XENION: ▶

Pilot your Xenion XE-II fighter over hostile enemy planets in order to rid the galaxy of evil. Hordes of alien attack ships will try to stop you in the air. Watch out for cyclops cannons and tanks which will fire at you from the ground. And beware, mother ships will appear and try to finish you off. You can pick up smart bombs from the planet and use them in your fight against the enemy. Dozens of screens of detailed terrain make this a great game for everyone.

64 k CoCo 1 or 2 and joystick required. Tape or Disk.

\$29.95 U.S.
\$37.95 Can.

128 k CoCo 3 Joystick and disk drive required.

MEDIEVAL MADNESS: ▶

You have been asked by the King of a mysterious land to rescue his daughter, the fair Princess, from the clutches of an unknown evil! Armed only with your crossbow, you set out into the unknown land on your quest. As you enter the mysterious land you find yourself surrounded by swarms of odd creatures that inhabit the land. You take aim, and fire. A direct hit. The monster slowly fades away, leading you to believe something magical controlled the hideous creature. You press forward not knowing what will appear next. MEDIEVAL MADNESS, our second light phaser game has many detailed playing screens and loads of monsters to keep you playing for hours. Multiple skill levels increase the difficulty of the game and make it fun for the beginner or advanced player. Can you rescue the princess? Only time will tell!

Medieval Madness Game, Phaser & Interface

THE RAT GRAPHIC DESIGN PACKAGE: ▶

This is the most complete graphics design package currently available for the CoCo 3. It supports 320 x 200 hi-res graphics mode with a 16 colour user definable palette. You can draw lines, circles, ovals, boxes, polygons and many more standard drawing functions. You can get stamps from the screen which can then be enlarged, shrunk, rotated, inverted and flipped and then be redisplayed on the screen in various ways. You can paint areas of the screen in one of the pre-defined colour textures or define textures. You can label pictures with one of the pre-defined fonts or define your own custom lettering style. Now don't worry about trying to draw your picture with the keyboard or even a cumbersome joystick. THE RAT comes with its own MOUSE. Yes that's right, it comes with a MOUSE, and not a simple analog one button mouse. Ours is a high quality digital, two button mouse like you would find on a more expensive computer like the Tandy 1000. You don't have to worry about selection squares around your drawing screen, just push a button on the mouse and you flip to a separate screen to select your drawing mode. Or you can use one of our pull down menus to load and save your pictures on disk. We also include screen print routines for many of the most popular printers.

Now that's a GRAPHIC DESIGN PACKAGE that beats them all! That's right, you get the graphics program, screen print routines, the mouse and the mouse pad all for one low price of:

\$79.95 U.S. \$99.95 Can.

BACK TALK

Editor:

I would like to comment on two articles in your June '88 issue: David Huag's article, "Internal Sound," Page 99, and Michael F. Wiens' article, "CoCo 3 Potpourri," Page 158. David's article, which describes how to install a speaker and amplifier inside a CoCo to produce sound with monitors that lack this capacity, is flawed in several respects.

First, David suggested using a 9-volt battery as the amplifier's power supply. Such extra power would be expensive. Instead, the correct way to power such an amplifier is off the CoCo's own power supply. For CoCo 1s and 2s, a +10-volt source is available at the positive side of the power supply circuit's 10,000 mfd filter capacitor. The big filter capacitor is a black or gray cylindrical object about 2 inches long and one-half inch in diameter, which is marked with its value (10,000 mfd or 4,700 mfd). The positive and negative sides are indicated by a marking and arrow. CoCo 3s have a convenient +10-volt source at the junction of the cathodes of the power supply's two biggest diodes. The diodes are black, cylindrical objects, one-half inch in diameter and one-half inch long, which are marked with a single silver band on the cathode side of the diode.

Second, David recommended making your own amplifier from "scratch" with an LM 386 chip. While his circuit will probably work, why go to all the trouble? Radio Shack sells a speaker amplifier in a nice little package (Cat. No. 277-1008), which only costs \$12 and has everything you need to install sound in your CoCo. It fits beneath the keyboard if you remove its back plate, and the Radio Shack's speaker has been baffled to provide better sound.

Finally, though David showed how to find the sound on his CoCo, his instructions won't work on some other CoCo models. David's instructions work fine on CoCo 1s. But on most CoCo 2 models, and all CoCo 3 models, the sound line is at Pin 1 of the custom DAC chip. This is a 20-pin chip marked SCC77526P on most computers. On the CoCo 3 sound can also be obtained, of course, from the audio output jack in the computer.

Next, Michael's article presents a rather faulty technical tip. His first hardware tip says that owners of the old CoCo 1 disk controller (Cat. No. 26-3022) can use the controller on a CoCo 2 or 3 if they rig up a +12-volt source for that card. Although this is true for the CoCo 2, Michael does not mention that, even with the 12-volt source, the controller will not work properly at double CPU speed. Therefore, if you run OS-9 Level II or any Disk BASIC program that does disk I/O at double processor speed, at best the controller won't work, at worst it will operate unreliably — occasionally crashing disks. The reason is that the

data separator circuitry on that old controller is a bit sloppy, and there is no simple fix for that problem. Both my column and the "Doctor ASCII" column have warned of this problem before. I strongly advise readers *not* to use that controller in their CoCo 3s. Buy a new one, instead.

Marty Goodman
San Pablo, CA

REVIEWING REVIEWS

Editor:

Needless to say, we at SPORTSware were very pleased, even honored to see the treatment given to the *Wargame Designer* system in the August '88 issue [Page 126]. We tried to create a game-designing system that would fill what we saw a void in the wargame and Adventure game market.

We would also like to comment on the reviews of John Herbert, reviewer of *Wargame Designer*. We have noticed his reviews in the past and have always found them enjoyable. His unique style and humor are refreshing. Unlike some reviewers, who feel that a recitation of the user's manual is enough, you can always tell whether or not Mr. Herbert enjoyed a software package. Feelings are what reviews are all about, and John Herbert relates them with ease. Let's hope that he continues to share his time and talent with the CoCo Community.

Paul L. Olmstead
President

Fair is Fair

Editor:

First, I would like to commend you for your fine magazine. RAINBOW's excellent articles and reviews have helped me enjoy my CoCo. I pay particular attention to RAINBOW's reviews. After reading reviews on *CoCo Newsroom*, *Kung-Fu Dude*, and *Rommel 3D*, I purchased the products. I found certain flaws that were not properly covered in the reviews, and I would like to comment on them now.

Despite *CoCo Newsroom*'s icons, you cannot return to the main menu from type-up. You must re-boot the program. Although knowing this may not have stopped me from buying this program (for it is excellent in all other ways), I think that the review should have mentioned this problem.

Kung-Fu Dude's review mentions that the program is copy-protected. The copy-protection does not appear to be benign. I couldn't get the program to boot. When I called the author, he said that he had encountered this problem before. The fault seems to be with the timing of some drives and the way the program boots the encrypted graphics from Track 0. I have returned the game, and the company is still working on the problem. Perhaps this is an example of the way a vendor can actually thwart future purchases through copy-protection.

Finally, the graphics in *Rommel 3D* have been compromised by the program's demand for speed. Although the game moves quickly and is mildly entertaining, I've seen better games and graphics in BASIC published in THE RAINBOW. I realize that some of my comments (especially for the last product) are subjective, and I see only two choices for me and for others who purchase "less than perfect" software: complain to the vendor or just accept the flaws.

Product reviews should be fair. They let your readers know what is new on the market. They should also temper and confirm the advertiser's claims. I will continue to read your magazine and purchase software from the vendors you review.

Wayne Montague
Mississauga, Ontario

We agree that reviews should be fair. Therefore, we will be working toward more serious "play testing" in-house. We regret it if we've allowed recommendations for flawed products to slip through.

HINTS & TIPS

Editor:

Paul Pritchett [July '88, Page 7] requested a way to hard copy *Micro Illustrator* pictures. I suggest these steps. PCLEAR 8 your CoCo; boot up *Micro Illustrator* and load the picture from the disk. Return to Disk BASIC by removing the disk and pressing RESET twice. Then, run the following program:

```
10 PMODE 4,1:SCREEN 1,1 'WATCH  
OUR PROGRESS  
20 FOR X=8252 TO 14396 'PICTURE  
SITS HERE  
30 A=PEEK(X):POKE X-4668,A 'MOVE  
PICTURE  
40 NEXT X:SOUND 20,1 'BEEP WHEN  
DONE
```

This will move *Micro Illustrator*'s picture to Disk BASIC graphics pages 1 through 4, where any trusty graphic dump program can do its stuff. Hope this helps!

Charles Doane
Miami, FL

CoCo 3 Artifacts

Editor:

I have tested some machine language programs with the CM-8 patch program listed in the February '88 issue ["Artifact Colors on CoCo 3's RGB," Page 114]. Each of the following will display color when executed on a CoCo 3 with a CM-8 monitor:

From Tom Mix: *Donkey King*, *Draconian*, *Buzzard Bait*, *Brew Master* and *Skyway*.
From Spectral Associates: *Lancer*, *Miss*

RUNS ON
COCO 2 & 3

AUTOTERM TURNS YOUR COLOR COMPUTER INTO THE WORLD'S SMARTEST TERMINAL!

YOU'LL ALSO USE AUTOTERM FOR SIMPLE
WORD PROCESSING & RECORD KEEPING

EXTRA FEATURES ON COCO 3 DISK

80 char. screen, 2400 baud thru serial port,
95,000 to 475,000 character buffer.

EASY COMMUNICATION + WORD PROCESSING + TOTAL AUTOMATION

Full prompting and error checking. Step-by-step manual has examples. Scroll text backward and forward. No split words on screen or printout. Save, load, delete files while on line. Print, save all or any part of text. 300 or 1200 baud. All 128 ASCII characters. Works with D.C. Hayes or any modem. Screen widths of 32, 40, 42, 51, 64.

DISK VERSION SUPPORTS RS232 PAK, XMODEM and SPLIT SCREEN FOR PACKET RADIO.

Editing is super simple with the cursor. Find strings instantly too! Insert printer control codes. Specify page size and margins. Switch quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text or files, download information, file it, and sign-off; then edit the receive data, print it in an attractive format, and/or save it on file. Compatible with TELEWRITER.

Advanced system of keystroke macros lets you automate any activity, such as dial via modem, sign-on, interact, sign-off, print, save. Perform entire session. Act as message taker. At start-up, disk version can automatically set parameters, dial, sign-on, interact, read/write disk, sign-off, etc. Timed execution lets AUTOTERM work while you sleep or play. No other computer can match your COCO's intelligence as a terminal.

Please hire the mentally retarded. They are sincere, hard working and appreciative. Thanks!

Phyllis.

From The Rugby Circle: *Caterpillar.*

From Mark Data: *Tut's Tomb.*

From Anteco Software: *8 Ball.*

From T&D Software: *Able Builders.*

From Adventure International: *Arex.*

From Factory Programming: *Outhouse.*

Note: If you use the patch while playing a game that switches between the graphics screen and text screen, sometimes you will only see vertical and/or horizontal lines. Usually this is not critical because the text screen asks you to enter the number of players, the names, the level, etc. If you play the game without the patch and memorize the screen text, you should be able to play the game with the patch. Also, some of the programs mentioned were on a ROM pack but have been transferred to a disk. Don't try to use the patch with a ROM pack — you can't.

Perry M. Dueck
Rosenort, Manitoba

A CoCo 2 Color Catalyst

Editor:

Thanks to everyone in the CoCo Community who took the time to drop a line or call about *Color Catalyst* ["Changing the Language," June '88, Page 168]. As it appears in the magazine, the program will

only run on the CoCo 3 and certain models of the CoCo 2. (Tandy changed more than the keyboard when it upgraded our favorite machine.) The following changes in Listing 2 will allow you to use *Color Catalyst* on your CoCo 1 or 2:

```
6 POKE359,57:M=113:N=25:PRINT
@13,"COLOR":PRINT@36,A$;:
PRINT@68,B$;:PRINT@100,C$;
8 PRINT@166,"CUSTOM BASIC
UTILITY":PRINT@232,"BY MARC
CAMPBELL";:PRINT@489,"[C]
MCMLXXXVII";
16 CLS:PRINT"DO YOU WANT TO
EXIT?(Y/N)":EXEC44539:A$=INKEY
$:IFA$="N"THEN10ELSECLS:NEW
30 GOSUB82:PRINTS$"BLACK CHAR
ACTERS ON GREEN",S$"BLACK CHAR
ACTERS ON ORANGE":S=163:E=195:
GOSUB83
31 IFQ=1THENPOKE65314,7ELSE
POKE65314,8
```

Delete Line 17 and lines 125 through 128.

Please note that the reset patch and many of the custom display options will be lost, but the other aspects of the program should work properly. If you experience an I/O Error when loading a custom version of BASIC, put the machine in an all-RAM mode by running Listing 1 and try again.

My thanks to Chuck Scharmann, president of Club 6809 in Massachusetts, for bringing this problem to my attention and helping me fix it.

Marc Campbell
Ephrata, PA

INFORMATION PLEASE

Editor:

I really enjoy your magazine, especially the letters. I've gotten quite a few ideas from this section.

I enjoy *Hall of Kings* and would like to buy *Hall of Kings II* or *III*. However, Prickly Pear Software is no longer in business. Is anyone else selling these games? I would like to continue the Adventure.

Jerry M. Bedell
St. Peters, MO

Glen Dahlgren, the original programmer of The Hall of Kings, has obtained all rights from Prickly Pear Software to market his trilogy. You can order the programs from Glen at: Sundog Systems, 21 Edinburg Drive, Pittsburgh, PA 1523; (412) 372-5674.

Computer Musicians

Editor:

I am seeking help from all CoCoists who use their CoCos for MIDI applications and music composition or arrangement. Has anyone heard of a voicing program for the Yamaha FB-01 that will work with a CoCo 2 or 3? I do some intricate MIDI work that involves the FB-01, and I need a voicing program that allows me to modify some of the voices on the FB-01.

All other major brands of computers have voicing programs that let them modify the sounds of the FB-01. I hope that such a

program exists for the CoCo. If it doesn't, such a program would be very lucrative to write.

P.O. Box 86
Red Oak, GA 30272*

KUDOS

Editor:

I just finished wading through a stack of bills. The only one that I didn't mind was my RAINBOW subscription renewal. Indeed, you even include a postage-paid envelope for the subscription. Subtle touches like this keep CoCo fans coming back — even when Radio Shack ignores the CoCo and praises its PC compatibles.

You are a class act, RAINBOW.

*Mike Shay
Lebanon, PA*

In Praise of Rainbow Advertisers

Editor:

I just wanted you to know how much I enjoy RAINBOW each month. You perform a great service for all CoCoists. The software companies who advertise in your magazine also maintain high standards. One such company is Gimmesoft. Mr. DiMarco is helpful and considerate to all his customers. My thanks to you both.

*Fred Sharpe
Scarborough, Ontario*

Confidence-Builder

Editor:

I would like to thank Marc Campbell for his BASIC editor, *Buddy* ["CoCo's Current Companion," July '88, Page 34]. New to computing, and only an average typist, I've been intimidated by long program listings. I've avoided some programs and typed in others with as much enthusiasm as I usually muster for a trip to the dentist. CoCo's built-in editor only added to my frustration.

Buddy has changed all that. The program has more features than my present word processor, is simple to use and works well with my tape system. Since *Buddy* takes the frustration and tedium out of typing in long listings, I ordered several back issues of THE RAINBOW. *Buddy* and RAINBOW are my CoCo's constant companions.

*Kay Greenwood
Crystal Springs, MS*

PEN PALS

• I am a 19-year-old who would like pen pals from anywhere in the United States. I have a CoCo 2, FD 501 disk drive, DMP-105 printer, CCR-81 cassette recorder/player and a speech/sound cartridge. I would like someone who likes *Doctor Who*, writing and anything in between. It may take some time, but all letters will be answered.

*Dennis Duane Ferrell
712 Gloria Grove
Wiggins, MS 39577*

• My brother and I are looking for pen pals from all over the country. We are: Scott, age 13, and Andy, age 14½. We have an ECB CoCo 2, DMP-105 and DMP-230 printers, DCM-3 modem, FD 502 disk drive, and a CCR-81 cassette recorder. We will do our best to respond to all letters.

*Andy and Scott Brady
51 Barberton Road
Lake Worth, FL 33467*

• I'm 31 years old and own a CoCo 2, tape recorder and a DWP-230. My interests are BASIC and assembly programming (practical programs for me and games for my kids) and word processing. My other interests are history, literature, politics and religion. I will answer all letters.

*Dan Weaver
66 Bunn St.
Amsterdam, NY 12010*

• I am looking for a pen pal who has the same setup as my system. So far, I have a 64K CoCo 2 and a cassette recorder. I am looking for someone who is a novice like myself who might be able to teach me more about this new computer of mine.

*Patti French
Rt. 2, Box 9
Grafton, ND*

• I am 37 years old and have a 64K CoCo with disk drive and a DMP-130 printer. I enjoy anything that has to do with computers. I would like to hear from anyone, any age and from anywhere in the world.

*Chuck Flowers
P.O. Box 246
Rio Dell, CA 95562*

• I would like a pen pal from anywhere. I have a CoCo 2 with one disk drive and two joysticks. I am 10 years old.

*Kevin Lewis
256 Elron Crescent
Thunder Bay, ON
Canada P7C 5T5*

• I am 16 years old and am looking for pen pals from all over the world. My computer system consists of a CoCo 3, DMP-105, two double-sided disk drives and a modem. I like to program in BASIC09, and I collect CoCo 3 pictures.

*Heath Dingwell
Rt. 2 Box 230
Litchfield, CT 06759*

• I am 16 years old, and I have the CoCo 2 and 3, FD 500 disk drive, DMP-105 printer and CCR-81 cassette. I am looking for pen pals who enjoy arcade and Adventure games.

*Shane Pasiechnyk
P.O. Box 344
Marysville, BC
Canada V0B 1Z0*

• I am 15 years old. My family and I own four computers — MC-10, CoCo 2, CoCo 3 and Tandy 1000 EX. We have a DMP-106 printer. I would like to have pen pals from anywhere in the world; age doesn't matter.

*Gretchen Silverheel
1633 Summit
Kansas City, MO 64108*

BULLETIN BOARD SYSTEMS

• The Port City Exchange is a "Phoenix" BBS system in the Mooresville area. It runs on a 64K CoCo 2 and is up 24 hours a day, seven days a week at (704) 663-6022. The parameters are 300 baud, 8-bit, 1 stop bit, no parity. There are multiple message bases and upload/download capacity. *Galactic Conflict* is the online game.

*Douglas C. Henderson
(NICKO)
539 Dixie Drive
Mooresville, NC 28115*

• There's a new BBS in southern California that needs CoCo users! We have room for uploads and downloads and have some great SIGs and message areas. We operate at 300/1200 baud, N-8-1. Call (818) 995-2461.

*Scott Shell (SysOp)
Allen Williams (Co-SysOp)
3425 Clairton Pl.
Encino, CA 91436*

• The Drunk Drive [call (517) 893-3091] now has a large archived CoCo download area. The Plastered Board [at (517) 892-7885] and Warped Board [(517) 686-7598] also support the CoCo with a variety of downloads. All are N-8-1, 300/1200 baud and run GT *Powercomm*. Press Q at the menu to have up- and download capacity. Press C to see all file categories. Press F to see all file descriptions. The Drunk Drive and The Plastered Board are online 24 hours a day. Warped Board is online from 6 a.m. to 3 a.m.

*Ron Sujkowski
1806 34th St
Bay City, MI 48708*

• The Chip to Chip is running at 300/1200 baud, 24 hours a day on a 512K CoCo 3. The system uses *PBBS* software and features message and software exchange for IBM, CoCo and CBM. New members must fill out an online application and use their real names. There is 20 Meg of disk storage space. The SysOp is Allen Jones. Call (902) 539-7743.

New Waterford, NS
Canada B1H 4K4*

THE RAINBOW welcomes letters to the editor. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or to conserve space.

Letters to the editor may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG> prompt, type RAI to take you into the Rainbow Magazine Services area of the SIG. At the RAINBOW> prompt, type LET to reach the LETTERS> prompt and then select Letters for Publication. Be sure to include your complete name and address.

Word Power 3.2

More Versatile • More Powerful With Spooler • Calculator • Split-Screen • 2-Column Printing

Unparalleled Power packed in this 100% ML Word Processor written from scratch for the CoCo 3! **No other word processor offers such a wide array of features that are easy to learn & use.**

DISPLAY & SPEED

Word Power 3.2 runs at double-clock speed and uses the **true 80-column display** with lowercase instead of the graphics screen. The result is lightning fast screen reformatting and added speed! **All prompts are displayed in plain English in neat colored windows.** The current column number, line number, page number, percentage of free memory is displayed at all times. Even the **page break** is displayed so you know where one page ends and the other begins. The Setup program allows you to change fore/background colors as well as (in)visible carriage returns. Word Power 3.2 can be used with RGB/Composite/Monochrome monitors as well as TV.

MAXIMUM MEMORY

Word Power 3.2 gives you **over 72K on 128K and over 450K on 512K CoCo 3** for Text Storage - more memory than any other CoCo word-processor. Period.

EFFORTLESS EDITING

Word Power 3.2 has one of the **most powerful and user-friendly full-screen editor with word-wrap.** All you do is type. Word Power takes care of the text arrangement. The unique **Auto-Save** feature saves text to disk at regular intervals for peace of mind.

Insert/Overstrike Mode (Cursor Style Changes to indicate mode); OOPS Recall during delete; Type-ahead Buffer for fast typers; Key-Repeat (adjustable); Key-Click; 4-way cursor and scrolling; Cursor to beginning/end of text, beginning/end of line, top/bottom of screen, next/previous word; Page up/down; Delete character, previous/next word, to beginning/end of line, complete line, text before/after cursor; Locate/Replace with Wild-Card Search with auto/manual replace; Block Mark, Unmark, Copy, Move & Delete; Line Positioning (Center/Right Justified); Set/Reset 120 programmable tab stops; Word-Count; Define Top/Bottom/Left/Right margins & page length. You can also highlight text (underline-with on-screen underlining, bold, italics, superscripts, etc.). Word Power even has a **HELP** screen which can be accessed any time during edit.

SPLIT-SCREEN EDITING

Splits the screen in half so you can view one portion of your text while you edit another. You'll love it!

MAIL-MERGE

Ever try mailing out the same letter to 50 different people? Could be quite a chore. Not with Word Power 3.2! Using this feature, you can type a letter, follow it with a list of addresses and have Word Power print out personalized letters. It's that easy!

CALCULATOR

Pop-up a 4-function calculator while you edit! Great for tables!

SAVING/LOADING TEXT

Word Power 3.2 creates ASCII format files which are compatible with almost all terminal/spell-checking & other word-processing programs. Allows you to Display Free Space, Load, Save, Append & Kill files. The **ARE YOU SURE?** prompt prevents accidental overwriting & deletion. You can select files by simply cursoring through the disk directory. Supports double-sided drives & step-rates.

PRINTING

Word Power 3.2 drives almost any printer (DMP, EPSON, GEMINI, OKIDATA, etc). Allows options such as baud rates, line spacing, page/print pause, partial print, page numbering/placement, linefeeds, multi-line headers/footers, right justification & number of copies. The values of these parameters & margins can be changed anytime in the text by embedding Printer Option Codes. The **WHAT YOU SEE IS WHAT YOU GET** feature allows you to preview the text on the screen as it will appear in print. You can view margins, page breaks, justification & more.

PRINT SPOOLER

Why buy a hardware Print Spooler? Word Power 3.2 has a **built-in Spooler** which allows you to simultaneously edit one document & print another.

TWO-COLUMN PRINTING

This unique feature allows you to print all or portion of your text in **two columns!** Create professional documents without hours of aligning text.

SPELLING CHECKER

Word Power 3.2 comes with spelling checker/dictionary which finds & corrects mistakes in your text. You can add words to /delete words from dictionary.

PUNCTUATION CHECKER

This checker will proofread your text for punctuation errors such as capitalization, double-words, spaces after periods/commas, and more. Its the perfect addition to any word processor.

DOCUMENTATION

Word Power 3.2 comes with a well-written instruction manual & reference card which makes writing with Word Power a **piece of cake!** Word Power 3.2 comes on an **UNPROTECTED** disk and is compatible with RSDOS. Only **\$79.95**

(Word Power 3.1 owners can get Word Power 3.2 Upgrade FREE by sending proof of purchase & \$5.00 to cover S&H costs & instructions)

October Magic

This is a happy month! There are a whole bunch of things to be happy about right now. First of all, remember that I write these columns a lot earlier than they appear in THE RAINBOW. Production schedules make this necessary, of course, so it is really an interesting exercise from an intellectual point of view: First, I have to project myself into the future and try to place myself in the time you will be reading this; second, I am as usual “full” of something that has just happened in real time (as they say) and want to tell you about it.

As to what’s happening in October itself — it is RAINBOWfest! That really makes me happy, because I sometimes liken RAINBOWfest to the ancient stories of the Scottish Clans’ annual gathering. Each time I walk into our convention hotel, I can’t help but think of the “Gatherin’ o’ th’ Clans” from legend. Each show is alive with anticipation of new things, new products and, most important of all, new people. We all make new friends and we all renew old acquaintances. And we get an infusion of spirit for our CoCo Community.

All of this is by way of saying I hope you will join us in Princeton October 21st through 23rd.

October, too, begins the start of our busiest half of the year. During the summer, with family vacations, with school out, with the weather so nice, almost everyone’s CoCo activity drops a little bit. Why, I remember one year Dick White wanted to take his CoCo on a camping trip with his family, and his wife threatened to hide the batteries he had rigged up!

September means back to work full time and back to school for so many of you (educators as well as students). I know computing sometimes takes a back seat to getting those schedules “set up.” But things have usually settled down by October, and we’re ready to go. October also means that we have lots of new things on the horizon. After all, the pre- and post-

COCO NEWSROOM

An excellent Desktop Publishing program for the CoCo 3. Design your own newspaper with Banner Headlines/6 Articles using sophisticated Graphics, Fonts & Fill patterns. Comes with 22 fonts & 50 pictures! Over 140K of code. Compatible with Epson, Gemini & Compatibles, DMP 105/106/110/120/130/200/400/420/500/2110, CGP-220, Laser LP1000 & IBM Compatibles. holiday seasons are the prime sales times for Color Computers. All those software and hardware people are working hard to come up with some new ideas to make your CoCo even more enjoyable.

* * *

But here in Prospect, Kentucky, as I write this I am only projecting into October. Still, it is a very happy month right now — perhaps some “October magic” is taking place!

Just a few days ago my daughter Wendy married Ira Barsky. Many of you who have been to RAINBOWfest may have met Wendy, and probably almost all of you have met Ira. My other daughter, Laurie, was Maid of Honor, and it was a very happy day for every one of us.

Long-time readers of this column will probably be asking where Sacy is living, now that Wendy has “fled the nest.” Sacy is Wendy’s teddy bear of many years who was almost lost when Wendy took a “Semester At Sea” and someone picked up her duffel bag by mistake as she landed back in the United States in Seattle.

Well, that’s the other half of the story of why this is such a happy month for all of us here.

Sacy put on a bow tie and was going to live with his “human grandfather” (me) for a couple of weeks, since Wendy somehow felt it inappropriate to take a teddy bear on her honeymoon. However, several days before the wedding some chest pains sent me to the hospital, and a few days after the wedding I went in for an angioplasty — a procedure doctors use to remove fatty buildup in coronary arteries.

Wendy and Ira delayed their wedding trip (much to my displeasure, I might add), and Sacy went to live at Wendy’s new home while I was in the hospital. I am pleased to report the procedure came off splendidly, and I was back at the office — although on a limited basis for a while — three days after the angioplasty. Sacy is living here, supervising my recovery, and will stay until Wendy and Ira return from their trip.

So, it is a good month. We’re glad you’re with us. And we’re glad to be with you!

— Lonnie Falk

METRIC INDUSTRIES, INC.

Model 101 Serial to Parallel Printer Interface

- ★ Works with any COCO
- ★ Compatible with “Centronics” Parallel Input Printers
- ★ Just turn the knob to select any one of 6 baud rates 300-9600
- ★ Comes complete with cables to connect to your printer and computer
- ★ Can be powered by most printers

Model 104 Deluxe Interface with “Modem Switch”

- ★ Same Features as 101 Plus
- ★ Built in Serial Port for your Modem or other serial device
- ★ Switch between Serial Output and Parallel Output
- ★ Comes with cables to connect to your computer and printer
- ★ Can be powered by most printers

Model 105 Serial Switch

- ★ Connects to your COCO to give you 2 switch selectable Serial Ports
- ★ Comes with a 3 foot cable to connect to your computer
- ★ Now you can connect your Printer (or printer interface) and your Modem (or other serial device) to your COCO and flip the switch to use either device
- ★ Does not require power

Cassette Label Printing Program

- ★ New Version 2.1 prints 7 lines of information on Cassette labels
- ★ Comes on Tape with instructions to transfer to disk
- ★ Menu driven, very easy to use
- ★ Save and Load Labels from Tape and Disk
- ★ Uses the features of your printer to print standard, expanded, and condensed characters
- ★ Automatically Centers Each Line of Text
- ★ Allows editing of label before printing
- ★ Program comes with 24 labels to get you started
- ★ 16K ECB required

Some of the Printers That Can —

Supply power for the 101 and 104 are Radio Shack, Star, Okidata, Brother, Juki, and Smith Corona.

Some of the Printers That Cannot —

Supply power for the interfaces are Epson, Seikosha, Panasonic, Silver Reed and NEC. If your printer cannot supply power to the interface you can order your interface with the “P” option or you can supply your own AC adapter. We recommend the Radio Shack 273-1431 AC adapter with a 274-328 connector adapter.

Write or call for more information or for technical assistance.

Supports 512K RAM dual speed, multi-tasking, multiple windows, and more!! Comes with disk and complete documentation. Only **\$89.95**

MULTI-VUE

User friendly graphics interface with multiple "window" applications for Level II. Only **\$54.95**

WIZ

OS9 Level II Terminal Package with 300-19200 baud rate and windowing capability. Requires 512K and RS-232 Pack. Only **\$79.95**

DYNASTAR

Best OS9 Editor/Word Processor Text Formatter. Has Keyboard Macros, supports terminals & windows simultaneously, configurable, auto-indent for C/Pascal programming, mail-merge. New Manual makes it easier than ever. Only **\$149.95**. DynaSpell **\$49.95**. Both Dynastar and Dynaspell: Only **\$174.95**

DYNACALC OS-9

Excellent spreadsheet for OS-9 users. Only **\$99.95**

OS9 LEVEL II BBS

BBS program that supports multiple users and sysop definable menus. Includes the following: Tsmom, Login, Chat, Message Retrieval, Mail Retrieval, Uloadx, Dloadx, and much more! Req. 512K. Only **\$29.95**

PC-Xfer UTILITIES

Programs to format and transfer files to/from MS DOS diskettes on CoCo Under OS9 Level 1 and 2. Requires SDISK or SDISK 3. Only **\$44.95**

SDISK 3

Standard disk drive module replacement allows full use of 40/80 track double-sided drives. Req. OS9 Level II. Only **\$29.95**. SDISK: **\$29.95**

OS9 LEVEL II RAMDISK

Lightning Fast Ramdisk with Auto-Formatting. A must for any OS9 Level II user. Req 512K. Only **\$29.95**

OS9 BOOKS:

Inside OS9 Level II: **\$39.95**
Rainbow Guide to OS9 II: **\$19.95**
Rainbow Guide to OS9 II Disk: **\$19.95**

OS9 Reference Card: **FREE** with any OS9 Purchase!!!

A program to help roommates organize expenses in a fair, precise manner

Bills!

Bills!

Bills!

Many people today have roommates. One of the main arguments that roommates have is bill payment — who pays what and how much. *Roommate* helps solve that problem and keeps a record of expenses and payments.

When starting the program, you are asked if you are creating a new file or loading a previous file. If you are creating a new file, you are asked the name of the roommate and given a list of expenses. The percentage of each expense to be paid is entered as a whole number, i.e., 90 percent = 90 not .90. When you have entered all the expenses of that roommate, you are prompted for information on the next roommate. Once you have entered information on all roommates, press ENTER to continue the program.

Next, you are asked if you want a printout of each expense that is percentage paid. The printout lists the roommate number and the corresponding percentage of payment per expense. Note that you may exceed 100 percent on any expense, total expenses, or the overall sum of expenses.

You are then asked if you need to change a roommate. This will include the name and all expenses. Simply answer the questions.

David Turner, an Emergency Medical Technician in Little Rock, is interested in computers, photography and astronomy, and has written custom programs for business.

Books That Can Launch A 1000 Programs!!

Pokes, Peeks and Execs are your guides into the jungle of computer programming. These commands give you the power of Machine Language without leaving the security of BASIC. Each book is a collection of "inside" information, with explanations and examples to help you immediately put it to use. Everyone from the novice to the professional will find these handy books a wealth of information.

300 POKES, PEEKS, 'N EXECS for COCO III

- *40/80 column Screen Text Dump
- *Save Text/Graphics Screen to Disk
- *Command/Functions Disables
- *Enhancements for CoCo3 BASIC
- *128K/512K RAM Test Program
- *HPRINT Character Modifier

Only \$19.95

500 POKES PEEKS, 'N EXECS

- *Autostart your BASIC programs
- *Disable Color BASIC/ECB/Disk BASIC commands
- *Disable Break Key/ Clear Key/ Reset Button
- *Generate a Repeat-key
- *Transfer ROMPAKS to tape
- *Set 23 different GRAPHIC modes
- *Merge two BASIC programs
- *And much much more!!!

For CoCo 1,2 and 3. Only \$16.95

ALL 3 BOOKS for \$39.95

SUPPLEMENT TO 500 POKES, PEEKS, 'N EXECS

- 200 additional Pokes,Peeks and Execs (500 Pokes Peeks 'N Execs is a prerequisite)
- *ROMPAK transfer to disk
- *PAINT with 65000 styles
- *Use of 40 track single/double sided drives
- *High-speed Cassette Operation
- *Telewriter, EDTASM+ CoCo Max enhancements
- * Graphics Dump (for DMP printers) /Text Screen Dump

For CoCo 1,2 or 3. Only \$9.95

UNRAVELLED SERIES

An invaluable aid for Basic and Machine Language programmers, these books provide a complete disassembly and annotated listing of the BASIC/ECB and Disk ROMs. These listings give complete, uninterrupted memory maps of the four ROMs. Gain complete control over all versions of the color computer.

- EXTENDED COLOR BASIC UNRAVELLED: COLOR BASIC and EXTENDED BASIC ROM Disassembly: \$39.95
- DISK BASIC UNRAVELLED: DISK BASIC ROM 1.1 and 1.0 Disassembly: \$19.95
- BOTH ECB AND DISK BASIC UNRAVELLED: \$49.95
- SUPER EXTENDED BASIC UNRAVELLED: SUPER EXTENDED BASIC ROM Disassembly for CoCo 3. \$24.95
- COMPLETE UNRAVELLED SERIES (all 3 books): \$59.95

WINDOW MASTER

The hottest program for your CoCo 3!! Imagine using Windows, Pull-Down Menus, Buttons, Icons, Edit Field, and Mouse Functions in your Basic Programs. No need to use OS9. It uses the 640x255 (or 320x255) hires graphics mode for the highest resolution. Up to 31 windows can appear on the screen at one time. Need extra character sets? Window Master supports 5 fonts in 54 sizes! How about an enhanced Editor for Basic? It gives you a superb Basic Editor which leaves the standard EDIT command in the cold. And don't forget that many existing Basic/ML programs will operate under Window Master with little or no changes. In fact, it does NOT take up any memory from Basic. Requires 1 Disk Drive, RS Hi-res Interface & Joystick or Mouse. Specify 128K/512K. \$69.95 Window Master & Hi-Res Interface. Only \$79.95

FUNCTION KEYS

Use F1, F2, ALT, CTRL Keys on your CoCo 3!!! If you program in Basic, this program is a must! Only \$14.95

Looking For New Software . If you have a Basic or ML program which you would like to market, contact us! We pay excellent royalties!!!

Order Status, Information, Technical Information, call 716-383-8830

The program now asks if you need to change the percentage paid. This is similar to the previous prompt. It simply verifies the percentages of payment for each roommate.

Now the program asks for the following expenses: Rent, Phone, CATV, Water/Sewer, Gas, Trash and Electricity. Enter the monthly amounts.

You may give the bill's due date and use the date as a reference for your statements.

The printout option gives you a printout that details expenses and payments. The screen print option lists the expenses on the screen. This is generally used as a review. Use SHIFT-@ to stop scrolling.

After completing the printouts, you are asked to save the data. The data file uses an extension to label each month. You might use the last digit of the year and the month number. For example, January, 1988 becomes 801. December 1988 becomes 812. January 1989 becomes 901. This enables you to keep monthly records on disk. The program also lets you delete the previous month.

If you want to convert this program to cassette, change the following lines:

```
1510 OPEN"O",#-1,FP$
1530 WRITE#1 to WRITE#-1
1550 CLOSE#-1
```

```
1610 OPEN"I",#-1,EC$
1630 IFEOF(-1)THEN1660
1640 INPUT#1 to INPUT#-1
1660 CLOSE#-1
```

And delete lines 1490, 1560, and 1590.

Roommate solves many of the problems involved with sharing apartment expenses. The program can help roommates remain friends.

(Questions or comments concerning this program may be directed to the author at P.O. Box 5062, Little Rock, AR 72225. Please enclose an SASE when requesting a reply.) □

REAL DESKTOP

CoCo Max™ III

AND

CoCo Max III is absolutely the best drawing package available for the CoCo 3, and it does more than just let you draw. CoCo Max III includes animation, text, color mixing and more features than you would think possible. It combines incredible speed with dazzling graphics and it is a joy to use even its most powerful features.

Pictures, graphs, flyers, cards, signs, school projects, labels, buttons and anything else you might dream of creating is now possible with CoCo Max III. Is it any wonder that the majority of CoCo Gallery pictures in the last five months were created with CoCo Max?

Thousands of CoCo users have found that you don't have to be an artist to have fun with CoCo Max. You'll wonder why you waited so long to get the incredible CoCo Max III.

CoCo Max III is the best because it includes:

- a huge picture area (two full hi-res 320x192 screens) - a large editing window - Zoom mode for detail work - 28 drawing tools which you just point and click on - shrink and stretch - rotation at any angle (1.5 degree steps) - 512K memory support (all features work with 128K too) - an Undo feature to correct mistakes - you can even Undo an "Undo" - Animation - special effects - color sequencing (8 colors, variable speed) - thirteen fonts (more available) - each font has eight different sizes - five style options (bold, italic, 3D, etc.) for thousands of font/size/style combination possibilities. - the CoCo Show "slide show" program - color editing of patterns - automatic pattern alignment - prints in single and double size - smart lasso (move text over a background...)
- advanced tools: arc, ray, cube, etc. - select 16 of the 64 colors (all 64 colors are displayed at once for selection!) - picture converter (CoCo Max II, MGE, BASIC) - extensive prompting - "glyphic" clipbook of rubber stamps - double click shortcuts - color mixing (additive/subtractive/none) - money back guarantee - sophisticated data compression saves disk space - pull down menus (no commands to remember) - forty paintbrush shapes - two color lettering - spray can - scrapbooks of pictures - error free - Y-cable or multipack not required - high speed hi-res interface included (plugs into joystick port) - disk is not copy protected - amazing "flowbrush" - RGB and composite monitor support - replace color - printing on black and white printers in five shades of gray - full color printing with optional drivers for the NX-1000 Rainbow and CGP220 - entirely rewritten for the CoCo 3

There are no limits to what you can do with this fabulous program. Speed, ease, animation, power and color, all in one package. CoCo Max III is the ultimate program for the CoCo 3. -Rainbow review 4/88

CoCo Max III: \$79.95

Max-10 owners: deduct \$10

System Requirements:

CoCo 3 disk system and a Joystick or Mouse

Printer drivers included:

IBM/Epson and compatibles, GEMINI, DMP105/106/130, OKI182/192, CGP220 (B&W), DMP110, DMP200

Color printer drivers (prints 125 different colors) Star NX-1000, CGP-220, or Okimate 20 each **\$19.95**

For all CoCo Max Versions

Max Edit Font Editor: A font is a set of characters of a particular style. With Max Edit you can create new fonts or modify the existing ones. **\$19.95**

Max Font disks (send for list) each **\$19.95**

Max Font Set (95 fonts on 4 disks) **\$49.95**

DS69/69B Digitizers: allows you to capture the image from a VCR or video camera and bring it into your computer. CoCo Max will let you load digitized pictures and modify them.

THE DAZZLING WORD PROCESSOR

You probably already have a word processor, and you probably wish it had these features:

- ▶ Fully menu driven (CoCo Max style) with point and click marking of text. You don't need the arrow keys!
- ▶ True WYSIWYG (What You See Is What You Get) including variable size fonts, styles (bold, italics, etc.) and graphics.
- ▶ Can print multiple columns on a page.
- ▶ Not limited by printer capabilities: fonts up to 24 points (1/3") high, superscripts, small print, etc.
- ▶ Fully integrated spelling checker (incredibly fast), no need to exit program to check spelling.
- ▶ Graphics can be imported from just about anything (CoCo Max; MGE; BASIC; even Macintosh pictures from a BBS) and resized to fit your document.
- ▶ Full screen preview including graphics.

Max-10 has all these unique features, plus all the features you are used to in your current word processor. Even with all this, you don't give up anything. Max-10 is easier to use, more intuitive, faster and more powerful than anything else. It's not just a word processor, it's a desktop publisher.

Some of the many features of Max-10:

- Blinding speed - printing in multiple columns - online dictionary
- spell checking - graphics can be mixed with text - full justification of proportionally sized characters - bold, italic, underline superscript and subscript type styles - superb file support, just point and click - "Undo" lets you correct mistakes - easy to use, no commands to remember - any graphics program can be used - pictures can be shrunk or stretched to fit - right and left alignment - centering - variable line spacing - page numbering - current page number displayed on the screen - variable tab stops - left and right margins - tabs and margins can vary in the same document - cut and paste text and graphics anywhere in the file - page break shows on the screen - pull down menus are quick and simple to use - lightning fast access to any point in the document with the scroll box - twenty fonts (styles and sizes), more available - any number of character sizes and styles can be mixed on the same line - up to more than 120 characters per line, depending on font size, style and letters - headers and footers, even with graphics - file compatibility with other word processors - right, left, bottom and top margins - word wrap - set starting page - type ahead - key repeat - key click - scroll up and down - ASCII file output for compatibility - disk directory - kill files- block cut, copy and move - global search and replace - paragraph indent - clipboard - merge - show file (on disk) - free memory display - page count - paragraph count - word count - graphics can be resized and moved - multiple fonts - error recovery - true lowercase - 512K memory support (all features work with 128K too) - complete point and click cursor control - moving, clearing and changing blocks of text is ridiculously easy, just point and click at each end of the text block - onscreen ruler - preview file before loading - search and replace - disk is not copy protected - more than 35 pages of text

CoCo Max III and Max-10 Perfect Together

You do not *need* CoCo Max III to insert and print graphics in Max-10. Max-10 works with any graphics creation program, and you can also use graphics downloaded from bulletin boards.

Similarly, you do not *need* Max-10 to create graphics with text in CoCo Max III. There are tremendous lettering capabilities in CoCo Max III, with its many fonts, styles, and sizes.

Together Max-10 and CoCo Max III are an unbeatable combination. This desktop publishing system is better than anything you've ever seen on a CoCo. We are so confident that you will use, and enjoy using the two software packages, that we offer an unconditional money back guarantee. Stop wasting your time and effort using inferior or obsolete products. Move up to the new generation of CoCo software now.

Max-10: \$79.95

CoCo Max III owners: deduct \$10

Max-10 requires a CoCo 3, at least 1 disk, & joystick or mouse
 Printer drivers included: IBM/Epson and compatibles; DMP
 105, DMP106, DMP130; CGP220 (B&W); Gemini/Star

Welcome to ...

R. S. B.

See R.S.B. and other Burke & Burke
products at the Princeton Rainbowfest.
Don't miss our Hard Disk Seminar!

There is nothing wrong with your Color Computer. Do not attempt to adjust it. The BASIC you know and love is now running under Level 2 OS9 windows. You are in command.

Burke & Burke is proud to present another OS9 programming language: Disk Extended Color BASIC.

You've probably heard of this language. It's the one your Color Computer was born with. We're talking PMODE, DIR, COLOR, RENUM, PLAY and other familiar words. Under Level 2 OS9. In as many windows as your memory lets you create.

Our R.S.B. software creates an OS9-compatible version of Disk Extended Color BASIC by reading your CoCo's ROM chips. We add new software for OS9-style graphics, sound, printer, and disk I/O. Of course, you can't use R.S.B. to run machine language programs, and some BASIC commands work slightly differently under R.S.B. Although R.S.B. loads and saves files using OS9's file format, we've also included utilities to transfer BASIC programs and data files between OS9 and BASIC disks.

Did you know that Level 2 OS9 always runs at double-speed? This makes R.S.B. very fast. You must have a CoCo 3 with at least 128K RAM, and a floppy controller with Disk Extended Color BASIC 1.0, 1.1, 2.0, or 2.1 ROM, or CoCo 3 CDOS ROM, to use R.S.B.

Wild & MV Version 2.1 Use "wildcards" with most OS9 commands, or rearrange your directory tree. Features recursive directory searches. A hard disk must! **\$19.95**

Check out these OS9 Utilities

Tools to let you spend less time fighting OS9, and more time using it.

EZGen Version 1.04 Powerful OS9 bootfile editor. Change module names, add or delete modules, patch bytes, or rearrange modules. Works on other files, too. **\$19.95**

The Amazing A-BUS

NEW

An A-BUS system with two Motherboards
A-BUS adapter in foreground

The A-BUS system works with the original CoCo,
the CoCo2 and the CoCo 3.

Plug into the future

With the A-BUS you can plug your PC (IBM, Apple, TRS-80) into a future of exciting new applications in the fields of control, monitoring, automation, sensing, robotics, etc.

Alpha's modular A-BUS offers a proven method to build your "custom" system today. Tomorrow, when you are ready to take another step, you will be able to add more functions. This is ideal for first time experimenting and teaching.

A-BUS control can be entirely done in simple BASIC or Pascal, and no knowledge of electronics is required!

An A-BUS system consists of the A-BUS adapter plugged into your computer and a cable to connect the Adapter to 1 or 2 A-BUS cards. The same cable will also fit an A-BUS Motherboard for expansion up to 25 cards in any combination.

The A-BUS is backed by Alpha's continuing support (our 11th year, 50000 customers in over 60 countries).

The complete set of A-BUS User's Manuals is available for \$10.

About the A-BUS system:

- All the A-BUS cards are very easy to use with any language that can read or write to a Port or Memory. In BASIC, use INP and OUT (or PEEK and POKE with Apples and Tandy Color Computers)
- They are all compatible with each other. You can mix and match up to 25 cards to fit your application. Card addresses are easily set with jumpers.
- A-BUS cards are shipped with power supplies (except PD-123) and detailed manuals (including schematics and programming examples).

Relay Card

RE-140: \$129

Includes eight industrial relays, (3 amp contacts, SPST) individually controlled and latched. 8 LED's show status. Easy to use (OUT or POKE in BASIC). Card address is jumper selectable.

Reed Relay Card

RE-156: \$99

Same features as above, but uses 8 Reed Relays to switch low level signals (20mA max). Use as a channel selector, solid state relay driver, etc.

Analog Input Card

AD-142: \$129

Eight analog inputs. 0 to +5V range can be expanded to 100V by adding a resistor. 8 bit resolution (20mV). Conversion time 120us. Perfect to measure voltage, temperature, light levels, pressure, etc. Very easy to use.

12 Bit A/D Converter

AN-146: \$139

This analog to digital converter is accurate to .025%. Input range is -4V to +4V. Resolution: 1 millivolt. The on board amplifier boosts signals up to 50 times to read microvolts. Conversion time is 130ms. Ideal for thermocouple, strain gauge, etc. 1 channel. (Expand to 8 channels using the RE-156 card).

Digital Input Card

IN-141: \$59

The eight inputs are optically isolated, so it's safe and easy to connect any "on/off" devices, such as switches, thermostats, alarm loops, etc. to your computer. To read the eight inputs, simply use BASIC INP (or PEEK).

24 Line TTL I/O

DG-148: \$65

Connect 24 input or output signals (switches or any TTL device) to your computer. The card can be set for input, latched output, strobed output, strobed input, and/or bidirectional strobed I/O. Uses the 8255A chip.

Clock with Alarm

CL-144: \$89

Powerful clock/calendar with: battery backup for Time, Date and Alarm setting (time and date); built in alarm relay, led and buzzer; timing to 1/100 second. Easy to use decimal format. Lithium battery included.

Touch Tone® Decoder

PH-145: \$79

Each tone is converted into a number which is stored on the board. Simply read the number with INP or POKE. Use for remote control projects, etc.

A-BUS Prototyping Card

PR-152: \$15

3 1/2 by 4 1/2 in. with power and ground bus. Fits up to 10 I.C.s

ST-143

CL-144

RE-140

IN-141

AD-142

Smart Stepper Controller SC-149: \$299

World's finest stepper controller. On board microprocessor controls 4 motors simultaneously. Incredibly, it accepts plain English commands like "Move arm 10.2 inches left". Many complex sequences can be defined as "macros" and stored in the on board memory. For each axis, you can control: coordinate (relative or absolute), ramping, speed, step type (half, full, wave), scale factor, units, holding power, etc. Many inputs: 8 limit & "wait until" switches, panic button, etc. On the fly reporting of position, speed, etc. On board drivers (350mA) for small steppers (MO-103). Send for SC-149 flyer.

Remote Control Keypad Option RC-121: \$49

To control the 4 motors directly, and "teach" sequences of motions.

Power Driver Board Option PD-123: \$89

Boost controller drive to 5 amps per phase. For two motors (eight drivers).

Breakout Board Option BB-122: \$19

For easy connection of 2 motors. 3 ft. cable ends with screw terminal board.

