NEXT MONTH: A special on data communications and the judges' decisions on our Simulation Contest! Want a BBS of your own? Our November issue features a program listing for a bulletin board system that requires only one disk drive as well as a method to "wash" your disks. Harry Hardy will examine synchronous data transmission and we'll learn all about data transmission with the CoCo.

In addition to printing our top Simulation winners' programs, we'll have more games, more home use programs, more educational material and more information on our Color Computer than is available anywhere else.

Look for November's *Rainbow*!

RAINBOW

DISK EXECUTIONER

Editor:

Floppy disks are very sensitive little critters. Cigarette ashes, cat hairs and dust can zap them really quick. To avoid disk errors and get as much use as possible from each disk you have to treat them like sacred religious objects.

As soon as I get a failure to write to any sector on a disk I transfer all the contents to a backup disk (if I don't already have a backup) and put the culprit disk in my shooting bag.

On my weekly pilgrimage to the firing range with my trusty .45-caliber automatic pistol, the disks first get stapled to the target backdrop and then while taking aim, I recall that blank feeling when I got my first disk I/O error and lost a valuable program, then squeeze the trigger. A fellow shooter who lost his job to a computer finds it very therapeutic to put what is left of the disk out of its misery with a double-barreled shotgun.

Dirty Harry never had it so good.

*J. Michael Nowicki
San Jose, CA*

EPSON NOTE EXCHANGE

Editor:

I would like to compliment you on your excellent magazine, and encourage you to keep up the great work. I look forward to receiving *the Rainbow* each month, I read it from cover to cover and refer to it often while "computing." I have had my CoCo for over a year and have expanded it to 32K. I plan on purchasing a disk system soon, and already own an Epson MX-80. If anyone has a similar system, and would like to exchange notes, please write me at 8521-26 Hower Rd., 54548.

*Mark Leman
Minocqua, WI*

INFORMATION, PLEASE

Editor:

Radio Shack and CompuServe have referred me to you with my hardware/software problem.

I have all Radio Shack equipment—TRS-80 Color Computer 16K with one I/O 4-pin port—Vidtex CompuServe/Dow Jones Program Pack.

My problem is I want to print simultaneously screen and printer while on line with CompuServe as most customers do. I've been told the Radio Shack Program Pak does not have commands for printer. Also, I'm not sure if the Modem I cassette outlet will run the printer as well as cassette or if an adapter to get two I/O outlets in computer is required.

Can you offer any suggestions, or poll readers or refer me further? Please respond to: RR 1, Box 150A Westview, 11952.

*Walter R. Silleck
Mattituck, NY 11952*

Editor:

I would like to extend my thanks to two previous software/hardware authors (even programmers and hackers need positive reinforcement):

Mr. DiStefano for his article on modifying CoCo to display reverse video. His article was comprehensive and his plans were easily followed. I comprehended, I followed, and I now have the closest thing possible to a "green screen" monitor without suffering through billfold surgery and actually buying one. Thanks, Tony.

Mr. Good for his article on printer spooling. I had to modify his program slightly (a horrifying undertaking since it was in assembly language) to get it to work on my system, a 32K CoCo, non-Disk Extended BASIC, and a LP VIII. The modification was definitely worth the effort and now, just as promised, throughput is vastly increased. I will be glad to elaborate on the modification to anyone experiencing problems if they send me a S.A.S.E. c/o 6555 Pawnee Circle, 80915. Thanks, Steve.

If any of you "machine language whizzes" have changed *Tele64* to display on a black screen (reverse video) or have gotten *Tele64* to produce a key beep (click, etc.), I would much appreciate hearing from you—I'm sure all readers would be very appreciative.

*Herbert B. Ridge
Colorado Springs, CO*

Editor:

I've been looking for a game where you can look out a viewport and see the landscape. What I had in mind was a plane, but a land vehicle would do all right. A couple of examples are *Red Baron* and *Battle Zone*. If you know of a game like this, please tell me: 2532 W. Mesquite.

*Eric Kertes
Chandler, AZ*

Editor:

I would like to find out from other Color Computer owners if anyone can tell me how to solve this problem.

My computer starts to print garbage on the left side of the screen in two rows approximately tabs 5 and 10. Then the machine

"hangs up" and must be turned off, thereby losing everything. This happens after being on 10 to 30 minutes. However, if I turn the machine on-off-on when first used, the problem usually does not occur. This is a big hassle when keying in a long program as I must make several saves to protect the program I'm keying in.

Any help appreciated; replies to 12063 Trampe Hts., 63138.

*Cornelius Washington, Jr.
St. Louis, MO*

Editor:

I recently tried to link RS Digitizer to my Color Computer. I need to measure irregular surfaces for my work. Unfortunately, the machine language program supplied did not work and the demo program for CoCo had non-available commands like "DEFINT." It is no surprise that nobody is buying it and that RS plans to discontinue the product. If anybody has succeeded in linking the digitizer to CoCo, please contact me at 1708 Simard, J1J 3X1.

I enjoy your magazine very much.

*Pierre Blondeau
Sherbrooke, Quebec, Canada*

ANOTHER SERPENT VICTIM

Editor:

I have been trying at Radio Shack's adventure game *Pyramid* for a long time now and I still can't get by the green serpent.

I was wondering if any of you adventurers out there could help me. Any clues at all would be helpful. Send to RD2 Box 331, 26035.

*John Jenkins
Colliers, WV*

LOOKING FOR FELLOW MC-10ERS

Editor:

I am writing in the hopes of finding other readers who are interested in the new Radio Shack MC-10 MicroColor Computer. I have just purchased this new machine, and would like to start a users' group.

Any interested readers (both owners and potential owners) who send me a S.A.S.E. will receive the group's first newsletter and a member survey, inviting them to join the group. Due to time and expense constraints, only inquiries accompanied by the S.A.S.E. will be acknowledged.

*Bob Kantor
Ossining, NY*

PRECAUTIONARY NOTE

In reference to Ben H. Little's letter in last month's *Rainbow*, recommending using the TV chassis as a ground point, we caution you about a potential shock hazard present in "hot chassis" TV sets. We do not recommend grounding to TV chassis as under abnormal conditions, dangerous voltages could possibly be present.

PLEASE, I'D RATHER DO IT MYSELF

Editor:

I am the owner of a 16K Extended BASIC CoCo. I would like to upgrade it to 64K. Would it be better for me to have Radio Shack do the upgrade for \$170 or do it myself for \$50? People have told me that if you do it yourself the addressing will be different—is this true? Also, for the readers with *Colorpede* you can speed up the game by *POKEing* 7690,88 and slow it down by *POKEing* 7689,0. Keep up the good work on a great magazine.

Scott Drake
Pine City, NY

EDITOR'S NOTE: There will be no problems doing it yourself if you follow the instructions in *Rainbow*.

EDUCATIONAL RESPONSE PLEASE

Editor:

I have been very impressed with the issues of your magazine which I have recently purchased. You are to be congratulated on producing a forum which can only help in the development of support for the Color Computer.

I am wondering if some of your readers can help me. This fall I will be supervising a pilot program which will introduce computers to children in several schools in our local school district (Knox County, Tennessee).

We will be using the Color Computer. I would like to hear from educators who have or are using computers in schools, particularly elementary schools. I am interested in their experiences with the machine, with children's reactions, with various software. I would be happy to share the results of our pilot with any interested readers as it progresses. My address is Johnson Bible School, Kimberlin Heights Station, 37920.

Chris Templar
Knoxville, TN

PRINTER OUTPUT BLUES

Editor:

Haven't been able to interface my Model 33 teletype with *Telewriter*.

Your listing #2 and loop supply work perfectly after making corrections suggested in June *Rainbow*.

Am trying to vary driver/program so can use on *Telewriter*. *Telewriter* has (14) JSR \$AZBFs which I have changed to JSR 32719s.

If I change line 290 in listing #2 to JSR \$AZBF and try to *RUN*, very strange things happen! Could you help me?

Secondly, I find no \$A282 or \$A2Bf at all in *Sigmon* and *Super Color Writer*. Any suggestions on where to start on these?

Craig Anderson
Eldridge IA

EDITOR'S NOTE: See next letter.

Editor:

Thank you for your hardware interface in the February issue of *the Rainbow Magazine*. I have put it together and it works great; in fact I'm using the ASR-35 to print this computer-generated letter.

There is a problem, though, and I was wondering if you have come up with a solution to it. When I'm using a ROM pack such as *Spectaculator* or some other ROM pack with a *PRINT* routine in it, your program does not work. The ROM pack must take over the locations you have used to *POKE* your program in. Is there a modification to the program to allow the use of the printer with the ROM packs?

Any ideas you have will be well received, I can assure you. And again, thanks for a great interface and program. It's very valuable to me even with the problem of the ROM packs.

Grant H. Smith
Northville, NY

EDITOR'S NOTE: Some programs use their own character output routines or maybe \$A2BF directly. For these programs all references to printer output such as JSR \$A2BF must be changed to the address of your driver routine. At the same time your driver routine must end with a \$39 or RTS instructions.

The Color Computer Word Processor!

MASTER WRITER is a professional quality full screen oriented word processor for your color computer. Take a look at what you get.

MASTER WRITER'S FULL SCREEN-ORIENTED EDITOR allows you to move the cursor anywhere in your text using the up, down, right and left arrows. Do this one character at a time or by line or page. Insert, delete or replace text at the cursor watching your changes as you make them. Delete or move blocks of text from one place to another. Merge in text from other files.

AUTOMATIC CARRIAGE RETURN after last complete word on each line; with this and **AUTOMATIC PAGE FEED** you don't have to worry about where a line or page ends — just type!

MASTER WRITER runs on a 16K, 32K, or 64K color computer, taking advantage of all available memory. Use it with **DISK OR CASSETTE** based systems. **EXTENDED BASIC IS NOT REQUIRED** for cassette version.

EASY TO UNDERSTAND MANUAL has you comfortably using **MASTER WRITER** in minutes. It is a **USER-FRIENDLY MENU-DRIVEN SYSTEM** with single letter commands. Check any command without having to refer to the manual with the **HELP SCREEN**.

10 PROGRAMMABLE FUNCTION KEYS allow easy insertion of frequently used words or phrases.

WORKS WITH ANY PRINTER. Take full advantage of your printer's special functions such as variable character size and emphasized characters with **EASY EMBEDDING OF PRINTER CONTROL CODES**.

GLOBAL SEARCH function lets you quickly locate specific strings for replacement or deletion.

Customize form letters or standard text with the **EMBEDDED PAUSE** feature. Just "fill in the blanks" when your printer pauses for a personalized appearance.

LIMITED MULTI-TASKING feature lets you print one file while editing another.

In addition to regular text you can use **MASTER WRITER** to **CREATE BASIC PROGRAMS** with the convenience of full-screen editing. It can also be used to make and edit simple **MAILING LISTS**.

OTHER FEATURES include easy setting of left, right, top and bottom margin, printer line width, and lines per page. Also repeat keys, auto line centering, auto page numbering and choice of display color formats.

TO ORDER send \$29.95 for cassette version or \$34.95 for disk version plus \$2.50 shipping (Calif. residents add sales tax) to: **PYRAMID DISTRIBUTORS, 527 HILL ST., SANTA MONICA, CA 90405 (213) 399-2222.**

MASTER WRITER \$29.95 Cassette
\$34.95 Disk

COCO DIALER

Editor:

I've enjoyed your magazine ever since I first ordered. I've also learned a lot through it.

I'm working on a phone dialer, through the CoCo, by making internal clicks — through motor on:motor off commands. Are there any *POKEs* or any commands (ML) that will make a click in the computer quickly in a row?

My friend made a program for his computer (Model I TRS-80) that dialed the phone quickly. I have a 64K ECB computer and am using a dial phone.

Damon Frazier
Binghurst, IN

EDITOR'S NOTE: *POKE & HFF21, & H3C* to turn on cassette relay, *POKE & HFF21, & H34* to turn it off. We do not recommend using the cassette relay to dial telephones due to the voltages that are present.

KUDOS

Editor:

I have been receiving *the Rainbow* for just over half a year now, and I cannot believe the growth I have seen in your publication. The most amazing part of that growth is the fact that the quality of *the Rainbow* has been maintained, while the magazine itself has grown by 50 percent.

This is the second time that I have written to you. The first time I complained about *Telewriter 64*, and the time it was taking for me to receive it from Cognitec. As you can see, I am a very happy *Tele-64* user. Cognitec deserves credit for a great word processing program, and my thanks to you for your assistance.

In closing, let me say that the best just keeps getting better. Keep up the good work.

Ted Gundersen
Valhalla, NY

Editor:

I recently purchased a TRS-80 Color Computer (or rather my dad paid for it for me) and am very pleased with its capabilities. However, I am looking for more and better quality software from magazines. The only programs I have keyed in so far are *Dragon-32* programs from British magazines. Unfortunately, none of them have been particularly good. Reading through *TRS-80 Microcomputer News* my attention was caught by a paragraph on magazines which stated that the *Rainbow* magazine covered the Color Computer and has "editorial content of high quality and will be of use to our customers."

Michael Mooney
Glasgow, Scotland

Editor:

I want to thank you for your incredible service. When my July issue of *Rainbow* didn't arrive, I went into mourning and my family, into hiding. I just couldn't believe it. I managed to hold off until the 25th as your policy states. At that time I rushed a letter off to your offices. Congratulations! Your

system really works. I have received my magazine already. Such fine service should not go unnoticed. To all your staff, I thank you.

Leonard Hyre
Cambridge, MD

COCO GROWS UP

Editor:

I own a 16K Extended BASIC TDP-100, and I would like to expand the computer to 64K. What I need to know is do I have to only buy 64K RAM chips to make it into a full 64K computer? I have studied your magazine and I still haven't figured it out yet. I would also like to know why certain *POKE* statements such as 65497,0 mess up the computer and why useful *POKE* statements such as 65495,0 do certain tasks. Thank you for a fantastic magazine.

Paul Miller
West Valley, UT

All you need to upgrade to 64K from 16K is eight (8) 4164 chips. Most chip suppliers will give you the instructions for the modification. For an explanation of the *POKE* statements you mentioned, obtain a copy of *TRS-80 Color Computer Technical Reference Manual* at your local computer center.

PIGGYBACK HAVOC

Editor:

I have a TRS-80 Color Computer series "D" 32K RAM (piggyback) but it didn't work properly with the disk version of *RS Color Scripts*.

The graphic display with upper and lower case letters didn't appear. We see only "garbage" when any letter is printed.

Tell me also what I have to do to eliminate that terrible RFI when the disk controller is plugged at the ROM port.

Nelson Lunha
Monlevade, MG, Brazil

EDITOR'S NOTE: Piggy backing RAM chips produces a "memory overlay" that plays havoc with certain software. We do not have an immediate solution to your problem. To reduce your RFI, return your computer to Radio Shack (after removing the piggyback chips) and they will update your computer by adding additional grounding connections between the main board and the disk controllers.

IF YOU KNOW, TELL JOHN

Editor:

I would like to know if you or anyone else could tell me how to enter the assembly language programs that are printed in *the Rainbow*. I have the *EDTASM+* from Radio Shack.

I would like to know if any conversions are necessary. If so, could you tell me where I may find the information I need? Writing assembly language is new to me and I would like any help I can get.

I would also like to know what the ASCII number just after the number line stands for. As well as how to enter the program using *EDTASM+*. Below is an example of what I mean: (this is part of the assembly listing of *Rainbow Roach* from the June 83 issue.)

```
0001 0902          ORG16310
0002 3FB6 8E0C1F    LDX #%C1F
0003 3FB9 A684     LOOP1 LDA ,X
```

I would also like to know if anyone can tell me what the symbols in the game *Space Shuttle* stand for. As well as how you land on the runway (I crashed every time I tried to land). I would also like any clues anyone can give me on how to get through the forest in the adventure game *Dragonquest*.

I think *the Rainbow* is the best magazine out for the CoCo, and I plan to renew my subscription early so I don't miss an issue. Keep up the good work.

John D. Cleveland
Lunenburg, Nova Scotia, Canada

EDITOR'S NOTE: The number you are referring to is not ASCII but the actual machine code in hexadecimal form. The first two bytes are the address and the rest are the object code (the program). By using the memory examine/exchange commands of *ZBUG* you can enter the machine (object) code at each respective address.

NEW BBS

Editor:

I wanted to inform you of a new Bulletin Board Service, Colorado Color, for the Radio Shack Color Computer. This board is always open (barring acts of God and the perversity of computers) and supports upload and download. The 24 hour BBS number is (303) 249-7866.

Congratulations on your excellent magazine—it is hard to believe your growth since my first issue (March 1981). I gladly recommend *the Rainbow* as the best magazine for the CoCo and probably the best computer publication I receive (of six). As much as I hate tearout cards in magazines, it seems I pass out most of yours to new users. Keep up the great work!

Charles G. David
Montrose, Colorado

HINTS AND TIPS

Editor:

In the course of developing software for my new product, the Kaleidophone (see August *Rainbow*, page 156) I have discovered yet another bug in Microsoft BASIC. If you have any software that involves the use of small numbers, watch out!

This is not the usual rounding error that all floating point is subject to, but a strange quirk in 1.1 BASIC. Try this:

```
PRINT 31 — 1.0E-38
```

Now 10^{-38} is almost zero, so you should get 31, right? Wrong! The answer given is 1E-38!

There are many variations of this. And it's not just a problem with using E format for input. Try this:

```
10 X=1.0
```

Spellbinding?

Of Course!
And Educational Too!

Juggle's
Rainbow

"Hello, I'm Merlapple™ the Wizard. My friends and I from Follett Library Book Company are helping grade school children all over the United States build logic, math and language skills through six unique programs designed for the Radio Shack TRS-80 color Computer.

These widely-acclaimed, award winning games from The Learning Company capture the fancy and test the reasoning processes of boys and girls ages pre-school through thirteen. Using both high and low resolution graphics, the games range from easy to "mind-boggling", each offering a distinct challenge to its players. "How-to-play" enactments contribute to program understanding while both graphic and musical feedback enhance learning.

The six outstanding programs offered include Juggles Rainbow™, Bumble Plot™, Bumble Games™, Magic Spells™, Moptown Hotel™, and Moptown Parade™.

To order any or all of the above programs, please return the order form below.

Number Match

\$29.95 (Tape or Disk)

To help the user develop the concept of numbers, learn to count from one to nine, and recognize the numerals for these numbers.

Math Facts Games I

Less than \$9.99 per game! **\$39.95** (Tape or Disk)

Provides an enjoyable method for practicing math facts. For grades 3 to 8. Four games are played against the computer; The count down (see how many you can do in 30 seconds); The secret word (do a problem guess a letter of the secret word); Tic Tac Toe (do a problem correctly get a turn); The Great Computer Challenge (timed exercise per problem 2,4,6, or 8 seconds to get it right).

Math Facts Games II

Less than \$9.99 per game! **\$39.95** (Tape or Disk)

Provides an enjoyable method for practicing math facts playing against the computer or another student. For grades 3 to 8, each skill level can be played at three different speeds. Four games are available; Stop the fact (stop the problem moving against time, speed & accuracy are the skills); Find the answer (Choose the correct answer out of ten for the problem given); Guide the Answer (Move the correct answer to the problem accuracy counts); The Great Face Race. (Each accurate answer moves you closer to the finish line.)

Color Text

\$79.95 (Disk only)

A powerful utility program—High resolution graphics and upper/lower case multi-colored text can be mixed on one screen, different size characters. Design your own character sets in Greek, Hebrew, Russian. Also allows animation (a non destructive overwrite), break disable, scrolling speed control and character construction. This program is intended for authors, teachers, game designers, or by anyone who wishes to prepare programs which involve the simultaneous use of text, graphics, and color. User programs (up to 16K) will run with Color Text on 32K machines. See Rainbow's software review Page 226 of the June 1983 issue.

Micro School Software Catalog **\$2.00** (Free with purchase)

More than 200 educational software packages available on multiple machines. More than 100 on the CoCo. Spelling, Punctuation, Reading and many others are available.

Please rush the following.

PERSONALIZED INSTRUCTION ON PERSONAL COMPUTERS

Upgrade Your Color Computer With A Key Tronic Keyboard.

Simple to install in your TRS-80 Color Computer*. A high-quality Replacement Keyboard from Key Tronic . . . the world's leading keyboard manufacturer for computer terminals.

FEATURES

- 15-20% higher data input rate compared to standard color computer keyboard.
- User programmable function key.
- Familiar typewriter layout.
- Complete legend description.
- High reliability—keys do not stick or jam.

Additional features include — high spring force on "clear" and "break" keys to prevent entry errors, full sculptured keytop array with low profile keytops, and locating "pips" on home row keys.

ORDERING INFO:

Price: \$89.95, please add **\$4.95** for plug adapter, part #500c, for models produced after Oct., '82 (Rev F and later).

```
20 X=X/1.1
30 IF (31-X)<30 THEN PRINT X;31-X
40 GOTO 20
```

You'll find a whole range where the error occurs—roughly 3×10^{-39} to 9×10^{-38} . Note that these answers are wrong by a factor of nearly 10^{40} , not an insignificant amount to say the least!

I think all vendors of numerical software should be aware of this.

*Fred K. Lenherr, Ph.D.

New Salem, MA*

Editor:

Are you tired of seeing the "OK" prompt forever on the screen, especially after your favorite program has just bombed? This you can change if your 80C has been converted to 64K. All that is required is to be in the all-RAM mode and key in the following:
POKE &HABEE, &H2B: POKE &HABEF, &H2B

This will change the prompt to ++. You could use any other symbol of your choice.

I initialize my computer upon start-up with this short routine.

```
10 LOADM 64K: EXEC
20 POKE &HABEE, &H2B: POKE &HABEF, &H2B
30 NEW
```

With this you can run all your favorite programs without affecting their operation.

*Edgar H. Poulin
Sherbrooke, Quebec, Canada*

SHARON HINTS

Editor:

In my last letter, I gave a rather complicated solution to the problem of "multiply defined symbol" error messages on Radio Shack's EDTASM+ software.

I heard from Sharon Lunsford at Radio Shack. Here is what she had to say:

"The 'multiply defined symbol' error message can be avoided by using the format OFFSET + LABEL instead of LABEL + OFFSET."

I tried it and it worked! If you have a line in the text file such as

```
LDX #TABLE+50
```

change it to

```
LDX #50+TABLE.
```

This has cleared up my problems. I hope it works for your other readers.

*Dave Jenkins
Evansville, IN*

Editor:

I've always liked the way *Rainbow* has treated games as seriously as other programming aspects of the Color Computer. *Rainbow's Scoreboard* is by far the most complete I've seen. Here are a few hints on two games that may help increase scores.

In case you haven't noticed, the scores for jumping barrels and knocking out pins in *Donkey King (The King)* by Tom Mix are not random. The score is derived by time left MOD 1000, so if you have 2400 time units left you will score 400 points when you jump a barrel, etc.

In *Protectors*, also by Tom Mix software, if you do a *POKE 13579,90* after you *CLOADM* and before you *EXEC*, the same

joystick that controls your vertical movement will also control which way you shoot. This puts more control in one joystick and leaves only the "throttle" button left on the other.

*Richard Uglum
Milwaukee, WI*

Editor:

I like the *Pipeline* program in the June issue but I thought I'd pass along a minor modification to pick up the game speed a bit. Change line 170 to read:

```
170 FOR QX=341 TO 344: POKE QX,255:
NEXT I$: INKEY$: IF I$="" THEN 230
```

This works with 1.0 through 1.2 Color BASIC to give the arrow keys a repeat function. Addresses 338 through 345 are the keyboard "last look" buffer, and *POKEing 255* there makes it appear that the key has been released and pressed again. Thus, the *INKEY\$* function will continue to recognize the key as long as it is held down.

*Stephen L. Lipps
Lebanon, IN*

Editor:

First I'd like to ask some questions and then I'll give some helpful hints.

1) How do I get past the large serpent in *Pyramid*?

2) How do I get across the rug in the large rectangular room in *Raaka-tu*?

3) How do I get the green key out of the electroshock room in *Bedlam*?

Now for the good stuff!

```
X = 1 . . . 255
```

POKE 12914, X on *Donkey King (The King)* for more men.

POKE 10739, X on *Katerpillar Attack* for more men.

POKE 9009, X on *PacTac* for more men.

POKE 10489, X on *PacTac 2* for more men.

NOTE: Unlike *Donkey* and *Katerpillar*, both *PacTacs* show all men given.

If you readers have answers to questions above, write me at 19 S. Waterloo Road, 19333.

*Pat J. Dolan
Devon, PA*

Editor:

In response to Chris Latham's letter on page 13 of your August 1983 edition of *the Rainbow*, there is a much easier way to save high scores. Simply reset the computer after you have played for 10 minutes, type *CSA-VEM "DONKEY"*, 12803,32512,12803. Then, whenever you load this new copy, the high scores will be included in the program itself.

You can get 300,000 points on *Donkey King (The King)* by grabbing the hammer on the first level and falling off the edge. It happens once in a while, so keep trying. Whenever this happens I don't save the high scores.

*Kenny Miller
Yardley, PA*

NO MODEM FOR MA BELL?

Editor:

I am looking for a way to send and receive programs using the cassette plugs over the phone lines to other CoCos. I saw an ad for a "Black Box" selling for \$69 that would do this and it wasn't a modem. If I could get a

schematic and a parts list I could build a few for our CoCo club members. Also maybe this circuit could be interfaced for two-meter ham radio, too. There are many CoCo owners that are hams in my area. Please contact The Radcliff Color Computer Club c/o N4GSB, 287 Highland Dr., 40160.

*Bryan Harp
Radcliff, KY*

EDITOR'S NOTE: Telephone transmission of data without some type of modem is possible but not recommended. For cassette output the Baud rate is close to 1500 and the bandwidth would be excessive for normal telephone transmission.

BRAZILIAN COCONUT

Editor:

I'm the leader of the only formal users' group in Brazil: The TRS-80 Color Club, P.O. Box 2951, Rio de Janeiro, with almost 100 owners and growing up very fast.

Here is one hint for your collection:

If you are getting some keyboard failures (lock out), try to switch the PIAs (6821 and/or 6822) between each other.

*Francisco J.M.C. da Silva
Rio de Janeiro, Brazil*

EVANSVILLE TO COCO, MOE

Editor:

I would like to form a C.C. Club in the Evansville, Indiana area. If anyone is interested, please call or write to Box 462, 47633, or phone me at (812) 874-2210.

*Brian Boyles
Poseyville, IN*

REVIEWER'S REPLY

Editor:

I would like to comment on the letter in the August issue from a Mr. John Plaxton regarding the software reviews published in *the Rainbow*.

I have done several software reviews for *the Rainbow*, and can honestly say that nothing has influenced the context of my reviews other than the product itself. Mr. Plaxton correctly pointed out, however, that opinions vary, and I guess that this can be further influenced depending on what other programs the reviewer has seen.

I have never reviewed what I considered to be a bad program, but I would like to point out that there is a difference between the choice of phrases such as "so-and-so is a fun game" as opposed to "so-and-so has excellent graphics and sounds."

One final point that I'm sure most of your readers are not aware of is that except for spelling, grammatical, and punctuation changes, *the Rainbow* editorial staff does not, in any way, change the reviews from the way that they are received.

*Gerry Schechter
Yonkers, NY*

PRINT #-2,

The issue of software theft, sometimes called piracy, is one of the hottest ones in the computer marketplace today. One of the main reasons for this, frankly, is because of what has been happening in the past few months in the Model I/III market.

A number of companies which have been producing some fine quality software for those machines have gone out of business and the reason that we are hearing that this has happened is because of the large amount of illegal software on the market.

That fact, plus the anticipated pullout of at least one major software vendor in the CoCo field, suggests that there is a major problem brewing in this area. Yes, we have written about software theft before — but the issue appears, at least to us, to be more serious at this time than at any time in the future.

Without doubt one of the reasons is because the Color Computer has grown to be one of the major forces in the marketplace. The potential for successful sales is greater than ever before — and that potential increases every day. Finally, with the introduction of the Color Computer 2, the 64K CoCo and the OS-9 operating system by Radio Shack, the potential is so great that it staggers the imagination.

The problem, however, is that it also attracts those who would seek to get something for nothing. And, while we do not condone it, the problem is reaching the proportions that the simple “copying a program for a friend” version of software piracy, while certainly damaging, is small scale. When bulletin boards spring up which are devoted to allowing illegal copies of commercial software to be downloaded, when “pirate newsletters” appear, when “companies” sell pirated software, there’s a big problem out there.

We’ve talked about this before, but the consequences of software theft are considerable. They mean that many talented programmers will simply stop, or never start, writing for the Color Computer. They mean that the cost of your software will go up. They mean that some companies with the resources to produce and market truly innovative programs will simply get out of — or never decide to enter — the CoCo field.

The Rainbow has been a part of the Color Computer market for more than two years now. We have talked about software theft in the past. And, we have done a few things. Now, we are doing more and I think it might be helpful if we let you know what they are.

We are asking all our advertisers to remove those “copy anything” programs from the market. Yes, we realize that some programs are sold with protected disks and tapes and that it can be a hassle to get a replacement. We are also asking our advertisers to provide a convenient and reasonable means of backing up their software for *the personal use of purchasers*. And, we suggest that you inquire whether software is sold without easy backup potential (such as Radio Shack, which gives you two disks in its *Sands of Egypt* package).

We have also asked Color Computer clubs to approve bylaws that forbid theft of commercial software. It has been gratifying that a huge number of them — from Alaska to Florida, New York to California and in Canada, too — have done so already. It is our intention to list a directory of Color Computer clubs. With more and more people coming into the CoCo Community every day, such information is important to them.

At last spring’s *RAINBOWfest* in Chicago, we asked representatives of Color Computer clubs in attendance to let us know whether they would have a problem with such a rule as a condition of being listed. No one expressed any problem. And we are in the process of preparing our directory.

The bottom line here, though, is that software theft hurts you most of all. It drives up the price of software; it limits the programs that may be available to you. And, if you do have an illegal copy of a piece of software, it will probably mean you can’t get any help from the manufacturer should something go wrong.

I hope you will help us eliminate software theft. The Color Computer market is one of the most robust and successful among all personal computers. Please help us protect it so that it will continue to grow and thrive.

While on the subject of Color Computer clubs, we will soon begin a section in *the Rainbow* that will give news of CoCo Club happenings. The purpose of this is to encourage the exchange of information — interesting presentations, new ideas, projects and the like. We encourage your club to be a part of that and to expect to receive some forms soon that will help you report news to us.

Our first *RAINBOWfest* is moving along and we hope that we see many of you in Fort Worth. This show

(continued on page 284)

Telewriter-64™

the Color Computer Word Processor

- **3 display formats: 51/64/85 columns × 24 lines**
- **True lower case characters**
- **User-friendly full-screen editor**
- **Right justification**
- **Easy hyphenation**
- **Drives any printer**
- **Embedded format and control codes**
- **Runs in 16K, 32K, or 64K**
- **Menu-driven disk and cassette I/O**
- **No hardware modifications required**

THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with *true lower case characters*. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.

...one of the best programs for the Color Computer I have seen...

— Color Computer News, Jan. 1982

TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer — 16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays: 64 × 24 and 85 × 24! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command.

The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, *all on the screen at one time*. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing.

RIGHT JUSTIFICATION & HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.

Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

FEATURES & SPECIFICATIONS:

Printing and formatting: Drives any printer (LPV/II/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Terminus, etc).

Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dot-graphics, etc.

Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification.

Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.

Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files — create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).

Cassette verify command for sure saves. Cassette auto-retry means you type a load command only once no matter where you are in the tape.

Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.

Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.

...truly a state of the art word processor...
outstanding in every respect.

— The RAINBOW, Jan. 1982

PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs \$49.95 on cassette, \$59.95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.)

To order, send check or money order to:

Cognitec
704 Nob Street
Del Mar, CA 92014

Or check your local software store. If you have questions, or would like to order by Visa or Mastercard, call us at (619) 755-1258 (weekdays, 8AM-4PM PST). Dealer inquiries invited.

(Add \$2 for shipping. Californians add 6% state tax. Allow 2 weeks for personal checks. Send self-addressed stamped envelope for Telewriter reviews from CCN, RAINBOW, 80-Micro, 80-U.S. Telewriter owners: send SASE or call for information on upgrading to Telewriter-64. Telewriter-compatible spelling checker (Spell 'n Fix) and Smart Terminal program (Colorcom/E) also available. Call or write for more information.)

PRESENTS

COLOR-STICK

The ORIGINAL interface for
the TRS-80*
Color Computer to let
you use the famous:

ATARI* JOYSTICK'

Just plug your Atari or Atari like joystick (the Color-Stick enables the use of most joysticks made for the Atari) into the Color-Stick interface and then plug the Color-Stick into an empty joystick port.

The Color-Stick can improve scores 50% and more while making some games more exciting and fun to play.

Don't settle for cheap imitations. Only the ORIGINAL Color-Stick's small inline design allows you to just plug your joystick into it and forget it. The Color-Stick becomes a part of your joystick so it does not interfere with your game playing. In addition Color-Stick returns a full value of '63' for the right and down directions, even when using two joysticks and even in the diagonal directions, the others don't.

NOW Color-Stick has a new low price.....

Color-Stick interface \$10.95 each
two for \$19.95 (less joysticks)

Atari joysticks \$9.95 each

BETTER

Don't miss out order the ORIGINAL. Send your check or money order or better yet call today and order your Color-Stick.

Add \$2.00 per order shipping and handling. Bank cards welcomed (please include expiration date). Orders paid by cashiers check, money orders, bank cards and C.O.D. are shipped within 48 hours. Personal checks please allow 1-2 weeks. C.O.D. orders add \$1.50 extra. S.C. residents add 4% sales tax. *TRS 80 is a registered trademark of Tandy Corp. Atari is a registered trademark of Atari, Inc.

In addition to the proverbial baling wire that holds many magazine operations together, *the Rainbow's* production process depends heavily on The Clipboard — if it's not on The Clipboard, don't bet on it ever hitting the printed page. About this time every month, it seems we all need The Clipboard at the same time. Lay it down and it's gone. Fortunately, it always reappears, because, without it, we would be in big trouble. It contains the evolving record of "what goes" and where it goes — and we don't even have a backup copy.

This month is our graphics special and "what goes" (which is to say what stays on The Clipboard) is influenced by how closely the article or program relates to our graphics theme. While many submissions had to be held over for later issues, one that has a solid position on The Clipboard is *Marathon*, John Fraysse's action-packed graphics game. It's fun to play — and not as hard as his *Rainbow Roach* — and, best of all, he shares with us the tricks of the trade and his special techniques for getting the most out of CoCo's graphics capability. John's article is a marathon, itself, so if you "hit the wall," take a breather and come back to it. And, if you get blisters on your typing fingers, try *Rainbow on Tape*, but don't miss *Marathon*.

One of our most colorful graphics offerings is *Flags*, which draws the flags of dozens of nations. *Color Blackjack* is a guaranteed winner, too, and even the program quickie, *Sinelines*, is a sure crowd pleaser. *Sinelines* was artist Fred Crawford's inspiration for our cover this month.

Do a *PCLEAR 40*, or so, for all the other graphics pages and, for dessert, try *Picture Your Face*, one of my personal favorites. I guess Dick Tracy has a sphere of influence that reaches all the way to Australia; at least, the Delbourgo family's latest offering reminds me of the way Junior, the police artist in the famous cartoon strip, would listen to eyewitness descriptions and then make a composite drawing of a face from an assortment of stock noses, ears, beady eyes and criminal type hairdos. I always wanted to try that; now we can all amaze our friends by letting CoCo *Picture Your Face*.

A welcome return to our pages this month is Jorge Mir, who has two articles! In addition to a cassette merge program, Jorge has *64KBASIC* for our growing number of readers with 64K.

After completing his comprehensive CoCo memory map in last month's issue, Bob Russell will return next month with additional discoveries, corrections and documentation for the new ROMs. Stay tuned for this and a special article of hints and tips on how to make the most of the memory map.

For those with I/O error blues, Harry Hardy's *Hide That Disk Directory* shows us how to initialize a 36th track! And, how to harbor an extra disk directory in out-of-the-way safety.

A final note. Even though we all have one eye on Fort Worth and our next *RAINBOWfest*, our judges are poring over the dozens of Simulation Contest entries and promise to name the winners next month in our Simulation Contest/Data Communications issue. The competition promises to be tough, though, for the quality and quantity of entries is high. Keep your fingers crossed and, in the meantime, if you haven't already done so, put a note on your own clipboard to subscribe to *the Rainbow*; with the cover price now at \$3.95, a \$22 per year subscription means an annual savings of more than \$25.

See you in Fort Worth!

—Jim Reed

GUARDIAN

**IF YOU HAVEN'T PLAYED GUARDIAN,
THEN YOU HAVEN'T PLAYED THE BEST.**

Check these features:

- 1.) The Landers aren't suddenly just "there", they implode out of particles!
- 2.) Not just "Beeps" but stunning sounds!
- 3.) Explosions **just** like the arcade with no skimping!
- 4.) Thrust flame behind your ship.

... and many more!

Order now by check, M.O., C.O.D., or see your dealer...

(If he doesn't have it yet, send him to us!)

\$27.95 — Tape / \$29.95 — Disk

More than just a Son-Of-Roach,
this multifaceted tribulation for microcomputerists

Well folks, here we go again! I must say that I was overwhelmed by the response to *Rainbow Roach* in the June 1983 *Rainbow*. First, let me say "thank you" to the CoCo community and my yet unseen friends or should I say *fiends* at the *Rainbow*. You made *Rainbow Roach* a smashing success! Now the question is are you ready for *Marathon*, which is probably what you will feel like you have been through after typing it in! But take heart, good things seldom come in small code space.

I know what most of you are thinking. *Marathon* is a *Son-Of-Roach*. Well, yes, and no. Remember, in the *Rainbow Roach* article I said that we would do some wild and wonderful things with scrolling graphics at a later date? I had *Marathon* in mind at the time as a demonstration of the applications of ML subroutines. *Marathon* has five ML subroutines, but please trust me, you will *not* need an editor or assembler—just the ECB listing provided and, of course, this article. Some of you wrote me righteously indignant that I had put a ML subroutine into a BASIC game and therefore had precluded all non-ML programmers from using the program. This was luckily *not* the case, as I explained, and will go over once again in this article. At any rate, the ML routines occupy approximately 300 bytes of memory and are written in position independent code (PIC) or "run anywhere code."

(John Fraysse, Jr. holds a degree in aerospace engineering from Virginia Tech. He and his wife Jean and their four children (ages 18 months to 12 yrs.) live in King George County, VA. Afabear Software is John's small spare-time business.)

MARATHON MADNESS!

By John Fraysse

is absolute . . .

Marathon is more complex than *Roach* . . . more of an ordeal. You must first race downhill on a SLED past deviously arranged scenery, then FLY your airplane over miles of moving mountainous terrain cluttered with air traffic control problems. Next, you take to the streets at rush hour (of course), and no traffic 'copter is going to help you out. Finally, a trip into the bowels of the earth as you power your SUB through the narrow, mined crevices of the deep, and past the resting place of JAWS!

I have structured the program into two modules, or portions, of stand-alone code. With some very simple modifications, the entire *Marathon* listing (requiring 32K ECB) can be broken into two 16K ECB programs. Consequently, those of you with 16K ECB can still play *Marathon* by creating these two programs from the full listing and by *CLOADing* and *RUNning* one program over the other. Virtual memory techniques!

For 32K ECB folks, the full *Marathon* listing automatically reconfigures itself for either a disk or cassette system. It *does not* use or need a BREAK key disable or the *POKE 65495,0* CPU speedup since these things seemed to do more harm than good (judging from some of the confusion over *Rainbow Roach*). If your machine can hack it—*POKE* it and watch it fly. This is left as your choice.

As with *Rainbow Roach*, I have provided a couple of screen dumps, a program functional line description, a variable list, and an assembly listing as well as a good deal of commentary including some debugging helps. So if all these words have hyped you up, get your typing fingers and your "bug spray" ready to hit those keyboards! But first some ground rules and useful hints:

- * You must have Extended Color BASIC (ECB).
- * If you have disk, you must have 32K.
- * You do *not* need a monitor or assembler.
- * ALWAYS save-to-tape or before typing RUN.

FIRE COPTER

WITH
3-DIMENSIONAL
GRAPHICS

NOW

JOYSTICK
COMPATIBLE

BY DALE LEAR

Down there — below and to the right — tongues of fire play across the face of a skyscraper like living things. Inside the copter, runaway temperatures nearly rip the conscious from your heat-punished body, momentarily throwing you off course. But panic taps a hidden reservoir of strength, and with an adroit push on the throttle, your FIRE COPTER continues to knife through the swirling plume of smoke, carrying its lifesaving water jets directly into the flames.

FIRE COPTER is joystick-controlled and accomodates one or two players. Ready for three-dimensional realism? Then you're ready for FIRE COPTER — the hot new arcade game from Adventure International!

Color Computer 16K Cassette \$24.95

ai Adventure
INTERNATIONAL

A SUBSIDIARY OF SCOTT ADAMS, INC.
BOX 3435 • LONGWOOD, FL 32750 • (305) 862-6917

To order, see your local dealer. If he does not have the program, then call 1-800-327-7172 (orders only please) or write for our free catalog. DEALER INQUIRIES ARE INVITED!

FOR YOUR COLOR COMPUTER

- * Type in lines as you see them. DO NOT ADD or SUBTRACT SPACES. This will keep your listing on your CoCo screen exactly like the *Rainbow* listing.
- * IF you have a correct *Rainbow Roach* listing, you can save some typing by first loading *Roach* and then deleting lines 0—44 and 50—65. Now, type and enter *RENUM 39,45,1* then add the statements from the *Marathon* listing at the end of line 43 (L\$(37) and a "GET"). The programs use the same character sets.
- * If you would like a tape of *Marathon* send \$4 and a label with your address on it:

John Fraysse
Afabeat Software
Box 822
Dahlgren, VA 22448

I'll cover the cassette, postage and handling and try my best to give you next day service. Or if you prefer, send a self-addressed envelope with *adequate* return postage and a blank cassette with \$3, whichever is more convenient.

- * When calling to discuss problems try to have your computer next to the phone so that we can debug and talk at the same time. Please look through this article's documentation first, especially the "Debugging Section." I will be glad to talk to you after 7:00 p.m. on weekdays, (703-775-7018).
- * Finally, as a favor, I would ask that you not give or sell *Marathon* or any other software you have purchased or typed in. As an individual, you have the right to use someone else's software (whether purchased or typed in) *not* to give away or sell it. Thanks much!

How To Run A Marathon

For 32K ECB users, simply *CLOAD* "MARATHON" *RUN*. Whether you are loading from a disk or cassette does not matter.

If you have 16K ECB, read this paragraph—otherwise, skip to the next one. Okay, you have 16K. First *CLOAD* "MARASET" and *RUN*. When the OK appears, *CLOAD* "MARADRV" and *RUN* again to play. *Maraset* and *Maradrvr* are two programs created from *Marathon*. See the special 16K ECB instructions for details. If you wish to press the BREAK key to edit *Maradrvr* only do so when the game status word reads "DIF" or "RUB." This is the only time when the graphic scenes are properly aligned. Re-running *Maradrvr* does not recreate the scenes. (*Maraset* does that.) If you follow this rule, you will be able to edit *Maradrvr* and rerun without reloading and rerunning *Maraset* first. However, if things don't look right, you will have to repeat the *Maraset-Maradrvr* sequence.

After typing *RUN*, the program headers will appear scrolling up from the bottom of the screen one at a time until a surrounding border is finally in place. The graphic screen is then displayed (see Figure 1) and the four scenes begin to move simultaneously. This is the wait mode. It occurs initially and after each game. Pressing the spacebar exits the wait mode, realigns the scenes and enters the "rub-in" mode (select difficulty level and enter your initials). The area in the center of the screen is the information/score box. The small square to the left edge of the box is the difficulty level. A question mark ("?") and the status word below the box ("DIF") indicate that you should select a difficulty level (1—4). Pressing the "1" through "4" keys will record your selection and move the "?" next to the "ID" label. The status

word will read "RUB" for rub-in. You must type three *capital letters*—all others are ignored. After entering your initials, the status word reads "RDY" for ready and an illuminating square to the left of the labels SLED, FLY, AUTO, or SUB will appear flashing and playing a short, random note sequence. Also, at this time, your vehicle will appear at its starting position in the appropriate trial area.

Figure 1

Marathon has four trial areas which you must negotiate in order. The RIGHT JOYSTICK controls all of the action. The button is never used. Increasing the difficulty level causes more and more obstacles in your path. With the SLED trial, you get more TREES. With the FLY trial, you get more BIRDMEN. When AUTOing, you have more FIRE HYDRANTS, and while SUBing, you must dodge more of those pesky MINES. When the status word reads "GO" your trial begins, first on the left hand side, the SLED. You move *downward*, the scenery moves *upward*. The next trial is the plane (FLY). You move to the *right*, the scenery moves to the *left*. This is followed by the AUTO. You move *upward*, the traffic moves *downward*. Finally, it's the SUB. You move to the *left*, the undersea world moves to the *right*. Your joystick controls horizontal movement while SLEDing or AUTOing and vertical movement while FLYing or SUBing. You must avoid "NOSE" contact with the scenery. Once the front portion of your vehicle has passed an obstruction you are safely by. Care was taken to make the joystick control exceptionally smooth and responsive, but at the higher levels a good deal of anticipation and split-second timing is required!

Your score is proportional to how long you lasted in each of the four trials and is totaled after each trial. For each 5,000 point increment in score, you will receive a bonus play round (a perfect *Marathon* is 5250). The game status word will read "BNS" and a rising scale is played. After the game has ended, the status word will read "END" and the four scenes will begin to move simultaneously again waiting on SPACEBAR to replay. Pressing the spacebar will realign the scenes and re-prompt the Difficulty/Rub-in sequence.

Well, that's your mission . . . a *Marathon* if you should decide to accept it!

Christmas

Holiday Script:

Beautiful holiday script writing for your computer. Has upper and lower case lettering and punctuation. Easy to change text. Tape Req. 16k Ext. \$8.95

Holiday Carols:
Slowly drawn the picture is a joy to watch. Music can easily be added. Advertising or home use. Tape Req. 16k Ext. \$5.95

Note: Our programs are different because they are written entirely in BASIC so they are easy for you to adapt to your particular needs. To make that even easier we provide a one page instruction guide which describes how key points in the programs work so that you can then develop your own similar types of programs.

Holiday Jamboree:
Similar to the holiday carols, but has 5 holiday pictures. Great Advertising tool or a joy at home. Tape 16k Ext. \$7.95

Tampa Instructional Center
201 EAST LINEBAUGH AVENUE
TAMPA, FLORIDA 33612
(813) 933-3923

Special Instructions For 16K ECB Cassette Users

1. Clear your machine by turning it off then on again.
2. Type and ENTER *POKE 25,6* (This will clear all the graphic pages and allow you to use all of your memory for program.)

3. If you have a purchased tape or wish to add to or edit the one you have previously created just *CLOAD* "MARATHON." If you have no tape file as of yet . . . type like crazy until complete or you are exhausted. Do not type *RUN* until you are instructed. If you wish to stop and rest prior to completion *CSAVE* "MARATHON" and repeat steps 1—3 to continue. When complete, make two copies and put them in a safe place. These are your "master" copies.

4. Now, you must make two programs out of the one master. This is also necessary to debug the two programs. The first program will be the setup code which will create most of the necessary graphics plus *POKE* the ML code into the proper memory locations. Here are the steps assuming the master is loaded:

- * ADD "*CLEAR360,16074*" as the first statement in line 11. Line 11 should read: 11 *CLEAR360,16074:PMODE3,1 . . .*
- * ADD "*AD=16075*" as the first statement in line 30. Line 30 should read: 30 *AD=16075:CK=0:FOR I=AD . . .*
- * DELETE lines 0—10 then delete lines 36 to the end of the program (*DEL 36—*)
- * *CSAVE* the result as "MARASET"

Now to create the second program—the BASIC driver.

Leave your machine on and reload the master file, "MARATHON." Follow these steps:

- * REDO line 0. Line 0 should read: "*AD=16075:GOSUB38*"
- * DELETE lines 11—37
- * *CSAVE* the result as "MARADRVR" just a few counts past the end of "MARASET"
- * Cycle your machine off then on again (restores graphic pages)

5. If you started with a purchased cassette, rewind to "MARASET," *CLOAD* then *RUN*. When the "OK" appears, *CLOAD* "MARADRVR" and *RUN*. *Marathon* is yours!

OWLS NEST SOFTWARE

'WE GIVE A HOOT'

ATLANTIS ADVENTURE

This one is tough! We challenge you to complete this in 30 days. If you can we will send you any cassette program we sell at no charge. (We will even pay the postage.) You start on a disabled sub, near the lost city of Atlantis. Your object is to get the sub and yourself safely to the surface. Your text adventure tape will have a 16K EXT version on one side and a 32K EXT version on the other.

ATLANTIS Cassette - Postpaid \$21.95

ADVENTURE STARTER PACKAGE

Learn how to play those adventures the painless way. You start with a simple adventure and then move into an intermediate. We also include hints and tips on adventuring. Your 16K EXT cassette includes both "MY HOUSE" and "PIRATES" adventures. Finish this and you are ready for "ATLANTIS".

Cassette 16K EXT - Postpaid \$17.95

PROGRAM FILE

Organize your cassette programs. Let your computer find that program for you. Create and maintain a four field file. You can search, sort, modify, delete and display on screen or printer. Sorting may be done by name, type, or location. You may sort on all three fields with a single sort.

Cassette 16K EXT - Postpaid \$14.95

LABEL III

Develop and maintain a mailing list. Print lists or labels in your choice of 1, 2 or 3 wide. Supports 3 or 4 line addresses with phone optional. Fast machine language sort on last name, first name, or zip code. You may sort on all three fields with a single sort.

Cassette 16K EXT - Postpaid \$19.95

NEW!!

Now you can add a little light and extend your coco's life. Don't leave your coco on and fry your chips. Put some lite in your coco's life. "OWLS EYE" indicator light plugs into either joystick port and may be mounted beside your keyboard where it is easily visible. It will glow BRIGHTLY whenever your coco is on. Very simple 10 second installation.

"OWLS EYE" - Postpaid \$ 8.95

DISASSEMBLER - ASSEMBLER

(By Dynamic Electronics) Designed for the beginner who wants to learn to write machine language programs.

```

6. If you have typed the program in, I suggest that you first get the setup program right ("MARASET"). To help you do this, I suggest that you add line 36 as follows:

```
36 SCREEN1,1:GOTO36
```

The *FOR/NEXT* loop in line 30 sum checks your ML code. It is properly entered when the value for CK is 31681. If not, an error message will result (see Debugging Hints for details). The screen command that you added as line 36 will let you see the graphics you have created. They should look like Figure 2 below. When "MARASET" is correct, note your corrections and *CSAVE* to tape. you should later edit the master and make the same corrections. You should also delete line 36 when you have finished debugging.

Figure 2

7. Now *CLOAD* your correct "MARASET" program and *RUN* then *CLOAD*"MARADRVR" and *RUN*, but stand by on the SHIFT@ keys. As soon as you see the graphics, pause the program. Does the lettering look OK? It should now look like Figure 1. If it does, congratulations, press any key and proceed. If not, start debugging, noting ALL your corrections. After you get it right, *CSAVE*"MARADRVR" to tape.

8. You should really go back and correct the master (*Marathon*) file. One day you might have a disk and/or more memory. The *Marathon* file would then be the one of choice.

9. Here is what your 16K ECB memory looks like after running both programs:

DEC	HEX	
ADR	ADR	
1536	600	MARASET STORES THE NECESSARY GRAPHICS HERE
7680	1E00	MARADRVR—THE BASIC DRIVER—RESIDES HERE AND OPERATES ON THE FOUR GRAPHIC PAGES VIA THE ML SUBROUTINES
16075	3EC6	MARASET STORES ML HERE
16383	3FFF	

**624 KBYTE
SYSTEM!**

ONLY \$499⁰⁰

**New
3" disk
cartridge**

COLOR AMDISK-III COMPATIBLE.

The AMDISK-III micro-floppy disk system is an engineering breakthrough in disk size, storage capacity, media protection and user convenience. It's fully compatible with your Radio Shack* Color Computer. Enjoy a full 624 KByte† (formatted) storage capability and the extra convenience of the new 3" hard plastic encased diskettes. They fit into a shirt pocket and are easy to mail, too.

The AMDISK-III drive system is ruggedly constructed for years of trouble-free operation, and is backed with our 90 day warranty on parts and labor.

Just circle the reader service number to receive complete specifications.

10. The reason this technique works is that only the BASIC program area is overwritten. The graphics and ML left behind by *Maraset* are *not* changed.

Debugging Hints

The majority of all errors you will inadvertently type into *Marathon*, or any other program, for that matter, will be SN (syntax) or FC (function call) errors. I will assume that you will find and correct all of your SN errors as they could be caused by almost anything. But I will treat FC and OD errors as they pertain specifically to *Marathon*, my ultimate of these errors so that you may correct most of them yourself. goal being to help you better understand the causes. Now, I know this is "old hat" to lots of you who may wish to skip this section, but many apparently could benefit from a few paragraphs on this subject. So here they are.

Function Call Errors

FC (function call) errors in *GET*, *PUT*, *DRAW*, *PLAY* and *LINE* commands are always caused by asking these guys to do something they can't. The most likely causes are as follows:

* Coordinates out of range: horizontal and vertical must be POSITIVE with the horizontal less than 256 and the vertical less than 192. EX: $PUT(X+4,Y+4)-(X-4,Y-4),A,PSET$, where $X=0$ and $Y>4$. Let's see; $X-4$ would equal -4 . NO CAN DO!

* Dimensions of the *PUT* not equal to the dimensions of the *GET*. EX: $GET(X+4,Y+4)-(X-4,Y-4),A,G$. Then somewhere else in a following line . . . $PUT(X+4,Y+4)-(X-2,Y-4),A,PSET$ where $X=10, Y=10$. Since the arithmetic statements $X-4$ and $X-2$ do not match, this pair will usually produce either a FC or the gosh-awfullest graphics you have ever seen!

* Execution of a string with an illegal character in it. EX: $DRAW"BM100,100;XL$(2);"$ where $LS(2)="D2L2P2."$ There is nothing wrong with the *DRAW* statement; however, the *STRING* it is trying to execute has an unrecognizable character in it, "P2." The result is a FC error. Since a string can be any printable character, BASIC has no way to know that you were going to use the string in a *DRAW* statement. You might have wanted just to *PRINT* $LS(2)$ which would be perfectly legal. In addition, if the *DRAW* command is at line 500 and then the $LS(2)$ string was defined, say in line 10, the source of your problems could be vastly removed from where you got your FC error.

When you get a FC error you can ask your CoCo to tell you any of the variables in the program if you do not ask it to do anything else like *EDIT* or *LIST*, etc. In the example above with the

GET/PUT FC error you could type, $?X,Y$ ENTER. These two numbers returned would be none other than X and Y. Now do these look right? Then check where the array was gotten and check the NAMES of the graphic arrays in the *GET*, *PUT*, and *DIM* statements.

You can also insert a *STOP* command wherever you want and the computer will stop. You may then ask it questions. When you wish to continue typing enter *CONT*. This insertion of *STOP* commands is referred to as adding *breakpoints*.

Poking the ML Code (OD errors)

OD, or out of data, errors are caused by insufficient data in the *DATA* statements. In line 30, I have inserted an automatic sum check of all the ML code. If you get an OD error you will know that you have missed some entries. If the error message from BASIC results, ("ERROR IN DATA STATEMENTS") the first number is the sum check (should be 31681) and the second is the value of the last number read in case you put in too many. Between BASIC's checks and this one I have installed and *Rainbow Check* (RBOWCHEK) you should be able to get this part right.

Catastrophic Paint

The ECB *PAINT* command can be very dangerous because it is very picky. If you wish to paint an object it must have its outline closed on itself otherwise the painting will

"leak out" and paint everything else. Sometimes this completely wipes out your carefully detailed scene, although an error will *not* result. You will rarely be pleased with what you get. Therefore, if you mistype coordinates of a *PAINT* or mistype the coordinates of the object to be painted, wild things could happen to your graphics. Try inserting GOTO 100 before suspect *PAINTs* where 100 reads: 100 SCREEN1, 1:GOTO100. This will let you see the graphics. Then move the GOTO100 statement around until you locate the rogue *PAINT*. Now check the coordinates and color codes for correctness. Then try to find where the scene or object was generated—maybe you have an error there. If all else fails, delete the *PAINT* command giving problems and go on debugging the rest of the program. Make a note of this and return to the problem after all else is in order. Oh yes, don't forget to *remove your added statements* after you are through debugging.

'COCOCASSETTE' SUBSCRIPTION SOFTWARE

*TRS-80 IS A TRADEMARK OF TANDY COMPANY

ENJOY A MONTHLY COLLECTION OF 8-10 PROGRAMS!
Including games, education, home finance and more;
on cassette for as low as \$5.00 a month! Add some ac-
tion and imagination to your Color Computer. . . Best of
all, we do the work!

LOOK AT SOME OF THE LETTERS WE RECEIVED FROM OUR SUBSCRIBERS.

"I just thought I'd let you know that your cassettes arrive in good order, load just fine, and I really enjoy your programs!"

MARION, OHIO

"I was extremely impressed by the first tape I received from you. The added extras are just super."

WILLOW GROVE, PENNSYLVANIA

"Seldom do I ever write a fan letter. Usually if something is good, nothing is ever said. I just renew the subscription or buy the product instead. T&D is an exception. I subscribe to several cassette computer magazines. Yours is certainly the most creative. The covers are original and clever. The material covered is excellent!"

PINE BLUFF, ARKANSAS

"I only entered a six-month trial but am already willing to extend my subscription!"

COLETAH, TENNESSEE

- BY(2) VERTICAL COORDINATES OF BIRDMEN OBSTACLES
- HX(2) HORIZONTAL COORDINATES OF FIRE HYDRANTS
- HY(2) VERTICAL COORDINATES OF FIRE HYDRANTS
- MX(2) HORIZONTAL COORDINATES OF MINES
- MY(2) VERTICAL COORDINATES OF MINES

Some of you might have already noticed that much of the programming philosophy used in *Rainbow Roach* has been used in *Marathon*. This is, indeed, true and, in fact, many of the variable names are exactly the same as well as most of the techniques used. This apparent lack of originality is actually a significant strength in most cases, especially in reducing the time necessary to develop new software.

The more standardized your techniques become for doing a particular function, the more you will be able to do them as "second nature" allowing more time to think about new and more complex tasks. Some examples include: a standard method of input for player difficulty level and initials; a standard character and numeral set; a standard header display; and a standard procedure for on-screen score keeping. With these little subtasks thoroughly understood and well documented, you may use them again and again if you made them general enough in application. You may even want to adopt a specific set of variable names to indicate certain quantities in all of your programs. An example would be "S" as score. Then, if you discover a more efficient way of doing something, a modification will be much simpler to implement and easier to understand.

My commentary concerning *Marathon* will be concentrated in three primary areas most of which are not common to the *Rainbow Roach* tutorial (June 1983). These include Program Structure, Graphic Techniques and ML Subroutines.

Program Structure

Three factors influenced the structure of the *Marathon* coding.

First was the desire to have the animation as fast as possible without the *POKE 65495,0* CPU speedup or a *BREAK* key disable. Therefore, the line numbers were sequentially numbered by ones and the animation loops placed as close as possible to the beginning of the program. Both loops are located in the first six lines of code. When BASIC encounters a *NEXT*, it starts looking for a *FOR* statement. The closer the *FOR* statement is to the beginning of the listing and the smaller the numbers it has to search through, the faster the loop. The speed attained is satisfactory updating at a 6 HZ rate which is faster than a lot of people's reaction time.

Secondly, I wanted the convenience and flexibility afforded by wholesale SUBROUTINING. In this way, it was easier to think logically about the tasks involved. Consider the diagram below:

MAIN PROGRAM BASIC (LINES 0-10)

ML	JOYSTICK SAMPLE
ML	MOVE SUB SCENE
ML	MOVE FLY SCENE
ML	MOVE SLED SCENE
ML	MOVE AUTO SCENE
BASIC	RUB-IN
BASIC	SCENERY ALIGN
BASIC	SCORE/HI-SCORE
BASIC	ASSIGN TRIAL PARAMETER "READY" AND BONUS

Subroutines Keep The Main Program Simple

By letting a ML subroutine sample the joysticks and generate either the vertical or horizontal coordinates necessary to produce X-Y motion, I was able to get by with two (not four) very similar animation loops. One loop for vertical and one for horizontal animation. The bounds of the loops are variables ("LB" and "UB") as well as the steps of the loops ("ST"). Therefore, I can start and end the animation anywhere I want and go forward or backward depending on the sign of ST. In the vertical loop (LINES 2-3), the *USR0* function returns the horizontal coordinate "X." In the horizontal loop (LINES 4-5) the *USR0* returns the vertical coordinate "Y." In both cases, the coordinate not defined by the *USR0* is defined by the animation loop counter "N." Thus, the *USR0* initializes the missing coordinate and increments its value at a *RATE* proportional to the right joystick position and then limits the output. This is a slow process in BASIC requiring a *JOYSTK(0)*, adds, subtracts, multiplies, divides and logical tests. It takes <.01 seconds in ML.

Chatsworth, CA 91311**

The other four ML subroutines move their respective blocks of graphics two pixels at a time up, down, right and left and wrap the scenery around. This eliminated the need to produce different graphics and greatly simplified the ML code while saving bunches of graphic memory.

Now, what about the BASIC subroutines? First of all, none are in the animation loop as *GOSUB*'s are very slow. But no one cares after the action has stopped. So they do things *between* the four trials. These include realigning the scenes, calculating and displaying the score, assigning animation loop parameters, and inputting the difficulty levels and initials.

As an aside, you may be asking yourself "Why do you need to realign the graphic scenes?" It is because of difficulty levels. Since higher difficulty levels mean more objects and that you will need to ERASE these objects to change levels,

"You may even want to adopt a specific set of variable names to indicate certain quantities in all of your programs."

you must have some way of knowing where they are. This can be done by counting the number of times through the animation loop and adding this quantity to original coordinates. But what if the scene STOPS when an object is partially wrapped around? The best method of *PUTting* or erasing things on a wrap-around scene is to always align the scene to its original position. This way the "partial wrap"

problems go completely away. The method also provides consistency from game to game without destroying any graphic elements. Once again this is the concept of "single-synthesis" graphics used in *Roach*.

The third and final reason for the structure of *Marathon* was the realization, even before I began to write the program, that it would not fit into 16K as is. Thus, I designed a stand-alone graphics/ML module between lines 11 and 35, inclusive. These lines, with very simple modifications, become the graphics/ML setup program *Maraset*. Note that it contains no *GETs*, *PUTs*, *DIMs* or character set. It is 99 percent of all the graphics (minus the lettering) and all of the ML code and text headers. The remainder of the program (lines 0—10 and 38—74) makes up the BASIC driver—*Maradrvr*. The idea of the two programs was simply to provide a means to operate a 20K program in 16K and, therefore, allow anyone with ECB (except 16K ECB Disk) to play *Marathon*.

Graphics Techniques

First, let me say that there is little in *Marathon* in terms of graphics which is not general knowledge to many of you. But, there are three areas I would like to address before we go on to the commentary on ML. These are *DRAWs*, the "1 to 2" rule and generating two "new" color patterns.

How many of you like using the *LINE* command? I don't because it is so inflexible especially when it comes to drawing colored lines. Did you know that you can use the *DRAW*

Talk is Cheap!

You want your color computer to talk,
but how much will it cost?
\$50 . . . \$100 . . . \$200 . . . NO!

HOW ABOUT \$29⁹⁵?

SPEAK UP!™ is a machine language
Voice Synthesizer program for your
TRS-80 Color Computer.* It is
100% software. Nothing else to buy.
Best of all, YOU can make
basic programs talk!

16K and 32K versions on one cassette.
Has text to speech capability.

*T.M. Tandy Corp.

16k minimum

It's easy to use, and will say
virtually anything!

Talk really is cheap!

Reviewed in the April issue of *Rainbow*.

command to do almost anything a *LINE* command can do plus much more? Specifically, I am talking about using a *DRAW* to connect points *not* in the L-R-U-D-E-F-H-G directions. Simply use the "M" with no "B" in front of it.

EXAMPLE:

```

10 PMODE3:PCLS:SCREEN1,1,:DRAW"BM100,100
C2M120,100"
20 GOTO20

```

Now, you could replace the *DRAW* with a *LINE* command but in terms of line color you only have a choice of *PSET* or *PRESET*. To get the right color, you would also need a *COLOR* command. The *DRAW* does not need a *COLOR* command plus it has the L-R-U-D-E-F-H-G directional capability as well as color, scale and the ability to execute *STRINGS*. *DRAW* also takes less space than *LINE* giving you more graphics in the same memory. *LINES* are only more convenient when the points you are connecting are variables, but you can still make a *DRAW* work by converting the variable coordinates to strings and inserting them into the *DRAW* syntax.

Now, what is the "1 to 2" rule? That's my name, incidentally, for lack of a better one. It will allow you to make substantially better looking multi-color, hi-res graphics. If you wish to outline an object and paint it in hi-res (*PMODE4*) you must first switch to *PMODE3* then *DRAW*, *PAINT* and switch back to *PMODE4*. Have you ever noticed that the edges of some of your figures look better than others? The smooth edges are because of the "1 to 2" rule or when the slope of a line is $\pm\frac{1}{2}$.

EXAMPLE:

```

10 PMODE3: PCLS: SCREEN1,1,: DRAW"BM100,100
C2M120,110L20U1): PAINT (104,106),2,2: PMODE4,
1: SCREEN1,1
20 GOTO20.

```

See that nice upper right edge? That's because $(110-100)/(120-100)=10/20=.5$. Now, let's try a triangle with a 45 degree angle. Change the *DRAW* to *DRAW"BM100,100CF20L20U20"* then *RUN*. Note how ragged the edge looks? This is due to the fact that the orange and blue colors of *PMODE4* are caused by vertical lines drawn every other X position. If this pattern starts on an odd numbered X position, the color will be either orange or blue; if on an even numbered position the color will be the opposite (orange or blue) of what it was when the pattern started on the odd numbered position. Using lines with .5 slopes fits perfectly into the "every other line" color pattern, hence the smooth edges. Use of this technique is evident in the "FLY" trial graphics (mountains) although it could not be used everywhere because I needed to have the mountains steeper in places.

Count the colors in *Marathon* . . . 5, 6, 7? Right! How? Well, orange-yellow stripe patterns can be obtained by drawing *PSET* lines every third or more X positions, but starting one position over from the beginning line of the exiting orange color pattern.

EXAMPLE:

