special Interest Group.

Sample Printout

Introducing

CoCo MaxTM II

There is absolutely nothing else on the Color Computer that is comparable to CoCo Max's power and ease of use. The most enjoyable time with a computer I ever had.
- **Computerware Review May 1985**

CoCo Max is the most incredible product ever marketed for the CC. No review can do it justice. I've never given any product a 10...I give Colorware's CoCo Max (Hardware, Software and Documentation) a 10!
- **Color Chronicle Vol III #6**

I never expected to see anything like it on my CoCo screen. There isn't a single command to remember. Even a person who has no drawing ability like myself can create a presentable picture. I've spent hours just doodling enjoying all the things from silly to the serious. Fascinating experience. Buy it, you won't be sorry.
- **6809 Express May 1985**

An outstanding program that almost turns your CoCo into a replica of the Macintosh. Terrific hi-res color, very easy to learn and use.
- **Family Computing February 1986**

CoCo Max puts fun back into computing, offering a state of the art environment you find on much more expensive machines. Colorware has invested the kind of time and research that virtually secures its success, and that shows up on your screen.
- **Hot CoCo July 1985**

The pack is well constructed, the user's manual is complete with illustrations and well organized. An outstanding buy for the performance. Colorware's advertisement accurately describes the product. Their delivery was timely as promised.
- **Rainbow June 1985**

**These were reviews of CoCo Max I.
CoCo Max II will blow your socks off
with even more power!**

- New bidirectional shrink and stretch
- New rotate function
- 9 new fonts (for over 200 typestyles)
- A new "Glyphic font" of small pictures
- A 68 page scrapbook
- Point and click to load files (no typing)
- Full error reporting, crash proof
- Custom patterns can be saved
- Printing in color (with CGP 115 or 220)
- Much more. (Note: CoCo Max II is available on disk only)

The reviews are nice, but see it for yourself* and draw your own conclusion.

*If you are not delighted with your CoCo Max II, we will immediately refund your purchase, including postage back.

For more information on
CoCo Max, turn the page.

CoCo Max IITM

You'll use it all the time and love using it.

What is CoCo Max?

Simply the most incredible graphic and text creation "system" you have ever seen. A Hi-Res Input Pack (more on the pack later) is combined with high speed machine language software. The result will dazzle you.

CoCo Max disk system, with Y-cable.

Is CoCo Max for you?

Anyone who has ever held a pencil or a crayon for fun, school or business will love it. A 4 year-old will have fun doodling, a 15 year-old will do class projects and adults will play with it for hours before starting useful applications (illustrations, cards, artwork, business graphics, flyers, charts, memos, etc.) This is one of the rare packages that will be enjoyed by the whole family.

What made CoCo Max an instant success?

First there's nothing to learn, no syntax to worry about. Even a child who can't read will enjoy CoCo Max. Its power can be unleashed by simply **pointing** and **clicking** with your mouse or joystick. With **icons** and **pull down menus**, you control CoCo Max intuitively; it works the same way you think.

Don't be misled by this apparent simplicity. CoCo Max has more power than you thought possible. Its blinding speed will astound you.

It lets you work on an area 3.5 times the size of the window on the screen. It's so friendly that you will easily recover from mistakes: The **undo** feature lets you revert to your image prior to the mistake. As usual, it only takes a single click.

Later, we will tell you about the "typesetting" capabilities of CoCo Max II, but first let's glance at a few of its graphic creation tools:

With the **pencil** you can draw free hand lines, then use the **eraser** to make corrections or changes. For straight lines, the convenient **rubberbanding** lets you preview your lines before they are fixed on your picture. It's fun and accurate. Lines can be of any width and made of any color or texture.

The **paint brush**, with its 32 selectable brush shapes, will adapt to any job, and make complicated graphics or calligraphy simple.

For special effects, the **spray can** is really fun: 86 standard colors and textures, all available at a click. It's like the real thing except the paint doesn't drip.

CoCo Max will instantly create many shapes: circles, squares, rectangles (with or without rounded corners), ellipses, etc. Shapes can be filled with any pattern. You can also add hundreds of custom patterns to the 86 which are included.

The **Glyphics** are 58 small drawings (symbols, faces, etc.) that can be used as rubber stamps. They're really great for enhancing your work without effort.

Pull down menus

Zoom in!

Control Over Your Work

CoCo Max's advanced "tools" let you take any part of the screen, (text or picture) and perform many feats:

- You can move it around
- Copy it
- Shrink or enlarge it in both directions
- Save it on the electronic **Clipbook**
- Flip it vertically or horizontally
- Rotate it
- Invert it
- Clear it, etc. etc.

All this is done instantly, and you can always **undo** it if you don't like the results.

For detail work, the **fat bits** (zoom) feature is great, giving you easy control over each pixel.

To top it all, CoCo Max II works in color. Imagine the pictures in this ad in color. If you own a Radio Shack CGP-220 or CGP-115, you can even print your work in full color!

There is so much more to say, such as the capability to use CoCo Max images with your BASIC programs, the possibility to use CoCo Max's magic on any standard binary image file. There are also many advanced features such as the incredible **lasso**.

Inside the Hi-Res Input Pack

Why a Hi-Res Input Pack?

Did you know that the CoCo joystick input port can only access 4096 positions (64x64)? That's less than 10% of the Hi-Res screen, which has 49152 points! (256x192). You lose 90% of the potential. The Hi-Res Input Pack distinguishes each of the 49152 distinct joystick or mouse positions. That's the key to CoCo Max's power. The pack plugs into the rom slot (like a rom cartridge). Inside the pack is a high speed multichannel analog to digital converter. Your existing joystick or mouse simply plugs into the back of the Hi-Res Pack.

Electronic Typesetting...

You'll be impressed with CoCo Max's capability. Text can be added and moved around anywhere on the picture. (You can also rotate, invert and flip it...) At a click, you can choose from 14 built in **fonts** each with 16 variations. That's over 200 typestyles!

Examples of printouts

Printing Your Creations

There are a dozen ways to print your work. All are available with a click of your joystick (or mouse) without exiting CoCo Max. Your CoCo Max disk includes drivers for over 30 printers!

Why do more CoCo owners choose 'REAL TALKER'?

Sure it's priced right, but there's more...

Thousands of 'Real Talker' owners know 'Real Talker' beats ALL other CoCo voice synthesizers in ease of use and flexibility. And, NO other CoCo talker has a clearer, more intelligible voice. That's quite a lot of advantage when you consider Real Talker's unbeatable price. Yet, Real Talker has some important features that you simply will not find in other CoCo talkers:

'SAY' command - You'll have your computer talking brilliantly in just minutes thanks to this powerful new command. Type SAY "ANYTHING YOU WANT" and your words are instantly spoken. It's that simple. Think how easy this makes creating speaking Basic programs. Adding speech to your existing programs is a snap too.

'CONVERT' - This is a truly powerful command for the basic programmer. CONVERT automatically transforms a machine language dependent speaking program into a stand-alone Basic program. In other words, you can effortlessly write speaking Basic programs that do not require a machine language translator in memory. This is a unique feature of 'Real Talker'. No other voice synthesizer gives you anything even remotely approaching this type of capability - even synthesizers costing considerably more.

Other features include software controlled pitch, unlimited vocabulary text-to-speech, and even a program that will recite any ASCII file (such as from Telewriter-64 & other word processors). You also get Colorware's unique full-screen phoneme editor program that let's you experiment with and modify speech at it's most fundamental level.

'Real Talker' is compatible with any 16K, 32K, 64K Extended or non-extended Color Computer. It works with any cassette or disk system and comes complete and ready to talk through your T.V. or monitor speaker. Price includes the 'Real Talker' electronic voice synthesizer in a ROM pack, software on cassette (may be transferred to disk), and user manual.

'Real Talker' is a full-featured electronic voice synthesizer unit built into a compact cartridge case. You simply plug it into the side of your computer.

NOW INCLUDED WITH 'REAL TALKER'.....

1. **'DR. TALK'**-This interactive "Eliza" type psychoanalyst program will discuss your innermost problems at length.
2. **'TALKING BATTLESHIP'**-It's you vs. the computer in this speaking version of the classic game.
3. **'TALKING BLACKJACK'**- Play for big stakes against a rather talkative casino dealer.

ONLY
\$59.95

'REAL TALKER-1' (for the original Color Computer).....\$59.95

'REAL TALKER-2' (for the Color Computer-2).....\$64.95

'Y - BRANCHING CABLE' For disk systems. If you have a disk system but do not have a Radio Shack Multi-Slot unit, this economical cable will allow to connect and use your Real Talker and Disk system together.....27.95

TALKHEAD

If you have a 'Real Talker', do not deprive yourself of this absolutely incredible machine-language Talking Head simulation program. While other talking head simulations use a minimal cartoon-like face, TALKHEAD uses high resolution, full-screen, digitized images of an actual person's face to create a life-like animated effect.

SOFTWARE FOR THE 'REAL TALKER'

TALKHEAD can be easily commanded in Basic to appear on screen and say anything you want. Available on cassette or disk for only \$19.95, TALKHEAD requires 64K and a Colorware 'Real Talker'.

ONLY **\$19.95**

Who Will Survive

By Scott Halfman

You are traveling in a land far away, seeking fortune. You gain loot by passing from castle to castle, each time picking up all the objects on the different levels (floors) of the castle. After cleaning out each castle, you move on to a new one, and the difficulty of the game increases accordingly.

Castle requires 32K Extended Color BASIC, however, it will run in 16K ECB with the disk controller unplugged. Now load in *Castle* and type RUN. The title screen appears. To continue, press the firebutton on the right joystick. The castle door opens and you enter the castle. A skill level prompt appears. Type a number between one and four (1-easy, 4-hard). There is a short pause, and then the computer reveals what objects are to be picked up on that level. Press the firebutton to play.

The game board appears. All the objects are laid on the castle floor, the bonus score and the number of men you have are displayed at the top of the screen. Your man is then lowered onto the game board.

To clear the board, you must pick up all the keys (or other objects) before the bonus countdown runs out, without falling off the path.

When the board is cleared, move to the (white) elevator platform. You are then lifted off that castle level to the next.

After clearing level six, your man makes his way to the castle exit

Scott Halfman is a student at Hendrick Hudson High School in Peekskill, New York, where he has completed a BASIC programming course. His hobbies include skiing, football and the CoCo.

The background of the page is a painting of a landscape. On the right, a dark silhouette of a castle with several towers sits atop a high, craggy cliff. The sky is a gradient of colors, from a pale blue at the top to a warm orange and red near the horizon, suggesting a sunset or sunrise. In the upper left corner, the dark, bare branches of a tree reach across the sky. The overall mood is somber and atmospheric.

the

Castle

of

Doom?

where you are prompted to either quit or go on. The number of castles finished, your score and the high score are displayed. Press 'Q' to quit or 'C' to continue.

If you dare to continue, your man leaves the castle and a new castle approaches.

(You may direct questions about this program to the author at 15 Lake Road, Peekskill, NY 10566, phone 914-739-4758. Please enclose an SASE when writing.) □

\$39.95 with source **\$79.95**

AND FOR RS DOS . . .

SMALL BUSINESS ACCOUNTING This sales-based accounting package is designed for the non-accounting oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List. **\$79.95**

ACCOUNTS RECEIVABLE Includes detailed audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package. **\$59.95**

These programs are user friendly and menu driven. Sample transactions are included. Each package features a hi-res screen. Each requires a printer, a minimum of 32k and at least 1 disk drive.

PAYROLL Designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pay and determines taxes to be withheld. Additional outputs include mailing list, listing of employees, year-to-date federal and/or state tax listing, and a listing of current misc. deductions. Suited for use in all states except Oklahoma and Delaware. **\$59.95**

DMS Database Management System. Search, sort, calculated fields, disk and tape interfaces. **\$24.95**

CBK Complete check register with statement balancing. Includes full amortization program and wage analysis program. **\$24.95**

AUTO85 Hi-res screen. 51/64/85 characters per line, inverse characters, automatic line numbering. **\$19.95**

MICROTECH CONSULTANTS INC.

VCR

THE HOME VIDEO MONTHLY

A funny thing has happened in the home video market. As it gets easier and easier to watch what you want, it gets harder and harder to decide what that might be.

Dozens of new tapes are released into the stores every week, along with hundreds of hours of programming on the network and cable channels. It has reached a point where even the most devoted videophile can use a little help sorting through it all.

Now that help is available.

Inside **VCR** you will find clear, easy-to-read reviews of all the best new releases. You'll find out about little-known videos — what they're about and where to get them. And in the feature articles, you'll find some very entertaining reading about the entertainment business.

Now that you've discovered **VCR**, you won't want to risk missing a single issue. You can save yourself the trouble of walking to the newsstand each month, and save yourself some money at the same time.

Just fill out the attached card and drop it in the mail. Or even easier, call (502) 228-4492 and ask for Sandy. She'll see to it that **VCR** is delivered right to your door each and every month of the year.

Yes, enter my subscription for the next 12 issues of VCR.

At only \$15, that's 36 percent off the regular newsstand price.

Name _____

Address _____

City _____ State _____ ZIP _____

My check in the amount of _____ is enclosed.

(In order to hold down costs, we do not bill.)

Charge to: VISA MasterCard American Express

Acct. Number _____ Exp. Date _____

Signature _____

*Subscriptions to **VCR** are \$15 a year in the United States. Canadian rate is U.S. \$22. Air mail rate elsewhere is U.S. \$60. All subscriptions begin with the current issue. Please allow 6 to 8 weeks for first copy. Kentucky residents add 5% sales tax. U.S. currency only, please. In order to hold down non-editorial costs, we do not bill.

To order by phone (credit card orders only) call 1-800-847-0309, 8 a.m. to 5 p.m. EST. For other inquiries call 1-502-228-4492.

Mail to: VCR, The Falsoft Building, P.O. Box 385, Prospect, KY 40059

Howard Medical offers a 30-day return guarantee on all hardware we sell. Return equipment to us within 30 days for a refund (less shipping) if you are unsatisfied for any reason. Quantities limited and subject to availability.

The Biggest

The Best

The Indispensable

The RAINBOW THE COLOR COMPUTER MONTHLY MAGAZINE

It's called the *premier Color Computer magazine* for good reason. **THE RAINBOW** is the biggest, best, brightest and most comprehensive publication a happy CoCo ever had! Is there any wonder we get letters daily praising **THE RAINBOW**, the magazine one reader calls "A Pot Of Gold" for his Color Computer.

THE RAINBOW features more programs, more information and more in-depth treatment of the Tandy Color Computer than any other source.

A monthly issue contains up to 300 pages and as many as two dozen programs, 15 regular columns and more than 20 product reviews. And advertisements: **THE RAINBOW** is known as *the* medium for advertisers — which means every month it has a wealth of information unavailable anywhere else about new products! Hundreds of programs are advertised in its pages each month.

But what makes **THE RAINBOW** is its people. People like Fred Scerbo, who write special programs at the request of readers. Experts like Dick White and Joseph Kolar, two of the most knowledgeable writers on BASIC. Communicators like R. Wayne Day, who stay abreast of telecommunications advances. Or, Dan Downard, **RAINBOW** technical editor, who answers our readers' toughest questions. Educators like Dr. Michael Plog and Steve Blyn, who show how CoCo can be used at home or school. Advanced programmers like Dale Puckett, who guide you through the sophisticated OS-9 operating system. Electronics experts like Tony DiStefano, who explain the "insides" of the CoCo. These people, and many others, visit you monthly through columns available only in **THE RAINBOW**.

Every single issue of **THE RAINBOW** covers the wide spectrum of interests in the Tandy Color Computer — from beginners' tutorials and arcade games to telecommunications and business and finance programs. Helpful utilities and do-it-yourself hardware projects make it easy and fun to expand your CoCo's capabilities. And, monthly reviews by independent reader reviewers take the guesswork out of buying new software and hardware products.

Join the tens of thousands who have found **THE RAINBOW** to be an absolute necessity for their CoCo. With all this going for it, is it surprising that more than 90 percent of **THE RAINBOW** subscribers renew their subscriptions?

We're willing to bet that, a year from now, you'll be doing the same. For more information call (502) 228-4492.

Get Your Very Own Pot O' Gold!

Here's your chance to have a Pot O' Gold full of programs, articles and information about CoCo every month of the year! A subscription to **THE RAINBOW** is only \$31* and you won't miss a single chock-full issue.

As the premier magazine for the Tandy Color Computer, **THE RAINBOW** has more of everything — and greater variety, too. Do yourself and your CoCo a favor and subscribe to **THE RAINBOW** today!

We accept VISA, MasterCard and American Express, Non-U.S. rates higher. U.S. currency only, please.

YES! Sign me up for a year (12 issues) of **THE RAINBOW**.

*Subscriptions to **THE RAINBOW** are \$31 a year in the United States. Canadian rate is U.S. \$38. Surface rate elsewhere is U.S. \$68. Air mail U.S. \$103. All subscriptions begin with the current issue. Please allow 5 to 6 weeks for first copy. Kentucky residents add 5% sales tax. In order to hold down non-editorial costs, we do not bill.

Rainbow On Tape Tops Typing

Tired of spending all your valuable computer time typing in those long, but wonderful, **RAINBOW** programs each month? Now there is **RAINBOW ON TAPE** to help ease the pain.

Each month all the lengthy programs (over 20 lines) in **THE RAINBOW** can come to you ready-to-run, thanks to **RAINBOW ON TAPE**. At \$80* per year — or \$10 a tape ** — it is the biggest bargain going. (Note: **RAINBOW ON TAPE** will not run on Dragon or MC-10 computers.)

Back issues are available beginning with April 1982 (except May 1983). Each month's tape will arrive at approximately the same time as that month's issue of **THE RAINBOW**.

*Subscriptions to **RAINBOW ON TAPE** are \$80 in the United States, \$90 U.S. funds in Canada and \$105 U.S. funds in all other countries. In order to hold down non-editorial costs, we do not bill. Kentucky residents add 5% sales tax. ** Individual back issues of the tapes are \$10 in the United States, \$12 U.S. funds for Canada and all other countries.

What goes well with the *Rainbow*?

Rainbow On Tape!

We call it the other side of **THE RAINBOW** and we may have to raise the price just to call your attention to it. With as many as two dozen programs every month, **RAINBOW ON TAPE** is a luxury service at a bargain basement price.

What is it? **RAINBOW ON TAPE** is a monthly cassette tape adjunct to **THE RAINBOW** and it's brimming with all the programs (those over 20 lines long) that fill the pages of the magazine. All you do is pop the cassette in your tape recorder and they're ready to run. No more lost weekends — or week nights — typing, typing, typing. With **RAINBOW ON TAPE**, you can read the article in the magazine then, in seconds, you load it up and run it. Yes, you could type them in yourself, as many people do. But all of them? Every month? There simply isn't enough time.

Isn't it time your CoCo became a full-time computer instead of a typewriter? Think how your software library will grow. With your first year's subscription, you'll get almost 250 new programs: games, utilities, business programs, home applications — the full spectrum of **THE RAINBOW'S** offerings without the specter of keying in page after page and then debugging.

RAINBOW ON TAPE — the "meat" of **THE RAINBOW** at a price that's "small potatoes." Food for thought. To get your first heaping helping, just fill out and return the attached reply card. No postage necessary.

Discover the other side of **THE RAINBOW**. It's not only a time-saver, it's the key to a whole new outlook!

Drive 0 and 1 **279⁹⁵**

One double sided drive with doubler board and new RS controller so you can have the equivalent of 2 drives in one. You can even backup from 0 to 1. Works with all CoCo's.

AMBER MONITOR **59⁹⁵**

Epson's Comrex 5650 has a 12" screen with 900 lines. Resolution for 80 column text and 18 MHZ band width. Retail price is 139.95. These are new, in factory sealed cartons, NOT used, repacked, or refurbished. Add 7.00 s/h. Monitor Interface for any Color Computer 29.95.

2 Drives **299⁹⁵**

Both our drive 0 and 1 in one case, with cable and R.S. controller. The best just got better!

Drive 1 Upgrade **119⁹⁵**

Add a second 1/2 height drive to your Radio Shack 26-3129. Comes with 3 minute installation instructions, screwdriver required. Double sided version (Drive 1 and 2) and doubler board add 79.00

Drive 1 **125⁹⁵**

Your Choice
Silver or White

199⁹⁵ Drive 0

SUPER DRIVE SALE

Special prices on new first quality disk drives. They even have GOLD connectors on the back... Some other places charge 229.00 for dr. 1 and 299.00 for dr. 0, not us! Drive 1 is for mod I, Second Color Computer drive, or external mod III, IV. Drive 1 just plugs into the extra connector on your Drive 0 cable. Both drives are compatible with any version of the Color Computer and all versions of drives. Drive 0 is your first Color Computer drive and comes complete with cable, manual, and R.S. controller. For double-sided drive and doubler board add 79.00 (for Drive 0 & 1 or 1 & 2). Bare full hgt SSDD drive only 79.95.

THE COMPUTER CENTER

901-761-4565, 5512 Poplar, Memphis, TN 38119

Add \$4.90 for shipping and handling—Visa, MC & money orders accepted, No CODs

Allow an additional 2 weeks for personal checks—Drive faceplates may vary slightly

Prices subject to change without notice.

Saturday at the Bijou — Remembering Intermission Sing-alongs

By Ruth E. Golas

When I was a little girl, a cherished amusement was a trip to the movies. During intermission, there was often a sing-along. The organist would play while the words to the song flashed on the screen. Everyone joined in as the master of ceremonies led the singing.

With *Sing-Along* I have tried to evoke that long-ago era when the audience was so much a part of the entertainment. I used the PRINT @ statements rather than graphics because I find them very interesting. Enjoy!

(Questions about this program may be directed to the author at 2826 Pacific Coast Highway, Torrance, CA 90505, phone 213-325-1384. Please enclose an SASE when writing.)

Ruth Golas has retired from the Torrance Police Department where she did microfilming. She is learning to program her CoCo and it has become her hobby.

AVAILABLE NOW DRAGON USER

To make the most of your new Dragon microcomputer from Dragon-Tano, you need *Dragon User* — the international, independent magazine for Dragon owners.

- Each issue of *Dragon User* contains:
- reviews of the latest software
 - programming advice for beginners
 - hardware projects

- program listings covering games and utilities
- reviews of Dragon peripherals and add-ons
- technical advisory service
- programming articles for users

The Dragon microcomputer was launched in the UK last year. Since then we have developed a knowledge and mastery of the machine's abilities. You can benefit from our experience by subscribing to *Dragon User*, which is expanding its coverage to include all US developments.

To make sure that you receive a copy of *Dragon User* regularly, subscribe direct to us. This costs only \$29.95 for 12 issues airspeeded to you — or take advantage of our special offer to long-term subscribers. Individual copies of the magazine can be obtained from your Dragon dealer.

Subscription order form. Receive a free book and save money by taking out a long-term subscription — a two-year subscription saves 10%, a three-year subscription saves 20%. In addition, long-term subscribers will receive a free copy of either *The Working Dragon* or *Dragon Games Master*. Please send a check, made payable to *Dragon User*, with this form. Start my subscription from the following issue

Radio Shack's Color Computer 2[®]

SAVE ON OUR BEST!

64K Memory! Extended BASIC! Cut \$20...new low price \$199.95

The Color Computer 2 is an affordable computer that allows you to write programs tailored to your personal and household needs. It's ideal for small-business and professional uses alike. With the built-in Extended BASIC language, you can access 32,000 characters of memory. To access the full 64K memory, simply add a

disk drive and the optional OS-9 disk operating system.

The powerful Color Computer 2 (26-3127, was 219.95 in Cat. RSC-15) creates detailed color graphics from simple, one-line commands, and is ideal for drawings, designs, charts, engineering diagrams and even animation!

Ready-to-run software can help you set up personal and household budgets, create a household inventory, keep track of your investments, write letters and reports and record recipes.

With a wide range of educational software available, your children can use the Color Computer 2 to help strengthen their math, spelling and reading skills. The family can even play exciting computer games. The system attaches to any TV and is easily expanded.

Get the Color Computer 2 and your family will immediately start to enjoy the advantages of home computing . . . together!

I Want My CoCo

By Becky and David Matthews

CoCoTV is no longer a distant dream. CoCoTV is here today! Watch the graphics video generated by the program while you listen to the original song recording of "Shadow of the Rings" on this month's RAINBOW ON TAPE. Your usually mild-mannered computer turns into CoCoTV with a music video of its very own. Follow the loading instructions and you'll want your CoCoTV, too.

The speed-up POKE is used in Line 40. This program uses many timing loops and can work without the speed-up POKE, but it will not be synchronized with the music.

Before loading the program, type PCLEAR B to free two Hi-Res graphics screens, then CLOAD "SHADOW" and run. The program first prompts for a color test (lines 50 through 80). Follow the instructions on the screen. Next is the cassette test (lines 90 through 110).

The Play button on the recorder should be pressed and the TV volume should be up (if it is, you hear sound effects during the two tests). When ENTER is pressed (for "yes" to the cassette test), the cassette is started (Line 170) and the countdown begins. Line 190 displays the countdown from eight to one. Welcome to CoCoTV!

Becky and David Matthews freelance in electronics, computers and music. When they perform live music (with their robot face sidekick), they are known as Adobe Pagoda.

Shadow uses its own built-in alphabet to display words on Hi-Res graphics screens. In Line 150 the array for 26 letters is dimensioned — DIML\$(26). Subroutine 2230 has the DRAW substrings to draw each letter. The letters are used in lines 2590 through 2770 of the title page subroutine to write "Shadow of the Rings" on the title page screen and in lines 620 through 1970 to display the lyrics of the song bridge.

Note in Line 2590 and Line 620, 54 has been specified to define the size of the DRAW commands. Changing 54 to 52 makes the letters half their original size. Similarly, 56 makes them twice as large. The only other information needed to use this alphabet is the X,Y coordinates (where to start drawing the letter) and which letter to draw. L\$(1) is the letter 'A', L\$(2) is 'B', L\$(3) is 'C', and so on.

Using Line 2600 as an example, 54 is the 'X' position, 66 is the 'Y' position and L\$(8) is the letter 'H'. See the letters subroutine (lines 2230 through 2460) for easy reference to which letter is which element of the L\$ array. Letters 'L', 'Q', 'X' and 'Z' are not defined in the letters subroutine. Every letter except 'I' is 20 steps across and 28 steps up and down. Knowing this, you can finish the alphabet. Starting with an easy letter, write your own 'L' DRAW substring, which is L\$(12). Add it to the program as Line 2345. Now try adding the letter 'Q', L\$(17) at Line 2385. For hints, look at Line 2370, which draws the letter 'O'. Continue and add 'X', L\$(24), Line 2445 and 'Z', L\$(26), Line 2455, and you have

Next to your computer,

nothing beats a Tandy® printer.

Tandy printers make fine print quality, graphics and high performance affordable.

For your best value and selection in top-quality printers, shop your local Radio Shack Computer Center. We've got what you need, whatever your printing requirements.

Versatile Business Printer

The DMP 430* (26-1277, \$899) is a 132-column dot-matrix printer with an 18-wire print head that delivers superior correspondence characters. Choose from micro, italic and double-high fonts, as well as bit-image graphics. In the draft mode, the DMP 430 delivers a fast 180 characters per second.

Low-Cost, Triple-Mode Personal Printer

The DMP 130* (26-1280, \$349.95) lets you choose from word processing,

data processing and dot-addressable graphics. Prints in four character styles: standard or italic cursive in draft or correspondence modes.

Budget-Priced High Performer

The DMP 105 (26-1276, \$199.95) is ideal for data processing and general-purpose use. Features a bit-image graphics mode, too.

High-Resolution Ink-Jet Printer

The CGP 220 (26-1268, \$599) quietly prints text and graphics in yellow, violet, red, green, cyan, magenta and black! And because there's no ribbon to wear out or become contaminated, the print quality remains excellent.

See the complete selection of printers and accessories at Radio Shack today.

a complete alphabet — a new font of letters to use on the graphics screens.

The asteroids subroutine (starting at Line 2530) is called several times in the program. At Line 240 it is used as an asteroids background for the Saturn man drawing, but at lines 350 and 460 the asteroids represent moons of Saturn.

In the Saturn man subroutine (lines 1990 through 2220), there is a variety of uses for the CIRCLE command. Part of the face outline, the ear covers, helmet front, eyebrows, eyes and mouth were all drawn with CIRCLE. Line 2210 draws the word TITAN on the screen in simple block letters.

All drawings of Saturn are done with CIRCLE. The routines that shimmer the rings also use CIRCLE, but vary the color (variable C) and the step (variable V). See the Medium Saturn, Large Saturn and Big Rings subroutines.

About the Musical Group

"Adobe Pagoda" is a live musical show performed by Becky and David

Matthews using three CoCos to provide multimedia excitement. The show includes CoCo graphics displayed on a large-screen TV, a 12-channel synchronized light show, a talking and singing robot face, fog machine and computer-controlled audio effects.

A gray model CoCo running *Colorforth* from The MicroWorks is the main controller for the system. It tells the drum machine what song to play at what tempo and reads the clock pulses from the drum machine to synchronize the show. The gray CoCo controls the fog, light show and audio effects delay line to follow pre-programmed actions unique to each song. This CoCo also sends synchronizing triggers to the CoCo used for graphics, and control signals to the CoCo used for the robot face and voice. The gray CoCo uses five PIAs for I/O.

A CoCo 2 running *Colorforth* from Armadillo International Software controls the robot face with lights for the eyes and mouth synchronized to the voice. The voice is generated by an SSI

263 voice chip. This CoCo receives numerical data that tells it what speech/sound effect routine to perform via the RS-232 port from the gray CoCo.

Finally, another CoCo 2 running BASIC provides the graphics for each song. Some pictures are generated by *CoCo Max*, most by BASIC. *Autorun* from Sugar Software is used to load and run new graphics screens and programs automatically throughout the show. This CoCo receives instructions from the gray CoCo via a joystick port.

"Shadow of the Rings," written and performed by Becky and David Matthews, was recorded at Sound Vortex studio in Nashville with the help of Tom Steinman and Rob Earls. For a cassette of two additional original song recordings with an accompanying graphics program, send \$10 to 2415 Smith Springs Road, Nashville, TN 37217. □

Editor's Note: The musical recording of "Shadow of the Rings" will immediately follow the *Shadow* program listing on this month's RAINBOW ON TAPE.

SHADOW OF THE RINGS

By David and Becky Matthews

Once ran a gold mine in the asteroids
I ran a crew of fifty androids
I loved you son of a Saturn man
I spent my leaves with you on Titan

Living in the shadow
I'm living in the shadow of the rings
Living in the shadow
I'm living in the shade of Saturn's rings

Can't kiss you now my blue-skin beauty
Your father felt it was his duty
He sent me here to mine the ice rings
He keeps me busy with so many things

Ammonia gas seeps into my ship
As I suit up for the day
I shoot my shipments out into your orbit
But I know I can never come that way.

Robot Odyssey I

Adventure game or advanced education? You decide! **Robot Odyssey I** is divided into 3 parts: a **tutorial** that teaches the basics of robot anatomy and circuit design; the **lab**, where you practice building robots to perform specific tasks; and the **game**, an adventure that challenges you to escape from Robotropolis.

Robotropolis is an underground city inhabited by both friendly and bothersome robots. It is built in five levels, so your escape must be achieved in five increasingly more difficult stages. First is the sewer where friendly robots aid your escape. In the next level, the subway, you must rewire a robot. At the fourth level you get to the master control center. Finally, you reach the skyways. Less than 5% ever solve the last level!

Each robot has one eye, a grabber, an antenna to send and receive signals, four thrusters for guidance, four bumpers that detect walls, and a rechargeable battery. You must learn to operate these robots, including modifying and designing their inner circuitry, to escape from Robotropolis.

In addition to having great fun and adventure, you will learn a great deal about the inside of robots, integrated circuitry, and logic. **Robot Odyssey I** is the ultimate puzzle, requiring much time and effort while providing big rewards in return!

Requires 64K, Disk \$34.95

Free Catalog!

Please call or write for our **free CoCo catalog** with **32 pages** of articles, software, hardware, and coupons!

Computerware is proud to represent The Last Word by Michael Bailey of United Software. We chose The Last Word because it is truly the ultimate OS-9 word processor!

The Last Word offers fast, on-screen formatting using your choice of mouse, joystick or keyboard. The popdown menu is accessible at all times while inputting text so it is very easy to use. The Last Word provides the capability to move, insert or delete blocks of text, paragraphs, lines, or characters with just a click of the mouse or joystick or the touch of a key.

The Last Word is compatible with Word-Pak or you can use its own hires 51x24 display. You open files just by pointing to names on a directory menu. Once the file is open, you can move freely within the file from top to bottom and back again. If using it with Word-Pak, you have a 22,000 word dictionary on-line at your fingertips!

You can easily imbed your printer's special codes in your files. With more than 30 screen editing commands available, it's simple to format or reformat as necessary. Change the margins, double or single space, etc. using the pop-down menus. The Last Word is very easy to use and learn. It will be a staple in your OS-9 library!

Requires 64K, OS-9 \$49.95

Bio Detector

Biofeedback and Lie Detector Game

Learn the art of relaxation through biofeedback - or use the same device for party fun as a lie detector game. Software for both is included. The Bio Detector works through silver finger sensors attached to the Bio Detector unit which plugs into the joystick port. Your galvanic skin response is plotted in hires color graphics and sound. Learn stress reduction easily by watching your responses on the screen. The Anxiety Attack Game will provide hours of embarrassing and truthful fun as well. All hardware, software, and instructions are included.

Requires 16K \$24.95

Advanced OS-9 Utilities

by Brian Lantz

KSHELL allows wildcard with any utility! Includes **PATH** for multiple path directories, **UNLOAD** for repetitive unlinks, **FLINK** for alternative boot files, **ARCHIVE** to backup large media to small media, & **CPY**.

Serious OS-9 users cannot do without this set of utilities!

Requires 64K, OS-9 \$29.95

Disk Fix & OS-9 Utilities

by Harry Hardy

Unleash the real power of OS-9! **DISK FIX** supports true double-sided, double-density, 40 or 80 tracks, and step rates up to 6 ms - and each drive is configured separately! (CCDISK included)

DMODE allows super easy modification of drive descriptors. **DIRCOPY** is a powerful copy utility. **PATCH** lets you inspect & modify a disk file. **FILELOOK** displays file modules without loading. **COMPARE** compares a file to memory.

Includes modules for 1.X and 2.X OS-9!

Requires 64K, OS-9 \$34.95

Monitors

NAP Monochrome Monitors

The 20 mhz band width, 800 line resolution, and 80 x 25 display insure a crisp picture. Plus—it has audio input. Green 12" Amber 12"

\$114.95
plus \$5 shipping

SAKATA Color Monitor

Beautiful 13" color display with 280 x 300 line resolution. Includes composite video color and audio.

\$175 plus \$15 shipping

Put a Monitor on Your CoCo with the Universal Video Plus

Our advanced design gives the highest quality display.

Installation is easy. There is no soldering and no dismantling of the RF shield.

The Universal Video Plus works with every CoCo. Easy-to-follow, clear instructions are included.

Heavy duty construction, evidenced by sturdy leads and connectors.

All cables (audio & video) are included. No need to buy extenders or extra cables as required by other drivers.

Shielded audio & video cables insure that no extra RF interference is introduced from the Universal Video Plus, unlike other interfaces.

Universal Video Plus \$34.95

The Crossword Creator Contest

Can you create a totally symmetrical crossword puzzle using the *Word+* program and the specifications outlined in the accompanying article on Page 38 of the May 1986 issue of THE RAINBOW? If so, you may wish to enter The Crossword Creator Contest. And, if we choose to print your crossword puzzle, you will be awarded a special prize.

Send us a disk or cassette copy of the data file of your puzzle created by *Word+* along with a printed copy of the crossword puzzle — including the clues and answers. Be sure to put a title on the puzzle and if possible, follow a general interest theme.

Entries will be judged on the following criteria:

- Puzzle symmetry
- Number of words
- Spelling
- Creativity
- Thematic originality
- Understandability
- Ease of loading data
- Neatness
- Packaging

Enter as often as you like! Please note: We consider your act of entering the contest as consent to publish your creation.

The Crossword Creator Contest is open to all RAINBOW readers, advertisers and employees of Falsoft, Inc.

Send entries to:
Crossword Creator Contest

Music+: New Commands, No Bugs

By Bob Ludlum

Since *Music+* appeared in RAINBOW ("Making Four-Part Harmony Easier," June 1984, Page 74) I've received a large response from *Music+* users with questions and requests for additional features. As a result, I've fixed a minor bug and added two new commands to the program.

If you're not familiar with *Music+*, it's an enhanced version of Larry Konecky's *CoCo Composing* (RAINBOW, December 1983). It is a BASIC program that loads a machine language music synthesis program. A screen editor facilitates the entry, editing and playing of four-part music. It requires a 32K Color Computer with Extended BASIC and runs without modification on both tape and disk systems.

I want to answer some questions I received repeatedly. First, is it possible to add more voices and octaves? Yes, relatively simple modifications to the editor and synthesis programs are all that is required, but a tradeoff exists between the added complexity and the quality of the sounds produced.

Music+ synthesizes the music wave form by summing the contributions from the four voices at equally spaced time intervals. The result is a sampled approximation of the desired wave form. The accuracy of the approximation depends on how often the samples are calculated (the sampling rate). The theoretical minimum rate required is two samples per cycle of the highest frequency component in the wave form. In practice, much higher rates are needed.

If the sampling rate is too low, unwanted frequency components appear in the wave form, a phenomenon known as "aliasing." *Music+* calculates a new wave form sample every 145 microseconds (6,896 samples per second), which is already marginal.

The second question frequently asked

Bob Ludlum is an electronics design engineer and holds a master's degree in electrical engineering. Bob lives in Panama City, Florida, and his hobbies include electronics, personal computers, classical and flamenco guitar, and flying.

was, "Why do I get a 'C' note when I enter a 'B' sharp and why do the notes jump from 'B' in one octave to 'C' in the next?"

The note table in *Music+* implements the equally tempered chromatic scale with a standard pitch of 440 Hertz (cycles per second) for 'A' in the fourth octave. Each octave begins with the note 'C' and is made up of 12 pitch intervals (half-steps). There is one half-step between 'B' and 'C', and between 'E' and 'F'. There are two half-steps between the rest of the notes with the sharps falling on the half-steps between.

For example, beginning with the third octave, the notes are C3, C3#, D3, D3#, E3, F3, F3#, G3, G3#, A3, A3#, B3, C4, C4#, etc. To raise a note one half-step, its pitch is multiplied by the twelfth root of two (approximately 1.0595).

The original *Music+* program had a bug that showed up when the music was saved following use of the (M)ove command. The (M)ove command changes the pointer (actually a branch instruction offset) to the start of the music data allowing a portion of a song to be played. Moving and then saving caused the wrong start location to be saved and the entire song would not play when executed. Playing before saving prevents the problem. Adding `POKE A9,0:POKE A9+1,128:` to the beginning of Line 625 of the original program fixes the bug.

The first of the new commands is (H)dcopy, which is used to dump the music data between specified note columns to a printer. The command simply lists each column number followed by the note length and the four note names for that column. The `POKE 150,18` in Line 9600 sets the Baud rate to 2400. Change it to match your printer, if necessary.

Turn the printer off when playing music. The synthesis program generates a byte (eight bits) to the output port that drives the CoCo's six-bit digital-to-analog converter. One of the lower-order bits appears on the serial port while music is playing and will cause your printer to do strange things!

The other new command is (W)form.

It allows changing the wave form table to produce sounds with different timbres. The program prompts for the percentages of the fundamental and the first four overtones of the music wave form. The 256 values for the new wave form table are calculated (in BASIC) by summing the scaled sinusoidal fundamental and the second through the fifth harmonics.

The new wave form table is in effect for played and saved music until *Music+* restores the table after RUN. The original *Music+* organ wave form has 50 percent fundamental, and 25 percent each for the second and third harmonics. The sum of the percentages should equal 100.

The machine language program is located immediately above the BASIC screen editor in order to maximize the amount of memory available for holding music data. Adding the new commands required either relocating the machine language program (which would have destroyed compatibility with existing *Music+* music files) or shrinking the BASIC program.

I decided on the latter and removed the unnecessary spaces and packed the lines. Unfortunately, doing so makes describing the necessary steps to update the original *Music+* program very difficult. I'll be happy to make a copy of the latest version of the program if you send me a tape or (preferably) a disk in

a self-addressed, stamped return mailer. My mailing address is 226 Pine Ridge Drive, Panama City, FL 32405.

I've been very pleased with the positive responses to *Music+* and hope the new commands will be useful. I'm especially grateful to all who were kind enough to send me some outstanding samples of their music. I encourage you to share your efforts with the readers of RAINBOW.

Editor's Note: Due to the length of the new and improved *Music+* program, we are unable to print the listing in THE RAINBOW. We will, however, include the modified *Music+* program on this month's RAINBOW ON TAPE. □

Place these values into the Music+ program or simply load and execute each song file from this month's RAINBOW ON TAPE. Either way, you'll be musically entertained.

The following contributors have sent us their compositions using the original *Music+* program. We have dumped the first portion of the music data from each song using *Music+*'s (H)dcopy command and have printed it for your enjoyment. Both songs will be provided in their entirety on this month's RAINBOW ON TAPE, immediately following the *Music+* program listing. Simply CLOADM and EXEC to play each song.

Scott Joplin's "The Entertainer"

Rejuvenate Father Time with a Chic Quartz-Locked Clock

By Henry C. Gernhardt, Jr.

Many years ago when I purchased my first computer I sorely felt the need for some sort of clock everytime DOS asked for the time and date. I solved the date problem with a calendar, but the cost of a quartz-locked board with battery backup was prohibitive. And all the clock circuits shown in computer and electronic magazines were very difficult to build.

Today, with computers that just a few years ago sold for several thousand dollars now selling for several hundred, it is possible to find quartz clock modules in many hobby shops. These black box modules are pre-wired, require no external circuitry and generally make use of widely available penlight cells that last for several years. They are even available with electronic gongs and chimes.

Construction begins with the hunt for parts. Locate either a five and one-quarter inch or eight-inch diskette. A

magnetic tape reel could be substituted, but you will have to use some ingenuity since nine-track computer tape is incompatible with most diskette machines (unless you have a tape transport mechanism).

Next, you need a piece of mat board, cardboard, or a thin piece of plywood or hardboard. Cut this piece into a square slightly smaller than the diskette. (See Figure 1.) Cut, punch or drill a three-eighths-inch hole in the exact center. This dimension is not critical, and a bit of play may even be beneficial.

Use some double-sided tape, contact cement or any kind of adhesive to affix the mat board to the backside of the diskette. I used double-sided tape to hold everything together while the silicon rubber glue (RTV) set up. This allows for quick assembly, yet provides a secure joining of the two pieces.

Make sure the hold in the mat board is centered in the middle of the diskette jacket hub hole. Then center the diskette itself, making sure all three holes are concentric. A dab of RTV will ensure they remain centered.

For the diskette clock assemblies, quartz clock modules with one-quarter inch or shorter mounting collars should be used, but longer collars are acceptable if you use appropriate spacers or are making a computer tapereel-based unit.

These marvelous little black boxes make use of both electronic and mechanical linkages and offer quartz-locked accuracy at an affordable price.

Mount the black box through the center hole from the back of the diskette assembly. Make sure the rubber gasket has been placed over the mounting collar. Put a brass washer and mounting nut over the collar from the front of the diskette and tighten. Mount the time indicators according to the directions that come with the module. Secure them with a cap nut, or an open nut if you plan to use a second indicator.

Viola! A handsome wall clock in the shape of a computer diskette. Various LCD and LED modules are also available. One of these can be mounted in the hub hole of a diskette or even in the head slot. For movements using electronic chimes, a thin box can be constructed in which to mount the chime, using the diskette as a lid.

I painted the second hands fluorescent orange, the hour hand red and the minute hand yellow to provide easily deciphered time. Dots, numerals and other kinds of markers for dial indicators are available from clock movement suppliers. I did not use dial indicators because I like the starkness of an unmodified and unmarked diskette with the orange second hand sweeping an

Can Listen
To You!

- SPEECH RECOGNITION
- HANDS OFF PROGRAMMING
- HIGH QUALITY SPEECH REPRODUCTION

EARS Does It All!

INCREDIBLE!

Two Years In the Making. Speech Systems was formed to develop new and innovative speech products. After 2 years of intensive Research and Development, we have created a truly sophisticated speech recognition device. Recognition rates from 95% to 98% are typical. Until now, such a product was outside the price range of the personnel computer market, and even small businesses.

EARS is trained by your voice and capable of recognizing any word or phrase. Training EARS to your particular voice print takes seconds. Up to 64 voice prints may be loaded into memory. You may then save on tape or disk as many as you like so that your total vocabulary is virtually infinite.

Speech and Sound Recognition. EARS is really a sound recognition system, so it really doesn't matter whether you speak in English, Spanish, or French. In fact you do not have to speak at all, you can train EARS to understand sounds such as a musical note or a door slamming.

Hands Off Programming. Imagine writing your own BASIC programs without ever touching the keyboard. Everything that

you would normally do through a keyboard can now be done by just speaking.

Programming EARS Is Easy. LISTEN, MATCH and other commands have been added to BASIC so that programming EARS is a piece of cake! The single BASIC line: 10 LISTEN: MATCH will instruct EARS to listen to you and return the matching phrase.

It Talks. EARS is also capable of high quality speech. We mean REALLY high quality. The speech is a fixed vocabulary spoken by a professional announcer. Speech Systems is currently creating a library of thousands of high quality words and phrases. For a demonstration call (312) 879-6844, you won't believe your ears or our EARS.

DISK OWNERS. EARS will work with any disk system with either a MULTI-PAK or Y-CABLE. Our new Triple Y-CABLE was specifically developed for those wishing to add SUPER VOICE as a third device.

You Get Everything You Need. You get everything you need including a specially designed professional headset style noise

cancelling microphone. The manual is easy to use and understand. Several demonstration examples are included so you don't have to write your own programs unless you want to. EARS will work in any 32K or 64K Color Computer.

SUPER VOICE \$20 OFF

Imagine talking to your computer and it talking back to you. When you need an unlimited vocabulary, you can't beat SUPER VOICE. For a limited time, we will give you the SUPER VOICE for \$59.95 with your EARS purchase. Even if you already have another speech unit, here is your chance to buy the best and save \$20.

VOICE CONTROL

Applications for EARS are astounding. Here is our first of many listening programs to come. VOICE CONTROL is a program specifically designed to allow you to control any appliance in your house with your voice and our HOME COMMANDER (sold separately) or the Radio Shack Plug 'N' Power controller. For example, you can control your TV by saying "TV ON" or "TV OFF". . . \$24.95

EARS SPEECH LIBRARY™ *

HIGH INTELLIGIBILITY SPEECH IS HERE

NEW!

EARS is far more than a speech recognition system that enables your computer to listen to you. EARS and the EARS SPEECH LIBRARY bring "high quality" speech to the Color Computer. EARS doesn't sound like a "computer" or "robot" - it sounds like real people. It sounds natural since we use real people to create the speech.

FEMALE VOICES COMING SOON

HERE'S HOW IT'S DONE. Speech Systems has invested nearly \$10,000 in special audio digitizing and speech compression equipment. Each phrase is spoken by a human announcer digitized and then compressed so very little memory is used, typically less than 400 bytes per word. For those familiar with the Texas Instruments "SPEAK and SPELL" line of educational toys, you are aware of the results. For those wishing a demonstration, call (312) 879-6844.

FEMALE and CHILDREN'S VOICES COMING SOON. The technique we use is independent of the speaker. A male announcer is presently used, female and young people's voices coming soon.

THE LIBRARY: Each group of the library contains words designed for a particular application. The SCIENTIFIC LIBRARY contains phrases designed for process or home control. The EDUCATIONAL LIBRARY has those words to help ensure keeping a child's attention. Words may be put together to form sentences and easily produced from BASIC, so you can write your own programs with incredible speech quality.

NOW AREN'T YOU GLAD YOU OWN A COCO!

SYMPHONY 12™

A 12 VOICE POLYPHONIC STEREO MUSIC SYNTHESIZER

\$20 OFF

- 12 SIMULTANEOUS VOICES
- STEREO & MONO
- 4 NOISE GENERATORS
- SOUND EFFECTS
- PLAYS AND MAKES MUSICA 2 FILES

SUPER POLYPHONIC. Speech Systems is proud to bring you SYMPHONY 12, a polyphonic 12 voice hardware stereo music synthesizer for the Color Computer. SYMPHONY 12 also gives you 4 noise generators for percussion synthesis and sound effects. The PIANO KEYBOARD and MUSICA 2 (sold separately) turns your COCO into a real music machine with incredible flexibility.

STEREO and MONO. By connecting SYMPHONY 12 to your home stereo system, music is produced in stereo, 6 voices from each channel. However, you don't need to have a stereo system, all 12 voices also come out of your TV or monitor.

PICK AN INSTRUMENT. SYMPHONY 12 lets you choose from 10 preset instruments to synthesize chimes, violin, oboe, banjo, harpsichord, piano and more. You can even change instruments as the music plays.

SOUND EFFECTS. SYMPHONY 12 is a sophisticated sound generator. 12 voices and 4 noise generators give you incredible sound effect capability. We have included gun shot, explosion, racing car and more.

WATCH IT PLAY. As SYMPHONY 12 plays, a graphics display of a piano keyboard shows the notes playing. The display is entertaining as well as very educational.

PLAY MUSICA 2 FILES. Thousands of MUSICA 2 users will be excited to know SYMPHONY 12 plays all music developed using MUSICA 2 like you have never Seen or Heard it. In fact we highly recommend the use of MUSICA 2 as a composition development tool for SYMPHONY 12. Use MUSICA 2's superior graphics input capability and then play it through SYMPHONY 12. You can also take advantage of our MUSIC LIBRARY series (sold separately) to give you access to over 500 music pieces representing 20 hours of music.

ULTIMATE MUSIC DEVELOPMENT SYSTEM. SYMPHONY 12, MUSICA 2, and the PIANO KEYBOARD give you incredible flexibility. Imagine sitting down at the PIANO KEYBOARD, playing a piece and recording it as you play just as you would to a tape recorder. Save your masterpiece and then using MUSICA 2 edit it if you like and print it. If you have a MIDI synthesizer, you can take the music and play it using COCO MIDI (sold separately). Try that on an IBM, APPLE, or COMMODORE (good luck).