Stepper Motor Driver ST-143: \$79

Stepper motors are the ultimate in motion control. The special package (below) includes everything you need to get familiar with them. Each card drives two stepper motors (12V, bidirectional, 4 phase, 350mA per phase). **Special Package: 2 motors (MO-103) + ST-143: PA-181: \$99**

Stepper Motors MO-103: \$15 or 4 for \$39

Pancake type, 2 1/4" dia, 1/4" shaft, 7.5°/step, 4 phase bidirectional, 300 step/sec, 12V, 36 ohm, bipolar, 5 oz-in torque, same as Airpax K82701-P2.

Current Developments

Intelligent Voice Synthesizer: 14-Bit Analog to Digital converter, 4 Channel Digital to Analog converter, Counter Timer, Voice Recognition.

A-BUS Adapters for:

IBM PC, XT, AT and compatibles. Uses one short slot.	AR-133...\$69
Tandy 1000, 1000 EX & SX, 1200, 3000. Uses one short slot.	AR-133...\$69
Apple II, II+, IIe. Uses any slot.	AR-134...\$49
TRS-80 Model 102, 200. Plugs into 40 pin "system bus".	AR-136...\$69
Model 100. Uses 40 pin socket. (Socket is duplicated on adapter).	AR-135...\$69
TRS-80 Mod 3.4.4D. Fits 50 pin bus. (With hard disk, use Y-cable).	AR-132...\$49
TRS-80 Model 4P. Includes extra cable. (50 pin bus is recessed).	AR-137...\$62
TRS-80 Model 1. Plugs into 40 pin I/O bus on KB or E/I.	AR-131...\$39
Color Computers (Tandy). Fits ROM slot. Multipak or Y-cable.	AR-138...\$49

A-BUS Cable (3 ft, 50 cond.)

CA-163: \$24

Connects the A-BUS adapter to one A-BUS card or to first Motherboard.

Special cable for two A-BUS cards:

CA-162: \$34

A-BUS Motherboard

MB-120: \$99

Each Motherboard holds five A-BUS cards. A sixth connector allows a second Motherboard to be added to the first (with connecting cable CA-161: \$12). Up to five Motherboards can be joined this way to a single A-BUS adapter. Sturdy aluminum frame and card guides included.

- The A-BUS is not a replacement for the Multi-pak

MAXSOUND

A High Quality Digital Audio Sampler and Sequencer

Turn your CoCo III into a REAL digital audio sampler with HIGH quality audio reproduction. Easily add exotic effects, ECHO, stuttering, speed shifting, sequencing, and reverse audio to BASIC or ML programs or GRAPHICS! Now includes Data Compression. Imagine recording any Voice, Music, or Sound effect and being able to use these DIGITAL recordings in your own programs! 3 disk sides includes: INTERFACT/BIN - ML driver for sound effects. G&M/BAS - Adds sound effects to Graphics. SHOWTIME and DEMO disks. SCOPE/BAS - Turns CRT into a Digital Oscilloscope to look at MAXSOUND waveforms. Version 3.0 upgrade \$6.95 + Shipping & Handling

"Maxsound...bringing a new era to the CoCo Community"
-Cray Augsburg, June '88 Rainbow Review

CALL TO HEAR 'OVER THE PHONE' DEMO (128k or 512k CoCo III only) \$59.95

Maxsound Soundtracks & Graphics

These exciting disks are samples of what can be created with MAXSOUND and CoCo Max III! Some work on 128k, some work without the MAXSOUND program and some are 512k 4 disk sides of unbelievable sounds and graphics! Just some of the titles are: Airwolf, Star Trek, Knight Rider, Warrior King Demo, Probe, and more are in the making! Prices range from just \$5.95 to \$9.95

Call or write for a complete catalog of titles available!

V-Term Terminal Emulator

Communicate with VAX, UNIX, Mainframe, and BBS Systems!

FEATURES:

- VT-100, VT-52, Vidtex (includes RLE graphics display), and standard CRT emulations.
- Developed and tested on a UNIX system using the EMACS and VI full-screen editors.
- All 128 ASCII characters accessible from the keyboard.
- Uses a high-resolution graphics screen to implement a highly readable 80-column screen.
- Menus can be operated concurrently with other terminal functions. (Disk Basic!)
- Full 28 line by 80 column screen, with 3 bottom lines protected for menus.
- Serial port up to 2400 baud, RS-232 Pak up to 9600 baud, DCModem Pak at 300 baud.
- XModem, XModem-CRC, Y-Modem, and ASCII file transfers directly to disk or memory.
- Prints disk or buffer files with settable margins, baud rate and word wrap.
- Full 128k or 512k support with a RAMDISK like buffer. Monochrome monitor support.
- Capture buffer, Snapshot, Conference mode, 35/40/80 Tracks, and over 56 pages of docs!

Version 02.00.00 upgrade \$6.95 + S&H Disk (128k or 512k CoCo III only) \$39.95

GRAPHICS-25

(512k CoCo III only)

Great with MAXSOUND and/or CoCo Max III!

Utilize the FULL 512k memory range of your CoCo III from BASIC for graphics! Create up to 25 ONBOARD HIRES SCREENS! Six new BASIC commands allow instant display switching while secretly drawing other screens. Save and load screens to and from disk. Copy one screen to another. Fast Graphics action, Smooth animation, and 100% Machine Language code. Requires DECB 1.0, DECB 1.1, or FKEYS III. Complete with documentation. Disk \$24.95

MAX-10

(CoCo III only)

The dazzling Word Processor and document creator for the CoCo III!

MAX-10 is the perfect partner for CoCo MAX III! Mix graphics and text to get great looking newsletters, flyers, ect... Includes Spelling checker! Requires Joystick. (CoCo Max III owners deduct \$10) Disk \$79.95

CoCo Max III

(CoCo III only)

See April '88 review. Built in Animation! / Amazing Color Sequencing!!!

Comes with Hi-Res Interface, MINILOAD/BAS, Demo Disk, CoCo Show Pgm. Requires Joystick or mouse. Sale \$74.95

MULTI-LABEL III

(CoCo III only)

See July '87 review. An easy to use, versatile label creating program

including many new CoCo III features. Print multiple fonts on each label! This one's a MUST for the CoCo III!! Disk \$16.95

FKEYS III

(CoCo I/II/III)

See April '87 review. A user friendly, programmable function key utility that creates up to 20 function keys. EDITOR, DOS mods, Single or Double sided, 35/40 tracks, DISABLE, and it's EPROMable! Disk .. \$19.95

SIXDRIVE

(CoCo I/II/III)

This machine language utility modifies DECB 1.0, 1.1, FKEYS III, or ADOS to allow the use of 3 double-sided drives (or 2 D/S drives and J&R's RAMDISKS) as 6 S/S drives. Disk \$16.95

AUTO DIM

(CoCo III only)

See Jan. '88 review. This hardware device protects your monitor, or TV from IMAGE BURN after a few minutes of inactivity from your keyboard. Illustrated and easy to install. Hardware \$29.95

MPI-CoCo Locking Plate

(CoCo III only)

Now 2 styles

Protects your CoCo III and Multi Pak Interface from destroying each other! Please specify MPI number 26-3024 or 26-3124 when ordering! Sale \$7.95

Warrior King

(CoCo III only)

Become Rastann, Warrior King, on a quest to regain his rightful

crown hidden deep within his sinister land. Battle monsters, gain magic & weapons, and travel thru harsh wilderness & dark castle dungeons in this medieval realm. From the creator of Kung-Fu Dude comes this awesome arcade game for the CoCo III! Uses the most detailed 320 x 200 16 color graphics & high speed ML code to vault you into a world of fantasy! Dare ye challenge the many perils ahead to become Warrior King? Requires 128k CoCo III, Disk drive, and Joystick \$29.95

HALL OF THE KING TRILOGY

(CoCo I/II/III)

See June '86 & Nov '87 reviews. The epic

adventure is back! The largest adventure campaign ever seen for the CoCo is again available. A total of 6 DISK SIDES of intense graphics adventure will have you playing for weeks! Each section is a 2 disk stand alone adventure, but all 3 together form an epic saga! Quest for the legendary earthstone in the ancient dwelling of the dwarfs while you enjoy the classic graphics that made this trilogy famous! Each adventure can be purchased separately for only \$29.95, the lowest price ever, or you can SAVE and purchase the entire set for only \$74.95. Requires 64k, Disk drive, (and composite monitor for the CoCo III). Please specify HALL of the King I, II, or III \$29.95 each or the entire 6 DISK Trilogy for only \$74.95

In Quest of the Star Lord

(CoCo III only)

See Aug '88 review. This is THE graphics

adventure for the CoCo III! Unparalleled 320 x 200 animated graphics will leave you gasping for more! You quest for the Phoenix Crossbow in this post-holocaust world of science and fantasy. Full 4 Disk sides of mind loving adventure! Requires 128k CoCo III and Disk drive. HINT SHEET \$3.95 (+ \$1.00 S&H by itself) Disk \$34.95

KUNG-FU DUDE

(CoCo I/II/III)

See Feb. '88 review. An exciting arcade game. The BEST karate game ever for the CoCo! Destroy opponents and evade obstacles as you grow even closer to your ultimate objective! Spectacular graphics, sound effects, and animation! Requires 64k, Disk drive, and Joystick. Now displays color on CM8. Disk \$24.95

PYRAMIX

(CoCo III only)

See Dec. '87 review. Brilliant colors, sharp graphics, and hot action in this 100% ML arcade game. You'll enjoy hopping Kubix around the pyramid, avoiding Kaderf, Smack, Smuck, & the Death Square! Disk .. \$19.95

AD&D Character's Companion

(CoCo I/II/III)

This great timesaving

utility helps create compatible AD&D characters. Includes dice rolling routine, pick ability, race & class. Buy from the Players Handbook, magic items & spell materials. Save, load, and print character info. 3 Disk sides \$24.95

White Fire of Eternity

(CoCo I/II/III)

See Dec '86 review. Enter the era of monsters & magic. Search for the legendary power of White Fire throughout the Forbidden Wood & Dark Caverns in this 64k animated adventure! Disk..\$19.95

Champion

(CoCo I/II/III)

See May '87 review. Become a superhero in this action adventure! Disk..\$19.95

Dragon Blade

(CoCo I/II/III)

"In the beginning there was VIP Writer and users saw that it was good. It was still the best thing around for the CoCo, But it's not the best anymore. There's a new word processor to claim the crown... VIP Writer III. Setting the Standard for CoCo 3 Word Processing."

-The RAINBOW SEPTEMBER 1988

VIP WRITER III VS THE COMPETITION

VIP Writer has ALWAYS led the pack with features and now VIP Writer III still leads the way! The chart below illustrates this fact. Telewriter 128 only gives you 48K for text. Why is it called Telewriter 128? Word power 3 gives only 72K! VIP Writer III makes use of over 106K! VIP Writer III is the ONLY CoCo 3 word processor worthy of it's name!

WORD PROCESSOR COMPARISON CHART

CoCo3 with 128K	VIP Writer III	Telewriter 128	Word Power 3
Text Storage	OVER 49,000	48,000	72,000
Print Spooler	YES 57,000	NONE	NONE
Total Storage	106,000	48,000	72,000
Spelling Checker	VIP Speller	NONE	FREE WARE
Screen Display	32/40/64/80	40/80	80

SCREEN DISPLAY OPTIONS

As the chart above shows - VIP Writer III offers more screen width options - all with 24 lines and actual lower case letters. It uses the CoCo 3's hardware display and double clock speed and is VERY VERY FAST! You can choose fore and background colors from up to 64 different hues. Color can be turned ON or OFF for the best possible display using a color or monochrome monitor or TV set. VIP Writer III has a built in on-line context sensitive help facility which displays command usage in easy to read colored windows.

CUSTOMIZER & PRINTER INSTALLER

VIP Writer III comes with a configuration / printer installation program which lets you customize VIP Writer III to suit your own liking. You can set screen width and colors as well as margins and more. You can also install your own printer and set interface type (serial, parallel or J&M), baud rate, line feeds, etc. Once done, you never have to enter these parameters again! VIP Writer III will load n' go with your custom configuration every time!

TEXT FILE STORAGE

VIP Writer III creates ASCII text files which are compatible with all other VIP Programs as well as other programs which use ASCII file format. You can use VIP Writer III to even create BASIC programs! There is a 49K text buffer and disk or cassette file linking allowing virtually unlimited text space. VIP Writer III works with up to four disk drives and lets you display disk directories and free space as well as rename or kill disk files. In addition VIP Writer III is 100% compatible with the RGB Computer Systems HARD DISK.

EDITING FEATURES

VIP Writer III has a full featured screen editor which can be used to edit text with lines up to 240 characters long with or without automatic word wrap around. You can select type-over mode or insert mode. There is even an OOPS command to recall a cleared text buffer. Other editing features include: Type-ahead • typamatic key repeat and key beep

for flawless text entry • end of line bell • full four way cursor control with scrolling • top of textfile • bottom of textfile • page up • page down • top of screen • bottom of screen • beginning of line • end of line • left one word • right one word • DELETE character, to beginning or end of line, word to the left or right, or entire line • INSERT character or line • LOCATE and/or CHANGE or DELETE single or multiple occurrence using wildcards • BLOCK copy, move or delete with up to TEN simultaneous block manipulations • TAB key and programmable tab stops • word count • line restore • three PROGRAMMABLE FUNCTIONS to perform tasks such as auto column creation and multiple copy printing.

TEXT FORMATTING

VIP Writer III automatically formats your text for you or allows you to format your text in any way you wish. You can change the top, bottom, left or right margin and page length. You can set your text flush left, center or flush right. You can turn right hand justification on or off. You can have headers, footers, page numbers and TWO auxiliary lines which can appear on odd, even or all pages. You can also select the line on which they appear! You can even change the line spacing! Parameters can be altered ANYWHERE within your text file!

PREVIEW PRINT WINDOW

VIP Writer III features an exclusive format window which allows you to preview your document BEFORE PRINTING IT! You are able to move up, down, left and right to see centered and justified text, margins, page breaks, orphan lines etc.

PRINTING

VIP Writer III prints TWICE as fast as any other CoCo word processor! It supports most serial or parallel printers using J&M JFD-CP or Rainbow interface and gives you the ability to select baud rates from 110 to 19,200. You can imbed printer control codes anywhere in your text file EVEN WITHIN JUSTIFIED TEXT! VIP Writer III also has TWENTY programmable printer macros which allow you to easily control all of your printers capabilities such as bold, underline, italics and superscript using simple key strokes. Other features include: multiple copy printing • single sheet pause • line feeds.

PRINT SPOOLING

Save up to \$150 on a print spooler because VIP Writer III has a built in print spooler with a 57,000 character buffer which allows you to print one document WHILE you are editing another. You don't have to wait until your printer is done before starting another job!

SPELLING CHECKER

VIP Writer III includes VIP Speller AT NO ADDITIONAL COST! VIP Speller checks text for misspelled words and has a 50,000 word dictionary that can be added to or edited.

DOCUMENTATION

VIP Writer III is supplied with a 125 page instruction manual which is well written and includes many examples. The manual has a tutorial and glossary of terms for the beginner as well as a complete index! VIP Writer III includes VIP Speller. DISK \$79.95

VIP Writer owners: Upgrade to the VIP Writer III Disk for \$49.95 + \$3 S/H. Send ORIGINAL disk and \$52.95 total.

VIP Database III

VIP Database III features selectable screen displays of 40, 64 or 80 characters by 24 lines with choice of 64 foreground, background, hilite and cursor colors for EASY DATA ENTRY. It uses the CoCo 3's hardware screen and double clock speed to be the FASTEST database available! VIP Database III will handle as many records as will fit on your disks and is structured in a simple and easy to understand menu system with full prompting for easy operation. Your data is stored in records of your own design. All files are fully indexed for speed and efficiency. IN-MEMORY SORT of records is LIGHTNING FAST and provides for easy listing of names, figures, addresses, etc., in ascending or descending alphabetical or numeric order. Records can be searched for specific entries using multiple search criteria. The built-in mail-merge lets you sort and print mailing lists, print form letters, address envelopes - the list is endless. The built-in MATH PACKAGE even performs arithmetic operations and updates other fields. VIP Database III also has a print spooler and report generator with unlimited print format capabilities including embeddable control codes for use with ALL printers. DISK \$69.95

VIP Database owners: Upgrade to the VIP Database III for \$39.95 + \$3 S/H. Send ORIGINAL disk and \$42.95 total.

VIP Library

/Writer Database Enhanced

The VIP Library /WDE combines all six popular VIP application programs - VIP Database III, VIP Writer III, VIP Speller, VIP Calc, VIP Terminal and VIP Disk-ZAP - into one program on one disk! The program is called VIP Desktop. From the desktop you have instant access to word processing with a spelling checker always in attendance, data management with mail merge, spreadsheet financial analysis, telecommunications and disk maintenance.* DISK \$169.95

VIP Library owners: Upgrade to the VIP Library /WDE for \$89.90* + \$3 S/H. Send ORIGINAL disk and \$92.90 total.

* Future VIP Library upgrades available at reduced cost.

All products run under RSDOS and are not copy protected.

SD ENTERPRISES

☎ (503) 663-2865 ✉ POB 1233 Gresham, OR 97030

Please add \$3 for shipping and handling. Outside continental US add \$4 S/H. COD orders add an additional \$2.25. Checks allow 3 weeks for delivery. All other orders are shipped the same day.

The CoCo Gallery

1st

COCO 3

Mill
Gerald E. Adams

Gerald used *CoCo Max III* to illustrate this graphic scene. He is retired and lives in Bremen, Indiana.

2nd

Multichromatic Spheres
Mark Sexton

Mark, of Madera, California, used BASIC and the CoCo 3 for this interesting graphic, then compressed it with an ML program he developed. He is a senior in high school and is fascinated with graphic arts.

**We are taking "CoCo Gallery"
to RAINBOWfest Princeton!
See Page 117 for details.**

SHOWCASE YOUR BEST! You are invited to submit your original work for inclusion in upcoming showings of "CoCo Gallery." Share your creations with the CoCo Community! Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also, please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere. A digitized copy of a picture that appears in a book or magazine is not an original work.

We will award two first prizes of \$25, one for the CoCo 3 and one for the CoCo 1 and 2; one second prize of \$15 and one third prize of \$10. Honorable Mentions may also be given.

Please send your entry on either tape or disk to the CoCo Gallery, THE RAINBOW, P.O. Box 385, Prospect, KY 40059. Remember, this is a contest and your entry will not be returned.

Two new graphics commands for
PMODE image manipulation

Super Stamper:

The Elastic Rubber Graphics Stamp

By Jeremy Spiller

Take a graphics picture and stretch it, shrink it, turn it upside down and inside out. Enlarge it, rotate it, skew it and distort it. Print it all over your TV screen as many times as you want. Each time you do, one simple command can make it as large, small, distorted or rotated as you like. *Super Stamper* allows you to do all this.

SuperStamper is a graphics tool for use with PMODE 3 or 4 screens, similar to the GET and PUT statements but with several sizable differences. It is a machine language program that can easily become a part of BASIC in your 64K CoCo 1 or 2, or in your CoCo 3.

SuperStamper adds two new commands to BASIC — SGET and SPUT. They do not replace BASIC's GET and PUT statements, but operate alongside them. They live in high memory and do *not* take up any of the memory BASIC uses for programming and data. Unlike GET and PUT, SGET and SPUT do not require that you dimension an array to store what you SGET; this saves valuable memory for your program.

Jeremy Spiller, a high school senior, has been programming since age 12. He is now selling his programs as GoSub Software.

Telewriter-128™

the Color Computer 3 Word Processor

For over 5 years now, Telewriter has been the #1 Color Computer word processor, both in popularity and in performance. Telewriter's near perfect mix of sophisticated professional features and a very natural user interface, has earned it the highest praise in numerous magazines, and an intensely loyal following among tens of thousands of Color Computer users all over the world.

HISTORY

Throughout the history of the Color Computer, Telewriter has pioneered software breakthroughs that set the standards.

In 1981, it was Telewriter 1.0 that first took the Color Computer's inadequate 32X16 all-uppercase display, and replaced it with a graphics-based 51X24 upper and lowercase display.

A few years later, Telewriter-64 added high density 64X24 and 85X24 displays and access to the full 64K of the newer Color Computers.

THE NEW AGE

Today, Telewriter-64 is recognized as the standard Color Computer word processor. It runs on all Tandy Color Computers — from the original Color Computer 1, to the Color Computer 2, and 3.

But the Color Computer 3 brings a whole new level of power to low cost computing and, so, a new Telewriter is here to put that power to work for you. We call it Telewriter-128.

TELEWRITER-128

You don't mess with a good thing, so Telewriter-128 is still Telewriter-64 at heart. The commands, and the user interface are essentially the same. If you know Telewriter-64, then you already know Telewriter-128. And, if you don't know Telewriter-64, you'll still have an easy time learning and using Telewriter-128.

TELEWRITER-64 FEATURES: Compatibility with any printer that works with the Color Computer; embedded control codes for underlining, boldface, sub/superscript, variable fonts; format commands for headers, centering, margin and spacing changes anywhere in the document; Format menu to set margins, spacing, page numbering, BAUD rate, lines per page, justification; Chain printing for one shot printing of multi-file documents. Fast, full-screen editor with wordwrap, block copy/move/delete, global search and replace, wild card search, fast 4-way auto-repeat cursor, fast scrolling, forward and backward paging, text alignment, tabs, error protection, word and line counter. Insert or delete text anywhere on the screen. Simple, easy to remember commands. Optional ASCII files for compatibility with spell checkers, terminal programs,

80 COLUMNS

But there are major differences as well. First, Telewriter-128 uses the Color Computer 3's new 80 column screen display.

This means, simply, that using Telewriter-128 on a low cost Color Computer 3 will look a lot like using a more expensive word processor on a much more expensive IBM PC, PS/2, or clone.

SPEED

Second, Telewriter-128 is lightning fast. Telewriter-64 was fast in its own right, but, by accessing the Color Computer 3's video hardware directly, and by running the machine in double speed mode, Telewriter-128 is able to provide extremely fast scrolling and instant paging — functions whose speed is crucial to serious word processing.

In this department, Telewriter-128 doesn't simply keep up with IBM-based word processors — it generally surpasses them!

EASE

Third, Telewriter-128 adds a host of new features big and small, that make it even easier to use.

Features like: Quick function key access to the editor or the menus — an instant on-line help screen summarizing all Telewriter commands and special characters — an option file where you store your personal set of format and screen settings so you only have to set them once!

Then, there's a quick save feature which allows you to save all your current work without leaving the editor. There's a simple way to cursor through the disk directory and read in a file by just hitting ENTER. And there's more.

NEW POWER

Telewriter-64 always had the power to handle any kind of serious writing, from letters to textbooks. But, here too, Telewriter-128 adds major features.

Like Macros — which let you insert whole words or phrases (even sets of control codes or format commands) into your text, with a single keypress. And every time you power up Telewriter-128, the macro definitions are automatically loaded*, so they're always there.

Then there's a Print Preview feature that shows you, on-screen, the way your printed text will look — with margins, headers, centering, justification, page numbering, and page breaks. This guarantees letter perfect documents every time, and makes tasks like widow/orphan line elimination, a breeze.

TELEWRITER-64 OR TELEWRITER-128

We could go on listing features, but the point is this: If you own a Color Computer, you already have the hardware for the most powerful, low cost word processor in town. All you need now is to add the heart and soul:

Telewriter-64, for the Color Computer 1 and 2, costs \$59.95 on disk, \$49.95 on cassette.

Telewriter-128 for the Color Computer 3 costs \$79.95 on disk, \$69.95 on cassette.

To order by Mastercard or Visa call (619) 755-1258 anytime, or send check or money order plus \$2 shipping (Californians add 6% sales tax) to:

COGNITEC

704 Nob Ave.

Del Mar, CA 92014

To upgrade from Telewriter-64 to Telewriter-128, return your original disk or cassette with \$39.95. (Add \$10 if you're also upgrading from cassette to disk. Deduct \$10 with proof of Oct '87 - Feb '88, purchase of Telewriter-64.)

When I first got Telewriter-64 last year, I was in heaven. I couldn't believe the program's versatility and ease of use.

-The RAINBOW, Oct. 1985

and BASIC. Load, save, append, partial save files to disk or cassette. Kill, rename and list disk files. Cassette verify and auto-retry on error.

TELEWRITER-128 - ADDITIONAL FEATURES: Print preview from editor; multiple copy print; footers; hanging indents; cursor thru disk directory to load, append, rename and kill files; quick file save from editor; keyclick; key repeat; true block move; 24, 25, or 28 line screen; 40 or 80 column screen; dual speed cursor; on-line help; overstrike mode; word delete; wordwrap at margin; user definable macros; nested macros; instant status window for information on cursor position, word count, etc.; instant function key access to menus or editor; options menu for setting character and screen colors, key repeat and delay rates, definable foreign symbols.

ed, *SuperStamper* remains BASIC until you reset or the computer. It will not lines without Extended memory less than 64K.

works only on PMODE 3 or 4 screens and does not work on the high resolution screens of the Color Computer 3. However, CoCo 3 owners can still use *SuperStamper* on their PMODE 3 or 4 screens (provided they switch to CoCo 2 mode — more on this later).

How It Works

Like the GET and PUT commands, SGET and SPUT allow you to specify a rectangle on your graphics screen for storage. Unlike the GET and PUT commands, however, SGET and SPUT allow you to specify three points instead of two. This turns the rectangle into a true parallelogram.

A parallelogram is a four-sided figure in which opposite sides are parallel. Squares and rectangles are special kinds of parallelograms, having right angles at the corners; but the corners don't have to be right angles in order for the opposite sides to remain parallel. By "SGETting" a piece of your graphics screen in a rectangular parallelogram and then "SPUTting" it in a parallelogram of another size, shape and orientation, you can distort, invert, shrink, enlarge or rotate whatever graphic elements were in the original parallelogram.

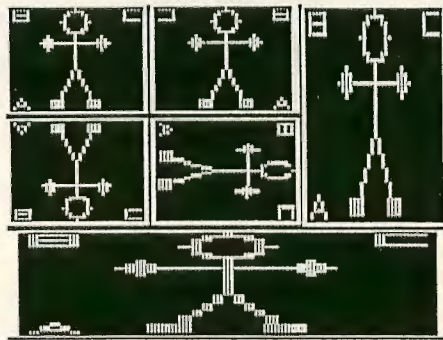

SuperStamper performs a beautiful mathematical ballet that recalculates the position of every pixel within your SGET parallelogram, and with SPUT, distorts the picture just as if it were made of rubber. The program is made even more versatile by its facility to lengthen or shorten the sides of the parallelogram, thereby enlarging or shrinking the picture.

You can shorten a picture in one dimension while elongating it in the other, giving the image a stretched appearance. Finally, you can rotate your parallelogram so that objects appear right-side-up, upside-down — or any rotational angle in between.

Once you have used the SGET command to specify your graphics parallelogram, you may stamp it all over the screen as many times as you want, using a newly defined parallelogram each time you SPUT it. With this stamping feature, you can draw a small picture in one part of the screen and use that picture to create many screenfuls of striking images. And because SGET and SPUT are compatible with all aspects of

BASIC, you can use *SuperStamper* as part of any BASIC graphics program.

SuperStamper allows you to SGET any part of your PMODE 3 or 4 screen up to 256 pixels wide by up to 128 pixels deep. Any attempt to SGET or SPUT with larger numbers will give unexpected results.

Usage Syntax

The syntax for using SGET and SPUT in your BASIC statements is as follows:

```
SGET (AX,AY)-(BX,BY)-(CX,CY)
SPUT (AX,AY)-(BX,BY)-(CX,CY)
```

X specifies the horizontal position of each of the three points that define the parallelogram — a number from 0 to 255; 0 is on the left side of the screen.

Y specifies the vertical position of each of the three points — a number from 0 to 191; 0 is at the top of the screen, and 191 is at the bottom. AX, AY specifies the position of Point A. BX, BY specifies the position of Point B. CX, CY specifies the position of Point C.

Note that you do *not* have to specify an array or an action as you do in the GET and PUT commands. *SuperStamper* uses its own secret array hidden away in high memory, so you won't have to sacrifice any memory that would otherwise be used for your own program.

The SGET command will "lasso" any part of your graphics picture by drawing an imaginary parallelogram around it. The three arguments that follow SGET specify the three points on the screen that define the parallelogram:

```
SGET (Point A)-(Point B)-(Point C).
```

The computer always draws four imaginary lines. The first is drawn between points A and B, and the second between points B and C. These two lines define the parallelogram. The other two imaginary lines are drawn opposite and parallel to the first two so as to complete the parallelogram. They meet at imaginary Point D, which is always diagonally across from Point B. (Note that *no*

line is drawn between points A and C.)

You may choose any shape parallelogram for "SGETting;" however, in most cases you will probably want to define a rectangle, as it is the easiest shape to keep track of. Once you have defined your SGET parallelogram, the computer copies it into a secret buffer where it is stored in a "standard" form for later stamping with the SPUT command.

SPUT has the same syntax as SGET. The first pair of coordinates following the SPUT define Point A; the second pair define Point B; and the third, Point C. The main thing to remember when using SPUT is that graphics elements that were near any given point when you defined your SGET parallelogram always remain near that point no matter where they are SPUT. For example, let's say you have a picture of a man with his arms and legs outstretched. His right hand is gloved and his left is not. You SGET him by specifying Point A near his right foot (the lower-left corner of the SGET rectangle); Point B near his right hand (the upper-left corner of the rectangle) and Point C near his left hand (the upper-right corner of the rectangle). Now you can stamp him with the SPUT command. If you specify Point A (the first pair of coordinates following the SPUT command) to be the *upper-left* corner of your SPUT rectangle, leaving points B and C to be the lower-left and lower-right corners, respectively, your man will appear upside down and backwards (inverted), just as if he were viewed in a mirror placed under his feet. His left hand now wears the glove instead of his right hand (see the figure for a screen dump of Listing 2's demo).

You can elongate your stick figure by specifying SPUT points farther apart than they were in the original SGET command. You could elongate him right to left while shortening him up and down. You can rotate him by having three points draw a non-vertical line between points A and B, and specifying a line between points B and C at a right angle to the line between points A and B. You can skew him by making Line AB non-vertical, but keeping line BC horizontal. And, of course, you can stamp him with no distortion at all.

Keying In for CoCo 3

Before trying to key in or run *SuperStamper* on a CoCo 3, you must put it into CoCo 2 mode by typing the following lines:

```
10 POKE &HFFDE,0
20 POKE 113,0
30 EXEC 40999
```

Program Organization

Listing 1 is the utility that boots the *SuperStamper* algorithm. It should be saved under the filename SUPRSTMP.BAS. Its function is twofold. First, it transfers the ROM into the all-RAM mode and installs the *SuperStamper* algorithm into the BASIC interpreter, giving it the ability to understand the SGET and SPUT commands. Second, it gives birth to a machine language "clone" of itself that can be saved to disk or tape and later reloaded to perform the same functions, only much faster.

Lines 1000 through 1170 contain the algorithm itself. *Every character in these lines must be correct or SuperStamper will not work.* For this reason, I have included check sums so the computer can tell you if you have made an error. Do not renumber these lines!

The DATA lines do not contain the letter 'O'! They do, however, contain many zeros! If you get an error message when running the program, check to see if you have included an 'O' instead of a zero. It is helpful to know that these lines contain only the digits 0 through 9 and the letters A through F and that all the lines are the same length except for Line 1170.

The ML Clone

When executed, the ML clone transfers the computer into the all-RAM mode and installs the algorithm. Note that the ML clone is *not* the same program you keyed in; it is created by SUPRSTMP and lives in a special place in high memory protected from BASIC by Line 70 (CLEAR200,&H7E00). After creating the ML clone, SUPRSTMP will prompt you for a save to disk or tape. When you answer the prompt, the clone will be saved as STAMP.BIN. Once saved, you may install *SuperStamper* very quickly by loading and executing STAMP.BIN. You *must* use the following boot to load and execute:

```
10 CLEAR 200,&H7E00
20 LOADM"STAMP"
   (CLOADM for tape users)
30 EXEC
40 CLEAR 200,&H7FFF
```

Note that you cannot key in or run any program that contains SPUT or SGET unless you have first installed the *SuperStamper* algorithm by either running SUPRSTMP or by executing STAMP.BIN. The computer cannot understand the syntax of SPUT or SGET

unless the operating system has been properly modified. The demo is no exception. Therefore, key in SUPRSTMP first and create an easily accessible copy of STAMP.BIN before beginning work on the demo.

It is important to your understanding of the program that you key in and study Listing 2. The listing is very much a part of the documentation for *SuperStamper* and a graphic demonstration of what happens when you relocate points A, B and C. It contains examples of how to create mirror images and skewed, stretched, inverted and rotated stampings.

The REM statements attached to each SPUT line explain what it does. The important thing to note is not the exact location of each point, but the *relative* position of points A, B and C in each SPUT statement.

The SGET is always done in a rectangle with Point A in the lower-left corner, Point B in the upper-left and C in the upper-right. If your SPUT statement places Point A in the lower-right corner, Point B in the upper-right and Point C in the upper-left, you get a mirror image (see Line 540). If you leave Point A at the lower-left, but displace points B and

HELLO/BAS

A DISK DIRECTORY UTILITY by Roy C. Pierce (c) 1988

WHAT WILL HELLO DO

Display Alphabetically Sorted Directory of any Drive. (0-3)	Easy to Read Display.
Print a Hardcopy of Sorted Directory w/Date and Disk Name.	ALL BASIC so it won't Mess up your System.
Run ANY BASIC Program with Ease.	SUPER FAST OPERATION.
RUNS ON ANY COCO.	Reads Any Drive at Will.
(32K Disk Extended BASIC Required)	Low Disk Overhead - Only 1 Gran.
Single Key Stroke Commands.	Easy to Copy to All your Disks, Comes with Handy DISKINIT/ Utility for Autobooting HELLO/BAS.

GOOD GAMES TRIO

Challenging Two Player Games by Roy C. Pierce (c) 1988

ADI OTHELLO CONNECT 5

FAST AND FUN FOR ALL AGES
EASY TO RUN
ALL BASIC COMPLETELY LISTABLE

THE PAK IS BACK!

Truly Compatible RS232 interface
NEW FROM

TELEPAK 
TECHNOLOGIES

No compatibility hassles! Uses standard DB25 cable.
No 1200 baud restriction. Baud rates to 19,200 baud!
Compatible with all RSDOS and OS-9 software that
uses the Radio Shack Deluxe RS232 Pack.

PRICED TO FIT YOUR BUDGET!

TELEPAK

For use with Coco 1 or multipack only, taking
advantage of their built-in power supplies.

44⁹⁵

TELEPAK +

For use with ANY CoCo in any configuration.

49²⁵

Even with a Y-Cable!

Orion Technologies
P.O. Box 63196
Wichita, Ks. 67203
(316) 946-0440

All orders add 3.00 shpg/hdlg.
C.O.D. additional 3.00
No delay for personal checks.

C to the right, your graphics will be skewed in that direction. The box around the stick figure is 80 pixels wide and 60 pixels high. Note that in some of the lines I have allowed BASIC to add these dimensions right inside the parentheses. The term (0,65+60) is the same as (0,125).

You can use any numerical expression or variable inside the parentheses.

Program Quirks

Keep in mind that you are working

with digitalized images whose resolution depends upon the exact size and location of each pixel. Whenever you shrink an image using *SuperStamper*, you will lose some detail. Because each pixel is longer up and down than it is right to left, rotations will produce some distortion that you may be able to minimize by adjusting the exact size and position of each SPUT point.

You may be surprised at some of your results. When you skew a picture, you may find that it wraps around to the

opposite side of the screen or is partly off the screen because you inadvertently placed Point D (the last corner of the parallelogram that you *didn't* specify in your SPUT statement) outside the 256-by-128 pixel limit.

(Questions or comments regarding these programs may be directed to the author at P.O. Box 1094, Townsend, MA 01469. Please enclose an SASE when writing for a reply.) □

Tandy® Computers:
Because there is
no better value.™

Tandy® Color Computer 3™

More than fun and games,
it's a versatile computer
for serious users.

Get real computing power with Radio Shack's most advanced version of the famous Color Computer! The Color Computer 3 is great for small business and home applications such as education, programming, word processing, graphics, entertainment and more.

It's easy to expand with disk drives, printer, telephone modem and more. Plus, the Color Computer 3 comes with 128K RAM (expandable to 512K), giving you greater programming and data-processing power. And for added versatility, the Color Computer 3 is compatible with software and accessories designed for the popular Color Computer 2.

Create incredible razor-sharp graphics with our CM-8 high-resolution monitor (sold separately). You can achieve up to 160 × 192 or 320 × 192 resolution graphics using 16 colors, or 640 × 192 with 4 colors.

The Color Computer 3 offers uncompromising performance at a terrific price. Visit Radio Shack today for a demonstration!

The Complete Rainbow Guide to OS-9

Authors Dale Puckett and Peter Dibble show how to take advantage of OS-9's multitasking and multiuser features. An easy-to-read, step-by-step guide packed with hints, tips, tutorials and free software in the form of program listings.

Book \$12.95, Disk Package \$19.95 (2 disks, book not included) — a savings of up to 36%!

SAVE 38%! Book and disks only \$29.95

The Rainbow Introductory Guide to Statistics

Dr. Michael Plog and Dr. Norman Stenzel give a solid introduction to the realm of statistical processes and thinking for both the beginner and the professional. (80-column printer required.)

Book \$2.95, Tape or Disk \$2.95 — a savings of 54%!

SAVE 62%! Book and tape or disk only \$4.95

Save up to 70% on our special discount

A Holiday Gift Idea Welcome on Any

The First Rainbow Book of Adventures

Contains 14 winning programs from our first Adventure contest. Includes *Sir Randolph of the Moors*, *Horror House*, *One Room*, *Dr. Avaloe* and more. Plus hints, tips on solving Adventures.

Book \$2.00, Tape \$2.00 — a 43% savings!

SAVE 50%! Book and tape only \$3.50

The Second Rainbow Book of Adventures

Featuring 24 of the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanies, find a hidden fortune, or win the heart of a mysterious princess. *Ring Quest*, *Secret Agent Man*, *Dark Castle*, *Curse of Karos* and more!

Book \$6.95, Tape \$6.95 — a 50% savings!

SAVE 57%! Book and tape only \$11.95

The Rainbow Book of Simulations

20 award-winning entries from THE RAINBOW's first Simulations contest. You are a Civil War Commander, an air traffic controller, a civil defense coordinator, or a scientist on Mars . . . your wits are on the line. Book \$3.50, Tape \$3.50 — a savings of 65%!

SAVE 70%! Book and tape only \$6

The Second Rainbow Book of Simulations

The 16 winners from our second Simulations contest. Fly through dense African jungle, bull your way down Wall Street, lead a bomb squad, or try your hand at Olympic events. Test your skills and talents. Book \$4.95, Tape or Disk \$4.95 — a 50% savings!

SAVE 55%! Book and tape only \$8.95

SAVE 57%! Book and disk only \$8.95

FILE TRANSFER UTILITIES

You asked for it at the Chicago RainbowFest -

FILE TRANSFER UTILITIES NOW HANDLE RSDOS DISKS!

Need to transfer text files to and from PC (MSDOS), RSDOS and FLEX disks into your CoCo (OS-9) system? Have text files on a PC (MSDOS) system at work and want to work on them at home on your CoCo?

With GCS File Transfer Utilities you just place the PC (MSDOS), RSDOS or FLEX disk into your CoCo disk drive - enter a simple command and the file is copied into a CoCo OS-9 file. File transfer back to PC (MSDOS), RSDOS and FLEX disks is just as simple.

PCDIR	directory of PC disk	RSDIR	directory of RSDOS disk
PCDUMP	display PC disk sector	RSDUMP	display RSDOS disk sector
PCREAD	read PC file	RSREAD	read file from RSDOS disk
PCWRITE	write file to PC disk	RSWRITE	write file to RSDOS disk
PCRENAME	rename PC file	FLEXDIR	directory of FLEX disk
PCDELETE	delete PC file	FLEXDUMP	display FLEX disk sector
PCFORMAT	format PC disk	FLEXREAD	read FLEX file
		FLEXWRITE	write file to FLEX disk

Extensive Options Single, double sided disks. 40 or 80 track floppy drives. 8 or 9 sectors. First level sub-directories - PC (MSDOS). FLEX transfers binary files also.

Requires OS-9 (Level 2 for MultiVue), 2 drives (one can be hard), MultiVue for MultiVue version, SDISK (SDISK3 for MultiVue) - see D.P. Johnson ad for SDISK

GSC File Transfer Utilities for CoCo - MultiVue version \$54.95

GSC File Transfer Utilities for CoCo - Standard version \$44.95

All diskettes are CoCo OS-9 format. Orders must be prepaid or COD, VISA/MC accepted, add \$1.50 S&H, additional charge for COD.

CBASIC III EDITOR/COMPILER

The ULTIMATE Color Computer III BASIC COMPILER!!!

If you want to write fast efficient machine language programs and you don't want to spend the next few years trying to learn how to write them in Assembly language or with a cheap compiler, then CBASIC III is the answer!!!

CBASIC III is the only fully integrated Basic Compiler and Program Editing System available for the Color Computer 3. It will allow you to take full advantage of all the capabilities available in your CoCo-3 including 512K RAM, without having to spend years trying to learn assembly language programming. CBASIC III allows you to create, edit and convert programs from a language you are already familiar with Enhanced Disk Color Basic, into fast efficient machine language programs easily and quickly. CBASIC III supports all the enhanced hardware available in the CoCo-3, including Hi-Res Graphics, & Screen displays, Extended Memory and Interrupts (Keyboard, Timer, Serial & Clock). We even added advanced commands not available in Basic to give you a level of control only available to very advanced Machine Language Programmers. Plus we made it exceptionally easy to use, not like some other compilers. CBASIC III is the friendliest and easiest compiler available for the Color Computer III.

CBASIC III is a powerful tool for the Beginner as well as the Advanced Basic or Machine Language programmer. You can write programs without having to worry about the Stack, DP Register, memory allocations and so on, because CBASIC III will handle it for you automatically. For Advanced users, CBASIC III will let you control every aspect of your program, even generating machine code directly in a program easily.

CBASIC III features well over 150 Compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen I/O. It supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Enhanced Color Basic, including Graphics H/GET, H/PUT, H/PLAY and H/DRAW, all with 99.9% syntax compatibility. CBASIC III also supports the built in Serial I/O port with separate programmable printer & serial I/O baud rates. You can send and receive data with ease to use PRINT, INPUT, INKEY, GETCHAR and PUTCHAR commands.

CBASIC makes full use of the powerful and flexible GIMI chip in the Color Computer 3. It will fully utilize the 128K of RAM available and install 2 Ultra Fast Ramdisks if 512K is available, for program Creation, Editing and Compilation. You can easily access all 512K of memory in a Compiled program thru several extended memory commands that can access it in 32K or 8K blocks and single or double bytes.

CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or create programs for the compiler. It is a full featured editor designed specifically for writing Basic programs. It has block move and copy, program renumbering, automatic line number generation, screen editing, printer control and much more.

The documentation provided with CBASIC III is an 8 1/2 by 11 Spiral Bound book which contains approximately 120 pages of real information. We went to great lengths to provide a manual that is not only easy to use and understand, but complete and comprehensive enough for even the most sophisticated user.

CBASIC III is the most expensive Color Basic Compiler on the market, and worth the investment. You can buy a less expensive compiler for your CoCo-3, and then find out how difficult it is to use, or how limited its features are. Then you'll wish you had bought CBASIC III in the first place. Dollar for dollar, CBASIC III gives you more than any other compiler available. If you can find a better CoCo-3 Basic Compiler then buy it!!!

Requires 128K & Disk \$149.00

DATAPACK III PLUS V1.1

SUPER SMART TERMINAL PROGRAM AUTOPILOT & AUTO-LOG PROCESSORS X-MODEM DIRECT DISK FILE TRANSFER VT-100 & VT-52 TERMINAL EMULATION

- * No lost data even at 2400 Baud on the COCO-3 Serial I/O port.
- * 8 Display Formats, 32/40/64/80 columns at 192 or 225 Res.
- * 50K Text Buffer when using the Hi-Res Text Display & Disk.
- * ASCII & BINARY disk file transfer support via XMODEM.
- * Directly record receive data to a disk file (Data Logging).
- * VT-100 terminal emulation for VAX, UNIX and other systems.
- * VT-100/52 cursor keys, position, insert/delete, PF & Alt. keys.
- * Programmable Word Length, Parity, Stop Bits and baud rates.
- * Complete Full and Half Duplex operation, with no garbled data.
- * 9 Variable length, Programmable Macro Key buffers.
- * Programmable Printer rates from 110 to 9600 baud.
- * Send Files directly from the Buffer, Macro Keys or Disk.
- * Display on Screen or Print the contents of the Buffer.
- * Freeze Display & Review information On Line with no data loss.
- * Built in Command Menu (Help) Display.
- * Built in 2 Drive Ramdisk for 512K RAM support and much more.

Supports: R.S. Modem-Pak & Deluxe RS-232 Pak, even with Disk.

Requires 128K & Disk, \$59.95

EDT/ASM III

128/512K DISK EDITOR ASSEMBLER

EDT/ASM III is a Disk based co-resident Text Editor & Assembler. It is designed to take advantage of the new features available in the CoCo-3 with either 128K or 512K of memory. It has 8 display formats from 32/40/64/80 columns by 24 lines in 192 or 225 Resolution, so you use the best display mode whether you are using an RGB or Composite monitor or even a TV for your display. Plus you can select any foreground or background colors or even monochrome display modes. It will even support 512K by adding an automatic 2 drive Ultra Fast Ramdisk for lightning fast assembly of program source code larger than memory. There is also a free standing ML Debug Monitor, to help you debug your assembled programs. EDT/ASM III has the most powerful, easy to use Text Editor available in any Editor/Assembler package for the Color Computer.

- * Supports Local and Global string search and/or replace.
 - * Full Screen line editing with immediate line update.
 - * Easy to use Single keystroke editing commands.
 - * Load & Save standard ASCII formatted file formats.
 - * Block Move & Copy, Insert, Delete, Overtyping.
 - * Create and Edit files larger than memory.
- The Assembler portion of EDT/ASM III features include:
- * Supports the full 6809 instruction set & cross assembles 6800 code.
 - * Supports Conditional IF/THEN/ELSE assembly.
 - * Supports Disk Library file (include) up to 9 levels deep.
 - * Supports standard Motorola assembler directives.
 - * Allows multiple values for FCB & FDB directives (unlike R.S. EDT/ASM)
 - * Allows assembly from the Editor Buffer, Disk or both.

Requires 128K & Disk \$59.95

TEXTPRO IV

"The ADVANCED COCO-3 Word Processing System"

- * 9 Hi-Res Displays from 58 to 212 columns by 24 lines in 225 Res.
- * On Screen Display of Bold, Italic, Underline & Double Width print.
- * Up to 8 Proportional Character Sets Supported with Justification.
- * Up to 80 Programmable Function Keys & Loadable Function key sets.
- * Fully Buffered keyboard accepts data even during disk access.
- * Autoexecute Startup files for easy printer & system configuration.
- * 8 Pre-Defined Printer function commands & 10 Programmable ones.
- * Supports Library files for unlimited printing & configurations.
- * Disk file record access for Mail Merge & Boiler Plate printing.
- * Completely Automatic Justification, Centering, Flush left & right.
- * Change indents, margins, line length, etc. anytime in the text.
- * Create and Edit files larger than memory, up to a full disk.
- * Easily imbed any number of printer format and control codes.
- * Built in Ultra Fast 2 drive RAMDISK for 512K support.

TEXTPRO IV is the most advanced word processing system available for the COCO-3, designed for speed, flexibility and extensive document processing. It is not like most of the other word processing programs available for the Color Computer. If you are looking for a simple word processor to write letters or other short documents, and never expect to use multiple fonts or proportional spacing, then most likely you'll be better off with one of the other simpler word processors. But, if you want a powerful word processor with extensive document formatting features to handle large documents, term papers, manuals, complex formatting problems and letter writing, then TEXTPRO IV is what you're looking for. It works in a totally different way than most word processing programs. It uses simple 2 character abbreviations of words or phrases for commands and formatting information that you imbed directly in your text. There are over 70 different formatting commands you can use without ever leaving the text you're working on. There are no time consuming, and often frustrating menu chases, you are in total control at all times. You can see what the formatted document will look like before a single word is ever printed on your printer. Including margins, headers, footers, page numbers, page breaks, column formatting, justification, and Bold, Italic, Underline, Double Width, Superscript and Subscript characters right on the screen.

TEXTPRO IV can even support LASER PRINTERS with proportional fonts, take a good look at this AD? It was done with TEXTPRO IV on an OKIDATA LASERLINE-6 laser printer!!! All the character sets used on this AD are proportional spaced characters, all centering, justification, and text printing was performed automatically by TEXTPRO IV.

Requires 128K & Disk \$89.95

HI-RES III Screen Commander

The DISPLAY you wanted but didn't get on your CoCo-3

- * 54 Different Character Sizes available from 14 to 212 epl.
- * Bold, Italic, Underline, Subscript, Superscript and Plain character styles.
- * Double Width, Double Height and Quad width characters.
- * Scroll Protect form 1 to 23 lines on the screen.
- * Mixed Text & Graphics in HSCREEN 3 mode.
- * PRINT @ is available in all character sizes & styles.
- * Programmable Automatic Key repeat for fast editing.
- * Full Control Code Keyboard supported.
- * Selectable Character & Background color.
- * Uses only 4K of Extended (2nd 64K) or Basic RAM.
- * Written in Ultra Fast Machine Language.

HI-RES III will improve the standard display capabilities of the Color Computer 3, even the 40 and 80 column displays have several features missing. For example, you can't use PRINT @ or have different character sizes on the same screen, even when mixing text and graphics with the HPRINT command. HI-RES III can give you the kind of display you always dreamed about having on your CoCo-3, with a wide variety of display options that you can easily use with your Basic or ML programs.

