## BOUNCING BOULDERS

Bouncing Boulders is a new, fast paced arcade-style game for your Coco. As you race your man around the screen you try to collect enough stars to open the exit to the next level. You can drop rocks to kill aliens that follow you around the screen trying to catch you. But beware of the falling and bouncing boulders as they will crush your man if you get trapped under one. The many different screens with lots of puzzles will keep you playing for hours on end.

**64 K REQUIRED**  
**TAPE OR DISK**

**\$28.95 U.S.**  
**\$38.95 CAN.**

## WRESTLE MANIAC

You've asked for it and now it's here, a wrestling game for your color computer. Play a single match or play a tag team match in this 1 to 4 player game. Wrestle against the computer or wrestle against your friend in a single or tag team match. Use punches, kicks, body slams, back breakers and many other moves as you attempt to pin your opponent. Super graphics and realistic play action make this a great game for all.

**64 K AND JOYSTICK**  
**REQUIRED**  
**TAPE OR DISK**

**\$28.95 U.S.**  
**\$38.95 CAN.**

## GANTELET

## MISSION F-16 ASSAULT

## MARBLE MAZE

## THE GATES OF DELIRIUM

Travel through towns and explore strange lands in the ultimate fantasy role-playing game for the color computer. As you travel the land you will meet different characters that you may convince to join you in your quest. During your quest you will learn the secrets of magic spells and ultimately, your final goal.

**Enter The Gates of Delirium contest!** The first person to solve the game shall be our grand prize winner of a Coco 3. There will be 5 second prizes of one free game from Diecom Products and 5 third prizes of one free hat from Diecom Products.

**64K**  
**REQUIRED \$38.95 U.S.**  
**\$52.95 CAN.**

AVAILABLE ON DISK ONLY

### ALSO AVAILABLE

— Paper Route, Knock Out, Karate, each game requiring 64K. Tape or disk.

**\$28.95 U.S.**  
**\$38.95 CAN.**

**HARDWARE PROJECT** *Building the robot system*
- The Menu Selector/Bill Bernico** \_\_\_\_\_ 158  
**TUTORIAL** *A professional look for program menus*
- Get Comfortable With OS-9/Nancy Ewart** \_\_\_\_\_ 160  
**TUTORIAL** *A good introduction for beginners*

The cassette tape/disk symbols beside features and columns indicate that the program listings with those articles are on this month's RAINBOW ON TAPE and RAINBOW ON DISK. Those with only the disk symbol are not available on RAINBOW ON TAPE. For details, check the RAINBOW ON TAPE and RAINBOW ON DISK ads on pages 103 and 151.

**NEXT MONTH:** Ah, lacy cards and rosy cupids. It's that sentimental time of year and THE RAINBOW is prepared with titillating tidbits to let you fall in love with your CoCo all over again. February brings our Utilities Issue filled with interesting and helpful programs for all. We'll finish our series on the robot operating system and introduce you to some more of the CoCo 3's wonders. And, of course, we'll have reviews of the latest products, plus our regular columns.

Valentine's Day is the time to make the perfect match — your Color Computer and THE RAINBOW.

A refund of 10/12ths the subscription amount after two issues are mailed. No refund after mailing of three or more magazines.

## The Doc's Still Hot!

*Editor:*

I have been receiving THE RAINBOW since the demise of *HOT CoCo*. One article I have missed is Doctor ASCII, so imagine my surprise when I received the November 1986 issue to find it a regular feature.

I used to turn to this article first thing upon receiving *HOT CoCo* and even though I have never submitted any questions, I have had many of them answered.

*Clair Hunt  
Sanford, MI*

*Glad you're a fan of Doctor ASCII's column. We welcome him as a regular columnist in RAINBOW. His column is on Page 162 of this issue.*

---

### RAINBOWfest Raves

*Editor:*

I just wanted to let you know what a good time I had at the Princeton RAINBOWfest. For those who have never attended a RAINBOWfest I urge them to go. This was my first but it won't be my last. I met some great people and it was fun to see the faces that go with the names in the magazine.

I hadn't been using my Color Computer that much until I picked up THE RAINBOW and decided to go to the RAINBOWfest. I bought the new CoCo 3 and have sent for a subscription to RAINBOW. I am excited all over again about the CoCo, and I can thank you and the RAINBOWfest for this new excitement.

*Larry Burlingame  
Selinsgrove, PA*

---

### Telecom Successes

*Editor:*

I would like to comment about the article "Hamming It Up" on Page 42 in the November 1986 issue. Our Air Force MARS Base Support Team at Langley AFB recently used a CoCo 2 with the RS-232 pack and a GLB PK II TNC for a VHF packet demonstration at the Langley Air Force Base Open House. The system operated fine through the five-hour program, logging and transmitting 176 pieces of morale and welfare traffic to a central point across the

base. There, the printed out messages were sorted according to region destination and introduced into the regular SSB MARS phone nets for delivery.

*James S. Johnson  
WB4WDM/AFF2VA  
Hampton, VA*

---

### THE NEW ADDITION

*Editor:*

After recently having problems with my CoCo 1, I purchased a CoCo 3. I discovered a few things other readers might like to know:

1) *VIP* software will not run on the CoCo 3. I use *VIP Writer* and *Database* extensively, and now must find something to replace them.

2) *PenPal* Version 1 will not run on the CoCo 3. I don't know about the later version.

3) The *DISTO* Super Controller works on a CoCo 3. However, C-DOS, ADOS, JDOS, etc., do not work. Only RS-DOS will work, so far.