```

10 PMODE4,1: PCLS: SCREEN1,1: FORI=20 TO 60
STEP2: LINE(I,10)-(I,60),PSET: NEXTI: FOR I=20
TO 60 STEP 3: LINE(I+1,10)-(I+1,60),PSET: NEXTI
20 GOTO20

```

The two colors of the balloon in the "FLY" scene are neither orange nor blue; they are purple and red. These are caused by alternating orange and blue horizontal lines one

over top of the other.

So, now you should see black, white, blue, orange, yellow, purple and red—*seven colors!*

Machine Language Subroutines

Let me first address those of you who are still confused over the marriage of BASIC and ML. If you are confused, it is probably because you think that you have to have an editor/assembler/monitor (EAM) to do ML. For all practical purposes, this is so if *you* are developing the ML. However, if someone else does that for you and puts the ML in a form that BASIC can handle, then you do *not* need an EAM, only a BASIC program containing the ML code. This is precisely what lines 30—35 are. Line 30 is a loop, reading the ML code values in the *DATA* statements (lines 31—35) one at a time and *POKEing* these values into a particular portion of memory. The values in the *DATA* statements are the results of assembling the assembly listing given in this article. The CoCo's 6809 microprocessor understands these numbers and the sequence they are in, whether they came directly from an assembler or through a BASIC program such as *Marathon*. Inserting the ML in decimal form into a BASIC program via *DATA* statements is the most straightforward way of providing those of you without EAMs all the benefits of ML without ever taking your eyes off the listing or your fingers from the keyboard. Well, now, I hope that settles this issue! Press on!

You will notice that I have assembled all five ML routines together; however, each routine has its own RTS (return to BASIC). So, all I need to do is determine where the start addresses are for each routine and jump to them from BASIC whenever I want one. This can be done in two ways; through

"This small savings is in the most repeated loop, so a little bit of time savings here gets multiplied by the number of times the loop is executed."

the *DEFUSR/USR* method or the *EXECA* (where "A" is the starting address) method. I choose to use the *DEFUSR/USR* method with the first routine (joystick sample and limit) because I wanted to pass a coordinate variable back to BASIC. I used the *EXECA(T)* method on the other four scenery-moving routines because it allows a subscripted variable as its address (A(T)), where A(T) was defined as the starting address of the Tth trial (T=1 to 4).

Note that the assembly listing is PIC (position independent code) due to the use of the PCR mnemonic following references to memory reserved labels (HRZ, LMIN, LMAX, CO). PIC means that you can move the ML code anywhere in memory and it will work just fine. This made converting the location of the ML for the 16K version of *Marathon* a snap! If I define the start address of the first ML subroutine as the variable "AD," and the start addresses of the other four ML routines relative to AD, then relocation is as simple as redefining AD. You will find the definition of AD in line 0 and the definition of the other four ML starting addresses (A(1—4)) in line 47. Note in the 16K instructions that AD=16075 and I have added a *CLEAR360,16074* state-

ment. This *CLEAR* statement clears 360 bytes of string memory space and sets the top of BASIC at 16074 so that the ML can be loaded safely starting at AD (16075 through 16375).

* From now on, the references to line numbers will refer to assembly listing line numbers unless otherwise stated.

ML Routine #1

This routine uses the four reserved memory locations at the end of the assembly listing. Line 2 causes a jump to BASIC's joystick to sample, based on the value of HRZ. The value of HRZ as well as LMIN, LMAX and C0 are *POKEd* in from BASIC prior to calling this routine. Lines 8—28 add eight to the joystick sample, divide by 16, subtract two then add the result to the current value of C0. C0 is then limited in terms of both its maximum and minimum values (LMAX and LMIN) and restored in the C0 location. Lines 29—30 cause a jump to another BASIC routine at address \$B4F4 which converts the value of C0 (now in the D register (A+B)) to a floating point number and passes it through the USR argument list. Line 30 returns to BASIC.

ML Routine #2

This routine moves the SUB scene to the right and wraps the graphics around. The key to this routine is how the screen elements are moved two bits at a time. Each byte is

eight bits; therefore, the bytes must be sliced up and pushed around such that every two-bit pair "walks" to the right on the screen within the limits of the animation block. Here's how it's done.

Line 31 loads X with the hex address of the end byte on the first row to be moved. Since each row is 16 bytes long, line 32 loads B with \$1F (15) as it will be used as a counter which, when zero, will signal the end of a row. Lines 33—37 load A with the byte pointed to by the X register and does a RORA three times and masks off the lower order bits. Or put another way, the last two bits in the byte at address X have been moved to the first bits in the byte followed by six zeros. Line 38 pushes this result onto the stack for safekeeping until all the bits in the row have been moved. This is the "wrap-around" byte. Lines 39—41 load the X address byte into A and LSRA's twice, thereby dropping off the last two bits and pulling zeros into the first two. Line 42 pushes this result onto the stack for temporary storage. Now line 43 loads A with the X-1 byte or the byte to the left of the one previously operated on. Lines 44—46 do a RORA three times moving the last two bits in A into the first two while line 47 masks off the last six bits. Lines 48—49 OR the contents of A with the last byte pushed onto the stack (at line 42) and stores it at the X address.

At this point, the X byte has the two LSBs of the X-1 byte as its two MSBs. Or, a two-bit pair has moved two bits to the right! Lines 50—52 decrement X and B and performs the entire process over until B is zero, at which time you have worked your way to the end of the row and are ready to do the wrap. Lines 53—57 load the X byte (now the end byte in the row), shifts the two LSBs out, pulling two zeros into the two MSBs and ORs the result with the value on the stack. The stack value at this point is none other than the "wrap-around" byte placed there in line 38. This is subsequently stored in the X position. So then, the two LSBs of the end byte of the row have become the two MSBs of the byte at the beginning of the row. A two-bit wrap-around!

Now, you need to repeat this for all the rows and to start back at the end of the next row down. Let's see, 32 bytes per row and we decremented B to zero starting from 15 (32+15=47), line 58 adds 47 to the X pointer to start us back at the end of the next row while lines 59—60 check to see if we have finished all the rows. If not, we "do" to the next row (LOOP1); if so we return to BASIC.

ML Routine #3

Routine #3 is very similar to #2 except it moves the (FLY) scenery to the left. You will notice that the RORA and LSRA commands in #2 have turned into ROLA and LSLA and that the bit mask 11000000 is now 00000011.

ML Routine #4

Now, let's see about doing this two-bit business with vertical—(up/SLED) animation. The scene is seven bytes wide so lines 92—93 load X with the leftmost byte of the first row to be moved and B is loaded with the number of bytes per row (seven). Once again B=0 will flag us that we are at the end of the row. Lines 94—100 push two lines (14 bytes) one byte at a time onto the stack for safekeeping; the equivalent of a *GET(8,8)-(63-9),xx,G* command. Lines 101—

109 perform a two-line move up on every byte in the SLED scene. Note the offset to the X register in the STA command in line 104. To move up two lines, we should subtract $32*2=64$ not 65! But note the auto-increment on X in the line above (line 103). The X+ saves us from an additional INX or LEAX I,X statement, so we must subtract one more ($-64-1=-65$) This small savings is in the most repeated loop, so a little bit of time savings here gets multiplied by the number of times the loop is executed.

Now let's complete the wrap-around. Lines 110—119 do the exact opposite as lines 92—100 and are the same thing as a `PUT(8,182)-(63,183),xx,PSET`. The only difference is that the address loaded into X is now the address of the end byte on the last row at the bottom of the scene.

ML Routine #5

This is the downward (AUTO) scenery move routine. The differences between lines 92—119 and lines 120—147 are almost non-existent, save the obvious difference in the X register's load address which is across the graphics page.

Some of you sharp folks out there might be saying, hey, he could have used the double accumulator (A+B) to move the vertical scenes if he had just made the scenes an even number of bytes wide, say six or eight. Well, you are right! But, there are two good reasons not to. The first is that a six-byte SLED or AUTO scene appeared to be too narrow and an eight-byte wide scene made the SUB and FLY scenes too short. The second reason is that the four ML routines exe-

cute almost precisely at the same speed in their respective animation loops. This meant that I didn't have to worry about "padding" the ML or the BASIC.

Well, what can I say besides that I'm getting writer's cramp?! Feel free to "pull my chain" if you still have problems after reading everything here and giving it a good try.

As always, I am very interested in your success and will make every effort to help you out. But for now I think I will close and take the wife and kids on a long weekend sail along our beloved Chesapeake—land of bounteous grace! Until next time, may peace be your companion.

Your CoCo Friend,
John

YOUR COLOR COMPUTER JUST EARNED A MATH DEGREE!

MATHMENU

Developed by an engineer, *Mathmenu* is a powerful menu-driven system to turn your Color Computer into an intelligent, flexible tool for mathematics and engineering. *Mathmenu* takes the tedium out of math, leaving your full brain power to attack the "meat" of your problems. By rapidly manipulating matrices and vectors, performing integration and differentiation, solving quadratic equations, plotting user defined functions and much more, *Mathmenu* can help simplify the most complex problems. Whether you are a student or a professional, if you use math, you need *Mathmenu*.

FEATURING:

- 3D SURFACE PLOTTING — Plots a user defined equation on an X,Y,Z coordinate system in the High-Res graphics mode. Planes, surfaces of revolution, statistical surfaces, etc. can be easily plotted. Surfaces may be saved to disk or tape. We believe this is the only program of its kind commercially available for the Color Computer.

PLUS:

- Complete MATRIX Operations (up to 8 x 8)
- Complete VECTOR Operations
- Numerical Differentiation
- Numerical Integration
- Least Squares Curve Fitting
- Binomial Expansion
- Prime Number Verification
- Main Menu with Single-key Selection and Return (Disk Only)
- 2D Function Plotting
- Rectangular to Polar Conversions
- Base Conversions
- Large Number Addition and Multiplication
- Reverse Polish Logic Calculator with Hexadecimal
- Quadratic Equation Roots

Complete documentation of all functions is included.

For 32K Disk \$49.95
 For 16K Cassette \$44.95 *Plotting Requires Extended BASIC*
 Documentation only \$5.00 (refundable with purchase)

Or write for free brochure.

NEW FOR THE COLOR COMPUTER

GRAF PLOT

HIGH RESOLUTION DATA GRAPHING

GRAF PLOT turns your COLOR COMPUTER into a sophisticated data plotter, producing professional quality graphs of any type of X-Y data. GRAF PLOT is perfect for personal, business, statistical, scientific and engineering applications. Includes features not found in any other COLOR COMPUTER graphing system:

- 222x174 pixel on-screen data plotting area.
- Complete on-screen labeling for two Y-axes w/200 data points per axis (even more points by chaining data files).
- 9 graphing options: 3 symbols w/2 line types or points only.
- Full function data editing: add, change, delete and sort.
- Hardcopy w/standard screenprint programs (not supplied) - includes interface for Tandy SCRPR1 w/instructions for interfacing other printers and screenprint programs.
- Unlimited overlays - plot 9 or more data sets per graph.
- Graphs output to screen, printer, tape or disk.
- Plots any user-defined function, edit 4 program lines.
- Built-in data smoothing (moving binomial average).
- Built-in integration - calculate areas or evaluate integrals of user-defined functions.
- Lists data and integrals to screen or printer.
- Saves completed graphs for instant reloading.
- Menu-driven w/auto-prompt option for fast throughput.
- Complete error trapping - GRAF PLOT won't let you make a mistake, practically impossible to crash.
- Comprehensive manual w/tutorials and sample data.

GRAF PLOT is available for 16K E.C.B. on cassette (\$35) and 32K-1 disk (\$45). Easy upgrade to disk for difference in price (disk version reads and writes tape data files). Send check or money order to: HAWKES RESEARCH SERVICES, 1442 Sixth St., Berkeley, CA, 94710. Include \$3 S/H on all orders. Manual available separately for \$10+S/H, refundable with purchase of GRAF PLOT. CA residents add state sales tax. Dealer inquiries welcome. Quantity discounts available.

Setting The Standards

WHAT THEY ARE SAYING ABOUT COLORPEDE

"... forefront of the pack..." **the Rainbow**, Dec '82 "... an outstanding offer." **N. Vernon, IN** "... the best graphics I have seen to date." **Erie, PA**
 "It is great!" **Dayton, OH** "... the best graphics and playability of any color computer game." **McKeesport, PA**

COLORPEDE

This truly outstanding engineer designed, 100% machine language game with multi-colored high resolution characters and fast action will challenge the most avid arcade buff. Can be played by 1 or 2 players controlled with joy sticks or key board. Joy stick control is fast, smooth and accurate. As COLORPEDE slithers through the toad stools, you attempt to destroy the COLORPEDE, knock out the menacing Bouncing Bug and eliminate toad stools while accumulating higher and higher scores. Demonstration mode with top 5 scores. Pause feature. For 16K Color Computer and TDP-100.

Cassette-\$29.95

Disk-\$34.95

ROBOTTACK

Ultra fast arcade action with colorful high resolution graphics. You are the super human who must fight off the attacking robots and save the remaining humans from destruction. You have super powers, can shoot in any direction and move anywhere on the screen to accomplish your vital mission.

Engineer designed, 100% machine language. Can be played by 1 or 2 players with joy stick control. Top 5 scores displayed. Pause feature. For 16K Color Computer and TDP-100 with joy sticks.

Cassette-\$24.95

Disk-\$27.95

TO ORDER:

VISA, MASTERCARD, Money Order. Please allow 2 weeks for checks. Add \$1.50 for shipping, \$3.00 outside U.S. 4% tax in Mich.

HIDE THAT DISK DIRECTORY

By Harry Hardy

How many times have you entered in a long program or text file, typed *SAVE* "filename" and the next prompt you got was "?I/O ERROR"? If that's not enough, you then type *DIR* only to discover that your directory isn't there anymore. Frustrating, isn't it? Even just one occurrence is too many.

What if we could hide a copy of that directory some place that even BASIC couldn't find? That is an interesting idea, but how can we do that? Well, not too long ago I discovered that my Radio Shack drive has the mechanical ability to access track 36. Actually that would be track 35 in the numbering scheme. Remember the other 35 tracks are numbered 0—34. Well, I got an idea; if I can actually access track 36, why not put a copy of the directory track, 17, out there?

If you have the 64K modification on your Color Computer that task is really quite simple, but if you don't have the mod you will need a program to do this for you. I have included the listings of several programs that will accomplish this. Two listings are in machine language for those of you with an editor/assembler, two are in BASIC with appropriate *DATA* statements to generate the two machine language programs, and the last one can be used to destroy your directory once you are satisfied that either set of the first two are working.

Before I explain how these programs work, let's see if we can get an idea of why the directory track seems to be the one most often destroyed. Remember our tracks are numbered 0—34 with track 17, the directory track, being right in the middle. Not only are the directory entries there, but so is something else called the *File Allocation Table*. Now when you want to access a file or save one, BASIC uses the file

(Harry Hardy, who has 15 years experience as an applications and systems programmer in telecommunications is currently employed as a telecommunications consultant by a large company that provides data communications products and services.)

allocation table to locate the various granules associated with that file. Remember, each granule is half a track or nine sectors. Since the disk head moves across track 17 so much to access this table, chances are very good, unfortunately, that if some type of error is going to occur it will happen on

"... not too long ago I discovered that my Radio Shack disk drive has the mechanical ability to access track 36."

the directory track. That's why a backup of each disk is advisable. However, with the programs I've included, you will be able to restore that *crashed* directory, assuming that the surface of the disk was not damaged.

The first program I have included is called *INIT36* for initialize track 36. Getting this track initialized is the first thing you will have to do. This program assures three things. The first being that the other tracks have already been initialized by using the *DSKINI* command. If they have not been initialized then you will get an I/O error from this program. I further assume that when you do the *DSKINI* that you use the default skip factor. If not, then it will be up to you to change the *SKPTBL* as appropriate. The other assumption is that drive 0 contains the disk we want to use. If you want to use another drive, I coded the program so it can be changed by *POKEing* the drive number in memory. Once you have loaded the program into memory type *POKE &H1018,&Hn*, where n is the drive number (0—3)

that you want to use. I do not validate drive number so if you type in a number for a nonexisting drive, the machine will lock up and you will have to push the reset button. The program is completely relocatable but be aware that since it formats all 18 sectors at the same time, it will require about 6400 bytes of *RAM* to run in. So don't try to load it with an offset too high into *RAM*.

Here is how this program works. At the routine labeled *START*, I display a prompt and read track 34 sector 18. I do this simply to get the head moved to the last valid sector that *BASIC* knows. If the disk was not initialized by using *DSKINI* you will get an I/O error here. The next routine labeled *STEP* is used to cause the 1793 to step the head to track 36. Remember 36 is really 35. Any place in the program that indicates 36 in the comment is done for easier understanding of the listing. I will refer to this track as 36 throughout the remainder of this article.

Once we have moved the head to track 36, I then format the 18 sectors. This is done starting at statement 54. The sectors are formatted according to the *Disk Programmers Manual* on page 58. Once all sectors are formatted, they must be given to the 1793. This is done at the routine labeled *WRITE*. This is done by storing each character on the data register for the 1793. Look at that routine for a minute.

The first instruction loads the address of the data register in the *Y* register. We then disable both interrupts. After that the old interrupt vector and vector out indicator are stored on the stack. The next instruction then loads the address of a routine within our program that control is to be given too, after all the data is written to the disk by the 1793. This address is then stored at location 0983. We now tell the 1793 that we want to write a track of data. This is done by storing the proper command on the command register located at address FF48. The command to write a track is *\$F4*. Next, we must enable the *NMI* indicator for the 1793. This is done by storing a value on the control register located at FF40. A copy of that image is maintained at location 0986. By loading that address in the *A* register and turning on bit 7, we enable the *NMI* for the 1793 once the new value is stored on the control register.

The routine labeled *W1793* simply gets a character from our formatted buffer and stores it on the data register. We will stay in that loop until all the data is sent. Once the 1793 has written all 18 sectors, it will interrupt the 6809 and give control back to us at the routine labeled *RETURN*. Remember, we saved the address of this routine in statements 100 and 101. This routine restores the old vector address, then gets the status byte from the 1793. I mask off drive not ready and busy bits before testing for an error. This routine then reads the new track to verify that it was written successfully, if not then an I/O error is issued here. Finally, I clear the screen and do a cold start back to *Disk BASIC*.

Now that we have a disk with 36 initialized tracks, how can we get our directory there? That's the job of the second program that I've called *HIDEDIR* for hide directory. This program simply gives you the option of saving or restoring the directory. If you want to save it, it reads all of track 17 and writes it to our newly initialized track; to restore the directory this program does just the opposite. Again, this program also assumes that drive 0 contains the drive we are to hide the directory on. If you want to use another drive, *POKE* that drive number in *&H10004*. Like the other program, I do not validate drive number.

Want to test it out? Type in the first two programs using your assembler and/or editor. Once you get an error free

listing verify that it matches my listing and run each one, *INIT36* first then *HIDEDIR*. Next type and run the short *BASIC* program I've called *Crash Directory*. After you run this program type *DIR*. How about that—you now have restored that lost directory! I do suggest that you try this a few times on a copy of an old disk until you are satisfied that it works. If you are having problems, verify your listings with mine.

If you're using the *BASIC* programs to generate these programs, be sure to carefully check that your *DATA* statements match the listing. I have included instructions on how to save the programs in each *BASIC* listing.

One note here. Once you are satisfied these programs are working and you hide your directory, then any copies you

*“... you can also use the above method to access all 40 tracks. Just add four to each **POKE** value and put whatever you wish on these extra five tracks.”*

make of your disk, you will have to run the programs to hide your directories on the backups. *BASIC* will not backup that track for you.

Now what about those of you who have the 64K mod on your *Color Computer*? Well, after you run whatever program you have to get an all *RAM* system, the following *POKE*s will allow you to use the *BASIC* commands to initialize track 36, make use of the *DSKO\$* and *DSKI\$*, and to do a backup command. First, *POKE &HD572,&H24* and *&HD595,&H24*. These two will allow *DSKINI* to initialize 36 tracks. *POKE &HD446,&H23* *POKE &HD1B0,&H24* will allow *DSKI\$* *DSKO\$* and backup to access track 36. I did not make a typing error on the *&H23*, *DSKI\$* and *DSKO\$*; use 23 instead of 24 for track number comparisons.

Should you not have a *Radio Shack* drive that has 40 tracks, you can also use the above method to access all 40 tracks. Just add four to each *POKE* value and put whatever data you wish on these extra five tracks. Remember, however, that *BASIC* will not use these tracks for file allocation since its file allocation method is based on 35 tracks. So, if you make use of the extra disk space you will have to manage it yourself.

I hope you don't have to use the *HIDEDIR* program to restore any directories, but if you do, I hope you find it useful.

FAMILY GAMES

FOR 16K AND 32K COLOR COMPUTER

STOCKBROKER — Up to 6 players can play the stock market. For 16K or 32K ECB. The 32K is in High-Res Graphics.

CRIBBAGE — For 2 or 4 players. In High-Res Graphics! (for 32K).

BATTLE — Will you get bombed before you can find all the ships? An extremely entertaining game for the family.

COLORMIND — Up to 4 players challenge for hidden colors.

REMREM — Challenge your friends. Who can remember the longest color sequence?

CONCEN — Challenge the computer or a friend to a good ol' game of concentration.

ALL GAMES only \$20.00 or ANY TWO for \$35.00

ALSO FROM *Aurora Software*:

MR. COPY — A quality copier written in M.L. that will make backup tape copies. MR. COPY is capable of making up to 99 copies in one loading! \$25.00

ROMDISK — If you have a modified 32K C.C. machine. ROMDISK will allow you to load your R.S. Rom Packs from a disk! \$20.00

AUTOTERM
 TURNS YOUR COLOR COMPUTER INTO THE
**WORLD'S
 SMARTEST TERMINAL!**
 YOU'LL ALSO USE AUTOTERM FOR SIMPLE
 WORD PROCESSING & RECORD KEEPING.

EASY TO USE

ON-THE-SCREEN EDITING via cursor. Full prompting. Scrolling. Key Beep & Error Beebop.

PLEASANTLY POWERFUL

Total communications ability at 110 to 1200 baud. Transmit text, graphics, BASIC and Machine Language. Save & Load cassette/disk files while on line. Scan/Edit current data while receiving more data. Use any modem. Fully supports D. C. Hayes & others. Use any printer, page size, margins, line spacing. Override narrow text width of received data. Imbed printer controls.

TRULY AUTOMATIC

Automate almost any communications activity. Dial via modem, sign-on, interact, sign-off. Perform an entire session. Act as a message taker. Keystroke Multipliers may include parameter changes, editing, time delays, execution of other multipliers, looping, waiting for partially specified responses, and branching based upon alternative responses. Self-test mode.

SAV-A-BYTE
 introduces
BATTERY BACK-UP

for 32K/64K CoCo Memory*

Never again experience that awful fear-or worse yet, the frustrating reality-of losing minutes or hours of entered data/text before it's stored away on tape or disk. **SAV-A-BYTE** gives you the confident assurance that all your data that you have so painstakingly entered will be preserved during any AC power disturbance. You just resume inputting at the same point you were so rudely interrupted when power returns.

FEATURES:

- Absolutely no changes to your CoCo
- Circuitry contained in ROM-port cartridge
- ON-OFF switch on cartridge, with LED indicator
- Over two hours support time during power failures
- External battery connected via cable
- Battery charging from CoCo power supply
- Plug-and-Play installation
- Optional ribbon cable bus extender

(* +5v-only memory)

Master Card or Visa

THE BEST JUST GOT BETTER

FHL FLEX ONLY \$69⁹⁵

FHL CC-FLEX has become the standard FLEX for the CoCo. Now you can buy CC-FLEX for only \$69.95 for a savings of \$30. CC-FLEX includes more extras, more utilities, and more functions than any other.

INCLUDES:

- **BEST PRICE IN THE WORLD!**
At \$69.95, CC-FLEX, with all these features, is the best price anywhere!
- **OFFICIALLY LICENSED TO FHL FROM TSC**
CC-FLEX is an official licensed FLEX from TSC. Be wary of unlicensed implementations.
- **NEW SMOOTH SCROLLING**
New with version 5.0:4 is SMOOTH scrolling. This is a feature not found on any other FLEX.
- **NEW VARIABLE RATE SCROLLING**
Variable rate scrolling lets you control the speed that the screen scrolls, from smooth to very fast scroll. Also this version of CC-FLEX is 50% faster in scrolling than previous versions.
- **NEW 'TED' TINY EDITOR**
Included with CC-FLEX at \$69.95 is 'TED', which stands for Tiny Editor. TED is fine for small editing jobs and is the easiest editor to use of any available. You can learn how to use it in less than five minutes!
- **NEW 'ISM' INTERACTIVE ASSEMBLER**
ISM is the program for those interested in assembly language but not convinced that they need to buy one. ISM is the perfect teaching tool to use to learn assembly language programming. You will need to use it in conjunction with a book on the subject (not provided). However, ISM includes a complete manual on its operation.
- **NEW EXTERNAL TERMINAL PROGRAM**
If you want to run CC-FLEX connected to a terminal so that you can get the benefit of a real keyboard and full 24 x 80 display, then EXT will do it for you. EXT allows a standard terminal and printer to be connected to the CoCo. 'NEW' EXT now supports real hardware handshaking.
- **EASY START UP**
Just type RUN"FLEX" or DOS if you have 1.1 Disk ROM. Quote from the June 1983 issue Hot CoCo. Re: FLEX by David Wasler, pg. 143, "It is the easiest to use. After you receive it, just put it in your drive and type RUN"FLEX"."
- **ONLINE "HELP" CAPABILITY**
Just like the big mainframes, CC-FLEX has a help function. Just type 'HELP' and CC-FLEX will answer your questions and help you run FLEX without having to keep paging through the manual.
- **RECONFIGURABLE TO YOUR NEEDS**
CC-FLEX'S powerful SETUP facility lets you change CC-FLEX to suit your needs and hardware. CC-FLEX is the only FLEX that gives you such complete control.
- **SUPPORTS ALL DRIVE TYPES AND SIZES, EVEN 3"**
CC-FLEX supports every type of drive currently available for the CoCo. These include 35, 40 and 80 track single and double sided. Even the new 3 inch from AMDEX. We supply support software on the 3 inch drive.
- **SIX DIFFERENT HI-RES SCREENS**
51 x 24 and 16 x 32 with true lower case, 64 x 24 and 64 x 32 all upper case. You can switch between these screens at will. The different scroll types are available for each screen type.
- **SUPPORTED BY THE LARGEST 6809 SOFTWARE FIRM IN THE WORLD!**
FHL is the largest software house in the world for 6809 based computers! We have over 100 software packages for FLEX and OS-9. We support CC-FLEX like no other.

OPTIONS AVAILABLE AT EXTRA COST:

- **DBASIC** - Radio Shack Disk Basic adapted to work with FLEX.
This is standard RS Disk Basic working with FLEX. This only works with FHL FLEX at this time. DBASIC has everything that RS Disk Basic has except for Direct access files and those functions that go with Direct access files.
- **ED/ASM** - Full feature Editor and Assembler
SPECIAL now only \$69.95! ED/ASM is the best Editor and assembler for the Color Computer. The editor is both screen and line oriented while the assembler is a full conditional macro assembler.

REVIEWS:

Quote from the June 1983 issue of HOT COCO. Re: FLEX by David Wasler, pg. 143.
"Frank Hogg Color FLEX has been on the market the longest and has the most software support. It is also the easiest to use. After you receive it, just put it in your drive and type RUN"FLEX"."

Quote from the March 1983 80 MICRO review by Scott Norman, pg. 101.
"I think CC-FLEX offers the most painless way of trying one's hand at an advanced operating system for the Color Computer. It offers quite a few "big machine" features, and opens the door for a lot of applications software."

Frank Hogg Lab brought FLEX to the CoCo over a year and a half ago. It has gone thru 5 updates since its original release in February 1982! FHL not only has FLEX, we support our FLEX with more software than anyone else in the world! We have over 100 software packages compatible with FHL CC-FLEX to fulfill all your needs. These range from languages, utilities and software development tools to data base management, word processing and business applications. We guarantee these programs will work with our FHL CC-FLEX and probably with any licensed version of FLEX!

And, there is no better way to purchase FLEX for less!!

So, order FHL CC-FLEX today and take advantage of our **SUMMER SPECIAL** of **\$69.95** to bring out the true power of your CoCo!!

We will accept Prepaid, COD, VISA, M/C and Diners. Please include \$3.50 for shipping and handling.

THE BEST JUST GOT BETTER

ED/ASM . \$69⁹⁵

LOOK AT THESE FEATURES ED

ED is both line and screen oriented. This means that you can edit by line number or by using screen type editing where you move the cursor to where you wish to edit and then make your changes. The line editing mode is very handy for programming as most assemblers and compilers refer to line numbers when an error occurs, thus making it easy to correct if the editor like ED can go to a line number to edit. Once there, ED can switch to screen editing to make the corrections.

ED also has cut and paste type of editing, where you can split a line and move the other half. You can also delete and rename files on disk from ED, edit more than one file without leaving ED, and many more. Here is a list of features:

- Menu** will list the command set for ED
- Set** allows changing editor characters
- Cursor** allows changing cursor control strings.
- X** sends out a user defined string
- Status** list flags and other internal editor settings
- Head** allows setting and listing of headers and tabs
- Tab** allows setting tab stops
- Width** set screen width
- Number** toggle number flag
- Renumber** renumbers the lines
- Verify** toggle the verify flag
- Zone** set or reset the zone flag for string searches
- Top** go to the top of the text (also works)
- Bottom** go to the bottom of the text (! also works)
- Next** target line becomes the current line
- Find** finds target string
- Append** appends a string to the current line
- Change** changes this to that in the text
- CChange** like above but asks you first
- Copy** copy a block a text
- Cut** cut the current line at a specified column
- Delete** a line or block of lines
- Expand** tabs in the text
- Insert** insert after the current line
- Move** move a block of text
- Overlay** the line
- Print** a line or block of lines
- Replace** a line or lines
- Splice** a line to the current line
- Stop** save the text to disk and edit
- Abort** exit the editor without changing anything
- New** allows working with files larger than available memory
- Edit** restart the editor with a new file
- Dir** list the directory of the disk
- Read** insert a file from disk into the file in memory
- Write** write a block of lines to a file on disk
- Save** save the file to disk
- List** list a line or group of lines
- FEDL** deletes a file on disk
- FREN** renames a file on disk
- CMACRO** create a macro
- LMACRO** list one or all macros
- DMACRO** delete a macro
- MACRO** execute a macro
- CALCULATE** performs math functions with results in binary, decimal, and hex
- EXEC** exec a text file as a set of commands for the editor
- Bell** rings the terminal bell (useful in macros)
- REM** used to document macros.

As you can see, ED is a very versatile and powerful editor for all your editing needs. It is particularly useful for the programmer that needs a flexible editor!!

FHL ED/ASM has been recognized as the most versatile package in its price range for FLEX. Now the best is less. Save \$30 by buying ED/ASM.

LOOK AT THESE FEATURES ASM

ASM is a fast and versatile (8 bit) macro assembler. It has the necessary elements to support structured constructs like WHILE and FOR etc. These are the ability to define macros with substitutable parameters, conditional assembly directives, and the ability to change the value of a label or symbol. In addition, source code may be assembled in modular form. That is as a series of LiBRary files. A short file containing a list of file specifications in standard assembler source format may call as many library files as desired. Symbols default to a maximum length of 6, but may be redefined to a maximum length of 3 to 30 characters.

ASM supports auto fielding and automatic label generation. Labels may be automatically generated and accessed within expressions.

This function has great power when used within macros. An example is the BASIC statement PRINT "HI". A macro would be created as:

An example would be:	PRINT MACRO	would expand into:
BRA :1	LDX #:1	PRINT "HI"
FCC "HI",4	JSR PSTRNG	LDX L0001
: EQU *	BRA :2	JSR PSTRNG
becomes:	: FCC "&1",4	BRA L0002
	: EQU *	L0001 FCC "HI",4
	ENDM	L0002 EQU *
L0001 EQU *		

ASM supports the following directives or pseudo operators.

FCC	form constant character(s)	MACRO	define a macro
FCS	form constant string	ENDM	end a macro definition
FCB	form constant byte	EXITM	exit macro being called
FDB	form double byte	DUP	duplicate lines n times up to 'ENDD'
SPC	insert spaces in the output listing	ENDD	end duplication bracket
LEN	set up length of output line for printing	IF	conditional assembly control
OPT	switch assembler options	ELSE	complement true-false flag
PAG	skip to next page	ENDIF	end conditional assembly clause
ORG	define a new origin (*)	ENDC	end conditional assembly clause
RAM	define a new storage counter origin (.)	WHILE	incremental conditional assembly control
EQU, SET	(re-) assign a value to a symbol	WELSE	complement sense of WHILE test
END, MON	signal end of source code	ENDW	end WHILE clauses
NAM, TTL	specify a name or title	LIB	open a library source code file
STTL	specify a subtitle	SYM	define length of significant characters for symbols
RMB	reserve memory bytes		
ERR	print error message		
RPT	repeat following line n times		

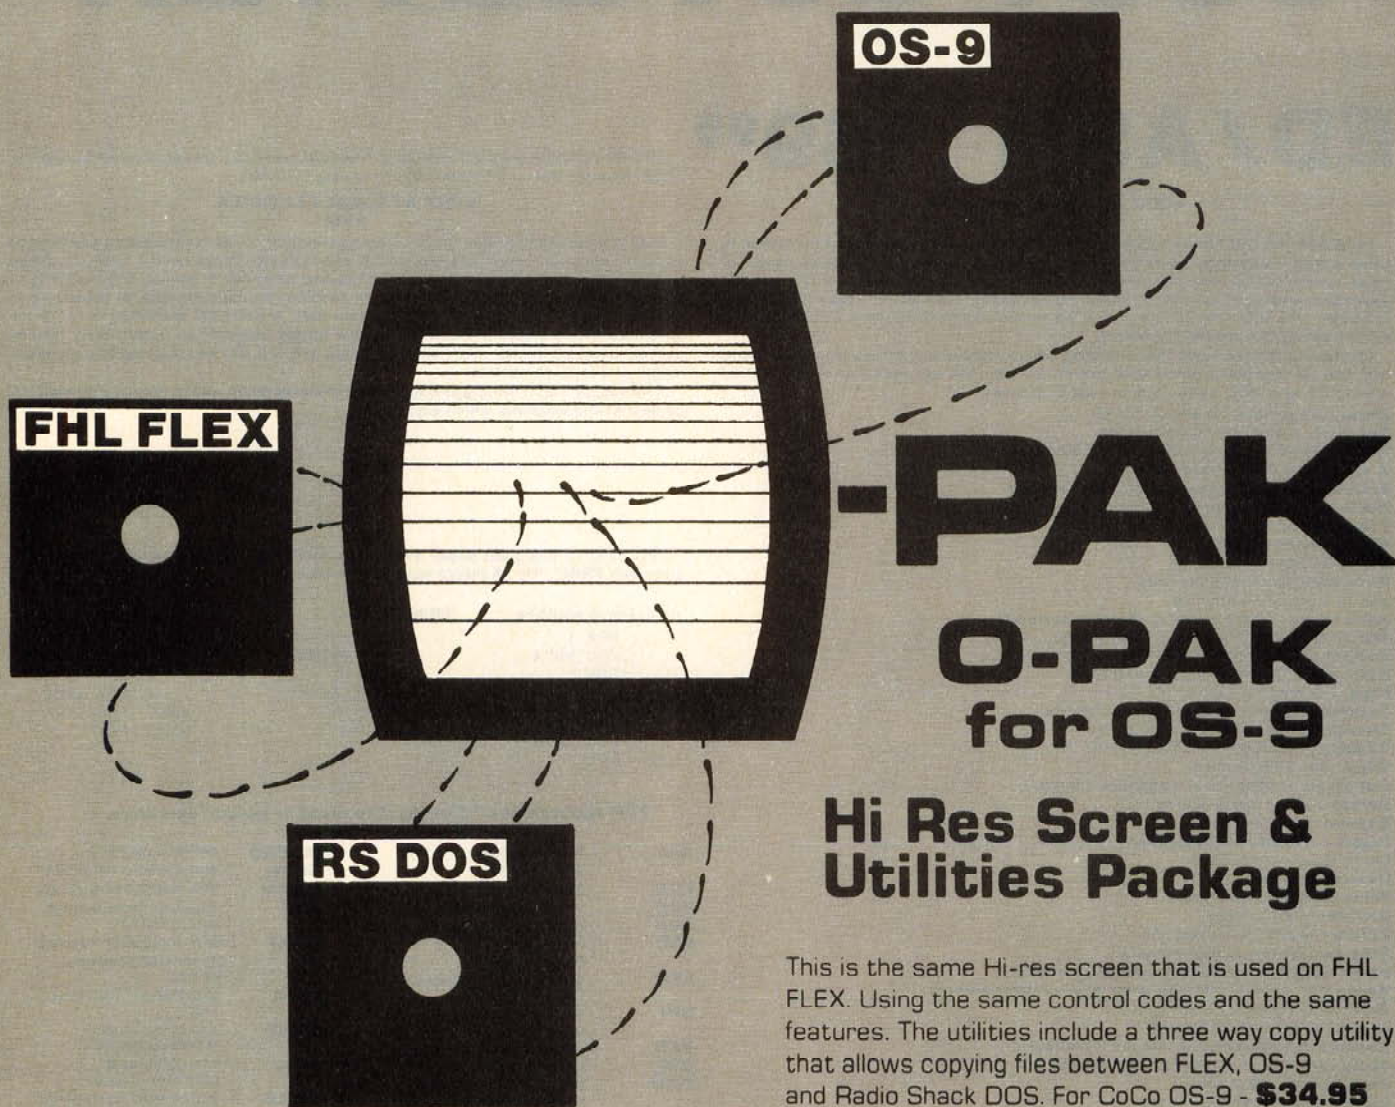

So, order FHL ED/ASM today and take advantage of our SUMMER SPECIAL to bring out the true power of your CoCo.

We will accept Prepaid, COD, VISA, M/C and Diners. Please include \$3.50 for shipping and handling.

A/BASIC COMPILER (Basic Compiler for OS-9 and FLEX)

This BASIC compiler generates pure, fast efficient 6809 machine code from easy to write BASIC source programs. *Uses ultra-fast integer math, extended string functions, boolean operators and run-time operations. Output is ROMmable and RUNS WITHOUT ANY RUN-TIME PACKAGE. Supports IF-THEN-ELSE structure and random access. Supports the following statements:

REM, END, CALL, FOR/NEXT, GOSUB/RETURN, IF/THEN, ON ERROR GOTO, ON-GOTO/ON-GOSUB, STOP, GEN, STACK, INPUT, PRINT, CLOSE FILES, OPEN, CLOSE, WRITE, RWRITE, READ, RREAD, CHAIN, RESTORE, SCRATCH, KILL.

Includes Chess in A/BASIC source.

Comment: A/BASIC does not compile RS Basic or any other Basic. It is an integer only (no floating point), version of BASIC. It can be used for games and graphics, but it has no built in functions for them. A/BASIC is a powerful addition to your library, and it does not require a license to use or sell the compiled code produced from it. PH

Written for 6809 OS-9 or FLEX
Available for the Color Computer

Object only **\$150.00**

* Source programs on disk.

DYNASOFT PASCAL

Dynasoft Pascal is a portable p-code implementation of a Pascal subset specifically tailored for small scale microcomputer systems.

Dynasoft Pascal is PASCAL SUBSET which includes the control structures of standard Pascal and supports the data types INTEGER, CHAR, BOOLEAN, scalar (enumerated), subrange, pointer, and ARRAY, along with the dynamic memory management functions NEW, MARK, and RELEASE. Its design is such that it is virtually impossible to write "spaghetti code", and the result is programs that are highly structured and highly readable.

Dynasoft Pascal is COMPLETE. It includes a fast one-pass compiler, a p-code interpreter, a supervisor program, and program SAVE, and LOAD routines that can be adapted for media ranging from paper tape to cassette to floppy disks. For speed-sensitive applications there is a built-in interface to machine language routines complete with parameter passing.

Dynasoft Pascal is COMPACT. The entire system will run on systems with as little as 12K of available RAM without overlaying. It produces ROMable p-code which is also compact: a typical algorithm compiles to less than half the size of the same algorithm expressed in the native code of an 8-bit processor. This means that you can get a lot of program in a surprisingly small amount of memory.

Dynasoft Pascal is PORTABLE. It is currently available for systems based on the 6809 microprocessors and more are planned. Programs written in Dynasoft Pascal are compatible at both the source and p-code levels: they can be transferred to a new machine without even re-compiling.

Written for OS-9 and FLEX

OS-9 Object only **\$69.95**
w/run-time source **\$99.95**

FLEX Object only **\$59.95**
w/run-time source **\$89.95**

Available for CoCo OS-9 and FLEX

New for OS9 and FLEX9 DYNA-C

Dynasoft sets a new price/performance standard with Dyna-C: a new Small-C derivative unlike all the others. Dyna-C produces compact, ROMable, position-independent, re-entrant, OPTIMIZED code that runs circles around anything in its price class. "C" for yourself:

As compared to Introl-C, Wordsworth 2.0, Duggers, and Intersoft, Dyna-C has the fastest Compile/load time, the fastest execution time and the lowest price. (All timings under FLEX9 at 1 MHz using sieve benchmark from Sept 1981 Byte.)

Dyna-C supports a large subset of standard C, including all statement types, most operators (including ? and), and all data types except float, long, unsigned, struct, multidimensional arrays and bitfields. It goes from your source to executable binary in two quick steps: the one-pass compiler with built-in pre-processor AND OPTIMIZER produces assembly code which is assembled straight to binary using any standard 6809 assembler (including TSC's ASMB, Microware's ASM, Lloyd I/O's OSM and FHL's ASM). While this means maintaining libraries in assembler source form it actually saves disk space and time by eliminating the loader step. It also supports separate compilation so you can split large programs or build your own libraries from C.

Source code for the entire runtime system is supplied, so you can customize to your own needs. Requires 36K of user RAM.

OS9: **\$109.95**
FLEX **\$ 99.95**

Available for the Color Computer

INTROL-C/6809 C LANGUAGE COMPILER

The Introl-C/6809 C language compiler system is an effective and field-proven set of software tools for developing programs, in C, for 6809-based target applications. Introl-C produces efficient, compact programs with fast execution speed.

The Introl-C/6809 compiler system is itself written entirely in C and the package consists of the following

software: C Compiler, Macro Relocating Assembler / Linking Loader, Runtime Library, and Library Manager. Compiled programs are re-entrant, relocatable, and ROMable.

The current release of the FLEX and OS-9 compatible Introl-C/6809 compilers - ver. 1.4 - is a comprehensive implementation which fully supports all standard C as defined by Kernighan & Ritchie except bitfields and doubles. Bitfields and doubles are scheduled for implementation in the FC6809 and OC6809. Existing versions of these compiler types are fully upgradeable to include these features, as they become available.

FLEX or OS-9 **\$375.00**
Available for the Color Computer

MICROWARE CIS COBOL COMPILER

The 6809 CIS COBOL compiler is the result of a joint effort by Microware and Micro Focus-the world leader in microcomputer COBOL."CIS" stands for Compact, Interactive, and Standard: making CIS COBOL ideal for microcomputer business applications. CIS COBOL meets the ANSI standard for Level One COBOL plus selected features from Level Two and is certified as such by the U.S. General Services Administration. It features:

- * Sequential, Relative and Indexed (ISAM) files
- * Interprogram communication including CALL and CANCEL
- * Nested IF and nested REDEFINES
- * PERFORM...UNTIL statement
- * ON OVERFLOW statement
- * Comparison of non-numeric operands of unequal length
- * Full Level One implementation of Library and Segmentation
- * Includes DEBUG module
- * Device-Independent Input/Output

OS-9 **\$895.00**

COMPUTERWARE'S RANDOM BASIC

With 11 digits of precision, Random Basic conforms closely to the ANSI standard, thus allowing the user to run standard BASIC programs with few, if any, changes.

FLEX **\$100.00**
OS-9 **\$195.00**
CoCo versions **\$75.00**

OSM - A 6809 Macro Assembler for FLEX and OS9

OSM is a MACRO Assembler with CONDITIONAL Assembly directives and other extended commands that are not found in other assemblers. If you write programs for OS9 and/or FLEX then OSM is for you because it generates OS9 or FLEX machine language binary files.

FEATURES:

- * Motorola standard mnemonics and addressing modes
- * 2 passes to generate object code

- * library file calls nestable to 12 deep
- * conditional assembly nestable to any depth
- * macros nestable to any depth, with parameters
- * variable length symbols up to 32 characters
- * 2048 maximum symbols
- * automatically generated labels and symbols
- * errors tell file name and line number
- * object code format for OS9, FLEX, or neither

For those users who write programs for FLEX and/or OS9, this assembler will allow you to support your source code files on one system. OSM can generate OS9 or FLEX formatted binary object code files under either disk system.

OSM supports the assembler directives for structured assembly language programming. Symbols may be upper or lower case, an option sets up a flag which tells whether or not lower case characters are the same as upper case. Symbols can be defined at a maximum length of 32 characters. A directive sets the maximum before any symbols are defined. OSM for FLEX defaults to 6 characters while OSM for OS9 defaults to 8 characters.

Written for FLEX or OS-9 **\$99.00**
Available for the Color Computer

CRASMB - MACRO CROSS ASSEMBLER for FLEX and OS9

CRASMB is a macro-conditional cross assembler. It uses machine language overlays or modules called "CPU Personality Modules" to do the work of mnemonic look up. It has directives and other extended commands that are not found in other assemblers. It generates OS9 or FLEX binary files.

FEATURES:

- * Cross assembles 8 CPU types: Motorola 6800-2-8, 6801-3, 6805, 6809 Mostek 6502, RCA 1802, INTEL 8080-5 ZILOG Z-80
- * 2 passes to generate object code
- * library file calls nestable to 12 deep
- * conditional assembly nestable to any depth
- * macros nestable to any depth, with parameters
- * variable length symbols up to 32 characters
- * 2048 maximum symbols
- * automatically generated labels and symbols
- * errors report file name and line number
- * object code format for OS9, FLEX, or neither

For those users who write programs for FLEX and/or OS9, this assembler will allow you to support your source code files on one system. CRASMB can generate OS9 or FLEX formatted binary object code files under either disk system.

This program is the most powerful assembler on the market today allowing the programmer to use a single computer system as a development system for many processors. The user may purchase the source code for the CPU Personality

Modules (CPM's) so that it may be modified to create a new assembler for a processor not yet supported.

Written for 6809 FLEX and OS-9
Color Computer versions available in both FLEX and OS-9 **\$200.00**

CPM's (CPU Modules) **\$ 35.00**
w/ source **\$ 70.00**

SPECIAL: Purchase CRASMB with all CPU modules w/source for FLEX or OS-9
*** \$499.00 ***

CROSS ASSEMBLER MACROS

This set of macros for the TSC Macro Assembler (for FLEX) or the OSM Macro Assembler (for OS-9 or FLEX) provides the user with the capability of using a 6800/1/9 computer system for program development for 6800/1, 6805, 6502, 8080/5, and Z80 systems, using the assembler language format normally used on the target machine.

OS-9 **\$55.00 each** or **3/\$110.00**
FLEX **\$50.00 each** or **3/\$100.00**

Also available for the Color Computer

SUPER SLEUTH

Super Sleuth is a set of programs which enable the user to examine and/or modify binary program files on disk or in memory on 6800, 6801, and 6809 systems. Programs may be disassembled into source code format and the source may be displayed, printed or saved on disk. Labels produced by SLEUTH can be changed globally to labels of the user's preference. Cross-reference listings of labels in any Motorola assembler-formatted source file may be produced to aid in debugging or modifying the program. Programs in ROM may be altered with the revised program being saved on disk; the resultant program could then be used to program a new ROM. Object code for 6800, 01, 02, 03, 05, 08, 09, or 6502 may be processed, 6800, 01, 02, 08, 09 object code may be easily converted to 6809 position-independent code.

Z-80 SUPER SLEUTH

This version of SUPER SLEUTH analyzes Z80, 8080, 8085 object programs. It is otherwise virtually identical to the other version of SUPER SLEUTH.

Object only versions:
CoCo OS-9 **\$ 49.95**
CoCo FLEX **\$ 50.00**
RS DOS **\$ 49.00**

FLEX or OS-9 with Source: **\$ 99.00**
UniFLEX: **\$100.00**

DYNAMITE +

DYNAMITE + is a new version of the DYNAMITE disassembler. It does everything that DYNAMITE did and more! A cross-reference generator has been added, label files are now maintained only in text form (LABEL EQU \$xxxx), and boundary file specifications have been tremendously simplified, which

makes it easier to disassemble large programs containing large tables.

Written for OS-9, FLEX

OS-9 **\$150.00**
FLEX **\$100.00**

Available for the Color Computer

6800-6809 and 6809 PIC/PID TRANSLATORS

The 6800-6809 translator converts 6800/1 assembler-language programs to 6809 assembler language programs by converting 6800/1 opcodes to sequences of one or more 6809 opcodes. The 6809 PIC/PID translator assists in converting 6809 assembler-language programs to position-independent code and data, using PC, S, U, X, and Y as base registers.

FLEX **\$50.00**
UniFLEX **\$60.00**
OS-9 **\$75.00**

EDIT/ASSEMBLE for OS-9

This Editor and Assembler package is much more powerful than the programs inclusive with CoCo OS-9. The Edit features "Screen-like" line editing capabilities, and Assemble is a Conditional Macro Assembler.

CoCo OS-9 **\$69.95**

DYNASTAR

SCREEN EDITOR/ WORD PROCESSOR
FOR OS9 & FLEX

DynaStar is a powerful, menu-driven screen editor equally suited to the tasks of program preparation and document processing. With the addition of the optional DynaForm print formatter/mail-merge program it is a complete word processing package for your OS9/FLEX system.

DynaStar Version II features no-nonsense "what you see is what you get" editing. To edit, simply move the cursor where you want it, and type. Any printable character you type is entered directly into your text, and any non-printable control character is interpreted as an editing command and is executed immediately. It's that simple! Single keystroke commands move the cursor in any direction, by character, word, tab, line or screenful, and delete characters, words, or a whole line. Two keystroke commands augment the simple commands by moving the cursor to the left or right margins, top or bottom of the screen, next paragraph, or the top or bottom of the edit buffer. You can search for a string, replace it with another, do it again, mark text blocks, move, copy or delete blocks, write them to side-files, read them in somewhere else, set tabs and margins, and center lines.

DynaStar features automatic word-wrap, and optional right justification right on the screen as you go, so you see how it will look BEFORE you print it. For programmers there is an auto-indent mode to help you write those well-structured programs. DynaStar permits editing of long files without having to break them

up, and the OS9 version will even let you go back to the Shell to do almost anything you want (including edit another file) without even losing your place.

DynaStar includes a unique macro facility to let you define more powerful commands by converting any control character to a command/text string of your choice. You can use this feature to completely remap your keyboard if you don't like the way we did it, and you can provide a special "startup string" which is processed every time you enter the editor to customize the editor to your own taste.

For complete word processing, the optional DynaForm text formatter provides all the standard features including pagination, headers and footers, single, double, and multiple spacing, boldface, double-strike, and underline. DynaForm has its own macro facility with string variables, nested include files, FULL MERGE/PRINT facilities, and automatic generation of Index and Table of Contents.

DynaStar for OS9 or FLEX	\$149.95
DynaForm for OS9 or FLEX	\$149.95
Purchased together	\$275.00

Color Computer versions—	
DynaStar	\$ 90.00
Dynaform	\$ 90.00
Purchased together	\$175.00

SPECIAL NOTE TO COLOR COMPUTER FLEX USERS:

Because DynaStar does its formatting on the screen, UNLESS you are using an external terminal the 51 x 24 CoCo FLEX format will limit its usefulness as a general word processor. DynaStar still makes an excellent screen editor for your programming needs and can be teamed up with the TSC text formatter (which formats at print time) to do word processing.

DO - Job Control Language for OS-9

"DO" is an easy to use Job Control Language for OS-9. BASIC like in nature, this new language was designed to be used primarily for Batch processing.

DO uses a minimum of 8.5K user memory. More may be allocated when the user application exceeds buffer size. DO has 26 number and 9 string variables. It also supports ON ERROR GOTO, allows parameter passing, and the use of labels.

DO contains the following directives: REMARK, TRACE-ON, TRACE-OFF, LET, GOTO, GOSUB, RETURN, ON ERROR GOTO, RESUME, REPORT, F, FC, PRINT, INPUT, READ, END, and CHAIN.

DO procedures may be chained or nested by using the DO command as an OS-9 command. The manual includes a "Procedure Library" of examples.

CoCo OS-9 version	\$49.00
General OS-9 version	\$99.00

RMS RECORD MANAGEMENT SYSTEM

RMS is a complete Database Management package for the 6809 computer. It is composed of five machine language programs that make up the most powerful business programming tool for the 6809. It can be used by the relative novice to implement an incredible variety of information storage and retrieval applications such as accounting, management information systems and customer or personnel records. The programmer can use RMS as part of the solution to a larger problem, saving many hours of unnecessary program development time. RMS can be used to handle data input, editing, validation, on-line retrieval, sorting and printed reports. It includes the following features:

- * User defined record format via data dictionary
- * Screen oriented, form fill-out type of access
- * Optional Two Level Record Hierarchy
- * All files in ASCII Text format, BASIC compatible
- * Direct access by key field, multiple index files
- * Extensive documentation, sample application
- * Versatile, professional quality report writer
- * Built in sort/merge

'Repainting' a *PMODE 4* Rainbow

By David King

How would you like to be able to write your next Color Computer or graphics game using a black background, lots of bright colors, and a 256 x 192 resolution screen, and all in BASIC? Sound impossible? Read on! The technique used is not new—I first discovered it in an article by George Fraser in the June, 1982 *TRS-80 Micro-computer News* titled "Texture." The article gave a machine language program to create the effect, but since I am a confirmed BB (BASIC bigot) I noted the program but never tried it. Eventually my curiosity got the better of me and I decided to see if I could write the routine in BASIC to make it easier to use with another BASIC program. I ended up with two versions of the routine, each with advantages and disadvantages as we shall see later. I have since discovered that the idea has been around for years before that, and it is capitalized on in the system software of at least two other popular home computers.

The technique, which I imagine was first discovered by accident, counts on the limitations of a standard TV. A TV is naturally designed to receive TV signals, and these signals must meet an industry encoding standard set. This standard requires the circuitry to be able to properly handle a maximum of about 180 pels (pixels) on a line. When this standard is exceeded, the TV is not required to perform as expected. The trick is to turn this limitation into an advantage. This can be done with the Color Computer by using *PMODE4* (*SCREEN1,1*), which uses 256 pixels per line and thus exceeds the standard, and places repetitive bit patterns such as 00110011 in the memory graphics screen area. While 1 bits

1 bits should produce white and 0 bits black, the rapidly changing pattern "fools" the TV and the desired magic of what has been best described as "false colors" occurs.

Now that we understand a little of the theory, here's how my *REPAINT* routines put this effect to work. First, on a *PMODE4* screen with a black background you draw a figure and paint it white. Since in *PMODE4* each pixel is represented by one bit in memory, this will give us a lot of 0 bits for the black area with 1 bits where the figure was painted. Then my routine is called, after having previously set variables indicating the area to be "repainted" and the bit patterns (masks) to be used. The routine will then selectively reset bits in the painted area so that the resulting pattern matches the masks and the desired effect is produced.

Before we look at the detailed operation of the routines, we need to discuss the specification of the bit patterns. My programs require the selection of two "masks," which may be identical, and a "shift amount," which may be zero. The masks are represented by an integer between 0 and 255, with repetitions of the binary form of the number being the bit pattern for a pixel row in memory. The two masks are used for adjacent rows, and this row-pair is repeated to fill the area to be colored. For example, the masks 51 and 204 would result in a bit pattern in memory of:

```
00110011
11001100
```

Now, what about the shift amount? This is a number from 0 to 7 which represents the number of bits the row-pair is shifted right each time before being replicated. Here's another example—masks 136 and 68 and a shift amount of two:

```
10001000
01000100
00100010
00010001
```

While an understanding of the masks is needed to experiment with the program, it is not needed to use it. Here is a

(David King, an electrical engineer, is a twenty-year veteran in the field of large-system computer design. His programming experience includes computer performance simulation and computer-aided design. At home he works with stained glass, woodworking, home construction, and also teaches BASIC at a computer-oriented Explorer Scout Post.)

list of values that will give you good results.

M1	M2	S	COLOR
85	85	0	red
170	170	0	blue
85	255	0	light blue stripes
170	255	0	light red stripes
17	17	2	blue/black checkered
34	34	2	red/black checkered
187	187	2	yellow/green checkered
119	119	2	violet/blue checkered
153	102	0	medium green textured
204	51	0	medium violet textured
238	238	0	yellow/green stripes
119	199	0	violet/blue stripes
238	187	0	light green textured
119	221	0	light violet textured
170	85	0	red/blue stripes
136	68	2	red/blue checkered

The first two entries are the colors you get with the trick of defining objects in *PMODE3* and then switching to *PMODE4*, and are also the ones frequently seen in machine language games. While the remainder of the parameter combinations do not result in pure colors, I'm sure that you will find plenty of uses for their unique colors and textures.

Now let's look at the routines. Listing 1 contains a program I've called *SLOW-PAINT*. When you use it, you will know where it gets its name. To help, there are speedup *POKEs* in lines 2000 and 2030 that you may remove if necessary. All variables used in the routine are listed in the comments. To evoke the program, set the variables for the masks, shift amount, and the X,Y coordinates to start repainting. This routine could also have been called *DUMB-PAINT*, because its algorithm is simple. It starts at the point given, proceeds right on the row, resetting bits to match the mask as it proceeds, until it finds a 0 bit, which marks the boundary of the painted area. It then returns to the starting

"Now that I have psyched you up I must confess that there are a few drawbacks to this technique. First, . . . the edges of your figures may suffer distortion. I feel this is a small price to pay for the overall gain. Second, and last, is the 'great mystery' . . ."

point and does the same to the left, once again returning to the starting coordinate when the boundary is encountered. It then steps down one row and repeats the process. When the downward step encounters a 0 bit the routine terminates. Be sure to use an even number for the X coordinate; more on this later. This simplified painting process will not handle complex shapes in one pass, but multiple calls to the routine with appropriate starting points should handle most, if not all, shapes. A better algorithm is left as an exercise for the student. Think about it—you'll come to appreciate the BASIC *PAINT* function a lot more!

The demo will draw a pie cut into four different colored pieces. The actual operation of the routine is a little hard to follow because of the optimization that I felt was necessary to maximize performance, but it should be understandable with the help of the variable definitions. Note the absence of

GOTOs, which would have created a real slowdown if this routine was properly tucked away at the end of a large program. In particular, look at the use of the undocumented *STEP 0* in line 2060, which creates a "loop-forever" situation, thus avoiding a *GOTO* at line 2120. The loop is exited in line 2080 by setting the loop variable Q1 to 1.

The routine shown in Listing 2 is appropriately called *FAST-PAINT*. What it gains in speed over its brother it, unfortunately, loses in precision. It uses the blunderbuss approach; you specify the upper left and the lower right coordinates, as in *GET*, for example, and it sets everything in that box that has already been painted white to the selected bit pattern. More than that, it works on byte boundaries, so the area covered may extend up to seven pixels to the left and right of the X points specified. This routine should be easy to follow with the comments and variable definitions. To aid in readability, I violated an important rule of maximum performance coding; all the constants used in the various calculations should have been placed in variables at the start of the routine. While the speed of this routine isn't too bad, you might want to make this change, along with adding in the high-speed *POKEs*. The approach used for the repainting is to *PEEK* a byte from the graphics screen buffer, *AND* it with the appropriate mask, and *POKE* it back. The screen buffer byte addresses are calculated from the X/Y pixels location by the formula: $1536 + \text{INT}(X/8) + 32 * Y$, where 1536 is the start of the buffer area. (For disk systems I believe that this address should be changed to 3584.) This routine was only designed to handle shift amounts of 0 and 2. While I haven't found other values to be of interest, you may try for yourself by using the first routine, which will take any value from 0 to 7.

may try for yourself by using the first routine, which will take any value from 0 to 7.

The *FAST-DRAW* demo program will draw 16 rectangles on the screen using the values in the preceding table. I suggest that you enter this program first to best see what this technique can accomplish.

The parameter values that I have suggested were discovered by an only semi-rigorous search, and I bet there are some good ones that I have missed. Please feel free to experiment and, if you uncover some new ones, I would like to hear about it. In that way, I could act as a clearing house and pass on additional collections to everyone at some later time. I also have some reason to believe that repetitive patterns longer than a byte might give good results, but I haven't had time to check that one out.

Now that I have psyched you up I must confess that there are a few drawbacks to this technique. First, you will find that the edges of your figures may suffer some distortion. I feel this is a small price to pay for the overall gain. Second, and last, is the "great mystery"—when you turn on the computer you never know exactly which colors you will get! Sometimes the parameters "85 85 0" will give you red and sometimes blue. The unpredictability is only partial, reds always alternate with blues and violets with yellows. This isn't as bad as it sounds since the results always seem to turn out pleasing with whatever color "set" you end up with. If you don't like what you get the first time you can try stopping the program, pressing the Reset button, and running it again. If you do this enough times, you will sooner or later get what you want. The same switching of colors can be achieved by changing the alignment of the bit patterns in memory. You can see this from my table; a mask of 85 (red)

is 170 (blue) when shifted one bit to the left. That is why I suggested that you always begin the repainting with the *SLOW-PAINT* routine on an even X value—you will get consistent, if not predictable, results. *FAST-PAINT* doesn't have that problem; an even alignment is always used. If someone knows why this happens I'd love to know. Better yet, how can this problem be avoided?

In closing, if you hardware-types would like to learn more about this effect, the following articles have been recommended to me:

**Byte*, Dec. 1980. "A Simplified Theory of Video Graphics, Part 2"

**Apple Orchard*, Fall 1980, "Apple II Hi-Res Graphics: Resolving the Resolution Myth"

"TRS-80 COLOR COMPUTER PRODUCTS"

"ENHANCED 1248-EP EPROM PROGRAMMER"

The list of directly compatible EPROMs increases by one, now including: 2508's, 2758-0/1's, 2516's, 2716's, 2532's, 2732's, 68732-0/1's, 68764's, and 68766's.

NEW FEATURES INCLUDE:

- 1) Intelligent algorithm that reduces programming time to as little as 1/6 that of fixed cycle programmers.
- 2) Diagnostic routines to isolate defective EPROMs, or locate differences.
- 3) A feature that guards against EPROM type entry errors.
- 4) Diagnostic routines that prevent keyboard entry errors from causing disastrous consequences.

FIRMWARE FEATURES

- | | |
|--------------------------|-----------------------|
| 1) EPROM ERASED! | 4) BYTE PROGRAMMING! |
| 2) COMPARE EPROM TO RAM! | 5) DUMP EPROM TO RAM! |
| 3) BLOCK PROGRAMMING! | 6) JUMP! |

Firmware is "stack-oriented", "position independent", and "menu driven". Supplied in an EPROM, it can also be stored on disc or tape for execution from RAM if desired.

STANDARD HARDWARE FEATURES

- 1) It has its own "on-board" 25 volt programming supply.
- 2) A quality textool "zero insertion force" (ZIF) socket.
- 3) Socket for firmware on-board.

A PIA port is also available on the programmer. This 8 bit parallel I/O port with handshake lines, can be used for many applications, such as a parallel printer port. Details on how to use this port as a printer interface are included in the instruction manual.

The instruction manual describes how to take full advantage of the power of this versatile programmer. We think you'll agree, that never before was an EPROM programmer so easy to use, and feature packed as is the 1248-EP.

The enhanced 1248-EP costs only \$129.95.

Firmware upgrades are available to our previous 1248-EP customers, in EPROM, for just \$29.95.

* TRS-80 is a trademark of TANDY CORP.
 ** SDS80C is a trademark of the MICRO WORKS.

"THE CK4 SERIES PROM / RAM CARDS"

The CK4 cards work with 2K, 4K, and 8K ROMs or EPROMs of the 5 volt only variety in 24 pin packages. The CK4 can also work with static RAMs, and increase your available memory by as much as 16,128 bytes.

The CK4-1 is specifically designed for use in computers with "F" series boards, or those machines that are "write protected" in the address range of \$C000 through \$FEFF. The CK4-1, therefore, does not incorporate features designed in the CK4 for use with RAM.

The CK4-2 is the unpopulated version of the CK4 series board. Buy this version and configure to meet your specific requirements, and stretch the value of your dollar.

FEATURES SUMMARY

- | | |
|---------------------------|---------------------------------|
| 1) MIX ROM AND RAM! | 4) EXTREMELY FLEXIBLE DECODING! |
| 2) EXPAND RAM FROM 2-16K! | 5) PROVIDES FOR BATTERY BACKUP! |
| 3) YOU WRITE PROTECT RAM! | 6) LOW COST! |

CK-4 \$29.95 ea. CK4-1 \$27.95 ea. CK-2 \$15.95 ea.

NEW PRODUCT OFFERING

A/D-80C ANALOG TO DIGITAL CONVERTER BOARD

The A/D-80C is a 16+ channel analog to digital converter with two 8 bit PIA ports plus handshake lines.

- *Implement closed-loop control of analog processes!
- *Use it to control your homes environment!
- *Computerize your laboratory or darkroom!
- *Build a multi-channel voltmeter!
- *Use it for waveform generation!
- *For robotics!

The A/D-80C is software programmable up to a maximum of 10 bits of resolution. The number of channels can be expanded beyond the 16 channel capability supplied, and the channels are software selectable.

The A/D-80C performs nearly 9K A/D conversions per second.

A generous area of the board is designated for wirewrapping to permit customization of analog signal processing circuitry.

Extensive documentation is provided to assist the user in the development of his application. Software listings are provided as an aid to software development, and a socket is provided for an EPROM for user developed software drivers.

DISK DOUBLE ENTRY - If you have spent hours trying to balance your Debits and Credits, this program is for you! Designed for small business, club, and personal use. Enter transactions in a journal type format. Program will maintain current account balances, produce Trial Balance, Income, and Balance Sheet reports and complete Account Ledgers. Will handle up to 300 accounts including report headings and totals. Up to 1400 average transactions on a diskette. Summary reports and four levels of subtotals available. **REQUIRES 32K** and a user understanding of standard double entry accounting concepts. - \$44.95 in BASIC with Machine Language subroutines.

COMMAND STREAM PROCESSOR - Adds a new dimension to the power of your Color Computer! A program to run your other programs. Will allow you to prepackage a stream of direct system commands as well as INPUT and LINE INPUT to your BASIC program. This results in a totally automated stream of activity. If you understand your computer and the flow of activity required for your total operation, you are ready for the power of Command Stream Programming. In completely relocatable Machine Language - \$19.95.

*JAN '83

*NEW

STATEMENT WRITER - For use with (and requires) Disk Double Entry. Produces statements suitable for billing from your Receivable accounts. Provides mailing labels to use with your statements and account summaries. Designed and documented to allow you to change formats to accommodate your own special needs. \$34.95.

That's INTEREST-ing - Time to let your computer do some real computation! This program will help you solve problems dealing with time, money, and INTEREST. Calculates present value, future value, and capital recovery for any combination of payments you specify. Rate of Return computation to predict how hard your money will be working. Special section to compute bond yields (current and to redemption). Amortization schedules about any way you want them - even allows you to change terms in mid schedule! All answers available on screen or printer. \$29.95 in BASIC.

*NEW

*NEW

DISK DATA HANDLER - 64K - Designed to use the full 64K RAM, but may also be configured for 32K. Uses standard ROM's - No special operating system required! Allows you to design disk data files for your specific needs. You define a basic record of up to 14 fields and 246 characters. Provides fast selection and sorting based on any field or combination of fields in this record. Powerful on screen input and update. User defined output of reports to screen, printer, or disk files which may be read by your BASIC programs for any computational or special formatting requirements. Printer reports allow headings, page breaks, and page numbering, and let you pass control codes to drive your printer's special features. Maximum number of records you may work with at one time will depend on RAM configuration and record size - 64K (32K) 1850 (500) - 21 char records, 179 (49) - 246 char records. An optional Extended record linked to the basic record may also be defined. The size of this Extended record is not a factor in determining maximum number of records. Will provide the growth capability needed for your increasingly sophisticated applications. \$54.95 in BASIC with Machine Language subroutines.

MATH TUTOR - Five programs that go from math fact (+, -, X, /) drill to full addition, subtraction, multiplication, and division at four levels of difficulty. Provides a step by step approach with error correction and rewards for good performance. - \$13.95 in BASIC.

*SEP '82

*SEP '82

SPELLING TEACHER - Up to 200 of their spelling words stored on tape or disk are presented in four lively study modes including a scrambled word game. - \$12.95 in BASIC.

*OCT '82

*AUG '82

ALPHA-DRAW - A subroutine designed to let you easily add characters to your graphic displays. You define X and Y coordinates and a string variable of one or more characters and Alpha-Draw will do the rest. Includes all keyboard characters. Comes with instructions for a true line numbered merge of tape files. Works great with the Screen Print program! - \$8.95 in BASIC.

*JUNE '82

*MAY '82

DATE-O-BASE CALENDAR - Puts you in charge of your schedule! Graphically displays any monthly calendar between 1700 and 2099. You put in up to twelve 28 character memos per day - calendar shows where the memos are - call up of day shows details. Use for appointments and a log of past activity. Study the chronology of the American Revolution or note the day your mortgage will be paid off. Search capability allows you to list or print all memos between two specified dates or only ones meeting key word criteria. Date computation shows elapsed time between two dates in days, weeks, months, and years. **REQUIRES 32K** in BASIC.

GRAPHIC SCREEN PRINT PROGRAM -

Works in ALL PMODES and lets you shift screen image anywhere on the printed page. Relocatable code lets you use all of your 16K or 32K machine. Available for Color Basic 1.0 and 1.1/1.2. Use EXEC 41175 to see which you have and SPECIFY with order. In Machine Language.

SPECIFY PRINTER TYPE

\$7.95 - For TRS-80® LP-VII/VIII & DMP 100/200/400.

\$9.95 - For Epson GRAFTRAX®, NEC® PC 8023 A-C, IDS-440/445, Paper Tiger® 460/560, Micro Prism® 480, Prism® 80/132 (with dot plotting), TRS-80® DMP-120, TDP-1, Micro Peripherals, Inc. 88G/99G, PROWRITER®, Centronics 739, Mircoline® 82A/83A (with OKIGRAPH I) /84/92/93 and Star Micronics, Inc. GEMINI 10/15.

(Trademarks of Tandy Corp., Epson America, Inc., C-Itch, NEC America, Okidata Corp., Integral Data Systems, Inc.)

TAPE DATE-O-BASE CALENDAR - \$16.95 - (max. 400 memos/tape file).

DISK DATE-O-BASE CALENDAR - \$19.95 - (over 4,000 memos/disk - max. 300 memos/month).

ALL PROGRAMS require Extended Color Basic and are delivered on cassette. All, except Tape Date-O-Base Calendar, are DISK System compatible.

For VISA and Master Card orders:
Include type, account number, expiration date, signature and phone number.
Sorry! No COD's.

U.S. and CANADA add \$1.00 per order for shipping.
Overseas \$2.50 per order. All prices in U.S. dollars.
Florida residents add 5% sales tax. Return within two weeks if not completely satisfied.

What Is Computer Literacy?

By Michael Plog, Ph.D.

I want to tell you about three students. The first one just entered high school this year. During his junior high school career, he had some microcomputer training; he even wrote a program. (This boy is my son, in case you are wondering.) During a mathematics course, one option for a special project was to write a computer program. After some thought, he decided to write a computer program to calculate a Spearman's rho correlation. That's a statistical way of telling how closely two sets of ranked items correlate with each other. It is simply amazing what junior high students are being taught these days! I helped him with some of the BASIC commands, but he wrote the program, based on the steps he took to solve the problem on paper. The Color Computer performed the task with ease, as expected. The program had no bells and whistles, but it produced the desired end result. My son was impressed with the speed of the machine, and seeing something he had created actually work.

A second student, a girl, graduated from high school last summer, and is a student at a state university now. She is an extremely bright student, and was placed in advanced courses in high school. This girl (well, young woman) took a computer course in high school—it was required. After this one course, she showed no interest in computers at all. She does not even enjoy playing games! About the only thing she wants to do on the machine is learn how to type. Now don't misunderstand—there is no sex role rigidity here. She is not at least interested in learning secretarial skills. She just realizes that in the very near future, anyone not knowing how to type will be functionally illiterate.

The third student also graduated from high school last summer, and is now attending college. When this young man was a mere boy, his parents bought him a Color Computer. He went through several stages, from playing games

to learning how to program to advanced knowledge about the internal workings of the Color Computer. When this fellow was a sophomore in high school, he "inserviced" the teachers in his building on the use and potential of computers. (Sophomore means 10th grade, folks!) The assistant superintendent of the school district learned a lot about computers from this lad, and then helped establish a computer consortium of several school districts.

So, we have these three students. You probably know of students similar to each of the three described above. Each of the three students described above have needs that must

"It is easy, but dangerous, to forget that literacy about computers is not necessarily an end in itself—it is a way to get to many ends."

be addressed by educational institutions. And while you may think this is heresy, it is my position that the second boy mentioned (the proficient programmer) does *not* represent the greatest need to be addressed by our schools.

Let's shift mental gears for a minute. The recent publication of the Commission on Excellence in Education caused quite a stir a few months ago.

There are mixed reviews about the recommendations of the commission. (Generally because of special interest groups, but also because the commission was "stacked" in favor of those people already representing the views of the administration.) One of the recommendations is important to us here, and it has few (maybe not any) critics.

The commission recommended that before graduating from high school, students be required to take one-half year of computer science. Now comes the problem. Exactly what should be taught during that half year? What types of things would satisfy the needs of the proficient programmer, the uninterested girl, and the fun user—all at the same time? Obviously, no single semester course will be adequate.

Most schools have an introductory course about computers, with an end goal of producing a program. This is unwise, and will not address the needs of many students.

(Michael Plog received his Ph.D. degree from the University of Illinois, the M.S. from Memphis State University, and the B.S. from the University of Tennessee. For his foreign/research language option required for the doctorate, he naturally selected computer language. Michael currently works for the Illinois State Board of Education as a research and evaluation specialist.)

After all, how many programmers does a society need? Would our culture be any stronger if everyone knew how to write a simple BASIC program? So, there is no reason to have all our students become programmers. It is not only silly, it is a waste of human resources. Some people are developers of programs, some users. Just because many people travel by automobile does not mean we should expect all our students to know how to rebuild an engine. Simply because we live in houses does not mean everyone should be a carpenter before allowed full adult status.

We should recognize that schools have to meet different needs of different students. The needs of the proficient programmer noted above are not necessarily any greater than the needs of other students in our educational institutions.

The major thing to learn about computers is that they can perform tasks. The specific tasks to be performed are varied. We should not present all students with the same learning experiences, because they will not all need to know the same things.

The girl mentioned above is a good example. Our educational institutions should provide for her needs as well as for the proficient programmer. One of her needs may be to simply understand the types of things a microcomputer can do, and the things it cannot.

It is reasonable to expect that high school graduates in the next few years will be computer literate. But what does—and should—that mean? All students should know the power of computers, how microcomputers impact on their lives, and how to follow written instructions in order to get a program to work.

But, the concept of computer literacy is more: it is as much an attitude and

appreciation of the power our electronic slaves as it is the acquisition of knowledge.

Owners of Color Computers can probably appreciate the power of our electronic slaves better than owners of other machines. Many of you are probably like me. I purchased a Color Computer because I wanted a micro of my own, but did not want to pay the outrageous price of other machines, like the Model III. After working with my computer, then others, my sense of awe and appreciation for the Color Computer grew.

It is easy, but dangerous, to forget that literacy about computers is not necessarily an end in itself—it is a way to get to many ends.

This may be the real challenge of computer instruction in our schools. During the next few years, we will see many attempts to define computer literacy in functional terms. I expect that some companies will provide curriculum guides for computer studies from kindergarten through high school. There will be a growth in "snake oil" salesmen: those individuals interested in producing a profit, yet not too concerned with educational experiences.

The future of computers in education sounds exciting. We have a choice of approaches. Instead of blundering ahead with the incorrect assumption that all students should be exposed to the same experiences, I suggest we should try to develop a more realistic understanding of the needs of our students.

If you have comments, arguments, or suggestions, I would like to hear from you. My address is 829 Evergreen, Chatham, Ill., 62629. By the way, when I discussed the three students in this article, I left out the most important student—*you*. Your schooling may end, but never your education. Until next month.

See you at RAINBOWfest

October 14—16 Fort Worth, Texas

STEAL THE BEST PROGRAMS

The best out of our library of over 200 published programs, packaged and priced so low that it seems like robbery:

Games #1 - Action-packed, logical, and colorful ones! Flyby, Blackjack, Motorcycle, Germ, Blockade, Life, Diggem, Robot Run, Stellar Empire, and Zero G for your fun and pleasure!

Adventures #1 - Trips to far-off and dangerous places. On the agenda are Jerusalem Adventure, Ultimate Adventure, Williamsburg Adventure, House Adventure, Andrea Doria Adventure, Blackard's Castle, and Realm of Naugah!

Practicals #1 - Programs for text editing, maillists, budgeting, filing, etc. including Keeptext, Keep Address, Keplist, Keepcheck, Keep Budget, Files, and Tape Inventory.

Graphs & Charts #1 - For data manipulation and display! Do it with Pie Chart, Bar Chart, XY Graph, Curve Fit, and Two Dates.

Choose any one of the four packages for just \$12.00 (\$17.00 on disk)!

SILVERWARE

- a lot of software for a little silver

Space Shutter

A
 bout two months after I got my Color Computer I finally got around to the graphics side of things. My objective in my first graphics program was to create a non-violent game which the younger members of my family could enjoy while still challenging the older arcade game fans. In this respect I am quite pleased with the results.

In *Shutter Bug*, a UFO appears and darts about the screen in a random pattern. The player must attempt to frame the UFO in the camera's viewfinder, using the right joystick, and take a picture of it by pressing the joystick button. The game score, the number of exposures remaining in the camera and the high score for the level being played at are displayed across the bottom of the screen.

By Jim Griffin

(Jim Griffin, employed in the data processing field for 17 years, is currently the Chief of Computer Systems Services for Public Archives Canada. He is currently using his Color Computer to automate a 5000 record data base on tape for the Ottawa Cursillo Movement.)

The game plays at three different levels: novice, buff and pro. At the novice level the UFO varies speeds within a moderate range and may traverse the full screen without changing direction, allowing younger players a better chance to get a good picture. At the higher levels of play the time limit of the game is reduced, the distance the UFO may travel without setting a new course is reduced and the range of possible speeds is increased. In order to make the game more interesting the UFO is given a variable head start after a picture is taken and you are presumably advancing your film. Assuming that when UFOs make abrupt changes in direction they would do so by executing an edge wheel it follows that they may be virtually invisible for an instant. When this happens the program will not allow a picture to be taken, to spare the player the embarrassment of taking a picture of nothing, of course.

Since my Color Computer was my introduction to BASIC and I had no knowledge of 6809 assembly language programming I assumed that I would be able to develop an arcade style game solely in BASIC. In this respect the initial version of the game was a major disappointment. From the time the picture was taken until the time the score was calculated and posted, the remaining exposures were calculated and posted and the UFO was underway again, a full seven seconds had elapsed. I couldn't believe that this was the best that could be expected. Two months of work to refine the program yielded *Shutter Bug* (Listing 1) and a number of insights that I would like to share, especially with novice programmers who are not prepared to begin learning assembly language programming yet. A list of the major variables used in the program has been provided (Table 1) to assist readers in analyzing the program.

The first thing to contend with in graphics programs is the excessive amount of memory used by graphics arrays formatted as suggested in the *Getting Started With Color BASIC* manual. As a number of articles have been written on the sizing of graphics arrays I won't deal with this topic in-depth, but would suggest that novice programmers who have not read these articles examine the *DIM* statement in line 20 and the *GET* statements associated with each array.

The problem of scoring is a little more complex. *Shutter Bug* falls into the "hunter-victim" class of programs along with the familiar shoot-em-up variety. Generally speaking, shoot-em-up programs can utilize the *PPOINT* instruction to determine the presence or absence of a given color at or in a limited predescribed pattern around a set of coordinates equating to the joystick position and in so doing determine a score. The potential area within which a score may be realized in *Shutter Bug*, the area within the viewfinder, is significantly more extensive and therefore demands a different approach to scoring. The *PPOINT* scan used in the initial version accounted for a major portion of the seven second delay.

The objective of the scoring routine was to award one point for each pixel of the UFO found within the viewfinder, a maximum of 246, and a bonus of four points for a perfect picture. The irregular shape of the UFO presented special problems. Figure 1 shows the UFO, as seen by the computer for scoring purposes, and the viewfinder in a "perfect picture" relationship to it. It can easily be seen that if the viewfinder were moved up three lines the score would be different to what it would be if the viewfinder were moved down three lines. Therefore, it was necessary to know the specific relationship of the viewfinder to the UFO. The program accomplishes this in lines 620—630 by ascertaining

the horizontal and vertical penetration of the viewfinder into the area occupied by the UFO. Since there were only 19 points of possible horizontal coincidence and nine points of possible vertical coincidence between the viewfinder and the UFO, it was practical to use the horizontal and vertical penetration factors as subscripts applicable to a table of valid scores (lines 640 and 70—150). Thus the task of scoring became a matter of mathematics rather than the slower *PPOINT* scan.

The second factor in the seven second delay was getting the score and exposure counters updated and onto the screen. The original "blank and redraw" strategy was too time consuming. Using the single *PUT* statement in line 800 for all digits proved much faster. The digits 0 through 9 were saved in the variables N0 through N9 (line 20) while the title screen was in preparation (lines 1070—1220), leaving no trace on the title screen when it appeared (line 50). The fact that this was accomplished with a single *GET* statement (line 1220) was made possible by the use of a technique which, when using an interpreter, might be described as "instruction modification." The trick is set up in line 40 and the subroutine beginning at line 1460. Based on the parameters in line 40 the subroutine searches out and stores in MA(1) the address where the "9" of the variable N9 is stored in the

"Instruction modification has been used in this program to effectively simulate the subscripting of graphic arrays. The uses to which the technique may be put are not limited to this one application."

GET statement (line 1220). When line 1220 is executed the *POKE* statement preceding the *GET* modifies the name of recipient graphics array in the *GET* statement, making it N0 the first time it is executed, N1 the second time and so on until it becomes N9 the final time. The fact that the *GET* statement is specifying a different array (variable) each time it is executed (N0 through N9) is of no consequence to the interpreter as long as the array has been described in a *DIM* statement (line 20).

The same technique as used again in line 60 and the subroutine beginning in line 1460. This time the subroutine stores in MA(2) the address where 0 of the variable N0 is stored in the *PUT* statement in line 800. The *POKE* statement in line 790 modifies the name of the array to be *PUT* by line 800 to N0 through N9 depending on the digit to be displayed on the screen. Thus a single *PUT* statement was used to display all the counts across the bottom of the screen. In addition to reducing the number of instructions which the interpreter must handle and therefore saving time, this technique has the benefit of saving precious memory by reducing the number of *GET* and *PUT* statements in the program.

There is one essential difference between the *GET* statement in line 1220 and the *PUT* statement in line 800. If the *BREAK* key is pressed at any time other than when the title screen is being prepared, line 1220 will appear as it does in Listing 1. This is not the case with the *PUT* statement in line 800 however, since the array name will coincide with the last

digit which was displayed at the bottom of the screen. If the player enters *RUN* after the *BREAK* key has been pressed, the program may not be able to find the modifiable address (MA) by virtue of the variable name not being in its original state. Line 960 protects against this occurrence in the event of a normal end condition; however, if the game is rerun after the *BREAK* key has been pressed, lines 1220 and 800 should be examined to ensure that they are in their original condition or the program should be reloaded.

Instruction modification has been used in this program to effectively simulate the subscripting of graphic arrays. The uses to which the technique may be put are not limited to this one application. I have also used it in a hangman game, among others, where it replaces an *ON X GOTO* and a string of *GETs* and *PUTs*. I leave it to your imaginations to envision other uses.

The primary question about using the technique is: Where do I start the search for the modifiable address? Code the variable name to be modified with a unique name, such as *QQ*, set the variable *Y* (line 40 in *Shutter Bug*) to a sufficiently small number (1536 will do if you have no idea at all where the statement might be) and raise the upper limit of the search (line 1480 in *Shutter Bug*) to the upper limits of your computer's RAM (16383 for 16K owners, 32767 for 32K owners). The values *PEEKed* at in *X* and *X+1* must, of course, be the decimal equivalents of the letters used to identify the variable whose name you are going to modify. Put an end statement immediately following the *GOSUB* statement used to initiate the search and *RUN* the program. When the program ends, type *?X* or *PRINT X* and press *ENTER*. The number that is returned is the address where the first letter of the two-lettered variable is located. Now the

search can be restructured as in *Shutter Bug* using some unique variable name which you might prefer to *QQ*, starting the search some reasonable distance prior to the address returned by the initial search. Remember that as you add, change and delete statements in your program, the location of the modifiable address will also change, so the spread of addresses to be searched (line 1480 in *Shutter Bug*) should be wider during development than in the completed product. In *Shutter Bug* the difference between the value of *Y* in line 60 and the actual location of the modifiable address (MA(2)) effectively controls the length of time that the title screen is held.

I hope that you enjoy *Shutter Bug* and find many new uses for these techniques.

JFD - COCO DISC SYSTEM - \$449

J & M Systems, Ltd. is a leader in the Model III marketplace with our JFD-III Disc Controller. With thousands in operation, we have set new standards in controller performance and reliability. We bring these same high standards to the COCO, resulting in the highest quality disc controller system on the market. Compare these functions before you buy:

- Price. \$449 includes controller, first drive, disc basic in ROM, and manuals. Just plug it in.
- Never needs adjusting. Our exclusive Digital Phase Lock Loop Data Separator and Digital Pre-comp Circuit eliminates the 3 adjustments found on other controllers.
- High quality standard production disc drives. For improved service and reliability. Tandon & Teac drives provide twice the read sensitivity that the drives found in other disc systems do, and hold their alignment far longer.
- Gold-plated card edge connectors throughout.
- Software compatible with Radio Shack Disc Basic, Flex, and OS/9.

MIND BOGGLING ADVENTURES

BEACON

by PAL Creations

You are the new keeper of an old lighthouse. The fact you have no experience doesn't matter as the old keeper will meet you there to show you the ropes.
32K EXT.....\$14.95

MANSION OF DOOM

by PAL Creations

Rescue the Princess Marlena from the mysterious Count Von Steinoff and reunite her with the townspeople of her village in Transylvania. The Count's mansion has 76 distinct locations for you to explore in your rescue attempt.
32K EXT.....\$14.95

STALAG & ENO

by PAL Creations

1) You are an allied POW in a German prison camp in 1944 and were forgotten in the hot box when the camp was evacuated due to unexpected bombing raids. How will you get out ALIVE?

2) Your eccentric old aunt just died and left you a fortune in cash. To prove you deserve it, you must decipher the clues and find your fortune, which she hid in her living room.

32K EXT..... Both for \$14.95

OLDIES BUT GOODIES...

JUNGLE TREK

Lost in a jungle with wild animals lurking; your only survival is to find a safe compound before you are lunch for lions; high resolution; multi-color.

16K EXT.....\$14.95

SCORE-EZ

From 1 to 6 people can play this excellent adaptation of a popular board game. The computer keeps score for all players, and rolls dice. You can roll again just like the original game. Properly position the results of each turn for maximum score. The only thing you will need besides your computer is players. Color graphics and sound will entertain you for hours, and it's EZ to play.

16K EXT.....\$15.95

BIORHYTHM/PSYCHIC APT.

1) Prints biorhythm charts of nearly unlimited length; attractively formatted for use on Line Printer VII. 16K

2) Your psychic ability is determined through questions evaluating your psychic experiences

16K Ext..... Both for \$15.95

EVASION

by PAL Creations

You have just escaped from a German prison camp. That was the easy part. Now you must get out of Germany!

Radio Shack's Most Powerful Color Computer

Ever!

**64K TRS-80®
Extended BASIC
Color Computer**

39995
26-3003
Less TV

Only \$28 Per Month On CitiLine Credit

Double your programming power with our new TRS-80 Color Computer—now with 64K of memory! It even has a new electric typewriter-quality keyboard in a compact, white case. With this professional computer, you can access 32K memory with the built-in Extended BASIC language or use the full 64K with our new, advanced programming tools.

Create Spectacular Graphics

You can easily create sophisticated, high-resolution graphics using simple one-line commands. You can produce drawings, business charts, engineering diagrams, even animation. Screen resolution can be up to 256 x 192 (49,152 pixels). In addition, Extended BASIC allows multi-character variable names, string arrays up to 255 characters, full-featured editing, tracing, floating point 9-digit accuracy, trigonometric functions, user definable keys, specific error messages and PEEK, POKE and USR commands to call machine language subroutines.

Powerful Disk Operating System

Add a Color Computer Disk Drive (26-3029, \$399.95) and our new OS-9 with Editor/Assembler (26-3030, \$69.95) and you have the perfect system for the advanced programmer. OS-9 is a real-time disk operating system that accesses the entire memory of the 64K Color Computer. It's designed for the 6809 microprocessor and includes functions for disk and terminal input/output, software memory management and multi-tasking. OS-9 contains approximately 40 utility programs used for system and disk file maintenance and control.

**OS-9 with
Editor/Assembler**

With the TRS-80 Color Computer's big 64K memory and the superior OS-9 operating system, you can develop powerful assembly language applications. Programming in machine language means more efficient memory use and faster execution of real-time action. In addition to converting assembly programs to 6809 machine language, the OS-9 assembler will produce a formatted program listing and alphabetized symbol table listing. It can also convert compiler-produced programs.

Other Support Features

OS-9 also gives you a text editor and debugger. You can edit single characters and groups of characters, plus single lines and blocks of lines with the text editor. And the macro definition facility lets you create new edit commands. The debugger is designed to facilitate testing of machine language programs. It includes commands to examine, dump, change and test memory; examine, change or initialize registers; insert and/or remove program breakpoints; execute programs; run OS-9 commands; and evaluate and convert arithmetic expressions in or to binary, hexadecimal or decimal number systems.

**Discover the 64K TRS-80
Color Computer**

To learn about all the features of the new TRS-80 Color Computer, stop in today at your nearest Radio Shack Computer Center or participating Radio Shack store or dealer. We also carry a complete line of software and peripherals to make your Color Computer even more versatile. Be sure to ask about our new BASIC-09 language (26-3036, \$99.95). It's an enhanced version of standard BASIC written for the 6809 processor, and includes features derived from PASCAL for structured programming.

In Color, with Pictures and Text!

All of our TRS-80 Color programs have easy to understand professional announcer narration, not synthesized, robotic voices. All text is displayed in easy to read upper- and lower-case characters. Video clearly illustrates key concepts in each frame of the program.

Only \$4.40 per program. (\$8.80 for 2, one on each side of a half-hour cassette). \$59.00 for 16 programs (8 cassettes) in an album. Send for a catalog of over 1000 programs for Atari, TRS-80, Apple, etc.

DORSETT

Educational Systems, Inc.
 Box 1226, Norman, OK 73070

The next time you have a party or you just want to impress some friends, these four short, eye-catching graphic programs will help you be a CoCo graphics show-off. Each program requires 16K with Extended Color BASIC.

Raindrop — A *PCLEAR8* must be executed before running this program. It produces a raindrop falling on calm water effect. This is a neat example of using all eight graphic pages to make animation. By deleting line 110, the graphics are greatly speeded up, and an eye-boggling effect is created.

Quaddraw — This program requires the right joystick. By moving the joystick lever, you create a line which will move in eight different directions. The line you make is symmetrically copied while you draw it, so it looks like you are drawing four different lines. Some very interesting pictures can be made with this program.

Illusion — This uses coordinates stored in *DATA* lines to produce a very interesting optical illusion.

Twirler — This uses the *CIRCLE* command with variable parameters, and four colors in *PMODE 4* to create a neat little graphics effect.

INTRODUCING!

KRON

WITH FOUR SCREENS

• TANKS • SPIDERS • BLOCKS • CYCLES •

It's like four games in one! Four entirely different screens provide hours of interesting entertainment! Battle spiders! Blast your way through the descending blocks! Defeat the enemy tanks! Trap the menacing cycles! Increasing levels of difficulty make each a real challenge! KRON is a fast ML program with multi-colors, Hi-Res, and many great sounds. It displays the top five scores plus has a pause feature and display mode.

32K STANDARD-JOYSTICK TAPE \$26.95
DISK \$29.95

CATACOMB

Avoid enemy patrols while getting fuel for your escape from the catacombs! Then dodge or blast space mines and enemy ships as you travel the hyperspace corridor seeking the safety of your mothership waiting at the stargate! Catacomb is an original Hi-Res, multi-color, multi-screen, machine language program.

16K STANDARD-JOYSTICK TAPE \$19.95
DISK \$23.95

PEEK COPY

The copier with a difference

- Copies tape based software (even most autostarts)
- Displays memory in Hex and ASC11
- Allows insertion or change of machine code
- Displays start, end, and execute addresses of ML programs
- Is written in relocatable machine language code

16K STANDARD TAPE \$11.95

Switchable Expansion Is Here

CoCo HAS A COMPANION!!

GOOD NEWS Switch over to more versatility with the new **BT-2000 COMPANION**. Save CoCo's connector with the best **COMPANION** it will ever have.

- Load 5 cartridges into the **COMPANION** and avoid the hassles while enjoying the benefits of push-button selection.
- Push a **Button** or select from your keyboard to turn on one of your 5 selections. Handy indicator lights let you know at a glance which cartridge is connected.
- **No More Turn-Offs**. Just switch to the next cartridge in your **COMPANION**. Push a button to **Restart** without turning off the power.
- **Plug-in**. Fill one to five slots for flexible programming, game playing or both. Choose ROM Packs, serial ports, parallel ports, or disk drives. Then do what you like to do best. The most powerful and cost effective expansion you will find for just ~~\$249.95~~.

\$200.00

FOR THE ADVANCED USER OR EXPERIMENTER

- The utmost in expansion power and versatility is the **BT-1000 Expansion Interface Unit**. ~~\$270.00~~
- **Large Built-in power supply** \$220.00 to power your peripherals and experimenter circuits.
- Space for your **ML utilities** with optional 8K of **RAM**. ~~\$300.00~~

\$245.00

ALSO NEW FROM BASIC TECHNOLOGY!!

- **BT-1010 PPI Parallel Printer Interface**. Free-up CoCo's serial port. Run your printer at top speed. Five foot cable with Centronics compatible connector and machine language printer driver are included. \$79.95.
- **BT-1020 Real Time Clock/Calendar**. Let CoCo keep the time and date for your programs and files. Day-light savings time and leap year keep you on time. Save data or program memory even when power is off with 50 bytes of battery backed memory. Alarm capability to turn on the coffee pot. All for only \$109.00. 
- **BT-1030 VIP Versatile Interface Port**. Connect CoCo to the outside world with two 8-bit parallel ports, two 16-bit timer/counters and a serial shift register. All user programmable. \$69.95.
- **WRITE FOR FREE BROCHURE.**

For years of trouble-free enjoyment all Basic Technology products use top quality components and are backed by a full 180 day parts and labor warranty. We service what we sell!!!

Add \$5 shipping & handling for BT-1000, \$2.50 for BT-1020. Michigan residents add 4% sales tax. Shipping & handling for residents of Canada, Hawaii, Alaska is \$10. Overseas orders add 15%. Check, money order, VISA, MC (give account no., expiration date, phone no.). Personal checks allow 2-3 weeks to clear. COD charge \$2 (requires certified check or money order).

"Watch for more peripherals from Basic Technology."

The Simplicity of

Program By
Norm Cutter

Among the many pleasures of showing off your computer is that of demonstrating how a very simple listing can sometimes produce spectacular results. *Sinelines* is just such a program quickie. Norm Cutter, of Aptos, California, writes us to say, "I would like to see many more short and interesting programs in your magazine. Copying those huge two to three page programs is a real chore." Along with his letter he enclosed a "very brief program which your readers can type up in minutes."

Well, we totally agree with Norm and, for offering to share his creation with all of us, we've selected him as this month's winner of the Roy G. Biv Award. Congratulations, Norm!

Norm suggests that once you're ready to run *Sinelines*, cue up a recording of Elton John's "Carla Etude" for a mood music accompaniment. But, perhaps you have your own "right" music. If you want the graphics to move a bit faster or slower, to match your preferred beat, then change the S variable in line 61 to, say, .05 for slower music. Experiment.

Sinelines

The listing:

```

10 REM**SINLINES, BY NORM CUTTER
20 PCLS:PMODE 4,1:SCREEN 1,1
60 B=B+I
61 S=S+.1
70 D=D+Q
80 IF B>250 THEN PCLS:I=-2
90 IF D>180 THEN Q=-2
92 IF D<5 THEN Q=2
93 IF B<5 THEN I=2
96 X=(SIN(S)*129)+129
100 LINE (X,D)-(D,B),PSET
150 GOTO60
    
```

DRAW-STRING GENERATOR

\$25.00
32K ext.

Throw away your graph paper and let CoCo do the draw-strings.

DRAW in any resolution with easy-to-use drawing board commands.
GENERATE draw-strings automatically from your own drawings.
EDIT the completed draw-strings.
ANIMATE up to 16 drawings on the screen.
SAVE the draw-strings to tape as BASIC data or as a BASIC program.

Adventure!

UNDERGROUND

Tired of playing adventure games that have a limited vocabulary? **Underground** gives a detailed description of your surroundings, just like a main-frame adventure! There are over 90 separate rooms, passageways, etc. Discover what the mysterious machine does, what lies in the Egyptian sarcophagus, how do you tame the guardian of Hell's Gate, where is the fabled golden apple? Everything is up to you. You give the orders, you are the hero. This adventure is not for the faint of heart! You can suspend your game at any time and continue later. Takes from 5 to 20 hours to play.
32K ext. BASIC Req. PRICE \$26.95 Disk only

COLOR KEY COMMAND

Looking for a powerful programmer's aid, but you don't have a fortune to spend? This program is for you! Look at these features: two keystroke entry of more than 80 Basic, Extended Basic, and Disk Basic commands. Select the color of your cursor. Select the prompt you want — no more "OK" when a program bombs! Automatic line numbering — you select the start line and increment! 4 custom programmable keys for a total of 64 characters each — enter whole lines with two key presses! Copy any line with the copy command. Merge tape programs together automatically. Redefine any or all keys with a short basic program we supply. How can you get all this and more for so little? Because you make the keyboard overlay! We give you a template with all commands printed on it — you cut it out and use it. That is all there is to it! Note: Not all features are available on every machine; some require Extended or Disk Basic to work properly.
16K or 32K Req.
PRICE \$18.95 (tape)* D

GALACTIC MATH

Load this game into your computer and start playing! This is a math tutor that is really an arcade game! Keep those saucers from landing! There are no "happy faces" or "funny clowns" in this math program.
16K or 32 Ext BASIC Req. PRICE \$15.95 (tape) D

PRICE \$29.95 (Tape) \$39.95 (Disk) 16k or 32k Req.

COLOR DISK SAVER Saves a disk to tape. Reloads disk from saved tape. Also has tape verify command! 32k Ext. BASIC Req. PRICE \$12.95 (tape)*

COLOR BIORHYTHM Are you up or down today, tomorrow, or years from now? Find out with **COLOR BIORHYTHM**. Uses high res graphics. Send the chart to printer. 16k or 32k Ext. BASIC Req. PRICE \$14.95 (tape)

DD CLOCK Don't forget what time it is when you are programming. The time is displayed in the upper right corner of your screen. Shows hours, minutes and seconds. Beeps every hour. 4k, 16k, or 32k. PRICE \$9.95 (tape)* Ext. BASIC not required.

— NEW PROGRAMS —

DOUBLE DOS

Do you have the 35 track disk blues? If you have 40 or 80 track drives, you are *really in need* of this program! **DOUBLE DOS** allows the user to use 35, 36, 40, and 80 track drives from BASIC. **ALL COMMANDS** are supported with **DOUBLE DOS**, even direct track and sector access! (DSKI\$0,39,18,A\$,B\$ is accepted by **DOUBLE DOS**!) You can reconfigure the system *any* time you want to, *without reloading*! The system is totally transparent to BASIC! **DOUBLE DOS** does require that you have a 64K system in order to use it. This program *does not* require the **FLEX** operating system!

PRICE \$24.95 (Disk) * D Order **DOUBLE DOS** and **ROM MOVE** and pay only \$29.95!
Note: The **AMDEK** disk drives are 40 track drives, get 10 extra granules with **DOUBLE DOS**!

ROM MOVE

Are you tired of having only 32K of memory when you have a 64K computer? **ROM MOVE** is just what you need! With **ROM MOVE**, you are given another 8000 bytes of room for your BASIC or Machine Language programs! You can switch from BASIC to **EXTENDED BASIC** to **DISK BASIC** easily. PRICE \$12.95 (Tape) * D (Ask about our 48K version) 64K required.

PRICKLY-PEAR SOFTWARE

QUALITY PROGRAMS FOR YOUR COCO & TDP-100

PROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTHERWISE NOTED.

SIMULATION GAMES

VIKING: Run your country well and become king or queen. This is the most complex simulation we've seen. Takes 2 or more hours, has 9 levels, and is for 1 to 4 players. B & ML. **Tape - \$19.95, Disk - \$24.95**

GANGBUSTERS: Start as a punk and manage your criminal empire to become syndicate boss. Steal, make hits on the other players, go to prison, and lots more fun. 2 to 6 players. B & ML. **Tape - \$19.95, Disk - \$24.95**

FOOTBALL: A strategy approach. Offense and defense choose their plays, and the results are calculated by past averages and some chance. Truly a football lovers simulation. B & ML. **Tape - \$19.95, Disk - \$24.95**

SIMULATIONS

FLIGHT: Not a game, but a hi-res graphic landing simulator. Choose 4 levels of instrument or regular landings, with or without crosswinds. Needs 32K. B & ML. **Tape - \$19.95, Disk - \$24.95**

FANTASY GAMING APPLICATIONS

(These are not games)

FANTASY GAMER'S PACKAGE: All versions have a 20 page manual and display hi-res rooms and roll complete stats for characters and monsters. 32K version also has a dicebag for instant dice simulations in 36 ranges. Disk version has dicebag and complete dragon and ring rollers. B & ML. **Tape - 16K \$19.95, 32K \$24.95; Disk - \$29.95**

FANTASY MASTER'S SECRETARY: For use during play, this will easily keep track of characters, monsters, time, treasure, magic, and more. B & ML. **Tape - \$19.95, Disk - \$24.95**

ADVENTURE

ADVENTURE IN WONDERLAND: Simply the best adventure ever written for the color computer. A full Eliza intelligence so you can enter whole sentences. At least three ways out of any trap. A vocabulary of HUNDREDS of words. Needs 32K. 100% ML. **Tape - \$24.95, Disk - \$29.95**

WORD GAMES

THE GREAT WORD GAME: 2 to 4 players compete using words they have chosen. Each player tries to guess the opponents' words while the opponents do the same. B & ML. **Tape - \$19.95, Disk - \$24.95**

TOPSY TURVY: Race against the clock to form as many words as possible from the letters you are given. Lots of bonus scoring for longer words. BASIC. **Tape - \$19.95, Disk - \$24.95**

DECIPHER:

For 1 or more players. Multiple players choose their words, while single players let the computer choose from hundreds stored in memory. You must unscramble the word or phrase while the clock runs. This is the best available word game! 100% ML. **Tape \$24.95, Disk - \$29.95**

JOYSTICK GAMES

TEEEOFF: The only really outstanding golf game for the color computer. All in hi-res, and you move your golfer (a little person) up to the ball and then control his backswing with the fire button. Very challenging, with water and sand-even giant cactuses. 1 to 4 players. 100% ML. **Tape - \$24.95, Disk - \$29.95**

SHAFT: The ultimate in "dodge the moving object" games. Really tough, with 15 screen patterns to learn and ascending difficulty. 100% ML. **Tape - \$24.95, Disk - \$29.95**

MISCELLANEOUS GAMES

MONSTERS & MAGIC: Fight your way thru up to 50 different monsters using a realistic fantasy combat system (initiative - damage by weapon type - levels - etc.), and then try to defeat the dungeon lord. 1000+ place description combinations. For 1 player, needs 32K. BASIC. **Tape - \$19.95, Disk - \$24.95**

JUNGLE: Take a journey into trouble. This game gives Murphy's law new meaning, and in this magical jungle, many things are only illusions. A very nice game, and easy enough for the younger set. BASIC. **Tape - \$19.95, Disk - \$24.95**

ADULT GAMES

THE NAKED GAMER: Nothing obscene - just two great games in which the losers are told to remove items of clothing. One game is a fast moving joystick type, while the other is a logic game. These games are terrific even if you keep your clothes on! B & ML. **Tape - \$21.95, Disk - \$26.95**

UTILITIES

COLORKIT: What can we say about the absolute best state-of-the-art programmer's utility. This program adds 35 commands to BASIC that should have been there all along and no short description will do it justice. Summary - light or dark screen, keyclick, screen editor, programable keys, a super memory tool, variable listing, echo to printer, BREAK disable, convert machine language to DATA, global search, single step thru program run, double space printouts of program listings - that's less than half of what it will do. It takes about 6K of space, and if you have 64K you can put it up high and lose no BASIC space at all. 100% ML. Fully relocatable. **Tape - \$34.95, Disk - \$39.95**

APPLICATIONS

PRICKLY-PEAR MAILING LIST: This mailing list program will handle up to 1500 records per file and will sort by name or zip code. It searches on any field and all display is in a hires upper and lower case format. There is no better mail list program. Needs 32K and 1 disk drive. B & ML. **\$49.95**

MUSIC BOX: Compose your music in 4 voices and let the harmony flow. You can assign any of 4 instruments to each voice, and the program is truly easy to use. 100% ML. **Tape - \$24.95**

EIGHT-BIT BARTENDER: Over 100 drink recipes, and you can call them up by name, category, or main liquor. The author's liver risked death to bring you this program. Needs 32K. B & ML. **Tape - \$19.95, Disk - \$24.95**

HOUSEHOLD HELPER: This gem does recipe conversions, metric conversions, gasoline computations, and maintains a bills due file. A very friendly program. B & ML. **Tape - \$19.95, Disk - \$24.95**

SUPER

ASTROLOGY: Everything our customers have written and asked for in an astrology program is here! This all new program by a new author gives accuracy to a few minutes of arc. Choose from tropical or sidereal zodiacs, Heliocentric or Geocentric, and five different house systems - Placidus, Campanus, Regiomontanus, Koch, and Equal. Specify the orb for aspects, find any harmonic, and output the complete natal horoscope to the screen or printer. The program will handle progressed and transit charts with date manipulation. This program comes with complete and easy to follow instructions, sample chart forms, and a suggested reading list to aid in interpretation. Don't settle for a lesser program! Needs 32K. B & ML. **Tape - \$24.95, Disk - \$29.95**

EXPLANATION OF CODES

BASIC: This program is 100% BASIC. That means it is easy to examine and easy to modify. BASIC is the best language for some applications.

B & ML This program is written mostly in BASIC, but some routines are in machine language for more speed. May be harder to examine or modify than an all BASIC program.

100% ML This program is all machine language for fastest possible execution. Examination or modification will require a high skill level.

Programs are available on AMDEK cartridges - add \$5.00 to the disk price.

Your personal check is welcome - no delay. Include \$1.50 shipping for each program ordered. (Shipping free on \$50.00 or larger orders). AZ residents add 7% sales tax. Orders shipped within two days.

EDUCATIONAL PROGRAMS

PREREAD I, II, & III: This program uses graphics and voice from the tape to teach the alphabet three ways - by name, by sound, and by shape. B & ML. **Tape - \$24.95, Disk (with voice tapes) - \$29.95**

PHONICS I: Teaches all the consonant blends phonetically, using graphics and sound from the tape. B & ML. **Tape - \$24.95**

PHONICS II: Like Phonics I, but teaches the consonant digraphs. B & ML. **Tape - \$24.95**

PHONICS I & II ON DISK: A package that includes both of the above in a disk format. Still has voice on tape. B & ML. **Disk only (with voice tapes) - \$44.95**

SPELLING:

Six tapes provide voice testing and practice modes for the entire 220 word Dolch list which makes up 75% of all elementary written material. Eleven lessons, and the testing is by VOICE, just like in class. The disk version can be easily modified to include new words. B & ML. **Tape - \$49.95, Disk (with voice tapes) - \$54.95**

MATHPAC: Provides drill and positive reinforcement of addition, subtraction, multiplication, or division. Lots of extras for repeating, setting levels, and classroom use. **Tape - \$19.95, Disk - \$24.95**

DISK UTILITIES

OMNI CLONE: This program even amazes us. It backs up every color computer disk we have seen, and has even backed up disks for the Model 3 and IBM PC. Protect your valuable collection against loss with this super power backup utility. Easy to use. Needs 32K and at least one disk drive, but

works with two drives if you have them. 100% ML. **\$39.95**

DISK ZAPPER: A neat utility that lets you easily examine and change data right on the disk! Rebuild directories, format to 40 tracks, change programs, store backup directories, and more. Needs two drives and 64K for some functions. B & ML. **\$34.95**

DISK MANAGER: If you have an extensive software collection, this program will create an alphabetical listing so you can find what you want. It also prints a super directory with ML addresses and gives you three ways to recover a crashed disk! Needs 32K and 1 disk drive. B & ML. **\$29.95**

DISK MASTER: Eight functions, including drive speed check and adjust, moving DATA files to and from disk and tape, a directory which includes ML addresses, two different disk maps, and an easy mass copy utility. Needs one disk drive and 32K. B & ML. **\$24.95**

PUBLICATIONS

SONGBOOK: The PLAY statements and lyrics for over 200 songs. Type them in and just listen, or use them in your own programs. Hymns, popular songs, folk songs, college marches, holiday songs, and lots more. About 100 pages, soft cover, plastic ring binder. **\$9.95 - quantities limited.**

Machine Language Cassette I/O

By Roger Schrag

In the July issue of *the Rainbow* I presented a program that aided machine language programmers in doing Input/Output operations with disk drives. This month I would like to present a program that offers similar capabilities for cassette users.

In the back pages of the Color BASIC and Extended Color BASIC manuals is a list of some routines contained within the BASIC ROM that machine language programmers may use. Four of these routines pertain to cassette operation, allowing you to load and dump blocks of memory to and from tape rather easily.

However, these routines don't offer the flexibility and power you might like. When it comes to performing complex operations, such as handling a cassette data file, these ROM routines will do very little of the work; you must write some very involved routines of your own to get the job done.

What I will present here is a block of source code that you may append to any program you write. This appendage contains nine powerful routines that your programs may all call upon as you wish. These nine routines are named Open, Close, Print, Input, Skipf, Cloadm, Csavem, Motor, and Audio. Each routine performs an operation similar to that of the BASIC statement the title reflects. For example, the Skipf routine allows you to skip over a file on the cassette. Please have a thorough understanding of how these nine BASIC statements work before attempting to use the routines.

Each of the nine routines requires that you first prepare the registers with necessary information. To use the Cloadm routine, for example, you must provide a filename and a load offset. Now let's take a look at each of the routines and how you may use them.

The first routine is Open. It allows you to open a tape file for either input or output. Before calling this routine, you must prepare the X, A, and B registers. Load the X register with the address of where in memory the filename is stored. Place a zero or \$0D (ASCII code for a carriage return) after the last character of the name so that the Open routine can calculate how long the name is. If you are opening a file in the input mode and would like the computer to simply use the first program it encounters on the tape, then point the X

register directly at a zero or \$0D.

Next you must load the A register with the file mode. To open the file for input load A with the value \$49, the ASCII code for I. To open the file for output load A with the value \$4F, the ASCII code for O. Finally, you must load B with the display status. The display status is irrelevant if you are opening the file in the output mode, but makes a difference for the input mode. If you load B with \$FF, the computer will clear the screen and show an S in the upper corner. It will then display filenames as they come up, and blink an F as the data file is read. If you don't want all of this information printed on the screen, then load the B register with a zero. This way the computer will not affect the screen in any way.

This example will open the next file encountered on the cassette for input mode. The filename will automatically be printed on the screen, and an F will blink as the data file is read:

LDX	#NONAME	Load X with the address of the name
LDA	#\$49	Open file in the input mode
LDB	#\$FF	We want the on-screen information
JSR	OPEN	Open the file
BRA	MORE	Program continues . . .
NONAME	FCB	\$0 Use next file encountered on the tape

The second routine is Close. It closes the cassette file if it is open. It does not require any register preparation. This example will close the cassette file:

JSR	CLOSE	Close the cassette file
-----	-------	-------------------------

The third routine is Print, and it is used to write to a cassette file opened in the output mode. This routine differs from the BASIC statement Print#-1 in that you may only write one character at a time. A small loop is necessary to write a complete message or block of data. To use this routine you must load the ASCII code of the character you wish to write to the file into the A register. The routine will handle the rest.

This example will write the data "PLASTIC SPOONS: 360 DOZEN" to the tape file:

LDX	#DATA	Point X at start of data
LOOP	LDA	,X+ Read a character of data

(Roger Schrag, currently studying computer science at the University of California at Berkeley, enjoys working with the CoCo and writing articles for the Rainbow. He also designs and translates programs for Adventure International.)

	TSTA		A zero marks the end of the data
	BEQ	MORE	If all data has been written, go on . . .
	JSR	PRINT	Write the character to the file
	BRA	LOOP	Loop back for next character to write
DATA	FCC	/PLASTIC	SPOONS: 360 DOZEN/
	FCB	\$0	A zero marks the end

The fourth routine is Input, and it is used to read in data from a cassette file opened in the input mode. If you chose a display status of \$FF when you opened the file, then an F will blink on the screen as data is read in. Again, this routine will only deal with one character at a time. No register preparation is needed for this routine, so simply call it directly to read a character from the file. On return, the A register will hold the ASCII code of the character that was read in from the file.

This example will read in a block of 512 characters and show them on the screen:

	LDX	#\$400	Point X at beginning of the text screen
LOOP	JSR	INPUT	Read a character from the file
	STA	,X+	Put it on the screen and increment X
	CMPX	#\$600	Check if we have covered the entire screen
	BNE	LOOP	If not, then loop back for more

The fifth routine is Skipf, and it may be used to serve two different purposes. First off, you may use Skipf to skip over a file on the cassette. However, you may also use it to verify files. You see, as the computer skips over the cassette file, it also reads the information carefully and watches for checksum errors. This means that if the computer is able to Skipf through a file without causing any errors, then you can be reasonably sure that the recording on the cassette is good, and that you won't get any load errors when you try to use that file at a future time.

The Skipf routine requires that you prepare the X and B registers in exactly the same manner as the Open routine. That is, you must load the X register with the address of where in memory the filename is stored and B register with the display status.

This example will search the cassette for a file named OUTGOING and will then verify and skip over it. The screen will not be affected in any way:

	LDX	#NAME	Load X with the address of the name
	LDB	#\$0	Use a display status value of zero
	JSR	SKIPF	Skip over and verify the file
	BRA	MORE	Program continues . . .
NAME	FCC	/OUTGOING/	
	FCB	\$0	Zero marks the end of the name

The sixth routine is Cloadm. It will load any machine language program from cassette that may ordinarily be loaded with the BASIC statement *CLOADM*. To use this routine you must provide the address of the filename and the display status, as with Open and Skipf. In addition, you

must put the offset that the computer should use in loading your program in the Y register. If you want the computer to load the program normally, not offset, then specify an offset of zero.

This example will load the program MODULE1 from cassette with no offset. The screen will remain unaffected:

	LDX	#NAME	Load X with the address of the name
	LDB	#\$0	Use a display status value of zero
	LDY	#\$0	Load the program normally, not offset
	JSR	CLOADM	Load the program
	BRA	MORE	Program continues . . .
NAME	FCC	/MODULE1/	
	FCB	\$0	Zero marks the end of the name

The seventh routine is Csave. It allows you to save a machine language program or block of memory onto tape in a format that may be loaded back in with Cloadm. Please note that you must have Extended Color BASIC to use this routine.

This routine requires that you prepare the X, Y, U, and D registers with necessary information. As with many other routines, you must first load the X register with the location of the filename. Next, load the starting address of your program into Y and the ending address into U. Finally, load the execution address into the D register. When you call on the routine, everything in memory from address Y to address U will be written on tape.

This example will write everything in memory from \$E00 through \$FFF onto tape with a filename of *RAMTEST*. The execution address will be \$E00:

	LDX	#NAME	Load X with the address of the name
	LDY	#\$E00	The starting address
	LDU	#\$FFF	The ending address
	LDD	#\$E00	The execution address
	JSR	CSAVEM	Write it all on tape
	BRA	MORE	Program continues . . .
NAME	FCC	/RAMTEST/	
	FCB	\$0	Zero marks the end of the name

The eighth routine is Motor. It allows you to turn the tape recorder's motor on and off. Simply load \$FF into the B register to turn it on, or zero to turn it off. This example will turn the cassette motor off:

	LDB	#\$0	Zero means off
	JSR	MOTOR	Turn off recorder's motor

The ninth and final routine is Audio. It allows you to connect the output from the tape recorder directly to the television's speaker. Load \$FF into the B register to turn on this feature, or zero to turn it off. This example will play the recorder's sound over the television's speaker:

	LDB	#\$FF	\$FF means on
	JSR	AUDIO	Turn the cassette audio on

And those are the nine routines provided in the program listing. Now let's look at the general requirements and conditions that apply to all nine routines.

All routines require that you leave low memory from \$0 to

\$3FF alone. This area is used by the ROMs in performing the various cassette functions. All routines will work on any Color Computer, right on down to 4K Color BASIC. The only exception is the Csave routine which requires Extended Color BASIC.

Each of the routines will preserve the X, Y, U, A and DP registers. The contents of the CC and B registers will be lost. After you call a routine, check the zero flag. If it is set, then the operation was carried out successfully. If, however, it is reset, then an error has occurred and the error code is in the B register. The table lists the error codes and what they mean.

This example shows how to use the error system to determine if an error has occurred:

```

JSR   XYZ      Call one of the nine routines
BNE   ERROR    If zero flag is reset, then an error
      (More code)
      Operation was carried out successfully
  
```

Please note that this program makes extensive use of undocumented ROM routines. This means that the program shown in the listing very well may not work with future versions of Color BASIC. (The program was written for Color BASIC 1.1, but should also work with 1.0.)

Now you should find it a whole lot easier to incorporate cassette I/O into your machine language programs. If you have any questions or comments, feel free to drop me a line. My address appears at the top of the program listing. Please

include a self addressed, stamped envelope when you write. The source code for the program listing is available on cassette for five dollars at the same address: 2054 Manning Avenue, Los Angeles, CA 90025.

Table Of Error Codes

Code	Abbr	Description
19	AO	File already open
21	IO	Input/Output error
22	FM	Bad file mode
23	NO	File not open
24	IE	Input past end of file

```

PRO-COLOR-FILE

"... PRO-COLOR-FILE is a very sophisticated data base management program..." (Color Computer News, June 1983)

"... It's definitely a gigantic step for the serious CoCo users..." (Rainbow Magazine, June 1983)

If you can't believe the reviews of these leading magazines for the Color Computer, then there is nothing we can say to convince you of the versatility of PRO-COLOR-FILE. However...