HI-RES III is totally compatible with Enhanced Color Basic and its operation is invisible to Basic. It simply replaces the normal screen display with an extremely versatile display package. With the full control code keyboard, you can control many of HI-RES III extended functions with just a couple of simple keystrokes.

Requires 128K Tape or Disk \$34.95

512K RAMDISK & MEMORY TESTER

RAMDISK is an ALL Machine Language program that will give you 2 ULTRA High Speed Ram Disks in your CoCo-3. It does not need or require the OS-9 operating system. It works with R.S. DOS V1.0 or V1.1 and it is completely compatible with Enhanced Color Disk Basic! Plus it allows your CoCo-3 to run at double speed all the time even for floppy disk access!!! It will not disappear when you press reset like some other ramdisk programs. The MEMORY tester is a fast ML program to test the 512K ram. It performs several bit tests as well as an address test so you know that your 512K of memory is working perfectly.

Requires 512K & Disk \$19.95

"The SOURCE III"

DISASSEMBLER & SOURCE CODE GENERATOR

The SOURCE III will allow you to easily Disassemble Color Computer machine language programs Directly from Disk and generate beautiful, Assembler compatible Source code.

- * Automatic label generation and allows specifying FCB, FDB and FCC areas.
- * Disassembles programs Directly from disk, unlike other disassemblers.
- * Automatically locates Begin, End and Execution address.
- * Output Disassembled listing with labels to the Printer, Screen or both.
- * Generates Assembler source files directly to disk or printer.
- * Built in Hex/Ascii dump/display to locate FCB, FCC & FDB areas.
- * 8 Selectable Display formats 32/40/64/80 columns in 192 or 225 Res.
- * Selectable Foreground & Background colors & Printer Baud rates.
- * Built in Disk Directory an Kill file commands.
- * Menu display with single key commands for smooth, Easy operation.
- * Written in Ultra Fast Machine Language.

Requires 128K & Disk \$49.95

To order products by mail, send check or money order for the amount of purchase, plus \$3.00 for shipping & handling to the address below.
To Order by VISA, MASTERCARD or COD call us at (702) 452-0632
(Monday thru Saturday, 8am to 5pm PST)

CER-COMP LTD.
5566 Ricochet Avenue
Las Vegas, Nevada 89110
(702) 452-0632

"Window Master"

Screen Display Fonts

Window Master supports up to 54 different character sizes on the screen with 5 different character styles. You can have Bold, Italic, Underlined, Super-Script, Sub-script or Plain character styles or any combination of them in any character size. You can also change the text color and background at any time to get really colorful displays.

Fully Basic Compatible

Window Master is fully compatible with Enhanced Color Disk basic with over 50 Commands & functions added to fully support the Point & Click Window System. Window Master does not take any memory away from Basic, so you still have all the Basic Program memory available.

Hi-Resolution Displays

Window Master uses the full potential of the Color Computer 3 display by using the 225 vertical resolution display modes instead of the 192 or 200 resolution modes like most other programs. It uses either the 320/16 color mode or the 640/4 color display to give you the best display resolution possible, and can be switched to either mode at any time.

Mixed Text & Graphics

Window Master fully supports both Text & Graphics displays and even has a Graphics Pen that can be used with HLINE, HCIRCLE, HSET and more. You can change the Pen width & depth and turn it on or off with simple commands. We also added Enhanced Graphics Attributes that allow graphics statements to use And, Or, Xor and Copy modes to display graphic information. With the Graphics enhancements added by Window Master, you could write a "COCOMAX" type program in Basic! In fact we provide a small graphics demo program written in Basic.

Event Processing

Window Master adds a powerful new programming feature to Basic that enables you to do "Real Time" Programming in Basic. It's called Event Trapping, and it allows a program to detect and respond to certain "events" as they occur. You can trap Dialog activity, Time passage, Menu Selections, Keyboard activity and Mouse Activity with simple On Gosub statements, and when the specified event occurs, program control is automatically routed to the event handling routine, just like a Basic Gosub. After servicing the event, the sub-routine executes a Return statement and the program resumes execution at the statement where the event occurred.

Enhanced Editing Features

Window Master adds an enhanced editor to Basic that allows you to see what you edit. It allows you to insert & delete by character or word, move left or right a word or character at a time, move to begin or end of line, toggle automatic insert on/off or just type over to replace characters. The editor can also recall the last line entered or edited with a single key stroke. You can even change the line number in line to copy it to a new location in the program.

Window Master Features

Multiple Windows

Window Master supports multiple window displays with up to a maximum of 31 windows on the screen. Overlapping windows are supported, and any window can be made active or brought to the top of the screen. Windows can be picked up and moved anywhere on the screen with the mouse. There are 6 different Window styles to choose from and the window text, border and background color is selectable.

Pull Down Menus

Menus are completely programmable with up to 16 menus available. They can be added or deleted at any time in a program. Menu items can be enabled, disabled, checked or cleared easily under program control. Menu selection is automatically handled by Window Master & all you have to do is read a function variable to find out which menu was selected.

Buttons, Icons & Edit Fields

Each Window can have up to 128 buttons, Icons or Edit fields active, if you can fit that many. Buttons, Icons and Edit field selection is handled automatically by Window Master when the mouse is clicked on one. All you have to do is read a Dialog function to find out which Button, Icon, or Edit field was selected, its very simple.

Mouse & Keyboard Functions

Window Master automatically handles the Mouse pointer movement, display and button clicks. It will tell you the current screen coordinate, the local window coordinate, window number the mouse is in, the number of times the button was pressed, which window number it was clicked in and more. The Keyboard is completely buffered, and supports up to 80 programmable Function keys that can contain any kind of information or command sequences you can imagine. You can load and save function key sets at any time. So, you can have special sets of function keys for different tasks. The "Ctrl" key is supported so that you have a full control code keyboard available.

Window Master Applications

Window Master pushes the Color Computer 3 far beyond its normal capabilities, into the world of a "User Friendly" operating environment. We are already planning several new programs for use with Window Master. So you don't have to worry about having to write all your own programs. And don't forget that many existing Basic and M.L. programs will run under Window Master with little or no changes. The Possibilities for Application programs are endless: Spread Sheets, Word Processing, Communications, Education, Games, Graphic Design, Desk Top Publishing and on and on.

Hardware Requirements

Window Master requires 512K of memory, at least 1 Disk Drive, a Hi-Res Joystick Interface and a Mouse or Joystick.

Technical Assistance

If you run into difficulty trying to use some of Window Master's features, we will be happy to assist you in any way possible. You can write to us at the address below or call us between 10am and 2pm Pacific Standard Time for a more timely response. Sorry, no collect calls will be accepted.

Ordering Information

To order WINDOW MASTER by mail, send check or money order for \$69.95, plus \$3.00 for shipping & handling to the address below. To order by VISA, MASTERCARD or COD call us at (702)-452-0632
(Monday thru Saturday, 8am to 5pm PST)

CER-COMP Ltd.
5566 Ricochet Avenue
Las Vegas, Nevada 89110
(702)-452-0632

Some Terms Defined

I've had my CoCo 2 for about a year now. Before that I knew very little about writing programs. Could you print a column on what PEEK, POKE, text, screen dump, HDRAW, HPRINT, DATA and SOUND mean. I need this information so I can become a better CoCo 2 user.

Chris Provence
Saranac, NY

RX I can define those terms for you: PEEK is used to determine the value stored at an address in memory; e.g. PRINT PEEK(1463) will print the value stored at address 1463 in memory. The opposite of PEEK is POKE.

POKE is used to change the value stored at an address in memory; e.g. POKE 1463,2 changes the value stored at Address 1463 to two.

Text files are files comprised of ASCII values. ASCII is an industry-standard code for representing text (components of alphabetic and numeric strings) using one-byte values (eight bits stored at a single address). 'A' = 65, 'B' = 66, . . . '0' = 48, '1' = 49, etc.

A screen dump is a printer's representation of what can be viewed on a computer's screen.

HDRAW, similar to the DRAW command on the CoCo 1, draws lines and boxes and works only with the newer Hi-Res modes on the CoCo 3.

HPRINT allows you to put text on a CoCo 3's Hi-Res screen.

DATA statements are used in conjunction with READ statements; e.g.:

```
10 READ X
20 DATA 23, 46, 55
```

The READ statement in Line 10 will pick up the value 23 for X. If another READ statement is encountered, it will use the value 46, etc.

The SOUND command is used to send audio effects to your TV speaker. SOUND 3,30 sends a low-pitched sound for 30 six-hundredths seconds.

Richard Esposito is the principal engineer for BDM Corporation. He holds bachelor's, master's and doctorate degrees from Polytechnic Institute of Brooklyn. He has been writing about microcomputers since 1980.

Richard Libra is a simulator test operator for Singer Link Simulation Systems Division.

with Richard W. Libra

A Good Deal

I have recently come across a super deal on IBM disk drives. They are the double-sided drives found on the discontinued IBM PCjr. Will these drives fit and work in the FD500 case? Also, can I use both sides of the drive from Disk BASIC, or just from OS-9? If I can't use both sides, will I be able to use one side of the drive?

Kent Signorini
Grimshaw, Alberta

RX The IBM disk drive should fit the FD500 case and use your power supply, but you may need to modify your cable. SpectroSystem's ADOS or Burke & Burke's Hyper-IO can provide the double-sided capability.

CoCo 2 and 3 — Programs Don't Mix

I own a CoCo 2, Version 1, Release 1, with disk drive. Is there any way to get CoCo 3 programs to run on my machine?

Duane Shwartz
Merrill WI

RX Unfortunately, no. CoCo 3-specific programs take advantage of its additional memory and unique hardware.

Problems With the Humidity

Whenever the humidity is high my CoCo 2 does not function properly. (I get a blank gray screen, and the ROM packs do not work.) I have no problems using my neighbor's computer in the same environment.

Steve Pawlowski
Elmont, NY

RX There are environmental specifications associated with all electronic equipment. Tandy specs for the CoCo are as follows: temperature, 55 to 85 degrees Fahrenheit; and altitude, 100 to 6,000 feet. Some CoCos may operate outside these specs due to relative age, small differences in parts, manufacturing, etc. As long as your machine operates within the published specs, there is nothing wrong with it. As mentioned before, for many years air-conditioned environments were required to operate computers at all.

IBM Software on a CoCo

In past articles, readers have asked if IBM software could run on the CoCo. I have heard that it was possible to run Apple software on the Tandy 1000. If this is so, why couldn't something be made to run IBM software on the CoCo?

Jared Hawley
Honolulu, HA

RX Granted, with Tandy's Trackstar 128 board installed in a Tandy 1000, you can run Apple II software; but it costs \$399 — twice the price of a CoCo 3! IBM PC coprocessors for the Atari ST and Apple Macintosh run around \$1,000 each. Who would buy such a card for a CoCo when a separate Tandy 1000 could be purchased for the same price — or less?

For a quicker response, your questions may also be submitted through RAINBOW's CoCo SIG on Delphi. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASK for "Ask the Experts" to arrive at the EXPERTS> prompt, where you can select the "Doctor ASCII" online form which has complete instructions.

Replace CoCo 3's built-in HPRINT font

The Font Master

By Eric Wolf

Stored in the new CoCo 3 is a high resolution font, a specially designed HPRINT character set. The area of memory in which the font is stored is called upon whenever the command HPRINT is performed. Each letter of the message is referenced in the font table of the high resolution graphics screen.

The font table is stored in RAM, which means you can read and write to it. (Its memory location is \$F09D through \$F49C, for characters 32-127.) *Font Master* allows you to easily change these characters, giving your Hi-Res screens that personal touch.

Font Master uses the 16-color, 320-by-192 graphics screen of the CoCo 3. It offers onscreen menu selection, complete error trapping, choice of tape or disk, editing commands, and easy integration with BASIC and machine language.

Upon saving, loading and running the program, the main screen appears, consisting of a command set (upper-

Eric Wolf is a free-lance programmer and attends LaSalle High School. He is currently writing a line of computer software that deals with games and utilities, and ML applications for the CoCo.

right), editing window (upper-left) and the current character set (bottom). Let's look at these one at a time.

The Edit window shows an enlarged version of the character you are working on and how it presently looks. The current character set is what the entire character set in memory looks like. The highlighted letter is the letter you are currently editing. The command set is a brief listing of all the commands recognized by the *Font Master*, and includes the following:

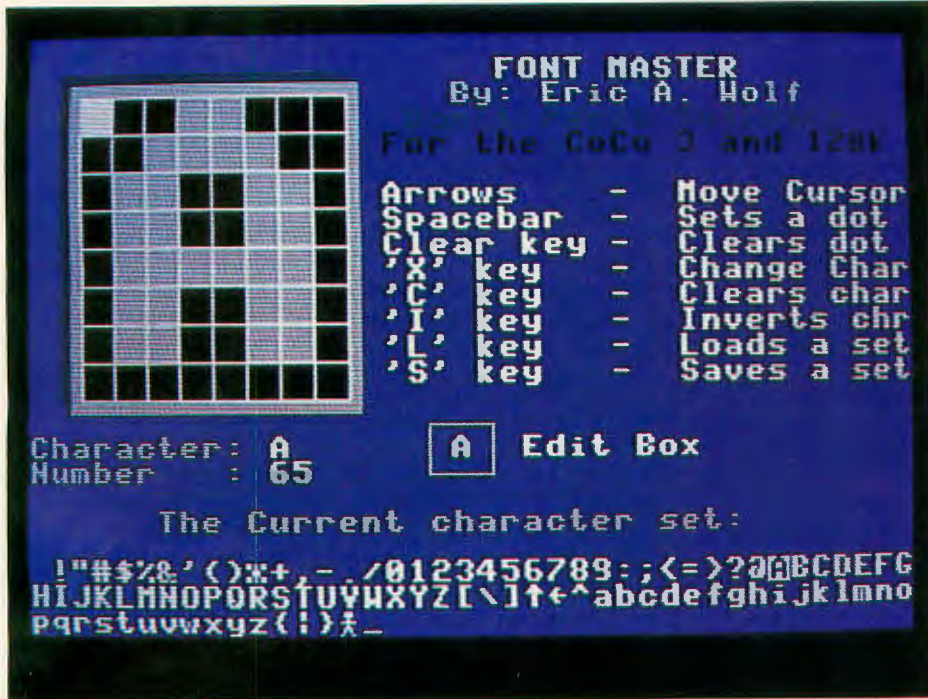

arrows	control the cursor within the editing window
space bar	sets (turns on) a dot in the editing window
CLEAR	resets (turns off) a dot in the editing window
C	clears entire editing window
X	saves current character and allows you to select a new character to edit
L	loads a character set from tape or disk
S	saves a character set to tape or disk
I	inverts the grid (changes white to black and black to white)

I have included two pre-designed font files (cursive and bold) for you to use and modify for your own purposes. They are included on this month's RAINBOW ON TAPE and DISK.

After you have saved your character set (using *Font Master*), you can integrate it into your own BASIC programs. First, load the program that uses the HPRINT command. Then load your character set — type (C)LOADM and press ENTER. Then, just run your program and the new character set will be in use.

Be careful about pressing the reset button. Doing so restores the original HPRINT font set. After pressing reset, you must reload the character set if you want to use it again.

(Questions or comments about this program may be directed to the author at 1630 N. Johnson St., South Bend, IN 46628. Please enclose an SASE when writing for a reply.) □

The Professional Color Computer

Enhancements for Productivity from HJL Products

For peak performance with any computer, you have to get information into and out of the system as easily as possible.

This is the purpose of the HJL family of professional enhancements for ALL MODELS of the Color Computer, including CoCo 3.

The Self-contained ProCase-57 Keyboard - \$79.95

It's the popular HJL keyboard perfectly fitted into its own sleek, low-profile case. Put your CoCo on a shelf or hang it on the side of your desk. ProCase-57 comes with 5-foot cable; installs in just a few minutes with no soldering.

The HJL-57 Keyboard Kit - \$59.95/69.95

Overwhelming favorite of serious CoCo users worldwide, the HJL-57 keyboard provides the smooth consistent feel and reliability you need for maximum speed with minimum input errors. Installs in your color computer without soldering. Just \$59.95 for Original or F-version. Kits for CoCo 2 and CoCo 3 are \$69.95.

The NumberJack Keypad - \$59.95

A self-contained numeric keypad for serious number-crunching. Besides the

numbers, it has all the cursors, symbols and math keys, including autoshifted ADD and MULTIPLY. Includes cable and connectors for solderless installation.

The Monitor Adapter - \$25.95

This universal driver works with all monochrome monitors. Easily installed without clips, jumpers or soldering (except some CoCo 2s with soldered-in video chips). Here's crisp, flicker-free monitor output with all the reliability you've come to expect from HJL Products.

The Monitor - \$99.95

Our high-resolution amber monitor gives you the display preferred by most computer pros. Once you've used it, you'll never go back to the TV set. 12-inch CRT has etched non-glare faceplate. (Requires adapter sold above)

Quick Basic Plus - \$19.95

High-performance programming aid works with any CoCo that has 4 function keys. 26 one-touch BASIC statements, 10 user-defined macros at a time (save as many sets of macros as you like), auto line-numbering, instant screen dump to printer, and global search, make this software ideal for any BASIC programmer. Specify disk or cassette.

The SoftSwitch - \$89.95

Connect any two parallel printers to one computer; select printers manually or insert a simple printer code in the text to be printed for fully-automatic, all solid-state switching. Complete with three cables and operating instructions.

The HJL Warranty

Every HJL product comes with a full, one-year warranty and the exclusive HJL 15-day unconditional guarantee (except software).

Pick a Pair and Save 15%

Take 15% off the price of any two or more products shown here. Just mention this ad when you order.

PREMIUM COCO3 512K UPGRADE

- Made in USA by J&R Electronics
- Memory chips socketed, user replaceable
- Rugged, long life construction
- Top mounted Memory for cooling
- Heavy duty POWER and GROUND planes to minimize memory errors due to noise
- High performance design, permits use of less expensive 150ns memory chips
- We supply Prime memory chips, not inferior pulls or fallouts*
- Includes RAMDISK, Spooler and Memory Test software on disk with 28 page User's Manual (We set the standard for 512K support software. We believe our software is uniquely powerful, as opposed to those 'Me, too' companies that charge extra for software with much less power!)

SPECIAL PRICES

#1010-29.95 JramR bare board plus connectors and software

#1014-39.95 JramR assembled & tested OK (No memory chips) and software
*CALL (for latest price of #1014 with memory chips and other products)

To place an order, write to: J&R Electronics, P.O. Box 2572, Columbia, MD 21045,
OR call (301) 987-9067-Jesse or (301) 788-0861-Ray

CocoTech

With MACPLAY and a CoCo 3 you can play MAC sound files (Included on the second diskette) with pure 6 BIT sound quality that the CoCo can produce! Or download other MAC sound files from a computer information service or MAC bulletin board systems to hear even more. Sound files can last for a few seconds or up to 1/2 minute. MAC sound files included on the second diskette contain excerpts from the 3 Stooges to the Road Runner and more!!

MACPLAY is only.....\$ 19.95

You can use UltiMax as a normal HI-REZ joystick interface or switch it to be used with a popular Max III graphics program. The other feature of UltiMax is the option to have a large or small stick area so you can be more accurate with your drawings!

The UltiMax interface is only \$29.95

Or trade in your original HiRes interface (sent postage prepaid) and get UltiMax for only.....\$14.95

DISCOUNT NEW LOWER PRICES!! PRICE LIST

CoCo Burke & Burke Hard Drive Kits

FLASH! More Burke and Burke systems have been bought in the last six months than other systems have sold in the last 3 years!!!!

Our first system features the Burke & Burke XT or XT RTC interface. This interface uses popular and inexpensive IBM PC type controllers. For this reason it is the least expensive hard disk system available today. Not as fast as the Isted system but faster than any other system available. It also supports RLL drives. **Note:** Disk Extended Color Basic support and other software options are listed on our price list. **Disadvantage;** requires a multi-pak.

KIT INCLUDES: Burke & Burke (B&B) XT PC interface. Hard drive with controller, 3 foot ST506 cable set. Hard Drive Case with 60 watt power supply and fan. Includes OS9 LI and LII software. 1 megabyte transfer in 45 seconds! Type ahead under OS9. Complete instructions. Easy one evening assembly.

1 YEAR WARRANTY ON ALL SYSTEMS!

20 Meg Kit Complete 60MS	*498.00
30 Meg Kit Complete 60MS RLL	*548.00
40 Meg Kit Complete 60MS	*618.00
Assemble and test any of the above add	50.00
OPTIONS:	
B&B Real Time Clock (add to above)	30.00
B&B XT ROM Auto Boot from hard disk	19.95
B&B Hyper I/O run DECB on hard drive	29.95
B&B Hyper III Ramdisk/spooler for above	19.95
FBU Fast Hard disk Back Up	75.00

Hard Drive Bits and Pieces

B&B XT PC style interface	69.95
B&B XT RTC interface w/clock/calendar (Call for Hard Drive and Kit prices)	99.95
FHL HCA/WD High Speed Interface	*99.95
WD 1002-05 High Speed for FHL Interface (Supports both Hard and Floppy drives) (Call for Hard Drive prices)	*196.00
Hard Drive case with 60W P/S and Fan	*98.00

(Can also be used for floppy drives)
SPECIFICATIONS: size 16" deep, 5.5" high, 7" wide. 60 Watt power supply with 3 drive type power connectors, quiet 12 volt DC fan, LED power indicator, color matches CoCo. Holds 2 1/2 height hard or floppy drives and has card guided space for a PCB the size of a drive (like the WD1002-05 controller)

Floppy Drives (5.25" and 3.5" FLOPPY DISKS)

TEAC High Quality Drives - 1 Year Warr.	
FD55B 360K 40 Track DS 5.25"	118.00
FD55F 720K 80 Track DS 5.25:	151.00
FD35F 720K 80 Track DS 3.5"	147.00
(Bare drives, requires case and power supply \$75.00)	

CoCo FHL High Speed Hard Drive Kits

Our top of the line system features Bruce Isted's interface for the Western Digital WD 1002-05 high speed controller. **Features;** fastest system available, 1 megabyte transfer in only 37 seconds!! Twice as fast as other systems! Supports 4 floppy and 3 hard drives, type ahead for both floppy and hard disk, **autoboot OS9 L1 or L2** from hard or floppy disk. **Disadvantage;** does not support DECB. This is the system of choice for the serious OS9 user.

KIT INCLUDES: FHL HCA/WD High Speed interface, Hard drive with WD 1002-05 controller, ST506 cable set, 4 foot 40 pin cable, Hard Drive Case with 60 watt power supply and fan, OS9 software for LI and LII with source, Complete instructions. Easy one evening assembly.
(INTERFACE SPECIFICATIONS: Size is the same as a floppy controller. Interfaces the WD 1002-05 controller to the CoCo. This controller handles 3 hard and 4 floppy drives. Type ahead under OS9 for both floppy and hard drive. Includes OS9 LI and LII software with source. Autoboot ROM included to boot from floppy or hard drive. Supports OS9 only. 1 megabyte transfer in 37 seconds!)

1 YEAR WARRANTY ON ALL SYSTEMS!

OS9 Software

The WIZ

by Bill Brady

Did you ever wonder why there is only one really good communications package for OS9? The WIZ is so good that no one has been able to better it in over a year on the market! Simply the best package there is for OS9 and the CoCo III.

FEATURES: Mac-Like interface with windows, text and binary upload/download with xmodem, kermit, on line HELP, AUTOLOGGING lets you dial up and log on to your favorite service, Macros, VT52 emulation, Usage log and much more.

The Wiz requires a RS232 Pak or similar device, LII and 512K. Supports the Owl-Ware Super I/O board.

The WIZ	79.95
Disto RS232 Pak	49.95

OS9 Users Group Disk Library

We have the complete OS9 Users Group Library available for immediate delivery. We pay the UG a royalty so you will be helping a worthy cause when you buy these disks. All the programs include source and some documentation. The 11 disk library is the best deal if you can read 80 track double sided disks. These disks are 720K each and are all almost full. That's almost 8 megabytes of programs for only \$156! The individual disks are on 35 or 40 track disks and some are double sided. Call or send for the list.

OS9 Users Group Disks each (50+ disks)	10.00
Complete 11 disk library	156.00

Inside OS9 Level II

The Book by Kevin Darling
\$39.95

Are you tired of playing games with Level II? Do you want to find out what's going on inside OS9? This is the book for you! Over 200 pages of hints, kinks, bugs, source listings and much more. Written by the well known Compuserve SysOp, Kevin Darling. 'Must reading' says Dale Puckett in Rainbow!

Sculptor

Sculptor is a applications language, commonly referred to as a 4th Generation Language. Basically this means that you can create applications in one tenth the time it would normally take. Sculptors screen and print formatting make screen displays and reports easy and fast. Sculptors B+ tree index system makes record lookup lighting fast. Programs are portable too.

Sculptor	249.00
Sculptor Special (If we have any left, (call))	149.00

DynaStar

Used by more OS9 users than any other!

FEATURES: Best OS9 editor/word processor/text formatter, has everything you would expect and more, supports terminals and windows simultaneously, auto-configurable, auto-indent for C and Pascal programming, mail merge for form letters, bug free, solid. New manual makes it easier to use than ever. Most popular word processor since 1982! Uses CoCo 3's windows for pop-up help menus, can be disabled. Two key sequence to move from anywhere to anywhere in your text. WordStar command style. Will work with files larger than memory. Merge function allows stringing many files together at print time. Full block manipulation, mark, move, copy, delete, read from disk, write to disk. **Keyboard Macros:** Define or redefine any control key (up to 29) to reproduce any key sequences, including commands! Macros can be read in at startup automatically or created on the fly as needed. **Printer Control:** Supports multiple printers via a print control file that transforms imbedded control characters to printer control characters. Changing printers is easy. **Formatting Commands:** Justification, word wrap, centering, headers, footers, macros, odd and even support, multiple index generation, multiple table of contents generation and more! *DynaStar* is the last word processor you will ever have to buy! Level I version also included on disk.

DynaStar word processor/formatter	150.00
-----------------------------------	--------

DynaSpell

by Dale Puckett

102,000 and 20,000 word dictionaries included. Supports both Level I and II. Fast, slick, the best available for OS9. Written by Rainbowtech columnist Dale Puckett.

DynaSpell spelling checker	75.00
SPECIAL WHEN PURCHASED WITH DYNASTAR	25.00

ORDERING INFORMATION VISA and M/C. NY residents add 7% sales tax. US shipping add \$3.50. Please call for Air Express shipping.

The fourth in a series of tutorials for the beginner to intermediate machine language programmer

Machine Language Made BASIC

Part IV: Getting Graphic

By William P. Nee

With this article we start to explore the Color Computer's best capability: the speed and ease with which it can create graphics. The standard way to begin any graphics program is with PMODE, PCLS and SCREEN. These three commands, along with PCLEAR, will set certain locations within the memory. The main locations we will use for graphics and their meanings are shown in Figure 1.

When you first power up, the computer assumes PCLEAR 4, PMODE 0, PAGE 1, and sets the addresses as indicated under START. Since PMODE 0,1 uses only the first graphics page, the computer assumes that you will be using \$600 to \$C00-1 for graphics (\$E00 to \$1400-1 with disk). If not, you must tell the computer something different. The three main graphic commands in machine language are shown in Figure 2.

Nothing is as easy as it looks. If you try these commands, your machine language program will become lost. The problem arises between the PCLS command and where EDTASM+ stores the program. On power-up with EDTASM+, Location \$FF/100 is \$600; this is where the edit buffer (your typed-in program) and the symbol table will begin. Since graphics also begin at \$600, a PCLS will set all graphic bits to 0 and,

Location	Indicates	Start	W/Disk
\$B6	PMODE (1 - 4)	(0)	(0)
\$B7/B8	end of graphics page +1	(#\$C00)	(#\$1400)
\$B9	bytes per line (\$10 or \$20)	(#\$10)	(#\$10)
\$BA/BB	start of graphics page	(#\$600)	(#\$E00)
\$BC/BD	(#\$600 if not disk, \$E00 if disk)		

Figure 1

Bill Nee bucked the "snowbird" trend by retiring to Wisconsin from a banking career in Florida. He spends the long, cold winters writing programs for his CoCo.

in the process, wipe out the buffer. To avoid this problem we must change the contents of \$FF/100.

Graphic pages 1 to 4 are from \$600 to \$1DFF (with disk, from \$E00 to \$25FF), and we must put the edit buffer above graphics. Whatever number we put into Location \$FF/100 must end in 00 and allow enough room for the text program before the ORG address. Let's use \$2800 for the buffer address at \$FF/100. This will allow locations \$2800 to \$3000 for the text and symbols and leave \$3000 and up for the assembled program. This is done in the following manner:

- 1) insert *EDTASM+* cartridge and power up
- 2) press Z and ENTER to get into ZBUG
- 3) press W and ENTER to read two bytes at a time
- 4) type FF/ to look at \$FF/100
- 5) type 2B00 and press ENTER to change to #2800
- 6) type GC006 and press ENTER to execute \$C006 (keeps \$FF/100 the same)

The assembler will now store the written program and symbols in a buffer starting at \$2800. You can actually read the program in the "A" mode starting at \$2A00. The "S" stack starts at the buffer location plus #177, decreasing from there.

The next problem arises if you try to use '5' to '8' in the PAGE command at \$9653. Since the computer is set only for PCLEAR 4, any higher number will give you a Function Call error message. To avoid this, we must PCLEAR some more pages. The BASIC PCLEAR command affects the addresses shown in Figure 3.

These numbers change as your BASIC program increases and becomes more complicated, but their initial value is assigned by the PCLEAR you select. So, in machine language, any PCLEAR must be put at least into Location \$19. Either the program or table shown in Figure 4 can be used to get the PCLEAR HEX value you desire.

The second method, while a few bytes longer, is preferable because it will recognize whether or not disk is being used.

If you want to use PCLEAR 8, the

EDTASM+ buffer must begin at \$3600 (\$3E00 with disk) or higher. The program must execute at an address even higher — generally the length of your text program plus an additional 200 bytes. The *EDTASM+* will give you a Bad Memory error message if you try to write your program over the execution address. If it does, increase the ORG location until it is above the text portion of your program.

The program for this article is in machine language only. It can be executed entirely from ZBUG and will break when you hit any key without losing the program. Initially, Location \$FF/100 is set to #3E00 to get above disk graphics; the program will ORG at \$4382 to leave room for the editor buffer and symbol table. Once you've typed in the program, switch to ZBUG. In the "A" mode you can follow the program and symbols from \$4000 to \$4381. That is why the program must ORG at least at \$4382.

Once the program has been checked for errors, you can examine the buffer locations in the "W" mode for the following information.

SPECIAL DEAL ON 500 PROGRAMS IS BACK!

BACK BY POPULAR DEMAND! GET OUR LATEST 50 DISKS OR TAPES FULL OF OVER 500 PROGRAMS. HERE IS WHAT YOU'LL RECEIVE:

- ★ Over 250 Utility/Home Application Programs including a Word Processor, Database, Spreadsheet, Disk Utilities, Business Software, Electronics Series, Educational Programs for Kids, plus much more!
- ★ Over 200 exciting games including King Pede, Kron, Star Trek, Flight Simulator, Wizard, Horse Races, Football, plus much more.
- ★ Over 30 adventures including Rambo, Haunted House, Power Sword, Skid Row, plus 32k graphic adventures.

Individual issues sell for \$9⁰⁰ each or \$450⁰⁰ for all 50. We slashed the price to only \$150⁰⁰!

Figure 5

The location in Buffer +10 plus 1 will give you the lowest ORG location that will not conflict with the buffer.

Using the EQU command makes typing in routine addresses unnecessary and makes the program easier to follow. Eight pages are cleared; the program is set for PMODE 3,1; PCLS. The screen is filled, then displayed with SCREEN 1,1. The program switches to PMODE 3,5 and then fills and displays the screen. The action keeps alternating until you hit any key — JSR (\$A000). When you do, the computer is reset for text screen and the program ends. In ZBUG, type FINISH = to see that the program ends at \$43DA. Type FINISH - PCLEAR +1 = to get the length of the program, which is #\$59 bytes.

A good technique to prevent the slight flicker on the graphics screen when alternating pages is to fill the screen first, then display it with the SCREEN command. This also gives the best animation effect. Since the program starts with PCLEAR, type GPCLEAR or G4382 to execute it. The END must be followed with PCLEAR.

You are not limited, by the way, to eight graphic pages of #\$600 bytes each as long as you have enough memory to go higher without running into the edit buffer or the assembled program. The PCLEAR table continues in Figure 5.

Generally, though, PCLEAR 12 is the highest you will use. The buffer must start at least at \$4E00 (\$5600 with disk) and execute even higher (text programs plus symbol length plus #\$200).

00000 TOTAL ERRORS

Add many more than four colors in HSCREEN 4, plus some techniques to put more style and depth into your graphics

Breaking the Four-Color Barrier

By Rusty Cutchin

Several years ago, as a yearbook editor for two trade associations of electronic technicians, I had the idea of putting the two groups' logos on the cover of the yearbook via the hot new medium of computer graphics. I programmed the designs at home on my CoCo 1 with good old PMODE 4 commands (and lots of artifact colors). But what I remember most about the project was transferring the program's variables to the Zenith Z-100 computer at the office and watching the designs come up in glorious 640-dot-wide resolution and 16 colors. Imagine — diagonal lines became lines instead of staircases, and circles became circles instead of Ferris wheels!

As a part-time layout artist I came to appreciate detail and resolution as much as — perhaps more than — color. Now that the CoCo 3 supports 640-by-192 graphics, I've been surprised to see that the excellent programmers writing graphics editors for the CoCo 3 are sticking with what is essentially a wide PMODE 4 screen (HSCREEN 2) in order to conveniently access 16 colors. This probably has something to do with the number of CoCo users not yet using RGB monitors, without which mixed

Rusty Cutchin is a former editor of Cashbox, the record-industry newspaper. He owns Bass Hit Productions, which produces records and markets music software for the CoCo.

text and graphics in the highest resolution leaves a lot to be desired.

For those of you who *do* have an RGB monitor and don't mind spending a little extra time for more professional-looking results, particularly in business-oriented graphics, I have a couple of programs to easily get many more than four colors in HSCREEN 4, plus some techniques to put more style and depth into your graphics.

These techniques are not sophisticated, and anyone with a rudimentary knowledge of Enhanced BASIC can duplicate and expand on them. Creating new colors is simply a matter of using alternating vertical lines of different colors to create a new color. In HSCREEN 4, the distance between lines is so narrow that a new color or shade is created by the two adjacent lines.

Listing 1, NUCOLORS, illustrates this. After setting up the screen and variables, the program uses the HLINE command to draw 16 boxes on the screen and fill these boxes with lines of different colors to create new colors and shades. The program tells you the step rate of the line loops used, as well as the two color codes that make up the new color in each box. I chose black, white, blue and red as the four default colors in Line 10. As neutral and primary colors, they create the secondary colors purple and gray and pleasing lighter or darker shades of themselves. You can substitute yellow for white and create different shades of green and orange, as well as browns or any other shade that can be created out of four colors.

How you control the actual color depends on the palette colors you use and the step rate of the line loops in lines 45 and 50, where the vertical lines are actually drawn. The step rate 'S' (distance between vertical lines of one color) is initially set to 1 in Line 20, so that the first four boxes will contain the default colors just as if you had set them

with HPAINT. If you set 'S' to '2' in Line 20, the first four boxes will have new colors in them. 'S' will increase by 1 in Line 65 for the next four boxes, returning to a value of 2 in Line 70 for boxes 9 through 12 unless you change these lines. When you leave more than two lines of space between lines being drawn (Step 3 or higher), the area begins to look more like vertical lines than solid colors. If you modify the program by adding another line loop before Line 45 or 50 to use three colors instead of two to make up your new color, however, you'll need Step 3 or higher. NUCOLORS tells you the step rate you're using (above the box), as well as the color codes (below the box).

But how to use these new colors practically, and how to fill areas other than boxes? Listing 2, DEMO, draws a dual business graph, creates a pie chart and bar graph using these new colors, adds colored text to the screen, and illustrates a few simple techniques to make your Hi-Res pictures more appealing. Many business users and hobbyists alike have bought expensive graphics packages, only to find that software doesn't turn you into an artist. A knowledge of basic design and layout principles is just as important when you're creating an advertisement or business graph.

DEMO first draws a background grid in lines 30 through 50. This gives a high-

tech look to your design from the outset, and though a little overused in broadcast graphics, is still effective. It's kept in a darker color so it will stay a *background* design. Then in lines 60 through 130, the program creates two gray background boxes containing shadowed white boxes in which are printed the questions our graphs will answer. The outer box, the inner box and its shadow have given the graphics some 3-D depth with just a few commands. In lines 40 through 190 we use another default color to print the background data for our bar graphs. Notice that we always erase just enough of the blue grid before drawing something new in its place. This keeps images from interfering with each other and also highlights foreground designs.

In Line 200 the real fun begins. We create a blank box in Line 210 that we fill with new colors by going to the subroutine at Line 500 to draw our alternating colored lines. The subroutine at Line 600 draws the circle for our pie chart (Line 225). Then at lines 230 and 240 we call a subroutine to clean up the area outside our circle and presto — a new shape with two colors not in our default HSCREEN 4 palette! The rest of the program uses the lines subroutine (Line 500) to give us new colors for our bars, a new section for our pie chart and text to finish things up.

As you can see, a professional-looking graph or picture with full resolution and more than four colors is easily available, thanks to the great features of the CoCo 3. Here's hoping those talented 6809 programmers out there will enhance their fine products with a professional graphics editor that fully utilizes the CoCo 3's capabilities!

(Questions or comments concerning these programs may be addressed to the author at 1313 Cricket Lane, Woodbridge, NJ 07095. Please enclose an SASE when requesting a reply.) □

CoCo Graphics Designer

\$29.95

The CoCo Graphics Designer produces beautiful Greeting Cards, Banners, and Signs for holidays, birthdays and other occasions.

The program features picture, border, and character font editors, so that you can modify or expand the already built in libraries. Plus a special "grabber" utility is included to capture areas of high resolution screens for your picture library.

Requirements: a CoCo I, II or III with at least 32K, one disk drive, BASIC 1.0/1.1, ADOS 1.0/1.1 or JDOS. Printers supported include: Epson RX/FX, Gemini 10X, SG10, NX10, DMP 100/105/110/130/430 CGP220, many Okidata (check with Zebra), Seikosha GP100/250, Gorilla Banana, Legend 808. Order #C323 CoCo Graphics Designer \$29.95. Ordering Instructions: All orders add \$3.00 Shipping & Handling. UPS COD add \$3.00. VISA/MC Accepted. NY residents add sales tax.

In *this and in future* "CoCo Consultations," I will be trying something new. In addition to the familiar Q & A column, I will also include tidbits of information contributed by various folks and, in some cases, comment on the information. Thus, even if you don't have a question, I invite you to send in any little hints or descriptions of experiences you have had with the CoCo that you think might be of interest to the CoCo-owning public in general.

Using the CoCo 3's MMU

Where would I get the information needed to properly use the MMU of the CoCo 3 to access all 512K of memory via assembly language?

Brian O'Neill
Kirkland, WA

The best reference for that is the service manual for the CoCo 3. This book, which costs about \$14 and can be ordered from the people at your local Radio Shack store (they will have to call Tandy National Parts to order it for you), is the reference that all commercial CoCo 3 software developers use. After a bit of time spent experimenting to clear up a few minor ambiguities in the information there, any assembly language programmer should be fully able to use the MMU of the CoCo 3. If you need to see some examples of its use, however, you might want to order a copy of Spectral's *Super Extended BASIC Unravelled* from Microcom. This is a complete, commented disassembly of the ROM in the CoCo 3 that

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. On Delphi, Marty is the SIGop of RAINBOW's CoCo SIG and database manager of OS-9 Online. His non-computer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

By **Marty Goodman**
Rainbow Contributing Editor

includes a guide to the GIME chip similar to that found in the CoCo 3 service manual. By paying careful attention to the start-up code and Hi-Res screen handling code found there, you will see examples of the use of the MMU by Microware's programmers.

CoCo 3 Cold Start

How do I do a cold start on the CoCo 3?

Randall Reid
(RANDOMR)
Wiaraton, Ont.

From BASIC you can type `POKE &H71,0:EXEC&H8C1B` and press ENTER. This resets the cold start flag at \$71 (the same flag used by the CoCo 1 and 2) and then jumps to the special CoCo 3 cold start sequence. That special CoCo 3 cold start routine was "snuck in" on top of what used to be the (unusable) `DLOAD` command. In fact, you can accomplish the same thing by typing `POKE &H71,0:DLOAD` and pressing ENTER! Of course, you can also just hold down the CTRL and ALT keys, press the reset button, then release those keys and press the reset button again. But then you have to gaze briefly at the ugly faces of the "three mugateers."

A Sound Deal

I'm using a NEC Multisync monitor with my CoCo 3 and get an exceptionally crisp, sharp image. But the NEC Multisync doesn't have an audio input. Can you recommend a means of getting sound out of the CoCo 3?

Lewis Kurfist
(LEWKAY)
Parkridge, NJ

The back of the CoCo 3 has an RCA phono-type audio output jack. You can connect that to the Aux or Line Input of any nearby hi-fi system and get sound that way. Or, you can buy a \$12 Radio Shack "speaker amplifier" (Cat. No. 277-1008) and hook that to the CoCo 3 via a cable that has an RCA phono plug at one end and a 1/8-inch mini phono plug at the other. This "speaker amplifier" requires a 9-volt battery, but you may be able to run it off a battery eliminator if the eliminator in question has sufficiently cleanly-filtered DC power so as to prevent a nasty hum in the amplifier.

If you're a hacker, you may want to mount that unit inside the CoCo 3 under the keyboard and "steal" 10 volts to run it from the CoCo's main power supply at the junction of D1 and D2. If you get a hum, you can smooth it out by regulating that power down to about seven volts by using a 7805 regulator whose ground is floated with a small-value (100 ohm or so) resistor.

Your technical questions are welcomed. Please address them to CoCo Consultations, THE RAINBOW, P.O. Box 385, Prospect, KY 40059.

We reserve the right to publish only questions of general interest and to edit for brevity and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Questions can also be sent to Marty through the Delphi CoCo SIG. From the CoCo SIG > prompt, pick Rainbow Magazine Services, then, at the RAINBOW > prompt, type ASK (for Ask the Experts) to arrive at the EXPERTS > prompt, where you can select the "CoCo Consultations" online form which has complete instructions.

Fantastic Super Controller II

DISTO Super Controller I

\$99.95

A Superb Controller. Along with the included C-DOS, plug-in three more software selectable DOSes or 2764 or 27128 EPROMs burned to your liking.

The Internal Mini-Expansion-Bus lets you add some incredible features to the controller. Disto Super Add-Ons were designed to fit neatly inside the controller case.

DISTO **NEW** 3 in 1 Multi-Board Adapter

\$59.95

This Multi-Board is an adapter that plugs in any Disto Super Controller, Ramdisk or MEB Adapter.

It includes a new and improved Printer Port (Centronics compatible), a faster Real Time Clock (works at 2MHz.) and a true RS-232 Serial Port (external 12 volt AC adapter required). DB25 cable included.

It fits neatly inside the metal case and is still within Tandy's power limits. It also works with or without a Multi-Pak.

NEW DISTO RS-232 SuperPack

\$49.95

- A Stand-Alone (Multi-Pak required) adapter that gives the user a true RS-232 Serial Port.
- Completely compatible with OS9's ACIA software.
- Compatible with software that requires the Tandy Deluxe RS-232 Pack.
- DB-25 cable included.

Master Card and Visa Accepted

Sorry: No personal cheques

- Radio Shack/Tandy controller compatible.
- Works on all COCOs - 1, 2 or 3 with or without Multi-Pak Interface.
- One 24/28 pin socket for 8K ROM, 2764, or 27128 EPROM.
- Internal MINI-EXPANSION-BUS connector for one DISTO Super Add-On.
- Low Power draw; within COCO's requirements.
- Gold Plated edge connectors.
- Under OS-9:
 - Buffered Read/Write sector achieved without halting the CPU.
 - Continual use of keyboard even while reading or writing to disk.
 - System's clock no longer loses time during Read & Write.
 - NMI is blocked and transferred to IRQ in software for low CPU overhead.
 - Completely Interrupt driven for fast & smooth Multi-Tasking operations.
 - Drivers written by KEVIN DARLING

\$130.

DISTO SUPER ADD-ONS

- **Real Time Clock & Printer Interface** **\$39.95**
Have the Real Time, Date and Year displayed on your screen at a simple command.
- **Mini EPROM Programmer** **\$54.95**
A LOW COST EPROM Programmer that attaches directly to any Disto Super Controller or MEB adapter to program those often used utilities.
- **Hard Disk Interface** **\$49.95**
A Hard Disk Interface fully compatible with SASI controller. Fits inside the Super Controller, Ramdisk or MEB Adapter. OS-9 drivers included. Also available with RS-232 Serial Port.
- **Super RAM 3 ZeroK Board** **\$CALL**
Now is the time to upgrade your COCO 3 to 512K of memory. Just add the memory chips and install in your COCO 3.
- **MEB Adapter** **\$24.95**
A Stand-Alone Mini-Expansion-Bus in which you can plug any other Disto Adapter directly in a Multi-Pak without the need for a Super Controller or Ramdisk.

See You At Princeton RAINBOWfest!

Three do-it-yourself fixes for the hardware hacker

Quick Fixes

By Marty Goodman

Each of the following three discussions present information to enable hardware tinkerers to make inexpensive repairs and upgrades to their CoCo equipment. These three projects have the following in common: They address widespread problems with CoCo systems; they take no more than an hour or two to complete; they require little hardware construction expertise; and the total cost of parts for any of the projects is under \$5.

Although the information will not be presented in a strictly *for-the-beginner* fashion, anyone with modest experience building electronic projects should be able to follow these instructions. Indeed, only one of the three projects

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. On Delphi, Marty is the SIGop of RAINBOW's CoCo SIG and database manager of OS-9 Online. His non-computer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

requires that you even read a schematic diagram.

Project One: Sparklies

Many CoCo 3 users have complained of "sparklies." These are little linear flashes of light that appear on a monitor screen some — or all — of the time. Generally, OS-9 Level II users with RGB monitors and 512K of memory report seeing them during disk I/O, but they have been reported by Disk Extended BASIC users on monochrome monitors — even appearing when the disk is not in operation. These are caused by subtle timing problems between the GIME chip and the DRAM chips it needs to address.

Until recently the only known ways to cure the problem were complex, tedious, expensive or all three. You could buy a different brand of DRAMs for your upgrade board, replace the old (1986) GIME chip with a newer variant (1987) of that chip. You could also unsolder your 68B09E chip, replace it with a socket, and insert a 6309E (Hitachi-made CMOS version of the 6809E) in that socket. The DRAM chip and GIME chip replacements cost \$180 and \$50, respectively. The 6309E chip costs \$12 to \$25, is difficult to get and, because the replacement process requires the removal of the CoCo motherboard and the unsoldering of a 40-pin chip, is a viable alternative only for the

most experienced and well-equipped hardware tinkerer.

History of the Fix

In March of this year, Roger Krupski of RGB Systems reported some startling news on Delphi: He had found a way to cure the sparklies with a quick, cheap modification. Roger was experimenting with various-length Y cables on his system (something I have repeatedly warned RAINBOW readers *not* to do) and found that when he added a cable to the system, his sparklie problem got worse. He then decided to manipulate the system-timing in a simple, direct way. He hooked an AM radio-type, 10- to 365-pF variable capacitor in parallel with C10, (a timing fudge factor/RFI suppression capacitor present on the E clock). In this manner, he could *tune out* the sparklies. When he had his long Y cable hooked up, it took more capacity to tune out the sparklies than when he was not using the cable. Roger examined the waveform with his 100-MHz oscilloscope and found that his modification removed some of the overshoot in the E clock waveform and smoothed out a *jog* in the middle of it. It also shifted the time constant for that E clock fudge factor circuit that Tandy had provided.

After considerable experimentation, observation and measurement, Roger arrived at the modification that seemed

to work best. A few other tinkerers on Delphi who had sparklie problems tried it and reported considerable success in curing them. Of course, the following suggestion is still *quite* experimental. It *is* possible that such manipulation of the clock timing could cause problems (including decreased system reliability.) I recommend that *only* those CoCo 3 owners with serious sparklie problem try the following fix, and I urge those who try it to report to me, in care of RAINBOW, what success they have with the fix.

The Fix

The fix that worked best for Roger is as follows:

Remove R9 and R10 from the CoCo 3 motherboard and replace those 47-ohm resistors with 100-ohm resistors. Then remove C10 and C11 from the board and replace those 39-pF capacitors with 100-pF capacitors.

Help with the Details

With the computer open in front of you, R9 and R10 are the two small, side by side cylinders just in front (front = toward the keyboard) and near the left-hand corner of the GIME chip (the 64-pin, square, socketed chip). On the CoCo motherboard, they are clearly marked R9 and R10 in white silk-screened letters. Each has yellow, pur-

ple and black color-bands. Remove and replace these resistors with 100-ohm resistors. The resistors may be purchased at Radio Shack, Cat. No. 271-1311, 271-152 or 271-012. While any one of these three will work, the first (No. 271-1311) will probably fit best physically in the space available.

C10 is a tiny green blob located behind the GIME chip, to the left of a prominent black cylindrical electrolytic capacitor (C9). C11 is an identical tiny green blob located near the right-hand edge of the board, to the left of the front screw that holds down the 40-pin system bus connector. It, too, is located to the left of a prominent black cylindrical electrolytic capacitor (C27), and immediately to the left of the resistor R11. Both of these capacitors are clearly labeled on the motherboard as C10 and C11 in white silk-screened lettering. Remove both capacitors and replace them with 100-pF capacitors (Radio Shack Cat. No. 272-123).

Your total parts cost for this project should be under \$2.