If someone comes up with a patch to allow *VIP* to run on the CoCo 3, I hope you will print it. I don't really want to go to another software package after having so much success with *VIP*.

*Tony Rapson  
Tulsa, OK*

*For some good news, see Jim  
Reed's column on Page 16.*

---

### Better, But Not Quite . . .

*Editor:*

The new CoCo 3 is an amazing new computer. It has everything the CoCo Community has been waiting for — better graphics, compatibility, etc., but there are still a few things we need. One of the things needed is more function keys on the keyboard or even better, a keyboard like the Tandy 1000's. Now that we have windows, we need a new Multi-Pak with about eight slots for more expansion.

*Leslie Miller  
Lewiston, ID*

---

### List Those Variables

*Editor:*

I have been reading RAINBOW since November 1984. During that time I have seen some changes in your program listings that make them even better and easier to use. On Page 53 of the September 1986 issue, I noted that Mr. Kromeke has included a variable list at the beginning of his program. I wish that all of the programs had such a list. It makes the programs more understandable for users.

*Regan Werner  
Pueblo, CO*

---

### HINTS AND TIPS

*Editor:*

For those who use *VIP Desktop* and want room for a small program or two, here is how to get two free granules. Grans 20 and 21 are unused so it is a matter of changing the GAT (Granule Allocation Table) to enable you to put programs there.

Boot up *VIP Disk-Zap* and, following the instructions in the manual, change bytes 20 and 21 of Track 17, Sector 2 to "FF." I have a one-gran boot program and a one-gran backup program on my disks and they speed things up greatly.

A word of caution. I do not know if there is more than one version of *Desktop* so you should examine grans 20 and 21 with *Desk-Zap* before modifying the disk.

*Bob Owen  
Wilmington, NC*

---

### Improved Graphics Dump

*Editor:*

For those of you with Radio Shack DMP-130 printers who are unhappy with the print options available when using *CoCo Max*, here is one solution. If you configure *CoCo Max* and request the Epson MX as the printer to be used, then it is possible to switch the DMP-130 to IBM mode and it will dump the pictures in a much more satisfactory manner. One problem is that you need to use a serial-to-parallel converter in order to use the IBM mode of the DMP-130. The advantages are great; it is possible to do a "double-size" dump and the double-strike looks a lot better.

*J. M. Perry  
Dublin, Ireland*

**RUNS ON COCO 3**  
OPERATING IN COCO 2 MODE

YOU COULD FALL IN LOVE WITH  
**AUTOTERM!**

IT TURNS YOUR COLOR COMPUTER INTO THE

**WORLD'S  
SMARTEST  
TERMINAL**

**NEW**  
DISK FILE  
TRANSFER VIA  
**XMODEM**

AND  
MOST  
LOVABLE

---

### **GOOD LOOKIN'**

---

AUTOTERM shows true upper/lower case in screen widths of 32, 40, 42, 51, or 64 characters with no split words. The width of 32 has extra large letters. Scrolling is forward, backward, and fast. Block graphics pictures are displayed automatically and can be scrolled.

The screen's top line shows operating mode, unused memory size, memory on/off, and caps-lock on/off. It also gives helpful prompts.

---

### **SWEET TALKIN'**

---

KEY-BEEP can be on/off. Unacceptable keystrokes cause a lower pitched BOP! This ERROR-BEEBOP can be on/off.

Talks to other computers with Full or Half Duplex; Baud Rate of 110, 150, 300, 600, 1200; Parity as even, odd, mark, space, none; 7 or 8 bit Word; any Stop Bits; all 128 ASCII characters; true line Break; XON/XOFF protocol; and optional line-at-a-time transmission. Able to send and receive text, block graphics, BASIC and ML programs. A 64K machine holds up to 44,000 characters (32,000 in HI-RES).

DUAL PROCESSING lets you review & edit while more data is coming in.

XMODEM for disk file transfer.

Fully supports D.C. Hayes and other intelligent modems.

Talks to your printer with any page size, margins, line spacing, split word avoidance. Embed your printer's control sequences for boldface, underlining, etc. Narrow text can be automatically spread out.

---

### **You'll also use Autoterm for simple word processing and record keeping**

---

You can display directories, delete files, transmit directly from disk, and work with files larger than memory. Easily maintain a disk copy of an entire session.

Compatible with TELEWRITER (ASCII) & other word processors.

---

### **SMOOTH WALKIN'**

---

AUTOTERM moves smoothly and quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text, download information, file it, and sign-off; then edit the received data, print it in an attractive format, and/or save it on file.

Editing is super simple with the cursor. Find strings instantly, too! Any operating parameter, such as screen width, can be altered at any time. Uncompleted commands can be cancelled.

---

### **PUTTY IN YOUR HANDS**

---

The word processor can be used to create, print, and/or save on file your personal KSMs. They let AUTOTERM act like you. For example, it can dial through your modem, sign-on, interact, perform file operations, & sign-off; an entire session without your help. KSMs can answer the phone, prompt the caller, take messages, save them, hang-up, and wait for the next call. The KSM potential is unbelievable!

---

### **NEW DISK VERSION 5 IS NOW AVAILABLE**

---

At start-up, AUTOTERM can set parameters, dial, sign-on, interact, read/write disk, sign-off, etc. Timed execution lets AUTOTERM work while you sleep or play.

Print while on line, with J&M Parallel Printer Port, Radio Shack Modem Pak or RS-232 Pak. AUTOTERM's buffering lets slow printers fall behind without losing data.