If you're in need of a program with the flexibility that lets you design your own records management system with up to 60 data fields, 4 data entry screens, 14 math equations, 5 custom report formats, and records lengths of up to 1020 bytes; AND that has the capability to duplicate records, index a file alphabetically on up to 3 fields simultaneously, print reports on a printer or the screen, select records using <, <=, >, >=, =, <> comparators individually or together with AND / OR relationships, obtain totals and averages, find any record out of a file of 1000 in 10 seconds or less, and utilize from 1 to 4 disk drives, THEN PRO-COLOR-FILE WILL FILL YOUR NEEDS!

Only \$79.95 + \$2.00 Shipping and Handling.

We accept VISA, MASTERCARD, Checks or Money Orders.

Call or write for more details:

DERRINGER SOFTWARE, Post Office Box 5300, Florence, S.C. 29502. Phone: (803) 665-5676 after 6:00 p.m. (EDT).

ATTENTION 6809 HACKERS

WE NOW HAVE 2 CONVENIENT LOCATIONS

- COLOR-80 BBS U4.0:** A DELUXE BBS WITH THESE FEATURES; AUTO 300 OR 1200 BAUD, UPLOADING, DOWNLOADING, INKEY\$, PICTURES, 75 MSG QUEUE, MAILING LIST GENERATION, PLUS MORE. CAN BE CUSTOMIZED. WRITTEN IN ASSEMBLY & BASIC. REQUIRES 64K COCO, 2 DISK DRIVES, AND AUTO ANSWER MODEM (PLEASE SPECIFY YOUR MODEM TYPE) \$150.00
- SUPER DISK UTILITY:** VERY USER FRIENDLY ASSEMBLY LANGUAGE UTILITY THAT MAKES LIFE WITH A DISK MUCH EASIER! HAS TO BE SEEN TO BE BELIEVED \$35.00 DISK
- CGP-DUMP:** ALLOWS ONE TO DUMP THEIR HI-RES COLOR SCREEN TO A CGP-115 PRINTER IN UP TO 4 COLORS IN ANY PMODE! WRITTEN IN ASSEMB. LANG. DSK OR CASS \$25.00
- MONITOR DRIVER:** ENABLES ONE TO USE A MONITOR. NO MORE RF INTERFERENCE. GIVES CRISP PICTURES. HAS OUTPUTS FOR COLOR, MONOCHROME AND AUDIO. REQUIRES NO SOLDERING. EASY TO INSTALL. ALLOWS BOTH COLOR/MONOCHROME AND AUDIO TO BE HOOKED UP SIMULTANEOUSLY! THIS IS THE BEST WE'VE FOUND YET \$35.00
- COLORCOM/E:** THE BEST SMART COMMUNICATION PROGRAM AVAILABLE—MUCH BETTER THAN 'DUMB' PROGRAMS LIKE VIDEOTEX. FEATURES ABILITIES TO DOWNLOAD, UPLOAD, PRINT BUFFER, SCROLL BUFFER, 110 TO 1200 BAUD, XON/XOFF PROTOCOL, RECEIVE LO-RES GRAPHICS, SAVE BUFFER AND MORE. AVAILABLE ON EITHER ROMPACK OR DISK. \$49.95
- 64K UPGRADE KIT:** SET OF 8-64K RAM CHIPS (200 NANO.) & INSTRUCTIONS. \$49.95
- REMOTE TERMINAL DRIVER 3.0:** ALLOWS ONE TO OPERATE HIS COCO FROM ANOTHER COMPUTER/TERMINAL VIA 300 BAUD MODEM. IN ASSEMBLY LANG. DISK OR CASS \$30.00

GHOST GOBBLER

From Spectral Associates, this "Pac" theme game is the best of it's type. Brilliant color, action and sound, just like an arcade gobble your way to glory, but watch for those ghosts! Get in on the wild fun of this game craze now. Tape: \$21.95. Disk: \$25.95

DONKEY KING

DONKEY KING

You simply can not buy a more impressive game for your color computer than this new wonder from Tom Mix. The graphics, sound, and animation are all just astonishing! There are four different graphic screens and each is endless fun. Requires 32K. Tape: \$24.95, Disk: \$27.95

GHOST GOBBLER

PROTECTORS

There are several good versions of the "Defender" theme available for the CoCo. None, however, rival this one from Tom Mix. No other game matches the detailed graphics and sheer excitement of this top seller. Requires 32K. Tape: \$24.95, Disk: \$27.95

CREATURE FEATURE

From Color Software, comes a lightening swift shoot & dodge the enemy game. It's clever cross between "Robotron" and "Beserk" themes, with bullets flying everywhere. Solid, shoot-em-up-fun. Requires 16K. Tape: \$17.95. Disk: \$19.95

ANDROID ATTACK

Spectral Associates' very well done "Berserk" type game with some interesting added features. Each cassette contains both the 16K and 32K version. The 32K version has voice output! Plenty of action. Tape: \$21.95

FROGGER

Just released by The Cornsoft Group, this is the officially licensed version from Sega, the arcade manufacturer. It has it all! 4 lane super highway, snakes, turtles, logs, alligators, etc. Lots of action and laughs! Requires 16K. Tape: \$19.95

INTERGALACTIC FORCE

Your space fighter roars into the Death Corridor. Lock-on and blast the enemy fighter from the sky. Now try dropping one into Death Star's narrow exhaust vent. It takes skill and guts. Good luck! With "Star Wars" theme song. From Anteco. Tape: \$24.95

THE COLORCADE.

SUPER JOYSTICK MODULE

ONLY
\$19.95

★ **It's a Joystick Interface.**

Now you can connect any Atari compatible joystick to your CoCo. These sticks are extremely rugged & provide very fast response and real arcade type action. They will improve the play of almost any game. The difference will amaze you!

★ **It's a Rapid Fire Module!**

Press the fire button on your joystick and get a great burst of fire instead of just a single shot! Adds tremendously to the many shooting type games that do not have repeat fire. With variable burst speed.

★ **It's a 6ft. Extender Cord.**

THE ATARI

ONLY
\$8.50

A well proven joystick, the Atari is known for being rugged and reliable. It gives good response and is the standard among home video players. Now at a great price! Use with module above.

ZIRCON VIDEO COMMAND

ONLY
\$14.95
A GREAT BUY!

This one has received outstanding reviews. Its unique design fits the hand beautifully and it has the truly fast and positive response needed for high speed play. Actually out-performs some joysticks that cost \$50 or more.

WICO FAMOUS "RED BALL"

THE BEST
YOU CAN BUY
\$34.95

The high performance joystick from the people who make them for the arcade machines. Built to take the abuse of even the most enthusiastic player. This is the best! Wico #15-9730. Use with module above.

FLAGS

By Joseph S. Paravati

How many times have you seen a flag and were stumped as to which country it belonged to? Well, here is a program, submitted by Joseph S. Paravati of Yorktown Heights, New York, called *Flags*. It not only provides beautiful, high-res graphic illustrations of 23 nations' flags, but is an educational tool as well. Joseph reminds us to make sure the screen is blue at the beginning of the program. If not, simply push the reset button and *RUN* the program again.

The menu displays the names of 23 countries in which you can either enter the corresponding number of the desired country, or type 0 for an automatic flag display of each country.

The most impressive aspect of *Flags* is watching the computer fill in the colors of the flags and slowly type the name of each country underneath the illustration, demonstrating the full color capabilities of your CoCo.

Flags is impressively beautiful, and more importantly, you will be able to identify more flags as a result of using this educational program.

OWL-WARE

NEW!

**ALL OTHER SPACE GAME GRAPHICS
ARE NOW OBSOLETE!
WE HAVE DEVELOPED
THE COLORTROLL!**

Always fully controlled colors against the
black of space!

STELLAR SEARCH

Tape \$27.95, Disk \$30.95

The largest and best graphics adventure ever. Graphics like color paintings! As Captain of the Enterprise you must establish contact with an unknown race while the enemy tries to stop you. A total of over 86K in 4 parts for 32K extended, giving a variety of game experience!

CRYSTAL REVENGE

Tape \$18.95, Disk \$20.95

An action arcade game where you defend your Homeworld from the Robot Ships. You can win only if you plan your defense. See reviews Rainbow - April, and CCN - August 1983. 16K extended.

NEW! BASIC MANUAL NEW!
FOR THE COCO!

TOP DOWN BASIC

by Ken Skier

An excellent introduction to structured BASIC written specifically for the color computer. Carefully structured programs are a must for advanced BASIC programming. \$14.95

NEW! WORD PROCESSOR

by Nelson Software

20% Off Newest Version

SUPER COLOR WRITER II™

This is the best word processor for the CoCo, and we are left with tape version not picked up by a customer. This program gets up to 51K storage on the 32K F-board. One only from stock for 32K. Started up twice for demo, full warranty. Usual price \$69.95, this one \$55.95.

THE FILE FIXER

The all-in-one file maintenance program.

- Machine language, Ext. Bas. not required.
- Auto-configures for 32K or 64K.
- Copy cassette to disk, or disk to cassette.
- Load as many programs as your memory will hold, then copy all to cassette.
- Copies virtually any program.
- Will remove most autostart loaders.
- Append an autostart loader to your program that checks for, and switches to 64K mode.
- Fixes programs that load below \$1000 so that they will work on a disk system.
- Make a tape directory and save it to tape.
- Change name, load address and execution address of machine language program.

Price: \$14.95

CLASSROOM SPELLING QUIZ

This basic program was written for grades K-8 as an intro. to computers and a classroom spelling aid. Designed for 1 student at home, or a classroom full. Parents & teachers add words that the students are learning.

Personal interaction, reward for hi score. Requirements: Extended Basic and a cassette recorder with remote motor control.

Price: \$9.95

*Include \$1.00 per tape postage and handling.
Illinois residents include 5.25% sales tax.*

Send check or money order to:
DP Development / 115 St. Barbara
Cahokia, Illinois 62206

KEYBOARDS

by Macrotron

The Premium Keyboard

All the features of our popular Professional Keyboard:

- * No gluing, soldering, or cutting—plugs right in
- * Four function keys complete the matrix
- * High quality construction assures years of trouble-free operation
- * Complete documentation included

PLUS these exciting new features:

Lower profile than the Professional

- * Extended Radio Shack layout
- * Silk-smooth feel—uses ALPS keyswitches

Our Versakey software enhances the keyboard's utility

- * Auto-repeat, n-key rollover and type-ahead
- * F1 becomes DEFINE, F4 becomes CTRL
- * May define up to 128 keys (including their SHIFT, CTRL, and SHIFT-CTRL combinations) as strings of up to 80 characters each.

* Supplied on cassette, may be copied to disk

"Have Josie ship yours today!"

GRAND OPENING SALE

The Premium Keyboard \$89.95
The Professional Keyboard (including software) ~~\$69.95~~ \$49.95
 Versakey software..... SPECIAL! FREE with Keyboard!

Both keyboards carry a 90-day limited warranty.

Please specify your computer's PC board type if known. Otherwise, specify the complete catalog number and serial number.

We have moved to a larger facility in order to serve you better. Please note our new address and phone number.

 Shipping Charges: U.S. \$2.00, Canada \$5.00, COD \$3.50 (No COD's to Canada).

ATTENTION DISK USERS

ARE YOU TIRED OF I/O ERRORS AND LOST DIRECTORY FAILURES

GOLD EDGE CONNECTORS

When these edge connectors are attached to the Color Computer/System 100 Disk controllers, the dreaded I/O error and lost directory failures may be virtually eliminated. These problems can be caused by oxidation of the tinned connectors on the disk controller; which can cause a poor electrical contact between the disk controller and the computer. The installation of these connectors DOES REQUIRE SOLDERING. THESE GOLD CONNECTORS ARE SOLDERED DIRECTLY TO THE EDGE CONNECTORS OF THE DISK CONTROLLER. INSTALLATION OF THESE CONNECTORS MAY VOID THE WARRANTY ON THE DISK CONTROLLER.

KIT INCLUDES TWO CONNECTORS AND COMPLETE INSTRUCTIONS FOR EASY INSTALLATION.

PRICE: \$ 17.95 + \$ 1.00 shipping (Installation not included)

★ ASK YOUR DEALER ABOUT THEIR INSTALLATION SERVICES ★

CUSTOM INSTALLATION (includes connectors)

\$ 35.95 + \$ 4.00 return shipping

INSTALLATION AND UPS 2nd DAY SERVICE WITHIN 5 DAYS OF RECEIPT OF DISK CONTROLLER

PRICKLY-PEAR SOFTWARE

QUALITY PROGRAMS FOR YOUR COCO & TDP-100

PROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTHERWISE NOTED.

GREAT NEW ADVENTURE ADVENTURE IN WONDERLAND 100% MACHINE LANGUAGE

We are going to go out on a limb here. We believe very strongly that this is the BEST adventure game ever written for the color computer. That's right, we said the BEST — no exceptions!!

Adventure in Wonderland is 100% machine language, and completely fills a 32K machine. The program has a vocabulary of literally HUNDREDS of words, and uses a full "ELIZA" type of intelligence simulator. That means you can give commands and conduct conversations in WHOLE SENTENCES if you like!! Try that with any other adventure!

This is a fantasy world peopled with the creatures of Lewis Carroll's imagination. "Alice's Adventures in Wonderland", "Through the Looking Glass", and "The Hunting of the Snark" have been blended into a delightful landscape. You will play the role of Alice as you wander through the garden of live flowers, the treacherous Tulgey Wood, the chessboard landscape, the wabe, and all the other familiar Wonderland scenes. You will meet, and talk with, the beamish Tweedle Dee and Tweedle Dum, the mimsy Mock Turtle, the uffish Duchess, the immortal Humpty Dumpty, and a dozen other Wonderland characters. And, of course, you will chit-chat with the Cheshire Cat!!

As we said, you have a vocabulary of HUNDREDS of words — not the usual stingy 30 or 40. The program's response to these words will vary depending on the situation, where you are, who you

are talking with, what you have said in the past, and the way in which the words are combined. Your task is to become Queen, save Wonderland from the Snark, and manage to return home. You may feel completely trapped in certain places in Wonderland, but there is always a way out . . . in fact, there are always (at least) three exits from each trap. An open mind, a pure heart, and a touch of Wonderland madness will keep you from despair!!

This is not an easy adventure, and will provide ample challenge for the most experienced adult players, but you will have so much fun conversing with the denizens of Wonderland that you may not want to leave anyway. We want to repeat what we said above, because we really mean it. WE BELIEVE THIS TO BE THE VERY BEST ADVENTURE EVER WRITTEN FOR THE COLOR COMPUTER. After you have tried it, you'll think so too! 100% machine language — Fully 32K long. **Tape - \$24.95; Disk - \$29.95**

Programs are available on AMDEK cartridges - add \$5.00 to the disk price.

Your personal check is welcome - no delay. Include \$1.50 shipping for each program ordered. (Shipping free on \$50.00 or larger orders). AZ residents add 7% sales tax. Orders shipped within two days.

Graphics Special — The '178' *POKE*

By Jim Hall

In the past few months there have been quite a few articles showing you how it is possible to display several colors on the high-resolution screens using complicated programs. Well, I have found how to display not only the four basic colors, but also 252 different patterns on the hi-res screens. Even better, no special program is necessary. Simply manipulate memory location 178. Almost any Extended BASIC graphics command located after *POKE*ing a number into 178 in a program will then use the pattern specified by the number poked to produce a spectacular effect! Here's a short program to show you what I'm talking about:

```

10 PMODE3, 1: SCREEN1, 1: PCLS
20 X=RND(126): Y=RND(96): X2=255-X
   : Y2=191-Y: W=RND(X): H=RND(Y)
30 N=RND(255): POKE 178, N
40 LINE (X, Y) - (X+W, Y+H), PSET, BF
50 LINE (X2, Y) - (X2+W, Y+H), PSET, BF
60 LINE (X, Y2) - (X+W, Y2+H), PSET, BF
70 LINE (X2, Y2) - (X2+W, Y2+H), PSET,
   BF
80 GOTO 20
    
```

Line 30 does the trick. It *POKEs* a random number into location 178. All graphics commands after this line will use the pattern corresponding number located in 178 just as if it were one of the standard colors.

As I said, this method can be used for almost any graphics command (PCLS is the only one I could find that would not work). The following example shows how the *PAINT* command will use location 178.

```

10 PMODE4, 1: SCREEN1, 1: PCLS
20 COLOR1, 0
30 CIRCLE(126, 96), 50
40 POKE 178, 56
    
```

(Jim Hall is a senior at the Columbus Academy and has been working with the Color Computer for 3 years.)

```

50 PAINT (126, 96), , 1
60 GOTO 60
    
```

I did not specify the paint color in line 50. This forces Extended BASIC to use the number in location 178 (56 in this case) to specify what pattern to use. Incidentally, if the following line were typed in:

```
45 COLOR 1, 0
```

the number stored in location 178 would be changed to a 1 by Extended BASIC and the circle would be filled in with white.

You're probably anxious to start using this new capability in your own programs by now, but are wondering if there is any logical connection between the number you choose to put in 178 and the pattern that results. The way Extended BASIC interprets the value is hard to explain—the "bit pattern" of the number that is stored in 178 is not directly used to fill in shapes and so there doesn't appear to be any logical connection. However, I created a program to display the 255 different patterns and colors to help you choose which ones are best for your program.

"... I have found how to display not only the four basic colors, but also 252 different patterns on the hi-res screens. Even better, no special program is necessary. Simply manipulate memory location 178."

Pressing the arrow keys will move the blinking box onto different patterns. Pressing "?" (or "/") will print the number to be *POKEd* into 178 to produce the pattern inside the blinking box. Press any key to return to the display. Pressing "b" will fill a large square with the selected pattern. Pressing the spacebar will fill a circle, box, and draw some lines using

BALLOON ATTACK

by Tim Purves from Computer Shack

New and totally different! Not only a great game with plenty of action but an exceptional learning tool to improve your programming skills. Included is the complete commented printout of the entire source code. See how the game was written and executed so that the mad balloonist drops bombs on unwary pedestrians. You can run and dodge, but to no avail, he'll get you, it's just a matter of time!

TRS80 Color Tape \$34.95
20% OFF SALE
Now til Oct. 31 \$25.56

COLOR BIORHYTHMS

from Armadillo Int'l Software

Predict your "good days"! Enter your birthdate and each of the biorhythms will be drawn... physical, emotional and intellectual. Uses a graphic mode not normally available without extended basic to produce high resolution graphics. What will happen on your next critical day?

22846 TRS80 Color 16K Tape \$10.95

FRENCH, SPANISH or ITALIAN BASEBALL

from Computer Island

Creative foreign language vocabulary games for learning and practicing. Each has about 100 words for you to translate to score a single, walk or homerun. Programs can be user modified to change the words and keep building your fluency. Requires Extended Basic.

the pattern. (Notice that when any key is pressed, the display will "scroll" using the subroutine starting at line 600. This may also be useful in your own programs.) Pressing "M" will switch the display between PMODE4 and PMODE 3, and pressing "S" will switch the screen number.

I'm sure you see the potential now of this technique. I can only guess why Radio Shack did not include this capability in Extended BASIC. Perhaps they thought it would confuse the beginning programmer.

Submitting Material To the Rainbow

Contributions to *the RAINBOW* are welcome from
everyone. We like to run a variety of programs which will be
useful/helpful/fun for other CoCo owners.

Program submissions must be on tape or disk and it is best
to make several saves, at least one of them in ASCII format.
We're sorry, but we do not have time to key in programs. All
programs should be supported by some editorial
commentary, explaining how the program works. We're
much more interested in how your submission works and
runs than how you developed it. Programs should be
learning experiences.

We do pay for submissions, based on a number of criteria.
Those wishing remuneration should *so state* when making
submissions.

For the benefit of those who wish more detailed infor-
mation on making submissions, please send a SASE to:
Submissions Editor, *the RAINBOW*, P.O. Box 209,
Prospect, KY 40059. We will send you some more
comprehensive guidelines.

Please do not submit programs or articles currently
submitted to another publication.

A Personalized Certificate Can Reward Young Computerists

By Steve Blyn

The computer revolution has finally materialized in many schools and homes. Many children are involved in learning either computer literacy or basic computer programming. This article will present one way to reward these children for their efforts and accomplishments.

Rewards are a wonderful way of encouraging children to further learning. The rewards do not always have to be glamorous or expensive. Sometimes the simple is more effective than the complex. My three-year-old daughter would much rather receive a bag of 29 cent balloons than an expensive doll. (I know from past experience that I won't get away with that too much longer.) A certificate generated by the computer can perhaps similarly be more effective a reward than something bought by an adult in a store.

How are the children learning material about computers and programming? There are several fine possibilities. They can be using the manuals, a good text, or perhaps the teacher may have developed his/her own curriculum. Whichever the case may be, I'm sure that the long range aim is divided into certain steps or goals along the way. There are usually chapters or units to be mastered. When these steps are reached, the computer can generate a card or certificate to reward those particular accomplishments.

It is my suggestion that certain key expressions can be developed by your kids for their accomplishments. The expressions will have more meaning if the kids think of them on their own. A little contest to think up the best titles or expressions may be a good idea. Some of the suggestions from kids that I work with are: COMPUTER WIZARD, COMPUTER WIZZ, COMPUTER ACE WIZARD, COMPUWIZ, COMPUNUT, CHIPS 1, 2 or 3, FIRST, SECOND or THIRD CLASS OPERATOR. Of course, such titles only matter if they have some meaning and importance to the kids. The particular message or messages that you choose can be as individual as are the kids.

The certificate that I will illustrate is for the logo WIZARD. With a little doodling, you may change this to any other logo. You will need a printer to get a hard copy of the certificate. A low resolution and a high resolution program listing are given.

Any model printer that interfaces with any CoCo model will produce the low resolution version. Line 40 of the low res version asks if you have your printer turned on. If you enter "N" you will see the card on the screen. If you press "Y" you will get a printout of the card. Run the program as many times as you want to keep making cards. If you press "Y" and your printer is not on, then the computer will hang up. Don't panic: Either turn the printer on or turn the computer off and start again.

The high resolution version can be viewed on any Extended BASIC CoCo. A printer with graphics ability and a screen dump program are necessary to printout out this version. Lines 350—570 set up the strings to draw the necessary letters. Lines 70—320 draw out the certificate.

I hope that your children enjoy using these certificates. Both you and they will receive satisfaction in designing your own reward cards. We at Computer Island would love to see the results of your creations.

Direct Graphic Design

By Don Inman
Rainbow Contributing Editor

This handy tool allows you to 'design graphic figures directly on the screen.'

This month's article borrows a program that appeared in "Assembly Language Graphics" by Don and Kurt Inman. My son, Kurt, wrote the program in two versions—one in Extended Color BASIC and one in 6809 Assembly Language. A modification of his BASIC program is presented here.

In many past articles and in most of my books, I have designed graphic figures on paper before writing computer programs to produce them on the screen. Kurt's program takes a different approach. It allows you to design graphic figures directly on the screen. When a final version is ready, the program provides you with the data necessary to produce the figure. This data can be used in any program that requires that figure.

The figure is designed in the text mode using block graphics on a 12 x 8 grid which is placed at the center of the screen. The color blocks in the grid are converted from BASIC color codes to hexadecimal data bytes that are *POKEd* into the graphics screen area. The conversion from the rectangular blocks on the text screen to colored pixels on the high-resolution graphics screen does not produce a one-to-one correspondence.

To aid in the development of the final picture, the program allows you to go back and forth between your experimental blocks and the results produced in high-resolution.

As the program begins, the title appears at the top of the screen. The color set and drawing color are shown at the right of the grid. A cursor is placed at the upper left position inside the 12 x 8 grid. The command prompt appears at the bottom left of the screen.

Figure 1 — Beginning Screen

The colors that are used in the experimental block mode are those of *Pmode 3*.

Color Set 0	Color Set 1
1 = green	5 = buff
2 = yellow	6 = cyan
3 = blue	7 = magenta
4 = red	8 = orange

Table 1 — Colors Used

(Don Inman is the acknowledged master of micro-computer graphics and the author of a large number of books, including "TRS-80 Color Computer Graphics and Assembly Language Graphics for the TRS-80 Color Computer" with Kurt Inman.)

The following one-key commands are used to create the figures.

	Typed Symbol	Command
1	↑	move cursor up
2	↓	move cursor down
3	←	move cursor left
4	→	move cursor right
5	C	change draw color
6	S	change color set
7	<space>	set block where cursor is located
8	—	erase block where cursor is located
9	D	display data table
10	T	test (draw figure in PMODE 3)
11	R	restart with a clear grid

Table 2 — Graphic Creator Commands

The first four commands (↑, ↓, ←, →) are used to move between blocks of the grid. The fifth and sixth commands (C and S) are used to select the drawing color and the color set used. If you desire to color a block, the space bar is pressed. If you change your mind and wish to erase a colored block, press the dash (—).

The last two commands (T and R) are used to either start over with a clear grid or to leave the text mode and go to the high-resolution 4-color graphics mode to view the results, whether temporary or final.

When you have decided on the final figure, the ninth command (D) will display a table of the data bytes which can be *POKEd* into the graphic screen's addresses to produce the high-resolution figure. The data may be saved and used in some future BASIC program.

SCREEN DATA

ADDRESS	DATA BYTES (HEX)
XXXX + 00	00 00 00
XXXX + 32	00 00 00
XXXX + 64	00 00 00
XXXX + 96	00 00 00
XXXX + 128	00 00 00
XXXX + 160	00 00 00
XXXX + 192	00 00 00
XXXX + 224	00 00 00

HIT ENTER TO RETURN TO GRID

Figure 2 — Data Byte Screen Format

Any value within the screen area may be chosen for XXXX as the display address. The data bytes from your drawing will replace the zeros shown in this diagram

Three arrays are used. G is a 12 x 8 array that holds the color code for each cell of the block drawing.

G(1,1)

G(12,8)

Figure 3 — Grid for Experimental Drawing

M is a 3 x 8 array that holds the data bytes (see Figure 2) generated to create the high-resolution drawing. C\$ is a nine-element single dimension array that holds the nine color names used for the border of the grid and the blocks of the experimental drawing.

Five variables are used.

Variable	Function
CS	color set (0 or 1)
CC	current drawing color code (1—4 or 5—8)
OC	old color (color code saved under cursor)
CX	X-position of cursor (1—12)
CY	Y-position of cursor (1—8)

Program by Modular Functions

The program is broken into 15 functional modules. This makes the program easier to understand and easier to explain. The program will be shown and explained by modules. The complete program appears at the end of the article. This program could be written more efficiently, but it is presented in this form so that the similarities and differences of the functional modules can be easily seen.

Module 1 (lines 100—199) — Dimension, Read and Assign

The arrays are dimensioned in line 110. Line 120 fills array C\$ by reading the data of line 130. Line 140 sets the original conditions: color set = 0, current drawing color = green, old color = green, cursor in position (1,1) of the grid. Lines 150—170 read the old color code into each element of the grid array (see Figure 3).

```

100 REM * DIMENSION, READ, AND A
101 SSIGN
110 DIM G(12,8),M(2,7),C$(8)
120 RESTORE: FOR X=0 TO 8: READ
121 C$(X):NEXT X
130 DATA BLACK, GREEN, YELLOW, BLUE
131 , RED, BUFF, CYAN, MAGENTA, ORANGE
140 CS=0:CC=1:OC=1:CX=1:CY=1
150 FOR X=1 TO 12: FOR Y=1 TO 8
160 G(X,Y)=OC
170 NEXT Y,X
199 '

```

Module 2 (lines 200—299) — Draw Borders

Line 210 prints the title. Lines 220—240 draw the top and bottom of the grid's border. Lines 250—270 draw the sides. Lines 280 and 290 draw the four corners.

```

200 REM * DRAW BORDERS *
210 CLS: PRINT@4, "FIGURE CREATIO
N PROGRAM";
220 FOR X=0 TO 12
230 PRINT@106+X, CHR*(156);:PRINT
@394+X, CHR*(147);
240 NEXT X
250 FOR Y=0 TO 7
260 PRINT@128+9+32*Y, CHR*(154);
270 PRINT@128+22+32*Y, CHR*(149);
: NEXT Y
280 PRINT@105, CHR*(158);:PRINT@1
18, CHR*(157);
290 PRINT@393, CHR*(155);:PRINT@4
06, CHR*(151);
299 *

```

Module 3 (lines 300—399) — Display Array

A subroutine (at line 5010) is called at line 310 to fill in the grid with color, provide color data, and print the cursor. The subroutine provides the original picture and updates of any color changes.

```

300 REM * DISPLAY *
310 GOSUB 5010
399 *

```

Module 4 (lines 400—499) — Get Command

Line 410 prints, or reprints, the command prompt and erases the OLC command. Line 420 provides for the input of a new command (see Table 2). When starting the program, the screen at this point looks like the diagram in Figure 1.

```

400 REM * GET COMMAND *
410 PRINT@449, "COMMAND?";STRING#
(15, " ");
420 A$=INKEY$:IF A$="" THEN 420
499 *

```

Module 5 (lines 500—599) — Up-Arrow

Line 510 tests to see if an up-arrow command has been given. If not, program control is passed to Module 6 at line 610. If an up-arrow has been pressed, line 520 checks to make sure that the cursor position is not in the top row. If it is, the cursor cannot move up or it will leave the grid. In that case, the command is rejected, and control returns to Module 4 for a valid command. If the cursor can move up, line 530 updates the variables. The old color code is placed in the current grid block, and the cursor's Y coordinate is decreased. The old color of the new block is saved in the new grid position. Line 540 then prints the cursor in the new position. Line 550 restores the old color of the previous position, thus erasing the cursor from that position.

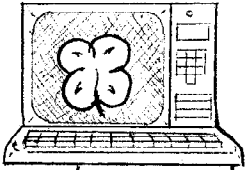

On the Screen		In the Array	
Before	After	Before	After
Yellow	C(5,3)	OC = 3	OC = 2
	C(5,4) blue	blue	yellow
C(X,Y) = C(5,4)		C(X,Y) = C(5,3)	

After the cursor has been moved and the old color restored, control is passed to Module 4 for a new command.

```

500 REM * UP-ARROW *
510 IF A$<>"^" THEN 610
520 IF CY-1<1 THEN 410
530 G(CX,CY)=OC:CY=CY-1:OC=G(CX,
CY)
540 PRINT@138+32*(CY-1)+(CX-1), "
X"; ← an inverted X
550 PRINT@138+32*(CY)+(CX-1), CHR
$((G(CX,CY+1)-1)*16+143);:GOTO 4
10
599

```

THE STEREO COMPOSER

YOUR COMPUTER NEVER SOUNDED SO GOOD

The **STEREO COMPOSER** music synthesizer was developed for the true music lover. All the features available for the **COMPOSER** described below are also available for the **STEREO COMPOSER**. However, instead of using the single 6 bit digital to analog converter built into the computer and the speaker built into your TV, the **STEREO COMPOSER** uses two 8 bit digital to analog converters which drive two audio power amplifiers. These amplifiers supply enough audio power to easily drive your own external speakers. If you like, the output may be connected to your home stereo system to further increase fidelity. Connection is provided by two phono connectors. If the music is too loud, two built-in volume controls are provided to allow you to control the volume of each of the channels separately. The advantage of being able to use external high quality speakers is obvious. The use of higher quality digital to analog converters serves to further increase music fidelity.

The **STEREO COMPOSER** produces music in stereo. Of the 4 voices produced, 2 are directed to each channel. This ability alone increases the realism of the music. You can even move the voices between speakers as the music plays.

The **STEREO COMPOSER** comes assembled, tested, burned in, with all the software and hardware to allow you to immediately start enjoying your music. A complete manual and examples are provided to give you everything you need.

The **STEREO COMPOSER** is completely compatible with the Radio Shack disk system. Any expansion unit will allow you to have both a disk and the **STEREO COMPOSER** operating.

Requires Extended BASIC and Minimum of 16K

STEREO COMPOSER (Hardware, Cassette and Disk) \$89.95

THE COMPOSER

The **COMPOSER** is a 4 voice music compiler which easily allows one to develop high quality music. Each voice is programmed separately. In addition, each voice uses its own waveshape table which means a unique sound for each of the 4 voices.

The **COMPOSER** features a 7 octave range. It supports dotted and double dotted notes as well as eighth, quarter, and standard triplet notes. Sixteenth and thirty second notes are also supported.

The **COMPOSER** allows the music to be played at any tempo and in any key. And believe it or not, the tempo and key can be modified as the music plays. This gives the user tremendous versatility in developing music. Key modification also allows the user to move the music up or down one or more octaves.

The **COMPOSER** displays a constantly changing random kaleidoscope pattern as the music plays. In addition, the number of the note being played is displayed which aids one in finding sour notes during music development. Both of these displays can be disabled to allow any screen to be displayed while the music is playing. In this way, one can show the words to a song or display a picture as the music plays.

The **COMPOSER** develops a machine language position independent subroutine that can be Saved, Loaded, and Executed independent of all other software. This means that you can share your music with friends. In fact, you can write your own BASIC programs that call and play the music. Software vendors may include the music in their own product.

The **COMPOSER** is menu driven making it extremely easy and friendly to use and operate. A thick operating manual is provided as well as 20 minutes of music. Many examples are given to aid the user in getting started. All you need is provided, no additional hardware is necessary. Don't let the price fool you, the **COMPOSER** has got to be heard to be appreciated. For reviews see June '83 *RAINBOW*, p. 192 and May '83 *Color Computer News*, p. 74.

Requires Extended BASIC and Minimum of 16K

CASSETTE VERSION \$24.95
DISK VERSION (32K) \$29.95

THE VOICE

WHY PAY \$100 OR \$150 FOR A SPEECH SYNTHESIZER?

Buy the \$29.95 special and find out. Better yet, save your money and read one man's opinion in the August '82 issue of *CCN* on page 53. It's a fact of life that you get what you pay for. You simply can't accurately duplicate a speech synthesizer in software. Software synthesizers will give you either a limited vocabulary, use up a lot of memory, produce poor quality speech, or a combination of all three.

THE VOICE is a hardware synthesizer that plugs into the cartridge slot. It uses a sophisticated integrated circuit, the SC-01 by VOTRAX, to reproduce any word in English as well as other languages using phonemes. Phonemes are basic units of speech of which 64 are available at 4 inflections. This chip costs us \$55. If you supply the chip, deduct \$55.

THE VOICE has two outputs. Speech may be heard through the TV speaker, or the built-in audio power amplifier may be connected to your own external speaker. If the volume is too high, a built-in volume control is provided.

THE VOICE comes assembled, tested, burned in, with all the necessary hardware and software. A complete manual with many examples is provided to get you started in developing your own programs.

THE VOICE is completely compatible with the Radio Shack disk system. Any expansion unit will allow you to have both a disk and **THE VOICE** operating.

Software Included With **THE VOICE**

BINGO The **VOICE** announces the **BINGO** titles while you play the game.

MATH TUTOR The **VOICE** tutors your child in learning arithmetic.

HIGH LOW The **VOICE** gives you hints in guessing a number it has picked.

EDITOR This utility program will help you develop words phonetically.

THE VOICE (Hardware, Cassette, and Disk) \$149.95

THE VOICE (As above without SC-01) \$ 94.95

THE TRANSLATOR

The translator is a machine language program that uses a built-in dictionary and a sophisticated program algorithm developed by Del Software to automatically convert text to speech. For example, AS "THIS IS ALMOST TOO EASY" followed by calling a USR will allow the **VOICE** to speak. The translator will even allow you to type words in one language (i.e. French) and have the **VOICE** speak in another (i.e. German). Nobody else gives you that flexibility. For 16K, 32K and 64K machines.

Software Included With The Translator

REACTION Test your reflexes as the **VOICE** gives you commands.

SIMON Test your memory for numbers spoken by the **VOICE**.

THE TRANSLATOR (Cassette or Disk) \$29.95

HOW TO ORDER

We accept CASH, CHECK, COD, VISA, and MASTER CARD orders.

Shipping and handling for all products in the continental US and Canada \$2.00

Shipping and handling for all products outside the continental US and Canada \$5.00

COD charge (requires cash, certified check, or money order) \$2.00

Illinois residents add 5 1/4% sales tax for the **STEREO COMPOSER** or **THE VOICE**.

Module 6 (lines 600—699) — Down-Arrow

This module performs in a similar manner as Module 5 except for the down-arrow. The cursor is moved down one row.

```
600 REM * DOWN-ARROW *
610 IF A$(<>CHR$(10)) THEN 710
620 IF CY+1>8 THEN 410
630 G(CX,CY)=OC:CY=CY+1:OC=G(CX,
CY)
640 PRINT@138+32*(CY-1)+(CX-1),"
[X]"; ← inverted X
650 PRINT@138+32*(CY-2)+(CX-1),C
HR$((G(CX,CY-1)-1)*16+143);:GOTO
410
699 '
```

Module 7 (lines 700—799) — Left-Arrow

Performs in a similar manner to Modules 5 and 6 except for the left-arrow. The cursor is moved left one column.

```
700 REM * LEFT-ARROW *
710 IF A$(<>CHR$(8)) THEN 810
720 IF CX-1<1 THEN 410
730 G(CX,CY)=OC:CX=CX-1:OC=G(CX,
CY)
740 PRINT@138+32*(CY-1)+(CX-1),"
[X]"; ← inverted X
750 PRINT@138+32*(CY-1)+CX,CHR$
(G(CX+1,CY)-1)*16+143);:GOTO 410
799 '
```

Module 8 (lines 800—899) — Right-Arrow

Performs in a similar manner to Modules 5, 6 and 7 except for the right-arrow. The cursor is moved one column to the right.

```
800 REM * RIGHT-ARROW *
810 IF A$(<>CHR$(9)) THEN 910
820 IF CX+1>12 THEN 410
830 G(CX,CY)=OC:CX=CX+1:OC=G(CX,
CY)
840 PRINT@138+32*(CY-1)+(CX-1),"
[X]"; ← inverted X
850 PRINT@138+32*(CY-1)+(CX-2),C
HR$((G(CX-1,CY)-1)*16+143);:GOTO
410
899 '
```

Module 9 (lines 900—999) — Other Commands

If none of the arrow commands have been pressed, this module looks for other requests. Line 910 checks for a space (change drawing color). If it has been pressed, the current color code replaces the old color of the block where the cursor exists. Control is passed to Module 4 for a new command.

Line 920 checks for a dash (erase old color). If pressed, the old color code is replaced by either 1 (green) or 5 (buff) depending upon which color set is being used. Control is passed to Module 4 for a new command.

Line 930 checks for the letter R (restart). If pressed, control is passed to the beginning of the program where a clear grid is provided for a new start.

Lines 940 through 970 test for change of color set (S), change of color (C), test (T), and display data (D). Control is passed to the appropriate module to perform the command.

Line 980 provides a final check. If an invalid command key has been pressed, control is returned to Module 4 for another attempt at a valid command.

```
900 REM * OTHER COMMANDS *
910 PRINT@458,A$;:IF A$=" " THEN
OC=CC:GOTO 410
920 IF A$="-" THEN OC=4*CS+1:GOT
O 410
930 IF A$="R" THEN 120
940 IF A$="S" THEN 1010
950 IF A$="C" THEN 1110
960 IF A$="T" THEN 1210
970 IF A$="D" THEN 1310
980 GOTO 410
999 '
```

Module 10 (lines 1000—1099) — Change Color Set

Line 1010 changes the old color and the current color to corresponding values in the new color set:

- | | | |
|------------|--------|-------------|
| (1) green | <----> | (5) buff |
| (2) yellow | <----> | (6) cyan |
| (3) blue | <----> | (7) magenta |
| (4) red | <----> | (8) orange |

Lines 1020—1040 change all color codes in the grid array to those of the corresponding values of the new color set.

Line 1050 changes the color set value and passes control to Module 3 to update the display with the new colors.

1270 PCLS:SCREEN 0,0:GOTO 410
1299 '

```

Module 13 (lines 1300—1399) — Display Figure Bytes

Line 1310 calls the subroutine (at line 4010) that calculates the data bytes that produce the high-resolution drawing. Line 1320 prints a heading for the table of data bytes. Lines 1330—1380 put the values into tabular form. Line 1390 prints a prompt telling how to return to the experimental grid.

EPROM BURNER/ROM EMULATOR FOR YOUR COLOR COMPUTER

The ProtoEPROM-CC from Prototech, Inc. will program and run 2716, 2732, and 2732A EPROMs. With the built-in 4K of RAM you can create and debug your own program pack software, then copy it into EPROM. Plug the disk (or program pack) into the expansion port of the ProtoEPROM-CC to save or load EPROM images on disk. Both RAM and EPROM are programmable directly from BASIC or from assembly language. The ProtoEPROM-CC plugs in to your Color Computer ROM slot and is completely powered by the Color Computer.

Super "Color" Library™

Gold Label Software for the V.I.P. in Everyone

No matter what kind of problem you are trying to solve with the Color Computer, there is a program in the ever-expanding integrated, **Super "Color" Library** that will give you the solution. Faster, Better, Smarter!

Every Library program features **MEMORY-SENSE** to determine your computer's memory, from 16 to 64K, and adjusts automatically to maximize work space. All programs, except the **Super "Color" Speller** and **Super "Color" Disk-ZAP**, feature a true lowercase display with below line descenders. Each program has been written specifically for the Color Computer in fast machine code to be totally compatible for optimum performance — Something a motley assortment of programs from diverse sources or a passel of overpriced, wallet-FLEXing software from a bygone era simply can not achieve.

The **Super "Color" Library** has all the power, speed, dependability and compatibility you will ever need so build your library a volume at a time or put the full power of the complete library of problem solvers to work right away.

VERSION 3.0 By Tim Nelson
THE INTELLIGENT WORD PROCESSOR

32x16 &
51-64-85x21&24
WITH REAL
LOWERCASE
DISPLAY

The **Super "Color" Writer II** is for those who desire the best. It is the most powerful, fastest, most dependable and versatile word processor available for the Color Computer, from 16 to 64K. The **Super "Color" Writer II** has features for the most demanding professional, yet it is easy enough for newcomers to master.

Of course the **Super "Color" Writer II** has all the features you would expect from the highest quality word processor, such as a clear, crisp and readable professional display with your choice of display colors, 9 display formats, standard 32x16 & 51-64-85x21 & 24 with real lowercase descenders, full 4-way cursor control, sophisticated edit commands, the ability to edit any BASIC program or ASCII textfile, seven delete functions, locate and change, wild card locate, a real block move & copy, word wrap-around, programmable tabs, display memory used and left, non-breakable space, multiple headers and footers, dynamic text formatting, comprehensive format parameters, use with ANY printer at any baud rate from 110 to 9600 baud, automatic justification, automatic pagination, automatic centering, automatic flush right, underlining, superscripts, subscripts, pause print, single-sheet pause, optionally print comments, append text files, available in a ROMPAK cartridge for maximum work space, but that's only half of the story. No other program can even begin to compare in features with the **Super "Color" Writer II**.

Check These Exclusive Features

MEMORY-SENSE adjusts to computer's memory (16-64K) for maximum work space, **TYPE-AHEAD**, **TYPAMATIC KEY REPEAT** and **KEY BEEP** for the pros, 3 **PROGRAMMABLE FUNCTIONS**, **AUTO PHRASE INSERT**, **COLUMN CREATION**, **TEXT FILE LINKING**, **HELP MENU**, A **TRUE EDITING WINDOW IN ALL 9 DISPLAY MODES**, **TRUE FORMAT WINDOW** to display line lengths up to 255 characters, with horizontal and vertical scrolling to replicate the printed page including centered lines, headers, footers, page breaks, page numbers, margins, giving a perfect printed document every time. Also makes hyphenation a snap; **TRUE AUTOMATIC JUSTIFICATION** for neat, even left and right hand margins; Ability to use **CHARACTER CODES** for printing special characters available with your printer, freedom to embed as many **PRINTER CONTROL CODES** as desired anywhere in the text, **EVEN WITHIN JUSTIFIED TEXT**; 90-plus page tutorial manual.

ADDITIONAL DISK FEATURES: Read a directory, Display free granules, Save with Automatic Verification, Load and Append ASCII files, and BASIC programs, Kill files, and Link files from disk for continuous printing, 54K bytes of workspace available with a 64 K system. Only the best offers all of these features.

Tape & Disk require 32K

Super "Color" Speller™

By Peter A. Stark

The **Super "Color" Speller** is a fast machine-code proofreading program to correct **Super "Color" Writer** files. Automatically proofreads your documents against a 20,000 word stock dictionary, plus your own customized dictionary and corrects typos or marks them for special attention.

AVAILABLE ON DISK ONLY \$69.95

All library programs also available on Amdisk III diskettes for an additional \$3.00

32x16 & 51-64-85x21&24 Display With Lowercase Descenders And **16** Thru **64K** Too!

Super "Color" Calc™

ELECTRONIC SPREADSHEET By Kevin Herrboldt

Now you can answer those "What if?" financial projection, forecasting, budgeting, engineering and calculating questions with precision, speed and power using the **Super "Color" Calc**, truly the finest electronic worksheet and financial modeling program available for the Color Computer, from 16 to 64K. Now every Color Computer owner has access to a calculating and planning tool rivaling **VisiCalc™** containing all its features and commands and then some. You need only change one variable and you instantly see how that change affects your assumptions. You can even use **VisiCalc** templates freely with **Super "Color" Calc!** Combine spread sheet tables with **Super "Color" Writer II** documents to create ledgers, projections, statistical and financial reports and budgets.

Features include: 9 display formats; standard 32x16 & 51-64-85x21&24 with real lowercase descenders * MEMORY-SENSE to adjust to computer's memory (16-64K) for maximum work space; Full-size 63x256 worksheet * Easy to use * HELP Menus to make learning faster * Machine code speed and high precision * Total flexibility in calculating * Up to FOUR VIDEO DISPLAY WINDOWS to compare and contrast results of changes * Sine and Cosine functions, Averaging, Exponents, Algebraic functions, and base 10 or 16 entry * Multi-layered Column and Row Ascending and Descending sorts * Locate formulas or titles in fields * Easy entry, replication and block moving of frames * Global or Local column width control up to 81 characters each * Create titles of up to 255 characters * Typematic Key Repeat * Key beep * Type-ahead * Print up to 132 column worksheet * Prints at any baud rate from 110 to 9600 * Print formats savable along with worksheet * Enter control codes for customized printing.

DISK FEATURES: Read a directory; Display free granules; Kill files, Save with Automatic Verification; Load files; Append disk files for complete worksheet printing, 54K bytes of worksheet space available with a 64K system.

Tutorial and sample templates are supplied with the program.

ROMPAK \$89.95

DISK \$99.95

Disk requires 32K for lowercase display.

Super "Color" Disk-ZAP™

Raved About In The April 1983 Issue Of RAINBOW!

Now the dreamed-of repair of I/O errors is a reality. The **Super "Color" Disk-ZAP™** is the ultimate repair utility for simple and quick repair of all repairable disk errors. Designed with the non-programmer in mind, the **Super "Color" Disk-ZAP™** will let you retrieve all types of bashed files, including BASIC and Machine Code programs.

This high-speed machine code disk utility has a special dual cursor screen display to show HEXIDECIMAL and ASCII displays simultaneously. You are able to: Verify or modify disk sectors at will * Type right onto the disk to change unwanted program names or prompts * Send sector contents to the printer or any other RS-232 device * Search the entire disk for any grouping of characters * Copy sectors * Backup tracks or entire disks * Repair directory tracks and smashed disks * Full prompting to help you every step of the way * 50-plus page Operators Manual which helps you simply and quickly fix the vast majority of disk errors, and teaches the rudiments of disk structure and repair.

AVAILABLE ON DISK ONLY \$49.95

**WE TAKE THE COLOR COMPUTER SERIOUSLY.
AUTHORS' SUBMISSIONS ARE ENCOURAGED.**

Super "Color" Terminal™

THE FINEST TERMINAL PROGRAM ANYWHERE!

Version 3.0 By Dan Nelson

The best has become even better, with many new features including 9 display formats; 32x16 & 51-64-85x21&24 with real lowercase descenders, plus compatibility with the 64K Color Computer. This user-friendly program makes communicating with ANY computer a breeze even for a newcomer. Communicate using your modem with all the popular information services such as Dow Jones, Compuserve, The Source, and local BBS's, clubs, friends, or the main-frame at work. You can also communicate directly with other microcomputers, such as the TRS-80 I/III, II, other Color Computers, Apples, IBM PCs, etc., via RS-232 without using a modem. Save the information or PRINT IT!

FEATURES: MEMORY-SENSE to adjust to computer's memory (16-64K) for maximum work space. Selectively print data at baud rates from 110 to 9600 * 54K of data storage with 64K disk system. 128 character ASCII keyboard * Automatic graphics mode * Word mode (word wrap) for unbroken words * Send & receive **Super "Color" Writer II, Database & Calc** files, ASCII files, Machine Language & BASIC programs * Set communications baud rate from 110 to 9600, Duplex: Half/Full/Echo, Word length: 5 6 7 or 8, Parity: Odd/Even or None, Stop Bits: 1-9 * Local linefeeds to screen * Save and load ASCII files, Machine Code & BASIC programs * Unique CLONE feature for copying any tape * Lower case masking * 10 Keystroke Multiplier (MACRO) buffers to perform repetitive pre-entry log-on tasks and send short messages * Programmable prompt or delay for send next line * Selectable character trapping * Files compatible with other Library programs.

ADDITIONAL DISK FEATURES: Works with up to four Disk Drives; Call a directory, Print free space, Kill disk files, Save with Automatic Verification and Load textfiles or BASIC programs. Save and Load KSM'S to the disk.

TAPE \$49.95

ROMPAK \$59.95

DISK \$69.95

Tape and disk versions require 32K for lowercase display.

Super "Color" Database™

Includes Mail Merge Capabilities

This high speed machine language program including true lowercase displays fills all your information management needs, be they for your business or home. Inventory, accounts, mailing lists, family histories, you name it, the **Super "Color" Database** will keep track of all your data.

The **Super "Color" Database** features MEMORY-SENSE to adjust to computer's memory (16-64K) for maximum work space. It is structured in a simple and easy to understand menu system with full prompting for easy operation. Your data is stored in records of your own design, each divided into as many fields as you need. All files are fully indexed for speed and efficiency. Full sort of records is provided for easy listing of names, figures, addresses, etc., in ascending or descending order. The math package performs arithmetic operations and updates other fields which is especially useful when used as an order entry and invoicing system. You can create reports, or lists for mailings, or whatever. Create files compatible with the **Super "Color" Writer II and Terminal**. Up to five different print formats are available, and control codes may be imbedded for customized printing.

4070 RETURN
4099 '

```

Module 15 (lines 5000—5099) — Inside of Grid

Lines 5010—5030 print the individual colored blocks of the experimental drawing grid. Lines 5040—5060 place the current color information on the screen. Line 5070 returns control to the main program.

```

5000 REM * INSIDE OF GRID *
5010 FOR Y1=1 TO 8: FOR X1=1 TO
12
5020 PRINT@138+32*(Y1-1)+(X1-1),
CHR$( (G(X1,Y1)-1)*16+143);
5030 NEXT X1,Y1
5040 PRINT@120,"COLOR";:PRINT@15
2,"SET=";CS;
5050 PRINT@248,"COLOR=";:PRINT@2
80," ";:PRINT@280,C$(CC);
5060 PRINT@138+32*(CY-1)+(CX-1),
"x";
5070 RETURN
5099 '
9999 END

```

Module 14 (lines 4000—4099) — Create Display Array
Line 4010 opens a loop in which lines 4020—4040 calculate the hexadecimal data bytes. Line 4050 places the bytes in array M. Line 4060 closes the loop, and line 4070 returns control to the main program.

```

4000 REM * CREATE DISPLAY ARRAY
*
4010 FOR Y1=1 TO 8:FOR X1=0 TO 2
4020 X2=1:IF CS=1 THEN X2=5
4030 A1=G(X1*4+1,Y1)-X2:A2=G(X1*
4+2,Y1)-X2
4040 A3=G(X1*4+3,Y1)-X2:A4=G(X1*
4+4,Y1)-X2
4050 M(X1,Y1-1)=A1*64+A2*16+A3*4
+A4

```

Sample Program Use

I first selected color set 1 using the command S.

Next, I changed the drawing color by using the command C.

A 3 was typed, and the lower-right information changed to COLOR = MAGENTA. The command prompt came back on (COMMAND?) in place of the prompt to type the new color code.

UPLOAD \$16.95

This is the UPLOAD side of DLOAD and DLOADM in Extended Color Basic. Send a basic or machine program to another ECB Color Computer. Programs can be passed directly or by phone if both computers are hooked to modems.(not supplied). Uploaded program arrives at the receiving end ready to save, run, or execute. Patch to correct the flaw in DLOADM is supplied in public domain.

INDEXER \$14.95

Program produces a sorted list of variables and line numbers used in your basic program. Following each variable or line number will be a listing of the numbers of the basic lines which contain the variable or line number. RUNNING the basic program is not required. Bonus! Global search of basic program for a variable, a text string, or a basic keyword.

Each card is a complete summary of the reference manuals and the microcomputer. Cards are two or more colors, printed on 80 pound Beckett Antique cover stock or a comparable stock, stretch-wrapped in plastic for shipping. They are accordion-foldup cards, in the same style as the traditional IBM reference cards used on the major computers for years. Fold-up size is eight and one-half by three and three-quarter inches, so they will fit easily into the shirt pocket. These cards provide a complete summary of the manuals plus many extras at your fingertips.

DRAGON 32 MICROCOMPUTER REFERENCE CARD

A sparkling, beautiful 9-color card, with red-orange background, 18 pages, on 80 lb. Beckett cover-stock, stretch-wrapped in plastic for protection until you open it. We have everything but the kitchen sink on this card.

It should save you hours of time, and it fits in your pocket. You have to see it to believe it. (And it has the famous "Magic Number".)

YOUR NAME AND ADDRESS

WHEN YOU SUBTRACT THE
NUMBER OF A GRAPHIC FROM
THE "MAGIC NUMBER" THE
RESULT IS THE NUMBER OF ITS
REVERSE OR INVERSE GRAPHIC

I then moved the cursor around with the arrow keys and used the space bar where the threes appear in Figure 3.

Figure 3 — Partial Block Design

				3	3	3	3					
			3	3	3	3	3	3				
			3	3	3	3	3	3				
3	3	3	3	3	3	3	3	3	3	3	3	3
3	3	3	3	3	3	3	3	3	3	3	3	3
3	3			3	3	3	3				3	3

The color was then changed to orange, and the arrow keys and space bar were used to fill in orange blocks where the twos appear in Figure 4.

Figure 4 — Finished Block Design

				3	3	3	3					
			3	3	3	3	3	3				
			3	3	3	3	3	3				
3	3	3	3	3	3	3	3	3	3	3	3	3
3	3	3	3	3	3	3	3	3	3	3	3	3
3	3	2	2	3	3	3	3	2	2	3	3	
		2	2					2	2			

Any corrections can be made by using the arrow keys with the dash to erase errors or a new drawing color to replace one color block with another.

Try using the program to create the same pattern as in Figure 4. When all finished, press T to see how the pattern looks in high-resolution. Then go back to the grid. Press D to see the data bytes which could be *POKEd* into any area of screen memory to produce the high-resolution result. Figure 5 shows the data bytes produced by the design of Figure 4.

EXPAND YOUR COLOR COMPUTER

USER 80C

USER SELECTABLE EXPANSION REQUIREMENTS

- Activate your disk controller, ROM CARTRIDGES, EPROM board, or any device that normally operates in the expansion slot.
- Protects computer from electrical damage caused by experimental boards or by plugging/unplugging ROM CARTRIDGES and controllers with the power on.
- Gold inlay connector contacts for more reliable operation. Menu-driven software (included). Allows user to operate multiple slots at the same time. (e.g., transfer data from one slot to any other slot).
- Select any of 6 slots with push-button keys or programming.
- Attach additional USER 80C's for more expansion slots.
- Utilizes its own reset button, eliminating the need to continually press the reset behind the computer.
- Operates with a 9V battery eliminator (included). Power supply is independent of computer.
- Has its own on/off switch with LED indicator.
- More to come: analog digital converter, parallel ports for printers and joysticks, four-channel scope.
- Production of experimental boards upon request. (Based on your schematics).

"Designed with the User in Mind" \$249.95

TERMS: Send certified check or money order for \$249.95, plus shipping, handling and applicable sales tax. (Personal checks take three weeks to process.) For shipping and handling include \$5.00 U.S., \$8.00 Canadian/Mexican, \$15 Overseas. Illinois residents include 5% Sales Tax. Prompt shipment. Dealer/Club inquiries invited.

Editor / Assembler CO-RES9

CO-RES9 is a Co-resident Editor / Assembler that will allow you to create, edit and assemble machine language programs for the color computer. It will quickly and efficiently convert assembly language programs into machine code files. It will output machine object code to either cassette tape in a 'CLOADM' compatible format or directly to memory for direct execution.

Text Pro II

"The Professional's Word Processor"

TEXT PROCESSOR FEATURES

- Character Fill
- Programmable Footer
- Right Justify Line
- Multiple Footnotes
- Three Indent Modes
- Three Programmable Headers
- Ten Programmable Tab Stops
- Margin Justification Left & Right
- Decimal Align, Center, Left & Right Justify on Tab Column
- Display & Input from Keyboard
- Change Formatting During Processing

TEXT EDITOR FEATURES

- Single Keystroke Edit Command
- Append Files From Tape or Disk
- Fully Integrated Disk File Handler
- Edit or Process Files Larger Than Memory
- (No Conversion Required) Fully ASC II Compatible
- Full Featured Line Oriented Screen Editor
- Search and Replace Any Character Pattern
- Copy, Move or Delete Lines or Blocks of Text
- Edit Basic, Text or Assembler Files

TEXT PRO II Features Over 70 Commands In All. Disk ... \$79.95

DATA PACK TERMINAL PACKAGE

- Full Text Buffering
- Terminal Baud Rates 300 To 9600 Baud
- Automatic Word Wrap Eliminates Split Words
- Full / Half Duplex
- Automatic File Capture
- Programmable Word Length, Parity & Stop Bits
- Automatic Buffer Size At Memory Limit
- Save & Load Text Buffer To Tape Or Disk
- Send Files Directly From Buffer Or Disk
- Full Disk Support For Disk Version
- Printer Baud Rates 110-4800
- Send Control Codes From Keyboard
- ASCII Compatible File Format

- Display On Screen Or Output Contents Of Buffer To Printer

We also have a disk version available called "DISKPACK." It includes all the commands mentioned plus commands for disk control. They include: Disk Load, Disk Save, Directory, Send Disk File and Kill Disk File. As usual all files are Basic Compatible ASCII formatted files which are also compatible with our Text Editor and Word Processor programs.

GLOMMER: True Graphics for 4K

By David Dawson

If you have a Non-Extended BASIC Color Computer and have been frustrated in your attempts to write graphics programs, this article should help. The program presented and described here will even work on a 4K computer as the display only requires 512 extra bytes, leaving a reasonable amount of memory on any system for program storage. Routines presented can also be adapted, and described techniques applied, to assist in the development of new programs.

In the following, I will present and explain a program that uses the 64 x 64 four color graphics mode that is unsupported by Extended Color BASIC. This mode has the advantages of being a true graphics mode (all dots are independent, unlike the semigraphics modes) and uses the least memory of any of the four color modes—which means 4K computers can use it, too.

This program was designed to use the memory directly below the text screen so it is not recommended for use with the disk drives unless the display memory is moved by changing the *POKEs* in line 70. But doing so will reduce the memory savings, as you will see.

Reserving Graphics Memory

Extended Color BASIC locates graphics memory separate from text screen memory. For many programs, this means 512 trapped bytes during graphics display. With a cassette system this is not necessary and using text memory would reduce the 1024 bytes required for graphics display of the four color mode used here to 512 bytes. The display could quickly be cleared when the text screen is required again as is also demonstrated in the *Glommer* program.

The problem is how to tell BASIC that the 512 bytes below the text screen are needed for graphics. This is easily solved by *POKEing* the BASIC program pointers to a point below the graphics memory required.

By *POKEing* the most significant byte of the top of BASIC program pointer (location 25) with 6, the pointer is located right below the text screen memory. This is because each addition of one to location 25 moves the pointer down 256 bytes. Thus, $6 \times 256 = 1536$ or the pointer points to byte 1536 which is the first byte below the text screen. Another 512 bytes are needed for mode G1C used in *Glommer*, so, if two is added ($2 \times 256 = 512$) and *POKE 25,8 ENTER* is used, any program will be loaded just below the graphics memory needed by mode G1C.

Two problems may appear when using this. First, a syntax error will appear when *RUN* or several other commands are used. This is because BASIC requires that the first byte of program memory be a zero. To cure this, type:

```
POKE(PEEK(25)*256),0 ENTER
```

Second, some garbage will probably be present in the memory now intended for storage of BASIC program lines. Always type: *NEW ENTER* after moving the pointer.

All of this must be done before any program is loaded or typed in. Use the commands listed in the opening remarks of *Glommer* before you begin typing it in and each time it is loaded. Extended BASIC reserves 6K on power-up so *Glommer* will work without the *POKEs* and *NEW* command. This technique is still useful in reserving less graphics memory than Extended BASIC allows.

Go To Graphics

The *POKEs* necessary to select various graphics modes and starting pages are given in the Color BASIC manual so I will not discuss them here. By changing line 60 alone, any mode can begin using the text screen memory. Make sure to *POKE* or *PCLEAR* enough memory for display. If you wish to use the mode used for *Glommer* in your own program, lines 60, 70 and 80 can be lifted out and used (see Table 1).

(David Dawson is a teaching assistant at the University of Nebraska at Omaha and is working on his master's in psychology. He has a wife, Leigh Anne, and a son, Adam.)

Line 40 can also be taken out and used any time the text screen is needed. Routines for clearing the screen, checking the keyboard and checking for player hit (see Table 1) can also be removed and used in other programs once certain variables are considered.

Table 1

Subsections of Glommer Program

Line	Function
40	Go to text screen
60	Set graphics mode
70	Set start of graphics memory
80	Choose color set
90	Clear graphics screen
300	Check keyboard
350	Check for creature near

Drawing Objects

In mode G1C, as well as the other four color modes, two bits specify the color of each dot (pixel) (see Figure 1), which means four pixels are specified by each byte. (For more background see the Color BASIC manual.) Instead of using boolean operators as the Color BASIC manual suggests, four dots could be drawn to graphics memory at a time by converting each set's binary number into decimal and *POKEing* the whole number at once. This is faster than boolean operators and uses much less memory than Extended BASIC's *GET* and *PUT* routines.

The easiest way to produce such a set of numbers is to first draw the image using graph paper as has been done in Figure 1. By using the color key (part a) in the same figure, each dot is then converted to two binary digits. If the dot were to be orange, for example, the two digits would be 1,1. This process continues until the entire object you are interested in is converted to binary digits.

Next, each binary number must be converted to decimal to be *POKEd* in. To convert, use part b of Figure 1. Add the decimal numbers in the diagram which correspond to a one in the binary number you are converting. If a one appears in the leftmost location 128 must be added and so on. Using this, the binary number in row 1 is converted: $00110100 = (128 \times 0) + (64 \times 0) + (32 \times 1) + (16 \times 1) + (8 \times 0) + (4 \times 1) + (2 \times 0) + (1 \times 0)$ or $00110100 = 32+16+4$ or $00110100 = 52$.

Figure 1

The Digitization of Ffloyd

(a)

Bits in decimal	7	6	5	4	3	2	1	0
pixels	128	64	32	16	8	4	2	1
	3		2		1		0	

(b)

two bits specify each pixel as follows:

Bit Pair	mode 0	mode 1
0 0	green	buff
0 1	yellow	cyan
1 0	blue	magenta
1 1	red	orange

(c)

graphic	bit pattern	decimal
	00,11,01,00	=32+16+4=52
	00,11,11,11	=32+16+8+4+2+1=63
	00,11,11,00	=32+16+8+4=60
	00,11,00,00	=32+16=48
	10,10,10,10	=128+32+8+2=170
	10,10,10,00	=128+32+8=168
	10,00,10,00	=128+8=136
	10,00,10,00	=128+8=136

=orange
 =buff
 =cyan
 =magenta

Plotting Movements

When using lines 60 and 70, the graphics display begins with location 1024 and every 16 locations—that is, 1040, 1056, and so on—begin a new column. Adding 15 to the base specifies a point on the right side of the screen, adding 8 specifies a point near the center. A graphics worksheet could then be constructed. To plot any point find the byte that holds it by getting the base address at the left and adding the number in the column to it. Use the technique given above to plot a point within a byte. Using this figure it would be possible to draw and animate almost any object or design with only a 4K system.

To move objects on the screen, I recommend that each creature's location be stored in a variable and that this number be the actual memory address of the top byte of the shape. The rest of the bytes in the shape are *POKEd* relative to that reference byte. For example, at the beginning of the game, the array for Ffloyd, our *Glommer* hero, begins in location 1768 so the second byte is then *POKEd* in location 1784, the third in location 1800, the fourth 16 below that and so on. Because of the shape of this array all of the bytes are *POKEd* in one column. That is, the second byte was *POKEd* in the location 16 greater than the reference byte, the third 32 below the reference byte and so on. One byte lower in mode G1C is 16 locations greater as 16 bytes specify a row. In the same way, if the array was wider than one byte the byte to the left of the reference byte would be stored in the address one smaller than the reference, the one to the right would be one greater and so on. Carefully examine how the monsters and Ffloyd are *POKEd* into memory in the program listing if you do not totally understand this idea. Of course, an erase routine must be constructed as well that exactly covers the drawn array.

To move objects to the right in any mode add 1 to their location, to move left subtract 1, to move up subtract the number of bytes that make up one row, in the case of G1C, 16, and add the same amount to move down.

Because this system *POKEs* directly into memory be very careful none of your objects leave the screen. If any do, the system may crash and must be reset or even turned off (thus losing your program) to regain control.

The Game

Ffloyd is trapped in an area with dreaded Glommers. He has only one means of escape, to float the balloons he found in his pocket up to the rainbow barrier at the top and break a hole in it to escape through.

The arrow keys are used to move Ffloyd and the spacebar is used to release balloons. A hole three bricks wide must be

cut to allow Ffloyd to escape. The spacebar will show the scoreboard once Ffloyd has been killed (the action stops) and the up arrow will begin the action. Ffloyd may only be killed by having a Glommer or the wall come near or touch his head.

Use the spacebar and then the up arrow to start the game at the beginning. When the last Ffloyd is lost, the colors will reverse. Press the spacebar to see the final score and the up arrow to begin a new game. Glommer objects wrap around, so it is possible to move off one side of the screen and appear on the other.

The game has five levels and gets very difficult as it progresses. The scoring also increases with the bonus for escaping round one at 100 points, round two at 200 and so on. Glommers are worth between two and six points depending upon the round. The wall blocks are always worth one point each.

This game was carefully written and executes about as fast as is possible using *POKEs* and BASIC. Delete the remarks and use the speed-up *POKE* (*POKE 65495,0*) before running the game for extra speed. If your computer stops on a sound command you cannot use the speed-up *POKE* and must press reset to regain control.

When typing in the program always make a backup copy on tape before testing the program (be sure the computer is in the slow mode before doing this) as this program does *POKE* directly into memory and if you make certain typing errors the computer could lockup and you would lose the copy you have typed unless you saved it to tape.

Glommer is fairly simple but a strangely addictive game; I hope you enjoy it. I have not been able to get through level

five—if anyone accomplishes it, please write and tell me how you did it. I would also be interested in comments or applications of these techniques.

MASTER CONTROL II

from Soft Sector Marketing

Cut Your Programming Time 50% - Improve Accuracy

Master Control II is a machine language program designed to increase the speed in which it takes to write basic programs, by providing the most commonly used program statements with two keystrokes rather than having to type the entire command. The program is relocatable and can be placed anywhere in memory, normally the top 1616 bytes of RAM, it will work on 16K and 32K systems.

- 51 preprogrammed command keys of standard and extended basic commands.
- Direct control of motor, trace and audio functions.
- Relocatable machine code, now works with disc systems.
- Automatic line numbering, starting point and increment are alterable.
- Programmable custom key, you can select your own special function.
- Direct run key, run the program as you write it.
- Plastic keyboard overlay for easy program use.
- Easy entry of commands into program statements.
- New, complete, easy to understand instruction manual.

FLIGHT

from Prickly-Pear Software

If you'd like to fly a plane then this is what you've been waiting for. A really good graphics oriented flight simulator in high resolution. Four difficulty levels let you go from student level to a difficult instrument-only landing. In front of you on the screen are your instruments, and above them are two representations of your plane in relation to the flight path. At the higher levels all you have to go by are the instruments. Can you put it down on the runway to hear the synthesized voice say "perfect landing"? Written by a professional flyer. Use joystick just like the control stick on a plane. Requires 32K

TIMS ... by Sugar Software

Tape Information Management System

A powerful, personal database manager that is easy and enjoyable to use. Just drop the cassette into your tape recorder and load into your computer. TIMS starts up automatically with prompts that will have you up and running in minutes without any uncertainties about what to do next. Here is an electronic file box with 1 to 8 user definable categories. Great for maintaining mailing lists, rosters, stamp or coin collections, etc. The documentation included with TIMS is excellent. On the reverse side of the cassette you get another copy which allows you to modify the program to suit your special requirements or modify for disc operation. Order your copy of TIMS today and get things organized the easy way, you'll love it! Requires Extended Basic. 32K Recommended.

Cassette **\$24.95**

ELITE - CALC

The Color Computer Worksheet Calculator Program You Have Been Waiting For!!

ELITE-CALC is a powerful, full featured worksheet calculator for your Color Computer. The all machine language program will help you answer "what if" questions, prepare reports, maintain records and perform other tasks. Has all the features you want. Individual cell formulas, Copy blocks of cells, Full cell-edit capability, Sorts, Graphs. Easy to use. Works with all printers. Comprehensive manual and sample worksheets included. A serious tool for those who want to do more than play games.

HELP!

HELP! is a reference book which contains every basic command for the Color Computer. It's index lists each command, not only by what it is called, but by what it does. All of the major commands are shown with their formulas, examples, and a full set of notes explaining the various parts, uses and pitfalls. The Beginning Programmer is provided with a brief but valuable guide to programming written in English, NOT computerese. Each command is explained clearly, and does not require any prior knowledge of programming. The more advanced programmer will find HELP! to be the perfect system for checking commands which are less familiar, for warnings of traps to be avoided and for exact references to the instruction manuals. 232 pages, spiral bound to lie flat on top of the computer. Measures only 4 1/2 inches by 6 1/2 inches closed. A great value, order yours today!

\$9.95

THE FACTS

For The Color Computer

A must book for the Color computer owner! The first document to provide information that will allow the user to take advantage of all the features of the Color Computer. Aimed at the machine language user. The FACTS attempts to explain, and describes in detail, how the user can make use of the computer's internal features. Divided into two sections. Hardware and software: the primary emphasis is on hardware capabilities and circuits. Provides detailed explanations of all the internal large scale integrated circuits. Includes schematic and spec. sheets. 166 pages. Order your copy today!

SPECIAL OFFERS From Star-Kits

Christmas Sale (Until December 24, 1983)

STAR-DOS 64

Reduced from \$74.90 to \$49.90. This is the same price as the standard 16/32K version. Here is your chance to get this extraordinary Disk Operating System for the Color Computer at a great price.

SPELL 'N FIX

Reduced from \$69.29 to \$59.29 for the CoCo disk or cassette version, and from \$178.58 to \$125 for the Flex disk version.

HUMBUG-64

Reduced from \$59.95 to \$49.95. This version is specially configured for 64K disk systems using either Flex or STAR-DOS.

REBATE

Buy your Star-Kits software from a dealer, and get an extra savings by sending us your registration form and a copy of your sales slip or invoice. The rebate is \$10 on software priced over \$50, and \$5 for software under \$50. The rebate is in effect until December 24, 1983.

ILLEGITIMACY PROGRAM

If you have an illegitimate (ahem . . . pirated) copy of a Star-Kits program, we offer you an amnesty as part of our Illegitimacy Program. Send us (a) a working copy of the program, (b) details on where and from whom you got it (with adequate identification of the source), and (c) 25% of the current list price, and we will send you (a) the latest up-to-date copy of the program, (b) a complete and up-to-date manual, and (c) a sales slip welcoming you to the world of happy Star-Kits customers. A small price to pay for a clear conscience?

MC-10 SPECIAL

To celebrate Star-Kits' being first with MC-10 software, here's our MC-10 Triple-Pak: MC-10 HUMBUG (normally \$29.95), MC-10 REMOTERM (normally \$19.95), and MC-10 COMMTERM (a brand new terminal communications program which sells separately for \$19.95), a total value of \$69.85, all for a special price of just \$55.

STAR-KIBBITTS

Welcome to the ninth of my monthly chats. To begin with, a short program and two requests.

When you do a BACKUP on a disk system, the computer is supposed to make an exact copy of a disk. Have you ever wondered whether the copy is really identical to the original? Here is a short program in Basic which allows you to compare two disks (it is written for two drives):

```
10 CLEAR 2000
20 FOR T=0 TO 34 : FOR S=1 TO 18
30 DSKI$ O,T,S,A$,B$
40 DSKI$ 1,T,S,C$,D$
50 IF A$=C$ AND B$=D$ THEN 70
60 PRINT "DIFFERENCE ON";T;S
70 NEXT S : NEXT T
```

This program consists of two loops which repeat for tracks 0 through 34, and sectors 1 through 18 of each track. Lines 30 and 40 read the corresponding sectors from drives 0 and 1, and line 60 prints the track and sector number for those sectors which are different on the two disks. You may find it very useful.

OK, now here's the first request. I'd like you to help me with a simple test. Initialize two disks with the DSKINI command, and then BACKUP one of them to the other. Now use the above program to check whether they are really identical, and let me know. I have an ulterior motive — I have run this test on three different computers (including different disk controllers and different drives). On two of them I got identical errors on sector 13 of tracks 5, 11, 17, 23, and 29. I'm curious to see whether anyone else has the same problem.

TAX DEDUCTION?

Now for the second request. Do you have any Color Computer hardware or software which you would like to donate to a non-profit school? In the last few years, Star-Kits has donated six Color Computers, as well as several printers, disk drives and cassette recorders, to local schools for computer education. If you have any CoCo equipment or software (such as a color computer, or disk system, or Line Printer VII, or anything else which you no longer need), or else if you just feel up to making a tax-deductible contribution of equipment or cash, we'd like to encourage you to do so. Send to the St. Francis School, 12 Green Street, Mt. Kisco NY 10549.

SALE!

Christmas is slowly approaching, and with it the time for the traditional holiday sales. The following items will be offered at special sale prices until December 24th, 1983:

STAR-DOS 64 is reduced from \$74.90 to \$49.90, the same price as the standard 16/32K STAR-DOS. Actually, for the \$49.90 price you get both versions.

SPELL 'N FIX is reduced from \$69.29 to \$59.29 for the CoCo disk or cassette version, and from \$178.58 to \$125 for the Flex disk version.

HUMBUG-64, the 64K version for Flex or STAR-DOS is reduced from \$59.95 to \$49.95.

Add this to the rebate we announced last month, and you can get Star-Kits software at really bargain prices.