PIANO KEYBOARD. For those wishing to turn SYMPHONY 12 into a real polyphonic synthesizer we offer the extremely powerful and versatile PIANO KEYBOARD. The PIANO KEYBOARD was designed to be used in our entire music product line. You can use it with SYMPHONY 12, MUSICA 2, SYNTH 77 PLUS, and even our advanced speech synthesizer, SUPER VOICE.

When using MUSICA 2, you will be using 4 of the 12 voices available from SYMPHONY 12. To take advantage of the full 12 voice capability of SYMPHONY 12 you may use either the Color Computer's keyboard or the PIANO KEYBOARD.

Y-CABLE or MULTI-PAK. Tape users using both SYMPHONY 12 and the PIANO KEYBOARD will require a Y-CABLE. Disk users will require the Triple Y-Cable or MULTI-PAK.

SYMPHONY 12. You get over a dozen music and sound effect selections and complete documentation. Software is shipped on Tape or Disk.

SYMPHONY 12 \$79.95
 SYMPHONY 12 (with Keyboard order) . \$59.95

COCO MIDI SEQUENCER/EDITOR

Now your COCO can talk to your MIDI music synthesizer. Whether you have a Korg, Roland, Casio, Yamaha, or Moog, it doesn't matter as long as it's MIDI equipped. Choose from

our entry level MUSICA 2 COCO MIDI system that plays MUSICA files or our Professional COCO MIDI SYSTEM.

- Supports up to 16 tracks.
- 2,000 events per track.
- 4,000 events all tracks.
- May be used as a sequencer.
- User friendly graphics display.
- Menu driven.
- Metronome available.
- Real time recording.
- Save your masterpiece to disk.
- Tempo may be modified.
- Quantizing to 32nd or 64th.

- Playback any or all tracks at any tempo.
- Tracks may be deleted, copied, transposed or mixed.
- Filter out unwanted channel or type of MIDI data.
- Simple music editing.
- Requires 64K disk system.
- Transposition.

Comes complete with Rom Pak Hardware interface, cables, manual, and software. Disk users require Y-Cable or Multi-Pak \$149.95

Now under development, voicing patch libraries for the Casio CZ series of synthesizers.

61 NOTE KEYBOARD . \$129.95

MUSICA MIDI™

COCO MIDI takes any MUSICA 2 music file and plays it through your music synthesizer. We offer you over 800 tunes from our MUSIC LIBRARY series (sold separately) or create your own music using the best music composition program available, MUSICA 2 (sold separately).

COCO MIDI includes: documentation, plenty of music, and the cable to connect between the COCO and your synthesizer. \$39.95 Tape or Disk

MUSIC LIBRARY™

The MUSIC LIBRARY series consists of 8 volumes: 100 through 800 each sold separately. Each contains over 100 four voice music selections with a playing time of over 3 hours each. The disk version is shipped on 5 full disks. When coupled with the STEREO PAK, the music is reproduced with unsurpassed realism.

A JUKEBOX program is included to allow you to select specific songs or automatically play each. These songs are ready to go, you don't need MUSICA 2 or a knowledge of music. MUSICA 2 users may customize each song. Each volume sold separately, specify tape or disk. . . . \$29.95 Tape or Disk

**Entire Library
30 Hours of
Music!
40 disks
or
25 tapes**

SYNTH 77 PLUS

You control vibrato pattern, Bender rate, Volume level as well as Attack, Decay, Sustain, and Release (ADSR envelope). As you play you can record, then edit and save it to disk or tape. You can even fine tune it to match other instruments.

The PIANO KEYBOARD is not necessary, you can use your COCO keyboard but the PIANO KEYBOARD makes your COCO a real music instrument. \$29.95 Disk only

STEREO PAK™

Plug this gem into your computer, connect to your home stereo system and sit back and enjoy music realism. The STEREO PAK is a hardware music synthesizer that plays our MUSIC LIBRARY series and MUSICA 2 music in stereo. Because it was designed specifically with music reproduction in mind, the sound is superb. The highs are crisp and clear while the bass notes will rattle your walls. Internally we use two high performance 8 bit digital to analog converters to assure fidelity.

The STEREO PAK is all hardware. It is intended as an enhancement for MUSICA 2 and our MUSIC LIBRARY series. Disk users will require our Y-CABLE or a MULTI-PAK. \$39.95

NEW! 61 NOTE PIANO KEYBOARD

**ATTENTION
CZ-101
OWNERS**

The PIANO KEYBOARD and SYMPHONY 12 turns the COCO into a 12 voice music synthesizer. When used with MUSICA 2, the PIANO KEYBOARD provides a user-friendly means of inputting music. For those wishing control over Vibrato, Volume, Bender, as well as Attach, Decay, Sustain, and Release (ADSR), we offer SYNTH 77 PLUS, a monophonic synthesizer. SUPER VOICE, COCO's most advanced speech

Our new 61 note (5 octave) full size keyboard is perfect for the beginner or professional. To give the PIANO KEYBOARD the most flexibility, we give you a choice of 5 different products to use: SYMPHONY 12, MUSICA 2, SYNTH 77 PLUS, SUPER VOICE, and the CZ-101 CONNECTION.

synthesizer, doubles as a music synthesizer when used with the PIANO KEYBOARD. For those with the Casio CZ-101 music synthesizer, the CZ-101 CONNECTION allows you to connect the "full size" PIANO KEYBOARD to give you standard keyboard.

61 NOTE PIANO KEYBOARD \$129.95
CZ-101 CONNECTION \$ 29.95

MUSICA 2 \$29.95

Tape or Disk

- When in stereo mode, music is played through our STEREO PAK (purchased separately).
- Loudness of each voice may be individually specified.
- Memory available is constantly displayed.
- Voice waveshapes may be exchanged between voices at any point.
- Tempo may be specified and may even be altered as the music plays.
- Flats and sharps supported.
- Billions of timbre combinations.
- High resolution graphic display, looks just like sheet music.
- MUSICA 2 is 100% software, no need for hardware unless you want music produced in STEREO. In that case, the STEREO PAK may be purchased separately. It's a must for the audiophile!
- Repeat bars allow repeating of music without re-inserting music a second or third time.
- 30 page manual describes all.
- Requires 64K.

• Output music to your printer (Gemini 10X, Epson, R.S. printers).

- Allows you to specify key signature.
- Voice timbre (waveshape) may be altered by specifying harmonic content just like stops on an organ.
- During editing, voice being inserted is displayed.
- Each measure is numbered for easy reading of music.
- Measure bars aid in reading and developing music.
- Each voice may be visually highlighted for easy identification.
- 4 Voices produced simultaneously.
- Input notes from Coco keyboard, joystick, or Piano Keyboard.

- Play music from your own BASIC program.
- Block copy music for easy music development.
- 100% machine language so it is lightning fast.
- Vibrato effect easily produced.
- With STEREO PAK, voices may be switched between left and right speakers as music plays.
- Durations include: whole, half, quarter, eighth, sixteenth, thirty-second, sixty-fourth, and triplet.

MUSIC THEORY

COURSE 1

This course covers all the basics from music notation & duration, key signatures, tempo, to an introduction of the keyboard. This is an entry level course recommended as a prerequisite for Course 2. 32K Disk only \$49.95

COURSE 2

A more advanced course that deals with: Major and Harmonic Minor scales, interval spelling, Triad (Chord) theory, Inversions, Dominant 7th chords, and ear training of the intervals. 32K Disk only . \$49.95

'SUPER VOICE' T.M.

**COCO'S MOST ADVANCED
SPEECH SYNTHESIZER.**

**IT TALKS, SINGS AND
MORE.**

only . . . \$79.95

WITH EARS PURCHASE

only . . . \$59.95

SUPER VOICE is no ordinary speech synthesizer. It uses Silicon Systems, Inc. SSI-263, the most advanced speech/sound chip available. SUPER VOICE is not only capable of highly intelligible speech, sound effects, and singing over a 6 octave range, but now we have turned SUPER VOICE into a monophonic Super Music Synthesizer with our PIANO KEYBOARD.

IT TALKS. A free TRANSLATOR text-to-speech program makes writing your own talking program as easy as SAYING "HELLO."

SUPER VOICE works in any 32K or 64K computer. A disk system requires a Y-Cable or Multi-Pak.

**Here are the facts;
the decision is yours.**

Mix the PLAY command with Sound Processor and you'll have . . .

CoCo Instant Music

By Dan Tandberg, M.D.

The PLAY command in Extended Color BASIC is a useful and powerful command for creating sound effects and music on the CoCo, but has always seemed difficult to use in actual practice. The string arguments for this command must be written in BASIC and then laboriously altered using the EDIT command. This trial-and-error procedure can be cumbersome. To overcome this and other problems, I have written a specialized text editor, *Sound Processor*, to facilitate creating and using strings for the PLAY command.

Using the Program

When running the program shown in Listing 1, the screen briefly clears and then shows the main display and the first of four help screens. Pressing 'H' at any time brings up the next help screen. These screens contain all the symbols and commands in the *Sound Processor* program.

The display area on the top half of the screen contains the page number and

the length of the string on that page. To create a sound, type in the symbols wanted and they are displayed. For example, try:

```
T200;04;L40;V22;1;2;3;4;5;6;
```

To see how this sounds, press the space bar and this string will be executed using the PLAY command. (Review the section on the PLAY command in the Extended BASIC manual if this seems confusing.)

Small changes can easily be made in this string using the various features of *Sound Processor*. You can hear the changes quickly and conveniently before going on. In this way, sounds and music can be created and edited as quickly and easily as text can be manipulated on a word processor.

Program Features

All of the features and functions of *Sound Processor* are displayed on the four help screens for easy reference during use. Press 'H' until the first help screen labeled SYMBOLS appears. This is a list of all the characters that can be entered into a string argument for the PLAY command.

Note that the program allows the use of either letters (A through G) or numbers (1 through 12) for notes. In addition, the plus (or '#') and minus signs are used for sharps and flats. The

length, tempo, pause, octave and volume parameters are listed with their allowable ranges. The other symbols, ';', '<', '>' and '.', are also used in the standard fashion. Anytime you press one of these valid characters, it is added to the string at the cursor position.

Press 'H' again to see the second help screen labeled CURSOR. This shows all of the possible ways the cursor can be manipulated. The right- and left-arrow keys move the cursor one space forward or backward and, if shifted, move it 10 spaces in the appropriate direction. The up-arrow key moves the cursor to the very beginning of the string (home) while the down-arrow key moves it to the end of the page. The CLEAR key deletes the character just in front of the cursor.

Sound Processor can edit and test up to eight different strings at once, with each string displayed on a separate "page." The shifted up- and down-arrow keys are used to move forward and backward. (When first running the program, all eight pages are, of course, empty.)

The third help screen, labeled PLAY ROUTINES, shows the different ways the strings can be executed. The space bar, as mentioned, plays one repetition of the string on the page displayed. Pressing ENTER plays the displayed

Dan Tandberg lives in Albuquerque where he teaches emergency medicine at the University of New Mexico.

string several times in a row. Initially, the sound is played three times, but the repeat counter can be set to any number desired using the '\$' function. Finally, pressing the '@' key plays all the pages in rapid succession, beginning with page one and ending with page eight. These commands are especially helpful when writing music. Small sections can be developed separately and each tested using the space bar. The whole piece can then be played with '@'.

The last help screen contains the TRANSFER ROUTINES. These may seem a bit complicated, but are useful for moving strings or parts of strings around between pages. The '!' key extends a string by taking all the characters from the cursor to the end of the string and adding this substring onto the end of the string. This is especially helpful when you need to write a string with many repeated elements.

To see how this works, go to page two (use SHIFT-down arrow) and type in:

```
T4;L2;D4;V25;EEFGGFEDCCDE;
L2.;E;LB.;D;L2;D;P2;
```

Now play it using the space bar. Move the cursor to the beginning of the page (up arrow). Press the '!' key and watch what happens. To complete the phrase, change the last three notes to 'D', 'C' and 'C'. You can use this extend function repeatedly until the string becomes too long. (Each page is limited to 240 characters).

The insert command (close parenthesis) actually inserts a blank page and moves each page above it up by one. Any data in page eight is lost, so be

careful. The delete command (open parenthesis) simply deletes a page and moves everything above it downward.

Pressing the '%' key allows you to exchange pages. For example, pages one and two can be swapped. The '&' key adds the page specified to the displayed page. The '=' key copies the displayed page to the page specified. You can also replicate a page with the apostrophe (') key. This makes a copy of the displayed page, inserts it into the next higher page and moves everything above upward. As with the insert command, the highest page is lost. Finally, pressing SHIFT and CLEAR together erases the entire displayed page, leaving all others intact.

Notice the message at the bottom of each help screen, IF ERROR OR BREAK USE GOTO 10. Whenever you make a syntax mistake in a string and try to play it, you'll get an error message (SN). If the program is run again, it erases all the strings already created. To avoid this, simply enter GOTO 10 and the program returns to where you were. Fix the error in the string and go on.

Input/Output Routines

Press 'I' at any time to bring up the I/O menu. This is used for saving or loading strings created to or from tape. Strings can be sent to the line printer as well by using option seven.

Perhaps the most useful I/O routines are three and four. These save either the displayed page or all eight pages to tape, but as DATA statements with line numbers. These files can be reloaded at

a later time and used in your own BASIC programs without retyping any of the data.

Modifications

Sound Processor can easily be modified to hold more pages of strings. Simply increase the value of 'Z' in Line 560 to suit your own needs. Also increase the amount of string space cleared in Line 20. Lines 650 and 660 may also be altered to produce DATA statements with different line numbers, if needed.

The *Sound Processor* can also be modified for disk operation by simply changing the device number in Line 670 and making minor changes in a few other lines. Substituting the lines shown in Listing 2 demonstrates one method of doing this.

I've found that using the *Sound Processor* markedly improves the utility of the PLAY command. Having all the information continuously available from the help screens is a real plus. Sound effects or music can be developed in a matter of minutes rather than hours. When a set of strings is finished, saving them as DATA lines using option four from the I/O menu produces a file that can be incorporated into one of your own BASIC programs. I would enjoy hearing about any modifications or unique applications.

(Questions about this program can be directed to Dr. Tandberg at 4130 Coe Drive NE, Albuquerque, NM 87110, phone 505-256-9457. Please enclose an SASE when writing.) □

CoCo Dares You to Name That Tune

By Marge Rutter

We've all watched those people on TV winning the big bucks just for naming a couple of tunes. And haven't you, at least once, thought to yourself, "I can do that"? But could you? Under all that pressure? Are you really quicker than the other guy?

Here's your chance to see! *Name That Song* challenges two players with all that pressure in the comfort of your own home.

Listing 1 loads 48 songs, with their titles and clues about their identity, into disk files. The titles are camouflaged so typing in the program won't reveal any answers. Most songs are not listed in their entirety but enough is there to recognize the tune. Type in and run Listing 1. When it is finished, the files are loaded for future use. Listing 1 doesn't have to be run again.

Listing 2 is the game. Here, two players, joysticks in hand, can battle it out against each other. Keep in mind that the computer is doing many different things between each note, so the joysticks are not very sensitive. A quick press does not necessarily register. The key is to push the firebutton and hold it down until the song stops. If the joysticks don't have any effect on the song, you

Marge Rutter is currently studying to become a computer science teacher and holds a bachelor's degree in education/foreign languages. She lives in Phoenixville, Pennsylvania with her husband, two children and Color Computer.

need to change lines 5110, 5120 and 5135. The numbers 126 and 125 should be substituted for the numbers 254 and 253, respectively. Apparently, some CoCos produce one set of these numbers when the firebutton is pressed and others produce the other set.

Each song plays for only 30 seconds before the computer goes on to another song. If you want more time, increase the timer in Line 5125.

When the song is stopped, the computer allows time for the player to announce the answer verbally, before giving the correct answer. The players decide whether the answer will be accepted or not.

If the players decide to set a time limit and one of them takes too long, simply mark that answer as wrong, so there will be no point given.

Finally, since the songs are selected randomly some of them could easily be played two or more times during the course of the game.

However, flags are set on songs that have been played and each new song is checked to make sure it hasn't been played before. Occasionally, the program appears to lock up when it's trying to find a new song. If this happens, relax. Think of it as a commercial and it will be right back.

The game is divided into five parts:

Melody Roulette — Melody Roulette starts out with a spinning wheel to determine how much money you are playing for. The best out of five songs wins this part. A tiebreaker is played if necessary.

Tune Topics — The 48 songs are divided into six categories. One of these categories is randomly chosen and the five songs are selected from that category. Once again, the best out of five wins and tiebreakers are played in the event of a tie.

This is the one area in which the program could lock up permanently. In the unlikely event that too many songs from the chosen category were already played during Melody Roulette (leaving less than five songs to choose from) or if too many tiebreakers empty out the category, the program goes into an endless loop, searching for a song in the category when one doesn't exist. Just press BREAK and start over.

Bid-a-Note — On TV, if the player who bids can't name the song correctly, the other player gets the point. This has never seemed fair to me. So in my version of the game, I've made it impossible to win Bid-a-Note by default. If you don't bid, you don't win.

There is nothing in the program to prevent a player from bidding higher than the previous bid. Similarly, there is nothing to stop the first player from passing on the first bid. If the first player does pass the first time around, the second player gets the bid for 15 notes. Again, the best out of five wins.

Tiebreaker — Melody Roulette and Tune Topics are each worth 10 game points. Bid-a-Note is worth 20. So, it is possible to have a tie at the end of the first three parts. A simple, sudden death tiebreaker decides who goes on to the Golden Medley.

Golden Medley — Now one of the players is on his own and the pressure is really on. He has 30 seconds to name five songs. The timer runs only while the music is playing. Press the firebutton (using the right joystick) to stop the timer for the answer. Or, if not sure, pass and come back to it afterwards. Remember, one wrong answer ends the game! If you need reminders on how to play, there are optional directions before each section.

(Questions about this program may be directed to the author at 48 Kenalcon Drive, Phoenixville, PA 19460, phone 215-933-8612. Please enclose an SASE when writing.)

The art of entertainment

Pinball Factory by Kary McFadden

The video game comes full circle in this glorious tribute to the original. Classic pinball springs to life as never before, with fresh new angles that only the computer can offer. Crisp graphics, sound, and fast, smooth action give this machine-language arcade game a realistic, responsive feel you'll hardly believe. There are even "tilt" buttons that let you "bump" the machine!

In addition to playing a great game of pinball, you can enjoy hours of creative pleasure as you design, build, and edit your own screens. Save and load your favorite creations. The joystick-controlled cursor makes it all easy.

Change the board: build with bumpers, tabs, and a multitude of solid obstacles to form any configuration imaginable.

Change the face: draw your own title board with lines, rays, and shape patterns. Add text in three different colors, and two different sizes.

Change the rules: alter the gravity, bounce, and scoring!

64K Color Computer required. \$34.95

Speed Racer by Steven Hirsch

The checkered flag drops as your pulse rises in this lively new arcade game. The road twists to the horizon on the 3-D panorama that sets the stage for the most exciting race the CoCo has ever seen!

Vie for time as you speed through the curves at incredible speeds. Step through the gears to stay ahead of the pack, but step lively since some will stop at nothing to see the end of the race, or the end of you!

Four challenging raceways, complete with obstacles and colorful 3-D scenery, put your skills to the test in this Pole Position™ type game.

32K Color Computer required. \$34.95

Rommel 3-D by Kary McFadden

You clutch the tank controls, searching for any sign of the enemy. Suddenly a blip appears on radar! Frantically, you move your tank into position. At last you spot the elusive enemy tank! Facing it, you race to lock sights and fire before he does!

Enter the ultimate battle-zone in this exciting 3-D tank combat game. Strategy, speed, and your tank's cannon are your only hope as you wind through a three-dimensional course inhabited by impenetrable barriers and enemy tanks.

Dazzling graphics and lifelike sound take you a step beyond the ordinary in this fast, machine-language arcade game. Enter the next dimension, ROMMEL'S troops are waiting for you!

32K Color Computer required. \$29.95

AT LAST!!!

ARE YOU TIRED OF PLUGGING
AND UNPLUGGING PERIPHERALS?

WOULD YOU RATHER **NOT** SPEND
\$50.00 ON A SWITCHING BOX?

PLAN-NET FORMS now offers complete
plans (assembly instructions, diagrams,
and parts lists by vendor) for RS-232 port
switching boxes.

All parts are available almost everywhere
locally at a small fraction of the cost of
most commercially offered boxes.

Only \$5.00 PER SET!!!

Wilkes-Barre, PA 18702-1061

NEW

OWL-WARE WINCHESTER BASIC

**ANNOUNCING... the Development of a Major Breakthrough in
HARD DRIVE SYSTEMS for the COLOR COMPUTER!!!**

Several months ago OWL-WARE introduced the Finest OS9 Hard Drive System for the Color Computer. Now we are about to introduce the only RSDOS Interface System worthy of our computer, OWL-WARE Winchester Basic. For the first time you have available a true Winchester System, although there are 10 directories made available to BASIC, the only limit to size of any file is the size of your drive. On a 10 meg drive you could have a 8 meg file on directory 5 and a 1 meg file on directory 8 and small files everywhere. You turn the computer on and you can immediately access your drive from BASIC or any language using commands you already know. You do not have to know or use OS9 to use OWL-WARE WINCHESTER BASIC, but if you do, all files saved from RSDOS are available to OS9. All files generated from OS9 can be made available to RSDOS by copying to the WINCHESTER BASIC directories. There are no partitions to wall you into, only one operating system, but nothing forces you to use an operating system you don't like.

Call for further details and availability on this breakthrough product!!!

Teaching Language Idioms

By Steve Blyn
Rainbow Contributing Editor

This month's program is a playful one designed mainly for those in the middle grades. It's good for all of us to occasionally take a break from more serious educational programs. This program points out idioms, one of the peculiarities of our language. We are going to have fun with some idioms that refer to bodily figures of speech. We have included such expressions as "crossed fingers," "toe the mark" and "nose to the grindstone."

If your students are motivated to discover the derivation of these idioms, then we have accomplished even more than we set out to do. We'll demonstrate how to add to the list to make it more comprehensive. Our main purpose, though, is enjoyment. We intend to show students that the computer can easily produce fun and educational programs.

While testing the program with middle school students, we found that a great source of amusement was the

Steve Blyn teaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.

errors made — some deliberately. Even after the students learned the idioms, they had a lot of fun entering answers other than the correct ones. "With tongue in cheek" became "with toe in cheek." "Feet of clay" became "nose of clay" and so forth. This experiment inspired a jovial atmosphere — laughing girls and boys, chuckling teachers, animated discussion, thinking out loud — it was delightful.

Lines 40 and 50 set the dimensions at 15 questions and answers. 'N' was set at 15 simply because we ran out of body-part idioms. If you can think of others, add more DATA lines and adjust the number on Line 40 accordingly. Lines 60-80 read these questions and answers from the DATA lines.

Line 100 chooses a random question and answer (variable 'R'). The program gives six answers from which to choose. The variable 'J' in Line 110 subtracts a number between one and five from the correct answer. The six answers printed start at the true number (R) less 'J' and include five more choices. The true answer is ensured a place among the six listed. Lines 170-190 print out the choices.

The only problem is the 'J' variable may fall below number one, or the 'J'-plus-five amount may exceed the 15

listed answers. If these situations occur, we encounter several BS errors. This indicates there is no such string. To prevent these problems, we set further restrictions on the 'J' values in lines 120 and 130.

Line 200 asks the question and Line 210 waits for the answer. Lines 220 and 230 evaluate whether the answer is correct. Line 240 prints the correct answer if the student gives an incorrect response. Lines 250-270 wait for the user to press the ENTER key to continue. If 'E' is pressed, the program ends.

We assumed that players would soon master this program completely since there are only 15 questions. Therefore, we did not include a scorecard. If it is needed, you could display the score at the bottom of the screen at all times. We included an extra variable (CR) on Line 220 to count the correct answers.

We hope your child or student enjoys learning these idioms. Perhaps you or they will be creative and produce a similar program with other idioms. Colors would be a good possibility, using questions such as "-- as a beet" or "-- with envy" or "feeling sad and --." We here at Computer Island always enjoy hearing from readers about their experiences with the programs in this column. □

Robots: Their Place in Education

By Michael Plog, Ph.D.
Rainbow Contributing Editor

A young woman was spending a rainy summer vacation with a group of artistic people, including some major literary "names." The group, restricted to indoor activities, told eerie stories for amusement. One of the venerable members of the group suggested that everyone write a ghost story. The young woman, named Mary Godwin, wrote a horror story based on a dream she had a few nights after the suggestion. She later married one of the members of that group, Percy Bysshe Shelley. Whether or not you have heard of Percy or Mary, you certainly know Mary's horror story, *Frankenstein* (or, the *Modern Prometheus*).

Mary Shelley's book became a prototype for horror stories, particularly those concerning robots. Mary had never heard the term "robot." Her book was written in 1818 and the word robot

came into being in a 1920 play by Karel Capek titled *R.U.R.* The word robot comes from the Czech word "robotnik," for worker or serf. Capek wrote about people creating mechanical beings to do work for humans.

Science fiction writer Isaac Asimov has been called "the father of robotics" because of the many stories he has written about the mechanical creatures. And for another important reason — Asimov's robots are not creatures who turn on their creators (like Frankenstein), but are manufactured by engineers to fit exacting specifications. The most important of these specifications is that robots may not harm human beings. Their circuits simply do not allow such an action. Thus, modern robot stories eliminate the fear (the Frankenstein complex) people have about mechanical intelligence.

Modern robots are industrial automations that perform a series of steps to complete a task. Robots are not yet made in the general shape of humans and have extremely limited intelligence. My daily life seldom brings me in touch with industrial robots, but I have a few contacts with other types. For example, I interact with a robot when making

long distance telephone calls. I simply dial an 800 number, enter my access number, then dial the number I want to reach. This all takes place with the aid of robots.

Besides industrial robots, there are robot "toys" for the home. Some of these machines are built in a similar fashion to the *Star Wars* robots and can perform a variety of tasks. The home robots, as well as industrial robots, need to be programmed. Indeed, a robot has a computer "brain" to allow human programming.

Since robots use computers, and may be considered as a subcomponent of the field of computer science, it is only natural that robots function in schools as well as factories and homes. Generally, they are used in computer classes and electronics courses. Students learn about robots by building the mechanical workers and programming them to perform a task.

When computers first appeared in schools, educational leaders wondered and debated about their use. In the beginning, they were used in classrooms to teach *about* computers. More recently, myriad uses have been made of computers in schools. Students use

Michael Plog received his doctorate degree from the University of Illinois. He has taught social studies in high school, worked in a central office of a school district and currently is employed at the Illinois State Board of Education.

them for a multitude of purposes other than learning BASIC programming. In fact, students can be declared computer literate without ever knowing about binary addition and subtraction. Computers are being used more and more as learning tools in classrooms. Students use word processing packages to write reports, database programs are used to examine information from science experiments, and the list goes on.

The educational community has spent over a decade debating the computer's role in elementary and secondary education. The debate continues even today, although most educational professionals consider the computer to be an additional (and very important) tool for students in the classroom, with a wide variety of purposes. There is no reason to expect the debate over the educational role of robots to be any less active than the debate over computer uses. What are appropriate activities for robots in the school? Should students simply learn about them, then consider the utility of robotics finished? Should robots be used as another tool for students, in the same way computers are an educational tool?

Despite similarities, robots and computers are not the same thing. Computers tend to be more oriented toward mental activities. Robots, on the other hand, tend to interact with the physical environment in a much more direct way than computers. For example, consider students working with a word processing package. The actual printing of a page is a physical activity, but is much less important than the mental activity of the student creating the document.

When you sit down in front of the Color Computer to write a program, most of the activity is the relationship between your mind and the screen. Not so with a robot. The observable activity of a robot performing a task deals with physical objects. Screws are tightened, materials are moved from one place to another, objects are assembled, and so on. The programming of a robot may involve the same mental activity as the programming of the Color Computer, but the end result differs.

Another feature of modern robots is their level of intelligence is not (and may never be) that which exists in fiction. A robot teacher may exist in science fiction stories, but will not be a reality

in a classroom during my lifetime. A robot message carrier, however, is a tangible reality.

With current technology, we can reasonably expect robots to perform any task a well-trained pet can perform. Before the end of this century, we may see a robot collecting lunch counts from teachers and delivering this information to the school cafeteria. It is not unreasonable to expect a robot to sweep the gym floor between classes, or to inform the administration when a child wanders away from the playground. But, I seriously doubt a robot will decide the grade a student should receive in math class, or referee an intramural basketball game.

The future of educational robots will probably be more interesting than the present fiction. The current reality of computers in education is much more than past science fiction writers ever dreamed. I would enjoy hearing about the uses of robots in your school. If there is such a creature (even if it deserves the nickname "Frankenstein") in your school, please let me know of your experiences. My address is 829 Evergreen, Chatham, IL 62629. ☺

Two-Liner Contest Winner . . .

Here's a great little ski game. Use your right joystick to maneuver the player through as many of the 20 gates as possible. This would also be a good candidate for the speed-up POKE once you become experienced.

The listing:

(For this winning two-liner contest entry, the author has been sent copies of both *The Second Rainbow Book of Simulations* and its companion *The Second Rainbow Simulations Tape*.)

J & R ELECTRONICS

Complete 256K and 512K Memory Expansion Systems
(Hardware, Software and documentation included)
User friendly software, programmer not required

Easy, Solderless Installation

★ We have eliminated the necessity to piggyback for 512K versions! ★

RAMDISK — Fast disk I/O, 35/40 track (two RAM drives with 512K)

PCOPYMOR — More than 30 PMODE 4 screens in memory at once! PCOPY command modified to accept PCOPY 1 to 128. More than 70 PMODE 4 screens and PCOPY 1 to 302 with 512K versions (or 30 PMODE 4 screens with one RAMDISK).

SPOOLER — HUGE printer buffer for offline storage inside your computer while the printer's busy. Customizable from 30K to over 200K (500K with 512K versions). Buffer can be turned off/on copied using simple PRINT CHR\$(8) commands.

PAGER — Load multiple BASIC programs into memory at once! 8 (16 with 512K versions) pages of 32K with a PAGE command added to BASIC. Page PEEKs and POKEs access data in other Pages. 4 (8 with 512K versions) pages of 64K in 64K modes. Fully commented source code provided for this one!

Plus—Various utilities and demo's. Detailed documentation, programs, system memory usage, and a lot more included.

OS9 Ramdisk — Fast OS-9 disk I/O! 35/40 track single sided or 40 track double sided (512K) Ramdisk under OS9! GOOD'S OS9 Ramdisk (Rainbow Feb '86) with fully commented source code and install files added by J&R. (Requires OS9 operating system)

ALL software above is configurable for 256K/512K operation.

Software shipped on disk, add \$10.00 for software on tape.

(OS9 RAMDISK not available on tape).

ALL boards below are 256K/512K capable, software & documentation included.

New SAM (74LS785) not included (use your 74LS783), 74LS785 recommended for 2.0 MHz operation.

Part number	Price	Description
#1001	\$39.95	Banker II bare board (with long pin socket, does not include memory Expansion Board)
#1002	\$69.95	Banker II bare board + parts (does not include Memory Expansion Board)
#1004	\$129.95	Banker II (256K, upgradable to 512K) assembled & tested with memory
#1005	\$169.95	Banker II (512K) assembled & tested with memory
#1006	\$15.00	Memory Expansion Board
#1007	\$29.95	Memory Expansion Board + parts
#9000	\$89.95	Down Under Controller. Ram Pack size controller with 800S Gold plated, high reliability edge connectors, jumpers for 24/28 pin ROM. Compatible with COCO I and COCO II.
#9001	\$35.00	BDOS (Enhanced DOS on 27128 EPROM)
#9002	\$5.00	64K switch
#9003	\$19.95	Banker II software pack
#9004	\$24.95	New SAM 74LS785 (required only for 2.0 MHz operation)

To place an order, write to J&R Electronics, P.O. Box 2572, Columbia, MD 21045, OR call (301) 987-9067 or (301) 788-0861.

HOURS: Weekdays 7 p.m.-9 p.m.; Sat. Noon-5 p.m. EASTERN TIME.

Add \$4.00 shipping & handling (FOREIGN ORDERS \$7.00), COD charge \$3.00. Maryland residents add 5% state tax.

CHECKS, MONEY ORDERS OR COD's only please (personal check — 2 weeks for clearance). IMMEDIATE DELIVERY. Give COCO Radio Shack model # (i.e. 26-3136). Disk or Tape when ordering.

QUANTITY DISCOUNT AVAILABLE. For information on shipping or previously placed orders call (301) 788-0861. COCO II 26-31XX owners call (soldering experience may be required).

The Educational Answers

SCIENCE GAME

32K EB - disk only/\$29.95

Over 600 questions in 9 categories. Makes learning science facts fun. Game format, 1 or 2 players, teams. Grade 8 and up.

STREET MAP GAME

32K - \$19.95 tape/\$24.95 disk

Hi-res. screen and graphics portray a typical section of a street map. This one shows people's homes, the school, the park, etc. Questions on how to get from one place to another are asked and the footsteps are shown.

CHEMISTRY TUTOR

32K - disk only - \$29.95

A hi-res. 4 part program that drills high school students in Elements, Symbols, Naming Compounds, Common Ions, and Balancing Equations. Correct answer given after 2 incorrect responses. A valuable tool for studying chemistry.

5 LIGHTPEN PROGRAMS

32K EB - \$44.95

Five menu driven educational programs designed for children in grade 1 and 2, and special educational students. Basic addition, basic multiplication, shape series matching, number series matching and word rhyming are included. All on a HI-RES screen, with graphics. User need only to use the light pen to operate the programs. (LIGHT PEN INCLUDED)

VERBAL MATH PROBLEMS

PIZZA GAME

32K EB - tape/\$19.95

Learn to locate coordinates on a grid. HI-RES text and graphics.

AREA & PERIMETER

32K EB - tape/\$19.95

Triangles, rectangles, and circles are covered in this HI-RES text and graphics program.

SALES & BARGAINS

32K EB - tape/\$19.95

Learn to find the discounted price. HI-RES text and beautiful graphics.

DISTANCE PROBLEMS

32K EB - tape/\$19.95

Moving graphics and text combines on a HI-RES screen. Rate x Time = Distance in all its forms.

STREET MAP GAME 32K E.B.
\$19.95 Tape \$24.95 Disk

Hi - res screen and graphics portray a typical section of a street map. This one shows people's homes, the school, the park, the post office, etc. Questions are asked on how to get from one place to another and the footsteps are shown after response. A fun way to improve map skills.

OPENING A BANK ACCOUNT

32K - Disk Only - \$24.95

A set of programs designed to introduce and provide practice in the skills of filling out bank applications, deposit and withdrawal slips, and computing bank account balances. Loaded with graphic presentations. Grades 3-6.

DOLLARS & SENSE

16K-Ext. - \$14.95 tape/\$19.95 disk

Learn to make purchases. Graphic displays of items kids love. Player buys items using dollars and coins to practice using money correctly. Solutions given.

McCOCO'S MENU

16K-Ext. - \$19.95 tape/\$24.95 disk

America's favorite pastime-going out to eat. Learn to buy and add up your purchases from a typical fast food restaurant menu. Gain skill in using money. Different prices each time.

COCO WHEEL OF FORTUNE

32K - \$19.95 tape/\$24.95 disk

Hi-res. graphics and screen in this version of the popular TV show. 1-6 players. Spin the wheel for points and guess a letter to solve one of the 200 puzzles. Have fun while strengthening LA skills.

COLORGRADE

32K - disk only - \$29.95

An easy to use classroom grading program. Keeps grades for up to 6 classes of up to 40 students per class. Many options including weighted averages and hard copy to printer.

(718) 948-2748

Dept. R 227 Hampton Green, Staten Island, N.Y. 10312

Send for catalog with complete descriptions.

Please add \$1.00 per order for postage. N.Y. residents, please add proper tax. FREE set of BINARY DICE, including full directions, with orders of 2 or more items.

Dealer Inquiries Invited.

TRS-80 Color Computer

All Payments in U.S. Funds.

An easy way to determine EPROM erasure times

Now You See It, Now You Don't!

By Marty Goodman

According to reports by the makers of CoCo EPROM programmers, over 2,000 Color Computer owners have EPROM programmers. These programmers are an essential tool for those wanting to customize their ROM software or wanting to make alternate character sets of their lower kits or 80-column cards.

All owners of EPROM programming devices will want to have an EPROM eraser. The eraser is simply a box with an ultraviolet light that has a particular peak wavelength output (2,537 Angstrom units). When this light is shined on an EPROM, it erases what has been programmed into it. But, how long does this process take? There is often much confusion about this and I have a simple answer.

Get several of the EPROMs you

usually work with. Program them with all zeros. This sets every bit inside the EPROM (an erased EPROM is set at all ones). Be sure to clean the quartz windows on used EPROMs with lighter fluid because particles of grease and adhesive can impede erasure.

Put the programmed EPROMs into the eraser and expose them to the UV light for one minute. Take them out and check to see if they are erased. If they are, the eraser is too strong. Try to increase the distance between the EPROM and the light bulb and try again.

Continue the process of putting the EPROMs into the eraser and checking every 30 seconds. This way, you can determine the apparent time of erasure. This time should be between one and one-half and seven minutes. To determine the proper erasure time, multiply this apparent time by five. For example, if the chip is not erased at the one and one-half minute check, but is at two minutes, the time for that brand and type of chip in that particular erasure is 10 minutes.

There may be significant variations between different brands and types of chips. My tests indicate most 27 series EPROMs behave about the same, but the Motorola 6876X series appear to take somewhat more time to erase.

Note that this technique requires nothing other than a clock, an EPROM burner and the EPROM eraser. It is far simpler, and more accurate, than any attempt to calculate the theoretical time needed for erasure using the manufacturer's specification for "nominal erasing energy" reported in watt-sec/cm-cm and the rated energy output of your UV bulb.

My source for this information is an old article on erasing 1702-type EPROMs. Note it is not proper to merely expose an EPROM to UV for the minimum time needed for it to appear erased when read in the EPROM programmer. The cells in the EPROM that hold the information will not be fully discharged and may later cause it to behave erratically.

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator on CompuServe and Delphi.

RAINBOW Info

How To Read Rainbow

Please note that all the BASIC program listings in THE RAINBOW are formatted for a 32-character screen — so they show up just as they do on your CoCo screen. One easy way to check on the accuracy of your typing is to compare what character “goes under” what. If the characters match — and your line endings come out the same — you have a pretty good way of knowing that your typing is accurate.

We also have “key boxes” to show you the *minimum* system a program needs. But, *do* read the text before you start typing.

Finally, the little cassette symbol on the table of contents and at the beginning of articles indicates that the program is available through our RAINBOW ON TAPE service. An order form for this service is on the insert card bound in the magazine.

What's A CoCo?

CoCo is an affectionate name that was first given to the Tandy Color Computer by its many fans, users and owners.

However, when we use the term CoCo, we refer to both the Tandy Color Computer and the TDP System-100 Computer. It is easier than using both of the “given” names throughout THE RAINBOW.

In most cases, when a specific computer is mentioned, the application is for that specific computer. However, since the TDP System-100 and Tandy Color are, for all purposes, the same computer in a different case, these terms are almost always interchangeable.

The Rainbow Check Plus

The small box accompanying a program listing in THE RAINBOW is a “check sum” system, which is designed to help you type in programs accurately.

Rainbow Check PLUS counts the number and values of characters you type in. You can then compare the number you get to those printed in THE RAINBOW. On longer programs, some benchmark lines are given. When you reach the end of one of those lines with your typing, simply check to see if the numbers match.

To use *Rainbow Check PLUS*, type in the program and *SAVE* it for later use, then type in the command *RUN* and press *ENTER*. Once the program has run, type *NEW* and press *ENTER* to remove it from the area where the program you're typing in will go.

Now, while keying in a listing from THE RAINBOW, whenever you press the down-arrow key, your CoCo gives the check sum based on the length and content of the program in memory. This is to check against the numbers printed in THE RAINBOW. If your number is different, check the listing carefully to be sure you typed in the correct BASIC program code. For more details on this helpful utility, refer to H. Allen Curtis' article on Page 21 of the February 1984 RAINBOW.

Since *Rainbow Check PLUS* counts spaces and punctuation, be sure to type in the listing exactly the way it's given in the magazine.

Using Machine Language

Machine language programs are one of the features of THE RAINBOW. There are a number of ways to “get” these programs into memory so you can operate them.

The easiest way is by using an editor/ assembler, a program you can purchase from a number of sources.

An editor/assembler allows you to enter mnemonics into the CoCo and then have the editor/assembler assemble them into specific instructions that are understood by the 6809 chip, which controls your computer.

When using an editor/assembler, all you have to do, essentially, is copy the relevant instructions from THE RAINBOW's listing into CoCo.

Another method of getting an assembly language listing into CoCo is called “hand assembly.” As the name implies, you do the assembly by hand. This can *sometimes* cause problems when you have to set up an *ORIGIN* statement or an *EQUATE*. In short, you have to know something about assembly to hand-assemble some programs.

Use the following program if you wish to hand-assemble machine language listings:

```
10 CLEAR200,&H3F00:I=&H3F80
20 PRINT "ADDRESS:";HEX$(I);
30 INPUT "BYTE";B$
40 POKE I,VAL("&H"+B$)
50 I=I+1:GOTO 20
```

This program assumes you have a 16K CoCo. If you have 32K, change the &H3F00 in Line 10 to &H7F00 and change the value of I to &H7F80.

The Rainbow Seal

The Rainbow Certification Seal is our way of helping you, the consumer. The purpose of the Seal is to certify to you that any product that carries the Seal has been physically seen by us, that it does, indeed, exist and that we have a sample copy here at THE RAINBOW.

Manufacturers of products — hardware, software and firmware — are encouraged by us to submit their products to THE RAINBOW for certification. We ascertain that their products are, in actuality, what they purport to be and, upon such determination, award a Seal.

The Seal, however, is not a “guarantee of satisfaction.” The certification process is different from the review process. You are encouraged to read our reviews to determine whether the product is right for your needs.

There is absolutely no relationship between advertising in THE RAINBOW and the certification process. Certification is open and available to any product pertaining to CoCo. A Seal will be awarded to *any* commercial product, regardless of whether the firm advertises or not.

We will appreciate knowing of instances of violation of Seal use.

Add an extra 22K of memory to Disk BASIC 1.1

Discover the 'Hidden' Five Tracks

By Jim Peake

If you own the new white Radio Shack disk drive (catalog number 26-3029) with Disk BASIC 1.1, you may have a 40-track drive masquerading as a 35-track drive. The new drives without the little tab to eject the disk are different from the old gray drives.

After more than three years of cassette loading, I broke open the piggy bank and bought a new drive in December 1983. Sure enough, it looks different. Rumor has it that it's a Model 4 drive from TPI. After six months of loyal service on my 1980-vintage D-board CoCo, I attached it to my new 64K CoCo 2. After experimenting to see how many tracks it really has, I discovered it works fine as a 40-tracker.

I've written a small program of POKES to modify the disk ROM for 40 tracks. To use it, you must have a 64K CoCo. You must also have a program to load the BASIC ROMs into the upper 32K of RAM, and switch the CoCo to the all-RAM mode. And you must have the

Jim Peake lives in Northfield, Vermont, and is a systems analyst for the state. He has over 12 years of applications software experience. He purchased his first CoCo in 1980 and his family has rarely seen him since.

new Disk BASIC 1.1 ROM. This change does not work with the 1.0 ROM because all the POKE addresses are different and you would need 40-track drives rather than the 35- or 36-track gray drives.

So how do we make Disk BASIC 1.1 use 40 tracks? There are several things that must be done. First, move the ROMs to RAM and switch to the all-RAM mode so we can make changes with the POKE command. Second, BASIC must be modified to initialize 40 tracks with the DSKINI command. Third, the file allocation table, which keeps track of what granules have been used, must be enlarged to keep track of 78 granules instead of 68. Changes have to be made so it is all saved to disk and not cut off at 68. Next, FREE has to be modified to look for 78 granules.

I did not make the directory allow for more than 68 files because, as a practical matter, I cannot believe anyone would want that many files on one disk.

The file allocation table is easy enough to expand, but doing so limits the system to a maximum of three drives. This is because the system initialization routine reserves space for up to four file allocation tables. Since each table is 10 bytes bigger to hold 78 instead of 68 granule pointers, there is

not enough room for more than three file allocation tables. Again, it's much too complicated to move all subsequent work addresses and not worth the trouble.

The advantages of this modification for using 40 tracks are many. You can save money by using fewer disks. This modification is fully compatible with the diskettes already formatted in the official 35-track format. They operate normally while in the 40-track mode and are protected from unsuccessful attempts to use the last five tracks. The file allocation table indicates to the modified 40-track system that those tracks are not available. BACKUP is the only command that invites disaster if you try to use 35-track diskettes while in the 40-track mode.

There are some disadvantages to this 40-track modification. If you run the system without loading the modification, the unmodified system wreaks havoc with 40-track diskettes. It shortens the file allocation table to 68 granules, thus losing forever the last five tracks. Any files or programs that used any or all of that area are unusable, and the diskette will be a 35-track disk until reinitialized to 40 tracks, which wipes out everything on the diskette. It is also a nuisance to have to load the necessary

programs for converting to 40 tracks each time you turn on the computer.

Of course, if you have an older drive that does not support 40 tracks, attempts to use the last five tracks result in an I/O error. And if Radio Shack or its supplier adjusts the drives to prevent using the last five tracks, then this modification won't work. I think the system is set up for upgrading to 40-track drives and Radio Shack probably will. If they do, they will have to put in

a few more checks than I did to ensure full compatibility with diskettes previously formatted for 35 tracks.

One last caution: This modification has not been rigorously tested in a variety of environments. Therefore, experiment carefully and test it to be sure it works dependably on your system before entrusting valuable data or hard work to it.

One does not start disassembling the ROMs without a good, comprehensive

map of what's what. In my case, the map and guiding light was the complete CoCo memory map published in the July, August, September and December 1983 issues of THE RAINBOW.

In conclusion, the new I.I system can easily be modified to use 40 tracks for storing up to 178,000 bytes of data on each diskette.

(Mr. Peake can answer questions about this program at 802-485-8922, 7 p.m. to 9 p.m. EST only.) □

WOODSTOWN ELECTRONICS

Rt. 40 E. WOODSTOWN, N.J. 08098

■ ***Some companies
will tell you
their programs
are integrated.***

■ ***Derringer
software speaks
for itself.***

■ Lots of companies claim that their programs are integrated. All they mean is that several programs are on the same disk. And only a few of them talk to each other. Crude systems that lack features can be a real headache.

■ At Derringer Software, when we say our programs are integrated, we mean that our programs *talk* to each other. Our PRO-COLOR-SERIES is completely compatible with DYNACALC® and TELEWRITER-64.™ These three programs are among the most flexible on the market today.

■ Investigate before you make any investment. Derringer Software will prove itself worthy. We produced the first serious database program for the Color Computer back in 1982. And it has remained the popular choice ever since. Now that's really saying something!

PRO-COLOR-FILE

©1984 by Derringer Software, Inc.

ENHANCED 2.0

- 60 Data Fields for each record
- 1020 spaces available per record if needed
- Maximizes multiple drive operation
- 28 equation lines (+-*/)
- IF-THEN-ELSE logic test in equations
- Full Screen editing on up to 4 data entry screens
- Key click and auto key repeat
- Stores custom designed report formats
- Obtain totals, averages, or summaries for any field
- Output reports to printer, screen, or disk file
- Send data out to a DYNACALC compatible file
- Separate label generator for up to 10 across labels
- Pre-define up to 16 indexes for searching/reporting file
- Sorts 750 records in under 5 minutes
- User defined selection menus
- Repeated tasks performed with one keystroke
- Comes with 75 pages of documentation in a 3 ring binder
- Supported by a national users group
- Full time programmer support
- Supplied on an unprotected disk

\$59⁹⁵

PRO-COLOR-FORMS 2.0

©1984 by Derringer Software, Inc.

PRO-COLOR-FORMS will access data files created with PRO-COLOR-FILE and merge them with a letter or place them on pre-printed forms.

- STORE UP TO 6 FORMATS • USER DEFINED PAGE SIZE
- SUPPORTS SPECIAL PRINTER CONTROL CODES • RIGHT JUSTIFICATION • PASSWORD PROTECTION • MERGES WITH GRAPHICS FROM MASTER DESIGN OR TELEGRAPHICS •

PRO-COLOR-DIR

©1984 by Derringer Software, Inc.

PRO-COLOR-DIR will read your directories and create a master data file that can be accessed by PRO-COLOR-FILE for sorting and reporting. 1000+ records can be stored on one diskette with valuable information about each program.

You can obtain hard copies of the information and create labels of the filenames for placing on the diskette itself.

- DISK ID NAME • FILENAME/EXT • TYPE OF FILE
- DATE CREATED • DATE UPDATED • NUMBER OF GRANS ALLOCATED • NUMBER OF SECTORS ALLOCATED AND USED • MACHINE LANGUAGE ADDRESSES •

MASTER DESIGN

©1984 by Derringer Software, Inc.

Generates lettering in hi-res graphics that can be different sizes, skinny, bold, textured, drop shadowed, raise shadowed or tall. Also interfaces with the Telewriter-64 word processor for printing hi-res displays with your letters.

Take full advantage of all the extended BASIC hi-res graphic commands including boxes, circles, lines, copy displays and utilize GET and PUT features. Added commands include mirror reflection, turn displays backwards or upside down. Squish displays, create dot patterns for shading or diagonal lines.

The Letterhead Utility allows you to access hi-res graphics from Telewriter-64, your own BASIC programs or PRO-COLOR-FORMS.

Interfaces with dot matrix printers having dot addressable graphics.

See reviews in:

SIDEWISE

©1984 by Derringer Software, Inc.

Add a new "twist" to your printer's capabilities!

SIDEWISE makes your printer do something you never thought possible—print side ways!

SIDEWISE will read in any ASCII text file and print it out side ways using a Radio Shack, Epson, Okidata, C-Itoh or Gemini printers having dot-graphics ability.

SIDEWISE OS9 is compatible with DYNACALC OS9 and requires Basic09

SIDEWISE OS9 **\$39⁹⁵**
(Disk only)

SIDEWISE RS-DOS **\$24⁹⁵***

* RS-DOS version included FREE with DYNACALC[®]

OS9 is a registered trademark of MICROWARE and MOTOROLA.

TELEGRAPHICS

©1984 by Derringer Software, Inc.

PRINT HI-RES GRAPHICS USING TELEWRITER-64!

Use CoCo Max, Graphicom or other graphics programs to create letter heads and print them while using Telewriter-64.