---

### **NO OTHER COMPUTER IN THE WORLD CAN MATCH YOUR COCO'S AUTOMATIC TERMINAL CAPABILITIES!**

---

**AVAILABLE IN CANADA**  
from  
**Kelly Software Distributors**  
Edmonton, Alberta

Please hire the mentally retarded. They are sincere, hard working and appreciative. *Thanks!* *Phyllis.*

## DOS in Time

Editor:

Many times in my programming efforts I need to know what type of DOS is being used. To find out what type is used so that proper pokes can be made, type `A=PEEK(30B):PRINT A`. The table below lists values.

A	DOS
19	Radio Shack Disk BASIC 1.0
20	Radio Shack Disk BASIC 1.1
29	Spectro Systems ADOS 1.01

I hope this information helps others in their programming endeavors.

*David W. Ostler  
High Point, NC*

## REQUEST HOTLINE

Editor:

It would be nice if someone would make a program to calculate electric and gas meters to determine usage to verify gas and electric company bills. Instead of using four circles to show meter dials, I would like it to input 1-12 o'clock setting to show meter dial arrows, then calculate it from the last meter taking date. By phoning the utility company, one could find out the regular date the meter was read, then use that date as the starting date to read.

*Bob Baker  
Box 254789  
Sacramento, CA 95825*

## Tired of Plain Vanilla

Editor:

Does anyone know where I can buy colored computer paper with matching envelopes?

*Dr. Hugo D. Spatz  
749 Nyack Avenue N.E.  
Port Charlotte, FL 33952*

See "Pipeline" in the November 1986 issue for information on hi-tech Stationery.

## Building the Perfect Adventure

Editor:

I am looking for an Adventure construction set for my CoCo 2. If anyone knows where I can find one, please write to me.

*Danny Cordonnier  
5003 Villa Circle  
Colorado Springs, CO 80918*

Check out "The Adventure Processor" on Page 26 in the August 1986 issue.

## Needs Telemetry System

Editor:

Does any company market hardware, transmitters and receivers for telemetry systems that could be run by the CoCo? Its use would be to monitor water pumps in a small water system. Must be FCC approved.

*Paul Wisinger  
Greenwood Town Hall  
P.O. Box 195  
Greenwood, LA 71033*

## Distaff Stats

Editor:

I play hockey on a women's team and have been assigned to do the statistics. Does anyone have a program to enable me to do the stats on my computer?

*Debbie Bechard  
3-842 Pilette Road  
Windsor, Ontario  
Canada N8Y 3B5*

## Reprinting Roger

Editor:

The past few months you have had inquiries about tape-to-disk transfers. You refer to the January 1984 issue, Page 48, Roger Schrag's "A Tape to Disk Transfer Vehicle." The January 1984 issue of RAINBOW is not available as a back issue and I cannot find a copy through various library sources. I expect others may have difficulty locating the referred article.

*Allen Hoffman  
W. Richland, WA*

You can order copies of a particular article from an out-of-print issue for \$2. You need to send us the title of the article, author and what issue the article appeared in.

In this case, however, due to popular demand, we plan to reprint Roger's article in our February 1987 issue.

## INFORMATION PLEASE

Editor:

I've been working on a boot program and haven't found a way to prevent the prompt sign from appearing. Is there any way to automatically run a program after loading from cassette?

*Jason Matheny  
1008 Audubon Parkway  
Louisville, KY 40213*

## Error Terror

Editor:

My CoCo 2 has a terrible case of I/O Errors, although I am using the standard Radio Shack CCR-81 recorder and C-20 tapes. Sometimes my programs will load without errors, while other times no programs will load even though they were saved in succession. After typing the same program several times, I would like to know if there is a poke or program to disable the I/O Error and recover the program.

*Jerry Broughton  
R.D. #1, Box 28  
Morris, PA 16938*

## The Line Starts Here

Editor:

I just purchased an Epson JX-80 printer. It has a four-color ribbon and is capable of printing in seven colors. It works great with Telewriter's method of defining and embedding printer codes right in the text. I need a color screen dump which supports this printer's superb Hi-Res graphics capabilities.

I have written to distributors of several of the major graphics editors (*Graphicom*, *CoCo Max II*, etc.) and none of them currently support the JX-80's color features (normal black works fine, however). If you have one of these printers, or plan to purchase one, please let the software companies know of your interest.

*Laura Burch  
52 Elm Street  
Newport, ME 04953*

## The ROS CoCo

Editor:

My grandfather and I were working on a remote-control car and decided to have a 64K CoCo 2 control it using commands from the computer. After soldering capacitors and resistors on a board, and hooking it up to a male and female connector, I'm not sure where to hook the connector or what commands to use. Please help.

Also, I am interested in exploring the different parameters of machine language and animated graphics using BASIC statements such as GET and PUT. I was wondering if anyone could reply and tell me how to do animated graphics or machine language programming.

*Eddy Learnard  
110 Park Avenue  
Williston Park, NY 11596*

See our three-part series on ROS (Robotic Operating System) which started in the December 1986 issue. Part 2 is on Page 153 of this issue; Part 3 will appear next month.

You may find the answers in the October 1986 Graphics issue.

## Small Business Needs

Editor:

I have yet to see a good inventory control program. I am sure the CoCo 3 can handle such a program. If I may speak for other small-business men, there is a definite need for a program that can handle the following: catalog number, page number, item description, packing, cost per pack, mark up and retail price with the number in stock. There needs to be an auto reorder point, so when a particular item goes below a certain number the program will send the items to be reordered as well as a complete inventory to the printer list, which can be printed on tape, disk or fanfold paper.