To close, a neat definition (from *The Devil's DP Dictionary* by Stan Kelly-Bootle) of Gershwin's Law: "It ain't necessarily so!"

SPELL 'N FIX

Regardless of whose text processor you use, let SPELL 'N FIX find and fix your spelling and typing mistakes. It reads text faster than you can, and spots and corrects errors even experienced proofreaders miss. It is compatible with all Color Computer text processors. \$69.29 in the Radio Shack disk or cassette versions; \$178.58 in the Flex version. (20,000 word dictionary is standard; optional 75,000 word Super Dictionary costs \$50 additional.)

HUMBUG — THE SUPER MONITOR

A complete monitor and debugging system which lets you input programs and data into memory, list memory contents, insert multiple breakpoints, single-step, test, checksum, and compare memory contents, find data in memory, start and stop programs, upload and download, save to tape, connect the Color Computer to a terminal, printer, or remote computer, and more. HUMBUG on disk or cassette costs just \$39.95, special 64K version for FLEX or STAR-DOS 64 costs \$59.95, MC-10 version \$29.95.

STAR-DOS

A Disk Operating System specially designed for the Color Computer, STAR-DOS is fully compatible with your present Color Computer disk format — it reads disks written by Extended Disk Basic and vice versa. STAR-DOS for 16K or 32K systems costs \$49.90; STAR-DOS 64 for 64K systems costs \$74.90.

STAR FLEX

The best implementation of FLEX for the Color Computer. Complete with all utilities, text editor, macro assembler, and HUMBUG debug monitor, \$250.00.

ALL IN ONE — Editor Etc.

Three programs in one — a full function Editor, a Text Processor and a Mailing List/Label program. All this for just \$50. Requires STAR-DOS and 32K, or STAR-DOS 64, or FLEX, specify which.

DBLS for Data Bases

DBLS stands for Data Base Lookup System. A super-fast system for searching for a selected record in a sequential disk file. Supplied with SPELL 'N FIX's 20,000 word dictionary as a sample data file — lets you look up the spelling of any word in under FOUR seconds. Priced at \$29.95. Requires STAR-DOS.

CHECK 'N TAX

Home accounting package combines checkbook maintenance and income tax data collection. Written in Basic for either RS Disk or Flex, \$50.

REMOTERM

REMOTERM — makes your CoCo or MC-10 into a host computer, operated from a remote terminal. \$19.95.

NEWTALK

NEWTALK — a memory examine utility for machine language programmers which reads out memory contents through the TV set speaker. \$20.

SHRINK

SHRINK — our version of Eliza, in machine language and extremely fast. \$15.

EDUCATIONAL SOFTWARE

Introduction to Numerical Methods — college level course on computer math, \$75.00.

We accept cash, check, COD, Visa, or Master Card. NY State residents please add appropriate sales tax.

A Hardware Hacker Cleans House

By Tony DiStefano
Rainbow Contributing Editor

Trying to come up with one project a month is sometimes just too much. First, I must think of a good project, then, there is the research. Making diagrams and designing circuits. After that, there is the proto-typing, (that is the hardest part and the most time consuming)—buying the parts, soldering it together, and then trying to find out why it doesn't work. Sometimes that requires a whole change of circuit. After the hardware works fine, it's time to write the article. All this must be leading up to something; it is, this month is cleanup month. It's time to answer a few questions and clear up a few problems. That is to say I didn't have time to complete a project. But, I'll tell you this, there will be some *hot* projects coming this fall.

Okay, the first thing on the agenda is a correction: Radio Shack does have a 1 mega-ohm potentiometer. The part number is 271-211. This correction comes from the April 1983 issue of *the Rainbow*. It stated that Radio Shack did not carry this part, but as someone pointed out to me, they do. This was in my finger-saving rapid-fire project.

The next thing is a little longer. A reader sent me a letter and asked me if it was possible to do my Reverse Screen on a "F" board, or the latest version, the one which has the smaller RF shield. Well, it is possible to do it. There are just a few differences. The first change is the "U," or chip numbers. Since Radio Shack decided to change the complete layout of the Color Computer, they changed the chip ID numbers. U29 on the old board now becomes U8 on the new board, that's the 74LS02. U7 on the old board becomes U6 on the new board, that's the MC6847. I stated in my article you have to remove the 74LS02 and bend the pins upwards and replace the chip in the socket with the pins sticking out. Well you can't do that on the new board. Radio Shack decided to save a few cents by not putting this chip in a socket. Fortunately they had the insight not to solder the input pins to ground. When making the modification you don't have to remove the chip, just solder your wire straight to the pin, there is nothing connected on the other side. Use

(Tony DiStefano is well known as an early specialist in Color Computer hardware projects. He is one of the acknowledged experts on the "insides" of CoCo.)

the same pin numbers as the other chip. Remember though, you still have to bend pin number 32 on the MC6847. Apart from these changes, the reverse screen will work fine.

The next problem is with my Y'er. You cannot plug in a Radio Shack program pack or any other pack for that matter, into one of the slots when the disk controller is plugged in the other slot. It will not work and might even cause damage to the computer and or to the disk controller. This is because the bus is not buffered nor does it have the switches to select between different slots. It will only work with my projects or other projects that are independently memory mapped. That is to say it does not use the CTS (pin number 32 on the cartridge connector) or SCS (pin number 32 on the cartridge connector) for selecting the device. These signals are being used by the disk controller software and hardware. If another device were to use these signals, there would be a bus contention and the CPU would get very confused. Maybe later on I could work on an adapter that would let you use these signals without any problems.

Another point of interest to you goes back to my article on memory chips. If you can recall, I talked about ROMs and EPROMS. Here is a little more. The socket that is available for Extended BASIC inside your computer has 24 pins. It usually holds an 8K ROM supplied by Radio Shack. This is where Extended BASIC resides. It is necessary though, to put an Extended BASIC ROM there. You can put different software there. All you need is to insert a chip. What chip? That depends on how long your program is. It is possible to put software that takes from 1K to 8K of memory. Most of the time an average user puts in an EPROM, because they are so easy to program, and are relatively inexpensive. All you need is some software and an EPROM Programmer, and of course an EPROM. Most of the common EPROM chips available today are 24 pins, that means that they are pin compatible with the socket (in the Color Computer) and will plug into the socket directly. There is however, one chip that is not. This is the 2764 8K EPROM. They why use it? You might ask. Well it's the least expensive 8K EPROM chip on

This adaptation works for the 2764 EPROM only. After the adaptation, it will fit in any of the Color Computer's ROM sockets: BASIC, Extended BASIC, or even the Disk BASIC socket.

HARMONYCS

P.O. BOX 1573
SALT LAKE CITY, UTAH 84110

This adaptation can be done directly to the chip or in-between two extra sockets. If done with the sockets, one 24 and one 28-pin socket is needed. The 28-pin to seat the EPROM and the 24 to go into the other socket.

1) Directly on the Chip.

- a) Solder pins 1, 28, 27 and 26 together.
- b) Pry up pin 20 so that it does not go back in the socket when the chip is replaced.
- c) Solder pins 20 and 22 together
- d) Solder a wire to pin 2 and insert the other side of the wire into the hold left by pin 20.
- e) Insert the chip so that pin 3 on the chip goes into pin 1 in the socket.

2) Using two sockets.

- a) Align pin 3 of the 28 pin socket on top of pin 1 of the 24 pin.
- b) Solder all the pins but pin 20 of the 28 pin socket to the 24 pin socket.
- c) Solder pins 1, 28, 27, 26 of the 28 pin together.
- d) Solder pin 20 to pin 22 on the 28 pin socket.
- e) Insert chip into the top socket. Pin 1 of the chip goes into pin 1 of the socket.
- f) Insert the bottom socket into computer socket. Pin 1 goes into pin 1 on both sockets.

The only other consideration left is when programming the 2764. The above modification reverses the address lines A11 and A12 as seen by the Color Computer. This means that, at programming time, these lines must be again reversed. This can be done in software or in hardware. Hardware requires that the two traces that lead to the EPROM programmer socket be reversed. In software all you have to do is transfer the second 2K block of memory with the third 2K block of memory.

Some of you who have had problems with my projects have written me asking for help. I must confess. I have a hard time answering letters. If you do write me, be patient, I will answer in time. Tell you what, I'll set aside one night a week, let's say Monday night, when you can call me at home, and talk to me about your problems. My telephone number is (514) 473-4910. But please, don't call before 7 p.m. or after 11 p.m. The cost of your long distance call might be worth not having to wait for a response in a letter.

Hint . . .

Single Disk COPY

Here's a feature which can be invaluable for users with a single disk drive. The Radio Shack Disk Manual mentions that use of the COPY Command requires two or more drives. This is not necessarily true. A single drive COPY can be made by doing the following:

- 1) Insert disk with file to be copied into the drive 0.
- 2) Type "COPY "FILENAME/ext:0" and press <ENTER>.
- 3) There will be one short beep and a notice will appear on the screen instructing the user to insert the destination disk.
- 4) Insert destination disk and press <ENTER>.
- 5) Once completed there will be two copies of the program: one original and one on the destination disk.

This method works for all types of disk files including machine language programs. It surprises me that Radio Shack would not mention such an important feature in their documentation.

—Larry Sandhaas

COMPUTERWARE®

NEW JUNIOR'S REVENGE

Climb vines, avoid obstacles & creatures to save your father from Luigi.

32K Cass \$28⁹⁵
32K Disk \$31⁹⁵

NEW COLOR BASIC COMPILER™

Ever written a BASIC program only to find it runs too slow and you haven't the courage to learn assembler? The Color Compiler™ is the answer! The Color Compiler™ lets you write programs in easy BASIC and converts it into fast machine language. After you run your compiled program, you may need to add delays because the Color Compiler™ will make it run an average of 40 times faster!

The Color Compiler™ features 46 commands & functions. Most are a subset of Extended Color BASIC. Except for a few restrictions, you can program in BASIC and assume that ANYTHING is legal. The Color Compiler™ generates position independent code so that you may put the compiled program anywhere in memory, including into a ROM-pack!

Send for a complete 32k Disk list of functions. \$39⁹⁵

NEW BIO DETECTOR™

Learn about yourself & others using today's technology & your CoCo! Finger sensors lead to the Bio Detector that plugs into a joystick slot. Just load the program & wrap the finger-grips on the subject. Results will be graphic!

The Bio Feedback Program graphs galvanic skin response on the screen. Watch yourself key-up & relax! The Anxiety Attack Game is fun for all ages. You can't lie to Bio Detector! (Based on current lie detector techniques).

Bio Detector includes all hardware, software & instructions. Silver contacts give greater contact. Adjustable grips fit anyone. Be the first on your block to "hook up"!

\$34⁹⁵

(Disclaimer: This is a toy. Results not admissible in court.)

TIME PATROL

Travel thru a time warp, meeting unique foes & friends.

Try Your Hand at Color Blackjack

If you enjoyed my version of *Color Poker*, which appeared in the April 1983 issue, you will find this version of Blackjack to be a pleasant companion. The game is played with you against the dealer. As explained later on, betting is done for you on a random basis, which speeds playing and adds an additional chance factor.

The dealer has two decks of cards and will reshuffle before the start of a new deal if there are less than 20 cards remaining. This allows you to do card counting to improve your luck. You have the option of splitting opening pairs. If you do split, your bet is doubled and split between the two hands.

In terms of win/lose, if you "bust," it's all over. If you make a "Blackjack," you win and the hand ends. You will break even in a tie with the dealer, including a "21."

Now, on with the program. The listing contains comments and should be straightforward to follow. All the subroutines are placed at the end of the program, starting at line 1470.

Lines 120—610 contain the strings used to *DRAW* the required ASCII characters on the *PMODE1* screen. Subroutine 1480 does the actual drawing. The screen is blanked while the card symbols and the opening title are created; also the two decks of cards are formed in lines 650—690.

The cards are created by three variables: *CV()*, *CN()*, and *CS()* for card value, card number and card suit. The card value is first set to the number of the card (1 to 13) then changed to 10 for jacks, queens and kings or to 11 for aces. The ace is counted high, as 11, unless the total value of a hand is over 21, then the aces revert to a value of 1.

The player's bet is selected in line 900 in increments of \$100. The initial deal is started in line 940. The two-dimensional variable *CD()* keeps track of the dealer's cards as well as the player's cards, including splits. The player's cards are checked to see if there is a pair by line 980. If there is, the player is given the option to split.

Line 1020 checks for player Blackjack. The variable *PT()* is the tally of the players' hands, which are obtained from subroutine 1770.

If the split option is taken, the program branches to deal the split

in line 1150. Both hands are checked for Blackjacks or "21," then back to play hand 1 (line 1010).

The player must respond to the HIT? question with either (Y) or (N). If another card is drawn the tally is checked to see if it is over 21 (bust). If not, the sequence is repeated.

When the player stops drawing cards, play passes to the dealer in line 1210. The dealer will draw until the card tally is over 17.

Once all the cards are down, the scoring routine is called, line 1280. All hands win/lose even money except Blackjack, which pays 3 to 2. Woe unto the loser of more than \$3000. A special treat awaits him courtesy of Morton Goldberg (February 1983 *Rainbow*)

Key Variables:

- A\$() Strings to draw ASCII characters
- CN() Card number (1 to 13)
- CV() Card value (1 to 11)
- CS() Card suit (1 to 4)
- DD() Array of cards dealt (1 to 104)
- BT Bet (\$100 to \$1000)
- CD(H,X) Cards in each hand
- SP SP=1 for split
- PT() Tally of players' hands
- CT Tally of dealer's hand
- TT Money player has
- DK Number of cards left to deal

(Joseph Kohn, a systems engineer for TRW, is interested in games and utilities. His current activities include a user's group at Norton AFB and formation of an Inland Empire user's group.)

BLACKJACKPRO

This is not a game.

Introducing BLACKJACKPRO. The computer assisted learning tool that teaches you to BEAT THE HOUSE.

BLACKJACKPRO is not a game for you to play against your Color Computer for fun. BLACKJACKPRO is a tutorial that will teach you the probability based system that expert black jack players have been using for years.

Phone orders may be placed by calling (212) 582-2006 or (613) 594-7855, or toll-free at 1-800-223-6015.

Mail orders and requests for information should be sent to

SKILLWARE CORPORATION
Applied Probability Dept., 2nd Floor
314 West 53rd Street
New York, New York 10019

BLACKJACKPRO is a trademark of SKILLWARE CORPORATION

BLACKJACKPRO will make it happen for you. It will condition you to make the correct play effortlessly.

BLACKJACKPRO will teach you at speeds ten times faster than any other method. Expert play will become easy and natural. You will be able to beat the house and go UN-DETECTED!

BLACKJACKPRO will pay for itself. Once you learn the black jack system using this tutorial, you will eliminate the house advantage and BE A WINNER.

BLACKJACKPRO is not a game. It is serious business.

The introductory price is only \$75. You can call us now. We're ready to take your order.

Please send me _____ BLACKJACKPRO tutorials @ \$75. each.

COLORSOFT™ BUSINESS SOFTWARE

AT LAST! BUSINESS SOFTWARE DESIGNED FOR THE COLOR COMPUTER

- ★ MAKE YOUR COLOR COMPUTER A WORKING BUSINESS PARTNER ★
- ★ ALL PROGRAMS ARE MENU DRIVEN AND USER FRIENDLY ★
- ★ PROFESSIONALLY WRITTEN AND FULLY TESTED ★
- ★ AFTER-THE-SALE SUPPORT ★

COLORSOFT™ GENERAL LEDGER

COLORSOFT™ General Ledger is ideal for the small business man who wants to take advantage of the time saving benefits of computerized accounting procedures. This package is designed for the businessman who is knowledgeable of accounting principles and who wants a computerized accounting system with greater user control. The features and options of this package compare favorably to higher priced software.

FEATURES

- *** USER FRIENDLY AND FULLY MENU DRIVEN ***
- *** UP TO 96 USER DEFINABLE RECORD CATEGORIES ***
- *** USER FLEXIBILITY IN ACCOUNT DESIGN AND ENTRIES ***
- *** DETAILED USER'S MANUAL WITH SAMPLE TRANSACTIONS ***
- *** APPROXIMATELY 800 ACCOUNTS RECEIVABLE/PAYABLE FILES ***
- *** STYLED FOR THE ACCOUNTANT/BOOKKEEPING ORIENTED USER ***
- *** MENU PROMPTS MAKE ENTRIES EASY, FAST, AND EFFICIENT ***

COLORSOFT™ General Ledger is an integrated, journal-type double entry accounting package for a small business that includes General Ledger, Accounts Payable, and Accounts Receivable programs. Outputs of the system include an income statement, balance sheet, accounts payable and receivable status lists, accounts payable and receivable aging reports, journal reports, account listing and a closing summary. During each user established accounting period (monthly, quarterly, annually, etc.), it will handle accounts of up to \$1,000,000.00 for approximately 800 accounts payable/receivable. Accounts are automatically numbered and each transaction is carried separately so that an account number will correspond to a specific purchase rather than a specific vendor/customer.

Requires 16K and a Single Disk Drive.
PRICE: \$129.95

COLORSOFT™ SMALL BUSINESS ACCOUNTING

The COLORSOFT™ Small Business Accounting package is ideal for the small businessman who wants to take advantage of the time saving benefits of computerized accounting procedures. This package is designed with this person in mind and as such, extensive computer or accounting experience is not required. The feature and options of this package are comparable to much higher priced software.

FEATURES

- *** USER FRIENDLY AND FULLY MENU DRIVEN ***
- *** USER DOES NOT NEED TO BE AN ACCOUNTANT ***
- *** UP TO 32 USER DEFINABLE RECORD CATEGORIES ***
- *** DETAILED USER'S MANUAL WITH SAMPLE TRANSACTIONS ***
- *** USER IS PROMPTED FOR COMPANION ENTRIES AS REQUIRED ***
- *** APPROXIMATELY 800 ACCOUNTS RECEIVABLE/PAYABLE FILES ***
- *** MENU PROMPTS MAKE ENTRIES EASY, FAST, AND EFFICIENT ***

COLORSOFT™ Small Business Accounting is an integrated, ledgerless accounting package for a small business that includes Accounts Payable, Accounts Receivable, Sales, and Purchase Order programs. Outputs of the system include an income statement, balance sheet, check register, accounts payable and receivable status lists, and accounts payable and receivable aging reports. During each user established accounting period (monthly, quarterly, annually, etc.), it will handle sales of up to \$1,000,000.00 and approximately 800 accounts payable/receivable. Accounts are automatically numbered and each transaction is carried separately such that an account number will correspond to a specific purchase rather than a specific vendor/customer.

Requires 16K and a Single Disk Drive.
PRICE: \$149.95

COLORSOFT™ PAYROLL

The COLORSOFT™ Payroll is a stand-alone payroll system. It is also suited for integration into the COLORSOFT™ Small Business Accounting Package. Payroll is a highly user friendly system designed for regular use by the small businessman.

FEATURES

- *** SUPPORTS OVERTIME AND BONUS PAY ***
- *** USER FRIENDLY AND FULLY MENU DRIVEN ***
- *** HANDLES HOURLY AND SALARIED EMPLOYEES ***
- *** MAINTAINS YEAR TO DATE TOTALS PER EMPLOYEE ***
- *** HANDLES FEDERAL, STATE, AND LOCAL INCOME TAXES ***
- *** DETAILED USER'S MANUAL WITH SAMPLE TRANSACTIONS ***
- *** HANDLES OVER 200 EMPLOYEES WITH 8 DEDUCTIONS EACH ***
- *** MENU PROMPTS MAKE ENTRIES EASY, FAST, AND EFFICIENT ***

COLORSOFT™ Payroll is a complete stand-alone package for maintaining personnel and payroll data on the employees of a small business and for calculating payroll and tax amounts and maintaining year-to-date totals for income tax reporting. This system will compute each pay period's totals based on hours worked, calculate taxes to be withheld, allow for specified deductions, compute net pay and prepare a mailing list. Additional reports that are produced include a listing of employees, a year to date federal and/or state tax listing, and a listing of current miscellaneous deductions. This system is suited for use in all states except Oklahoma and Delaware.

Requires 16K and a Single Disk Drive.
PRICE: \$99.95

COLORSOFT™ ACCOUNTS RECEIVABLE

COLORSOFT™ Accounts Receivable is a full stand-alone accounts receivable system. It is also suited for integration into the COLORSOFT™ Small Business Accounting package. Accounts Receivable does not require the user to be an accountant; in fact, this is a highly user friendly system designed for daily use by the small businessman. The features and options of this system compare favorably with much higher priced software.

FEATURES

- *** PROVIDES ACCOUNT AUDIT TRAIL ***
- *** ACCOUNTS ARE CARRIED BY CUSTOMER ***
- *** USER FRIENDLY AND FULLY MENU DRIVEN ***
- *** PREPARES INVOICES AND MAILING LABELS ***
- *** USER DOES NOT NEED TO BE AN ACCOUNTANT ***
- *** DETAILED USER'S MANUAL WITH SAMPLE TRANSACTIONS ***
- *** MENU PROMPTS MAKE ENTRIES EASY, FAST, AND EFFICIENT ***

COLORSOFT™ Accounts Receivable provides the user with detailed audit trails and history files on all transactions by a customer. It also prepares invoices, mailing labels, aging lists, customer history reports, and an alphabetized customer listing. The user can define discount/net terms for commercial accounts and finance charge and minimum payments for revolving accounts.

Requires 16K and a Single Disk Drive.
PRICE: \$89.95

USER'S MANUALS WITHOUT PROGRAM \$20.00 EACH (Refunded on Purchase)

INCLUDE: \$2.25 Handling Per Order

COLORSOFT™ APPLICATIONS SOFTWARE

COLORSOFT™ MANAGEMENT SKILLS SERIES I: BEING BOSS

"BEING BOSS" is a collection of six programs and is the first in an ongoing series of computer assisted management development tools. Those who can benefit include corporate executives, managers, heads of teams, group leaders, supervisors, foremen, teachers, and parents. In fact, anyone who must take a leadership role can benefit from these programs.

- A. REFLECTIONS - a self evaluation guide
- B. ASSERTIVENESS - taking control as a leader
- C. MANAGEMENT STYLES - how to approach the leadership role
- D. DECISION MAKING - how to handle decision making
- E. COUNSELING - helping others solve personal problems
- F. STRESS CONTROL - taking care of yourself

Each program is in a multiple choice questionnaire format where the user is queried as to a response to a specified management situation. Tutorials help the user learn new management skills and insights. The programs include voice annotation from the author, Mr. Terry Barker. "BEING BOSS" is based in part on his forthcoming management books "BOSS TALK" and "THEORY C."

The series, "BEING BOSS" offers to the user the latest in management skill development concepts and should prove to be an invaluable TOOL for anyone who wishes to reach their full potential as a leader. The author has condensed week long intensive workshop material into this outstanding package. The accompanying user's manual is very well written and is easily understood by anyone.

Requires 16K Ext BASIC and cassette.
PRICE \$89.95

LOAN ANALYSIS . . . Prints amortization tables, determines status of loans, and auto loan option with trade-in allowance and taxes . . . \$ 20.95

ANNUITY . . . Future value, present value, compound interest, and determines Individual Retirement Accounts (IRA) . . . 16K Ext BASIC \$ 18.95

STOCK ANALYZER . . . Maintains stock portfolio data base for multiple stocks. Graphs to screen or printer and projects trends of data. Disk compatible . . . 16K Ext BASIC \$ 21.95

RECIPE FILE . . . Save your recipes on tape. Features include built-in text editor for creating and editing each recipe and adjusts ingredient measure for desired servings. Screen or Printer output . . . 16K Ext BASIC \$ 21.95

HOUSEHOLD EXPENSE MANAGER . . . Menu driven package for maintaining cassette file of 30 household expenses for a 12 month period. Keeps cumulative totals by category and a separate total for tax deductible expenses. Analysis program compares month to month. Screen or Printer output . . . 16K Ext BASIC \$ 19.95

COLORSOFT™ GAMES.

TAG

Classic two player game of chase - fun for all ages.

16K BASIC with joysticks

Statistics in the Classroom: Mean and Standard Deviation

By Stan Peppenhorst

Teachers often need the arithmetic average (mean) and standard deviation of a set of test scores. This program calculates the mean, and displays two standard deviations on each side of the mean. (In this program, standard deviation is calculated as the square root of the variance.) The program can be adapted for use by those not in education by substituting other words to describe the data gathered.

The number of items is requested in line 130 and is limited to 50 by line 120. Line 150 requests the student's name or initials followed by a comma and the score. The name can be omitted by starting with the comma. This permits flexibility by using only numbers.

Insert "I;" after the second *PRINT* in line 180 if numbering is desired. If a student number is preferred, change N\$ to N in lines 120, 150, and 180. The format of the printed data can be changed by using the comma, the semicolon, or nothing after N\$(1) and S(1) in line 180. Line 180 also has a timer loop.

Lines 1025 and 1055 round the values to the nearest hundredth. These lines may be omitted or the precision may be altered by changing the exponents. In addition, calculations for -3 to +3 standard deviations may be added to lines 1070 and 1090 if desired.

(Stan Peppenhorst teaches high school physics and is a doctoral candidate in educational administration and supervision at Memphis State University.)

Our Lessons Teach You to HEAR and THINK in a Second Language

These lessons are for you if you:

- Think you can't learn
- Have had previous difficulties
- Want to start out right
- Want language success

HOW TO HEAR AND THINK IN A SECOND LANGUAGE

Skilled linguists have developed our series of second language programs. The lessons utilize the power of programmed instruction wherein you are advanced to new material only after satisfactory learning has occurred at the current level. Our techniques teach you how to think in a language without initially using any printed text material. No mental translation to your native language is required. You learn as a child does, hearing and speaking before text reading. The computer both tutors and keeps track of progress as it moves you forward (or backward when review is necessary). AUDIO plus VISUALS plus INTERACTIVE RESPONSE establish the learning process, and literally THOUSANDS of visuals help seal-in the sound patterns of your new language.

All of our lessons are interactive and user friendly; yet, you are unaware of the complex course structure involved. For example: Lesson SLU-1 uses the theme of PEOPLE, PERSONS & FAMILY to teach the use of nouns to name things, to classify them into categories, and to identify members of a group. Sentence structure is developed using the verb 'be' and its relationship to nouns and adverbs, including plural forms and inversions. Noun structure using definite and indefinite articles, and regular and irregular plural forms is also presented. The other lessons are similarly designed. In addition, each VOCABULARY LESSON presents approximately 200 visuals and 200 words that are integrated into the learning process.

While the foregoing might seem complex, and it is, IT IS ALSO THE REASON OUR COURSEWARE CAN TEACH LANGUAGES. If you have tried 'game' or 'tape' language programs you know that they are ineffective. Our programs can teach you a language because we have successfully combined expert authoring of programmed courseware with **audio & visuals & response & branching** into a powerful tutorial package.

DEALER INQUIRIES ACCEPTED

We have a broad range of Audio Visual Computer Aided Instruction under development. Some users of our courseware might include Day Care Centers, Schools (public and private), institutions in various categories, individuals and language tutors.

ABSOLUTELY NO RISK

You may examine your order for 15 days. If you decide not to take advantage of the lesson(s) simply return in good condition for a full refund or cancellation of credit card charges.

COLOR COPY

COLCOPY is a menu driven copy utility that copies data files or programs: disk to tape, tape to disk or disk to disk. It also kills files or programs.

Many options are provided: copies basic programs, machine language programs or data files, allows selection by groups of filenames or extensions, individual files by menu selection, writes multiple copies of files to tape, backup a disk to tape, restore a disk from tape, copies files in alphabetic sequence and much more.

Written in basic with machine language subroutines. Requires 32K, DOS.

Includes program on tape and instructions.

ONLY \$15 pp

CASSDIR

CASSETTE DIRECTORY will read a tape and list the program name, length of basic program or start, end and transfer addresses for a machine language program. You may display the listing on the screen or a printer. Does not require extended basic.

This program is our get acquainted offer. Request CASSDIR when you order COLCOPY and we will add it to the flip side of the cassette for free or send 2.50 to cover our cost. Of course we will add your name to our mailing list for new products and send you a copy of our catalog.

With this small cost there is no reason not to send for your own copy.

Back Issue Availability

Back copies of many issues of *the RAINBOW* are still available.

All back issues sell for the single issue cover price—which is \$2 for copies of Volume I, Numbers 1-8 (through February, 1982), \$2.50 for Volume I, Numbers 9, 10 and 12 (through June except May, 1982) and \$2.95 for Volume II, Numbers 9, 10, 11, 12 (March, April, June and July 1983). Also \$2.95 for Volume II, Number 3 (October 1983). In addition, there is a \$3.50 charge *per order* for postage and handling if sent by United Parcel Service and \$6 for orders sent U.S. Mail. UPS *will not* deliver to a post office box or to another country. This charge applies whether you want one back issue or all of them.

Most back issues are available on white paper in a reprint form. Issues out of print include May, July, August, September, October, November, and December, 1982 and January, February, April, 1983. VISA, Master Card and American Express accepted. Kentucky residents please add 5 percent state sales tax.

Due to heavy demand, we suggest you order back issues you want now while supplies last.

In addition, copies of the cover *only* of the July, 1982, Anniversary Issue are available separately for \$1 each, plus 50 cents shipping and handling. These are suitable for framing.

PRETTY PRINTER

This M/L utility program will allow you to write your code in as compact a form as you wish, but list it to the screen or printer in an easy to read 'PRETTY PRINT' format. Turn this: -

```
10 PRINT "EXAMPLE": FOR X=ATO M:FORY=STO  
P:Z=X+Y:PRINTZ:NEXTY:NEXTX
```

```
Into this: - 10 PRINT "EXAMPLE":  
FOR X = A TO M:  
FOR Y = S TO P:  
Z = X + Y:  
PRINT Z:  
NEXT Y:  
NEXT X
```

With one simple command.

CAT. NO. DM001 16K Ext \$12.95

P.U.F.F.

Say the magic word and P.U.F.F. your print formatting problems disappear. The Printer Utility File Formatter turns any word Processor (that produces ASCII text files) into a super printer formatter. Embedded codes will perform the following functions: -

- * Send control codes to your printer.
- * Set left and right margins at any time.
- * Set headers and footers.
- * Left, Right and Fill Justify.
- * Centre the next 'n' lines.
- * Temporary indent (neg or pos).

Plus many other features.

CAT. NO. DM002 16K Ext \$24.95

KEYBOARD OVERLAYS

Many programs are supplied with keyboard overlays to help you keep track of the various commands used by the program. Now you can add overlays to your own programs or to commercial programs that did not come with this feature. Die cut to fit the standard Color Computer keyboard. Dealer inquiries for blank or custom printed overlays are invited.

CAT. NO. HW002 99¢ each

DATAMAIL

The ultimate cassette based mailing list program for home or business use. Fully customized data collection screen allows you to set your own field lengths and field titles. Fast machine language sort by any column in any field. Save all or any block of files for letter reading by DATAMAIL or your own letter program. Merge two or more lists, search by record number or key word in any column. One key commands for Input, Kill, Change. Print single records or any block of files, 1, 2, 3 or 4 across. 32K holds about 300 files.

CAT. NO. DM003 16K Ext \$14.95

FIRST SAMPLER

Six programs for the price of one. All have been published in popular computer magazines and are now available on one tape at this special price.

- * MATH Improve your mental math skills
- * WORD Make words from the supplied letters in this game for the whole family.
- * CONVOY Can you sink the computers convoy before it sinks yours?
- * BAGIT Train your memory to remember the things you put in the bag.
- * VECTORS Row your boat across the river without going over the falls.
- * AHHA Find the treasure chest in Another Haunted House adventure. Don't get caught by the Old Miser's ghost.

CAT. NO. DM005 16K Ext \$9.95

COCOCOPY

This all M/L Program will copy BASIC or M/L programs including most Auto Start Programs. It will supply the beginning, ending and offset addresses and allow you to change the load address for M/L programs. I/O errors are ignored so that bad tapes can be corrected. Programs can be renamed and the motor/audio functions are controlled from the keyboard.

Format Your Video With This Worksheet

By George E. Klement

Good screen formatting will add a great deal of interest when planning your programs. Here is a simple utility program called *Video Worksheet* that will provide a printout of video screen positions as an aid in programming *PRINT@* locations.

The program starts with a prompt, asking for number of copies. (Remember to have a sufficient amount of paper in the printer.) Then press ENTER. A counter on the screen shows what your CoCo has sent to the printer by copy number. The program ends when the counter matches the input number.

An EPSON MX-80 printer was used for this utility set for 9600 Baud. This may require a *POKE* number change to match your printer, or just delete line #1. Also line 130 has Printer Control Code (140) that may not be compatible. This code tells the printer to form feed to the end of each page. Other than that, make as many copies as you wish. This is a good way to reuse the back side of printouts you may be recycling for scratch paper, if they haven't already been separated.

Development Of A New Fantasy Game

By Bill Nolan
Rainbow Contributing Editor

Last month I got a little ahead of myself in this column. If you recall, there is a combat program we have been working on here, and the first barebones version was published last month. The reason I may have been ahead of myself is simple. The combat system used in the program is—as I mentioned—not like any currently in use. In fact, the combat system you saw last month was excerpted from a game in development. In this column, I will give you some general material about the game we are developing and provide you with a program for rolling up characters suitable to the new game. You may well prefer to continue playing whatever fantasy game you play now, but it won't hurt to see how a new game develops.

In this new game (for which we need a name—any suggestions?) there are eight basic character ability scores. These are:

1. physical beauty
2. intelligence
3. faith
4. agility
5. speed
6. manipulation
7. stamina
8. strength

Each of these abilities is determined by rolling five four-sided dice and totaling the three highest. This results in scores from three to 12, heavily weighted toward the top. The top weighting results from an assumption that player adventurers will be superior individuals. After all, if they were average they would choose an easier life.

Hit points are found by totaling strength, stamina, and faith, and as the player character rises in level an adjustment is made. Force points are determined by adding together the scores for stamina, faith, and intelligence, with an adjustment for level. Force points are a measure of mental strength and attunement with the forces of nature, and are used to figure saving throws and in the magic system.

The magic system is completely new, since I think that the

present magic systems are the weak links in many games. In our new game there are several ways of practicing magic, and these are referred to by color, as in white magic, black magic, green magic, red magic, and so on for most colors. Within each color there are three types of character classes, and these are the arcanist, the guardian, and the champion. The arcanist is a dedicated student of a certain color of magic, the guardian is sort of a keeper of the faith, and the champion is a fighter dedicated to the cause. There are also several classes of characters who are not aligned with any particular color, and some of these classes are the fighter, the thief, and the rogue. The rogue is a sort of charismatic fighter with thieving abilities.

I hope that this general overview will help you to keep the combat system in perspective as we continue working on it. One of these days, we will finish the new game, and then we can all try it out. One of the main ways it is different is that it is designed from the start to be played with the help of computer programs, and as we proceed, you will be surprised at how many things that affects.

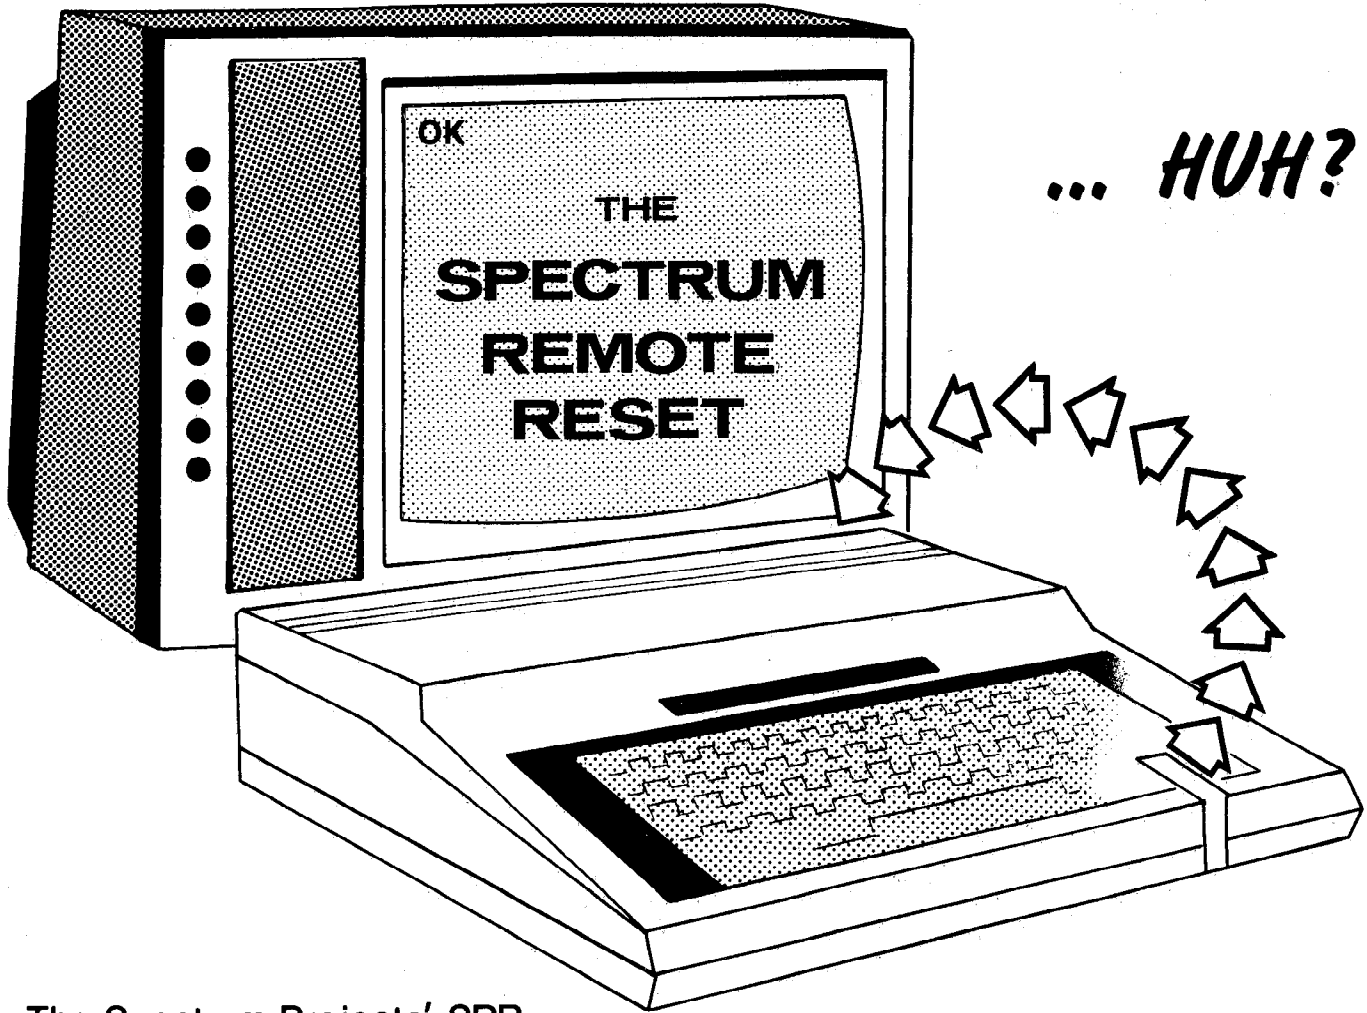

Meanwhile, back at the combat system, we were working on critical hit and fumble tables. For those of you not familiar with these tables, let me explain them a bit.

Almost every combat system I have ever seen for a fantasy game involves dice, and one of the rolls you make is your roll to hit. A number is computed by some method (often by looking it up on a table of numbers called a "to hit" chart), and the player taking a swing must roll that number or higher in order to hit his target. For example, let us suppose that one player's fighter is a low level type while his opponent is several levels higher and is also more agile and has better armor. Aside from the fact that the first fighter is probably in over his head, we can assume several things. The bottom line, as they say, is that it will be much easier for the second fighter to score a hit with his sword than for the first fighter to do so. A combat system is nothing more than a means of reducing this to some sort of numerical chance.

Let's suppose that we determine—using our favorite combat system—that the first fighter has 1 chance in 3 of hitting the second, while the second has 2 chances in 3 of hitting the first. In terms of dice, that would mean that fighter number 1 must roll a 21 or higher on a die having 30 sides in order to score a hit, while fighter number 2 needs to

(Bill Nolan is a principal in Prickly-Pear Software. He teaches computer science at a local college and referees a weekly fantasy game.)

roll an 11 or higher on the same 30-sided die. Of course, your particular combat system may call for the use of a die having 20 sides, or even two dice giving a range of 1 to 100 (percentile dice), but the principle is the same.

If fighter 1 rolls a 21, he has hit, and if he rolls a 20 he misses. That seems simple enough, but suppose he misses terribly. Suppose he rolls a 1, which represents the absolute worst possible swing he can make. It has always seemed logical to many gamers that there should be some difference between missing your roll by 1 and missing it by 20. At the other end of the situation, suppose our intrepid fighter rolls a 30 for a perfect hit. Is a perfect hit to go unrewarded?

The answer to both of these problems comes in the form of a set of two tables. The first is a FUMBLE table and is referred to whenever a player makes the worst possible roll—usually a 1. When this happens, the player rolls again and looks up the result on the fumble chart. That result may be anything from falling on your own sword to dropping your weapon. The other chart—the CRITICAL HIT table, is referred to whenever you roll the best possible roll, and here the result is beneficial to the fighter.

Below are the two tables. These are not cast in bronze, so if you have any suggestions for improvements, let me know. Both tables are set up for a 30-sided die, and thus give 30 possibilities.

FUMBLE TABLE

1. fell on your weapon and were killed
2. fell on your weapon for 1D20 damage
3. fell on your weapon for 1D12 damage
4. fell on your weapon for 1D10 damage

5. fell on your weapon for 1D8 damage
6. fell on your weapon for 1D6 damage
7. fell on your weapon for 1D4 damage
8. broke your weapon—even if magical
9. broke your weapon—if magical loses 1 plus
10. broke your weapon—if magical no effect
12. slipped and fell—no attack for 2 rounds
13. slipped and fell—no attack for 1 round
14. slipped and fell—attack at -2 next round
16. slipped and fell—attack at -1 next round
17. sprained wrist—can't hold weapon in that hand
18. sprained ankle—attack at -2 for rest of fight
19. broke your ankle—can't stand up
20. wrenched your knee—dexterity bonus is reduced by 4 even if that makes it minus
21. dropped your weapon—must draw another
22. dropped your weapon—can recover in 2 rounds
23. dropped your weapon—can recover in one round
24. fell on your back hard—all items on your back must save vs. crushing blow and no attack next round
25. left yourself open and opponent adds 5 to his roll this round
26. left yourself partially open and opponent adds 2 to his roll this round
27. fell and hit your head—stunned for 2 rounds
29. fell and hit your head—stunned for 1 round
30. no bad effect

CRITICAL HIT TABLE

1. no special effect
2. stunned your opponent for 1 round
3. stunned your opponent for 2 rounds
4. disarmed your opponent—he must draw another weapon
5. disarmed your opponent—2 rounds to recover
6. disarmed your opponent—1 round to recover
7. your opponent was open—double your damage
8. broke your opponent's wrist—he can't attack with that hand
9. broke your opponent's ankle—he can't stand
10. sprained your opponent's ankle—he's -2 to hit for the rest of the fight
11. your opponent broke his weapon
12. damage is plus 1D20
13. damage is plus 1D12
14. damage is plus 1D10
15. damage is plus 1D8
16. damage is plus 1D6
17. damage is plus 1D4
18. knocked your opponent down—he can't attack for 2 rounds
19. knocked your opponent down—he can't attack for 1 round
20. knocked your opponent down—he is -2 next round
21. knocked your opponent down—he is -1 next round
22. your blow landed on the forehead—opponent is blinded by the blood, and attacks at -4 for the rest of the fight
23. you get another attack this round
24. opponent is confused—you get an extra attack next round
25. the god of war was impressed and takes a hand—you are plus 2 for the rest of the fight
26. you inspire your companions—they are all plus 1 next round

30. opponent is killed outright

NOTE: In some instances, the effects will have to be adjusted by the game referee to take account of the current situation.

Well, that's the tentative fumble and critical hit charts. Below is a program that rolls the characteristics of our new type player and also tells you what classes and races the player qualifies to be. If you are interested in the new game, let me know. If enough people are interested, I will develop it into a complete gaming system in the coming months. It's a good system, and we are already using it here. So long 'til next time. Write me in care of Prickly-Pear Software.

PIPELINE

OS-9 IS REALLY taking off, as we predicted here that it would once Radio Shack came out with its official version. The Microware OS-9 seminar early in August was a crowded affair and the enthusiasm was everywhere! What we're hearing is that OS-9 will, in reality, make the Color Computer the "machine for everyone." On the most simple level, you can use CoCo to just run programs that you purchase (and there are more than a thousand of them now available and more coming in every day), or you can program — which will usually require an Extended Color BASIC machine with more than 16K of memory. Farther down the road, there is assembly language programming and OS-9, which is a full-blown disk operating system. The ability to use OS-9 on a multi-user and multi-tasking system is important to the family which wants two computers but only one set of software. Our hat's off to Radio Shack for bringing OS-9 to the CoCo!

If you doubt the impact introduction of OS-9 and the new CoCo product lines will have on the world of computers, as well as the CoCo Community, then just take a look at these figures which come from the well-respected *Science Digest*. In a recent survey of 12,000 persons, *Science Digest* found that 36 percent owned a personal computer and that 56 percent planned to purchase one within the next year. But, of even more significance, 80 percent look for memory when buying a computer, 79 percent survey expansion capability and 77 percent make or will base their choice on software availability. Sounds like they're talking about CoCo.

Also on the OS-9 front, the first program to hit the market specifically for the Radio Shack version of OS-9 has already been announced. It is by Frank Hogg Laboratory and is called *O-Pak*, a combination high resolution screen (with a number of options) and a set of utilities. One of the most useful utilities: One which will copy files between the Hogg Flex system, Radio Shack's OS-9 and the standard Radio Shack disk formats.

Also on the subject of OS-9, we're proud to report that our new columnist, Dale Puckett, has been elected president of the National OS-9 User's Group.

One of Dale's objectives is to integrate the OS-9 User's Group with Color Computer Clubs across the world.

YOU'VE READ ON THESE pages about the departure of Jon Shirley as Vice President for Computer Merchandising at Radio Shack. Now, new appointments for three senior Radio Shack executives have been announced in Fort Worth.

Ed Juge, who has been Director of Computer Merchandising, becomes Director of Merchandising — Business Computer Products. Mark Yamagata, Director of Merchandising in the United Kingdom, is now Director of Merchandising — Personal Computer Products. Bill Wash, Director of Customer Service, has been named to be Director of Computer Merchandising Services.

CoCo (and the Portable Computer) fit under the aegis of Mr. Yamagata. He has worked with Tandy in Japan and the United States before his assignment to head up the UK operation. He joined Tandy/Radio Shack in 1968.

In making the announcements, Radio Shack said the new organization was done to "direct more intensive management support to specific TRS-80 computer product segments." Juge, Yamagata and Wash will report to Bernard Appel, Radio Shack's Executive Vice President — Marketing.

WHILE ON THE SUBJECT of Radio Shack, a new and important product has been announced in the education field. It is a card reader, which will read data from marked or punched cards. The card reader will then transfer the data to a computer — via an RS-232 — for use with an appropriate applications program. Card readers are one way in which educators can quickly grade tests and make surveys important in the education process. So, this represents a significant step for Radio Shack. The card reader is affordable, too, for such a complicated piece of hardware — \$1,595.

SEVERAL FIRMS IN THE United States are announcing agreements to sell their products overseas, particularly in the British market, where the Dragon-32 is popular.

Superior Graphic Software says that it signed an agreement with Eurosoft for European marketing; Nelson Software's *Super Color Writer II* has been chosen as the "official" word processor for the Dragon to be introduced in this country by Tano Corp.; and Nanos Systems Corp. has now produced a reference card for the Dragon similar to that it made up several years ago for CoCo.

The Rainbow hasn't been left behind, either. We've just signed a major deal for international distribution in Europe, Africa, Asia and Australia.

A NEW FORMS processing program is now available from Derringer Software of Florence, SC. The program allows the merger of data files and letters. Just in time for the upcoming elections next year!

WE DON'T EVEN BELIEVE this, but there's a new product available called the *Byte Bat* from MicroTie Systems Corp. This is a foam rubber bat that lets you "slug" your CoCo when things go wrong — without hurting CoCo. A Byte Bat is \$12.95 by mail at P.O. Box 8112, Walnut Creek, CA 94546.

IF YOU WANT to let CoCo earn you some money, try *Home Computer Business Reports* at P.O. Box 4759, Santa Barbara, CA 93103. These reports will show ways that you can make your computer make money for you. Some of the ideas are fairly common, others pretty unique. A catalog is available for just \$1.

NOW THERE IS *The Computer Newsletter*, with a digest of all sorts of information on computers. And, because CoCo is so big, it even has an edition of its own! It costs \$17.50 a year in the U.S., \$20 in Canada and can be ordered at P.O. Box 952, Cleveland, OH 44120. Be sure to mention that you want the CoCo edition, as there are several others.

A UNIQUE SOFTWARE catalog is offered by a firm called Questron, P.O. Box 576, South Holland, IL 60473. Their catalog of CoCo software is in the form of a tape, which lets you get an "advance look" at what games, utilities and art programs actually do. The catalog costs \$2, but comes with a free program.

COLORFUL UTILITIES

- **BASIC AID** – Speed program entry by single key input of 43 common BASIC commands. Redefine any or all keys. Merge, move and renumber any part of your program. Comes with a plastic keyboard overlay. ROMPAK \$34.95/DISK \$49.95
- **BASIC COMPILER** – Convert your BASIC programs into fast efficient machine language. Produces code more compact and up to 50X faster than original BASIC. Integer compiler with no Extended BASIC needed. 16K–64K versions included. TAPE \$39.95
- **Omni Clone** — Back everything up! This amazing program handles “non-standard” disks with ease! We haven’t found any yet that it can’t handle. Lowest price too! 32K \$29.95
- **BACKUP64** – Make single drive backups of all your disks with half the effort. By utilizing your 64K RAM, only 6 quick swaps are needed instead of a slow 12. Relief for single drive owners. DISK \$14.95
- **PRITTY PRINTER** – Disassemble complex, multiple line statements of BASIC code with this professional program lister. Simple commands control printer baud rates, maximum line length, lines per page and disable form feeds. DISK/TAPE \$19.95
- **SCHEMATIC DRAFTING PROCESSOR** – Save hours of work and design professional looking electronic diagrams using a 480X540 pixel worksheet with 6 viewing windows. Over 30 electronic symbols with 10 user definable symbols are provided. Dump hard copy to the printer and save the created schematics to disk. 64K DISK \$49.95
- **MICROTERM** – A terminal program for the new Radio Shack MC-10 Color Computer. Now you can use your PoCo Coco as an inexpensive terminal to access bulletin boards, CompuServe and other data lines. TAPE \$24.95
- **MASTERMAIL 1200** – Finally a disk mailing list program for serious business applications. Mastermail can store up to 1200 5-line labels per disk, print by code, and uses a very fast machine language sort. 32K–1 disk min. DISK \$49.95

B5 Software

B5 believes the Computer is a unique teaching tool and deserves quality software. Our programs are based on sound learning principles and make learning fun.

Rated 4-Star
by Radio Shack †

EDUCATIONAL PROGRAMS

for your TRS-80 COLOR COMPUTER* & TDP-100*

with Extended Basic

CLOCK †

Grades 1-4. Helps children practice telling time. 4 skill levels: hour, quarter hour, 5 minute and 1 minute intervals. Options include reading hours and minutes separately on the large graphic clock with synchronized hands. After 10 correct answers a small mouse ascends to the tune of Hickory, Dickory, Dock.
16K Cass \$24.95 32K Disk \$26.95

MONEY †

Grade 2-4. Provides an opportunity to count coins. 5 skill levels range from counting only dimes, nickels and pennies to counting various combinations of all coins which can total more than one dollar. The program uses graphic coins. If a series of 3 problems are answered correctly a rocket ascends to the moon. If 1 or more are incorrect, the rocket crashes instead.
16K Cass \$19.95 16K Disk \$21.95

BORROW †

Grades 2-4. Allows the student to reinforce subtraction skills. Problems appear in large graphic numerals. Small boxes above the numerals allow for regrouping procedures. 7 skill levels. A happy face appears on the screen for each correct answer. After 10 completed problems, a Pac-Man-type creature munches a numeral down.
16K Cass \$19.95 32K Disk \$21.95

CARRY †

Grades 2-4. A program designed to help students to practice addition. Uses same format as Borrow. 4 skill levels.
16K Cass \$19.95 32K Disk \$21.95

QUESTION

Grades 1-8. Asks questions with multiple choice or true and false answers. Fits any curriculum because you can input the questions and answers. Graphic reward is a blinking robot. Also designed for use with data tapes. Printer use optional.
16K Cass \$19.95 32K Disk \$21.95

MATHFACT †

Grade 1-5. Motivates students to learn their facts. All 4 math operations are in the program. Student selects the desired operation then the desired addend, subtrahend, factor or divisor, or then can request a mixed presentation within each operation. 2 skill levels, all drills timed and scored. If all facts are answered correctly, students can play a quick number game as a reward.
16K Cass \$16.95 32K Disk \$18.95

HANGWORD & SCRAMBLE

Grades 1-8. Presents 2 word games. Hangword is similar to the old favorite, Hangman. Blanks appear and students guess letters for the blanks. Wrong guesses build the graphic display of the word "Sorry". Scramble displays the word with the letters scrambled. Students guess the word and spell it correctly. Input own words with this program or purchase data tapes. See data tape listing. Printer use optional.
16K Cass \$14.95 32K Disk \$16.95

SPELLING

Grades 1-8. Very flexible as it allows you to input your own choice of words and store them on tape files. You may also purchase data tapes for this program. See data tape listing. Words flash on the screen from .1 to 10 seconds, then student types the word. The score is given after each entry and the student is rewarded with a graphic display of words and a song. Printer use optional.
16K Cass \$16.95 32K Disk \$18.95

KEYBOARD

Grades 1-6. Helps familiarize student with keyboard. A graphic keyboard enables user to locate keys quickly. Home keys are identified and proper fingering may be taught. Lessons are built around alphabet, finger, word and sentence drills. At the end a graphic reward is given. 32K version has lengthier timed drills. Both 16K and 32K versions can use data tapes for further practice. See data tape listings.
16K Cass \$19.95 32K Cass \$24.95 32K Disk \$26.95

ABC'S

Grades K-1. The child types the letters in the alphabet to the tune of the alphabet song. The reward is a graphic and sound display.
16K Cass \$9.95 16K Disk \$11.95

SKIP COUNTING

Grades 1-4. Helps the child learn to count by 1's, 2's, 5's, 10's, 100's, or any number desired. The user selects the parameters by giving the number to count by and the beginning and ending number of each sequence. The student can practice at whatever level needed, and each lesson has a graphic reward.
16K Cass \$16.95

DATA TAPE LISTINGS

Data Tapes may be used with other B5 programs. They cannot be used alone.

Use with Keyboard Program
KEYBOARD PHONIC DRILL - Letter, word and sentence finger drills using common vowel and consonant combinations. \$8.95

Use with Keyboard, Spelling or Hangword Programs
DOLCH WORDS - 273 words used most often in beginning readers. \$8.95

GRADE LEVEL SPELLING - Over 300 words on each tape. Each lesson follows a phonic rule. Available in Grades 2,3,4,5 or 6 levels. \$8.95 per grade level

SPACE WORDS - Over 300 words to challenge and motivate the superior speller. Grades 4-8. \$8.95

ADULT WORDS - Most often misspelled words. Highly challenging. \$8.95

Use with Questions Program
NOUNS AND VERBS - 4 lessons on nouns and 4 on verbs. Grades 3-5. \$8.95

READING COMPREHENSION - Lessons build from simple to complex. Grades 2-4.
Main Idea \$10.95
Sequencing \$10.95
Fact & Opinion \$10.95
Cause & Effect \$10.95
Complete Series of 4 \$39.95

Color Sketch

A Keyboard Graphics Utility

By Darryl Kotcher

Though the Color Computer has excellent capabilities as far as creating graphics goes, many times it is useful to view the graphic as it is being drawn in order to insure accuracy. *Colorsketch* allows one to do this.

Using the arrow keys and several one-key commands, excellent sketches can be drawn, and with enough persistence, can even compare to those obtainable on a graphics tablet.

Here are the commands that are available with *Colorsketch*:

- B — Move cursor but don't draw (blank)
- C — Move cursor and draw (color)
- E — Exit from drawing
- H — Display help table (this list)
- I — Alter high speed cursor increment
- M — Change graphics mode (*PMODE*)
- N — Disengage key repeat (no repeat)
- O — Origin of circle to be drawn
- P — Paint an enclosed section
- R — Engage key repeat
- S — Define line starting point
- T — Draw line from starting point (terminating point)
- X — Change cursor color

Upon loading and running the program the user is prompted with questions about which mode (*PMODE*0—4) color set (0 or 1), foreground and background colors (within limits of given *PMODE*), and starting point on screen (0—255, 0—191). After this initial information is entered the user is shown the help table (which can be called at any time simply by hitting the H key) and asked to hit any key to continue. The user is then asked if an old picture is to be loaded. If the answer is yes, then the user is prompted to set up tape and hit ENTER to load. The graphics screen will be displayed and the old picture will be loaded in with the cursor located at the predefined location. If no is selected, the graphics screen is immediately displayed and cleared with the cursor positioned at the predefined location. At this point the user is now ready to put *Colorsketch* to work.

The program is initially set to draw with no repeat to the arrow keys. Hit B (Hear the beep?) and also hit R. Now hold one of the arrow keys down. The cursor will continue to

move in the direction of the arrow until it is released. Hit C and press any arrow key. The cursor will continue to move in the direction of the arrow but leaving its trail behind making it now a sketching tool. Oops, you made a mistake? Just hit B and go back over the line in the opposite direction. The line is now being erased. In this way a simple sketch can be drawn.

Hit H and look at the help table. See all those other commands available? Those are where the real power of *Colorsketch* lies. Hit any key and return to the graphics screen. Move the cursor anywhere and hit S. Now move it anywhere else and hit T. Presto, a line is drawn between the two points. Now draw a box and place the cursor within. Hit P and follow the instructions for painting shown. The lower right corner will show you which mode (PM) and color set (CS) you're in. When you are returned to the graphics screen you will find your box now painted if you followed the instructions and used an allowable color. Now using <SHIFT> and any arrow key move the cursor quickly to another location and hit O. You are now prompted with the information needed for Extended BASIC's *CIRCLE* command. When all are answered and you are returned to the graphics screen a circle with origin at the cursor will now be drawn. Now use the M key to switch to one of the four color modes. Hit X and change the cursor to another color and draw a small line. Hit X again and draw another line using a different color. Using this technique, one can draw very colorful drawings.

The program is written in as structured BASIC as I found feasible and thus is easily modified. I hope you find as many uses for this program as I have. CoCo's can create some impressive graphics and this program will only make it easier. If anyone encounters any problems or any questions regarding this program, feel free to contact me at (313) 981-3825. Good luck and happy sketching!

RECORD MANAGEMENT SYSTEM

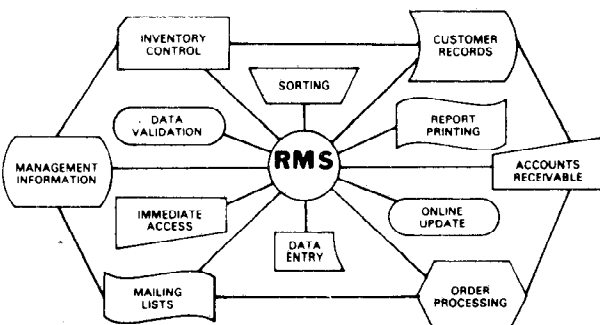

RMS

DATABASE MANAGEMENT

RUNS ON THE COLOR WITH FRANK HOGG FLEX

- USER DEFINED RECORD FORMAT VIA DATA DICTIONARY
- SCREEN ORIENTED, FORM FILL OUT TYPE OF ACCESS
- OPTIONAL TWO LEVEL RECORD HIERARCHY
- ALL FILES IN ASCII TEXT FORMAT, BASIC COMPATIBLE
- DIRECT ACCESS BY KEY FIELD, MULTIPLE INDEX FILES
- EXTENSIVE DOCUMENTATION, SAMPLE APPLICATION
- VERSATILE, PROFESSIONAL QUALITY REPORT WRITER
- BUILT-IN SORT/MERGE
- EASY TO USE

RMS is a complete DATABASE MANAGEMENT package for the 6809 computer. It is made up of five machine language programs that make up the most powerful business programming tool available for the 6809. It can be used by the relative novice, to implement an incredible variety of information storage and retrieval applications, without any programming. However, the programmer can use RMS as part of the solution to a larger problem, saving many hours of unnecessary program development time. RMS can be used to handle data input, editing, validation, on-line retrieval, sorting and printed reports. Custom data manipulation can be filled in by the user's BASIC programs.

SOUTHERN SOFTWARE SYSTEMS

SERIOUS SOFTWARE FOR THE COLOR COMPUTER

Presenting... THE GRAPH ZAPPER,
THE BAR ZAPPER and THE PIE ZAPPER

- **THE PIE ZAPPER** draws pie charts of your data - plain or fancy sectors - 5 kinds of sectors - alternate sectors styles to make an outstanding impact - labeled sectors - option to display raw numbers or percentages on chart with or without totals.
- **THE BAR ZAPPER** creates bar graphs with multiple bars - five different bar styles - positive and negative bars - can use names or numbers for bar identification - plenty of options - *"Extremely easy to use. . . Beautiful. . . Well prepared and documented tool."* The Rainbow, April 1983.
- **THE GRAPH ZAPPER** plots line graphs of data and equations - multiple lines with different symbols - mix equations and data on the same graph - with or without grids - plots lines or points - *"The Graph Zapper is one of the most completely documented pieces of software we have seen. . . The Graph Zapper is an outstanding utility and can be a major tool in statistical, business and other uses where graphic representation of numbers is desirable."* The Rainbow, Dec. 1982
- Endless applications - electric consumption, stock prices, math class equations, children's height and weight, data analysis, trend indication, experimental results, statistical analysis, sales presentations.
- The three ZAPPERS provide you with a sophisticated capability that will handle from the simplest to the most complex graphing needs.

All three ZAPPERS have these Features:

- High resolution graphs with on screen numbers, titles, and labels.
- Sophisticated data editor makes changing data simple.
- Disk version has added features including storing completed graphs on disk and menu driven file loading.
- Detailed user's guides for all features.
- Low resolution graphs can't compare.
- 14 day money back guarantee.
- User friendly, easy to understand.
- Thorough error prevention.
- Save data for later graphing or editing.
- Low cost upgrade from tape to disk.
- Hard copies possible with readily available screen print programs for nearly any brand of printer.
- Requires Ext. Color Basic and delivered on cassette.

\$15.95

for 16K tape versions

add \$1.00 for shipping . . . send check, money order,
or VISA/MasterCard number and expiration date

\$19.95

for 32K disk versions

\$44.95 for all three tape versions + \$3.00 shipping

\$56.95 for all three disk versions + \$3.00 shipping

Florida residents add 5% sales tax

WORKSAVER RECEIVES RAVE REVIEWS

FROM COLOR COMPUTER NEWS AND RAINBOW

- Fast Entry of Basic Programs
- Over 100 user definable keys
- Enhances all Coco's from 16K Non Extended Basic to Extended, 64K, Disk
- Available on Disk or cassette
- Built in cassette merge
- User's Support Service

"There are a number of products on the Coco market...the WORKSAVER ranks up there with the best of them"
—Rainbow Dec. '82

"...undoubtedly the best program I have ever bought for my color computer"
—Color Computer News Jan. '83

"the main function of the program seems to be making things easier and more functional for the user. It succeeds extremely well"
—Color Computer News Jan. '83

THE WORKSAVER WILL SAVE YOU HOURS OF WORK...WRITING AND DEBUGGING YOUR PROGRAMS"

—Rainbow Dec. '82

FULL SCREEN EDITOR

"WANT TO CHANGE the line a couple lines up? Simple. Use the arrow keys to the appropriate place and make the change. This is not only a lot easier, but it is vastly faster, too...changing line numbers, joining lines together, breaking them apart, duplicating them elsewhere—heady stuff—is very easy to do with the Worksaver" (Rainbow)

DYNAMIC EDITING

This is one of our users' favorite features: When the computer halts due to an error, or you want to make an improvement while running, you can make changes without losing data: "This is a major plus in debugging...it can save a lot of time in data loads...(and) the generation of data through inputs." Rainbow Dec. '82

"The things that this program add to the color computer..."

INCREASE ITS CAPABILITIES MANIFOLD

...it should have been incorporated into the original MICROSOFT programming (or) given out with every color computer."

—Color Computer News Jan '83

THE PLATINUM WORKSAVER INCLUDES:

- Enhancement program, including a sample array editor on a high-quality Agfa cassette.
- Fully labeled acetate keyboard overlay, not a cheap stick-on.
- Complete instructions
- Loads in seconds, takes 2.2 K

WORKSAVER A1-A3 OWNERS:

Contact us regarding return policy for our New A-4 version.

The PLATINUM WORKSAVER costs \$35.00 plus \$3.00 S&H (NY residents add appropriate tax). To order write:

PLATINUM SOFTWARE
P.O. Box 833
Plattsburgh, N.Y. 12901

Phone orders: (518) 643-2650 9-5 EST

VISA, MASTERCARD ACCEPTED. PERSONAL CHECKS TAKE 2-3 WEEKS TO PROCESS.

DYNAMIC INPUT

Perform numeric calculations, and check the contents of arrays and variables, WITHOUT interrupting the running of BASIC programs: "An EXTREMELY valuable feature that I use ALL the time."

—Color Computer News Jan. '83

NUMERIC KEYPAD CONVERSION

"The keys JKLUIOP are defined as the numbers 1-7, respectively...this mode is a Godsend for long data statements."

—Color Computer News Jan. '83

FULL FEATURED 4 COLOR KEYBOARD OVERLAY

"TRUTH: The WORKSAVER overlay is the best we have seen for this type of program."

—The Rainbow Dec. '82

"A well designed keyboard overlay (NOT a sticker..."

—Color Computer News Jan. '83

ELIMINATE THE CLUTTER

THE ORGANIZER ALBUMS TO HOLD YOUR CASSETTES

Store and organize your cassette library. The Organizer is constructed of black vinyl with rigid molded plastic frame to prevent crushing. Label holder welded on the spine for quick identification of contents. Order albums filled with BASF-DPS, C-10 tapes and get an even better deal!

Item	Price
Organizer-12 with Tapes	\$12.95
Organizer-12 without Tapes	\$6.95
Organizer-6 with Tapes	\$8.95
Organizer-6 without Tapes	\$4.95

Shipping: \$2.00 for first item + \$.50 for each additional item.

THE COCO-SWITCHER A QUALITY PIECE OF HARDWARE

The CoCo Switcher allows you to hook up three peripherals to your RS-232 jack. Connect your modem, printer and any other RS-232 compatible peripheral to the CoCo Switcher. Select among these peripherals at the flick of a switch on the front of the CoCo Switcher or turn them all off. No more scrambling around behind your computer. No more risk of harming your computer's RS-232 port. An LED on the CoCo Switcher shows if your computer is on or off at a glance.

The CoCo Switcher is contained in a sturdy black anodized steel box which sits firmly on rubber feet.

Dimensions: 2½" (64mm) x 4" (102mm) x 5⅞" (150mm)
\$39.95 plus \$2.00 shipping and handling

Color Computer Programs

★ Secret Of The Crypt **New!!!**

The BIG adventure continues. The sequel to the popular "Enchanted Forest" is here! You'll move in more than 50 hi-res, 3-D graphic scenes searching for clues in an attempt to enter the crypt. But beware, the trail to the crypt is beset with puzzlements. In fact, the crypt's secret will remain a mystery to all but the most adventuresome. Requires 32K extended basic.

Tape cassette (postage paid).....\$21.95

★ Bigfoot

Hunt Bigfoot in a hidden maze of caverns and twisting tunnels that are displayed in hi-res graphics as you move. Seek out the lair of Bigfoot while avoiding perils along the way. Features multiple levels and many options of play. Each hunt takes place in a new, randomly generated maze. Challenging and fun. Requires 32K extended basic.

Tape cassette (postage paid).....\$21.95

★ The Enchanted Forest

The BIG adventure in hi-res graphics. Move through more than 50 scenes on a quest to rescue the captive princess. Decisions are made according to visual clues, not text. There are many inhabitants in the Enchanted Forest — some are friendly, some are not. This is a sophisticated computer adventure — a real challenge. A must for your adventure library. Requires 32K extended basic.

Tape cassette (postage paid).....\$21.95

(The Enchanted Forest was reviewed in the Dec. 1982 issue of Rainbow).

★ The Game Show

Now a lively party game where two teams compete against the clock to name several items in a category. Includes 60 rounds with color graphics and sound. Machine language routine for fast response. Requires 16K extended basic and joysticks.

Tape cassette (postage paid).....\$19.95

(The Game Show was reviewed in the Jan. 1983 issue of Rainbow).

Complete Personal Accountant: we've made the best much more friendly.

If you have any doubts that we offer the best and most complete personal financial package available, look over the features listed below. Now we have the only package with **full screen editing** for Atari 400/800*, TRS-80 COLOR, Commodore 64* and VIC-20; the ability to move the cursor in any direction makes our accountant-designed package even more friendly than before. No one else offers all of these:

1. CHECKBOOK MAINTENANCE — automatically balances your checkbook with each entry; manages checks, charges, deposits, and interest quickly and accurately.
2. CHART OF ACCOUNTS — maximum of user flexibility with up to 99 accounts plus 9 sub-categories may be defined.
3. CHECK SEARCH — multi-reference; tracks items on every field including tax deductibles.
4. NET WORTH/INCOME/EXPENSE STATEMENT — know-exactly-where-you-stand program generates statements with the touch of a key.
5. DETAIL & SUMMARY BUDGET ANALYSIS — an absolute necessity in financial planning.
6. CHECK WRITER — prints personalized checks.**

7. PAYMENTS/APPOINTMENTS CALENDAR — monthly displays of up to 250 bills and 200 appointments.
8. COLOR GRAPH DESIGN PACKAGE — graphs all monthly files.
9. MAILING LIST — maintains all records, sorts by name or zip, allows add/change/delete.
10. FRIENDLY USER MANUAL — complete with indexing, flow charts and diagrams; the most thorough documentation on the market.

This all adds up to the finest personal financial system available — comprehensive enough for a small business.

Less than one hour of data input per month will allow this **menu-driven package** to help you handle your finances with a lot more fun than drudgery.

Plus, ours is the only expandable system; purchase the package in sections and add on as your financial needs grow. Features 1, 2, 3 and 6:

\$39.95 diskette, \$36.95 cassette; Features 4 and 5: \$29.95

diskette, \$26.95 cassette;

Features 7, 8 and 9: \$29.95

diskette, \$26.95 cassette; or **save \$19.90 or \$15.90**

respectively by buying the entire system for \$79.95 diskette, \$74.95 cassette.

*Random Access available for disk.

The Carefully Contrived Superhero

By Bob Albrecht
Rainbow Contributing Editor

FANTASY ROLE PLAYING GAMES

Millions of young people, and many not-so-young, are playing fantasy role playing games. A role playing game is a game in which one or more players create and control characters (adventurers) who live their imaginary lives in a specially made game world. The game world is created, managed, and operated by a GameMaster (GM), also called a referee, adventure master, or Dungeon Master (DM).

Most people who play role playing games use a formal rule system. Some of the best known are shown below.

Dungeons & Dragons (D&D). From TSR Hobbies, P.O. Box 756, Lake Geneva, WI 53147.

RuneQuest (RQ). From Chaosium, P.O. Box 6302, Albany, CA 94706.

Tunnels & Trolls (T&T). From Blade, Box 1467, Scottsdale, AZ 85252.

Worlds of Wonder (WOW). From Chaosium, P.O. Box 6302, Albany, CA 94706

BEGINNERS BEWARE! The rule books are very difficult to understand. If you are a beginner, first try **Worlds of Wonder** or **Tunnels & Trolls**. Programs in "GameMaster's Apprentice" are based on the game system used in **Worlds of Wonder** and **RuneQuest**. For general information about fantasy role playing games, try the following book, excellent for beginners.

Through Dungeons Deep by Robert Plamondon. From Reston Publishing Company, 11400 Sunset Hills Road, Reston, VA 22090.

Copyright (C) 1983 by DragonQuest, P.O. Box 310, Menlo Park, CA 94025. Portions of "GameMaster's Apprentice" are from a book-in-progress called **Adventurer's Handbook: A Beginner's Guide to Role Playing Games**.

In the game of *Champions*,* you create a superhero like Batman or Wonder Woman or Spiderman. Your character has a base value of 10. You increase the value of a characteristic by spending Power Points according to the following price schedule.

CHARACTERISTIC ABBREVIATION PRICE

Strength	STR	1
Dexterity	DEX	3
Constitution	CON	2
Body Pips	BOD	2
Intelligence	INT	1
Ego	EGO	2
Presence	PRE	1
Comeliness	COM	.5

Suppose you have 100 points to spend on improving your character's characteristic. You might spend them like this:

ADDED			
CHARACTERISTIC	VALUE	PRICE	POINTS
STR	10	1	10
DEX	10	3	30
CON	10	2	20
BOD	0	2	0
INT	20	1	20
EGO	10	2	20
PRE	0	1	0
COM	0	.5	0
TOTAL POINTS			100

*For information about *Champions*, contact Hero Games, 92A 21st Avenue, San Mateo, Calif., 94402.

(Bob Albrecht and George Firedrake are two of the most prolific authors in the microcomputer world today. Specialists in writing for beginners, they are authors of numerous books, including TRS-80 Color Basic.)

Write a program to help design a *Champions* superhero. When you type RUN, it might begin like this:

```

CHARACTERISTIC VALUE PRICE POINTS
1 STR 0 1 0
2 DEX 0 3 0
3 CON 0 2 0
4 BOD 0 2 0
5 INT 0 1 0
6 EGO 0 1 0
7 PRE 0 1 0
8 COM 0 .5 0

TOTAL POINTS:
CHANGE WHAT (1 TO 8)?

```

Select a characteristic to change by pressing a number key from 1 to 8. The CoCo then asks:

NEW VALUE?

Type your new value and press ENTER. The new value appears on screen along with a new TOTAL POINTS. You can select a characteristic and enter a new value as many times as you want until you get the character you want, with exactly the number of TOTAL POINTS the GM said you could have.

We suggest you store information in arrays of subscripted variables, as follows.

CH\$() for the characteristic abbreviations, STR, DEX, and so on.
 TVAL() for the values of the characteristics.
 PRICE() for the prices.
 POINTS() for the total points, each trait.

For ideas on how to write this program look at our simpler program to contrive a *RuneQuest* character in the August, 1983 issue. We have the following outline in mind for this program.

```

100 REM**CONTRIVE A SUPERHERO
200 REM**SET UP FIXED ARRAYS
300 REM**SET TVAL ARRAY TO ZERO
400 REM**PUT WORKSHEET ON SCREEN
500 REM**CHANGE WHICH ONE?
600 REM**GET NEW VALUE
700 REM**COMPUTE TOTAL POINTS
800 REM**GO AROUND AGAIN

```

In block 500, you might want to include a way to start over. If someone presses 0, start over at block 300.

Roll A Character

In the February and March issues, we showed you several programs to roll the seven basic characteristics for a *RuneQuest* or *Worlds Of Wonder* character. There is always another way. The following program packs the abbreviations into a string RQ\$, then picks them out as needed.

```

100 REM**CREATE A CHARACTER
110 RQ$="STRCONSIZINTPOWDEXCHA"
120 CLS

300 REM **ROLL THE CHARACTER
310 FOR K=0 TO 6
320 : CH$ = MID$(RQ$, 3*K+1, 3)
330 : GOSUB 910 'ROLL DICE
340 : PRINT CH$, DICE
350 NEXT K

400 REM**TELL HOW TO DO AGAIN

```

```

410 PRINT
420 PRINT "TO DO AGAIN, PRESS AN
Y KEY"
430 IF INKEY$ = "" THEN 430 ELSE
120

900 REM**DICE SUBROUTINE
910 D1 = RND(6)
920 D2 = RND(6)
930 D3 = RND(6)
940 DICE = D1 + D2 + D3
950 RETURN

```

Also try the following variation for lines 310 and 320.
 310 FOR K=1 TO LEN(RQ\$)/3
 320 : CH\$=MID\$(RQ\$,3*(K-1)+1,3)

A *Dungeons & Dragons (D&D)* or *Tunnels & Trolls (T&T)* character has six characteristics, with slightly different abbreviations.

Dungeons & Dragons		Tunnels & Trolls	
Strength	(STR)	Strength	(STR)
Constitution	(CON)	Constitution	(CON)
Intelligence	(INT)	Intelligence	(INT)
Wisdom	(WIS)	Luck	(LK)
Dexterity	(DEX)	Dexterity	(DEX)
Charisma	(CHA)	Charisma	(CHR)

Your Turn

- 1) Modify our program for *D&D* or *T&T*.
- 2) Write a single program to roll the characteristics for a *D&D*, *RuneQuest*, or *T&T* character as selected by the user. It might start like this:

```

I CAN ROLL A CHARACTER FOR:
DUNGEONS & DRAGONS (D)
RUNEQUEST (R)
TUNNELS & TROLLS (T)
WHICH GAME (D, R, OR T)?

```

- 3) Replace the DICE SUBROUTINE with one of the variations shown in the March issue. Better yet, include several different DICE SUBROUTINES and let the user select one.

The Character File

In the August issue, we challenged you to write a CHARACTER FILE PROGRAM with character records stored in arrays of subscripted variables. Our program begins by reserving memory space and, using a subroutine, loading the arrays from DATA statements. We then present a menu and wait for someone to order.

```

100 REM**CHARACTER FILE PROGRAM
110 CLEAR 1000
120 DIM NAYM$(50), STR(50)
121 DIM CON(50), SIZ(50), INQ(50)
122 DIM POW(50), DEX(50), CHA(50)
130 GOSUB 13010 'LOAD ARRAYS

200 REM**TELL HOW TO USE
210 CLS
220 PRINT "YOU CAN FIND A CHARAC
TER RECORD"
230 PRINT "BY NAME OF CHARACTER
OR YOU CAN"

```

```

240 PRINT "SCAN THE ENTIRE CHARA
CTER FILE."
250 PRINT @128, "MENU:"
260 PRINT @194, "TO FIND A RECOR
D, PRESS '1'"
270 PRINT @226, "TO SCAN ENTIRE
FILE, PRESS '2'"
280 PRINT @258, "TO RETURN TO ME
NU, PRESS '0'"

```

```

400 REM**WAIT FOR KEYPRESS
410 KY$ = INKEY$
420 IF KY$="" THEN 410
430 IF KY$="1" THEN 1010
440 IF KY$="2" THEN 2010
450 IF KY$="0" THEN 210 ELSE 410

```

You can combine lines 120, 121, and 122 into a single long line. Line 130 calls the LOAD ARRAYS SUBROUTINE which begins with a REM statement in line 13000. Look for it in the subroutine section below. The character records are stored in DATA statements beginning at line 30000.

The program has two main modules, shown below.

MODULE 1

```

1000 REM**CHARACTER FINDER
1010 CLS
1020 INPUT "NAME$"; WHO$
1030 RN = 0 'RECORD NUMBER

```

```

1100 REM**LOOK FOR WHO$
1110 RN = RN + 1 'NEXT RECORD
1120 IF NAYM$(RN)<>WHO$ THEN 121
0
1130 GOSUB 12010 'DISPLAY RECORD
1140 GOTO 1310

1200 REM **CHECK FOR EOF
1210 IF NAYM$(RN)="ENDFILE" THEN
1220 ELSE 1110
1220 PRINT "I DON'T KNOW " WHO$

1300 REM**TELL HOW TO DO AGAIN
1310 GOSUB 10010 'GET REQUEST
1320 IF KEY$="0" THEN 210 'MENU
1330 GOTO 1010 'DO AGAIN

```

MODULE 2

```

2000 REM**SCAN CHARACTER FILE
2010 CLS
2020 RN = 0 'RECORD NUMBER

2100 REM**DISPLAY NEXT RECORD
2110 RN = RN + 1
2120 GOSUB 12010 'DISPLAY RECORD

2200 REM**TELL HOW TO DO AGAIN
2210 GOSUB 10010 'GET REQUEST
2220 IF KEY$="0" THEN 210 'MENU
2230 IF NAYM$(RN)="ENDFILE" THEN
2020 ELSE 2110

```

Both modules use subroutines that begin at lines 10000 and 12000. These are called in lines 1130, 1310, 2120, and 2210 above.

Three subroutines and the character records complete this program.

```

10000 REM**GET REQUEST SUBR.
10010 PRINT
10020 PRINT "TO DO AGAIN, PRESS
SPACE"
10030 PRINT "TO RETURN TO MENU,
PRESS '0'";
10040 KEY$ = INKEY$
10050 IF KEY$="" THEN 10040
10060 IF KEY$=" " THEN RETURN
10070 IF KEY$="0" THEN RETURN
ELSE 10040

```

```

12000 REM**DISPLAY RECORD SUBR.
12005 REM**RN IS RECORD NUMBER
12010 CLS
12020 PRINT NAYM$(RN): PRINT
12030 PRINT "STR", STR(RN)
12040 PRINT "CON", CON(RN)
12050 PRINT "SIZ", SIZ(RN)
12060 PRINT "INT", INQ(RN)
12070 PRINT "POW", POW(RN)
12080 PRINT "DEX", DEX(RN)

```

MATCH 2!

Color pattern concentration. Two player option or play against the computer at different skill levels. Some unexpected surprises add more fun, should sharpen memory skills.

order code ... M2 price \$7.95

GRAPHICS PROGRAM GENERATOR II

This program actually writes graphics programs for you! Edit your graphics while viewing the screen using menu driven commands. When your picture is complete GPG-II will write a unique BASIC program to tape, duplicating your edited picture. A machine language module supports lettering including shifted keys and has repeat function. 'Binary save' feature to use graphics text in later program.

ordering code ... GPG-II price \$16.95

HOUSEHOLD BUDGET WORKSHEET

If you have a CoCo and any printer, don't be without this inexpensive money management helper! Operates without a separate file, yet loans are automatically updated with months remaining and new balances. Provisions for variable income/expenses and one time income/expense; user defined budget categories. All figures incorporated into calculations 'visa-calc' style.

order code ... HBW price \$6.95

LLIST-RITE

Complex, non-commented programs (like someone else's) are much easier to follow after using this listing utility! Multiple and IF...THEN...ELSE are logically separated, line numbers are set apart from text, page boundaries observed. Works with any CoCo Printer.

order code ... LLR price \$5.95

ELECTRICITY CONSUMPTION MONITOR

Want to reduce your electric bill? You can't manage it if you can't measure it. This program utilizes your CoCo to store consumption information and then produce Hi-Res graphic usage charts, text displays of the last 30 days in KWH or DOLLARS with high low and average days. Predicts your next bill with increasing accuracy as the month progresses.

ordering code ... ECM price \$10.95

COLOR COMPUTER 16K EXTENDED BASIC

SCREEN REFERENCE CARD

Is your CoCo turned off while you write programs? TURN IT ON! Let the computer look up and display proper syntax, function or statement. Imagine PRINT on a text screen locations displayed with the touch of a keystroke, graphics patterns, X/Y coordinates, ASCII codes and more.

order code ... SRC price \$7.95

PROGRAMMERS WORKSHEET

Can't remember variable assignments/descriptions or subroutine location/purpose? You're not alone! Our worksheet, designed to become the front page only of your new program makes proper techniques as easy as 'rapid writing'. The longer, more complex your program, the more headaches you'll save with this form! Use your office copier to reproduce the original you receive.

order code ... PWS price \$1.50
(ONLY \$1 WITH S.A.S.E. !!!)

SUPER BONUS PAK

All our fine programs on separate cassettes with manuals and the Programmers Worksheet for \$49! ... and we pay all shipping and handling. You save over \$13

order code ... SBP price \$49
(no shp&hdg)

Low cost, high quality programs
Color Computer Weekly 3/83

May I compliment you on a fine program
and return policy

Letter 5/83 (GPG-II)

ECM offers a lot more than the advertisements suggest ... very neat, compact energy monitoring routine ... nice BASIC programming techniques

RAINBOW REVIEW 4/83

...radical...fun...powerful...a breeze to use

RAINBOW REVIEW 6/83 (GPG-II)

...the price is a small one to pay for an item that will make your computing a happier experience...deffinatly impressive

RAINBOW REVIEW 4/83 (LLIST-RITE)

THE FUTURE OF HOME COMPUTING IS PROGRAMS THAT ENLIGHTEN, TEACH, SAVE & MANAGE

```

*****
*
*      CC SOFTWARE
*
*      * UNIVERSAL PROGRAM 1(UP-1) *
*
*      Known as the Program Stacker, UP-1 allows
* several programs to be loaded until the memory is
* filled. Quickly jump from one program to another
* or compose new programs while retaining the old
* ones. Data or ML programs can be stored and re-
* trieved from a cassette. Characters or values can
* be written to memory and memory contents can be
* examined. Text can be composed and stored in mem-
* ory and printed on an external printer.
*      UP-1 Cassette $14.95
*
*      * DISASSEMBLER-ASSEMBLER (DISASM) *
*
*      Using English mnemonics and Decimal Locations,
* DISASM is an easy way to learn to assemble machine
* Language Programs or Subroutines. Subroutines can
* be used with Basic Programs and called by either
* USR or EXEC commands. For CC compatibility, all
* locations are given in Decimal eliminating the
* confusion associated with HEX. All commands are
* Menue oriented for easy entry. The Disassembler
* can be used to Analyze Machine Language Programs
* as well as the Basic and Extended CC ROMS. Example
* programs are included. Cassette $19.95
*
*      * TERMINAL PROGRAM (DYTERM)
*
*      DYTERM converts a CC into a terminal. Receive and
* send data between 2 computers, another terminal or
* a MODEM. BASIC Program with ML subroutines.
*      DYTERM Cassette $14.95
*
*      * FINANCE PROGRAM (DYFIN) * new
*
*      DYFIN is designed to aid in the financial planning
* of loans, savings, annuities, investments & retire-
* ments. It quickly calculates monthly payments for
* loans and gives the return for money invested over
* a period of years. Also included is a 500 year
* Calender that displays any month of any year plus
* a checkbook program. EB is required. Tape $19.95
*
*      EXTENDED BASIC not REQUIRED unless noted. Programs
* require a 16K Computer and are DISK compatible.
*
*      HARDWARE ITEMS
*
*      Increase your computer's memory with the following
* Memory Expansion Kits. Soldering is not required
* and the modifications are reversible. Each kit is
* warranted for one year.
*
*      ME-1 upgrades 4K to 16K          $19.95
*      ME-2 upgrades 4K to 32K         $59.95
*      ME-3 upgrades 16K to 32K       $39.95
*      ME-4 upgrades D & E CC to 64K   $99.95
*      ME-4F upgrades F series to 64K  $89.95
*
*      Note: ME-4 & ME-4F require a 1.1 ROM. WE WILL
* install our kits in your Computer for $10 + ship.
*
*      6809E Microprocessor Chip       $19.95
*      6821 Peripheral Interface Adapter $6.95
*      EXTENDED BASIC ROM              $87.00
*
*      WE REPAIR COMPUTERS
*
*      * PUT YOUR PROGRAMS IN A PROM PACK *
*
*      Send us your program on a cassette and we will
* send you a cartridge with your program in it. Send
* $19.95 for 4K and $29.95 for 8K.
*      Blank cartridge with circuit board $9.95
*      EPROM type 2764                   $9.95
*
*      NEW & USED RS & TDP COLOR COMPUTERS were purchased
* and upgraded for use in our Computer School. Call
* or write for prices. All carry a 180 day warranty.
*
*      checks, VISA & MC Cards. Add $2 ship.