Telegraphics interfaces with Radio Shack, Epson, Gemini, C-Itoh and Okidata printers having dot-addressable graphics. A simple modification to Telewriter-64 will allow you to exit Telewriter via the DISK I/O MENU and print out the graphic without affecting any of your text in the buffer.

This is the same feature that is included in our MASTER DESIGN program. Since we felt you don't need to buy two graphics editing programs, we have made this feature available at a reduced price.

(Available Only On Disk) **\$24⁹⁵**

Telewriter-64 + TELEGRAPHICS - **\$64.95**
(Save \$20)

CoCo Max II + TELEGRAPHICS - **\$84.95**

@ SUMMARY

©1985 Derringer Software, Inc.

If you use your spreadsheet program to keep track of your expenses then @SUMMARY can help you analyze those expenses. For example, if you indicate a "Category" for each expense then @SUMMARY will produce a report that shows a total for each category, the highest amount, the lowest amount and the average amount. In addition, @SUMMARY can produce a hi-res line graph or bar graph of the analysis and allow you to place titles on the graph. A hardcopy of the graph can also be generated as well as saved to disk.

The analysis can be saved in a "data file" which can be loaded into DYNACALC or read in by @SUMMARY for future additions to the analysis. If you use other Spreadsheets such as ELITE[®]CALC then you have added a graphing feature to your spreadsheet applications. The analysis can also be saved in an ASCII file which can be read by word processors for inclusion in a report.

@SUMMARY is compatible with any spreadsheet program that can generate an ASCII text file of worksheets.

Specify RS-DOS or OS9*

*OS9 version does not have Hi-Res graphing and requires Basic09.

(disk only) **\$19⁹⁵**

Database Ditties . . .

By Cray Augsburg
Rainbow's CoCo SIGop

There have been a lot of goings-on in our Color SIG, including a large amount of activity in the databases. Because of this, most of this month's column is devoted to Marty Goodman's database report.

Color SIG is rapidly increasing in size. We have 2,989 members and expect to have well over 3,000 members within a few weeks.

We have unofficial reports of our Forum activity versus the message activity on CompuServe. We average 380 posted messages a week to CompuServe's 430. This ratio, too, is rapidly changing in our favor.

There is a decrease in the number of users having problems adjusting to Delphi. Most people are finding it easier to use than "that other system."

Contest Results

We recently had a contest to see who could write message number 6809. The "magic message" was written by Lloyd Pulley (FATONE). After winning, all Lloyd could say was, "I just logged on to see who won and now I find out it's me!" For his effort, he will receive a free 72-hour period on the Color SIG. Keep an eye open because we will be having similar contests in the future.

Missing Words

Here is a correction for the May

Cray Augsburg serves as RAINBOW's technical assistant and holds an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Kentucky. His username on Delphi is RAINBOWMAG.

"Delphi Bureau." At the top of Page 94, I describe how to locate specific RAINBOW ON TAPE files. Missing are the rules that explain this. They are:

- 1) To find a specific file, type
READ MM/YY XXX Title
where MM/YY is the date and XXX is the page number. The title may be omitted.
- 2) If the month (MM) has only one digit, such as February, then do *not* include a leading zero.
- 3) If the page number (XXX) has only two digits, then *do* use a leading space.

The examples should now make sense.

Strike up the Band Already!

Everything appears to be running smoothly on the Color SIG. We have lived up to our word and now submissions to the database are being enabled usually within 24 hours.

The only area that causes some concern is the Music topic of the database. As a music lover, I find the lack of activity there disconcerting (pun fully intended). I urge all members to search through their files at home. Surely you can find at least one or two music files you would like to submit.

Keep in mind that there are several people with considerable experience who "reside" on our Color SIG. If you have any questions, you can always leave them in Forum. They are sure to be answered quickly. Now let's see what good news Marty has to bring us . . .

Database Manager's Report

In the four weeks that have gone by since I assumed the job of database manager on Delphi, quite a lot has happened in our CoCo SIG database.

I have posted some new text files that may be of interest, including one on *legal* telephone "phreaking," describing how I cut my Delphi telephone bill from \$150 to \$13 per month. A new *NEWBOX* file is more speculation about the coming Color Computer. There's also an essay on the issue of *pornography*, and how it relates to our SIG.

Graphics

We have four new art galleries containing 12 to 20 pictures each by famous CoCo artists Ana Landa, Ron Kiyomura, Linda Neilson and Erik White. These are among

the best CoCo art ever produced. Many are winners of RAINBOW's "CoCo Gallery" awards.

There are a number of new individual files, including *Red Riding Hood*, an enhanced video digitized image. Also in the Graphics section is a digitized and animated image of guess who, under the heading GUESS WHO.

Stephen Macri (**DRACMAN**) has given us a nice updated anatomical chart of the brain, with special attention to CoCo-related functions. Mark Kowit (**TOBOR8**) has contributed a set of three enhanced digitized images, including a clever one called *Eat Strawberries*. Erik Gavriluk (**ERIKGAV**) has uploaded a gallery of 15 digitized images, including a particularly interesting one, *Baby*.

Graphicom is well-supported in the database, with alternative menus and font set screens. If more *Graphicom* users will drop me a line on the Forum or in MAIL, I can upload a lot more alternate *Graphicom* fonts and stamp sets. All you need do is ask. I have about a 50 or more such files.

We also have a fresh upload of *McPaint*, a "guiltware" product (you are asked to send the author a few bucks if you like and use the program). This is a graphics editor for the CoCo vaguely similar to *Graphicom* and *CoCo Max*. Along with the new *McPaint* upload, we have a set of about 15 fonts for *McPaint*. And from the same authors (Eric Gavriluk and Greg Miller) we have a set of *Animate* utilities that allow you to make (and hopefully later upload to us for all to see) short animation sequences from the pictures you draw. Best of all, Erik and Greg, the talented creators of *McPaint* and *Animate*, are available on our forum for questions.

Art Flexser has contributed his *MAXCMP* utility to our graphics section. This utility allows you to convert CoCo graphics screens from *Graphicom*, *CoCo Max* and other graphics editors into our .PIX format, an ASCII BASIC version of the picture that can be downloaded. I recommend that anyone who wants to upload CoCo art to Delphi or other BBS systems get and use this file.

Loren J. Howell (XENOS) has given us a CGP-115 (color printer plotter from Tandy) screen dump for full-color dumps of *CoCo Max* files.

Hardware Hacking

I have uploaded in this section all of my software development tools for creating character generator ROMs for the PBJ *Word-Pak I*, and for all makes of CoCo lowercase kits. There are also some data files with my favorite fonts sets for such things. All you need to do is download those data files and burn them into an EPROM, and you can customize your screen character font if you own a lower kit or PBJ *Word-Pak*. There is also an article by Don Hutchison on how to interface a Microfazer buffer to the CoCo, and a chart I made of the pinouts of most common EPROMs.

Also in the Hardware Hacking database is an alternate driver software for the Intronics Ver. 2 EPROM programmer. With this patched software (which I wrote), you will have the option of proper slow programming of EPROMs, a needed option due to reports of unreliability in the long-term data storage of EPROMs programmed with that programmer in its normal (fast) mode.

Data Communications

Art Flexser has uploaded a series of fixes for *Colorcom/E* Version 3. These patches

allow you to correct some serious flaws in the currently released version.

Don Hutchison (DONHUTCHISON) has given us a superb discussion of the workings of 1200 Baud modems and addresses the question of whether or not it pays to get one.

Steve Bjork (6809ER) has uploaded the latest revision of his conferencing program, *COTERM*. Be sure to get this one if you use Delphi's conference area a lot. It offers a *split screen* to make it easy to compose your outgoing messages.

Also present are some patches for *Mikeyterm 4.0* to allow you to use its auto-dialer function (control 3) with a Hayes modem. Thanks once again to Mike Ward, its author.

Utilities

There is now a full set of Intel Hex to CoCo binary, and vice versa, utilities in this topic area, along with a full description of just what Intel Hex is. I wrote and uploaded this. Keith W. Smith (UGLY) has uploaded the *Ugly Wordprocessor*, a simple line editor for quick jobs. Cray Augsburg (RAINBOWMAG) has uploaded some tax preparation utilities (*TAX*), a pie chart utility (*PIE*), and some other new files as well.

Games

Cray Augsburg has submitted a number of new games from RAINBOW's collection. (None of these has appeared in the magazine, however.) And Stephen Macri has submitted a very clever golf Simulation.

Assembly Language

Don Hutchison has uploaded source code for three neat little ditties. *NUTRAX* formats an extra five tracks on 35-track CoCo disks without hurting existing information (great for hackers moving up to a 40-track version of Disk BASIC). *Color Zoom* is a visually pleasing bit of clever code that the authors of *Graphicom* got from an old CoCo game, modified and gave to me. I gave it to Don, and he commented it and turned it into a good assembly language tutorial.

Product News and Reviews

In this database topic are reviews of the latest Radio Shack games, *Pegasus*, *Donpan* and *Pitfall II*, and a report on the DS69A Video Digitizer. Also in this section is my reply to RAINBOW regarding their review of a newly released EPROM programmer.

I have a review of the VIDCODIT video digitizer, a \$40 bare board kit sold by Dick Kinney that does a rather fine job of digitizing a video signal, though it is pretty hacker-oriented. Buried in that review are three digitized pictures of me, taken as samples of the performance of the unit.

OS-9

We have a description of how to make the *Version 2.0 OS9 CO80* driver work with the DISTO 80-column card.

Greg Forseth has given us some RAM disk software for OS-9 and the Banker 256K expansion.

Rob Wyatt (ROBERTJR) has uploaded a pause utility command.

Coming Attractions

Look for more product reviews, including one of the Tandy Hard Drive Controller and Drive for the CoCo. And look for a *Kermit* supporting terminal program in the Data Communications section of the database. In hardware, I hope to soon have a sophisticated, all-machine language driver program for the Green Mountain Micro Color Burner, complete with point-and-pick menus and bar graph displays of what percent of the EPROM is programmed. And, in Graphics, more pictures and more *Graphicom* font screens.

Coming soon to the Graphics section is a superb dedicated *Fat Bits*-type screen editor, one that has a mode in which you can do "fat bits" (enlarged) editing of artifact color screens with the magnified pixels appearing as red, blue, white or black on your screen. The total area shown in the magnifier is larger than in any other graphics editor's "fat bits" program, and the ease of use of this utility is good.

Soon, I will release my *C64-to-CoCo Converter*, a program that allows CoCo owners to download Commodore 64 *Doodle* format files, then view them on their CoCos. We will show a few representative converted *Doodle* art files, and you will be able to find many more on the Micro Artists (MANIAC) SIG on Delphi.

In the Data Communications topic area on our CoCo SIG, we hope to soon have the complete *WEFAX* program set and the full documentation for it and, later on, possibly some interface-less RTTY/CW software as well. (This last by the authors of *Graphicom* and *WEFAX*.) We may later feature a number of tutorial files in our assembly language database for beginning and intermediate ML hackers.

There has been a heavy emphasis on graphics in this report. This is due in part to my own great interest in this area. Remember, we welcome submission of all material. I will try to develop other areas now that the Graphics section is off to a good start. We cordially invite you to submit your favorite original or public domain programs, pictures and music to share with the CoCo Community. And, please feel free to speak up and share your thoughts about products you buy or reviews you read.

— Marty
(MARTYGOODMAN)

HOW DO YOU SHARE A RAINBOW?

**It's simple —
Give a RAINBOW gift
certificate . . .**

Share THE RAINBOW with your friends a gift subscription to the premier information source for the Color Computer. Then, each month, all year-round, they'll enjoy the spectrum of RAINBOW programs, articles and information written exclusively for their CoCo!

First, they'll receive a handsome card announcing your gift. Then, they'll be reminded of you each month when they receive up to 300 pages of THE RAINBOW — including as many as 24 programs, 15 regular columns and up to 20 product reviews.

When you give a RAINBOW gift certificate, you'll also be safeguarding your own collection. No more frantic searching for those back issues you've lent to a friend.

Give a RAINBOW gift certificate and let your friends in on something you already know — THE RAINBOW is the perfect companion for the Color Computer!

**Please begin a one-year (12 issues) gift subscription to
THE RAINBOW for:**

To order by phone (*credit card orders only*) call 1-800-847-0309, 8 a.m. to 5 p.m. EST. For other inquiries call 1-502-228-4492.

Subscriptions to THE RAINBOW are \$31 in the United States; U.S. \$38 in Canada. The surface rate to other countries is U.S. \$68; the air rate, U.S. \$103. Kentucky residents add 5% sales tax. U.S. currency only, please. All subscriptions begin with the current issue. Please allow 6 to 8 weeks for delivery. In order to hold down non-editorial costs, we do not bill.

Now from Falsoft, The RAINBOW MAKER, comes . . .

The monthly magazine that's reader-friendly

If you're interested in the highly popular Model 100, the Tandy 200, the brand new portable Tandy 600 or Tandy's new generation of MS-DOS computers — the 1000, 1200, 2000, or the exciting new Tandy 3000 — PCM is for you!

PCM, The Personal Computer Magazine for Tandy Computer Users, is brought to you by the same people who bring you THE RAINBOW, the premier magazine for the Color Computer. Need we say more?

So, if you're ready to add portability or step up to MS-DOS, stay with Tandy and THE RAINBOW family by subscribing to PCM!

FREE PROGRAMS!

We learned from THE RAINBOW that readers want programs to type in, so each month we bring you an assortment of them, including games, utilities, business applications and graphics.

BAR CODE, TOO!

Also, PCM is the only computer publication in the world (that we know of) that brings you programs in bar code, ready to scan into memory with the sweep of a wand!

TUTORIALS GALORE

Add to this our regular tutorials on telecommunicating, hardware and machine language, as well as BASIC programming tips and product reviews, and we think you'll find we're one of the most informative and fun magazines on the market today.

So if you're ready to add portability or step up to MS-DOS, stay with Tandy and THE RAINBOW family through PCM.

To order by phone (*credit card orders only*) call 1-800-847-0309, 8 a.m. to 5 p.m. EST. For other inquiries call 1-502-228-4492.

YES! Please send me a one year (12 issues) subscription to PCM for only \$28.* A savings of 22% off the newsstand price.

Investigating the CPU

By Tony DiStefano
Rainbow Contributing Editor

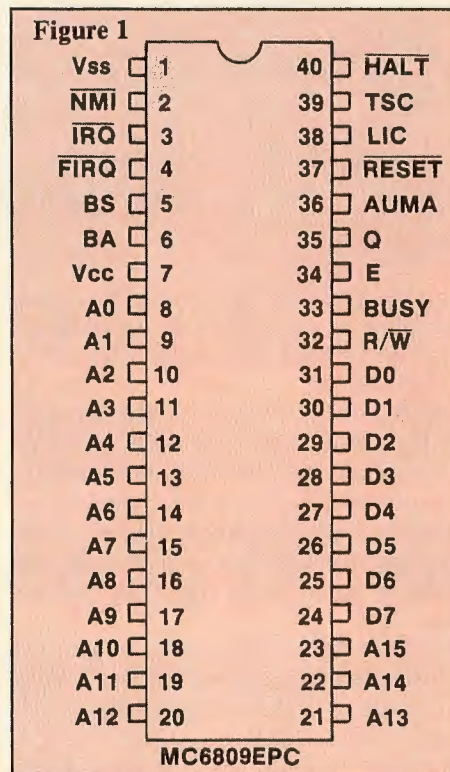

If you have been following the past several articles, you are familiar with how a memory chip works. A memory chip by itself is not useful and a Printed Circuit Board (PCB) full of memory chips cannot do much. We need something that can write to and read from this memory. What we need is a CPU. What is a CPU? It's a Central Processing Unit.

This chip is the workhorse of the computer. It does just about everything. In the CoCo, the CPU is made by Motorola. The part number for this chip is MC6809EPC. The "MC" stands for the company, the "6809" is the part number, the 'E' means it's driven by an external clock and the "PC" means it is a plastic package.

It's common knowledge that the 6809 is one of the most powerful eight-bit CPUs made. In fact, some people argue it is *the* most powerful. Whatever the case, we're going to dig into it and look at it from a hardware point of view.

The most important thing to know about this chip is the pinout. The 6809 is contained in a 40-pin DIP (Dual Inline Package) the same size and shape as the VDG, PIA and SAM chips also in the CoCo. Figure 1 shows this 40-pin chip and the pin names. The following is a pin-by-pin description of the 6809.

Tony DiStefano is well-known as an early specialist in computer hardware projects. He lives in Laval Ouest, Quebec.

Pin 1 — Vss. This is the ground pin to which all signals are referenced. It has a potential of zero volts.

Pin 2 — NMI. This normally high (five volts or logic state of one) input triggers on the negative edge of a pulse. This in turn requests that a non-maskable interrupt sequence be generated. A non-maskable interrupt (as the word indicates) cannot be inhibited by the pro-

gram. It also has a higher priority than FIRQ, IRQ or software interrupts.

During recognition of this NMI, the entire machine state is saved on the hardware stack. After a reset, an NMI is not recognized until the first program load of the hardware stack pointer. The pulse width of the NMI low must be at least one E-cycle long before it is recognized.

Pin 3 — IRQ. This input triggers in the same way as the NMI except it initiates an interrupt request, providing the IRQ bit in the CC (Condition Code register) is clear. This also saves the entire machine state on the stack. The IRQ has a lower priority than the FIRQ. It is up to the service routine to clear the source of the interrupt before doing an RTI (Return from Interrupt).

Pin 4 — FIRQ. This input, like the IRQ, initiates a fast interrupt request, providing the FIRQ bit in the CC is clear. This has higher priority than the IRQ, but only saves the CC register and the program counter on the stack. The interrupt service routine should clear the source of the interrupt before doing an RTI.

Pins 5 and 6 — BS (Bus Status) and BA (Bus Available). Two outputs that work together to generate the condition of the CPU. When BS and BA are both low, a normal or running condition exists. When BS and BA are both high, it indicates the CPU is in the halt mode. When BS is high and BA is low, an interrupt or reset is acknowledged. And

finally, when BS is low and BA is high, the CPU is in a sync acknowledge mode.

Pin 7 — Vcc. This input powers the CPU with five volts.

Pin 8 to 23 — A0 to A15. These 16 pins are used to generate one of 65,535 different address locations the 6809 CPU can access for data transfer. When the processor does not require the bus for a data transfer, it sends out all that is on the address bus. The R/W line equals one, but BS equals zero. This is known as a dummy access or VMA cycle. All addressed bus lines go into a high-impedance state when BA is high or when TSC is driven high.

Pin 24 to 31 — D7 to D0. These eight bi-directional pins are used to transfer data to and from the CPU and other devices connected on the data bus.

Pin 32 — R/W. This output signal indicates the direction of the data transfer on the data bus. A low indicates the CPU is writing data to the data bus. A high means the CPU is reading. When BA is high or when TSC is high, the output is made high-impedance.

Pin 33 — BUSY. This output-pin signal indicates that bus re-arbitration should be deferred. Wow, what a mouthful! This means BUSY is high for the first two cycles of any instruction that first reads, then writes new data, high during the first byte of a double-byte access, and during the first byte of any indirect access.

Pin 34 and 35 — E and Q. These clock signals are required only by a 6809 that has an 'E' prefix. In the CoCo, these signals are generated by the SAM (MC6883) chip. These signals bring the CPU to life. The 'Q' clock must lead the 'E' clock. Addresses are valid after the falling edge of the 'E' clock, and data is latched from the bus by the falling edge of the 'E' clock. More on 'E' and 'Q' clocks later.

Pin 36 — AVMA. This output is the advanced VMA signal and indicates the CPU will use the bus in the following bus cycle. The predictive nature of the AVMA signal allows efficient shared-bus multiprocessor systems. When the CPU is in either a halt or sync state, the AVMA is low. The CoCo does not support this feature.

Pin 37 — RESET. A low on this normally high input forces the CPU into a reset condition. The reset vectors are loaded into the program counter from locations \$FFFE and \$FFFF, then the CPU begins to execute the instructions it finds. Because the reset threshold

voltage is higher than that of standard peripherals, it ensures all peripherals are out of reset state before the CPU goes to work.

Pin 38 — LIC. The last instruction cycle is high during the last cycle of every instruction, and its transition from high to low indicates the first byte of an opcode will be latched at the end of the present bus cycle. LIC is high when the CPU is halted at the end of an instruction.

Pin 39 — TSC. This three-state control causes the address, data and R/W lines to go into a high-impedance state. The control signals BA, BS, BUSY, AVMA and LIC do not go into the High-impedance state. To force the CPU into this state, TSC must be made high just before the end of the previous cycle. To regain access, TSC is brought low and the clocks for that processor restarted when the addresses become valid.

Pin 40 — HALT. A low level on this input pin causes the CPU to stop running at the end of the present instruction and remain indefinitely without loss of

data. When halted, the BA output becomes high, indicating the buses are free. While stopped, the CPU does not respond to external requests, although NMI or RESET will be latched for later response. During the halt state the 'Q' and 'E' clocks must continue to run normally.

Figure 2 is a diagram of the timing information of a read cycle and write cycle for memory or peripherals.

The complete read cycle for the CoCo is about 1,117 ns (nanoseconds) long. The cycle starts with the falling edge of the 'E' clock. Some 200 or so nanoseconds later, the address bus is stable. That means the bus holds a valid 16-bit address. At the same time, the R/W line is stable with a logic level of one. A little later, about 80 ns or so, the 'Q' clock changes to a high condition. But for now, it is not very important.

The next change is the 'E' clock. About 629 ns after the 'E' clock falls, it rises again. This change is important but I'll get to that later. Next, the 'Q'

clock falls to a zero state. Now, most important, when the falling edge of the 'E' clock occurs, the data on the data bus is transferred into the CPU.

There is a small catch: the data must have been valid (stable and not changing) 80 ns before the falling edge of the 'E' clock. It is up to the memory device or peripheral to make sure the data is there on time. The CPU does not wait; if the data is not there on time, wrong data is entered into the CPU.

The second part of Figure 2 is a write cycle. The complete write cycle is the same length as the read cycle, approximately 1,117 nanoseconds. Again, everything starts with the falling edge of the 'E' clock, and again the address bus is stable with a 16-bit address. This time the R/W line is stable with a logic level of zero. The 'Q' clock rises and the 'E' clock rises; the 'Q' clock falls and the 'E' clock falls. But this time, the CPU supplies the data.

The data is valid no later than 200 ns after the rising edge of the 'Q' clock, which occurs just before the rising of the 'E' clock. The data stays valid until about 20 ns after the falling edge of the 'E' clock. In that time, the memory of the peripheral device must take the data from the data bus. Then another cycle starts. The CPU decides whether it is a read or a write, depending on what it's doing next.

How the CPU decides depends on what it did in the previous cycle. When the computer is first turned on, the reset

line keeps it from doing anything until everything stabilizes. When the reset line starts the CPU going, it always does the same thing — two reads. These two reads are always at the same place, \$FFFE and \$FFFF. This is the reset vector, which is a pointer that points to a memory location. Because the 6809 can access 65,535 bytes of data (16 bits), the pointer must be exactly 16 bits long. Since the 6809 can access only eight bits at a time, the pointer must be two bytes long.

After the CPU reads these two bytes, it places them in an internal register called the program counter. This program counter always points to the CPU's next instruction. The CPU reads the first instruction. Instructions in the 6809 can be one to four bytes long, so the CPU has to read zero to three bytes more depending on the instruction. After the complete instruction has been read, the CPU acts on it. This instruction could be read data, write data or do something internal. Whatever the case, the CPU continues to read and write until turned off.

Now we know how a CPU accesses devices on the bus. It's time to join the CPU and the memory chips discussed in previous articles.

For example, let's use an 8K memory device. This could be a ROM or a RAM chip. It has 13 address lines, A0 to A12. Two to the power of 13 is 8K. Since the CPU can access 64K, eight of these memory chips can be used. But how?

Some sort of decoding has to be set up. If we hook up the first 13 address lines to the CPU, we are left with three unused lines.

Now, we can use a three to eight decoder chip (explained in an earlier article). If we connect the three unused address lines of the CPU to this decoder, we have eight individual address locations. In turn, these eight lines can be used to control the chip enable lines of eight 8K memory devices. That brings our total to 64K of memory. Mixing the 8K devices between ROM and RAM would give us a complete computer. Well, almost.

Eight chips of memory do not a computer make. It needs a little more than that. Things like a keyboard, video, drives and joysticks are a must on a computer. These connect a computer to the real world. But these things are not as complex as you might think. They are just more devices connected to the CPU via address lines, data lines and control lines.

For instance, the keyboard is simply a bunch of switches and, through a device called a PIA (Peripheral Interface Adapter), the CPU monitors the switches and interprets them according to the software. Each switch represents a letter of the alphabet or a number. That's all. PIAs and other I/O devices take up little room in a memory map. A PIA only takes up four bytes. More decoder chips are needed in order to map it properly, but the same theory is used. ☺

PRINTERS!!!

NEW! Star Micronics NX-10	\$295
Okidata 192 (Parallel)	\$370
Okidata 192 (Serial)	\$425
Okidata 182	\$240

PIPELINE

SIX SHOOTER Tactical Electronics Corporation now offers an automatic parallel interface printer switch that lets up to six computers share one printer. It supports computers using a Centronics-type parallel port. The switch, which is available for under \$500, is invisible to applications, allowing use with word processors and graphics screen dumps. Each connected computer is prioritized. If a shared printer is in use, the switch appears to be an offline printer to the computer. Switching is automatic and there is no data loss during switchover. Also, an automatic line feed can be provided for computers if necessary. *Contact Tactical Electronics Corporation, P.O. Box 1743, Melbourne, FL 32902, (305) 676-6907.*

EDUCATED CABLE The new User Programmable Interface Cable presents a solution to RS-232 asynchronous interface problems. The user may select, via DIP switches on the male-to-male cable, configurations covering 95 percent of applications. The DB25 cable is priced at \$19.95 and is available in a 10 foot length. *Contact Craig Data Cable Co., 652 Glenbrook Road, Stamford, CT 06906, (800) 243-5760 (in Connecticut call 203-356-9315).*

BBS DREAM A new BBS package is under development for the CoCo by Software Interphase, Inc. The *SysLink* system is to support TeleLink Networking for private and public messages; *MicroMatch* for on-line computer dating; *FileMail* for sending private files to other users; *SuperVote* for surveys and polls; and much more. Also provided with the package will be manuals the SysOp may sell to system users. *Contact Software Interphase, Inc., 5 Bradley Street, Providence, RI 02908, (401) 274-LINK (voice) or (401) 272-1138 (300/1200 Baud).*

TWO-PORT BUFFER Proteus, a parallel two-port buffer that supports hardware or

software switching of ports, is now available from Computer Friends. Proteus features multiple-copy capability on each port as well as flexible capacity buffering. This means each port is given as much memory as available. Cost is \$199 for the 64K version and \$299 for the 256K version. *Contact Computer Friends, Inc., 6415 SW Canyon Ct., Portland, OR 97221, (503) 297-2321.*

FREE OFFER Falcon Safety Products, Inc. has announced the availability of a free 16-page illustrated guide on preventive maintenance techniques for computers and other electronic office equipment. The booklet guides the reader through proper maintenance using products from the Falcon line of care products. Topics covered include dust removal, static control, platen restoration and safety measures. *Contact Falcon Safety Products, Inc., 1065 Bristol Road, Mountainside, NJ 07092.*

PUBLIC DOMAIN CompuServe has placed specifications for the asynchronous 'B' protocol file transfer program into the public domain. Protocol features include interrogation of remote computer characteristics such as transfer capabilities, cursor addressing and graphics modes, as well as host initiation of file transfers in either direction. The specification documents and C language sources for the generic implementation can be downloaded free of charge from the CompuServe Information Service.

PROTECTION Reuters News Service has reported that radiation emitted from computer monitors and televisions may be harmful. To combat the effects of the offending rays, RAM has introduced CRT Shields. Priced from \$29.95, these shields are manufactured with lead and chemically treated to filter out harmful radiation. The non-glare shields also include a lifetime

warranty. *Contact RAM, 8306 Wilshire Blvd., Suite 10, Beverly Hills, CA 90211, (800) 227-2001 (in California call 800-537-2001).*

BOOKWORM Howard W. Sams & Co. has recently introduced *Computerfacts* technical service data manuals for seven Tandy/Radio Shack products. These manuals provide the repair data necessary for service and maintenance of computer equipment. Included in the manuals are schematics, wave form photos, trouble-shooting tips and replacement parts lists. Priced from \$19.95, the manuals are available for, among other Tandy products, the CoCo and CoCo 2 as well as the DMP-110 printer. *Contact Howard W. Sams & Co., 4300 W. 62nd Street, Indianapolis, IN 46268, (317) 298-5400.*

ALSO . . . Howard W. Sams & Co. has released *68000, 68010, 68020 Primer* — a book written to introduce novice or experienced programmers to the instruction set and addressing modes of the 68000 family. The book covers architecture of the chips, how to program in assembly language, code-mapping and how the chips are used in multi-user systems. For more information write to the address given above.

COVER UP Mousetop, the mouse cover with a "country look," has set out to give personality to computer "mice" nationwide. This cover fits most computers' mouse devices. Made from silver/gray fur, Mousetop comes in two varieties. One is slightly near-sighted and wears wire-rimmed "granny" glasses, and the other has 20/20 vision. The washable Mousetop is designed to protect your mouse from the grime of daily use. It retails at \$5.95 with glasses and \$5.49 with 20/20 vision. *Contact H&H Enterprises, Box 2672, Corona, CA 91718, (714) 737-1376.*

This bundle of subroutines can lend audio effects to any program

Bleeps, Bloops, Bells and Whistles!

By William Mitchell

This program, *Soundbase*, represents an inventory of sounds used in games and educational programs I have written. They have been developed over several months and saved so they can be appended to any program, then called for subroutines as needed. When the program is completed, the unused subroutines are deleted, but I usually use all of them in most programs. *Soundbase* can be used to form a basis for many programs.

(Editor's Note: Unplug the disk controller, if you have one, before loading the program.)

Dr. William Mitchell is a gynecologist trained at the University of Alabama Medical Center in Birmingham. He is a self-taught programmer who enjoys experimenting with the features possible with the 6809 chip. He has four children and lives in Enterprise, Alabama.

COLORFUL UTILITIES

COCO CHECKER*

Something possibly wrong with your CoCo??? CoCo CHECKER is the answer!! Will test your ROMs, RAMs, Disk Drives & Controller, Printer, Keyboard, Cassette, Joysticks, Sound, PIAs, VDG, Internal Clock Speed, Multi-Pak Interface and more!! 16K TAPE/DISK **\$19.95** (see Jan '85 Rainbow Review)

MULTI-PAK CRAK

Save ROMPAKs to your 64K Disk system using the RS Multi-Pak Interface. Eliminate constant plugging in of ROMPAKs now by keeping all your PAK software on disk. Includes POKEs for "PROBLEM" ROMPAKs- including the NEW 16K PAKS! (Demon Attack, Dragons Lair, etc) 64K DISK **\$24.95**

TELEPATCH II

All the FEATURES of TELEPATCH plus the classically proportioned characters of the WIZARD (\$19.95) font w/TRUE lowercase descenders! Get BOTH & SUPERCARGE your TW-64 for only **\$29.95**

SPIT 'N IMAGE

A super upgrade from Disk Omni Clone! Back everything up! This amazing program handles "non standard" disks with ease. We haven't found any disk yet that it can't handle. Don't ever be caught without a backup again! Lowest price too! Beats most "copy protection" programs! 32K DISK **\$29.95**

COCO SCREEN DUMP

The best screen dump program for the Panasonic, Epson & Gemini printers ever! Have the option of standard or reverse images w/regular or double sized proportional pictures. 600-9600 Baud too! A must for Graphicom and CoCo Calendar users. 16K TAPE/DISK **\$19.95** (see Nov '84 Rainbow Review)

DISK UTILITY 2.1*

A multi-featured tool for USER FRIENDLY disk handling. Utilize a directory window to selectively sort, move, rename and kill file entries. Lightning fast Disk I/O for format, copy and backup. Examine contents of files, the Granule Table, plus the size, load addresses and entry points of all programs. Single command execution of both Basic and ML programs. 32K/64K DISK **\$24.95** "Disk Utility has proven itself very quickly at my house" - Ed Ellers Oct '84 Rainbow Review pg. 220

SPECTRUM FONT GENERATOR

Now you can write files using any CoCo Word Processor (Telewriter-64, VIP Writer, etc.) and convert them to special Highly Detailed character sets! Some of the character sets supported are Italics, Old English, Futuristic and Block. A character set editor is included to create custom sets or modify existing ones! Supports most dot-matrix printers! DISK **\$29.95** (see Dec '85 Rainbow Review)

SPECTRUM DOS

Add 24 NEW Disk commands with 2 Hi-Res screens! Supports 40 track & Double-Sided drives, 6 ms stepping, auto disk search, error trapping & "EPROMABLE". 64K DISK ~~\$49.95~~ New LOW price!! **\$24.95**

SCHEMATIC DRAFTING PROCESSOR

Save time and design pro looking diagrams using a 480X540 pixel worksheet w/6 viewing windows. Over 30 electronic symbols w/10 definable symbols. (Even Logic gates & Multipin chips!) Print hard copy and save to disk. 64K DISK ~~\$49.95~~ New LOW price!!! **\$29.95** (see Jan '84 Rainbow Review)

BASIC+

Basic+ provides (23) of the most used BASIC cmds w/one keystroke plus scrolling & editing w/single key! Also included is a 32 character typahead BUFFERED keybd w/auto key & repeat plus a 32K Print Spooler & Ptr Echo! 64K DISK **\$29.95** (see Jan '86 Rainbow Review pg. 192)

COCO CHECKBOOK

Use your CoCo to keep track of your checking and savings accounts! Printout individual personal checks! 32K/64K TAPE **\$29.95** DISK **\$39.95** (see April'85 pg. 210 & Oct'85 pg. 197 Rainbow Reviews)

*** NOW AVAILABLE BY EXPRESS ORDER AT YOUR LOCAL RADIO SHACK STORE -**

COLORFUL UTILITIES

COCO TEXT UTIL

Includes utilities that most CoCo word processors (TW-64, VIP Writer, etc.) leave out! Reset margins to correct length for uploading, convert all UPPER CASE text to mixed upper/lower, display total BYTE count, EASY rename & kill functions! DISK \$19.95 (see May '86 Rainbow Review)

COCO VIDEO TITLER

Start your VCR tapes with dazzling title frames followed by professional countdown to black fade-outs! Use a title page editor with several sizes of text & background colors! 16K TAPE \$19.95

PENPAL

It's here! CoCo's answer to 1-2-3! PENPAL combines Word Processing, Communications, Graphics, Data Base & Spread-sheet into a single integrated software package! 64K DISK INTRO PRICE \$69.95

64K DISK UTILITY PACKAGE

Take advantage of an expanded 64K machine. Make an additional 8K of RAM available by relocating the Ext Basic ROM from \$8000 to \$D800. Copy ROMPAKS to disk (even "protected" PAKS) and create a 32K SPOOL buffer for printing. DISK \$21.95 (see July '83 Rainbow Review)

TAPE/DISK UTILITY

A powerful package that transfers tape to disk and disk to tape automatically. Does an automatic copy of an entire disk of programs to tape. Ideal for Rainbow On Tape to disk. Also copies tape to tape & prints tape & disk directories. TAPE/DISK \$24.95 (see Sept '83 Rainbow Review)

SUPER DUPER UTILITIES

Finally! At last! A "SUPER DUPER" utility software package all rolled up into ONE!!! Includes such great utilities as: CoCo Disk Zap, Disk Encryption, Disk Mailing List, EZ Disk Master, Graphics ZOOM, Banner Creator, Function KEYS, Super INPUT/LINEINPUT, Basic Program PACKER, Alpha Directory, Basic SEARCH and much, much more!!! 32K DISK \$29.95 (see June '86 Rainbow Review)

COCO CALENDAR

Get organized for '86 TODAY with the CoCo Calendar! Designed for recording the entire year's occasions and daily appointments so you can plan ahead. You can store HUNDREDS of entries and our GRAPHIC Calendar will show all MEMOS! 32K DISK \$24.95 (see Mar '86 Rainbow Review)

THE OS-9 SOLUTION

NOW, a program that creates a "USER FRIENDLY" environment within OS-9! The OS-9 SOLUTION replaces 19 of the old "USER HOSTILE" commands with single keystroke, menu driven commands. No more typing in complex long pathnames or remembering complicated syntaxes! Set all XMODE parameters at the touch of keys! Requires OS-9 ver.01.01.00 \$39.95 (see Sept '85 Rainbow Review)

COCO-UTIL

Now you can have the power to easily transfer Radio Shack Color Computer disk files to your MS-DOS machine - including the Tandy 1000 & IBM PC!!! You can also transfer MS-DOS files to your CoCo disk, even format CoCo disks! CoCo-Util will save you countless hours of retyping! No need to move your computer or printer anymore! Requires 128K MS-DOS computer w/2 disk drives - \$29.95

The CoCo Gallery

1st
PRIZE

Harry McKinion
Cardinal

Our June Gallery opens with a familiar sight of summer, a brilliantly colored songbird heralding the end of winter. Harry lives in Semmes, Alabama and used *X-Pad* to create this picture.

Clay Ambrose
Rose

June is when the roses bloom to their fullest beauty and this skillful rendition of one of nature's lovely embellishments was drawn using *CoCo Paint*. Clay lives in Bloomington, California.

2nd
PRIZE

3rd
PRIZE

Michael Wafkowski
Scallop 2

Michael lives in Elwood Park, New Jersey and used *CoCo Max* to create a charming arrangement of shells sure to make anyone long for the sea breezes and summer fun at the beach.

Egret

Another seaside scene familiar to beach lovers is a lone Egret swooping around looking for the best place to wade. Merwyn lives in Vienna, Virginia and used Extended Color BASIC to draw this picture.

SHOWCASE YOUR BEST!

You are invited to nominate original work for inclusion in upcoming showings of "CoCo Gallery." Share your creations with the CoCo Community!

Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also, please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere.

We will award a first prize of \$25, a second prize of \$15 and a third prize of \$10. Honorable mentions will also be given.

Monica Dorth, Curator

Protect Your Valuable Magazine Collection With . . .

DISTINCTIVE, DURABLE RAINBOW BINDERS

For greater
convenience, order
RAINBOW Binders
through the
shopping area of the
CoCo SIG of Delphi!

Each issue of THE RAINBOW is a vital resource that you will refer to again and again, to gain insights, to explore new areas of interest or simply to refresh your memory. So, you need to keep your copies of THE RAINBOW safe — in high-quality, vinyl binders that provide complete protection.

These distinctive red binders not only ensure that your RAINBOWs stay in mint condition, but they showcase your collection as well. Each binder is clearly embossed with the

magazine's name in gold lettering on both the front and the spine. They're a handsome addition to any room.

They also make it possible for you to organize your work space and eliminate the clutter on a permanent basis. You'll spend more time on your CoCo and eliminate those frustrating searches for misplaced magazines.

A set of two handsome binders, which hold a full 12 issues of THE RAINBOW, is only \$13.50 (please add \$2.50 for shipping and handling).

Special Discounts On Past Issues With This Offer

To help you complete your collection of THE RAINBOW, we're offering a special discount on past issues with the purchase of one or more sets of binders.

When you place an order for six or more back issues of THE RAINBOW at the same time you order your binders, you are entitled to \$1 off each magazine, which normally sells for the single issue cover price. For an order form, please refer to our "Back Issue Information" page (check Table of

Contents under departmental listings). Also with this offer, copies of the "Official And Compleat Index To THE RAINBOW" (a comprehensive index of RAINBOW's first three years, July 1981 through June 1984), usually priced at \$2.50, may be purchased for only \$1 with a set of binders.

Due to heavy demand, we suggest you order back issues now while supplies last.

_____ **YES.** Please send me _____ set(s) of RAINBOW binders at \$13.50 per two-binder set (plus \$2.50 per set for shipping and handling). If your order is to be sent via U.S. Mail to a post office box or to another country, please add \$2. Kentucky residents add 5% sales tax. **U.S. currency only, please.**

Order one or more sets of binders and take advantage of these exciting offers:

_____ I also want to take advantage of a special savings of \$1 off the single issue cover price for back issues with the purchase of a set of binders. (Minimum order of 6 magazines. An order form from a recent issue indicating the back issues you wish to receive should accompany this order.)

_____ I want to purchase the first three-year index to THE RAINBOW (July 1981 through June 1984) at the special price of \$1 (regular price \$2.50) with my purchase of one or more sets of binders.

Name _____

Address _____

City _____ State _____ ZIP _____

My check in the amount of _____ is enclosed. (In order to hold down costs, we do not bill.)

Learning another valuable Life Skill . . .

A Measure of Success

By Fred B. Scerbo
Rainbow Contributing Editor

Editor's Note: If you have an idea for the "Wishing Well," submit it to Fred c/o THE RAINBOW. Remember, keep your ideas specific, and don't forget that this is BASIC. All programs resulting from your wishes are for your use but remain the property of the author.

This month's "Wishing Well" offers another Life Skills program designed to help youngsters or students sharpen a skill that is very important for everyday survival. The program, titled *Ruler*, is designed to help individuals master the detailed use of a common ruler (non-metric). Using only the commands available in 16K Color BASIC, we will create a slick program that not only quizzes these skills, but actually helps in the training and memorization required to use them.

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.

The Wish

Several years ago THE RAINBOW published a program by T. Gray called *Ruler Reader*. It was designed to help quiz the user on reading a ruler and measuring a randomly generated line on the screen. (Mr. Gray's program was based on another program called *King Komputer* by D.B. Allison in the April 1982 issue of *80 Micro* magazine.) The program was a real find for me, since I often spend much time creating from scratch most of the educational programs I need to use with my handicapped and special needs students. The students greatly enjoyed this ruler program.

There was one minor drawback to the program, however. The ruler drawn would only display a measuring stick with divisions down to an eighth of an inch. Since many of my students are involved in a graphic arts program, they are often required to have ruler reading skills down to one-sixteenth of an inch in order to accurately complete their tasks.

I resorted to making work sheets with an enlarged inch broken into 16 parts, all with the correct measurements written below. This proved to be very suc-

cessful, but many of my fellow instructors lamented the lack of a $1/16$ inch program like the one that THE RAINBOW had provided.

Therefore, the time had finally come to grant a new wish: Create a ruler program that would go down to one-sixteenth of an inch and that would not only quiz, but instruct on the various parts of the displayed inch.

The Program

The concept behind *Ruler Reading Skill* is simple. Using the low resolution graphics of the Color Computer, we create an enlarged view of one inch. I am partial towards using a completely black screen with programs such as this, using `CLS(0)`. Since the inch we draw is with white screen blocks, the black background helps to emphasize the actual divisions on the screen.

Using a set of `FOR/NEXT` loops and the `GET` command, we draw this large inch with subdivisions of $1/16$ displayed. A set of subroutines is also included to label each of these marking lines as needed. This is done using screen `POKEs` so we can have reversed numbers for our fractional markings. This helps keep the consistency of the black screen. (Naturally, these `POKEs` will cause prob-

lems for those who may wish to type this into the MC-10. More on that later.) The overall look of the screen is quite effective.

One very important feature I have included in this program is the rewrite of the INPUT command using INKEY\$, which I introduced several months ago. As I mentioned then, the major drawback to the INPUT command is that it reacts to the CLEAR key and thus wipes the screen clean of any work done by the user.

“One of the best features is the review section”

I am sure there are some memory POKES that disable the CLEAR key, just as there are for the BREAK key. However, there is another major advantage to using this variation of the subroutine mentioned. I have included some IF/THEN statements to have it ignore any useless keys on the keyboard. Since we only want to have our student pressing the numbers and the slash (/) to create our fractions, the letters on the keyboard have been ignored. This prevents the entry of an additional character.

For example, if the answer is $\frac{1}{2}$, the program would mark space $\frac{1}{2}$ as incorrect. The space bar is one of the keys ignored for this reason. All of our possible answers in the quiz section are stored in DATA statements as strings. Therefore, the string “ $\frac{1}{2}$ ” and “ $\frac{1}{2}$ ” would not be a match. This way, we avoid needless hassle, especially with some all-thumbs individuals.

Like the original ruler program, the screen gives a random length line that must be matched against the inch displayed. No value markings appear below the lines at this point. I have also taken great care to make the line and the markings on the screen large enough and close enough together so there will

be no question as to which marking the line is matching up with.

The user must enter the correct fractional length of an inch using the numbers and the slash mark. The ENTER key must be pressed to record the answer. If the answer is correct, the screen indicates so, and places the marking labels below each inch.

If the answer is incorrect, the screen says: SORRY! TRY AGAIN: and allows another try. On the third try, the screen displays the value markings of each line. At this point, the student should be able to get the correct response. If not, the screen displays the correct answer.

The program may be interrupted at any time by pressing the '@' key and the score is displayed. Continue the quiz part of the program by pressing 'C', rerun the program by pressing 'Y' for yes, or stop by pressing 'N' for no. If you are using this program with students, I would not show them the 'C' (continue) function right away or they will be checking their score after every single problem.

One of the best features of this program is the review section, which appears at the beginning of the program. As you may recall from previous “Wishing Well” articles, I have a special pet gripe against software that claims to be educational but does not teach anything. Many programs just quiz a skill rather than teach it.

The review feature allows the student to walk through the parts of the ruler as many times as needed to be familiar with the material. The student advances through the parts of the ruler by pressing the ENTER key. After the review is complete, the screen reads:

```
DO YOU WANT TO TRY AGAIN (Y/N)?
```

Pressing 'Y' repeats the review while pressing 'N' goes directly to the quiz. You may choose to skip the review part altogether.

MC-10 Changes

I have taken a little different approach this time for the MC-10 changes. If you want to type this in, make the following changes. First, leave out Line 160 and include the following lines in its place:

```
160 X$=INKEY$:MU=(-9999):IFX$
  =~R~THEN 170
161 IFX$=~Q~THEN500
162 GOTO160
```

Next, you must change lines 390-470 to adjust for the POKE variations on the screen locations. After each POKE we need to add MU+.

I have relisted them with the corrections included:

```
390 L=0:FORI=0TO18STEP4:L=L+2:PO
KEMU+1218+I,47+L:NEXT
400 L=0:FORI=21TO31STEP4:L=L+2:P
OKEMU+1216+I,49:POKEMU+1217+I,47
+L:NEXT
410 FORI=0TO31STEP4:POKEMU+1249+
I,45:POKEMU+1250+I,45:NEXT
420 FORI=0TO31STEP4:POKEMU+1281+
I,49:POKEMU+1282+I,54:NEXT:RETUR
N
430 L=0:FORI=0TO31STEP8:L=L+2:PO
KEMU+1316+I,47+L:NEXT
440 FORI=0TO31STEP8:L=L+2:POKEMU
+1348+I,45:NEXT
450 FORI=0TO31STEP8:POKEMU+1380+
I,56:NEXT:RETURN
460 POKEMU+1384,49:POKEMU+1400,5
1:POKEMU+1416,45:POKEMU+1432,45:
POKEMU+1448,52:POKEMU+1464,52:RE
TURN
470 POKEMU+1424,49:POKEMU+1456,4
5:POKEMU+1488,50
```

They are listed here in a 32-column format to help you out. You must add one more line as well:

```
35 MC=15360
```

This helps to ensure the screen POKES are correct.

Conclusion

The reactions of my students and fellow teachers have been very positive toward this latest Life Skills program. While the inspiration came from other programs, it remains unique in and of itself. I hope you find it useful.

Oops! Correction

Last month I offered a program to create educational plans. I recently uncovered a small quirk that occurs when you scan through all the objectives. The program appears to end if you go all the way to the last objective. This can be solved by including a DATA line reading:

```
4338 DATA ~THIS IS THE END OF
THE OBJECTIVES. RETURN TO
THE MENU.~
```

This solves the problem by giving you a chance to exit. I hope no one was stymied by this little bug.

Next Month

A surprise for the five-year anniversary issue! □

Introducing...

Telewriter-64 Character Set Editor
 Finally...A utility that allows you to customize the character set to your own specifications! Includes 3 new fonts (one with true descenders!), works with all versions. Written by TELEPATCH author Bob van der Poel.

Tape \$14.95 Disk \$17.95

Adventure In Mythology
 By Scott Cabit

An animated graphics adventure. Battle monsters and discover treasures as you assume the personalities of various heroes in ancient Greek mythology! You goal is to win the hand of the beautiful Atalanta, the swift-running huntress. But beware of the perils and obstacles that stand in your way as you journey through ancient Greece! Four-voice music and sound effects, automatic speech when using a Tandy SSC speech pak. Load and Save feature, over 250 locations. 64K Machine language.

Tape \$21.95 Disk \$24.95

Fighter Pilot

An original arcade game! Wave after wave of attacking aircraft attempt to shoot you down as you maneuver your fighter into the wild blue yonder, blasting enemy fighter, bombers, and paratroopers out of the sky. Joystick or keyboard operation. "pause game" feature. Disk version saves high scores. 32K, 100% Machine Language. See February '86 Rainbow for review.

Tape \$21.95 Disk \$24.95

Disk Utility Package

12 great disk utilities in one package! Includes Archive, Backup (35 or 40 track), Format (35 or 40 track...fost!). Find (searches file for a pattern, reports all occurrences). Compare (compares two disk files). Occount, and Menu (reads all disks in the system and displays a sorted directory from which to choose). 32K, one disk drive required. See February '86 Rainbow for review.

Disk \$19.95

The Andrea CoCo
 By Art Martin

Another great animated graphics adventure! All you came down to the Yacht Club for was to get a drink and maybe play a little poker. Heck, nobody would ever guess that the closest thing you owned to a real yacht was the one over your fireplace. It was in the bar that you heard rumors of earth-shattering events about to take place. You step out onto the wharf to get a little air when your natural curiosity and sense of adventure start to work...Can you save the world? Superb graphics, save & load feature. 64K, one disk drive required.

Disk \$24.95

Pumpman

You'll dig this 100% ML arcade game! The Pumpman carries a pump that he fires at aliens Pooky and Dragon as they change forms and chase him around underground. 15 different screens, "pause game" feature, bonuses. As fun and challenging as the original arcade game! 32K, one joystick required.

Tape \$21.95 Disk \$24.95

CGP-220 Screen Dump

A graphics screen dump utility for the CGP-220 Ink Jet Printer. Features include: Fast machine language, four-color and one-color versions, special CoCo Max version, user-selectable colors, regular or double-size printout. 16K.

Tape \$14.95 Disk \$17.95

H.D.R. SOFTWARE ENHANCE YOUR COCO!