If such a program is available, I would appreciate knowing where it can be purchased.

*Henry R. Barish  
135 Madison Street  
Apt. 10  
Wellsville, NY 14895*

## BOUQUETS

Editor:

Recently I experienced crashed disks on a terminal program which I had purchased from Spectrum Projects, a RAINBOW adver-

# 500 POKES, PEEKs, 'N EXECs FOR THE TRS-80 COCO

NEVER BEFORE has this information of vital significance to a programmer been so readily available to everyone. This book will help you 'GET UNDERNEATH THE COVER' of the Color Computer and develop your own HIGH-QUALITY Basic and ML programs. SO WHY WAIT??

This 80-page book includes POKES, PEEKs and EXECs to:

- ★ Autostart your basic programs
  - ★ Disable Color Basic/ECB/Disk Basic commands like LIST, LLIST, POKE, EXEC, CSAVE(M), DEL, EDIT, TRON, TROFF, PCLEAR, DLOAD, RENUM, PRINT USING, DIR, KILL, SAVE, LOAD, MERGE, RENAME, DSKINI, BACKUP, DSKI\$, and DSKO\$.
  - ★ Disable BREAK KEY, CLEAR KEY and RESET BUTTON.
  - ★ Generate a Repeat-key.
  - ★ Transfer ROMPAKS to tape (For 64K only).
  - ★ Speed Up your programs.
  - ★ Reset, MOTOR ON/OFF from keyboard.
  - ★ Recover Basic programs lost by NEW.
  - ★ Set 23 different GRAPHIC/SEMIGRAPHIC modes
  - ★ Merge two Basic programs.
  - ★ AND MUCH MUCH MORE!!!
- COMMANDS COMPATIBLE WITH 16K/32K/64K/COLOR BASIC/ECB/DISK BASIC SYSTEMS and CoCo 1, 2, & 3.

ONLY \$16.95

All orders \$50 & above shipped by 2nd day Air UPS with no extra charge. Last minute shoppers can benefit.

**NEW!**  
SUPPLEMENT  
to  
**500 POKES,  
PEEKs 'N EXECs**  
ONLY **\$9.95**

**200** additional Pokes, Peek's 'n Execs to give you MORE PROGRAMMING POWER. Includes commands for:

- Rompak Transfer to disk
- PAINT with 65000 styles!
- Use of 40 track single/double sided drives with variable step-rates
- High-Speed Cassette Operation
- Telewriter 64<sup>®</sup>, Edtasm+<sup>®</sup> and CoCo Max<sup>®</sup> Enhancements
- Graphics Dump (for DMP printers) & Text Screen Dump
- AND MUCH MUCH MORE!
- 500 POKES, PEEKs 'N EXECs is a prerequisite

## DISK TUTORIAL

(2-Disk Package)

An indispensable tutorial for serious disk Basic/ML programmers. Gives almost everything you MUST know about the disk system. Some features:

- Learn about track/sectors/granules
- How the Directory is organized
- Useful disk utilities
- Useful ROM routines
- How to use double sided/40/80 track drives
- Information security on disk
- Insight into common disk errors
- Many Tips/Hints/Secrets you won't find elsewhere!
- And Much Much More!

CoCo 1, 2 & 3

ONLY \$36.95

**MICROCOM SOFTWARE**  
P.O. Box 214  
Fairport, N.Y. 14450  
Phone (716) 223-1477

VISA, MC., Am Ex, Check, MO. Please add \$3.00 shipping and handling (USA & CANADA, other countries \$5.00). COD add \$2.50 extra. NYS residents please add Sales Tax. Immediate shipment. Dealer inquiries invited.

## COCO GRAPHICS DESIGNER

The CoCo Graphics Designer allows you to create beautifully designed Greeting Cards, Signs and Banners for holidays, birthdays, parties, anniversaries and other occasions. Comes with a library of pre-drawn pictures. Also includes utilities which allow you to create your own character sets, borders and graphic pictures. Requires a TRS-80 COLOR COMPUTER I, II OR III OR TDP-100 with a MINIMUM OF 32K, ONE DISK DRIVE and a PRINTER compatible with DISK BASIC 1.0/1.1, ADOS 1.0/1.1 AND JDOS. Supports the following printers: EPSON RX/FX, GEMINI 10X/SG-10, NX-10, C-Itoh 8510, DMP-100/105/400/430, SEIKOSHA GP-100/250, LEGEND 808 and GORILLA BANANA.

DISK ONLY \$29.95

PICTURE DISK #1

This disk includes OVER 100 pre-drawn pictures for use with the CoCo Graphics Designer.

DISK ONLY \$14.95

## COLOR SCRIBE II THE COCO3 WORD-PROCESSOR

This superb word processor uses the 80 COLUMN display of the CoCo III and includes the following features: Justification, Headers, Footers, Pagination, OVER 20 Line Editing Commands such as Character Insert/Delete, skip over words, breaking a line and more. Comes with a comprehensive manual. Requires a 128K COCO III with Disk Drive.

ONLY \$49.95

## COCO DISK ZAPPER

Are you frustrated with crashed disks? If so, this program can save hours of labor by restoring complete or part of the information from the disk. It's indispensable!

Requires minimum 32K/64K disk system

CoCo 1, 2 & 3

ONLY \$24.95

Call Toll Free (For Orders) 1-800-654-5244 9 AM - 9 PM EST 7 days a week

Except NY. For information, technical information, NY orders & after-hours 1-716-223-1477

tiser. When I wrote them explaining my problem and inquiring about the cost of replacement, I received by return mail two replacement disks and a letter of apology for my inconvenience from Paul Rosen. Companies like Spectrum deserve all possible support.