```

Remember, when you enter this program, you can omit REM statements and comments following an apostrophe.

Coming Attractions

Surely, but slowly, we will explore the following things:

- The elusive RND
- GameMaster's Dice
- Looking up stuff in files. First, files of information in DATA statements and arrays. Next, cassette files. Eventually, disk files.
- Whatever else comes to mind or is suggested by you.

What do *you* want? If it fits into the general idea of "GameMaster's Apprentice," we might do it. Send your suggestions, complaints, kudos, requests, whatever . . . to George & Bob, P.O. Box 310, Menlo Park, Calif., 94025.

Hint . . .

Saving In ASCII

When you save programs, CoCo can perform this function in two ways, by using binary codes or actual letters and numbers (called ASCII and pronounced AS-KEY).

Although it takes longer, ASCII sometimes is a more accurate way to save a program, especially when you may be transferring programs between systems—say from a disk-based to a cassette-based system.

To save in ASCII, simply add a comma and an "A" to the end of your "SAVE" instruction, like this: *CSAVE* "PROGRAM",A and the ASCII save will be done by CoCo.

FHS

Federal Hill Software

FINE PRODUCTS FOR THE COLOR COMPUTER AND TDP-100

Coco-Accountant II

We've turned a fine accounting program into a great accounting program for the home or small business. The all-new Coco-Accountant II provides everything you need to keep track of your finances and make income tax time a breeze. Spend a few minutes every month with your canceled checks, credit card bills, cash receipts and payroll stubs. Data entry is quick and painless. When you're through, Coco-Accountant II will list and total expenditures and income by month, account or payee, provide a year-to-date summary by account and figure your net cash flow. Better yet, it will provide a printed spreadsheet to show your year at a glance.

The program sorts entries by date, lists most functions to screen or printer and saves your files to tape or disk. A special feature flags tax deductible expenses and expenses subject to state sales tax. It even computes the sales tax you paid. In addition, COCO-ACCOUNTANT II includes a separate program to balance your checkbook the easy way and print a reconciliation statement. Up to 450 entries per file on 32K tape version, 500 per file on 32K disk and 750 on 64K disk version. For 16K Coco owners we have a simpler program that tracks expenses only, without the tax options. It will handle 200 entries per file. All versions are easy to use and menu-driven and come with complete documentation. And here's the best part—the price! Coco-Accountant II is only \$21.95 on tape, \$24.95 on disk.

Play Blackjaq!

This is as close as you can come to the real thing without losing your shirt! A full casino simulation, with up to 5 players and 9 decks. The computer plays vacant hands by card counting rules, keeps track of everybody's winnings and losings, displays two card-counting algorithms and even prints out the results of every hand if a printer is on line!. Great for the beginner or experienced player. Use it at home for fun or brush up on your technique before hitting Atlantic City or Las Vegas. Requires 16K Ext. Bas. Only \$19.95 on tape, \$24.95 on disk.

Kokomath!

Teachers and parents: Are your kids bored by dull educational programs? Let KOKO the Math Clown make arithmetic a joy. KOKO gives your youngsters 10 math problems. If they get them all right, they give KOKO a bath! He keeps track of their score. Add, subtract, multiply an divide at three levels of difficulty. Colorful graphics and music make this a kid-tested winner! Includes both Extended and Standard Basic Versions. Only \$8.95

To order programs, send check or money order to **FEDERAL HILL SOFTWARE, 825 William St., Baltimore, MD 21230. Your personal check is welcome—no delays. Add \$1.50 per order for postage and handling.**

64K Breakthrough!

Did you feel gypped when you found out your "64K" computer still had the same old 32K in Basic? We sure did. So we've developed HID 'N RAM, a program that will access that "hidden" 32K from Basic and use it for data storage. Imagine writing a 28K data handling program with every bell and whistle you can think up and still having 32K left for the names, numbers and addresses you're crunching! HID 'N RAM is a brief ML driver embedded in a Basic demonstration program (a mailing list) that shows you how to store your data in the "other" 32K and access it using regular Basic commands. When you see how it works, you can delete our program and write your own. The ML driver stays with the program! Use it from tape or disk. What's the catch? There's only one. Your data must be in strings of equal length—which the program takes care of—and that length must be a power of 2 (such as 8, 16, 32, 64 or 128 bytes). Of course, you must have a 64K computer. Comes with complete documentation. HID 'N RAM is only \$19.95 on tape, \$24.95 on disk.

The Handicapper

Use the power of you Color Computer to improve your performance at the track! The Handicapper is two separate programs for thoroughbred and harness horses that apply sound handicapping techniques to produce rankings for the horses in each race. Factors include speed, distance, track condition, post position, past performance, jockey or driver's record and other attributes. With a little practice, you can handicap an entire race in a few minutes and a whole card in less than an hour! Easy enough for the beginner, sophisticated enough for the veteran horseplayer. Cassette comes with both Extended and Standard Basic versions. Includes complete documentation and betting guide. Thoroughbred or Harness Handicapper, \$24.95 each on tape. \$29.95 disk. Both programs only \$39.95 tape or disk.

Printer Artist

This unique printer utility introduces the Color Computer to the little known but delightful craft called "Artying." This is the art of creating pictures using typewritten characters, and Printer Artist puts it at your fingertips. It includes two programs with 12 ready-to-run drawings of ships, birds and animals, holiday and patriotic themes, famous Americans and more. In addition, there are two utility programs and instructions for 40 additional drawings. Create your own file of printer art and save it to tape or disk. Complete documentation. Fun for home or classroom. Only \$19.95 on tape, \$24.95 on disk. Requires Ext. Bas.

QUALITY SOFTWARE AND PERIPHERALS FOR YOUR COMPUTER

MYSTIC MANSION — New!! You'll be hearing lots about this incredible ALL GRAPHIC adventure. Explore the mansion and escape from the island, if you can! This one is tough to solve, but you'll have fun trying. For 32K Disk only. **Disk \$29.95**

SUPER STATS — New!! The most powerful statistics program available for the CoCo/TDP. Multiple linear regression, forecasting, mean, standard deviation, correlation coefficients, covariance, F and t tests. Powerful data editing and manipulation abilities such as transformation of variables including log, exponentiation, raise to a power and multiply by or add a constant. Data plotting, Student t tail areas, Gaussian cumulative probability distributions, and more. Flexible I/O (screen or printer, tape or disk). Very good documentation. 16K Extended BASIC. **Cassette \$29.95**

SIMPLEX — New!! Linear programming by the "simplex" method now available for the Color Computer. This powerful decision making tool finds the optimum "mix" for a given set of constraints. Ideal for business students, teachers, and professionals. Dynamic model dimensioning, with maximum size approximately 45 constraints and 45 variables. Disk compatible. 16 page manual included. 16K Extended BASIC. **Cassette \$29.95**

PAGE PLUS — Attention BASIC programmers! Here is the software you've been waiting for! Up to 56K available from your BASIC programs. This utility, written by Chris Hawks, does the memory management necessary to utilize the two 32K banks of memory. Easy enough for any "intermediate" level BASIC programmer to use. Includes documentation and demo programs to show you how to use PAGE PLUS to get the most out of your computer. Works with 64K tape or disk systems. **Cassette \$27.95 Disk \$29.95**

MDISK — Hal Snyder's latest breakthrough for the 64K Color Computer! MDISK lets you use the upper 32K of memory for rapid storage and retrieval of programs and data. Whether you own an actual disk drive or not, MDISK puts the "hidden" 32K to work for you as a "virtual disk," with capability to save and load up to 15 programs, view a directory of files stored in "page 1," kill unwanted page 1 files, execute BASIC or machine language directly from MDISK, chain to a BASIC program while preserving data already created, and more. These functions are available not only under manual keyboard control, but from programs in progress as well, permitting high-speed swapping of programs or data. Unlike many 64K utilities, MDISK doesn't copy BASIC to RAM. This greatly increases the amount of workspace available to you (by 22K in a disk system). MDISK is written in position independent code, and will work on disk or tape based 64K systems. Full documentation included. **Cassette \$27.95 Disk \$29.95**

ROMBACK — Why pay more? The easiest to use ROM-pak dumping utility available! At the best price, too! Comes with full documentation, including detailed patching instructions to allow several popular "problem" cartridges to run from tape or disk. Stop plugging and unplugging your disk controller! Don't blow any more SAM chips or 6809Es! Use ROMBACK, and run those programs from tape or disk instead. Works with any 64K Extended BASIC system. **Cassette \$16.95**

QUICKSORT — A machine language sort routine specifically designed to be used by BASIC programmers. Speeds up those programs where a BASIC sort is just too slow. Great for mailing lists and databases. Can be incorporated into many existing programs as well. Written in position independent code, works on tape or disk systems. 16K required. **Cassette \$12.95**

64K BOOT/PAGER — The 64K Boot allows you to modify BASIC by moving it from ROM to RAM. The PAGER is a menu-driven utility allowing you to manually page between the 32K banks of memory, copying BASIC or data from one page to the other. The complete assembler source code for both programs is included. Both are written in position independent code and run on 64K tape or disk systems. **Cassette \$19.95**

STRUCTURED MACROS — An assembly language programming tool for users of the Macro-80C assembler, by the Micro Works. Structured macros come close to transforming your assembler into a high-level language. Your programs become more understandable and debugging is simplified. Commands include IF, ELS, ENDIF, IFTST, IFCC, WHILE, ENDWH, REPEAT, and UNTIL. **Disk \$19.95**

WIZARD 64 — If you've got 64K, then this one's for you! Uses both 32K pages of memory for graphics and action—combines the features of Wizard's Tomb and Wizard's Tomb Part II into one great game. Challenging enough for adults, yet entertaining for younger players too. 64K Extended BASIC required. **Cassette \$21.95 Disk \$23.95 16K version \$12.95 32K version \$15.95**

All Software Available on 3" AMDISK Cartridges—\$4 additional

ORDERING INFORMATION

*\$10 shipping, handling, & insurance on printers,

(312) 286-0762

QUALITY SOFTWARE AND PERIPHERALS FOR YOUR COMPUTER

AN ASTRONOMICAL ARRAY OF FEATURES FOR A DOWN-TO-EARTH PRICE

MORE QUALITY: 120 cps • thrupt time of 58 lpm • high resolution (120x144) bit image & block (6x6) graphics • extra fast forms feed
MORE FLEXIBILITY: super/sub script • underlining • backspacing
 • double strike mode • emphasized print mode • 816 character buffer • compatible with most software supporting leading printers
 • 10" carriage • 15" carriage Gemini-15 available
MORE RELIABILITY: 180 day warranty (90 days for head & ribbon)
 • mtbf rate of more than 5 million lines • print head life of more than 100 million characters

SAVE \$90.00!!!

Our incredible Gemini-10 package—a **PRINTING SYSTEM** ready to plug in to your Color Computer. **NOTHING MORE TO BUY.** Includes serial to parallel converter, graphic screen print software, deluxe user manual, and 5 minute setup instructions! A \$479.00 value. Complete package

Wide carriage Gemini—15 also available:

Package ONLY \$579*
 Printer only \$499*

THE GEMINI-10 X

NEW
 LOW PRICES!

ONLY \$389*

Order yours today!
 Parallel printer only, \$309.

GET THE MOST FROM YOUR SYSTEM WITH AN NEC MONITOR PACKAGE!

Without a monitor, you'll never know just how good your graphics are. Word processing becomes less fatiguing, programming more enjoyable. NEC is famous for excellent color reproduction and tack-sharp resolution. We take the work out of adding the monitor to your system by including a custom plug-in monitor driver (with color, monochrome, and audio outputs), any required cables, and easy setup instructions. Buy with confidence—we've done the "homework" for you!

NEC 12" Color monitor (JC1212M) package ONLY \$389*

NEC 12" Green-screen (JB1260M) package ONLY \$169*

NEC 12" Amber screen (JB1205MA) package ONLY \$219*

True lower-case and inverse video—just plug in the LCA-47. Special price with monitor purchase \$66.

GET SMART!! GREAT DEAL ON HAYES SMARTMODEMS

Hayes 300 baud Smartmodem—the amazing programmable auto-dial, auto-answer modem, now in a special package deal for your Color Computer. Buy the Hayes for list price, and at NO EXTRA CHARGE receive the Colorcom/E smart terminal program (cartridge or disk), an RS232 cable, and setup instructions! Act now!

Hayes 300 baud Smartmodem package ONLY \$289*

Hayes modem with CC cable only, \$249*

Signalman Mark I modem, 300 baud direct connect, list \$98, our price \$86*

The revolutionary 3" disk system! Two compatible 156K drives in a compact enclosure. Uses the rigid, protected 2-sided cartridge that has made others obsolete. Our package includes the Amdisk III, cable, disk controller, Disk BASIC manual, 12 cartridges, setup instructions, and a ML tape to disk program to help transfer your software! Everything you need, plus you save \$50!

Package price ONLY \$689* Amdisk III plus cable only \$479*

Order Now!!

**SALE ON
 AMDISK III
 DISK SYSTEM!!**

UPS C.O.D. orders gladly accepted,
 \$2.00 additional.

SKYLINE 64K Memory Upgrade Kits

8 guaranteed 200 n.s. 64K memory chips, solderless installation instructions, Skyline's 64K BOOT and PAGER programs (a \$19.95 value). All for the super low price of \$59.00! Order yours today!

The Power Of OS-9

(And How To Keep It Simple)

By Dale L. Puckett

This is the first installment of a new monthly feature on the powerful OS-9 operating system.

Grab your CoCo and hold on! Thanks to Tandy's release of Microware's OS-9 operating system, you now have more computing power at your fingertips than you ever dreamed possible.

Welcome to KISSable OS-9, a brand new monthly feature in *Rainbow*. First, let's explain the title. Computing is a complex business. Yet, if we keep our wits about us and learn to solve one small problem at a time, we can create large programs that are nothing short of amazing.

Writing is the same. Although it sounds like a snap, it is probably one of the hardest things in the world to do right. However, if you look closely, you'll find the writer's formula for success is similar to the programmer's. He uses short words, short sentences and short paragraphs to build stories that work.

Today's programmers use short modules of readable code to build complex programs. The OS-9 operating system and the high level languages it brings you make the job easy.

Simplicity is the key to success in both professions—unfortunately, it is also highly evasive. Often, it seems impossible to achieve. That's where our title comes in.

KISS is an acronym I learned early in a journalism curriculum. It stands for "Keep It Simple, Stupid." Hopefully, every time I wander into a complex maze and start to confuse you—and myself—I'll glance back at the title of the column and force myself back on track.

I've been very excited ever since *the Rainbow* asked me if I would be interested in introducing you to OS-9. I didn't hesitate.

My response was immediate because of my pleasant experiences with OS-9 during the past several years. Let's make a

(Dale L. Puckett is a freelance writer and programmer who has worked with the Motorola family of microprocessors since 1976. He just completed his first book, "A Complete Tour Guide To BASIC09," this summer. It is being published by Microware and will be available this fall. He is the author of DynaSpell, Readtest, Esther and Help, which are available from Frank Hogg Laboratories. He serves on the InfoWorld Software Review Board and is a Chief Warrant Officer in the U.S. Coast Guard.)

comparison. If you have only used Radio Shack's Disk Extended BASIC in the past, you probably think it's pretty hot stuff. It is! However, if you've already moved up to a real operating system like FLEX, you probably love it more. In either case, I'm predicting that after you've used OS-9 for a while, you'll think you're in microcomputer heaven.

This column is dedicated to you—the CoCo user. We'll try to show you little tricks that make your computer more powerful and easier to use. And soon, we'll move on to introduce you to powerful new languages like BASIC09, C, and Pascal. We'll also introduce you to the OS-9 assembler and show you how to write your own 6809 machine code modules. Then, since it's always better to show than tell, we'll take a few short Color BASIC programs and rewrite them in BASIC09. Wait till you see the difference!

The arrival of OS-9 has already generated a lot of excitement in the Color Computer arena. Frank Hogg Laboratory, for example, has already announced a new High Resolution Screen and Utility package for the CoCo version of OS-9. It's called O-PAK and will give you a 51 x 24 character screen for around \$35.

Frank immediately realized that a state of the art operating system like OS-9 and the powerful applications software it can run would be cheated by the 32-column display on CoCo. He plans to have O-PAK ready by October 1.

Incidentally, you'll love the utilities you get with O-PAK. You'll be able to read FLEX and Radio Shack disks from OS-9. You'll also be able to dump and list them and look at their directories. Powerful OS-9 applications software like the DynaStar text editor, DynaSpell spelling checker and many high level languages will be available for CoCo's OS-9 operating system at some very nice prices.

Our registration fee has been mailed and plane reservations confirmed. We'll be covering the Second Annual OS-9 Seminar in Des Moines for you, August 12—15. We'll even take along the camera so you can see the faces of the people who are bringing you this powerful tool.

OS-9: An Overview

OS-9 has so many things going for it that it will take us several months to show you the major features. In this first column we'll reveal some new magic in CoCo's keyboard as

we show you how to talk to OS-9. We'll even throw in a few tricks that will make your life as a programmer easier. But first, let's answer a few questions in an attempt to get to the bottom line.

Why should you be excited about OS-9? What's an operating system? What are OS-9's advantages over Disk Extended BASIC? Why is it better than FLEX? Is it? To answer these questions we must look at OS-9's family tree.

OS-9 is an extremely efficient implementation of the UNIX operating system philosophy which was designed and coded in 6809 assembly language by Microware Systems Corporation in Des Moines, Iowa. Since it is native 6809 machine code it is small and fast.

UNIX, developed by Bell Laboratories in the early 1970s, was written in "C." Its designers strived to create an operating system that recognized that software development is expensive. It simply took too much time to write and maintain system and application programs. UNIX helped, but was too big to fit on most microprocessors. OS-9 makes the UNIX philosophy work on CoCo and other 6809 microcomputers.

Let's use your Color Computer as an example. How many times have you needed to use one program while you were running another? How many times have you wished that your spouse could use the computer to keep the books while you were programming it from a second terminal? Have you ever wished you could print a long letter while you were composing another? Now, we all do these things easily, every day, with OS-9.

It all started when Motorola, the 6809's manufacturer and Microware Systems Corporation in Des Moines, joined forces to write an operating system designed to use every capability in the chip. The project was possible because the 8-bit 6809 microprocessor has several 16-bit registers and almost every memory addressing mode used by a minicomputer.

Motorola's goal was to sell mass-produced "software-on-silicon"—everything would be distributed in ROM (Read Only Memory) chips. To do this, they needed a set of modules (programs) that could be plugged anywhere in memory.

The use of an assembler to reassemble the source code or a linking loader to link the modules together at "run time" was out of the question. The modules had to be "position independent."

The operating system also needed to meet several other requirements: All modules had to be re-entrant. More than one user would be running them at the same time. This meant that you had to be able to interrupt the routine in the module, let another program execute it and then return to the original caller with all answers intact. It also meant that the programs in the modules could not modify themselves while they were running.

OS-9 Modules must contain only machine code. Variables are stored in a separate data area. This lets you remove modules when they aren't being used and makes room for other programs.

The OS-9 operating system knows which language is being used in a module. And, modules can talk to each other. The streams of characters traveling between modules, files and devices all look alike. An OS-9 program can't tell if it is getting instructions from a keyboard or a disk file. It has no need to know. Individual device drivers are the only modules that need to know—because they take care of all adjustments.

The requirements and characteristics above give you an operating system made up of a number of small modules. Each module contains the following information:

- a) A name made up by a string of ASCII characters.
- b) A module header that contains the module type and size.
- c) A revision number.
- d) The distance from the beginning of the module to the beginning of the code.
- e) The amount of memory required to execute the module.
- f) A checksum that makes sure your program is loaded properly. If the checksum is incorrect, OS-9 will not execute your program.

Major modules in your Color Computer's OS-9 operating system include:

- a) OS9 and OS9p2: A kernel which forms the heart of the operating system.
- b) Clock: Divides the 6809's time between several different processes by managing interrupts from a 60 cycle power line. This makes the processes appear to be running at the same time and also keeps the time of day.
- c) IOMan: Manages all requests for Input/Output from all devices.
- d) RBF: Takes care of all Input and Output to random files on floppy disks and other block-oriented devices. It also handles all directories and other file information.
- e) SCF: Manages OS-9's communication with your keyboard, CoCo's screen and other devices that read or write one character at a time.
- f) CCIO: The device driver that actually communicates with the hardware inside CoCo. It services both the keyboard, and the screen.
- g) RS232: The device driver for the RS-232 port. You use it when you timeshare your CoCo with an external terminal.
- h) TERM: A device descriptor that contains data used to tell your programs what your terminal looks like. It works with the CCIO device driver.
- i) T1: Another device descriptor that tells your programs what they can expect from your external terminal. It uses the RS232 device driver.

How does this newfangled operating system fit into the picture? How does it compare to the Color Disk Extended BASIC you have been using?

Color Disk Extended BASIC is a programming language. It contains a few simple routines that allow you to save programs and data on a floppy disk and load them back in for use. When you talk to it, you use BASIC language. You can tell it to "PRINT HELLO!," etc.

OS-9, on the other hand, is an environment. It makes it possible for BASIC09, Microware's own highly readable and structured advanced BASIC language, and other computer languages to talk to the real world.

OS-9 connects your program to your keyboard. It writes letters and numbers on CoCo's screen so you can read them and prints data on your printer so you can have a hard copy. It saves programs on floppy disks for you—so you won't have to type them over every time you want to run them and it even lets you run two or more programs at the same time—a process called multi-tasking.

OS-9 has its own library of programs that you can call in

to do your dirty work. These programs are called utility programs and we'll be showing you how to use them during the next several months. This month, we'll show you some new magic in CoCo's keyboard.

Special Keys

When you run OS-9, several special keys make life easier. They help you correct mistakes, repeat actions or even stop a program in midstream.

Let's start with the "mistakes." What happens if you mean to type *LIST* but *LOST* comes out of your fickle fingers? No problem—if you correct it. And if you don't OS-9 will let you know.

There are two ways to correct an error. You can hit the backspace key and back the cursor up to the bad character so you can type over it. Or, you can hit the line delete key to get rid of the whole mess and start over. It's your choice. To do this, you use CoCo's back arrow key.

You say your Color Computer doesn't have a key marked "LINE DELETE"? No problem! Most terminals don't. CoCo's OS-9 lets you delete the line you are typing by striking the "X" while holding down the key marked "CLEAR." In fact, the CLEAR key always serves as the CONTROL key when you are running OS-9.

Other special functions let you repeat the previous input line, interrupt a program, redisplay the present input line, exit a program, or wait. The "wait" function gives you a way to stop CoCo's screen from scrolling so that you may study a line while listing a long file.

The Repeat Key

You'll love the repeat function because of the wear and

tear it saves your finger tips. To use it, you hold down the "CLEAR" key while typing the letter "A." You'll find this function really handy when you need to run the same command line several times. Just type CLEAR A and the line will magically reappear. Then, type ENTER to run the command again.

Try this the next time you turn on CoCo. Type: DIR ENTER. You should see a list of the contents of your current data directory.

Then, type: CLEAR A ENTER. Your trusty Color Computer should list the directory again. If you think the repeat key is neat now, wait till you use it with a long command line.

It sure beats typing. Exercise this special key every time you get the chance. You'll save hours.

Other Special Keys

If you ever need to temporarily stop a program in the middle, you can use the Interrupt Key. To do this on your Color Computer, you strike the letter "C" while holding down the CLEAR key. Or, you can strike the BREAK key while holding down the SHIFT key.

You may redisplay the present input line by typing CLEAR D. Or, stop a program by typing BREAK. Or, you could type CLEAR E. The "E" stands for "End." On most other OS-9 computers you type "Control Q" for quit.

Imagine that you are running a program that prints a long list of numbers on your terminal. The numbers are coming at you so fast that they scroll off the screen before you can read them. What do you do?

This would be a good time to try OS-9's special "wait" key. Strike the "W" key while holding down the CLEAR key. The printing should stop. After you have studied the numbers, you may continue printing by hitting any other key. Try it.

The last special key lets you ESCAPE. It sends an end-of-file character and gives you a way to send a signal to procedures that receive data from the keyboard. To send it, hold down the CLEAR key and strike the BREAK key.

There's only one catch. When you send this ESCAPE code to OS-9, you must be sure that you type ESCAPE as the first character on the line.

Other OS-9 Magic

Hold on to your seats, we haven't told you everything. Are you impatient? Do you often know what you want to do next but you find yourself waiting for the computer to finish one task so you can tell it to do the next?

Rest easy. OS-9 lets you "type ahead." This is a fancy way of saying that while CoCo is running one program, you can go ahead and type another command line, or answer the next question if you know what it will be.

In fact, you may stay several command lines in front of CoCo. It will execute them one at a time, just as fast as it can. There are only two gotchas. First, you will be typing blindly. This is only a minor slow-down however, and is much better than sitting around chewing your fingernails. And secondly, you cannot type ahead on CoCo's keyboard while the disk drives are being accessed. Tandy should have used an ACIA for I/O instead of bit banging PIAs.

I hope you have enjoyed this first look at OS-9 on the Color Computer. Next month we'll look at the file system, show you how the directories work and start looking at all of the handy OS-9 utility commands.

Introducing - MORE Quality Software by MSI.

Featuring * COLOR FINANCE for the Color Computer - 32k Ext. Disk req'd. \$59.95

Features include:

- * User Friendly - No programming knowledge required
- * Fully documented/Easy to use
- * Maintain up to 21 Asset, 21 Liability, and 54 Expense Accounts
- * Print Options (Account Statements, Budgets, Trial Balance, & MORE!)
- * Backup/Restore To Cassette Tape
- * Large 42 x 32 screen display
- * Sample Session Included for Fast and Easy Instruction.

ONLY \$59.95
exclusively from
Delker Electronics, Inc.

TO REALIZE THE FULL POWER & PERFORMANCE OF THE 6809, LOOK TO GIMIX.

GIMIX OFFERS YOU A VARIETY OF SS50 BUS COMPONENTS AND SYSTEMS.

OS-9 GMX III

The **GMX 6809 CPU III** and **OS-9 GMX III**. A Multi-user, Multi-tasking package for the ultimate in System Performance plus protection of the system and other users from crashes caused by errors in individual users programs
#01 (CPU & Software) **NEW!** \$1698.01

INTELLIGENT I/O PROCESSOR BOARDS increase system throughput by reducing interrupts to the host, buffering data transfers, and data preprocessing. Prices include on board firmware. Requires system drivers.

#11 3 port RS232 Serial (SS30) **NEW!** \$498.11
#12 4 port Parallell (SS50) \$538.12

OS-9 GMXIII drivers (included when purchased with GMX III package) \$200.00
 OS-9 Level 2 users -- contact GIMIX for system requirements and availability.

192K GMX II #79 SYSTEMS: All include GMX 6809 CPU III and OS-9 GMX III (#01); a #11 3 port intelligent serial I/O & cables; #19 Classy Chassis; 192KB Static RAM; #68 DMA controller, all necessary cables, power regulators, and filler plates. The OS-9 Editor, Assembler, Debugger, BASIC-09, and RUNB are included.

#79 with dual 40 track DSDD drives **NEW!** \$5998.79
#79 with dual 80 track DSDD drives \$6298.79
#79 with #88 8" Dual Drive Disk System \$7598.79
#79 with #90 19MB Winchester subsystem & one 80 track DSDD drive \$8998.79
 UniFLEX for the GMX 6809 CPU III and intelligent I/O boards is in development.

OS-9 GMX I; OS-9 GMX II; FLEX; and UniFLEX

The **#05 GIMIX 6809 PLUS CPU board** \$578.05
 Options: GMX DAT \$35.00 SWTPC DAT \$15.00
 9511A \$312.00 9512 \$265.00

#49 64KB GHOST SYSTEM includes: #05 CPU; #19 Classy Chassis; 64KB static RAM; a #43 2 port serial card & cables; #68 DMA Controller; all necessary cables, power regulators, and filler plates; GMXBUG monitor; FLEX; and OS-9 GMX I. You can software select either FLEX or OS-9. The OS-9 Editor, Assembler, Debugger, BASIC-09, and RUNB are also included.

#49 with dual 40 track DSDD drives \$4398.49
#49 with dual 80 track DSDD drives \$4698.49
#49 with #88 8" Dual Drive Disk System \$5998.49
#49 with #90 19MB Winchester subsystems & one 80 track DSDD drive \$7398.49

#39 128KB SYSTEM includes: #05 CPUwDAT; #19 Classy Chassis; 128KB of static RAM; a #43 2 port serial card & cables; #68 DMA Controller; all necessary cables, power regulators, and filler plates; GMXBUG monitor; FLEX; and OS-9 GMX II. You can software select either FLEX or OS-9. The OS-9 Editor, Assembler, Debugger, BASIC-09, and RUNB, and GMX-VDISK for FLEX are included.

#39 with dual 40 track DSDD drives \$4998.39
#39 with dual 80 track DSDD drives \$5298.39
#39 with #88 8" Dual Drive Disk System \$6598.39
#39 with #90 19MB Winchester subsystem & one 80 track DSDD drive \$7998.39
 UniFLEX, available at extra cost, requires 8" or Winchester drives. A signed license agreement with TSC is required before shipment.

You can add to any GIMIX system RAM, I/Os and other options, or substitute non-volatile RAM. GIMIX will customize to your needs.

COMING SOON: Contact GIMIX for price and availability on 40MB and 72MB Winchester (5 1/4") drives, removeable pack Winchesters, 256KB static RAM boards.

All GIMIX systems are guaranteed for 2MHz operation. GIMIX systems include documentation for all boards and software in a GIMIX binder. **ALL DRIVES ARE 100% TESTED AND ALIGNED BY GIMIX.**

ALL BOARDS AND SYSTEMS ARE ASSEMBLED, BURNED-IN, AND TESTED. GOLD-PLATED BUS CONNECTORS ARE USED.

TO ORDER BY MAIL: SEND CHECK OR MONEY ORDER OR USE YOUR VISA OR MASTER CHARGE. Please allow 3 weeks for personal checks to clear. U.S. orders add \$5 handling if order is under \$200.00. Foreign orders add \$10 handling if order is under \$200.00. Foreign orders over \$200.00 will be shipped via Emery Air Freight COLLECT, and we will charge no handling. All orders must be prepaid in U.S. funds. Please note that foreign checks have been taking about 8 weeks for collection so we would advise wiring money, or checks drawn on a bank account in the U.S. Our bank is the Continental Illinois National Bank of Chicago, 231 S. LaSalle Street, Chicago, IL 60693, account #73-32033. Visa or Master Charge also accepted.

EXPORT MODELS: ADD \$30 FOR 50Hz. POWER SUPPLIES.

GIMIX Inc. reserves the right to change pricing, terms, and product specifications at any time without further notice.

ALL PRICES ARE F.O.B. CHICAGO

Choose from GIMIX' wide variety of system components.

The **GIMIX CLASSY CHASSIS #19** consists of a heavyweight aluminum cabinet, constant voltage ferro-resonant power supply, and SS50 Mother board with baud rate generator board \$1398.19
 Triple Disk regulator card and cables \$88.22 Baud rate generator card \$88.93
 Missing cycle detector \$38.23 Filler plates \$14.92
 Back panel connector plates (specify) \$8.60 50 Hz. option \$30.00

MEMORIES (GIMIX uses only Static RAM)

#67 64KB NMOS STATIC RAM board \$478.67
#64 64KB CMOS STATIC RAM board w/battery back-up \$568.64

Create Your Own Tutorial

By Joseph Kolar
Rainbow Contributing Editor

In the last article, we found that when you key in a very long sentence or paragraph which requires more than one program line to complete, and put quotes after the "imaginary line" (the left margin) of the last line of text and follow it with a semicolon, you can continue on the next program line and get neat, satisfactory results.

Given this knowledge, it is good practice to run a tutorial program for your own amusement. The object is to experiment and see if what you are learning holds up in all cases. Also, you want to see if you can find some additional techniques that might be useful.

A good practice, whenever you experiment or revise programs, is to put a fresh tape into your cassette. Many times you will be interrupted or you will get a nice display. If you *CSAVE* twice, you will be able to keep revising and improving your program without the fear of forgetting what you had done before. Later, you can decide to either keep it or erase it. You should keep a specially designated tape handy just for temporary storage.

Personal tutorials are good for the soul! They enable you to make your own programs and give you practice in organizing text. You learn with this "hands on" approach. After you make a nice tutorial, you should *CSAVE* it for your own reference and for your fellow computer addict's benefit.

It is fun to create and you can't help feeling good when you finish and know that not only have you learned something new and enjoyed learning it, but that it is available for future reference and pretty strong evidence that you've come a long way.

It is the old story, "what happens if . . ." Look at the listing.

- 1) Pose a question.
- 2) Illustrate it with an example.
- 3) Determine what happens.
- 4) If the answer is inconclusive or unsatisfactory, discard it and try another question.
- 5) If the answer has significance to you, write *REM* statements, giving your conclusions, in your own words that make sense to you.

(Joseph Kolar is a free-lance writer and programmer dedicated to proselytizing for computers in general, and the CoCo specifically.)

- 6) Pose another question to cover a slightly different case. (Go off on a tangent.)
- 7) Repeat steps 2 to 6.
- 8) When you have exhausted the possibilities or have gone as far as your interest allows, finish up with a conclusion.

The above instructions are not chiseled in stone. You need not memorize or follow them religiously. They are just a guide to give you the feel of "what if . . ."

Later, you may find other avenues to investigate. You may find your tutorial has a fatal flaw. No sweat! Get out your tutorial and work it up.

Remember, you are making this up for your own benefit and making boo-boos is part of the game. You will agree that it is fun when you discover something new on your own.

Finally, as the proud creator of a tutorial, you may want to share it with others. Submit it to your favorite publication.

Let us consider *REM* statements. If *REMs* are used properly, they are very useful. They can also be distracting and annoying to read if they appear haphazardly in a program.

Did you ever notice a long, explanatory *REM* that has single letters of a word at the right margin and the rest of the word on the next line? Or, a space at the left margin, causing the line to be indented?

Fire up your trusty CoCo and key in this *REM* program line: 10 "NOW IS THE TIME FOR ALL NEWCOMERS TO TRY TO LEARN AS MUCH AS THEY CAN ABOUT WHAT THEY CAN DO WITH THEIR COLOR COMPUTER." Did you type it in exactly with a space between each word? Good!

Notice that the first line will end with "NEWC." The next line will begin with "OMERS." Your next two lines will have a beginning space at the left margin.

Admit it! It looks like hell and is awkward to read. It need not be!

Recall how we formatted text so that it has a neat appearance and is easily read? The technique for writing neat, readable *REMs* is quite different from formatting text.

Rule 1 is that *REMs* must be formatted on the screen to be read exactly as they are keyed in. What and how you key in is exactly what you see.

Consider that sentence again. Key in: 10 "NOW IS

DO YOU HAVE A BASIC OR ASSEMBLY PROGRAM TO SELL?

... avoid unreliable cassette tapes and recorders
and EPROM your program!

With EPACK, BASIC and assembly routines for color computer can be read from cassette tape and stored onto 2516, 2716 (single supply), 2732, 2532, 2564 and 2764 styled EPROM (21 and 25 volt). These EPROM are then inserted into MMB, a game packlike cartridge that automatically executes your program when it's inserted into the color computer ... just like the game packs.

EPACK is an excellent alternative to cassettes for programs you want to sell and for personal programs you would like to execute quickly and conveniently from a more reliable medium.

NOTE: 2732, 2764 and 21 volt capability are available optionally and are not included in the standard EPACK. **

EPACK consists of EPG, BROM and MMB for \$150.00

The units in EPACK are sold individually as follows:

BROM

Utility fits any memory size color computer. Its function is to process BASIC source files into a format that can be written out to EPROM by Control Craft Inc.'s EPROM programmer (EPG) ... and still be executed by the BASIC interpreter - but from EPROM, not RAM!

BROM \$25.00

EPROM PROGRAMMER (EPG)

- Zero insertion force socket
- Personality plugs configure programmer to accept 2716 (5 volt supply), 2532 and 2564 style EPROM.
- Programmer's software is included on the programmer board as firmware.
- Program sources:
 - * read cassette tape files into memory and then write file to EPROM (files are in Radio Shack format)
 - * write color computer RAM to EPROM
 - * read EPROM inserted in programmer into RAM
 - * write color computer ROM to EPROM
- Functions:
 - * test EPROM to see if it's unprogrammed
 - * read an EPROM into color computer RAM
 - * write RAM buffer out to EPROM
 - * redefine the location of the RAM buffer
 - * verify the programming of an EPROM
 - * compare the contents of RAM buffer against an EPROM
 - * edit the RAM buffer
 1. Examine/change memory locations
 2. Examine/change start buffer address
 3. Fill RAM buffer with FF hex
 - * read blocks from a cassette file into RAM
- Menu driven operation allows easy use
- Plastic case enclosed circuitry
- Gold plated edge connectors
- Self-contained unit ... no external power supplies are used
- Unit operates on any memory sized TRS-80 color computer

EPG \$105.00

MULTI MEMORY BOARD (MMB)

- Complete with support IC, sockets and decoupling capacitors
- Accepts 2516, 2716, 2532, 2732, 2564 EPROM
- Accepts 2016, 4016, 6116 static RAM*
- Max capacity of 6 memory chips
- Runs on any size TRS-80 color computer
- Board is jumper addressable to either \$C000 or \$8000
- Provisions for write protect switch, or can jumper the board to write protect RAM

- Jumpers configure the memory type used on the board. Provisions for inserting DIP switches in place of the jumpers
- Gold plated edge connector
- Each IC or IC socket has decoupling cap installed
- Plastic case is available extra, at \$7.50 (pricing is subject to change without notice) (case included in EPACK)
- * RAM may not work with series E or later color computers.

MMB \$30.00

** UPGRADE (optional for EPACK or EPG)			
2732-25 volt	\$15.00	2732-21 volt	\$15.00
2764-25 volt	\$15.00	2764-21 volt	\$15.00

SMALL MEMORY BOARD (SMB)

- Provision for decoupling capacitors
 - Accepts (1) 2732 eprom (4K program)
 - (1) 2764 eprom (8K program)
 - (1) 2764 eprom (16K program)
 - No jumpers need to be set
 - Board will fit into standard Radio Shack cartridge cases
 - Control Craft cartridge cases available
- (Radio Shack is a trademark)*

SMB (with Control Craft case) \$15.00

SMB (board only) \$8.00

All prices subject to change without notice.

DEALER INQUIRIES WANTED (minimum dealer order is 5 units)

THE TIME FOR ALL NEW." Put "-" after the NEW and continue on the next line: "COMERS TO TRY TO LEARN AS MUCH." There are two spaces left. Press two SPACES. This will bring you to the next line. Key in "AS THEY CAN ABOUT WHAT THEY CAN." This time there is one space. Press SPACE and continue on the next line and finish up.

Now the REM looks neat and is easy to read.

Keep in mind that the only time you will see the REM is when you LIST your program. LIST it!

HINT: If a line of REM text ends with a one-letter word like "A" or a variable like "X," you may prefer to put a space in that right margin position and start the letter at the left margin.

There are a few conventions that you can use to make your REMs interesting.

When making an ordinary REM statement, put three asterisks after " ". This spotlights the line.

If you run out of string space (LS ERROR MESSAGE), backspace to the end of a full line. Start a new ' line but leave out the asterisks and continue. This indicates that the line is a continuation of the starred REM.

When you want to call attention to a part of the program with a REM, try centering it, and fill in the places before and after it with plusses.

If memory allows, you may want to blank out lines above and/or below a REM line. Just put in line numbers and " " to set off parts of your program.

Notice the treatment in lines 5; 50,60; 130,140; 340, 350,360 of the listing. These are some of the visual effects you might want to create.

All your effort may be in vain if you fail to leave a space

between the program line number and the " " marker. If you don't leave a space, when you ENTER and RUN your program, the computer will automatically put it. Your entire REM line will be effectively moved to the right one space. There is no telling what a long REM line will look like. The chances are that you will spoil the effect you spent so much time trying to create.

Mike Bryant, Utica, N.Y., suggests putting REMs into the listing using lower case. This will create reversed characters and cause them to stand out vividly.

Check out how many bytes are used up when you use REM and when you use " ".

With formatted text and formatted REMs you can create visually pleasing tutorials for yourself. Remember that each investigation; each question pursued; each "what if . . ." explored adds to your knowledge. If you consciously try to follow these hints, you will find that, in time, you will make neat program text and program listings that will be a joy to read.

You may even want to dress up the listing with a title page for practice. Go ahead! Indulge yourself!

FILMASTR

The Color Computer has a powerful ally in FILMASTR. This is a DATA MANAGEMENT SYSTEM that you can trust. FILMASTR combines the best features of the big systems to provide a combination of speed, power, and ease of operation that can't be beat.

YOU are in complete control of this friendly program with no programming knowledge required. You design the data screen with up to 20 fields by moving the cursor on screen with the arrow keys and typing in the field names. FILMASTR takes care of all of the rest.

Enter data by just filling in the blanks. This form fill-in is easy and natural to use. You can even copy data from the previous record with one key-stroke. Add records, delete records, change records without fuss.

Tell FILMASTR to sort your file on any field that you want or to retrieve a particular file and the job is done with super-human machine language speed. FILMASTR will find a single file or a group of files that meet your request and will save those records as a separate file if you want to.

Controlled printing formats? Of course! Tell FILMASTR which records to use, which fields to print and in what order. You can control the print location to any position on the page. Mailing labels? You bet! All commands are given to FILMASTR with single keystrokes. Press the HELP key (BREAK), and the available commands are displayed. Make your choice from the menu and let FILMASTR do the work. FILMASTR can store up to 255 characters in each record and up to 24,000 characters in each file. (9000 with 16K).

UTILITIES

COLOR MONITOR-Written in position independent code. (May be located in any free memory). Very compact. Only occupies 1174 bytes of memory. Full Featured. Includes Break-Pointing of machine language programs, register display and modify, memory display and modify, and block memory move commands. Displays memory in hex and ascii format on one line 8 bytes long. **MACHINE LANGUAGE \$24.95**

ROM-This program is a utility that will move "most" 8K Rom-Packs to disk and allow you to run them from disk. Easy to use. Requires 64K. **\$17.95**

SCREEN PRINT ROUTINE-Using your Epson or Microline Printer. Print the screen contents on a full size 8½ x 11 sheet. 16K Ext. Basic **\$17.95**

TAPE DUPE Now — an all new Tape Backup Program. Even copies those hard to copy Auto-Execute Programs. Protect your software by making a backup copy. Probably the finest tape copier program ever. 16K Maching Language. **TAPE \$21.95**
DISK \$25.95

DISK TO TAPE- Dump the contents of most disk, to tape automatically. Machine Language. **\$17.95**

TAPE TO DISK - Load the contents of most tapes to disk automatically. Machine Language. **\$17.95**

MAIL LIST-Maintain a complete mailing list with phone numbers etc. Ext. Basic. **DISK BASED \$17.95**

THE FIXER-Having trouble moving those 600 Hex programs to disk? The fixer will help. Completely automatic. **\$17.95**

TAPE CAT-All new machine language program lists contents of tapes to printer. Make a catalog of your tapes. **\$17.95**

PROGRAM PRINTER UTILITY-This program will list basic programs to your printer in two column format. Saves paper and makes your listing look professional. Disk based. **\$17.95**

EDUCATIONAL SOFTWARE For The Color Computer and TDP 100

STORY PROBLEMS is a program that is designed to give practice in solving STORY PROBLEMS (sometimes called STATEMENT, THOUGHT or WORD PROBLEMS) on the COLOR COMPUTER. It is suitable for use in either a home or school environment. It is also a tool that will allow you to create new story problems to suit your children's needs and ability levels. It has many features that make it particularly attractive: Story problems involving addition, subtraction, multiplication, division or a combination of the four are presented to the student by slowly scrolling each letter of each problem onto the screen. Up to 5 students may use the program at the same time. There are 4, user modifiable, skill levels. 16K Ext. Basic **TAPE \$19.95**

CLOCK-With the ever increasing use of digital clocks, more and more young people are unpracticed in the use of the "ANALOG" clocks. You remember those, the ones with the hands. This program will attempt to teach the relationship between the two types of clocks. **REQUIRES 16K EXT. BASIC \$14.95**

SPELLING TEST is designed to give a standard oral spelling test using the audio track of the computer's tape recorder to dictate test words and sample sentences. Student responses are typed on the keyboard and checked by the computer. Results are displayed on the screen and (if connected) on a printer. **REQUIRES 16K EXT. BASIC \$19.95**

MATH DRILL is a program designed to help children to practice addition, subtraction, multiplication, and division skills on the COLOR COMPUTER. It has several features that make its use particularly attractive.

- Up to 6 students may use the program at the same time.
- Answers for addition, subtraction and multiplication are entered from right to left, just as they are written on paper.
- Commas may be included in the answers.
- Partial products for the multiplication problems may be computed on the screen.
- Division answers that have a remainder are entered as a whole number followed by the letter "R" and the remainder.
- There are ten, user modifiable, skill levels.
- A "SMILEY FACE" is used for motivation and reward. Its size increases relative to the skill level.
- Skill levels automatically adjust to the student's ability.
- A timer measures the time used to answer each problem and the total time used for a series of problems.
- After a problem has been answered incorrectly the correct answer appears under (above in division) the incorrect answer.

REQUIRES 16K EXT BASIC \$19.95

WORD DRILL is designed to give a multiple choice vocabulary quiz. Words and definitions are entered into the program from the keyboard or from a tape file. The computer displays a randomly chosen definition and eight word choices. The student must enter his response before a built in timer reaches zero.

REQUIRES 16K EXT. BASIC \$19.95

SEARCH-A-WORD This Program generates a word search puzzle to your specifications. You specify the size of the puzzle and the number of words that it is to hide within the puzzle. 16K or 32K Ext. Basic. **TAPE \$17.95** **FLEX VERSION \$27.95**

**EDUCATIONAL PACKAGE — SPELLING TEST —
WORD DRILL — MATH DRILL — ESTIMATE —
ALL FOR — \$69.95**

ESTIMATE is a program designed to help children to practice estimating the answers to addition, subtraction, multiplication and division problems on the COLOR COMPUTER. It has many features that make its use particularly attractive:

- Up to 5 students may use the program at the same time.
- There are 5, user modifiable, skill levels.
- The acceptable percent error may be changed as a student's skill improves.
- A timer measures the number of seconds used to answer each problem and the total time used for a series of problems.
- If a problem has been answered incorrectly, the student is told the percent error and asked to try again.
- If a problem is answered incorrectly a second time, the student is told the correct answer and the range of acceptable answers is displayed.
- A report is given at the end of each set of problems that includes the number of problems done, the number of problems answered correctly on the first try and the average percent error.
- The (BREAK) key has been disabled so that a child will not inadvertently stop the program from running.

16K EXT. BASIC \$19.95

TEACHERS' DATABASE is a program designed to allow a teacher to keep a computerized file of information about his/her students. There are many features that make this program particularly attractive.

- Information on as many as 100 students (or more) may be in the computer at one time.
- Each student may have as many as 20 (or more) individual items of data in his/her record.
- The program will run from cassette or disk.
- Cassette and disk files are completely compatible.
- The program is menu driven.
- Records may be easily changed, deleted, combined or added.
- Information about students may be numerical or text.
- Records may be quickly alphabetized.
- Records may be sorted by various criteria.
- Records may be reordered (ranked) based on test scores or other data.
- Data displayed during a sort may be printed on a printer or saved on disk or cassette as a new file.
- A full statistical analysis of data may be done and sent to the printer.
- Student test scores may be weighted. **32K EXT BASIC TAPE \$39.95**
DISC \$42.95

Down for debugging, text processor's problems cause author to go . . .

Dabbling With Disk

By D. S. Lewandowski
Rainbow Contributing Editor

Well, it seems that a "simple" text processor isn't. I am having a few problems debugging the *EDIT* portion of the program. So in the meantime let's hope the lower prices have encouraged you to purchase a disk system. This month we are going to dabble with disk. Now, I have been playing with the new ROMs. I still haven't gotten my hands on the 1.1 Disk Extended. But from the rumors I've heard, it won't be around long enough to be of any real importance. Yet, we shall access the disk ROM call as recommended in the disk manual. So let's all turn to Page 61 of the disk bible according to Tandy.

Hmmm! It says here that using offset addressing, the location of the DSKCON address is at \$C004, with the address of a pointer to the disk variables at \$C006. There is even a short assembly language program here which will read Track 3, Sector 17 and store the 255 bytes at \$3800. Oh well, not very practical. Let's see if we can modify it to do something.

First of all, I like to see if something is happening, so, let's move the buffer to the screen, located at \$400. That's nice, now half my screen is pink. (You really have to fill a disk to get information on Track 3, Sector 17.) So, let's reverse those numbers and make it Track 17, Sector 3. That's better, now I see part of the directory track. Now that we know that DSKCON works, let's write a program to allow us to step through the disk and see what it holds. I haven't commented on the listing as I usually do, probably due to the problems with the *EDIT* routine in the text program. So, here is a line by line account of what's happening.

Since we are going to use this program with the disk controller plugged in, we have to ORGinate it at \$E00. Start is the now-familiar Clear screen ROM call. Next we need a prompt, or message, to fill the empty screen. So, in line 120 we load the X register with the address of MES. Since we shall be printing more messages, we make *PRINT* a subroutine and branch to it in line 130. The *PRINT* subroutine loads the A register with whatever X is pointing at. Since we

pointed X at a line of text labeled MES, we know it's aimed at the right place. Since our MESSAGE is not very long, we check to see if we have loaded the A register with a zero. If $A=0$, then our message is over. If A contains anything other than a zero, we jump to a ROM routine which will print the contents of the A register on the screen. Then we branch back to *PRINT* and get the next character that X is pointing to. When the A register finally contains zero, we branch to RET1, which is a return from subroutine. This will bring us back to line 140. Line 140, cleverly enough, branches us around the *PRINT* routine as well as the text.

Okay, we have arrived at line 260. Here we need to get the track and sector inputs from the operator. Now we shall do something I haven't done yet. We are going to get decimal inputs. First, point X at MES1, which is the word TRACK. Then, you guessed it, back to *PRINT*. We know that our disk drive has 35 tracks, numbered 0 to 34. So, let's get a decimal input between 00 and 34—this will make error checking easier. Since we need two keypresses, we branch to GETWO, line 410, from line 280. In GETWO we get a keypress and compare it against \$30 on an ASCII zero. If it's less than zero it's no good, so back to GETWO. If it's greater than ASCII 3 or \$44, we also go back. Since the A register already contains the ASCII value of the keypress we jump to the ROM call which prints it, echoing the keypress on the screen. If you lost track, we're at line 470. Strip off the ASCII by subtracting \$30. Now here's a cute trick, the A register contains the absolute value of the keypress. In line 480 we load the B register with \$0A. Next, in line 490 we MULTIPLY the contents of A with the contents of B. (Remember \$0A = 10 Decimal.) The B register now contains either 0, 10, 20, or 30 Decimal, depending on the previous contents of A. Let's put that somewhere safe. Line 500 stores the contents of B at a memory location named VAR. Back to pressing keys, we repeat the same procedure, except that now we will accept a number from zero to nine. In 580 we add the contents of A to the contents of VAR and get our track number. At line 600 we finally return to line 290. Here we load A with \$0D, a carriage return, and print it. Next, we load X with the position of MES2, print the prompt, and get the sector number. QUESTION? What is to stop someone from requesting sector 39? ANSWER: Nothing, just don't do that.

Moving right along we come to line 380. Again, we branch

(Dennis Lewandowski, one of the early authors active with the Color Computer, specializes in machine language programming. He and his wife, Rose, founded DSL Computer Products.)

around our subroutines and end up at MAIN, line 610. Here we have something to see—the track and sector we input is loaded into the proper memory locations using the address contained at \$C006. To accomplish this, we load the X register, with the contents of \$C006 and \$C007 (remember X is a 16-bit register). Loading A with 2 and storing it in the memory location X is pointing at tells DSKCON we wish to READ data. Then using offset addressing, we clear, or zero the memory location X which is pointing at +1. Sounds confusing? Wait and see how far we are going to carry this. Now we load A with VAR1, and store the track number at the memory location X which is pointing at +2. Line 650 loads A with the sector number and stores it at X+3. Since the U stack pointer is idle, we load it with the screen start address and store it at? Right, X+4. Now that all the pointers are in place we jump to the DSKCON routine in line 710. Since DSKCON leaves the drive on, we must turn it off by putting a zero in A and storing it at \$FF40.

It would be helpful knowing which TRACK and SECTOR we are on. Since a sector equals 255 bytes, or \$FF, we know that \$400 to \$4FF will be occupied. However, we still have half a screen left. Let's move the cursor down one line, for neatness, and print the word TRACK. We already have TRACK as MES2, so we shall reuse it. We are on line 800 now. BASIC does a lot of things. One is that it constantly is converting hex to decimal. The way this is accomplished is by placing a hex number into the D register. Then after complimenting, ANDing, and ORing, it comes out decimal because the D register is really a combination of A and B, and the numbers we are working with will be no greater than 34 decimal. In line 800 we zero the Z register, which is the first half of the D register. Then we jump to a ROM routine by loading B with the track number stored in VAR1. This routine will convert the hex number in B to decimal, as well as printing it on the screen. Lines 830 to 890 do the same with the sector number.

Now for a command loop. We want to go forward and backward on the disk. For these functions we shall use the + (PLUS) and - (MINUS) keys. We may also wish to restart our program, using the X key for this. To save a sector in a buffer other than the screen, we shall use S, and we shall use W to write that sector. W should also stand for *warning*, since you can really spoil a disk by writing over system information.

Well, everything else seems fairly self-explanatory. So, back to work on the *TEXT* program. See you next month.

UTILITIES+ FOR EXTENDED BASIC

#UK2 COLOR KRUNCHER — \$12.95

- Reduces Memory Requirements of Any Ext. BASIC Program—Speeds Program Execution Time
- Type In A Program From A Magazine, As Is, Debug It, Then Let KRUNCHER Make It Shorter
- Includes LN.XREF and REM.REMV (#UR2)
- Includes "EXTENDED BASIC FASTER" (#F1)

#F1 "EXTENDED BASIC FASTER" — \$3.95

- The First Published Proven List of Methods YOU Can Can Incorporate Into All Your Own Ext. BASIC Programs For Maximum Speed Efficiency
- For Novice or Experienced Programmer
- For Graphics or Non-Graphics Programs

#UV4 VARIABLE CROSS REFERENCE — \$6.95

- Locates All Variables And "Where Used" Line #'s In Your Ext. BASIC Program
- Optional Variable Only List (No Line #'s)
- Automatic Sort—Optional Printer Output

#UF2 LLIST FORMATTER — \$9.95

- User-selectable Margins, Page Lengths, Top-of-Form, Font Size, Line Length And More
- Title And Date Your Important Listings
- Start And Stop Listings At Any Line #
- Optional Space Between Lines—Highlights Line Numbers—Opt. Single-Sheet Pause—For Most Recent Printers (can be user modified)

#UR2 LINE CROSS REFERENCE — \$7.95

- Provides A Sorted Listing Of All Referenced Line Numbers—Optional Printer Output
- Includes Optional REM.REMV—Removes All Unreferenced REM's And Comments And Line #'s
- Removes Comments From Referenced REM's
- Includes Optional Line Protect Feature

#UD2 DISK DIRECTORY WITH BYTES — \$7.95

- Gives Same Info As DIR, PLUS Individual File Bytes, PLUS Free And Used Total Files, Grans, And Bytes, PLUS Opt. Disk Name, PLUS To Screen Or Printer
- One Screen At A Time (No More Frantic SFT/@)
- Includes Separate DISK NAME Program

#US3 COPY/SEARCH/REPLACE/DELETE — \$7.95

- Same As Disk COPY, But To-and-From Disk OR Tape
- For ASCII Textfiles Or Programs Or Datafiles
- Search OR Search & Replace (optional) OR Search & Delete (optional)
- Excellent For Changing Long Variable Names
- Great For Changing Spelling Or Capitalization

#H1 VIDEO*CLEAR — \$14.95

- Computer Associates' VIDEO INTERFERENCE REJECTION CABLE—Reduces Or Eliminates Picture Interference Caused By Serial Or Disk Cables—External TV Cable Replacement—No Soldering—2 Min. Installation—For 75 Or 300 Ohm TVs Or Monitors—Nothing Extra To Buy—Price Includes Shipping—Qty. Disc. Avail.

ALL PGMS (EXCEPT #UD2) FOR EXT. BASIC TAPE/DISK

BUY 3 OR MORE ON THE SAME ORDER & TAKE 10% OFF

Opening CoCo's Library To The MC-10

By Dan Downard
Rainbow Technical Editor

A machine language program to convert Color BASIC to MC-10 BASIC

I think in the months to come we will see accelerated interest in the Model MC-10. The availability of software is on the horizon. Radio Shack has introduced a few programs for the PoCo, but the real advantage lies in MicroColor BASIC. Since it's nearly identical to Color BASIC why not take advantage of existing software? For those of you who have already tried loading your CoCo programs into the PoCo, you probably noticed that the tapes loaded correctly but, when you listed the program, all you got was garbage.

How come? The BASIC tokens are different. A token is an abbreviation of a BASIC command, or function, used to save memory and speed program execution. If we could find a way to convert these tokens, CoCo programs written in Non-Extended BASIC could be run on the PoCo. Besides the advantage of existing software, it may be easier to input a program on the CoCo due to the editing commands not present on the other system. Extended and Disk commands are not available with the exception of a few math functions. The program listing that follows contains a machine language listing that not only converts the tokens, but flags the commands that are not available.

Tokens

BASIC converts every command or function input from the keyboard into a one- or two-byte "token" before storing the line into memory. This is done by the ROMs, and invisible to the user. For example, the Color BASIC token for *PRINT* is \$87. If you would examine a BASIC program in memory, you would see the hex byte \$87 at every location where a *PRINT* command was input. At the same time, when you list a program you see the original command. This is because the ROM also detokenizes the line before outputting it to the screen or, if an ASCII save is requested, to the storage device such as a tape recorder.

Tokenizing is done to preserve memory. Obviously, the one hex byte \$87 occupies four less bytes than *PRINT*. Also, program execution is faster. Before every command is exe-

cuted, BASIC has to compare the command in question to a table of all the commands and find a match. When the match is found, another table is used to find the execution address for that routine. Again, matching just one byte is less time consuming than a table of several bytes each. Actually, the process we have just described is the same method we will use to convert tokens. It is called a "lookup table." Lookup tables are used extensively for code conversion.

Tokens are easy to spot in a hex-dump of a program. They all have bit 7 set, or they are all greater than \$80. Since no other ASCII characters greater than \$7F represent standard printable characters, you would not expect to find numbers this high in a listing. By this method, BASIC picks out the tokens when scanning a line for execution.

The Program In Memory

The only other thing we need to know to convert programs is where the program is located in memory. This, too, is not as hard as it sounds. If you have been reading the articles about memory maps, you may have noticed an address \$0019 (25). The two bytes, or word, at this address tell us where the BASIC program begins. It makes no difference if you are using Non-Extended, Extended or Disk BASIC. If we start at this location in memory, the first two bytes will be the address of the next line, the next two will be the line number, and the remaining bytes will be the program line until a zero is encountered. A zero signifies the end of a line. With a monitor such as RAINBUG, HUMBUG or ZBUG, look through a program sometime, it's interesting.

We must use this information to convert our tokens. After ignoring the first four bytes of a line, we can scan for tokens by testing the byte for a minus. This means bit 7 is set. After encountering a token we use a lookup table to convert from CoCo to PoCo. For example, addresses \$3000 to \$303B correspond to CoCo tokens \$80 through \$BB. If we look at the corresponding FCB byte, we will find the PoCo token. After converting the token we simply store the new one at the same location as the old one. In the CoCo, functions tokens are preceded by \$FF. The succeeding byte is the actual token. For these values, we convert the tokens and store a \$20, or a space, in place of the \$FF as the PoCo does not have any two-byte tokens.

The only exceptions to this rule are *GOTO* and *GOSUB*. The CoCo recognizes these two tokens as GO-TO and GO-SUB. After finding a \$81, or the token for GO, we must

(Dan Downard is an electrical engineer and has been involved in electronics for 24 years through ham radio (K4KWT). His interest in computers began about five years ago and he has built several 68XX systems.)

examine the next byte to reveal the true command.

An error reporting routine is called when a token is not convertible, such as *DRAW* or *PMODE*. An "!" is substituted for the command much like in the BASIC ROM routine.

Running MC-10 CONV

As you can see, I used the new *Microware OS-9 Assembler* to produce the object code for this program. It was a good exercise in becoming familiar with the new operating system. This particular program is so short it would probably be faster just to key in the machine code using a monitor rather than assembling a file. Once the program is in memory, save it using:

```
(C)SAVEM"MC10",&H3000,&H30CC,&H305 C
```

If you are using *EDTASM+* be careful with the FCBs; every one must be entered on a separate line. Also delete Line 1, as *EDTASM+* will not support the NAM directive. After these two changes the rest of the text can be entered as it is shown.

The program is written in position independent code and will execute anywhere in memory depending on your system. To convert a program, use the following steps:

- 1) Load the CoCo BASIC program. You may list it but do not run it.
- 2) (C)LOADM"MC10"
- 3) EXEC
- 4) After the OK prompt save the BASIC program to tape using CSAVE"FILENAME"
- 5) Load the tape into your PoCo using CLOAD.

The ORACLE II

The Ultimate CoCo Monitor.

The ORACLE II is not a rehashed monitor program adapted to the CoCo, but a state of the art monitor designed to compliment the CoCo and its unique abilities.

Compare some of our features:

- 64K Compatible - the ORACLE II can relocate itself and its monitor screen above disk basic.
- Single Stepper - a single variable speed stepper that allows you to step both rom and ram.
- Disassembler -
- Graphics Support - allows you to step a program while watching any graphic screen, in any graphic mode, and toggle between the monitor screen and back, with one key.
- ASCII/hex search-up to a 10 byte search.
- Full screen display and editing of memory.
- Over 40 commands.

CoCo disk or tape (both versions included) \$35.95

New Utilities From Computer Shack!

CIII

New program that lets you copy a color computer disk (any file basic, text or machine language) to a Model I/III or 4 disk, or from a Model I/III or 4 to a color computer disk. This program does no conversions but it will transfer any file to or from a disk. You must have a Model I/III or 4 with 2 disk drives. Compatible with most Model I/III operating systems. Price is \$24.95 for the Model I/III or 4 disk.

COLOR VFU

The neat little disk utility that makes handling your disk files so much easier. This program lets you read a directory on any disk with 1 keystroke and then copy, kill, or run any programs on that disk.

DISK ONLY..... \$19.95

DFT II

The best value in terminal programs. One of the easiest modem programs to use yet it can do things no other modem program can. It will transfer basic programs from a Model I/III or a Color Computer. Transfer machine language programs from one CoCo to another without any conversions. Chat mode, ASCII transmit and receive mode and much much more.

DISK OR TAPE now only..... \$25.95

BALLOON ATTACK

New low price for this exciting all machine language game that comes with a complete copy of the documented source code.

TAPE..... \$21.95 DISK..... \$23.95

ASSEMBLY LANGUAGE GRAPHICS FOR THE TRS-80 COLOR COMPUTER

By Don Inman

\$14.95

Written specifically for the TRS-80 Color Computer, this book uses sound and graphics to show how 6809 assembly language can be used to perform tasks that would be difficult or impossible with BASIC. All of the explanations are hands-on, so that the manual can serve as a tutorial.

PROGRAMMING THE 6809

By Rodney Zaks & William Labiak

\$14.95

This book explains how to program the 6809 in assembly language, covering all aspects progressively and systematically. Beginning with the basics of programming, **Programming the 6809** goes on to explain registers and buses, subroutines, the 6809 instruction set, addressing modes, I/O techniques and devices, and finally, data structures.

6) List the program and notice any "!" symbols. If there are none, you're OK.

If you find a "!" in your program, you will have to list the

original program and do the best you can to convert the command to an equivalent that will be accepted by the MC-10. One good example is *ELSE*. For example . . . *ELSE N=10* can usually be rewritten as . . . :N=10. Watch out for

PRINT#-2 commands. They will have to be changed to LPRINT.

Summary

I tested the program on two of the examples in the back of the "Getting Started" book and they worked fine. The first program was *Blackjack*, on page 292. It had an *ELSE* statement in Line 4020 that required a colon instead of the *ELSE*. The other program was *Play Back Your Tune*, on page 294. No modifications were necessary at all after using "MC10." These were two good examples, as the first program had graphics and the second used *SOUND* for some music.

There's a wealth of software already written for the MC-10. Just find someone with a Color Computer.

- COMPUTER SHACK - 7 GREAT NEW GAMES

All of these games are 100% machine language for high speed action and exciting graphics. Some highlights of the games... *Fury* and *Chopper Strike* come with both a 16K version and a 32K version on each tape/disk. A good version for 16K computers and a better one for 32K computers. *CASHMAN* and *STRONGHOLD* let two players play at the same time competing against each other. *CASHMAN* and *CATALYST* are non violent (no one gets killed)-*CASHMAN* has 32 different screens with excellent colors and graphics. A Super Super game... *CHOPPER STRIKE* has 105 different landscape screens in its 32K version. Probably the best *WAR GAME* written for the *COCO*. See our *COLOR AD* in this issue for pictures of the actual screens.

CASHMAN

A new hit arcade game from Dunlevy and Frayer. This is a original game with some ideas from *BagMan*™ and *Jumpman*™. A non-violent game with tremendous excitement. You have 35, yes 35 different screens with ladders, jump boards, moving conveyors, birds, cats, nets, stairs and bags of money. You can play one player or better yet 2 players at the same time!

32K Tape \$27.95 Disk \$29.95

DEMON SEED

Birds, Demons, and Space Ships! Exciting color and fast action. Three screen's and three challenge rounds make this a constantly changing and exciting game.

32K tape \$27.95 Disk \$29.95

CHOPPER STRIKE

The newest chopper game on the market. Its twice as good as *Whirlybird* run! This game was written for 16K then we added more screens for the 32K version. The 32K version has 105 different screens. Fly a very responsive helicopter that goes up, down, forward or backward. You have tunnels, heat seeking missiles, ICBM's, fuel tanks, anti-aircraft guns, missiles, and men to rescue.

BACKUP MASTER/ GRAPHIC MONITOR \$29.95

SUPER powerful UTILITY allows backups to be made of any program — cassette, disk, even ROM based!!

- Over rides all software autostart mechanisms
- Fully relocatable — will not interfere with any program
- Capable of reading many tapes which BASIC can't

64K USERS have extra power

- Modify BASIC to suit your needs
- Save copies of BASIC, Ext BASIC, Disk BASIC, etc.
- Run address dependent ROMS from RAM

GRAPHIC MATH ADVENTURE \$21.95

Challenging Adventure! Fully player selectable up to 300 "room." Search for treasure on land, on river, and in the labyrinth of caves. Your search is blocked by many obstacles which can be overcome by correctly answering math problems. Any one or all four functions (+, x, -, ÷) can be selected to add variety. 24 skill levels make the game challenging for all ages. 32K EXT BASIC Required

Also:
SPELLING MASTER \$14.95 **MATH MASTER \$14.95**
for both

Conquer spelling. Learn the words you have trouble with. User input unlimited number of words. Good for weekly spelling lists. SAMPLE list provided.
16K EXT BASIC cassette

Learn Basic Math Facts (+, x, -, ÷) and counting routines. Math drill for speed. Math tutor teaches with graphics.
MATH DRILL Non-EXT BASIC \$8.95
MATH TUTOR 16K EXT BASIC \$8.95

CONCENTRATION \$6.95

40 blocks hide 20 patterns. Pit your memory skills against your friends. Two players. Non-EXT BASIC cassette.

About Your Subscription

Your copy of *the RAINBOW* is sent second class mail and, for subscribers in the United States, the date of mailing is printed on the label. If you do not receive your copy by the 25th of any month, send us a card and we will mail another immediately via first class mail.

You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an "account number" and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at P.O. Box 209, Prospect, KY 40059. This applies to everyone *except* those whose subscriptions are through our distributor in Australia.

ARTIFICIAL INTELLIGENCE

Guess the Animal

GUESS THE ANIMAL—A machine language, artificial intelligence program for the Color Computer. You must play it to believe it. Think of an animal, and this software will try to guess it using your clues. Watch this program learn, and use your clues. See it respond with questions. The longer you play, the smarter this program becomes. 16K **\$17.95 Tape**, or **\$20.95 Disk**. (Both Animals and Body Parts **\$24.95 Tape**, or **\$27.95 Disk**.)

COLOR COMPUTER WORKSHEET

ELITE•CALC is a powerful, full featured worksheet calculator for your Color Computer. The all machine language program will help you answer "what if" questions, prepare reports, maintain records and perform other tasks. Has all the features you want. Individual cell formulas • Copy blocks of cells • Full cell-edit capability • Sorts • Graphs • Easy to use • Works with all printers •

Elite•Calc™

THE BEST FOR ONLY
DISC or TAPE **\$44⁹⁵**

UTILITIES

DISK MANAGER—Copy any program (or file) to another disk with only two key strokes. Kill disk programs with the same ease. All menu driven. A must for disk users. 16K **\$22.95 Disk** only.

TAPE DUB—Make personal copies of Basic and Machine Language tapes with ease. Completely automatic, menu driven. All machine language. 16K **\$19.95 Tape**, or **\$22.95 Disk**.

REPEAT KEY—Have your keyboard automatically repeat the key that was held down. It's great when you're typing programs! Position independent code. Machine language. Both 16K and 32K versions for **\$14.95 Tape**, or **\$17.95 Disk**.

LLISTER—Would you like to have program listings that "page break". How about program listings with nice margins? Works with any printer. Machine language. 16K **\$14.95 Tape**, or **\$17.95 Disk**.

SHRINK—Eliminate all unnecessary spaces from any Basic program. Get more program into your memory. Machine language. 16K **\$14.95 Tape**, or **\$17.95 Disk**.

Body Parts

(Bawdy Parts)

Have fun with artificial intelligence. This take-off on Animals is a riot. See if this program can guess the body-part you have in mind. The program learns, and responds with questions. If you give it x-rated clues, it turns into Bawdy Parts. 16K **\$17.95 Tape**, or **\$20.95 Disk**. (Body Parts and Animals **\$24.95 Tape**, or **\$27.95 Disk**.)

COLOR TUTOR—An exceptional program for Language, History, Math and Vocabulary drills. You enter questions and answers. Program randomizes, presents questions, keeps lesson score. Store lessons for future use. Excellent for you or your children. 16K Ext. Basic **\$19.95 Tape**, or **\$22.95 Disk**.

LOAN PAYMENT CALCULATOR—A fast and easy way to calculate what a monthly loan payment will be. Amount of loan, interest rate and length of loan are displayed; along with your calculated monthly payment. You change any item, and your new monthly payment is displayed. Output to a printer if desired. If you are going to buy a new car, stereo, or house ... this program was written for you. 16K Ext. Basic **\$17.95 Tape**, or **\$20.95 Disk**.

Tumble 'Brella

By Bob Delbourgo
and
Brian Ferguson

An article in an earlier *Rainbow* described a way of projecting a picture of a solid object on your video screen and provided the basic method of how to spin it around. It was suggested that the idea could lead to spectacular animation effects. Here, we will present a short program which does just that; it depicts a tumbling umbrella but you may easily adapt the program to shapes of your own making.

The whole key to smooth animation lies in being able to release enough high-resolution graphic pages. On a 16K CoCo with ECB you *PCLEAR8* to access eight pages in *PMODE0* but you can do a lot better if your computer has more memory. (Many people today have upgraded from 16K to double or more memory.) Those of you with 32K RAM can release 18 graphic pages or more by entering

N=18 (equals the number of graphic pages in our program)

POKE (N+1)*1536,0:POKE 25,(N+1)*6:NEW
before you type in the program. It is vital *not* to *PCLEAR* anything at the same time. Obviously the larger "N" is (20 maximum) the less space there is to write the program! Incidentally, when N=0 you get the usual POKE25,6:NEW result for achieving maximum text.

In the accompanying listing there are 20 vertices marking out the umbrella; their coordinates are spelled out in lines 12 and 13. Their projections are worked out in lines 17 to 19 and their video positions are joined in lines 20 to 22 to make the umbrella shape. Suffice it to say that M stands for the graphic page number and, correspondingly, line 23 increases the rotation angle T by 20 degrees with each successive picture. The rest is self-explanatory.

The listing:

CHROMA SYSTEMS GROUP

EUCHRE!

A Hi-Res version of the card game. Your partner is the computer, the opponent team is played by the computer. Allows any of the four players to "GO" alone.
 (ECB, 32k)
 Cassette \$19.95

DSKMON!

Examine and fix sector data, also includes disk read/write, file information display, and selective disk backup.
 (ML, 16k or 32k)
 Disk (With Source) \$24.95

MORE CSG PROGRAMS!

UTILITIES

- CCADS** — A full 6809 machine language monitor with line assembler and disassembler. All you need to debug machine language programs
 (ML, 16k or 32k)
 Cassette \$19.95 or Disk (With Source) \$23.95
- UNLOCK** — A complete disk backup utility. Features included are initialization of any track, copy any track and correct I/O errors, or leave them intact, and verify any track. Track numbers up to track 80 may be used at any time.
 (ML, 16k or 32k)
 Disk (With Source) \$24.95
- CHROMA-KEYS** — Define function keys and save them to disk or cassette
 (ML, 16k or 32k)
 Cassette \$9.95 or Disk (With Source) \$13.95
- SPOOLER** — Print ASCII files from disk without waiting.
 (ML, 16k, 32k, or 64k only)
 Cassette \$11.95 or Disk (With Source) \$15.95
- COMMAND** — Add machine language programs as commands to BASIC
 (ML, 16k or 32k)
 Cassette \$15.95 or Disk (With Source) \$19.95

GAMES

- PROSPECTOR** — An ECB Hi-Res graphics game. Can you get the gold out of the mine?
 (ECB, 16k or 32k)
 Cassette \$7.95
- JUMP-A-PEG** — A Hi-Res version of an ancient strategy game.
 (ECB, 16k or 32k)
 Cassette \$7.95

MISCELLANEOUS

- CLOCK** — A software real-time clock program for the CoCo. Warning: The clock will stop during tape I/O.
 (ML, 16k or 32k)
 Cassette \$9.95 or Disk (With Source) \$13.95
- DARKROOM DATABASE** — Throw away your Photo-Lab index. Let CoCo look up the facts. Darkroom Data-Base with timer.
 (Disk, 16k or 32k)
 Disk \$19.95

CMERGEing The Easy Way

By Jorge Mir

This simple, straightforward program will allow you to merge cassette programs quickly and easily.

After you *CLOAD* the program and *RUN* it, the screen will display the amount of memory available so you can judge whether or not additional programs can be merged. In addition, the screen shows the beginning and ending RAM locations where your merged programs are located. The references are given both in decimal and hexadecimal formats.

If you are planning to merge large programs, you should make as much memory available as possible. This is done by typing in the following:

```
POKE 25,6:POKE 26,1:NEW
```

```
POKE 25,&H0e:POKE 26,1:NEW (for disk systems)
```

You can then load the program and run it.

The program gives you the choice of continuing to merge, or ending the merging routine.

Selecting number 1 (continue to merge) will start loading the next program. Make sure the next program to be merged is in the tape recorder and the "play" button has been pressed. Once you select 1, the recorder will start immediately, so you have to have the tape ready.

After the new program has been merged, the computer will stop and the OK prompt should appear. At this point, you should renumber the program to make sure it does not conflict with the step numbers in the *CMERGE* program. Renumber the first program merged starting with line number 100. This is done by typing: *RENUM* 100,,10.

List the program and jot down the last step number. When you merge the next program, you will have to renumber it starting with a line number higher than the previous program's last line number.

This renumbering procedure is necessary, especially if your programs have any *GOTO* or *GOSUB* statements.

After renumbering, just type *EXEC* and *ENTER* and the *CMERGE* program will take over again and you will be ready to merge additional programs.

Please note that you must return back to *CMERGE* even though you are through merging programs. When back on *CMERGE* just select 2 from the menu to end the merging process. You can then list the entire merged programs, edit them, save them to tape or to disk, etc.

Once you have merged all programs and exited from the *CMERGE* program, you should delete the *CMERGE* section of the merged program. In its place, type in a menu to access the various merged programs, or just simply delete those step numbers.

If you get an "OM ERROR" when merging a new pro-

gram in, that means you have run out of *RAM* and your merged program is too long. Simply type *EXEC* to return to the *CMERGE* program and end the merging process as described above.

Please note that the amount of memory available as shown on the screen does not take into consideration additional memory required by any dimension statements your programs might use. Therefore, it is quite possible to be able to merge programs that might subsequently give you an *OM ERROR* when you try to run them because there may not be sufficient room left in *RAM* for your dimension statements.

Closely following the above simple instructions will allow you to merge your programs successfully. Have fun!

THE MICRO COMPUTER BUSINESS WILL GROW FROM \$10 TO \$100 BILLION IN THE NEXT EIGHT YEARS! ARE YOU READY TO CASH IN?

The **micro computer business** is predicted to grow from its present \$10 billion to \$100 billion before 1990! Imagine the possibilities this opens for you! No matter where you live, if you're starting up or presently in business, **no other industry offers you more opportunities!**

Now, finally, all the inside information you need to secure a prosperous future in this dynamic industry is available in **one place - THE COMPUTER ENTREPRENEUR MANUAL!** - An **immense** information source, compiled by our **inquisitive** research team, aided by a panel of **experts** and **business people** from **all areas** of the **computer industry!**

We present the inside story of **more than 100 lucrative computer businesses you can enter**, where you'll find the **real opportunities** for the eighties: from one man operations like **Programming Author, Word Processing Center or Consulting, to Systems House, Service Bureau, Computer Store etc!** Many at little or no investment! All the invaluable facts and figures: **How to start, Capital needs, Profit estimates and Margins, How to Sell and Market, How missing technical or business experience need not stand in your way, Source of Suppliers, etc!** Details that could take **years** to find out on your own!

We'll show you **inside tricks**, like how to **never again pay retail** for computer products and consumer electronics, **even for one item - right now**, while you're starting your business! How to get **free merchandise** and trade show **invitations, etc.** This alone will **more than pay** for the manual! You'll read **actual case histories** of other computer entrepreneurs, so you can **learn from their mistakes, and profit from their success stories!** Where you'll be **one year** from now depends on **your actions today!** Let us show you how to take the **first crucial steps!**

Order now and take **advantage** of our **limited introduction special, THE COMPUTER ENTREPRENEUR MANUAL**, and a **six month subscription to THE COMPUTER ENTREPRENEUR REPORT/NEWSLETTER** (so you're **always up-to-date** with the industry), both for only **\$29.95!** You must be **convinced on how easy** you can **strike it rich** in the micro computer business - or you may **return the manual for a full refund** within thirty days! **USE OUR TOLL FREE NUMBER TO ORDER!**

EVERYTHING YOU NEED TO KNOW TO SUCCEED IN THE COMPUTER BUSINESS IS ALL IN THIS MANUAL!

THE COMPUTER ENTREPRENEUR MANUAL has the **answers** to all your questions about **selecting, starting and successfully running a computer business!** There has **never** been such a **comprehensive collection of know-how and information** about this business in **one place!** All the **facts you need to plan and achieve your goals** in **easy-to-follow, step-by-step instructions!**

These are some of the **100-plus businesses** covered in **PART ONE** of the manual, with the facts on **How to start and run, Start-up Cost (Even how to operate on a shoestring),** What profits to expect, **Wholesale prices, Mark-ups, Suppliers, future outlook, case histories** for each, etc:

Systems House, Software Author (who to sell to and who to avoid), Service Bureau, Software Publisher (How to find programs that sell, Word Processing Service, Consulting and Consultant Broker (use your skills or those of others, make \$150 - \$1000 a day!), The incredible Games Business, Computer Store (Franchises: Pro and Contra, or a low inventory store in your home!), OEM, Hardware Mfg, Data base and Teletext Service (big prospects!), Used Computers, Repairs, Rent-A-Computer, Promote Fests and Trade Shows, Turnkey Systems,

Bartering, Mail Order, Compile and rent mailing lists, Specialized Data Headhunting and Temp Help Service, Tech Writer Shop, Custom Engineering, The highly profitable Seminars and Training Business, and many more!

Many **new ideas and ground floor opportunities!** Interviews and **success stories on companies of all sizes!** Privy info on the **profits made:** How some **computer store operators net \$100 - \$250,000!** Little known outfits that made their owners **millionaires**, one of these low-key companies, making simple boards, went from **nil to \$20,000,000 and 100 employees in four years!** Programmers that make **\$300,000, Thousands of micro millionaires** in the making, etc!

Whatever your goal is - **Silicon Valley Tycoon**, or just a **business at home - we guarantee** you'll find a **business to suit you - or your money back!**

PART TWO of the manual is **loaded** with the **know-how** and **"streetfighting" savvy** you need, both as a **novice or business veteran**; to get started, to stay and to **prosper** in the micro computer business! A **goldmine of information** in clear and easy-to-use instructions: How to prepare your **Business Plan, Outside financing, The mistakes you must avoid, How to hire and manage employees, Incorporation (when, and how to do it cheaply), Surviving bad times, Record Keeping, how to estimate your market before you start, Use multiple locations to maximize profits, how to promote and stay steps ahead of the competition!** How to get **free advertising, free merchandise, free advice, Power negotiating** with suppliers to **double your profit margins, etc!** Even how to **keep a present job while starting a business part time!**

Don't miss this opportunity to be part of this great industry - **the next success story could be your own!** Order the manual **today!** Part one and two, bound in a **deluxe ring binder**, where you can also collect our **newsletter (free for six months with the manual - a \$32.50 value!)** - all for only **\$29.95!**

THE COMPUTER ENTREPRENEUR NEWSLETTER - ALL THE LATEST INSIDE BUSINESS NEWS! NOW! SIX MONTHS FREE WITH YOUR MANUAL!

You're **always attuned** to the industry, and your **manual kept up-to-date**, with our **newsletter!** Each issue has the **latest business news, Ideas, new suppliers, our indispensable "watchdog" column on profits, discounts (don't miss mfg's promos, like recently, when top video monitor sold at \$80 - that's half wholesale, one third of the retail price!), the competition, the big deals, etc!** Feature stories with start-up info and case histories on **new micro businesses!**

You'll get **invitations** to trade shows and conventions, the **usage of our advisory service** and our **discount buying service** for your purchases!

You'll find **many items** in our newsletter that will **save you the cost of your manual many times over!**

***** PCLEAR 80 Software... *****

...is very serious about the Color Computer! We are concentrating on bringing you the finest business and utility software available anywhere. Programs like TELEWRITER and COLORCOM-E gave the CoCo respectability. Now, with ELITE CALC and PRO COLOR FILE, the Color Computer becomes a powerful small-business computer. PCLEAR 80 now offers all of these programs to the small business owner.

If you prefer to write your own programs, we also support you. The WORKSAVER has features that will cut hours from your programming and debugging time. The two-key entry of Basic words is actually the feature I use LEAST! The power of WORKSAVER is in its full-screen editor and dynamic editing. We also carry RAINBOW-WRITER, which gives a new dimension to your programs. And watch for a powerful new disk utility coming soon.

Of course we still carry a number of fine games. And don't forget to ask for the POKEFILE or the P.D. GRABBAG if your order is over \$20.00 (both if your order is over \$30.00). See last month's ad for details.

BUSINESS

- *****

THE UN-DISK

Now . . .
VDUMP
A utility to
load and save all
your memory!
\$14.95

UN-BELIEVABLE

But true! There *is* a disk drive in your Color Computer . . . and it is faster and more efficient than any "hardware" drive you can buy, for any price. This new "disk drive" is called VDOS—for Virtual Disk Operating System—and it will absolutely revolutionize the way you operate your CoCo.

VDOS lets you use the "extra" memory inside your CoCo as a virtual disk, with programs (any programs) stored out of the way. You can "save" and "load" programs from your in-memory

disk into working memory, and then run them. When you're done, you can simply access your in-memory disk again . . . and save or load another, and another.

And VDOS is fast. Because you are using memory rather than a mechanical device (like a disk drive or cassette player), programs load instantly. Yes, VDOS is faster than a disk!

VDOS works with all Color Computers—from 16K non-extended to 64K extended. Obviously, the

more memory you have, the greater number (and length) of programs you can store. For a 64K system, VDOS also uses the "unused" part of memory, providing up to 50,000 bytes of storage! Now, that's some disk!

We call it VDOS because in the future there will be utilities for your VDOS UNDISK that will give even greater capabilities—such as a full one-pass memory dump to cassette. Other utilities are planned, too.

We believe VDOS is the

greatest advancement for CoCo since the introduction of the disk drive itself. And, at less than \$100, it is so inexpensive you can't afford to be without it. If you have the "cassette blues," VDOS *is* the answer!

Finally, VDOS is simple to operate. It is entirely self-prompting and comes with a complete manual. But you almost don't even need the instructions—it requires absolutely no technical expertise.

VDOS. The answer to your prayers.

Cassette: \$49.95 Add \$1.50 shipping and handling; Canadians add \$5 for shipping; Foreign points add \$9.

The Young, The Old And Color LOGO

By Sharon Bardus

Helping children with *LOGO* is a rather tricky business. It is not a simple matter of reading and explaining the manual. Radio Shack's *Color LOGO* manual defines the role of the child as the explorer, and the role of the teacher as the guide. This challenging relationship requires much finesse. For a child to get the most out of *LOGO*, the helping adult needs to know when to guide and when not to. Sometimes it is difficult to stay in the background. *LOGO* is so much fun that an enthusiastic adult can quite easily

(Sharon Bardus is a third grade teacher at Southwestern City Schools, Columbus, Ohio. She holds a B.S. in early and middle childhood education and an M.A. in curriculum and foundations from Ohio State University. She and her husband, Glenn, sell educational programs under the name of B5 Software.)

and unintentionally "take over." It requires willpower not to.

If the adult intercedes too much, two negative results occur. First, the child is not allowed to go through the thinking processes to create an end product. In *LOGO*, the thinking processes are far more important than the actual program. Second, if too much help is given, the program becomes the parent's or teacher's and not the child's. Ownership is transferred. The child is robbed of the pride and self-esteem that comes with the completion of a program.