If the sparklies are not completely cured (or at least considerably lessened), put things back the way they were. Although you will probably destroy the original resistors and capacitors you removed, replacement parts are available at Radio Shack (Cat. No. 271-009 for the 47-ohm resistors; Cat. No. 272-121 47-pF cap will do to replace

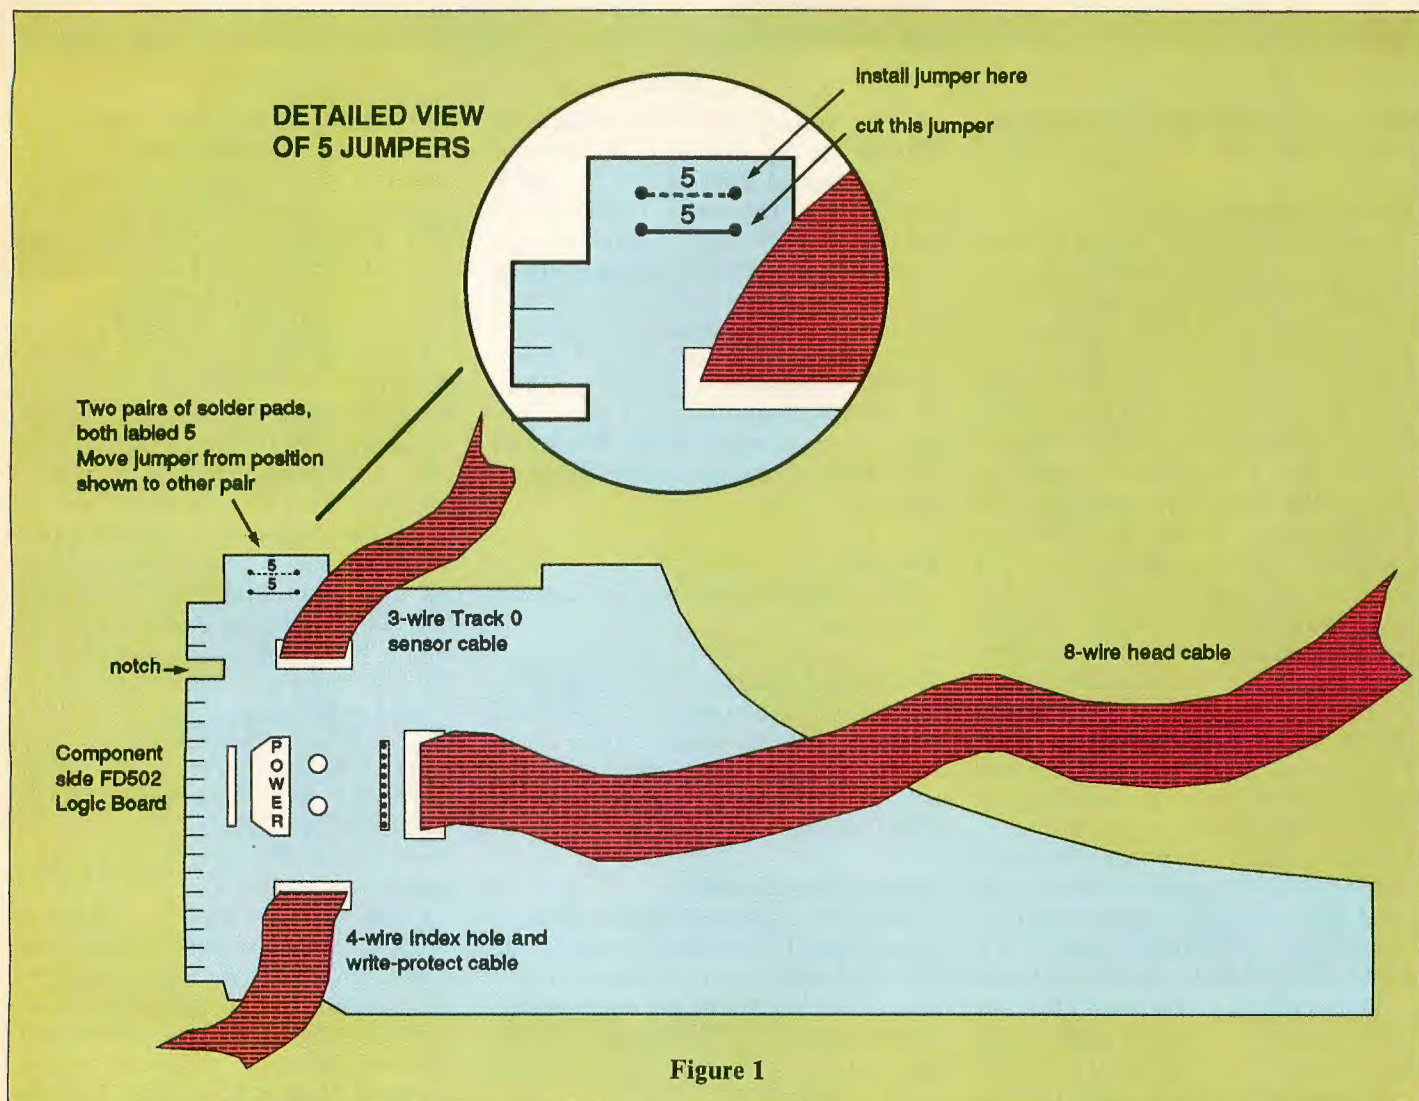

Figure 1

the original 39-pF cap). If the sparklies are not *quite* cured, you might want to experiment with different capacitor values. Try values ranging between 50 and 500 pF.

Remember that opening the case of the computer voids any warranty you might have with Tandy, and that Tandy repair services *does* reserve the right to refuse to repair computers that, in the opinion of the repairperson who sees the machine, are butchered beyond repair by their owners.

Project Two: FD 500/FD 502 Drive Fix

There is a potentially *serious* problem that will plague some owners of the newest disk drive systems sold by Tandy for the CoCo. This problem *only* occurs if you buy *both* your Drive 0 system and your second drive from Radio Shack, and you own a model FD 500 or the latest FD 502 double-sided drive systems. The problem will cause crashed disks when copying from Drive 0 to Drive 1 under both Disk BASIC and OS-9 (although the problem is more serious and frequent under OS-9). However,

there *is* a simple hardware fix for the problem.

Essential Background

By convention, the disk drive hardware for the CoCo was set up so that when any *one* drive was being accessed, the drive spindle motors on *all* drives in the system are on. All software written for the CoCo, especially the Disk Extended BASIC and the OS-9 Levels I and II operating systems, expect such behavior. This convention differs from the conventions of other PC Compatible, hardware. There, when any one floppy disk is accessed, *only* that disk's spindle motor spins.

Now, because CoCo's disk-access software expects all drive spindle motors in the system to be running when any one drive is accessed, if you tell the computer to read something from one drive and copy it to another drive, the system software will *not* wait for the motor on the other drive to come up to speed. (It knows you have one drive running and assumes that all other drive motors are at speed.)

The Tandon TM65L type drives used in the FD 500 CoCo drive system and the drives used in the FD 502 double-sided CoCo drive system have *jumper*s that determine if the drive motor will start in response to *just* a motor-on signal (as required for proper CoCo operation) or if the motor-on line must be active *and* the drive selected. These jumpers were properly set for CoCo operation on the Drive 0 unit of the FD 500 and FD 502 drives.

However, those buying an addition (Drive 1) to their FD 500 and FD 502 drives are in for a rude surprise. The Tandy stock-added drive for the FD 500 and FD 502 is generally supplied with incorrectly set motor logic jumpers. If you own a two-drive FD 500 or FD 502 system, and *both* drives were purchased from Tandy, check to see if your system has this problem.

Under Disk Extended BASIC, type POKE &HFF40,2 and press ENTER. If the Drive 1 light *and* motor are on, there is a problem that you can correct using the fix described as follows. (If your drives were set up properly, only the Drive 1

light — not the motor — would go on.) You can also check this problem by opening your drive case to see the spindle motors of both drives, typing POKE&HFF40,9 and pressing ENTER. Drive 0's drive light will go on, and its motor should go on, too. If the the spindle motor for Drive 1 does *not* go on as well, you will need to correct this with the fix described below.

The FD 500 Fix:

Open the drive case and expose the bare Drive 1 drive. You may need to completely remove it, disconnecting the 34-pin connector and the four-wire power connector and removing the two screws holding it to the case. Look on the drive's circuit board for three staking pins arranged in a 90-degree angle and labeled JP 7. If pins B and C are jumpered, you have found the problem. Remove the jumper that connects pins B and C, and shift it so that it joins pins A and C. If your drive is a different version, you may have to hunt for the jumper that correctly affects the motor's operation. Look for a jumper with zero resistance to Pin 16 (motor status) of the drive's 34-pin connector.

The FD 502 Drive Fix:

The FD 502 drive is a bit more complicated to fix. The FD 502 drive's motor logic control jumper is *soldered* in, and the jumper is relatively inaccessible, requiring that you not only remove the drive from the case, but that you also partly or completely remove the logic control board from the bare drive to gain access to the right jumper.

Open up the disk drive case and remove the top (Drive 1) drive (see Figure 1). This will entail removing four screws to open the case, the four-wire power connector and the 34-wire edge card connector from the drive and the two screws that hold the drive in place.

Next, look at the component side of the drive's printed circuit logic board. The component side has prominent cylindrical electrolytic capacitors and a number of connectors attached to it. (The underside of that board has some surface-mount resistors and capacitors soldered to it.) Position the board so that the edge connector is facing you, and the little notch in that connector is to your left. You must now identify three connectors.

To the left of the four-wire power

connector's original position is a connector that hooks to a three-wire mylar cable going to the Track 0 detect sensor. Further back and to the right of the power connector is a four-wire mylar cable that plugs into the circuit board, carrying Index-Hole and Write-Protect detector information. Behind the four wire power connector, some cylindrical capacitors and some bare staking pins, is an eight-wire mylar connector that carries signals from the drive motor's heads to the logic board. You will probably have to remove all three of these cables at their logic board connection.

These three mylar cables are attached to little white connectors that, in turn, plug into mating connectors on the circuit board. Do *not* tear the mylar when removing these connectors. Note, too, that the mylar is *not* plugged directly into the connector, as is the case with the CoCo keyboard connector. It is *bonded* to a connector, which mates to another connector that is soldered to the PC board. Do not try to pull the connector out by the mylar ribbon. Try using a jewelers' screwdriver to carefully remove those connectors.

After you have removed these three connectors, you will find three hold-down screws that attach the printed circuit board to the disk drive. Remove these, and lift out the printed circuit board from the drive.

To the left and behind the notch that marks Pin 2 of the 34-pin connector, you will see two pairs of pads on the circuit board labeled 'S'. While the right pair is jumpered, the left pair is not. Remove the jumper from the right pair of pads, and solder one across the other pair of pads.

Put the drive back together, attach the connectors and reinstall the drive in the cabinet.

Testing Your Work:

From Disk BASIC, type POKE &HFF40, 2 and press ENTER. The Drive 1 light should come on, but *none* of the motors should go on. While POKE &HFF40, 8 should cause *both* motors to go on, *none* of the drive lights should go on. POKE &HFF40, 10 should cause both motors and the Drive 1 light to go on, and POKE &HFF40, 0 should turn everything off. If your system behaves in that fashion, you've fixed it properly. If it behaved in that fashion originally, you should *not* attempt to fix it.

Thanks to Kevin Darling (KDARLING) of Raleigh, NC. Kevin was, to my knowledge, the first person to discover the FD 502 drive problem. Kevin was developing driver software for Tony DiStefano's No Halt Controller using a two-drive FD 502 system and kept running into problems. Eventually, he discovered the improperly jumpered FD 502 Drive 1 unit. It was an impressive detective job. Kevin later collected reports that the FD 500 system had a similar problem. Thanks, also, to Glen Hathaway (HATHAWAY) who informed me of the JP 7 on his Tandon TM65L jumper and its effect on the motor logic.

Project Three: Multi-Pak Upgrade

As I wrote over a year ago, Tandy has recommended that owners of all Multi-Pak models who want to use them with a CoCo 3 must upgrade them. At present, I am uncertain whether the upgrade is required for the new Multi-Paks (Cat. No. 26-3124), but still recommend it be done. Some of the Cat. No. 26-3134 Multi-Paks currently sold have an 'A' suffix after the catalog number (26-3124A), and have the upgrade board already installed. Those with older Cat. No. 26-3124 Multi-Paks should read on for instructions on how to make up and add this upgrade board themselves.

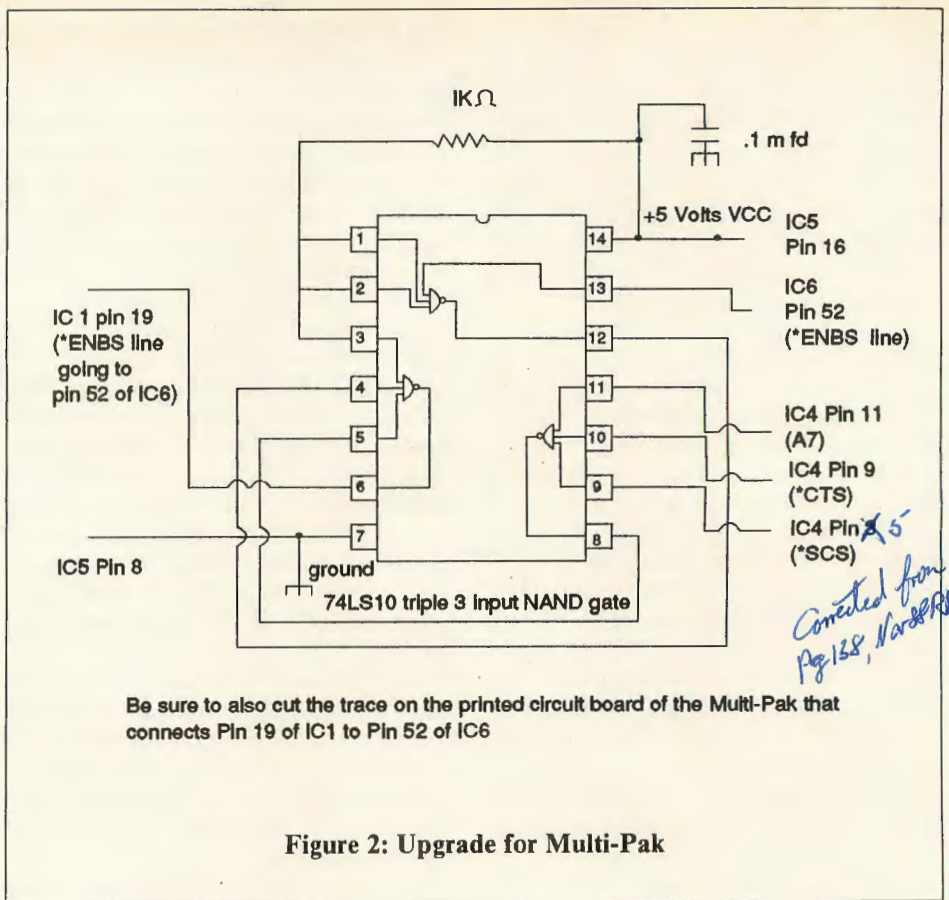

Figure 2: Upgrade for Multi-Pak

The needed upgrade for the older Multi-Pak (Cat No. 26-3024) was easy. You obtained a new PAL chip for it, and replaced the old, socketted PAL chip in the Multi-Pak with this new one. For a while, that upgrade PAL chip was available through Tandy National Parts. More recently, National Parts has refused to provide that part to end users. However, the part is still available from third-party CoCo retailers, such as Microcom.

Owners of the smaller, newer (Cat. No. 26-3124) Multi-Paks faced a more difficult upgrade. A Satellite Board had to be ordered from National Parts and then properly installed. This board is currently hard to get, and the instructions for its installation that I provided over a year ago are also dated, because those old instructions were keyed to particular wire colors. Tandy has since changed the wire colors of the upgrade board, making my original instructions nearly useless.

One of our members on Delphi took the trouble to "reverse engineer" the Multi-Pak Satellite Board upgrade and post a schematic for it. The upgrade consists of a *single*, 35-cent small scale TTL logic chip, a 10-cent deglitching capacitor and a 5-cent resistor. With the information provided in the schematic diagram (Figure 2) and a small printed

circuit board, hardware tinkerers should be able to do their own upgrade for a fraction of the cost charged by Tandy repair.

Those who would attempt this upgrade must be sure to first *cut* the trace that connects Pin 19 of IC 1 to Pin 52 of IC 6 on the printed circuit board of their Multi-Paks. Note that IC 6 is a monster square integrated circuit. It is a custom chip made *just* for the Multi-Pak. Note, too, that its pins are smaller than those of the other ICs — soldering to Pin 52, as called for in the upgrade, can be a delicate matter. Skill and fine tips on your soldering iron are both essential.

The schematic diagram shows the 74LS10 (triple three input NAND gate) IC with its pins arranged as they actually are on the chip, but it also shows what the pins connect to internally. This upgrade turns off the Multi-Pak's data bus when addresses that have Bit 7 set are presented to it. This protects the GIME chip registers from bus conflicts with any I/O devices plugged into the the Multi-Pak that try to use addresses greater than \$FF7F. Addresses accessed via the *CTS line (\$C000 through \$DFFF) and the *SCS line (\$FF40 through \$FF5F) are unaffected.

Thanks to Jim Johnson (REINDEER), who provided this information.

SUNDOG SYSTEMS

Warrior King

NEW!

Become RASTANN, Warrior King, on the quest to regain his rightful crown, hidden deep within a sinister land. Battle monsters, gain magic and weapons, and travel through harsh wilderness and dark castle dungeons in this medieval realm. From the creator of *Kung-Fu Dude* comes this awesome arcade game for the CoCo III! *Warrior King* uses the most detailed 320x200 16 color graphics and high speed machine code to vault you into a world of fantasy. Dare ye challenge the many perils ahead in order to become WAR-RIOR KING? Req. 128K CoCo III, disk drive, and joystick. Only \$29.95.

In Quest of the Star★Lord

This is THE graphic adventure for the CoCo III! Unparalleled 320x200 animated graphics will leave you gasping for more! You quest for the Phoenix Crossbow in this post-holocaust world of science and fantasy. *In Quest of the Star Lord* is a full 4 disk sides of mind-numbing adventure! Req. 128K CoCo III and disk drive. Only \$34.95. Hint Sheet: \$3.95.

"A dynamite program! The best graphics I've seen to date on the CoCo III. You have to see it to believe it."

— 8/88 Rainbow review

Kung-Fu Dude

An exciting arcade game. The BEST karate game ever created for the CoCo! Destroy opponents and evade obstacles as you grow ever closer to your ultimate objective. Spectacular graphics, sound effects, and animation! Req. 64K CoCo, disk drive, and joystick. Only \$24.95.

"The CoCo karate gap has been filled and Kung-Fu Dude does it excellently. I highly recommend it!"

— 2/88 Rainbow review

All programs CoCo 1, 2, 3 compatible, unless otherwise stated

Pittsburgh, PA 15235
(412) 372-5674

The epic adventure is back! The largest adventure campaign ever seen for the CoCo is again available! A total of six disks of intense graphic adventure will have you playing for weeks! Each section is a two-disk stand alone adventure, but all three together form an epic saga. Quest for the legendary Earthstone in the ancient dwelling of the dwarves while you enjoy the classic graphics that made this trilogy famous! Each adventure can be purchased separately for \$29.95, the lowest price ever, or you can purchase the entire set for only \$74.95! Req. 64K CoCo and disk drive.

"One of the best adventures I have experienced to date!" — 6/86 Rainbow review

"The animated graphics are dramatic, detailed, and excellent!" — 11/87 Rainbow review

"The adventure of a lifetime. Don't miss out!" — 7/88 Gamer's Connection review

CHAMPION

Become a superhero in this unique 64K action adventure. Great graphics and sound effects! See 5/87 Rainbow review. Disk \$19.95.

DRAGONBLADE

Another great 64K animated adventure! Can you obtain the enchanted sword to slay the evil dragon? See 11/86 Rainbow review. Disk \$19.95.

WHITE FIRE OF ETERNITY

Enter the era of monsters and magic in this splendid 64K animated adventure! See 12/86 Rainbow review. Disk \$19.95.

Personal checks, money orders, and American C.O.D. orders accepted. Include \$2.50 for S/H. \$3.00 extra for C.O.D. orders. PA residents add 6% sales tax. Authorship and dealer inquires welcome.

Those who have been using Delphi for a year or so may be familiar with the Delphi Advantage plan. Essentially, this plan offers reduced rates for members who guarantee to use at least \$24 worth of online time each month. Now Delphi has reduced Advantage Plan usage rates to \$4.80 per online hour. Figure 1 shows a comparison between Delphi Advantage rates and the hourly rates of two other services.

To sign up for the Delphi Advantage, enter USING ADVANTAGE at the Main> prompt on Delphi. There is a one-time entry fee of \$19, and you must commit to using at least \$24 of online time each month (unused portions of the \$24 do not carry forward to the next month.) The \$24 usage commitment is applied at the beginning of each month. Many of you probably use Delphi quite a bit more than this already. A quick review of your account should be all that is necessary to determine if the Delphi Advantage would be beneficial to you.

In addition to the reduced access rates, Delphi Advantage members receive the monthly Delphi newsletter and a monthly summary of usage. The plan is open to all members in good standing (no outstanding accounts). You can cancel online anytime you decide the plan is not helping you.

A New Development

Through an agreement with Dave Thomas (MORTIMER), Falsoft, Inc., publishers of THE RAINBOW and PCM, now manages the Portable Place SIG on Delphi. PCM has covered the Tandy portables for more than five years now. While PCM's magazine coverage of portable computers will still exclude non-Tandy products, the newly acquired SIG welcomes users of all portables. Good luck to the staff as they embark in this new direction.

Oldie, But Goldie

Last month we covered some useful applications of files in the Delphi Workspace. Now, let's focus our discus-

Cray Augsburg is RAINBOW's technical editor and has an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Kentucky. His username on Delphi is CRAY.

Lower rates, expansion and online editing

Time for a Change

By Cray Augsburg
Rainbow Technical Editor

sion on the files themselves or, rather, the text editors used to create them.

In the past, we have used the CREATE command to build text files online. This is OK for simple notes. But what if we want to correct mistakes in longer files?

The CREATE command only lets us write the file. Once a file is saved, the only way to make corrections is to retype the entire file. Here is where Delphi's online text editors really come in handy.

Delphi offers a choice between two different line-oriented editors: *EDT* and *Oldie*. I prefer to use *Oldie* because its command structure is based on slash commands as are other areas of Delphi. In addition, *Oldie* shows you exactly where you are in the file by supplying you with two numbers. The first number indicates your current position in the file. The second number indicates the total number of lines in the file.

We'll save discussion of *EDT* for a future column. Use the Settings section of Workspace to set *Oldie* as your default online text editor. To invoke the editor while in Workspace, enter EDIT *filename*. Listed below are the commands available with *Oldie*. Please note the slashes are used as delimiters in the command lines. They *are* required.

- /APPEND/*string*/ adds the text *string* to the end of the current line.

Database Report

By Don Hutchison

Rainbow CoCo SIG Database Manager

This month in the CoCo SIG, we've got some great graphics that I'm sure you will enjoy.

OS-9 Online

In the General topic of the database, Keith Alphonso (ALPHASOFT) uploaded a text file describing Alpha Software Technologies' BBS system. Jim Johnson (REINDEER) sent in an article about creating a customized system disk that boots up into an 80-column text window.

The Utilities topic includes Bill Brady (OS9UGED), who posted a file management utility called Runner, and John Beveridge (JOHNTORONTO), who uploaded a program to remove the first block from files sent in CoCoBin format by the *Wiz*.

In the Patches topic, Chris Burke (COCOXT) sent us a patch to correct a bug in the Rename command of *EZGen* Version 1.04. Chris also uploaded an *EZGen* script to fix an error processing bug in Version 2.2b of the Burke & Burke BBFHDisk.dr hard disk driver. Kevin Darling (KDARLING) uploaded an 80-column patch for *TS/Edit*, provided by Bob Santy.

In the Telcom topic, Merle Kemmerly (TOOK3) uploaded Version 3.0.0 of *Telstar*, a terminal program for the CoCo 3 under Level II OS-9. Bill Brady uploaded the *WizACIA* device driver and M2w descriptor (the ACIA port driver used by the *Wiz*). Bill also posted the source code for the SuperBoard version. Warren

**THE POWER STONES
OF ARD**

**THE QUEST FOR
THE SPIRIT STONE**

You're tired, you're hungry, not to mention you're badly injured. No one in town seems to want to talk to you. Your magic sword has stopped glowing, the room is dark, you're out of spells, you can't get your wand to work, you won't swear to it but you may be lost, you have no idea what that last puzzle meant, and you hear something large moving just beyond the only door. The old sage warned you there would be days like this!

"QUEST FOR THE SPIRIT STONE" is an Adventure that will keep you playing for hours. It features single keystroke commands, 16 color graphics, 100% Hi-Res graphics screens, full game save, extensive playing area, level advancement, and the disk is not copy-protected. You choose your character's name, race, sex, and ability scores. The use of arrow keys simplify movement. This one is easy to play but a challenge to complete!

"Fun and challenging . . . should find its way into many CoCo 3 software collections."

The Biggest
The Best
The Indispensable

The RAINBOW

THE COLOR COMPUTER MONTHLY MAGAZINE

THE RAINBOW is the biggest, best, brightest and most comprehensive publication a happy CoCo ever had! **THE RAINBOW** features more programs, more information and more in-depth treatment of the Tandy Color Computer than any other source.

A monthly issue contains nearly 200 pages and up to two dozen programs, 14 regular columns and as many as 12 new product reviews. And advertisements: **THE RAINBOW** is known as *the* medium for advertisers — which means every month it has a wealth of information unavailable anywhere else about new products! Hundreds of programs are advertised in its pages each month.

Every single issue of **THE RAINBOW** covers the wide spectrum of interests in the Tandy Color Computer — from beginners' tutorials and arcade games to telecommunications and business and finance programs. Helpful utilities and do-it-yourself hardware projects make it easy and fun to expand your CoCo's capabilities. And, monthly reviews by independent reader reviewers take the guesswork out of buying new software and hardware products.

Join the tens of thousands who have found **THE RAINBOW** to be an absolute necessity for their CoCo. With all this going for it, is it surprising that more than 90 percent of **THE RAINBOW** subscribers renew their subscriptions? We're willing to bet that, a year from now, you'll be doing the same.

Rainbow On Tape & Rainbow On Disk!

— great ways to bring **THE RAINBOW** into your life. Each month, all you do is pop the tape into your cassette player or the disk into your drive. No more lost weekends. As soon as you read an article about a program in **THE RAINBOW**, it's ready to load and run. No work. No wait.

Just think how your software library will grow. With your first year's subscription, you'll get almost 250 new programs: games, utilities, business programs, home applications. And, with **RAINBOW ON DISK**, you'll also get all the OS-9 programs.

RAINBOW ON TAPE and **RAINBOW ON DISK** — they're the "meat" of **THE RAINBOW** at a price that's "small potatoes." And now you even have a choice about how it should be served up to you.

To get your first heaping helping, just fill out and return the attached reply card. No postage necessary.

C.O.D. ADD \$5

- /BOTTOM moves the edit pointer to the bottom of the file.
- /CHANGE /string1/string2/ replaces string1 in the current line with string2.
- /DELETE removes the current line from the file.
- /DIRECTORY shows a directory of Workspace files.
- /EDT invokes EDT. (You can always move to EDT from Oldie, but you cannot call Oldie from within EDT.)
- /EXIT leaves the editor and saves the file.
- /FETCH merges an existing Workspace file into the file you are now editing.
- /GLOBAL /string1/string2/ changes all occurrences of string1 in the file to string2.
- /HELP shows the HELP command list onscreen.
- /INVISIBLE toggles the line number

- display on and off.
- /LOCATE /string/ finds the next occurrence of string in the file and moves the edit pointer to that line.
- /NEXT moves the edit pointer to the next line in the file. You can also use /+ to move one line forward and /- to move one line backward.
- /PRINT prints the current line on the screen.
- /QUIT leaves the editor without saving the file.
- /REPLACE /newline/ replaces the current line of text with newline.
- /SAVE saves the current file — as it stands — as a Workspace file.
- /TOP moves the edit pointer to the top of the file.
- /UPLOAD merges a file from your computer into the file you are editing at the current position of the edit pointer. Uses buffer capture (^R/^T

- flow control).
- /VIEW toggles display of the text on and off. It affects display of text while using /NEXT.
- /WHERE is used to find the current position of the edit pointer. (Especially useful for those who have used /INVISIBLE to turn off the line number display.)

These slash commands can be abbreviated if enough characters are supplied for the command to be unique. In fact, you can abbreviate all the commands down to one character except /DIRECTORY and /EDT (/D defaults to delete and /E will exit the editor).

Next month we'll learn to use these commands to make online editing of text files a breeze. ☺

Hrach (WAROCK) posted *RiBBS-Trek*, a rework of the public domain *Star Trek* game for use on *RiBBS* systems. Jim Hollier (PGJIM) sent us *JTerm* Version 2.9, an upgraded version of the popular *JimmyTerm* program. Bob Ayella (BOBAYELLA) uploaded *BBTerm*, a freeware terminal program. Finally, Paul Pollock (PAULBELL) posted a set of accessory programs for use with *XCom9*.

Barry Aaron (BARRYAARON) uploaded a BASIC09 program for the Graphics and Music topic. Barry's program generates complicated and attractive patterns of dots.

The Programmers Den topic gives us Mike Stute (GRIDBUG), who uploaded the *Printf* and *Scanf* functions for the standard C library.

CoCo SIG

Jerry Semones (JERRYS) posted a humorous text file called *And It Was Good*, which describes the corporate decision-making process, in the General Information topic of the database.

In the CoCo 3 Graphics topic, Bruce Nelson (DOCNELSON) uploaded his picture of the galaxy. Mark Garbarini (F19) uploaded four original drawings that he created with *The Rat*, and I (DONHUTCHISON) posted the CoCo Gallery files for three previous months. John

Barrett (JBARRETT) sent us two of his *CoCo Max 3* pictures. Eric Robichaud (EGROBICHAUD) uploaded an updated version of his MGE viewer utility for MS-DOS machines. (The MS-DOS programs, *PKXARC* or *ARC* are required to unARC these files. *TC*, as used on the CoCo, will not work.) Bob Wharton (BOBWHARTON) posted some fantasy drawings, a picture of the Qantas koala, an NFL logo, and the 1988 Baseball All-Stars logo. David Mills (DAVIDMILLS) uploaded a nude drawn by Brad Bansner. Finally, Zack Sessions (ZACKS) uploaded some PMODE4-to-MGE conversions and a program he wrote to do them.

The Source for 6809 Assemblers topic includes Roger Krupski (HARDWAREHACK), who posted an 80-column screen dump program for the CoCo 3, and Jason Forbes (COCOBKID), who posted the source code for his game *Life*.

In the Utilities & Applications topic, Robert Pierce (RPIERCE) sent us a disk editor package, and Eric Tilenius (TILENIUS) uploaded a utility that breaks the long lines in ASCII files (created by many word processors) into files containing lines of a specified length. (This utility inserts carriage returns as needed to ensure that line length.) Malcolm Heath (MACHEATH) uploaded his

no-hassle check register for the CoCo 3. While Ken Halter (KENHALTER) posted a program that prints four disk directories in a row, Craig Moore (CRAIGMOORE) posted *CMAudio*, a freeware sound-sampling program designed for the CoCo 3. Troy House (AMTEX) uploaded his *TV Guide Companion*.

In the Hardware Hacking topic, Marty Goodman (MARTYGOODMAN) uploaded a text file that describes how to modify a standard Hi-Res joystick adapter for use with *CoCo Max 3*.

The Classic Graphics topic included my posting of the CoCo Gallery files for twelve previous months, Jason Forbes' *Life* tutorial graphics and some graphics simulations for the game and some of John Barrett's favorite cute faces.

Dick White (DICKWHITE) posted six archived poll results files in the Archives topic.

Product Reviews & Announcements included Mike Stute's review of *Lyra* Version 2.52, and Spencer Lepley's (SPENCELEPLEY) review of *Max-10*.

In the Data Communications topic, Malcolm Heath posted a version of the *WeFax* program for the DMP-105/106 printer.

That does it for this month. See you online on Delphi! ☺

OWL-WARE

Proven Technology New CoCo 3 Utilities

Great for 512K Systems! From Color Venture and OWL-WARE

PRINTER LIGHTNING

A great print spooler which gives you 44K print buffer from a 128K CoCo and up to 438K (200 pages!) from a 512K CoCo. With this spooler you can run a program while you are printing a file. The spooler does not slow down the computer to any noticeable extent while you are running a second program and no lost characters arise. Baud rates selectable. *Printer Lightning* can reside in memory along with *RAMDISK*!

RAMDISK

Using 512K CoCo 3 you have access to 2 additional disk drives in RAM. All disk commands are supported, and the data are Reset button protected. You can now have up to 5 disk drive capacities on line at once and can assign the ram disks to any drive number. By making the ramdisk Drive 0, all programs which require a lot of drive access will run much faster. You can have the *RAMDISK* in memory at the same time as the *Printer Lightning*!

BACKUP LIGHTNING

This program is the fastest way to make backup copies of your files using a 512K CoCo. You can backup 35, 40, or 80 track disks single or double sided. Both RS and OS-9 disks may be backed up. The original disk is saved to memory and a copy can be made on an *unformatted disk* every 45 seconds! The lightning read, write, format, and verify routines that were developed make this program much quicker than RSDOS or OS-9 for backups. This will become one of your most used programs!

Super I/O Board for OS-9

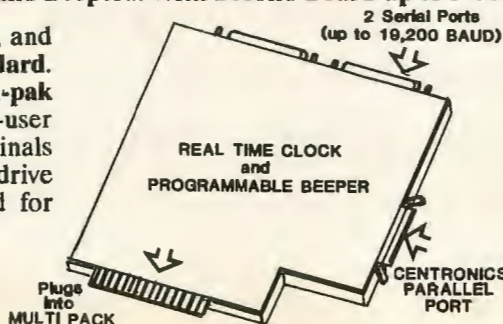

Each Board Provides 2 Serial Ports and Centronics Parallel Port

First Board has Real Time Clock and Beeper... With Second Board up to 5 Users

The serial ports are usable up to 19,200 Baud, and the parallel port is a true Centronics standard. Plug into your multi-pak. On CoCo 3, multi-pak must be upgraded. You will have a multi-user system with additional computers or terminals plugged into the serial ports. An OWL hard drive and 512K upgrade are strongly recommended for multi-user systems.

Intro Price... \$169.

BOARD 2... \$145.

OWL-WARE

Proven

On the Razor's Edge of

Basic and OS-9 Hard Drive Systems

Proven Performance for Demanding Home or Business Users

Every hard drive which has been produced by OWL-WARE during the last 3 years is **complete**. A system consists of software, hard drive, controller, heavy-duty power supply, and LR Tech Interface. There are no hidden costs for assembly or testing. When a drive system is ordered, we fully **assemble, test, and burn-in** the system for 3 full days. This ensures dependability and optimum performance.

We have now been supplying CoCo hard drive systems and parts for more than 3 years. This is the longest history in the CoCo market of any system. Some other advertisers are stating that they have one of the most reliable systems for the CoCo *with all of 4 months history in the CoCo hard drive market!* We have reached our position in the hard drive market by providing our customers with a quality product that they (and we) can be proud to own and use.

Because of many requests for a lower price system in kit form, we are now selling a kit of all parts at a significant discount compared to our regular prices. We recommend this kit (or any kits offered by any other supplier) only to those who have experience in electronic assembly and OS-9.

For OS-9 Levels 1 and 2

OWL Hard Drive BASIC 3

There have been several ads in this magazine about BASIC for Color Computer hard drive systems. These ads sometimes only tell a part of the story. Our BASIC system price includes **assembly, testing, and 3-day burn-in** period. We do not require a Multi-pak to operate.

Our hard drive systems are fast, reliable, and reasonable in price. This has been proven by hundreds of users over the past 3 years. We do not have to turn off error checking for speed. We achieve high speed BASIC from a unique indexing method.

The table below will summarize some of the key points about our BASIC hard drive system and two other systems. We believe that we have the best BASIC interface for CoCo hard drives available.*

BASIC Hard Drive Systems*

Feature	OWL	B&B	RGB
Drive Portion Available	Entire	Entire(?)	Entire
User Sets BASIC/OS-9 Partitions	YES	Yes	No
Add to Existing OS-9 Drive Without Reformat	YES	Yes(?)	No
Drives 0-3 Hard/Floppy	YES	No	Yes
Built in Park	YES	No	Yes
Speed*	FAST	Fast	Fast

* All feature details are believed to be true at time of writing and are subject to change. We believe that our BASIC hard drives are the fastest due to our indexing method, but all three systems are fast. On ours all BASIC commands work including DSKINI, DSKI\$, and DSKO\$.

OWL WARE Software Bundle

Disk Tutorial/Utilities/Games DISK TUTOR Ver 1.1

Learn how to use your disk drive from this multi-lesson, machine language program. This tutor takes you through your lessons and corrects your mistakes for a quick, painless disk drive introduction. (This professionally written tutor is easily worth the bundle's total price.)

OWL DOS

An operating system that gives faster disk access and allows the use of double-sided drives. Corrects a floating point number error on early CoCo systems.

COPY-IT

Quickly copies selected programs between disks. A wild card option selects groups of programs to copy.

VERIFY

Verifies reading of each sector. Bad sectors are listed on the screen.

2 GAMES

We will select 2 games from our stock. These sold for more than \$20 each.

If sold separately this is more than \$125 worth of software!!

Do not mistake this software with cheap, non-professional "Public Domain" software which is being offered by others. All of this software is copyrighted and professional in quality. The tutor is unique with us and has helped thousands of new users learn their disk drive.

only \$27.95

(or even better)

only \$6.95 with

any Disk Drive Purchase!!

Our prices include a discount for cash but do not include shipping.

OWL-WARE has a liberal warranty policy. During the warranty period, all defective items will be repaired or replaced at our option at no cost to the buyer except for shipping costs. Call our tech number for return. Return of non-defective or unauthorized returns are subject to a service charge.

A program to make your keyboard perform like the big boys — and more

Get More Power From Your CoCo Keyboard

By Michael Sweet

Every month more and more hardware and software seems to come out for the CoCo, and the first thing most CoCo owners get is a new keyboard. Most available keyboards contain four extra keys, either four function keys or two function keys and the ALT and CTRL keys. The program presented in this article will patch BASIC so the extra keys will perform functions similar to those of the PC Compatibles. Also added are a print spooler (32K buffer for 64K machines), an added device number for owners of the Radio Shack Sound-Speech Pak, and a screen print (dump to printer) routine for both

Mike Sweet is a student at Cayugo County Community College. He has won awards for programming in the New York state math symposium and hopes to make programming his career.

New Low Prices! New Products!

HDS Floppy Drive Controller Board

FEATURES:

- Gold Plated Edge Cards
- Dual Selectable ROM Sockets
- Compatible With All COCO Versions
- One Year Warranty

HARD DRIVE SPECIALIST has manufactured floppy drive controllers for the Color Computer for **SIX** years. Buy the controller alone to upgrade your present drive system, or purchase a complete drive 0 to get a high quality drive system loaded with features. This controller allows the use of either two 24 pin ROMs, or one 24 pin and one 28 pin ROM. Using this board with the standard Radio Shack ROM gives you 100% compatibility with all Radio Shack software.

Completed and Tested Board with ROM.....	\$99.
(includes Case and DOS instructions)	
Completed and Tested Board	\$79.
without ROM (includes case)	
Bare Board with Instruction Manual.	\$30.
Parts Kit for Bare Board without ROM.....	\$30.
Radio Shack ROM (current version).....	\$30.
Double Sided Compatible ROM	\$20.
NEW! Magnavox 8CM515 Monitor	\$289.
with Cable for COCO 3	
NEW! 2400 BAUD ZOOM External Modem	\$179.
with Cable.	

Ordering Information: Use our WATS line to place your order via VISA, MasterCard, or Wire Transfer. Or mail your payment directly to us. Any non-certified funds will be held until proper clearance is made. COD orders are welcome as well as purchase orders from government agencies. Shipping costs are available upon request. If you are not satisfied with your purchase within 30 days, you may return product for full refund excluding shipping costs.

the text screen and any graphics screens.

The standard CoCo keyboard contains 54 keys, with the SHIFT keys tied to the same input so that the computer "sees" only 53 keys. Radio Shack did not allow for the four extra keys, so the normal key scan will not return correct codes for these keys. To utilize the extra keys, you will need an assembler (*ED-TASM+* or similar). As listed, the program will work on a 32K CoCo or a CoCo 3. It can be altered to work with 16K and 64K machines as follows:

For 64K systems, make the following changes:

```
100      ORG      $7800
1690     CMPX     #$FF00
2100     CMPX     #$FF00
```

and add the following lines:

```
1660     STA      $FFDF
1680     STA      $FFDE
2070     STA      $FFDF
2090     STA      $FFDE
```

For 16K systems make the following changes:

```
100      ORG      $3000
1690     CMPX     #$4000
2100     CMPX     #$4000
```

Please note that the 64K version will *not* work properly on a CoCo 3.

Once you have assembled the program to tape or disk, go into BASIC, type CLEAR 200, &H6FFF for 64K or CLEAR 200, &H27FF for 16K and load the program. Execute the program, remembering that you must never type EXEC more than once after you have loaded it — doing so will destroy all the old I/O routine pointers. If you have typed the program in correctly, all the keys should function normally. Holding them down should yield auto-repeat. The extra keys should work as shown in Figure 1.

The program initializes itself at START by redirecting BASIC's I/O routines (screen output, keyboard input and printer output). Note that the INKEY\$ function address is changed to point to a new routine (lines 340 through 430) so that it will check the keyboard buffer. The between-statements routine is also redirected for the same reason (lines 440 through 450). BASIC also checks to see if you have specified a legal device number (as in a PRINT#-1 statement) and reports an FC error if you haven't. In order to allow a device number of -3 for the Speech Pak, this also had to be changed

Figure 1

(lines 460 through 470). The next 550 lines contain the code for the interrupt routine (NEWIRQ, for keyboard entry checking and print spooling); the output to the Speech Pak (SPEECH); for output to the screen (CHROUT); for spooler use (both PRINTR for entry of print data into the buffer and SERIRQ for spooler output to the printer); and the keyboard scan routine itself (POLKEY, POLCAT, NEW16A, GETKEY and NEW19A).

Now the screen print program (SCRKEY) is encountered. Since SCRKEY is called from POLKEY, the stack has to be reset in order for it to return correctly. Then Location \$FF22 is read. If it is >127 (negative), then the program goes to GRAPH. Otherwise the text screen is assumed to be seen, and text from \$400 to \$5FF is converted to ASCII format and sent to the printer. If it is a graphics screen, the starting address of the screen is assumed to be in Address \$BA (BASIC's screen pointer).

A page code, CHR\$(12), is sent to the printer, along with a half forward linefeed code. On most Tandy printers this is a CHR\$(27) plus CHR\$(28) combination; if yours is different, change lines 6480 and 6500 to LDA numbers, putting the codes after the number signs.

Then the old line length is saved, and the width is set for the graphics mode you are in. If it is one of the four-color modes, the program moves to COLOR for the dump. Otherwise, it produces a reversed screen image to the printer (white dots appear black). This can be changed by de-commenting (removing the asterisks) in lines 6930 and 7440.

Once the dump is done, the program restores the old line length and full linefeed. The codes used by Tandy are CHR\$(27) and CHR\$(54). If your printer uses different codes, change lines 7050 and 7070 the same way you did before.

In order to produce a large image, I decided to use the block graphics characters available on Tandy printers (lines 7660 through 7730). If your printer does not use the same codes (two codes per line, in Hex), replace them with codes corresponding to the low-resolution graphics characters (see *Getting Started With Color BASIC*). If your printer does not support these characters, the screen print routine will work only for the text mode. One possible solution is to add a graphics dump routine.

A note to Tandy printer owners: Look in your printer manual for details on the block graphics characters. Some print modes (Correspondence, etc.) do not allow graphics.

Details of the I/O Routines

Several changes were made to the printer routine, the first one being the addition of a print spooler. Memory locations &H9B and &H9C contain the carriage width (number of characters

per line) and the current printer head position. When the end of a line is reached, a carriage return, CHR\$(13), is sent. Also, locations &H97 and &H98 are the current page line number and the maximum page line number. When the

current page line number is equal to the maximum, a form feed, CHR\$(12), is sent. This way you won't print over the perforations in the printer paper. The page length (in Line 320) and the line length (second two digits of Line 290) can be from 01 to FF Hex (1 to 255 decimal) and can be changed without affecting the program's function. Also, the baud rate is set to 29 Hex (1200 baud) and can be changed for printers that handle faster baud rates. Replace the first two digits in Line 290 with the Hex value for the baud rate you want.

The Speech Pak output routine (lines 1470 through 1610) merely does what Radio Shack's program on Page 11 of the CoCo manual does, but now all you have to do is type:

```
PRINT #-3, "HELLO"
```

and you will hear the computer say "hello." One interesting side effect of this is that Extended BASIC uses Device #-3 for input from a modem. That could make writing terminal software considerably easier! The SPEECH routine itself keeps scanning Address &HFF7E until Bit 7 is set (ready to receive signal — >127). Then it sends a

APRIL 1983 "RAINBOW"

Now you can retrieve lost data on any disk. VIP Disk-Zap is the ultimate repair utility for repair of most disk errors. VIP Disk-Zap verifies diskettes, reads and writes any sector and lets you retrieve all types of bashed text files, BASIC and ML programs. VIP Disk-Zap includes a 50 page tutorial manual **DISK \$24.95**

VIP Terminal

RATED BEST IN JANUARY
1984 "RAINBOW"

For your important communications needs you've got to go beyond software that only lets you chat. You need a smart terminal so that you can send and receive programs and messages and print them! The VIP Terminal features 32, 51, 64 or 85 characters by 21 or 24 lines on the screen and has a 43K byte buffer to store information. **DISK \$29.95**

Turn the page for more VIP software!

character to the Speech Pak and returns.

The spooler routine is standard issue. After putting the character into a circular buffer, it updates the line position and page line values as necessary. The actual printing is done during an IRQ interrupt, where the routine checks to see if the printer is busy or not. If not, it will, if possible, pull a character out of the buffer and send it to the printer.

POLKEY is quite similar to BASIC's keyscan routine at \$AICI, but the addition of the four keys and their functions required some overhauling. First, the SHIFT key is not masked from the rollover any longer, although pressing it alone will not return a code. The same holds true for the ALT and CTRL keys. For this reason, holding down one of these keys for more than a second and then pressing another key with it gives an instant repeat of that key.

Following the POLKEY routine is the POLCAT routine, which is called during the IRQ interrupt. First it calls POLKEY to see if a key has been pressed. If not, it returns. If the code returned is negative, the corresponding eight-character string is put into the keyboard

type-ahead buffer. Otherwise, the code returned is put into the buffer. The buffer will hold up to 128 characters. If the buffer is full, the speaker will beep a warning to you.

At Line 4170 the ALT keys are defined, starting with ALT-@. Each definition may be up to eight characters long, and the ASCII code of the last character must be 128 or greater for the program to recognize the end of its definition. Also, each definition must start on an even eight-byte boundary from ALTCHR. Thus, RMBs are used to fill up the rest of the unused bytes between definitions.

The function key definitions come at Line 5270 and may be up to 16 characters long. Therefore, they must come at even 16-byte boundaries to each other, again using RMBs.

NEW16A is called during the input routine and at the OK prompt. If the keyboard is being called for input, the routine will wait, with the cursor flashing, until the buffer has some characters in it. Once a key has been pressed, the cursor is erased and the buffer is updated, moving the buffer contents down one character. Then the keystroke is returned to the input routine.

NEW19A is the between-statements BREAK and SHIFT-@ check. The keyboard buffer is checked to see if a keypress has been made. If so, NEW19A checks to see if it was BREAK or SHIFT-@. If it was neither, it continues with the Extended BASIC routine at \$82C0 (for TRON tracing). If BREAK was pressed, the screen is restored to text and the spooler buffer is reset. The BASIC routine waits until another key is pressed, and then goes to the Extended BASIC between-statements routine.

Conclusion

Once you get this program up and running, you'll probably wonder how you got along without the use of your function keys. I also own a Tandy 1000, and it was the basis for my new keyboard driver. I must say, though, that even though that computer is supposed to run five times faster than the CoCo, it lacks the ease and friendliness of the CoCo.

MJK & MJK3 DOS

WHY BUY ADOS 3

WHEN YOU CAN HAVE THIS

Now: MJK-DOS for COCO 1, 2, and 3 \$39.95
 Most powerful operating system for the CoCo ever!
 Allows up to 3 DS-80 track drives or standard drives. The DS-80 drives are software configurable to standard Radio Shack* format in order to maintain compatibility. Allows global file name specification with wildcards. All the files will be displayed alphabetically, including the date that the file was saved. Use one command to KILL or COPY a number of files that meet the global filename specification (can be a full disk) in one run or one at a time upon user prompt (Y-key). Use the powerful CHAIN command to use programs of any length. Use the built in FULL SCREEN EDITOR to allow fast and easy program modification. You can even use the FROM command that will put you (after an error) in the modified line editor or get the automatic error trap routine with fully spelled out error names. Hit one key to repeat the last command. You will also get error trap, repeat key, AUTO, DATE, CAT (two columns of directory with only the filenames & extensions), WAIT, RUNM, BAUD, FIND, OLD, DATES, (string in basic program), LCOPY (groups of basic lines), REPL (to replace a string), TYPE (list a text file on screen/printer), SPLIT or JOIN basic lines, SAY for real spoken text, word peek & poke and many more... MJK-DOS is primarily intended for double-sided 80-track drives (720K each)
 ALLOWS YOU TO READ/WRITE/FORMAT 35/40 DISKS ON A 80T DRIVE
 ***** PROMPTABLE ***** ** FREE UPDATES FOR 1 YEAR *****

MJK512 DOS(COC03-512X) \$49.95
 BUILT IN RAM DISK AND RAM TEST COMMANDS
 Monitor-Disassembler (COCO 1, 2&3) \$39.95
 Source-Code Generator/LabelGenerator (COC01,2&3) \$49.95
 JB REMOTE rs-232 pack driver for bbs etc. (COC01,2&3) \$19.95
 NEWKEY (COC03) new key scan--gives you true ALT & CTRL \$15.00
 NEWKEY232(COC03)--JB REMOTE and NEWKEY in one package \$25.00
 RTC -real time hardware clock for the coco 1,2,&3 \$35.00

VIP Calc

"MORE USEABLE FEATURES"
 FEBRUARY 1985 "RAINBOW"

Now every CoCo owner has access to a calculating and planning tool better than VisiCalc™, containing all its features and commands and then some. VIP Calc displays 32, 51, 64 or 85 characters by 21 or 24 lines right on the screen. VIP Calc allows up to a 33K worksheet with up to 512 columns by 1024 rows! In addition, VIP calc has multiple windows which allow you to compare and contrast results of changes. Other features include 16 DIGIT PRECISION • trig. functions • averaging • algebraic functions • column and row ascending or descending SORTS • locate formulas or titles in cells • block move and replicate • global or local column width • limitless programmable functions • works with any printer, Embed printer control codes for customized printing. Combine spreadsheet tables with VIP Writer documents to create ledgers, projections, statistical and financial budgets and reports. Requires 64K. **DISK \$59.95**

VIP Speller

INCLUDES 50,000 WORD DICTIONARY
 VIP Speller works with ANY ASCII file created by most popular word processors. It automatically checks text files for words to be corrected, marked for special attention or even added to the 50,000 word Dictionary. You can even view the word in context. Words can be added to or deleted from the dictionary or you can create your own dictionary! **DISK \$34.95**

Armchair Admiral

"Avast ye swabbies!" Roars Captain Blackbeard. "Hoist the Jolly Roger! When I gives the word, give 'em a broadside!"