Lawrence Gibbs  
Cochranville, PA

### Plus Promptness

Editor:

This is a letter of praise for Computer Plus. I got my DMP-105 printer in eight days after mailing my check to them. The toll-free number is nice too, since I was able to find out beforehand just how much the postage and handling was to be.

Jerome Bigge  
Muskegon, MI

### Some Exceptions

Editor:

This is to inform all users of Speech Systems software and/or hardware products that, due to the extensive care we take with the design and production of our offerings to the CoCo Community, all of our products (save three) will execute unmodified on the CoCo 3.

The first exception is E.A.R.S. That, too, will run if you type EXEC &HE010 and press ENTER before the subsequent CLOADM and EXEC of EARS.BIN.

The second exception is CoCo MIDI. Disregard the following if you're using a Y-cable. The following is for multipack users. The disk controller must be in Slot 4. The CoCo MIDI pack must be in Slot 3. Turn on the computer and type:

```
POKE 65407,51:EXEC57360
```

The third exception is for *Super Voice*. The Super Voice Speech Synthesizer works perfectly in the CoCo 3 as outlined in the manual. However, the CoCo 1 and CoCo 2 would let you get sloppy and not force you to CLEAR100,&H5FFF to LOADM"TRNS LATE" or CLEAR100,&H57FF to LOADM"SUPERTOK" even though you are supposed to. The CoCo 3 forces you to do this. Failure to do this will not allow you to load the program.

Thanks to all of you for your continued support; and thank you too, RAINBOW, for being the best friend the CoCo ever had!

Randy H. Spector  
Vice President, Speech Systems  
Batavia, IL

### BULLETIN BOARD SYSEMS

Editor:

The Tandy Color SIG CoCo TBBS of the South Bay Color Computer User's Group has a new phone number which is Voice (408) 923-2967, Tandy CoCo BBS (408) 244-8250. We want this BBS to be one of the best CoCo/recreational boards in California. The board is running several CoCo sub-boards and many various discussion/entertainment boards. Each of the CoCo boards

has its own up/download ability corresponding to the topic of the board (example: graphics, music, general, games). Check it out and please consider joining our CoCo club, the South Bay CoCo User's Group of the Santa Clara Valley.

John Say  
San Jose, CA

• The CoCo Communications newsletter is going strong. This newsletter has a list of 24-hour CoCo BBSs throughout the world. Also has reviews on BBS software, modems, terminal software, a review on 24-hour BBS in each state each month. There will also be a mailbag for people to leave messages in or ask questions about BBS hardware, software, etc. The cost is \$2. The new address is:

Steve Slack  
6 Saddle Circle  
Newark, DE 19711

• Fast Trackin' BBS has added Run Length Encoded graphics (RLE) online for the callers' viewing pleasure. (SysOps interested call BBS for information.) These graphics files can be viewed using Mike Ward's RLETRM or CIS Vidtex. There are plenty of other graphics online, digitized and drawn by Mike Trammell of New York. There are also games, communications, utilities and music files, plus a Stuff file that can be added to for some helpful hints. The 1.08-Meg BBS is still running on the reliable backup MODEM II until service can be found for the 1200 baud Data Phone.

The BBS operates on an open format. Callers must leave their name, address and phone number before being validated to use the BBS. After validation, within 24 hours if all information has been left, the callers will be able to retrieve files. All menus can be viewed beforehand. The BBS number is (502) 365-7771 and operates 24 hours a day.

David Guess  
Princeton, KY

• To access Omni-Com BBS call (601) 497-OMNI or (601) 875-8688. It runs 24 hours, 300/1200 baud, 7-bit, even, 1 stop.

Omni-Com Data Telecommunications  
Gautier, MS

• If you are looking for a BBS system loaded with CoCo software, Access-80 is the board to call. It has many special interest areas (SIAs), one of which is dedicated to the CoCo. Call (603) 888-6999, 24 hours a day, 300/1200 baud.

Bruce Bureson  
Nashua, NH

• I have a 64K CoCo with dual disk drives, a printer and a DCM-5 modem, and I would like to get in touch with a BBS near or in the Belle-Mead area. Anyone interested, please write me soon.

Scott Enman  
88 Steinmetz Road  
Belle-Mead, NJ 08502

• I am running a BBS at (201) 382-8252 called The Final Frontier. Callers can participate in the multi-player interactive *Star Trek* game. I also have a lot of *Star Trek* downloads.

Derrick  
Colonia, NJ

• The Mystical Mansion of Madgarr BBS hours are 10:30 p.m. to 6 a.m. and from 9 a.m. to 2 p.m. EST. It runs on 300 baud only. Call (304) 287-2607. All users are validated and real names are not necessary.

Mark Richards  
Carolina, WV

THE RAINBOW welcomes letters to the editors. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or space.

Letters to the editors may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS. Be sure to include your complete name and address.

## UTILITIES/BOOKS

### UTILITY ROUTINES for the TANDY & TRS-80 COCO (Vol 1)

This powerful book for Basic and ML Programmers, includes program explanation, memory requirements and an annotated source listing for the utility routines given below. These routines if bought individually will cost you HUNDREDS OF DOLLARS.

These are 100% Position Independent ML Utilities and require no ML programming knowledge.