Knowing the history and theory behind *LOGO* should help an adult appreciate the significance and importance of *LOGO*. That information should, in turn, help the adult determine how to guide the child better.

In the sixties, working on mainframes in the artificial intelligence laboratories at MIT, many people helped to develop and experiment with *LOGO*. Seymour

Papert guided much of this work. Papert had spent five previous years working with child psychologist, Jean Piaget. Piaget's work has greatly influenced education. Behind most of his theories is the idea that children will learn better by themselves, when there is a purpose or meaning to that learning that is useful to the child.

Papert extended this idea to computers and children. While programming in *LOGO*, children teach a computer how to think. This in turn improves a child's own thinking abilities. To draw lines, shapes and geometric patterns, children use important mathematical concepts without ever having had formal instruction in them. They are able to do this because there is a need and a reason to do so.

Children work with variables to change the number of repetitions, or the colors, or the degree of turns. Estimating distances must be done each time a line is drawn or a turn is made. In a classroom math lesson, many youngsters are afraid to estimate. They are afraid of giving a wrong answer. In *LOGO*, children will

estimate readily and eagerly because there is a real need and purpose behind it.

Working with proportions to make the desired shape look right, or to make the shape look right in relationship to something else helps to provide the building blocks for working with ratios. Turning the turtle requires an intuitive use of angles and degrees.

LOGO provides numerous problems that children can solve with a thoroughness that is hard to find elsewhere. To "debut" a program, a child must learn to break the problem into small components until the problem is identified and corrected. Self-correcting with a purpose becomes a natural phenomenon. Children learn that errors can be beneficial because they lead us to study what happened and why. Thus, the processes of creating a program in *LOGO* far outweigh the importance of the end product.*

With all this thinking going on, who would want to interrupt it? Unfortunately, well-meaning adults are often overcome by their own enthusiasm. They interrupt the child's thinking because they visualize a different end product, one that is fancier or more complex. Or, they want to show the young programmer a more efficient way to write the same program. Children are quite willing to let this happen, yet, the child's own discoveries are interrupted and the child passes ownership of the program over to the adult.

* Papert, Seymour, *Mindstorms, Children, Computers, and Powerful Ideas*

RAINBOWfest

**FREE RAINBOW
POSTER For
First 200 Tickets Sold.**

The fun and excitement of *RAINBOWfest* is coming your way . . . and now there will be a *RAINBOWfest* near you!

For the 1983-84 season, we've scheduled four *RAINBOWfests* in four parts of the country. Each one will offer fun, excitement, new products, seminars and information for your CoCo! And for those who (perish the thought) don't like CoCo as much as you, we've scheduled each *RAINBOWfest* in an area that will provide fun and enjoyment for the whole family.

Just look at this great lineup:

Fort Worth, Texas — October 14—16. We'll kick off the *RAINBOWfest* "season" with a visit to CoCo's home — Radio Shack's headquarters in Fort Worth. Our CoCo Community Breakfast will feature Ed Juge, Radio Shack's director of computer merchandising, as the guest speaker. And, we hope to be able to offer tours of Tandy Center for those who will be at what promises to be an exceptional *RAINBOWfest* kickoff.

Long Beach, California — February 17-19. What a way to get away from the winter doldrums! And what better place than sunny Southern California with thousands of fellow CoCo owners! Fly with CoCo to the sun for the winter. Top flight seminars will draw on many local CoCo experts.

Cherry Hill, New Jersey — April 6—8. Just 6.3 miles from the Liberty Bell, *RAINBOWfest* comes to the populous north-

east. It's a close drive from New York, Boston, Philadelphia, Washington and Baltimore.

Chicago — June 22—24. We'll play *RAINBOWfest* again, CoCo! This is the site of CoCo's very first show this spring. And right next to the world's largest indoor shopping mall.

Every show will be held at a Hyatt-Regency Hotel and all will be offering special rates for *RAINBOWfest*. Every show will open at 7—10 p.m. Friday, run 10 a.m.—6 p.m. Saturday and close with an 11 a.m.—4 p.m. session Sunday. Each will have a CoCo Community Breakfast featuring an outstanding national speaker from the Color Computer World. And each exhibition will be interspaced with a number of seminar sessions on all aspects of CoCo — from writing in machine language to making your BASIC work better.

But most of all, there will be exhibitors. Lots of them. All ready to demonstrate products of every kind. Some with special programs and hardware items to introduce. Others with show specials.

Tickets can be secured directly from *the Rainbow*. We'll also send you a special reservation form so you can get your special room rate.

Come to *RAINBOWfest* . . . help us all celebrate CoCo Community at its finest!

RAINBOWfest Fort Worth

Seminar Program And Speakers

Don Inman **Using And Teaching LOGO**

Don is one of the most respected names in the Color Computer field and an expert on graphic techniques in both BASIC and assembly language. His Using Graphics column appears monthly in the Rainbow.

Tim Purves **Using Voice And Sound Synthesis**

Tim, who writes for Computer Shack, is the author of Fury and CIII.

Steve Blyn **Programming For Education**

Award-Winning Rainbow columnist and teacher, Steve has written dozens of educational programs for Computer Island.

Frank Hogg **Advanced Operating Systems**

Frank is a pioneer in OS-9 and FLEX systems and is president of Frank Hogg Laboratory.

John Grabbard **Writing Adventure Games**

John, who writes programs for Spectral Associates, is the author of Keys To The Wizard and Android Attack.

Andy Larson **Education and Software Development**

Andy, of Follett Library Book Company, has long been active in developing software for educational uses.

Bill Nolan **Fantasy Gaming And CoCo**

DungeonMaster, programmer and Rainbow Columnist, Bill has developed a complete Dungeons and Dragons program for CoCo.

Tom Nelson **Start Your Own Software Business**

Tom is a Rainbow columnist and one of the owners of Nelson Software Systems.

Frank Brandon **CoCo Business Applications**

Frank, who will be joined in this seminar by business programmer Dennis Mitchell, is principal of Color Software Services, a division of Brantex, Inc..

PLUS...RAINBOWfest's "CoCo Community" Breakfast
featuring Mark Yamagata, Radio Shack's New Director Of
Computer Merchandising for Personal Computer Products.

Mr. Yamagata has just been appointed to this position, which among other responsibilities, has overall supervision for the Color Computer. This will be among his first public appearances in his new capacity.

Additional seminars are planned as well. Admission to all seminars is at no charge. See registration form for admission prices to exhibit area and breakfast.

**COME TO RAINBOWfest FORT WORTH —SEE COCO'S OWN
HOMETOWN!**

Computer literacy, developing higher level thinking skills, increasing pride and self-esteem can result from using LOGO. To let this happen, a parent or teacher needs to be able to accept a program or the manner in which it is written as an expression of the child, at his or her own level. Healthy respect is an essential ingredient in any collaboration.

Steeped in all this theory, I eagerly introduced my third graders to *Color LOGO*. I enthusiastically showed them the commands FD, BK, LT and RT, and I explained how to put numbers with the commands. As a class, we experimented together until we reached the magical 90-degree turn. Then with more exploration we built a square. From a roomful of waving hands, I selected two "lucky" students to investigate the world of *Color LOGO*. Within minutes, the novice programmers interrupted the class to find out why the computer did not understand their commands of up and down. Obviously, intervention was necessary.

Young children have difficulty orientating themselves to the direction the turtle will move on the screen. They do not realize commands such as forward or right can be any direction depending on the placement of the turtle.

Using the body to do walk-through exercises is a good way to help children grasp the sense of direction required for LOGO. I had my class stand up and face the board. I told them to move forward three steps. Then turn right. They continued this movement three more times. After the last movement, the children were again facing the board. I asked them, "Were you facing the same way each time you moved forward or turned right?" The students then realized forward or right could really be any direction. We continued doing more walk-through exercises adding the commands backward and left. Body walk-throughs are a good way to help children orientate themselves to the screen turtle and think about movements they want the turtle to make.

Explanation and guidance are definitely necessary when helping a child use LOGO. So, however, is time for thinking and self-discovery. A wise adult will balance the two discreetly.

Following are the first LOGO programs written by a nine-year-old boy, Jason Wright. Jason had had a few introductory lessons to LOGO. He had learned how to build a square with the class. He and my son Burt, age 12, experimented to come up with the triangle. The circle command was taken from the manual. When Jason began typing in the command square repeatedly, he was taught the repeat command and the turn command. He was also taught the color command. With these three shapes, and using the repeat and color commands, Jason developed these programs. Naming them was another enjoyable creative venture.

Appreciate these programs as beginning programs written by and belonging to a nine-year-old. Let your child copy them, change the variables, explore, and experiment. Watch as they change into programs belonging to your son or daughter. Maybe he or she will let you name them.

See you at
RAINBOWfest

October 14—16 Fort Worth, Texas

Greetings!

As you may remember, last month I was put in my place by a terrible thing. I was trying to make the machine draw a circle for me. I figured the most sensible way to draw a circle was to move forward one little step, turn to the right a degree, move forward another little step, and et cetera, 360 times. So I gave my turtle the following instructions:

```
TO CIRCLE
REPEAT 360 (FD 1 RT 1)
END
```

But the dagnabbed turtle drew a stop sign instead. I couldn't figure out why until one night last week, right in the middle of a chess game with Bertha. It was my move, and I wanted to move my horse, and I started to think about all the kinds of hopping that three-legged chess horses can do. Then, sort of like one of those hallucinations, I started seeing a turtle right on the chessboard. If you told it to turn one degree to the right and at the same time move one square ahead, what would it do? Well, depending on the rules of the chessboard, it might do a number of things. But if the rules said it could only be in the middle of one square at a time, then when you told it to move one square forward while turning one degree right, it might be gradually turning to the right but for a long time it would have to keep hopping only into the square in front of it.

Make sense?

Let me draw the situation:

1	2	3
8		4
7	6	5

On the first move the turtle could hop forward one square, but as long as it's moving forward, it only has three squares to choose from (square 1, in front and to the left; square 2, directly in front; and square 3, in front and to the right). Well, obviously the turtle will keep hopping to the square directly in front of it until all those one degree turns add up to enough that it is inspired to hop to the square in front and to the right. How much is that? Well, if each time it hops a square it points one more degree to the right, then it will be pointing *directly* at the square in front and to the right after 45 hops (adding up to 45 degrees). That means that once it's pointing at about 22 and a half degrees, it should be ready to make its leap to the square in front and to the right. It should keep on leaping to the next square (each time front/right) until the number of accumulated degrees makes it turn enough so that it can begin leaping to square 4.

That more or less makes sense. I decided to check my reasoning by making the turtle trace over the stop sign a few steps at a time. Doing that, I found that each of the turns was 45 degrees. That seemed reasonable, since the centers of those boxes should be 45 degrees apart from each other. But—but—but I found that half the sides were about 60 steps long and the rest were about 43 steps long. Altogether that adds up to some 412 steps, instead of the 360 I expected.

Weird! I keep thinking about a turtle on ice skates who is trying to make a turn but sliding and sliding and sliding until all at once he makes a nice big turn. One thing I thought was that maybe the boxes weren't really squares after all, but rectangles—that would explain why the sides of my stop sign were not all the same length. But why should the instructions "REPEAT 360 (FD 1 RT 1)" produce a figure that I can trace over almost exactly by telling the turtle to make a few 45 degree turns here and there and 412 forward steps? Of course, I could always say that the turtle has a bug. Anybody out there have a better explanation?

I also lost the chess game—and I blame it entirely on the

C.C. DIALER

Let your Co. Co. do the "walking".

Turn your computer into an automatic telephone dialer.

Generate touch tones from C.C.'s keyboard or stored directory.

Save, load and modify directories on tape or disk.

Requires Extended Basic and Touch Tone phone service.

distraction of thinking about turtles. I lost both my knights faster than you can imagine (after nefarious footwork on the part of certain pawns and others). But I'll tell you one thing. The turtle doesn't do very well when you tell it to make little steps and turns. It's got ice skates. So, maybe we should try to make a "circle" with bigger steps and bigger angles (we'll really have a polygon, but maybe it'll look like a circle).

```
TO CIRCLE2
REPEAT 36 (FD 8 RT 10)
END
```

That looks okay. Let's try to get fancier. How about making it circle around itself?

```
TO CIRCIR
REPEAT 36 (CIRCLE2)
END
```

Whoops! I forgot to reorient it each time. How about this?

```
TO CIRCIR2
REPEAT 36 (CIRCLE2 RT 10)
END
```

Neat! Looks like a jelly doughnut. How about a real doughnut?

```
TO CIRCIR3
REPEAT 36 (CIRCLE2 RT 10 FD 10)
END
```

Not very good! Can you do better? I'm going to play around with the angle and the forward step in "CIRCIR3."

```
TO CIRCIR4
REPEAT 36 (CIRCLE2 RT 10 FD 20)
END
```

Still needs work. How about moving the turtle over on the screen before starting the whole thing? Did I mention that the turtle will move without leaving a line if you instruct it "pen up" ("PU" stands for "pen up" "PD" for "pen down")?

```
TO CIRCIR5
PU LT 90 FD 105 RT 90 PD
CIRCIR4
END
```

Pretty good, but could be better. You make it better, okay? Moving right along, let's try to doughnut a diamond. A diamond might be something like this:

```
TO DIAMOND
FD 45 RT 40
FD 45 RT 140
FD 45 RT 40
FD 45 RT 140
END
```

I guess if we're working in the same fashion as we did with the circle, we might first try spinning it. How would I do that? I'm thinking, I'm thinking. Well, maybe if at the end of each diamond I reorient the turtle a little and have it draw another. Let's say I'll reorient the turtle five degrees to the left—how many times do I have to redraw it to make a complete diamond circle?

```
TO DIAMONDCIR
REPEAT 72 (DIAMOND LT 5)
END
```

Well, that was okay. Ben likes it, I think. He's been watching the screen and then licking my toes, and darn, it tickles! One thing about having a linguistical dog, you don't have to bathe nearly as much as ordinary people. Dear Ben! Don't anybody tell me animals don't have feelings or sense. This dog's all sweetness and light, except for sometimes a shade of melancholy around the eyes and a little mischief. Anyhow, let's now try for a diamond doughnut. How did I do the circle doughnut? Let's do something similar:

```
TO DIADOUGH
REPEAT 72 (DIAMOND LT 5 FD 5)
END
```

Well, that was not too terrible. I think I might try something with pen up and pen down and see if I can sneak that diamond over and keep it pointing directly outward. Meanwhile, I hear thunder. Aunt Bertha's calling. I hope she hasn't run into any more bristles. She tells me she'll never ever speak to me again if I mention the pig incident one more time. How was I to know the pig would roust himself at the worst possible moment? By the way, did you see the excellent comparison of the various forms of *Logo* and the turtle graphics programs in the August issue of *Popular Computing*? If you didn't, I recommend you check it out. Especially you, Doug! I remain,

Uncle Bert

TRS-80C® and TDP 100® SPECIALISTS

COLORFORTH®

IS THERE LIFE AFTER BASIC? Yes! with **COLORFORTH**, a new, high level language for the color computer. **COLORFORTH**, a figFORTH compiler, has an execution time as much as 10 to 20 times faster than Basic, and can be programmed faster than Basic. **COLORFORTH** is highly modular for easy testing and debugging. **COLORFORTH** has been specially customized for the color computer and requires only 16K. It **does not** require Extended Basic. When you purchase **COLORFORTH**, you receive both cassette and RS/DISK versions, the figEDITOR and an extensive instruction manual. Both versions and 75 page manual, all for only \$ 49.95

PCFORTH

FORTH for the IBM PC® and Zenith Z-100®. All the features of **COLORFORTH**, but customized for the IBM and Zenith Z-100 personal computers. Requires 32K and MS/DOS or IBM/PCDOS. On 5-1/4" SSD diskette. Complete with 75 page manual, just \$ 59.95

NEW!

MASTER MIXOLOGIST® The Bartenders' Guide

This disk based program for the color computer contains recipes for over 150 of your favorite bar drinks- both alcoholic and non-alcoholic. **MASTER MIXOLOGIST** is menu driven for ease of use. Requires 16K and one RS/DOS drive. Get this one today, it will be great for your next party \$ 19.95

ARMADILLO BUG® MACHINE LANGUAGE MONITOR

More and more programs are appearing in magazines written in Machine Language. Now with **ARMADILLO BUG**, you can easily enter Machine Language programs without a lot of time consuming "pokes". **ARMADILLO BUG** is an excellent system for beginners to learn to write and debug their own Machine Language programs as well. This package includes: Memory examine and change; Move; Punch and Load; Fill commands; and more! Runs in 16K, and **DOES NOT** require Extended Basic. Complete on cassette with printed manual. Just \$ 14.95

COLOR BIORHYTHMS

This is a neat **BIORHYTHMS** program you can use to chart the future (or past). Includes High Resolution graphics **without** Extended Basic being required. Runs in 16K. On cassette, with instructions \$ 10.95

OTHER ITEMS OF INTEREST

"**STARTING FORTH**", a book by Leo Brodie. The best introductory Forth text available. 384 pages. Soft cover \$ 16.00

figFORTH Installation Manual. Contains FORTH model, glossary, memory map, and instructions \$ 15.00

figFORTH 6809 Source Listing. (NOTE: THIS IS NOT IDENTICAL TO COLORFORTH SOURCE). Requires installation manual for implementation \$ 15.00

LOOKING FOR NEW SOFTWARE
ARCADE ACTION GAMES

ON USING PRINT USING

By Richard A. White
Rainbow Contributing Editor

In many programs, readability and understandability of the data sent to screen or printer requires an output in different form than the way the data is stored in the computer. For example, dollar amounts may be typed in a number of different ways and stored accordingly in the computer. For the output, we want these values all printed in the same format and aligned on the decimal point. The following table will give you an idea of what this means.

INPUT	DESIRED OUTPUT
123.2	\$123.20
4231\$	4,231.00
-22.78	-\$22.78

BASIC routines to convert a number to a string and format it to the desired form could be written. Why bother when *PRINT USING* in Extended BASIC is there to do it for you? *PRINT USING* gives you wide flexibility in formatting numbers and some string formatting capabilities as well. In the text of this column we will describe how *PRINT USING* works, and some of the jobs it can do. The listing at the end is a tutorial and practice program that covers each *PRINT USING* form in a step by step way, shows how *PRINT USING* responds to various inputs and lets you try various inputs of your choice. Save the program to tape or disk and call it up in the future when you want to use *PRINT USING* and need a refresher, or need to test if what you want to do will work. Educators may find some ideas here for writing tutorial programs of their own on other subjects.

PRINT USING needs two pieces of data to work. It needs to know how you want the output formatted and it needs to have the data to be output. Here is the basic syntax for outputting a number:

```
PRINT USING "#####";D
```

D is the variable containing the number. "#####" is a string that tells *PRINT USING* the format. I will call it the

(Richard White has a long background with micro-computers and specializes in BASIC programming. With Don Dollberg, he is the author of the TIMS data base management program.)

"format string" from now on. In this case, "#####" says "print D as an integer number with up to five digits. Here are some examples.

D	FORMATTED OUTPUT
345	345
345.89	346
23456.4	23456

Note that the output is aligned right and that the decimal part has been rounded. This is true rounding as opposed to *INT()* and *FIX()* which only chop the excess. By the way, 0.5 rounds up to 1.0, while 0.49999 rounds down to 0.0.

PRINT USING works from your keyboard as well as from a BASIC program, so fire up CoCo and let's get some action along with the reading. Type in the following:

```
D=12345.6
OK
SS="$###.###.##"
OK
```

The computer now has some data, 12345.67, and a format string named SS in memory. The format string "\$###.###.##" will tell *PRINT USING* to print a \$ on the left, allow space for five integer and two digits after the decimal point, print a command when there are more than three integer digits and print a decimal point with two digits to its right. Let's try it on the keyboard. Type *PRINT USING SS;D* and press *ENTER*.

```
PRINT USING SS;D
$12,345.60
OK
```

It worked and it's easy. Here is something else that works. Press *CLEAR* and type *PRINT@100, USING SS;D* and press *ENTER*.

```
PRINT @100,USING SS;D
$12,345.60
OK
```

This means that you can print a formatted output exactly where you want it on the screen. And don't forget using a ; after D to hold the cursor position to the end of the last character printed and avoid wiping off other things printed

PETROCCI FREELANCE ASSOCIATES

Inspector CLUEseau

Sherlock Holmes/Agatha Christie fans-It's finally here—A murder mystery game for the 80-C! Mr. Goodbody has been killed in his mansion and you must solve the mystery. WHO committed the murder, WHERE did it occur and HOW was it done! Question suspects, find the secret passage, and break the code to get clues. Hi-Res graphics enhances this excellent game. The computer records the clues you obtain on a clue inventory screen and also provides suspect descriptions at the touch of a finger. A fast, fun game that will sharpen your deductive skills. Every game is different!

Tucson, AZ. 85748
602-298-1041

on the same line. You can show this from the keyboard by typing CLEAR and then PRINT@100, USING S\$;D; ENTER.

```
PRINT@100, USING S$;D;
$12,345.60OK
```

CoCo can output to screen, cassette, printer and disk. It turns out that PRINT USING will send formatted data to any of these devices. If you have a printer, turn it on and type PRINT#-2, USING S\$;D and press ENTER.

```
PRINT #-2, USING S$;D
OK
```

Your printer will have printed \$12,345.60

Here are two other keyboard exercises to demonstrate other PRINT USING properties. You type the lines indicated and the computer does the rest.

```
You Type E=34.2
OK You Type PRINT USING S$;E;D
$ 34.20$12,345.60
OK
```

The computer allocated the same number of print positions for each number. The unused positions before the three were filled with spaces. The number of print positions is equal to the length of the formatting string. When it is not appropriate to print a character in the formatting string like the comma when the number has only two integers, PRINT USING prints a space. But, the numbers run together above and do not make a clear printout. One way to solve this is to provide PRINT°XY, USING statements separately to print E and D. But, there is another way. Try this at your keyboard.

```
You Type S$=" $##,###.##"
OK You Type PRINT USING S$;E;D
$ 34.20 $12,345.60
```

Much better. Any ASCII characters can precede or follow the number formatting characters and will be printed as typed into the formatting string.

```
You Type S$="$##,###.## PAID"
OK You Type D=234.75
OK You Type PRINT USING S$;D
$ 234.75 PAID
OK
```

If you have been typing along with me you should have the basic PRINT USING idea and syntax well in hand. Let's now look at the various formatting options PRINT USING gives us. Each is accomplished by configuring the format

string in a specific way. Examples of each type of format are included in the tutorial and practice program at the end of this article. Below is the practice code only. I recommend that you type it in now. Then, I will assume that you are running this program and can call each string, enter data and see result as the discussion continues.

```
10 CLS: DIMS$(20): S$(2)="#####.###": S$(1)="#####":
S$(3)="##,###.##": S$(4)="** ,###.##": S$(5)="$####.##":
S$(6)="$S###.##+": S$(7)="**$###.##+": S$(8)="+##.##":
S$(10)=-##.##": S$(9)="AMOUNT $$#.##1111": S$(14)
="!"
11 S$(12)="%%": S$(13)="%%": S$(11)="#.#.#": NOS=
"things to note;"
100 CLS: FORX=1TO13STEP2: PRINTX;S$(X) ;TAB
(16)(X+1)S$(X+1): NEXT
120 PRINT@224,"ENTER STRING #?": INPUTS
125 PRINT@224,S$(S): PRINT"ENTER DATA ";:LINE
INPUTD$: PRINT
130 IFVAL(D$)<>0 THEN D=VAL(D$): PRINTS$(S):
PRINT USING S$(S);D ELSEPRINTS$(S): PRINT
USING S$(S);D$
140 INPUT dATA sTRING";A$ PRINT@224,,,,,,,,,,,,,;
IFA$="S"THEN 120 ELSE 125.
```

When you RUN this program, it prints the internally defined format strings (lines 10 and 11), and asks you to enter the number of the string you wish to work with. Your display should look like this:

```
1 #####                2 #####.###
3 ##,###.##           4 ** ,###.##
5 $####.##            6 $$###.##+
7 **$###.##+         7 +##.##
9 AMOUNT $$#.##      10 -##.##
11 ##.##1111         12 %%%
13% %                14 !
ENTER STRING #?
```

A number of these format strings have been discussed or should be fairly obvious from what we have already said. One PRINT USING property common to all number formatting strings is overflow. Let's see it work.

```
ENTER STRING #? You Type 1 <ENTER>
#####
ENTER DATA You Type 123456 <ENTER>
%123456
dATA sTRING?
```

The format string, #####, was set up for five digits. We gave

GHOST - 16K ECB by S. Rosen - The famous word game. Ages 8-adult.
HORSE RACE 16K Ext. by R. & P. Armstrong
Race your horses and beat the odds. Up to 6 players and 6 races to a set. Hi-res graphics.

BEYOND WORDS 32K ECB \$19.95 Each
These Language Arts programs cover common misspellings, and synonyms/antonyms on each level. Additionally, Level 1 tests contractions and abbreviations, Level 2 tests homonyms, and Level 3 tests analogies. Each program has 3 parts and contains over 400 questions and uses over 800 words. All tests are grade appropriate. User modifiable (directions included). Printer option.

Level 1 Grades 3-5
Level 2 Grades 6-8
Level 3 Grades 9-12

VOCABULARY BUILDERS 32K ECB \$19.95 Each
200 Vocabulary questions on appropriate grade levels in a 4 part multiple choice format. 1000 words used. Extensive research has provided challenging words on all levels. When mastered, the words may be changed by the user (full directions included). Printer option.

Level 1 Grades 3-5
Level 2 Grades 6-8
Level 3 Grades 9-12

On Disk
Beyond Words I and Vocab. Builder I \$38.95
Beyond Words II and Vocab. Builder II \$38.95
Beyond Words III and Vocab. Builder III \$38.95

CONTEXT CLUES 16K Ext. \$17.95 Each
Each reading program contains 50 situational paragraphs with one key word missing. Child uses context clues to find correct answer in multiple choice format. Random selection of readings each round. Available for 4th, 5th, 6th, or 7th grade. Please specify.

READING AIDS 4-Pak 16K Ext. \$19.95
A 4 part menu driven program for the Elementary school child to create his own original reading material. Includes the 4 popular programs — POETRY, SILLY STORIES, SILLY SENTENCES and WIZARD, now expanded to 16K Extended Basic.

A BYTE OF COLOR BASIC \$4.95
A work-text manual that will help the programming newcomer begin to write his own programs. Practice exercises and answer key.

THE GREAT HAMSTER HUNT by L. & D. Weston 32K Ext. Basic \$19.95
A charming kids' adventure. Find the missing hamster in the house. Look in each of 6 fully furnished rooms but be sure to avoid the dreaded cat! Hi-res graphics and songs throughout. Ages 3 to 10.

FOREIGN LANGUAGE BASEBALL
16K ECB-200 words-\$11.95 Each
32K ECB-500 words-\$19.95 Each

Score base hits or home runs for correct answers. You're out if wrong. User modifiable. A fun way to learn and practice vocabulary. Specify FRENCH, SPANISH or ITALIAN.

MUSIC DRILL by David Steele 16K ECB \$19.95
Learn to identify the notes of the scales of most popular major and minor keys. Drill on sharps and flats, hear the notes of the scale and work against the timer. A must for all music students.

KNOW YOUR STATES by James Keeling 32K ECB \$19.95
High-res graphics portray each state for you to identify. If you can't, try the "help" command where you can see the state's position within the entire United States. Choose the number of states you want to try and see your score at the end.

Preschool Series 16K ECB by Joseph Kolar \$11.95 Ea. on Cassette \$15.95 Ea on Disk
All 3 on disk - \$38.95

Pre. #1 Clowns and Fishnum. 2 programs to reinforce counting and number recognition.
Pre. #2 Countkid and Addpenny. 2 programs to help with counting and beginning addition. More advanced than Pre. #1.
Pre. #3 Alpha-Byte. 3 programs each covering a part of the alphabet for letter recognition.

HEBREW BULLETIN BOARD 16K Ext. \$15.95
by Joseph Kolar
A utility that will enable YOU to create Hebrew or Hebrew/English words, flash cards, sentences, greeting cards, etc. in Hi-res. Easy to learn-full documentation. For hard copy, use your printer and any screen print program.

MR./MS. COCOHEAD 16K Ext. \$15.95
Create over 10,000 funny faces with this exciting face maker program. All facial features controllable through the keyboard. Surprise commands for even more detail and extra enjoyment.

THE WIZARD NOW SPEAKS
THE TALKING WIZARD 16K Ext. \$19.95
A talking version of our popular WIZARD game. This is a child size (Eliza-Freud) type game. Input any question and the WIZARD writes and now SPEAKS (through the T.V. speaker) an amusing answer. Great for reading practice or just plain fun.

SPECIAL — CLOSEOUT of Creative Computing's never released software for the CoCo. 2 Hi-Res machine language, joystick controlled arcade style games. **PICNIC** (escape spider, capture food). **TRICKASHAY** (tank duel in a tricky maze). 1 or 2 players, multi-level. 16K Ext. Both for an incredible \$11.95

it six and it responded %123456. In this case, the computer can do no right. When it prints what it did, your presentation will likely be fouled up. If it chops a digit from either end, the value printed is meaningless. Rounding doesn't help since six digits are still necessary to communicate the size of the number. 123000 and 123456 are the same order of magnitude and could be interchangeable for some engineering

"BASIC routines to convert a number to a string and format it to the desired form could be written. Why bother when PRINT USING in Extended BASIC is there to do it for you? PRINT USING gives you wide flexibility in formatting numbers and some string formatting capabilities as well."

applications, but six digits are still required. One way out is to lengthen the format string to, say, #####. This now provides for seven characters. Another way, in applications where rounding to a preset number of significant figures is acceptable, is to use String 11.

```
ENTER STRING #? You Type 11 <ENTER>
##.##1111
ENTER DATA      123456
1.23E+05
```

This can deal with any size number that CoCo can handle. Two digit spaces left of the decimal point are required to handle a digit and a minus sign when the number is negative. Up to eight digits right of the decimal point could be specified. You can also use it with other formatting characters. For example, a string \$\$\$##1111 and 123456 for data will print \$ 1.23e+05. However, I can hear our accountant readers screaming NO! NO! NO!

String 4, **,###.## will print up to five digits left of the decimal point. If less than five digits need be printed, the unneeded digit spaces are filled with *s.

```
ENTER STRING #? You Type 4 <ENTER>
**,###.##
ENTER DATA      You Type 1234 <ENTER>
*1,234.00
```

This notation can be used with a "\$" to print an amount on a check that cannot be easily altered.

```
ENTER STRING #? You Type 7 <ENTER>
**$###.##-
ENTER DATA      You Type 123.7 <ENTER>
**$123.70
```

And while we are dealing with money, let's put the dollar sign immediately before the leftmost digit and NOT fill out with *s.

```
ENTER STRING #? You Type 6 <ENTER>
$$,###.##+
ENTER DATA      You Type 123.7 <ENTER>
$123.70+
```

PRINT USING will print a minus sign left of the leftmost

The Original FLEX™ for Color Computers

- * Upgrade to 64K
- * RS to FLEX, FLEX to RS file transfer ability
- * Create your own character set
- * Automatic recognition of single or double density and single or doubled sided
- * All features available for either single or multiple drive systems
- * Settable Disk Drive Seek Rates
- * Faster High Resolution Video Display with 5 different formats
- * Save RS Basic from RAM to Disk
- * Move RS Basic to RAM
- * Load and save function on FLEX disk
- * 24 Support Commands 12 with Source Text
- * External Terminal Program

If you are tired of playing games on your TRS-80C Color Computer, or find that you are handicapped by the limitations of the RS BASIC in trying to write a Program that will allow you to actually USE the Color Computer as a COMPUTER. YOU ARE READY TO MOVE UP TO THE FLEX9™ Operating System. If you want to have REAL PROGRAMMING POWER, using an Extremely Powerful Business BASIC, PASCALS, C Compilers, a full-blown Macro Assembler with a Library capability so you are not continuously reinventing the wheel. YOU ARE READY TO MOVE UP TO THE FLEX9™ Operating System. If you would like to see if YOU REALLY COULD USE A COMPUTER IN YOUR BUSINESS, or begin to make your Computer start PAYING IT'S OWN WAY by doing some Computer Work for the millions of small businesses around you, such as Wordprocessing, Payroll, Accounting, Inventory, etc. THEN YOU ARE READY TO MOVE UP TO THE FLEX9™ Operating System. How?? DATA-COMP has the way!

DATA-COMP's FLEX9 Conversion for the TRS-80C Color Computer was designed for the SERIOUS COMPUTER USER, with features like greatly increased Display Screens, WITH Lower Case Letters, so you can put a FULL Menu on ONE Screen, or see SEVERAL Paragraphs at the same time, with features like providing a FULL Keyboard so you have FULL Control of your Computer AND it's Programs NATURALLY, without needing a chart to see what Key Combination will give you what function, with USER ORIENTED functions to make using the Operating System natural, like having the Computer AUTOMATICALLY determine what type of Disk is being used in what type of Disk Drive and working accordingly, rather than you have to specify each and every thing for it, or like having the Computer work with the Printer you have been using all along without you having to tell the new Operating System what is there, etc.

digit when numbers are negative and the format string does not give other instructions. Remember to allow for this when you are calculating how long a number to make the format string for. You can force a sign to be printed and cause it to print on either the left or the right of the number. Accountants like signs to be on the right of the number in some instances. String 7 was used above. Its form is `**$###.##-`. The `"."` at the right causes the sign to print at the right only if it is negative. Compare the following to the example above.

```
ENTER STRING #? You Type 7 <ENTER>
**$###.##-
ENTER DATA You Type -123.7 <ENTER>
**$123.70-
```

The example using String 6, above, printed a `"+"` after the number. This was forced by the `"+"` at the right of the string, `$$###.##+`. A `"+"` on the left like in `+##.##` will cause a sign, either a `"+"` or a `"-"` to always print left of the number. Now here is a weird one. If the format string is `-###.##`, a minus sign will always print left of the number irrespective of whether the number is positive or negative. If anyone can figure out where to use that one, let *the Rainbow* know.

We noted before that ASCII characters other than those that effect formatting can be included in the format string. Now we will look at a couple of format strings that work on other strings rather than on numbers.

```
ENTER STRING #? You Type 14 <ENTER>
!
ENTER DATA You Type JOHN <ENTER>
J
```

So that gets the first letter of a word and prints it only. If you want more of the string, use `%%` or `% %` as the format string. Each `"%"` reserves one character space. Spaces are added between the

```
two %s to extend the format string to as
many characters as you need. The string
is aligned left. Here are two examples.
ENTER STRING #? You Type 13 <ENTER>
% % ENTER DATA You Type Jim <ENTER>
Jim
```

```
ENTER STRING #? You Type 13 <ENTER>
% %
ENTER DATA You Type Lónnie <ENTER>
Lónnie
```

Please remember that when printing a string, the data is held in a string variable. The *PRINT USING* statement must be coded accordingly.

PRINT USING S\$;D\$

Finally we mentioned that *PRINT USING* can be used to format data sent to a tape or disk file. The topic is covered very briefly in the CoCo Disk System Manual. Following is a short program to save dollar amounts to tape (if you want to use a disk drive, just change each `-1` to `1`) and then read them back in and print them.

```
10 OPEN"0",-1,"TEST"
20 INPUTA:PRINT #-1,USING"$##,
###.##";A:IF A<> THEN20
30 CLOSE
40 PRINT"REWIND, SET TO PLAY
AND PRESS <ENTER>":
INPUTA
50 OPEN"1",-1,"TEST"
60 IFEOF(-1)THENCLOSE:END
70 INPUT#-1,A$:PRINTA$:GOTO60
```

Note well that while numbers can be saved from a numeric variable, they are saved as strings and must be read back into a string variable. Also, while *PRINT USING* does not change a number or string in memory, it does change if it is used to put that data to tape or disk. There must be a creative use for this somewhere.

ROAR!

Do tricks with your computer without breaking your wallet's spirit! A subscription to **Chromasette** gets you a tape or disk full of quality programs delivered by First Class Mail every month! Write for more information or, better yet, try a Back Issue. At \$6.00 for 6 to 8 programs on tape (\$11.00 on disk), you'll see just how good and inexpensive **Chromasette** software is.

The Bottom Line:	Tape	Disk
1 year (12 issues)	\$50.00	\$95.00
6 months (6 issues)	\$30.00	\$55.00
Single Issues	\$ 6.00	\$11.00

Calif. residents add 6% to single issues. First Class postage to N. Amer. included. Overseas add \$10 to subscriptions and \$1 to single issues. Sent A/D rate. All back issues from July 1981 available—ask for list. Programs are for the Extended BASIC model and occasionally for disks.

Okidata's ML92: Quality, Speed And Compactness

The previous line of printers by Okidata, the Microline80 series, offered the CoCo user a rugged, high quality printer with economical ribbon (spools, not cartridge) replacement and a "no extra cost" serial interface. What is the incentive for going to the ML92 printer? There is quite a bit, but alas, with some penalties!

Let's hit the most important subject for CoCo users first, the serial interface. Early literature and distributor ads indicated that the new printers were available with either parallel or serial, not both, interfaces at the same price. Unfortunately, when ordering time came, it was apparent that the only way the printer came with a parallel interface and optional extra cost serial board. I don't know why Okidata changed its strategy, but I feel the extra cost was justified. As a previous happy ML82A owner, I am now a very pleased ML92 owner.

Now let's get down to some of the goodies that justify (right justify, even) the cost. First, the new printers are fast, 160 cps at 10 cpi (10 pitch). This rate is even more impressive if you set printer and computer to a 2400 Baud rate, as opposed to the normal 600 Baud. With the 2K buffer in the printer, the printing is full speed bidirectional with no pause.

For type styles, or fonts, there are 5, 6, 8.5, 10, 12 and 17.5 pitch. These are all available in the data processing mode, which is the fastest. These can be printed at enhanced (1/2 dot vertical) or emphasized (1/2 dot horizontal) double strike. Underline, subscripts and superscripts are supported.

Where the ML92 really shows its colors is the correspondence mode. This replaces the data processing font with one which is a close approximation to standard typewriter characters. The letters are formed in two passes. This is not the same as double strike. Some of the dots are printed on the first pass, then the letters are completed on the second pass. This has to be seen to be appreciated. The effect is to eliminate the dot matrix look from your final printed letters, term papers, etc. The descenders do not have the stunted appearance of Radio Shack printers. The print speed is reduced to 40 cps to accomplish this feat and the 17.5 pitch cannot be used.

Vertical and horizontal form controls are very complete. These include tabs, form length, dot tabs, print start, and left margin. Correspondence mode supports proportional spacing between characters with the appropriate software.

In the dot graphics mode, seven pins out of nine can be addressed, which requires only printer codes from 0 to 127 (seven bits). There are control codes for entering and exiting graphics without having to pre-specify the number of graphics characters to be printed. For this privilege, there is a slight quirk. The CHR\$(3) is not printed. In fact, trying to print CHR\$(3)CHR\$(2) will return to the text mode. Solution: in software, detect that a CHR\$(3) is to be printed, then send it twice. Dot resolution is up to 72 by 72 dots per inch, which can fill an 8 1/2" x 11" sheet with the full PMODE4 screen at 3 x 3 dots per pixel. Unfortunately, the TRS-80 6 block graphics are not provided; they stayed with the ML80 series.

Need Greek or Hebrew? Then make your own characters

using the Down-line Loadable Character Generator (DLCG). This is custom programming with a resolution of 7 vertical dots by 11 horizontal half dots. Up to 96 characters may be stored in the printer.

On the mechanical side, the Okidata printers are very rugged and their printing precision appears to hold up. The paper feed pins are on the platen which means you don't waste a sheet of paper whenever you start to print. An optional tractor attachment is available to print narrow paper or labels.

You will probably have to install the serial board yourself. It is essentially piggyback on the parallel board. The only trick is to watch that no wires get pinched when all the screws are finally tightened down. With the serial board in there is no longer access to the parallel connector. While you are at it, the ability to externally switch between 600 and 2400 Baud may be made by soldering two wires across dip switch SW6 on the serial board. These are connected to a SPST switch that can be conveniently mounted on the plate used to cover the parallel port.

There are two versions of the instruction manual. The correct one is fully typeset with good quality illustrations. If you receive the manual with Okidata type printing, contact Okidata for a replacement.

Overall, the ML92 is a compact, high quality printer that should have a long life and provide sufficient versatility for most users.

(Okidata, Inc., 111 Gaither Drive, Mount Laurel, NJ 08054, \$699)

—Joseph Kohn

FASTAPE

"THE NEXT BEST THING TO A DISK DRIVE"

- Saves and loads cassette files at 3000 baud (double normal speed)
- Uses high-speed (POKE 65495,0) mode, makes it convenient to stay in this mode throughout
- Automatic adjustment of cassette and printer parameters when speed mode is changed
- Control-key functions for many Basic commands and for changing speed modes
- Compatible with Basic, ML, or ASCII tape files (convert those long ones to double speed!)
- Transparent to Basic; takes up just 1/2 K of your valuable memory

"IF YOU ARE TIRED OF WAITING FOR THOSE TAPES TO LOAD, I STRONGLY RECOMMEND THAT YOU BUY THIS FINE UTILITY."
The RAINBOW, July 1983
 "... A REAL TREAT FOR THOSE WITHOUT DISK SYSTEMS."
Hot Coco, October 1983

16K cassette.....\$21.95

"THE PEEPER"

This ML utility makes it possible to inspect any desired part of memory WHILE BASIC OR ML PROGRAMS ARE RUNNING (uses interrupts to run "along side" of another program). Flip through memory using arrow keys, in any of CoCo's 26 documented display modes. Freeze the action, or slow it to a crawl. Unlock the secrets of arcade animation effects! See what Basic is doing "behind the scenes"! A superb learning/debugging aid for ML programmers (prints out registers and stack on command), or the just plain curious. "A Guided Tour Through CoCo's Memory" (included) will show you the way.

Use CGE To Build Character(s)

After being around computers for a while, I'm sure that you have heard of "word processing" and have a pretty fair idea of what some of the uses of a "text editor" are. Great! Now, how about guessing what a graphics editor is used for? You've got it; a graphics editor can be thought of as a "word processor" for creating graphics. CoCo Warehouse has recently introduced one of these editors which they appropriately named *Color Graphics Editor*, designed specifically for the Color Computer.

Color Graphics Editor (CGE) is a utility program designed to help create animated graphics figures on the screen. It is a machine language program which allows the advanced programmer to work in color graphics modes G6R, G6C, G3C or G2C.

After loading the program from disk or cassette, the programmer is given a choice of graphics mode to work in and color set for the particular graphics mode. Once these are chosen, the editing screen appears. This screen comes up in the graphics mode which you have chosen and has a box in the upper left hand corner with a blinking pixel used for a cursor in the box. On the right side of the screen is a matrix of hex numbers which correspond to the values stored in memory needed to create the figure drawn in the box. In

creating a figure, the cursor is moved about the box with the arrow keys. Using appropriate keys, a pixel can be turned on to any color available, the background color can be changed, and the pixel's pattern can be shifted left, right, up or down. When you are through drawing a figure, it can be saved into one of four memory buffers. Once you have filled up the buffers with four slightly different positions of your animated character, there is a command that allows the buffers to display, in step fashion, one at a time on the screen. This allows you to test the animation for character building ranges from 10 x 16 in the G2C mode to 16 x 30 in the G6R mode. The box size is fixed, therefore, you lose some flexibility in the types of graphics that can be generated. Larger pictures, such as background scenes, require building various boxes and stringing them together.

There are actually two editing modes with this program. There is a mode that allows direct access to the hex data table. With this, minor changes can be made after a figure is drawn rather than having to move the cursor all over the graphics box to make a change.

This program is designed for the more sophisticated programmer, because the output of this program is a file of code configured in a FDB format recognized by an assembler. Output can also be in a BASIC file with the hex code written into a series of data statements which can be appended to a BASIC program. In either case, these may be of little use to a neophyte programmer.

CGE is a program which I found to be easy to use in generating graphics animation. The instructions are well written with no obvious errors. The instructions could be enhanced and more helpful to an intermediate programmer if specific examples of merging data to BASIC programs were described.

The program comes on tape, with instructions to easily transfer to disk. Its only real use is in the disk format, because there is no tape data file saving feature built in. A somewhat puzzling feature is that it is written for a 16K machine in non-relocatable code. Since it was evidently designed mostly for disk use and most disk systems are at least 32K, it would be nice to have it relocatable.

With the exception of these few minor flaws, this is an excellent program designed for the advanced programmer looking for an easier way to animate assembly language programs.

(CoCo Warehouse, 500 N. Dobson, Westland, MI 48185, \$19.95 on cassette)

Hint...

Get The Sound Out

You can send sound from your 80C to any amplifier simply by soldering a couple of connections from the RF modulator.

Pin 3 from the RF modulator and any PC Board ground will give you audio output that you can send to any outside amplifier.

Incidentally, Pin 3 is the third pin back from the rear of the 80C on the RF modulator.

You should remember that opening the computer case will void your warranty.

T.U. GRAPHICS EDITOR

TIRED OF PLAYING GAMES? The TU Graphics Editor allows you to expand your creativity. Simple joystick cursor control and powerful but easy to use keyboard commands allow you to create, print, save, and use anything the screen will display. Become an artist, make blueprints, design graphics, make the terrain for Your next video game. TUG Editor makes it easy. Only 27.95\$ Canadian or 22.95\$ U.S.

All of these fine prints were made with the TVG Editor's SCREEN PRINT facilities on CGP-115 or DMP-100. Also works with LP VII, LP VIII, and DMP 200

PLANET CONQUEST

Combines the SKILL of learning to fly your spaceship as in a "LUNAR LANDER" with the THRILL of aerial dogfights with flying monsters that threaten the success of your mission. Dangerous landings and variable gravity add to the excitement. There are 3 "Lander only" skill levels plus 6 more with monsters. A low 19.95\$ Canadian or 16.50\$ U.S.

All three programs are 100% machine language, and require 16K, Non-Extended Basic, minimum. Here's a special offer from the author, Craig Carmichael: 50\$ Canadian or 41\$ U.S. for all three programs.

SCREEN TWO

EXPAND YOUR DISPLAY!
 LONGER LINES, To 85 characters, MORE LINES, to 27, LOWER CASE WITH DESCENDERS! COMPATIBLE with all versions of BASIC! ***See your text as it will appear on your printer. ***Reserve any amount of the screen for PMODE 4 graphics. ***List slowly enough to see! Works with most BASIC programs. Just 14.95\$ Canadian or 12.50\$ U.S.

Good 'Hues' From *Rainbow-Writer*

By Dr. Charles H. Santee

Rainbow Connection Software has come up with a utility that offers good news and "hues" for programmers. Anyone interested in writing programs is soon faced with a need to mix graphics and text on the same display. *Rainbow-Writer* offers you this facility and more. When I first received the program, I began like a kid with a new toy. I hurriedly read a few instructions, casually tossed the documentation aside, and loaded a program (*LOADM"RW42":EXEC*).

I was greeted with a menu. The first task was to select an appropriate memory size for the machine I was using. After pressing "2" for 32K, I was asked for an "OFFSET." I didn't quite know what this meant so I pressed *ENTER*. I then received my first surprise.

A title page appeared with two lines of text at the top. It looked somewhat like a text page with black characters on a green background, but there was something different. The cursor was replaced by an underline and each line of text contained as many as 42 characters. After typing a few lines, the moment of insight finally hit. Aha! The text is written on the graphic screen and I was in the immediate mode of BASIC.

I had expected that *Rainbow-Writer* would allow me to construct programs with text on a graphic screen. I had not expected that I would be able to operate in the immediate mode of BASIC with a graphics text display. Let me restate this, because the documentation is not clear on this point. After you load and *EXECute* one of the programs which generates predefined character sets (RW42 or RW64) you are given a preloader menu. You then answer two questions. Answer the first by pressing "1" if you have a computer with 16K, "2" if you have a 32K or "3" if you have 64K. The next question which appears as "OFFSET?" allows you to delete part of the predefined character set (up to 99 characters) so that you have fewer characters to work with, but also use less memory. You are then transferred to the immediate mode of BASIC. Your text is displayed on a graphic screen. The return to text screen after any *PRINT* command is disabled. This means you can have as many as 64 characters and 24 lines with which to prepare and display BASIC as you are preparing the program. This is a very nice feature for those of you without a printer. You can see more of your program lines on the screen.

After this brief excursion, I went back to thoroughly read the documentation and ran the Demo program. The documentation lists the following features:

- User definable 224 character set. You are given a set of letters, numbers and graphics characters that you can easily change if you wish.
- Works in all *PMODES*. You can print using the standard print commands in all *PMODES*.
- Two character sets which produce four character densities—32 x 16 (32 characters per line with 16 lines), 42 x 24, 50 x 24, 64 x 24, plus double widths in *PMODE 4*.
- ML extension of BASIC completely interfaced and transparent. This means you can operate using standard BASIC commands to control the location of text including *PRINT@*.
- Automatic underline, superscript, subscript, reverse video, top and bottom definable scroll protect options. You can turn these on before using an option and off afterwards from a program or from the immediate mode of BASIC.
- User friendly, easy to operate via Status/Help screen, simple commands, no messy *PEEKs* and *POKEs*.
- Special *EDTASM+* command allows instant compatibility with Radio Shack's Editor/Assembler cartridge.
- The program includes a Demo program, tape/disk conversion instructions, character generator program and operations.

This program contains the features listed as well as a few more that I discovered. Once I understood what the program did, I found it to be extremely easy to use. Many of the features can be used by the standard Extended BASIC commands. You can switch from one mode to another. The actual number of characters per line and number of lines depends on the mode you select. In modes allowing four colors you can select the color of characters by using the *COLOR* command. You can also use four colors in *PMODE 4* to define the background and foreground of characters. The documentation refers to these colors as artifacted colors. These artifacted colors are fast becoming a favorite of a number of programmers. Take a look at the Shack's *Sands of Egypt* to see the type of display you can get with these colors.

All special commands are accessed by typing "CHR\$(27)" then two to four letters to indicate the command. I found

and volume buyers.

this infinitely easier to remember than trying to use *PEEK* and *POKE*. If you forget the commands, you can type "CHRS(27) 'H.'" to get a help page that shows the commands and their present status.

Two separate BASIC programs are included with which you can generate and save your own character set. These programs were easy to use and greatly enhance the flexibility of the program.

Although not stated in the documentation, you can turn on the alternate text mode by typing "SCREEN 0, 1" and it will remain on. Thus, in the text mode, you can use that yellow background you sometimes see in commercial programs (like *Color Scripts*).

Another nice feature of *Rainbow-Writer* is the ability to scroll protect the top and bottom lines. This allows you to effectively set a text window and draw pictures above or below this window. The text you print will scroll in the defined area. This is excellent for constructing Computer Assisted Instructional (CAI) programs for education, graphic adventure games and a variety of other uses. This feature can be used in the immediate mode so that you can experiment with the graphic commands in Extended Color BASIC and see both the command and the results of using that command before incorporating those commands into a program.

Rainbow-Writer includes instant compatibility with Radio Shack's *EDTASM+*. To use this feature, turn off all equipment. Insert the *EDTASM+* ROM Pack. Turn on the computer and enter "Q" from *EDTASM+* Editor. Load the version of *Rainbow-Writer* you wish to use, enter the parameters appropriate for the memory you have, and then

type "PRINT CHR\$(27) "E+."." You will then be back in the Editor/Assembler with the text displayed on the graphic screen. This makes it easy to alter *Rainbow-Writer* to your own specifications and/or add other assembly language code to make your own assembly language programs. This is a very nice touch that advanced programmers will love.

The program is designed so well that beginning BASIC programmers could probably use *Rainbow-Writer* with little trouble. However, the beginning programmer may find that the instructions in the documentation do not give a clear enough explanation of what can be done. Advanced programmers, I am sure, would like more information, but the ease with which this program is integrated with an Editor/Assembler and examples included in the Demo program make it easy to experiment to find the desired information.

All users should pay close attention to the last page of the documentation which gives a chart for *PRINT@* locations. This is an excellent aide in formatting the screen. A desirable addition to this chart would be a chart showing the X and Y coordinates for *PRINT@* locations. This would have enabled locating graphics around or through the text with greater ease.

When using a 64 character set in *PMODE4*, the letters are packed closely together and are difficult to read. However, this character set has two important functions. First, you can view larger sections of text as might be desired in some word or text processing programs you might want to write. Second, you can use this compact mode with your own defined character sets to put two or more characters together for special effects. For example, you might make a

The **KEY-264K** is here!!

DO YOU HAVE A 32K SYSTEM WITH 64K MEMORY CHIPS ?? ARE YOU STILL BEING TOLD YOU CAN ONLY USE 32K FROM BASIC ??

DON'T BELIEVE IT !! - KEY COLOR SOFTWARE brings you the KEY-264K. An exciting NEW SOFTWARE utility that allows any STANDARD 32K COLOR COMPUTER TO ACCESS 64K RAM FROM BASIC, and with NO HARDWARE MODIFICATIONS REQUIRED!!!

*** Works with CASSETTE based systems! ***

*** Works with DISK based systems! ***

The KEY-264K divides the 64K ram memory into two 32K banks or sides, each of which can be utilized independently by the BASIC interpreter, with the ability to switch instantly from one side to the other. IT'S LIKE HAVING TWO COMPUTERS IN ONE!! Have your BASIC program on one side and keep your variables on the other side, or have your main program on one side and your subroutines on the other side, or have your program on one side and use the other side for 4 additional HI-RES pages, or any combination you like. The possibilities are endless because the KEY-264K allows full communication between sides plus the ability to switch back and forth at will, all from within BASIC. You could also have different programs in each side and switch back and forth between them using simple keystrokes, even while the programs are running!! Or run them both at the same time in the FOREGROUND/BACKGROUND MULTI-TASKING mode. Don't buy that printer buffer yet! With the KEY-264K you can be printing in the background side while utilizing your computer normally in the foreground side AT THE SAME TIME!!! Debugging a program? Use either a BASIC command or simple keystrokes to instantly duplicate your program, in it's present status, on the opposite side. Switch to the opposite side later and pick up exactly where you were before!

For DISK users, the KEY-264K allows you to alternate between DISK and EXTENDED BASIC on the same side with simple keystrokes. No need to pull your controller or power down. You can be in EXTENDED BASIC on one side and in DISK BASIC on the other side and still switch back and forth and have full communications between the two sides.

The KEY-264K does this and MORE thru extensions to BASIC. No need to learn a new language! The KEY-264K adds 15 NEW COMMANDS and 1 function to BASIC, including powerful new BLOCK MEMORY MOVE and GRAPHICS VIEWING commands.

The KEY-264K works on 32K systems with "E", "F", or even modified "D" boards and requires EXTENDED or DISK BASIC with GOOD 64K MEMORY CHIPS! Systems with piggy-back 32K or half-good 64K memory chips WILL NOT WORK!!

ORDER YOUR KEY-264K CASSETTE TODAY by sending check or money order for \$39.95 plus \$2.00 postage U.S.A. (\$5.00 outside U.S.A.) Mass. residents add 5% sales tax.

KEY COLOR SOFTWARE
P.O. BOX 360
HARVARD MA. 01451

figure by defining several characters and then use the *PRINTI@* command to move this character across the screen. You may be able to construct BASIC language games with animated characters that come close to rivaling those that are written entirely in machine language.

Let me give a specific example of how this might be done. The standard character set includes a little man shown in six different views (one character for each view). Program listing #1 allows you to use the joystick to make this man walk and jump across the screen in eight directions. Now, I know this program will not work unless you have *EXECuted Rainbow-Writer*. However, I have included a simulation in program listing #2. This brief example moves a graphic character as you move the joystick. Just watch this second program operate and imagine that the character is a little man that takes steps with each move. This will give you a feel for the animation that is possible. In both cases, I used the sounds of steps to slow down the animation to a reasonable walking rate.

This brings me to what I feel is a major shortcoming of the program. You can define and save your own character set. You can create a separate character generating program which can be used with a BASIC program for your own marketed software product. However, there are no instructions given as to how to *MERGE* the machine language program and the BASIC program into one independent program. As a teacher, I am primarily interested in constructing educational programs which are easy to use. Having to load a machine language program and then a BASIC one is just an extra step for us simple-minded users to mess up.

In the short time I had to review this program, I tried some quick and dirty ways I knew of *MERGEing* BASIC and

machine language programs (moving the end of the program pointer to incorporate the machine language program at the end of the BASIC line) but, to date, I have not been successful. The ideal solution would be to include a BASIC language frame which incorporates the machine language utility as part of the software package. The user would then simply load the frame, add the lines of BASIC to make the kind of program desired and then save the final product for future use.

As the software exists, I would rate this program as a "very good" utility and an excellent addition to a programmer's set of tools. It is easy to use, has many good features and I found no bugs.

To move this program to the "excellent" category, I would like to see the following features added:

- 1) A brief statement in the introduction or operation section that tells the user (in language that a beginner can understand) that after answering a few questions, the program returns to the immediate mode with text in a graphic display.
- 2) Instructions for *MERGEing* the machine language portions with BASIC for one integrated program.
- 3) A chart that shows memory locations and/or X and Y coordinates in relation to *PRINT@* locations for drawing graphics in relation to the printed text.
- 4) Additional aids for formatting text such as word wrap, centering text and left/right justification.
- 5) A keyboard, joystick, or XPAD (graphic tablet) graphics editor with a graphic cursor that is compatible with *Rainbow-Writer*.

In conclusion, I feel that Dan Larson and Paul Penrose should be commended for their work on *Rainbow-Writer*. This program is an easy-to-use, yet powerful tool for beginning and advanced programmers. I would especially recommend this program for teachers who want to write their own computer assisted instruction programs in BASIC.

(Rainbow Connection Software, 3514 6th Place NW, Rochester, MN 55901, \$29.95 tape, \$32.95 disk)

SYSTEMS SOFTWARE

MACRO-80C

This is a **disk-based editor, macro assembler and monitor**, written for Color Computer by Andy Phelps. **THIS IS IT** — The ultimate programming tool!

The powerful 2-pass macro assembler features conditional assembly, local labels, include files and cross referenced symbol tables. MACRO-80C supports the complete Motorola 6809 instruction set in standard source format. There are no changes, constraints or shortcuts in the source language definition. Incorporating all of the features of our Rompack-based assembler (SDS80C), MACRO-80C contains many more useful instructions and pseudo-ops which aid the programmer and add power and flexibility.

The screen-oriented text editor is designed for efficient and easy editing of assembly language programs. The "Help Key" feature makes it simple and fun to learn to use the editor. As the editor requires no line numbers, you can use the arrow keys to position the cursor anywhere in the file. MACRO-80C allows global changes and moving/copying blocks of text. You can edit lines of assembly source which are longer than 32 characters.

DCBUG is a machine language monitor which allows examining and altering of memory, setting break points, etc.

The editor, assembler and monitor — as well as sample programs — come on one Radio Shack compatible disk. Extensive documentation included. **MACRO-80C Price: \$99.95**

SOFTWARE DEVELOPMENT SYSTEM

The Micro Works Software Development System (SDS80C) is a complete 6809 editor, assembler and monitor package contained in one Color Computer program pack! Vastly superior to RAM-based assemblers/editors, the SDS80C is non-volatile, meaning that if your application program bombs, it can't destroy your editor/assembler. Plus it leaves almost all of 16K or 32K RAM free for your program. Since all three programs, editor, assembler and monitor are co-resident, we eliminate tedious program loading when going back and forth from editing to assembly and debugging!

The powerful screen-oriented Editor features finds, changes, moves, copies and much more. All keys have convenient auto repeat (typematic), and since no line numbers are required, the full width of the screen may be used to generate well commented code.

The Assembler features all of the following: complete 6809 instruction set; conditional assembly; local labels; assembly to cassette tape or to memory; listing to screen or printer; and mnemonic error codes instead of numbers.

The versatile monitor is tailored for debugging programs generated by the Assembler and Editor. It features examine/change of memory or registers, cassette load and save, breakpoints and more. **SDS80C Price: \$89.95**

MICRO WORKS COLOR FORTH

- Forth is faster to program in than Basic
- Forth is easier to learn than Assembly Language
- Forth executes in less time than Basic

Forth is a highly interactive language like Basic, with structure like Pascal and execution speed close to that of Assembly Language. The Micro Works Color Forth is a Rompack containing everything you need to run Forth on your Color Computer.

Color Forth consists of the standard FORTH Interest Group (FIG) implementation of the language plus

most of FORTH-79. It has a super screen editor with split screen display. Mass storage is on cassette. Color Forth also contains a decompiler and other aids for learning the inner workings of this fascinating language. It will run on 4K, 16K, and 32K computers. Color Forth contains 10K of ROM, leaving your RAM for your programs! There are simple words to effectively use the Hi-Res Color Computer graphics, joysticks, and sound. The 112-page manual includes a glossary of the system-specific words, a full standard FIG glossary and complete source listing. **COLOR FORTH ... THE BEST!** From the leader in Forth, Talbot Microsystems. **Price: \$109.95**

MICROTEXT: COMMUNICATIONS VIA YOUR MODEM!

Make your Color Computer an intelligent printing terminal with off-line storage! The Microtext module is just what you'll need for:

- Talking to a timeshare system or information service
- Printing out what is received as it is received
- Saving received text to cassette tape
- Re-displaying the received text even while on-line
- Communications with other computers
- Using your computer as a general-purpose 300-baud terminal
- Downloading programs from other computers

The Microtext module is a program pack containing not only firmware but a second serial port so that both your printer and modem can be connected at the same time. Microtext can be configured for any serial printer that will work with the Color Computer, even if it requires line feeds! But even if you don't have a printer, you can keep a permanent copy of your data by storing to cassette tape. Also, any Radio Shack/Centronics-compatible parallel printer may be used by adding the Micro Works' PI80C parallel interface.

For those of you with special terminal applications, Microtext has selectable parity; it sends odd, even, mark or space. With mark parity (which is default) you can send to computers requiring either seven or eight bits. All 128 ASCII codes can be sent. Exchange programs with other Color Computer users! Basic programs may be downloaded from other computers or timesharing systems.

You'll find many uses for this versatile module! Available in ROMPACK, ready-to-use, for **\$59.95**.

MACHINE LANGUAGE

MONITOR TAPE: A cassette tape which allows you to directly access memory, I/O and registers with a formatted hex display. Great for machine language programming, debugging and learning. It can also send/receive RS232 at up to 9600 baud, including host system download/upload. 19 commands in all. Relocatable and reentrant. **CBUG Tape Price: \$29.95**

MONITOR ROM: The same program as above, supplied in 2716 EPROM. This allows you to use the entire RAM space. And you don't need to re-load the monitor each time you use it. The EPROM plugs into the Extended Basic ROM Socket or the Romless Pak I. **CBUG ROM Price: \$39.95**

SOURCE GENERATOR: This package is a disassembler which runs on the color computer and generates your own source listing of the BASIC interpreter ROM. Also included is a documentation package which gives useful ROM entry points, complete memory map, I/O hardware details and more. A 16K system is required for the use of this cassette. **80C Disassembler Price: \$49.95**

P.O. BOX 1110, DEL MAR, CA 92014 (619) 942-2400

HJL-57 Keyboard Has The Answer

The Color Computer has been widely mistaken by many people as just another game machine. This was mainly due to the fact that it had a "toy like" keyboard and a limited screen display. Many products have been introduced to overcome the screen format problem; however, up until now, not many solutions to the keyboard dilemma have appeared. The HJL-57 replacement keyboard is a welcomed solution to an existing need of your Color Computer.

The keyboard is available in two versions; one is for the original Color Computer up to and including those with "E" boards. The other is for the "F" board revision and TDP-100 computers. You must specify which computer you have when ordering the keyboard. There is no extra charge for either one of the keyboards. The key layout is identical to that of your Color Computer, with the exception of the four function keys. They are placed in pairs on each side of the spacebar. All the letter and number keys are a light gray color. The ENTER, CLEAR, and arrow keys are white, while the BREAK key is red. All of the keycap characters are molded into the keys with either black or white plastic. The keyboard comes with two spacers, four flat plastic washers, eight metal spring clips, and installation instructions.

All of the keys have sculptured tops which provide a firm grip for your fingers. A touch typist or hunt 'n' peck user will experience no lost characters, because the keys require very little pressure to activate. I would compare the feel of this keyboard to that of a Televideo or a DEC keyboard.

One of the four function keys is described as being "latchable." What this means is that when the key is depressed, it will remain that way until it is pressed again. Although the use of the function keys is not mentioned in the accompanying documentation, I have been assured by HJL that there will be software available very soon that will make use of these keys. In the meantime, however, there is a simple solution to make use of these keys thanks to Bob Rosen of Spectrum Products. In the June 1983 edition of *Rainbow*, an article appears by Mr. Rosen showing you how to program function keys. Type it in (plus add a couple of corrections noted in the July issue) and RUN it. It will work perfectly with the four function keys on your keyboard.

Construction of the keyboard is first-rate. The keyboard mounting plate is constructed of an extruded aluminum plate. A flat membrane sheet is attached to it. The keys are then mounted on top of the sheet to the aluminum baseplate. This type of construction provides you with an extremely sturdy keyboard package. Again, depending on which version of the computer you have, the proper keyboard connector is provided for the connection to the computer. The keyboard also carries a one year warranty, showing the confidence that HJL has in this product.

The installation instructions are simple and straightforward. Start by removing the screws from the bottom of your computer. Remember, opening the case voids any warranty from Radio Shack. Next, remove the keyboard unit from the computer and trim down the center support post. Place the two spacers provided onto the rear two posts, and connect the keyboard connector to the computer. Place the new keyboard onto the four support posts, lining up the holes with those in the aluminum baseplate. Place the four plastic washers over the posts and push on the four retainer clips. These clips may be removed at any time without difficulty if you ever want to remove the keyboard.

Now flip over the top half of the case and set in the custom black bezel, lining it up on the four posts in the case. Install the remaining clips and reassemble the case. The keyboard has been designed to meet the RFI and EMI shielding requirements, set by the FCC, which become effective October 1, 1983. With my computer, I noticed a very large reduction in picture interference. Installation of the keyboard took me about five minutes.

It is my opinion that all those who are serious about the potential of the Color Computer will definitely appreciate the quality and performance of the HJL-57 keyboard.

COLOR COMPUTER WEEKLY

NEW!

CAN YOU AFFORD \$1 A WEEK?

The CCW Newsletter will give you this if you can:

- An issue loaded with program listings of all sorts (for just a buck a week—unbelievable!)
- Latest news and information — if it happens on Monday you'll know about it by Friday (for a mere 100 cents a week!)
- Mailed out to you first class every week! (At last a reason to live from week to week!)
- Free software/hardware manufacturer's directory (This alone is worth the price of the subscription, and we even send regular updates to subscribers.!!)

All it takes is ten thin dimes a week to bring meaning to your life. Cumulatively we'll take payment in the following ways:

- Charge my Visa or MasterCard at once for the full amount (\$52/year)
- Charge my Visa or MasterCard quarterly at the rate of \$13 every three months
- Here's my check for \$14 for the first quarter, bill me in three months for the next quarter (we have to charge you extra to send out those bills)
- Here's my check for \$52 for the full year hurry and send me my first issue

Get The Most Memory

You can get the most memory available on your CoCo by entering the command POKE 25,6:NEW. This, in effect, is a PCLEAR0 on your system.

This command will *not* work with a disk installed. It will, instead, clobber the disk operating system. If that happens, simply RESET.CoCo.

WHIRLYBIRD RUN

- WRITTEN IN MACHINE LANGUAGE
- FIVE SCREENS WITH INCREASING DIFFICULTY
- HI RES COLOR GRAPHICS
- REALISTIC SOUND EFFECTS

Requires 16K RAM, Joysticks
ONLY \$21.95

LUNAR-ROVER PATROL

- WRITTEN IN MACHINE LANGUAGE
- HI RES COLOR GRAPHICS
- GREAT SOUND
- EXPLODING BOMBS, DEADLY MISSILES, ATTACKING TANKS

Requires 32K RAM, Joysticks
ONLY \$21.95

LUNAR-ROVER PATROL - Guide your Lunar Rover along the moon's surface following every bump and crevice as a barrage of obstacles hinder your movement. No MOON-PATROL type features left out of this game.

WHIRLYBIRD RUN - Your mission is to reach and destroy the enemy base hidden deep within the Tunnel of Doom encountering missiles, saucers, and deadly gas clouds along the way. If you like SCRAMBLE, you will love WHIRLYBIRD RUN.

DEALER INQUIRIES INVITED

confusing as it might seem changing back and forth as long as you keep the word association in mind and that word would start with the first letter anyway.

Now I'll show you one final example I used to make a complex LINE statement into a simple matter. Define

A: (A(X),A(X+1))

C: (C(Z),C(Z+1))

L: LINE(128,96), and

Z: PRESET (P was already needed for PRINTUSING).

The program listing I was typing in alternated between LINE(128,96)-(A(X),A(X+1)),PRESET and LINE(128,96)-C(Z),C(Z+1)),PRESET. Now with only a handful of key-strokes instead of a lineful I was able to complete either LINE statement, not only in less time but with less hassle using parentheses.

I consider myself a pretty fair touch-typist and I must say that using a utility program with keys having defined key-words took a little getting used to. I thought to myself while typing in the first program listing using Keys, "This program would not be for the touch-typist. I have to look at the definitions to find the right key when I could have typed it in already!" *Not so!* Admittedly, it did take me more time at first, but it was something new and I wasn't familiar with Keys or how best to use the definitions. However, the more I used Keys I began to see better ways of redefining the keys to suit my needs through different sections of the listing. Touch-typing capability eventually added to the speed of programming.

Documentation was not perfect, but was nevertheless sufficient or above average for anyone to understand and use. There was a problem with incorrect offset numbers and memory clearing, but I was assured by the author that the

documentation was an early release for the RAINBOWfest and that the corrections and additions would be in future releases. The program itself, once executed, guides you through all necessary functions without need for good documentation. However, I feel that the casual CoCo user may need just a little more information in the "Loading From Tape" section. You are clearly shown how to save your personalized set of definitions but are not quite as clearly instructed on how to load that program back into CoCo. If you try to CLOADM your program following the tape instructions with an offset, it will not load. (No offset is required after the copy is made.)

In using Keys I think probably the most important improvement that could be made would be to allow greater than 12 characters per key. Having more than 26 definable keys might be helpful too, although 26 were generally sufficient once you became acquainted with Keys and used a little pre-thought. And finally, I would suggest adding one more item to the MENU MODE: Print current key definitions to the printer. A minor thought, but it would be nice to have a hard copy, especially if you have more than one set of definitions saved.

There are other "key-defining" utility programs on the market with more bells and whistles. But they also cost considerably more. I found Keys very useful and it did everything it was meant to do. For under \$10, this utility is certainly worth your consideration.

(Chroma-Systems Group, P. O. Box 366, Dayton, OH 45420, \$9.95 tape, \$13.95 disk)

VDUMP — A Must For V DOS Users

I had the privilege, about a month ago, to review a program which I thought had excellent potential. The subject of that review was the *V DOS* program by Dr. Preble. One of the items mentioned in that review was the author's promise of upcoming utilities to expand *V DOS's* capabilities. The subject of this review is one of those utilities. *VDUMP* is a machine language program designed to dump the contents of *V DOS* to tape or to load a previous dump into *V DOS*.

For those of you who may have missed the review on *V DOS*, a brief explanation follows. *V DOS* is a virtual disk operating system. The term "virtual" means that an item takes on an appearance of something other than that which it really is. The term "virtual disk" then means a disk system which really is not a disk system but takes on the appearance of one. *V DOS* will take half of the user memory for the disk system data storage. Thus in a 16K or 32K system you will lose half of the available memory. However, with a 64K system, the memory you will lose will be the 32K which lies under your ROM hidden from use. In other words, you will be using the upper 32K of RAM. Thus the only real loss will be the 2K required for the actual program. *V DOS* behaves like a disk system in that it allows the user to catalog programs in its data storage area in a manner similar to that of a disk system. Since the program to be stored under *V DOS* must already be in user memory, the data movement is

memory to memory. This makes the data transfer very fast. The original *V DOS* did not have a dump facility with it. It required the user to load the programs to be cataloged on an individual basis each and every time the system was used. However, with *VDUMP* that all changes.

VDUMP comes on a cassette tape and unlike *V DOS* is not auto-loading. The documentation consists of three pages of single-sided typewritten material. The instructions are broken down into three sections: Introduction, how to use the DUMP function, and how to use the LOAD function. The instruction sheets are easy to read and follow.

VDUMP is loaded using the *CLOADM "VDUMP"* command. Once it is loaded, typing *EXEC* will get it running. *VDUMP's* start message then appears on the screen, along with the request: *DUMP OR LOAD (D/L)?* *VDUMP* is now awaiting your command input. How does your *VDUMP* work and why is it needed? Suppose you have already cataloged a series of programs under *V DOS* and wish to save the entire set of programs on cassette tape for later use. Without *VDUMP* you would have to recall each and every program from *V DOS* one at a time and *CSAVE* it to tape. This can be a long and tiresome process. With *VDUMP* the process becomes very simple. You load and execute *VDUMP*. *VDUMP* will now ask if you want to load the *V DOS* system from tape or save the contents of *V DOS* to tape. In our case, the save or dump would be the correct function. Placing the cassette recorder in the record mode and typing *D* to *VDUMP's* prompt will do just that. The file that is placed on the cassette tape will not be in standard RS format. That is, only one file per tape side can be done. Trying to position the tape past the first file using the *SKIPF* command will get an I/O error. There are ways to overcome this problem, I'm sure, but I did not investigate any of them. You have now saved the contents of *V DOS* for use at another time. Suppose at some future date you decided to pick up where you left off. The process is simple. First, you load *VDUMP* from tape and *EXECUTE* it. Second, you load the tape containing the previously saved data. Put the recorder in the *PLAY* mode and answer *VDUMP's* prompt with *L*. The load process takes about three to four minutes for a full 32K. Once the load is complete, *VDUMP* exits and control is returned to the *BASIC* interpreter, which promptly displays the familiar *OK* message. Once the *OK* appears you know the restore/load feature functioned properly. Now typing *V DOS* and performing a directory list will display the contents of *V DOS*.

VDUMP is a short utility which functions just as described in the literature. It will save the entire contents of *V DOS* to cassette tape in a single file. *VDUMP* will also restore a previous dump. Using *VDUMP* and a cassette tape is similar to changing a diskette in a standard disk drive. *VDUMP* is a welcome addition to a very good system. I see only one drawback. I think it would have been nice if *VDUMP* had the data on the cassette in standard RS format. Then more than one dump could have been placed on each tape. I liked *V DOS*, and it combined with *VDUMP* to form a great combination. The price has been reduced to a point where it is affordable by most everyone. Thus, for those who have a cassette-based system, the addition of *V DOS* and *VDUMP* would speed up and enhance that system considerably. I consider the *V DOS/VDUMP* combination to be an excellent addition to any serious *CoCo* library.

Statgraf: A Powerful Regression Analysis Package

Statgraf is a new linear regression analysis package by Dennis D. Zaebst. In the course of my graduate studies, I used canned regression routines on a large mainframe from time to time. This new package from Sugar Software seems capable of doing all the things those routines could do and maybe more. It is an excellent program and does all it says it will. To use Statgraf, you need 32K of RAM. A printer and a screen print program are also desirable.

I am too limited by time, space and knowledge to give any type of discussion on linear regression technique or theory. So, I will limit my discussion to the capabilities of this package, which are many. First of all, the documentation is excellent. The 40-page manual includes a very good tutorial on the use of Statgraf which, while powerful, is very easy to learn and use. One pass through the step by step tutorial and all I needed from then on was the command reference summary. The tutorial takes you through an example problem which uses all the features of Statgraf. A technical appendix is included with instructions for interfacing a screen print program and also a brief discussion of regression terminology which serves as a good review.

Data pairs can be entered from the keyboard or from a tape/disk data file. There is room for up to 250 observations. The package contains a powerful data editing mode which allows editing the data pairs in almost any fashion. I felt that this was one of the package's strongest features because you can really roll up your sleeves and manipulate the data any way you want. Pairs can be inserted, deleted, modified or printed as hard copy. There is also a sort routine

which will automatically sort data pairs in ascending order of the independent variable if desired.

The graphing function is also versatile. It uses the highest resolution screen to graph the data, allowing you to set up the axes and to display the data points, regression line and 95 percent confidence limits. You even have a choice of five different symbols to use in plotting the data (circles, triangles, squares, etc.). It is also possible to superimpose a grid over the graph if you desire, and you can produce an area graph in which the area below the curve is shaded. Multiple data sets can also be plotted on the same graph.

Labeling of the graph is very easy. The orientation of the text (up, down or horizontal) is selected in command mode and a cursor is used to position the text on the graph. All in all, the package produces a very good-looking graph indeed!

Other functions include transformation of observations using logarithmic, square root, exponential, inverse or additive codes and the calculation, plotting and display of residuals based on the current transformation. Statgraf also calculates, displays and sends to the printer a number of useful statistics including a slope, Y-intercept, correlation, confidence limits and tests of significance for each parameter and coefficients of determination and alienation. An interpolation the function calculates predicted values given a value of the independent variable and calculates the 95 percent prediction and confidence intervals for the observation.

I feel this package would be great for the study of regression theory. Things happen fast enough for the student to really begin to spot and analyze trends and see how the theory fits together. But Statgraf's main plus is that it is an excellent regression analysis package for anyone who has occasion for serious use of this statistical technique.

(Sugar Software, 2153 Leah Lane, Reynoldsburg, OH 43068, \$24.95 tape or disk)

Adventure In Wonderland: Alice Is At Least A '9'

You were beginning to get very tired of sitting by your sister with nothing to do. You were considering whether the pleasures of eating ice cream would be worth the trouble of walking all the way to the refrigerator when, suddenly, a white rabbit with pink eyes ran by. There was nothing so very remarkable in that; nor did you think it was so very odd to hear the rabbit say to itself, "Oh dear! Oh dear! I shall be too late!" But, when the rabbit actually took a watch out of its waistcoat pocket, looked at it, and then hurried on, you burned with curiosity. So you ran after it and you were just in time to see it draw a rabbit hole on the TV screen and pop right through it.

In another moment you jumped right after the rabbit, never once considering how in the world you were going to get out. *Down . . . down . . . down.* Then suddenly thump! Fortunately, you were not hurt.

This is where this wonderful new adventure begins. You are stuck in Wonderland and you have three major objectives. You must become Queen, help capture the nasty Snark and, of course, get home again. Don't let the name fool you. It sounds easy to play but believe me it isn't. I consider myself a novice adventurer and so far I have only been able to get home.

The documentation states that the adventure is based on the works of Lewis Carroll. Knowing this, I rushed down to my local library and checked out "Alice in Wonderland." When I got home I was surprised to find out that the adventure followed the book down to the tea. Mad Hatter's Tea Party, that is. The adventure has everything the book has, including the three-legged glass table and even the caterpillar and his hookah.

In most adventure packages you receive a small sheet of paper with a few instructions and a list of verbs. This does not hold true for *Adventure in Wonderland*. When I opened

up the package I found a six-page instruction booklet beautifully illustrated. The illustrations made the documentation very interesting, many of them depicting the people and places you will discover. I give Prickly-Pear an A+ on the documentation.

Wonderland is a non-graphic, 100 percent machine language adventure that requires 32K. Unlike most adventures that only understand 30 to 40 words, *Wonderland* uses an "Elize" type intelligence simulator that allows you to carry on full sentence conversations with many of the inhabitants in Wonderland. You can converse with Cheshire Cat, Mock Turtle and many others. This adds to the interest of the adventure.

Cheshire Cat is your constant companion. He has many things to tell you if you tell him the right things. I really enjoyed talking with Cheshire at first, but sometimes when you are trying to move, the cat interrupts with one of his jokes or sayings and you are unable to complete your move. I found this to be very annoying after playing the adventure five or six times.

For those of you who like to kill things, you only have one foe. Because of this, and the fact that you cannot get killed, they should change the name of this program to Fantasy Adventure. Then again, it is Wonderland.

This adventure falls short in only a few areas of being the best adventure. The program does not set up a video window so all room descriptions scroll off the screen. The program also does not allow you to use abbreviations. This means every time you want to move you must type the complete command. One last thing that bothered me about this adventure is that you cannot save it while in progress.

I rate this adventure from difficult to very hard. If you are a real adventure buff, then I recommend this adventure. It may not be *the* best but it is *one* of the best. It is a welcome change from your typical dungeon and haunted house scenarios.

(Prickly-Pear Software, 9234 E. 30th Street, Tucson, AZ 85170, 32K tape, \$24.95, 32K disk, \$29.95)

—Steven Schweitzer

ARE YOUR WALKING FINGERS GETTING FOOTSORE ?

Tired of typing in those long, but wonderful, programs from each issue of **the RAINBOW**? Now, you can get **RAINBOW ON TAPE** and give those tired fingers a rest. With **RAINBOW ON TAPE**, you'll be able to spend your time enjoying programs instead of just typing...typing...typing them! All you need to do ever again is pop a **RAINBOW ON TAPE** cassette into your recorder. CLOAD and RUN any one you want.

RAINBOW ON TAPE is available as a single issue for \$6.50 or on a yearly-subscription basis for only \$60. It is the perfect complement for **the RAINBOW** itself.

VISA, MasterCard and American Express accepted. All subscriptions begin with the current issue and back issues are available beginning with April, 1982. Subscriptions are sent first class mail to coincide with the arrival of your current issue of **the RAINBOW**.

Now . . .

The Best Color Computer Magazine Offers The Best Tape Service

Think of it! Not 10 or a dozen—but between 20 and 30—programs every month from **Rainbow On Tape**. All the really good programs from the **Rainbow**! All the long ones . . . so you don't have to type them in. Just CLOAD and RUN!

ORDER RAINBOW ON TAPE TODAY!
HANDY ORDER CARD BETWEEN PAGES 34 and 35

Beyond Words Is Beyond Words

EDITOR'S NOTE: While this review was originally run in our September issue, substantial portions were inadvertently deleted during the production process. Following is the review in its entirety.

Beyond Words consists of three separate language arts tutors from Computer Island written for children and young adults, grades three through 12. After *CLOADing* this 32K Extended BASIC program, the user must enter *PCLEAR 1* before proceeding to *RUN*. At this point the student is asked to enter his/her name and tell if the printer is turned on. The child then chooses one of three subtests. Each is a three-part, menu-driven program and the user can practice one skill and then go on to another at the end of a round. The incorrect questions and answers are displayed, and if the printer is turned on, a list of items to study is generated. If a particular subtest is used for five rounds, a total score is given.

Beyond Words 1, 2 and 3 are written for children in grades three to five, grades six to eight, and grades nine to 12 respectively. All have spelling subtests in which a correct and an incorrect spelling of a word is given. The child then types in and enters the word that he thinks is spelled correctly. Fourth graders who tested it really liked the idea of

having to type in a word, rather than keying in the number of the answer. That age groups seems to enjoy a program that allows them to use the computer as much as possible.

A second subtest in each program deals with antonyms and synonyms. In this part, two words are shown. The child has to decide if the meaning of the words is the same (S) or opposite (O).

It is the third subtest that is different in each program. In *Beyond Words 1*, it is short forms. This subtest covers abbreviations and contractions. The long form is given and dashes are shown to indicate the length of the answer. The child is then to type in the short form. In *Beyond Words 2*, there is a subtest in homonyms. A word is given, and again dashes indicate the length of the answer. The child has to at sounds type in a word the exactly like the given one.

Beyond Words 3's third subtest is analogies. Two pairs of words are given and the user has to decide if the relationship of the first pair is the same as the relationship of the second pair. In other words, is the analogy true (T) or false (F)?

All three programs have 400 questions each. The questions are randomly selected and, in our testing, we found hardly any repeats with each loading.

The words used in the program are all contained in *DATA* statements. The documentation suggests that the program can be modified by the user and gives very complete directions on how to change the *DATA* statements so the program's use really becomes infinite. The modification directions are clearly written and very easy to follow.

We had many children of all different ages use the program that was suited to their particular age group. The reactions and comments about the programs were all very favorable. All of the children, especially the younger ones, enjoyed the amount of interaction that they had with the computer. My daughter, Shari, who is in the eighth grade, found the subtests for her level very challenging. Very often she complains that "educational" software written for her age group is too easy.

I was glad to see a program written for the high school level. The types of subtests given here would certainly supply excellent practice for the standardized tests that many high school students have to take, such as SATs.

Beyond Words 1, 2 and 3 are excellent language arts tutors. They cause children to think. What more need be said . . . I am beyond words.

(Computer Island, 227 Hampton Green, Staten Island, NY 10312, tape \$19.95 each)

It's easy with the right keys.

The HJL-57 professional keyboard instantly upgrades your TRS-80* Color Computer to a dependable, high-performance machine with all the capabilities of systems costing hundreds more.

If you've ever tried to enter a major block of data or do word processing, you know that the keyboard is the major limitation of the color computer.

Designed from scratch

To provide a total solution to the problem, the HJL-57 was designed from the ground up, specifically for the Color Computer (not an adaptation of a stock keyboard). The result is a dependable, high-throughput keyboard that makes input less tedious, less time-consuming, and less distracting.

State-of-the-art, full-travel technology

A real keyboard with all the feel and response to make you more confident and reduce input errors. Sculptured, low-profile keycaps are ergonomically designed to cut fatigue and improve typing speed.

Compatible with all TRS-80* Color Computers

Including the F-version and TDP-100.* Layout is identical to original CoCo keyboard PLUS four software-definable function keys (one latching), specially positioned to avoid inadvertent actuation.

Built for heavy use

Manufactured under contract by a leading U.S. OEM, with

* Trademarks of Tandy Corporation

contacts rated for 100 million cycles minimum, rigidized aluminum baseplate, and spill-proof construction, the HJL-57 comes with a **full 1-year warranty**.

Quick and easy installation

Anyone can remove the old keyboard and easily install the HJL-57 in just a few minutes, and the kit includes a new bezel for a totally finished conversion.

RFI/EMI shielded

Meets FCC Article 15 requirements which become effective on October 1, 1983.

15-day money-back guarantee

If you are not completely satisfied, just re-pack it (in original condition, of course) and return it to us within 15 days for a full refund.

CoCo owners go professional today

The keys to peak performance are yours for **only \$79.95**. Order now to release the hidden potential and full value of your color computer.

Payup And Payout: Some Strengths And A Few Weaknesses

By David Johnson

Payup and *Payout* are new tape-based accounts receivable and accounts payable packages from Sector Software of Canada. Written by Warren Wagner for the CoCo and an LP VII, both programs offer a number of useful accounting functions, but *Payout* (accounts payable) has one fault that I, as an accounting teacher, find very hard to live with. More on that later—first, the good news.

One strength is the author's invitation to freely edit the programs to tailor them to your particular needs. In some places, this is necessary as well as desirable.