As Blackbeard's flotilla closes upon it's prey, a lookout suddenly cries, "Captain, a British Man-of-War!"

The time-honored parlor game of Battleship, enhanced by intelligent computer opponents, comes to your Cocom3 complete with sloops and galleons. Up to eight opponents, any mix of human or computer. Available for the Cocom3 with 80 column display and one disk drive. \$14.95 + \$2 S&H. WA residents please add 7.6% sales tax.

Order from: Eversoft
P.O. Box 3354
Arlington, Wa 98223-3354

Personal check, money orders, and COD orders welcome.

Hint . . .

Windows Three

Here are three handy screens to keep on your work disks to call when you want to develop a new procedure or run an old one. Use the BASIC09 editor to create the three procedures. Note: The vdgint command is not usually found on the System disk supplied but is in the MODULES directory of the Configuration disk. You will need it in your commands directory if you want to call up a 32-column screen.

A 32-column CoCo 1 and 2 Screen

```

PROCEDURE scrn32
SHELL "load vdgint"
SHELL "deiniz /w3"
SHELL "xmode /w3 type=1 pag=16"
SHELL "shell i=/W3&"
PRINT "Press <CLEAR. . ."

```

A 40-column CoCo 3 Graphics Screen

```

PROCEDURE scrn40
DIM path:INTEGER
SHELL "iniz /w1"
OPEN #path,"/w1":WRITE
RUN gfx2(path,"DWSET",6,0,0,40,24,0,1,1)
SHELL "merge sys/stdfonts >/w1"
SHELL "merge sys/stdptrs >/w1"
SHELL "merge sys/stdpats_4 >/w1"
SHELL "display 1b 3a c8 01 >/w1"
RUN gfx2(path,"SELECT")
SHELL "shell i=/w1&"
SHELL "shell"

```

An 80-column CoCo 3 Graphics Screen

```

PROCEDURE scrn80
DIM path:INTEGER
SHELL "iniz /w2"
OPEN #path,"/w2":WRITE
RUN gfx2(path,"DWSET",7,0,0,80,24,0,1,1)
SHELL "merge sys/stdfonts >/w2"
SHELL "merge sys/stdptrs >>/w2"
SHELL "merge sys/stdpats_4 >/w2"
SHELL "display 1b 3a c8 01 >/w2"
RUN gfx2(path,"SELECT")
SHELL "shell i=/w2&"
SHELL "shell"

```

At the BASIC09 B prompt, save each screen separately as source code that ends up in your root directory ($\backslash D0$); e.g., save scrn32. Then pack each of them separately as packed code, which ends up in your commands directory ($\backslash D0 \backslash CMDS$); e.g., pack scrn32. You may then call a screen by typing, say, scrn40 at the OS-9 prompt, or by typing \$scrn40 at the BASIC09 prompt.

By keeping the source code in your root directory, you can amend the features of any of the screens by loading the code into BASIC09. For instance, you might want to change the scrn40 blue color to black by editing RUN gfx2(path,"DWSET",6,0,0,40,24,0,1,1) to read RUN gfx2(path,"DWSET",6,0,0,40,24,0,2,1).

Del Turner, Kamloops, BC

Corrections

“Barden’s Buffer” (August 1988, Page 170): Bill Barden has written to make a few points about his timing program. In Mr. Barden’s words, “Art Flexser, author of ADOS, correctly points out that the timing program will work only under Radio Shack Disk BASIC 1.1. He [Art Flexser] also adds a few suggestions: 1) Use POKE&HFF03,&H34 to disable the interrupts from BASIC and POKE&HFF03,&H35 to enable them. 2) Use an DREC instruction to disable and enable the interrupts in assembly language rather than a TFR (a TFR will work, however.)”

“The Old Switcheroo II” (August 1988, Page 120): Mark Haverstock wrote to correct some errors in part numbers given in his article. The correct Radio Shack catalog number for the experimenter’s box is 270-030, not 270-2301. Similarly, the number for the five-pin in-line DIN jack is 274-006, not 274-005.

“Flight Simulator II” (Review, August 1988): The correct price for *Flight Simulator II* is \$34.95, not \$24.95 as stated in the review. The program is available only through Radio Shack and cannot be purchased directly from SubLOGIC.

“Escape From Tut’s Tomb” (August 1988, Page 58): Due to a production error, part of the listing for 2PART1 is missing from the printed magazine. The missing portions are reproduced below. The files on RAINBOW ON TAPE and RAINBOW ON DISK are unaffected and include the complete program.

DIGISECTOR DS-69B NEW VIDEO DIGITIZER FOR THE COCO 3

(AND ALL OTHER COCOS...)

**SUPER
RESOLUTION !!!**

COCO 3 SCREEN

USE YOUR COCO 3 TO ITS FULL POTENTIAL!

Use The Micro Works' DIGISECTOR™ DS-69 or DS-69B and your COCO 3's high resolution graphics to capture and display television pictures from your VCR or video camera. The DIGISECTOR™ systems are the only COCO video digitizers available that accurately capture and reproduce the subtle shades of gray in TV pictures!

- **COLOR:** Add color to your screen for dramatic special effects.
- **HIGH RESOLUTION:** 256 by 256 spatial resolution.
- **PRECISION:** 64 levels of grey scale.
- **SPEED!** 8 images per second on DS-69B, 2 images per second DS-69.
- **COMPACTNESS:** Self contained in a plug-in Rompack.
- **EASY TO USE:** Software on disk will get you up and running fast!
- **COMPATIBLE:** Use with a black and white or color camera, a VCR or tuner.
- **INEXPENSIVE:** Our low price puts this within everyone's reach.

POWERFUL C-SEE 3.3 SOFTWARE

This menu-driven software will provide 5 and 16 shades of gray to the screen and to the printer with simple joystick control of brightness and contrast. Pictures taken by the DIGISECTOR™ may be saved on disk by C-SEE 3.3 and then edited by our optional MAGIGRAPH, or by COCO MAX or GRAPHICOM. This versatile new software is included in both DIGISECTORS™

DS-69B and C-SEE 3.3	\$149.95
DS-69 and C-SEE 3.3	\$ 99.95

TRADE IN YOUR OLD DIGISECTOR™

If you already have one of The Micro Works' DS-69 or DS-69A DIGISECTORS™, you may return it to us and we will upgrade your unit to a DS-69B.

UPGRADE DS-69A to DS-69B	\$49.95
UPGRADE DS-69 to DS-69B	\$69.95

The DS-69B comes with a one year warranty. Cameras and other accessories are available from The Micro Works. DS-88 version available for IBM PC.

NO RISK GUARANTEE

If you are not completely satisfied with the performance of your new DS-69B, you may return it, undamaged, within ten days for a full refund of the purchase price. We'll even pay the return shipping. If you can get any of our competitors to give you the same guarantee, buy both and return the one you don't like. We know which one you'll keep.

NOVICES NICHE

We're Looking for a Few Good Shorties

Help! The Niche needs more submissions! If you have written a good shortie, please send it in. We're looking for graphics, utilities, educational programs and games (especially games!). How short is a shortie? Well, if you printed out your listing in 32 columns, as we do, it should fit on one half of an 8½-by-11 inch page (be under 12 inches). (Entering PRINT#-2,CHR\$(27) CHR\$(81)CHR\$(32) will allow most Epson-compatible printers to LLIST a program in 32 columns if you want to check this.)

Graphics

Fright Night

By Patricia Moos

Spook is a short but flashy Halloween program. It draws a jack-o'-lantern on the PMODE 3 graphics screen, then starts playing an eerie tune. At first the music is slow, but as it repeats it plays faster and faster. Finally, the music stops and the image flashes.

Because of the GOTO 230 statement in Line 270, the pumpkin will flash endlessly after it finishes its song. If you would like your jack-o'-lantern to run endlessly from start to finish, replace Line 270's GOTO 230 statement with GOTO 10 and add these two lines:

```
225 FOR T=1 TO 20
265 NEXT T
```

Put the monitor in your window and share the specter with trick-or-treaters on Halloween night.

The listing: SPOOK

Ad Infinitum

By Rick Weshenfelder

CoCo 3

If you're one of those people who liked the Lava Lamp, you'll love *Eyecatcher*. Just type in, load and run the program to see an infinite number of CoCo 3 graphics. Press any key to start the program over again.

I used the speed-up poke (POKE 65497,0) because the program has to do quite a bit of number crunching. (Note: CoCo 2 users should use the CoCo 2-specific speed-up poke in translating this program to their machines.)

If you like to fiddle with the programs you type in, you might try changing the values of some of the variables to see what will happen. F controls the spacing between lines as they are drawn. TI controls how often the colors will change, and TM is responsible for resetting the program. There are more, but these will do for a start.

If you want to tinker more with the program, I have some suggestions. Try, for example, adding a routine to let the number keys change the background color. Remove the variable TM entirely for a continuous picture, or make an option that switches between continuous and timed pictures.

Tying up DRAW Strings

By Keiran Kenny

32K
ECB

With *CopyPix* you can use LINEINPUT to enter DRAW commands and see what you have drawn as soon as you press ENTER.

On running the program you will see a text screen with the word *Draw* at the upper-left corner. Type in one of the DRAW commands (U15, for example — see your Extended Color BASIC manual) and press ENTER. The program then shifts you to the PMODE 4 screen to show what you have done. Pressing the space bar returns you to the text screen for another prompt. Add a few more commands, press ENTER again, and watch your drawing grow. You can enter DRAW strings up to a maximum of about four text screen lines in length, but you may find that entering commands one to four at a time is preferable.

When the program starts, the cursor is at the center of the screen (128,96). Enter a BM or B command if you want to change the cursor position at any time. Otherwise, each new line will follow on from the end of the last line you drew.

If a cassette recorder is connected to your CoCo, you can save your pictures to tape. To save a picture, position the tape and enter SP (save picture) at the LINEINPUT prompt, then press Record and Play. To load a saved picture, position your tape and enter LP (load picture), then press Play on the recorder. (Do not put space between the DRAW prompt and either SP or LP; doing so will result in an error.) When you load a picture from tape, the cursor will be at Position 128,96.

Seeing the Bigger Picture

By Erich Sweaney

CoCo 3

CoCo Plus is a short program that increases the CoCo 3's HSCREEN 2 or 4 screen by six vertical pixels (from 192 to 198). To use 198 vertical pixels in your own programs, type in lines 40 and 70 every time you use the HSCREEN 2 or 4 command.

The HCIRCLE command does not work properly when you enter it between vertical locations 192 and 198, and the HPAINT command requires a little experimentation, but all the other commands work fine. Type in and run this listing for a demonstration.

The listing: COCOPLUS

Taking on the One-Armed Bandit

By Kenneth Carlin

4K

I recently rediscovered a game I had written more than five years ago that is still fun to play (and it will run on every CoCo there is, from the old 4K non-extended all the way to the 512K CoCo 3) — it's a Low-Res interpretation of the classic slot machine.

Game play is extremely simple. After the title screen, you are prompted to press P to play the game; this constantly seeds the random number generator with new values, ensuring a completely new game every time. You are then prompted for a bet between one and five tokens. The windows

will flash random blocks of graphics, simulating the spin of the wheel. If the symbols match after the machine has stopped, you win. Payoff is as follows:

Window	Payoff
yellow in 1st	2x
yellow in 1st and 2nd	5x
3 blue or 2 blue and a bar	10x
3 red or 2 red and a bar	20x
3 white or 2 white and a bar	35x
3 cyan or 2 cyan and a bar	50x
3 magenta or 2 magenta and a bar	100x
3 orange or 2 orange and a bar	200x

In case you hadn't guessed, the bar mentioned above is the

**** in Window 3. With any winning combination, the payoff is flashed on the screen along with the message "Winner!" Play ceases only when you run out of money or grow tired of playing.

There are a few things you may want to add to this game to make it more enjoyable. Personally, I like to pull back on some sort of "arm" when I play a slot machine. If you have a joystick, you can incorporate it into the program by following a few short steps. First, retype Line 28 so that it reads as follows:

```
28 Q=JOYSTK(0):IFJOYSTK(1)>30THE
NPRINT@389," PLEASE RESET THE AR
M":GOTO28
```

Now retype Line 29 to read:

```
29 PRINT@389," PULL THE ARM BAC
K":Z=JOYSTK(0):IFJOYSTK(1)<>63TH
EN29ELSEPRINT@340,""GOTO4
```

These two changes allow the joystick to function as the slot machine's arm. If prompted to reset the arm, push the joystick all the way up. Then give it a pull. Once the joystick is pulled all the way down, the machine will engage. If you want sound in the game, add :SOUND100,1 to the end of Line 8, and change the end of Line 23 to read ML=ML+1:SOUND1,1:NEXT. That's about it. It's rather short, but I wrote it to stay within the constraints of a 4K computer. Feel free to dress it up in any way you see fit. Chances are you have more than enough memory to add quite a few features.

The listing: SLOTS

Submissions to "Novices Niche" are welcome from everyone. We like to run a variety of short programs that can be typed in at one sitting and are useful, educational and fun. Keep in mind, although the short programs are limited in scope, many novice programmers find it enjoyable and quite educational to improve the software written by others.

Program submissions must be on tape or disk. We're sorry, but we cannot key in program listings. All programs should be supported by some editorial commentary, explaining how the program works. If your submission is accepted for publication, the payment rate will be established and agreed upon prior to publication.

If you have an idea for the "Wishing Well," submit it to Fred c/o THE RAINBOW. Remember, keep your ideas specific, and don't forget this is BASIC. All programs resulting from your wishes are for your use, but remain the property of the author.

A continuation of last month's "opposites" game, for more advanced students

Two for the Price of One

By Fred B. Scerbo
Rainbow Contributing Editor

Over the last two months I've introduced two brand-new programs, *Opposite Concepts 1* and *Match Game of Opposites 1*. These programs were designed to train the young user in telling the difference between opposite concepts by employing a set of 20 pairs of examples (i.e., hot versus cold). *Match Game* took these concepts one step further and made recall of the terms a great deal of fun. (You could even have adults play this variation of *Concentration* just for fun, since both young and old would have the same chances of winning. Remember, you can't put a price tag on quality time you spend with your kids — this is just another tool for that goal.)

This month, I'm offering you a set of 20 additional opposite concepts. These concepts will be a little more abstract, with terms like "in front of" and "behind" or "talk" and "listen." Those of you who want details on how these programs work should refer to the last two months' articles, rather than having all the technical lingo repeated here.

How these 20 came into being is almost an adventure in itself. After I had struggled to come up with the first set, one of the elementary teachers who has since started using these programs commented that she would hardly be able to come up with 20 sets of opposites to begin with. When I remarked to her that I had already developed a second set of 20, with the graphics to go along with it, she was quite surprised. She then dared me to come up with a third set of 20. (Believe it or not, after sitting down with a few of my own upper-level

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.

students for a half hour, we actually were able to come up with 20 more, as well as the graphics to go along with them. I'll save those for several months, though, to see what your reaction is to these first installments. We don't want to overdo a good thing.)

Too Much Typing!

If you have typed in the last two months' programs, I am going to give you a few pointers on how to save some time in getting both new programs quickly into your CoCo. Remember, the easiest way to get these programs error-free is by subscribing to either RAINBOW ON TAPE OR RAINBOW ON DISK. If you don't have a subscription, I'll now mention two quick ways to save some hacking time.

Tape Only?

Those of you without a disk drive will not be able to use the MERGE command found in Extended Disk BASIC. In that case, if you want to type in the listing shown here, you should load your error-free copy of *Opposite Concepts 1* from two months ago. Next, follow the steps shown below.

1. With the program loaded, type DEL 395-790 and press ENTER.
2. Retype lines 2, 85, 90 and 95 from this month's new listing.

3. Type in lines 395 through 790 from the new listing.
4. Save your new listing to tape with a different filename, such as OPOSITE2.

Now you may take some steps to use this data in *Match Game of Opposites*, following these steps:

1. Reload OPOSITE2.
2. Type DEL 0-390 and press ENTER.
3. Type DEL 795- and press ENTER.
4. Delete lines:

400	500	600	700
410	510	610	710
420	520	620	720
430	530	630	730
440	540	640	740
450	550	650	750
460	560	660	760
470	570	670	770
480	580	680	780
490	590	690	790

We do not need these DATA lines in *Match Game of Opposites*. Simply type the line number and press ENTER.

5. Type RENUM 110,395,0 and press ENTER.
6. From last month's listing type in lines 1 through 105 and 310 through 620. Also, retype Line 2 to read 2 REM*MATCH GAME OF OPOSITES 2*.
7. Save the entire program and test it for errors. You may want to use a different filename, such as MATCH2.

You will now have copies of both programs with all the new data in place. If you find this too confusing, simply type in the listing as you see it here.

Disk Users Only!

Disk users have a much easier time with this, since you can use the MERGE command. To get OPOSITE2, follow the same instructions as you would above for tape. What you are actually doing is deleting the old DATA lines from OPOSITE1 and typing in the new lines 395 through 790. Also be sure to retype lines 2, 85, 90 and 95.

However, for the next program you can save a great deal of time by using the MERGE command. To do this, after you have saved OPOSITE2 to disk,

follow steps 1 through 5 above for *Match Game of Opposites*. From that point on, do the following:

6. On a new formatted disk, save this new DATA list by typing SAVE "VOL2", A and press ENTER. This saves the lines to your disk in ASCII.
7. Load your copy of *Match Game of Opposites* from last month's issue. Next, place the new disk with VOL2 on it in your drive, type MERGE "VOL2" and press ENTER. The new

- lines will now take the place of all the old data, and the program should be ready to run, provided you have not made any typing errors. Also, retype Line 2 as 2 REM *Match Game of Opposites*.
8. Save this new version with the filename MATCH2 or some other appropriate name. You don't want to use the same filename as VOL1, since you would be killing the old file and writing over it with your new program.
- Both programs are now ready to run.

Refer to the last two months' issues for instructions on how to run the programs. Only the material covered will be different.

Next month will be the final chapter in this series of early childhood education programs. I'll list a third, totally different program, which will introduce this material inserted into sentences while still using our graphics. Let me know if these programs prove as valuable to you as you they have to our elementary students!

Editor's Note: For your convenience, both programs (OPOSITE2 and MATCH2) will appear on this month's issue of RAINBOW ON TAPE and RAINBOW ON DISK. This will ensure that those of you who want bug-free copies will not have to merge for MATCH2.

The RAINBOW

THE COLOR COMPUTER MONTHLY MAGAZINE

Back Issue Availability

For greater convenience, order RAINBOW Back Issues through the Rainbow Magazine Services area of our Delphi CoCo SIG.

BACK ISSUES STILL AVAILABLE

Have you explored the wealth of information in our past issues? From our very first, four-page issue to many with more than 300 pages of material, it's all just for CoCo users — a great way to expand your library!

A WORLD OF INFO AT A BARGAIN PRICE

All back issues sell for the single issue cover price. In addition, there is a \$3.50 charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by United Parcel Service. There is a \$5 charge for the first issue, plus a \$1 charge for each additional issue on orders sent by U.S. Mail. UPS *will not* deliver to a post office box or to another country.

MOST ISSUES STILL AVAILABLE

Issues July 1981 through June 1982 are available on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 5 percent state sales tax. In order to hold down costs, we do not bill, and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To check availability and order, review and fill out the form on the next page and mail it with your payment to:

THE RAINBOW
 The Falsoft Building
 P.O. Box 385
 Prospect, KY 40059

BACK ISSUE ORDER FORM

(See overleaf for instructions.)

Please send me the following back issues:

NEW! The OS9 Calligrapher Font Massager

This OS9 utility program allows you to do all sorts of things to Calligrapher font files. You may create new fonts, modify existing fonts, invert fonts, compress fonts, double the height and/or width, halve the height and/or width and convert between OS9 and RSD OS formats. **\$19.95** (or only **\$14.95** if ordered with any other *Calligrapher* item).

CALLIGRAPHER

CoCo Calligrapher - (Hybrid BASIC/ML) Turn your CoCo and dot-matrix printer into a calligrapher's quill. Make beautiful invitations, flyers, certificates, labels and more. Includes 3 fonts: *Gay Nineties*, *Old English* and *Cartoon*. The letters are 1/2 inch high and variably spaced. Works with many printers including Epson, Gemini, Radio Shack, Okidata 92A, Banana and Pro-writer. Additional fonts are available (see below). Tape/Disk; **\$24.95**.

OS9 Calligrapher - (C) Although a different program from the CoCo Calligrapher, the OS9 Calligrapher prints all the same fonts. It reads a standard text file which contains text and formatting directives. You may specify the font to use, change fonts at any time, centering, left, right or full justification, line fill, margin, line width, page size, page break and indentation. Similar to *troff* on UNIX systems. Includes *Gay Nineties*, *Old English* and *Cartoon* fonts. Additional fonts are available (see below). Disk only; OS9 Level I or II; **\$24.95**.

Calligrapher Fonts - Requires Calligrapher above. Each set on tape or disk; specify RSD OS or OS9 version; **\$14.95** each. **Set #1** - (9 fonts) Reduced, reversed and reduced-reversed versions of *Gay Nineties*, *Old English* and *Cartoon*; **Set #2** - (8 fonts) *Old Style* and *Broadway*; **Set #3** - (8 fonts) *Antique* and *Business*; **Set #4** - (8 fonts) *Wild West* and *Checkers*; **Set #5** - (10 fonts) *Stars*, *Hebrew* and *Victorian*; **Set #6** - (8 fonts) *Block* and *Computer*; **Set #7** - (5 small fonts) *Roman*, *Italics*, *Cubes*, *Digital* and *Old World*.

Economy Font Packages on disk; specify RSD OS or OS9; **\$29.95**: **Font Package #1** - Above font sets 1, 2 and 3 (25 fonts) on one disk. **Font Package #2** - Above font sets 4, 5 and 6 (26 fonts) on one disk. Both Packages #1 and #2 (51 fonts) on one disk; **49.95**.

Calligrapher Combo Package - Includes the Calligrapher and Economy Font Packages #1 and #2, 54 fonts in all; specify RSD OS or OS9; **\$69.95**.

NEW! Hershey Fonts Now Available For the Calligrapher!

These 28 fonts are known as the *Hershey* fonts developed by Dr. A. Hershey. All fonts come in both standard and reverse. **Set #10** includes Roman (Simplex, Complex Small, Complex, and Triplex) - 8 fonts. **Set #11** includes Script (Simplex Small, Simplex, Complex Small and Complex) and Gothic English - 10 fonts. **Set #12** includes Italic (Complex Small, Complex and Triplex), and Roman (Duplex and Complex Tiny) - 10 fonts. Each set is **\$14.95**. Sets 10, 11 and 12 on one disk make up the **Economy Font Package #4**, (28 fonts) for **\$29.95**. See special offer above.

All programs run on the CoCo 1, 2 and 3, 82K Extended Basic, unless otherwise noted. Add \$1.50 per tape or disk for shipping and handling. Florida residents add 6% sales tax. COD orders add \$5. Dealer inquiries invited. Orders generally shipped in 24-48 hours. No refunds or exchanges without prior authorization.

*TRS-80 is a trademark of Tandy Corp.

Last month, we studied the eight directional motion DRAW commands and developed a design on our graph paper screen. That is not the end of CoCo's abilities, however. CoCo can use other directions. CLOAD and run the *Graphic Paper* program you saved onto tape. If your program doesn't have a holding line, type 300 GOTO 300. (Note: When using these new direction commands, first plot the drawing on graph paper.)

Look at Listing 1, but don't copy and run it. You will only get junk. Follow the instructions found in this article and have fun learning this new concept.

Using LHUERFDG motion commands you created angular drawings. The results of these artistic efforts, even in PMODE 4, have jagged outlines. You see the telltale step syndrome. To mute these angular forms and give them the semblance of gentle curves, use the M motion command. Use real graph paper to draw the lines as they are explained.

We will now make some changes in last month's *Graph Paper* program. Key in 97 PSET(110,90,3) and run. This is the point of origin, around which we shall build a design. Both horizontal and vertical lines are in increments of 10 (i.e., 0,10,20, to 240). Dark guide lines are in increments of 40 (i.e., 0,40,80, etc.). The dark lines are an overlay to help locate specific points. They are created in lines 80 and 90. You may use them or remove them by inserting a REM in front of the lines.

Look at the graph on the computer screen. Starting at the left margin, we have three white lines and then a dark line. Along the horizontal line that displays the dot, count the first dark line as 40, the next dark line as 40, and the three white lines between (each having a value of 10) as a total of 30. Together the lines total 110.

Count down from the top border, along the vertical line on which the dot is displayed. There are two dark lines with one white line between (90 total).

Delete Line 97 and key in Line 100. Use S40 to make the lines created by the UDLREFGH DRAW command 10 times as large as they appear in the default mode. This way the lines drawn with the

*Modify last month's
program to smooth out
your art work*

New Directions

By Joseph Kolar
Rainbow Contributing Editor

computer are equivalent to lines drawn on real graph paper. Thus, everything you draw on the screen can be duplicated on real graph paper and vice versa.

For this tutorial we will use the coordinates (110,90), oriented so that any line created will begin and end at some intersection where a vertical line crosses a horizontal one. We won't use the guide lines in lines 80 and 90, so mask them with a REM. Unless the color Cx (where x is the color used) is changed, it is only necessary when using the DRAW statement to enter the color in the first program line. CoCo will remember to use the same color until you give it new instructions.

Once we put in the starting point, BM110,90, we can make each successive move begin where the previous move ended. You will see how much easier it is to draw in this manner than to draw lines located by using BMx,y (where x is the horizontal component, and y is the vertical component).

Run the program, study it, press BREAK and type LIST100. The elements that created the line on our screen graph paper were NM+1,2. On the real graph paper, put a heavy dot at an intersection. N tells CoCo that after it moves M+1,2 it must return to its original position (back to the dot). M+1 tells CoCo to move one space in a positive direction — from the starting point of the move, to the right. On your graph paper, draw a line from the dot to the first horizontal/vertical intersection on the right. M+1 is followed by ,2. The 2

or +2 tells CoCo to move down two spaces in the positive vertical direction. Now draw a perpendicular line that starts at the end of the last pencil line and ends at the second horizontal/vertical intersection. Put a heavy dot at the end.

CoCo will draw a line between the two dots, M+1,2 or M+1,+2. The N made the cursor return to its starting point.

To see the lines on the screen, type EDIT100 and press ENTER and X to end. Press the left arrow once to remove the closing quotation mark, type RD2 and enter. Type RUN, and press BREAK. To edit Line 100, use the spacebar to move under the R. Press 3D to remove RD2. Press ENTER and run.

Look at Line 101 in the listing (DRAW "NM+1,-2"). On real graph paper, draw a line in a positive direction (R) from the dot at (110,90). In the program, a comma separates the vertical and horizontal directions. The vertical element is -2 (i.e., it moves up two from the end of the horizontal line just drawn). Draw the line (U2) and make a dot. CoCo will use NM+1,-2 to connect the dots and return. Key in Line 101 and run.

There are two components to these new moves. The first (horizontal) is separated by a comma from the second (vertical) component: Mh,v. If this move is prefixed by an N (NMh,v), the cursor will return to its original position after the move is completed. If the command is prefixed by a B (BMh,v), an invisible line will be drawn. In effect, it is a jump move to a new location.

If the movement of the horizontal is negative, it moves to the left of the starting point. If it is a positive value, the movement is to the right. If the movement of the vertical component is negative, the cursor moves up from the starting point; if it is a positive value, it moves down.

The formula is as follows:

M(+ or -)h,(+ or -)v
M = movement
+h = right
-h = left
, = separates elements
+v = down
-v = up

Key in and list Line 102 (DRAW "NM-1,-2"). We have returned to (110,90). On real graph paper, we will move M-

- * All returns must have prior authorization and are subject to a re-stocking fee.

1, which moves us one unit to the left. Draw in the line and end with a heavy dot. The vertical component is -2, which is two units up. Continue the line you began, moving up two spaces. End with a heavy dot. Connect the two dots. CoCo will draw this line when you run the program.

Next look at Line 103. We move one unit to the left because the first element is -1. Draw the appropriate line. The comma tells us that the next component, 2 or +2, is the vertical element. Draw a line down two units and make a dot. Draw a line between the two dots. CoCo will draw this line and return to its point of origin.

Key in Line 103 and run. You should now have an X on your screen. (To show you the importance of those N prefixes, delete them from lines 100-103. Can you guess what your drawing will look like? Try it! Replace all the N's and let's continue.)

Key in and list Line 110. We keep returning to our original position (110,90) so that our design will emanate from a single point. We are now going to make a two-unit-long X, using the directions, EFGH. Run the program. Now we will make another X that emanates from (110,90) and goes to the following points in succession: (130,100), (130,80), (90,80) and (90,100).

Get out your graph paper. Put a dot at some intersection and label it (110,90). Find the four points listed above, and put a dot at each set of coordinates. Connect them one at a time to the central dot. Use this information to determine the NMh,v locations. Use NM so we can return to (110,90).

When you find the first location, check Line 111. Key in Line 111 and see how you have done. Do the same for the other coordinates and key in lines 112, 113 and 114. We now have a triple X. The temptation is to add the routine, NL2NR2NU2ND2, but we want to be more creative than that.

Key in Line 120. This tells CoCo to draw an invisible line (jump move) two units to the left and one unit up. (CoCo connects the beginning point with the end point.) Then it asks CoCo to make a conventional move, one unit up and, from there, one unit right.

Key in Line 121. BR2 caused the cursor to jump two spaces to the right, and then draw one space to the right of and one space down from the jump. Now work out the other arms of the design, lines 122 and 123. Use your

graph paper to visualize what you are creating. After you key in those lines and run the program, you should have a symmetrical design. We are going to add one-unit lines to the four segments. Key in Line 130 and run.

There is always more than one way to do anything. The simplest way to make this design is to pick the central point (110,90) and proceed as we have already done (the old N ploy).

Your last move ended at (90,100). Pick out an intersection and mark a dot. I usually label the 90 to the left of and the 100 above the dot so I know where I am starting. Since each line is 10 units from the next, I know that to get from 90 to 110 on the horizontal, I must move to the right two units, or M+2. To get from 100 to 90 on the vertical, I must go up one unit, or -1. Run the program.

You will notice that you are able to print over an existing line. I chose to make it invisible with a jump move by prefixing my command with B.

Key in Line 131. Use your graph paper to draw this, so you can visualize the program as you read it. We are back at (110,90). Run the program. Next key in and run Line 140. We moved four units in each direction and made a square.

The last instruction of Line 140 is not NU4, which would return us to the center, but U4, which keeps us in a corner. There is method to our madness. Lines 150 through 157 connect the eight spokes of our drawing in a clockwise direction. Work out the movement statements one at a time using the formula we used earlier. If you look at the tips of the U and E spokes, you can count the three lines between them on the horizontal plane. They are to the right of the center, so they are positive (M+3). Add the comma to separate the components. Note that the E spoke is one unit down (+1). Thus, your direction would be M+3,1 or M+3,+1. Continue to calculate the formula for each section until you have completed the octagon. After you complete this, check with the listing to see if your calculations are the same as those in lines 150 through 157.

We will now edit Line 100 and center the design on CoCo's screen at (128,96). Move the cursor under the second 1 and press 2E to tell CoCo that you want to change the next two characters. Press 2B and SHIFT-up arrow. Move the cursor under the 0 of 90, press C to tell CoCo that one letter will change, enter and run the program.

We now have a pie figure, and we will

paint alternating pieces of this pie. Unmasking the guide lines (80 and 90) will help when locating the coordinates for the PAINT command. Any pair of coordinates in the green background area within the segment are satisfactory.

Look at the coordinates given in lines 170 through 173 of the listing. They are located somewhere in the background. Convert the PAINT lines to PSET lines if you want to see the point chosen:

```
170 PSET(132,71,4)
171 PSET(155,109,4)
172 PSET(116,125,4)
173 PSET(105,94,4)
```

Run the program.

When you plan to use the PAINT command, find a point within the boundaries to be painted. Then change the PSET line to a PAINT line in this manner: Change PSET(116,125,4) to PAINT(116,125),4,x, where x is the border color. See how easily you can make the big switch?

Key in lines 170 through 173. You don't have to delete the original lines; use them as a guide and key in the proper data. When you run the program, the guide lines (in Color 4) will block part of your PAINT command. Next, paint the right half of the four "propeller blades" (that is what they look like to me). Use PSET to find points within the boundaries of these blades, and convert the PSET command to a PAINT command. If you would prefer, key in lines 180 through 183 and run. (The program uses Color 1, so there is little difference.)

At this point we want to get rid of the *Graph Paper* program. It is sacrilege to delete it, so we will bypass it. Key in lines 6 and 99 without the REM and run. Now for the masterpiece: Mask lines 6 and 99, key in Line 15 without the REM and run.

Want another masterpiece? Change the foreground from Color 4 to 3 in lines 170 through 173 and from Color 2 to 1 in lines 180 through 183. Unmask lines 6 and 99 and run. Who wants to practice? Gain more confidence in handling your new skill by changing all the fours in Line 140 to fives. Choose a starting point on one of the spokes and link up the eight spokes in lines 150 to 157. The modified program will be in next month's article.

This tutorial is not just a game; it has practical value. Have your utility program ready for the next lesson, and we will create more beautiful works next month. □

RAINBOW review 8/88

INTRODUCING THE WARGAME DESIGNER

TAKE COMMAND! Now you can create your own 1 & 2 player wargames and more. If you are into wargames, science fiction or Dungeons and dragons, you'll love the WGD system.

The completely menu driven system allows you to create your own full color Hi-res icons for units and map features. Take control of the number of units, strength, movement, turn of entry, range of fire, terrain modifiers and objectives. No programming required! WGD comes with a 23 page manual and 2 floppy diskettes in a rigid vinyl case with these four ready to play scenarios:

- INVASION NORTH a river crossing challenge
- ATTACK ON MOSCOW a historic simulation 1941
- ROBOT COMMAND a sci-fi thriller
- DUNGEON WARRIOR save the damsel in distress

Complete WGD system ONLY \$29.00 Each scenario available separately with WGD system demo for ONLY \$10.00.
COCO 3 128K Disk

GRIDIRON STRATEGY

The FIRST and still the BEST 2 player football strategy game for the COCO 3 128K disk.

Over 20 offensive plays and 10 defensive alignments. See the RAINBOW review 8/87 'fascinating.' Totally unique playing system!

Disk, manual and playing aids only \$21.00

Orders shipped first class FREE within 24 hours of receipt ORDER TODAY!

SPORTSware 1251 S. Reynolds Rd., Suite 414, Toledo, OH 43615

OS9 Programming Tools

CCENV® PROGRAMMING ENVIRONMENT

CCENV is a mouse-and-menu driver for all OS9 compilers and assemblers. CCENV is interactive and easy to use. A single mouse-click can take a C program from source code to executable module and then run the program in a window. Colorful pull-down menus, popup menus and dialog boxes set all compiler, assembler, and linker options. Temporary files are automatically written on the RAMdisk if available, reducing compile-time. Go from edit mode to compile and back to edit with mouse-clicks. Error messages are saved and can be scrolled in a window during your next editing session.

CCENV maintains configuration files so all options can be rechosen automatically. A PROJECT option implements the MAKE utility, allowing large projects to be split into separate modules until linking. Coupled with CCENV, any OS9 compiler becomes interactive and brisk. You can throw away "CC1." Move over, Turbo C! This is the way programming should be!

CCENV OS9 COMPILER/ASSEMBLER ENVIRONMENT \$49.95
with source code \$99.95
Requires OS9 Level II, mouse, and any compiler or assembler.
Preset for the MicroWare C Compiler.

FUNCTION LIBRARIES

C GRAPHICS LIBRARY: The complete CGFX graphics library in C
source code and relocatable modules \$19.95

C MATH LIBRARY: \$19.95
BASIC09 FORMAT \$ 9.95 Both \$24.95

BASIC09 MOUSE & MENU LIBRARY: Create mouse-driven applications with pulldown menus from BASIC09. Includes UNDERSTANDABLE directions for using mice and menus in OS9. \$14.95

Create whirlpools and waves in an undulating grid

Warped Animation

By Patrick D. Grengs II

Gravitational Grid uses several user-entered parameters to simulate a warped checkerboard. These parameters control both the resolution of the display and the characteristic deformations in the grid. Although a joystick allows faster "gravity-center" entry, its use is not necessary.

As you run the program, you will be asked a number of questions. The first of these concerns screen resolution. If you want your display to be animated, press N at the prompt, "High Resolution (Y/N)." Since the animated display must create four consecutive screens, it will take about four times longer to generate an animated display than a high resolution display. The next prompt, "Enter X Linear Step," pertains to the width, in pixels, of each of the displayed checkers. Similarly, "Enter Y Linear Step" designates the height, in pixels, of each checker square.

The next prompt asks for the gravity type: Linear or Normal. This deter-

mines the gravity that the checker board will experience during its creation. Linear gravity produces *sharp* blips in the grid while normal gravity produces *smooth* blips.

"<1> Points <2> Grid <3> Checkers" asks for the type of grid to be created. While the Points option produces a grid composed of points where the vertices should be located, Grid creates the actual grid, with corresponding vertices connected by line segments. Checkers creates a grid with every other region filled in. If you choose the Checker option, you will be asked to enter a filling — paint or linear. If you choose the Paint option, every other block will be filled using CoCo's PAINT command.

If you choose the Linear option, a filling algorithm will be used to fill alternating blocks. The time requirement for this algorithm is costly, so only use this option on complex grids. (If the PAINT command is used on complex or folded grids, too many blocks may be accidentally painted.)

Those of you who want to create an animated display will also be asked for the horizontal and vertical direction of movement on the grid.

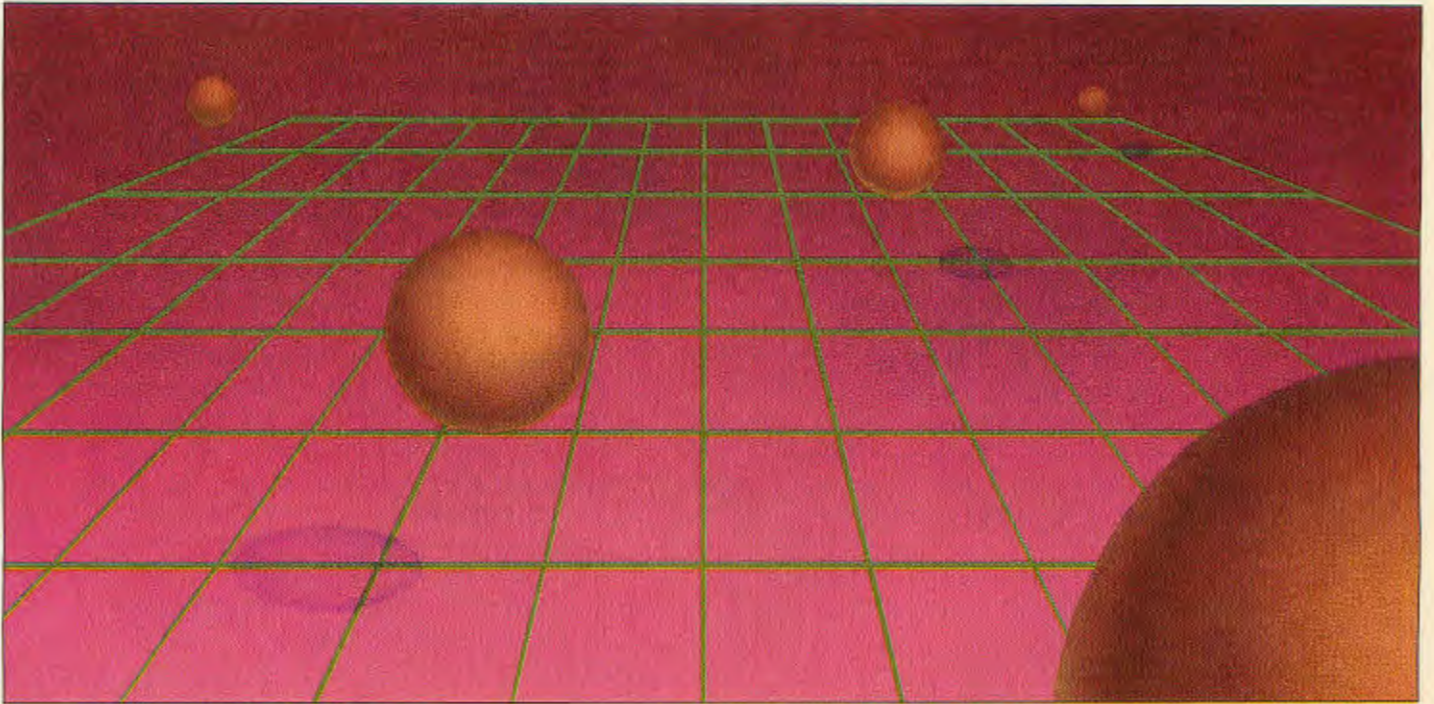

Finally, you must choose the size (magnitude) of the blips and the degree of twist imposed on them.

After the numeric parameters have been entered, each blip's center must be defined. To do this, move the cursor to the point at which you want to place a center of gravity. Press the space bar or joystick button. Now move the dot to the outer region of influence. (The distance between the center and outer region is called the *radius of influence* of the blip.) You now have four choices:

Press U for an upward blip — the top of the grid will appear pushed up at one point.

Press D for a downward blip — the grid will appear pulled down at one point.

Patrick Grengs, a math and computer science major, works part-time at 3M's CAD/CAM center. Patrick enjoys graphics and animation programming on his CoCo.

Press R for a right twist — a *tornado*, moving in a clockwise direction, will appear on the grid.

Press L for a left twist — The *tornado* will move in a counter-clockwise direction on the grid.

A circle, which indicates the radius of influence, will appear after each blip is completed. Press ENTER after all blips have been defined. The screen will be cleared and the grid created.

A number of nested FOR NEXT loops control the grid creation process, but the key to the program is the gravity and twisting algorithms. The gravity algorithms push or pull the grid's vertices toward or away from the various centers of gravity. The distance is determined by a distance function: The further the vertex is from the center of gravity, the less the vertex will be affected. With Linear Gravity, the function is directly proportional to the distance between the vertex and the center of influence. With Normal Gravity, the effect is based on a simple sinusoidal function of distance. Normal Gravity will produce more realistic deformations in the grid.

The twisting algorithms rotate the vertices of the grid in either a clockwise or counter-clockwise manner. The angle of rotation is based on the distance. Linear Twisting gives us an angle di-

rectly proportional to the distance. The angle from Normal Twisting is based on a sinusoidal function of distance. As with Normal Gravity, Normal Twisting produces more realistic results.

Here are the parameters for a generic animated grid:

Prompt Question:	Answer:
High Resolution (Y/N):	N
Enter X Linear Step:	16
Enter Y Linear Step:	12
Gravity Type:	2 (Normal)
1.Points 2.Grid	
3.Checkers:	3
Filling:	1 (Paint)
Horizontal Direction:	2 (Right)
Vertical Direction:	2 (Down)
Enter Magnitude:	1
Max. Angle Twist:	90

Enter a blip at the screen's center, with a large radius of influence. Use either gravity or twisting as the force on the grid. Press ENTER. Now go and get yourself a cup of coffee, since it will take about a half an hour to create your animated display.

In order to save your high-resolution/animated display, press BREAK to exit from the display, and use these commands for each of the follow-

ing:

- Enter CSAVEM"filename",1536,

7679,0 to save a high-resolution grid onto tape.

- Enter SAVEM"filename",3584,9727,0 to save a high-resolution grid onto disk.
- Enter CSAVEM"filename",1536,13833,0 to save an animated grid onto tape.
- Enter SAVEM"filename",3584,15881,0 to save an animated grid onto disk.

Use the following procedure to view any files you save:

1. RUN "GRAVGRID".
2. Press BREAK.
3. LOADM"filename".
4. Type GOTO 190, and press ENTER
5. Control the keyboard speed using A through Z. Pressing A creates a fast display. The farther you move through the alphabet, the slower your display will become.

I hope that you enjoy *Gravitational Grid* and its demonstration of the CoCo's graphics display power. I welcome any improvements or questions you might have about the program.

(Questions or comments regarding this program may be directed to the author at 375 West Hathorn, River Falls, WI 54022. Please enclose an SASE when requesting a reply.)

RAINBOW

Give us your best: Join the ranks of these courageous CoCoists in showing the Color Computer world your high score at your favorite micro-diversion. We want to put your best effort on record in THE RAINBOW's "Scoreboard" column. All entries must be received 60 days prior to publication. Entries should be printed — legibly — and must include your full name, address, game title, company name and, of course, your high score. Each individual is limited to three score entries per month. Send your entries to Scoreboard, c/o THE RAINBOW.

For greater convenience, your high scores may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS.

SCOREBOARD POINTERS

In conjunction with THE RAINBOW's Scoreboard, we offer this column of pointers for our game-playing readers' benefit. If you have some interesting hints, tips or responses to questions, or want help yourself, we encourage you to write to the Scoreboard, c/o THE RAINBOW.

In response to questions from:

● George Lane: In order for you to complete your quest in *Sands of Egypt*, you must drop the scepter. When the computer says where, type ON MUMMY. After you do that, type GO CRACK, get the ladder and type GO CRACK again. In *Dallas Quest*, type PULL CURTAIN.

In *White Fire of Eternity*, I have the ring and I need the pick, but I do not know how to get it.

Michael Duvall
Zanesville, OH

● Troy Ferguson: In order to kill the gargoyle in *Raaka-Tu*, you first have to get the burning lamp and the candle. After you get these two items, go back into the room and go north until the gargoyle comes at you. Type LIGHT CANDLE WITH LAMP and immediately leave the room after you drop it.

When you get to the vault and decide to go inside, whatever you do, don't pull the handle.

How do you get past the bronze gates?

Tracy Nahas
New London, CT

● Dan Breault: In *Gates of Delirium*, the people are located in towns, except two; they are located in a dungeon and a castle. The dungeons are the guardians of all but one of 10 gate keys. These gate keys will be needed to win the game. The shrines are in the second world 18 levels below Twin City I. Use the Moon Gates to get to Twin City I. Enter the dungeon inside the town, but make sure you have all your party with 2,400 hitpoints or the depths of the dungeons will kill you.

Duane Whitlock
North East, MD

● Mike Duvall: To get the palm fronds in *Sands of Egypt*, you must go to the pool. From the cliff, go down, west, south and east. Type GO TREE and you'll be at the palm tree. Drop all the items and type CLIMB TREE. At the top of the tree, type GET DATES. Climb down and get your items. Go south and then east. At the pool, type FEED CAMEL and he will kneel so you can mount him. Ride the camel and dismount him. You will be at the pyramid. Climb it and get the axe. Go back to the pool by riding the camel. Go to the tree and climb it with the axe. At

the top, type CHOP FRONDS. Get the fronds and go down. Type BRAID FRONDS and you will have a sturdy rope.

Shawn Maloney
Ozone Park, NY

● Jim Barkel: In *Downland*, to get off the rope, go to the right end and push the joystick over to the right while pushing the button. As soon as you are on the slatted part, push the handle to the middle, then push to the right and you'll be on the rope.

In Chamber 6, what is the rope used for when you first walk in?

David Breyer
Cincinnati, OH

Scoreboard:

In *Bedlam*, after getting stuck with the hypodermic needle and returning to your cell, to stop running into the walls type PLUGH and you will return to your normal self again.

To get Houdini down, type UNTIE HOUDINI. How do you get the strait-jacket off him?

How do you wake up the "real doctor" lying unconscious in the corner?

Jerry Hagerty
North Syracuse, NY

Scoreboard:

How do you get Roger the Rogue Elephant to cooperate in *Dallas Quest*? How do you get past the cannibals in order to enter the cave?

Eric Costello
Pine Bluff, AR

Scoreboard:

In *Dallas Quest*, if you want to get the flashlight, you have to pull the curtain in the trading post.

In *Dragon Blade*, how do you get past the stone door after the whirling pool?

Eric Vermette
La Tuque, Quebec

Scoreboard:

I have successfully landed the Heart of Gold on Magrathea in *Hitchhiker's Guide to the Galaxy*, but I cannot unjam the hatch or enter the screening door.

John Knight
Kalamazoo, MI

Scoreboard:

In the *Interbank Incident*, how can I get into the Air Force base in Germany?

In *Enchanter*, how do I find water?

In *Sands of Egypt*, where can I find the scepter?