Enhance your CoCo with THE ENHANCER. It gives you 26 user-definable "soft keys" of up to 50 characters each. It gives you upper- and lower-case characters and 128 special characters in a 32-by-24 high-res display. The Enhancer gives you Pascal-like procedures, keyboard auto-repeat and much more. The Enhancer smoothly complements your CoCo's vocabulary. It uses NO user RAM! The Enhancer requires 64K, extended BASIC and comes on disk or tape. It costs U.S. \$18.00.

See review in the May '86 issue of Rainbow Magazine.

TEXT PROCESSING POWER WITH TXEDIT

Why toy with other text editors? Get TXEDIT, the best word processor for the CoCo. Txedit uses the high-res screen to display true lower-case characters. It has graceful error recovery, and will retain all text even if you press RESET. It has powerful embedded formatting commands, including headers, footers, vertical and horizontal margins, page numbering, centering, right-justification, double-spaced printing, and any "special effects" your printer can handle. TXEDIT has a huge 47K text buffer. It is totally command-driven and user friendly — no more wading through endless menus. An online help screen is available to assist you. TXEDIT is lightning fast — it requires no slow disk "overlays." It takes less than 3 seconds to find a word at the end of a 17-page document! TXEDIT will work on a 64K CoCo with Radio Shack Disk BASIC (any version) and costs U.S. \$44.95.

The Enhancer Disk or Tape, 64K \$18.00
TXEDIT Disk only, 64K \$44.95

BASIC COMPILER

WASATCHWARE believes that users of the Color Computer deserve the right to use all 64k of RAM that is available in the computer, and have fast machine language programs that use the full potential of the 6809 microprocessor. That is why the BASIC compiler, called MBASIC was developed. Here are some of the reasons that make this compiler one of the best bargains in this magazine:

- Programs can use all 64k of RAM for either program storage or for large numbers of variables and arrays like A(20000)
- Full Floating Point arithmetic expressions with functions
- SUBROUTINE and CALL commands allows for structured programming and more independent program development
- Full sequential and direct access disk files allowed
- BASIC source and M.L. output I/O to disk, tape or memory

C-05, C-06, C-10, C-12, C-20, C-24, C-32

BUY THE BEST, AT FACTORY-DIRECT PRICES

From the leading supplier of Computer Cassettes, new, longer length C-12's (6 minutes per side) provide the extra few feet needed for some 16K programs.

- BASF-LHD (DPS) world standard tape.
- Premium 5 screw shell with leader.
- Internationally acclaimed. Thousands of repeat users.
- Error Free • Money back guarantee.

500 C-12's or C-10's — 38¢ each w/labels, add 4¢ • Shipping \$17/500
500 Boxes 13¢ ea • Shipping \$10/500 (Free Caddy offer does not apply)

CASSETTE STORAGE CADDY
Holds 12 cassettes \$2.95 w/ro boxes
Includes edge labels and index card

Quality Stationery for Personal Computers

CoCo Synthesizer Produces

Even if you don't know much about music, banging away on the keys of a piano can be a lot of fun. If you have always wanted to compose music, but didn't have an instrument or the time to learn how to play, now you do. The CoCo *Piano-Synthesizer/Composer* makes composing tunes easy. It turns the CoCo's keyboard into a piano keyboard, remembers the notes played and plays them back at any tempo you choose. It provides a powerful editor for correcting or altering the stored music data.

Martin and Jeremy Spiller are a father and son team from Shirley, Massachusetts. Martin is a dentist and enjoys programming in his spare time. Jeremy is 14 years old and hopes to own his own software company someday.

The CoCo piano allows you to save each composition on tape or disk, and to load them as stand-alone machine language programs that EXEC without the help of the BASIC language driver. Furthermore, it automatically creates PLAY statements complete with line numbers and stores them on tape or disk for merging into BASIC programs. This function is in addition to, and totally separate from, the ability to store the music as synthesized ML programs. You may reload your ML composition back into the BASIC editor at a later date and add to or edit the composition. Please note that the CoCo piano does not play chords, only single notes.

The CoCo *Piano-Synthesizer/Composer* can be programmed to sound like a wide variety of instruments (as well as non-instruments). It contains two envelope tables that can be programmed by

the user. With a bit of experimentation, it can sound like a jazz piano, an organ, an echo chamber or like no instrument ever heard before. You can toggle from one envelope to the other at any time while composing. This change is recorded in the musical data and, on playback, toggles a change to the other envelope. When the composition is saved, any changes made in the envelope tables are automatically saved along with the music data.

How to Use the Program

There are two separate program listings. The first one boots the machine language synthesizer into memory and saves it on tape or disk as *PIANO/BIN*. Line 2 of the booter contains checksums for each of the data lines. Provided all

Out-Of-This-World Sounds

By Martin and Jeremy Spiller

of the entries in Line 2 are correct, the program tells in which line you have made a mistake in typing the rest of the data statements. Do not renumber this program! If you get an error report and can't find the error in the line reported, check to see if the checksum in Line 2 is correct.

The second program listing is the BASIC language utility that allows easy management of the ML program. While keying it in, it is best to include only those spaces between commands that you see in the listing. We economized on memory to allow 16K users to use the piano, and extra spaces use extra memory. Save this program on disk or tape as *PIANO/BAS*. *PIANO/BAS* loads *PIANO/BIN* each time it is run, so both programs should be on the same disk or tape. Run the BASIC program. A

prompt asks if the ML program is to be loaded from tape or disk. Once the ML program has been loaded, the main menu appears.

Now press '1'. This puts you in the play/compose mode. Begin playing music and the computer stores the notes and their lengths. The length of the note depends mostly on the length of time your finger remains on the key. However, the program does record information on the length of time between keystrokes up to a maximum of one second.

In this mode, a text screen representation of the keyboard appears on the TV. The keyboard looks like a two-tiered organ keyboard. All of the keys in the second row and most of the keys in the bottom row are mapped to resemble the white keys on a piano. They are

each marked with the note that the key plays when depressed. The keys above them represent the black keys on the piano. Notice that some of the keys in the first and third rows are colored blue on the map. These keys produce no sound when pressed, and are not recorded in music memory. They represent sharps and flats that do not exist on the chromatic scale; their omission gives the keyboard the appearance of a piano keyboard.

Three octaves are represented, starting at middle C. They go from the up-arrow key to the 'Y' key, from the 'U' key to the right-arrow key, and from the 'Z' key to the '<' key.

Some of the keys are colored red — these are control keys. They are the CLEAR, ENTER, SHIFT, '?' and space bar. These can be pressed at any time while

in the play/compose mode. The SHIFT key exits the synthesizer and returns to the main menu.

In order to simplify playing the keyboard, consider using black-and-white self-adhesive tabs to cover the appropriate keys. These can be obtained at any stationery store. If you can't find these, try small pieces of colored electrician's tape.

Playing versus Composing

The machine code program was originally formulated to allow experimentation. The object was to allow the user to modify a pure tone by manipulating its volume over time. This is done by specifying the volume at discrete intervals in what is known as an envelope pattern. Some envelope patterns, such as the piano envelope, sound lovely if stretched out over a long period (a high envelope delay) and if played only once per key press. Others can give interesting effects if the delay is shortened and if the envelope pattern is repeated for as long as the key is pressed.

As the program evolved, however, the keyboard developed into a piano and we decided to store the notes and their lengths in memory. We discovered that when repeating patterns were used, memory filled up too fast. For this reason, we decided to allow composing

tion for composing. We have chosen an arbitrary envelope delay (representing tempo) of 1100, and a non-repeating piano envelope as default. Whenever a note key is pressed in the play/compose mode, note and length data is stored in memory whether you want to keep the

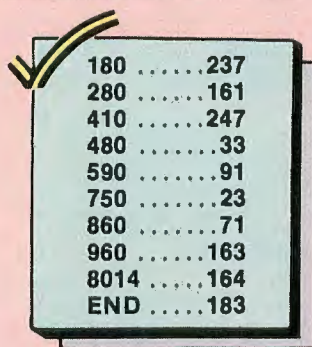

"It can sound like a jazz piano, an organ, an echo chamber . . ."

only in the non-repeating mode. While you get meaningful note data in the repeating mode, the length data may not be correct. However, even when using a repeating pattern, only one note byte and two length bytes are stored per key strike, so memory is conserved.

The program is configured at execu-

tion for composing. You will store meaningful length data as long as you do not switch to a repeating envelope pattern by pressing the space bar. If you mistakenly press the space bar, press it again to return to a non-repeating envelope pattern.

Now that you are in the play/com-

pose mode, go ahead and try playing some music. For 16K users, about 1,000 notes can be stored before running out of room; 32K users should be able to bang away for most of the day before hitting the top of RAM. If this happens, don't worry. The binary program checks to see if the limit has been reached and returns to the menu. Nothing has been lost, and you can still play back, alter and save the stored data.

Each time a note key is pressed, the CoCo remembers the note and the length of time your finger was on the key. It also keeps track of the time between keystrokes up to a second. If you are inexperienced and spend a lot of time looking for the next key to press, the program takes no notice beyond one second. For experienced piano players, the only problem is getting used to the keyboard itself. Remember that if you press a second key while the first is still pressed, there will be no response until you take your finger off the first key.

The Control Keys

Correction of mistakes in the play/compose mode is limited to the CLEAR key. Whenever this key is pressed, the last note played is eliminated. Pressing it twice or three times eliminates the last two or three notes played. The entire composition can be eliminated this way. Any notes eliminated are replaced with the next note keys pressed.

When you are finished composing and want to return to the main menu, simply press either SHIFT key. If you mistakenly exit the play mode, return to the same position in the composition by pressing '2' at the menu. Beware. If the '1' is pressed, the program assumes you want to compose a new piece and dumps any music already in memory.

The computer keeps track of pauses that last up to one second. This creates a problem with longer or multiple pauses that normally occur in musical notation. The ENTER key makes it possible to place pauses in the music. It

works the same way the note keys work. The pause lasts for as long as you press the ENTER key. During composition, this creates a high pitched noise that indicates something is being pressed. This noise does not occur on playback.

Of course, if you are only fooling around with the synthesizer and do not care about what is stored in memory, you do not need the pause button at all. You will, however, want to use the space bar. This control toggles between repeating envelopes and single envelope strikes. Remember that repeating envelopes do not give meaningful note length data and should be avoided when composing.

The final control key is the question mark-slash key. The synthesizer program contains two programmable envelope tables. The question mark key toggles between the two tables and allows playing of different parts of a composition with different sounding envelopes. Any time this control key is

pressed, a code is stored in the music memory that triggers a corresponding shift during playback.

Envelope Delay and Play Delay

How long is a whole note? The longest note stored in memory is a whole note and is proportional to the envelope delay. Press a note key in the default mode and listen carefully. The sound trails off to nothing. The length of time it takes for the sound to fade away totally is the longest note length stored in memory. Keeping your finger on a key longer does not lengthen the time between that note and the next during playback.

If you are playing a very slow tempo piece and need a longer whole note,

simply increase the envelope delay. If you are playing a very fast piece and want to hear more of a fadeoff during short keystrokes, shorten the envelope delay. It is best to alter the envelope delay before storing data to keep. A short keystroke with a long envelope delay causes the program to store only a part of the entire envelope. Increasing the envelope delay after the data has been stored lengthens the note, but it does not increase the proportion of the envelope played. The envelope delay may be altered from the main menu by pressing the "change tempo" option. Numbers between one and 65,535 will work. Try the default envelopes using an envelope delay of 500.

The play delay can also be altered

from the main menu by pressing "change tempo." While the envelope delay has an effect in both the play and playback modes, the play delay operates only in the playback mode. It accounts for a constant pause between notes when they are played back. It is included as a fine adjustment for playback timing. The default value is 50.

This is the first parameter to alter if the playback is too fast or too slow. Values between one and 65,535 are accepted. Small increases or decreases don't make much difference, so don't be afraid to change it by factors of 1,000. You may later the play delay or the envelope delay at any time, even after composing a piece. They do not affect the stored music data once it has been

placed in memory, but they affect the playback of that data.

Programming the Envelope Tables

Before programming an envelope, you must know something about synthesizing periodic sounds. The CoCo has no sound-generating circuitry. In order to produce sounds, the microprocessor must minutely manipulate the voltage output to the loudspeaker. (That it can do this quickly enough to produce a fantastic array of sounds is a testament to the extreme versatility of the 6809 and the Color Computer.)

In order to produce the sound of a particular instrument, most hardware synthesizers produce a particular sine wave electrical output varying between

zero and five volts. This pure tone is then modified to produce the same general pattern of electrical output as the sound output of the instrument it is trying to mimic. The unmodified sine wave produces a pure tone of a particular volume depending upon the maximum voltage allowed by the circuitry. The envelope modifications are mainly constraints on the volume of the sine wave over time.

To produce the sound of a piano, it begins with a maximum volume when the key is struck, falling off rather quickly at first and then more slowly until it fades out entirely. This is exactly what the CoCo *Piano-Synthesizer* does: It produces a square wave instead of a true sine wave, the maximum voltage of

which is controlled by the values in the envelope table.

Go back to the main menu and press '6'. When the prompt asks which table to use, press '1' and ENTER. Now remember what we said about the fast falloff and a gentle fadeout? The graph shown is the envelope used to produce the piano default sound. This envelope can be altered or a totally new one created by using the left joystick and firebutton. For example, position the cursor at the bottom left side of the screen and press the firebutton. The original point disappears and is replaced by the new one. Now move the cursor one position to the right and four above the one just set and press the firebutton again. Continue this process,

depositing points three or four higher in each succeeding position, until it reaches the top of the screen. Then, for the next cursor position, move the cursor to the bottom of the screen and repeat the same process.

Do this until you reach the last cursor position on the right. You have created

effect. When you are finished creating the envelope, press any key to return to the menu.

Now try playing any selection still in memory. If there is no stored data, just play something from the compose mode. Try changing the tempo. Type in an envelope delay of 100. Press '1' at the

you can type in literally any envelope pattern wanted, the best ones follow a pattern. Each succeeding value should bear a rational relationship to its neighbors rather than being a random scattering of points. Maybe the points follow some sort of curve, or a pair of curves. Maybe every third point is offset from the curve by some fixed amount. The possibilities are endless, and when combined with various envelope delays and repeating patterns, quite a collection of different sounds can be created. Both envelope tables are programmable. An organ-like effect can be produced by using an envelope that is a straight horizontal line at the top of the screen.

For those interested in experimenting with sound, try a rational envelope

"Each note is represented in memory as three data bytes."

a series of upward sloping lines. To be really fancy, make the top of each succeeding line several positions lower than the last one to create a trail-off

menu and get into play mode. Play a few notes and then press the space bar. Now play the same notes over. Interesting!

A word about coherent values. While

using very short delays (say 50) and a repeating pattern. Note that different keys vary in tonal quality as well as in pitch. The reason for this involves the interference patterns produced as the envelope delay gets nearer to the frequency delay (the delay used to produce the desired pitch). You may hear different "beat frequencies" with different keys.

Saving and Loading Compositions

Once you have composed and perfected the music, *PIANO/BAS* provides the means to save it on disk or tape. This is done from the menu and is self-prompting. It is saved with any altered envelope tables, envelope delay and play delay that are *POKE*d in while composing, so each composition has its own unique sound. You do not have to run the BASIC driver in order to play the music. Just *LOADM* or *CLOADM* whatever filename is used to store it. Then type *EXEC* and the piece plays.

If it needs further editing, run the BASIC driver and load the previously stored piece from the menu. Add to it, change the envelopes, the delays, or alter the note data and then resave the changes.

The Editor

We have done our best to confine the BASIC program in order to allow 16K owners to use the piano. The editor is simple, but adequate for manipulation of program data. It windows any 15-note segment of your composition, and allows replaying any part of that segment from the beginning to the cursor position.

Play something from the compose mode and press '9' at the main menu. The first column on the left is the note position. It starts at zero and increments for each note in the composition. The other columns represent actual note data. Each note is represented in memory as three data bytes. The second

editor column translates the first data byte into an octave and a note. The third column contains the note length. These numbers go from one to 32; 32 is the longest note played. (If most of these numbers are less than 15, you might consider resetting the envelope delay to a smaller number and replaying the piece. That way, more of the envelope is heard during each keystroke.)

The last column is the pause interval that keeps track of the time between keystrokes. It is a number between one and 255. The higher the number, the longer the pause. This pause is not to be confused with the pauses intentionally placed in the data by pressing the *ENTER* key. Those pauses are stored just like any other note, with a note length and an interval pause.

The cursor can be moved up or down by pressing the appropriate arrow keys. Notes may be changed, inserted or deleted by positioning the cursor at the note position to be changed or deleted.

'KEEP-TRAK' General Ledger Reg. \$69.95—ONLY \$24.95
"Double-Entry" General Ledger Accounting System for home or business: 16k, 32k, 64k. User-friendly, menu-driven. Program features: balance sheet, income & expense statement (current & 'YTD'), journal, ledger, 899 accounts & 2350 entries on 32k & 64k (710 accounts & entries on 16k) (disk only). Version 1.2 has screen printouts. Rainbow Reviews 1.1 - 9/84 : 1.2-4/85

"OMEGA FILE" Reg. \$69.95—ONLY \$19.95
 Filing data base. File any information with Omega File. Records can have up to 16 fields with 255 characters per field (4080 characters/record). Sort, match & print any field. User friendly menu driven. Manual included (32k/64k disk only). Rainbow Review 3/85, Hot CoCo 10/85

BOB'S MAGIC GRAPHIC MACHINE
 Can generate BASIC code to use in your programs. Easy drawing and manipulation of circles, ellipses, boxes, lines and ARCS. Single joystick operation with on line HELPS at all times. Allows text on the graphics screen & movement of objects on the screen. Can be used as a stand-alone graphics editor. Instruction Manual. **GRAPHICS EDITOR Reg. \$39.95—ONLY \$19.95** for disk or tape. 64k ECB. Rainbow Review 7/85, Hot CoCo 9/85 *"The graphics bargain of the year"*

'KEEP-TRAK' Accounts Receivable. (Avail. 10/01/85).
 Features: auto interest calculation, auto ageing of accounts, installment sales, total due sales, explanation space as long as you need, detailed statements, 'KEEP-TRAK' General Ledger tie in, account number checking, credit limit checking & more. User friendly/menu driven. Includes manual. **\$39.95** or **\$49.95** General Ledger & Accounts Receivables. (Disk Only).

'COCO WINDOWS' Available 10/31/85
 With hi-res character display and window generator. Features an enhanced key board (klicks) and 10 programmable function keys. Allows the user to create multiple windows from basic. Includes menu driven printer setup and auto line numbering. Four function calculator. with memory. The above options can be called anytime while running or writing in BASIC. **APPLE PULL YOUR DRAPES, YOU DON'T WANT TO SEE THIS. \$19.95** (disk or tape) includes manual.

THE OTHER GUY'S SOFTWARE (Add \$2.50 for postage & handling)
 P.O. Box H, 55 N. Main C.O.D., Money Order, Check in U.S. Funds
 Logan, UT 84321 (801) 753-7620 (Please specify if J&M controller)

Insertions occur at the cursor position, and the remainder of the composition is moved one position higher in memory. Inserting and deleting may take some time in long compositions since the entire data array above the cursor position must be relocated, and this relocation is done from BASIC.

Insert intentional pauses by typing PAU in place of a note. Pauses are like any note in that you must specify a note length and pause length. An envelope table switch may be inserted by typing ENV.

For the inexperienced piano players, we have included an option that allows the user to change both the note lengths and interval pauses en masse. Pressing '9' while in the editor allows you to specify numbers that are automatically inserted into all note positions from the top of the screen to the cursor position. Since any note position can be specified as the first note in each segment (the top of the screen), you can make large-scale changes in tempo or timing with reasonable precision.

Assembling PLAY Statements

Pressing '8' at the main menu causes the computer to build BASIC PLAY statements. These are assembled directly to disk or tape as a BASIC program

complete with line numbers. Load them and type RUN to hear them. Those with disk drives can merge them into their own programs after adjusting the line numbers using Extended BASIC's RENUM function.

Line 5 is a tempo line. This line may be altered to speed up or slow down the playback. Since these are run from BASIC without the help of the ML synthesizer, envelope changes are ignored. (Actually, there is a way to get a "pseudo envelope" in BASIC. Those interested should contact Jeremy Spiller for information on how to obtain the program for this.) The PLAY statements offer another method of editing compositions as they can be manipulated using Extended BASIC's editing functions.

Tuning Your Piano

While we feel reasonably competent to write computer programs, neither of us play the piano, nor do we even know much about music. We tuned the piano by ear and if you can do better, give it a shot. The key table is located at &H3180. The assembly listing shows it from lines 16100 to 31300.

Look carefully at the assembly listing. Each key is represented by three bytes. The name of the key is com-

mented to the right of its first byte. (Don't confuse these with the three data bytes stored in memory while composing. These begin at &H334C.) The first two bytes are the frequency delays and these account for the pitch of the key. The third byte is the note "name" and is the value stored in the first of the three data bytes while you are composing. The higher the frequency delay values, the lower the sound produced by that key. Note that in most cases, both delay values are the same. Keeping them equal or close to equal keeps the wave square.

The wave shape could be altered toward triangular by drastically reducing one while increasing the other. The wave doesn't have to be square. The delay values can be from one to 255. To sharpen the sound of a key, locate that key in the comment column of the key table and reduce the numbers in the frequency bytes. (The actual memory address is the hexadecimal number in the column farthest to the left in the assembly source code listing. As an example, to sharpen the sound produced by the BREAK key, POKE numbers lower than 52 into addresses &H3216 and/or &H3217.)

To lower the entire keyboard an octave, POKE higher numbers into the

frequency bytes of all the keys in the table. Do this by trial and error, sharpening or flattening each position until it sounds right. Once you get the table the way you want it, play a tune and save it as *PIANO/BIN*. Then, whenever

"The editor is simple, but adequate . . ."

you run the BASIC driver, it automatically loads the modified tables and becomes the new default. Have fun!

Key Memory Addresses

- &H3000 Execution address of play/compose segment.
- &H325A Execution address of playback segment.
- &H330D and &H330E LSB and MSB of address of last note played. POKE another address here to end playback at another note position.
- &H334C Address of first note of compositions.
- &H3262 and H3263 Holds LSB and MSB of address of first note played (usually holds &H334C). POKE another address here to begin playback at another note.
- &H3180 First byte of key table.
- &H3219 First byte of envelope Table 1.
- &H323A First byte of envelope Table 2.
- &H317E and &H317F Holds top-of-RAM (&H7F80 in 32K systems).

(You may direct questions about this program to the authors at RFD 1, Box 504, Shirley, MA 01464, phone 617-448-2681. Please enclose an SASE when writing.)

UNIVERSAL VIDEO DRIVER

IT'S THE BEST!!!

Great Price! Only \$29.95

Carefully engineered to work with ALL Color Computer models including the newest COCO II. Enables your COCO to operate with a video monitor instead of a television.

- Works with monochrome monitors!
- Works with color monitors!
- Audio Connection included!
- Easy installation—no soldering!

QUALITY VIDEO MONITORS

Sakata SC-100 - Streamlined 13" composite monitor. Sharp, brilliant colors. With speaker and earphone jack. **\$199.95**

CGS Amber Screen - High quality 12" monitor. Attractive off-white cabinet with tilt/swivel base. **\$119.95**

Zenith Amber - Excellent performance... Zenith quality. 12" Screen. A Real Bargain. **\$99.95**

Order a quality monitor from us and get a Universal Video Driver for only \$24.95 — Save \$5.00.

GRAFX SCREEN **NEW!!**

Versatile new screen dump software for your Star compatible printer. Print horizontal or vertical, image magnification, positive or negative and more! **5 1/4 Disc ONLY \$14.95**

PRINTERS

NEW Star SG-10 model printer
120 cps w/true descenders,
2K buffer, proportional spacing.

FREE GRAFX SCREEN
Software with your printer.

star

ONLY \$249.95

SERIAL TO PARALLEL PRINTER INTERFACE

300 to 9600 baud. Complete with all cables and connectors.

Only \$49.95

NEED MORE MEMORY? 64K Memory Expansion Kit

All parts and complete instructions (for 'E' and 'F' boards and Coco II).

NOW ONLY \$19.95

DISC DRIVES

- Teac 55B DSDD Drive **\$119.95**
- J&M JFD-CP Controller with DOS **139.95**
- Dual cabinet, power supply holds 2 horizontal 1/2 height drives **79.95**
- Drive one upgrade for new Tandy dual horizontal cabinet **119.95**
- Disc drive cable **24.95**
- Radio Shack DOS Rom 1.1 w/manual **29.95**

SPECIAL DISC STORAGE

Attractive, heavy duty acrylic case with lock. Holds and protects 50 5 1/4" discs with five moveable indexed dividers.

SUPER BARGAIN ONLY \$9.95

Purchase this attractive storage case including 10 discs for \$21.95.

COCO UTIL II — NEW VERSION

Transfer Coco disc files to your IBM compatible computer. You may also transfer MS-DOS files to a Color Computer disc. Save hours of retyping. Coco Util has been so popular we decided to make it even more powerful and versatile... extended directories, faster, improved menu selection system and more!

\$39.95

Coco Util users upgrade to the new version for only \$12.95 including shipping and handling.

PCX-II Computer

TOTAL IBM PC-XT COMPATIBILITY AT SENSATIONAL PRICES!!!

Don't settle for a Tandy 1000 or other standard PC until you check our performance and prices.

Starting at only \$685.00

Hard Drive Systems	As low as \$520.00
Hayes Compatible Modem	
300/1200 baud	189.95
Color Graphic Board	84.95
Floppy Controller	49.95
IBM Compatible keyboard	From 69.95
Multi-function board	124.95
(1 serial port, 1 parallel port, 1 game port, real time clock, up to 384K).	
Parallel printer cable	24.95
Serial printer cable	24.95
135 Watt IBM-type power supply	99.95
IBM PC-XT compatible mother board	From 159.95

We use and recommend the following excellent software.

DAC — complete accounting system for IBM compatibles. General ledger, receivables, payables, inventory.

An unbelievable bargain at ONLY \$69.95.

DBASE III — Ashton Tate's powerful database management system. **ONLY \$389.95**

THE TWIN — Works exactly like Lotus 1-2-3. Excellent users manual. **An outstanding value ONLY \$145.00**

VP PLANNER — Another Great Lotus 1-2-3 Look Alike. **\$89.95**

FREE! Mark Data Products popular accounting system - with a PCX-II computer purchase.

IMPORTANT!

We maintain a library of quality public domain software for purchasers of our computer systems — text processor, data base manager, spread sheet, communication, utilities and entertainment software. Call for details.

FOR THE SERIOUS COCO USER

- Accounting System** - very popular ledger system for small businesses. **\$99.95 disk**
- Order Entry** - an excellent companion to the accounting system **\$99.95 disk**
- Easy File** - get organized with this user friendly data management system **\$59.95 disk**
- Super Screen** - Best screen enhancement program available. **Cassette \$29.95 Disk \$32.95**

DISCS • CASSETTES • ROMS

5 1/4" discs, double density, reinforced hub w/sleeve, guaranteed. **\$12.95 for 10 discs in an attractive storage box.**

- C-10 Cassettes w/labels **10 for \$5.50**
- Cassette storage box **10 for \$2.00**
- Basic 1.2 ROM **\$39.95**
- Extended 1.1 ROM w/Manual **\$49.95**

CyberTank

About The One-Liner Contest . . .

THE RAINBOW'S One-Liner Contest has now been expanded to include programs of either one or two lines. This means a new dimension and new opportunity for those who have "really neat" programs that simply just won't fit in one line.

Here are the guidelines: The program must work in Extended BASIC, have only one or two line numbers and be entirely self-contained — no loading other programs, no calling ROM routines, no poked-in machine language code. The program has to run when typed in directly (since that's how our readers will use it). Make sure your line, or lines, aren't packed so tightly that the program won't list completely. Finally, any instructions needed should be very short.

Send your entry (preferably on cassette) to:

THE RAINBOW One-Liner Contest
P.O. Box 38
Prospect, KY 40059

Submitting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

Program submissions must be on tape or disk and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs. All programs should be supported by some editorial commentary explaining how the program works. Generally, we're much more interested in how your submission works and runs than how you developed it. Programs should be learning experiences.

We do pay for submissions, based on a number of criteria. Those wishing remuneration should *so state* when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submissions Editor, THE RAINBOW, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. We will send you some more comprehensive guidelines.

Please do not submit programs or articles currently submitted to another publication.

DeskMate® 7-in-1 software makes your Color Computer better than ever.

Now our popular DeskMate® software is available for disk-based Color Computers! DeskMate (26-3259, \$99.95) features seven popular personal-productivity programs—all on one disk!

A general-purpose *TEXT* entry and editing program performs search and replace, file merge and block select, copy and delete. It's ideal for writing correction-free letters, memos and short reports.

A simple spreadsheet program includes an easy-to-use menu and automatic column formatting. You can use *LEDGER* to do budgeting, sales forecasting, profit-and-loss projections and other "What if...?" calculations.

A four-color picture editor lets

LEDGER

you create lines, shapes, patterns, fills in areas with color and enter text. Using *PAINT*, you can create colorful charts, graphs, designs and "doodles" on your screen, then print a copy on a dot-matrix or ink-jet printer.

The *INDEX CARDS* personal filing system lets you enter and edit data and perform simple sorts and searches. It's ideal for keeping track of names and addresses.

INDEX CARDS

TELECOM

TELECOM, a communications program lets you access national information services, plus transmit and receive files from other computers by phone (requires modem).

A simple monthly calendar program displays "to do's" for any date. *CALENDAR* is an easy way to organize your work day.

TEXT EDITOR

A four-function *CALCULATOR*, with memory, is also available within any application without interrupting the screen in the program you are currently using.

If you don't already have a disk drive for your color computer, you can add one for just \$299 (26-3131). The 5 1/4", thinline floppy drive plugs into your Program Pak® port for over 156,000 characters of storage. Add a second drive at any time, too.

Enhance Presentations with Text Panel Formatting

By Joseph Kolar
Rainbow Contributing Editor

Now hear this! I have developed 20 tutorials using Hi-Res graphics for the 16K ECB CoCo. Before presenting this 20-month series, I invite all interested readers to make their wishes known. Drop me a line and register your vote. Would you prefer that we continue our leisurely stroll through BASIC? Or would you like to settle in for a long session with Hi-Res graphics?

Our agenda for today is the text screen and how to format text panels in an interesting manner to enhance their presentation.

In many educational programs, text must be used extensively to explain or develop a theme. It behooves the novice programmer to make the text on the screen as appealing as possible. About two years ago, I presented a tutorial on this subject. To the newer readers of this column, what you learn here will stand you in good stead.

Hint for today. When keying in program lines, look at the TV/monitor screen and watch the characters appear

Florida-based Joseph Kolar is a veteran writer and programmer and specializes in introducing beginners to the powers of CoCo.

as they are typed in rather than looking at your fingers. You will find that typing errors can be spotted as they are committed and can be corrected before completing the program line. There are two advantages to this: You will gradually develop a touch-typing system as you are weaned from being mesmerized by the keyboard and it eliminates a lot of errors before pressing ENTER.

When the program is run it may not produce an error message. It may carry an embarrassing misspelling in an otherwise impeccable program. When it is discovered, creative time is wasted searching out the right program line, correcting it and running the program to verify the correction. It is difficult enough to program without the bother of debugging silly spelling errors.

The veterans may want to skip Listing 1 and Listing 2 because they are old hat. Newcomers, key in Listing 1, carefully typing in the lines as they appear in the listing. Run the program. Press any key to advance. Faithfully follow the instructions. Perform all actions called for enclosed in brackets. If you skip over parts of the text/instructions, you will not get the entire picture.

Once this tutorial is completed, Line 2000 is altered. Refer to the listing and

restore the line to its original condition.

In the educational program that we are going to develop in the next few months, we will be doing a lot of programming directly from the screen. Understanding how to format text and position a sentence(s) on the screen so it doesn't look disjointed or unbalanced is important. It's imperative that you practice programming sentences to make neat, well-placed text for display on the screen or you may encounter trouble later.

Long REM statements in a listing should be formatted with a different view in mind. REM statements are dormant during the execution of a program. When they are revealed in the course of listing a program, they must be neat, logical and readable just as text lines on the screen.

Forget the "invisible vertical line" gambit. Look at the screen and compose, alter and adjust the REM statement lines so they are instantly recognizable and readable.

Key in Listing 2. When finished, list it line by line, beginning with 3000 through 3080. The listing is the tutorial! Those who know how, may want to append Listing 2 to Listing 1.

Listing 3 is practically one giant

GOSUB program. It could have been divided further, but after a point too many GOSUBs can be counter-productive. Aside from the usual one-panel-at-a-time presentation of text on the screen, we will demonstrate scrolling, simple substitution and complex substitution methods.

Key in Listing 3. Line 10 demonstrates the usual panel replacement method (Lines 100-101, 110-111, 120 and 122).

The panels of text must be carefully crafted to fit in the available screen space. This means the contents of each panel may have to be revised. (Add a few words or delete a few words.)

Beginning with Line 123 and continuing through Line 128, the program changes to the scrolling method. Each set of definitions is scrolled upwards. Note that each set covers about one-half of the screen rows to maintain a nice, two-set display at all times.

The columns in each set created were based on one of the techniques in a tutorial we discussed a few months ago. It should be familiar, so we won't beat it to death. Here is a question to ponder — Why are there four commas after "red" in Line 123 rather than three commas after "English" in Line 122?

The languages in column one are Germanic and those in column two are Romance. It is easy to spot the similarities in the words in the two columns. Examine the "black" set. The three Germanic definitions are very closely related, as are the three Romance ones. They are called cognates; words that are linguistically related and that may have a common origin. The obsolete English word for "black" is "swart," which exists today in "swarthy." The progenitor of the Romance languages is Latin, while that of the Germanic trio is a hypothetical proto-Germanic language. "Black" is related to an old Anglo-Saxon form of unknown origin.

The simple substitution method can be observed in the text presentation in lines 20 and 30. Here the panel remains in place. The definitions are replaced simultaneously as one unit. Line 120, on the top half of the screen, briefly comments on the word lists to be depicted.

The bottom half of the display panel uses the same group of GOSUBs that were used in Line 10 to create the combo panel replacement and scrolling method. Note that in Line 20, PRINT@ ,255,"" becomes GOSUB200 in Line 30.

In order to utilize the same GOSUBs, we decided to print "nothing" in the last space on the right-hand side of the row above our starting row (beginning at space 256). The idea is to maintain the integrity of GOSUBs 122 through 128 and to maintain the same vertical location at all times. Also, the text on the top half of the screen is not partially scrolled up and off the screen. The PRINT@ allows us to designate the location of a GOSUB statement without altering its contents, which ends it effectively as a GOSUB.

Change the first 255 in Line 20 to 256 and you see how it ruins an effect we tried hard to achieve.

Line 40 uses the complex-substitution method. If you want sound, turn up the volume.

Line 300 sets the values for the location of the seven entries that will be substituted, one at a time, in each set. X\$ is used as a blanking-out string variable.

Line 301 sets up the abbreviations that will remain in place throughout this program segment.

Line 303 locates and prints the "red" set. Between each PRINT@ word, there appears a slight pause and a sound, courtesy of GOSUB400. Note the ';' after the entries that contain 'B', 'D' and 'F'. They are required after the left-hand column. If they are omitted, the right-hand column is wiped out, losing the abbreviations that were meant to remain undisturbed.

Line 305 blanks out the definitions and pauses for two seconds.

Note that lines 303 and 310 end with EXEC44539:GOSUB305:RETURN. It waits for a key to be pressed, blanks out the definitions and returns. The temptation was too great to resist. A GOSUB500 was created to continue this program.

Line 99 was a temporary stop that became dormant once the program, (lines 10 through 40) was finished and a loop to repeat (Line 50) was added.

Line 399 ends the program abruptly and keeps the sound (GOSUB400) separated from the complex substitution segment. Delete or mask Line 399 with a REM and see what happens!

After CoCo runs through the complex substitution sets, instead of coming to the intended screeching halt, it goes berserk and makes three ever-decreasing loops encompassing white-yellow-green, yellow-green and green, before going back to the start of the program.

Obviously, CoCo is innocent. There is a hidden semi-error in the listing that is suppressed when 399 GOTO 399 is used. Guess who made the error. Can you track it down and save my day?

TRON and TROFF, the debugging aids, are often both useless and confusing in a large program. Listing 3 is ideally suited to try out the TRON feature of ECB.

Press BREAK, type in TRON, press ENTER and RUN. You'd think this program was made to order to demonstrate

"If it works, don't fool with it!"

TRON. Each number enclosed in square brackets gives the program line number that is executed.

If you follow it slowly, you will be able to determine at what point I caused CoCo to veer from the straight and narrow. It will nudge you toward the error(s). Put on your thinking cap and locate the mistake(s).

Sometimes, as happened in this program, it is possible to create a viable program with a submerged, latent error that is not readily apparent. If this program is enlarged and altered to head in a new direction, the error can surface and force you to cope with it. My motto is, "If it works, don't fool with it!"

With the TRON on, note that lines 10 through 40 are not displayed. Rather, all the GOSUBs are nicely labeled. Lines 200, 300, 301 and 400, which remain set at some point in the program, are in a stationary location. This is particularly obvious in the complex substitution segment.

Program lines that do nothing are not noted, such as locations that are not executed. Only that which is in the location is executed.

Work through Listing 3 with TRON and compare each bracketed number with the listing line number. You will find it helpful and enjoyable to romp through the program with CoCo. If you find the mistake, good. If not, have fun exploring this debugging tool anyway, and when finished, remember to pluck the REM out of Line 399 and get out of TRON mode with BREAK, TROFF and ENTER.

Everytime you turn on CoCo and program, you are having a learning experience. Enjoy it! □

ANALOG AND DIGITAL I/O PORT KITS

Parallel 8 bit input & output for your CoCo, and Models 1, III, 4.

• MODULAR DESIGN FOR ADDITION OF MULTIPLE PORTS
I/O PORT KIT INCLUDES...

4.5" x 6" Printed circuit board; All components; Cable (Plugs To CoCo Adapter)
Diagnostic software listing (BASIC); and Manual. (Requires 5V 100 ma supply)

I/O port kit (J107K)	\$35
A-D/D-A Interface (J202K)*	\$35
CoCo Adapter-required for CoCo (J110K)	\$15
5 Volt Power Supply (D100K)	\$25
Relay Array Kit (J027K)	\$32

*requires J107K I/O Port kit

COMPLETE SYSTEMS

DIGITAL MEMORY SCOPE—Converts the CoCo TV display into an oscilloscope screen. (S101M)	\$189.00
DIGITAL RECORDER and DELAY—Record and play back audio signals up to ten seconds. (S102M)	\$178.00

CoCo Takes the Plunge: Pool Maintenance Made Easy

By Stephen Snider

Swimming Pool Maintenance is a program to give the new pool owner a helping hand in maintaining proper pool conditions. Although new owners will get the most benefit from this program, experienced owners can also find useful information.

The program is menu driven and user friendly. It runs on a 16K Extended BASIC computer. On initialization, the menu gives several choices:

1) Calculate Pool Size in Gallons — This information is needed in the next section. It calculates the size of either rectangular, oval or circular pools.

2) Adjust Chlorine Level — This section asks for the pool size in gallons, air temperature, water temperature and chlorine test results. It then determines the proper amount of chlorine to be added to bring it up to the desired level. It calculates the proper level for either stabilized or non-stabilized pools.

The calculations are taken from manufacturer's specifications. It may be necessary to adjust the results to individual circumstances discovered by

daily testing. If the test results are high from day to day, then less chlorine needs to be added. Once a regular pattern has been established, this section will probably not be needed.

3) Adjust PH Level — This section asks for the results of the PH test. It then gives the chemicals needed (if any) to obtain the proper level.

4) Winterize Pool — This section is a data section only. It gives instructions to properly winterize the pool. It also gives additional suggestions on optional equipment to help minimize problems during the winter.

5) Open Pool — This is also a data section. It gives the proper procedure to open the pool at the beginning of swimming season.

6) Pool Problems — This section presents a menu of various pool problems that you might encounter. It lists the probable cause and one or more solutions.

I think pool owners of all kinds will find this program very useful. If you require any assistance, please contact me at P.O. Box 234, Energy, IL 62933. Please enclose an SASE. □

Now! 500 new programs for the Tandy 1000!

For Your TRS-80 Color Computer

Apple - Atari - Commodore - TRS 80 I, III, 4 & Color - IBM PC Jr. - Tandy 1000

New Educational Programs for Grades K-12 and Adult Self-Studies

32 Programs Now Available on Disk for TRS Color Computers

Interactive Tutorial Programs for Home or Classroom Use

Over 1000 programs for your selection with 32 now available on disk for the Color Computer and 500 now available for the Tandy 1000.

"We're Your Educational Software Source"

Subject	No. of Programs
Reading Development	256 (4 on disk)
Reading Comprehension	48 (4 on disk)
Mathematics	128
Algebra	16 (16 on disk)
History	32 (4 on disk)
Spelling	16
Government	16
Physics	16 (4 on disk)

16 Programs in each of the following:

Children's Tales - Carpentry - Electronics
Health Services - Office Skills - Statistics
First Aid/Safety - Economics - Business
Accounting - Psychology - MUCH MORE!

Send for our free catalog of over 1000 Dorsett educational programs for Atari, TRS 80, Apple, IBM PC Jr., Commodore, Tandy 1000, etc.

Apple II, TRS 80 I, III, & 4, and Commodore 64 computers require respective conversion kits (plug-in board and stereo cassette player), \$99.00. Atari 400/600/800/1200 computers require the Atari cassette recorder and the Dorsett 4001 Educational Master Cartridge, \$9.95. For the IBM PC Jr. a cassette adapter cable and a good cassette recorder are required. The Tandy 1000 requires the Dorsett M1001 speaker/PC board kit, \$69.00, and a standard cassette recorder. A Radio Shack CCR-81 or CCR-82 is recommended.

CASSETTES: \$59.90 for an album containing a 16-program course (8 cassettes with 2 programs each); \$8.80 for a 2-program cassette.

DISKS: \$14.95 for a one-program disk; \$28.95 for two disks; \$48.95 for four disks. All disks come in a vinyl album.

Dealer Inquiries Welcome

Dorsett Educational Software features:

- Interactive Learning
- User Friendly
- Multiple Choice and Typed
- Program Advance with Correct Response
- Full-time audio narration (Cassette Programs Only)
- Self Paced Study
- High Resolution Graphics
- Easy Reading Text

Help Us Battle the High Cost of Disk Drives

**NOW . . .
V-PRINT**
A utility to print
directory on paper
\$9.95

New Lower Price Un-DISK Drives ~~\$49.95?~~ **\$34.95**

You Bet! There are empty spaces in your 32K and 64K CoCo. The Preble VDOS Un-DISK helps you fill them up with PROGRAMS!

- Un-DISK uses your computer's extra memory like a fast disk drive.
- Un-DISK can store BASIC and MACHINE LANGUAGE programs.
- Un-DISK is INVISIBLE. Yup! Un-DISK does not interfere with normal Color Computer Operation.
- Un-DISK appears only when you type the magic word VDOS.
- Un-DISK comes with comprehensive instructions which you may not need because:
- Un-DISK is self-prompting and easy to use!
- Un-DISK is provided on cassette.
- Un-DISK is faster than a slow clumsy DISK DRIVE and best of all . . .
- Un-DISK is CHEAPER than a DISK DRIVE!
- Un-DISK will work even if you already own a disk but WHY BUY A DISK AT ALL?
- Un-DISK should be in the library of every serious CoCo user even if you own a disk says Frank J. Esser, independent reviewer for RAINBOW Magazine!

OK sure, disk drives ARE NICE. I own one. But if your finances are limited, the Un-DISK can give you much of the power of the mechanical drive. Even if you already own a disk the Un-DISK can work like a super fast extra disk.

EXTRA . . . EXTRA . . . EXTRA . . . EXTRA . . . Additional Power For \$14.95

Only with VDUMP for the Un-DISK!

- VDUMP lets you make a cassette backup copy of everything stored in the Un-DISK.
- VDUMP lets you save 5, 10, 15 or more programs on a single cassette tape file.
- VDUMP lets you switch Un-DISKs. With a single load operation replace a group of financial programs with a set of children's programs. (The new VDUMP tape overwrites the old.)
- VDUMP can allow you to save a whole lot of RAINBOW ON TAPE in a SINGLE file.
- VDUMP is the perfect companion to the Preble VDOS Un-DISK.

Available from Doctor Preble's Programs, naturally! Bringing you fine Color Computer Products Since 1983!

The Preble VDOS Un-DISK **\$34.95**
The Preble VDUMP \$14.95
Shipping & handling
U.S. and Canada \$1.50
or \$5.00 to other foreign points

Dragon's
WORD PROCESSOR 2.2
TAPE OR DISK VERSION

A feature packed program that turns your CoCo into an office machine. Create and save letters and documents with the Word processor tailored for the NX-10.

COMPLETE NX-10 PRINTER SYSTEM

- 5K BUFFER • IMPROVED NLQ • QUAD HIGH & WIDE PRINTING • EXTENDED CHARACTER SETS • 10 INTERNATIONAL FONTS • IN-THE-CASE ADJUSTABLE TRACTOR • REVERSE LINE & FORM FEEDS • 120 CPS (DRAFT) 30 CPS (LQ) • FONT CONTROL & MARGIN CONTROL FROM CONTROL PANEL • 1 YEAR WARRANTY SERVICEABLE NATIONWIDE • AUTOMATIC LINE CENTERING • LEFT OR RIGHT HAND JUSTIFYING • SINGLE SHEET PAPER FEED • 7 GRAPHICS MODES

COMPLETE SYSTEM

NX-10 • BLUE STREAK II • SUPER GEMPRINT
TYPE SELECTION/TUTORIAL • WORD PROCESSOR 2.2

\$309⁹⁵

+ \$10 Shipping
and Insurance

BLUE STREAK II SERIAL TO PARALLEL INTERFACE

- RUN COCO I or II to PARALLEL PRINTER
- HIGH QUALITY TOGGLE SWITCH ELIMINATES CABLE SWITCHING
- 300, 600, 1200, 2400, 4800, 9600 SWITCHABLE BAUD RATES
- AC POWER OPTIONAL-NOT NEEDED WITH NX-10 PRINTER
- COMPLETE WITH ALL CABLES AND CONNECTORS
- THRU-PUT EQUIVALENT TO BUFFERED INTERFACES
- 1 YEAR WARRANTY

\$54⁹⁵ SHIPPING
PAID!

SUPER GEMPRINT

A FULL
8" x 11"
SCREEN DUMP PROGRAM

- Prints all 5 Primitives
- Machine language position independent code
- Tape transferrable to disk
- Requires 16K extended color basic

WITH USER
DEFINABLE

RECEIVED & CERTIFIED

The following products have recently been received by THE RAINBOW, examined by our magazine staff and approved for the *Rainbow Seal of Certification*, your assurance that we have seen the product and have ascertained that it is what it purports to be.