**COMMAND KEYS:** Access commands with 2 keystrokes  
**CURSOR STYLES:** Over 65000 cursor styles  
**ERROR SKIP:** 'ONERR GOTO' for Basic Programs  
**FULL LENGTH ERRORS:** Get real word error messages  
**KEY CLICKER:** Ensure Key input accuracy  
**REPEAT KEY:** Repeat ANY key  
**REVERSE VIDEO (Green & Red):** Eliminate eye-strain  
**SPOOLER:** Don't wait for those long printouts  
**SUPER SCROLLER:** Save/view scrolled lines  
**TAPE-TO-DISK:** Copy Basic and ML programs  
**AND MUCH MUCH MORE!!!**

For 16K/32K/64K Cassette or Disk Systems, CoCo 1, 2 & 3

**BOOK \$19.95**

THESE ROUTINES (READY-TO-RUN) ON CAS/DISK:

**\$24.95**

BOTH BOOK AND CASSETTE or DISK:

**\$36.95**

### UTILITY ROUTINES (VOLUME II)

(Disk Only)

Includes 20 oft-used utilities such as:

- PAINT with 65000 styles
- Add SUPERSCRIPTS to your OMP printer
- Design your own commands!
- Programming Clock
- Fast Sort for Basic Strings
- Create a character set for your DMP printer
- Find/Replace phrases in your Basic Program
- Let the computer locate your errors!
- CoCo Calculator
- Super EDITing for Basic Programs
- Automatic Directory Backup
- And much much more!

64K DISK ONLY

**\$29.95**

## WE HAVE ALL THAT YOU NEED TO SUCCEED

### SUPER TAPE/DISK TRANSFER

- Disk-to-Disk Copy (1 - 3 passes)
- Tape-to-Disk Copy
- Tape-to-Disk Automatic Relocate
- Disk-to-Tape Copy
- Tape-to-Tape Copy

Copies Basic/ML programs and DATA files.  
 CoCo 1, 2 & 3 32K Disk System  
 (Disk to Disk Copy requires 64 K)

DISK ONLY  
**\$24.95**

### UTILITY BONANZA I

Includes 20 best-selected utilities:

- 40K Disk Basic ● Disk Cataloger
- Super Tape-to-Disk Copy (with Automatic Relocate)
- Disk-to-Tape Copy
- LList Enhancer (with page numbering!)
- Graphics Typesetter (two text sizes!)
- LARGE DMP Graphics Dump
- X-Ref for Basic Programs
- Hidden 32K (Use the "hidden" 32K from your 64K CoCo)
- Basic Stepper (Super Debugger!)
- RAM Disk (for Cassette & Disk Users)
- Single Key Printer Text Screen Dump  
 AND MUCH, MUCH MORE!!!

Most programs compatible with CoCo 3

DISK (64K Req.) ONLY **\$29.95**

### "MUST" BOOKS

**UNRAVELLED SERIES:** These 3 books provide a complete annotated listing of the BASIC/ECB and DISK ROMs.

COLOR BASIC UNRAVELLED: \$19.95

EXTENDED BASIC UNRAVELLED: \$19.95

DISK BASIC UNRAVELLED: \$19.95

ALL 3 UNRAVELLED BOOKS: \$49.95

RAINBOW GUIDE TO OS-9 (Book): \$18.95

RAINBOW GUIDE TO OS-9 (2 Disks): \$29.00

BASIC PROGRAMMING TRICKS: Tips and tricks

for Basic Programmers. Only \$14.95

CoCo 3 SECRETS REVEALED: \$16.95

### OTHER SOFTWARE . . .

Telewriter-64 (Cas) \$47.95 (Dsk) 57.95

Teleform: Mail Merge for TW-64® 19.95

Telepatch (Dsk) 19.95

Telepatch II 29.95

CoCo Max (Cas) 67.95

CoCo Max II (Dsk) 77.95

CoCo Max Upgrade (Dsk) 18.95

Autoterm (Cas) 36.95

(Latest Version) (Dsk) 46.95

Graphicom II 22.95

**SPIT 'N IMAGE:** Makes a mirror image (BACKUP) of ANY disk, even protected ones. Will also initialize and BACKUP in one pass. ONLY **\$32.95**

**COCO UTIL II (Latest Version):** Transfer CoCo Disk files to IBM compatible computer. Transfer MS-DOS files to CoCo. CoCo 1, 2 & 3 ONLY **\$36.95**

**DISK ANTI-PIRATE:** Best copy-protection program for disk Basic and ML programs. CoCo 1, 2 & 3 ONLY **\$59.95**

**HIDE-A-BASIC 1.1:** Best copy-protection program for Cassette Basic programs. CoCo 1, 2 & 3 ONLY **\$24.95**

### CABLES/HARDWARE

**HAYES COMPATIBLE MODEM: \$129.95**

**MODEM CABLE: \$19.95**

**UNIVERSAL VIDEO DRIVER:** Use your monochrome or color monitor with your CoCo (ALL CoCos). Includes audio connection. Easy installation - no soldering. ONLY **\$29.95**

**INTRONICS EPROM PROGRAMMER:** Best EPROM Programmer for the CoCo. Lowest Price Anywhere - **\$137.95.**

**RS232 Y CABLE:** Hook 2 devices to the serial port. ONLY **\$18.95.**

**3-POSITION SWITCHER:**

Select any one of three RS232 devices (printers/modems) from the serial port. ONLY **\$37.95**

**Y CABLE:** Use your Disk System with CoCo Max, DS69, etc. ONLY **\$24.95**

**SERIAL TO PARALLEL INTERFACE:** With 6 switch selectable baud rates (300-9600). Comes with all cables. **\$39.95**

**MICROCOM SOFTWARE**  
 P.O. Box 214

## We Keep On Keeping On

Probably the number one subject of letters to RAINBOW these last several weeks has concerned the CoCo 3 and what programs will and will not run on it. First of all, I want you to know that we're doing as much as we can to get as much accurate information together as possible and to get it to you.