Kristy Craig
Little Rock AFB, AR

Scoreboard:

In the *Interbank Incident*, I found the code book, computer, disk, cartridge and the IBC special card, but I am not able to find the secret hideout. Please help.

In *To Preserve Quandic*, how do I pass the helicopter on the roof?

Georges Fortin
Baie-St. Paul, Quebec

Scoreboard:

In the *Interbank Incident*, I can't seem to find the crooks.

In *Dallas Quest*, after you enter the barn with the owl, you must kill the rat by typing DRDP OWL.

In *Sands of Egypt*, the magnifier is used to light the torch from the sun's rays.

Katie Miller
Chino, CA

Scoreboard:

In *Madness and the Minotaur*, in order to get the third spell, I must tie the Hydra up so I can enter the room with the parchment, but after I get the spell, I am told that I need the rope for the next spell. Is there a way to untie the Hydra or to kill it so I can get the rope back?

Duane Whitlock
Northeast, MD

To respond to other readers' inquiries and requests for assistance, reply to "Scoreboard Pointers," c/o THE RAINBOW, P.O. Box 385, Prospect, KY 40059. We will share your reply with all "Scoreboard" readers in an upcoming issue.

For greater convenience, "Scoreboard Pointers" and requests for assistance may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS. Be sure to include your complete name and address.

XTEAM & OS-9

BOTH WINNERS

All of our OS-9 products work with:
OS-9 version 1
OS-9 version 2
OS-9 Level 2

XTERM

OS-9 Communications program

- Menu oriented
- Upload/download Ascii or XMODEM protocol
- Execute OS-9 commands from within XTERM
- Definable macro keys
- Works with standard serial port, RS232 Pak, or PBJ 2SP Pack, Includes all drivers
- Works with standard screen, Xscreen WORDPAK or DISTO 80 column board

\$49.95 with source **\$89.95**

XDIR & XCAL

- Hierarchical directory
- Full sorting
- Complete pattern matching
- OS-9 calculator
- Decimal, Hex, Binary
- +, -, *, /, AND, OR, XOR, NOT

\$24.95 with source **\$49.95**

XDIS

OS-9 disassembler

\$34.95 with source **\$54.95**

HARDWARE

- 512k memory upgrade \$124.95
 - Ram Software
 - Ram Disk
 - Print Spooler
 - Quick Backup
- All three for only **\$19.95**

*Software by ColorVenture

XWORD

OS-9 word processing system

- Works with standard text screen, XSCREEN, WORDPAK, or DISTO
- True character oriented full screen editing
- Full block commands
- Find and Replace commands
- Execute OS-9 commands from within
- Proportional spacing supported
- Full printer control, character size, emphasized, italics, overstrike, underline, super/sub-scripts
- 10 header/footers
- Page numbering in decimal or Roman numerals
- Margins and headers can be set different for even and odd pages

\$69.95 with source **\$124.95**

XMERGE

Mail merge capabilities for XWORD

\$24.95 with source **\$49.95**

XSPELL

OS-9 spelling checker, with 20000 and 40000 word dictionaries

\$39.95

XTRIO

XWORD/XMERGE/XSPELL

\$114.95 with source **\$199.95**

XED

OS-9 full screen editor

\$39.95 with source **\$79.95**

AND FOR RS DOS ...

SMALL BUSINESS ACCOUNTING

This sales-based accounting package is designed for the non-accountant oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List.

\$79.95

INVENTORY CONTROL/SALES ANALYSIS

This module is designed to handle inventory control, with user defined product codes, and produce a detailed analysis of the business' sales and the sales force. One may enter/update inventory data, enter sales, run five sales analysis reports, run five inventory reports, set up product codes, enter/update salesman records, and update the SBAP inventory.

PAYROLL

Designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pay and determines taxes to be withheld. Additional outputs include mailing list, listing of employees, year-to-date federal and/or state tax listing, and a listing of current misc. deductions. Suited for use in all states except Oklahoma and Delaware

\$59.95

PERSONAL BOOKKEEPING 2000

Handles 45 accounts. Enters cash expenses as easily as checks. Handles 26 expense categories. Menu driven and user friendly.

\$39.95

ACCOUNTS RECEIVABLE

Includes detailed audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package.

\$59.95

ACCOUNTS PAYABLE

Designed for the maintenance of vendor and A/P invoice files. The system prints checks, voids checks, cancels checks, deletes cancelled checks, and deletes paid A/P invoices. The user can run a Vendor List, Vendor Status report, Vendor Aged report, and an A/P Check Register. This package can be used either as a standalone A/P system or can be integrated with the Small Business Accounting Package.

NIGHT OF THE LIVING DEAD

Software

CoCo 1, 2 & 3

Night of the Living Dead — An Interactive Nightmare

Apparently you were wrong about that road you thought was a shortcut a couple of hours ago.

You've managed to get yourself totally lost, and it's looking less and less likely that you're going to make it back to school in time for your first day of classes tomorrow.

The only person you've seen for miles is the hitchhiker you picked up over an hour ago. She says her name is Sheena.

Night of the Living Dead begins innocuously enough, but just wait a few minutes. You see, the dead are waking up — they're very hungry. And your car is out of gas.

Night of the Living Dead from Adventure Novel Software is a two-disk text Adventure for 64K ECB disk-based CoCos. Unlike the movie of the same name (zombies are the only thing in common), it begins with your character stranded in the middle of nowhere. Without gas, your 1970 Mercury Montego "might as well be a rabbit." You're stuck with a strange woman who wears a Frank Zappa T-shirt and is by turns threatening and polite.

To the east is a cemetery and a church. To the west is an impenetrable thicket. To the north and south the gravel road stretches endlessly and will

take you nowhere. But things don't seem hopeless, at least not until a heavily made-up man (like a corpse?) with a gaping hole in his neck shambles toward you. What to do? *I* tried running, but there's nowhere to run.

Adventure Novel Software says that the only goal in *Night of the Living Dead* is to stay alive, which is not an easy feat. I'm embarrassed to tell how far I got — and I even had help.

Unlike most games, there is more reward in solving this Adventure than just the satisfaction in knowing you've done it: A cash prize of \$500 is offered to the first person who "survives." To win, an Adventurer must be a registered owner and send in a transcript or written solution by registered mail. The correct entry with the earliest postmark wins. If by December 31, 1988, there is no winner, one will be chosen at random from the owner registration cards mailed back.

Needless to say, I do not have a ghost of a chance of claiming the loot. I died more times than I can remember, and in the most horrible ways. The further along I got, the more spectacular my deaths.

"If you are faint of heart or squeamish of stomach, I recommend you not try this game. Literally, heads will roll."

In my very first death my head struck a sharp object; fortunately, I died immediately. For my second death, I was treated to a screwdriver through the skull (watch out for that man with the gaping hole in his neck). In my third death, my jugular was ripped open and the last thing my dying eyes saw was a zombie having my arm for lunch. For the benefit of those of you swallowing to hold back your last meal, I shall refrain from regaling you with more vivid accounts of my demises.

Night of the Living Dead provides some pretty grotesque descriptions. If you are faint of heart or squeamish of stomach, I recommend you *not* try this game. Literally, heads will roll. And there are colorful descriptions of oozing flesh and sucking sounds (sorry, I had to throw that in) — yet Adventure Novel Software's Bob Schuette says that the gory descriptions have even been toned down in the latest version!

When you see the disk jackets (or if you've seen the Adventure Novel Software ad), you may wonder where "Savage Software" fits into the scheme of things. "Savage Software" is Curtis Fennell, the "editorial" half of *Night of the Living Dead* — Adventure Novel and Schuette are the programming half.

Descriptions of the character's current location are provided at the top of the screen above a black bar. A "clock" in the upper-right corner keeps track of the time and moves. As this is a text Adventure, there are no graphics (Schuette and Fennell say graphics wouldn't do the story justice — your imagination serves better). Text is shown on the 32-character screen. The

Putting the Savage in Savage Software (And the Novel in Adventure Novel)

There are a lot of people who would just as soon read a good book as go to a movie. Some writers can evoke images more vivid than any movie screen can. From his narrative in *Night of the Living Dead*, Curtis Fennell, known to the CoCo market as Savage Software, has shown he is one such writer.

Curtis and Bob Schuette, the writing and programming team behind *Night of the Living Dead*, have been friends since college. It was during those years that Curtis first found out about a new form of computer entertainment — Adventure games. Back then, the games were in their infancy. Even the better ones limited players to two-word commands, and the puzzles did not always make a lot of sense.

When Bob recently contacted Curtis about writing an Adventure for the CoCo, he had no idea that Curtis was already working on one. The game design systems Curtis tried were limiting, and he was invariably disappointed in how the final product worked.

So they decided to join forces. Using Bob's Adventure Novel design system, Curtis brought *Night of the Living Dead* to life. It was a challenge for Curtis to develop the story line without going overboard in grotesque descriptions. Much of the debugging process, in fact, involved rewriting text some players found unappealing. Graphics were removed from the game because they simply could not do it justice. "Without question, the scariest visions exist in the player's own mind," Curtis says.

Schuette believes his exclusive game design system will provide a fresh, new outlook for Adventures. "We're in the

business of entertainment. Our goal is to supply the computer industry with unique games that, while challenging, can be solved by most players," he explains.

"Don't get me wrong. These games will never be pushovers. The players will definitely get their money's worth from us. But I also don't want them to get so completely stumped and frustrated that they never get the full enjoyment from finishing the game on their own." A self-taught programmer and chemical engineer, Bob's experience ranges from writing game software to programming industrial process controllers. But he has found some innovative uses for the CoCo: "As an avid fan of windsurfing, I'm constantly interested in what the wind is doing — how fast it is blowing, and whether it is picking up or falling off. By rewiring an old DC motor and putting a set of anemometer cups on it, I can constantly monitor the wind speed through my CoCo joystick port. It's kept me from making quite a few useless trips to the lake."

Bob still uses one of the original 64K CoCo 1s and says he has never experienced a failure, even after he has left it on for weeks at a time. This love of his CoCo 1 helped Bob decide to keep his games compatible with all three CoCos.

"I've had some opportunities to work with the new CoCo 3, and I think it is a fine machine," he says, "but I'm sure there are many people out there who want to stay with the older models. It would be a shame if all the new software developed was designed specifically for the CoCo 3. At least for now, you can be sure that one company will still be producing software for all three CoCos." □

game is disk-intensive — so leave the Data disk in the drive.

Game play is typical for Adventures of the verb-noun command variety. But commands of many more than two words may be given. There is a help function that shows how to use a variety of commands. You can talk to the characters, question them or ask them to perform a specific task, e.g.: SHEENA, TELL ME ABOUT FRANK ZAPPA.

The usual command abbreviations are supported (N, S, E, W, U and D). The "examine" command can be shortened

to X, the "inventory" command to I. Also, there is no inventory limit. The SCRIPT command sends all text to the printer.

I am not very experienced with Adventures and so was frustrated when sometimes my "interpreter" would not recognize a reference to something it informed me of just a few moves earlier, or when it wouldn't understand something I thought was totally obvious. A quick rereading of the help screen yielded this advice: "If the game does not understand a verb, try a synonym

Zombies 10, People Zip

No, you fool! Stay away from that door — don't go in there! Oh, well, another one bites the dust.

How many times have you watched a hack-and-slash movie and actually cheered for the monster because the characters are so *stupid* they deserve to die?

I mean, if you're staying in a hotel (or a summer camp) where a body count is taken daily, would you traipse off la-ti-da by yourself to the remotest, spookiest place around and then appear *surprised* when the ax falls? Would you even stick around after the first body is found? Not me — I'd get the @#\$\$! outta there! You think that you would, too? We think we're so smart. In their shoes, we wouldn't be so stupid, and we'd live a lot longer.

We can be smug in our superiority most of our lives. It is doubtful we'll be menaced by Jason, Freddy or Zombie (thank God!). But *what if?* What if by some means we could pass through the other side of the camera lens and put our wits on the line against the ghoulies.

Night of the Living Dead and *Adventures* like it let us do this. I tried the game, and I wasn't very successful at surviving. I now have new respect (or sympathy, at least) for those stupid people who blunder boldly into the attic, the cellar

and the cemetery. You see — they had no choice. The script wouldn't let them back out and run.

In playing *Night of the Living Dead*, as I knew the goal was to "survive," I thought I would just run up the gravel road until I was safe (zombies are rather sluggish, you know). Well, the game wouldn't let me. It forced me into a situation and made me follow its "script." Of course, how I acted within the confines of the situation was up to me — so I promptly got knocked off.

I knew the zombie was steadily creeping up on me, but what was I doing? Checking out the scenery, examining my inventory for a possible weapon, twiddling my thumbs. If I were a character in a horror movie, the audience would probably be cheering my imminent demise. I feel two sayings are applicable here (I'm fond of sayings): "Don't knock something 'til you've tried it," and "Don't criticize unless you've been in someone else's shoes."

And now for the moral of this lunacy: "Don't make fun of horror movie victims just because they walk into obvious traps — *unless* you've survived *Night of the Living Dead*."

Have a happy Halloween, and watch out for zombies. □

for it." (Hint: SEARCH is sometimes more revealing than EXAMINE.)

The SAVE command allows you to stop and save your progress at any game prompt — this is very handy, as it "saves" you from having to start back from the beginning of the game every time you die (which, if you are like me, you will do frequently). When you type SAVE, a mini-menu pops up that prompts you for the drive of your "save" disk, then for the game number — you can save five.

After you die, you are asked if you want to restore a previously saved

game. If you do, a similar menu prompts you for the drive and the game number. If you indicate you *don't* want to restore a game, you must do a cold start to get back to Disk BASIC.

I tried *Night of the Living Dead* on a CoCo 1, 2 and 3, and it worked fine on all. The only thing it wouldn't work on was an old, gray-case E-board CoCo 1, and that was because of the high-speed poke, I suspect. But most CoCo-ists will be able to play the game.

I found *Night of the Living Dead* fun to play, and I especially appreciated the exciting and smooth narrative flow — this *Adventure* reads better than most. I expect that those who are fans of zombie movies will like the game, and connoisseurs of "ordinary" *Adventures* will get a kick out of it, too.

(Adventure Novel Software, P.O. Box 8176, Spartanburg, SC 29305, 803-578-7421; \$34.95 introductory offer: First product review from this company appearing in THE RAINBOW)

— Lauren Willoughby

Moon-Runner — Souped-Up Lunar Buggy

In *Moon Runner* you command an amphibious patroller armed with laser and overhead missiles. Your mission is to battle enemy forces across the lengths of eight moons and then destroy the Trigan base.

Opposing you is an array of strong enemy forces, including attacking spacecraft, tanks, mines and surface rockets. Even the moon's surface is against you. There are crevices, rocks, trees and cacti among the obstacles you must either jump over or destroy.

While you have nine patrollers to accomplish your mission, they are thin-skinned craft and easily destroyed. When they are gone, the mission is terminated. Also, the patrollers use up fuel quickly. To keep going, you must shoot down the fuel satellites that orbit the moons.

Once you have fought your way to the Trigan base, the game gets harder! You must blast holes in the rotating force shield protecting the Trigan generator. This is not easy — the base shoots back! Because your laser is short-ranged, you must move close to the base, firing your laser constantly. It's a heavyweight slugfest.

Moon Runner is a well-crafted program that takes up a full disk. You must leave the disk in the drive while you are playing because the program accesses the disk throughout the game. Since the nine top scores are recorded, do not write-protect the disk.

Besides joystick control, you also have two keyboard controls. The ENTER key pauses the action, as well as resumes game play. The Q key ends a particular game (your patroller blows up!). You

are returned to the main menu to begin again.

The game has complete instructions and is easy to play, but hard to master.

A nice programming touch is the flexibility with which you can play at different levels. For example, if you complete Level 2, you can select levels 3, 2 or 1 to play next. A frustration with most arcade games is losing all your men, tanks, etc., and having to start all over again. That's boring — *Moon Runner* is not!

This is one good arcade game. It runs on the CoCo 1, 2 and 3, with RGB or composite monitors. You will need 32K, one disk drive and a joystick. The scrolling graphics and animation are exceptional, and the CoCo 3 version makes use of the PALETTE command.

For its combination of affordability and playability, *Moon Runner* is one first-class addition to the CoCo library.

(Nick Bradbury, 10500 Sandpiper Lane, Knoxville, TN 37922, 615-966-0172; \$15: First product review from this company appearing in THE RAINBOW)

Inventory Manager — A Program You Can Count On

Being in business myself, I was more than happy to receive a copy of *Inventory Manager* by Forrest Enterprises for my latest review assignment. Nor could the timing have been any better, as the program arrived in time for me to use with my own inventory.

Inventory Manager is just what the title says. It basically handles all the necessary (not to mention dreaded) tasks involved in recording and updating your inventory records. Actually, about the only thing it doesn't do is take inventory for you.

One of the first things I would like to point out is that *Inventory Manager* comes on a non-protected disk, which makes it possible for you to make a backup copy. Another welcome feature

is that the program is written mainly in BASIC, which makes it easy to modify to suit your personal needs.

Modification was necessary in my particular case because I am in the food service business, and the inventory procedure differs a little from that of other types of businesses. I work a lot with weights and fractions, whereas most businesses need only be concerned with the physical count of a particular item. All it took was a phone call to the distributor and my problem was solved.

Upon loading *Inventory Manager* you are greeted with a simple title screen. Pressing any key takes you to the configuration menu, where you tell the program the number of disk drives used, the printer's baud rate, the company name and address, and which version (there are two) of *Inventory Manager* you would like to run. This configuration is a nice feature — systems change. (To save you the time of having to answer these questions every time you load the program, you can use a second boot-up program after configuration. You change the appropriate program lines to match your system, as described in the manual.)

JUBILEX

A fast paced game that requires both skill and quick thinking. Pilot your ship over the planet Jubilex. Avoid shots from the ground while you destroy their aircraft. Complex weapon system. Requires joystick, CoCo III, and disk drive. \$25

GAT BACKUP

A 128k CoCo III backup utility that gives you the options to backup only the granules used, a section, or the entire disk. Makes multiple copies. Copies 35 tracks in two passes. Formats and gives directories. Requires CoCo III and disk drive. \$15

DIASM

A disassembler that loads a file and allows you to disassemble it as if it were in memory, no matter where the program is really located. Works with auto-executing programs. Many other features. Supports printer. CoCo I, II, or III. Disk only. \$20

All programs are in machine language. Add \$5 per program if you want the source file included. We pay shipping and sales tax. Write for more information, or send check or money order to:

GSW Software

BEDFORD, TX 76021

Sample printouts available upon request if return postage provided.

*Texas residents add 7% sales tax — or else!

Once you have configured the program for your system, you are presented with the main menu. From here you are given the option of doing such things as creating a new file or printing out inventory, purchase orders and item lists. Or you can sort, edit and move any number of items within your various files.

The first time you run the program you will naturally have to start by creating a file. You will be prompted for the name of the file to be created and then for all the necessary information to set up your own inventory system (this is where the only real difference between Version 1 and 2 will be of any importance).

The first two things you are prompted for are the identification number (up to four digits) and the item order number

(a code of up to 10 characters that your supplier uses to identify a particular item), such as a part number.

If your particular business does not require an order number, you may want to use Version 2, which handles all its sorting and file management by use of the item I.D. number alone. This saves a lot of unnecessary typing — you can just press ENTER when prompted for information.

Next you will be asked for an item description (up to 40 characters), the inventory quantity (the amount you have on hand) and the "trigger" order quantity. The trigger order quantity is a useful feature that "triggers" automatic ordering of an item when the inventory quantity of an item matches or falls below the specified trigger quantity.

Next you will be prompted for the "after order" quantity. This along with the trigger order number is how the program decides how much of a particular item needs to be ordered when using the auto-order feature. The last two prompts are the item cost (how much a particular item costs you) and the retail cost (how much you plan to charge for the item).

The best part is that if you should make a mistake while entering any of this information, you can update it at a later time. You can even delete the entire record if you decide you no longer want to carry a particular item. Items can be moved from one file to another or converted to allow files created with Version 1 to be used on Version 2, or vice versa. All of this makes *Inventory Manager* a very flexible and full-featured inventory control and purchase order entry system.

After all the items have been entered into inventory files, *Inventory Manager* can complete what to me used to be some very time-consuming tasks. To start with, placing a purchase order is now as simple as just answering a few prompts. For example, I was able to print out a purchase order containing 71 items, with individual prices calculated and totaled at the bottom, including additional charges (postage and handling, etc.), all in just a couple of minutes. This is a welcome improvement to the usual 30 to 45 minutes spent doing the same thing by hand.

With the inventory printout option I was able to get an entire listing of my stock, including unit cost and total cost for each item — not to mention the total value of my entire stock — with just a few keystrokes. I found this to be exactly what I needed to help determine my operating costs and to prepare my inventory/sales reports (which are required by the company I work for), and I could do it in just a few steps taking less than a half-hour. Now that's a lot of power for your dollar, especially if you compare it to expensive programs out there for some of the *other* machines.

Everything considered, I must say I am very pleased with the performance of *Inventory Manager*. It does everything I would expect of a program of this type, and maybe even a little more. In my opinion, if you own a business and find inventory to be a tedious and time-consuming job, I think buying this product would definitely be money well spent!

Inventory Manager comes on a non-

stair

Software

CoCo 3

Disk Manager Tree — OS-9 File Management

Managing files on a disk with the limited file management utilities provided with OS-9 Level II is not an easy task — especially if you have a hard disk. The simple copy and delete commands do the job . . . one file at a time. But what if you want to copy or delete a number of files on a disk? Well, you could type the appropriate command over and over again, changing the filename each time, or you could use *Disk Manager Tree* from Alpha Software.

Disk Manager Tree is a file manipulation utility that runs under OS-9 Level II and makes excellent use of the windowing capability built into the operating system. The package is designed to work with standard floppy disk systems, hard disk systems and RAM disks. When you execute *DMT*, it scans the entire disk that is mounted in the specified device, say /d0, and displays the disk structure graphically. For my system disk, *DMT* displayed the following:

```
-- /d0
|-- CMDS
| |-- ICONS
| |-- SYS
```

This tree structure is displayed in one

of three windows. A second window is used to display the files in the selected directory, and the third window displays the various commands available and serves as a dialog box. From the main menu you can change to another directory or create and delete directories.

Using the up and down arrow keys you can select a subdirectory; by pressing the ENTER key you can display its list of files in Window 2. A submenu appears providing options to view, tag, copy and delete files. A file is selected by moving the up and down arrow keys and pressing the ENTER key to tag it. If you press C the file can be copied; pressing D deletes the file, and F1 allows you to view the file. When you view the file, a pop-up window appears and the file scrolls through the window.

Copying and deleting multiple files is a piece of cake with *DMT*. Simply move the arrow keys to the appropriate files and press ENTER to tag them. Once all the files have been tagged, simply press C or D. When copying, *DMT* prompts for the new directory; when deleting files, *DMT* asks if you are sure all of the tagged files should be deleted. If you agree, *DMT* proceeds to delete them.

DMT is a useful "workhorse" type program for managing the OS-9 disk system. Although I don't have a hard disk system, I can see that such a utility would be quite useful. I found the utility especially useful for rearranging files on floppy disks. Being able to select a number of files to be copied to other floppies really speeds up disk maintenance.

The only problem I found with *DMT*

is in the View File option. Once a text file is selected for viewing, there is no way to terminate the listing other than by scrolling through the entire file. This is, of course, a major concern if you happen to choose a large file to view. I hope that Alpha Software will correct this in the next revision of the program.

I should also mention that *DMT* comes with an icon and instructions on how to include *DMT* in *Multi-View*. And, finally, *DMT* takes up about 70K of memory — which is not a problem on a 512K CoCo but might be for a 128K CoCo.

I strongly recommend *DMT* for new and advanced users to OS-9. It is an efficient and easy way to manage files. The program is very simple to use, has a good manual and an online help capability.

(Alpha Software Technologies, 2810 Buffon St., Chalmette, LA 70043, 504-279-1653; \$29.95)

venture. Our CoCos are outstanding graphics computers, and this good Adventure could be a great one with graphics.

Shadow World is available on either tape or disk and is not copy-protected, so backup copies for your own protection is not a problem.

(Prodek Software, c/o Mike Snyder, Route 2, Box 81, Allen, OK 74825, 405-857-2852; \$10.50 for tape, \$12.50 for disk: First product review for this company appearing in *THE RAINBOW*.)

CoCo 1, 2 & 3

BASIC Screen Editor — Full-Screen Editing Capabilities

I learned BASIC by typing in listings from magazines. I started with plain BASIC, which meant erasing the line and typing it over (really tough on those 255-character packed lines). Then I expanded my CoCo with Extended Color BASIC and, bless Tandy, there was a line editor built-in. Now I could fix those typos with relative ease. Coincidentally, as my experience on the CoCo expanded, I also became a “professional” programmer and had access to a multitude of editors.

Most of these editors I used in my work allowed me to load in whole files to edit a full screen at a time. What a pleasure that was. Then I would come home to CoCo’s humble line editor and wish for better things. Well, let me tell you, better things could be here.

BASIC Screen Editor by Douglas Pokorny and Gil Winograd takes the CoCo line editor one step further. It provides a full-screen editor especially for BASIC programs. It allows you to edit anything that appears on the screen — including direct commands.

BSE includes a short formatting program that must be run before using the editor the first time. It initializes and customizes the editor to your current CoCo setup and favorite features. Once you’ve set everything up, all you have to do is type `DDS` if your CoCo supports that command, else type `RUN“BSE”`. If you ever change your mind or your

CoCo, just run the configuration program to change the initialization parameters.

What does *BSE* do for you? After the title screen, you don’t even know it’s there. So start typing in that great program you found in *THE RAINBOW* and run it. Oh, no, the dreaded SN Error! List the line in question and use the BASIC line editor to fix your typo. The normal Tandy editing commands are still active. What happened to the *BSE* program? Oh, it’s still there, waiting for you to decide that you need a heavy-duty fixer.

List a bunch of lines. Say you want to customize the program with your own name in the `PRINT` statements. Great, just use the arrow keys to put the cursor over the word you want to change and type away. Press the arrow keys to get to the next change and type away again. If you hold down an arrow key for about a second, it starts auto-repeating. Slick, I can travel all over the screen with hardly a thought.

Here is a complete list of all the features of *BSE* and the keystrokes to generate them:

arrow keys	move cursor one character
BREAK	deletes character under the cursor
SHIFT-left arrow	backspaces
F1	recalls custom palette (CoCo 3)
F2	uses default CoCo 3 palette
CLEAR-@	erases screen
CLEAR-up arrow	puts caret on-screen
CLEAR-down arrow	toggles insert mode
CLEAR-left arrow	moves cursor to beginning of line
CLEAR-right arrow	moves cursor to end of line
CLEAR-BREAK	deletes from cursor to end of line
CLEAR-ENTER	splits the line at the cursor
SHIFT-@	toggles <i>BSE</i> on and off

The program is reset-proof, and other features include automatic lowercase-to-uppercase conversion, compatibility with the CoCo 1, 2 and 3, and compatibility with JDOS and ADOS. I’m using it with a 128K CoCo 3. It is written in position-independent machine lan-

Software

CoCo 1, 2 & 3

Shadow World — Adventures in Time

Shadow World is a text-only Adventure written for your 64K ECB Color Computer. It also runs fine on the CoCo 3. In *Shadow World*, your goal as a scientist is to find out why experimental lab animals have been dying as a result of time-travel experiments performed by a company that has stolen your time-travel formula.

This is a difficult Adventure to solve, but it is possible. The author has placed many items and locations in the game that are not necessary for the solution, and the result is a tough yet challenging Adventure.

As with most Adventures, this one also recognizes various abbreviated commands, such as `N` for north and `INV` for inventory. Your progress is best monitored with the use of a map, and provisions are made to save and reload a game using the standard `(C)SAVE` and `(C)LOAD` commands. A perfect score is 10, and I scored 8 — but only with the help of a solution sheet the author sent for the purpose of the review.

The game scenario is interesting and challenging. The only flaw I can see is that *Shadow World* is a text-only Ad-

guage and comes on an unprotected disk.

The manual is eight pages of extremely readable text that fully explains the program's use and operation. It has plenty of examples and is written in fairly plain English so that even an inexperienced user should have no trouble understanding it. There were one or two minor typos, but I'm really fussy about manuals.

BSE performed as described with some minor problems. I couldn't get some of the shifted characters to auto-repeat — strange things got printed on the screen (the distributor says this can't be fixed so they are going to put a notice in the manuals). Another point I am concerned with is that the program allows you to type in more characters on a BASIC line than the CoCo allows; this could present a minor retyping chore if you get carried away packing lines.

But on the other hand, no matter what I did, I couldn't get the program to have a major malfunction. In fact, I found it really neat to be able to re-execute command lines by just moving the cursor back to the beginning of the

line (like a DIR command) and pressing ENTER. Another fun feature is the program's ability to recover programs after a NEW command. As long as it is on the screen, a line can be recovered by simply moving the cursor to the beginning of each line and pressing ENTER. Presto! Recovered code.

I would not call this program a full-featured editor because some features are missing that I would consider essential — like being able to scroll through the whole file and having cut-and-paste capabilities. Nonetheless, it has plenty of useful features that makes the CoCo easier to use. Given the reasonable price and the program's resident state, this looks like a good deal for all you BASIC programmers.

See pg 34, Jul 88 RB for type-in prog for some plus other features.
(Second City Software, P.O. Box 72956, Roselle, IL 60172, 312-653-5610; \$19.95 plus \$2.50 S/H)

Software

CoCo 3

Al-Write — CoCo 3 Editor/ Assembler

Al-Write is an editor/assembler written just for the CoCo 3. When the package first arrived, I was excited with the idea of a new tool for writing assembly programs that might allow me to retire my old super-patched ED-TASM+, which has been modified to run on the CoCo 3.

Al-Write comes on one unprotected disk with a 57-page manual. The disk may be backed up with the BACKUP command; in fact, this is the only way a working copy can be made because the program makes use of the command DOS for starting the program. Do not just copy the files! Instructions for this should have been included in the manual. Backing up your master disk is always important — but especially so when working with assembly language.

SPECIAL EVENT!

COCO GALLERY LIVE SHOWCASE YOUR BEST AT RAINBOWFEST

We are taking the popular "CoCo Gallery" on the road to RAINBOWfest Princeton — and we'd like you to submit your own graphics creations to be exhibited at the show!

RULES

- You can enter color or black-and-white photographs or printouts of your original artwork produced on the CoCo 1, 2 or 3. Entries must be framed, mounted or matted, and may not be smaller than 5-by-7 inches or larger than 11-by-14 inches.
- Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere. A digitized copy of a picture that appears in a book or magazine is *not* an original work.
- Along with your entry, send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.). Please include a few facts about yourself, too!
- Your name, address and phone number, along with the title of your work, must be clearly marked on the back of each entry, and a disk copy of each piece must also be included.
- Entries must be mailed to THE RAINBOW before October 10, 1988, or brought to the RAINBOWfest registration booth by 10 a.m., Saturday, October 22.
- All entries to CoCo Gallery Live become the property of Falsoft, Inc.

There will be two categories: one for graphics produced on the CoCo 1 and 2, and one for CoCo 3 graphics. Several awards will be made in each category. Winners will be determined by votes from RAINBOWfest attendees. In case of any ties, winners will be determined by our chief judge, CoCo Cat.

Prizes and ribbons will be presented Sunday, October 23, 1988, and winning entries will be published in the February '89 issue of THE RAINBOW. Send your entry to "CoCo Gallery Live," THE RAINBOW, 9509 U.S. Highway 42, Prospect, KY 40059.

RAINBOW FEST

PRINCETON OCT. 21-23

RAINBOWfest is the only computer show dedicated exclusively to your Tandy Color Computer.

Nowhere else will you see as many CoCo-related products or be able to attend free seminars conducted by the top Color Computer experts. It's like receiving the latest issue of THE RAINBOW in your mailbox!

RAINBOWfest is a **great opportunity** for commercial programmers **to show off new and innovative products for the first time. Princeton is the show** to get information on capabilities for the new CoCo 3, along with a terrific selection of the latest CoCo 3 software. In exhibit after exhibit, there will be demonstrations, opportunities to experiment with software and hardware, and special RAINBOWfest prices.

Set your own pace between visiting exhibits and attending the valuable, free seminars on all aspects of your CoCo — from improving BASIC skills to working with the sophisticated OS-9 operating system.

Many people who write for THE RAINBOW — as well as those who are written about — are there to meet you and answer questions. You'll also meet lots of other people who share your interest in the Color Computer. It's a person-to-person event and a tremendous learning experience in a fun and relaxed atmosphere.

A special feature of RAINBOWfest is the **Educational Sandbox**, which features **child-oriented workshops** to give hands-on experience to an age group often neglected. There are sessions for the kindergarten through third-graders, and for fourth- through sev-

enth-graders. And, as an additional treat for CoCo Kids of all ages, we've invited frisky feline CoCo Cat to join us for the show. RAINBOWfest has something for everyone in the family!

If you missed the fun at our last RAINBOWfest in Chicago, why don't you make plans now to join us in Princeton? For members of the family who don't share your affinity for CoCo, there are many other attractions in the Princeton area.

The Hyatt Regency Princeton offers special rates for RAINBOWfest. **The show opens Friday evening** with a session from 7 p.m. to 10 p.m. It's a daytime show Saturday — the CoCo Community Breakfast (separate tickets required) is at 8 a.m., then the exhibit hall opens promptly at 10 a.m. and runs until 6 p.m. On Sunday, the exhibit hall opens at 11 a.m. and closes at 3 p.m.

Tickets for RAINBOWfest may be obtained directly from the RAINBOW. We'll also send you a reservation form so you can get a special room rate.

The POSH way to go. You can have your travel arrangements and hotel reservations handled through RAINBOW affiliate, POSH Travel Assistance, Inc., of Louisville. For the same POSH treatment many of our exhibitors enjoy, call POSH at (502) 893-3311. All POSH services are available at no charge to RAINBOWfest attendees.

COCO COMMUNITY BREAKFAST

Dick White — RAINBOW Contributing Editor

Our keynote speaker for the traditional CoCo Community Breakfast is Dick White, contributing editor for THE RAINBOW. Mr. White, who has a long background with microcomputers, will discuss his personal experiences in the early years as he traces the development of the Color Computer since its introduction in 1980.

SPECIAL EVENT!

We're pleased to present The Educational Sandbox, a joint Tandy/RAINBOW effort. This is a computer workshop for RAINBOWfest kids. There will be two sessions on both Saturday and Sunday. One workshop will be for the kindergarten through third-grade set, and the other for fourth- through seventh-graders. Each workshop will last between 45 minutes and one hour, and will give the children and their parents hands-on experience in using Tandy computers and software.

Several times while I was running *Al-Write* the disk did a self-destruct.

Al-Write will run only on a CoCo 3 using Disk BASIC 1.1 and one or more disk drives. If you are not sure which version you have, look at the start-up logo when you first turn your computer on. It should read Disk Extended Color BASIC 2.1; if it reads 2.0, you have Disk BASIC 1.0.

First I tried to run the program on my 512K CoCo 3 and was presented with a blank screen and blinking cursor. Since I also have 128K CoCo 3s for the kids, I took command and used them for testing. I had a few problems with *Al-Write*, but a request for help brought a new disk with Version 1.1 and additional information not in the manual. Because almost any new product is likely to have bugs, I expect the manual may be updated by the time you read this. The new 1.1 version also fixed the ghosting bug and works with 512K.

When you type DOS you are presented with the copyright notice; pressing any key will put you in the main menu. From here your first option is Edit, which will put you in a BASIC full-screen editor that can support 32- or 40-column screens. While the 80-column screen is not supported, most programmers should find the 40-column screen satisfactory. The colors used in the display (black, white and green) are compatible with any type of monitor or TV.

While the manual is sizable, I must take exception to some of the terms used and other inaccurate information that it contained. More about using *Al-Write* and some of its excellent features would be a real help. An index would have helped greatly in locating needed information. Very important instructions for using *Al-Write* were missing or hard to find.

From the menu you can view your disk directory in a neat two-column format; load or save your source file; assemble code; run assembled code; quit *Al-Write* or select the Options menu. You must use the Options menu to name your binary/object code disk file. When you load or save your source text file you are prompted for a filename. In the Options menu you can select screen or printer output for your assembly listing.

No method is provided for listing your text file to a printer! The Options menu lets you set a default origin for your assembled program, but it must reside totally in the range of \$6000 to \$7FFF, which is fine for some

applications. You may also use the origin directive in your source code, but only one ORG is allowed.

Another stated limitation is that the assembled program must not "handle" memory outside the \$6000 to \$7FFF range if it is to run within the *Al-Write* environment. This eliminates the ability to access any graphics or text screens, system registers, BASIC hooks in low memory, etc. Some utilities published in THE RAINBOW require access to these memory areas. This also means you cannot take advantage of the extended memory of the CoCo 3 system within *Al-Write*. But programmers can write and assemble a program anywhere in memory with *Al-Write*, then load and execute it from BASIC.

SAMPLE.ASM is a text file you can test the assembler with. Several times I was greeted by an unknown system error even with the sample. If you do get this error you must turn your CoCo 3 off and then on to recover, even if it was run from *Al-Write*'s menu. The start label is not supported and is not allowed, but you can use any other valid label name to specify the execution point in your program. To do this you follow the END statement with the label you have chosen; if you fail to do this the program will crash the system when you try to run it. *Al-Write* uses a default execute address of \$000 unless you specify the address directly or with a label in the END statement.

One feature I really like is the ability to write subroutine source code and save it in a disk file — thus you can build yourself a subroutine library. The subroutines may then be added to your main program using the Include function; this can save a lot of typing or reinventing of the wheel, so to speak. The Include feature works very well. While assembling the source code, it loads in and includes (merges) source text from disk files. Includes may not be nested. There's no need to worry about conflicting line numbers because *Al-Write* does not need or use them.

Al-Write follows some predefined conventions for register usage allowing easy parameter passing. Parameter passing is well-explained in the manual, which provided examples. *Al-Write* does allow you to do a trial assembly; the program assembles your text, listing errors found while assembling your source file. *Al-Write* does provide error messages, but it usually overprints the line with the error. Normally when the assembler encounters an error the assembly process is aborted and you are

returned to the editor, but this may be overridden with the NoEdit directive. Other directives include List/NoList, CLS (clear the screen) and Wait, which will stop and wait for a key press before continuing during assembly.

Well, if you are a person who reads only the last paragraph of a review, here is mine in a CoCo-nutshell. While *Al-Write* has some excellent features, its limitations preclude it for many practical uses. If the memory location and access restrictions within the environment could be eliminated, *Al-Write* could set a new standard for assembly language programming under Disk BASIC. *Al-Write* will run on any CoCo 3 with Disk BASIC 1.1. Though the manual was sizable, some very important information was either missing or hard to find. While I had problems at first getting *Al-Write* to work as expected, I received a quick response from the author, a new version with bugs fixed and additional information not in the manual.

(Daniel Jimenez, P.O. Box 4967, San Antonio, TX 78285, 512-690-1788; \$30: First product review from this company appearing in THE RAINBOW)

Software

CoCo 3

Word Power 3.1 — 80 Columns and Windows, Too

After using *VIP Writer* with my CoCo 2 and a composite monitor for several years, I looked forward to viewing an 80-column screen with the CoCo 3. But I was greatly disappointed at the lack of good "friendly" word processing software that followed. I tried two systems advertised in RAINBOW, but they failed to meet my requirements — versatility and the KISS factor (Keep It Simple, Stupid).

So I continued using *VIP* with its 64-column window until Microcom came out with *Word Power 3*. The first version of the system had a few bugs, but it showed great promise. Through close coordination and cooperation with those who recognized this promise, Microcom now offers CoCoists a very useful system that is fun and a joy to use.

Before going into a detailed review of this system, I would like to point out that I am impressed with the software development capability of Microcom.

After I received the initial version and noted a few problems, I received their 3.1 version, which took care of these problems and included many other enhancements. I called to express my thanks and was told that they plan to revise the program as necessary to make it more responsive to the needs of the public based on recommendations and to provide previous customers updated versions for cost and handling. This is *real PR!*

One of the most impressive things about this word processor is that it was developed for the CoCo 3 from scratch and, unlike other word processors, is not "patchwork." This makes it more sufficient in fully utilizing the versatile capabilities of the CoCo 3. Written in machine language and operating in the double-speed mode, it has amazing execution speed and enables very fast screen reformatting. Also, *Word Power 3.1* is not copy-protected, which means you can make copies for your own use.

The system's ease of learning really impressed me. Memorizing the key commands is a snap because most follow a logical pattern, and the system employs an effective use of colorful

windows. It is much easier to use than the *VIP* software and two other CoCo 3 word processing systems I had tried. Even *WordStar*, which I use in my work, is nightmarish in comparison with *Word Power 3.1*.

The first requirement in using *Word Power* is running the program *SETUP*, which establishes your defaults, some of which can be changed while typing and editing.

When you run *SETUP*, the first thing you see is the main menu:

1. Set Colors
2. Set Parameters
3. Set Printer Codes
4. Save Setup File

Word Power 3.1 opens beautiful horizons of colors that you pick out yourself, and you can change them if you tire of a particular set. I have an RGB color monitor, and I use a beautiful sky blue background with black letters when I am in the edit mode, and my linefeed symbols are purple. In the window mode I have a red border with an amber background on the inside. There are many colors and combinations from which to choose. If you have a monochrome monitor, you still go through the color selection routine to get the "mix" that appeals to you.

When selecting parameters you are asked whether you want a key-click, automatic key repeat and automatic saving (which is *great* in my case, because I live in "the lightning capital of the world," which seasonally experiences frequent power disruptions). I set my left and right margins at 1 and 79, respectively, so that I can see as much as possible on the screen without scrolling to the right. But before printing I change the margins to give me a 1-inch border.

After entering your default parameters, you need to enter the various codes

TAPE or DISK

for your printer to underline and print in bold, script or italics, etc. There are provisions to handle all your printing needs.

When you have finished entering your printer codes, you save your setup, write-protect your backup disk, cold-start your computer and run `BOOT`. You then see the main menu inside a colored window border on the background color you selected:

Type/Edit
Options
Load File
Save File
Print
Exit to DOS

If you wanted to load a file, you would select Load File using the arrow keys. You would then see an instruction window and the directory of your file disk within another colorful window. These helpful windows and the logical use of the control and other function keys make *Word Power 3.1* very user-friendly.

In the Type/Edit mode, you create or edit documents. At the top of the 80-column screen display is shown the percentage of memory used and the current column, line and page number; it also indicates whether type is in the upper- or lowercase mode and insert or overstrike mode. Another nice feature is the page-break display, which enables you to see exactly where the page ends; this improves the aesthetic appeal of your documents.

The type-ahead feature lets you type as fast as you want — without losing text. It is very easy to center or right-justify text, as well as to underline text or use boldface, italics, super- and subscripts. Underlining is displayed

onscreen, and the bold/italicized/etc. text is displayed in different colors. I find this preferable to inserting printer codes within the text that throw off line lengths and page-break locations, and which require much more memorizing.

The Locate/Replace feature lets you find a phrase and replace it with another. I especially like the wild card feature that lets you search similarly spelled words with a single reference.

An instant display of all the commands is available in the help screen, which can be accessed with `CTRL-?`. The word count feature is great for students. It instantly displays the total number of words in the entire text, regardless of the cursor position.

Another feature is option code embedding, which enables you to change margins, spacing, etc., in a portion of text (for example, a single-spaced quote in double-spaced text). *Word Power 3.1* has logical embedded codes (for example, LM for left margin, LS for line spacing, etc.). These codes are listed in the help screen.

Word Power 3.1 has a very user-friendly disk input/output menu. The directory, which shows the remaining granules on the disk, is displayed on the left side of the screen. You can select files by simply cursoring through this window and pressing `CLEAR`; or you may enter your own filename. If you have text in memory and load another file, it will be appended to the text in memory. All saving and loading is done in ASCII format, making *Word Power 3.1* compatible with most other word processors, spelling checkers and text formatting utilities.

Of all the word processors I have used, *Word Power* has the maximum text storage capacity. On a 512K CoCo 3, it gives you over 460K of text space,

which is roughly 336 pages of double-spaced text. On a 128K CoCo, the storage capacity is more than 72K.

In the printing mode, you select parameters such as baud rate, line spacing, page numbering, right justification, number of copies, headers, footers, etc. The single-sheet pause feature lets me use single sheets instead of perforated paper. The WYSIWYG (What You See Is What You Get) feature is excellent! If you elect *not* to print to the printer, you can view the document onscreen as it will appear after printing. Also, *Word Power* is "printer independent"; that is, it is compatible with almost any printer.

With the mail merge feature, you can type a letter, follow it with a list of addresses and print out personalized letters. This is a useful feature for clubs, schools and other organizations that send bulk mail.

The program comes with a spelling checker/dictionary program on a separate disk. It will work with any ASCII file. I find it very handy to proofread my text for spelling errors. It shows how the incorrect word appears in the text and lists possible correct spellings. At this point I have the option to ignore or substitute the correct word. I also have an option to add words for a "personalized" dictionary.

A nifty little punctuation-checking program included on the *Word Power* disk will check the text for punctuation errors such as capitalization, words appearing twice in a row, spacing and more. Note that the program will not correct errors, but mark them. The user can then choose to go back into the file and correct the errors. I am not aware of any similar program for the CoCo.

The package comes with a 40-page manual and a command reference card.

Rulaford Research is proud to announce a new "customer satisfaction" program. When you buy a program from us, you may return it within 30 days if you are not satisfied with it for a complete refund (less a restocking charge of \$5.00). In addition, you may purchase a year's free updates for only \$10.00 when you buy a program. We want you to be happy with what we sell, and we're ready to go the second mile to make sure that you are!

Lyra, a powerful yet easy-to-use MIDI music composition program, now comes with **LyraPrint**. Print your music on a Tandy, Epson, or OkiData 92A compatible printer. Hundreds of users use it for fun, as part of a teaching program, or professionally. \$59.95

Love music but don't know one note from the other? Or do you like to just sit back and let your computer and synthesizer make beautiful music for you? **Lyra Library** is for you. Over 11 disks packed with music of a wide range of styles. Send SASE for complete list of titles and details on how you can have a custom disk made. each disk \$14.95

 **Rulaford Research**
P.O. Box 143
Imperial Beach, CA 92032
(619) 690-3648 (evenings 6-10 PT)

Other good stuff: • **FB-01 Calc** is a simple basic program that creates event files for Lyra so you can set up custom configurations for your FB-01 from Lyra. A must if you have an FB-01! \$19.95 • Coming soon—complete FB-01 and MT-32 voice editor/librarians. Inquire for availability and price.

Ordering information: send check or money order. Sorry, no credit cards. COD is ok. Shipping and handling included in price. CA residents add 6% tax.

The manual is well-written and guides you step-by-step through the various features.

There is no capability lacking in *Word Power 3.1* that would preclude its ranking with the highest among word processors, and future enhancements promise to make it a system not to be without. Couple the great text features of *Word Power 3.1* with the vivid, beautiful colors, and you *really* have "something to write home about"!

(Microcom Software, 2900 Monroe Ave., Rochester, NY 14618, 800-654-5244; \$79.95)

Software

CoCo 1, 2 & 3

HELLO/BAS — Menu Greetings

I'll admit it: I am not a one-computer woman. Though the CoCo is nearest and dearest to my heart, I dabble with MS-DOS machines (in my work) and have been know to dally with Commodores. But don't judge me too harshly — I always come back to the CoCo, the friendliest and most versatile computer around.

Sometimes, though, I can't help but compare features and inwardly compose a wish list. One thing I wish is that IBM compatibles had a disk operating system built in, like CoCo's Disk BASIC (some Tandy IBM compatibles *do* have MS-DOS built in). It takes IBM machines and their look-alikes so *long* to boot. In comparison, CoCo springs awake, ready to go.

One thing MS-DOS *can* do is auto-

matically execute an AUTOEXEC.BAT file, which can carry out instructions and load specific files for you. With my MS-DOS machine, all I have to do is turn it on — by following the AUTOEXEC.BAT file I wrote, it calls up a menu program that lets me boot (with just one keystroke!) any program on my hard disk. If there's one thing I'm bonkers about, it's menus. And since I'm compiling a wish list, I wish CoCo had an AUTOEXEC.BAT function that could give me a menu of programs on my floppy disk for "point-and-shoot" loading. (Tony DiStefano's projects look interesting, but I am not a hardware person.)

Now, you're probably wondering why I've wasted three paragraphs of what is *supposed* to be a review, spouting off in left field. There's a reason for this: menus.

HELLO/BAS gives 32K ECB CoCos menus. With the program's little auto-repeating cursor, I can zip around an alphabetized menu presentation of a floppy disk directory, press ENTER when I come to a BASIC program I want to load and — bingo — it loads and runs. Just as nifty as my MS-DOS menu.

And what's more, a utility provided allows me to boot *HELLO/BAS* from a floppy by entering the DOS command (this works a lot faster than waiting for MS-DOS's AUTOEXEC.BAT file to finish executing — *HELLO/BAS* does use the high-speed poke). Typing a three-letter command is better than typing the 10-character command, RUN"HELLO".

What's the big deal in saving seven keystrokes? Well, computers *are* supposed to save time — why did you ditch your typewriter in favor of a word processor, anyway? Another reason for using menus is ease of operation. Menus let you set up a sort of "turnkey" system.

New users may stare blankly at you when you try to describe the process of calling up a directory, then loading and running a program, but even a child can quickly figure out how to "point and shoot."

The *HELLO/BAS* disk comes with five files: HELLO, DOS BOOT, HELP, DISK INIT and LOG BOOK. *HELLO*, of course, is the main program. When you run HELLO, the program will read the disk directory, alphabetize and display it. The program can be configured to run on any drive. The screen can show 24 files at a time, but there are extra "pages" that can take care of the 25th file and beyond.

In addition to the alphabetized directory display, the screen also shows you the default drive number, which screen "page" you are currently in, the number of files on the disk and the number of granules free. You select and load a program by moving a cursor to the file (via any arrow key) and pressing ENTER. The auto-repeating "cursor wrap" feature is nice — pressing the down arrow key at File 24 takes you back to the top of the directory list. The program does *not* induce finger sweat. Pressing P allows you to print out a hard copy of the directory; pressing CLEAR lets you read another disk in the current default drive.