This month the *Seal of Certification* has been issued to:

Car Dealer Assistant, a financial utility program designed to provide car dealers with an efficient way to figure four "what if" computations for use in negotiating, insurance calculations, rolling of all amortization variables, conversion of annual add-on rate to A.R.P. and two utility programs to change applicable tax rates and/or erase accounts from the disk. *Sylvester Software, 6943 Oleander Avenue, Highland, CA 92346, disks and manual \$195*

Digital Memory Oscilloscope, a hardware/software kit requiring a 64K CoCo 2 with Level II RAM to convert a CoCo TV display into an oscilloscope screen for audio range signals and lower. Auto-trigger and storage in 8K buffer allows detailed study of AC and slowly changing DC signals. *D & A Research, 400 Wilson Avenue, Satellite Beach, FL 32937, unit includes all necessary hardware and software, \$169*

Plateau of the Past, a 32K graphics Adventure game requiring a disk drive. The scenario places you in the role of explorer accepting the quest for a tycoon's foolhardy brother, lost in a treacherous and unexplored region of the globe. To find and rescue him, you must overcome the hostilities of nature, natives and prehistoric creatures. *Zytek Ltd., P.O. Box 701, Blue Island, IL 60406, disk \$26.95 plus \$2 S/H*

Inside Information, a book by John Helliwell to give electronic service users a guide to matching online databases to business needs, instruction in database search procedures and a compendium of facts, tips and lists to help maximize return on communication time and money. *New American Library, 1633 Broadway, New York, NY 10019, \$19.95*

Casper CoCo Quick Assembler, a 32K programming utility requiring a disk drive that combines the editor, assembler and debugger into one whole. The editor, by looking up symbols and opcodes, saves indexes into tables instead of characters. The debugger is then able to use the assembler to find locations in memory from their position in the editor's source file, which the debugger displays. *Earl W. Casper, 6012 S 14 Pl, Phoenix, AZ 85040, disk \$20*

Software Spare Parts, book by Kent Porter consisting of C language routines and utilities covering areas from text processing to matrix algebra, from data conversion to graphics, and including a range of flexible routines that can be plugged into larger programs. *New American Library, 1633 Broadway, New York, NY 10019, \$24.95*

Darkmoor Hold, a 64K graphics Adventure requiring a disk drive. The scenario places you and your comrades (a dwarf and an elf) on a perilous exploration of the 10 levels of Darkmoor. Your nemesis is an evil wizard, who will continue to try to thwart your band's every acquisition of treasures with stronger and stronger spells and creepier and wilier monsters. *Prickly-Pear Software, 2640 N. Conestoga Ave., Tucson, AZ 85749, disk \$29.95 plus \$1.50 S/H*

Eagle, a 32K graphics Simulation requiring joysticks. The scenario places you in the role of pilot breaking out of lunar orbit and attempting a soft landing. Joysticks control thrust and craft altitude and information is continuously displayed on horizontal and vertical velocities, acceleration values, distances from objectives and fuel consumption. *Saguaro Software, P.O. Box 1864, Telluride, CO 81435, cassette \$24.95, disk \$29.95 plus \$1 S/H*

CoCo Valet, a 32K home-based filing system requiring a disk drive. Features include search, edit, mark fields (for selecting fields for printouts), change files, on-screen help and non-destructive cursor. *Derby City Software, 3025 Kozy Kreek Drive, Louisville, KY 40220, disk \$21 plus \$3 S/H*

A2D Deluxe Joystick, a joystick featuring self-centering as well as free floating operation, mechanical trims on both axes and an eight-foot cable. *Cinsoft, 2235 Losantiville Avenue, Cincinnati, OH 45237, \$27.95 each, \$49.95 pair*

Best of CoCo-Time '85 (Utilities), a program comprising 18 often-used utilities, most requiring 16K. Among the utilities are: CoCo Disk Zap, 40K BASIC (requires 64K), Banner Creator, DMP Graphics Dump, In Memory Disk Drive (requires 64K), Function Keys, Disk Mailing List (requires 64K), Tape/Disk Encryption and BASIC Program Packer. *Microcom Software, P.O. Box 214, Fairport, NY 14450, cassette or disk \$26.95 plus \$3 S/H*

U-Buffer, a hardware printer buffer designed for user expandability. The U-Buffer is available in 16K (P16) and 64K (P64) versions and comes with a handbook detailing installation, operation, upgrades and technical information. *Digital Devices Corporation, 430 Tenth Street, Suite N205, Atlanta, GA 30318, P16 \$119.95, P64 \$149.95.*

Adventure In Mythology, a 64K graphics Adventure that places you in the roles of various heroes of Greek mythology. You can provide Icarus with a better idea, slay the Minotaur in the labyrinth of Crete, discover the secret of the statue of Galatea and win the hand of the beautiful huntress, Atalanta. *Saguaro Software, P.O. Box 1864, Telluride, CO 81435, cassette \$24.95, disk \$27.95 plus \$1 S/H*

Pumpman, a 32K ML arcade game requiring a joystick. The objective is to destroy the aliens by firing the pump and pumping them into oblivion. Perils include the misuse of your pump resulting in its disappearance, the aliens have only to touch you to kill you and the aliens change form and tactics at ran-

dom. *Saguaro Software, P.O. Box 1864, Telluride, CO 81435, cassette \$24.95, disk \$27.95 plus \$1 S/H*

CoCo Base I, a 32K relational database manager requiring a disk drive and featuring 10 programs. Possible are up to 600 records of up to 1,000 characters, moving specific data around within the program to allow files to update each other, string and numeric operators to allow any user-definable comparison or calculation and compatibility with all CoCo printers. *JTJ Enterprises, P.O. Box 110841, Nashville, TN 37211, disk \$49.95 plus \$2 S/H*

Temple of the Lost Ark, a 32K Adventure game for the intermediate Adventurer. Features include a help key for guidance through the hazards and pitfalls and a command interpreter that requires only one-word commands. *The Saint John Gallery, P.O. Box 613, Mount Sinai, NY 11766, cassette \$7, disk \$8*

Hall of the King II: The Inner Chamber, a 64K graphics Adventure on two disks requiring a disk drive but not *Hall of the King I* for play. This game begins another quest for the legendary Earthstone, the foundation of an ancient dwarven civilization. Only by daring the hazards of the inner chambers can you hope to find and learn to use the Earthstone. *Prickly-Pear Software, 2640 N. Conestoga Avenue, Tucson, AZ 85749, disks \$39.95 plus \$1.50 S/H*

Uninterrupted Power Source (UPS), a hardware accessory to prevent loss of data from power failures for all computers using 5V memories. It consists of a 2.6AH sealed battery, a control circuit, a miniature toggle switch and a light emitting diode. Three connections are necessary: 5 volts, ground and unregulated 9-12 volts. Supplies power to the memories for as long as two hours when commercial power sources fail. *Dynamic Electronics, Inc. P.O. Box 896, Hartselle, AL 35640, \$59.95*

Unkill, a 32K disk utility requiring two disk drives, a printer and knowledge of the printer's compressed mode. It is menu driven and does not require knowledge of files and fat tables in order to recover files from a bad disk to a blank one. *Proper Programs, P.O. Box 681, Garner, NC 27529, disk \$9.95 plus \$2 S/H*

1986 Tax Estimate, a 32K home financial utility requiring a disk drive. Possible is the estimation of federal tax liability based on the laws in effect at the time of publication. *TRY-O-BYTE, 1008 Alton Circle, Florence, SC 29501, disk \$5*

GOTHELLO, a 16/32/64K strategic board game for one or two players with three levels of difficulty. *Bangert Software, P. O. Box 21056, Indianapolis, IN 46221, cassette or disk \$12.95*

Graphic Echo, a 16/32K graphics screen dump program designed for Radio Shack dot-matrix printers. Sold on cassette, it is compatible with disk systems and offers regular or enlarged images, positive or negative images, with manually set margins or auto-centering, and capable of working in all five PMODEs. *Tothian Software, Box 663, Rimersburg, PA 16248, cassette \$14.95*

Vegas Game Pak, a 32K arcade game requiring a joystick and containing the following casino favorites: Regular fruit-type slot machine, Bar-bar five-seven-blank slot machine, Multiline pay fruit-type slot machine, Video poker, Video keno and Video blackjack. *Novasoft, 4285 Bradford N.E., Grand Rapids, MI 49506, cassette \$24.95, disk \$27.95 plus \$2 S/H*

CoCo DISKZAP Utility, a disk editor featuring the following commands and functions: Mode, to allow users to specify the disk's sector offset; Zero, allows setting any sector in the disk to Hex 00; Copy; Print; Verify; Format; Display; File Zap, to allow stepping through a file (ML, BASIC or ASCII) to modify any part; and Directory. *Super-*

Com Associates, 449 Rougemount Drive, Pickering, Ontario, Canada L1W 2B8, manual and disks \$39.95 U.S. funds.

LFAST, Linear-Free-Access-Source-Translation, an assembly utility requiring a disk drive. Possible are the linking of ML programs, insertion of text messages in the object code stream and the ability to point to buffers where text arrays, numeric arrays and ML subroutines are located. *D.J. Leffler, 955 Trinidad Road, Cocoa Beach, FL 32931, \$68.50*

KAMELION, an interface operating system (IOS) using the Supercomp 68008 expansion board (produced by Cir-Pac Ltd.). This IOS provides complete co-processing, access and control between a CoCo and the Motorola 68008 microprocessor on the expansion board. CoCo's capabilities are expanded to almost equal the Radio Shack Model 16. Included is the capability to write standard CoCo disk files from the 68008 memory up to full disk capacity for a single file. Also included are complex commands such as CONFIGURE, which can be invoked to configure the 68008 memory with data and machine code files. *D.J. Leffler, 955 Trinidad Road, Cocoa Beach, FL 32931, \$78.50*

Code Practice, a 32K instructional aid to help those who would like to learn or improve their skills with International Morse Code. Menu driven, the operator may select listening to random letters, numbers and punctuation or code conversation between Ham Radio operators. Speed at which code is sent can be selected by the operator between two and 90 words a minute. *Sunrise Software, 8901 NW 26 Street, Sunrise, FL 33322, disk \$9.95*

The *Seal of Certification* program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a *Seal*, the magazine certifies the product does exist — that we have examined it and have a sample copy — but this *does not* constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW's reviewers for evaluation.

— **Monica Dorth**

REVIEWING REVIEWS

PLANECEO & PGCALPRT

Editor:

We found the review of *PLANECEO* and *PGCALPRT* by John McCormick [April 1986, Page 190] to be just and considerate. In reply, we have a few comments to make about the programs and the review.

PLANECEO is designed to be strong in educational content and is intended for student use or for refresher use by non-students. If used by students, it should be considered supplemental to, and not substitutive for, formal scholastic training. *PGCALPRT* anticipated more use by professionals. Both programs are for serious use.

We regret the reviewer found bugs. We wish we could guarantee there will be no more but there may be some bugs left in spite of the authors' attempts to eliminate them. We will keep users informed of bugs and fixes. The ones reported in the review have, of course, been corrected.

PGCALPRT is written to send every geometric calculation to the printer. The reviewer pointed out that some systems result in no such optional printing. As a result of his valid suggestion, current releases of *PGCALPRT* contain patches that will enable users to either retain the original concept or to change the main and subprograms to provide optional printing. Also, the patches will be supplied in printed form to prior users.

The *CONVERT* subprograms were included in both programs as sort of a bonus. They were not intended to print on the printer.

Thank you for the review and thanks to John McCormick for his work.

George F. Saunderson
TASC

PIXGEN

Editor:

I would like to comment on the review by Eric Tilenius of *PIXGEN* (*RAINBOW*, February 1986, Page 208).

I feel that Mr. Tilenius did a fair and accurate review of *PIXGEN* utility, but would like to point out some things he may not have been aware of. Mr. Tilenius mentions in his review that he discovered two places in the program where error handling bugs could be found.

The first of these, which occurred when drawing a line, has been fixed.

The second bug occurred during a "paint" operation. The documentation of *PIXGEN* emphasizes several times that the painting utilities must be used carefully. The reason is that the speed achieved by the *PIXGEN*'s painting routines is accomplished by mathematical algorithms that have few internal error handling routines.

The review states that *PIXGEN* could interest anyone wishing to create graphics Adventures where storing pictures on disk is not a valid option. I disagree. *PIXGEN* makes it possible to store several times as many pictures as could be stored on an entire disk in only about 12K of RAM. With the exception of these items, I feel Eric Tilenius did a remarkable job.

Scott A. Cabit
Author of *PIXGEN*

Track Events

Editor:

We appreciate the review of *Track Events*, Page 200 of the February 1986 *RAINBOW*. However, it wasn't mentioned that the game requires 64K, and our updated version of the game requires a joystick. We would also appreciate it if you would inform readers of our new address: 3937 Shady Hill, Dallas, TX 75229.

Baron Products
Dallas, TX

Magazine Index System Disk Pilot

Editor:

Thanks to your reviewers Dan Smith and Larry Goldwasser for their careful reviews of *Magazine Index System* and *Disk Pilot* (December 1985, pages 224 and 233).

Since *Magazine Index System* was submitted for review, a new, updated version has been released (version 1.1). This release corrects minor problems with the original and adds some new features. Files no longer need to be on Drive 0 — any drive on the system can now be accessed by *Magazine Index System*. In addition, the search routines have been rewritten and are now faster than before. The user is no longer limited to nine search terms, nor is the 29 character limit imposed.

Regarding *Disk Pilot*, I'd like to apologize to Mr. Goldwasser. Apparently an addendum sheet was missing from the package he received — this sheet explains the 'S' option, which permits the user to access any of his drives (0 through 3).

Thanks once again for an excellent magazine — keep up the good work, everyone in the CoCo Community appreciates it.

Bob van der Poel
CMD Micro Computer Services Ltd.

CoCo Max II

Editor:

Thank you for the fine review of *CoCo Max II*. We would like to correct, however, a statement that was inaccurate.

Mr. Jackson writes that "*CoCo Max* has no provisions for killing or renaming files." This is not the case. You can leave *CoCo Max* at any time with the "Quit" function, then Kill or Rename any file(s). When finished, simply type RUN. The *CoCo Max* screen will come back exactly where you left off, and you don't lose your art work. We think this ability to switch between *CoCo Max* and BASIC at will is much more powerful than a simple Kill and Rename feature would be.

John Monin
Colorware Inc.

We welcome letters to "Reviewing Reviews" and remind you that they may also be sent to us through the MAIL section of our new Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS.

'Shooting Gallery' Math Mission Reinforces Skills

Condition red! Prepare for imminent invasion. Protect yourself with intelligence and skill and future generations will honor your courage and knowledge.

Math Mission is an educational game designed to reinforce math skills in addition, subtraction, multiplication and division. It has four levels of difficulty ranging from basic facts to problems with two digits. The program is suitable for first- to fourth-grade students. There is an option that combines all difficulty levels. The game is similar to a shooting gallery and is played with joysticks. Problems are shown with six answers. There is a timer so students must answer the problem promptly, but it is not so fast that it discourages slower students.

It is easy to load and run. If using a disk drive, you are entitled to make two backup copies. With the cassette version, there is an explanation of how to transfer the program to disk.

When running *Math Mission*, you see a title screen and then the main menu. Choose addition, subtraction, multiplication, division and the level of difficulty ranging from basic facts to two digit problems. The game then starts the first of four rounds of play. In each round the student receives 10 problems. The Shot Timer and Power Level Bars with their numerical readouts are in the lower right-hand

corner of the screen. When play begins, these are set to the maximum.

The problem is shown at the bottom of the screen with six possible answers at the top. Using the joystick, students move the "gun" under the correct answer and fire. If right, they move on to the next problem and the number of correct responses is shown in the lower left-hand corner. If wrong, the power bar is lowered by 25 percent but they get another chance to answer the problem correctly. If they are correct the second time, the power bar is reset and a right answer is recorded. If wrong again, the correct answer is shown, but a wrong answer is recorded, the power is reduced by 25 percent and they get the next problem.

If four problems are missed in any level, a sad face is displayed and they are told to press the firebutton which returns them to the main menu. A perfect score in any round generates a short song and graphics display. After all four rounds, students receive one of two graphics screens and a musical tune. If they score 100 percent in all four rounds, there is a graphics display showing that they are a "Grand Master of *Math Mission*." For any other score they are shown a screen saying they are a "Master of *Math Mission*."

One distraction though; in the second through fourth rounds, instead of having the graphics on a black screen, they were on a green screen. This made reading some of the numbers hard because I could not see the vertical extension in numbers such as four.

This program would be interesting for elementary students to use. There is plenty of sound, movement and action. I also like how students are given a second chance before getting an answer wrong. When I played, there were times that I knew the right answer, but didn't get the joystick in the right place or pressed the firebutton too fast and it was nice not to be punished for a dexterity mistake.

(Sugar Software, 1719 North 50th Avenue, Hollywood, FL 33021, cassette or disk \$24.95 plus \$1.50 S/H)

Hint . . .

Single Disk COPY

Here's a feature which can be invaluable for users with a single disk drive. The Radio Shack Disk Manual mentions that use of the COPY Command requires two or more drives. This is not necessarily true. A single drive copy can be made by doing the following:

- 1) Insert disk with file to be copied into the Drive 0.
- 2) Type COPY "FILENAME/EXT:0 and press ENTER.
- 3) There will be one short beep and a notice will appear on the screen instructing the user to insert the destination disk.
- 4) Insert destination disk and press ENTER.
- 5) Once completed there will be two copies of the program: one original and one on the destination disk.

This method works for all types of disk files including machine language programs.

CD Editor Provides Invisible Convenience

Using Extended BASIC's line EDIT function to make changes in a block of program lines can, at times, be frustrating. I usually end up listing all the lines in the section of interest and then noting those needing changes or corrections. Each line is then edited one by one. Until now, there has been no easy way of working on programs one screen at a time. *CD Editor* from C & D Computer Products provides some relief from the frustration of program editing. This utility program provides many of the features of a full-screen editor without using one extra byte of memory in a 64K CoCo.

CD Editor requires a 64K CoCo with at least one disk drive and should work on all versions of JDOS or Disk BASIC. The program comes on disk in the form of a short BASIC program that copies the BASIC and Extended BASIC ROMs into the upper 32K of RAM. It then checks for the type of Disk BASIC that is being used and loads in new machine code from disk to the upper RAM locations containing the original line editor. The editor fits in the same amount of space that was taken up by the original EDIT function. If desired, BASIC's standard OK prompt can be changed to anything you want, up to five characters, such as READY. The loader program then clears the screen and erases itself. The copy that I originally received failed to load properly with JDOS BASIC 1.21. A phone call to C & D Computer Products isolated the problem. A short time later I got a new disk that loaded and ran properly with JDOS BASIC 1.21 and Disk BASIC 1.1.

The program is transparent to BASIC and permits BASIC programs to run as if it did not exist. The cursor becomes a blinking black square that turns into a blinking white square when the editor is active. Typing in the command EDIT turns the program on and off.

CD Editor works on any displayed portion of a program that has just been typed in or listed. A movable cursor determines where on the screen any changes are being made. Cursor movement is controlled by the four arrow keys. (The JDOS version uses the shifted up- and down-arrows for vertical motion.)

To delete characters, place the cursor on the first character to be deleted and press the shifted left arrow once for each character that is to be deleted. To add characters, place the cursor at the point of insertion, add blank spaces with the shifted right-arrow key, and then type the new data over the blank spaces. Typing at the current cursor position causes the new text to overwrite the existing text.

None of the changes are actually entered until the cursor is moved to the end of the line being edited and the ENTER key is pressed. Pressing ENTER in the middle of the line causes the last portion of the line to be lost. I had a tendency to forget this and often pressed ENTER immediately after making changes, and not at the end of the line.

The editor also allows two or more program lines to be combined into one. Program lines may also be duplicated by changing the line number of the line that is to be duplicated. I found this last feature quite handy in writing programs that use many lines of nearly identical code. I just duplicated the lines as many times as required and then went back and made the unique changes to each line.

Another program on the disk lets you save the modified BASIC and Extended BASIC into EPROMs to make the screen editor and new prompt a permanent part of the CoCo. I could not try this because I do not own an EPROM programmer. However, I did try the EPROMs loaned to me by C & D Computer Products and had no problems.

The disk comes with a three-page instruction sheet which covers loading and using the program. A copy of the instruction manual is on the disk in the form of a BASIC program. The disk also contains a catalog of other programs from C & D. None of the programs are copy protected so backups can be made. The programs, however, are copyrighted.

(C & D Computer Products, 1706 Seabrook Avenue, Cary, NC 27511, disk \$19.95 plus \$2 S/H)

DYNAMIC COLOR NEWS

A monthly Newsletter with Educational material for writing Programs, New Products, Product Reviews, Programs, and much more.

\$15 yr. - Free Sample -

DCN-1, Six PGMS include Character Generator, Loan Interest, & Bank Switching.

DCN-2, Five PGMS include Check Book, Sort, Study, & Address File Programs.

DCN-1 or DCN-2, \$9.95 Tape, \$11.95 Disk

PROGRAM SAVER

Uninterrupted Power Source (UPS) provides power to RAM during power failures. For all computers with 5 Volt memories. \$59.95

MEMORY EXPANDERS

We have several types of solderless memory expanders from 64K to 512K. Call or write for details.

MEMORY MANAGER

(New Product)

Software designed to manage the second 32K memory bank for 64K computers. Copy ROMs to RAM and stack Programs in the upper memory or use the Friendly RAM Disk to quickly stored or load programs to or from the second memory bank.

\$27.95 Cassette, \$29.95 Disk.

Checks, Visa & MC Cards. Add \$3 ship.
Free Catalog. 24 Hour phone.

Super RAMDisk Provides Mega-memory

"More memory!" they cried. "Give us mega-memory like the competition!" Well, CoCo users, now you have it. Spectrum Projects is distributing a 256/512K memory expansion from DISTO.

To use the DISTO Super RAMDisk you need a 64K CoCo and a Multi-Pak Interface. Why the Multi-Pak? It enables the DISTO upgrade to be used with the CoCo 2, something that has been hindering previous upgrade kits. The unit is housed in an attractive white metal case and plugs into slot number 2 of the Multi-Pak. Software for both Disk BASIC and OS-9 is provided on disks to use the memory upgrade as a RAM disk. With OS-9, up to three RAM disks can be connected at one time.

What is a RAM disk and do I need one? At present, the only software that exists for the Super RAMDisk is drivers that make the memory expansion act as another disk drive. It's not a normal disk drive, though. First, it is super fast. The total time to read or write a sector is less than 5/1,000 of a second. One of the uses could be storage of graphics pages for fast recall during games. Can you write longer programs? Not with the present software. The problem is not with the memory expansion, but with the software. As you are probably aware, Disk BASIC only recognizes 32K of user memory.

To write longer programs, you could split them into small ones, but you can do the same thing with a regular disk drive. You will have to find a way to pass parameters (variables) between programs if necessary. A suggestion is to store them in a file and recall them when necessary. Remember, we are talking about a quiet, fast disk drive that consists of RAM.

The use of a RAM disk with OS-9 is another story. Regarding longer programs, as long as modular programming concepts are used, BASIC09 already has the facility to pass parameters between programs. Considering the disk intensive nature of OS-9, it's a welcome relief to transfer the commands directory to the RAM disk and watch it fly. Commands execute almost instantaneously. No noise either.

There are still memory constraints inherent to OS-9 Level I, but a RAM disk seems to speed up things quite a bit.

Brian Lantz has licensed both the Disk BASIC and OS-9 RAM disk drivers to DISTO. The Disk BASIC version is on a separate disk.

After entering `LOADM"RAMPAK":EXEC`, you are prompted for the default RAM disk drive number and Multi-Pak slot number. Then, you are asked whether to clear the RAM disk.

After these prompts, the RAM disk is formatted and available for use as another disk drive. You are in the 64K RAM mode and the driver is located at `$FD00`. This is why you are asked whether to clear the RAM disk. If you have to use the Reset button, the data on the RAM disk is not lost, but you have to re-initialize the driver before it can be recovered.

The DISTO Super RAMDisk OS-9 Driver by Brian Lantz is virtually the same driver software used for other memory expansions. The module is named RAMDisk and,

after loading this module, you must link the driver "R0" to the system. You must then format the RAM disk. The default format is 40 tracks, single-sided, but the device descriptor can be changed to take full advantage of the spare memory.

The only drawback to doing this is backing up the RAM disk. The use of a utility by Computerware named *Dircopy* makes it easier.

The DISTO unit is compatible with all CoCos. Previous units reviewed would not work with the CoCo 2. The cost of using it is the price of a Multi-Pak. The unit is well-constructed and functions as advertised.

I do see some shortcomings with the Disk BASIC software and documentation. I sometimes wonder how to take advantage of all of this extra memory. The only documentation for Disk BASIC is a typewritten page explaining how to boot the driver. No information is given about the hardware aspects of the unit. The user should have the page addresses and a description of the hardware for experimentation purposes.

The OS-9 software documentation is just adequate. It explains all of the initialization steps and procedure files, but again it lacks any information about the hardware. This is not so bad for OS-9, due to the nature of the system, but I'd like to see it.

In comparison to other units I've seen, this unit is adequate from a hardware standpoint, and doesn't require soldering, wiring or opening the computer. We will have to wait and see if any software other than the RAM disk applications develops.

(Spectrum Projects, Inc., P.O. Box 21272, 93-13 86th Drive, Woodhaven, NY 11421, 256K version \$129.95, 512K version \$169.96, distributed in Canada by CRC Computers, 10802 Lajeunesse, Montreal, Quebec, Canada H3L 2E8)

— Dan Downard

Two-Liner Contest Winner . . .

Type in *Babbler* and RUN it. See if you can make out what the CoCo Man is trying to say. This would make a cute subroutine.

(For this winning two-liner contest entry, the author has been sent copies of both *The Second Rainbow Book of Simulations* and its companion *The Second Rainbow Simulations Tape*.)

Mind-tingling action!

THE SECOND RAINBOW BOOK OF ADVENTURES

Twenty-four of the most challenging Adventure games ever compiled await you in this latest offering from The Rainbow Bookshelf. Journey through time, fight World War III, win the heart of a beautiful and mysterious princess. Experience the titillations of the most rugged Adventurer without ever leaving your seat.

Order The Second Rainbow Book of Adventures and among the 24 program listings you'll receive are:

- Yellow Submarine** — Meet the Beatles and attempt to outlast the Blue Meanies while enjoying some of the Fab Four's all-time musical hits.
- Ring Quest** — Regain possession of a magical ring and save a kingdom.
- Time Tripper** — Lost in another dimension.

- Chief Inspector** — Who killed B.L. Brown?
- Sir Randolph Returns** — The sequel to a favorite from our first Adventure book.
- Silverton House** — Where's the money been stashed?
- Ice Princess** — Just one glance at this beauty will steal your heart.

Experience other traditional and contemporary challenges from these winning authors: Mark Fetherston, Jeff Crow, Larry Lansberry, J.C. Jackson, Robert W. Mangum II, Robert Poppe, David Taylor, Gregory Clark, Steve Skrzyziarz, David L. Dawson, Curtis Boyle, Bruce K. Bell, Pat Pugliano, Pat and John Everest, Mike Fahy, Scott Settembre, Darin Anderson, Robert L. Thomas, Terrance Hale, Paul Hensel, Phillip Courie, Michael Dennison and Robert Dickau.

The Second Rainbow Book of Adventures sells for only \$13.95!

THREE BONUS PROGRAMS WHEN YOU BUY THE SECOND RAINBOW ADVENTURES TAPE!

That's right. You'll receive a total of 27 fantastic Adventures when you get the Second Rainbow Adventures tape. The three bonus games are Castle Thuudo, by Carmen D. Michele; Halls of Dungeon Death, by Eric and Mark Riel; and Caves of Kalakh, by Jane Fisher — programs with listings too lengthy to include in the book. Save yourself hours of typing listings. Load these great Adventures into your computer and run them!

The Second Rainbow Adventures Tape is only \$13.95.

The tape is an adjunct and complement to the book. Even if you buy the Second Rainbow Adventures Tape, you'll need the book for the introductory material and loading instructions.

Keep your Rainbow Bookshelf up-to-date!

See Page 221 for additional Rainbow Bookshelf offerings.

Please send me The Second Rainbow Book Of Adventures for \$13.95*

Please send me The Second Rainbow Adventures Tape for \$13.95

The Rainbow Bookshelf™

The Ultimate Color Computer

Enhancements
for Productivity
from HJL Products

To achieve maximum productivity with your Color Computer, you have to make it as easy as possible to get information into and out of the system.

This is why we developed the HJL family of high-performance enhancements for ALL MODELS of the Color Computer.

The Keyboard - \$79.95

The overwhelming favorite of serious Color Computer users worldwide, the HJL-57 keyboard has the smooth, consistent feel and reliability you need for maximum speed with minimum input errors. Includes 4 Function Keys and sample function key program. Installs in just a few minutes with no soldering.

The Numeric Keypad - \$89.95

The NumberJack is a self-contained, cable-connected keypad for heavy-duty number-crunchers. Besides the number keys, it has all the cursors, symbols and math keys, including autoshifted (one-touch) ADD and MULTIPLY. Comes complete with 3-foot cable and all necessary connectors for quick and easy installation without soldering.

The Monitor Adapter - \$25.95

This universal driver works with all monochrome monitors, and is easily installed without clips, jumpers or soldering (except in some later CoCo 2s with soldered-in video chips). Here's crisp, clear, flicker-free monitor output with all the reliability you've come to expect from HJL Products.

The Monitor - \$89.95

The GoldStar high-resolution amber monitor brings you the monochrome display that's preferred by most computer professionals today. Once you've used it you'll never connect your computer to a TV set again. The 12-inch diagonal CRT has an etched non-glare faceplate. (Requires adapter sold below)

The BASIC Utility - \$25.95

Quick Basic Plus, a high-performance programming utility, can be used with any color computer that has four function keys. 26 pre-defined BASIC statements, 10 user-defined macros at a time (you can save as many sets of macros as you like), automatic line-numbering, word wrap, global search,

and instant screen dump to printer, make this software the BASIC programmer's dream come true. Comes with re-legendable 3-way reference chart. Specify disk or cassette.

The HJL Warranty

Every HJL product comes with a full, one-year warranty and the exclusive HJL 15-day unconditional guarantee (except software).

Pick a Pair & Save 15%

Now, for a limited time, we'll give you 15% off the price of any two or more products shown here. Just mention this ad when you order.

Credit card customers include complete card number and expiration date. Add \$2.00 for shipping, 3.50 to Canada; except monitors (call for shipping charges before ordering monitors). New York state residents add 7% sales tax. **Dealer Inquiries Invited**

SemiGraphics Support Utility Unleashes 'Hidden' Abilities

The *SemiGraphics Support Utility*, available for 16K ECB CoCos on either disk or cassette, expands Extended Color BASIC to allow direct access to the semigraphics modes.

What's a semigraphics mode? You can go through Tandy's *Color BASIC*, *Extended Color BASIC*, and *Disk System* manuals and still not know a thing about semigraphics. Why? Because four of these five semigraphics modes are not supported by any version of CoCo BASIC. So how do you find out about them? The RAINBOW is a source, and so is William Barden's book, *Color Computer Graphics*.

What you'll find is that these semigraphics modes are built into a chip in the CoCo called a Video Display Generator. One of the modes (SG 4) is accessed by Color BASIC as the Lo-Res graphics through the SET, RESET and POINT commands. The remaining four modes (SG 6, SG 8, SG 12 and SG 24) are called the forgotten modes. When the various versions of CoCo BASIC were developed, these capabilities were, for one reason or another, not supported. Without BASIC support, these modes are cumbersome to use. Various numbers must be POKEd into memory locations to select color, or set or reset the various picture elements. A pain, to say the least.

The advantage of the semigraphics modes over the true graphics modes is that all eight colors can be used on one screen with a fairly fine resolution of 64 by 192. The semigraphics modes also lend themselves to intermixing text and graphics on the same screen.

Are these advantages worth the hassle involved in figuring out all of those POKEs? To the average programmer, probably not. Not, that is, without *SemiGraphics Support Utility*.

SemiGraphics Support Utility becomes part of ECB, adding 18 commands and four functions to the programming language. These new commands and functions can be freely intermixed with all of the ones you're already used to. The graphics require allocation of video pages, much like ECB graphics. Various semigraphics modes can be assigned to various sets of pages. Any element (based on X and Y

coordinates) can be set to any color. *The SemiGraphics Support Utility* commands, similar to their ECB counterparts, allow the user to draw lines (solid, dotted or dashed), boxes, circles, ellipses or arcs. Figures thus created can be filled with any color using the command parallel to ECB's PAINT.

The figures can be redrawn at other coordinates, or moved to other parts of the screen or even to other screens not currently displayed. These features should be of interest to anyone creating animation. As the demo program displays, smooth and rapid movement of screen figures can be produced. Figures produced in the highest resolution mode can be "scaled down" to lower resolution modes without altering X/Y coordinates. Video pages can also be copied from one location in RAM to another.

Since the alphanumeric mode is one of those accessible by *SemiGraphics Support Utility*, text and graphics can be mixed on a single screen. In addition to the graphics capabilities, the utility allows the generation of either one-bit or six-bit sounds. The user supplies what is called a "frequency delay" and an "envelope delay" for these sound-producing commands. Neither of these terms is defined in the documentation, so expect to do a little experimenting. The six-bit version allows control of the sound volume. With practice, you can produce some pretty bizarre sounds.

The user is able to print his graphics creations to a dot-matrix printer. I was unable to review this aspect of the utility because the only kinds of printers supported are the Gemini-10X and Epson. Pictures included in the documentation indicate that the various screen colors are represented on the printout by shades or patterns of gray. I would like to see this utility with support for more printers.

The documentation consists of 61 pages. I have already pointed out what I feel to be a shortcoming in documentation for the sound commands. The remainder of the documentation shares this shortcoming: brevity. To give credit where credit is due, however, *SemiGraphics Support Utility* is a very complex system and would not be easy to document. Don't expect to sit down and immediately produce stupendous semigraphics: This system takes some work. I would compare learning it to learning ECB's graphics capabilities. Included in the documentation are short programming examples, illustrating all the features. On the disk (or tape) with the utility is a demo program in which *SemiGraphics Support Utility* struts its stuff. The listing of this demo is provided. I strongly urge the user to type in the example programs, run the demo and go over the listing as a learning experience.

One of the first applications I thought of for this program was the creation of title screens and the like for my programs. Remember though, *SemiGraphics Support Utility* must be in place on the computer running the program, which could cause exportation problems.

Extended Color BASIC is great for graphics. Have you ever found yourself wishing you could use more than four colors? Or have graphics and text on the same screen? Then I would definitely recommend the *SemiGraphics Support Utility*. Check the price — I consider it a bargain few graphics programmers should pass up.

(Micro Computer Systems, 1404 Sunset Dr., Friendswood, TX 77546, cassette \$14.95, disk \$17.95)

— Stanley Townsend

Hint . . .

Upside-Down Loading

If you've been having problems with I/O Errors when loading programs from cassette, try reloading with the cassette recorder placed upside down. It may not be technically refined, and it may not work, but when faced with the dreaded I/O it's worth a try. Besides, Rick Bullon, who suggested this method, says it works for him 90 percent of the time.

Big League Baseball Stats For Your League!

If you're a coach, player or baseball fan, you'll love **Baseball Statpak!** This series of programs will keep track of a team or an entire league, with incredible screen displays and print-outs.

Batter's Scorecard tracks AB, Hits, Runs, Walks, RBI's, HR's, SO's, Errors and On-Base Percentage for up to 180 players! **Pitcher's Scorecard** tracks Games, IP, Hits, Walks, Runs, SO's and ERA for up to 60 pitchers. **Team Scorecard** will keep standings for an entire league!

Lightning-fast machine language sort on any stat makes this an invaluable coaching tool! You've seen these stats for the Big Leagues in your newspaper. Now you can have them for your league, whether it's Little League, High School, College, or Amateur Softball! **Baseball Statpak** is available on 16K Tape or 32/64K Disk. Extended Basic Required. Only \$34.95, on tape or disk.

The Handicapper

Use your **Color Computer** to improve your performance at the track! Separate 16K programs for **Thoroughbred**, **Harness** and **Greyhound** racing rank the horses or dogs in each race quickly and easily. All the information is readily available from the *Racing Form*, harness or dog track program.

Thoroughbred factors include speed, distance, past performance, weight, class, jockey's record, beaten favorite and post position. **Harness factors** include speed, post position, driver's record, breaking tendencies, class, parked-out signs and beaten favorite. **Greyhound factors** include speed, past performance, maneuvering ability, favorite box, class, kennel record, beaten favorite and breaking ability.

Complete instructions and wagering guide included. You can buy a more expensive handicapper, but you can't buy a better one! **Thoroughbred**, **Harness** or **Greyhound Handicappers** \$39.95 each on tape or disk. Any two for \$59.95 or all three for \$79.95.

The CoCo Health Consultant: Health Programs

Interested in knowing whether your diet is providing the proper amounts of vitamins, minerals and protein? How about suggestions for supplements for certain physical ailments? Or maybe you just want to check your biorhythm for the next few weeks. These are all part of a package from Health Software called *Health Programs*. The package includes; "Deficiency Symptoms and Food Sources for 21 Different Nutrients," "Nutritional Therapy for 30 Different Ailments," "Pmode 4 Graph for 3-Week Biorhythm," "Text Mode Graph for 4-Week Biorhythm," and "Hypoglycemia Symptoms, Tests and Diet Recommendations."

The largest part requiring a 32K system, is the Diet program. To quote the introductory display, "Select from a list of 181 foods and see how much protein, calories, 11 vitamins and nine minerals are contained in your selections. The totals are individually compared to your RDAs if under age 19, or your MDRs if over age 18. It has 14 different RDA and MDR categories and adjusts for pregnant or lactating women 18 to 45 years old."

The package includes a two-page list of food items with codes and units of measure. To use the Diet program, enter age, weight, sex, and, if female, whether pregnant or not. The user is then asked if he/she uses vitamin supplements and, if so, the quantities of each. Then, using the list supplied, the user enters the quantities of food consumed for a full day up to 30 items. The program then displays the previously mentioned analysis of protein, vitamins and minerals.

The programs are well-written and perform as claimed. They are written in BASIC and come on tape or disk. In the tape version, the long Diet program is loaded using the high speed PDKE to speed up the loading — even at that it takes about one and a half minutes to load. This program is too large to use with a disk even if the disk PCLEAR 0 is used. However, there is another copy of the Diet program on the 'B' side of the tape which can be loaded onto a disk.

Although the programs are easy to use, there are a few suggestions that could result in an even friendlier package. Some of the programs move to another screen simply by pressing ENTER while others require the entry of a specific number. Sometimes the choice is 1 or 2 and other times it's 5 or 6. There should be more consistency here. An improvement my wife would like to see would be the ability to enter three days' worth of diet instead of one to give a more representative average. The analysis takes four full screens to display and it would be nice to be able to direct this to a printer. Finally, the food list supplied with the package should also be included as a file so that if the original is lost or worn, a new one can be printed.

Is it worth buying? If you're interested in meeting your MDRs, the analysis can be very useful and the other programs in the package provide interesting information. The \$10 price is certainly quite fair for what you get.

(Health Software, 1521 Lancelot, Borger, TX 79007, cassette or disk \$10)

— James G. Kriz

Line Editor Works Well with Compilers

Line Editor is a full-screen editor for Assembly and PASCAL source code. It edits text files that can then be used with Assembly or PASCAL compilers. It requires at least 16K Extended BASIC and uses the Hi-Res graphics to display a 51 by 24-column screen with true upper- and lowercase characters. The program features auto-repeating keys, fast screen routines, and built-in help screens to remind you of the different commands. Although it is sold on cassette, *Line Editor* works with both cassette and disk. The editor is in machine code, but has a BASIC loader which allows the user to make some modifications. All input and output is in ASCII so as to be compatible with other programs.

Line Editor is not compatible with EDTASM+ type assemblers nor is it designed to edit BASIC programs.

At first, I couldn't get it to work. After following the instructions without success, I discovered there was a simple error in Line 0 of the BASIC loader. After fixing that line the program runs fine.

The editing capabilities of *Line Editor* compare well with other text editors with similar command options.

The manual is eight pages long and covers all the commands and operations of the program with suggestions for use and modifications. Unfortunately, the manual contains typos and mistakes and the help screens in the program also contain errors.

Commands sometimes work erratically with lines of text that contain only one or two characters. Editing is done primarily in an overstrike mode and inserting text is awkward. A line of text is restricted to 51 characters. If you exceed this limit, not only is anything past the 51st character hidden, but the commands sometimes act unpredictably.

There is no way to send files to a printer; a major shortcoming. Though you might be able to overcome this by modifying the BASIC loader, you cannot break out of the editor, modify the loader and then rerun the program. The text is lost if the program is re-entered with the RUN command. There is no way to re-enter the editor after performing a write to disk or cassette. The program simply ends. This makes it difficult to make saves periodically as you type in a long text file. Although you can append stored files to the text in memory, there is no way to save only a portion of the text in memory.

This program works well for its intended purpose but is of somewhat limited use. It is only for those with an assembly or PASCAL Compiler but no text editor to create files to use with them. Although it has a very reasonable price, *Line Editor* should have been debugged with more care. If you need such a program, *Line Editor* is for you.

Super Tutor is designed to teach letter and number recognition to children ages 2 to 6. With the aid of parents, *Super Tutor* can be expanded to teach spelling.

The program arrived on disk. Actually there are four versions of *Super Tutor* on the disk. *Super Tutor* is divided into three learning levels. Each learning level has its own program. In addition, there is a main program that runs all three levels. The main program allows you to quickly switch between learning levels.

Level one teaches letter and number recognition. Each time a letter or number key is pressed the letter or number is drawn on the screen in large block form. The letters and numbers are drawn on a black background and colored white. Up to five rows of eight characters each can be displayed at one time. When a key is pressed the parent should tell the child the name of the letter or number. After a letter or number is displayed a short melody is played, which is usually a couple of notes designed to get the child's attention.

Level two teaches the child to recognize a letter or number on the keyboard. A random character is displayed and the child presses the appropriate key to cause the character to be displayed again. Nothing happens to the display until the proper character is pressed. When the child gives the proper response, the character is echoed to the screen and a short tune is played. In level two you can select training on letters or numbers only, or both letters and numbers.

Level three can be used to teach spelling. At the start of level three, enter the largest word length to be displayed, which can be from one to eight letters. In level three, words are displayed on the screen. The child must press each letter of the word in the proper order. When a correct letter is pressed the letter is displayed. When a word is entered properly an ear-catching melody is played. The parent must work along with the program to teach the child word pronunciation and spelling.

The *Super Tutor* package includes two pages of operating instructions. The instructions are straightforward and easy to understand. Included with the operating instructions is information on modifying and adding words to level three. The *Super Tutor* programs are written in BASIC. Words used in level three are located in lines 7000 and above. Up to 250 words can easily be placed in the data dictionary. *Super Tutor* comes with 50 words in the dictionary. You must know how DATA statements are written to modify or add words to the dictionary.

Super Tutor is easy to operate and performs exactly as described in the instructions. The author's telephone number is included in the instructions. Parents need to participate in the training in order for *Super Tutor* to work effectively. If you are looking for a program to teach young children the alphabet, numbers and early vocabulary, *Super Tutor* may fit the bill.

(Challenger Software, 42 Forth St., Pennsburg, PA 18073, 32K ECB, tape or disk \$24 includes S/H)

Educational *Biosphere* is Fun and Challenging

Imagine cruising in a spaceship, as captain of *Arkworld*, and learning about a dying planet below. This is much more than a game. In *Biosphere*, the challenge is to save doomed alien life-forms as you fly about the galaxy. You must remember that your decisions will affect the ecology of the planet. It can be a very educational experience and is not for those who wish a shoot-'em-up action game.

Biosphere is a complex ecological Simulation that lets you decide how to populate the dying colony of each planet you land on. Your ship is filled with 100 plants and 100 animals, each with their own characteristics. You can choose from these or experiment with genetic engineering to compose as many as 10 new life-forms. You must examine the planet's environment, and then determine what combination of plants and animals to beam down.

Educators will marvel over the detail of the ecological system, and the glossary page. The manual is well-written and provides helpful insights into a successful Simulation.

The program is also well-written and user friendly. It employs eight icons to display the main actions. The left- and right-arrow keys select the icon/functions. The up- and down-arrow keys scan through the information. A display area between the icons uses words and pictures to depict the information. The bottom half of the screen simulates the control panels, computers and ship holding cells.

Each *Biosphere* Simulation is different since the native Colony is randomly generated. When the first icon flashes, information about the colony is displayed. The number of inhabitants varies depending upon your success in providing the correct balance of necessary ingredients.

Using the Environmental icon, information about the planet's temperature, humidity, wind direction and gasses present on the surface is displayed. During the Simulation, these factors change as the balance of nature is affected.

The Animal Manifest is next. Use the up and down arrows to scroll through each of the 100 animals in the ship's hold. Biological information is shown: Animal Name (listed one at a time, in alphabetical order), Order (what it eats), Intake/Expel (gasses breathed), Weight range, Temperature and Humidity range it can live in and Quantity. The Quantity is the only random factor from game to game (all

other characteristics remain constant). As each animal is displayed, determine how many (if any) you want to send to the planet. By studying the current environment, and that which will support the native life form, you are better prepared to save the dying planet.

The next icon, the Plant Manifest, works the same way as the Animal Manifest.

Genetic Engineering is next. If you choose to create an animal or plant, scroll through the Plant/Animal manifest lists. When you have chosen the two animals or plants you want to draw from, they appear in two boxes, and between them, your mutation: The Genetic lifeform appears! Five plants and five animals can be created this way.

The Window View is the view of the planet. You see a parade of animal life and growing plants. The author claims, "The beautiful sight of that teeming lifescape is the thrill that makes you glad you chose to be an ecologist." However, the view seems to start from the beginning each time, rather than continue from where it left off.

The Time Control icon displays the number of days the Simulation has been running, as well as the modes: normal, accelerated or hyper. In normal time, you make the choices and set up the Simulation. Printouts can also be made. In Accelerated time, one planetary day passes every 20 seconds. You can test the selections and make adjustments. Hyper time runs the Simulation at one day per second. Once in hyper time, the Simulation must run its course until all native animals have perished, or the ecology created proves to be stable by supporting the colony for 65,000 days. (This could take up to 18 hours to complete. But, until your decision-making skills are finely honed, the game is usually much shorter.)

The final icon is Archives. You can save a current Simulation, retrieve an already-created Simulation, or list the directory of previously saved Simulations. This allows saving choices before going into hyper time, and allows re-playing the Simulation after loading and changing the quantities to better your performance. It is recommended to save a record when beginning the simulation and several more times before entering hyper time. By looking at the environmental changes and observing the native colony's head count, you can monitor the effects of your actions.

Playing the game is easy. However, winning is another story entirely! The tips the author suggests are timely. A good strategy is to print out the entire animal and plant manifests so that you can learn about and refer to the wide range of possible combinations. In a school setting (or two-computer family), the use of a database on another computer would be a great way to choose the best life-forms to fit the needs of the simulation.

There is no suggested age range for this program. However, I would recommend it for middle-school age and older. Those who work with this Simulation will gain insight into the ecological principles that govern our own relationship to the planet Earth.

Required is 64K Color Computer, (color TV recommended) and one drive. *Biosphere* loads with the DOS command, or the BASIC program provided to start OS-9 on a Color Computer with a BASIC ROM prior to 1.1.

French Package Sharpens Language Skills

It's been quite a while since I wrassled with French irregular verbs in high school and in college. The verbs won. Always. Every match. Although I never passed a French exam in my scholastic life, I always merited a 'C' because I tried so hard. I just never mastered the art of thinking in another language.

Here at *THE RAINBOW*, letters from our French-speaking readers land on my desk for translation. I still try as hard as I can and I'm still earning a 'C'. Perhaps if I had had a tool like *French Package* by David M. Compton to study with, I wouldn't have to live with the memory of my professor's parting words to me, "Monique, you sound like a child. You guess too much. It is amazing how much you guess right, but you *must learn*."

French Package requires 32K and comes on a non-protected disk so that backups for the user's convenience can be made. This program does not teach French; it is designed to help students reinforce material already studied. The documentation is three pages long and describes the programs within *French Package*.

From the menu, students may choose a quiz on the verbs aller, avoir, boire, s'asseoir and devoir, and from within each verb choose any of the 11 tenses or moods. The declensions are shown and the student responds with the correct verb form. Next are three categories of regular and

irregular verbs along with their tenses and moods (including my personal boogeyboo, the subjunctive). Past participles, future and conditional are among the choices. The student is presented with the infinitive and asked for the correct form.

There are quizzes on both relative pronouns and object pronouns. This was my second favorite part. I always knew the difference between "que" and "qui" (I just never placed them correctly in the sentence, so no credit). Vocabulary is tested and stumped me royally when "fertile" was rejected as the response to "fecond." There is a multiple choice test in English on French civilization and a multiple choice test in French on French history. That was my favorite part along with the quiz on the comparative and superlative forms of adjectives and adverbs — they were the only rounds in which I earned perfect scores on the first tries.

There are quizzes and reviews on "si" clauses, forms of "quel" and "lequel," interrogative pronouns and a test on the student's knowledge of imparfait versus passe compose (in which I proved once again, I really am an animal and can live and deal only with now). There are quizzes on regular verbs in the present tense and I was able to salvage some of my pride on those and the quizzes on numbers from one to 100.

Mr. Compton has included instructions to modify *French Package* so it can match different textbooks more closely. I believe if I had had a CoCo and *French Package* when I was in school, I could have spared my classmates all those dumb puppet shows I wrote and performed and probably could have passed my courses in the regular manner. All in all, *French Package* is a worthy learning aid and delighted me with how much I can still guess right.

(David M. Compton, 252 N. Main Street, Suffield, CT 06078, requires 32K, disk \$39.95 plus \$3 S/H)

XSCREEN Gives High Resolution for OS-9

Have you ever wanted something besides the 32 characters per line on a green screen for your OS-9 system? Unhappy with inverse video instead of lowercase letters? Well here it is, and at an affordable price.

XSCREEN is a high resolution screen package for the OS-9 operating system of the Color Computer. Choose from 51, 64 or 85 characters per line. The display can be white or green characters on a black background, or black characters on a white or green background. All of these combinations have 24 lines per page. *XSCREEN* also has real lowercase letters.

The 85 characters per line is nearly impossible to read on a television. However, it is readable on a monitor. The 64 characters per line is available in two character sizes; wide and narrow. The wide characters seemed easier for me to read, but judge this for yourself. At 64 characters per line with either the wide or narrow characters, my eyes got tired after 15 minutes of work on the television. The 51 characters per line was easy to work with for long periods of time on a television or a monitor.

After *XSCREEN* is copied to the command directory, activate it by typing *XSCREEN*. You are presented with a menu for selecting the characters per line, and the foreground and background colors. It then returns to OS-9. If you need to change to a different style screen or want to quit *XSCREEN*, return to the menu by pressing the CLEAR and BREAK keys at the same time. If you quit *XSCREEN* and want the high resolution screen back again, reboot the system before executing *XSCREEN* again. This is stated in the manual in large bold letters.

XSCREEN uses about 12K bytes of user memory. This leaves about 28K bytes of memory for applications. If using BASIC09, you will have about 7,000 bytes of memory for your

Hint . . .

Data Finder

Have you ever gone through your tapes or disks and found a data file that you couldn't identify? Well, I have, and it's a pain when you can't load it without the program and you can't find out what program it came from. Here is a program to solve your problems. Simply type in and run the program, and when it finds the file it will put it on the screen or on paper if you have a printer.

```
20 CLS:INPUT"WHAT IS THE NAME OF THE
DATA FILE";DFS
30 OPEN "I",#1,DFS
40 INPUT#1,D$
50 PRINT D$
60 IF D$="EOF" OR D$="" THEN 80
70 GOTO 40
80 CLOSE #1
```

If you want to load a data file from tape, change #1 to #-1 in lines 30, 40 and 80. If you want to print out the data, change line 50 to PRINT#-2, D4.

Chris Stevenson
Crocker, MO

application program. With the OS-9 editor you will have just over 24K bytes of memory for the text you are editing.

All of the OS-9 display functions are supported by *XSCREEN*. In fact, *XSCREEN* has additional display functions which make it much easier to write screen editing routines. These codes allow erasing to end of line, turning the cursor on or off, scrolling down and erasing to end of screen. There are also several codes to change the foreground and background colors of the display and change the number of characters per line. To get these additional display codes, *XSCREEN* uses some of the OS-9 graphics display codes. This may sound like a problem if you have existing programs that make use of these codes. It is not, and here is why. *XSCREEN* does not use the standard output /TERM. Instead it uses a driver called /HI. To perform the standard OS-9 graphics display functions, direct the display command to /TERM. OS-9 will process the display code the same as if *XSCREEN* was not present.

I tried *XSCREEN* with OS-9 version 2.0.0. It did not operate predictably. I hope the makers of *XSCREEN* will make the necessary changes so it will work properly with version 2.0.0.

XSCREEN is well worth the price. It is nice to be able to get more than the 32 characters per line. If you cannot afford 80-column hardware, *XSCREEN* is the way to go.

(Microtech Consultants Inc., 1906 Jerrold Ave., St. Paul, MN 55112, disk \$19.95)

— Mike Piotrowski

"XPNDR2 and SuperGuide - an Ideal Expansion Card Set"

— RAINBOW 2/86
HARDWARE REVIEW

XPNDR2 \$39.95 each or 2/\$36

This prototype card features a 40 pin connector for projects requiring an on-line disk system or ROM paks. The CoCo signals are brought out to wire-wrap pins. Special gold plated spring clips provide reliable and noise-free disk operation plus solid support for vertical mounting of the controller. The entire 4.3x7 inch card is drilled for ICs. Assembled, tested and ready to run.

XPNDR1 \$19.95 each or 2/\$36

A rugged 4.3x6.2 inch bare breadboard that brings the CoCo signals out to labeled pads. Both XPNDR cards are double-sided glass/epoxy, have gold plated edge connectors, thru-hole plating and are designed with heavy power and ground buses. They're drilled for standard 0.3 and 0.6 inch wide dual in-line wirewrap sockets; with a 0.1 inch grid on the outboard end for connectors.