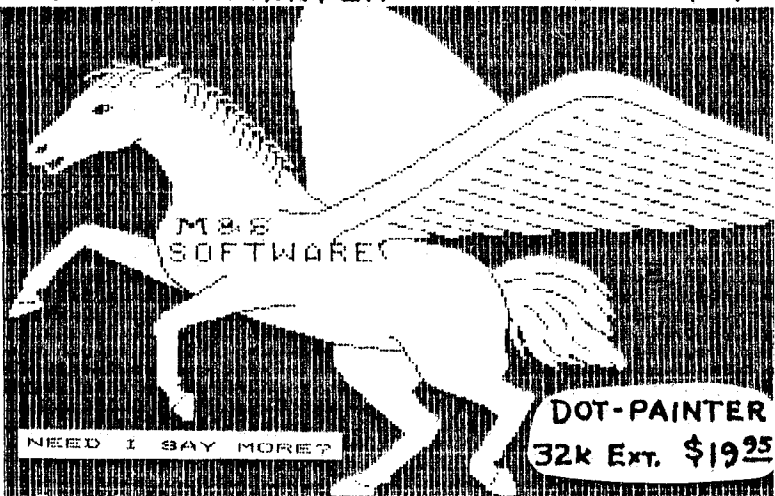

Given the inherent limitations of a tape file system, these packages both are fairly easy to learn and operate. Before *LOADing* it is necessary to execute a *POKE 25,6:NEW* in order to clear all available memory. When I failed to do this I got an OM Error when I tried to run the program. After this, *POKE* and *CLOAD* will load a short cover program which, when run, loads the main program while a title screen is displayed. This all seems to take a little too much time to my liking. The loader program can be skipped by positioning the tape and *CLOADing*. This saves some time. During processing, the speed-up *POKE* is used. If your machine can't handle this, you can edit it.

A main menu, which is the same for both programs, is the first thing you see when you run the program. The first function is start or add to files and is the basic data entry function. Information is entered pertaining to receivables and payables invoices such as date, customer or vendor name, invoice number, amount and whether paid, not paid or a credit memo. *Payup* also allows entry of labor charges and sales tax amounts, while *Payout* will ask which asset or expense account to charge the expenditure to. Twelve asset and expense accounts are provided. Nine are already named while the last three are only numbered. Editing the program would easily give you any twelve specific account titles you want. The search, edit, delete function is fairly self-explanatory. The search menu allows a fast scroll through all invoices or you can search through the files by customer or vendor name, invoice number, paid, not paid or credit memo and, in *Payout*, by the check number which paid the invoice. The search-by-name function allows use of partial names. If you don't know the complete name of a vendor or customer, you can still find the invoice.

Selections 4 and 5 on the main menu are the load-from/save-to-tape functions. I encountered no problems here other than the usual limitations of sequential access files. A nice feature here is the ability to load blocks into memory on top of each other without disturbing any files already in memory. This removes some of the sequentiality of the files. It also lets you save separate daily or weekly blocks of data and put it all into memory for processing at the end of the period. With a 32K machine, you have room for 200 files in memory at any one time so space is limited.

Main menu selection 6 is the print statements function

and differs slightly for each program. In both programs, screen output is limited due to the limited space available on the screen. However, the screen statements do offer useful account summaries for intra-period perusal. The screen and printer provide the same basic statements; the screen statements are just more condensed.

Both programs provide good looking, well-formatted output. Double-size letters are used for headings, which can include your company name if you edit it into the program. Instructions for this are provided.

Payup offers a summary of the accounts receivable balance which lists the current period's activity by invoice with debit, credit and balance columns, a complete listing of all invoices in memory indicating amount and whether paid or not paid and statements of account by customer. There is also a sales tax statement but some program editing will likely be necessary here to reflect specific tax rates and vendor's commissions.

Payout's statements are similar to those generated by *Payup*. There is a balance sheet by invoice with debit, credit and balance columns, a listing of all invoices in memory indicating amount and whether paid or not (The title of this statement is "List of Receipts"; I feel "List of Charges" would be better.) and a listing of any or all of the asset or expense accounts showing their balances and listing the invoices that make up those balances.

It is in *Payout's* balance sheet where there is a problem. When an invoice is entered, the amount is correctly debited to the selected asset or expense account, but is also debited to the accounts payable account. Similarly, a credit memo from a vendor is properly credited as far as assets or expenses are concerned, but it is also credited to accounts payable. Payments of invoices are also credited to accounts payable. What this means is that the accounts payable account is exactly in reverse, that is, the debits should be credits and vice versa. I have not been able to determine as yet how difficult a fix this would be in the program, but I do feel it is a serious problem. In accounting, debits are debits and credits are credits and must be handled with the least possibility of errors. One could ignore the debit and credit columns and just use the balance, but I feel this just increases the chances of an error occurring when the primary financial statements are prepared.

Except for the complete listings, the statements can only be printed on a monthly basis according to invoice date. All balance calculations are performed when the statements are printed so you must keep up with previous balances as of particular dates (the program will ask for the previous balance) should you want statements printed on intra-period dates. This might require a subsidiary paper file.

The documentation for the program is enough to get you started, but it is somewhat sketchy, offering only brief descriptions of the functions and some statement examples (without explanations). Instructions are provided for changing the program to fit a 16K machine, but you really need 32K for any real quantity of data.

Overall, there is a good beginning here, but I feel more work is needed. If you plan to buy this one, be prepared for a thorough testing period before you go on line.

(Sector Software, 17 Waynewood Drive, Dartmouth, N.S.
B2W 1G1, Canada, \$29.95 each on cassette)

Score-EZ Is Easy

Jarb Software's *Score-EZ* is a great game for the CoCo. It is a version of the home game Yahtzee, where you try to make the best poker hand out of five dice in three rolls. This version is for one to six players, each one having their own score pad on the screen. The CoCo does all the work: it rolls the dice and keeps score. All you do is pick the dice you want to keep and roll the rest, and if you get what you want before your three rolls are up, you can skip the rest of your rolls and go right to your own score sheet.

The game starts with some simple block graphics that spell Score-EZ. I like the game instructions and the write-up that came with the game. They were "ez" to understand and it was "ez" to play the game. The game is written for 16K Extended BASIC.

The only aspect I didn't like was the double entry prompts: you always had to key what you wanted and then hit ENTER. This confused people at the start, but as the game progressed it was no longer a problem.

Have fun, and may all your rolls be good ones.

(Jarb Software, 1636 D Ave., Suite C, National City, CA
92050, tape \$15.95)

—Stephen M. Hess

RAINBOW POSTER NOW AVAILABLE

Yes, it's here! A beautiful full-color poster of the cover of our January issue!

This big (31x23) poster is printed on heavy poster paper and varnished to make it really shine. It is the perfect addition to your computer room and is available for only \$5. There's even a small Rainbow logo in one corner.

Send for yours today! There is only a limited supply, and when we run out, there won't be any more.

Each poster is \$5, plus \$1.50 handling charge per order to same address in U.S. and Canada. Other points add \$3. U.S. Currency only. VISA, MasterCard and American Express accepted. Mail to: Rainbow Poster, P.O. Box 209, Prospect, KY 40059 or call (502) 228-4492.

AMDISK-III Small Drives, Big Byte

I was a little apprehensive, to say the least, at the first sight of the new *AMDEK* 3" disk drives. Why would anyone want a 3" disk? My 5¼" disks are almost full and surely a 3" disk can't hold that much! Wrong! Measuring approximately 7" wide x 4½" high x 8½" deep, the *AMDISK-III* disk drive will hold more.

The first thing I did when trying out the new drives is format a 3" disk at 40 tracks/18 sectors using *FLEX*. That's 184K compared to the normal 161K. Since the *AMDEK* disks are two-sided, a total capacity of 368K per disk is very realistic. Due to the fact that Disk Extended BASIC initializes disks at 35 tracks and 18 sectors, the total capacity of each disk is 322K including the directory. The 3" disks are very rugged and ideal for mailing or carrying around in your shirt pocket. A metal shield covers the media when not in use.

Each *AMDEK* package has two drives housed in an attractive gray and off-white enclosure. The unit is shipped with two diskettes and comes ready to operate. The owner must supply the Radio Shack disk controller. Two choices of cables are available, depending on whether one or two 5¼" drives are to be used in addition to the *AMDEK* unit. The 5¼" drives are necessary only for compatibility with existing software packages as the 3" drives can be operated as a stand-alone disk system. This drive system can be configured to be either drives 0 and 1, or 1 and 2. Adequate instructions, complete with pictures, are given regarding setting the switches complete with pictures.

If an existing Radio Shack drive is used for drive #1, the user is given instructions for removing the termination resistor inside the drive. This resistor is supposed to terminate the last drive on any "daisy chained" system. Since the *AMDEK* drives already contain a "termination" resistor, it is no longer necessary and may even degrade the system operation.

The key specifications of the drives follow:

Average Access Time	—	55 msec
Track to Track	—	3 msec
Settling Time	—	15 msec
Average Latency Time	—	100 msec
Motor Start Time	—	0.7 sec

Specifications for the standard Radio Shack drive list the average access time as 463 msec. As you can see the *AMDEK* drives are much faster. This could become an asset with the new OS-9, system as driver characteristics are programmable. With the frequency of disk operation, a true DOS speed is important. Also, 40-track drives are supported.

With the exception of a fan that runs continuously, the drives are very quiet. A front panel switch turns the power on and a welcome pilot light reminds you to turn it off. The unit is designed for two-sided disks and a pilot light on each drive is either red or green depending on the side in use. Sometimes the light is the only indication that the drive is running due to the enclosed nature of the disk aperture.

The unit was tested both with and without a 5¼" drive in the system and performed just like you would expect. To the user, it is just like having two regular sized drives on line. In reality, I don't see how you could survive without at least one 5¼" drive in the system. However, a dozen or more software vendors *will* provide software on 3" disk, if requested—among those being Frank Hogg Labs, Tom Mix, Nelson Software and Cognitec. Still, you must have some way of reading other commercial software. Once this software is transferred to the 3" disks your problems are solved.

I am very pleased with the operation of *AMDEK-III*. After about a week of use, no problems were encountered other than normal operator error. It is just like having two 5¼" drives. In fact, it is even better since each disk had two sides.

(AMDEK Corp., 2201 Lively Blvd., Elk Grove Village, IL 60007, \$499)

—Dan Downard

Hint . . .

No-List *POKE*

If you would like to keep your program from listing, use *POKE* 383,158. To return to normal listing, type *POKE* 383,0.

TRS-80 COLOR COMMODORE 64 VIC-20 SINCLAIR/TIMEX TI99/4A

ZEUS

QUEST — A NEW IDEA IN ADVENTURE GAMES! Different from all the others. Quest is played on a computer generated map of Alesia. Your job is to gather men and supplies by combat, bargaining, exploration of ruins and temples and outright banditry. When your force is strong enough, you attack the Citadel of Moorlock in a life or death battle to the finish. Playable in 2 to 5 hours, this one is different every time. TRS-80 Color, and Sinclair, 13K VIC-20. Extended BASIC required for TRS-80 Color and TI99/A. \$14.95 each.

32K TRS 80 COLOR Version \$24.95.

Adds a second level with dungeons and more Questing.

ZEUS — It's fast and furious as you become the WIZARD fighting off the Thunderbolts of an angry ZEUS. Your Cone of Cold will destroy a thunderbolt and your shield will protect you — for a while. This is the best and highest speed arcade action we have ever done. Difficulty increases in wave after wave, providing hours of challenging fun and a game that you may never completely master. Commodore 64, Vic20 (16k expander), and 16k TRS-80 Color Computer. (ALL MACHINE CODE!) \$19.95 tape \$24.95 disk. (Tape will not transfer to disk.)

SEAWOLFE — ALL MACHINE CODE In this high speed arcade game, you lay out patterns of torpedoes ahead of the attacking PT boats. Requires Joysticks, at least 13k RAM, and fast reflexes. Lots of Color and Sound. A fun game. Tape or Disk for Vic20, Commodore 64, and TRS-80 Color. NOTE: tape will not transfer to disk!

\$19.95 Tape — \$24.95 Disk.

WIZARDS TOWER — This is very similar to Quest (see above). We added wizards, magic, dragons, and dungeons to come up with a Quest with a D&D flavor. It requires 16k extended color BASIC. 13k VIC, Commodore 64, TRS-80 16k Extended BASIC, TI99/A extended BASIC. \$14.95 Tape, \$19.95 Disk.

Authors — Aardvark pays the highest commissions in the industry and gives programs the widest possible advertising coverage. Send a Self Addressed Stamped Envelope for our Authors Information Package.

ADVENTURES!!!

The Adventures below are written in BASIC, are full featured, fast action, full plotted adventures that take 30-50 hours to play. (Adventures are interactive fantasies. It's like reading a book except that you are the main character as you give the computer, commands like "Look in the Coffin" and "Light the torch.")

Adventuring requires 16k on Sinclair, and TRS-80 Color. They require 8k on OSI and 13k on VIC-20. Now available for TI99. Any Commodore 64.

\$14.95 Tape — \$19.95 Disk.

ESCAPE FROM MARS

(by Rodger Olsen)

This ADVENTURE takes place on the RED PLANET. You'll have to explore a Martian city and deal with possibly hostile aliens to survive this one. A good first adventure.

PYRAMID (by Rodger Olsen)

This is our most challenging ADVENTURE. It is a treasure hunt in a pyramid full of problems. Exciting and tough!

Dungeons of Death — This is the first D&D type game good enough to qualify at Aardvark. This is serious D&D that allows 1 to 6 players to go on a Dragon Hunting, Monster Killing, Dungeon Exploring Quest. Played on an on-screen map, you get a choice of race and character (Human, Dwarf, Soldier, Wizard, etc.), a chance to grow from game to game, and a 15 page manual. 16k Extended TRS-80 Color, 13k VIC, Commodore 64. At the normal price for an Adventure (14.95 tape, \$19.95 disk), this is a give-away.

Dealers — We have a line of about 100 original programs for the machines listed here. We have High speed Arcades, Quality Adventures, Word processors and Business Software for Small machines. Better yet, we have excellent Dealer support. Phone for information.

Send \$1.00 for Complete Catalogue - Please specify system on all orders - \$2.00 Shipping Charge on each order

Phone Orders Accepted 8:00 a.m. to 4:00 p.m. EST. Mon.-Fri.

Master Control II Fulfills Its Promise

For all of you would-be typists who, like me, could use a hand keying in BASIC programs, there is an updated version of a BASIC enhancement package appropriately called *Master Control II*. This machine language program is designed to allow you to easily enter most BASIC commands and keywords with only two keystrokes.

The complete package is very professionally done and includes a 1616 byte program on a quality cassette with a plastic keyboard overlay and a well-written, six-page instruction manual. The program, as supplied, requires a minimum of 16K and although Extended BASIC is *not* required, some of the BASIC statements that can be entered via *Master Control II* are for Extended BASIC only. The software is also compatible with the Radio Shack disk system.

Upon getting the program, I proceeded in my typically precise manner, *glancing* at the instructions and immediately loading *Master Control II* on my 32K CoCo. I then loaded a rather large program that I had never finished, with the intention of utilizing the software to its fullest. Well, to make a long story short, about a minute later I got a very "interesting" graphic display of random colors and a CoCo that refused to respond to any keyboard input. A second, more detailed examination of the instructions disclosed the problem. It seems, obviously now, that if you have more than 16K or a disk system, you must first make a copy of the program, adjusting the start, end and exec addresses prior to actual use.

Once loaded, *Master Control II* lives up to its promises and allows you to enter BASIC commands and statements with only two or three keystrokes. Some of these commands such as *RUN* and *CONT* take effect immediately without need for the *ENTER* key. Others, such as *LIST* and *SAVE* allow you to enter specific line numbers and program names respectively. Normal BASIC statements such as *PRINT*, *FOR* and *PEEK* will also be printed with only two keystrokes.

This shorthand method of entering BASIC programs can be very helpful. In fact, the program's effectiveness seems to be directly related to one's typing ability. In other words, the lower your typing ability the greater your possible improvement in throughput.

Another very convenient feature of *Master Control II* is the automatic line numbering option. This allows you to specify the starting line number and increment or default to 10,10. For entering your own programs this feature is a must. For entering programs from a magazine such as *the Rainbow* you are at the mercy of the original programmer. If he or she was kind enough to number the program in a consistent manner with a fixed increment, you are in luck. Otherwise, automatic line numbering will just not suffice. Also, there is one important point not covered in the instructions. Once in auto mode you will naturally continue to be provided with the next line number whenever you press *ENTER*. However, should you want to exit the auto mode to correct a mistake, etc., the instructions provide no help. Trial and error disclosed that pressing the Break key temporarily exits the auto mode. Returning to auto line numbering is as easy as pressing "shift-down arrow" and the key marked *AUTO*. The program will then pick up where you left off in the numbering sequence.

Master Control II also provides a repeat function on all keys and one programmable custom key. The custom key works fine and I only encountered one minor problem when using it. A couple of keystrokes put you into the enter mode for the custom key. You then enter whatever you wish your custom key to later repeat. Being ambitious, I attempted to program my custom key with four or five lines of information. As usual, my nimble fingers couldn't keep up with my thinking and a typo resulted. Pressing the "left-arrow" to backspace and correct my mistake, I found the left-arrow doesn't backspace, it just prints a lowercase "h"! Picky, I know, but when your wife is looking over your shoulder, impatiently waiting to use your wonderful new program, time is critical and rekeying the whole thing is frustrating.

To continue, one feature I found missing from this otherwise good program, was a full screen editor. *Master Control II* is great for entering new programs. However, for making changes to existing text, you are still stuck with Radio Shack's less than adequate built-in editing capabilities. A couple of years ago when *the Rainbow* was just a newsletter, I bought a full screen editor (yes, Virginia, there was software available even then). I still use this editor today and truthfully could not live without it. Unfortunately, it is not compatible with *Master Control II*. Oh, well!

Summing up, if you want a good program to enable you to enter BASIC programs more quickly and correctly, would like automatic line numbering and a programmable custom key and don't mind the CoCo's built-in editing capabilities, then this software package could very well be for you.

(CoCo Warehouse, 500 N. Dobson, Westland, MI 48185, \$19.95)

FINALLY!

A REAL SPREAD-SHEET PROGRAM FOR THE COLOR COMPUTER

DYNACALC™

Business people use spread-sheets to organize columns and rows of figures. DYNACALC simulates the operation of a spread-sheet without the mess of paper and pencil. Of course, corrections and changes are a snap. Changing any entered value causes the whole spread-sheet to be re-calculated based on the new constants. This means that you can play, 'what if?' to your heart's content.

But DYNACALC isn't just for accountants. DYNACALC can be used for just about any type of job. Not only numbers, but alphanumeric messages can be handled. Engineers and other technical users will love DYNACALC's sixteen-digit math and built-in scientific functions. There's even a built-in sort command, so you can use DYNACALC to manage small data bases - up to 256 records.

DYNACALC will let your computer do just about anything you can imagine. Ask your friends who have VisiCalc, or a similar program, just how useful an electronic spread-sheet program can be for all types of household, business, engineering, and scientific applications.

DYNACALC is designed to be used by non-programmers, but even a Ph.D. in Computer Science can understand it. Built-in HELP messages are provided for quick reference to operating instructions.

DYNACALC has a beautifully simple method of reading and writing FLEX data files, so you can communicate both ways with other programs on your system, such as the Text Editor, Text Processor, Sort/Merge, RMS data base system, or other programs written in BASIC, C, PASCAL, FORTRAN, and so on.

Except for a few seldom-used commands, DYNACALC is memory-resident, so there is little disk I/O to slow things down. The whole data array (worksheet) is in memory, so access to any point is instantaneous. DYNACALC is 100% 6809 machine code for blistering speed.

Color Computer DYNACALC works with the FLEX operating system from Frank Hogg Laboratory (64k required). If you aren't already using this powerful operating system, we have a special deal for you: order DYNACALC (regularly \$200) and FHL Color FLEX (regularly \$99) together for only \$250.

To order, see your local DYNACALC dealer, or order directly from CSC at the address below. We accept telephone orders from 10 am to 6 pm, Monday through Friday. Call us at 314-576-5020. Your VISA or MasterCard is welcome. Be sure to specify that you want the Color Computer version.

ORDER YOUR DYNACALC TODAY!

The Mouse Stands Alone

Radio Shack has again shown its continued support of the Color Computer with its introduction of another hardware item, the *Color Mouse*. This little gem will allow you extremely fast and easy control of cursor movement in any direction. The *Mouse* is very compact in size, 3½" long, 2½" wide, and about 1½" high. The fire button is located on the top front of the unit. It is very easy to position your finger on it while moving the *Mouse*.

You can use the *Mouse* with or without joysticks. To use it, simply plug it into one of the joystick ports (the program you are using will determine which one) and set it down on a piece of clean paper. The reason for this is to prevent the ball on the bottom of the *Mouse* from picking up any foreign matter. The movement of the *Mouse* is very smooth as long as you keep the ball clean.

The surface area that the *Mouse* uses is approximately a 5" square. Cursor direction is relative to the position of the *Mouse* on the paper. When you move it away from you, the cursor will move to the top of the screen. To bring the cursor to the bottom of the screen simply move the *Mouse* toward you. Any direction is available to you by simply moving the *Mouse* to a position that is relative to the starting point you chose on the paper.

I have found that you can use the *Mouse* on virtually any game, or with any program in which you want precise control of the cursor, such as drawing graphics. It does have its drawbacks though, with certain types of games. These games would include *Pac Man*, and maze-type games, where cursor control is limited to direct horizontal and vertical movement.

All in all, the *Color Mouse* from Radio Shack is a good hardware item to expand the versatility of your Color Computer.

(Radio Shack, Nationwide, Cat. No. 26-3025, \$49.95)

—Ted Hasenstaub

Motorbike Challenge Provides Cheap Thrills

As you accelerate on your motorcycle you see an obstacle in your path. Your choices are to jump over it or crash through it and die. Naturally, you jump over and make it with ease. No, you're not in a James Bond movie with a souped-up cycle, you're playing *Motorbike Challenge*, a new game for your TRS-80 Color Computer or TDP-100.

Motorbike Challenge is a 16K Extended BASIC game which is in machine language. Extended BASIC routines are used for graphics. The game uses the right joystick for control of the motorbike.

The objective of the game is to cross obstacles and the bomb-ravaged bridge while exercising full riding controls. It is a challenging game for those who seek adventure in a motorbike ride. The computer asks you to pick a skill level from 1 to 9. The computer displays side views of the two tracks, the bomb-ravaged bridge, the water, obstacles and your motorbike. The number of motorbikes in reserve is indicated by the number of dots at the top left-hand corner of the screen. You are given three chances to complete the course. Each time you finish you get a more difficult course.

The instruction page for *Motorbike Challenge* is very good. It tells you everything you need to know about the game. This includes loading instructions, skill levels, joystick controls and score display.

There seems to be a problem with the color mode selection. Sometimes the color set is reversed after loading the program. The water, normally blue, turns red.

I recommend this program for your home use and, at \$14.95, it's a steal.

(Microcom Software, P. O. Box 214, Fairport, NY 14150,
\$14.95 on tape)

WE DO BASIC BETTER!

Experience High Resolution Graphics and Speed Unsurpassed in Color Computer Extended Basic Software

GALLOPING GAMBLERS

Those who have tried it agree that *GALLOPING GAMBLERS* is so addictive, so exciting, that you and your whole family will sit cheering for your horse to win.

No joysticks are required for this 4 player game. Place your bets on the variable odds and then wait for the sound of post time...and...they're off.

Game includes color graphics with score and birds-eye view of the race track. Can you last all twelve races?

We dare you to try.

\$18.95

GATOR ZONE-

Is the first video computer game that takes a "byte" out of the Preppy craze! You can finally get even with those pesky Ivy League snobs by blasting away at a host of Preppy Gators on their home planet of "Prepture". You have to be quick, or the gators will gobble up your shirt! This is comic arcade fun at its best. Includes high-resolution graphics, on-screen scoring, joystick action, and three levels of play. An IMB original!

\$18.95

STAR SIEGE PLUS-

Discussed with Space Battle games in which your space craft looks like an asterisk?

STAR SIEGE lets you and your friend (or enemy) pilot two high resolution space ships while trading laser blasts. The first to take ten hits loses, but watch out for that pesky alien saucer! He wants to see to it that you both get vaporized.

Also includes two player *TANK TORCHER* game.

\$18.95

METEOR STORM-

If you are bored with space obstacle games that place you as a distant observer from a point far off in space, then *METEOR STORM* is for you. Enjoy the thrill of blasting the approaching meteors from the cockpit of your own spacecraft. Watch the meteors grow in size until...

16K Color Extended Required. Includes sound enhanced laser blasts, multi game scoring, and three levels of play.

\$12.95

SELECT-A-GAME-

combines 3 of IMB's finest bonus games in one simple load! You can switch back and forth from "ALPINE ALIENS", "OH, GOBI!", and "ZELDA'S BAT BOTTLE". All contain stunning color graphics and high speed action. Even if you already own one or more of these games, you will want this fine package.

\$18.95

MICRO-MATH SKILLS QUIZ-

is a fine math drill for students at or below the 3rd grade math level. Includes automatic grade tally, and INKEY entry with large print, high-resolution graphics. This is a must for educators!

\$12.95

CREATAVADER-

Now you can design your own "Invader-style" game for your Color Computer. Includes all the routines needed for customizing the creatures you hate the most. Full instructions included. Create your own targets or select from a menu of seven pre-designed four color targets.

\$18.95

COLOR WORDCLONE-

Turn your Color Computer into a supertypewriter. Screen displays 50 characters by 23 lines in real upper and lowercase. User modifiable. Remove our character generator and use it in your own basic program. This is an easy to use word processor. The character generator alone is worth the price of the tape. Works with tape or disk.

\$18.95

KOSMIC KAMIKAZE-

Our best selling high-resolution, deep space arcade game which the RAINBOW called "...the best spaceship graphics we have seen in a non-machine language program." Battle high speed alien saucers, decoy ships, bonus killer crafts and speeding comets.

\$18.95

ADVANCED

STAR*TRENCH WARFARE-

This High Resolution Color Game has the most elaborate graphics of any Color Computer Game created to date. You'll be amazed by the remarkable speed and flicker-free animation found in this graphic space challenge. Program includes a moving trench, cockpit perspective, on-screen rapid scoring, energy and ship gauges, automatic high score tally, joystick control, and a recharge and crash sequence you'll have to see to believe. Use your own 3-D glasses and add an amazing sense of depth to this classic game. Truly a must for every Color Computer.

\$18.95

STARBASE ATTACK-

Why be a loser? Here's an arcade game you can play to win. In other space city defense games you play until you lose. *STARBASE ATTACK* is totally different. Your mission is to clear a path for the escape vehicles which will carry your people to safety. Not only that, but you must also maneuver your own escape before alien warheads or a wave of killer asteroids level your dome-covered cities. You control high energy laser blasts and expansion shields, but watch out! You might end up the one who doesn't escape.

Math Adventure Could Be An Educational Treasure . . .

I am alone in the middle of a deep, dark cave. There is no possible way for me to escape. There is a wall to either side of me, blocking both my exits, and nestled between them is a strange looking box. Since I have had my troubles with strange looking boxes, (my CoCo is one of them) I decide to take my chances at one of the walls. I charge the large red wall, in full barbaric fashion, and at the instant I crash into the wall, it mercilessly groans (walls do not speak, they either groan or squeak) my one weakness, *a math problem!* I now stand at the wall, trying to figure out what the product of 177 and 165 is. (This is a real head scratcher, even for us barbarians.) Luckily, the Barbarian Horde Local 101 has given us behemoths calculators. However, since it is good for people to learn to do these mathematics in their head, a new release by The Software Factory allows your youngster to go on an adventure while learning math problems.

The program is called *Math Adventure*, and is intended for educational purposes, and requires a 32K Color Computer with Extended Color BASIC. The program pushes the memory constraints of a 32K machine, so it will not work with the disk drive ROM Pack plugged in.

When the program first loads in, you are greeted with the copyright notice, and are asked the skill level that you wish to select (between one and 20). The accompanying docu-

mentation explains that for each level selected, random numbers of up to twelve times the level selected are possible (ie, level 20 would have numbers up to 240).

The program then asks how many screens are desired. The number selected may be in a range of 10 to 60. This number really decides the length of the game. Playing the "quickest" game (10), I could not keep the time to complete the game under the hour mark. This is definitely the program's most serious stumbling block. Since this program is geared with the 6- to 12-year-old in mind, it tends to fail because of loss of interest. From the number of children that age I have seen, I cannot imagine very many of them sitting still for more than 15 minutes, and none of them would for an hour to hour and a half *minimum* of this program.

After selecting the number of screens, the program loads data off the cassette, and squeezes memory to less than four hundred free bytes. The program asks you to select what type of questions are preferred. You may select addition, subtraction, division, multiplication, or all four of these at the same time.

Finally, a nice feature is included. The program asks you if your machine can handle high speed. I really do appreciate this feature in programs, because my machine does not handle the high speed well, and I do not enjoy editing the program to take out the high speed *POKEs*. Unfortunately, the program and the documentation assume that most Color Computers *can* handle the high speed, and as a result, it appears as if little effort has been taken to speed up the graphics. The program takes anywhere from 10 to 23 seconds to draw the graphics. Since this is definitely a nuisance, I cannot see why the author did not speed up the

graphics, especially when many of the screens repeat themselves. Why couldn't the program simply use the same screen instead of re-drawing the whole screen? Another complaint about the speed could be fixed by simply not using a ridiculous order of operations to paint the screens. As an example, when on the "forest path" area, the program uses BASIC's *PAINT* command. There is no problem with this, but it is used in an illogical order. The program clears the screen green, then draws a large portion of the screen blue; then it draws "trees," which are quite larger than the sky area, and again paints them green. This is at best an awkward way to do graphics, and takes extra work.

The program does add some good features in the graphics area, which does make *Math Adventure* more interesting. First, there is the boat. The student may enter the boat by correctly answering a question, which adds a nice dimension to the game by showing the player's figure in a small raft-type boat, which makes the game much more enjoyable.

The program also displays a bright red box, which acts as a teleporter in full Star Trek fashion. When the student touches this box, he is asked a math problem, and if he answers correctly is teleported to the cave level. To return to the "path" area you must re-enter the teleporter. I really like the way you are "beamed aboard," where you are scrambled apart and re-integrated into your more usual self. Although I like this feature, it might be confusing to children that are young, but it must be explained to them.

The object of the game is to gather the 15 treasures, and while this may seem like an easy job, it takes a considerable amount of time. To gather a treasure, all one must do is simply run into the treasure and answer the question that is posed to you. If you fail, the treasure disappears and is

randomly replaced in the game area. If you correctly answer, your score is incremented and you are played the three notes that are given for all correct answers.

As far as an educational program goes, this program does not go far. Although it is not intended to teach a student *how* to do math, it *is* intended to be a drill to encourage the student to study math. (Or is that to trick the student to learn math?) The program *does* succeed in this area, but it is not effective because there is not enough action, movement, exciting graphics, sound, or sufficient rewards to keep the child's interest. In other educational programs I have used; there are many more rewards and encouragement; in this program the only reward is a three-note tune. The worst educational aspect of the program is that if you incorrectly respond to a question, you are not given a second chance, or even the correct answer. I thought this was especially poor because the student is trying to *learn*, not guess blindly.

I cannot really recommend this program unless some simple changes are made. This program could, however, be greatly improved *if* the speed of the graphics is increased, and more action is incorporated to encourage the student to play the program. (One idea would be to add an evil monster to stop the student from taking his/her attention off the program.) Also, more chances to answer the question, or the correct answer itself, *must* be given if we are to facilitate learning. If these changes are made, I believe *Math Adventure* could become one of the better educational programs available for the Color Computer.

(The Software Factory, 1333 Morgan Rd., Bremerton, WA 98312, \$21.95 tape)

—Eric Oberle

"Fun For The Whole Family"

Tired of one or two player games that are boring for everyone but the player? Do you wish you could get the children interested in a game that has educational qualities and is entertaining enough to keep them interested? Then you need ALPHABET SOUP, a word recognition and spelling game that has all the challenge and excitement of an arcade game plus the fun and competition of a board game. With room for up to five players and nine skill levels, ALPHABET SOUP is great family fun. It's so much fun, the children won't even notice that their word recognition, spelling, vocabulary, and typing skills are steadily improving.

ALPHABET SOUP \$14.95

WITH SCHOOL ABOUT TO BEGIN, IT'S TIME TO HELP YOUR CHILDREN SHARPEN THEIR MATH SKILLS! With our three math drill programs, your children can practice math skills that have grown rusty over the summer vacation and be ready to start learning new material immediately after school begins. Each program features five skill levels, entertaining music and graphics, and personalized prompts to keep the children interested and motivated.

Super Screen Gives Hi-Res Plus

Most people will agree that our CoCo is a very powerful machine. With 64K and a disk drive or two, you can now run some very sophisticated software. When it comes to running small business and advanced personal programs, however, there is a problem. The normal text screen display is only 32 characters by 16 lines, which limits the amount of data that can be displayed at any given time. Also, there is no easy way to efficiently combine text and graphics on the same screen.

Super Screen is a machine language utility that not only solves these problems, but adds a few additional features to CoCo's repertoire, as well. It requires a minimum of 16K, works with Extended or Disk BASIC, and also works on a 64K machine. The screen is produced in *PMODE4*, and displays 51 characters by 24 lines on a buff colored screen. Any character that can normally be printed on the screen can be printed with this program. Several "control codes" are available to control and customize the display, and the *PRINT@* and *CLS* commands are also fully implemented.

Once the program is *EXECuted*, *Super Screen* will automatically adjust itself to conform to the amount of memory that you have. There is also no need to reserve space for it beforehand, or to enter any exotic *POKEs*—a very nice touch. At this point, you are presented with the familiar OK prompt, except that you are working on a hi-res screen.

There are nine control codes in all, and they are passed to the program with a "PRINT CHR\$(N)" statement, where "N" is the control code. The codes perform the following functions: reversing the screen characters and background color; backspacing the cursor; issuing a line feed; issuing a carriage return; switching between a blinking or non-blinking cursor; issuing a home-up; erasing from the cursor to the end of the line; and erasing from the cursor to the end of the screen.

Using the control codes is very easy, but I soon got tired of typing in all those "PRINT CHR\$(N)" statements. I solved this problem by equating my own variables to the control codes I was using. For example, I set *RV\$=CHR\$(6)*, and was able to reverse the video by using a "PRINT RV\$." This also made it easier to remember the control codes. I also discovered that a *SCREEN1,0* command will change the color set to green instead of buff. This produced a slightly more readable display on my color TV due to the pseudo-colors produced on the normal buff screen.

Super Screen has two additional features that make it more than just a screen utility. The first of these is the auto key repeat, which will repeat any key that is held down for more than one-half second. This made it very easy to edit long BASIC lines when holding down the spacebar or left arrow keys, for example.

The other additional feature is the real kicker. It is a full implementation of the *ON ERROR GOTO* command, which is found on some other machines. With this extremely handy command, you can trap any error in your program and stay in control as opposed to having your program go down the tubes. You can also find out exactly what the error was, and in what line number it occurred. This feature can be a real lifesaver if you have spent an hour or so entering data into your program, only to be greeted with an I/O error when you try to save your data out to disk or tape (without a disk in the drive for example). Remember, if you *RUN* your program after an error, all of your data will be lost.

Super Screen is an excellent utility that performs very well, and is designed with both business and personal users in mind. Because of this, it will only work in *PMODE4*, which might be a limiting factor for some users. The documentation clearly explains how to use it, and includes many helpful examples. One additional feature of *Super Screen* is that it is supported by very friendly and helpful people, which is a must for the serious CoCo user.

(Mark Data Products, 4001 Alicia Pkwy., No. 207, Mission Viejo, CA 92691, \$29.95 tape, \$32.95 disk)

Fast-Paced *Fury* Has Good Color, Graphics

Fury, an arcade-type game from Computer Shack requiring 32K Extended Color BASIC, has some extremely good graphics, but the sound effects could use some improvement. Let's look at the high points first.

As the game begins, you are in an airplane surrounded by clouds and enemy aircraft, including helicopters, airplanes, hot air balloons, parachutists and deadly magnetic mines. Using joysticks, your goal is to destroy as many enemy craft as possible before colliding with any of them. Your ship remains at the center of the screen at all times, but the graphic effects are such that you appear to move around through the clouds and enemy craft.

The game is fast-paced, colorful, and responds rapidly to the joysticks. *Fury* can be played with up to two players. The game becomes more difficult as it progresses and your score increases. This is done by releasing more magnetic mines into your airspace and decreasing your firing rate as your cannon heats up. The magnetic mines are a nice touch, as they are indestructible and you must run from them as they chase you if you get too close. You get three aircraft initially and can earn another for each 15 enemy airplanes destroyed. The parachutist cannot be shot, but must be rammed by your craft to be destroyed.

The enemy craft seem to randomly move across the sky in different straight-line vectors, and your manipulation of the joysticks alters the perception of their direction, giving a very good, flickerless illusion of movement on your part. There are enough enemy aircraft in the sky at all times to keep you busy firing and dodging the mines.

The game's weakest point is in its sound effects. It has "talking" capabilities and the novelty and cuteness of the speech synthesis quickly wears thin. It announces its title and publisher periodically during the attract mode and prompts the players for their turns (even in a single player game). I think it's wonderful that people are gifted enough to program speaking ability into the CoCo, but I also believe the speech generated should contribute to the quality of the game, and not distract from its playability, as it seems to do in *Fury*. The firing sound effects are done nicely with a realistic machine gun sound, but when your ship is destroyed all you get is a weak sounding, ineffective low volume sound distortion.

I prefer seeing the memory space allocated to speech synthesis devoted to giving the game multiple skill levels. As it is, the game starts at a quite difficult level for the younger child and continues to increase in difficulty, especially when the firing rate is slowed down. Our eight-year-old lost interest rather quickly.

Fury is also available for 16K with sound effects but without voice synthesizer.

If you appreciate good, smooth graphics and don't mind a rather irritating voice reminding you it's your turn, then I can recommend *Fury*.

(Computer Shack, 1691 Eason, Pontiac, MI 48034, tape, \$27.95, disk \$29.95 for 32K with joysticks)

—Randall Smith

Turn your TRS-80 Color Computer into a powerful business machine. Create and manage customized records for innumerable home and office applications. HOMEBASE™ data management system goes beyond just storing, sorting and retrieving your business records. It allows you to use the same data records in calculations and in printing form letters and reports. The HOMEBASE™ text processing system is both a word processor and a complete filing system. Store 250 screens of text as data records and then use any portion of a record for searching, sorting, or for printing form letters and special reports.

HOMEBASE™ is an invaluable tool for managing a business involving insurance sales, real estate sales, property rentals/management, mail-order sales, or any comparable business. Using HOMEBASE™, both accounting and non-accounting applications are easily automated to save you time and provide better information about your business. Create customized ledgers or extend your payable and receivable records to include descriptive data important to the daily operation of your business as well as its continuing success.

HOMEBASE™ is a menu driven system and does not require programming. The system documentation includes descriptions of every menu option and is uniquely designed for quick referencing. System documentation includes a tutorial and demonstration program.

\$35

DATA MANAGEMENT

- 50 data fields • **Formatted dates**, time of day; phone numbers, & dollar amounts
- 24 **scratchpad data fields** not stored within any data record
- **Variable-length alpha/text data fields**
- **Reorganize** records using move or ascending/descending sort on any data field
- **Manage** files using search/select, delete, clear, duplicate or list
- **Perform calculations** on any numeric data using add, subtract, multiply, & divide
- **Print** using automatic formatting with options to print report titles, page numbers, record names and data names
- **File Utilities** include generate, merge, duplicate, summarize, cassette backup/reload, rename, delete, directory display/print and moving data between files.

\$15

CUSTOM REPORTING

- **Merge** data management files with text files
- **Create** and store form letters and report formats
- **Print** each data record as one letter or report
- **Print** selected records as a single report/list
- **Change** the print field size for any data field
- **Use** a single report for different files
- **Print** multiple copies.

HOMEBASE

SYSTEM REQUIREMENTS

TRS-80 Color Computer with 32K; Disk Basic; and one disk drive. 2 Disk drive option is included - NO EQUIPMENT MODIFICATIONS REQUIRED.

\$25

TEXT/WORD PROCESSING

- 250 **screens** of text
- **Reorganize** text records using move, copy, or ascending/descending sort
- **Manage** text files using search/select, delete, clear, duplicate, move or list
- **Print** text record appearing on the screen to review before final printing or print all of a selected group of records
- **Format** using embedded printer controls for paging, skipping lines, and changing fonts
- **Program printer controls** include right & left margins, lines per page, page width, horizontal tabs, page heading, page numbering, line spacing, and multiple copies
- **File Utilities** include generate, merge, duplicate, synchronize, cassette backup/reload, delete, rename, and directory display/print.

Color Monitor Help For ML Programmers

Attention Color Computer Wizards! Not the Dungeons and Dragons type of Wizards, but you Wizards who are *into* CoCo machine language programming. Tom Mix has released a program to help you in your quests for the ultimate program.

Color Monitor allows the user to edit and debug machine language programs for the 80C. After the program to be monitored and the *Color Monitor* programs have been loaded, you can choose from a series of commands which allow you to:

- Display Memory — One line, eight bytes long.
- Substitute Memory — Displays a line with the option of substituting a new byte for the current one.
- Jump to a specific address and execute the program to a user-specified address.
- Move a block of memory from any location to any location.
- Display the contents of any register.
- Change the contents of any register.
- Exit *Monitor* and return to BASIC.

Color Monitor occupies 1174 bytes of memory so it is usable with most 32K programs. Since it is written in position independent code, it can be moved out of the way of your machine language program. Memory is displayed in hex and ASCII format on one line, eight bytes long.

Color Monitor is easy to use. Machine language programs reveal their secrets and bugs as *Monitor* enables you to review them. Even ROM packs can be analyzed by disabling the auto start mode by covering pins 7 and 8.

A feature which would make the unit more desirable would be a single step (jump to PC, EXEC, next instruction and BREAK) command.

My other objection is the format of the instruction manual (if it can be called a manual). Like other Tom Mix software, all instructions, hints and info are printed on a 5½ x 5½ sheet of paper. While this format might suffice for *The King* or other games, it just is not adequate for a program of this complexity. A larger format or more pages would allow for more detail and larger type.

With the current documentation, this program is only for those who know what they are doing. No beginners allowed here.

In conclusion, if you are *into* machine language programming, you'll like *Color Monitor* because it allows you to get into your machine language program.

(Tom Mix Software, 3424 College N.E., Grand Rapids, MI 49505, \$24.95 on tape)

—Bruce Rothermel

AVAILABLE NOW DRAGON USER

To make the most of your new Dragon microcomputer from Dragon-Tano, you need *Dragon User* — the international, independent magazine for Dragon owners.

- Each issue of *Dragon User* contains:
- reviews of the latest software
 - programming advice for beginners
 - hardware projects

- program listings covering games and utilities
- reviews of Dragon peripherals and add-ons
- technical advisory service
- programming articles for users

The Dragon microcomputer was launched in the UK last year. Since then we have developed a knowledge and mastery of the machine's abilities. You can benefit from our experience by subscribing to *Dragon User*, which is expanding its coverage to include all US developments.

To make sure that you receive a copy of *Dragon User* regularly, subscribe direct to us. This costs only \$29.95 for 12 issues airspeeded to you — or take advantage of our special offer to long-term subscribers. Individual copies of the magazine can be obtained from your Dragon dealer.

Subscription order form. Receive a free book and save money by taking out a long term subscription — a two year subscription saves 10%, a three-year subscription saves 20%. In addition, long-term subscribers will receive a free copy of either *The Working Dragon* or *Dragon Games Master*. Please send a check, made payable to *Dragon User*, with this form. Start my subscription from the following issue.....

PUT MORE FUN IN YOUR COLOR COMPUTER

RAINBOW-WRITER SCREEN ENHANCER

Introducing the ultimate in hi-res graphics text display. Allows your color computer to write text on any graphics screen in Rainbow colors. 16K Extended Basic required. 12 sizes to 64 x 24. See accompanying ad for details. \$29.95 Cass - \$32.95 Disk.

- User definable 224 character set featuring true lowercase with descenders, improved cursor, slashed zero, Greek math symbols, lunar landers, stick figures, tanks, cars, planes, card suits, etc.
- Works in all PMODES. Four-color artifacted characters in PMODE 4 (highest resolution)!
- Pre-loader allows optimum loading in 16K, 32K or 64K machines. The 64K selection automatically transfers all ROM (including cartridge) to RAM. Uses 4-5K of memory.
- ML extension of BASIC completely interfaced and transparent incorporating direct conversion of all keys and commands including PRINT @.
- Use all day for hi-density screen displays, graph labels and listings, or incorporate into your own BASIC or ML games, word processors, etc.
- Includes demo program, tape/disk conversion instructions, character generator program, and operators manual.
- Large colored letters for children or video recorders direct from keyboard or program.

PIGSKIN PREDICTIONS 3.0

This NFL Handicapper survived the strike! Enhanced version of last year's best seller featuring...

- Simple menu-driven selection of schedules, ratings, division races, predictions or results by team or week. 7 different types of reports to screen or printer (optional) available each week.
- Easy one-a-week entry of scores - no complex stats.
- Predicts all games for remainder of season each week.
- Calculates projected won/loss records for all weeks.
- Maintains home field advantage rating as well as power rating for each team for accurate predictions.
- Allows user schedule entry. 1983 schedule and ratings info included free—ready to run.
- Tracks computer's accuracy by team and week.

32K enhanced version features dazzling Rainbow-Writer screen displays. 16K abridged version included free. 16/32K Extended Basic required. 2 tape cassette \$29.95; 32 Disk \$32.95. Previous owners call for upgrade plus data tape.

CONQUEST OF KZIRGLA & SCEPTER OF KZIRGLA

Dungeons, wizards, treasure chests, hidden trap doors and more. If you enjoy challenge and complexity, these adventure games are for you. Featuring real-time graphics with arcade sound for your color computer. "Scepter" requires 16K Extended Basic. \$16.95 Cass - \$19.95 Disk. Hi-res sequel "Conquest" 16K Extended Basic Cass \$21.95; 32K Disk \$24.95.

Kaleidophone — An Array Of Color, Sound And Instruction

Well, here's another color organ-type program for your CoCo. *Kaleidophone* is a very good idea. It will create avant-garde art creations on your computer screen, based on the fanciful flights of harmonious melodies from your sound system.

When you open the box, you are greeted by a very impressive cable that will connect your computer and your stereo. My first questions were answered quickly. My computer is quite a distance from my stereo, and I didn't want to have to move either one. The interconnecting cable is at least 17 feet long—more than ample to do the job. My next concern was connecting my stereo to my computer. I didn't want to make nachos out of my computer chips! So when I saw that little black box on the cable, well . . . I mean what are screwdrivers for anyway? I felt much better to see some guts in that box. It looks as if it should take care of most of the output, and maybe a spike or two.

(C.C.Calc requires 32K, Personal Checks Welcome)

So, with computer and stereo hooked up, I marched on to the instructions. This is where some real fun starts! Contained in the documentation is a mini-adventure. Your first task is to pick from one of three pamphlets containing the information to get started. I'll give you a clue—go to the single sheet first. Now you have the knowledge you need for "Quest Of Color."

The second of the three scrolls is to throw you off track. It is called "Installations and Operating Instructions." This will prove to be no major form of enlightenment. Mainly, it's a test of determination. Now cautiously proceed to *Kaleidophonics 1983*. You have now reached your goal! Marvelous color displays on your computer's screen! Well, gang, get ready for a surprise.

All through your *Quest of Color* you were told of the wonderful potential of this software/hardware combo. And, basically, they are right. This setup has lots of potential. But, right now, your awesome display of "Night on Bare Mountain" stays in a sea of potential.

The demo program included is a very valiant attempt to show some nice features. But mainly they only suggest to you what can be done. The only routine that gets close to giving you a choreographed display is *Fly*. In my opinion, this is the only thing that lives up to all the claims of an interesting display coordinated with the movement of music.

As we move deeper into the documentation, you find more riddles and clues as to what can be done. In section III, you have the strange feeling of entering into the middle of this odyssey. You see familiar but unrelated information. In an attempt to get a bearing on where you are, you move on to "Calling Machine Language Utilities."

Here you find a thick web of information—all interconnected but separate. You learn of eight ML routines. Their faces are never shown. You are told to experiment with them, but, all the time the object code remains a secret. Thus, creating another creature swimming in the sea of potential.

So far this review has been very fanciful. This is the same feeling you get when you read the documentation. The aura of having something grand and unique. The feeling of approaching a new vista in art and music. But, with every dream comes the time to wake up.

Kaleidophone is a very nice package. And it comes with some good software and a fully detailed manual. If you would like to create your own ultimate color organ, this is the stuff you need. But, if you want to buy something that you can grasp onto quickly, and be really impressed with your efforts, hold on. The people at New Salem Research did a good job on the hardware. There are also some nice ML routines. But, if you want a really good display, be prepared to work at it. I feel the results from that effort could be very rewarding.

If, after reading this review, you are left with the feeling, "What's he talking about?" don't worry. This is the same feeling I got when I finished reading the documentation. Should you buy it? If you want a system to create your own ultimate color organ, then yes. If you want something pretty to look at, Tandy's *Audio Spectrum Analyzer* is very good.

(New Salem Research, West Main Street, New Salem, MA
01355, \$49.95)

First Sampler: The Good, The Bad And The Ugly

By A. Buddy Hogan

First Sampler is a cassette package of six BASIC programs that "have been published in popular computer magazines." The documentation for the six programs consists of a copy of the full page ad that Dataman uses to promote its business. The description of each program is extremely brief and nondescript. Each program, then, becomes an adventure in itself. There are three consecutive copies of each program on the tape. I presume they are recorded at different volume levels, but the first recording of each loaded fine for me.

WORD. Up to 10 people can play this electronic version of the popular board game, Scrabble. Each player's name is displayed at the top of the screen as each round is played. There are 10 boxes with randomly generated letters that you must use to form a word. The score for each letter chosen is displayed as is the total value of the word. After the word is entered, you are asked whether the word is correct. This is intended to allow time to look up questionable words in the

dictionary. A "yes" results in your score for the round being displayed and lets the next player take a turn; a "no" allows you to use the arrow keys to redo the word. The game lasts for as many rounds as it takes to use up the 200 letters allotted for a game. The program uses *DATA* statements to insure that consonants and vowels are available for each player's turn. This game is fun to play and educational as well.

MATH. There are no instructions for using the program, but it is relatively simple to follow. You are given a choice of the math function you want to practice, or you may choose a combination of the four. You are confronted with 10 problems that are cleverly presented in boxes with randomly colored backgrounds. One mistake on each question is allowed before you are given the correct answer. If you solve the problem, you are congratulated and the problem is erased from the box; if you miss it twice, a sad tune is played, the correct answer is given and the problem remains in the box so you can see which ones you have missed. If you hit an alpha key rather than a numeric in attempting to answer a problem, a "?Redo" is written on the screen between the lines used by the program. It will remain for the rest of the round. The level of math presented is approximately sixth grade (three place addition and subtraction, two place division, and three place multiplication). However, I must caution you, I would not allow a sixth grader, or anyone else, to come close to this program. I suggest that this program be erased immediately by anyone purchasing *First Sampler*. You are advised by the ad copy that this program will "improve your mental math skill." What they neglect to tell you is that your mental math skill improvement may occur at the expense of your overall mental health. I had an extremely difficult time reviewing this program and the ones that follow because of the singular manner in which the programmer has abused the first commandment of programming, "Thou shalt not use the computer to ridicule, belittle or demean a human being." A computer program that is intended to help a person sharpen academic skills should employ sound teaching techniques, not pomposity. At the conclusion of each round, you are presented with your score (0-100 percent) and a pompous message that is dictated by the level of your score. If you miss all of the questions, you get this jolly little message: "You must have jello for brains." A 10 percent score produces, "I know morons that score higher." If that isn't gross enough, guess what your reward is if you score high? If you miss only one you are told, "You can't replace me yet." The praise and encouragement for getting a perfect score is, "I bet you can't do that again." Don Rickles would be proud of this programmer's style. If you can survive the insults, you are informed of the time that it took you (in seconds) to complete the round.

CONVOY. Remember a board game called "Battleship?" Well, *Convoy*, the CoCo version, is better than the real thing. The program makes excellent use of the graphics and animation capabilities of CoCo. The learning value of *Convoy* is worth the price of the entire package of programs. A multicolored display is drawn in the upper left two-thirds of the screen. The display is really a matrix consisting of vertical rows (numbered 0-9) and horizontal columns (labeled A-T). You are asked to enter the row and column for the bow position of a ship. Then you are told to enter the rest of the vessel by pushing an arrow. The vessel is entered on the display as a series of boxes with the first letter of the vessel inside each box. If you try to place a ship off of the screen,

you are told that your ship is "out of ocean." You are given one aircraft carrier (made up of five boxes), two battleships (made up of four boxes each), three cruisers (three boxes each), two submarines (two boxes each) and four PT boats (one box each).

After you have entered your fleet on the display, the computer begins to position its vessels on the display. One by one, you see the words "aircraft carrier," "battleship," etc., move across the screen until they disappear from view, to be hidden somewhere in the display. Then the fun begins.

You are asked to fire on the computer's fleet by designating the row and column where you think it may have hidden a vessel. After you input your guess, a box is drawn to the right of the display that tells you whether your shot was a hit or a miss. Then the computer tells you where it fired. The result of the computer's shot is also displayed. If you hit a vessel, it is shown on the display as the first letter of the vessel on the black background. If the computer hits your ship, it erases the letter from the box indicating what kind of ship it was. All misses show as light blue boxes on the display.

The game continues in this fashion until all of one fleet is destroyed. If you fire on a location that contains your own ship, you are told that you have fired on your own ship and you lose your turn. This is an outstanding game in every respect.

BAGIT. Are you always forgetting things? Most of us have that problem. *Bagit* will help you train yourself to remember. You are instructed to try to remember the objects that will be put into a bag by creating a mental image that

connects the objects or the first letter of each object. This is good advice. Up to six players can play. Each must decide how many misses will be allowed before the player is eliminated. This allows people of different skill levels to play together.

A screen is presented that has a "bag" drawn at the bottom with the player's name in the middle. A display at the top of the screen is used for you to enter the name of the object that you want to put in the bag. When you finish inputting the name of the object, the letters animate over to the middle of the screen and then fall, in descending order, into the bag. You are allowed only as many misses as you indicated at the beginning of the game. After that many misses, you are eliminated and the remaining players continue.

After you correctly identify an item, you are told, "OK, I found it;" after you have correctly identified all of the items, you are rewarded with, "Great, you got them all." If you name the same item twice, you are told, "You already said that." The game ends when everyone has been eliminated. The displays at the end of the game are first class. Each player's name is displayed, the mistakes allowed, mistakes made and total number of times he/she guessed all of the items in the bag. Then a display shows all of the items contained in the bag at the end of the game (to settle those arguments) as well as a request for another game. *Bagit* is a challenge as a game and a programming delight.

VECTORS. Rowing a real boat across a real river with real paddles is somewhat easier than figuring out how to do it with the azimuth and river speed given and two keyboard arrows as oars and the numeric keys for stroke speed. The display shows the object of the game and a dock (box with a "D" in it) on the other side of a river, to which you must "row" your boat (a larger colored box). If you are as unlucky or uncoordinated or undereducated as I am, the perils of Niagara await you. There is a waterfall at the edge of the display over which my boat fell repeatedly to a melancholy CoCo refrain. As you move your boat by pressing the arrow keys and the numeric keys, the speed of the river increases (you can tell by the white flashes that simulate water going down the river and over the falls). My every attempt to control this process failed. Maybe you have to know something about navigation or aviation. Azimuth?

AHHA. A complicated program with no instructions is always a turnoff to me. This one turned me off. *AHHA* is a nongraphic adventure through a "sinister old mansion" to find the treasure chest. The deceased former resident of the mansion still lays claim to the treasure and will try to claim you as his most recent victim. The title for the program comes from one of the lines in the program. This adventure would probably be banned in Boston for its violence, but then I guess most adventures fit this mold. If you are somewhat familiar with adventures, you should enjoy *AHHA*. If you think adventures are weekend events in college towns, you better leave this one alone.

A final word. The price of this total package is only \$8.05 (\$9.95 in Canadian dollars), and even including the programs I wouldn't wish to own, that's quite a bargain for this package.

THE OLDEST MAILORDER COMPANY IN CANADA

After only 2 years in business we have thousands of satisfied customers Canada-wide.

As those of you who have been with us from the beginning know, we started with a limited, but quality selection of 2 companies. Since then we have gone on to add manufacturers at the rate of about 1 a month. We now offer one of the widest ranges of software in North America!

Our large selection of titles has been built up on the basis of YOUR INQUIRIES. We encourage you to write or call us with comments and suggestions so that we may continue to improve our selection and service.

Payment Policy

Unlike most mailorder companies

- We accept C.O.D. orders and we do not insist on a cash deposit.
- We accept your personal cheques without making you wait the customary 2/3 weeks for clearance.
- Our prices already include shipping, handling and insurance charges
- All software and hardware is shipped First Class and Insured (books are shipped Book Rate)

Service

OUR OFFICES ARE STAFFED 9 TO 5 MONDAY TO FRIDAY YEAR-ROUND. WE ARE ALWAYS PLEASED TO ACCEPT YOUR ORDERS OR INQUIRIES AT

CoCo Mail Not First Class

By Frank J. Esser

Many businesses have the need to reach the buying public with advertisements and promotional material. Other businesses need to reach their customers with seasonal information and promotional material. Whatever the reason, the use of computer maintained mailing lists has been on the rise, especially with the advent of the personal computer. Many businesses which previously had to rely on others to perform these functions can now do them for themselves. But, they need the necessary software to perform these functions. Enter onto the scene the "mailing list programs." Early applications of microcomputers were devoted to this field and CoCo is no exception. *CoCo Mail* is one of these programs. It is described as a program to help fill the void of business programs available for CoCo. It is basically a mail list program with a few frills added.

CoCo Mail comes on a standard 5¼" floppy disk. *CoCo Mail* requires 16K of memory and one disk drive. The documentation is enclosed in a vinyl three-ring binder. The printed material consists of 17 single-sided, typewritten pages. The introduction gives a brief overview of the programs and what they will do. The first chapter gives a detailed overview of *CoCo Mail* and how it works. There is some confusion in this section and later sections along with the menus themselves. The confusion comes from the author's use of the term "file." It is this reviewer's opinion that the author consistently misuses this term. The general use of the term "file" is to indicate a collection of information or data arranged in a specific manner. Sub-elements of the file are understood to be records within the file. Groupings of records within the file are usually understood to be segments of the file. The author consistently refers to records as being files and this is where the confusion occurs. If further subdivision is required then the records can be broken down into fields. Most mailing systems will group the name, address, city, state and ZIP together to form a record with each of the above being a field within a record. Actually that is what *CoCo Mail* is doing; it just does not say it that way. The third section is devoted to explaining how to backup the disks and how to get *CoCo Mail* started. The next and final section explains each of the prompts on all the menus used by the programs.

CoCo Mail consists of a series of small programs placed on a disk and controlled by a master program called COCO/MAL. *CoCo Mail* is started by typing RUN COCO/MAL. Once the master program is up and running, a menu is presented offering options:

- 1 — Initialize
- 2 — Update File
- 3 — Review File
- 4 — Delete File
- 5 — Print Labels—2 Across
- 6 — Print Single Labels

- 7 — Create Transfer File
- 8 — Process Transfer File

I would like to review each of these functions one at a time.

The INITIALIZE function is used to create the data file. The file created has the name MAIL/LST and is 23 grams long. The name is not optional and only one file per disk is supported. The file size is limited to 200 records, each record being 256 bytes long. A little fast arithmetic will indicate that indeed the program is using a full sector for each record.

The second function is the UPDATE FILE function and it is used to enter data into the file. The data is entered from a screen menu, which has a submenu that requests the following information.

- 1) Add a file—Really you are adding a record to the file. The only way data can be entered into the file.
- 2) Add to notes—A method to add to the notes which were or were not entered via step 1 above.
- 3) Change address/phone—Provides a method to change any of the fields of a given record.
- 4) Exit—Returns you to the main menu.

Upon the completion of the data entry for each record you are not returned to the submenu, but instead are returned to the main menu. Thus, if you have more data to enter, you are forced to go through the reenter sequence to get back to the UPDATE FILE section.

The REVIEW FILE section consists of a menu offering the following choices.

- 1) Review by Name—Provides the user with a method to call up a given record for review, given he knows the exact name for the record in question.
- 2) List to Printer—Provides for a dump of the entire data base to the printer.
- 3) Exit—Returns the user to the main menu.

The use of the review by name option requires that the user know the exact name being requested, otherwise a match will not occur.

CoCo Mail does not support a method which will let the user scroll either backwards or forwards through the data file.

The DELETE FILE section provides the delete function at the record level. This is one of the areas where the aforementioned confusion sets in, especially since *CoCo Mail* allows for only a single file. However, what is really happening is that a record is being deleted. Again the user is required to know the exact name associated with the record he wishes to delete. If he does not, a match will not be found.

PRINT LABELS—2 ACROSS is the label generation section which will print labels, two to a row. It appears that the program was set up to handle labels which are 15/16"

FLORIDA SEARCH NO LONGER!

wide and requires labels that are 3" long, two abreast. The program does not provide for provisions to handle different size labels.

PRINT SINGLE LABELS is the same as the previous command except that it will handle only single labels, one abreast.

CREATE FILE TRANSFER provides the user with the ability to select certain records from the original file for transfer to another file on another disk. During the transfer process, the original records are deleted. There are no options offered. The process creates a sequential file on both the destination and source disk, called "CODE/FILE," which contains the records being transferred.

PROCESS TRANSFER FILE command is provided to help retrieve data if an overflow condition occurs during the transfer process. The process transfer function also will add records from the CODE/FIL file on this disk to the master file.

CoCo Mail is advertised as a mail list program. It appears to this reviewer that the program is aimed at a very small group of applications. Since *CoCo Mail* restricts the user to only one data file per disk and that file has a maximum of 200 records, I find its application very restricted. As a general mail list program I think it fails to pass the test. The program lacks flexibility in its application. There are no provisions for using multiple drives, the data files cannot be expanded, and they are limited to only 200 records even though the disk allocation would allow for 207 records. The program disk consists of a series of rather short programs which are constantly swapped from memory as the options are exercised. The screen handling is very elementary, with

repeat lines causing the menu to scroll off the screen. The update function takes you all the way back to the main menu after each entry, thus requiring you to go through the selection process for each record entered. The search function requires that the exact name be known or else a match will not occur. The review section does not provide a method to scroll through the data file a record at a time. The documentation is somewhat confusing to read in that terms are interchanged throughout. The terms *file* and *record*, and *sort* and *search* are interchanged a number of times. *CoCo Mail* does not provide a sort function at all. A sorted mail list can only be obtained by knowing beforehand what the range is for the field to be sorted on. Thus, if the records are entered out of order or later entries are out of order, selective printing of the data file is required to get them in order.

I had problems getting the transfer function to work properly. The instructions are rather vague about just how to use this option. The user is forewarned that experimentation is required to get this process to work properly. I finally resorted to listing the programs to determine just what was going on. I found the process to be extremely simple. The conclusion reached is that the documentation is confusing and not the process. The transfer function will remove from the data file those records that match the code entered and will place these records on a file called CODE/FIL. Once the file has been built, the names are deleted from the original data file. Then, this file is copied from the original disk to the new disk using BASIC's copy command. Using the option **PROCESS TRANSFER FILE**, the CODE/FIL is read and the records contained in it are transferred to the regular data file. This completes the transfer. There are no options associated with this transfer. The records will be deleted from the original file; thus, if you want to retain a master file, they must be reentered. I did not try it, but I believe if you now run the **PROCESS** option on the original disk it will replace the deleted records.

In conclusion, *CoCo Mail* is a mail list program which I believe has very limited application. It most certainly will not meet the needs of a business which has more than 200 customers without a lot of effort on the part of the user. *CoCo Mail* will only handle one data file per disk, leaving a free space of 30 grants to be perhaps wasted. The documentation is confusing because of the interchanging of the terms mentioned above. The section on transferring data from one disk to another is confusing. The system disk consists of 12 programs, one of which is the data file. The programs are short and are constantly being loaded from disk each time a new option is exercised. The screens are in the form of menus, but in some cases the wrong answer to a prompt causes the menu to scroll. Enough wrong answers and the menu is gone. The programs in general lack the sophistication normally found in private sector software. However, *CoCo Mail* will maintain a mailing list of 200 names per disk, and it does have all the functions necessary to properly maintain that data file. I generally like to refrain from talking about the price of a particular software package because the net worth of a package to a given reader should be his judgment alone. In this case I believe that the price is out of line. It is the opinion of this reviewer that the programs are not worth the \$59.95 that is being asked.

YOUR COLOR COMPUTER JUST GOT WHEELS!

REVOLUTION!

You accelerate hard down a long straightaway, braking heavily at the end for a hard corner. You slice smoothly through the esses, and then boldly keep the power on for a fast sweeper. The Ferrari drifts dangerously near the edge, but you make a tiny correction in the steering, and you are through.

The finish line flashes by, and suddenly you are in the pits. The car falls silent. You see your lap times being held up. Your final lap was a new lap record! At last, you permit yourself a small smile.

You have mastered this powerful car on a difficult track, driving with the assurance and precision that comes only from long hours of practice.

You are driving an *authentic* race car. You are playing *Revolution!*

FANTASTIC ACTION

Revolution uses high resolution, machine language graphics for action that is smooth and fast. The emphasis is on authenticity in the control and motion of your car. As in driving a real race car, accuracy and precision in your driving are what counts. Frills and non-essentials have been left out.

PURE COMPETITION

Like a real race driver in practice and qualifying sessions, you compete against the clock and against the existing lap record for that track. *Revolution* records the lap records and the name of the person who set the record, so you always know who reigns supreme on your favorite track!

DESIGNED WITH YOU IN MIND

Revolution is menu-driven, and self explanatory. Information screens tell you what you need to know. When you're ready to play, a menu of the names of all your tracks is displayed, along with the lap record for each track and the name of the person who set that lap record. You select a track with a single keystroke, and *Revolution* takes you there.

A NEW CONCEPT

Revolution is a unique game, because it allows you to create the most important part of any race game: the track itself.

The first time you run *Revolution*, you will be able to choose from several tracks and cars which are included with the game.

But, with *Revolution*, this is only the beginning! You can create as many tracks as you like. You can make each new track as difficult or as easy as you wish. You can make easy ones to begin with, and tougher ones as you become more skilled. You may find creating tracks to be almost as much fun as driving on them!

You can save your favorite tracks to run on again whenever you wish. *Revolution* will automatically add these new tracks to the menu. And you can exchange your favorite tracks with other *Revolution* owners.

Be careful, though, about letting your friends play this game. They may not want to let you have your computer back!

THE EARLY REVOLUTION

A prototype version of *Revolution* was published in the September, 1982 issue of *Rainbow* magazine, under the name *The Track*. The response to *The Track* has been terrific.

Revolution has all the features that have made *The Track* a favorite, and *Revolution's* fast, high-resolution machine language graphics are dramatically improved over the prototype's.

REVOLUTION NOW!

The original *Revolution* for the TRS-80™ Color Computer requires 32K and one disk drive. A new cassette version has action just like the disk version, and similar track-saving features excluding a menu of available tracks. The cassette version will run on a 32K Color Computer or TDP-100. You can upgrade to the disk version later, too, for a nominal fee.

REVOLUTION

For 32K Disk \$24.95

Requires Joysticks

For 32K Cassette . . . \$21.95

& Extended BASIC

Wild Party Definitely For The Daring

Ever been to one of those parties like you see in those R-rated movies where beautiful girls remove articles of clothing and suddenly there's a partially clad beauty everywhere you look? Neither have I, unfortunately, but the odds will be much improved for CoCo lovers in the near future, thanks to *Wild Party*, a new creation by B&B Software of Jenkintown, Pa.

Before this review continues any further, it should be obvious that *Wild Party* is not for everybody. It's not the kind of program you would want to have on your monitor when your mother-in-law or clergyman drop by for a visit. And it's definitely not for youngsters under 18 years of age. It is, as Larry Flynt, the publisher of *Hustler* might say, for "mature, open-minded adults."

However, one should not assume that *Wild Party* is particularly vulgar or obscene either. Naughty is probably a better description since the power of suggestion and the players' collective imagination and desire will determine how far one can go. There are no suggestive graphics or sounds; the program depends entirely upon screen prompts.

As a reviewer I tried to imagine myself in the midst of a party with lovely young women all around. And I'll have to admit that the suggestions would definitely liven up most parties.

The program offers several options, depending upon the degree of excitement you hope to create. You have your choice of "mild" or "wild." If you select the second option, the computer asks, "Are You Sure?" This selection has an effect on the events in the game and also varies the length. You also may determine whether you want to play a short, medium or long game. Another option is included for married couples or singles. From two to six couples may participate.

At the beginning of the game, the computer asks for the number of couples and their first names. If users are so inclined, the game could take some unusual turns by inserting various combinations of people's names as participating couples.

Using the RND function, the program selects an event by an algorithm which tends to save the more interesting events for last. Based upon the requirements for each event, the program selects either a single participant or a couple. By varying the order of the events and by modifying the events themselves, a lot of variety and spice is added. There is one particular event which, if repeated, is accompanied by the comment, "I'm repeating. I like this one."

Another event allows a participant to replace an article of clothing that was removed earlier. The program checks whether that person has removed any clothing and, if not, states that the privilege of replacing clothing may be saved until needed.

There are several events in which the computer selects a male and a female as the participants. If the group of players consists mostly of married couples, it probably would be more fun to prevent the computer from selecting a husband and wife as the participants by answering "Yes" to the question "Married Couples?"

In the program documentation, the creators say they did "literally thousands of test runs . . . to ensure that it is unlikely that someone will be completely undressed. On the other hand, given the way random functions work, it might sometimes happen." To which I would have to add that given the way human nature sometimes works, the suggestions could naturally lead to such an event.

The program is written in BASIC language, 16K memory is required and it will run with either non-Extended or Extended BASIC.

Other than the suggestions included in *Wild Party*, the program does not break any new ground in computer programming. It could, however, prove to be a great ice-breaker at your next party.

(B&B Software, P.O. Box 210, Jenkintown, PA 19046, \$35 tape)

Pack your computer well. Include cashiers check, money order, or personal check (allow 2 weeks for personal checks) for \$104.00 (\$99.00 + \$5.00 shipping) to PYRAMID. You may also pay by Mastercard or return COD. We will treat your computer tenderly and rush it back to you.
PYRAMID — 527 Hill St. - Santa Monica, CA - 90405 - (213) 399-2222

Colorout—A Versatile Blockbuster Of A Game

Colorout is a 16K machine language version of the classic *Breakout* game with all the options. Not only can you select joystick or keyboard control, but four different actions and four starting speeds as well. With this kind of versatility, the difficulty can be adjusted for any skill level from adult (novice) to 14-year-old "stick jockey" and provide good play value for all.

When *CLOADMed*, the program first displays the title block and then proceeds to the game. You may call the menu at any time by pressing the BREAK key to select the number of balls, ball angle and the starting speed, as well as several other options described in the instructions. Once the game setup is made, you may play as long as you like without having to face the menu between each game. When a change is desired, pressing the BREAK key will send you to the menu for another setup.

When setup is complete, play begins. The playfield is colorfully presented in low res graphics. Three colored bars representing six layers of bricks are presented across the top of the screen, capped by a scoreboard line showing control mode (J for joystick or K for keyboard), ball remaining, current score and high score for this *CLOADM*.

Play is straightforward with good control in both joystick and keyboard modes. My sons, ages 11 and 14, preferred

joystick control, but thought the keyboard mode was almost as good. Game action is good, although the sound effects are not very thrilling. The ball speed increases from the prescribed level as play progresses making things more difficult. Although four ball speeds are selectable, there is very little difference among them. I feel that two speed selections would be more realistic. There is no outstanding reward for clearing the screen, just another 3150 points and another layer of blocks. This is more of a cosmetic comment than a criticism of the play value of the game.

The instructions included were on two sides of an 8½ x 11 sheet and did a good job explaining the game and the different options available. The only problem was in the callout of the keyboard keys to use for paddle control in the keyboard mode. The quotation marks enclosing the description were blank! The obvious answer was correct in this case, the right and left arrow keys are the ones to use.

The instructions include a section on troubleshooting hints for common problems. For disk system users, instructions for transferring the program to disk are included. Spectral Associates also offers to replace a tape that becomes unusable for any reason, for \$1.50 and the return of the original tape.

Overall, I feel this is a game with good play value and enough versatility available from the menu to provide a good *Breakout* game for players at all skill levels.

(Spectral Associates, 141 Harvard Avenue, Tacoma, Washington 98466, \$12.95 tape, \$16.95 disk)

Composing In Stereo With Stereo Composer

The *Stereo Composer*, produced by Speech Systems, is a software and hardware enhancement of another product of theirs called *The Composer*. *The Composer* is a software package which greatly increases the sound producing capability of the Color Computer by enabling the production of music in four part harmony. (A review of *The Composer* appeared in *the Rainbow*, June 1983.)

The *Stereo Composer* allows you to easily hook up your stereo system or two 8-ohm speakers to your Color Computer. When music is played, two of the four parts produced will come out one speaker while the other two parts will be heard through the other channel.

Hardware consists of an enclosed board which connects to the cartridge slot of your Color Computer. In order to use disk drive with this package, you will need a Y-adaptor or an expansion interface allowing you to hook up two boards simultaneously to the cartridge slot. Otherwise, you will need to use the cassette version even if you have a disk drive. Contained on the board are two 8-bit digital-to-analog converters (DACs) which give much improvement in sound quality over that offered by the single 6-bit DAC contained in the Color Computer.

Connection is made to either your stereo system or

directly to speakers by way of two standard phono connectors on the board. Two cords (each over nine feet long) with male connectors on each end are supplied for your convenience. Also on the board are volume controls for each channel.

Software received is the same package as *The Composer* except that sound is routed through the DAC board instead of the internal DAC of the Color Computer. Music produced no longer comes out your television or monitor speaker.

Also contained on the software package is a program called "Jukebox." This program contains 16 ready-to-play songs and sound effects. This is a great increase over earlier versions of *The Composer*. Songs ready to play are "Exodus," "Color My World," "Mexican Hat Dance," "Beer Barrel Polka," "Yellow Rose," and others. In the cassette version, the songs and effects are automatically loaded and played in sequence. This gives more than 20 minutes of listening pleasure (interrupted by the time it takes to load each song). On the disk version, each song may be selected separately or also played automatically in sequence. To my dismay, though, the sound effects examples sounded only through my television speaker and not my stereo as I expected them to. Also, the new manual (an enhanced version of earlier versions) does not contain any information on how to achieve the effects. I would expect that the stereo capabilities would also increase sound effects capabilities. This capability needs to be explored in greater details by Speech Systems as I am sure that many CoCo users could make use of it.

When the program is *RUN*, the following menu appears

on the screen:

1. LOAD SOURCE (BASIC)
2. COMPILE SOURCE
3. PLAY MUSIC
4. MODIFY TEMPO
5. MODIFY/OCTAVE
6. SAVE COMPILED MUSIC (ML)
7. SAVE SOURCE (BASIC)
8. GRAPHICS ON/OFF
9. END OR EDIT

Music that you enter yourself must be prepared by first selecting option 9 and then developing a "source" program of *DATA* statements (one *DATA* statement for each group of four notes which will be sounded simultaneously). Each note is entered as its letter name and a number indicating its octave. At the end of each *DATA* statement (group of four notes) must also be entered a letter indicating the group's time duration. Control of sound through the speakers is had by order of placement of the notes within each statement. The first two of these notes will be heard through one speaker while the other two will sound through the other speaker.

Two features have been added to *Stereo Composer* that did not appear in earlier versions. One is a REPEAT command and the other is a BASIC command. Both commands are used by embedding them into the *DATA* statements while preparing music. The REPEAT command allows sections of music to be easily repeated without having to double up on *DATA* statements. The BASIC command allows control to easily pass back and forth between music being played and a BASIC program.

As stated earlier, the sound produced is much better than that offered by the internal DAC of the Color Computer using only a monitor speaker. Some of the sounds produced are quite good and clear in quality although I still desire better sound quality for serious applications.

Overall, this package is a good buy. The price is reasonable and less than prices available for similar packages for other computers. Those of you interested in musical applications of computers would benefit from the added stereo capability and improvement in sound offered by two 8-bit DACs over the single 6-bit DAC contained in the Color Computer.

Sort, Search, Save, Delete With *Program File*

Program File is an excellently written piece of software designed to help you produce and maintain a file system of your cassette tapes. The program is written in BASIC with some machine language *POKEs*. It will run on a 16K ECB machine, which will allow 100 programs to be stored. If you have 32K, you can store 350 programs. The software adjusts to the amount of memory available.

If you are like me, you probably have a lot of cassette tapes lying around with a hundred or more programs on them and you don't know what programs are on which tapes. If that's the case and you want an organized index of your collection, then *Program File* may be for you.

Program File is a mini-database type program that will allow you to input four types of information about each program you have on cassette. The pieces of information you can input are: 1) PROGRAM NAME—This is the eight character or less name assigned to the program; 2) PROGRAM TYPE—This identifies the type of program such as game, utility, education, etc.; 3) LOCATION—Allows you to identify which tape the program is on; 4) COMMENTS—This allows you to make brief comments about the program such as: a real dud, PCLEAR 1 before loading, etc.

Once you have all this information entered you are in for a

real treat because *Program File* has some really nice features. First, when you save your data to tape, a second copy is made automatically. Then, when the second copy is saved, CoCo asks you if you want to verify the save. If you respond with a yes, you are prompted to rewind the tape to the beginning of the data and press ENTER. If the save is good, you will be advised and returned to the main menu. The second thoughtful feature is that if the program bombs, or you hit the BREAK key while entering data, etc., your information is not lost. You simply type "GO TO 5" ENTER and you're back in business.

Once the data is saved on tape you can have your records listed to the screen or printer. When listing to the screen you will be offered five scan speeds. You can stop the scan at a record by pressing any key. You may then continue the scan, modify the record, or return to the menu. If you choose the printer option you can either print all or individually selected records.

There are three other options of particular importance: SORT DATA, SEARCH RECORDS and DELETE RECORDS. The sort routine is fast. I entered data for 118 programs that I have on 19 different cassettes in 11 categories. I then asked CoCo for a sort by program type, program name, and location. It took a grand total of 6.78 seconds. Now, that's not bad.

The search option lets you search in any of the four fields for a particular record. The computer will scan your data and present the first record encountered with a match to the string you are looking for. When the record is presented, you will be given the option of continuing your search or returning to the menu. Finally, the delete option allows you to delete records by name, number or all records.

This is an excellently written piece of software with plenty of on-screen prompts to allow you to operate the program without referring to the instructions. Speaking of instructions, the four, 8½ x 11 pages are written in a clear, logical, easy to read order.

Since the program is written in BASIC, it would be easy to modify for keeping files of things other than your programs. It should also be easy to convert the program to operate with a disk system.

As a bonus for those of you that subscribe to *CoCo Cassette* magazine—and even for those who don't subscribe—the first six issues are included in a demo file on the tape.

If you are looking for this type of software, then this program would be a good investment.

A Scribe For Hire

Well, here I am, floating around the Pacific Ocean on board the world's *only* active battleship, without much to do (except work, of course). Then, finally the word is passed over the announcing system: "MAIL CALL!" Hey now, this is perfect; *the Rainbow* has sent me something else to review—Computerware's *Color Scribe* 32K disk word processor. I just got my disk system a few weeks ago, so this should be a good chance to see it *really* do something.

As I begin to look through the documentation (50 full-size pages of daisy-wheel print), the first thing I notice is that *Scribe* is a line-oriented program, while the program I already use is a screen-oriented program. After going through the manual in-depth and practicing with the numerous functions, I noticed some more differences from what I am used to and some similarities.

The *Color Scribe* disk comes with two copies of two different programs: SCRIBE.BIN and SCRIBE51.BIN plus a demo text dump for illustration purposes. SCRIBE is the standard version using the 32 x 16 screen with reverse video while SCRIBE51 uses ML graphics to generate 51 x 24 text (sound familiar?).

Both programs have basically the same features. And all the features you would expect in a good processor are there:

SEARCH for and REPLACE text; MOVE or COPY text; printer CONTROL CODES embedded in your text; RIGHT JUSTIFICATION if desired; HEADERS and FOOTERS; a variety of DISK and CASSETTE I/O functions; etc. And there are a couple of nice "bells and whistles," one of which is a "bell" that can be set to go off after any number of characters from 1—127. Another is a MACRO command that can define a single keystroke to be one or more commands.

But, with all this going for it, I still never got really comfortable with *Color Scribe*. One thing that bothers me is inherent to line-based processors, and that is, obviously, having to deal with text line by line rather than as a whole. With a screen-oriented program, I find that I can just let my writing "flow" without even thinking about the program operation. But, not so with *Color Scribe*. Even after working with it for a while, I still have to put too much thought into program decisions as I was writing (I even went back to "Old Faithful" for the final draft of this review).

Another thing that I find a hindrance is the complicated command structure of switching back and forth between EDIT and TEXT INSERT with line specific information. Also, I am very disappointed in the editing of lines itself. For any particular line, you can change one text character for another, but to insert (for example) a missing comma you either have to rewrite the line from the point of the missing comma, or use the two words the comma *should* be between in a string REPLACE function. This may sound minor but it can really be a pain if you need to do very many of these "small" changes.

Being line-oriented makes *Color Scribe* a natural for editing BASIC programs saved in ASCII format, and this application does work out pretty good. Perhaps someone just starting in word processing would get used to *Color Scribe's* operation, but, for the price, I really feel your money could be better spent elsewhere.

(Computerware, P.O. Box 668, Encinitas, CA 92024, \$49.95 disk, 32K required)

—Bruce Sterling

FLY the F16 Instrument Flight Simulator

Exciting simulation of jet flight
Navigate a new course each flight or
do aerobatics. Instrument takeoffs
and landings. Variable control
sensitivity for beginner or expert.
Fully instrumented including "Heads Up"
display. Specify 16K or 32K ex. basic.

Worth Repeating

This John Dana program is one of our favorites. Type *RUN*. Hit ENTER *twice*. Key in your name. Then, pound away on the space bar. Then, *RUN* again and key in a number between 96 and, say, 150 and hit ENTER. Now try the "color" keyboard.

```

1 'COLOR CRAZINESS
5 CLEAR 600
8 INPUT N
10 A$=INKEY$
15 IF A$<>" " THEN A$=CHR$(ASC(A$)+N)
20 B$=B$+A$
30 PRINT B$;
40 GOTO 10
    
```

\$24.95

Tape Information
Management System

A user-oriented, easy to use personal database management system for the TRS-80[®] Color Computer with these outstanding features:

- * keeps files of programs, names, addresses, birthdays, recipes, class or club rosters, etc.
- * variable record and field lengths
- * phrase substitution editor
- * up to 8 user-definable fields
- * ML sort (up to 3 fields), search and delete functions
- * user-definable printer format, for any printer
- * up to 230 characters per record

Price includes the database management system, full documentation including a reference guide and 1981 Bibliography of Color Computer articles.

Requires 16K Extended Basic. 32K recommended.

1982 TIMS Bibliography - \$9.95.

\$19.95

The TIMSMail mailing list manager has most of the fine features of TIMS as well as these special mailing label features:

- * user selected label formats
- * continuous or single sheet
- * designed for 80 column printer
- * 1, 2 or 3 labels wide
- * 2.5, 2.75, 3, 3.5 and 4 inch labels
- * select fields to print
- * select records to print
- * fast ML search, sort (up to 3 fields) and delete routines

Requires 32K Extended Basic

\$19.95

Auto Run is a utility program for the TRS-80[®] Extended Basic Color Computer. It is used to add convenience and professionalism to your software.

Auto Run will help you create your title screen with the graphics editor. The graphics editor allows you to choose a background color and border style. Using the arrow keys and several other commands you can draw pictures, block letters and also include text.

Auto Run will generate a machine language loader program to precede your program on the tape. Then, to start up your program, simply type CLOADM to load in the Auto Run loader program, which will then automatically start itself up, display your title screen, load your program and then RUN or EXEC it.

Also you may record a vocal or musical introduction preceding your program. The Auto Run loader will control the audio on/off.

Basic programs can be set to load anywhere in memory above the PCLEAR 0 page.

Software authors: The Auto Run prefix may be appended to your software products.

Price includes complete documentation and assembly source listing.

Requires 16K Extended Basic.

Galactic Hangman \$17.95

A great new twist to the popular educational word guessing game for the Color Computer. Large (700 words) and sophisticated vocabulary. Or enter your own words, your child's spelling list, foreign language vocabulary, etc.

Outstanding high resolution graphics, animation and sound effects.

Price includes both 16K and 32K versions

PIRATECTOR!

\$99.95

Our disk-based antipiracy applications development system has these features:

- * Protect your disk software from piracy
- * Users can create (non-executable) backups
- * Protects ML or Basic programs
- * Your program is encrypted, which prevents listing or disassembly
- * Loader displays graphic title screen, then loads and starts your program
- * Incrementing serial numbers and other user data supported
- * Automatic generation of copies from your master for 2 (or more) disk drives
 - Disk initialization
 - Copy all files from master to target
 - Piratect up to 5 programs on target disk
- * 100% Machine Language
- * Easy to use full-screen menu oriented
- * User subroutines
 - User subroutines may be LOADMed
 - Usable by ML or Basic
 - Border drawing routine
 - Keyboard input routine ideal for your programs
 - Position independent
- * Break key disable for Basic programs
- * Title screen graphics editor to create your own title screen
 - High resolution
 - Semigraphic modes 8, 12 and 24 (64x64, 64x96 and 64x128)
 - 8 colors
 - Combine text with graphics
 - Load, display, save graphic title screens made with other graphics editors
- * Protect demo disks you send out

\$19.95

Disk Version - \$24.95

Disk version with all 62 stories - \$49.95

A sensational and educational version of a popular party game for the TRS-80[®] Color Computer... For 1 to 10 players. Load a story into the computer. The players are asked to supply a noun, verb, part of body, celebrity, etc. which the program uses to complete the story. The story, which is displayed when all words are entered, will be hilarious.

Price includes Silly Syntax game, user guide and 2 stories.

Requires 16K Extended Basic (32K for disk).

You can create your own stories or order story tapes from the selection below.

Each story tape is \$9.95.

Silly Syntax stories - Ten stories per tape.

- | | |
|----------------------|---------------------------|
| SS-001 - Fairy Tales | SS-004 - Current Events |
| SS-002 - Sing Along | SS-006 - Adventure-Sci-Fi |

NEW

PREREADER \$19.95 Disk - \$24.95

Help your preschool age (3-5) child learn to read with this easy to use menu-driven program. Great high resolution graphics, colors and sound effects. Includes capital and small letters, numbers, shapes and colors, much more! Requires 32K Extended Basic and joysticks.

NEW

STATGRAF \$24.95 Disk - \$29.95

STATGRAF is a linear regression analysis package combined with sophisticated high resolution plotting/line graphing. Features include: allows entry of up to 250 pairs of (x,y) data, transforms observations using logarithmic, square root, inverse exponential or additive codes, plots any number of data sets on a single graph, type information directly onto the graph in 3 orientations.