DISKINIT creates "autobootable" *HELLO/BAS* disks. It is best to run DISKINIT on newly formatted disks, because the DOS BOOT program it generates is sector-dependent; on a semi-full disk there may already be programs occupying the intended sector. This means that you will probably have to create your own *HELLO/BAS* bootable disks from scratch (a bootable disk must contain DOS BOOT and HELLO — HELP is helpful, but not necessary) and

Check Account Information System

Not just another checkbook program but a user friendly, menu driven, disk based information system. Keep track of deposits, checks, ATM withdrawals and other account transactions. Define up to 36 categories to monitor expenses. Set up automatic transactions for such items as direct deposits and deductions. Balance your account(s) in minutes! Other features include multi-drive capability, display and print options, check search on any field, edit and delete capability and more.

Still pounding away at that keyboard?

Save Time and Money with a Combination Subscription!

SAVE up to 19%

when you buy a joint subscription to the magazine and either RAINBOW ON TAPE or RAINBOW ON DISK! A one-year subscription to THE RAINBOW and RAINBOW ON TAPE is only \$91 in the U.S., \$108 in Canada, \$153 foreign surface rate and \$188 foreign airmail. A one-year subscription to THE RAINBOW and RAINBOW ON DISK is only \$115 in the U.S., \$138 in Canada, \$183 foreign surface rate and \$218 foreign airmail.*

Every month, these convenient services bring you as many as 24 ready-to-run programs. Using the current issue of THE RAINBOW as documentation, all you have to do is load and run them. A one-year combination subscription to THE RAIN-

BOW and RAINBOW ON TAPE or RAINBOW ON DISK give you more than 230 new programs! The typing time you save can be spent enjoying your CoCo!

RAINBOW ON TAPE For No-Fuss Fun

Back issues of RAINBOW ON TAPE are available beginning with the April 1982 issue. A single copy of RAINBOW ON TAPE is \$10 within the United States; U.S. \$12 in all other countries. The annual subscription rate for RAINBOW ON TAPE is \$80 within the U.S.; U.S. \$90 in Canada; and U.S. \$105 for all other countries.*

RAINBOW ON DISK Offers OS-9 Programs

In addition to all the programs offered on tape, part of one side of RAINBOW ON DISK is formatted for the OS-9 operating system. That means you can now get all the OS-9 programs from the magazine — programs that cannot be put on tape. Back issues of RAINBOW ON DISK are available beginning with October 1986. Subscriptions to RAINBOW ON DISK are \$99 a year in the U.S. Canadian rate is U.S. \$115. All other countries, U.S. \$130. Single copy rate is \$12 in the U.S.; U.S. \$14 in Canada; and U.S. \$16 in all other countries.*

To order by phone (credit card orders only), call (800) 847-0309, 8 a.m. to 5 p.m. EST. All other inquiries call (502) 228-4492.

Look for our envelope located between pages 66 and 67 for ordering individual subscriptions to THE RAINBOW, RAINBOW ON TAPE and RAINBOW ON DISK.

*U.S. currency only, please. In order to hold down costs, we do not bill. Kentucky residents add 5% sales tax. Please allow 6 to 8 weeks for delivery of first copies. Joint subscriptions to THE RAINBOW and RAINBOW ON TAPE or RAINBOW ON DISK begin with the current issue.

Please note: While group purchases of RAINBOW ON TAPE and RAINBOW ON DISK are permitted (and multiple subscriptions are even discounted, if purchased in one order from a club), no license to make copies is conveyed or implied. Yes, your group may even purchase a subscription to our disk/tape services, but such purchase in no way authorizes that any copies be made of that original disk/tape. Specifically, this means that the original disk/tape itself may indeed be kept in a club library for use by members. However, a group purchase does not entitle club members, individually or as a group, to copy that disk/tape.

Unauthorized copying of any copyright product is strictly illegal. The copyright (right to make copies) is in no way conveyed in the purchase transaction.

HOW DO YOU GIVE A RAINBOW?

It's simple — Give a RAINBOW gift certificate . . .

Let a gift subscription to THE RAINBOW carry the premier Color Computer magazine right to your friends' doorsteps. THE RAINBOW is *the* information source for the Tandy Color Computer.

Each month, your friends will enjoy the intelligent programs, reviews and articles written exclusively for their CoCo.

First, your gift will be announced in a handsome card. Then, all year 'round, they'll remember you and your thoughtfulness when they get each edition of THE RAINBOW — more than 200 pages loaded with as many as 24 programs, 15 regular columns and lots of helpful hints and tips.

Generosity benefits the giver, too. There'll be no more tracking down borrowed copies of THE RAINBOW. Your collection will be safe at home.

Give a RAINBOW gift certificate and let your friends in on the fun. THE RAINBOW is the perfect companion for the Color Computer!

Get your order to us by October 25 and we'll begin your friends' subscriptions with the December issue of RAINBOW.

Please begin a one-year (12 issues) gift subscription to THE RAINBOW for:

Subscriptions to THE RAINBOW are \$31 in the United States; U.S. \$38 in Canada. The surface rate to other countries is U.S. \$68; the air rate, U.S. \$103. Kentucky residents add 5% sales tax. **U.S. currency only, please.** All subscriptions begin with the current issue. Please allow 6 to 8 weeks for delivery. In order to hold down non-editorial costs, we do not bill.

copy your favorite BASIC programs to the disk. DOS BOOT and HELLO take up one gran each of disk space, and HELP takes up two.

HELLO/BAS will not load machine language programs, which is a downer. The author apologizes for this lack on one "page" of the nine-page help file.

HELLO/BAS is one professional-looking, well-behaved (as long as you stay away from ML) and user-friendly utility for BASIC programs. Once you start using it, you may find yourself growing spoiled. I like HELLO/BAS and have put it on the same disk with some of my favorite RAINBOW programs.

The applications are varied. Whether you're a new CoCoist or an old pro, you'll find a use for HELLO/BAS. Seasoned hackers can see whole alphabetized directories at a time (without the SHIFT-@ shuffle), along with other information. New users can circumvent syntax errors. And it would be especially useful for handicapped people and children. Do your fingers a favor and introduce the CoCo in your life to HELLO/BAS.

(RCPierce Software, P.O. Box 1787, Main Post Office, Edmonton, Alta., Canada T5J-2P2, 403-474-8435; \$19.95 US, \$22.95 CDN: First product review from this company appearing in THE RAINBOW)

Software

CoCo 1 & 2

Quest for the Ring — The Vanished Kingdom

You say you've solved *Labyrinth* and have already congratulated yourself for a job well done? Not so fast, King William. Zarth, the evil wizard, found out you were escaping and did some fast work before he was destroyed. He hid your crown, locked your castle and made all the people in your kingdom vanish. Then he hid the ring he used to cast all those spells. Now you have to find the ring so you can undo all the spells and get your people back.

You start this graphics Adventure in front of your castle. From there you can wander around the kingdom, looking for your crown and Zarth's ring. The kingdom contains mountains, streams, chasms and a lake, but no people to ask for help. (I happen to think the piranha fish ate them, but the author says Zarth made them disappear!) You're on your

own, but you can use any objects you find and the clues they provide. The only living thing you'll ever see is the dragon, and he's not about to help you, believe me!

The first thing that struck me when I loaded the game was the excellent graphics. (If you don't have a color monitor, borrow somebody's. The graphics are *much* better in color.) Every time I went to a different screen I sat there for a minute just soaking up the scenery. The second thing I noticed was the sound. A little song plays during the title and "RIP" screens. A note sounds at every keystroke, and a little bird chirps when it's your turn to input.

After I died the first time (on my second move!), I discovered the self-booting feature. By just pressing the CLEAR key you can start the game over without reloading. Those of us who die often really appreciate this; I've seen this feature only in programs written in machine language.

I thoroughly enjoyed this Adventure. The graphics and the logic used are a definite plus. Games that have you do illogical things (i.e., go through mirrors) leave me frustrated. In duplicate scenes (like fields), the trees, rocks and chasms are shown in different places, so it's easy to know where you are. *Quest for the Ring* has a limited vocabulary, but I found that more of a help than a hindrance. Everything I needed to do could be accomplished with a dozen commands. And speaking of help, I got all the help I needed when I looked at objects.

I also got all the help I needed from my 10- and 11-year-old sons (and half the neighborhood children). I'd start playing the game and the next thing I knew there'd be three or four chairs pulled up around me, with the occupants offering advice on what to do next. If I left my chair for a cup of coffee, I'd come back to find it occupied by one of the kids, who'd look excitedly at me and say, "I'll take over from here."

Quest for the Ring is a fun game, simple yet challenging. You have to reason things out, but it isn't so complicated that it will take you months of playing to solve. The kingdom is laid out very neatly, and what you have to do is straightforward. Also, you can carry as much as you want. Your hands never seem to get full. This eliminates the decision of what to drop in order to pick up something else. Decisions like those in other games cause a lot of backtracking and frustration for novice Adventurers.

There is no save feature, so you lose everything you've collected whenever you die. However, starting the game over and recollecting everything is fairly easy if you draw a map as you go along. You score points for every object you find, with a possible score of 504 at the end of the game. Don't let the number 504 scare you, though — there aren't 504 objects in the game. Some things you pick up are worth 30 points, others maybe 50. To see what you are carrying, you have to type USE INV instead of just INV.

Like its predecessor, *Quest for the Ring* is also a stand-alone Adventure for the CoCo 1 or 2, with 64K disk Extended Color BASIC. Note that it will not work on CoCo 1s earlier than an F board. This two-disk set has 59 Hi-Res screens and can run on either a one or two-drive system. The optional high-speed poke is also available. The disks aren't copy-protected, so workable backups can be made, but only with the BACKUP command. Files cannot be copied one at a time. This protection, the only one the authors put in, prevents the loading and running of any of the single "modules" of the game.

RTB guarantees all its software to load, or you can return it for a prompt replacement at no cost to you. I can personally vouch for this service, because my original review copy didn't load. When I called the company, I expected to hear an answering machine at the other end (it was late Saturday afternoon). What I got was a real person. He was very helpful and supportive, and once he realized he couldn't solve my problem over the phone he sent out a replacement copy immediately.

All in all, I think RTB Software has a real winner here. *Quest for the Ring* is a game that can be played and enjoyed by all ages and skills, and is well worth the price. I'd recommend completing the trilogy with *Labyrinth* and *Adventure in Lumeria*, and watching for other

games from this company, which seems to be getting better with each program.

(RTB Software, P.O. Box 777, West Acton, MA 01720, 508-263-0563; \$34.95 plus \$3 S/H)

CoCo 1, 2 & 3

Home Bingo — CoCo Calls the Numbers

Home Bingo is a handy program to have around the house if you like to play this popular game with your family. It's also suited to the commercial bingo halls, although one might have a tough time convincing hard-core bingo patrons that a computer is selecting the numbers randomly. I suppose that being able to see and hear those rattling ping-pong balls provides an added sense of honesty and randomness to the typical bingo player.

Home Bingo is supplied on either disk or cassette and is written in BASIC. It requires a minimum of 32K RAM and Extended Color BASIC, and it works fine on the CoCo 3, as well. The program loads simply by entering RUN "BINGO". A short menu of options is displayed. Both regular bingo games and round robin games are supported.

In regular games, the computer first displays the number sequence, such as No. 3, followed by the actual bingo number being called. Numbers such as G58 are extremely large and take up most of the screen.

If the round robin selection is made, the sequence is not counted but the

displayed bingo numbers are just as large as in the regular games. The program keeps track of the numbers it calls so that the same number is never duplicated in a game.

All 75 bingo numbers are available in the program and all are displayed in large green characters on a black background with the prefix, such as 'B', being only about half the size of the actual number. This is helpful in that it tends not to distract from the importance of the number itself. Most professional bingo players don't even need to see or hear the prefix. They have played enough games to know that "58" belongs in the 'G' column.

Home Bingo is a good program at a fair price and provides the CoCo user with a way to bring a little more high-tech into those smoke-filled bingo halls across America.

(Williams Enterprises, 53 Old Derry Road, Box 7, Hudson, NH 03051, 603-883-2859; Cassette \$9.95 or Disk \$11.95, plus \$2 S/H: First product review from this company appearing in THE RAINBOW)

MLBASIC 2.0 - BASIC Compiler

If you want your BASIC programs to run up to 50 times faster, or want more programming features without learning another language, MLBASIC is for you. MLBASIC is the most compatible BASIC compiler available for the Color Computer. WHY? Because MLBASIC fully supports:

- Low- and high-resolution graphics
- All types of I/O (disk, screen, printer, RS232)
- All available commands offered with BASIC
- Floating point functions and expressions
- Integer, floating point and string type variables and arrays
- Use of all available 512K RAM in the COCO 3
- 80,40 or 32 column text displays

MLBASIC not only contains everything that you would expect a BASIC programming language should contain, MLBASIC has features that offer flexibility of other languages like C, Pascal, FORTRAN and even assembly language. These features will allow programmers to directly access the CPU registers on the COCO, produce modular program code with SUBROUTINES, manipulate memory in blocks, and even call ROM routines in other areas of memory.

MLBASIC revision 2.0 has incorporated all enhancements that were suggested by MLBASIC 1.0 users and more. Revision 2.0 did away with all the incompatibility problems that existed with revision 1.0.

MLBASIC allows for the first time user to quickly compile a program using default compiler settings. The advanced user has the capability of controlling over a dozen settings which control where the program is compiled, which medium to compile to (memory or disk), string space, compiler listings and more.

With all this going for MLBASIC, your might expect the cost to be a little out of your budget. After looking at prices of other BASIC compilers for the COCO 3 you might be correct. But look again at this ad; for only \$59.95, you can have a programming language that will spark your interest once again in the COCO.

Before you buy another BASIC compiler for the COCO, find out if it supports everything MLBASIC supports. Then look at the price tag. We feel that it won't be long before you place an order for MLBASIC.

"MLBASIC is a fine program for any serious programmer,"
said David Gerald in the December 1987 RAINBOW.

WASATCHWARE

7350 Nutree Drive
Salt Lake City, Utah 84121
Phone (801) 943-1546

The following products have recently been received by THE RAINBOW, examined by our magazine staff and issued the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

Bug Buster, an upgraded arcade game that has you chasing specimens of the species *Bugus computerum* out of the disk drive, ROM, RAM, power supply and the printer. (The bugs infested your CoCo "a long time ago, while you were looking the other way.") This upgrade to *Bug Buster* features faster action and smaller targets. Requires a 32K CoCo, a disk drive and a joystick. *Tothian Software, Box 663, Rimersburg, PA 16248; \$19.95.*

CMMM, a stock market trading program "that will make money on a particular stock, whether the stock increases or decreases in price, providing the stock returns to its original price." For the CoCo 1, 2 and 3. Requires a disk drive and a DMP printer. *Weller Enterprises, P.O. Box 8004, La Crescenta, CA 91214, (818) 352-6811; \$49.95.*

Good Games Trio, a collection of 3 two-player games: *ADI, Othello* and *Connect Five*. *ADI* is a computerized version of a "board" game invented hundreds of years ago in Africa. *Othello* uses an 8-by-8 board and permits the user to obtain printouts of current games. *Connect Five* is based on the pencil-and-paper game and is mapped out in 10 columns. For the CoCo 1, 2 and 3; uses the high-speed poke. *RCPierce Software, P.O. Box 1787, Main Post Office, Edmonton, AB, Canada T5J 2P2, (403) 474-8435; \$19.95 US, \$22.95 CDN.*

Hall of the King Trilogy, a trio consisting of *Hall of the King, Hall of the King II: The Inner Chamber* and *Hall of the King III: The Earthstone Revealed*. Each graphics Adventure takes place in Firrhest, where a dwarven race once lived, and where the powerful Earthstone is hidden. Each program comes on a floppy — two sides of the disk are used. Requirements include 64K and a disk drive. For the CoCo 1, 2 and 3. *Sundog Systems, 21 Edinburg Drive, Pittsburgh, PA 15235, (412) 372-5674; \$74.95 for set, \$29.95 each, plus \$2.50 S/H.*

Hard Bodies, an on-disk swimsuit issue — "page after page of models in swimsuits that will make your CoCo screen sizzle." For the CoCo 1, 2 and 3; requires 64K disk. *Baron Products, 3937 Shady Hill, Dallas, TX 75229, (214) 350-3900; \$15.*

HELLO/BAS, a directory utility that lets you list and print a disk directory in alphabetical order, swap default drives with a key press and

load and run BASIC programs from a menu. For the CoCo 1, 2 and 3. Requires 32K ECB and uses the high-speed poke. *RCPierce Software, P.O. Box 1787, Main Post Office, Edmonton, AB, Canada T5J 2P2, (403) 474-8435; \$19.95 US, \$22.95 CDN.*

In Quest of the Star Lord Hint Sheet, a listing of the commands necessary to solve Sundog Systems' CoCo 3 *In Quest of the Star Lord* Adventure. The commands are encoded (but you have the key) in order that you don't learn more than you wanted to by a careless glance. The hint sheet is intended to be sold only to registered owners of *In Quest of the Star Lord*. *Sundog Systems, 21 Edinburg Drive, Pittsburgh, PA 15235, (412) 372-5674; \$3.95.*

Moneyman II, a menu-driven program composed of seven modules designed to perform common financial calculations: Savings Planner, Loan Planner, Budget Planner, Checking Account, Savings Account, Reconcile Bank Statement and Summarize Deductibles. The modules interact and call on each other as needed. Requires 32K ECB and a disk drive. An additional drive is optional, and a printer is recommended. *Tothian Software, Box 663, Rimersburg, PA 16248; \$24.95.*

Night of the Living Dead, a text Adventure with a ghoulish turn: You are lost in a remote area, and the dead are waking up. The only goal is to survive. As an incentive, the company is offering \$500 to the first player whose character can live through it (deadline December 31, 1988). For the

CoCo 1, 2 and 3. Requires 64K and a disk drive. *Adventure Novel Software, P.O. Box 8176, Spartanburg, SC 29305, (803) 578-7421; \$34.95 introductory offer.*

VIP Database III, a CoCo 3 database that supports 40-, 64- and 80-column screens, uses separate text and highlight colors for easy data entry, features in-memory sort of all records and a built-in print spooler. The database can store up to 550 records of 256 characters on a one-disk system, and it supports multi-criteria searches with up to 16 separate relational keys. Requires the CoCo 3. *SD Enterprises, P.O. Box 1233, Gresham, OR 97030, (503) 663-2865; \$69.95.*

Wildcard Copy, a Disk BASIC supplement that lets you do a multiple copy with one command, equivalent to the COPY * command on other systems. It can be used to copy files with the same name but different extensions and files that share an extension. The program is written in BASIC for two disk drives and the CoCo 1, 2 and 3. *RVC Software, P.O. Box 560, Englishtown, NJ 07726, (201) 446-2033; \$15.*

Word Processing: TRS-80 & Star NX-10, a word processing program written in BASIC for the duo of the CoCo and the Star Micronics NX-10 dot matrix printer. The program takes advantage of the printer's capabilities, including underlining, italics, NLQ print, emphasized and bold print, superscripts and subscripts, Pica and Elite, etc. For 64K CoCo 1, 2 and 3; comes on cassette only. *Lee Sullivan, P.O. Box 8718, Penacook, NH 03303, (603) 753-4497; \$12.*

F First product received from this company

The Seal of Certification program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a Seal, the magazine certifies the product does exist — that we have examined it and have a sample copy — but this does not constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW reviewers for evaluation.

— Lauren Willoughby

Computer Island Educational Software

ARROW GAMES

32K Ext. - \$21.95 tape/\$26.95 disk
Six menu driven games for young children (ages 3-6) to teach directions. All games involve using the arrow keys ONLY. Games include: LADYBUG, BUTTERFLY, ARROW MATCH, KALEIDOSCOPE, RABBIT, and DOODLE. Colorful graphics.

FIRST GAMES

32K Ext. - \$24.95 tape/\$29.95 disk
First Games contains 6 menu driven programs to delight and teach your early learners (ages 3-6). These games enrich the learning of colors, numbers, lower case letters, shapes, memory visual discrimination and counting.

CLOZE STORIES

32K Ext. - \$19.95 Tape/\$24.95 Disk
These programs give students practice using the popular CLOZE reading technique. Each program contains grade appropriate short stories with key missing words to be deduced by the student. Available for grades 3, 4, 5, 6, OR 7. Please specify.

DRAWING CONCLUSIONS

32K Ext. - tape \$19.95/disk \$24.95
These programs contain short stories. Each story has two accompanying questions that ask the student to draw conclusions from the text. Available for grades 3-4 OR 5-6. Please specify.

LOCATING STORY DETAILS

32K Ext. - disk only - \$24.95
These programs contain short stories. Each has an accompanying picture. Questions about story details refer to either the text or pictures. The disk generated graphics are an integral part of these attractive programs. Available for grades 2-3 OR 4-5. Please specify.

FOREIGN LANGUAGE GAMES

32K Ext. - \$19.95 tape/\$24.95 disk
(500 words)

French or Spanish Baseball

Score base hits or home runs for correct answers. You're out if wrong. Correct answers supplied. Fun way to learn and practice vocabulary. PLEASE SPECIFY LANGUAGE.

PUNCTUATION PRACTICE

32K Ext. - tape \$19.95/disk \$24.95
On screen practice in proper usage of the familiar punctuation marks. Grades 3-7.

MATH TUTOR SERIES

16K Ext.

These tutorials take the child through each step of the example. All programs include HELP tables, cursor and graphic aids. All allow user to create the example, or let the computer choose. Multi-level. Great teaching programs.

LONG DIVISION TUTOR

Barden's Buffer

Assembly Language for the Complete Novice: Part II

By William Barden, Jr.
Rainbow Contributing Editor

Last month's column looked at the basic architecture of the 6809 microprocessor used in the Color Computers, and many of the instructions and addressing modes of the 6809. In this column, I'll write some simple programs, assemble them by hand and by assembler and incorporate them in BASIC programs. This column will present the basic ideas of assembly language programming. Let's see if you're brave enough to learn it.

Hand Assembling

A *sort* usually arranges items in alphabetical order, generally from A to Z. Therefore, if we want to sort all the characters on a text screen in order, we would use a sort — probably a *bubble sort*.

A Bubble Sort

A bubble sort compares the first entry in a list with the next one. If that entry is smaller, swap the entries. The bubble sort continues, one entry at a time, until it reaches the end of the list. If any entries are switched, the process repeats. When no swap has been switched, the list is sorted. Look at the following example:

```
*F  F  F  F  F  F  F
G  *G A  A  A  A  A
A  A  *G B  B  B  B
B  B  B  *G G  G  G
Y  Y  Y  Y  *Y C  C
C  C  C  C  C  *Y D
D  D  D  D  D  D  *Y (one pass over)
```

```
*A  A  A  A  A  A  A
F  *B B  B  B  B  B
B  F  *F F  F  F  F
G  G  G  *C C  C  C
C  C  C  G  *D D  D
D  D  D  D  G  *G G
Y  Y  Y  Y  Y  Y  *Y (two passes over)
```

```
*A  A  A  A  A  A  A
B  *B B  B  B  B  B
F  F  *C C  C  C  C
C  C  F  *D D  D  D
D  D  D  F  *F F  F
G  G  G  G  G  *G G
Y  Y  Y  Y  Y  Y  *Y (three passes over, sorted)
```

In the preceding example, the asterisk shows the suspect item. While the list is sorted after three passes, another pass must be made to verify that no switch has occurred.

The text screen starts at location \$400 in CoCo memory and goes to \$5FF, 512 characters. Here is a BASIC program that would complete this sort:

```
100 Y = 0
110 FOR X = &H400 TO &H5FE
120   A = PEEK( X )
130   IF A <= PEEK ( X + 1 ) THEN GOTO 1701
140   B = PEEK( X + 1 )
150   POKE X, B:POKE X + 1, A
160   Y = 1
170 NEXT X
180 IF Y <> 0 THEN GOTO 100
190 END
```

If you run this program, you'll see the characters on the screen rearrange themselves in alphabetical order — really a CoCo-coded order, like ASCII. Figure 1 shows the results of the sort after the program is listed on the screen. The sort takes quite a long time in BASIC — about 58 minutes, depending on the characters' random order. How would this be done in assembly language?

The Assembly Language Version

The sort compares two values, the current location and the current location + 1. To compare in assembly language, we must have one value in a register — typically the A or B register — and compare it with another value in memory. In

Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years' experience in the industry covers a wide background: programming, systems analysis and managing projects for computers ranging from mainframes to micros.

ag. A '1' is loaded into the register to indicate the if no change occurs, the register will hold 0): LDY #1 ANGE".

entire code, including a compare instruction, swap (if necessary) and set change flag, now looks like this:

```
LDA    ,X+    GET FIRST ENTRY
CMPA   ,X      COMPARE TO I+1
BLS    ONE70  GO IF ENTRY I GE ENTRY I+1
LDB    ,X      GET SECOND ENTRY
STB    -1,X   SWAP B TO A
STA    ,X      SWAP A TO B
LDY    #1     SET "CHANGE"
```

At this point, we also know that the Y register is initially set to 0 and that the X register points to the start of the screen memory:

```
LDX    #$400  POINT TO SCREEN
LDY    #0     SET CHANGE FLAG TO 0
LDA    ,X+    GET FIRST ENTRY
CMPA   ,X      COMPARE TO I+1
BLS    ONE70  GO IF ENTRY I GE ENTRY I+1
LDB    ,X      GET SECOND ENTRY
STB    -1,X   SWAP B TO A
STA    ,X      SWAP A TO B
LDY    #1     SET "CHANGE"
```

Since this action is taken for every screen location from \$400 to \$5FE, stopping at \$5FE, we must have a way to stop the compare instruction. X is incremented from \$400 through \$5FE. When it reaches \$5FF, we should stop to see if the change flag has been set. If it has, we must go back for another pass. If it has not, the sort is complete. If X does not stop at \$5FF, however, we'll continue looping and compare for this pass:

```
CMPX   #$5FF  TEST FOR SCREEN END
BNE    ONE10  GO IF NOT ONE PASS
```

If one pass has been completed, test the change flag by comparing the contents of the Y register with 0 and branching back if Y = 1 (indicating that at least one swap has occurred):

```
CMPY   #0     TEST CHANGE FLAG
BNE    HUNDRD GO IF CHANGE OCCURRED
```

The whole sequence now looks like this:

```
LDX    #$400  POINT TO SCREEN
LDY    #0     SET CHANGE FLAG TO 0
LDA    ,X+    GET FIRST ENTRY
CMPA   ,X      COMPARE TO I+1
BLS    ONE70  GO IF ENTRY I GE ENTRY I+1
LDB    ,X      GET SECOND ENTRY
STB    -1,X   SWAP B TO A
STA    ,X      SWAP A TO B
LDY    #1     SET "CHANGE"
CMPX   #$5FF  TEST FOR SCREEN END
BNE    ONE10  GO IF NOT ONE PASS
CMPY   #0     TEST CHANGE FLAG
BNE    HUNDRD GO IF CHANGE OCCURRED
```

There are several branches in this sequence. We've named them to correspond to the BASIC implementation of this sort.

If we use *labels* instead of line numbers, as in BASIC, we have:

```
HUNDRD LDX    #$400  POINT TO SCREEN
LDY    #0     SET CHANGE FLAG TO 0 ONE10
LDA    ,X+    GET FIRST ENTRY
CMPA   ,X      COMPARE TO I+1
BLS    ONE70  GO IF ENTRY I GE ENTRY I+1
LDB    ,X      GET SECOND ENTRY
STB    -1,X   SWAP B TO A
STA    ,X      SWAP A TO B
LDY    #1     SET "CHANGE"
ONE70  CMPX   #$5FF  TEST FOR SCREEN END
BNE    ONE10  GO IF NOT ONE PASS
CMPY   #0     TEST CHANGE FLAG
BNE    HUNDRD GO IF CHANGE OCCURRED
```

(I've indented to indicate the inner loop.)

Hand Coding

My first program — one that read a single punched card from a card reader and then boot the system — was completely hand coded. In one card, I made a quantum leap in my understanding of assembly language programming. I'm not saying that hand coding this program will do the trick for you, but it may help.

The first step in hand coding is to make a skeleton of the instructions based upon instruction length. You can find the instruction length in the list of instructions found in the back of assembler manuals, on a 6809 instruction sheet or in books on 6809 programming. As I explained in the last column, different addressing modes require different instruction lengths, as do different types of instructions. Branch instructions are always two bytes — opcode followed by displacement value. *Load immediate* instructions are two or three bytes — opcode followed by a 1-byte (A or B) value or a 2-byte (D, X or Y) value. *Load from memory* instructions are 3-byte instructions — opcode followed by two bytes of

Two-Liner Contest Winner . . .

Here is a utility to display a slower, more organized directory listing, good for those who find it difficult to keep up with DIR's fast scroll-through. It handles up to 72 files.

Put spaces for individual page listing.
The listing:

```
Ø CLS: CLEAR2ØØØ:K=Ø:M=1:FORA=3TO
11:DSKI$ Ø,17,A,B$,C$:D$=B$+LEFT
$(C$,127):E$(Ø)=LEFT$(D$,8):FOR
F=1TO7:E$(F)=MID$(D$,F*32+1,8):N
EXTF:FOR G=ØTO7:PRINT@K,"#";M"
E$(G):K=K+16:M=M+1:IF K>5ØØTHEN
K=48Ø
1 EXEC44539:NEXTG:NEXTA:END
```

Want spaces for my Coco 3!

John M. Beck
Suitland, MD

(For this winning two-liner contest entry, the author has been sent copies of both *The Third Rainbow Book of Adventures* and its companion *The Third Rainbow Adventures Tape*.)

memory address. *Indexed addressing* instructions vary depending upon the offset. The skeleton here looks like this:

XXXXXX	HUNDRD	LDA	,\$400	POINT TO SCREEN
XXXXXXXX		LDY	#0	SET CHANGE FLAG TO 0
XXXX	ONE10	LDA	,X+	GET FIRST ENTRY
XXXX		CMPA	,X	COMPARE TO I+1
XXXX		BLS	ONE70	GO IF ENTRY I GE ENTRY I+1
XXXX		LDB	,X	GET SECOND ENTRY
XXXX		STB	-1,X	SWAP B TO A
XXXX		STA	,X	SWAP A TO B
XXXXXXXX		LDY	#1	SET "CHANGE"
XXXXXX	ONE70	CMPX	,\$5FF	TEST FOR SCREEN END
XXXX		BNE	ONE10	GO IF NOT ONE PASS
XXXXXXXX		CMPLY	#0	TEST CHANGE FLAG
XXXX		BNE	HUNDRD	GO IF CHANGE OCCURRED

Each two X's represent two hexadecimal digits or one byte. Now we can add the opcodes for the instructions by finding them in the instruction list:

BEXXXX	HUNDRD	LDA	,\$400	POINT TO SCREEN
10BEXXXX		LDY	#0	SET CHANGE FLAG TO 0
A6XX	ONE10	LDA	,X+	GET FIRST ENTRY
A1XX		CMPA	,X	COMPARE TO I+1
23XX		BLS	ONE70	GO IF ENTRY I GE ENTRY I+1
E6XX		LDB	,X	GET SECOND ENTRY
E7XX		STB	-1,X	SWAP B TO A
E7XX		STA	,X	SWAP A TO B
10BEXXXX		LDY	#1	SET "CHANGE"

BCXXXX	ONE70	CMPX	,\$5FF	TEST FOR SCREEN END
26XX		BNE	ONE10	GO IF NOT ONE PASS
10BCXXXX		CMPLY	#0	TEST CHANGE FLAG
26XX		BNE	HUNDRD	GO IF CHANGE OCCURRED

Note that some opcodes are made up of two bytes. Motorola ran out of opcodes and also wanted to make frequently used instructions shorter.

Now we can add the immediate values — values loaded into a register and found within the instruction. For example, the LDA instruction loads \$400 into the X register:

BE0400	HUNDRD	LDA	,\$400	POINT TO SCREEN
10BE0000		LDY	#0	SET CHANGE FLAG TO 0
A6XX	ONE10	LDA	,X+	GET FIRST ENTRY
A1XX		CMPA	,X	COMPARE TO I+1
23XX		BLS	ONE70	GO IF ENTRY I GE ENTRY I+1
E6XX		LDB	,X	GET SECOND ENTRY
E7XX		STB	-1,X	SWAP B TO A
A7XX		STA	,X	SWAP A TO B
10BE0001		LDY	#1	SET "CHANGE"
BC05FF	ONE70	CMPX	,\$5FF	TEST FOR SCREEN END
26XX		BNE	ONE10	GO IF NOT ONE PASS
10BC0000		CMPLY	#0	TEST CHANGE FLAG
26XX		BNE	HUNDRD	GO IF CHANGE OCCURRED

Now let's tackle the branches. In the last column, we learned that branches use a relative addressing mode, which adds the current location to a displacement field in the instruction. To hand code this value, do the following: For a forward branch, start at 0=next instruction after the

"I cannot imagine the CoCo 3 without ADOS-3; it would not be a complete machine."
The RAINBOW, July 1987

You've moved up to a CoCo 3. A powerful new machine. Now, it's time to give BASIC a shot in the arm, with ADOS-3. Wouldn't it be nice to turn on your machine and be greeted by an 80-column display, in the colors of your choice, with your own custom startup message? To run routinely at 2 MHz (double speed) without having to slow down for disk and printer operations? This and much, much more is possible with ADOS-3, our CoCo 3 adaptation of the acclaimed original ADOS, which shares the original's virtual 100% compatibility with commercial software. After customizing ADOS-3 using the provided configuring utility, you can have it burned into an EPROM that plugs into the Disk BASIC ROM socket, or just use it in RAM as a disk utility. (EPROM + burning will cost \$15-20; we provide information concerning how you can have this done.) Supports double-sided drives (35, 40, or 80 tracks). FAST and SLOW commands, auto line number prompts, RUNM command, keystroke macros, arrow-key scroll through BASIC programs, auto-edit of error line, and many more valuable features.

"ON A SCALE OF 1 TO 10, I RATE ADOS-3 A SOLID 15." RAINBOW, 7/87

branch and add one for each following byte. For a backward branch, start at the \$FF=second byte of the branch and subtract one for each of the above. Thus, if BNE ONE10 branches back 21 bytes, start at FF (the second byte of BNE), and move back in the following manner: FF, FE, FD, FC, FB, FA, F9, F8, F7, F6, F5, F4, F3, F2, F1, F0, EF, EE, ED, EC to EB (first byte of LDA). The machine language commands would look like this:

```
BE0400  HUNDRD LDX  #$400  POINT TO SCREEN
10BE0000  LDY  #0  SET CHANGE FLAG TO 0
A6XX  ONE10  LDA  ,X+  GET FIRST ENTRY
A1XX  CMPA  ,X  COMPARE TO I+1
230A  BLS  ONE70  GO IF ENTRY I GE ENTRY I+1
E6XX  LDB  ,X  GET SECOND ENTRY
E7XX  STB  -1,X  SWAP B TO A
A7XX  STA  ,X  SWAP A TO B
10BE0001  LDY  #1  SET "CHANGE"
8C05FF  ONE70  CMPX  #$5FF  TEST FOR SCREEN END
26EB  BNE  ONE10  GO IF NOT ONE PASS
10BC0000  CMPY  #0  TEST CHANGE FLAG
26DE  BNE  HUNDRD  GO IF CHANGE OCCURRED
```

Now we can fill in the second byte of the *indexed* instructions. These are a bit tricky. You must note what type of indexing is being used and whether there's a displacement value. You must also code in the index register field, RR. Here the code value for the index register is 00, for X. The trickiest coding is for the STB -1,X, which is coded as 00011111. The RR register code is 00, so the result is 00011111. The five-bit field holds the displacement value of 111111, equal to -1 in two's complement notation.

```
BE0400  HUNDRD LDX  #$400  POINT TO SCREEN
10BE0000  LDY  #0  SET CHANGE FLAG TO 0
A680  ONE10  LDA  ,X+  GET FIRST ENTRY
```

```
A1B4  CMPA  ,X  COMPARE TO I+1
230A  BLS  ONE70  GO IF ENTRY I GE ENTRY I+1
E6B4  LDB  ,X  GET SECOND ENTRY
E71F  STB  -1,X  SWAP B TO A
A7B4  STA  ,X  SWAP A TO B
10BE0001  LDY  #1  SET "CHANGE"
8C05FF  ONE70  CMPX  #$5FF  TEST FOR SCREEN END
26EB  BNE  ONE10  GO IF NOT ONE PASS
10BC0000  CMPY  #0  TEST CHANGE FLAG
26DE  BNE  HUNDRD  GO IF CHANGE OCCURRED
```

Finding a Place for the Code

Now that we have the code, we need to know where to put it. If we use assembly language code with BASIC, we must place the code out of harm's way. We don't want BASIC to clobber the machine language bytes as it stores variables or internal variables. One way to do this is by using the CLEAR command in BASIC. This command allocates string space and protects a block of memory. For example, CLEAR 300,&H3EFF allocates 300 bytes of string space and protects all memory above \$3EFF — just a little under the 16K point. There's still enough room for BASIC to function in the memory under this point.

There are other places we *could* put the machine language bytes (such as in the middle of large arrays or in strings), but this is the safest place — a place that will never be touched by BASIC.

Now that we know where the machine language bytes go, we can assign locations to each of the instructions. Because some instructions refer to absolute memory locations (such as LDA CONSNT, instruction locations should be assigned *after* making the skeleton of instruction lengths. We are going to do it now. (We are lucky that the program above is relocatable anywhere in memory — it contains no absolute addresses.)

We can see from the code shown in Figure 2 that the machine language bytes occupy memory from \$3F00 to \$3F21. Now, how do we get them there? Assuming that we're

```
3F00  BE0400  HUNDRD LDX  #$400  POINT TO SCREEN
3F03  10BE0000  LDY  #0  SET CHANGE FLAG TO 0
3F07  A680  ONE10  LDA  ,X+  GET FIRST ENTRY
3F09  A1B4  CMPA  ,X  COMPARE TO I+1
3F0B  230A  BLS  ONE70  GO IF ENTRY I GE ENTRY I+1
3F0D  E6B4  LDB  ,X  GET SECOND ENTRY
3F0F  E71F  STB  -1,X  SWAP B TO A
3F11  A7B4  STA  ,X  SWAP A TO B
3F13  10BE0001  LDY  #1  SET "CHANGE"
3F17  8C05FF  ONE70  CMPX  #$5FF  TEST FOR SCREEN END
3F1A  26EB  BNE  ONE10  GO IF NOT ONE PASS
3F1C  10BC0000  CMPY  #0  TEST CHANGE FLAG
3F20  26DE  BNE  HUNDRD  GO IF CHANGE OCCURRED
3F22
```

Figure 2

going to be working in BASIC, we can use the BASIC POKE statements to move any type of data anywhere we want within the 64K addressing space of BASIC. The easiest way to do this is to list the data in DATA statements and then to use a loop to move the data:

```

900 CLEAR 300, &H3EFF
1000 DATA &HBE, &H04, &H00, &H10, &HBE, &H00, &H00,
&HAE
1001 DATA &H80, &HA1, &H84, &H23, &H0A, &HE6, &H84,
&HE7
1002 DATA &H1F, &HA7, &H84, &H10, &HBE, &H00, &H01,
&HBC
1003 DATA &H05, &HFF, &H26, &HEB, &H10, &HBC, &H00,
&H00
1004 DATA &H26, &HDE
1010 FOR I = &H3F00 TO &H3F21: READ A: POKE I, A:
NEXT

```

The loop at Line 1010 moves the 22 bytes of data into the \$3F00 protected area.

Next, now that we have the machine language code there, how do we get to it? Here again, BASIC has the answer. The DEFUSR statement defines where the code is. There's an ID number attached to this statement so it becomes DEFUSR0 - DEFUSR9, but since we have only one machine language program we'll use DEFUSR0. Once defined, the code is called by a USR0 statement, which tells the BASIC interpreter to use

the defined location and transfer control to the machine language program found there:

```

900 CLEAR 300, &H3EFF
1000 DATA &HBE, &H04, &H00, &H10, &HBE, &H00, &H00,
&HAE
1001 DATA &H80, &HA1, &H84, &H23, &H0A, &HE6, &H84,
&HE7
1002 DATA &H1F, &HA7, &H84, &H10, &HBE, &H00, &H01,
&HBC
1003 DATA &H05, &HFF, &H26, &HEB, &H10, &HBC, &H00,
&H00
1004 DATA &H26, &HDE
1010 FOR I = &H3F00 TO &H3F21: READ A: POKE I, A:
NEXT
1020 DEFUSR0 = &H3F00
1030 A+USR0(0)
1040 GOTO 1040

```

We are now all set to call the program, or are we? Once the program is executed, what will happen? The last instruction was a BNE. It branches back to the beginning of the bubble sort if the data is not sorted. However, if the data is sorted, the next instruction in sequence is executed. But there is no next instruction. Since the next instruction will be garbage, the program will probably blow up in some strange loop after the sort is done.

After the sort let's return to a BASIC calling program by

Burke & Burke

P.O. Box 1283 Palatine, IL 60078-1283
(312) 397-2898

Our Famous Hard Disk Interface

We've sold hundreds of our affordable, high-performance CoCo XT and CoCo XT-RTC hard disk interfaces to a very hot Color Computer market in a single year! This year, 1988, is "The Year of the Hard Disk" at Burke & Burke.

The CoCo XT hard disk interface lets you connect up to 2 low cost, PC compatible 5-120 Megabyte capacity hard drives to your CoCo. You buy the drive, Western Digital WD1002-WX1 or WD1002-27X (ALL) controller, and a case from the PC dealer of your choice. Just plug them into the CoCo XT, plug the CoCo XT into your Multi-PAK, and you have a 20 Meg OS9 hard disk system for under \$450!

Great for multi-user systems! The CoCo XT interface uses advanced "NO HALT" hard disk controllers, which do not halt your CoCo and do not disable or use interrupts during hard disk access. You get full type-ahead, and the system clock does not lose time during hard disk access. Fully compatible with most RS-232 expansion ports!

CoCo XT (with anodized housing, 60 page user manual, hard disk back-up utility and new, Version 2.3 drivers for use with both OS9 & HYPER-I/O) - \$69.95. Or choose the **CoCo XT-RTC** (includes real-time clock / calendar with battery backup) - \$99.95

THE PROFESSIONAL TOUCH: XT-ROM - Automatically boots and reboots OS9 from hard disk. Installs in your hard disk controller's BIOS ROM socket - \$19.95.

Now: Hard Disk for BASIC

"Dynamic Disk Interface" runs hard drives, big floppies, and more!

You or someone that you know may have the 35 Track Blues. It strikes hundreds of CoCo users every year. One day you wake up, and say to yourself, "These 35 track floppy disks are just too small."

There's only one cure. More storage. Get it. With HYPER-I/O, from Burke & Burke.

BASIC for the '90's

HYPER-I/O modifies the RS-DOS Disk BASIC in your CoCo 1, 2, or 3 to provide a "Dynamic Disk Interface". Use your existing BASIC and RS-DOS software with hard disk interfaces (CoCo XT, DISTO), RAM Disks, and any mix of floppy drives from 160K to 720K each. Fully RESET protected, user configurable, expandable, OS9 compatible, EPROM-able HYPER-I/O may soon be THE system of choice for the CoCo 1, CoCo 2, and CoCo 3. **HYPER-I/O Version 2.5** now available for only \$29.95.

HYPER-III (RAM Disk and Print Spooler for CoCo 3 HYPER-I/O) - \$19.95

Shipping (within the USA) CoCo XT \$2.00; Disk or ROM \$1.50. COD's add \$2.20.

Looking for "The Answer"?

Gain access to the vast warehouse of information stored in your "non-conscious" mind through your computer keyboard.

There are mini-programs or circuits in everyone's "non-conscious" mind which will enable them to accomplish remarkable things. In order to utilize these mini-programs, a bridge of communication must be established between the conscious and the "non-conscious" parts of the mind. Six years of research and development have resulted in a proven aid for establishing this bridge.

"The Answer" is a software package which aids you in communicating with your "non-conscious" mind to solve questions and difficult problems in a question/answer format. It utilizes graphics and optional user-programmable subliminal messages to strengthen the communication bridge.

Ask your questions...seek the answers...**EXTERNALIZE THE RESULTS** via automatic disk-stored record and optional print-out.

Order now for only \$29.95 (+\$3.00 S/H) to COD's.

"Turn on your computer and turn on the power of your mind!"

using a stack (described last month). The stack saves the return address of a control point in the BASIC interpreter. We can pop that return address by including a 6809 RTS (Return from subroutine) instruction as the *last* instruction of the machine language code as shown in Figure 3.

“Assembly language is tedious, and it is hard to learn. But if you want to do things that you just can’t do in compiled languages, assembly language is the only way to go.”

We’ll have to include that in the storage portion of the BASIC program as well:

```

900 CLEAR 300, &H3EFF
1000 DATA &HBE, &H04, &H00, &H10, &HBE, &H00, &H00,
&HAE
1001 DATA &H80, &HA1, &HB4, &H23, &H0A, &HE6, &HB4,
&HE7
1002 DATA &H1F, &HA7, &HB4, &H10, &HBE, &H00, &H01,
&HBC
1003 DATA &H05, &HFF, &H26, &HEB, &H10, &HBC, &H00,
&H00
1004 DATA &H26, &HDE, &H39
1010 FOR I = &H3F00 TO &H3F22: READ A: POKE I, A:
NEXT
1020 DEFUSR0 = &H3F00
1030 A = USR0(0)
1040 GOTO 1040

```

Now we *are* all set to run the sort. The USR0 will transfer control to the machine language code; the screen sort will be done; the RTS will return control to BASIC. BASIC will execute the next instruction after the USR0 that is, in this case, a continual loop so screen result is not disturbed.

If you run this code, you’ll see a rapid sort of the screen. This is several times faster than the equivalent BASIC code, and *speed* is the reason that assembly language is used.

Assembler Assembling

You can see that it is possible to hand assemble machine language code. However, it’s very tedious. Grace Hopper, the major force behind COBOL, says that it’s almost impossible to assemble a string of 40 ones and zeroes and not make a mistake. For this reason, it’s much easier to assemble the code automatically. The symbolic code:

HUNDRD	LDX	#\$400	POINT TO SCREEN
	LDY	#0	SET CHANGE FLAG TO 0
ONE10	LDA	,X+	GET FIRST ENTRY
	CMPA	,X	COMPARE TO I+1
	BLS	ONE70	GO IF ENTRY I GE ENTRY I+1
	LDB	,X	GET SECOND ENTRY
	STB	-1,X	SWAP B TO A
	STA	,X	SWAP A TO B
	LDY	#1	SET "CHANGE"
ONE70	CMPX	#\$5FF	TEST FOR SCREEN END
	BNE	ONE10	GO IF NOT ONE PASS
	CMPY	#0	TEST CHANGE FLAG
	BNE	HUNDRD	GO IF CHANGE OCCURRED
	RTS		RETURN TO BASIC

is entered into the assembler program. This *source code* is the actual assembly language. The assembler then proceeds in the same way that we proceeded in hand assembling. It makes one pass through the lines of code, allocates space for

3F00	BE0400	HUNDRD	LDX	#\$400	POINT TO SCREEN
3F03	10BE0000		LDY	#0	SET CHANGE FLAG TO 0
3F07	A680	ONE10	LDA	,X+	GET FIRST ENTRY
3F09	A184		CMPA	,X	COMPARE TO I+1
3F0B	230A		BLS	ONE70	GO IF ENTRY I GE ENTRY I+1
3F0D	E6B4		LDB	,X	GET SECOND ENTRY
3F0F	E71F		STB	-1,X	SWAP B TO A
3F11	A7B4		STA	,X	SWAP A TO B
3F13	10BE0001		LDY	#1	SET "CHANGE"
3F17	8C05FF	ONE70	CMPX	#\$5FF	TEST FOR SCREEN END
3F1A	26E8		BNE	ONE10	GO IF NOT ONE PASS
3F1C	108C0000		CMPY	#0	TEST CHANGE FLAG
3F20	26DE		BNE	HUNDRD	GO IF CHANGE OCCURRED
3F22	39		RTS		RETURN TO BASIC
3F23					

Figure 3

each instruction and assigns opcodes. It also builds a symbol table of all labels and symbols in the code. The symbol table for this code would look like this:

```
HUNDRD    $3F00
ONE10     $3F07
ONE70     $3F17
```

The assembler now makes a second pass and fills in opcodes, displacements, and absolute addresses. The result is *object code* that looks much like the machine language code we generated. This object code is usually loaded by a *loader*, resulting in true machine language code — ones and zeroes.

If you understand what's happening in the process above, the assembler won't pose any problems for you. Assemblers have a few more commands called *pseudo-operations* or *pseudo-ops* that allow you to define the origin of the program, allocate space for constants or define constants, define text strings, etc., but these are relatively easy to understand.

As I mentioned in the previous column, one of the best assemblers for the CoCo was Disk *EDTASM*. I say *was* because Radio Shack has discontinued it. Disk *EDTASM* was like *Turbo PASCAL* for the PC compatibles — it operated in a highly interactive environment that allowed you to edit a program, quickly assemble it *in memory* and then debug the assembled code, all in the same program. It was a one-step process. If you want to learn assembly language, I suggest that you look for a copy of this. Once you *know* assembly language, the assembler you use is not as critical, but Disk *EDTASM* is a great learning tool.

A Second Example

Let's try a second example:

```
100 CLS 110 X = 16: Y = 8
120 DX = 1: DY = 1
130 L = &H400 + 8 * 32 + 16
140 X = X + DX
150 Y = Y + DY
160 IF ( X < 0 OR X > 31 ) THEN DX = -DX: X = X + DX
170 IF ( Y < 0 OR Y > 14 ) THEN DY = -DY: Y = Y + DY
180 POKE &H400 + L, 96
190 L = Y * 32 + X
200 POKE &H400 + L, 79
210 GOTO 140
```

This BASIC code clears the text screen and then moves an 'O' around inside the screen on a diagonal path. As the 'O' is moved, the old position is erased. The effect is like the cursor in an old *Pong* game — the cursor bounces around within the screen.