SuperGuide \$3.95 each

Here is a unique plastic insert that aligns and supports printed circuit cards in the CoCo cartridge port. Don't forget to **ORDER ONE FOR YOUR XPNDR CARDS.**

Included with each XPNDR card are 8 pages of APPLICATION NOTES to help you learn about chips and how to connect them to your CoCo.

ROBOTIC MICROSYSTEMS

BOX 30807 SEATTLE, WA 98103

"The CBASIC Compiler"

Now anyone can create fast efficient Machine Language Programs Easily and Quickly without having to use an Editor/Assembler

CBASIC is a fully integrated, easy to use Basic program Editor and Compiler package. CBASIC is 99.9% syntax compatible with Disk Extended Color Basic programs, so most Basic programs can be loaded and compiled by CBASIC with little or no changes required. The compiler is an optimizing two-pass integer Basic compiler that can convert programs written in Disk Extended Color Basic into 100% pure 6809 Machine Language programs which are written directly to disk in a LOADM compatible format.

The programs generated by the compiler can be run as complete stand alone programs. A built-in linker/editor will automatically select one and only one copy of each subroutine that is required from the internal run-time library and insert them directly in the program. This eliminates the need for cumbersome, often wasteful separate "run-time" packages.

CBASIC WAS DESIGNED FOR BOTH BEGINNING & ADVANCED USERS

CBASIC is a Powerful tool for the Beginner or Novice programmer as well as the Advanced Basic or Machine Language programmer. The Beginner or Novice programmer can write and compile programs without having to worry about Stack Pointers, DP registers, memory allocation, and so on, because CBASIC will handle it for you automatically. All they have to do is write their programs using the standard Basic statements and syntax. For the advanced Basic and Machine Language programmers, CBASIC will let you take command and control every aspect of your program, even generating machine code directly in a program for specialized routines or functions.

CBASIC adds many features not found in Color Basic, like Interrupt, Reset, and On Error handling. It also has advanced programming features that allow machine level control of the Stack and Direct Page registers, variable allocation, automatic 64K RAM control, program origin and even multiple origins. It can even have machine language code generated within a program that executes just like any other Basic program line.

FULL COMMAND SUPPORT & SPEED

CBASIC features well over 100 Basic Commands and Functions that fully support Disk, Tape, Printer and Screen I/O. It also supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Extended Color Basic, and all with 99.9% syntax compatibility.

CBASIC is FAST. Not only will CBASIC compiled programs execute 10 to 1000 times faster than Basic, but the time it takes to develop a CBASIC program versus writing a machine language program is much, much shorter. A machine language program that might take several months to write and debug could be created using CBASIC in a matter of days or hours, even for a well experienced machine language programmer. We had a report from a CBASIC user that claimed "a Basic program that used to take 3 hours to run, now runs in 7 to 8 minutes". Another user reported a program that took 1 to 1½ hours to run in Basic, now runs in 5 to 6 minutes!!

MORE THAN JUST A COMPILER

CBASIC has its own completely integrated Basic Program Editor. The Editor contained in CBASIC is used to Create and/or Edit programs for the compiler. It is a full featured editor with functions designed specifically for writing and editing Basic programs. It has built-in block Move and Copy functions with automatic program renumbering. Complete, easy to use inserting, deleting, extending and overtyping of existing program lines. It is also used for Loading, Saving, Appending (merging), Killing disk files and displaying a Disk Directory. It also has automatic line number generation for use when creating programs or inserting sequential lines between existing lines. You can set the printer baud rate and direct normal or compiled listings to the printer for hard copy. The built-in editor makes program corrections and changes as easy as "falling off a log". If CBASIC finds an error when compiling, it points to the place in the program line where the error occurred. All you have to do is tell the editor what line you want to start editing and when it is displayed, move the cursor with the arrow keys to the place where the error is and correct it. Just like that, it's simple.

HI-RES & 80 COLUMN DISPLAYS

CBASIC is the only Color Basic Compiler that includes its own Hi-Resolution 51, 64 or 85 by 24 line display. It is also the only compiler that supports both the PBJ "Word-Pak" and the Double Density 80 column cards. All of these display formats are part of the standard CBASIC compiler package. Not only can these display formats be used for normal program editing and compiling, but CBASIC will also include them in your compiled programs! If you want CBASIC to include the display driver in your program, all you have to do is use a single CBASIC command "HIRES". The run-time display driver that CBASIC includes in your program is not just a simple display, but a full-featured display package. With the Hi-Resolution display package you can mix text & graphics, change characters per line, underline, character highlight, erase to end of line or screen, home cursor, home & clear screen, protect screen lines, and much more. All commands are compatible with our HI-RES II Screen Commander so you can easily develop screen layouts using HI-RES and Color Basic before you compile your program. The same applies to using the 80 column card drivers. What other Basic compiler offers you this kind of flexibility?

64K RAM SUPPORT

CBASIC makes full use of the power and flexibility of the 6883 SAM (Synchronous Address Multiplexer) in the Color Computer. It will fully utilize the 96K of address space available in the Color Computer (64K installed) during program Creation, Editing and Compilation. CBASIC has a special command for automatic 64K RAM control. When used in a program, it allows the user to use the upper 32K of RAM space automatically for variables or even program storage at run-time. It will automatically switch the ROMs in and out when needed. There are also two other commands that allow you to control the upper 32K of RAM manually, under program control. No other Color Basic compiler directly supports the use of 64K RAM like CBASIC.

ALL MACHINE LANGUAGE

CBASIC is completely written in fast efficient Machine Language, not Basic, like some other Color Basic compilers. Because of this, CBASIC can edit and compile very large programs. Even using the Hi-Resolution 51 by 24 line display, it can work with about a 34K program, and the 80 column card versions can handle almost 40K of program. Some of the other Basic compilers can only work with 16K or about 200 lines. Even working with large programs, CBASIC compiles programs with lightning fast speed. It will compile a 24K program to disk in less than 2 minutes! That's without a listing being generated. We've heard stories about some other compilers that take almost 10 minutes to compile a simple 2-3K program. You might inquire about this when you look at some of the other compilers available.

THE FINISHED PRODUCT

Since CBASIC contains statements to support ALL of the I/O devices (Disk, Tape, Screen & Printer), Hi-Res Graphics, Sound, and Enhanced Screen displays, it is well suited for a wide range of programming applications. It generates a complete, Ready to Run machine language program. The finished product or program does not have to be interfaced to a Basic program to perform some of its functions or commands. This may seem obvious to you, but some of the other Color Basic compilers don't necessarily work this way. Some of their compiler commands need a separate Basic program in order for them to work. In some cases, require that a separate Basic program be interfaced to the compiled program to perform I/O functions, like INPUT, PRINT and so on. CBASIC doesn't do this. ALL of its commands are compiled into a single machine language program that does not require any kind of Basic program to make it work.

COMPATIBILITY

You may be wondering about those statements we made earlier concerning 99% or 99.9% syntax compatibility. What does that other 1% consist of? The biggest part of that 1% has to do with string arrays and variables. CBASIC does not use a "String Pool" like Color Basic. It uses absolute memory addresses to locate string variables and arrays. This is why CBASIC's string processing is so fast, it also eliminates the time consuming "Garbage Collection" problem. When CBASIC allocates space for strings, it must know how much space to use for each string. When you Dimension a string variable in CBASIC, you must tell it how much space you want to save for each element. To Dimension an array of 40 strings, 64 characters each, you would DIM DA\$(40,64). If a string is not dimensioned, CBASIC will automatically allocate 32 bytes for it. If you want a single string to have enough room for 200 characters you would DIM AX\$(200). For string arrays, you would still access the element you want, the same as Color Basic, to get string #30 from the array DA\$, you would still use DA\$(30), the only real change is in the DIM statement. For undeclared string arrays of 10 elements or less, CBASIC will automatically reserve space for 10 (0-9) strings of 32 characters. In some other Color Basic compilers, you have to declare EVERY string variable used in the program in a DIM statement. And, to create an array of 40 strings with 64 characters each, you would have to DIM AD\$(2560), and then to access string #30, you would have to multiply 30 x 64 and use a special variable name format or access it one character at a time. Not very compatible or convenient to use, and difficult at best.

CBASIC REQUIREMENTS

CBASIC requires a minimum of 32K RAM and at least one Disk drive. We strongly recommend that you have 64K. CBASIC is compatible with all versions of Color & Extended Basic and both Disk Basic V1.0 and V1.1. Programs compiled on either system will run on systems with different ROMs. CBASIC is NOT compatible with JDOS.

DOCUMENTATION

The Documentation provided with any program is very important to the user. This is especially true when you talk about a program as complete and complex as CBASIC. Even though CBASIC was designed to be the most User Friendly compiler on the market, we went to great lengths to provide a manual that is not only easy to use and understand, but comprehensive and complete enough for even the most sophisticated user. The manual included with CBASIC consists of approximately 120 pages of real information, not like some manuals that put just one or two short paragraphs on a page. If we did it that way, we could have easily created a three or four hundred page manual. The manual index breaks down each section of the manual and gives a 3 or 4 word description of each section and its items along with page numbers. The manual has three sections, the Editor, Compiler and Appendix. Each of these is divided into subsections, with Section and Subsection titles printed at the top of each page. If you want to, you could find the information you are looking for by simply flipping through the pages and scanning the Section titles on the top of the pages. The Manual itself is an 8½ by 11 Spiral Bound book with durable leather textured covers. Some of the reports we have had from CBASIC users describe the manual as being the Best program manual they have ever used.

COMPARE THE DIFFERENCE

CBASIC is not just another Color Basic Compiler. It is the only complete Basic Compiler System for the Color Computer. Compare CBASIC's features to what other compilers offer and you'll see the difference. When comparing CBASIC to other compilers, you might want to keep some of these questions in mind. Does it support I/O functions? You can't write much of a program without PRINT, INPUT and so on. What about complex string statements, or string statements at all? How large of a program can you write? Can you compile a complex string like: MID\$(RIGHT\$(DA\$(VAL(IN\$), LEN(LE\$)), 3,3)? Can you use two character variable names for string & numeric variables, like Basic. Does it support all the Hi-Res graphics statements including PLAY, DRAW, GET and PUT, using the same syntax as Basic? Do you ever have to use a separate Basic program? Can you take complete Basic programs and compile them without extensive changes? Will they work? How do you edit a program when it has errors compiling?

PRICE VERSUS PERFORMANCE

The price of CBASIC is \$149.00. It is the most expensive Color Basic Compiler on the market, and well worth the investment. We spent over 2 years writing and refining CBASIC, to make it the Best, most Compatible Color Basic compiler available. Most of our CBASIC users already bought one or more of the other compilers on the market and have since discarded them. We even traded in a few of them. If you want a cheap compiler, we'll sell you one of those traded in, at a good price. Before you buy a compiler, compare the performance of CBASIC against any Color Basic compiler. Dollar for Dollar, CBASIC gives you more than any other Color Basic compiler available.

ORDERING INFORMATION

To order CBASIC by mail, send check or money order in the amount of \$149.00 plus \$3.00 for shipping and handling to the address listed below.

To order by VISA, MASTERCARD or COD, call us at: (702) 452-0632 (Monday thru Saturday, 8am to 5pm PST).

"The Source"
has arrived!

The Source brings the cost of Disassembler and Assembler Source code generation down to Earth.

Now you can Disassemble Color Computer machine language programs and generate beautiful, Assembler Source Code for a fraction of the cost of other Disassembler/Source Generator programs.

The Source has all the features and functions you are looking for in a Disassembler.

- Automatic label generation.
- Allows specifying FCB, FCC and FDB areas.
- Disassembles programs directly from Disk.
- Supports multiple origin disk files.
- Output complete Disassembled listing with labels to the Printer, Screen or both.
- Generates Assembler compatible source files directly to disk.
- Generated source files are in standard ASCII format that can be edited by most word processors.
- Built in Hex/Ascii dump/display to help locate FCB, FCC and FDB areas in a program.
- Fast Disassembly mode for testing & checking FCB, FCC and FDB mapped areas.
- Built in Disk Directory and Kill file commands.
- Menu display with single key commands for smooth, Easy, almost foolproof operation.

Starship Falcon
Graphics Adventure Game

Six months ago a terrorist group demanded to be designated the rulers of Alpha Sigma III, under the threat of world starvation on the planet Earth. The Federation denied their demands, so they released a biological weapon which has destroyed all known edible plant species from throughout the known galaxy. To date no plant life has been able to survive on Earth. Recently, Federation undercover agents have reported a story told by a roving space trader, of a planet with abundant edible plant life. These plants have a reputation of being able to survive in all climates and in fact, are supposed to grow at an incredible rate. The Federation is desperate! If Earth's food source is not replaced soon, the Federation will have to evacuate all animal and Human life. Your mission is to go to the planet Zephyr and obtain the seed of these plants and return to Earth. Several Federation agents have been sent to obtain the seeds and none has returned! Can you get the seed and survive??? GOOD LUCK!

Money Math Teaches Children Coin Values

If you have a young child who is excited about using money but confused about its values, *Money Math* may be a useful addition to your home or school library. *Money Math* is an educational program targeted for first- through third-grade children (and useful for remedial tutoring for upper grades). It uses high resolution graphics and a voice synthesizer (optional) to teach children the value of common U.S. coins and the dollar, how to count various combinations of coins and even how to spell them.

Money Math comes in two versions, a 32K program and a 64K version. The programs are identical except the 64K program offers voice prompts, help and encouragement by utilizing The Voice speech synthesizer from Speech Systems.

After the initial Hi-Res title page, which includes a display of the coins and dollar, the program displays a menu of 15 options comprising six categories. The categories are: Coin Values, Spelling, Count to \$1.00 with . . . , Count Coins, Mixed Coins and Choose Coins.

Selection from the menu is highlighted and made through movement of the up or down arrows and ENTER key. Large graphics coins are used throughout all options. (The quarter is one and one-half inches on a 13-inch screen; the rest of the coins are proportionally presented and easy to read.)

The first category, Coin Values, randomly shows the child the four basic coins (penny, nickel, dime, quarter) and the dollar along with the name of the currency. The child has to enter the value of the currency in either decimal or cents notation. The second category reinforces the correct spelling of the appropriate coins and dollar.

The next three sections (10 options) drill the child in counting coins, and offer the choice of counting to one dollar using a particular coin or of counting a variety of groups of coins. The easier counting categories require input in cents notation. The most difficult category, Mixed Coins, requires decimal notation when working with sums greater than one dollar. (The child is required to place the dollar sign and decimal point in the correct places in order to get credit for the problem.)

In the final category, Choose Coins, the student is shown a monetary value on the bottom of the screen and he must place an appropriate combination of coins on the screen to equal that value. This is accomplished by depressing the 'P', 'N', 'D' or 'Q' keys for pennies, nickels, dimes, or quarters. The selection of coins can be in any order and erased one coin at a time if desired.

Choosing Coins does not have the option of choosing a dollar bill, even if you are working with values greater than one dollar. My third-grade son wanted to use dollar bills and I thought about that idea myself. It might be a possible addition to the program. However, I can see many disadvantages to that approach. For example, dollars and dimes both begin with 'D', dollars take up considerably more space on the screen, and counting money problems become much more simplified and too easy to solve if dollars are used instead of coins to produce a dollar's worth of currency on the screen. Perhaps it might be best to leave this routine as is.

There are several additional features that should be

noted. The 'C' key is used to change the color of the penny to its copper color if it should be blue initially.

Normally, the child makes a selection from the menu and is drilled through a total of 10 problems before he is given a random musical and graphics reward and returned to the menu. The child may quit, however, at any time by pressing the CLEAR key, and return to the menu. Needless to say, there is no reward in such an action. The rewards are brief and entertaining, and have a positive influence on the kids. If using the 64K talking version, the child is also rewarded with verbal phrases like "congratulations," "super," "outstanding" and a surprising "supercalifragilisticexpialidocious."

The student can receive help at any time by pressing the space bar. Help is available in all levels at any time and always shows the child the correct answer or one of the possible solutions. Additionally, in the Mixed Coins category, the computer provides a step-by-step counting of each coin, accumulating the sum of each value at the bottom of the screen and highlighting the coins counted as each is added. The 64K version provides a verbal counting of the coins in addition to the visual presentation.

The right arrow is used to erase answers throughout all drills. It seems more natural for children who have used the CoCo to associate the left arrow with erasing. Perhaps it would be desirable to leave the right arrow in the program, but add one line of code to accept the left arrow erase as well.

I had a problem with trying to run the 64K program. My computer has always been able to handle the speedup poke (POKE 65495,0), until now. For some reason the placement of the poke within the program caused peculiar screen problems. After several attempts at various solutions, I took a close look at the software and discovered that removal of the speedup poke solved the problem. Therefore, if *Money Math* seems to load OK, but you have unusual effects or problems running the program, try replacing the POKE 65495,0 with POKE 65494,0 in lines 13 and 1000. You'll have to load the program *MONEYT* by itself, without following the normal instructions for loading, in order to edit that program. The author has been notified of the situation and a note probably will be added to the documentation. If you know that your computer can not use the speedup poke, be sure to mention it with your order. The documentation, by the way, is quite clear and easy to read.

Money Math, along with several educational programs by CY-BURNET-ICS, is tested and used in elementary school systems in Tennessee and is quite student friendly. It is available for Network use as well as individual family environment use.

Kindergartners seemed to need more help, but enjoyed using the program. Older, early-elementary kids loved it and enjoyed counting and manipulating money on the TV. I think *Money Math* shed a new light on some of the things they had been working with on paper at school. I highly recommend *Money Math*.

Options Galore with CGP-220 Screen Dump Package

The *CGP-220 Screen Dump Package* consists of six separate programs. Basically, they accomplish two things. Three of the programs create four-color pictures while the other three produce monochrome results. The package includes versions that run on 16K and 32K Color Computers. Two of the programs allow the user to print the two-screen images produced by *CoCo Max*. Memory limitations, however, require the user to be using at least a 32K machine.

The package is well-written and organized. Pretty menus were sacrificed for ease of use and efficiency of programming. The programs are easily transferred to disk for those who have disk drives.

Several printing options are provided in this package. When printing color images, the user can alter the printed colors as related to those shown on the screen. One can also select normal or double-sized images. When printing mono images, the options include printing in any of eight colors and the ability to print the negative of the image. These capabilities allow the creation of attractive, as well as weird, results. Imagine . . . purple people and blue pets.

Although the documentation explains all options, one thing needs to be clarified. The user is asked to CLEAR some memory before loading one of the programs. My gripe with this is that it doesn't tell the user how much memory to clear. Because of my past experience I was able to allow enough memory. However, a new CoCo user might not be so lucky. Also, the loading instructions should be organized in an itemized "step" fashion. These changes would be relatively simple.

All in all, *CGP-220 Screen Dump Package* is an excellent buy for \$14.95. Aside from those problems in the documentation, it surpasses products you might find elsewhere.

(CMD Micro Computer Services, Ltd., 10447 124th Street, Edmonton, Alberta, Canada T5N 1R7. Distributed in the U.S. by Saguaro Software, P.O. Box 1864, Telluride, CO 81435, cassette \$14.95 plus \$2 S/H)

— Cray Augsburg

Hall of the King Challenges Avid Adventurers

If you like Adventure games, and enjoy programs that show how far Color Computer programming has advanced in recent years, you should experience *Hall of the King* to see how good it gets.

Available from Prickly-Pear Software, *Hall of the King* is one of the best Adventure programs I have experienced to date. I wish I could report my victory but thus far I have been unable to solve the game. *Hall of the King* is a challenge for even the most avid Adventure player.

The opening credits are impressive and make you feel as though you're watching a show on television because the special effects are special. Next, you receive an in-depth background on the situation you're becoming involved in. You can review the scenario a page at a time at your own speed. The authors have taken time to research the topic while remaining imaginative so you're primed when the Adventure begins.

Hall of the King consists of two disks, and gives you a lot more playing time that you might need when an Adventure is so complex and challenging. Although there are two disks, only one disk drive is required, but you need to have 64K.

The graphics are many and well-done. *Hall of the King* is 100 percent high resolution graphics in detailed color. I enjoyed wandering through the *Hall of the King* admiring the programmer who spent so much time polishing all the fine details.

The response time to commands is almost immediate, except for a brief wait between commands while new graphics are drawn, which I didn't mind at all. There are SAVE and LOAD commands that make it possible for you to resume where you left off between games with ease. The packaging of the program is a vinyl container making it handy to grab and load. The documentation is thorough and well-done.

Good Adventures like *Hall of the King* keep the Color Computer's future bright.

(Prickly-Pear Software, 2640 N. Conestoga Avenue, Tucson, AZ, 85749, two disks \$39.95 plus \$1.50 S/H)

Advanced Utilities — Five OS-9 Goodies

I was once asked, "What do you buy for the computer when you already have a word processor, a spreadsheet and a database?" I told the questioner to buy utilities. Utilities are those wonderful little programs that exist only to make the computer do more for us in an easier way. To this end, Computerware has released a set of five OS-9 utilities packaged together as *Advanced Utilities*.

The five utilities included in the package are *Kshell*, a direct, more powerful replacement for Shell; *Cpy*, a more powerful version of Copy; *Archive*, a backup utility to back up hard disks to floppies; *Flink*, a program to define what file to use as the boot file on the next reboot; and *Unload*, used to remove a program from memory by recursively unlinking it. The five utilities come on one disk, which is unprotected. Also included is a nine-page manual that explains the utilities and has examples for each. The explanation for *Kshell* is wonderful and covers all aspects of this utility. The other utilities seem to suffer a little, though.

Kshell is the showpiece of the package. This program takes the place of the shell to give a more powerful command interpreter. Its most powerful feature is its automatic wild card extensions. Any place on an OS-9

command line you would place a filename, you can use a wild card. Use it to match any file in the directory that corresponds to a pattern. The '*' character matches any set of zero or more characters. The '?' character matches any single character. For example, the command "del *.bas" deletes all files in the current directory that end with ".bas." The command "del file?.txt" deletes files such as "file1.txt," "file2.txt," "filez.txt" and any other file that fits the pattern. This works with all OS-9 commands that let you give a list of filenames on the command line. It does not work on OS-9 commands that only use the first filename found on the command line. For example, the ident command only reports the first file no matter how many are stated. Thus, a wild card used with ident still only gives one report.

Another feature of *Kshell* is its PATH variable. You may assign a value to PATH to tell OS-9 where to look for commands. The command PATH="/d0/cmds:/ho/cmds" tells OS-9 to look for a command first in /d0/cmds and then in /ho/cmds. You can give it as many paths to search as wanted. Although not stated in the manual, I am sure there is some limit on the number of characters the PATH can have.

In addition to the PATH variable, *Kshell* gives four user-defined variables or macros. These are called \$1 through \$4. You may give them any value and substitute them anywhere in an OS-9 command line. If you set \$1 equal to /d1/docs/reviews/advutil.txt, all you have to do to edit that file is enter edit \$1. In addition to saving repetitive typing, macros can be passed to procedure files. The command proc \$2="program" sets \$2 to the string "program" for the duration of the procedure proc. In the procedure file you would use \$2 in any place you would normally use a filename.

Kshell has also borrowed some ideas from the UNIX operating system. One of these is the use of the single opening quotation mark (') character. If a command is placed within single opening quotes, its first line of output is substituted at that point. For example the command echo Current directory is 'pwd' generates this: Current directory is /d1/docs/reviews. You can mix this with the macros. \$1='pwd' sets \$1 equal to the current execution directory.

Vegas Game Pak — CoCo Goes Casinoing

If you're having the gang over for a party soon, you'll be doing them and yourself a favor if you have the *Vegas Game Pak* on hand. It has six games, count 'em, and if your friends enjoy gambling, this is the next best thing to being in Nevada.

The selections include: **Poker** — Everybody's favorite card game, complete with graphics face cards and the ability to enter as high a credit line as you choose before the game gets under way. You may bet as much as five dollars per hand; **Keno** — The screen displays a series of 80 numbers. The challenge is to pick the 10 numbers you believe the computer will select. Your numbers are indicated by a blue checkmark until replaced by red checkmarks — should the computer choose one of your numbers. The game includes the capability of changing numbers if you want to change your selection before the action begins; **Blackjack** — Nice graphics cards with some handy options, including splits, doubles and insurance that allow you to increase your earnings fairly quickly, if you're lucky; **Three different slot machine games**, including Riteleft, Bar5 and 3Line. These are variations on the theme of spinning wheels, fruits and numbers.

All six games are written in machine language and are very responsive to user input. Betting is easy, the action is smooth, running totals of earnings are available and suspense is ever present.

Vegas Game Pak is fun. It is a good bargain because almost every one of these games would be a nice draw if sold separately.

(NovaSoft, 4285 Bradford N.E., Grand Rapids, MI 49506,
tape \$29.95, disk \$27.95 plus \$2 S/H)

— Barbara Combes

Also from UNIX, *Kshell* accepts either the standard CHD and CHX commands or the aliases of CD and CX. Comment lines under *Kshell* may begin with either an "*" as in the normal shell or with an '#' as in UNIX.

The *Kshell* has a few other features. The command prompt can be set to whatever is wanted. The command "-p="Ksh>" would replace the OS9: prompt with Ksh>. Error reporting can be turned on or off. The command "-e" turns on full error messages like PRINTERR does. The difference is that a -ne command turns off error reporting. You can also specify what file to take the error messages from if you want to use something other than the system default. *Kshell* has improved upon the standard shell's redirection capability. The output of a command may be redirected to a file, to append to an existing file, or to overwrite an existing file.

To get all these extra features, you must give up something; what you give up is memory. *Kshell* reduces available memory by about 3.5K. This may be a problem if memory is tight. Using *Kshell* and a Hi-Res screen utility only left enough room for me to edit an 8K document with my word processor, as opposed to a 12K document under the standard shell. Those using the standard 32 by 16 screen or an 80-column hardware card may not miss that 4K as much.

If it seems that the other four commands are getting the short end of the stick here, you're right. They also get short-changed in the manual. While *Kshell* is covered in full detail with several examples for each command, the rest of the utilities are covered in less detail.

The *Cpy* utility is an improvement upon the Copy command. In addition to the standard Copy features, it can copy multiple files to a directory. Used with *Kshell*'s wild cards it can be very useful. The command "Cpy /d1/source *.bas" copies all BASIC programs in the current directory to /d1/source. *Cpy* is a little confusing though. To copy one file to another, the syntax is "Cpy source destination," while to copy multiple files it is "Cpy Destdir source1 source2 source3" I have no idea why the author used two separate syntaxes on the same program.

The *Archive* utility is used to back up hard disks or large floppies to smaller media. It allows copying these large media to several smaller ones without splitting files over two different smaller medias. This command worked exactly as the documentation said it would and without any problems.

The *Unload* utility is a recursive version of Unlink. *Unload* removes a module from memory by repetitively unlinking it until it disappears from memory. This also worked as described.

The final utility, *Flink*, is an interesting one. It allows you to state what file the system is to boot from on the next reboot. Thus, you could have two or more boot configurations on a disk and choose which to use. This also seemed to work just as it is described.

What you get with *Advanced Utilities* is a very good replacement shell and four good utilities. The *Kshell* itself is worth the price. All five utilities were tested under both OS-9 Version 1.01 and Version 2.0 without any problems.

(Computerware, 4403 Manchester Ave., Suite 102, Box 668,
Encinitas, CA 92024, \$29.95, requires OS-9 operating
system)

— Mark Sunderlin

Hint . . .

Color Computer 2 Warning

If you are upgrading your new CoCo 2 to 64K, remember that the 16K chips you are taking out are *not* the same as the 16K chips (type 4116) that earlier CoCos used. They are type 2118, which use a different power supply (+5 volts only) and *will not* work in earlier units, and could cause damage. (If you intend to do a 32K "piggyback" expansion on your CoCo 2, use another set of 2118s, *not* 4116s that came out of an older computer.)

NumberJack — An Auxiliary Keyboard Input Device

HJL has now provided the Color Computer with the long-missing Numeric Key Pad Area by introducing a device it calls NumberJack.

Initial reaction by many of you will be, "I have number keys already; what do I need another gadget for?" Well, I felt that way too, but my preference for HJL products (I own several) led me to try NumberJack. I do enough calculation and spreadsheet work to make reasonable use of the device. The question in my mind was whether spreadsheet use of it alone could justify its hefty price.

I am now convinced that NumberJack justifies its cost not just as a spreadsheet convenience, but as an auxiliary input device in the fullest sense of the word.

The unit is approximately six or seven inches on a side, and a few inches thick. The numeric keypad is attached to the computer by a length of ribbon cable that projects about two feet from the underside of the computer case on whichever side you choose. On the top are 24 keys, including the 10 digit keys (zero through nine), four arrow keys, four primary math operations (add, subtract, multiply and divide), two relational operators (< and >), and four computer control keys (@, CLEAR, SHIFT and ENTER).

A competent technician could install NumberJack in under three minutes, but the average owner may take closer to 15 minutes. The installation involves opening the case, removing the keyboard, and then connecting both the keyboard and the numeric key pad to a small T-shaped adapter board. This is then replugged into the keyboard connection receptacle. (The specimen I received included T-connectors for all versions of the CoCo; the shipping documents imply that you might receive only the adapter appropriate to your model.) In no case is soldering needed. For some CoCo 2 installations, an additional grounding pigtail is needed and supplied, and the method of attaching that is simple and well-planned. The computer case must be cut to let the ribbon cable out, and the ribbon cable must be attached to a ventilation slot to provide strain-relief on the cable. The other end of the ribbon cable is then plugged into a receptacle on NumberJack.

The directions warn that erroneous characters on the screen mean the cable is plugged in backwards. The best solution for that is to reopen the case and turn the ribbon the other way in the T-connector. Expecting that the average user may be reluctant to open his case, HJL advocates simply turning the cable over and plugging it into the NumberJack the other way. That will work also, but gives a less professional appearance.

Here I must fault HJL for a few minor shortcomings. The instructions do not mention that other sources of erroneous characters are stuck keys! I spent two hours trying to get the unit to work properly before I discovered that a small burr of plastic where the ENTER key rubbed on the edge of the cover was causing such anomalies as double characters when SHIFT-8 (the open parenthesis) was pushed, inoperative ENTER from the keypad but correct operation of ENTER from the main keyboard, and similar problems. I called HJL about the problem. They said mine was the only case of this problem so far reported and had me return the unit for

warranty re-work. I shipped it to them, and received a fully repaired unit in exactly eight days.

I can attest to the fact that customer support has been excellent; my own experience has been that questions normally receive return phone calls with adequate answers in under four hours. This is the first time I have had to return hardware to HJL, and a check with two local CoCo Clubs and a few local dealers indicated that hardware returns are rare for HJL, and that their service is consistent with the excellent phone support I experienced.

However, I feel strongly that the receptacle on the side of NumberJack and the connector inside the computer should both have been made idiot-proof, rather than simply suggesting reversing the plug in the receptacle. I say this because an upside-down plug on the unit looks bad, and I could very easily connect the cable to the unit with pins misaligned.

Once my unit was working, I tried some calculations and spreadsheets. Naturally, the unit worked as advertised, and I found the "phone dial" approach to number crunching significantly less tiring than the use of my normal keyboard. But then my kids interrupted. I have a three-year-old who is into Sesame Street educational software. I never realized how intimidated she had felt by the large keyboard when doing her simple preschool math. She grabbed NumberJack and wouldn't give it (or my CoCo) back! Her comprehension and speed rose dramatically, and I concluded that the more convenient arrangement of number keys can make a big difference in educational uses.

Next, my nine-year-old took over the CoCo to play a video game. He prefers to play *Frogger* with arrow keys rather than joysticks. Again, NumberJack was preferred to the normal keyboard input. Then, I tried modeming, and found that having a spare CTRL (alias CLEAR) key, or another ALT (alias '@') key was something to be appreciated.

My CoCo is stationed in the den, with a monochrome monitor facing one wall. The family TV is on another wall and serves as our color display. I often get backaches twisting to watch both displays when using software with color capability. Since 80 percent of my usage is word processing, I cannot justify replacing the monochrome monitor with a color one. Suddenly my swivel chair and the two feet of ribbon cable became the solution to the problem. A number of my programs were readily modified to accept punctuation or number responses in place of, and in addition to, the use of single letter responses to some prompts. Thus, I could turn in the chair with NumberJack on my lap and comfortably view the color display while retaining full control of the computer.

NumberJack is not just a spreadsheet convenience, but rather a true auxiliary keyboard input device. It may soon be viewed not as a luxury, but as a normal upgrade for the CoCo.

— H. Larry Elman

Become a King in Wizard's Tower

Before he died, the Wizard King hid three magic talismen in the dungeon under his tower and protected them with monsters. Your quest is to find the three talismen and become king.

There is nothing I like better than a great Adventure game, but this is not really an Adventure game so much as it is a Dungeons and Dragons simulation.

Play takes place on three Lo-Res text graphics screens. The first screen shows the countryside with various terrain and monsters. After buying supplies in town (food, magic spells, weapons, armor), make your way across the screen to the tower. Upon entering, go to the Dungeon screen. It shows the corridors, treasure chests and evil creatures of the dungeon. The idea is to steal treasure chests while killing or avoiding the evil creatures. A treasure chest may contain gold or may have one of the magic talismen. The third screen is a smaller, simpler version of the second screen.

When you find the three talismen and return them to the village, you win. Before achieving that goal, however, you will have to return to the village for more food rations or better armor and weapons.

Unfortunately, the creatures (goblins, wizards, dragons, balrogs) are less than intelligent. Represented by text letters, they wander around on the screen. No matter how many you kill there are always the same number of them on the screen. Everytime you move, all of the creatures make a move.

The game is easy to learn and takes about a half hour to play. The graphics are not high resolution and the action can be slow and repetitive. The program is written in BASIC. If you enjoy programming you might like to modify it to correct for the slowness.

This game is a good choice for the price.

(Mitchell Software, P.O. Box 194, Tomahawk, WI 54487, \$9.95)

— James Ventling

Telewriter-64 Character Set Editor Makes Modifications Easy

One of my most frequently used and favorite programs is *Telewriter-64*. This latest offering from CMD Micro makes this popular word processing program even more appealing.

The *Telewriter-64 Character Set Editor* provides an easy way to modify the character set used by *Telewriter-64*. Three new fonts are included with the program that demonstrate the capability of the software. "Descend" provides real honest-to-goodness descenders on the screen and "French" adds French characters to the vocabulary.

Modification of characters is simple. With the aid of cross hairs, arrow keys, and an eight-times larger-than-normal character, you can edit any character and make it look as you want it to. While you see real descenders, you will not be able to print them unless your printer has true descenders as well. You can modify characters to your heart's content, and the printout is not affected. However, if you have a printer that allows downloading character sets, you could use this program to create unique characters.

The program is menu driven and easy to use. The documentation is adequate, consisting of six pages of detailed instructions on the program's application and use. All modified fonts can be saved to tape or disk. The software is supplied on tape but can easily be transferred to disk. It works on all versions of *Telewriter-64* and is not copy protected, so backup copies can be made. I liked this program. It did what it is was advertised to do and won't leave an empty spot in your wallet.

ASSEMBLY LANGUAGE PROGRAMMING for the TRS-80 COLOR COMPUTER

At last - The book exclusively for you and your CoCo !! You've learned BASIC and are now ready to learn assembly language programming. This hands-on guide begins with the basics and progresses to the expert level; revealing programming conventions and techniques and all the internal capabilities of the TDP-100, CoCo 1 and 2. At every step of the way are illustrations, sample programs, and plain English explanations. All sample programs are shown as assembled with Radio Shack's EDTASM+ cartridge. Plus, a complete chapter explains how to use all EDTASM+ capabilities. This book describes how to write subroutines, interrupt handlers, programs that control the graphics display modes, cassette, disk, keyboard, sound, joysticks, serial I/O, interrupts, and use of ROM resident subroutines. Not only is the MC6809E microprocessor described, but also the video display generator (VDG), peripheral interface adapters (PIA), and

how they all work together. This book is suitable as a high school or college textbook.

CHAPTERS: The Binary Number System - Memory and Data Representation - Introduction to MC6809E Microprocessor - Addressing Modes of the MC6809E - MC6809E Instruction Set - Assembly Language Programming with EDTASM+ - Assembly Language Programming - Assembly Language and Extended Color BASIC - Internal Control and Graphics - Technical Details.

Modest Packaging Can't Hide SCRDMP10's Usefulness

Let's get the negative thing out at the beginning. *SCRDMP10* comes modestly packaged on an average quality commercial cassette. The documentation accompanying the cassette is two paragraphs that very briefly describes what the program does and how to get it up and running.

But don't be discouraged and don't be fooled. Once it's fired up, you discover that behind those humble trappings is one slick screen dump program that reproduces a PMODE 3 or 4 screen through a DMP printer with a minimum of fuss and bother.

SCRDMP10 comes on a cassette in the form of a BASIC driver. When the program is run, you are provided with a pair of prompts. The first is for your printer's graphics control codes (ENTER defaults to those of the DMP-100, which worked fine with my DMP-110). The second prompt asks for a loading address, and here you may run into a snag, since the documentation is neither clear nor helpful (hint: Begin the routine from a cold start — POKE 113,0:EXEC40999, and if you have a DMP-100 or one of its cousins, try entering 14848). The actual ML program is poked in and you are given the choice of saving it to tape or disk.

Now you're home free. After loading or drawing the graphics screen, simply enter EXEC. You are prompted for the choice of background color (to reverse the printout) and the Baud rate for the printer. Position the paper at the top of the head, push ENTER, and away you go! It's as easy as that.

As soon as the print is finished, you are offered the choice of rerunning (again with the option of reversing the colors) or returning to BASIC to draw or enter another graphics screen and repeat the cycle.

The finished format is six and a half by seven inches sideways, and, as might be expected, there is a degree of distortion in the printout, relative to what is on the screen. I also discovered that I could not copy the ML program between drives. So, unless you are luckier than I, you'll have to use the Backup routine and then copy whatever else you might want on the disk with it. I'm not into drawing with my CoCo, but I did try the program as a tool for printing out graphs generated by Tom Mix's *Teachers Data Base* and billboards of some other pieces of software in my library. I had no problems at all.

The main problem with this software is its poor documentation. If you can get by that and the modest packaging, you have a quick and easy, black-and-white screen dump.

Algebra Simplifies and Solves Equations

Algebra, to the best of my knowledge, is the only program that solves equations as *equations*, rather than numerically, although it sometimes says zero is one solution to a particular equation, even while it continues to complete the solution algebraically.

It is somewhat difficult to describe just what it does but a few examples may help make it clear.

If you enter $(X^2-6X)^2-2(X^2-6X)=35$, *Algebra* displays $X^4-12X^3+34X^2+12X-35$. Enter $3-X^2=2X^2+1$, and you get $3X^2-2=0$.

$5X-2X^2=2$ produces $-2X^2+5X-2$; ready to substitute into the standard binomial solution (very hard to write in a recognizable form here, but which goes like this: $-B$ plus or minus the square root of B squared, minus $4AC$, all divided by $2A$; a formula that stirs memories).

Here is an equation generated by the computer (the previous ones came from a math text): $(F+A-(C-E)-B)*E*A=00$; one solution is $A=0$ and the general solution is $A=B-E-F+C$.

Here is one last equation, this one also generated by the computer, which I did not verify: $C/(C+F*B/((F+E-C)/(C+D)))=0$ and the solution is $C=0$ and $C=E+F$. I spent about 10 minutes on this one and gave up!

Briefly put, *Algebra* simplifies or solves certain equations for any specified variable.

The only changes the user must make to his input equation is to specify every number as a letter, e.g., $23X-3Y$ must be written as $AX-BY$ because the program treats everything, numbers included, as string variables.

If you don't change all numbers to letters, you often get incorrect-appearing solutions because the answer is written as "ABX" or something similar and, if 'A' and 'B' are left as numbers, you could get something like "12X" when the correct answer is "2X" (1 times 2X).

By specifying the numbers as letters, it is always obvious that the numbers are to be multiplied in the final answer.

Hint . . .

Heads or Tails?

Have you ever wanted to devise a simple "odds/even" or "heads/tails" utility program? If so, this might help:

10 RND(2)-1	(YIELDS 0 OR 1)
20 RND(2)>1	(YIELDS 0 OR -1)
30 ((RND(2)>1)*2+1	(YIELDS 1 OR -1)

This is not made clear in the documentation and led to my initial conclusion that there was something wrong with the program (there wasn't).

When starting the program you select three different speeds which turn out to be our old friends, the CoCo speed pokes. These pokes don't work with all CoCos but will work with most and really speed up the operation of this program.

On normal speed I could always solve the equation faster than the computer, and I even kept up with it at high speed, but I am certain my accuracy would suffer if I solved several equations in a row, a problem the computer doesn't have.

The program's author is currently translating this program into machine language, which should greatly speed up execution, although it is now faster than many people who are inexperienced with this sort of problem.

The new version should be sent to the purchasers of the BASIC version when completed.

After selecting the speed the computer can handle, you either enter an equation to solve and then specify which variable to solve for, or you have the computer generate random equations and solve them as a demonstration.

Don't run the auto equation generator on the fastest speed. If you do, you won't be able to tell what is happening. If you get "stuck" in the fastest speed (where the display is garbage during calculations), press the BREAK key and rerun the program. Even though the screen is scrambled, this restarts the program without using the Reset button. When running your own equation in the fastest speed, the program stops at the end of a solution.

I found no bugs in this program and am impressed with the idea behind it.

I have seen better documentation but I can't remember ever seeing worse. The bad grammar, poor spelling, lack of information and generally sloppy appearance of the brief documentation that comes with this fine program are discouraging but shouldn't prevent you from purchasing the product because the program itself is very easy to use.

This is a very interesting program, probably unique in its function, that deserves attention. With some changes to the documentation this would be a fine program for anyone who has the need to solve linear equations or convert higher order equations to a form that can then be looked up in various tables.

It is a bargain and so easy to use that most people will find the instructions more of a minor annoyance than an obstacle. This program isn't flashy or complicated to use; it just sits there and lets your CoCo perform a task it has never been able to do before.

Algebra is the answer to many students' prayers for a program that would "really solve" some of those jumbled masses of numbers and letters that teachers always assign as homework.

The copy of *Algebra* that I received was not copy-protected and after starting the review I was informed that the price had been reduced to \$19.95, a giveaway price for this innovative piece of software. At this price I urge anyone with an interest in programming, or any use for this sort of program to buy a copy.

(M F Estes Softhead Co., P.O. Box 335, Elba, NY 14058, requires 32K, cassette or disk \$19.95 plus \$2.50 S/H)

— John McCormick

RAINBOW ON TAPE

Enjoy Your RAINBOW Programs with the Greatest of Ease Subscribe to RAINBOW ON TAPE!

Each month, RAINBOW ON TAPE gives you as many as two dozen ready-to-run programs from the current issue of THE RAINBOW, excluding OS-9 programs and those less than 20 lines. With just a one-year subscription, you'll receive more than 230 new programs. And, using the documentation provided by the magazine, all you have to do is load and run them.

**Need a back issue of RAINBOW ON TAPE?
Issues available beginning with April 1982**

Subscribe to RAINBOW ON TAPE Today!

**LOOK FOR OUR ORDER CARD
BETWEEN PAGES 34 AND 35**

The cost for a single copy of RAINBOW ON TAPE is \$10 within the United States; U.S. \$12 in all other countries. The annual subscription rate for RAINBOW ON TAPE is \$80 within the U.S.; U.S. \$90 in Canada; and U.S. \$105 for all other countries. **U.S. currency only, please.** In order to hold down non-editorial costs, we do not bill.

NOW AVAILABLE ON DELPHI!

For your convenience, RAINBOW ON TAPE can also be ordered via the Delphi Information Network, in our Shopping Service area of THE RAINBOW's Color Computer SIG (Special Interest Group).

The individual programs from our past June issues are also available for immediate download in the RAINBOW ON TAPE Database area in THE RAINBOW's Color Computer SIG on Delphi. There is a \$3.50 per program surcharge.

RAINBOW ON TAPE is not a stand-alone product, but is intended as an adjunct and complement to the magazine. Even if you purchase RAINBOW ON TAPE, you will still need the magazine for loading and operating instructions.

**To order by phone, (credit card orders only) call
1-800-847-0309, 8 a.m.-5 p.m. EST. All other
inquiries call 1-502-228-4492**

For greater convenience, order RAINBOW ON TAPE through the shopping area of the CoCo SIG of Delphi!

Programs from Our Past June Issues:

June 1985 (Sound/Music Issue) — *Piano Note Tutor*, a tutorial on the notes of the piano keyboard; *Minute Waltz*, a music program that brings classical composer, Frederick Chopin up to date; *Name That Song*, a game to test music and memory skills; *Multo of Mars*, a graphics game to learn multiplication; *Chopper Assault*, an arcade game of action; *Analog-To-Digital*, a sound synthesis program to put your voice into memory; *Simplifying the SOUND Command*, a tutorial on saving keystrokes and memory; *Animatic*, a demonstration program to ease the writing of animated graphics; *CoCo Chronograph*, a hardware/software project to add a real-time clock to CoCo; *Hi-Q*, a challenging puzzle peg game of skill; *Super Disk Charger*, a utility to put the "turbo" in your drives; plus 17 additional programs.

June 1984 (Music Issue) — *Tone Row*, a tutorial on 12 note/12 pitch composing; *Music+*, a music synthesis program for composing in four part harmony; *Room Layout*, a home utility to help rearrange furniture; *Election Tabulation*, a vote tallying utility; *Music 1812*, an entertainment program that produces some grand overtures; *Doodler*, a graphics program for CoCo Picassos; *CoCo Classics*, a music program to get a 'Handel' on 'Bach'; *Connect 4*, a game to test your skill; *Guitar Chords*, an aid in producing string music; plus 16 more programs.

Super Duper Utilities Packs a Punch

Utilities are some of the most popular pursuits of the CoCo hobbyist. Human nature drives us to seek new ways of doing things quicker and easier. Our computers provide the opportunity. The new offering from Microcom Software definitely does some new things quicker. *Super Duper Utilities* is supplied on an unprotected disk and is written for a 32K ECB system. The author, Kishore M. Santwani of *500 Pokes Peeks & Execs* fame, has done a good job. He has used his expertise to make CoCo do some pretty handy tasks, which I have listed here:

40K Disk Basic — A utility that gives 64K disk users 40K instead of the usual 32K of memory. Remember, Disk BASIC needs 2K for its own use, so there is only 38K to work with. Two versions are available, one for Disk BASIC 1.0 and one for version 1.1.

Alphadir — This utility reads the disk directory, then sorts and rewrites it in alphabetical order. This is handy for locating program names as your disk library grows larger.

Basic Search — Enables you to find all BASIC lines where a specified string is located. Very handy to find all those high speed pokes, as an example.

Banner Creator — Lets you create a large banner with seven-inch letters. Baud rate is selectable from the menu, ranging from 600 to 9600.

Disk Encryption — Provides password protection for BASIC programs on disk and keeps unauthorized people from accessing them.

EZ Disk Master — Lets you copy, kill and rename disk files, and to determine the starting, ending and executing addresses for ML programs. You can also run and execute programs directly from the menu.

Function Keys — Allows you to program any numeric keys (0-9) with strings of up to 250 characters each. This can be a very helpful feature during programming. For

example, you could press a key and automatically insert "print #-2" in the BASIC line.

Graphics Zoom — This utility is very impressive and easy to use. A menu allows you to look at the picture in memory and to select the area to be magnified four times. You can then modify the magnified area using arrow keys to move the cursor and the space bar for turning the cursor on or off and for modifying the picture.

Large Screen Dump — This program dumps PMODE 3 or 4 screen images to your DMP printer. The printout runs sideways and is twice the size of the graphics screen.

List/Dir Pause — I really liked this one! By pressing SHIFT/CLEAR, you can make the list pause in full screens instead of flashing by. A second SHIFT/CLEAR returns to the normal mode.

Mailing List — A handy mailing list right where you need it. You can delete or modify the records and sort by ZIP code. It prints to either screen or printer.

Program Packer — Removes all spaces and REM statements from BASIC programs. Reduces the memory requirements of BASIC programs.

Super Input/Line Input — This is a very useful utility and one which most programmers will love. It modifies the keyboard input routine to allow editing without having to access the EDIT command each time. Load it in and edit directly with a combination of arrow and CLEAR keys.

Disk Zapper — This utility allows you to change the data on the disk and recover most of the data in case of a crashed disk.

These utilities are useful and the fact that they are all on one disk makes this program even more appealing. However, in most cases, the user must type in a short BASIC line before actually using the utility.

But, they all work fine and the software is worthy of consideration. It offers helpful utilities at a reasonable price.

(Spectrum Projects, Inc., P.O. Box 21272, 93-15 86th Drive, Woodhaven, NY 11421, \$29.95 plus \$3 S/H)

Converting ASCII text from MS-DOS disks to CoCo disks

The Great Transformation

By Marty Goodman

Much as we love the CoCo, the fact is the IBM PC (and its clones) running Microsoft Disk Operating System (MS-DOS) is by far the most commonly used personal microcomputer for business. Many of you may use one at work, or have friends who use them.

This article is intended to provide you with a means of converting ASCII text files on a disk created using an MS-DOS computer into ASCII text files on a Color Computer-type disk. Next month, a companion article will provide you with the means of creating an MS-DOS-type disk on your Color Computer and the means to write CoCo text files to such a disk.

System Requirements

A 64K Color Computer with Disk Extended BASIC (versions 1.0 or 1.1)

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator on CompuServe and Delphi. Among his numerous hardware and software designs, production and marketing projects, he introduced Graphicom and WEFAX to the CoCo world. His non-computer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

and two disk drives are required for these programs. Two drives are needed to allow the file conversions to occur at a reasonable rate of speed. That is why no attempt was made to write this utility for single-drive systems.

The disk drives must be capable of fully accessing 40 tracks. There is no way around this; MS-DOS uses all 40 tracks. Most disk drives sold by third-party suppliers will access 40 tracks, as do most Tandy disk drives manufactured over the last couple of years. Most of the full-height drives Tandy sold in white cabinets will access 40 tracks. All of the half-height drives Tandy has been selling are capable of 40-track operation.

The Problem of File Conversion

The Color Computer differs widely from the IBM PC. The CoCo uses disks formatted with 35 tracks and 18 256-byte sectors per track; the PC uses 40 tracks with nine 512-byte sectors per track. The CoCo uses single-sided disk drives; the PC uses double-sided disk drives. The CoCo uses a Western Digital or Fujitsu brand disk controller chip; the IBM PC uses a NEC disk controller chip. The CoCo uses the Radio Shack Disk BASIC operating system; the PC uses MS-DOS. All of these differences cause problems.