In his column this month, Jim Reed addresses a few of the problems and is giving the most-asked questions some answers. Our Q-and-A columns are trying to address things, as well. I'll try not to duplicate those letters here.

While we'll certainly keep on keeping on in this regard, I do think that a couple of observations are in order.

The first is, of course, that those people who "followed the rules" for third-party software really don't have a problem. It is the people who did not who may have some incompatibility problems. Some of these firms will provide fixes; we will attempt to find some fixes when we can and, as always, fixes may well come in from other members of the CoCo Community. When they do, we'll pass them on to you.

The second issue is a little more philosophical, however.

Let's consider this: Many of the programs written for the CoCo and CoCo 2 were "gee whiz" simply because they did something really special that, now, you might take for granted with the CoCo 3. My best example is *Telewriter*. I remember when it first came out and we sat down and simply "gee-whizzed" at the high resolution screen. This, remember, was in the days long before 80-column cards and the like.

Other programs came along, like *Elite-Word*, and all of them did the same thing. So did a bunch of database managers, telecommunication packages and the like. Before long, it was pretty well-established that a Hi-Res screen was necessary for the more "business-oriented" functions of the Color Computer. In the last two years, no one would have seriously considered marketing a word processor, for instance, that did not have a high resolution screen display.

But when Dick White and I first saw *Telewriter*, the first question in our minds was "how did they *do* that?" Dick figured it out (he knows a lot more about programming than I do). All I did was use it.

My point, however, was that it was done with programming. And that programming required a great deal of program space. Even in machine language, it had to make the CoCo run slower. It also used up programming space that might have been devoted to more features (although I have always been satisfied with the features available in *Telewriter*, myself).

# Printer Interface Package

**\$239.95**

**Compatible with the new COCO3**

**Seikosha SP-1000A Printer**

**Metric Industries Model 104P Interface with Modem Switch**

This package includes the SP-1000A Printer, a true parallel printer, not the SP-1000AS which is a serial printer that cannot operate at the standard Color Computer Baud Rate of 600.

**Free shipping**

- Graphics
- Multiple Copies
- Variable Line Spacing
- Paper Width
- Pin and friction — 4" to 10"
- Centronics parallel
- Impact dot matrix method, bi-directional in logic seeking, uni-directional in graphic printing
- 100 (Draft mode), 20 cps (Near Letter Quality) print speed, with reduced noise level
- Pin-feed or friction-feed.
- Automatic paper loading function
- True descenders
- A variety of functions including Under line, Bold print, Double striking
- A variety of print character sets including Pica, Elite, Italics, Super/Subscripts, Proportional, Elongated, Condensed, and Italic Super/Subscripts.
- Standard 1.5K buffer

**Printer is covered with a two-year warranty.**

**Model 101 Interface \$39.95**

**Model 102 Switcher \$35.95**

**The Model 104 Deluxe Interface \$51.95**

**Cassette Label Program \$6.95**

The Model 101 is a serial to parallel interface intended for use with a COCO and any Centronics compatible parallel printer. The 101 has 6 switch selectable baud rates (300-9600). The 101 is only 4" x 2" x 1" and comes with all cables and connectors for your computer and printer.

The Model 102 has 3 switch positions that allow you to switch your computer's serial output between 3 different devices (modem, printers or another computer). The 102 has color coded lights that indicate the switch position. These lights also act as power indicators to let you know your computer is on. Supplied with the 102 are color coded labels that can be applied to your accessories. The 102 has a heavy gauge anodized aluminum cabinet with non-slip rubber feet.

The Model 104 is a serial to parallel interface like the Model 101 but it has the added feature of a serial port (sometimes referred to as a modem switch). This feature allows the connection of a parallel printer and any serial device (modem, serial printer etc.) to your computer. You may then select either output, serial or parallel, with the flip of a switch. The 104 is only 4.5" x 2.5" x 1.25" and comes with all cables and connectors for your computer. You supply the serial cable for your modem or other serial device.

**New Version 1.3 Tape transferrable to disk. Now save and load Labels from tape or disk.**

This fancy printing utility prints 5 lines of information on pinfeed cassette labels. "Cassette Label" is menu driven and is very easy to use. It uses the special features of your printer for standard, expanded or condensed characters. Each line of text is automatically centered. Before the label is printed, it is shown on your CRT — enabling you to make changes if you like — then print 1, 2 or 100 labels. The program comes on tape and it is supplied with 24 labels to get you started. 16K ECB required.

## Other Quality Items

High Quality 5 Screw Shell C-10 Cassette Tapes \$7.50 per dozen

Hard Plastic Storage Boxes for Cassette Tapes \$2.50 per dozen

Pin Feed Cassette Labels  
White \$3.00 per 100  
Colors \$3.60 per 100 (Red, Blue, Yellow or Tan)

Ribbons for your SP-1000 series Seikosha printers \$8.00

The Model 101, 102, and 104 work with any COCO including COCO3, any level basic and any memory size. These products are covered by a **1 year warranty**.

The 101 and 104 require power in order to operate. Most printers can supply power to your interface. Star, Radio Shack, and Okidata are just a few that do. Epson and Seikosha do not. The interfaces can also be powered by an AC adapter (Radio Shack Model 273-1431 plugs into all models). If you require a power supply, add a "P" to the Model number and \$5.00 to the price (Model 101P \$44.95, MODEL 104P \$56.95).