As in the first example, each poke is used to set characters on the screen directly. Character 96 is a space, which clears the character position. Character 79 is an uppercase 'O'. Variable X, the column, varies from 0 to 31. Variable Y, the row, varies from 0 to 14. Using up to 15 rows traces the same path, and the display is not very interesting.

The variables DX and DY are the increments to add to X and Y. At the start, the increments are one and one, which results in the movement of one character position over and one down. When Character O hits the side of the screen, however, one or both of the increments are changed by negation. This changes the direction of the move. Both change at a corner.

How would this be coded in assembly language? The assembly language program for this is shown in Listing 1. It follows the same logic as the BASIC program. As you can see, this is an *EDTASM+* (Disk *EDTASM*) listing. The source code (the text) contains the pseudo-op *ORG* to set the origin to \$3F00 and several *FCB* pseudo-ops to initialize variables. Otherwise, you'll find it easy to follow. The listing also includes absolute addresses in some of the instructions, unlike our first example. Variables XR, YR, DX, and DY are located in absolute addresses.

The BASIC code for the program is shown in Listing 2. It uses the same scheme of relocation by *DATA* values we used in the first example. There is no *RTS*; however, the display runs continuously (reset to regain control). If you run the program, you'll be amazed — nothing shows up on the screen. Why?

This program is so much faster than the BASIC version that the 'O' is moving too fast to be seen. If you don't believe me, substitute &H12, &H12 for the &HA7, &HB4 in Line 180. This will prevent the old character from being erased. Now when you run the program you see the screen fill up with O's as the "cursor" moves around the entire screen in the wink of an eye.

This is a very brief introduction to assembly language. Assembly language is tedious, and it is hard to learn. But if you want to do things that you just can't do in compiled languages, assembly language is the only way to go.

See you next month with more CoCo topics. □

THE BEST COCO ASSEMBLY LANGUAGE PROGRAMMING BOOKS IN PRINT

"Assembly Language Programming for the CoCo" (The Book) and the CoCo 3 (The Addendum). Professionally produced (not just skimpy technical specifications). THE CoCo reference books.

THE BOOK - 289 pages of teaching assembly language for the CoCo 1 & 2. It's used as a school text and is an intro to Computer Science. It describes the 6809E instructions, subroutines, interrupts, stacks, programming philosophy, and many examples. Also covered are PIAs, VDG, SAM, kybd, jstsk, sound, serial port, and using cassette and disk. \$18.00 + \$1.50 s/h.

THE ADDENDUM - Picks up where the BOOK left off. Describes ALL the CoCo 3 enhancements & how to use them with assembly language. The most complete GIME spec. WOW - Super-Res Graphics, Virtual Memory, New Interrupts, and more information not available elsewhere. Find out what the CoCo 3 can really do. \$12.00 + \$1.00 s/h.

COCO 3 SPECIAL Start your CoCo library right. See what the CoCo can really do and save money - buy the BOOK and ADDENDUM for only \$27.00 + \$2.00 s/h.

Introducing the OS-9 Team

By Richard A. White
Rainbow Contributing Editor

Last month, we discussed some general operating system ideas and the ways in which OS-9 differed from them. All operating systems must connect the computer's computing and memory areas to its input and output components. An operating system provides the connections to the outside world. Most operating systems hide this connecting code in a program that is loaded when the computer is booted.

Because you seldom need to know this code, you would not need to know its location. There is a problem, however, if the operating system is not set up for new hardware you want to add.

One solution to this problem is buying a new version of the operating system. Owners of MS-DOS machines have done this many times. ("Want a hard disk? Fine. But Version 2.1 of DOS won't work with this. A 3.1 will work just fine. \$50 please. You only have 256K of RAM? That's a little small for Version 3.1. Oh, it will fit fine, but nothing else will fit with it. For \$250 we have this memory upgrade board to take you to 640K.")

Richard White lives in Fairfield, Ohio, has a long background with microcomputers and specializes in BASIC programming. With Don Dollberg, he is the co-author of the TIMS database management program.

OS-9 was designed to handle such situations without causing the trauma that other systems cause. Higher-performance options are not quite free, but the cost is compensated by the intellectual challenge. OS-9 can be altered so easily because the user can get to each of the operating system modules and change or replace them, or add others. In this article, we will discuss why and how you make changes in your OS-9 system.

Modules

There is a distinction between user and system modules. While user modules are loaded and used after booting a system, system modules are included in the kernel and boot files. Kernel files contain the programs that start and manage the system's operation. Input and output (I/O) files communicate with attached hardware. All system modules should be in the kernel or in OS9Boot. As we go along, note which modules should be in OS9Boot and which should not. Under Level II, the kernel includes REL, Boot, OS9p1, OS9p2, Init, CC3G0 and Clock. The first three are stored on Track 34 of the boot disk and are loaded when you type DOS to start up OS-9. REL resets the system hardware, prepares it for OS-9 and calls OS9p1. OS9p1 initializes the system, and Boot loads OS9Boot.

Init, OS9p2, CC3G0 and Clock must be in your OS9Boot file. Init is not a

program. It is a data module containing system constants. OS9p2 handles memory management, the module directory and functions associated with module management, and process control. This is the heart of multitasking capability in OS-9. CC3G0 now loads *Shell* and *GrfDrv*, establishes communications with *Shell* and starts the StartUp file.

Shell handles communication between you and the computer. The program interprets commands that are typed in and calls the proper operating system code to execute them. Though not part of the operating system, it may be considered an application program that interfaces with the operating system. *Shell* is designed to be loaded separately from OS9Boot as is *GrfDrv*. Do *not* put either of these into your OS9Boot.

Shell's input may come from sources other than the keyboard. Input can also be redirected from any source managed by OS-9. Typically, alternate input comes from a disk file containing commands identical to those typed from the keyboard. The StartUp file is one such disk file. But CC3G0 automatically starts the process of reading this file on boot. *Shell* interprets commands from StartUp as if they had been typed. A simple StartUp file provided with OS-9 sends a welcome message to the screen and runs Setime to set Clock to the present date and time. StartUp can be quite long. Mine exceeds 50 lines.

About The One-Liner Contest . . .

THE RAINBOW's One-Liner Contest has now been expanded to include programs of either one or two lines. This means a new dimension and new opportunity for those who have "really neat" programs that simply just won't fit in one line.

Here are the guidelines: The program must work in Extended BASIC, have only one or two line numbers and be entirely self-contained — no loading other programs, no calling ROM routines, no poked-in machine language code. The program has to run when typed in directly (since that's how our readers will use it). Make sure your line, or lines, aren't packed so tightly that the program won't list completely. Finally, any instructions needed should be very short.

Send your entry (preferably on cassette or disk) to:

THE RAINBOW
One-Liner Contest
P.O. Box 385
Prospect, KY 40059

Managers and Submanagers

We have discussed some of the OS-9 modules that get things started, but other modules that have been involved deserve our attention. The `StartUp` file was read in. The modules that manage system startup need help reading it. The `Boot` module contains enough code to find and read in `OS9Boot`, but any other disk access is beyond its capability. It finds `OS9Boot` by its length. `Boot` reads sectors in sequence looking for `OS9Boot`'s length. If `OS9Boot` were split into two parts, `Boot` would be defeated. `StartUp` may be anywhere on the disk and may be split into separated sectors. A more competent disk handler than `Boot` is needed.

"OS-9 can be altered so easily because the user can get to each of the operating system modules and change or replace them, or add others."

All data transfer from and to the computer's hardware (drives, printer and terminal) is managed by the I/O manager called `IDMan`. In addition, `IDMan` takes care of communications between processes — tasks that do not involve hardware but have functional similarities. To accomplish its role, `IDMan` uses three submanagers that are designed to handle different types of communications.

The simplest type of communication is a stream of characters. The keyboard generates such a stream, which is irregular and unpredictable in terms of when characters are sent and how characters are grouped. The computer deals with the characters one at a time as they are presented to it. This stream is called a sequential character file and its submanager is named `SCF`. The screen, printer and modem are also `SCF` devices. `SCF` can handle any number of these devices and is limited only by what can be attached to a `CoCo`.

Disk drives are organized into blocks of data called sectors. When a disk is read, a block of data of known size (256 bytes on the `CoCo`) is loaded in. A block of memory must be received, stored in

a defined area of memory (the buffer). It must then be read (out of the buffer), as needed, to the using application in the character stream. Because the sectors containing the required data may be distributed at random locations on the disk, the submanager must read the disk's file allocation table and determine the sectors and the order it needs to call. This submanager's basic function is to handle random blocks. The submanager's name, `RBF`, refers to random block files.

`RBF` manages any storage device based on blocks of data, including floppy disks, hard drives and RAM disks. Compare this with `Boot`'s disk access code that reads in `OS9Boot`. `Boot` can only find where `OS9Boot` starts on a disk and the number of contiguous sectors it occupies. If `OS9Boot` is divided into parts that are at different locations on a disk, `Boot` cannot operate. For this reason, always use a newly formatted disk to make a new boot disk so that `OS9Boot` will *not* be saved in two places.

Communications between processes have complexities all their own. The sending process cannot generate data faster than the receiving process can handle it. The submanager controlling the process must know the needs of the receiving process and control the sending process so that it does not exceed these needs. In this respect, this submanager is like `RBF`, which ensures that the data rate does not exceed the storage rate of the storage device. However, there is no block organization to the data. The process of transferring data from one operating process to another is called piping; therefore, the submanager is named `PipeMan`.

Drivers

Human managers organize, direct and control, but seldom do any of the actual work that makes something happen. OS-9 managers and submanagers are no different. Their management duties are all they can handle, and they need help carrying out their functions. Their helpers are called drivers, and these do the actual work of transferring data to and from processes and hardware.

The standard device drivers supplied with OS-9 are `CC3ID` (handles the terminal functions), `CC3Disk` (handles floppy disks), `Piper` (works with pipes), `Printer`, `RS-232` and `Modem`. `ACIAPAK` replaces `RS-232` if you use the `RS-232` in your `Multi-Pak Interface`. Most specialized hardware use special

drivers. The hard disk, for instance, requires an additional driver. Like CC3Disk, this driver works with RBF.

If the basic OS-9 design philosophy is followed, a driver can handle a variety of similar devices having different characteristics. Floppy drives, for example, have changed drastically in the last eight years. When the first CoCo came out, a 5¼-inch drive was typically a single-sided, single-density, 35-track device that stored less than 100K. The first CoCo drive added double-density, 156K storage. A friend who owned a Model I told me I would only need four or five disks because of their large capacity. I almost believed him.

A couple of years later, double-sided, 40-track drives were standard on IBM PC's. Now single-sided drives are not even made, and 3½-inch drives that store 720K are common.

When Radio Shack brought out OS-9 Level I for the CoCo, it must have believed my friend. The disk driver was hard-coded to use 35-track, single-sided disks only. This change in OS-9 design made it impossible to use larger drive capacities with the stock driver. How should it have been done?

With OS-9, the driver obtains the characteristics of a device from a data module (a device descriptor) each time it needs to access that device. This is what Level II CC3Disk does. The device descriptors carry the names used to call the drive. If you want to load a program in the CMDS directory on disk 1, you type LOAD/D1/CMDS/MYPROG. *Shell* interprets this request and sends it to RBF, which works with CC3Disk to load the file. A first step is to read the drive characteristics from the device descriptor module, D1.

The characteristics stored in a device descriptor are the maximum capabilities of the drive. They tell OS-9 nothing about how the disk in that drive is formatted. The specifics about the disk itself are read from the disk and compared with the capacity given by the descriptor. As long as the disk characteristics are equal to or less than those reported by the descriptor, the disk can be read and written. So a 35-track, single sided disk works just fine in a 40-track, double-sided drive.

As noted, Level II comes with CC3Disk, which uses its device descriptors to determine the capabilities of

each drive. It also comes with various pre-made device descriptors covering some of the more popular drive choices. Not all possible descriptors are provided, and Murphy's Law requires that at least one that you want will not be there. For example, there is no 40-track single-sided descriptor. If you have such a drive, you can use the 35-track descriptor but not use the last five tracks. There are descriptors for the current standard 5¼-inch drive, which is 40-track, double-sided with a 6-ms step rate.

One of the favorite pastimes of OS-9 addicts is hacking the code. That means changing modules to make them better (though a pessimist, in a fit of kindness, might say to make them different). This has led to all sorts of patches, modified modules, rewritten modules and programs to do some of this. OS-9's database on Delphi is full of such information. Some of the information is quite useful. One in particular, *DMode* by Kevin Darling, provides a way to patch a module that is on a disk. With *DMode* and information in the OS-9 manuals, you can make any device descriptor you need.

Programs to make device descriptors

SolidDrive™ by Vidicom Corp

SolidDrive™ - a ramdisk that doesn't forget! Fully Static, battery backed CMOS ram makes SolidDrive™ ready to use instantly. You can forget formatting and copying work files to ramdisk then copying back your changes to floppy. You can forget fear of power failures. The instant power loss occurs, SolidDrive™ write-protects itself and your valuable work. SolidDrive™ gives you state-of-the-art surface mount technology. That's why we have the best guarantee in the industry - Two years limited repair or replacement! SolidDrive™ is compatible with Multi-Pak® and comes complete with OS9® Level I or II

device driver, formatter and self-test software. Available in 512K and 1 Megabyte versions. Factory upgrades available for 512K version. RSDos Driver now available, treats SolidDrive™ as 3 or 6

EZ FRIENDLY For Your CoCo 1, 2, & 3

Leonardo's Pencil

(Reviewed in Oct. 87 RAINBOW) Makes programming sensational-looking graphics as easy as moving a joystick! Converts precision drawings into "DRAW" commands which can be stand-alone BASIC programs or merged into other programs. Also includes "DEMO" and "PAINT" programs. Requires a spring-centered joystick or touch-pad. 32k ECB tape or disk \$14.95

? ENIGMA?

Transform your computer into an ultra-secret code machine capable of enciphering and deciphering in over 12 million virtually unbreakable codes! (not simple substitution codes). Print hard copy or store & retrieve coded data on tape or disk. Only the person who has the password can read it! 32k ECB tape or disk \$12.95

New! EZ Writer

Just answer the prompts & type your message; "EZ WRITER" will put it into perfect letter form and send it to your DMP or DWP. Professional-quality, 1 to 4 page letters every time! Do one letter or multiple copies for "personalized" mailings. Saves letters and mailing lists. Even does labels. Menu-driven. Undoubtedly the EZ-est letter writing system available! Free sample on request! 32k ECB tape or disk \$19.95

(MATH GAMES)

FOUR superior educational "games": "RACEWAY", "GO TO THE TOP" (multiplication tables drill), "WORD PROBLEMS", & "PYRAMID". Covers addition, subtraction, multiplication, & division. Different levels of difficulty. Exciting graphics & sounds. EZ and fun! 32k ECB tape or disk \$19.95

KEYBOARD COMMANDER

Probably the most exciting typing tutor available for your CoCo. You are the commander of a space ship & it's your job to shoot down alien letters & words as they speed toward you & attack your spaceship. Exciting Hi-Res action! 32k ECB tape or disk \$24.95

E.Z. FRIENDLY SOFTWARE

118 CORLIES AVE. • POUGHKEEPSIE, NY 12601 • (914) 485-8150
(Add \$1.50 s/h to all orders. NY residents add state sales tax.)

are included in commercial packages such as *SDisk*. There are ways to do whatever is needed. When I installed my 3½-inch drive, I only needed to make a device descriptor and a new `OS9Boot` that included the descriptor.

`CC3Disk` cannot manage a hard drive, so a new driver is needed. Hard drive suppliers provide drivers with their packages and descriptors when appropriate. The user must make a new `OS9Boot`, which includes these modules, and proceed with the installations — it takes a little more than just a new boot. Burke & Burke began by providing only an interface and software, leaving users to supply their own hard drive. Thus, a wide variety of drives can be used. To solve the descriptor problem, Chris Burke wrote a program to make a descriptor that matches the drive used. This is fine for a person who can get a real deal on an older drive and the data to make the descriptor. However, it is a problem for the non-technical person. Burke & Burke now provides a complete package.

Next we have `Printer` and its descriptor `P`, which drives a printer through the serial port. Unless you have a very old printer, you will want to run it faster than the 600-baud default rate. OS-9 provides `Xmode` to change `SCF` descriptors. Initially, run `Xmode` at the beginning of a session by typing `Xmode /p baud=4` to run at 2400 baud. (I have a serial-to-parallel converter, so I use `Xmode /p baud=6` and work at 9600 baud.) Next, automate the procedure by putting the `Xmode` statement in your `Startup` file. It will look exactly as you would type it from the keyboard, but it takes a few seconds for `Xmode` to load and run — a waste of precious time. So, the final step in the automation is to make a new boot using `P` after you have changed it with `Xmode`. (More about that in a later column.

Use `Xmode` to change the 300-baud default of `T1` or `T2` as well. These descriptors work with `RS-232` and the serial port, or the `ACIAPAK` and the `RS-232 Pak` respectively.

The last I/O system to be discussed is the terminal made up of your keyboard and your video display. In Level I, this was pretty simple. It consisted of the driver `CCIO` and the device descriptor `TERM`. With the arrival of the `CoCo 3`, a number of people wrote 80-column drivers, which were made available on information services like `Delphi` and allowed us to use the 80-column screen before the release of OS-9 Level II. Here, again, new hardware required

only a new driver and a new device descriptor.

OS-9 Level I does not provide graphics support, but the `BASIC09` package for Level I supplies a graphics interface module, `Gfx`. This is an assembly language program that handles both color graphics and joystick functions. `Gfx` is loaded, either before running `BASIC09` or by a `Shell` statement in the program, and then called by the program with the `BASIC09 RUN` statement. Like `Shell`, `Gfx` can be viewed as an applications program that interfaces with the operating system. Remember that all applications programs must be loaded separately and never be put into your `OS9Boot`.

One of the real strengths of OS-9 Level II is its windowing and graphics capabilities. The windowing capability coupled with multitasking sets OS-9 apart from all other microcomputer operating systems. (The much ballyhooed OS-2 for PC Compatibles lacks windowing, though windows will be provided by either Microsoft *Windows* or IBM's *Presentation Manager*.)

The modules involved in windows and graphics fit into the OS-9 pattern. As always, there is a driver, `CC3IO`, and a number of device descriptors. Each active window needs a separate device descriptor, but you can have more descriptors in your boot than you have active windows. In fact, you should so there are free descriptors for the new windows you open. Think of each window as a separate terminal, available to run its own program.

Two basic window device descriptors should be in your boot: `TERM`, a 32- or 40-character display in which OS-9 boots up, and `W`, a generic descriptor is not used alone to run a window.

Your OS-9 option may have additional window descriptors in your boot, generally named `W1`, `W2`, etc. `W1` through `W7` come with OS-9 Level II, and several are pre-configured. `W8` through `W15` come with *Multi-View*. Additional descriptors are available from the `Delphi OS-9 Database`, or can be made by you. Six or eight descriptors are generally sufficient; 15 is more than most people need.

Level II provides the major graphics capabilities available from the *Shell* level. To accomplish this, you need an interface module for your `OS9Boot` and an application program named `GrfDrv`, which OS-9 automatically loads on boot. Two interface modules, `VDGInt` and `GRFInt`, come with Level II. `VDGInt` interface provides the `CoCo 1` and `2` with 192-by-256 pixel graphics

and a 32-character screen when using the `TERM` window. To use 40- or 80-character windows and the `CoCo 3`'s high resolution graphics, `GRFInt` must be in your boot. The `Config` program lets you choose which interface to include in your boot, but you can include both. `WindInt` is an enhanced version of `GRFInt` that comes with *Multi-View*. It should replace `GRFInt` if you use it.

Remember, `GrfDrv` is a graphics application program required by Level II and automatically loaded at boot. It must *not* be in your `OS9Boot`. Like `Shell`, `GrfDrv` provides functions the system needs to handle the screen, but it is not part of the operating system.

The Summary

Those are the OS-9 system modules, supporting application modules and their basic functions. To end, let us summarize the principle differences between Level I and Level II.

- Many of the Level I modules are unchanged in Level II. The kernel of the operating system was changed to deal with the expanded memory and its `GIME` memory manager chip.
- `CC3Disk` replaced the `CCDisk` of Level I and reads the disk drive device descriptors. `CC3Disk` lets you fully customize your system to your drive.
- `CC3IO` is the new keyboard and video graphics device driver that deals with the window device descriptors.
- `GrfDrv` is an entirely new program containing a complete set of graphics primitives accessible from the keyboard, batch files or machine language programs. There are few limits: If you want 15 windows, you can have 15 windows. Each will support what is, in effect, a separate terminal with a separate application running or ready to run.
- If you get a hard disk, describe it in a device descriptor and add it, and its driver, to your boot.

There is a lot of effort involved in learning how to set up and use OS-9. Actually, the setup is the hard part. A `Startup` file can load program modules, initialize windows, start applications and hand the user a machine that is ready to edit text, work on a spreadsheet, and call up a `Bulletin Board System` at the press of the `CLEAR` key. The investment comes in learning to configure the boot, write `Startup` files and do this work. Those not wanting to make this investment in time may not want to dabble in OS-9. But who knows when they will change their minds? ☺

Another Cry for Standards

By Dale L. Puckett
Rainbow Contributing Editor

This month's column will explain why a standard, intuitive user interface is needed in OS-9 application programs and will present a listing of Bill Brady's *FMenu*, a procedure file that modifies OS-9 Level I *CCDisk* drivers and a format utility that recognizes and uses double-sided disk drives. I'll pass along a small correction to last month's *Gfx3* listing and give you a few lines of code that put the new functions to good use.

Designed With the User in Mind

Why do we keep coming back to standards? Most of us buy a CoCo because we have a job for it to do. However, after we bring it home, we discover that it can do *many* jobs. Unfortunately, every time we buy a new software package, we have to learn how to run the CoCo again. This is neither fair nor productive.

For OS-9 to survive in the CoCo market, the number of application programs must rival the number avail-

able for Disk BASIC-based Color Computers. Moreover, these new applications must be easier to use than the present crop of Disk BASIC programs, and they all must work the same way.

Tandy recognized the problem several years ago and had Microware develop *Multi-View*. Now we must force the software developers (who depend on us to buy their products) to use *Multi-View* and create a standard way to do everything that a program must do. We must also insist that the forum SysOps (whose royalty checks depend on the time we use their databases) show others how to use *Multi-View* so that our hackers can standardize and enhance the public domain software they make available to us.

We can't insist that newcomers to OS-9 learn to use its internal power. Everyone would be better off if this work were done inside all OS-9 application programs. Indeed, the millions of CoCo owners now stuck with Disk BASIC applications might join us if they could use OS-9 to do their work without learning a new routine for every application.

Wouldn't we rather sell our application software to a base of several million users than to three or four thousand hackers? Don't we need the money?

Take this indictment seriously, but don't absorb too much guilt. After all, the MS-DOS world suffers from the

same problem. When you buy a new MS-DOS application program for your business, you still need to send your employees to school for two or three days — and pay the expert \$695 per employee for the honor.

However, MS-DOS machines are generally owned by large companies that can afford to pay for this training. CoCo owners, on the other hand, can barely afford the price of new software. (They certainly can't afford the time to learn excessively complex operating system details that have nothing to do with the work at hand.) We must hide these complexities from these CoCo owners if we want them to use our products and buy OS-9 application software.

During a recent conversation with a Tandy official, I asked if there was anything new and exciting on the horizon. "New and exciting?" he asked. "We've made the tools available. Now, we're anxiously waiting to see what people do with them." How can we ignore this challenge?

Model for Future OS-9 Applications

Bill Brady addressed the OS-9 standards problem best when he said, "After you learn your 50th piece of software, you lose interest." That may be the reason you only need to double click on a *Multi-View* icon to run *WizPro*. It's quite relaxing to lean back and watch

Dale L. Puckett, a freelance writer and programmer, serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. His username on Delphi is DALEP; on packet-radio, K0HYD @ N4QQ; on GENIE, D.PUCKETT2; and on CIS, 71446,736.

WizPro connect you to your favorite bulletin board or forum. *WizPro* is an important product with an impressive list of features. The program's most important feature, however, is the standard it sets for future OS-9 application software — especially in the user-interface arena.

Brady has always encouraged fellow developers to release software that's intuitive and friendly. The CoCoBin standard he designed and placed in the public domain is a perfect example. Yet, many of the people who should promote this move toward an intuitive and detail-free user interface, discourage and prevent its growth.

I write this after downloading my first CoCoBin XModem file from GENIE recently. Brady, the OS-9 SysOp on GENIE, had E-Mailed me an updated pre-alpha version of *WizPro*. After starting the XModem download, I instructed *WizPro* to receive it. A few seconds later, I was amazed when my screen displayed a window that looked like a MacBinary file from one of the many Macintosh bulletin boards.

As if by magic, *WizPro* knew the name of the file it was receiving and the number of blocks in the file. As the download proceeded, *WizPro* kept me informed of the download's progress. Later it saved the program in a file and gave it the name that file had on Brady's computer. CoCoBin also automatically took care of the file attributes and other details I once handled manually. All I had to do was run the new program.

Automatic file transfer is only the beginning. Now that Brady has shipped the alpha test version of *WizPro*, he's installing the full CoCoBin II standard. Now when you download a *Multi-View*-based program with *WizPro*, you will receive the program, the *Multi-View* AIF file and the icon file for the program — all automatically. When the download is complete, each file will be stored individually. You only need to move the program file to your CMDS directory, the icon file to your CMDS/ICONS directory and the AIF file to any working directory. To run your new program, just double click on the icon.

Once you use *WizPro* to download a file uploaded in CoCoBin format, you'll never want to return to straight XModem. Knowing that we published the CoCoBin standard more than a year ago and the CoCoBin II standard more recently, I asked Bill why CompuServe and Delphi have no files available in this format.

Brady said that the SysOps have been

discouraging the use of the CoCoBin standard and seem to prefer that everyone download on XModem. "Unfortunately, after you download a straight XModem file you aren't finished," Bill explained. "Before you can run the program you just downloaded, you must load it into memory and save it to a new file or run the OS-9 verify utility against it. Then you must run the OS-9 ATTR utility to set the execute bits on the new file, or you still won't be able to run your new program. Who needs it?" he ended.

"For OS-9 to survive in the CoCo market, the number of application programs must rival the number available for Disk BASIC-based Color Computers."

The Macintosh SIGs on the major national data services were leaders in the creation of the MacBinary standard. The SysOps recognized that it was unnecessarily complicated for the end user to download a file containing a Macintosh application program. They needed a better way. If they didn't find it, their subscribers would stop downloading files. They would lose online time, and worse, their users wouldn't have access to the many new tools that were being developed and placed in the public domain. Our own SysOps should follow this wise decision.

In addition to the CoCoBin standard, Bill Brady has donated other products to the public domain. His *WizXmod* — a BASIC09 procedure used to add XModem transfer capability to a program — has been available in RAINBOW's Delphi OS-9 Online and other national data services for nearly a year.

FMenu

This month we feature FMenu — a new creation that Brady has put in the public domain. Use FMenu in *WizPro* when you send a file to the host computer. Adding FMenu as a subroutine or procedure to your BASIC09 application program allows you to select a file from any OS-9 directory. The code for FMenu appears in Listing 1.

FMenu works like — though better than — the standard file dialog Apple gives Macintosh users. The standard file dialog box is one of the major reasons every Macintosh application program opens, closes and saves files in a similar manner. If we want OS-9 to survive in today's market, we must create a consistent and intuitive user interface. We can begin this process by including FMenu in our OS-9 programs.

Use FMenu to move up and down a list of files in any directory by striking the up and down arrow keys. When the file you want appears in the window at the bottom of your screen, press ENTER to select it. Brady uses the arrow keys instead of a mouse because the computer cannot display the mouse's position on a text-only screen, and *WizPro* is designed to work in a text window (for increased display speed) or in a graphics window. I suggested that Bill add a GMenu subroutine that would allow mouse selection of files when *WizPro* is run in a graphics window. (I think he agreed.) Perhaps we will soon have GMenu in the public domain as well.

FMenu offers a quick-find feature. Thus, if you *think* you know a filename but you don't know its spelling, type the first few character of the filename. FMenu will move to the first file with a similar name. (You might even find it the first try.) When you select a directory, press ENTER to move into it. You can skip the directory names and move to the filenames by pressing the space bar. You can return to the beginning of the directory you are listing by pressing ALT-up arrow. Pressing ALT-down arrow takes you to the bottom of the directory listing.

***WizPro* — A Closer Look**

When I asked him to define *WizPro*, Brady said, "It's a telecommunications program that does terminal emulation, but those definitions only scratch the surface. *WizPro* is entirely user redefinable. You can run in a text window or a graphics screen. *WizPro* is also user extendible. You can replace any procedure and add new protocols, autopilots and procedure creation programs. You can even add another terminal program as an extension."

Why would you want to modify your terminal program? Hosts and data services often change their protocol. With *WizPro*, you won't have to rewrite an entire *Comms* program to adopt to a new host — you only need to change the extension. Brady feels *WizPro*'s extendibility should remove much of

the delay that follows the changes made by host systems.

Brady also explains why you might add another terminal program as an extension of *WizPro*: "If you really like a particular public domain terminal program, you can run it as an extension of *WizPro*. When you do this, you pick up a few fringe benefits, too. *WizPro* takes care of all the autologging, record keeping, screen initialization, colors, fonts, etc. — all the dirty work — before it gives control to the other program."

WizPro makes it easy for you to run extension programs, too. When you call these from the menu, *WizPro* passes an initialization string that contains all of the parameters you once had to remember and type at the OS-9 prompt.

What makes *WizPro* different from other terminal programs available on OS-9? According to Brady: "The others are designed to be used in a limited set of circumstances with a specific host or a specific computer and a single baud rate. *WizPro* works with any host at any rate."

Although *WizPro* has grown from the discoveries made during the development and servicing of *Wiz*, *WizPro* does not replace *Wiz*. Rather, the program is designed to combat obsolescence.

WizPro includes mouse pause (or is it mouse paws?) that brings the host to a halt when you click the mouse. Now you'll never watch a message scroll off the screen before you can read it.

Clipper is another new feature Brady has added to the program. By pressing ALT-up arrow, you can browse through an 8K buffer that contains the

most recently received text. With *Clipper*, you can receive new text online while you view the buffer. You can mark a series of lines and send a snapshot of them to a file, your printer or modem. You can even load the buffer from a file stored on your computer and send a snapshot to the modem or printer.

Brady has improved his conference mode. Now you can use all the control keys except CTRL-X while in the conference mode. Brady can add this function because *WizPro* knows what is happening when it calls an extension. So if you enter *Clipper* while in the conference mode and try to send some text or a file to the host, *WizPro* will switch into the half-duplex time delay mode and send the information. This is the only mode most services will let you use in conference mode. *WizPro* knows that and acts accordingly.

Writing a Program Longer Than 64K

WizPro is so functional because it uses more than 64K of memory (128K of memory in your CoCo 3). Brady shared a few of his secrets with me:

"I can use more than 64K of memory because I overlay procedures and move them in and out of the 64K process space *WizPro* uses," Brady said. "*WizPro* always leaves two 8K blocks of memory free in its 64K process space. All the real-time spacecraft telemetry and command software used by NASA is written in a similar manner."

Through careful design and construction of the program, Brady makes sure that there are always two 8K blocks available. He uses three blocks for data storage, one block as an 8K buffer and

two others to hold an additional 4K of *WizPro*'s variables. Out of the eight 8K blocks in a 64K workspace, six blocks have been used. There are two blocks left.

Brady keeps those two 8K blocks free and uses them to run the *WizPro* extension procedures. He switches them into the 64K process space with the BASIC09 RUN command. After they have done their job, he switches them out of *WizPro*'s 64K space by using the KILL command. Because of BASIC09 and OS-9's excellent design, these extension programs can be located either in the remainder of your CoCo 3's 512K of memory or in a file on one of your disks.

If you want to use Brady's trick to build your own giant BASIC09 programs, you'll need to be aware of one more detail. Brady loads the name of the command he wants to run in a string variable and then runs the string. An example helps clarify this procedure.

First, Brady dimensions a 32-byte string variable named PROC. Before *WizPro* calls the XModem procedure, it initializes PROC in this manner: `proc:= "XModem"`. The program then runs PROC and passes any necessary variables. The command line should read something like this:

```
run proc (paths,colors,flags
. . . fonts, port)
```

The ellipsis in the program line stands for a number of variable names not typed. In some cases, Brady passes 23 variables to a *WizPro* extension procedure. When he passes these parameters, he is giving the extension procedure access to everything *WizPro* knows.

Introducing the FOCUS™ software system for OS-9™ Level II—serious business for your CoCo3!

FOCUS Applications Hub

A multi-tasking/multi user systems of I/O functions and utilities which features:

- Two level menu system with company code and access code protection.
- Unique filing, sorting, searching and record locking routines.
- Works with most printers, floppy/hard drives and terminals.
- Similar keys and screen formats for all FOCUS-MATE programs.
- Routines for file maintenance, data backup and setup.
- Context-sensitive help screens.

FOCUS-MATE Correspondence Module

An integrated Text Editor, Text Formatter and Mailing List Database:

- Import text or database files for mail merge facilities.
- Control all printer functions, change formats anywhere in text, save formats.
- Preview final text on screen.
- Print with left, right, full or centered justification, tabs, auto headers/footers, page numbering and dictionary lookup.
- Multiple text column capability.

FOCUS-MATE General Ledger Module

A sophisticated General Ledger package for small business.

- All features integrate with other FOCUS-MATE modules.
- Number of accounts and transactions limited only by disk space.
- Auto balance checking, flexible period and year-end procedures, profit/cost center consolidated ledger and batching capabilities.
- Reports: Balance Sheet, Trial Balance, P&L Statement, Transaction Journal, Transaction Aging.

OS-9 Programmers: FOCUS is a great tool-box for system developers!

OS-9 is a trademark of Microware and Motorola Inc.

To use this BASIC09 feature, Brady had to carefully organize his program. You will need to do the same. You must also kill each procedure after it runs, or you will run out of space. Most of the time — all the time if you load your packed modules into memory before you run your program — your program won't slow down. When you run the procedures, OS-9 just switches them into the program's workspace. When you kill them, they are switched out. The program does this by toggling a few bytes on your CoCo 3's GIME/memory-management chip.

Because *WizPro* is interrupt-driven, it is fast and behaves well in OS-9's multitasking environment. *WizPro* doesn't take over your computer. *WizPro XModem* can download a long file in one window while you play flight simulator in another window. In addition, *WizPro's* front end driver *WizAcia* (also released to the public domain) is signal driven. Therefore, program extensions can be called by the host if a certain byte or byte sequence is received, and all of this happens automatically, transparent to the user at the host's command.

Another look at *Gfx3*

If you're a seasoned BASIC programmer, I'll bet you've already caught the mistake in the two nested IF-THEN-ELSE decision trees in *Gfx3*, I should have assigned the variable *Act* to a value of 1, 2, 3, etc., instead of 100, 200, 300, etc. You must make this change to get *Gfx3* to perform properly.

When you get ready to create your own *Gfx3*, make sure that you type the names of the actions exactly the way you defined them in *Gfx3* in the calling program. For example, if your *Gfx3* decision tree is looking for an action named *ss.wnset*, then you must type *ss.wnset* exactly that way in the run *gfx3* ("ss.wnset") line in your calling program. *Gfx3* is extremely case-sensitive. The calling program *must* spell the action verb right.

After writing *Gfx3*, I discovered that the module is 2,089 bytes when packed. The original BASIC09 code was 3,806 bytes long and uses 76 bytes to store data. Since this data memory comes out of *RunB's* 8K memory pool, this will not take any additional 8K memory blocks.

Listings Show *Gfx3* Benefits

To see the benefit of having a subroutine package like *Gfx3* available for your own BASIC09 programs, compare the two different modifications of the

MVShell code (listings 2 and 3). The first listing comes from a program I named *MVShell2*. It exercises the menu bar we created in June and July with OS-9 System Calls. The other listing comes from *Gfx3Test* and exercises the menu bar in the same manner as does the *MVShell2*. Compare the two listings. You'll want to get right to work on your own *Gfx3*.

"Because WizPro is interrupt-driven, it is fast and behaves well in OS-9's multitasking environment. WizPro doesn't take over your computer. WizPro XModem can download a long file in one window while you play flight simulator in another window."

We're starting both listings cold with `RUN Gfx2(StdOut,"CurOff")` from the July column's listing. This will let you add both versions of the code to different copies of *MVShell*. When you run it, you will see the menus pop down and receive a report telling you which menu number and item was selected when you clicked the mouse. Unfortunately, I didn't get a chance to write the code that runs when you make a menu selection. It's designed, however, and should be in a later column.

My *Gfx2* file is 2,497 bytes long — 2,250 for the original *Gfx2*, 94 bytes for *InKey*, 99 bytes for *SysCall* and 54 bytes for *Cls*. If I merge my present *Gfx2* and the *Gfx3* files, I will use 4,586 bytes out of an 8K block. That leaves 3,605 bytes in the 8K block of memory used by OS-9 when it loads *Gfx2* and *Gfx3* from the same file. There are an additional 3,605 bytes to use as we like.

We could do several things with this memory. We could, in fact, use it to make the Tandy Menu functions available on all our BASIC09 programs. Yes, I think a 3,600 byte subroutine module is in order. We'll shoot for that listing in the November column.

About Those Missing Lines

The laser-writer gremlins zapped John Lind's listing, *Skipmuf.p* in the June issue. Lines 71 through 78 are missing. Lines 71 through 76 contained definitions, so you *definitely* need them. Here are the missing lines from *Skipmuf.p*:

```
70 mo :ARRAY [1..12] of real;
71 results :ARRAY [1..24] of
real;
72 moname, printpath :ARRAY
[1..12] of char;
73 call :ARRAY [1..12] of char;
74 ocntnt :ARRAY [1..12] of
char;
75 name, ocity, ocntny :ARRAY
[1..12] of char;
76 moarray :ARRAY [1..12] of
monthstr;
77 $PAGE
78 $SUBTITLE Procedure dwset
79 * 80 * DWset - procedure to
create a device in a window of
81 * type 'sty.'
82 *
```

John is presently working on a satellite orbit computation program. He's writing it in BASIC09 first and promises to share that version with you here. Thanks, John.

Double-Sided Disk Access

If OS-9 Level I users don't love Steve Goldberg, they will after they look at this month's listings. Goldberg has created an OS-9 procedure file that will patch your *CCDisk* driver and *Format* command to use double-sided disk drives with OS-9 Level I, Version 2.00. He asked me to pass it along.

Diskfix adds the new code to the end of the existing *CCDisk* module and leaves you with your new *CCDisk* module in a file on Drive *vd0*. After you run *Diskfix*, run *DS9Gen* to produce a new boot file. Once *DS9Gen* has created your new *DS9Boot* file, you'll be off and running on double-sided disks.

Diskfix is compatible with all previous patches to change the step rate of the drives. In fact, the other patches can be done either before or after you run *Diskfix*. However, you must remember to change *IT.SID* at an offset of \$19 bytes in your device descriptors *vd0* and *vd1* from one to two, so that OS-9 will know that you have installed double-sided drives.

The day I was going to send a copy of *Diskfix* to RAINBOW, I got another

letter from Goldberg: "Hold the presses! Pull the front page! Here's the ultimate patch for CCDisk," he wrote. Goldberg's new version reads the track count, number of sides and the head step rate from the device descriptor. Now you can have several drives with different step rates, and numbers of tracks and sides on the same Level I, Version 2.0 system.

Set the step rate to your disk drives by patching your device descriptor modules at an offset of \$14 hex from the beginning of the module. You can do this with debug or modpatch. An easier way, however, is to use a Dmode utility.

You will not be able to boot from a double-sided disk since the Boot module is hard-coded for one side only. However, you can boot up with a single-sided disk and then switch to a double-sided disk or keep the original drive as your system drive and use a double-sided drive for your data.

Steve's procedure, FormatFix, gives you the ability to format single-sided disks on double-sided drives. It uses a trick submitted by Ray Nicklas published in the May '84 issue of RAINBOW [Page 300].

Making Text Windows Fast

Let's review MakeGW, a procedure for making graphics windows first published in *The Complete Rainbow Guide to OS-9 Level II: A Beginners Guide to Windows*. I have been merging mgw ever since we wrote the book. Recently, I began thinking about being able to change a window to a text window quickly. With one small change and a few more OS-9 command lines, the change was complete. Here's the original MakeGW:

```
* First, kill the window we're
running in
display lb 24
* Now, create a new window
* This one is the standard 80 X
24, four color one we use most
of the time
display lb 20 7 0 0 50 18 1 0 4
* Set the window to the right
font
display lb 3a c8 01
* And finally, select the win-
dow we just created
display lb 21
```

Type the display commands above (You can skip the comment lines if you

want) into an OS-9 file, using your favorite editor. Then put the output of the procedure file into a file using OS-9's merge abilities.

```
makegw > mgw
```

Any time you need to change any screen to a four-color, 80-by-24 graphics window, type merge mgw and press ENTER. Your new screen will appear like magic. After you make mgw, copy MakeGW to a new file named MakeTW (for Make Text Window). Use your editor to make the second display command line read:

```
display lb 20 2 0 0 50 18 1 0 4
```

After you have edited MakeTW, run it and merge its output into a new file named mtw. Now when you want to change that slow graphics window into a fast text-only window, type merge mtw, and press ENTER.

That's it for October. Join me next month, and we will continue to explore the functions of OS-9 Level II and *Multi-Vue*. □

NEW FOR OS-9™: FORTH09™ from D. P. JOHNSON

FORTH09 is a FORTH-83 Standard implementation specially tailored for OS-9. Includes the double number extension word set, system extension word set, complete forth 6809 assembler and more. Programs written in forth can instantly be saved as compact executable machine language modules. The FORTH09 system runs on any level I or level II OS-9 (6809) machine with at least 32k of available memory and one disk drive. Saved Forth09 application code is romable, reentrant and fully position independent, requiring as little as 3k for a small program. Where maximum speed is required the user can force small code words to be automatically compiled as in line code rather than subroutines. Supplied with complete printed documentation. **\$150.00** (+ \$3 S&H) Specify disk format if other than CoCo OS-9 format desired.

Other OS-9 SOFTWARE from D. P. JOHNSON

L1 UTILITY PAK - Contains 40 useful utilities that run under both level I and II OS-9. Included are a complete set of "wild card" file handling utilities, a disassembler, a disk sector editor, and the MacGen command language compiler. MacGen will allow you to generate many useful command macros in minutes, much more useful than procedure files. Macro source is included for a macro to implement an archival backup type function. **\$49.95**

L2 UTILITY PAK - Contains a Level II "printerr" function that also shows the pathname being searched for when "not found" or permission type errors occur. Also contains level II software ram disk driver. Ten other utilities included, some useful for level I also. **\$39.95**

L1+L2 COMBINATION PAK both of above together for **\$75.00**

SDISK - Standard disk driver module replacement allows full use of 40 or 80 track double sided drives with OS-9 Level I. Full compatibility with CoCo 35 track format and access all other OS-9 non-CoCo formats. Easy installation. **\$29.95**

SDISK+BOOTFIX - As above plus boot directly from a double sided diskette. **\$35.95**

SDISK3 - Level II version of SDISK driver. Same features as level I (except bootfix not required to boot from double sided). **\$29.95**

PC-XFER UTILITIES - Programs to format and transfer files to/from MS-DOS™ diskettes on CoCo under OS-9. (Requires either SDISK or SDISK3 to run depending on which level of OS-9 you are using) **\$45.00**

MSF - MS-DOS disk format file manager. More complete file transfer capabilities for level II only. (Requires SDISK3 to operate).

Now supports 720K 5-1/4" and 3-1/2" MS-DOS Formats. **\$45.00** MSF+SDISK3 together **\$65.00**

All diskettes are in CoCo OS-9 format unless otherwise requested; other OS-9 formats can be supplied for \$2.00 additional charge. All orders must be prepaid or COD, VISAMC accepted, add \$1.75 S&H for first software item, + .25 for each additional item, \$5.00 for CCRD, additional charge for COD.

D. P. Johnson, 7655 S.W. Cedarcrest St., Portland, OR 97223 (503) 244-815 * (For best service call between 9-11 AM Pacific Time, Mon.-Fri.)

* NOTE: There will be no phone order or consultation service between Oct. 7 and Oct. 31 1988 due to vacations... mail orders will still be processed weekly.

OS-9 is a trademark of Microware and Motorola Inc., MS-DOS is a trademark of Microsoft, Inc., FORTH09 is a trademark of D. P. Johnson

Submitting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

WHAT TO WRITE: We are interested in what you may wish to tell our readers. We accept for consideration anything that is well-written and has a practical application for the Tandy Color Computer. If it interests you, it will probably interest lots of others. However, we vastly prefer articles with accompanying programs which can be entered and run. The more unique the idea, the more the appeal. We have a continuing need for short articles with short listings. These are especially appealing to our many beginners.

FORMAT: Program submissions must be on tape or disk, and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs and debug our typing errors. All programs should be supported by some editorial commentary explaining how the program works. We also prefer that editorial copy be included on the tape or disk using any of the word processors currently available for the Color Computer. Also, please include a double-spaced printout of your editorial material and program listing. Do not send text in all capital letters; use upper- and lowercase.

COMPENSATION: We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submission Guidelines, THE RAINBOW, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. We will send you comprehensive guidelines.

Please do not submit material currently submitted to another publication.

About Your Subscription

Your copy of THE RAINBOW is sent second class mail. You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an account number and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone *except* those whose subscriptions are through our distributor in Australia.

"Guarantee" As good as Gold.

Howard Medical's 30-day guarantee is meant to eliminate the uncertainty of dealing with a company through the mail. Once you receive our hardware, try it out; test it for compatibility. If you're not happy with it for

any reason, return it in 30 days and we'll give you your money back (less shipping.) Shipping charges are for 48 states. APO, Canada and Puerto Rico orders are higher.

Dear Friends,

Thank you. 1988 marks our fifth year of providing quality software for the Color computer. Only your support has made it possible. So, from our hearts, Peg and I thank you. And remember our promise--If you buy it from us, we support it. If you are unhappy for any reason, send it back for a full refund within 30 days of purchase.

Pyramix

This fascinating CoCo 3 game continues to be one of our best sellers. Pyramix is 100% machine language written exclusively to take advantage of all the power in your 128K CoCo 3. The Colors are brilliant, the graphics sharp, the action fast. Written by Jordan Tsvetkoff and a product of Color-Venture.

The Freedom Series

Vocal Freedom

I've got to admit, this is one nifty computer program. Vocal Freedom turns your computer into a digital voice or sound recorder. The optional **Hacker's Pac** lets you incorporate voices or sounds that you record into your own BASIC or ML programs. This is not a synthesizer. Sounds are digitized directly into computer memory so that voices or sound effects sound very natural. One "off-the-shelf" application for Vocal Freedom is an automatic message-minder. Record a message for your family into memory. Set Vocal Freedom on automatic. When Vocal Freedom "hears" any noise in the room, it

Dr. Preble's Programs
 For Color Computer Software
 Since 1983

plays the pre-recorded message! Disk operations are supported. VF also tests memory to take advantage of from 64K up to a full 512K. Requires low cost amplifier (RS cat. #277-1008) and any microphone.

Mental Freedom

Would your friends be impressed if your computer could read their minds? Mental Freedom uses the techniques of Biofeedback to control video game action on the screen. Telekinesis? Yes, you control the action with your thoughts and emotions. And, oh yes, it talks in a perfectly natural voice without using a speech synthesizer! Requires Radio Shack's low cost Biofeedback monitor, Cat. #63-675.

BASIC Freedom

Do you ever type in BASIC programs--manually, I mean. If you do, you know it can be a real chore. Basic Freedom changes all that. It gives you a full screen editor just like a word processor, but for BASIC programs. Once loaded in, it is always on-line. It hides invisibly until you call it forth with a single keypress! This program is a must for programmers or anyone who types in programs. By Chris Babcock and a product of Color-Venture.

Lightning Series

These three utilities give real power to your CoCo 3.

Ramdisk Lightning

This is the best Ramdisk available. It lets you have up to 4 mechanical disk drives and 2 Ram drives on-line and is fully compatible with our printer spooler below.

Printer Lightning

Load it and forget it--except for the versatility it gives you. Never wait for your printer again! Printer runs at high speed while you continue to work at the keyboard!

Backup Lightning

This utility requires 512K. Reads your master disk once and then

makes superfast multiple disk backups on all your drives! No need to format blank disks first! Supports 35, 40 or 80 track drives.

Speed Racer

As the checkered flag drops your pulse rises in this lively arcade game. The road twists to the horizon on the 3-D panorama that sets the stage for exciting racing. Vie for time as you glide through the curves at incredible speeds. Step through the gears to stay ahead of the pack, but be quick! Some will stop at nothing to see the end of the race, or the end of you! Four challenging raceways, complete with obstacles and colorful 3-D scenery test your skills in this Pole Position™ type game.

32K Color Computer required...\$34.95

Pinball Factory

Video games come full circle in this tribute to the original arcade game, *Pinball*. Classic pinball springs to life as never before, with fresh new angles that only a computer can offer. Crisp graphics, sound, and fast smooth action give this machine-language arcade game a realistic, responsive feel you'll hardly believe. There are even "tilt" buttons that let you "bump" the machine. In addition to playing a great game of pinball, you can enjoy hours of creative pleasure as you design, build, edit, and play your own screens.

64K Color Computer required...\$34.95

Demon Seed

The first waves of flying, diving, bloodthirsty bats are arriving. Move, fire, and move again. It's a never ending battle. If you are lucky enough to defeat the bats, be ready for a much greater challenge, *The Evil Demons* themselves. Destroy a wing and another takes its place. Only a direct hit can save you now. It will take great skill to triumph. If you do, then you better be ready for the *End*. The Demon Flag Ship descends to destroy your remaining ships. Your only hope is to penetrate the hull, break through the shield, and destroy the dreaded Gargoyle.

32K Color Computer required...\$19.95