The fact that many IBM PC word

processors store files in a form that is not exactly ASCII text causes further complications. You simply have to make sure the files you wish to read on the IBM PC-type disk are pure ASCII text. Most programs that do not normally use pure ASCII for text storage provide, as an option or separate conversion program, the means of turning their file format into pure ASCII.

Working in our favor is the fact that both computers use the same size disk, that Microsoft wrote the code for both MS-DOS and Disk BASIC, and that the Western Digital (or Fujitsu) disk controller chip can read or write anything written by the NEC controller chip. (Oddly, the NEC chip cannot read everything written by the Western Digital chip. In converting CoCo material to an MS-DOS disk, one has to take the special limitations of the NEC chip into account when formatting a disk for it using the Western Digital chip.)

I have added one feature to my MS-DOS-to-CoCo conversion program. It pokes a little routine into memory that sets the high order bit of all characters in the MS-DOS file to zero before converting them to CoCo disk format. It also strips out line feeds from the MS-DOS file.

Most MS-DOS ASCII and other text files end lines with a carriage return character (Hex \$0D), followed by a line

WE'VE OUTDONE OURSELVES!

DS-69A DIGISECTOR™ THE VIDEO DIGITIZER NOBODY CAN BEAT!

NEW

The DS-69A is the best video digitizer available for your COCO at any price. This new, turbocharged version of our original DS-69 Digisector allows your 64K COCO to see clearly into the world of any television picture.

- SPEED!** The fastest — 8 images per second!
- PRECISION!** The highest — 64 levels of true grey scale!
- RESOLUTION!** The finest — 256 × 256 picture elements!
- Compabitibility** Use with a black and white or color camera, a VCR or tuner.
- Compactness** Self contained in a plug in Rompack.
- Convenience** Use with a Y-cable, Multi-Pak, PBJ Bus or plug directly into the cartridge slot.
- Ease of Use** Software on disk will get you up and running fast!

POWERFUL C-SEE™ SOFTWARE

C-SEE is the menu driven software package included with your DS-69A. Available on disk or cassette, it provides lightning fast 5 level digitizing to the screen, high precision 16 level digitizing for superb hard copy printout and simple keyboard or joystick control of brightness and contrast. Or call our driver routines from your own Basic program for easy 64 level random access digitizing. Pictures taken by the DS-69A may be saved on disk or cassette by C-SEE and then edited with COCO MAX, MAGIGRAPH or GRAPHICOM for special effects. Any of the popular printers may be used to obtain printouts of images digitized by the DS-69A.

ONE YEAR WARRANTY

DS-69A Digisector & C-SEE III Software	\$149.95
OR your DS-69 &	\$ 59.95
MAGIGRAPH Graphics Editor on disk	\$ 39.95

DS-69 DIGISECTOR™ THERE'S ONLY ONE BETTER VIDEO DIGITIZER . . .

And that's the DS-69A. The DS-69 is The Micro Works' original video digitizer, tried and true since 1984. It provides almost all the features of the DS-69A and is now available at a new low price. The DS-69 features;

- SLUGGISHNESS** 2 images per second. Quick enough to freeze all but the fastest moving pictures.
- INCOMPATIBILITY** Brightly colored scenes may be striped when using a color camera.
- INCONVENIENCE** Will not work with a Y cable.

Otherwise, it's a DS-69A. Precision, resolution, compactness, ease of use, software and warranty. Except one last thing.

DS-69 Digisector & C-SEE III Software	\$ 99.95
---------------------------------------	----------

Superb image quality produced by both Digisectors.

feed character (Hex \$0A). But CoCo word processors are accustomed to seeing lines ended *only* by the carriage return. Some CoCo word processors automatically remove any line feeds they may find in a file. *Telewriter-64* is one example. However, some CoCo editors (i.e. the editor for Macro 80C) choke on a file if it contains line feeds. In general, when converting text from an MS-DOS system to a CoCo Disk BASIC system, it is useful, sometimes mandatory, to strip off line feeds. The resetting of the high-order bit to zero should help convert *WordStar* and some other type files into ASCII for compatibility with CoCo word processors and editors.

The "filter" routine that does the line feed and high-order bit stripping is executed in Line 5050. If you want to have the file converted without this filter, just delete Line 5050: load the converter program, then before running the program, type 5050 and press ENTER. This deletes Line 5050 and disables the filter. You may want to save the program with that line deleted.

Program Limitations and Idiosyncrasies

There are several limitations with this file conversion program. First, it can only read single-sided disks (because so few CoCo owners use double-sided disk drives). Virtually all MS-DOS users use double-sided disks. However, originally MS-DOS used single-sided disks, and to maintain backwards compatibility, the current versions of MS-DOS have the ability to read and write single-sided versions of MS-DOS disks. In order to create an MS-DOS disk that can be read by a CoCo with single-sided drives, the user must first format a single-sided disk on the MS-DOS machine. Under MS-DOS, do this with Drive B and give the command `FORMAT B: /1`.

After prompting you to put a blank disk in Drive B, the computer formats a single-sided MS-DOS disk. You must transfer any files you want converted to that disk. Only MS-DOS disks prepared in this manner can be read by this MS-DOS-to-CoCo conversion program. (It is possible to write a conversion utility to read double-sided [normal] MS-DOS disks on the CoCo, but double-sided drives are required.)

MS-DOS supports volume labels and subdirectories. To keep the conversion program simple, I elected not to write code that took either into account. Therefore, the files you wish to transfer *must* be put in the Root directory of the single-sided MS-DOS disk. This pro-

gram ignores volume labels, subdirectories and killed files, but I do suggest not having any of these things on the disk you are preparing for file conversion.

Files can be of any length, but the computer reads and writes data a sector at a time. To keep the code simple, I made it convert files a sector at a time and let the last sector in each file be fully converted, even if the file is supposed to include only part of that last sector. The result is that it adds some trash at the end of files it converts, although all of the file does get converted. This extra trash often shows up as part of the original file itself. Indeed, that trash will very often be material from just before the end of the file. But if you look a little farther back, you'll see the true end of the file, followed by up to 255 characters of text, which is a repeat of stuff near the end of the file. The extra trash can be edited out with a word processor.

One note for *Telewriter* users: *Telewriter* does weird things when it encounters a caret sign in incoming text. The caret itself is not displayed, and the

"I made it convert files a sector at a time . . ."

character following it is lost or altered. I suggest you make sure there are no caret signs in the text you convert. If need be, first edit the text using an MS-DOS-based word processor on your MS-DOS machine.

Users of *VIP Writer* will need to do a little extra work to prepare their files for loading into the word processor. Unfortunately, *VIP* is set up to interpret a null as an end-of-file marker. This MS-DOS-to-CoCo conversion routine doesn't actually remove the line feeds; it converts them into nulls. Because of this, *VIP* loads only the first line of the converted text. The rest is ignored as the null at the end of the line tells *VIP* it has reached the end-of-the-file.

To correct this, *VIP* users need to delete Line 5050 in the main program. This tells the converter not to strip the line feeds. Then, after the conversion is complete, you can do one of two things: 1) Leave the file as is and edit out the line feeds (the hard way), or 2) Run the file through the program in Listing 2 and answer the prompts. This listing strips the line feeds right out of the file.

Using the Program

First, make up your MS-DOS single-sided disk with MS-DOS ASCII text files you want to convert. Be sure to put all files in the Root directory. Be sure the disk does not have a volume label, subdirectories or a killed file. Put that disk in your CoCo's Drive 1. Put a disk with this conversion program (*MS2COCO.BAS*) in Drive 0. Type `LOAD "MS2COCO"` and `RUN`. Upon seeing the title page, make sure your specially prepared MS-DOS disk is in Drive 1, then press ENTER. Follow the prompts to view all entries on the root directory of the MS-DOS disk. Select the entry you want to convert by typing its number, then pressing ENTER when asked to confirm that selection.

Be sure you have adequate blank space on the Disk BASIC disk in Drive 0. That disk must be formatted in ordinary format — just follow the prompts. After selecting the file on the MS-DOS disk you wish to convert, you are asked to choose a filename for it as it will appear on the CoCo disk. Note that you are only to enter an eight-letter filename; the program automatically assigns the extension `"/TXT."`

The speed of file conversion is roughly 2400 Baud. This is accomplished by a sneaky programming trick, the "VARPTR trick." You might wish to examine the code between 5000 and 5200 to see how the `VARPTR` statement is used to help create a 256-character long string in one fell swoop.

During file conversion some curious numbers appear on the bottom of the screen. These numbers were put there mostly to help debug the program. Going from left to right, they represent the cluster number, track and sector number on the MS-DOS disk that is currently being acted on.

On the right bottom part of the screen you will see a display of the number of bytes that remain to be converted. As the file is converted, that number decreases to zero. The number gives an idea how far along the program is in the process of file conversion. When the program is done converting a file, it prompts with a beep and asks if you are done or if you want to convert another file.

Special thanks go to Don Hutchison (user name `DONHUTCHISON` on Delphi) for his beta testing of this utility and his help in dealing with line feeds, including the program in Listing 2. Also to Art Flexser (`ARTFLEXSER` on Delphi), author of *ADOS*, for his help in suggesting the `VARPTR` trick and for providing a routine from which Don

derived the line feed-stripper program. Thanks to Cray Augsburg (RAIN-BOWMAG on Delphi) for his beta testing that revealed the problems to be encountered by users of *VIP Writer*. Extra special thanks go to Fred Cisin, author of *Xenocopy*, who spent hours patiently teaching me about MS-DOS disk file structure.

Next month we'll present the other half of this package: a group of programs that allow you to format an MS-DOS-type disk on the CoCo and to write Disk BASIC text files onto that MS-DOS disk using the CoCo. A short simple BASIC program will be included that inserts line feeds into CoCo ASCII files after the carriage return, making such files more palatable to MS-DOS-

type text handling programs.

For those with other file conversion needs, please take note of the following:

Mark Data Products makes a program called *CoCo Util* that converts to and from Disk BASIC on an MS-DOS-type machine. (Note that this is an MS-DOS program and runs only on MS-DOS machines.) It does, of course, support double-sided MS-DOS disks. Mark Data Products, 24001 Alicia Parkway, No. 207, Mission Viejo, CA 92691, (714) 768-1551.

D.P. Johnson makes conversion utilities to handle file conversions between OS-9 and MS-DOS disks. These utilities run on the Color Computer under OS-9 and support double-

sided disk drives. D.P. Johnson, 7655 S.W. Cedarcrest Street, Portland, OR 97223, (503) 244-8152.

For those with an IBM PC or other MS-DOS machine who wish the ultimate in file conversion utilities, let me recommend *XENOCOPY II*. It runs on nearly all MS-DOS machines, and reads from, writes to and formats over 250 different disk formats. This includes OS-9, Color Computer and hundreds of CP/M variant formats. If you obtain special hardware, this conversion program also supports a number of eight-inch and 3½-inch disk formats. *Xenocopy II* is available from Xenosoft, 1454 6th Street, Berkeley, CA 94710, (415) 525-3113. □

At Last — INTERCOMP SOUND presents:
**PROFESSIONAL MIDI PRODUCTS FOR
THE COLOR COMPUTER!!**

At InterComp our objective is to support Midi hardware/software for the Color Computer to the fullest. Within the next year or so you can expect a variety of products such as librarian/patch programs (Korg, Yamaha, Casio, etc. . .), graphics editor and system exclusive software. Don't go out and buy another computer for your MIDI system!!!! Our products are designed with the professional in mind, be it for studio, performance, home recording or music education. Here is the start of more to come!

COLOR MIDI CONNECTION — This interface plugs into the cartridge slot. It contains 3 Midi outputs, 1 Midi input, and a female connector for the disk controller (no Y-cable is required) \$98.00.

SYNTRAX 1.00 — With this sequencer you will quickly control your Midi system! Major features include: 16 polyphonic tracks, interactive editor, 30,000 bytes for note storage, independent repeats for any track, all midi channel control data (program changes, channel #, velocity, pitch wheel, etc.), int/ext sync for Midi drum machines (or another sequencer), programmable tempo, transposition, clefs, key signatures, chords, complex rhythms, use up to 4 disk drives, sequence chaining and linking, notes/Midi-events can be specified with a resolution of 1/384 note! Requires 64K, disk drive, COLOR MIDI CONNECTION — \$75.00.

SYNTRAX 2.00 — All the features of SYNTRAX 1.00 plus: real/step time record (notes, velocity, program changes, and controllers), input filtering, programmable split points, punch in/out anywhere, easy and quick editing of Midi data, supports J&R's 512K upgrade for a tremendous amount of storage for recording! \$125.00 (Customers that already have SYNTRAX 1.00 can upgrade to ver. 2.00 for \$50)

SYNLIB 1.0 — Expandable Multi-Instrument Voicing Librarian. Buy what you need, when you need it. Includes pull down menus, SYNTRAX 2.0 compatibility and ease of expandability to set up the studio instantly. Synlib with one librarian Module — \$45. Roland TR707/727 Lib. Module — \$20.00. Korg EX800 Lib. Module — \$20. Yamaha, Casio Lib. Modules Avail. soon!

Include \$3 for shipping (CODs add \$2). Residents of N.Y. state add sales tax. Mail check or money order to:

E.T.T. Electronic Typing Teacher

by CHERRYSoft

Learning to type the right way can save you hours of tedious work when entering programs into your CoCo, and this is just what ETT was designed to do. Devote a little time every day practicing with ETT and before you know it you will be typing with confidence. Entering those programs will no longer be the chore it use to be.

ETT's video keyboard lets you practice with all the keys labeled, all the keys blank or only the "home" keys labeled. The visual cues guide you while you learn to type without watching your fingers. ETT shows your accuracy, response time, and words per minute. You will quickly see that you are improving with practice.

With the sentences provided by ETT learning to type can be fun. Over 1000 variations chosen because they include every letter in the alphabet. You can also create your own practice sets. This outstanding program was written by a certified teacher and professional programmer and comes with a ten page student manual-study guide. Requires 16K Extended Basic.

Cassette **\$24⁹⁵** FREE SHIPPING Disk **\$29⁹⁵**

ETT is being used in schools throughout the U.S.
See ETT at your favorite dealer or order direct.

About Your Subscription

Your copy of THE RAINBOW is sent second class mail. If you do not receive your copy by the 5th of the month of the publication date, send us a card and we will mail another. Canadian subscribers and foreign airmail allow two additional weeks.

You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an "account number" and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone *except* those whose subscriptions are through our distributor in Australia.

ADOS ENHANCED, EPROM-ABLE DISK BASIC

Now, you can supercharge Basic with an impressive array of extra features WITHOUT sacrificing compatibility! ADOS is compatible with virtually 100% of commercial software. Customizing utilities are provided to allow user-defined command abbreviations, baud rate, step rate, tracks per disk (35 or 40), support of double-sided drives, and more. After customizing ADOS, you can have it burned into an EPROM that plugs into the Disk Basic ROM socket, or just use it in RAM as a 64K disk utility. (EPROM + burning will cost about \$20—we provide information concerning how you can have this done.) Features include: • repeat and edit of the last direct-mode command • 26 definable control-key abbreviations • automatic line-number prompts • DOS command • lowercase command entry (a fine complement to a Lowerkit or PBJ WordPak) • COPY (filename) to (drive number) • AE error override option • RAM command (64K) • RUN command • text echoing to printer • ML monitor • text file scan • enhanced directory • error trapping • hi-res text utility included (42, 51, or 84 characters per line)

"I COULD NOT FIND ANY SOFTWARE THAT WOULD NOT RUN UNDER ADOS."
THE RAINBOW, December 1984

"I LOVE ADOS! . . . A GENUINELY FIRST RATE PRODUCT."
Color Micro Journal, February 1985

"I WON'T PART WITH MY ADOS EPROM FOR ANYTHING . . . NO COMPATIBILITY PROBLEMS."
Hot CoCo, May 1985

Disk . . . \$27.95

Hot CoCo, May 1985

THE PEEPER ML PROGRAM TRACER

Monitor machine-language programs AS THEY ARE RUNNING! Peeper actually timeshares with the target program, giving FULL CONTROL as ML programs run. Switch instantly between watching regular program output and Peeper's trace of registers and stack on screen or printer. Inspect memory in any of 26 display modes. Execution speed can be varied from full speed to the barest crawl, or halted entirely, as programs run. Single-stepping, breakpoints, memory or register exchange. Relocatable, supports 64K use. (16K required) See February '85 review.

Disk . . . \$23.95 Tape . . . \$21.95 Assembler source listing . . . Add 3.00

FASTAPE THE NEXT BEST THING TO A DISK DRIVE

Fastape allows cassette I/O at 3000 baud—TWICE NORMAL SPEED. It uses the high-speed (POKE 65495.0) mode, and makes it convenient to stay in this mode throughout. Features automatic adjustment of cassette and printer parameters when speed mode is changed. Control-key functions for many Basic commands and for changing speed modes. Compatible with all file types, and can be used with Teletwriter 64 and many other tape utilities. (16K required) See July '83 review.

THE NEXT PHASE OF ADVENTURE GAMES HAS FINALLY ARRIVED!

Zytek

presents

View your movements in
the unique map window!

100% machine language
HI-RES, color, graphic
adventure!

Actual screen graphic!

This extensive game uses
an entire diskette!

Battles orchestrated
blow by blow!

Are you tired of being forced to constantly type directions or pick up and put down provisions? Are you frustrated at discovering the right logic only to be stumped by the game's vocabulary? **Plateau of the Past** eliminates these annoyances without sacrificing excitement. If you enjoy the challenge of a fast-paced adventure, then this game is for you!

Prepare yourself! The journey ahead of you will surely be perilous. You are hereby forewarned of possible encounters with strange beasts! If you survive these dangers, you must still find the missing idols and attempt to reach the forbidden village. Good luck, you'll need it!

TOTHIAN SOFTWARE

TIME MASTER Calendars, biorhythms, human compatibility, more. Fun at parties. Printer optional. Reviewed 12/85. 16K ECB. \$19.95

PERPETULIFE Challenging board game based on Life. Play a friend or play (lose to) CoCo. Reviewed 4/86. 16K ECB/ML. \$19.95

GRAPHIC ECHO New! Versatile graphic screen dump for RS dot matrix printers. Regular or enlarged images. Positive or negative images. Adjustable margin or auto-centering. Works in all 5 PMODEs. 16K/32K ML. \$14.95

TEACHER PAK PLUS The works for teachers. \$47.95

HOMEWARE New! Give your CoCo real power at home. Printer preferred. Works with tape or disk. Five 16K ECB/ML modules:

CALENDAR - Draw calendars for any date. Various formats. Add appointments, memos.
SAVINGS/LOANS - Work out a personal savings plan. Decide if you can afford that loan.
DIRECTORY - Keep track of phone numbers, addresses, etc. Print address labels.
INVENTORY - For home insurance records, hobbies, small business. Very flexible.
HOME-WRITER - ML word processing powerful enough for home use but easy enough to be totally mastered in one short sitting.
Single modules: \$19.95 Whole set: \$49.95

All programs sold on tape. Send check or money order, no cash (Pa. residents add 6%) to:

Tothian Software, Inc.
Box 663
Pimersburg, Pa. 16248

All of these programs carry the Rainbow Seal.

NEWMAN PRODUCTS

GANTELET

One, two or even three people can play Gantelet at the same time. You and your friends travel through the many levels in search of an exit to the next level. Avoid the Ghosts and other creatures that are out to stop you in your quest. Collect keys to open doors, treasures and magic potions to aid you in your battle. Watch out for hidden traps as you frantically search for the exit to the next level.

64 k required
tape or disk

\$28.95 U.S.
\$38.95 Can.

Mission: F-16 ASSAULT

Fly your plane over land and water while avoiding enemy missiles, planes and helicopters attacking from the top and bottom of the screen. Use your radar to track objects as they approach the main screen. Bomb oil refineries, airports and destroy planes before they can take off from the airports. Watch out for missiles fired from hidden missile silos on the ground. Dozens of screens of detailed terrain plus increasing difficulty make this a great game for everyone.

64 k and joystick required
tape or disk

\$28.95 U.S.
\$38.95 Can.

PAPER ROUTE

As a paper boy, you ride your bike along your route delivering papers to your customers. Break customers' windows or damage their property and they will cancel their subscriptions! Earn bonus points by damaging non-subscribers' property. Avoid pedestrians, cars, and maybe even a mad dog in your attempt to deliver all of your papers! Detailed graphics and lots of surprises make this game a real challenge for everyone.

64 k joystick required
tape or disk

\$28.95 U.S.
\$38.95 Can.

MARBLE MAZE

Move your marble around the mazes in your search for the finish line! Avoid marble eaters, acid puddles and other creatures that inhabit the mazes. Eight different levels and great graphics make this game a must for your collection.

joystick required

64 k required tape or disk **\$28.95** U.S. **\$38.95** Can.

KNOCK OUT

Fight against five different boxers in this great boxing game! At first the boxers are easy to knock out, but beware, it gets harder as you move on. The boxers are out to stop you in your quest to become champion of the world. Outstanding graphics make this a must for your collection!

KARATE

Challenge the computer, or a friend to a Karate match! Use various Karate punches and kicks to knock your opponent down and earn points to win the match. When challenging the computer, your opponent's Karate skills increase as you win matches. This game is a challenge for even the expert game player.

joystick required

The Two-Question Two-CoCo Problem

By Dan Downard
Rainbow Technical Editor

• *I have two questions. My system consists of a CoCo 2 64K, a CoCo 1 NC board upgraded to 64K with dual Radio Shack disk drives (white cases) and their controller, a CMP-130 printer, a Modem I and a Radio Shack cassette recorder.*

1) *When I move the disk drives from my CoCo 2 to my CoCo 1, the disk directories display garbage and none of the programs will run, yet when I move the drives back to the CoCo 2 everything works fine. Could this have something to do with the clock speeds of the two CoCos?*

2) *Is there any way to transfer the Radio Shack Disk BASIC 1.1 ROM to RAM, then automatically print out all the memory locations to my printer? I have the Radio Shack EDTASM+ cartridge on disk using Roger Schrag's patch.*

Dean Pace
St. Peters, MO

Dan Downard is an electrical engineer and has been involved in electronics for 26 years through ham radio (K4KWT). His interest in computers began about seven years ago and he has built several 68XX systems.

Most of the people who write, Dean, have just the opposite problem with their disk drives. The older disk controllers will not work with the CoCo 2s due to the lack of 12 volts on the expansion port. As far as your problem is concerned, I suggest replacing the 6809E on your CoCo 1. I had the same problem once and replacing the microprocessor cured it.

As a sidelight, we have been informed that the new disk controllers from Tandy are not capable of reading single-density tracks. FLEX and some protection schemes read and write single-density data on Track 0. The new controllers will not work with this software.

To disassemble Disk BASIC all you need to do is return to the 32K mode by entering Z-BUG and changing memory location \$FFDE. This disables the 64K mode and you should be able to read the data directly from ROM. Use the Z-BUG command THC000 DF58. Make sure you are in the Hex input mode first by typing I16.

A Hard Disk is Hard to Find

• *I have Version 02.00.00 of OS-9. It is*

compatible with either 15-megabyte or 35-megabyte hard disk drives. When I found out this information, I became interested in buying a hard disk drive. I searched through magazines and catalogs trying to find one and came up with nothing.

Could you please give me any information as to where I could find a 15M or 35M hard disk drive?

Andy Ellinor
Odessa, FL

Andy, it just so happens that Tandy also sells 35-Meg hard drives. Maybe that's why the drivers are set up for these odd values. I'm sure that changing these parameters in the device descriptors will be addressed by one of our OS-9 advocates very shortly.

Mixing Software and Memory Expansion

• *I am considering installing more memory in my CoCo — 128K or 256K. There are several suppliers of these upgrades and I am concerned about their compatibility with software, that I believe, will eventually be available to use this memory. If I install one*

of these upgrades will I be able to use software written for this amount of memory or will I have to have a certain "brand" of memory expansion?

What do you know of the progress being made on this software, such as spreadsheets, word processors or database managers?

David Kincaid
Greenville, SC

David, you hit the crux of memory expansion when you bring up software. So far, I have seen no efforts in the fields you mention. Most memory upgrades come with RAM disk software. All this does is allow the increased memory to act as a super-fast disk drive.

Thunder RAM from Spectrum Projects comes with a built-in ROM using a system of machine language commands/entry points. It's called TDOS and it's a step in the right direction, but still does not easily facilitate the use of longer programs.

Personally, I can't envision a program too large to run on the CoCo if modular programming is used. Maybe the data will not fit in memory now; that is where a RAM disk helps. Just store all of your data in disk files that have fast access.

Terminal Adjustment for OS-9?

• I have an older 'D' board that was "piggybacked" up to 32K. How do I go about installing 64K so it can be used as a terminal in my OS-9 system? I can remove the 74LS02 and 138 and install sockets if that is necessary.

Bernie Beshere
Ketchikan, AK

I assume you want a smart terminal, Bernie, since 32K is more than enough for a dumb terminal; 32K is more than enough for a smart terminal, as long as you don't mind a small buffer. What I am getting at is the fact that your terminal program does not have to operate under OS-9 to use it as a remote terminal for OS-9. There are several excellent terminal packages written for Disk BASIC that will do the job.

To modify a 'D' board I suggest obtaining a copy of the May 1984 RAINBOW. There is an article entitled "RAM/ROM Upgrade Roundup" by Ed Ellers [Page 49] that gives instructions for upgrading several types of boards, up to the earlier CoCo 2s.

If you buy your 64K chips from one of our advertisers, they will usually provide installation instructions with your order if requested. Be sure to mention the type of board you have.

No Hope for this Marriage

• Recently, I experimented with one of my

programs. I made a BASIC program that requires the use of a predrawn graphics screen. Every time I work with this program, I first have to load the BASIC program and then LOADM the graphics screen. I want only one program to load! I tried to SAVEM the program and graphics screen like this:

```
SAVEM"GRAPHS",1536,30000,1536
```

When I loaded the program, I made a listing perfectly, but when I ran the program, the computer stopped and the listing became lines of garbage. What can I do to SAVEM and LOADM my BASIC program and graphics screen together?

Eric Bernatchez
Quebec, Canada

Eric, loading a BASIC program also sets pointers in low RAM to tell CoCo where the program starts and stops. There are several methods of packing graphics into a BASIC program, but I would not advise them for extensive graphics usage. Just grin and bear it when you hear your drives purr.

The Secret of Cables and Pins

• I have a gray CoCo with two vertical disk drives. I also have acquired two additional Drive 0s I would like to use as Drives 2 and 3.

One of the best kept CoCo secrets seems to be the cable and pin function assignments and the disk drive addressing methods used by Radio Shack for the vertical drives. The local Radio Shack Service Center claims it cannot provide this information.

John McNeirney
Madison, WI

John, the different drives are selected by a separate pin for each drive. The functions of all of the active pins between the controller and drives are as follows:

Pin	Signal
8	Index/sector
10	Drive select 1
12	Drive select 2
14	Drive select 3
16	Motor on
18	Direction select
20	Step
22	Write data
24	Write gate
26	Track 00
28	Write protect
30	Read data
32	Drive select 4

April Fresh CoCo

• I read in another magazine that if you combine fabric softener and water in a spray

bottle and spray it on the rug around your computer it will stop static electricity. Is this true or not?

Chris Romance
Massapequa Park, NY

Chris, I heard a rumor to that effect, too, but I'm not a chemist. Maybe one of our readers can confirm this suggestion. It certainly works on your clothes!

Read My Memory

• I upgraded to 64K, added disk and Telewriter-64. Everything worked. I then prefixed ROMRAM to a program expecting more memory from MEM, but CoCo seemed stuck in 32K. How can I determine the true memory remaining in 64K regime? Is there a PDK? Or am I misusing ROMRAM?

R. Telford
Surrey, British Columbia

Mike, there have been several articles written on this subject, but you are correct — just simply running ROMRAM does not give more memory. It just relocates your BASIC ROMs to RAM where they can be changed, moved, etc. I do think you have a bigger buffer with Telewriter-64 in 64K.

Prompt Printing

• I have a Radio Shack DMP-100 printer and I print out graphics pictures quite often. But, even when I print them out at 1200 Baud, it still takes a while for a complete picture to print out. Is there any way I can print at a faster speed? I've heard of a serial-to-parallel interface, but what does it do?

Matthew Coenen
Norwalk, IA

Matthew, the only thing a serial-to-parallel converter does is speed up the data from your CoCo to the printer; it does not allow the printer to print any faster. Instead of sending data at 1200 Baud, you are able to send it at 9600 Baud.

BARDEN'S BUFFER

The Meaning of Life

By William Barden, Jr.
Rainbow Contributing Editor

The game I'm about to describe is more than a frivolous pastime. For some, it's a challenge in assembly language. For others, the key to unlocking the secrets of evolution. And for yet others, it's a way of generating interesting patterns. It's called "Life," and is an ancient computer game dating back at least 15 years.

Actually, it's not a game in the sense of a person versus computer confrontation. It's more a challenge of finding out how the game works and what the limits are, if any.

The Rules of Life

The rules were laid out by the game's inventor, mathematician John Horton Conway. Martin Gardner, of *Scientific American's* "Mathematical Games" fame, introduced it in his October 1970 column and provided periodic updates for several years thereafter. For the most part, the descriptions I'm providing come from the *Scientific American*

Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years experience in the industry covers a wide background: programming, systems analyzing and managing projects ranging from mainframes to microcomputers.

columns. There's a recently published book on "Life" and other topics, called *The Recursive Universe* (William Poundstone, William Morrow and Company, 1985) that makes interesting reading.

The rules are deceptively simple. Start with a square matrix like a checkerboard. Each square of the checkerboard is called a cell. The checkerboard can be any width and any height, although something on the order of a CoCo screen (128 by 96) is a good size to start with. Put a pattern on the checkerboard by generating random points or entering points via a BASIC PSET command. The pattern defined is the starting generation.

Now consider each cell in the 128 by 96 matrix defined by the CoCo's screen. If a cell is on, it's considered to be living. Whether or not a cell survives until the next generation is dependent on its immediate neighbors, the eight cells adjacent to the living cell, as shown in Figure 1. We'll call the neighbors A, B, C, D, E, F, G, H and I.

If the living cell has no neighbors or one neighbor, it dies from loneliness and disappears in the next generation. If the cell has two or three neighbors, it survives until the next generation. If the cell has more than three neighbors, it dies from overcrowding.

Not only can cells die, but new cells can be born. If an empty cell has three neighbors, the neighbors produce a new cell in the next generation. This only happens if an empty cell exists and there are three of the possible neighbors A, B, C, D, F, G, H and I.

Each generation is produced using these simple rules and there are an unlimited number of generations.

Here's an example. Start with a simple pattern such as the three cells in a straight line, as shown in Figure 2. The

result in generation one is a straight line of three cells at right angles to the first line. This pattern flips back and forth, oscillating in a style reminiscent of a blinker. To "Life" devotees, the pattern is called a blinker.

tiful designs but die off after a dozen generations or so. Figure 3 shows the tenth generation of a "Life" game generated from 1,400 initial random points, grouped towards the screen center.

allows 4,096 by 4,096 cells to be displayed at one time. As a matter of fact, a dedicated system has been built to run "Life" at high-speed so the patterns can be observed and cataloged. Bear in mind this is not a project that is a profound breakthrough in artificial intelligence — it is primarily a fun thing that has some interesting implications. Still, "Life" has a large following.

A BASIC Life

Listing 1 shows "Life" implemented in BASIC. This BASIC program uses only a 14 by 20 element portion of the screen since BASIC is decidedly slow in producing the next generation. To use this program, enter a number for 'X' from zero to 19 and a number for 'Y' from zero to 13 to define the pattern, and watch the computation. It takes about 52 seconds to produce the next generation. The blinker pattern is defined by entering:

```
10,6
10,7
10,8
-1,-1
```

The two "-1" values terminate the entry and start "Life" processing.

An Assembly Language Life

A 14 by 20 matrix is really not big enough to see the interaction of the different patterns. The point of this column is a full-blown CoCo assembly language program to generate a 128 by 96 single-color version of "Life" on the CoCo (see Listing 2). Using the assembly language program, each generation of "Life" takes about 6.7 seconds. Still slow, but fast enough so you can easily watch the progress from generation to generation. I decided to use the lower resolution PMODE 0, instead of the maximum resolution PMODE 4, which requires four times the computation because there are four times the number of pixels.

The Program Algorithm

Having been through several versions of "Life" on different systems, I knew the program could never be fast enough. For that reason, I gave a lot of thought as to how the program should be implemented.

The first design consideration was the graphics screen. The graphics screen in Disk BASIC starts at location \$E00, as shown in Figure 4. If PMODE 0 is used, the resolution of the screen is 128 pixels wide by 96 pixels high. In PMODE 0 and in every single-color graphics mode, one

Figure 2: Computing the Next Generation

The Appeal of Life

The interesting thing about "Life" is the unpredictability of the patterns produced. Start with a completely random pattern generated by:

```
100 PMODE 4,1
110 SCREEN 1,0
120 FOR I=1 TO 1400
130 PSET(RND(256),RND(192))
140 NEXT I
```

and apply the rules of "Life." You'll wind up with a situation analogous to life oozing up out of the primordial slime — a random pattern that produces some organisms that stay around forever and others that produce beau-

tiful designs but die off after a dozen generations or so. The rules of "Life" pose some interesting questions and they had programmers, computer scientists and mathematicians spending millions of dollars of computer time investigating "Life's" patterns. Are there patterns that move? Are there patterns that reproduce without limit? The answer to both of these questions is yes, but it's not immediately obvious to those watching the game for the first time.

A High-Speed Life Generator

To study "Life," programmers and computer scientists use large mainframe computers and displays. One display

Figure 3: Sample of Life Generation

bit is used to store the color for each pixel. A '1' in the bit means the foreground color is used; a '0' bit means the background color is used. Therefore, in PMODE 0 there's a total of 128 pixels/row x 96 rows = 12,288 pixels = 12,288 bits.

Of course, there are eight bits in a byte, so 12,288 bits/(8 bits/byte) = 1,536 bytes used to store each graphics screen.

Figure 4: Memory Layout for PMODE 0

The plan I use is to keep the PMODE 0,1 screen as the current screen and update a second screen, the PMODE 0,2 screen. (In the PMODE command, the second parameter specifies the page number, in this case '1' or '2'.)

To do this, I have it scan the current screen one cell (pixel) at a time. For each cell, a count of the neighbors is made, with the corresponding cell in the new screen set or reset according to the rules of "Life." The scan proceeds from right to left across each row, starting at the

Figure 5: Scanning the Current Page

last row and ending on the first row, as shown in Figure 5.

One other screen design consideration was what is to be done on the screen boundaries. There are two approaches to handling boundary conditions. One approach lets the living cells disappear beyond the screen edges. A second approach treats the whole screen as a "toroid" — a closed universe — as

shown in Figure 6. The second approach is followed here. Patterns going off the right reappear on the left, patterns going off the top reappear on the bottom, and so forth.

Figure 6: The Closed Universe of the Screen

After each screen scan of 12,288 cells, the second screen is written to the first screen by a quick assembly language subroutine. This makes the update

appear almost immediately, avoiding a slow, partial screen update.

The program is divided into three parts: a main loop, a Count Neighbors subroutine and a Get Address subroutine.

Main Loop

The main loop scans through the first screen as shown in Figure 5, starting with the last cell in Row 95 of Column 127. Rows are called 'Y' and are numbered from zero through 95. Columns are called 'X' and are numbered from zero through 127.

The current location is held in variable XY. Note that this is a two-byte variable. The first byte holds 'X' and the second byte holds 'Y'. This variable is initialized with X=127 and Y=95. The loop from MAN005 through the fifth instruction after MAN080 is the main loop of the program, done 128*96 times to process each of the 12,288 cells. Each time through the loop, subroutine GETADD is called to calculate the addresses for the current XY. This is followed by a call to subroutine COUNTN to count the neighbors of the current cell.

After the call to COUNTN, a check is made of the current cell's on/off status. The byte location of the current cell is held in ELOC, a 16-bit pointer set by GETADD. The bit position of the cell within the byte is held by EBIT, an eight-bit variable set by GETADD. A branch is made to MAN040 if the cell is empty.

If the cell is empty, a check of variable COUNT (set by COUNTN) is made. If COUNT=three, the code at MAN010 is called for the "birth." If COUNT<three, nothing is done.

If the current cell is not empty, a check is made of the number of neighbors. If COUNT=two or three, the corresponding cell in the second screen is set, otherwise the cell is reset. Again, pointer ELOC holds the address of the current cell, while EBIT holds the bit position of the cell within the byte retrieved. Variable EBITI is the inverted bit of the cell, set by GETADD. For example, if the current bit is represented by 0010000, EBITI holds 1101111. This makes it easy to reset the bit.

At the end of the birth/death checks, the code at MAN080 decrements 'X' by one. If 'X' does not equal 11111111 (off the left edge of the screen), the next cell is considered. If 'X' is 11111111, 127 is stored in the first byte of XY for the 'X' value, and 'Y' is decremented by one. If

'Y' is not equal to 1111111, the next row above is considered.

When the 'Y' value is decremented down to 1111111, the last row has been processed and the new cells are in the second screen. The data in screen two is moved to screen one by the short move code starting near MAN085. This code is so fast the entire screen appears to change, even though the movement is done from top to bottom, a row at a time.

Count Neighbors Subroutine

This subroutine counts the eight neighbors of the current cell. The result is COUNT, which holds a value of zero through eight and is used in the main loop to determine whether the cell lives or dies. The subroutine uses two tables. One of the tables starts at ALOC and is the byte location table. This table is established by the GETADD subroutine and holds the byte address of each of the neighbors of the current cell, the neighbors being the cell up and to the left, directly above, up and to the right, the cell directly left, and so forth.

The second table starts at ABIT and holds the bit configuration that defines the neighbor bit within the byte pointed to by the ALOC table. For example, if the current cell is defined by 00010000, the neighbor to the left is defined by 00100000 and the neighbor to the right by 00001000.

The Count Neighbors subroutine goes down through both tables, using the ALOC table entry to point to the byte containing the cell and the ABIT table entry to strip off the proper bit, which is counted if it is a one. The current cell is defined by ELOC and EBIT, and is beyond the end of both tables so that the subroutine only counts neighbors.

Get Address Subroutine

Most of the work in the program is done by the Get Address subroutine. It establishes the addresses in the ALOC table and the bit positions in the ABIT table. The graphics data for all 128 by 96 bits, remember, is represented by one bit somewhere within the 1,536 bytes of screen one. The first byte represents Y=0 and X's of 0, 1, 2, 3, 4, 5, 6 and 7; the next byte represents Y=0 and X's of 8, 9, 10, 11, 12, 13, 14 and 15, and so on.

The subroutine locates the byte containing the current X,Y by multiplying the 'Y' value by 16, as there are 16 bytes per row. The 'X' value is then divided by eight and added to the Y*16 value.

Eight is used as a divisor because there are eight cells per byte. The division is done by three consecutive shifts — it's equivalent to a BASIC INT function. The actual address in screen one is then computed by adding \$E00 to Y*16+INT(X/8). This byte address is stored in DLOC, ELOC and FLOC the table locations for the current X,Y and its two neighbors on the same row.

The ALOC, BLOC, and CLOC locations in the preceding row can be found by subtracting 16 from the locations for the current row. The result is put into the three table entries. Similarly, the GLOC, HLOC and ILOC locations are found by adding 16 to the current row locations.

These table entries are valid providing one of the three rows isn't off the top or bottom (or another condition, which we'll discuss shortly). Checks are made for this, and 1,536 is either added or subtracted from the row to point to the wrap-around row from the other side of the screen, which gives the toroidal effect.

The code from location GET022 is used to compute and store the bit position within the byte to be accessed by the ALOC entry. This location is determined by the three least significant bytes of 'X'. If X=XXXXX000, for example, the bit position is 10000000; if X=XXXXX001, the bit position is 01000000, and so forth, up to X=XXXXX111, where the bit position is 00000001.

The cell mask values are contained within a cell mask table at location MASK. The entries in ABIT are initialized such that the current 'Y' values (B, E and H) get the mask table value, the 'Y' locations to the left get the bit position values with the bit shifted left one bit, and the Y locations to the right get the bit position values with the bit shifted right one bit. If the bit position for the current cell is 00010000, for example, ABIT, DBIT and GBIT get 00100000, and CBIT, FBIT and IBIT get 00001000.

The last part of the GETADD subroutine adjusts the ALOC table for the boundary conditions in cases where either the current 'Y' involves two bytes or the edge of the screen (left or right) has been encountered. If the current 'Y' is at the left bit of a byte, for example, the bit mask is 10000000. The left neighbor's bit mask is 00000001 in this case (the right neighbor's bit mask is 01000000).

This means the left neighbor's byte location should be one less than the

location stored. This check is made and the byte location adjusted in the two cases where the current 'Y' is at either end of the byte. A check is also made for the left and right edges, and 15 is added or subtracted to get the proper wrap-around byte in this case.

To avoid computing addresses for every X,Y, the byte address calculation is done only for X's that represent a bit at either the left or right end of the byte. These are the only cases where two bytes are involved. If the bit is in bit position one (01000000) through five (00000101), the prior ALOC addresses apply, and the address portion of GETADD is skipped at the beginning of the subroutine. The effect is to speed up the

Figure 7: One-, Two- and Three-Cell Patterns

subroutine for two-thirds of the cells, knocking about 14 percent off the screen update rate.

A BASIC Driver

Listing 3 shows the BASIC driver program that implements the assembly language "Life" program. It has the assembly language machine language code embedded in it as a series of DATA values. The DATA values are relocated to the &H3E00 area by a POKE loop before the program is executed.

The BASIC driver has provision for either entering a set of points for the initial "Life" pattern, or for generating a number of random points at the screen center. To enter a set of points, enter 'S' after the USER PNTS (S) OR RANDOM (R)? prompt message.

The program then asks for the X,Y position of the point: X,Y? Enter as many X,Y values as you want, and enter -1,-1 to terminate the entry. The X,Y points *must* be even numbers due to the half resolution of PMODE 0. For example, adjacent points are 100/100, 100/102 and 100/104.

To use a set of random points, enter R after the Set/Random message. The program asks for the number of points to use: NUMBER OF POINTS?

Too few points here, and the second generation virtually disappears, leaving only a few points that disappear on the next generation. If the entire screen is filled with points, the next generation disappears entirely.

Sample Patterns

You could systematically investigate all patterns and their succeeding generations in "Life," — much work has already been done in this area. The

Figure 8: The Five Tetrominoes

simplest pattern is a single cell (Figure 7), which dies in the next generation from loneliness. The next simplest patterns are two adjacent cells, either horizontally, vertically or diagonally. These also die in the next generation.

The next set of patterns are triplets. There are five ways in which three cells can be combined, as shown in Figure 7. Since the L-shape cells have two neighbors, they endure until the next generation. In addition, the cell in the nook of the 'L' is born. The resulting block is a stable life form — what Conway calls a still life — it never changes. We've seen the three cells in a straight line before; they change to a line at right angles on the next generation, a so-called blinker. The blinker flips back and forth from generation to generation. The other configurations die after one generation.

The next set of cells are made of four cells connected together. The game's jargon for these patterns is "tetromino," tetra meaning four. There are five ways that four cells can be connected, as shown in Figure 8. The block configuration is stable, as we've seen. The 'T' tetromino looks as if it will grow larger and larger, but stabilizes after nine generations into a "traffic light," a series of four blinkers.

The straight line tetromino turns into a block of six cells on the next generation, which in turn creates a "beehive," another unchanging pattern. The two remaining tetrominoes also produce beehives.

So far, "Life" isn't too exciting, but we've only considered four sets of

Figure 9: The R Pentomino

patterns. There is an infinite number to go!

The next set of patterns is formed by connecting five cells, "pentomino" shapes. One of the most interesting of these is the 'R' pentomino, shown in Figure 9. The 'R' pentomino seems to grow without bound, scattering debris all over the screen. However, after dozens of generations in our toroidal universe, the life forms settle down to simple patterns that are either still life or blinkers. An intermediate screen is shown in Figure 10.

Ah, Sweet Mystery of Life

Is there any configuration of cells that grows without bound, forever? Experimentation in this area produces a shape known as a glider. It glides across the screen (Figure 11). The glider can be generated by a glider gun, a complex arrangement of patterns that goes on producing gliders forever. (It's also seen in the 'R' pentomino patterns.) There are other patterns that replicate themselves as well.

Figure 10: R Pentomino Patterns

It's a lot of fun to start with a pattern of your own design (you can do this by slightly altering the BASIC program) and watch what happens. At the very best, you'll see generations of interesting "Life" forms.

For more reading on this, get Poundstone's book or try to get the original *Scientific American* articles. For help, contact me at P.O. Box 3568, Mission Viejo, CA 92692.

Next month I'll be back with more assembly language topics. In the meantime, keep assembling! □

ADVANCED BASIC PROGRAMMING AID

Now there is a product which integrates the most used utility functions for your COCO. It works with all Extended Color Basic COCOs, 16k, 32k and 64k. Look at the features available, no need for a text processor to create or change programs. Saves disk space and time because programs do not have to be saved in ASCII format.

- * COPY COMMAND: Copy one or more statements in a program
- * MOVE COMMAND: Move one or more statements in a program
- * FIND COMMAND: Find a string and REPEAT FIND for string.
- * MULTIPLE EDITING SESSIONS: You can edit two programs at once and MERGE all or part. This also allows you to RUN one pgm while editing another
- * SCROLLING: Allows for down or up scrolling through pgm.
- * AUTOMATIC EDIT: You can enter edit of current line without specifying the line number.
- * COMMAND KEYS: One keystroke enters most basic commands.
- * REPEATING KEYS: Auto repeat.
- * AUTOMATIC LINE NUMBERING: Set start and increment.
- * BASIC FORMATTING: ON/OFF control, for easier reading of list/print multiple stmts
- * KEYBOARD CLICKER: ON/OFF
- * CLEAR KEY DISABLE: ON/OFF
- * AUTOMATIC MENU LOADER: If you have a favorite menu pgm you can load it automatically.
- * AUTOMATIC PROGRAM EXIT: Run another ML pgm w/no pwr off.

ALSO SUPER PROGRAMMING AID: You get Advanced Programming Aid plus

- * PROGRAMMABLE COMMAND KEYS: You get a command editing Program to make the keys do what you want, enter up to 250 characters with one key.

ADVANCED PROGRAMMING AID \$24.95
 SUPER PROGRAMMING AID \$29.95
 Upgrade from ADV to SUPER \$14.95

ALSO: GO-THELLO - a popular board game, 1 or 2 players, 3 levels of difficulty on 1 player. \$12.95

BSS DISK MANAGER: copy, move, kill run, rename etc. handy for disk management make it simple: \$14.95

\$2.00 S & H specify DISK or TAPE

CoCo's Best & Fastest Spreadsheet

RS-DOS VERSION

(WITH GRAPHICS)

Computer Systems Center
 42 Four Seasons Center #122
 Chesterfield, MO 63017
 (314) 576-5020

OS-9 VERSION

Exclusively
 from
Radio Shack
 Stock No. 26-3275

Works with 80-Column Hardware

For the serious student from Preschool to College

- Ages 3-5
- Hand-eye coordination
- Colors
- Shapes
- Numbers
- Great graphics and music
- Reading readiness skills
- Capital letters
- Small letters
- Learn to associate letters and letter blends with the sounds they make
- Requires 32K ECB and joysticks

PreReader

\$19.95 -Tape
\$24.95 - Disk

GALACTIC HANGMAN

**Both 16K ECB and
32K ECB versions
included on tape
\$17.95**

- For grade 2 and up
- Exciting version of popular word guessing game
- Play against the computer or a friend
- Outstanding high-resolution graphics and animation
- Great sound effects and music
- 700 word vocabulary included
- Create your own word files
 - your child's spelling list
 - foreign language vocabulary
 - specialized word list, i.e., geographic, chemistry, physics
- Broaden your vocabulary
- Both 16K ECB and 32K ECB versions included on tape
- Easily moved to disk

MATH MISSION

Math Mission is an educational game designed to reinforce early math skills in the four math operations:

Addition
Subtraction
Multiplication
Division

- Can be played on any of four optional levels of difficulty
- Joystick oriented to develop hand-eye coordination
- Shot timer simulates a classroom time test
- Picture, sound, and word rewards

MATH MISSION requires 32K ECB and 1 joystick

Available on both Tape and Disk
\$24.95, either version

Dealer and author inquiries are always welcome. Canadian dealers should contact Kelly Software Distributors, Ltd., P.O. Box 11932, Edmonton, Alberta T5J-3L1, (403) 421-8003.

Disk software compatible with Radio Shack DOS only.

SUGAR SOFTWARE
1710 North 50th Avenue
Hollywood, Florida 33021
(305) 981-1241

A complete catalog of other sweet Sugar Software products is available.

Add \$1.50 per program for postage and handling. Florida residents add 5% sales tax.

COD orders are welcome. CIS orders EMAIL to 70405, 1374. No refunds or exchanges.

KISSable OS-9

The Disk BASIC/OS-9 Connection

By Dale L. Puckett
Rainbow Contributing Editor

To build better soldiers, drill sergeants tear down new recruits to nothing before rebuilding them into soldiers. Installing a new version of an operating system on the personal computer is an analogous process. I love the new 2.00.00 version of OS-9. However, the transition hasn't been painless and we'll share the observations of one OS-9 software wizard this month.

We'll take an in-depth look at a new product that should make it easier for dedicated Disk BASIC users to enter the OS-9 world. We'll also introduce several new RAM disks and show different ways to use them, plus spotlight some programs from Kevin Kuehl. To show how the same job can be done with two different languages, we are listing versions written in both assembly language and C.

Dale L. Puckett, who is author of The Official BASIC09 Tour Guide and co-author, with Peter Dibble, of The Official Rainbow Guide to OS-9, is a free-lance writer and programmer. He serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. Dale works as a U.S. Coast Guard chief warrant officer and lives in Alexandria, Virginia.

Drivers Needed for New Version

We have been reading the mail on the CompuServe OS-9 SIG with interest. Immediately after OS-9 Level II hit Radio Shack shelves, people started complaining their *Word-Pak* and *Word-Pak II* drivers would not work. Ed Bender, the software wizard at PBJ, handled most of the inquiries personally.

Bender worked hard with a disassembler and a little assistance from Fort Worth to get the new drivers online. But, the new drivers were not compatible with the earlier *Word-Pak* drivers or the *O-Pak* drivers from FHL.