Requires 32K Extended Basic.

Super Color Writer II Lives Up To Its Name

By Stuart Hawkinson

Color Computer software has evolved over the past few years from a few simple basic games and utilities to a sophisticated collection of professional application programs. Word processing programs have shown a remarkable improvement in the number of features offered and ease of use. For many people, word processing is the primary purpose of having a personal computer. The software for letter and manuscript writing has to be good. Not only do the programs have to support a wide range of functions for ease of editing and formatting text, they must also integrate those functions into an easy to use framework.

Super Color Writer II, Version 3.0, is a very well designed word processing program for the Color Computer. It has practically every feature you could ask for in a personal computer program. Included are complete editing and for-

matting capabilities as well as a full range of printer control codes and display options. These extensive functions are integrated into a consistent set of keyboard commands and screen prompts, providing the user fine control over the editing process. *Super Color Writer II* is not inexpensive or simple to learn, but the time and money invested are well spent for the person who wants to use the Color Computer for serious work.

The *Super Color Writer II* manual, presented as a word processing tutorial, is written in a clear yet detailed style. The manual covers all the operations of the program, starting with a survey of screen presentations and modes of operation. Topics include a complete discussion of editing text, saving and loading text files, text formatting, printing and page formatting, and a thorough explanation of printer control via special non-printing codes. A complete summary of the commands, additional information about printer codes, and assistance with poor TV displays is covered in the eight appendices.

The manual, packaged in a padded three-ring binder, was produced using *Super Color Writer II* with a high quality daisy wheel printer. I received the disk version of the program which comes on a protected disk. Backup copies are available through Nelson Software's Customer assurance plan. The program loads and auto executes by typing *LOADM"WRITER"*. From that point you can remove the program disk from drive 0 and substitute a formatted disk to save and load text files.

The program operates in three basic modes. The edit mode allows you to enter and change text, locate and manipulate strings of characters, and reorganize blocks of text. The command mode allows changing display formats, saving and loading tape or disk files, and setting up special program functions. Finally, the window mode allows previewing the formatted text in a form very close to the one to be printed. Moving between modes takes only one or two keystrokes, and the next response expected is always clear. For example, to locate a string while in the edit mode, type *<CLEAR><L>*. The prompt on the command line is "Locate," to which you respond with the search string.

The program provides a wide range of features and options. The Color Computer display can be selected in one of nine densities, from 32 characters by 16 lines, through 51x21, 51x24, and up to 85x24. The 64 character line display, which may be somewhat difficult to read for some, has the lower case descenders and is about the same as other true high res "character" screens available. The 85 character per line mode is difficult or impossible to read with a normal TV monitor. However, these display modes are very useful for giving a final impression of the formatted text before printing.

The display can also be selected in one of four color combinations. The line width is adjustable to 240 characters. A horizontally scrolling window is used to view edited text. Several other user convenience features are selectable, including word-wrap (turning it off will allow the display to keep up with keyboard input), key-repeat, and an echoing key-beep. The program's type-ahead buffer can keep pace with the fastest typist. Another friendly feature is the 'undo' command which will restore deleted text or delete newly inserted material. If you can't remember a particular command, pressing *<CLEAR><?>* will bring up a multiple screen memory.

With this program, you are in full control while driving the cursor around the screen. Not only can you use the arrow

MYSTERIOUS ISLE

GREAT NEW TEXT ADVENTURE GAME!

You vaguely remember being put in the lifeboat as the ship was sinking. Now you awaken on the beach of MYSTERIOUS ISLE . . . alone in the small battered boat. Can you find the pirate's fabulous treasure and escape with it and your life!!

Quality Software Is The Number One Priority At K & K COMPUTERS

LASER TANK - Pit yourself in a game of strategy and excitement against the computer. You must defend your flag from attacking tanks and destroy them before they destroy your flag or you!!! Only \$15⁹⁵.

GAZON - The deadly Gazonians are trying to steal your supplies and you must stop them at all costs. Similar to the popular "RIPOFF" Arcade Game, this game has color and is faster. Machine language. Only \$19⁹⁵.

MUTATRON - As the last person alive, you must protect yourself from sadistic robots bent on killing you. Another popular Arcade Game, "ROBOTRON", brought to you by K & K. Machine language. Only \$19⁹⁵.

SHOOT TO SPELL AND FLASH MATH - An educational package that helps kids learn to spell and educate them on elementary math. An absolute must for adults with school aged children. Only \$15⁹⁵.

SPACE HARVEST - Pilot your spacecraft above the Planetoid Voltar stealing spacefruit and trying to avoid alien guards. Machine language Only \$19⁹⁵.

SERIAL TO PARELLEL CONVERTER - Have a printer with a parellel port? Tired of waiting for a line list? With this little hardware device you can make your color computer run at any baud rate between 300 and 9600. Let K & K help your printer to go much faster!!! Only \$67⁹⁵.

BLACKJACK - A casino game that puts two players against the beady eyed dealer of the house. This dealer deals the cards as good or even better than Intellivision. If you have any gambling blood at all this game is a must! Same rules as any Las Vegas casino. Only \$15⁹⁵.

TAPE INDEX - Trouble keeping track of what programs are on your tape? Now it's possible to place a directory on your cassette. Only \$15⁹⁵.

WE'VE CHANGED OUR NAME: FORMERLY K & K COMPUTORWARE, NOW K & K COMPUTERS.

ALL GAME PROGRAMS - require 16K extended (prices are set for cassette, add \$4⁰⁰ for disk, except business.)

PROGRAMMERS!!! - K & K pays the highest royalties for your programs. If your program is good, send it to K & K

TRS-80 COLOR COMPUTER USERS-New programs are added each week. **SEND \$1⁰⁰ FOR OUR COMPLETE CATALOG**

POLARIS - You are under the ocean in a submarine, attacking planes and enemy destroyers dropping depth charges attempting to destroy your sub. Can you destroy them before they destroy you? This is a fast action machine language program. Only \$19⁹⁵.

SUPER ZAP - Enemy spaceships are attacking from all sides and your mission to defend your starbase from the deadly Armada of Pyruss. This will be a dangerous mission since the Pyruss Armada has never been defeated by any humanoid. Only \$15⁹⁵.

SKY DESTROY - Planes and helicopters are coming from all directions, they must be stopped! This game is similar to Atari's and now available to color computer users. Machine language. Only \$19⁹⁵.

BOWLING SCORED FOR DOLLARS - Do your leagues bowling averages. This program will keep individual scores, team totals, individual averages, team standings, and print all this information to your line printer. On cassette and disk, specify on order. Only \$19⁹⁵.

INVENTORY CONTROL - This program contains all the necessary features required for all types of inventories: sort inventory by stock number, list stock number, description, amount in stock, cost, wholesale, profits. Only \$49⁹⁵.

CHECK LEDGER - This bookkeeping system allows the user to have current information on your expenses by any category you wish. Year end tax statements made easy. Disk required. Only \$49⁹⁵.

ACCOUNTS PAYABLE - Small businessmen, control your business growth by keeping track of all your cash liabilities and payment history. Only \$49⁹⁵.

ACCOUNTS RECEIVABLE - This system keeps track on the status of all customer accounts, all payment histories included. Only \$49⁹⁵.

K & K COMPUTERS
P.O. BOX 833 • STERLING HEIGHTS, MICHIGAN
48077

Telephone: (313) 264-7345

keys to move up, down, left, or right, but you can also move right or left one word or to the beginning or end of a line. With just one or two keystrokes, you can move to the top or bottom of the screen or the beginning or end of the text. (Some word processors only allow you to move the cursor a character or a line at a time.) *Super Color Writer II* also gives you this power with the delete command, so be careful! A complete set of block commands includes move, copy, or delete. And you can work with a single block, or up to 10.

Many popular word processors operate in the overstrike mode. When you type with the cursor over a line of text, the new characters replace, or overstrike, the old. Other programs use the insert mode. Typing new characters results in inserting them at the cursor position. Then, you must delete the following unwanted letters. With *Super Color Writer II*, you start in the overstrike mode, but with `<CLEAR><I>`, you can change to the insert mode.

Access to a versatile "locate" command, allows you to find, replace, change, or delete text strings. The option to match only a portion of the characters in the search string allows the others to be freely substituted (the "wildcard" feature). This powerful command can also be executed a specified number of times, or executed only after verifying at each occurrence of the search string.

With the disk version of *Super Color Writer II*, you have complete control over disk file manipulation. In addition to saving and retrieving individual text files, you can rename or kill files from the command mode. The disk directory is displayed in a neat, two column format. If there are more entries than will fit on one screen, the program display halts until you press the key. The amount of free space on the disk is also displayed. (These are features that the Color Computer DOS should have!) To see how much text you have entered, type `<CLEAR><C>` to display the number of characters used, the amount of memory space remaining, and the number of disk granules required to store the text file. The "word" command displays the number of words in your text.

Several features demonstrate the complete control *Super Color Writer II* provides. A number of global print command options are used to format the text. Finer control is provided by inserting format parameters in the text as special format lines. Included are all the imaginable justification and spacing features plus options like footers, headers, and page numbering. An especially useful feature is the non-breakable space character (`<CLEAR><SPACE>`). This can be used to bind words or characters together to prevent insertion of extra spaces by the justification process. This also keeps the wordwrap feature from separating words.

Super Color Writer II also provides several mechanisms for controlling your printer. You can embed special codes in the text, as well as send codes to the printer via the command line input. With these features, you can produce underlining, bold face text, or any type font which your printer can deliver. Programs of printer control codes can be selected with a simple `<CLEAR>` followed by a number.

With so many features, it's hard to identify areas for improvement. One possibility is a print spooling facility. Some word processors allow you to send a large file to a disk buffer to be printed as a background task. You may then continue to enter or edit text from another file. However, with *Super Color Writer II*, you can link files together for continuous printing of lengthy documents. Another desirable feature would be to print a number of copies unattended.

This function can be performed by the user programming a multiple execution of the print command. The only thing I found lacking in the documentation was a keyboard chart that summarizes the editing functions. Its inclusion would have made learning *Super Color Writer* much simpler.

The only problems I had with *Super Color Writer II* were those normally associated with learning a new system. With so many features and commands available, you might wonder how hard it is to get started using the program. I found that very few special features were needed to begin. Most of the special commands and parameters can be ignored at the start. Useful default values have been set. Simply printing a file with `<CLEAR><P>` will produce a well-formatted page of text. A few times during my initial work with the program, I got into an unexpected mode of operation. I started losing letters at the end of a line and then had them magically appear in an inverted order later. I finally discovered I was getting into the insert mode by accident. The manual does mention these strange happenings, if you read it carefully.

Another problem was with a clever feature called the "OOPS" command. It is designed to recall text that has been inadvertently deleted. However, it only works with text that has been deleted following the cursor position. Text before the cursor can also be deleted, but that text is gone forever (as I found out during a demonstration of *Super Color Writer* to some friends.).

Super Color Writer II makes full use of the 64K CoCo by using bank switching. By not relying on BASIC, *Super Color Writer II* has access to the full 64K, thus allowing 41K of work space with a disk system. By "clumping" the hi-res displays, you can obtain an additional 8.5K of word space to get 50K total work space in the disk version. The program will be renamed *VIP Writer*.

My overall impression of *Super Color Writer II* is very favorable. In the month I have had the program for review, I have only scratched the surface. The program has nearly every feature and option possible to implement on the Color Computer. The design of the program is excellent; the programming is flawless. I found that the movement between direct keyboard commands, using the `<CLEAR>` key, and the special command mode was natural and easy to follow. With the few exceptions noted, the input needed was clear. I also liked the capability to control a variety of printers with the specially programmed codes. The manual is well-written and contains a wealth of detail. A beginner can find answers to questions easily, and all the features are thoroughly documented.

Super Color Writer II lives up to the claim of having "features for the professional, yet is easy enough for newcomers to master." It certainly is one of the best word processors available for the Color Computer, or any computer for that matter.

(Nelson Software Systems, 9072 Lyndale Ave. So., Minneapolis, MN 55420. 16K, 32K, or 64K Color Computer, \$69.95 on tape, \$89.95 on Rom pack or \$99.95 on disk.)

Simulation Contest

The winners of the *Rainbow* Simulation Contest will be published in our November issue — be sure to watch for the announcement. Also, Adventure buffs should start gearing up for *Rainbow's* Second Annual Adventure Contest.

Superior Graphic Software Products

HOME OF MOTION PICTURE PROGRAMMING

TRS-80® COLOR COMPUTER®

TALKING GRAPHIC DEMONSTRATION

When someone sees your CoCo and asks "Just what does this thing do?" then load TALKING GRAPHIC DEMO and let your computer do its own show and tell, complete with musical background and a running commentary. As quoted in THE RAINBOW, "This is, frankly, better than anything the people who sell the machines have."

Extended color basic. Tape only\$24.95

THE DISK DOCTOR

DISK DOCTOR.....That disk with the vital information you forgot to back up just crashed! Don't PANIC. Take 2 aspirin, count to 10, and put in an emergency call for THE DISK DOCTOR. This program will salvage machine language, BASIC, data, ASCII, even MPP pictures. Completely menu driven for easy use. As 80 MICRO REVIEWER states "I feel safer when creating important files and programs having the DOCTOR 'on call!'"

DOS only\$49.95

MPP-TUTORIAL

MPP-TUTORIAL....The programming tool of the professionals. You may not be a great artist, but you too can produce stunning, high resolution graphics. Detailed step by step instructions to create near studio quality animation. Quote CHROMASETTE, "...if you want to see and use the full graphic potential for your CoCo, this program is required!"

Extended color basic—specify tape or disk\$34.95

THE TALKING SPELLER

Use your 80C as a spelling tutor. Utilizes the capability to control the cassette recorder from within a program. You record the list of words, TALKING SPELLER plays back the words, waits for an answer from the keyboard, and keeps score. Very user friendly, and lots of sound effects. 16K BASIC

.....\$19.95

DIRECTORY DOCTOR

Provides preventive medicine against crashed disks. Easy as ABC—build a spare directory track, and exchange it for a garbled track when needed. All menu control, and without taking up user disk space. 32K

should be even bigger than the first one in Chicago last spring, so make your plans.

There will be several seminars in connection with the show. These, alone, are worth the price of admission. But, the seminars are at no charge. So, you can come to Fort Worth and attend the seminars for free. Tickets are only necessary to get entry into the display area (but who would want to miss it!).

We have been doing some very exciting things here at the *Rainbow* with the new OS-9 package, some of which will be reported to you by Dan Downard, our technical editor. But, among them are multi-user operations and we encourage you to look at these possibilities, too.

We have been successful using the MC-10 and the Portable Computer as terminals, running software in a multi-user format — one program out of the CoCo itself and the other out of the MC-10 or Portable Computer. Now, considering the MC-10's price, that's a pretty inexpensive terminal to have for timeshare.

And, on the same subject, I hope you will welcome Dale Puckett to the *Rainbow*. Dale is one of the world's top experts on OS-9 (he's just finished a book on BASIC09) and will be sharing his expertise with you every month. We're proud to have him with us.

By way of "finally" for this month, we urge you to keep your eyes open at a number of new things coming for your

favorite computer — from third party vendors as well as from Radio Shack itself. As I said earlier, this is one of the most robust of the personal computer markets and there are many good things on their way to you.

One of those things is a new book which we will publish in time for Christmas, called the *Rainbow Book Of Adventures*. This will contain the top adventures from our contest last year. More details are coming.

And, speaking of details: We'll be starting up the Second Annual Rainbow Adventure Contest next month. Lots of good prizes for that one, too!

It will coincide with the announcement of winners of the Rainbow Simulation Contest. Yes, we've got some good things on their way to you!

Hint . . .

Print Out Disk Directory

If you have a long disk directory and want to see all of it, or if you simply wish to have a hard-copy printout of your directory, on simple command will allow you to do this easily.

Just `POKE 111,254:DIR` and the entire disk directory will appear on your printer, even if it is too long to be fully displayed on your screen.

WE CHALLENGE YOU!

ACROSS THE RUBICON 16K EXT or NON EXT — The popular WWII wargame. Break thru the Huertgen Forrest using infantry, tanks, paratroops, air and artillery strikes and destroy Hitler's plans for the Battle of the Bulge. CASSETTE . . . \$19.95.

RUBICON II 32K EXT The wargamer's choice! Everything ATR has and more: units, patrols, German artillery, platoon movement, supply, intelligence, spotting rounds, unit merge, game save and much more! CASSETTE . . . \$24.95.

GALACTIC TAIWAN 32K EXT Battle storms, pirates and high taxes in hopes of making a profit in the galaxy. CASSETTE . . . \$19.95.

MISSION EMPIRE 32K EXT cass or disk. Starting with one planet, incomplete intelligence and limited resources, you must form alliances, build armies and conquer the galaxy. Game save. Cass or Disk version on Cassette . . . \$19.95.

MISSION EMPIRE 16K EXT or NON EXT. With all of the above except advanced play levels. CASSETTE . . . \$19.95.

BOMBER COMMAND 16K EXT The air war over Germany, 1941-45. Player must destroy German industry while fighting off flak, the Luftwaffe and bad navigation. CASSETTE . . . \$19.95.

STARBLAZER 32K EXT During your absence, the SPECTRUM galaxy has been overrun by the draconic xyclons. Now you command the only Starship left to retaliate. CASSETTE . . . \$19.95.

MATH SKI-RACE 16K For elementary grades K-6. Remediation. Teacher sets parameters and students polish arithmetic skills a fun way. CASSETTE . . . \$19.95.

ROMPAC BACKUP 64K Can't run your ROMPACS with your disk in or just want backups? R.B. makes it easy. CASSETTE ONLY . . . \$15.95.

All games strategy oriented, graphically portrayed and guaranteed from defect and boredom. For DISK version add \$3.00. No mail delays with personal checks. State system with order.

This, quite literally, is the color computer America has been waiting for. One of the best sellers in the United Kingdom, the Dragon will soon be manufactured by TANO to serve American consumers who want a serious, affordable computer; one that has proven itself at providing educational and home management applications as well as fun and games. To meet this challenge, the Dragon was born. With a standard 64K of RAM. A professional typewriter-style keyboard guaranteed for 20 million key operations. And an impressive array of options which include disk controller and drive, a printer, audio cassette recorder, a modem (RS-232 serial I/O), joysticks, game cartridges and a free BASIC training manual.

DRAGON!TM THE COLOR COMPUTER YOU'VE BEEN WAITING FOR.

Using the new 6809E Microprocessor (a great advance on the original 6502 still used by our competition), the Dragon brings advanced computer functions well within your reach. And priced below \$400, it's anything but expensive.

But these aren't the only points of difference with which our Dragon roars. Unlike most units, the Dragon gives Extended MicrosoftTM * Color BASIC as its standard language while the competition is still stuck in MicrosoftTM * BASIC training. The Dragon's advanced graphics features include set, line, draw, circle, paint, print @ and print using. Of course the Dragon also features advanced sound capabilities.

*MicrosoftTM is a registered trademark of Microsoft Corp.

And full editing features allow you to insert, delete or change at will.

Oh yes — don't forget the colors! The Dragon features nine; with five different resolutions from 512 points of text (16x32) to 49,152 points (256x192) at high resolution. And you can view these amazing phenomena through either your composite video color monitor or VHF TV.

So goes the Dragon's story. If you'd like to know more, just mail the coupon or call George Merchant (our Director of Marketing) toll free at 1-800-327-7671.

Software developers and dealer inquiries are welcome. The Dragon is destined to become legend as America discovers its great performance is no myth.

Please send me more information on the Dragon.

TANO
MICROCOMPUTER
PRODUCTS CORP.

RECEIVED & CERTIFIED

The following products have been recently received by *the Rainbow*, examined by our magazine staff and approved for the *Rainbow Seal of Certification*, your assurance that we have seen the product and have ascertained that it is what it purports to be.

This month the *Seal of Certification* has been issued to:

The Programmer's Toolkit, six 16K programs to aid BASIC and ML programmers which include: **CROSSREF**, a ML program which prints line location of all variables and a sorted cross reference list for the source and destination for every GOSUB and GOTO statement in a BASIC program. **CMERGE**, a ML subroutine which saves the trouble of retyping long subroutines. **CHAINRUN**, a program that allows program chaining. **HEXEDIT**, a ML program which gives full edit capability in hexadecimal or ASCII for any RAM address in memory. **EDIT**, a ML program which gives full screen edit capability for any BASIC program. **DUMP**, a program which displays the memory contents of ML programs. Includes a 10-page instruction book. Moreton Bay Software, 316 Castillo Street, Santa Barbara, CA 93101, tape \$28.95.

Question And Answer, a set of five 32K ECB educational programs designed to help children in the early grades and more advanced pre-school age children to understand and use common mathematical concepts and symbols. Moreton Bay Software, 316 Castillo Street, Santa Barbara, CA 93101, tape \$17.95.

Addition Thrills and Subtraction Action, two 16K ECB educational programs for grades 1—4. One- and two-digit addition and subtraction practices are presented in a game format for up to four players. Moreton Bay Software, 316 Castillo Street, Santa Barbara, CA 93101, tape \$14.95.

VRXREF-Variable Cross Reference, a 16/32K ECB tape/disk BASIC utility program that locates all variables and "where used" line numbers in a ECB program with optional printer output. Micrologic, Box 193, First Avenue, East Brady, PA 16028, tape \$6.95.

LLSTFM-Llist Formatter, a 16/32K ECB tape/disk BASIC utility program that has user-selectable margins, page lengths, top-of-form, font size and line length. This program will also title and date listings, start and stop listings at any line number, give option of space between lines and single-sheet pause, and highlights line numbers. Micrologic, Box 193, First Avenue, East Brady, PA 16028, tape \$9.95.

DRB-Disk Directory with Bytes, a 16/32K ECB tape/disk BASIC utility program that gives same information as DIR, individual file bytes, plus free and used total files, grams and bytes. Also includes optional disk name, and lists to screen or printer, plus a separate disk name program. Micrologic, Box 193, First Avenue, East Brady, PA 16028, tape \$7.95.

Arex, a 16K arcade game for one or two players. Objective: As Arex Commander, you must occupy and hold enemy territory while avoiding three alien dangers. Adventure International, P.O. Box 3435, Longwood, FL 32750, tape \$34.95.

Borrow, a 16K educational math program for grades 2—4 with seven skill levels. This program allows the student to reinforce subtraction skills. Problems appear in large graphic numerals and small boxes above the numerals allow for regrouping procedures. B5 Software, 1024 Brainbridge Place, Columbus, OH 43228, tape \$19.95.

ABC's, a 16K ECB educational program designed to help children practice the letters of the alphabet. B5 Software, 1024 Brainbridge Place, Columbus, OH 43228, tape \$9.95.

Hangword and Scramble, two 16K ECB menu-driven educational games. Objective: Practice spelling skills by playing **Scramble and Hangword** and creating your own word lists. B5 Software, 1024 Brainbridge Place, Columbus, OH 43228, tape \$14.95.

Bio Detector, a bio-feedback monitoring device which allows the CoCo to "read" the amount of stress the user is feeling and graphs the skin response on the screen. The Bio Detector can be used to help you learn to lower your personal stress level, to observe your reaction to questions or other stimuli, or to play Anxiety Attack. It can also be used as a lie detector. Includes cassette, wrap finger grips, and instructions. Computerware, P.O. Box 668, Encinitas, CA 92024, tape \$34.95.

Super Screen 1.1, a ML program that upgrades the performance of 16K Extended and Disk BASIC Color Computers. Replaces 32 character by 16 line display with a new 51 character by 24 line display screen including a full upper and lower case character set. Other features include full implemented PRINT@ and ON ERROR GOTO statements, combines text with hi-res graphics, auto-key repeat, and control codes for additional functions. Mark Data Products, 24001 Alicia Parkway, Suite 207, Mission Viejo, CA 92691, disk.

Clock Drill, a 32K ECB educational program designed for pre-school children through third grade. This program teaches children to understand time on a clock face and convert it to digital notation and to tell time by increments of 60 minutes, 30 minutes, 15 minutes, five minutes and by the minute. CY-BURNET-ICS, 5705 Chesswood Drive, Knoxville, TN 37912, tape \$24.95.

CSR-D-Copy/Search/Replace/Delete, a 16/32K ECB tape/disk BASIC utility program for ASCII textfiles, programs or datafiles to change long variables, keywords, spelling and capitalization. Same as disk copy but to and from disk or tape. Micrologic, Box 193, First Avenue, East Brady, PA 16028, tape \$7.95.

LNXREFER-Line Cross Reference, a 16/32K ECB tape/disk BASIC utility program that provides a sorted listing of all referenced line numbers from all occurrences of THEN, ELSE, GOTO, GOSUB, and RUN—optional printer output. Includes optional REM, REMV—removes all unreferenced REMs and comments (and line numbers if REM is first)—removes comments from referenced REMs and includes optional line protect feature. Micrologic, Box 193, First Avenue, East Brady, PA 16028, tape \$7.95.

Spelling, a 16K ECB, menu-driven spelling drill program that will allow you to enter your own spelling lists, drill them and create word lists to be printed. B5 Software, 1024 Brainbridge Place, Columbus, OH 43228, \$16.95. **Spell-Grade-4**, a data tape to be used with **Spelling** or **Hangword & Scramble** tape \$8.95.

Question, a 16K ECB educational drill program that allows student or parent to enter questions of any category and multiple choice or true/false answers in a quiz form. Also can be listed to the printer. B5 Software, 1024 Brainbridge Place, Columbus, OH 43228, tape \$19.95. **Nouns and Verbs**, a data tape of eight lists and 15 multiple choice questions to be used with the **Question** program, tape \$8.95.

Money Manager, a 32K ECB menu-driven, home and small business accounting system that will set up separate accounts for bills and allow you to put a budgeted amount of money into these accounts each pay period. This program also allows you to balance a checkbook, keep track of expenditures, keep track of how much money you can spend on non-budgeted items and interest earnings on money kept in a NOW checking account. Reitz Electronics, Inc., 3170 W. Central Avenue, Toledo, OH 43606, tape \$24.95.

Key-264K, a utility program that allows any 32K CoCo to access 64K RAM from BASIC without hardware modifications. Requires Extended or Disk BASIC and good 64K memory chips. Key Color Software, P.O. Box 360, Harvard, MA 01451, tape \$39.95.

Shifter, a 16K talking "munch" game for one or two players. 29 Enterprises, 1208 Country Court, Cary, NC 27511, tape \$20.

Alphabet, a 16K ECB educational program designed for pre-school children through first grade. This program teaches the alphabet through letter recognition in and out of sequence by using a variety of exercises. CYBURNET-ICS, 5705 Chesswood Drive, Knoxville, TN 37912, tape \$24.95.

C.C. Poker, a 32K ECB five-card draw poker game. Objective: Obtain the best possible poker hand by winning points in proportion to the value of the hand. Ron N. Friesen, #59-9252 Hazel Street, South, Chilliwack, B.C., Canada V2P 5N6, tape \$24.95.

The Companion BT-2000 Expansion Interface, a Color Computer bus expander that allows the user to plug in up to five program memory cartridges, then select and operate them one at a time. A "cold start" reset button is available to recover a "locked up" computer without turning power on and off. Basic Technology, 1500 Kent Road, Ortonville, MI 48462, \$249.95.

64K Boot/Pager, two ML utility programs. The **64K Boot** allows you to modify BASIC by moving it from ROM to RAM. The **Pager** is a menu-driven utility allowing you to manually page between the 32K banks of memory, copying BASIC or data from one page to the other. The complete assembler source code for both programs is included. Skyline Software, 442 Sunnyside, Wheaton, IL 60187, tape \$19.95.

MDISK, a 64K ML utility program that lets you use the upper 32K of memory for rapid storage and retrieval of programs and data. Has the capability to save and load up to 15 programs, view a directory of files stored in page 1, kill unwanted page 1 files, execute BASIC or ML directly from **MDISK** and chain to a BASIC program while preserving data already created. Skyline Software, 442 Sunnyside, Wheaton, IL 60187, tape \$27.95, disk \$29.95.

Quicksort, a 16K ML utility sort routine program specifically designed to be used by BASIC programmers. This utility will speed up those programs where a BASIC sort is too slow. Skyline Software, 442 Sunnyside, Wheaton, IL 60187, tape \$12.95.

Structured Macros, a 32K assembly language programming tool for users of the Macro-80C assembler, by The Micro Works. This program comes close to transforming your assembler into a high-level language. Commands include IF, ELS, ENDIF, IFTST, IFCC, WHILE, ENDWH, REPEAT, and UNTIL. Skyline Software, 442 Sunnyside, Wheaton, IL 60187, disk \$19.95.

Motorbike Challenge, a 16K ECB game with nine skill levels. Objective: Drive the motorbike carefully without crashing into obstacles on the bridge in the shortest possible time. Microcom Software, P.O. Box 214, Fairport, NY 14450, tape \$14.95.

Romback, a 64K ECB ROM Pack dump utility. Comes with full documentation, including patching instructions to allow several popular "problem" cartridges to run from tape or disk. Skyline Software, 442 Sunnyside, Wheaton, IL 60187, tape \$16.95.

Page Plus, a 64K ML utility program that does the memory management necessary to utilize the two 32K banks of memory. Up to 56K available from BASIC programs. Includes documentation and demo programs. Skyline Software, 442 Sunnyside, Wheaton, IL 60187, tape \$27.95, disk \$29.95.

Pigskin Predictions, a 16/32K ECB NFL Football prediction and analysis program with menu-driven selection of schedules, ratings, division races, and predictions or results by team or week. Seven types of reports to screen or printer (optional) available each week. Rainbow Connection Software, 3514 6th Place, NW, Suite D, Rochester, MN 55901, tape \$29.95, disk \$32.95.

Face, a 16K ML educational game for ages two and up with synthesized human voice. Objective: Create faces of different shapes and features by inputting different eyes, nose, mouth and hair. More than 10,000 faces possible. Childish Software, P.O. Box 985, Norcross, GA 30071, tape \$21.95.

Articulator I, a 16K voice program that will add speech to programs or change dialog in **Shifter**. Digitizes your voice from audio tape, sound track may be put on tape as part of other programs. 29 Enterprises, 1208 Country Court, Cary, NC 27511, tape \$20.

Super "Color" Speller, a 64K machine-code proofreading program to correct **Super "Color" Writer** files. Automatically proofreads documents against a 20,000 word stock dictionary, plus your own customized dictionary. It corrects typos and marks them for special attention. Nelson Software, 9072 Lyndale Avenue, South, Minneapolis, MN 55420, disk \$69.95.

Teletutor I, an educational package of four programs for ages six to adult for the Dragon 32. **Spelling Test**, a program designed to give an oral spelling test using the soundtrack of the tape recorder to dictate either single words or words and sample sentences. **Word Drill**, a program designed to give a multiple choice vocabulary giving of words and their definitions. **Math Drill**, a program designed to help children practice addition, subtraction, multiplication and division in 10 skill levels with a full report at the end of tests. **Estimate**, a program designed to help children practice their mental arithmetic in five skill levels and gives full report of tests. Includes a sealed 17-page instruction binder. Micro Deal, 41 Turo Road, St. Austell, Cornwall, PL25 5JE, tape \$25.

Snakes and Ladders, a 16K ECB board-type game for one or two players. Objective: Climb ladders and avoid snakes to reach the top of the 100 block playing board. Microcom Software, P.O. Box 214, Fairport, NY 14450, \$14.95.

Girdle the Enemy, a 16K ECB game for one or two players in two skill levels. Objective: Outsmart your opponent by moving up, down, or sideways and surround your opponent's trail with strategy and skill to completely block the way. Microcom Software, P.O. Box 214, Fairport, NY 14450, tape \$12.95.

Disk Loader, a program that loads most 16K ML programs from tape to disk. This program takes tape-based ML programs, stores them on disk, and allows them to run automatically. **Disk Loader** is designed to load programs which interfere with normal disk operation. Saves multiple copies, allows renaming the program, and automatically gives program load and execute addresses. Stuart Hawkinson, 6695 SW 203rd Court, Aloha, OR 97007, tape \$13.95.

Guardian, a 16K arcade game. Objective: Fire plasma bolts and smart bombs to destroy landers, swarms, baiters, pulsers and munchies as you protect your ship from destruction. Quasar Animations, 1520 Pacific Beach Drive, San Diego, CA 92109, tape \$27.95.

Instrument Flight Simulator, a 32K ECB instrument flight simulator that allows you to take-off, do aerobatics, navigate a course, fly at almost Mach 3, and perform instrument landings. KRT Software, P.O. Box 41395, St. Petersburg, FL 33743, tape \$19.95.

Lowercase, a 16/32K program that modifies the printer's existing character set to give true descenders to lowercase characters on the LPVII and DMP100. This program is user transparent and includes CHROUT, a program to modify ML software to use the descenders program. KRT Software, P.O. Box 41395, St. Petersburg, FL 33743, tape \$15.95.

Colorware Light Pen, a light pen that plugs directly into the joystick port and is compatible with light pen software. It includes six programs on tape and instructions. Colorware Inc., 78-03 F Jamaica Avenue, Woodhaven, NY 11421, \$19.95.

Video*Clear Interference Rejection Cable, a device that connects between the computer and television set and is designed to eliminate or reduce video interference created by the computer. The kit includes the video cable and its filter block, a coaxial "F" connector adapter, a 300 ohm BALUN adapter connector, and instructions. Computer Associates, 508 4th Avenue, N.W., Riverside, ND 58078, \$14.95.

The *Seal of Certification* program is open to all manufacturers of products for the TRS-80 Color Computer, the TDP-100, or the Dragon-32, regardless of whether they advertise in *the Rainbow*. By awarding a *Seal*, the magazine certifies the program *does exist*, but this *does not* constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to *the Rainbow's* reviewers for evaluation.

—Jutta Kapfhammer

CORRECTIONS

Thanks to John Fraysse and Dick White, the gremlin who has been sabotaging our listings has been caught and shown the error of his ways. As many of you have observed, on occasion our program listings have a couple of lines concatenated, or linked together, when *LLISTed* even though when *LISTed* to the screen they print as separate lines.

Examples of this problem include *Rainbow Roach* (June 1983) in which lines 27, 28 and 29 are concatenated. In the same issue, the *Pipeline* game's lines 180 and 190 are run together. In our July issue, the gremlin linked lines 108 and 109 in *Snail*. For August, *Mastermind* was struck, with lines 22 and 23 tied together. There are probably other instances, but, from these, John detected a *modus operandi* for the culprit: It seems that in each instance, the missing carriage return occurs immediately following a BASIC line which is exactly 132 characters long.

Told of this common denominator, our BASIC expert, Dick White, immediately pointed out that on power up the Color Computer *assumes* a printer width of 132 characters and, further, that the line printer will automatically execute a carriage return at 132 columns. Therefore, the line printer width variable (decimal address 155) is initialized at 132, and suppresses any carriage return generated by BASIC at the 132 column point to avoid a double carriage return and a resultant blank line.

To solve our problem, then, we have modified our formatting program for the Epson printer to include a *POKE* 155,0 to eliminate the carriage return suppression. Let's hope this also eliminates the problem.

—Jim Reed

Alexander B. Trevor tells us that to enable the DELETE function in the HOMRUN program, (page 88, August 1983) line 1885 must be renumbered to 1895. Also, Sandy says he omitted the file extension of the program as stored on CompuServe; the full file name is HOMRUN.CC [70000,130].

Robert K. Tyson reports that, in his *Strategy Football* (August 1983), a problem will occur in the two-player mode after a touchdown is scored. To eliminate the bug, change lines 358 and 362 as follows:

```
358 IF (BL=1 AND MD=1) OR (MD=2) THEN 376
362 IF (BL=2 AND MD=1) OR (MD=2) THEN 384
```

COLOR COMPUTER | FLEX* | OS-9† USERS

DO YOU WANT faster running programs (over 100 times faster than BASIC)? A high level language that is also a low level language? A compiler that runs in less than 32K? Assembly language output? Position independent code? Extensive library functions in source assembly code? Periodic newsletters with new library functions? An aid in learning assembly language? Liberal version updates?

C is the language of the eighties; accepted by IBM and Bell Labs for system development: a compact, highly versatile, easy to use language, excellent to use to build games, applications, utilities, operating systems, etc.

DUGGER'S GROWING SYSTEMS with over 21 years of experience in computing was first on the market with a 6809 C compiler. The compiler has been extensively tested, revised, and proven.

DUGGER'S GROWING SYSTEMS C is a growing subset of the standard C. Version 1 contains all the necessary C commands (while, if, if else, int, char, etc.). Version 2 contains additional features (float, long, for, goto, etc.).

AN EXTENSIVE LIBRARY in assembly language source is provided (char, I/O, formatted print, filehandling, string manipulating, etc.) Color Computer version also has additional functions which use the BASIC ROM

functions (cls, polcat, floating point, etc.).

Upgrading The Shack's Screen Print Program to 32K

By John K. Dayton

I guess like most of us Color Computer owners, the first program I purchased after my printer was the Radio Shack *Screen Print Program*. Of course, back then I had a 16K machine.

Last September, I had a 32K upgrade done. I combined several programs into one large one which was the reason for the memory upgrade. This new program required the *Screen Print Program* from Radio Shack. You know what happened, don't you? I see you out there nodding as if there is some shared knowledge or experience between us.

The *Screen Print Program* resides at the top of RAM for a 16K machine placing it smack in the middle of your new 32K of RAM. The result is that your long programs won't work. It would seem to be a hopeless situation because the *Screen Print* cannot be offset.

I have a resolution to this problem. Let your computer rewrite your copy of *Screen Print* and load it into higher RAM. Here's how to do it:

STEP 1) You must have a copy of Radio Shack's *Screen Print Program*.

STEP 2) Enter the following program:

```
10 CLS
20 FOR I=15744 TO 16376
30 P=PEEK(I)
40 IF P=61 OR P=62 OR P=63 THEN P=P+63
50 POKE I+16128,P
60 NEXT I
70 PRINT "DONE"
```

STEP 3) With this program in your computer load the Radio Shack *Screen Print Program*. Do not *CLEAR 200,15743* prior to loading and do not *EXEC* the program.

STEP 4) *RUN* the BASIC program above. It will move the *Screen Print Program* to high RAM while correcting it. Do not *EXEC* at this time.

STEP 5) Make a recording, or two, of your new *Screen Print Program*. To do this, set up your recorder to record and key in the following command:

```
CSAVEM "SCPRT",31872,32504,31872
```

STEP 6) Test this new program. Turn off your computer and wait the 15 seconds before turning it back on. Rewind your tape to the beginning of the new version. Type in the following:

```
CLEAR 200,31871
CLOADM "SCPRT"
EXEC
```

Now enter this short program:

```
10 PMODE 4,1:PCLS:SCREEN 1,0
20 FOR I=1 TO 10
30 CIRCLE (RND(256)-1),RND(192)-1),RND(40)
40 NEXT I
50 GOTO 50
```

Turn on your printer. Press the *BREAK* key and then press *SHIFT* up arrow, the screen print command. The printer should print the same picture which is on your screen. If it does not, you will have to redo the entire procedure.

Using The New Version

You may use this new version of the *Screen Print Program* just as you would use the old version except use the following memory locations:

LOADING	CLEAR 200,31871
	CLOADM "SCPRT"
	EXEC
REVERSE PRINTING	POKE 32431,255
NORMAL PRINTING	POKE 32431,0
SUBROUTINE	DEFUSR0 = 31913
SAVING	CSAVEM "SCPRT",31872,32504,31872

```
*****

Color by HOT CoCo

If you like color . . . you're going to *love* HOT CoCo magazine.

The exciting new monthly devoted exclusively to the TRS-80 Color Computer.* It's from the publisher of 80 Micro.

Let **HOT CoCo** color *your* system with:

- Feature articles on color graphic techniques
- Computer art
- Games
- Specific color applications in home, education, business and hobbies

PLUS

- Ideas on patching, aiding and trouble shooting
- Buyer's guides
- Product and book reviews
- Hardware interfacing and enhancing
- Programming techniques and tutorials

Best of all, **HOT CoCo** is written by users just like you.

The material is always up-to-date and useful. Hardware, software, books . . . what's new . . . what's best . . . what works. And you get one year for only \$24.97. A 13th issue is yours **FREE** with pre-payment (check or credit card). Use the attached order form, the coupon, or call toll free 1-800-258-5473. Subscribe Today!

YES! please sign me up for one year of HOT CoCo at \$24.97.** I understand that with payment enclosed or credit card order I will receive a free issue making a total of 13 issues for \$24.97.

Copyrighting Your Software

Part 2

By Tom Nelson
Rainbow Contributing Editor

This is the second installment of a short series of columns about copyright protection for your software. The first column was devoted to an introduction to copyright law. In this column you will learn the important steps to proper registration of your copyright with the Copyright Office.

Copyright protection exists in a work of software from its inception, provided the proper copyright "legend" has been attached before the software has been "published." You've got to be careful not to "publish" your work without a proper copyright notice, or your software will enter the public domain, and will be usable by anyone without obligation to you.

"Publication" has a special meaning in the copyright area. Section 101 of the Copyright Act of 1976 provides the definition:

"Publication" is the distribution of copies or phonorecords of a work to the public by sale or other transfer of ownership, or by rental, lease, or lending. The offering to distribute copies or phonorecords to a group of persons for purposes of further distribution, public performance, or public display, constitutes publication. A public performance or display of a work does not of itself constitute publication.

The Act goes on to further define what a public display of a work constitutes.

Obviously you don't want to "publish" your programs without a proper copyright notice. It is not entirely clear how far you may go in having others debug your program or review your program without having published your program. Judging from the definition given above, it is therefore definitely advisable to put a proper notice on your program even before you write it! Although there is a way to cure the unintentional omission of the notice, it is troublesome and not the best way to go about things.

Let's assume that you have not let your program enter the public domain. You still must put a proper copyright notice on your program.

Proper notice is the important element. The notice must contain the the copyright symbol ©, or the word Copyright

or the abbreviation Copr., the year of first publication of the program and the name of the owner of the copyright, or a recognizable abbreviation. For example, a book may have the notice:

™Copyright 1983 by Horatio H. Pirate

The copyright symbol ™ should be used if you intend to market your programs in Europe. For programs sold in South America you must also have the phrase: "ALL RIGHTS RESERVED."

Now you know what the notice should say, but the next question is where should it appear? It should be placed both in the program itself and be made to appear when the program is used, for example, each time the program is loaded up. Where the screen will not display the copyright symbol, (C) is an acceptable substitute. In addition, the notice should be conspicuously placed on the packaging. If your program is contained in a ROM chip, a copyright notice should also be in the code in the ROM. Don't forget that your documentation is also copyrightable subject matter, and should have its own copyright notice.

"... and we will be issuing your copyright certificate to you as soon as our extensive evaluation is complete.

Sincerely,
U.S. Patent Office"

(Tom Nelson was formerly a Special Assistant Attorney General for the State of Minnesota. He currently is General Counsel for Softlaw Corporation, makers of the Super "Color" Library, and of the ColorQuest adventures.)

Proper use of the copyright legend provides you with some but not all copyright protection. If the program is not registered with the Copyright Office within three months from first publication, you are denied some legal remedies for infringements occurring prior to registration.

Once you have properly registered your copyright you are entitled to seek statutory remedies including damages. You are also entitled to obtain court costs and attorney's fees if you are successful. The statutory damages are available if you register any time up to five years after you first publish your work. However, the court cost and attorney fee provision applies only to infringements occurring up to three months after first publication or after registration, if registration occurs after the initial three month period. Thus, if you seek to sue for infringement of your copyright during the three month period after first publication and the three month period has not expired, you may register and if successful in the lawsuit, you may be entitled to court costs and attorney's fees. However, if the three month grace period has ended and you have not registered your copyright, you will not be entitled to court costs and attorney's fees for infringements occurring prior to registration.

So what, you ask? Sure, you can still collect damages. Damages, however, are often minimal compared to the court costs and attorney's fees you incur to enforce your rights. In reality, without the ability to obtain court costs and attorney's fees, you may not be able to afford protecting your copyright. It just costs too much, especially if you are up against a big company which has in-house attorneys who can delay the proceedings for years. The fear of paying attorney's fees and court costs should be a real consideration to anyone thinking of infringing your copyright.

I'll discuss more about remedies later. For now I'll assume that you have concluded that the time has come to register your copyright.

Registration is a formal application process. It requires the completion of the proper forms and transmittal of proper copies of your program. There are two categories under which your programs may be registered: as literary works and as audiovisual displays. These two forms of registration are not separate; both may be used for the same program. Each has a specific purpose. Registration as an audiovisual work applies primarily to video games. Several companies have taken videotapes of the pictorial displays and sound effects of their games as they are played or as they operate in the attract mode between plays, and applied for a copyright for these displays. Recently, several court decisions have upheld the validity of this type of copyright for video games. This type of copyright has proven much more useful to protect against infringers of game copyrights, since this type of copyright protects the exact expression of the game in its display rather than in its programming code.

The copyright for non-dramatic literary expression, on the other hand, provides protection for "readable" code, whether by the human eye or by machine. This is a protection for the original code of your program.

The literary work copyright is the usual one sought. It is, by and large, the only form available for utility and other non-game programs which do not have original or protectible screens. Even game programs are usually registered as literary works since most games are not really going to be the subject of copying. However, if you feel that your game is worth the added expense and trouble, by all means register it as an audiovisual work.

To register literary works you must obtain the form TX from the Copyright Office. You can either obtain it from the Copyright Office itself, or from your local federal office building. The address of the Copyright Office is United States Copyright Office, Library of Congress, Washington, D.C. 20559. The form comes with a detailed explanation sheet for filling it out. The form is self-explanatory and tells you what to do with it when you are done. Some parts of the form may, however, give you some trouble. Let me mention a few points here so that when you get your forms you can refer back to this column to help you fill it out. The portions for your entry of information are numbered, and I will follow those numbers here when making comments.

2) If you wish, you may use a pseudonym when registering the program, or you may register the program as having anonymous authorship. If you do this, however, your copyright protection will be shorter in duration than if you listed your real name, only at least 75 years. Such time periods for microcomputer programs at this stage of computer developments are the equivalent to eternity! Be aware that if you created the program while in the employ of another, the program may have been a "work for hire," and thus the property of the employer and not you. This will have a significant bearing on the ownership of the program. If you have any questions concerning whether your work is a "work

for hire," you should consult a copyright law attorney.

3) The form differentiates between creation and publication. These are different things. The date of creation is when the program was finished in the form for which you are seeking registration. You don't have to publish your program for it to be registered and be afforded full copyright protection.

4) A claimant is a person to whom some right concerning your copyright has been transferred. You must list in space four any persons who have rights in your software, and how they obtained that interest. If there are none, you should put only the author's name. You should be aware that the copyright law specifically provides that no transfer of copyright ownership is valid unless it is in writing, signed by the owner or his or her agent (section 204). Section 205 allows the Copyright Office to record transfer documents. This is done to avoid any future misunderstandings which could arise from multiple transfers of portions of one's copyright rights. To take advantage of this recodation feature while retaining the confidentiality of your agreements you may file a "dummy" agreement stating all the relevant terms merely for the purpose of recording the transfer with the Copyright Office. If you have questions about this, see your attorney.

5) There are three reasons to re-register a piece of software: 1) You are only now applying for registration as author of this work, even though your other co-authors have already done so; 2) You are registering a work which you previously registered when unpublished, and now your program is published; and 3) You are now registering a new version of your program, e.g., *Super Color Writer II* Version 3.0. Each new version of a program should be separately registered to give yourself full protection. The original copyright does not cover later revisions or versions of your program.

Once you have completely filled out the form, you must send it, together with \$10 and a copy of your program, to the Copyright Office in order to register your software. This latter requirement is called the "deposit" requirement. It is an issue of much concern to software companies. The fear is that since people can come to the Library of Congress to peruse through documents, they might peruse through your program and steal it. Therefore, software houses are reluctant to submit complete copies of their programs, and many are reluctant to submit source code at all, choosing instead to submit object code, ie, 1s and 0s.

Responding to these concerns, the Copyright Office has developed special procedures for the deposit of software. First, although the Copyright Office would like to have the source code, it will accept object code under a "rule of doubt" if you accompany your deposit with a short letter certifying that your submission is an original work of authorship. The Copyright Office only requires that you send in the first and last twenty-five pages of your program, ie, a printout in binary, hexadecimal or source, and the page on which the copyright notice appears. Those of you who really wish to protect your programs can add twenty-five pages of code to the beginning and the end of your program which are meaningless gibberish.

Those of you who intend to treat your source code as a trade secret, and thus will be sending in the source code, should be sure to have a readable copyright notice on the first page of your code. Those of you writing in BASIC have a different problem since there is no object code to supply. You will have to supply the first and last twenty-five pages of your source, if you have that many.

Registration of your program as an audiovisual work requires that you use Form PA, also available from the Copyright Office. It is very similar to Form TX. However, instead of depositing the first and last twenty-five pages of your program, you would instead deposit a videotape or movie of the screens which you wish to protect. Filing of form PA is not exclusive of filing for registration as a literary work with form TX as well. Be sure to do both.

Now you are on the way to getting your software proper copyright protection. Still, once the Copyright Office has accepted your program and issued your numbered copyright certificate, what have you really got? In my next column I will explore what rights the copyright law gives you and how you can best use them. Until then, get and fill out those forms.

This column is meant to be educational and informative. It is not intended as legal advice. If you should have a legal question you should consult an attorney of your choice.

Elite·Calc™

NOW ... The worksheet calculator program you've been waiting for is waiting to work for you. ELITE·CALC™ is a powerful, full featured worksheet calculator designed especially for the Color Computer. Answer "what if" questions, prepare reports,

maintain records and perform other tasks that, until now, required sophisticated business computers. ELITE·CALC™ is a serious tool for those who want to do more than play games with their Color Computer.

Features include:

- Single character commands
- Help Displays
- Enter text or formulas to 255 characters long
- Repeat text entries
- 255 maximum rows
- 255 maximum columns
- Available memory always displayed
- Rapid Entry modes for text and data
- Selectable Automatic Cursor movement
- Insert, Delete, Move entire rows or columns
- Replicate one cell to fill a row or column with selectable formula adjustment
- All machine language for speed
- Extended BASIC required for ROM routine calls
- Automatic memory size detection for 16K, 32K or 64K
- > 20K bytes, storage available in 32K systems
- BASIC style formulas
- Math Operators: +, -, X, /, %, =
- Relation Operators: =, >, <, <=, >=, <>
- Logic Operations: AND, OR, NOT
- Conditional Formula: IF ... THEN ... ELSE
- Trig Functions: SIN, COS, TAN, ATN

- EASY TO USE
- INDIVIDUAL CELL FORMULAS
- COPY BLOCKS OF CELLS
- FULL CELL-EDIT CAPABILITY
- COMPATIBLE WITH ALL PRINTERS
- CHANGEABLE BAUD RATES
- GRAPH FORMAT FOR BAR CHARTS
- SORT IN ASCENDING OR DESCENDING ORDER
- COMPREHENSIVE MANUAL INCLUDED

- Log Functions: LOG, EXP, SQR.
 - Misc. Functions: INT, FX, ABS, SGN.
 - Range Functions: SUM, AVERAGE, COUNT, MIN, MAX, LOOKUP
 - Nine digit precision
 - Definable constant table
 - User definable printer set-up commands
 - Individual column width settings
 - Adjustable row height to insert blank lines without wasting memory
 - Hide columns or rows
 - Alternate print font selectable on cell by cell basis
 - Display/Print formats set by cell, row, or column
 - Dollar format, comma grouping; prefix or postfix sign
 - Scientific notation, fixed point and integer formats
 - Left and Right cell contents justification
 - Full page formatting
 - All formats stored with worksheet on disk (tape)
 - Save & Load Disk (tape) files in compact memory form
 - Scan disk directories
 - Output ASCII file for word processor input compatibility
 - Memory resident code ... no repeated disk calls
- Sample worksheets included

THE BEST FOR ONLY

Printing Graphic Characters On The Microline 82A

Direct Printing and Using Telewriter-64

By Robert W. Ericson

If you have an older Color Computer (ROM operating system 1.0) and the Microline 82A printer, you probably have shared my frustration in trying to produce graphic characters in a predictable and reliable way. Note: to find which ROM you have, type `EXEC 41175` and it will appear on your screen. This article presents the techniques of using the full set of graphic characters available and tips on their use for both direct printing (`PRINT #-2,`) and from the keyboard using the *Telewriter-64* word processing system from Cognitec.

The difficulty in using graphic characters lies in the instruction manuals for both the 82A and the *Telewriter-64*. The former gives wrong information and the latter skips over the issue. It was only after many telephone calls and letters to both the vendor (thinking my printer was broken) and to Okidata and a considerable amount of trial and error that I was able to decode the system.

Direct Printing Of Characters

To print graphic characters you must first set the printer into the graphics mode. This is done by typing `PRINT #-2, CHR$(14)` and `ENTER`. Nothing seems to happen, but a signal was sent to the 82A putting it into the graphics mode.

Next type `PRINT #-2, N`, where N is any number between 160 and 223. (The user manual specifies 128—191). This does not apply to ROM version 1.0.) This will print a graphic character on your printer. To develop a reference chart of numbers and graphic characters, enter the program in Listing 1 and `RUN` it.

To return the printer to normal operations you may either turn it off and on again or type `PRINT #-2, CHR$(15)`. This will exit the graphics mode and reset the printer.

Tip 1: You can put the computer in the expanded or condensed mode as well as in the graphics mode. This will, in

(Robert Ericson is a senior consultant with the Professional Services Group of Keane, Inc., Boston MA, where he provides a broad range of management systems services to commercial clients.)

effect, give you three times the number of graphic characters. For example, put the printer in the expanded character mode (`PRINT #-2, CHR$(31)`) and run Listing 1. You may also put the printer in the condensed mode (`PRINT #-2, CHR$(29)`) and run Listing 1.

"A problem occurs when one enters the graphics mode. There is no instruction to indicate which keys produce which characters. Help has arrived! The chart below is a conversion table of keys to graphic symbols. Note that each capital letter and symbol (including the space bar) creates a graphic character."

Tip 2: If you are using the ROM cartridge Color Scriptit from Tandy Corp., you can have it print in one of the other print styles. For example, to print your Scriptit text in bold: 1) turn on your system—computer and printer; 2) before inserting the ROM cartridge, type `PRINT #-2, CHR$(29)`; 3) turn off the computer (the printer will remain in the bold mode); 4) insert the Scriptit ROM; 5) enter text and print it out. Your margins and formatting will be changed.

Listing 1

```
10 FOR X = 160 TO 233
20 PRINT #-2, CHR$(15)X" = "CHR$(14)CHR$(X)
30 PRINT #-2, CHR$(10)
40 NEXT X
```

Line 10 sets up the program to list all the characters. Line 20 first puts the printer in the normal mode to print the numbers and equal sign, enters the graphic mode and then prints the graphic character. Line 30 is a line feed to give double spacing. Line 40 completes the loop.

Use of the Telewriter-64

I assume the reader is familiar with the *Telewriter-64* program and understands the concept of embedded codes. These are adequately explained in the *Telewriter-64* manual. I have found it quite handy to put a standard format of embedded codes at the head of all my word processing. This format is:

```
↑05 10 15 20 25 30
↑D1 30
↑D2 29
↑D3 31
↑D4 29 31
↑D5 27 54
↑D6 27 56
↑D7 14
↑D8 15
↑D9 24
```

(Note: The up arrow is produced by pressing CLEAR and the period symbol together.)

The first line sets a group of tab stops. The embedded codes 1—9 will set the printer to the following modes:

- 1 Standard
- 2 Condensed
- 3 Wide
- 4 Bold
- 5 6 Lines per inch
- 6 8 Lines per inch
- 7 Graphics mode
- 8 Clear print buffer

A problem occurs when one enters the graphics mode. There is no instruction to indicate which keys produce which characters. Help has arrived! The chart below is a conversion table of keys to graphic symbols. Note that each capital letter and symbol (including the space bar) creates a graphic character.

To use this feature in the body of your text: 1) press CLEAR and 7 together to enter the graphics mode (after you have defined it as indicated above); 2) enter the letters or symbols of the graphic characters desired; 3) to exit the graphics mode type CLEAR and 1 together.

Tip 3: Use the graphics mode to simulate logos, or make a stylized letterhead.

Tip 4: To get bold print (not extended) put the embedded code on the preceding line.

Tip 5: Draw a worksheet with a 2 x 3 block grid and use it to sketch your design. (If you send \$1 and a self-addressed, stamped envelope to the author directly, he will send you a copy of his worksheet. Send to: Robert W. Erickson, 5 Carriage Dr., Acton, Mass., 01720.)

PMODE 4

GRAPHICS DUMP

BY J. PAUL FOUNTAIN

After seeing the fine job Mr. Kohn did on his *Printout At PMODE4* article (*Rainbow*, July 1983), I realized that we have not seen any program in print that supports the dot addressable capabilities of the TRS line printers. I am about to remedy this situation with the program that follows. It is a machine language routine that will copy a *PMODE4* screen to a TRS-80 Line Printer (mine is a Line Printer VIII) using the dot addressable graphics capability. The routine requires Extended Color BASIC because it uses the graphics page pointer.

Since printing one dot for each screen pixel resulted in such a small image on paper, I decided to double the number of dots both vertically and horizontally. Four dots per pixel lets the printer image cover most of an 8½" x 11" page (approximately the size of a 13" TV screen). In addition, I found it necessary to turn the printed image on its side because the 256 pixels across the *PMODE4* screen results in 512 printer dots, and the printer uses only a 480 dot line.

An editor/assembler must be used to get the code into memory. I will describe the process for Radio Shack's *ED-TASM+* since this is the assembler I used.

First, type in the assembly listing. There is no need to type in anything beyond or including the semicolon on each line nor any

(Paul Fountain, a carpenter and part-time farmer, teaches personal computer programming classes at home. He enjoys programming on his 64K CoCo in his spare time.)

line beginning with an asterisk since these are REMarks. Next, assemble in memory with this command: A/IM/AO/WE. The WE switch will stop the assembly if an error is encountered.

When the assembly process yields 00000 ERRORS, the machine code is in memory. Save a copy of the assembly listing to tape using the W command. Now enter ZBUG using the Z command. Finally, save the machine code to tape with this command; PGRAFDUMP 7D8F 7F51 7D90(3D8F 3F51 3D90 for 16K).

You'll notice that all of the variables need not be saved; however, memory must be reserved for them when *CLOADing* the program. The assembled code is relocatable, so it can be loaded using an offset.

This routine may be used as a BASIC USR subroutine or called directly from the keyboard. Reserve memory for the machine code with a CLEAR 200,&H7D7F (&H3D7F for 16K) statement. Then *CLOADM* the machine code into memory. To use the machine code as a subroutine, define the entry point to START1 using this statement: DEFUSR0=&H7DBB (&H3DBB for 16K). Call the subroutine from BASIC with this statement: A=USR0(0).

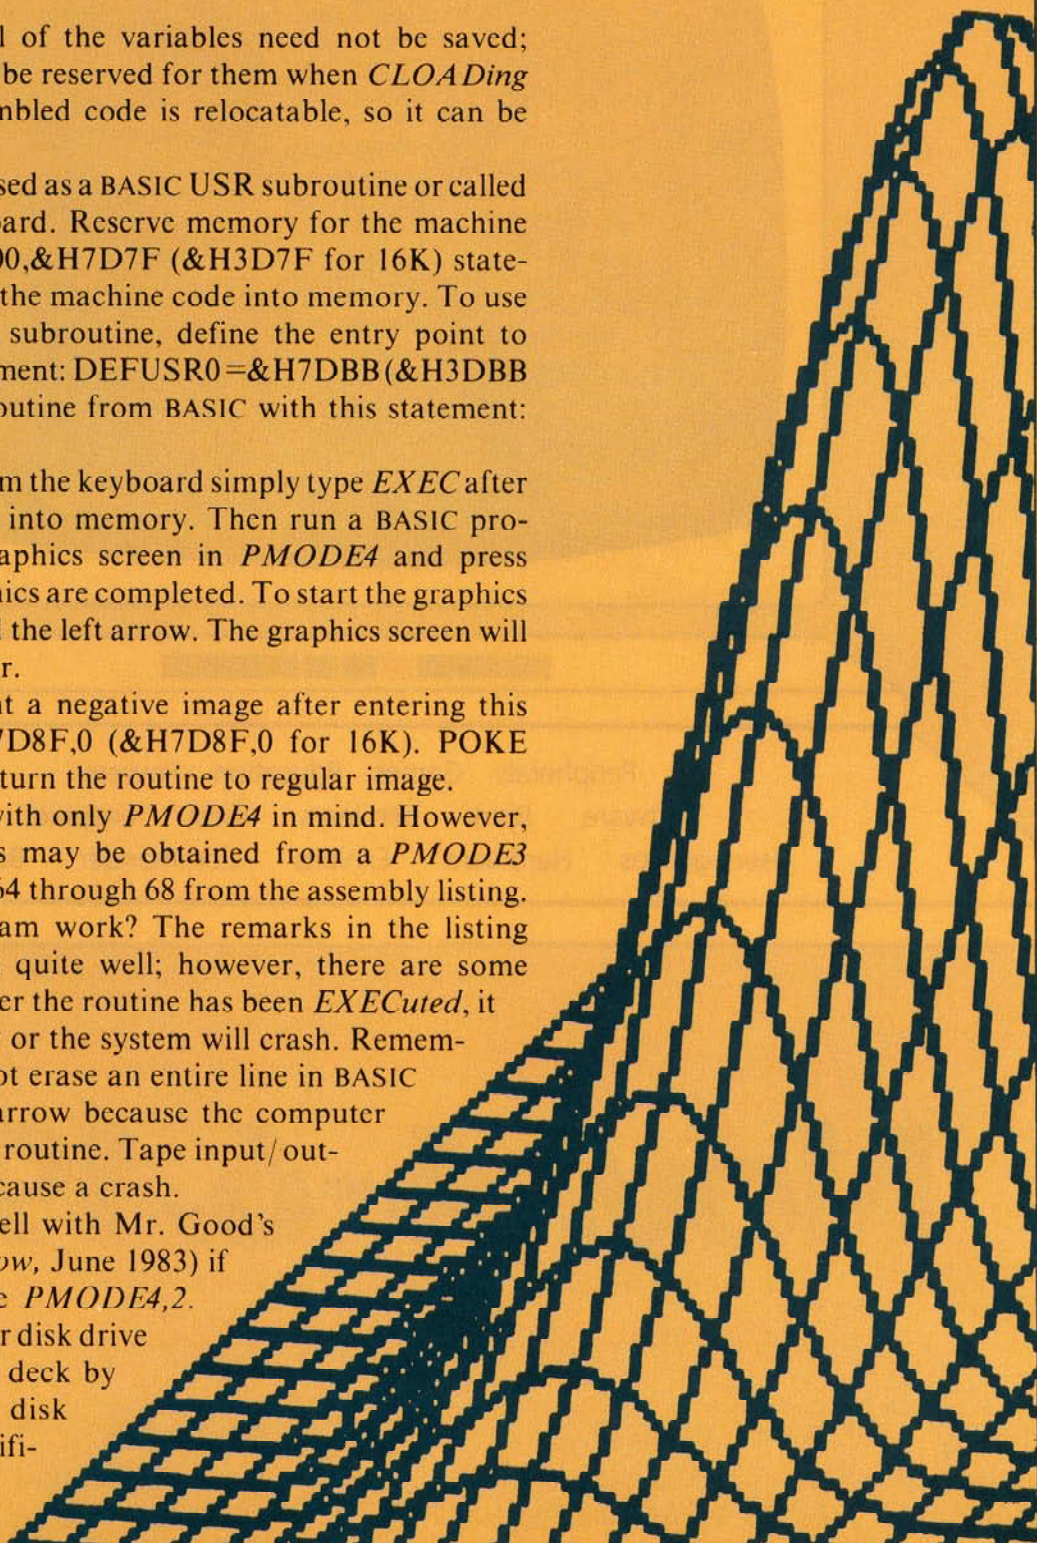

To call the routine from the keyboard simply type *EXEC* after *CLOADMing* the code into memory. Then run a BASIC program that creates a graphics screen in *PMODE4* and press BREAK when the graphics are completed. To start the graphics dump, press SHIFT and the left arrow. The graphics screen will not be sent to the printer.

The routine will print a negative image after entering this statement: POKE &H7D8F,0 (&H7D8F,0 for 16K). POKE &H7D8F,&HFF will return the routine to regular image.

I wrote this routine with only *PMODE4* in mind. However, some interesting results may be obtained from a *PMODE3* screen by deleting lines 64 through 68 from the assembly listing.

How does the program work? The remarks in the listing describe the mechanics quite well; however, there are some cautions to observe. After the routine has been *EXECuted*, it must remain in memory or the system will crash. Remember, too, that you cannot erase an entire line in BASIC using SHIFT and left arrow because the computer will jump instead to this routine. Tape input/output operations will not cause a crash.

The routine works well with Mr. Good's *Printer Spooler* (*Rainbow*, June 1983) if you *PCLEAR8* and use *PMODE4,2*. Oh yes, you may use your disk drive instead of your cassette deck by using the appropriate disk statements without modification to the routine.

Picture Your Face

By D. and R. Delbourgo

For many years it has become standard practice for police departments (not to mention more secretive organizations) to use an *Identikit* so as to build up a complete face of a suspect by adding one feature to the next as the identification details come in.

You can also try to "photofit" on your TRS-80C, although it must be admitted that the memory available places a strong limitation on the variety of faces that are sketchable with the computer. Even though the listing at the end consumes a full 20K of memory—typists beware!—it shows what can be done on your trusty CoCo.

The program is self-prompting but we should draw your attention to the particular features: LONG HAIR, SPECTACLES, BEARDS, MOUSTACHES, LINES/WRINKLES. If one or other of these is not needed at any given stage (for instance you might be drawing a young boy with good eyesight), simply press "C" to continue.

Also we should warn you not to enlarge or move around to any great extent these features: FACE SHAPES, HAIRSTYLES, LONG HAIR, BEARDS (except as specified), MOUSTACHES. Otherwise we stand in danger of painting incorrectly, with disastrous results!

When you have finished your picture, those of you with printers can transfer your *magnum opus* to paper. The examples alongside indicate the kind of thing you can achieve with a little care. Of course, you may also construct the most outlandish caricatures by enlargement and funny placements of each feature.

A few remarks about the program itself:

Lines 1-10 produce the title card.

Lines 40-64 give the directions.

Lines 100-336 provide the feature choices.

Lines 340-347 allow you to print and rerun.

Lines 600-611 contain the drawing subroutine.

Really, the heart of the program lies in the drawing subroutine, which, you will observe, allows you to shift the features about (subject to painting limitations thereafter) and rescale them (to a maximum and minimum).

The printing routine is in BASIC and is awfully slow; but it was either that or injecting an ML routine with a vast collection of DATA statements, and, thinking how outaced you would already be with typing in the main program, we decided to stick to slow but word-economical BASIC.

We are not especially proud of our drawings, but our program is so devised that those of you with artistic flair can easily change our string statements and get more accomplished results. Also, it ought to be possible to modify our program quite easily to get a cartoon version of *Identikit*. Have fun with it in the meantime.

wild party

A naughty, sexy computer game
for 2 to 6 couples.
Game varies
every time you play.
All prompts from TV screen,
no need to read
complicated instructions.
Send self-addressed stamped
envelope for program descrip-
tion and instruction sheet.

On cassette tape.
For 16K Color Computer.
Extended BASIC not required.

\$35.00 incl postage.
(PA resid add \$2.10)
Send check to P.O. Box 210,
Jenkintown, PA 19046

CIRCLE CITY SOFTWARE

NEW ADDRESS:
 1210 Victoria Drive
 Lebanon, Indiana 46052

Credit Card Customers
 include number and expiration date.

NEW MASTER DISK \$29.95
 A touch of a button allows you to keep tabs on your disk library. Creates directory files directly from 100 of your source disks on one Master Disk. Search by file name, file type, disk name, free space, or individual directory. All output can be sent to line printer. Menu driven and very user friendly! This is an improved version of the program reviewed in The Rainbow. Optional accessory package adds even more features. 16K or 32K disk required.

SEA TRADER

A new game in which you play an 18th century sea captain plying the trade routes. The you start start out on a shoestring and try to become a billionaire. Hazzards include pirates, storms, bad markets, and bad debts. People have become so fascinated with this game that they actually cheat to keep from winning. 16K color basic, tape or disk \$19.95.

COLOR STAR PILOT

Take a trek through space to defeat the alien enemy in this superior version of a classic space game! Reviewed in Rainbow. Requires extended basic. Comes with 32K 3-level game or 16K novice version. Tape or disk \$19.95.

ACCESSORY PACKAGE \$20.00

A second disk for improved versions of the original single-disk accessory programs. Includes notebook for storage of disks and paperwork.

SORT

New Sort program is faster and more efficient than original version. Runs in 16 or 32K to produce an alphabetic listing of all file types you specify.

RECOVER

New Recover program not only rewrites directories from master files but can rebuild an entire disk to eliminate "IO" errors.

ZAP

New addition. User friendly directory Zapper to manually correct directory data when all else fails. Menu-driven with help files for novices.

The Perfect Companion For Your New Portable Computer

There's a new and exciting computer on the block — Radio Shack's TRS-80® Model 100 Portable Computer. It promises to be one of the most significant advances in personal computing of the 1980's!

And, now, there's a new and just-as-exciting magazine specifically devoted to your Portable Computer. It is called **PCM—The Portable Computing Magazine**, and it is published by the same people who bring you the most popular Color Computer magazine in the world — the **Rainbow**.

PCM—The Portable Computing Magazine sells for \$3 per copy and \$28 a year by subscription. If, after seeing your first issue, you find it is not for you, just let us know. We'll happily, cheerfully and immediately refund your entire subscription payment. We're that confident that you'll love PCM. After all, it is **The Portable Computing Magazine!**

PCM

THE PORTABLE COMPUTING MAGAZINE

9529 U.S. Highway 42
P.O. Box 209
Prospect, KY 40059
(502) 228-4492

YES! Sign me up for a year (12 issues) of **PCM—The Portable Computing Magazine**

Name _____
Address _____
City _____ State _____ Zip _____
 Payment Enclosed
Charge VISA MasterCard American Express
Account # _____ Interbank # (MC only) _____
Signature _____ Card Expiration Date _____

Subscriptions to **PCM—The Portable Computing Magazine** are \$28 a year in the United States. Canadian and Mexican rate is \$35 U.S. Surface rate elsewhere \$64 U.S. Air mail \$85 U.S. All subscriptions begin with the current issue. Please allow 5-6 weeks for first copy.

Hint...

What's Your ROM Number?

With all the talk about new ROMs, you may be wondering exactly which ROM you have. If you have Extended BASIC, just read the information at the top of the screen on power up. Then, to see which Color BASIC ROM you have, type *EXEC 41175* and <ENTER>.

If you have the new ROMs, the Extended BASIC will indicate Version 1.1 and Color BASIC will be Version 1.2

RAINBOW

Give us your best: Join the ranks of these courageous CoCoists in showing the Color Computer world your high score at your favorite micro-diversion. We want to put your best effort on record in the Rainbow's Scoreboard column. All entries must be received by the first of the month to be eligible for the following month's Scoreboard. Each individual is limited to three score entries per month.

★ **New Number One** • **Last Month's Number One**

ALCATRAZ II (Spectral Associates)

18,790★ Chris Sweet, Harvard, MA
8,710 Kanti Dinda, Kingston, Ontario

ANDROID ATTACK

25,000★ Wes Hill, Vashon, WA
15,500 Cameron Amick, Reisterstown, MD

ASSAULT (Computer Shack)

1,100★ Kevin Mesecher, Ft. Walton Beach, FL

ASTRO BLAST (Mark Data)

158,000★ Larry Plaxton, Medley, Alberta
157,000 Scott Drake, Pine City, NY
104,464 Jim Baker, Florissant, MO
98,000 Tim Warr, Bellingham, WA
92,000 Harry Sawyer, Watchung, NJ

ASTEROID

2,322★ Matt McMann, New Boston, MI

AVENGER (The Cornsoft Group)

24,575★ Rich McGervey, Morgantown, WV
19,480 Jim Sparke
19,220 Vince Lok, Mississauga, Ontario
16,310 Dave Lubnow, Sussex, NJ
14,075 Stephen Lai, Palatine, IL

BIRD ATTACK (Tom Mix)

200,725★ Peter Niessen, Carlisle, MA
110,850 Chris Sweet, Harvard, MA

BLEEP

105★ Matt McMann, New Boston, MI

BLOC HEAD (Computerware)

286,900★ Ron Moore, Greensburg, PA
104,575 Rich McGervey, Morgantown, WV
47,775 Chris Long, Manitowadge, Ontario
47,375 Van Adams, Poplarville, MS
42,225 Hal Mermelstein, S. Windham, MA
40,250 Ed Bottini, St. Louis, MO
29,475 Derek Keener, Columbus, OH

BUSTOUT (Radio Shack)

42,000★ Derrick Kardos, Colonia, NJ
34,700 Sara Hennessey, Golden Valley, MN
28,720 Perry Denton, New Baden, IL
27,880 Mike Wells, Pittsburgh, PA
17,170 Neil Berkman, DeWitt, NJ
11,060 Ryan Van Manen, Grand Rapids, MI
7,314 John Mattox, Atlanta, GA
6,570 Rich Van Manen, Grand Rapids, MI

CANYON CLIMBER (Radio Shack)

155,900★ Dustin Yates, Shreveport, LA
133,400 Kevin Dawdy, Findlay, IL
127,800 Michael Garvie, Pekin, IL
121,800 William Daley, Biloxi, MS
118,000 Kevin Boehm, Springfield, IL
117,200 Ryan Van Manen, Grand Rapids, MI
114,400 Rich Van Manen, Grand Rapids, MI
113,800 Kevin Dawdy, Findlay, OH
112,000 Nicolle Zeman
98,600 Jimi Barr, Long Beach, CA
82,700 Andrew Herron, High Point, NC
81,400 Richard Rankin, Kitchener, Ontario
74,600 Sal Barlett, Mesa, AZ
61,000 Dale Mihocko, Phoenix, AZ
57,500 Don Cornett
55,400 John Mattox, Chattanooga, TN
51,000 Barry Cole, Long Beach, CA
49,800 Michael Piantoni, Brockton, MA
45,200 John Bennett, St. Albans, WV
44,600 Chris Long, Manitowadge, Ontario
34,000 Jay Johnson, Puyallup, WA
28,400 Robert Daley, Biloxi, MS

CATCH 'EM (Aardvark)

237,000★ Craig Edelheit, W. Bloomfield, MI
91,000 Dean Bouchard, Kingston, N.S.
70,157 Kirk Beler, Taber, Alberta
65,768 Laura Sandman, Louisville, KY

CATERPILLAR (Aardvark)

63,100★ Todd Byington, N. Salt Lake, UT
54,608 Lawrence McElligott, Lancaster, CA
53,233 Ron Pinson, Guelph, Ontario
45,813 Wes Hill, Vashon, WA
31,742 Daniel Milbrath, Ann Arbor, MI

CAVE HUNTER (Mark Data)

42,600★ Gary Ritchie, Bellevue, Alberta
27,050 Jim Baker, Florissant, MO
26,300 Mike Hughey, King George, VA
21,150 Jim Baker, Florissant, MO
15,200 Rich McGervey, Morgantown, WV

CLOWNS & BALLOONS (Radio Shack)

83,710★ Don Fraser, Shakope, MN
77,910 Dan James, Clearwater, FL
74,920 Sal Barlett, Mesa, AZ
74,600 Jimmy Kendall, Elkview, WV
72,840 Lyman Green, Jr., Dayville, CT
72,290 Lloyd Stagg, Pensacola, FL
64,980 Andrew Figel, Sardes, OH

COLOR COSMIC INVADERS

62,300★ Peter Niessen, Carlisle, MA

COLOR CUBES (Radio Shack)

4,50★ John Handis

COLOR HAYWIRE — formerly Berserk (Mark Data)

22,050★ Jim Baker, Florissant, MO
17,850 Brian Wallingford, Fall River, MA
14,850 Michael Rhattigan, Cary, NC
14,750 Rich McGervey, Morgantown, WV
12,450 Chris Coyle, Selden, NY
9,800 Dave Lubnow, Sussex, NJ
9,150 Cameron Amick, Reisterstown, MD
8,150 Greg Brink, Portage, MI

COLOR INVADERS (Computerware)

240,700★ Roland Hendel, Mississauga, Ontario
227,050 John Osborne, Kincardine, Ontario
217,635 Jim Baker, Florissant, MO
126,350 Perry Denton, New Baden, IL
93,510 Rich McGervey, Morgantown, WV

COLOR METEORIDS (Spectral Associates)

1,496,000★ Craig Edelheit, W. Bloomfield, MI
1,253,200 Jeff White, Prairie de Chien, WI
292,000 Roland Hendel, Mississauga, Ontario
292,000 Vince Lok, Mississauga, Ontario
252,050 Larry Plaxton, Medley, Ontario

COLORPEDE (Intracolor)

3,355,248★ Scott Drake, Pine City, NY
2,745,982★ Roland Hendel, Mississauga, Ontario
2,547,299 Rich McGervey, Morgantown, WV
2,400,735 Scott Seihorst, Columbia, SC
2,139,248 Mike Hall, Hartland, WI
1,099,380 Greg Burke, Kenora, Ontario
572,930 Sal Barlett, Mesa, AZ
474,322 Richard Manley, San Bernardino, CA
458,601 Phil Wilkins, Vancouver, BC
382,000 Dave Lubnow, Sussex, NJ
306,028 Rick Ingram, Wheatland, WI
245,723 Cameron Amick, Reisterstown, MD
177,600 Kris Ponder, Jacksonville, FL

COLOR SCARFMAN (The Cornsoft Group)

976,520★ Bruce Thornhill, Barrhead, Alberta
772,000 Keith Seifried, Greenville, OH
600,410 Roland Hendel, Mississauga, Ontario
539,100 Larry Plaxton, Medley, Alberta
530,200 Alan Klotzback, Plainville, OH

COLOR ZAP (Spectral Associates)

227,330★ Ron Rhead, Willowdale, Ontario
84,400 Chris Sweet, Harvard, MA

Using The Upper RAM Of Your 64K

By Jorge Mir

The January 1983 issue of *the Rainbow* (page 166) contained one of my articles describing a program that would modify other BASIC programs so that they could run in the unused upper RAM portion of a 64K system. Since then, I have been receiving several phone calls or letters every week regarding questions about the program or suggestions for improvement (mainly speeding up the process) to make it more convenient to use the full 64K power of the Color Computer.

Since there has been so much interest in using the "wasted" RAM available in a 64K system, I decided to revise the program to make it simpler to use. You will note that, in order to accomplish my objectives, I ended up with two programs: *CONVERT*, which actually changes the BASIC program so that it runs in upper RAM; and *64KBASIC*, which loads and executes the converted programs. This way, you can convert BASIC programs and save them on tape or disk rather quickly. Then, later on, you just run the short "loader" program (*64KBASIC*) which will load the converted programs and run them automatically.

If you have a disk system, you can convert programs up to a length of no more than 9,980 bytes. With a cassette system, programs up to a length of 16,720 bytes can be converted and run in the upper RAM area. The *CONVERT* program determines what type of system you are running and sets up all parameters automatically.

Once the program is converted, you will be asked for a filename which must not exceed eight characters. If you have a disk system, the program will automatically add ".64K" as the extension before it is saved. Please note that the program will be saved as if it were a machine language program and cannot be *CLOAded* or *LOAded*. Hence, the need for a "loader" type program, *64KBASIC*.

The loader program switches the computer to 64K using a short machine language subroutine that loads the converted BASIC program, sets the proper BASIC pointers, and runs it. This is true whether you are running a disk or cassette system. When you run the loader program, it will prompt

you for the program name and ask you if you are running a cassette or disk system. This last prompt could be determined automatically, but was added in case someone wants to load and run programs on cassette while using a disk system. It can be modified easily so that no prompting is required if you are bothered by it.

Many of the people who called because they were having difficulties were trying to run the program without reading and following the instructions and, of course, could not work the program properly. Therefore, I will repeat the instructions here. Follow them closely to avoid any problems:

1. Turn the computer off and then back on. This will assure you are in the *PCLEAR4* mode.
2. Load the program you want to convert so that it runs in the upper RAM area. Do not *RUN* the program.
3. Change the BASIC pointers by typing the following and pressing <ENTER>:
POKE 25, PEEK(27) : POKE 26, PEEK(28) : NEW
4. Load and *RUN* the *CONVERT* program.
5. After the program is converted, you will be asked for a filename and asked to get ready for storing the program. After answering the prompts, it will save the converted program to cassette or disk, according to the system in use.

The above steps will complete the conversion procedure and the program will then be ready for use. As previously noted, you have to run the program using the loader program called *64KBASIC* which will prompt you for the program name to be *RUN*.

This procedure speeds up the whole process considerably since programs to be run are already converted and the loader program is rather short and quick.

For those of you who are beginning to program or simply like to find out how programs work, the rest of this article is devoted to an explanation of the programs.

First, let's discuss the *CONVERT* program.

Step 10 checks to see if you have a disk system. The simplest way is to check what the ASCII value is at &HC000.

If it is a 68, then you have the disk ROM in place, so the value of "S" is set at *H2601 (beginning of BASIC when in the *PCLEAR4* mode). If it is not a 68, then the value of "S" is set

(Jorge Mir, a Certified Public Accountant, is currently controller of a Fortune 500 Corporation. Personal computing is his main hobby and he publishes most of his original work through the Rainbow.)

at &H1E01, the beginning of BASIC when not using a disk system. The other variables ("SS" and "BS") are also set. This is where we trick the computer so that programs can run in upper RAM.

If you had a monitor and were able to look inside the computer's memory you would note that each BASIC step, as stored in memory, is preceded by a reference. This reference tells the computer where to look for the beginning of the next BASIC step, in essence, it points where to go after executing the current step. The *CONVERT* program changes these references so that the programs can run in the upper RAM area. It does so by adding an offset value to these references. These offset values are calculated as follows:

	Type of system in use	
	Disk	Cassette
Start of BASIC (PCLEAR4)	&H2601	&H1E01
Start of usable upper RAM in a 64K system	&HD801	HC001
Number of bytes in between	&HB200	&HA200

You can actually compute these values with your computer by typing in the following:

```
PRINT HEX$ (&HD801—&H2601), or
PRINT HEX$ (&HC001—&H1E01)
```

Thus, the values of "SS" and "BS" are set according to the system in use once the program determines whether or not you are using a disk system.

Step 20 simply sets the value of "E" to the end of the program you want converted. Since *CONVERT* follows directly after that program, then the value would be two bytes less than the beginning of *CONVERT*. The beginning of BASIC programs can be determined by *PEEKing* at loca-

tions 25 and 26 as is done in step 20 (without subtracting two bytes). Since we want to keep the value of "S" constant, we make another variable (which will be changed during execution of the program) by making "X" equal to "S."

Step 30 determines what the next step reference is making the variable A1 equal to the most significant byte and the value of A2 equal to the least significant byte. Then, the value of A is set to equal the reference in RAM (by multiplying A1 times 256 and adding A2 to it).

Step 40 changes the most significant reference to the next step by adding the offset (SS) as previously explained.

Step 50 checks to see if we have reached the end of the program. If it is not the end, it will go to step 60 where X becomes the next step reference and the whole process is repeated again by going to step 30. If it is the end of the program, then we go to step 70.

Step 70 simply sets the last two bytes of the program to zero, indicating the end of the program.

Step 80 sets three zeroes at the beginning of BASIC, according to whether you are running a disk or cassette system. You should note that the variable "BS" should be changed if your BASIC program contains high resolution graphic routines needing graphic pages at the beginning of RAM. This is done by changing the value of "BS" in step 10.

The remaining of the program simply deals with prompting for the filename to be used when saving the program to disk or cassette and it is self-explanatory.

Next, let's discuss how the *64KBASIC* loader program works.

Steps 10 through 110 simply prompt for the filename and system in use, then do a crude attempt at some simple low resolution graphics while you wait for the system to do its work.

Steps 120 through 170 do the switching to 64K. These steps can be used as a stand-alone program to accomplish this task, or as a subroutine in any program needing the upper 64K or RAM. These steps *POKE* a machine language subroutine in an unused low RAM area (starting at &H200) located before the area used for the video output.

Steps 180 through 230 offset-load the BASIC program as if it were a machine language program.

Steps 240 through 260 set the BASIC pointers according to the system in use. Here again, the pointers are set to maximize RAM storage and should be changed if your program contains any graphics requiring the graphic pages. This is done by changing the "&H0E" in step 250 or the "&H06" in step 260 to allow room for the graphic pages. The Radio Shack manual has a memory map indicating the location of the graphic pages in the various graphic modes.

Writing these short utilities continue to be a source of enjoyment for me and I sure enjoyed chatting or corresponding with many Color Computer users who are trying to maximize their use of our fine little machine.

HELP!

SEND FOR

THE VERY BEST COLOR COMPUTER REFERENCE SYSTEM

HELP! provides the BEGINNING PROGRAMMER with every basic command for the COLOR COMPUTER. Each command is indexed by what it **does** as well as what it is called. Every major command is shown with its formula, examples of how it is used, a full set of notes, common pitfalls, and references to the instruction manual.

HELP! provides the more ADVANCED PROGRAMMER with the perfect reference system for checking less familiar commands. It can also serve as a translation of Basic into Color Basic.

232 pages, ring-bound, lies flat on computer.

TRUNKS FOR THE MEMORIES.

Introducing the most logical place to store Elephant Memory Systems® (or lesser brands of disks): The Trunk.

With its alphabetized library index, you can file or retrieve up to 60 disks, instantly.

The Trunk is made of durable molded plastic with a hinged, one-piece lid, to keep disks safe from dust, dirt, and other detriments which disks despise.

And, it's portable. Because the lid doubles as a carrying handle so your Elephant Memory Systems® disks can go anywhere you do.

There's a model for 5¼" and 8" floppies, as well as a cassette-and-game file and a special Atari® version.

So if you're looking for the best disk storage system on the market...

The Trunk is an open-and-shut case.

THE TRUNK. ENDORSED BY ELEPHANTS.

Elephant Memory Systems® Disks

A full line of top-quality floppies, in virtually every 5¼" and 8" model, for compatibility with virtually every computer on the market. Guaranteed to meet or exceed every industry standard, certified 100% error-free and problem-free, and to maintain its quality for at least 12 million passes for over a life-time of heavy-duty use.

Marketed exclusively by Leading Edge Products, Information Systems and Supplies Division,
55 Providence Highway, Norwood, MA 02062. Dealers: call toll-free 1-800-343-8413;
or in Massachusetts, call collect (617) 769-8150, Telex 951-624.

Tacoma, WA 98409

CUBIX

Excitement mounts in this fantastic 3D Cube Maze game as CUBIX attempts to change the colors of the squares while villainous creatures conspire to prevent him from completing his task. A constant array of "Snake Eggs" and "Death Globes" drop from the sky and bounce around the pyramid threatening to give CUBIX a bop on the head, and just to keep things hopping (literally) "Sprink" and "Flip" appear later in the game to undo his work by changing the squares back to their original colors.