"We didn't have much trouble implementing the drivers for the *Word-Pak* once we figured out what Microware did with the CO80 driver for the phantom Tandy video board," Bender said. "Most of our problems came after the fact and we have been getting some complaints about the reduced screen control functions implemented in the current version.

"Actually, this is good and bad at the same time," Bender said. "Someone had to define a standard for screen control functions. While this was somewhat accomplished by *O-Pak* and *Word-Pak*, much of Tandy's OS-9 software was not compatible with either. Now, it is guaranteed that all Tandy (and hope-

fully all third-party software) will be *Word-Pak* compatible."

Bender also received some complaints about the loss of control for the *Word-Pak II* screen control relay. *Word-Pak II* users with a single composite video-monitor connected to *Word-Pak II* and the standard CoCo video output can no longer switch the screen back and forth to alternately display graphics and text.

For example, if you were editing a BASIC09 program that used graphics with the earlier PBJ drivers the *Word-Pak II* display could be used to edit it. Later, when running the program, the screen could display text while the graphics were being drawn. Now, the only solution is a POKE to *Word-Pak II* to switch the screens back and forth — a method that does not find favor with OS-9 purists.

Bender has an idea that may solve the problem: "First, create a small OS-9 procedure that, once invoked, would put itself to sleep, only to wake up once every second or two to check the path descriptor for TERM to see if the TYPE byte has been changed," Bender said. "If a change is detected, toggle the screen control relay to the appropriate display. The program should be simple and use very little CPU time."

Bender also noted that something

needs to see if GRFO is active in order to control the graphics display. This program needs to allow all other programs to run concurrently with it.

Bender says PBJ has had very few complaints about the loss of control for the scroll rate of *Word-Pak II*. But, they

set of patches to Delphi's CoCo SIG. They let the DISTO Display 80 adapter card work with the CO80 subroutine module that is standard with Tandy's Version 2.00.00 of OS-9. Some of you may want to use them to maintain a strict Tandy standard.

them into the boot file with the Config utility.

With the additional capability made possible by the new hardware from Tandy and third-party vendors, we must make choices about managing the operating system on our Color Computers. OS-9's modularity makes it possible and new hardware and software make it fun. Next month we hope to review the concept of modularity and introduce several approaches to the management of our Version 2.00.00 system software.

"This structure is invisible to Disk BASIC and requires no knowledge of OS-9."

have had many complaints about the loss of cursor-style control and they plan to fix it.

"Please point out that the way CO80 is linked into CCIO as a subroutine makes it nearly impossible to add display codes to the CO80 module without patching CCIO," Bender said. "Any codes other than those defined by Tandy are not passed on to the CO80. So, even if the routines are in place, they never get called. The cursor-style control is an exception, since Tandy provided a sequence to change the cursor color in CO32."

Here's good news for people using public domain *Word-Pak* drivers. A new public domain driver for *Word-Pak II* that runs with Version 2.00.00 is now available in the DL6 database on the CompuServe OS-9 SIG, according to SysOp Wayne Day. The new offering was written by Bill Dickhaus, the OS-9 section leader on the CoCo SIG.

CO80 Patches Work with DISTO Display 80

Dennis McMillan has contributed a

However, many may want to use the new DISTO drivers that Brian Lantz is writing. They will be compatible with *O-Pak* and the old *Word-Pak* drivers and will eliminate some of the shortfalls in the Tandy CO80 module.

In the Tandy CO80 module, there are six occurrences of \$FF78. To make the DISTO board work with the module, change each \$FF78 to \$FF54. Also set the ":switch" at \$FF57 to "on" before booting OS-9. Here is the list of offsets supplied by McMillan.

- <SPACE> .+24
- <SPACE> .+48
- <SPACE> .+19
- <SPACE> .+3E
- <SPACE> .+EF
- <SPACE> .+69

Note that these offsets move from one to the next. You do not need to link to CO80 each time — only the first time. After making these changes, save them in a file and store them in the modules directory of the "Boot/Config" disk so they can be loaded easily. Or install

WBASIC — An OS-9 Disk that Thinks It's Disk BASIC

Late last year, Alan Reinhart of Royersford, Pennsylvania, had a novel idea. Today, he has a major product, and CoCo users migrating to OS-9 time will find it very interesting. *WBASIC* is a ROM-based program. It replaces Disk Extended BASIC and stores Disk BASIC data and programs in OS-9 formatted files on a hard disk.

When I saw *WBASIC*, I was immediately impressed. Reinhart had written code that makes directories on an OS-9 formatted hard disk look like standard Disk BASIC floppy disks.

Why is this significant? Since the entire hard disk uses a standard OS-9 format, OS-9 programs and data can be stored on it also. And, since the "RSDOS Floppy" directories are actually OS-9 directories, OS-9 application programs and utilities can also read from or store data in them. People with a heavy investment in standard Disk BASIC programs and data can continue to use their original programs and accumulated data while they move up into full OS-9 operation.

With *WBASIC* you can copy a floppy disk containing a number of *Elite*, *VIP*

OS-9™ SOFTWARE/HARDWARE

SDISK—Standard disk driver module allows the full use of 35, 40 or 80 track double sided disk drives with COCO OS-9 plus you can read/write/format the OS-9 formats used by other OS-9 systems. (Note: you can read 35 or 40 track disks on an 80 track drive). Now updated for OS-9 ver. 02.00.00 \$29.95

SDISK + BOOTFIX—As above plus boot directly from a double sided diskette \$35.95

L1 UTILITY PAK—Contains all programs from Filter Kits Nos. 1 & 2 plus Hacker's Kit #, plus several additional programs. Over 35 utilities including "wild card" file cmds, MacGen command language, disassembler, disk sector edit and others. Very useful, many of these you will find yourself using every time you run your system. These sold separately for over \$85. \$49.95

SKIO—Hi res screen driver for 24 x 51 display; does key click, boldface, italics; supports upgraded keyboards and mouse. With graphics screen dump and other useful programs. Now UPDATED FOR OS-9 Ver 2.0 \$29.95

PC-XFER UTILITIES—Utilities to read/write and format ss MS-DOS™ diskettes on CoCo under OS-9. \$45.00 (requires SDISK)

CCRD 512K Byte RAM DISK CARTRIDGE—Requires RS Multipak interface, used with driver software below provides 1/2 MB OS-9 RAM disk. \$259.00 (Prices subject to change).

CCRDV OS-9 Driver Software for CCRD—\$20.00

All disk prices are for CoCo OS-9 format; for other formats, specify and add \$2.00 each. Order prepaid or COD, VISA/MC accepted, add \$1.50 S&H for software, \$5.00 for CCRD; actual charges added for COD.

or other Color Computer word processor files; edit with an OS-9 word processor like *DynaStar* or *Stylograph*; check spelling with an OS-9 program like *DynaSpell* and print using an OS-9 text processor like *TS Word*. *WBASIC* should ease the entry of thousands of Color Computer users into the OS-9 computing world.

"The existing Disk BASIC file structure has no real expansion capabilities," Reinhart said. "Several vendors selling Winchester drives discovered that quickly. Managing the 20,480 sectors on a five-megabyte disk instead of the usual 620 sectors on a floppy has been a real problem. Several attempts have been made to solve the problem by placing a number of standard floppy-sized volumes on a hard disk drive but this approach is not totally successful."

Reinhart came up with his method because he was concerned about what he perceived as a "go to OS-9 or forget it" policy at Tandy.

"Their policy is fine if you are interested in working with OS-9," Reinhart said. "But, if you are just starting and are not interested, there was no easy answer."

A common file structure lets Reinhart's *WBASIC* talk to OS-9. While Disk BASIC has been hard-coded to live in a 35-track, single-sided environment, OS-9 was designed for expandability.

"I have recreated the OS-9 file handling system with my own code," Reinhart said. "The result is the Disk BASIC user gains the benefit of a second, more capable file structure while keeping compatibility with the old. But, at the same time, OS-9 users can now write short programs in Disk BASIC then boot OS-9 and access the same data files from BASIC09."

WBASIC uses the drive number part of a file specification to communicate with the hard disk drive. Drive numbers 4 through 13 are placed on the hard disk, each in its own directory. This structure is invisible to the Disk BASIC user and requires no knowledge of OS-9. However, to use OS-9, simply type DOS and log to the Winchester. OS-9 users see a standard OS-9 disk.

To make *WBASIC* work, Reinhart did his homework with *Disk Basic Unraveled*. He located the addresses where he could intercept the various Disk BASIC statements and jump to his own code. When you use a *WBASIC* OPEN statement with a drive number higher than three, it creates an OS-9 file in a directory on the hard disk drive.

Reinhart stores all Disk BASIC flopp-

Metric Industries

Model 101 Interface \$39.95

The Model 101 is a serial to parallel interface intended for use with a COCO and any Centronics compatible parallel input printer. The 101 has 6 switch selectable baud rates (300-9600). The 101 is only 4" x 2" x 1" and comes

with all cables and connectors for your computer and printer.

The Model 104 Deluxe Interface \$51.95

The Model 104 is a serial to parallel interface like the Model 101 but it has the added feature of a serial port (sometimes referred to as a modem switch). This feature allows the connection of a parallel printer and any serial device (modem, serial printer

etc.) to your computer. You may then select either output, serial or parallel, with the flip of a switch. The 104 is only 4.5" x 2.5" x 1.25" and comes with all cables and connectors for your computer. You supply the serial cable for your modem or other serial device.

Model 103 Combo \$68.95

With the turn of a knob the model 103 switches your computer's RS232C serial port to any one of 3 outputs — 2 serial and 1 parallel. The serial ports may be used for modems, serial printers or even another computer. The parallel port can

be used with any Centronics compatible printer. The 103 has the best features from the 101 and 102: color coded position indicator lights, 6 switch selectable baud rates, heavy anodized aluminum cabinet, and many more.

Model 102 Switcher \$35.95

The Model 102 has 3 switch positions that allow you to switch your computer's serial output between 3 different devices (modem, printers or another computer). The 102 has color coded lights that indicate the switch position. These

lights also act as power indicators to let you know your computer is on. Supplied with the 102 are color coded labels that can be applied to your accessories. The 102 has a heavy gauge anodized aluminum cabinet with non-slip rubber feet.

Cassette Label Program \$6.95

New Version 1.2-Tape transferrable to disk. Now save and load Labels from tape or disk.

This fancy printing utility prints 5 lines of information on pinfeed cassette labels. "Cassette Label" is menu driven and is very easy to use. It uses the special features of your printer for standard, expanded or condensed characters. Each line of text is automatically centered. Before the label is printed, it is shown on your

CRT — enabling you to make changes if you like — then print 1, 2 or 100 labels. The program comes on tape and it is supplied with 24 labels to get you started. 16K ECB required.

THE 101, 103 AND 104 ALL REQUIRE POWER IN ORDER TO OPERATE. MOST PRINTERS CAN SUPPLY POWER TO YOUR INTERFACE. STAR, RADIO SHACK, AND OKIDATA ARE JUST A FEW THAT DO. EPSON DOES NOT. THE INTERFACES CAN ALSO BE POWERED BY AN AC ADAPTER (RADIO SHACK MODEL 273-1431 PLUGS INTO ALL MODELS). IF YOU REQUIRE A POWER SUPPLY, ADD A "P" TO THE MODEL NUMBER AND \$5.00 TO THE PRICE. (MODEL 101P \$44.95, MODEL 104P \$56.95 AND MODEL 103P \$73.95)

The Model 101, 102, 103 and 104 will work with any COCO, any level basic and any memory size. These products are covered by a **1 year warranty**.

The Model 101, 103 and 104 work with any standard parallel input printer including Gemini, Epson, Radio Shack, Okidata, C. Itoh and many others. They support BASIC print commands, word processors and graphic commands.

We manufacture these products. Dealer Inquiries are invited.

Other Quality Items

High Quality 5 Screw Shell C-10 Cassette Tapes **\$7.50 per dozen**

Hard Plastic Storage Boxes for Cassette Tapes **\$2.50 per dozen**

Pin Feed Cassette Labels
White **\$3.00 per 100**
Colors **\$3.60 per 100** (Red, Blue, Yellow or Tan)

pies or directories in a master directory named RSDOS. Each floppy is actually a subdirectory named RSDOS0 to RSDOS9. When you type a Disk BASIC command line like DIR B, *WBASIC* performs the equivalent of the OS-9 command, DIR /HO/RSDOS/RSDOS8.

To make room for his code, Reinhart moved the start of Disk BASIC's free memory area from \$0989 to \$0C00. This means that any Disk BASIC machine language programs that are not position-independent and start at \$0989 do not work with *WBASIC*. However, Reinhart says he has tested hundreds of programs and almost all of them work.

New RAM Disks Increase OS-9 Speed

I met Tony DiStefano for the first time at RAINBOWfest-Palo Alto and one of the things we discussed was his new Super RAM Disk. I was so impressed with his products that I bought a 512K Super RAM cartridge and a DISTO Controller with an enhanced Display 80 adapter.

When DiStefano came up with the idea to add adapters to his controller and RAM disk cartridges, he solved a lot of problems. Some of us have had our Multi-Pak slots full for a while. We have been wondering how to add more hardware like the Radio Shack Speech Cartridge to our CoCo. Tony has come to the rescue.

Many people at Palo Alto were impressed, too. By the time I talked to Tony, his distributor (CRC Inc., 10802 Lajeunesse, Montreal, Quebec, Canada H3L 2E8, phone 514-383-5293) had sold out. I had to order mine.

Bob Rosen — WHIFFLE on Delphi's Color Computer SIG — helped me out. He shipped Tony's 256K Super RAM cartridge and it arrived the next day. The 256K Super RAMDisk sells for \$129.95. The 512K version costs \$169.95.

I quickly installed the OS-9 RAM Disk drivers licensed by Brian Lantz and was soon working with a 512K CoCo: the DISTO Super RAMDisk plus the *ThunderRAM*. My own 512K Super RAM has also arrived and very soon I'll be cooking with a 768K CoCo. And, as if that weren't enough, DiStefano has made it possible to put an additional 512K of RAM on his Super RAM cartridge. If I added that 512K, I would be running with 1280K — in a CoCo. I'm impressed.

Getting the Most from RAMDisk

Brian Lantz certainly gives versatility

in the RAMDisk software for the Super RAM cartridge. A ready-made device descriptor makes the 256K RAM disk look like a single-sided, 40-track floppy disk. Data and programs can be moved quickly from a floppy to the RAM disk using the OS-9 Backup utility command. It takes less than 40 seconds to do the whole job.

A modules directory on the disk contains a device descriptor that covers almost every option. The descriptors are in the correct format to work with the Config utility that comes with Version 2.00.00. By selecting the proper descriptor, you pick the number of the drive, either R0, R1 or R2; the Multi-Pak slot number desired, one through three; and the size of the RAM disk, either 256K or 512K.

After I had used the RAMDisk as the mirror of a single-sided, 40-track disk for several weeks I decided to take a closer look. I discovered that I was losing 77,824 bytes or 304 sectors of high speed RAMDisk by operating in this mode. There are 262,144 bytes or 1,024 sectors of memory available on the DISTO Super RAMDisk. However, the 40-track floppy can only only 184,320 bytes or 720 sectors.

At first, I thought I had only two alternatives. I could run the RAMDisk as a single-sided, 40-track drive and gain the advantage of the high-speed backup operation. Or, I could configure the RamDisk with 1,024 sectors and use all available RAM. Unfortunately, with the latter method I would need to use the Dsave utility command to copy OS-9 directories or disks to the RAMDisk — an operation that takes several minutes.

After a little thought I decided to take advantage of my double-sided, 40-track drives. I would use both sides of the drive, but not all of the tracks. I wound up formatting a disk with 56 tracks — 28 per side. This produces 1,008 sectors of storage.

I called up the OS-9 Debug utility and modified the /R1 device descriptor to make the RAMDisk look like 28 tracks with 18 sectors per track on two sides. I then used the new Version 2.00.00 Format utility to create the disk. Format ran properly and the OS-9 Free utility command reported that I had 1,008 sectors available. I moved right ahead and ran the Backup utility program. Backup up ran successfully and copied about half of the special 28-track double-sided disk. Then it reported a Media Full error. It made sense to me that you can't have two sides on a

RAMDisk, but I thought I could fool the software.

As it turned out, I did fool the software by taking a different approach. Fortunately for my experiment, the Backup utility command does not check everything when it looks to see if the two disk formats are the same. It only checks the total number of sectors.

After discussing the problem with Brian Lantz, I changed the number of sides in the RAMDisk descriptor back to one and changed the number of tracks to 56 rather than 28. I left the number of sectors per track set to 18 so it would match the floppy media. I saved the new version of the device descriptor again, ran the Attr utility command on it to set the execute and public execute attributes of the new file.

Then, I formatted the RAMDisk again using the new descriptor. Free again reported 1,008 sectors available. I ran Backup again. It worked.

What did I gain from the experiment? Time, mainly. When I did a backup from my specially formatted 28-track, double-sided floppy to the RAMDisk it took 41 seconds. Then, I ran *DirCopy*, a fast directory copy utility from Computerware. It took three minutes and 26 seconds.

You probably noticed that this method does not use 4,096 bytes of the 256K available on the RAMDisk. I wasted 16/18 of a track. You can get around this by modifying the device descriptor for the floppy disk so you can format the double-sided 40-track disks in an even more non-standard fashion.

For example, why not format them to hold 64 tracks (32 tracks on two sides) with 16 sectors in each track? This gives exactly 262,144 bytes or 1,024 sectors on the floppy. A RAMDisk formatted this way does the job nicely and wastes no space. Since you won't be exchanging these non-standard floppies with anyone, set them up any way you desire.

I haven't decided how to handle my 512K RAMDisk yet. If I buy a double-sided, 80-track disk I could use a similar trick. 512K of RAM holds 2,048 sectors. If I formatted a disk to hold 128 tracks (64 on each side) with 16 sectors in each track it should work perfectly. To maintain the 18 sectors per track standard so the device descriptor won't have to be modified for the 80-track floppy disk, set it up with 112 tracks (56 tracks on each side) containing 18 sectors per track.

Changing Device Descriptors

To change the device descriptors used

by the floppy disk drives, use the OS-9 Debug utility command. We'll go step by step, but first we need to give a short description of a device descriptor.

Following the standard module header in every device descriptor that uses the RBF file manager, there is a table that defines the disk drive being used. The first byte of the table is located 18 decimal bytes (\$12 bytes hexadecimal) from the start of the module containing the device descriptor. The following table shows the offset from the start of the module, the name of the location in the OS9Defs files and a short description of the information it contains.

Offset	Name	Description
\$12	IT.DTP	Type of device (always 01 for disk drives)
\$13	IT.DRV	Drive number (DISTO slot number)
\$14	IT.STP	Step rate (00 for RAMDisks)
\$15	IT.TYP	Device type
\$16	IT.DNS	Media density
\$17	IT.CYL	Number of tracks
\$19	IT.SID	Number of sides
\$1A	IT.VFY	Verify if 00, no verify if 01
\$1B	IT.SCT	Number of sectors per track
\$1D	IT.TOS	Number of sectors per track in Track 0

To change the format on the RAM-Disk and floppies, change IT.CYL, the number of tracks and IT.SCT, and the number of sectors per track. To start, type:

```
OS9: debug <ENTER>
```

When you see the Debug prompt, D:, type:

```
L R0 <ENTER>
```

This links debug to the start of the module containing the device descriptor named R0. Use the name of the device descriptor you want to modify here. After linking to the descriptor, move to the byte containing the number of tracks. Since it is at an offset of \$17 hexadecimal bytes from the start of the module, type:

```
. <SPACE> .+17 <ENTER>
```

Notice how the debug utility commands use hexadecimal notation for these offsets. Displayed now is an address followed by the value of the data stored at that address. It should contain two zeros (00).

```

) else if (not && (c != '\n'))
    c = to[0];

if (squeeze && (c == lastc))
    ; /* If we compress repeats, then do nothing */
else
    putchar(c);
lastc = c;
)
)

```

```

Press the ENTER key once to move to the lowest significant byte of the two-byte value being modified. Debug prints the next address followed by a one-byte value. If you are changing the device descriptor of a 40-track drive, Debug returns a value of \$28 (hexadecimal) here. Now type an equal sign (=) followed immediately by the new value wanted in the descriptor. For example, to wind up with a 64-track RAM disk, type:

```
=40 <ENTER>
```

Note here that \$40 is 64 decimal. After changing the number of cylinders, link to the start of the device descriptor module again like before. Move to the location of IT.SCT, which is at an offset of \$1B. Make this change in a similar manner, then check or set the value of IT.TOS. Exit the debug utility by typing a Q or q as the first letter following the prompt. You then see the standard OS-9 prompt.

At this point, you can use the modified device descriptor. However, you will probably want to save it using the OS-9 Save utility command. If the device descriptor module is named R0 in memory and you want to save it in a file called R0.New, use the following command line.

```
OS9: save R0.New R0 <ENTER>
```

This command line creates a file named R0.New in the current execution directory which is usually /D0/CMDS. The module R0 is stored in that file. Before attempting to load the file, run the Attr utility command to set the execute and public execute attributes for the file.

Banker RAM disk is an Alternative

I recently had a chance to see the J&R Electronics 512K Banker. It supports all versions of the Color Computer and, since it installs inside the Color Computer, a multipack is not needed.

With the Banker you get a RAM Disk. And, since OS-9 already allows printing in the background by using an ampersand (&) at the end of a command line, you get a simple print spooler without buying any special software. When listing a file from the RAM disk to the printer, there is no wait for floppy access, so the system works efficiently at the same time.

The installation procedure for the Banker is simple if you have two drives. Put the system disk in Drive 0 and your Banker OS-9 disk in Drive 1, then run the install procedure file for the type of RAM disk desired and the CoCo does

all the rest. A utility that fixes the OS-9 boot disks to boot with the Banker installed is also included.

The Banker can be installed as a 512K or 256K RAM system and it comes in varying levels of completion. Options start with a bare board at \$34.95 — you buy the parts — and run up to a completely assembled and tested 512K board that sells for \$149.95. Get the details from Jesse at J & R Electronics, P.O. Box 2572, Columbia, MD 21405, phone (301) 987-9067.

All except the assembled and tested 512K board require piggybacking RAM chips for expansion to 512K. If you do not feel comfortable with piggyback chips, purchase their new Memory Expansion Board Kit for \$29.95. This kit is necessary to install a Banker in the two-chip Korean CoCo 2s.

KShell Makes Life Pleasant

Computerware's *KShell* is the star of a new set of *Advanced Utilities for OS-9* from Paul Searby's Encinitas, California software house. It's UNIX-like features let you work quicker and smarter. *KShell* is a direct replacement for the standard OS-9 Shell. In fact, internally it is named Shell.

KShell gives you the ability to use wild cards on the OS-9 command line, set the priority of any process and make multipath searches. If you are tired of receiving the Error #216 "File Not Found" message, *KShell's* path facility will make your day. To install and run it, simply type:

```
OS9: ex load /d0/cmds/kshell <ENTER>
```

A *KShell* path command line looks like this:

```
OS9: path=/d1/cmds <ENTER>
```

After this line is typed, *KShell* first checks the current execution directory when it is looking for a program. If it does not find the program there it looks in /d1/cmds. You are not limited to one additional path, since you can place as many as will fit in a 64-character line. Each path in that line must be separated by a colon. Here's a sample:

```
OS9: path="/r1:/h1/cmds:/d1/cmds" <ENTER>
```

If you forget which paths have been assigned to *KShell*, find out by typing, "Echo \$path". If you forget something when you type the path, append things to it like this.

```
OS9: path=$path+":/d1" <ENTER>
```

The beauty of these commands is they only need to be typed once. And if you

```

```

do it from a procedure file, the whole operation can be semi-automatic. *KShell* also supports up to four macros. Each macro can contain up to 48 characters.

Like the UNIX Shell, *KShell* treats a command placed in single quotes with the output of that command. This sounds complicated, but it makes sense. Look at a few examples:

```

OS9: echo The date is 'date'. <ENTER>
OS9: echo chd 'pxd' <ENTER>
OS9: echo The disk in drive one
      is 'free /d1'<ENTER>

```

The first line prints "The date is" followed by the output of the standard OS-9 date utility command. The second example changes the current data directory to the same as the current execution directory since *pxd* returns the name of the current execution directory on the standard output path. The last command line works like the first.

The wild cards are the asterisk (*) and the question mark (?). An asterisk matches any number of characters. A question mark matches any single character. Since the files that match the wild cards are substituted in the command line before they are passed to a command, *KShell's* wild cards are available to all programs.

The ability to assign default paths alone makes *KShell* worth the price of the entire *Advance Utilities for OS-9* package. Additionally, you get a new copy utility command named *cpy* that allows copying multiple files to a given directory.

The archive utility in the package is valuable if you have a hard disk and want the ability to make backup copies easily. Operation is almost automatic and after archive fills one floppy it prompts for a new one.

To round out the package, Computerware includes an unload utility that completely removes modules from memory and a flink utility that gives a way to make any existing file that is contiguous the boot file.

A Helpful Hint

There is a way to make a new boot file that's almost easier than using the new Config utility. First, create a new directory on the disk and copy each file you want in the new OS9Boot file into that directory. Then, instead of creating a separate bootlist file, use either the Microware 'd' utility or the "ls" utility from several of the third-party vendors and type this command line.

```
OS9: ls ! dsave <ENTER>
```

Two from Kuehl

This month, our feature programs were written by Kevin Kuehl, a senior high school student in Valparaiso, Indiana. Kuehl contributed several assembly language programs to "KISS-able OS-9" last summer. He's back with two new programs written in both assembly language and C.

Comm is a utility that compares two text files or a file to standard input. It is handy for programmers who are looking for changes they have made in a source file. *Tr* is a standard translit utility that can squeeze lines and use sets of characters. Sample OS-9 command lines are shown as comments in each listing.

Kuehl also sent some advice with his programs. "Tell everyone how important it is to write their assembly language programs in modules," he said. "This makes them much easier to debug.

"Also, make sure they *always* send their errors to the standard error path," Kuehl added. "It is unnerving to send a file down a pipeline and find (if you are lucky) an error at the end. Or worse yet, garbage that once was an error message. Use LDA #2 in assembly language or "fprintf(stderr, " ") in C for all error messages."

Our Future

The 68K version of OS-9 may very soon be the standard operating system on most home-oriented computer systems. At a recent conference sponsored by Microsoft, Sony and Phillips proposed a new file format standard for the new compact disc technology. OS-9 68K is at the heart of the standard that supports sound and graphics as well as data on the new disks. The CD-I system uses a Motorola 68000 processor and custom graphics and sound processors still under development by Sony and Phillips. The systems may be sold as complete systems or as add-ons to existing audio CD players.

Modularity and Version 2.00.00

Next month we hope to review the concept of modularity and present several approaches to operating system management. We need these skills when adding new hardware and software to our OS-9-based Color Computers. During the process, we'll introduce several new utility packages that help make the job easier. And, we'll publish a few more short programs to give you some programming practice and new tools at the same time. □

Educational Programs

? Questions ??

Questions — a powerful, easy to use, authoring program! **Questions** has as many uses as its owners have creativity. Teachers have used **Questions** to develop pre and post tests, to make copies of the same test with questions in a different order, and to review and reinforce difficult lessons with their students. But **Questions** is not limited to school uses. Enterprising people have found other uses for it. Party-givers have used it to personalize games for baby and wedding showers, and for creating their own trivia games. Administrators have used it for inservice training. Children have written their own riddles with it. If you own **Questions**, you'll find a way to use it. You will also be pleased with its many fine features:

- ★ Word processing commands that allow you to make changes as you type
- ★ Screen commands so you do not have to constantly refer to the manual
- ★ Options to take the quiz on the computer or to print a hard copy of it
- ★ Sequential or random presentation of questions
- ★ The ability to print the same test with questions in a different order
- ★ The printing of an answer key
- ★ The option to use expanded printer lettering to create large print tests.
- ★ The ability to save quizzes to cassette or disk
- ★ A review feature which permits students to study questions that have been missed
- ★ A record keeping system
- ★ Multiple choice, true/false, or fill in the blank formats.

Questions is truly a professional authoring program that meets the needs of all of its users.

16K ECB - Cass. \$19.95

32K ECB - Cass. \$24.95

32K Disk - \$26.95

Reading Comprehension Series Grades 2 - 4

B5's **Reading Comprehension Series** is a set of data files to be used with the **Questions** program described above. Each file contains over 100 questions, organized into 6 to 8 sequential lessons. Lessons build from simple to complex. This series emphasizes the thinking aspect of reading. Simple sentence structure allows the student to concentrate on thinking skills.

Main Idea ★ Sequencing
Fact & Opinion ★ Cause & Effect

Each Title: Cassette - \$10.95
Disk \$12.95

Complete Series of 4 Titles:
Cass. - \$39.95; Disk - \$41.95

Most B5 programs are available through **Radio Shack® Express Order**.

CORRECTIONS

"The Computerized Shopping List" (April 1986, Page 216): Dennis Weide has written to give us a correction and a hint to his *Shoplist* program. The hint: The last entry in Table 1 on Page 217 explains that an OD Error will occur if STOP is omitted from the data section of the program. This is Line 2010 in the listing, but the line number will vary depending on how many items you enter. Also, it is important to keep in mind that the program takes a few minutes to compile the data, so don't get excited if there isn't an immediate response.

The correction: In some instances a BS might occur in Line 1300 if the program isn't used properly. To alleviate this situation, delete Line 421. The program will work as it should.

"A Peace Treaty for Computer Hackers and Couch Potatoes" (March 1986, Page 49): Bill Bernico has written to tell us there is an error in his program *TV Shows*. If you pick the Network News option, the word "magazine"

appears. This is because the variable "Z\$" was not defined. To correct the problem, add the following line to the program:

```
375 Z$="BR3BU4R2DG2DR2"
```

"The CoCo Zone" (April 1986, Page 26): There are no reported problems with the actual program *CoCo Zone*. There have been, however, numerous calls from readers who are having trouble creating a working copy of the game. RUNNING the *CoCo Draw* program draws and saves the graphics screens, *Zone 0* through *Zone 9* to the tape or disk for you. The final, working game tape or disk **must** have these files in the following order: *Boot*, *Zone 0*, *Zone 1*, ..., *Zone 9* and *CoCo Zone*. Then, CLDAD and RUN *Boot*, answer all prompts and you'll soon be ready to play the Adventure. Notice that *CoCo Draw* has nothing to do with the actual play of the game.

For quicker service, Corrections will be posted on Delphi as soon as they are available in the Info on Rainbow topic area of the database. Just type DATA at the CoCo SIG prompt and INFO at the Topic? prompt.

The Rainbow Bookshelf

The Complete Rainbow Guide To OS-9

The book that demystifies the state-of-the-art operating system for the Tandy Color Computer. Authors Dale L. Puckett and Peter Dibble show you how to take advantage of OS-9's multi-tasking and multi-user features, and the capability of redirecting input and output commands at will. An easy-to-read, step-by-step guide packed with hints and tips, tutorials and free software in the form of program listings.

Book \$19.95, Disk \$31.00 (2 disks, book not included)

The Rainbow Book of Simulations

Features 20 award-winning entries from THE RAINBOW's first Simulation programming competition. You are the Commander-in-Chief of the Confederate Army during the Civil War, an air traffic controller at one of the nation's busiest airports, the owner of your own software business, a civil defense coordinator in charge of saving Rainbow City from a raging flood, a scientist conducting experiments on Mars . . . Your wits are on the line.

Book \$9.95, Tape \$9.95

First The Rainbow Book of Adventures

A collector's item containing 14 winning programs from THE RAINBOW's very first Adventure contest. Includes such favorites as *Sir Randolf of the Moors*, *Search for the Ruby Chalice*, *Deed of the York*, *Horror House*, *One Room*, *The Door* and *Dr. Avaloe*. Plus, hints and tips on solving Adventures.

Book \$7.95, Tape \$7.95

The Second Rainbow Book of Adventures

Our newest arrival features 24 of the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanies, find a hidden fortune, or win the heart of a beautiful and mysterious princess. Experience the thrills and chills of the most rugged Adventurer without ever leaving your seat. *Ring Quest*, *Secret Agent Man*, *Dark Castle*, *Curse of Karos*, *Island* and more!

ARE YOU LOOKING FOR A HI-RES GRAPHIC SCREEN PRINT DUMP?

HARDCOPY - Hardcopy is more than just a screen print dump, compare these features with any other graphic dump program on the market:

- Full GRAPHICOM/GRAPHICOM PART II compatibility! Loads STANDARD 6K images, GRAPHICOM pictures, and COCO MAX pictures too!
- BLACK & WHITE or GREY SCALE printing. In GREY SCALE printing, colors are printed as user definable patterns. Supports hi-res in all 4 GRAPHICOM display modes!
- 1x, 2x, 3x PRINTOUTS - Three menu options are reserved for the most frequently used printout sizes: 1x (quarter page), 2x (half page), and 3x (full page).
- GRAPHIC LABELS - The label printing option allows the user to create custom mailing or disk labels with professional looking results.
- GREETING CARDS - The greeting card option allows the user to custom design greeting cards using both text and graphics.
- GIANT POSTERS - The poster option provides the user with a means of reproducing a hi-res graphic to a multi-sheet poster.
- SPECIAL EFFECTS - The special effects option allows the user to directly control the printing directives. ROTATION, X/Y SIZE, X/Y FLIP, X/Y GRID, X/Y FILL, TAB, WINDOW, POS/NEG IMAGE, and more!
- USER CALL - Have an application that **HARDCOPY** doesn't quite match? **HARDCOPY** routines can be added to EXTENDED BASIC through the USR command!

GRAPHICOM PART II

DISTRIBUTED BY COMPUTIZE INC.

©1984 WHITESMITH V:1.0
ALL RIGHTS RESERVED

GRAPHICOM PART II \$24.95

NEW LOW PRICE! GRAPHICOM DIGITIZER \$159.00

Input directly into Graphicom for easy enhancements, manipulation, stamping, and storage. Accepts composite video signal in (1.0v p-p) from video camera, VCR, video disc player, another computer, or other compatible video sources. View "off air" or "VCR" digitized video at close to real-time. "Snapshot" video frames to the digitizer's internal memory. No slow, data serial manipulation. Use with your multi-pak, "Y" box, or a "Y" cable ("Y" cable available at \$19.95) Video is input via a "BNC" connector. External controls for HORIZONTAL POSITION, VERTICAL POSITION, HORIZONTAL WIDTH, BRIGHTNESS, and CONTRAST (FUZZ) settings. Don't be fooled by imitations...this is the GRAPHICOM VIDEO DIGITIZER... the only digitizer that "DIRECTLY" inputs into Graphicom. **REQUIRES 64K COCO, 1 DISK DRIVE, AND 2 ANALOG JOYSTICKS. FREE GRAPHICOM PROGRAM, PICTURE DISK, AND GRAPHICOM UTILITY SUPPLIED WITH PURCHASE OF VIDEO DIGITIZER (A \$50 VALUE).**

GRAPHICOM \$24.95

Catalog No. 111GD
Simply stated - One of the finest graphic programs written for the Color Computer!
FEATURES:
• S-U-P-E-R U-S-E-R F-R-I-E-N-D-L-Y!
• Supports 4 Hi-Res display modes
• 4 page animation mode
• Color Palette with over 15 color patterns for use with Hi-Res artifact
• Send/Receive pictures over modem
• Supplied utility allows capturing Hi-Res screens from most COCO arcade games
• Multiple Hi-Res character fonts (user redefinable)
• Supplied utility for transferring Graphicom screens to Basic or other M/L programs.
• Supplied utility for loading screens from Basic or other sources
• Built in Hi-Res SCREEN PRINT (compatible with EPSON, C-I-TOH, GEMINI-10, OKI, plus Radio Shack's LP-VII, LP-VIII, DMP-100, DMP-200, and GCP-115 printers) from 110 to 9600 baud
• SEND/RECEIVE slow-scan television
• Many additional features, operating hints, hardware mod's and suggestions, etc.
REQUIRES 64K COCO, 1 DISK DRIVE, AND 2 ANALOG JOYSTICKS

NEW MASTER KEY II

New Improved Version! A hardware product that takes control of any program regardless of protection. Now use with RS Multi-pak, "Y" cable or optional extender cable. Captures register contents as they were when Master Key II was engaged. Complete disassembler, memory save, and much more. Requires some familiarity with Assembly Language.
ROM PAK Cat. No. 160HR \$ 99.95
Cat. No. 161HR With Ext. Cable . . . \$109.95

"Y" BOX

\$29.95

YOU COULD SPEND \$100.00 OR MORE TO UPGRADE YOUR GRAPHICS SYSTEM, JUST BUY...

Eclipse (Zoom) \$19.95/Moreton Bay	Text Master (Hi-Res Text) . . . \$29.95/Data Man
Super Paint (Paint) \$19.95/Michtron	G.C.U. (Disk Utilities) \$19.95/Computize
Shrinx (Reducer) \$21.95/Grafx	

OR YOU COULD SPEND \$24.95 FOR GRAPHICOM PART II AND GET:

a video processing package that provides many functions that are missing in Graphicom. Here are just a few of the features provided by Graphicom Part II:

- ENLARGE/REDUCE/ROTATE**
Enlarge or reduce any portion of a graphic screen, just like a photographic enlarger! Rotate by any degree or fraction of a degree around any point on the screen.
- PAINT**
Paint or "fill-in" any irregular area on the screen! More than 50 different colored patterns available. Additional paint patterns may be user-defined.
- PAN & ZOOM**
"Zoom in" x2, x4, or x8 on any portion of the screen to do fine pixel work. Allows editing of Graphicom character sets with ease!
- TYPESETTER & FONT EDITOR**
Add text in 16 different sizes, also supports user definable foreground & background colors. Design & Edit characters for use in the typesetter.
- PIXEL BLASTER**
Allows the user to easily substitute or remove colors. Widen lines, swap BLUE & RED without effecting BLACK & WHITE, etc.

GRAPHICOM PART II DOES NOT REQUIRE GRAPHICOM TO RUN!

Graphicom Part II requires a 64K extended disk basic system, and supports 1 to 4 disk drives, keyboard or joystick (analog or switch type) input. It will load and save both Standard BIN files and Graphicom screens. All functions support color or Hi-Res operation, as well as the 4 screen display modes.

PICTURE DISK SETS

- Available from COMPUTIZE
- 4C - Artifact color palette
 - 5C - Large character sets (from Derringer Software)
 - 6C - Same as 5C but set up as stamp set
 - Picture Disk Set 1 \$19.95**
 - 7 - Miscellaneous Art Set #1
 - 8 - Miscellaneous Art Set #2
 - 9 - Miscellaneous Ads and Examples
 - Picture Disk Set 2 \$19.95**
 - 10 - Miscellaneous Fonts
 - 11C - Artifact color palette type fonts
 - Picture Disk Set 3 \$14.95**
 - 12C - Art demo from WHITESMITH
 - 13C - GRAPHICOM PART II function demo
 - Picture Disk Set 4 \$14.95**

GC II FONT DISKS

- Each disk contains 10 or more fonts. (4 versions of each font, one for each display mode).
- 14C - GCII Fonts Disk #1
 - 15C - GCII Fonts Disk #2
 - 16C - GCII Fonts Disk #3
 - GRAPHICOM PART II Font Disks . . . \$19.95**

SUPER BACK-UP UTILITY ©

WITH S.B.U. FROM COMPUTIZE - YOU'LL NEVER NEED ANOTHER BACK-UP UTILITY FOR YOUR COCO!!
SUPER BACK-UP UTILITY WILL PERFORM ALL OF THE FOLLOWING FUNCTIONS:
1. TAPE TO TAPE (Regardless of most protection schemes!)
2. TAPE TO DISK (Move Cassette programs to Disk!)
3. AUTO RELOCATE (For those Cassette programs that conflict with Disk operating systems.)
4. DISK TO TAPE (Place Disk programs onto Cassette)
5. DISK TO DISK (Our powerful Split-N-Image Program, Copies regardless of most protection schemes!)
• MENU DRIVEN
• REQUIRES 32K EXTENDED COCO
• REQUIRES 1 OR 2 DRIVES
• ALL MACHINE LANGUAGE!!!
COMPARE WITH OTHER INDIVIDUAL PROGRAMS COSTING IN EXCESS OF \$100.00
DISK \$49.95 Cat. No. 107CD

TRIPLE TRANSFER UTILITY ©

Transfer contents of disk to tape • Transfer contents of tape to disk • Automatically relocates cassette programs that conflict with the disk operating system • Displays machine language program addresses • Copies ASCII, Basic, & Machine Language Programs • All contained in 1 menu driven program!
REQUIRES 32K CC EXT.
Cassette \$19.95 . . . Cat. No. 105CT
Disk \$24.95 Cat. No. 105CD

SPIT-N-IMAGE ©

M/L Disk Back-Up Utility
There is no need to suffer the heartbreak of crashed disks any longer. Spit-N-Image will create a mirror image of your valuable disk programs which do not respond to normal back-up functions. Will also initialize and back-up in one pass. Data processing experts always insist on having a back-up - it's good a practice.
REQUIRES 32K CC

New Dual Mode EPSON

The new Epson LX-80 offers printing flexibility in two modes: one mode allows you to print in a quick (100 cps) dot-matrix style for programming and graphics, and the Near Letter Quality mode (16 cps) produces precise (240 dots per inch), beautiful type for correspondence, reports, and similar purposes. The LX-80 offers 160 different type-style combinations, including Pica, Elite, Enlarged, Emphasized, Condensed, Subscripts and Superscripts, and type-styles can be selected quickly from the top control panel or from program control. Comes standard in friction feed; tractor option is also available.

LX-P package includes an LX-80, a serial interface, a Color Computer to Epson cable, and Printer Tutorial that teaches you how to program the different type styles (\$29.95 value).

LX-P: LX-80 package **\$317** (\$7 shpg)

ET-1 tractor option for LX-80. **\$29.50.**

SF-1 Single-sheet feeder for the LX-80. **\$145** (\$7 shpg)

Epson	RX-80 FT	repack	\$207.
Epson	LX-80 New		\$249.
Botek	Serial to parallel converter		\$68.45
Howard	CoCo to Epson cable		\$25.

DM-1	Disk mailer holds from one to five diskettes	\$20.
	200 lb. cardboard construction	
	25 mailers/box	

MONITORS

123 Zenith 12" Green Screen, 640 dots x 200 dots resolution, 15 MHz band width. **\$114** (\$7 shpg)

123A Zenith 12" Green Screen Special, **\$67.50** (\$7 shpg) 80 Column non glare

122 Zenith 12" Amber Screen, 640 dots x 200 dots resolution, 15 MHz band width. **\$117** (7 shpg)

141 Roland 13" Color Monitor with speaker, 270 dots x 200 dots resolution, 4MHz band width **\$247** (\$12 shpg)

All monitors require video controller. Reverse video free with monitor order.

MEMORY

64K Upgrades—1 Year Warranty

64-E1 for E Boards with complete instructions. Remove old chips and replace with preassembled package—no soldering or trace cuts. **\$28.45** (\$2 shpg)

64-F1 for F Boards. No soldering needed. Capacitor leads must be cut. **\$24.45** (\$2 shpg)

64-2 for COCO 2. Kit requires one solder point, no trace cuts. **\$24.45** (\$2 shpg)

CONTROLLERS

New Controller from J&M: Has switch that allows either JDOS or RS DOS to be the disk operating system; eliminates software compatibility problems, while preserving the advantages of J&M's gold contacts and data separator. Also added to the DC-2 is a parallel port, which means a serial interface is no longer needed to make a parallel printer (like the Epson) work.

DC-2 Disk Controller with JDOS. **\$128** (\$2 shpg)

RS-1: RS DOS ROM Chip. **\$20.00** (\$2 shpg)

DC-1 Disk Controller reads and writes to 35 and 40 track single and double-sided drives for all models of the Color Computer w/ JDOS. **\$128** (\$2 shpg)

VC-1 Video Interface mounts inside Color Computer by piggy-backing IC on top of interface—no soldering, no trace cuts. All models give composite video & sound. **\$24.45** (\$2 shpg)

VC-2 for COCO 2—mono only. **\$26.45** (\$2 shpg)

VC-3 for COCO 2—both color or monochrome **\$39.45** (\$2 shpg)

VC-4 for new Color Computer (no sockets, chips are soldered to mother board). Attaches with spring-loaded clips. Color or mono. **\$39.45** (\$2 shpg)

DD-2	Double sided 360K disk with ½ height case & heavy duty power supply	\$188.
CA-1	Disk drive cable	\$24.50
CA-2	Two drive cable	\$29.50
DE-1	Disk enclosure ½ height with power supply	\$58.

HOWARD QUALITY STANDS

PS-1X

New TS-1X Monitor Stand: Designer-beautiful stand with clear corner posts, easy side access to ROM port, reset and on/off buttons. **\$39.50** (\$3 shpg)

TS-1: Standard 13" monitor stand for the original Color Computer. Specify black, ivory or clear. 15" x 11" x 4". **\$29.50** (\$3 shpg)

TS-2: Same as above for the COCO 2. **\$29.50** (\$3 shpg)

PS-1X Printer Stand features new noise-suppressing foam top and cork base. 15" x 11" x 2½". **\$24.95** (\$3 shpg)

EPSON AND J&M

The EJ-P Package

The Epson LX-80 Printer teamed with our new J&M DC-2 Controller gives you top printing capabilities plus built-in switch gives JDOS or Radio Shack DOS so all software can run on your Color Computer. Package includes: Epson LX-80 Printer with ET-1 tractor; DC-2 controller; parallel Color Computers to J&M cable; Epson Printer Tutorial (\$29.95 value).

Complete EJ-P package **\$425.00** (\$7 shpg)

GUARANTEE

Howard Medical's 30-day guarantee is meant to eliminate the uncertainty of dealing with a company through the mail. Once you receive our hardware, try it out; test it for compatibility. If you're not happy with it for any reason, return it in 30 days and we'll give you your money back, (less shipping).

Hours: 8:00-4:00 Mon.-Fri.
10:00-3:00 Sat.

Software system requirements: CoCo with 1 disk, 32K RAM, 80-column printer

DISTO

SUPER CONTROLLER

ONLY \$99.95 MS

FEATURES:

- Gold contacts on all connectors.
- Shielded metal box for low RF noise.
- 4 28-pin sockets for software expandability.
- Uses 2764 or 27128 EPROMs.
- EPROMs are software selectable.
- Internal Mini-Expansion Bus interface for:
 - 80 Columns
 - Real Time Clock and/or
 - Parallel Printer or
 - EPROM Programmer or
 - User Projects.
- Complete Radio Shack compatibility.
- New technology, no adjustments needed.
- Very Accurate 16mhz High Speed Master Clock.
- Needs +5 volts only, works on all COCOs or COCO IIs.

EXPANSION ADD-ONS:

There are currently four add-ons available from DISTO for this controller:

PPRINT

The first is a Centronics Compatible Parallel Printer adapter. This adapter will allow you to connect a Centronics compatible printer directly to your controller, leaving the serial port of your computer free for your modem. Printer driver software included.

RTIME

The second is a Real Time Clock. This is a clock chip that will keep the proper time, date and year. A small battery keeps the time when the Computer is off, retrieve and set the time by using simple Basic POKES. Also available with the Real Time Clock is the optional Centronics Compatible Parallel Printer adapter. Software to set the clock and printer driver included.

MPROM

The third is a Mini EPROM Programmer. Yes, a low cost programmer that attaches to the disk controller. A ~~program~~ for the DISTO Super Controller. Program those often used utilities into EPROM and plug them directly into your controller. Will program 2764's or 27128's, a perfect mate for the DISTO Super Controller.

DISPLAY80

The fourth is a real knock-out. This is a three in one card. It's major function is to add an 80*24 display to your computer. A feature packed package also includes RTIME and PPRINT. All in one neat package that fits inside the controller. OS9 software available. Call for more information.

HEAT UP YOUR COCO!

New HARD DRIVES

Besides the obvious advantage of increased disk access speeds and a vast amount of storage, our COCO hard drives boast many innovative features. For instance, you may boot OS/9

directly from JDOS - no intermediate boot floppy is required. Our software can run with virtually

any winchester with a

ST412 type-interface. Our drives have capacities of 5, 10, or 20 MBytes (formatted), and may be either partitioned into up to 7 logical units or left as one large logical unit. Our COCO hard drive systems are complete with case, power supply, cables, OS/9 drivers, and instructions. Prerequisite: OS/9, JFD-CP controller.

5 1/4" 5 MByte full size \$495
 5 1/4" 10 MByte 1/2 size \$650
 3 1/2" 20 MByte (shown above) \$795

JFD-CP DISK CONTROLLER

Our new JFD-CP, compatible with both the original COCO and the COCO 2, features a parallel port to support a

Centronics compatible printer or our hard drive, and an external ROM switch, which allows you to select JDOS or an optional RS

DOS-type ROM. It comes in

a case and includes JDOS 1.2 and manual. JDOS implements all RS DOS commands, plus many more, including auto line numbering, error trapping, baud rate selection, OS/9* boot from floppy or hard drive, and Memory Minder**, our disk drive analysis program (Precision Alignment Disk not included).

JFD-CP Disk Controller with JDOS \$139

COCO-CLASSIC

Our old JFD-COCO controller remains a strong seller. Some people just like old "classics" best! So we have brought it back at the lowest price ever!

JFD-COCO Disk Controller with JDOS \$99

New TERMS

One-year warranty on parts & labor; 30-day money back guarantee (except shipping) if not totally satisfied. Items must be returned in like new condition.

Free shipping via UPS in continental United States for payment by VISA, MasterCard, or cashiers check. COD requires 10% prepayment by bank card plus 3% shipping. Blue Label and foreign shipping extra.

DRIVE SYSTEMS

Upgrade your Color Computer by adding our new JFD-CP disk controller, supercharged with JDOS 1.2 operating system, and a top quality drive with case and power supply. Comes complete with cable and JDOS manual.

Drive 0 System with one single side drive \$279
 Drive 0 System with one double side drive \$349
 Drive 0,1 System with two single side drives \$389
 Drive 0,1 System with two double side drives \$489

MEMORY MINDER**

Memory Minder is a disk drive test program now included in JDOS. Used with a Precision Alignment Disk, Memory Minder allows you to check

your drives for speed, alignment, sensitivity, hysteresis, and more! You can actually align or adjust the drives while viewing the graphics on the screen. No special equipment needed!

PRECISION ALIGNMENT DISKS (From Dysan)
 PAD-40X1: Tests single side disk drives \$26
 PAD-40X2: Tests double/single disk drives \$33

Memory Minder is available on diskette for those who don't own a JFD-CP controller with JDOS. Includes Precision Alignment disk.

Memory Minder: single side package \$59
 Memory Minder: single/double side package \$75