## Ordering information

Free shipping and insurance in the United States (except Alaska and Hawaii) on all orders over \$50.00. Please add \$2.50 for shipping and handling on orders under \$50.00.

Ohio residents add 5.5% sales tax.

Call (513) 677-0796 and use VISA, MASTERCARD or C.O.D. or send check or money order to:

**Call for prices on the SP-1000A and other Seikosha printers.**

**Metric Industries Inc.**  
P.O. Box 42396  
Cincinnati, Ohio 45242

The CoCo 3's high resolution modes eliminate the need to "program in" a high resolution screen. This means it speeds up a program (because the CoCo 3 does not have to use software to maintain the screen) and it allows more "space" for more features.

The same goes for most of the "artifact color" programs. Heck, you don't need artifact colors when you have 16 regular colors available at a time in BASIC. But I remember when Mark Data Products introduced its first animated graphics Adventure games. They, too, set a standard. CoCo 3 has some problems with the artifact colors because it doesn't really need them. It has real colors.

I guess my point is that there are two ways to look at CoCo 3 and its "downward compatibility." The first is that there are, indeed, some things that do not (will not) work as they did before. The other way is that more and better things will come out of the new machine.

Yes, I know it also means that you might be in a position to buy some new software. But, in truth, much of what you now use will run on the CoCo 3. That which does not will probably have some "better" version available in the next few months or so.

I can see there is room for some disagreement here. It is certainly possible to take the position that "I have bought all the software I want to buy." If that is so, then sure, there may be a problem. But, I, personally, have always seen a computer as an evolving

system. When something decidedly "better" comes along, I want it. It improves both my enjoyment and productivity.

Here is an example, albeit extreme. When the laser printers came out, we went out and bought one. Before, we had been doing listings in double-strike and "emphasis" mode to make sure we had good, clear copy. The lasers changed all of that. Not only did we get good, clear and black copy, we also got it, seemingly, hundreds of times faster. But we already had a printer, right? Why change? Because of simple productivity.

***"I, personally, have always seen a computer as an evolving system. When something decidedly 'better' comes along, I want it."***

I am not advocating you go out and buy a laser printer (unless you do very heavy printing on your CoCo, as we do). What I am saying is that we saw something that would work better and we got it.

In what are, admittedly, the very early stages of the CoCo 3, things are kind of up in the air right now. No one, even here at the RAINBOW, has every

version of every program. But we are working diligently to test things as we can. We'll help as much as we can.

But, remember, too, we have a magazine to put out and new programs to test as well. Of course, we are working on all of this, and will keep on keeping on. One of the reasons we will is because we owe it to you to do as much as we can. And the other reason is that it is just plain fun.

I happen to think that is the best part of it all. Whether you have a CoCo, a CoCo 2 or a CoCo 3, computing is fun. And it is going to be more and more fun as the years go on.

I do want to thank all of you who have written to comment on the wrapper which we now use to protect THE RAINBOW in its venture through the postal system (or should I say systems, since many countries are involved). We've been wanting to do this for a long time and our printer has finally been able to get the equipment to do it.

I am also gratified to see how many of you took the time to drop me a line to say something about the subscription offer packed in the CoCo 3 boxes. Most of you said that you already have a subscription, but that it was "nice to see" this happening.

A suggestion if I may: Give that little envelope to a friend. Anyone can use it! And we're delighted to get those envelopes!

A happy CoCo New Year to each of you!

— Lonnie Falk

# If You Pay Taxes You Need Coco-Accountant

All our software is CoCo 3 Compatible

"It's the most useful piece of software I own."

That's what we hear again and again from folks who buy Coco-Accountant II. This 32/64K single-entry accounting system for the home and small business is all you need to manage your finances and give you the information you need at tax time.

We wrote the original version for ourselves two years ago because we wanted to know three things: Where did the money come from, where did it go, and what can we deduct from our taxes?

As it turned out, we liked it better than anything else on the market, so we decided to sell it. And we've been improving it ever since.

People say they like it because it's easy to use. Just spend a few minutes each month entering your data: checks, cash outlays, credit card expenses or income. In any order. CoCo-Accountant takes the whole mess and makes sense out of it. Here's what it does:

- ◆ Lists and totals entries by month, offsetting income against expenses.
- ◆ Lists and totals entries by account, for a month or the whole year.
- ◆ Lists and totals entries by payee or income source, for a month or the whole year.

◆ Provides a year-to-date summary by account.

◆ Prints a spreadsheet showing activity by account and month for the whole year (seeing this one is believing).

◆ Flags deductible expenses.

◆ Flags expenses subject to sales tax and figures out how much sales tax you paid!

◆ Lets you define up to 48 accounts (in 64K version).

◆ Takes 900 entries in 64K version, 500 in 32K disk and 450 in 32K tape.

◆ Sorts entries by date.

◆ Stores your data to tape or disk.

You can use CoCo Accountant as a simple check-book register or make it into a comprehensive home accounting package. Our customers tell us they use it in the home, at school, for their clubs, churches and small businesses. In fact, they use it in ways we never dreamed of!

CoCo-Accountant II is so easy to use and flexible that you'll be delighted. So stop shoving all those records in a shoe box and join the computer age!

The price of Coco-Accountant II is \$34.95. Please be sure to tell us your memory requirements and whether you want tape or disk.

## Thoroughbred, Harness, Greyhound

HORSE RACES

HARNESS RACES

DOG RACES

Use your **Color Computer** to improve your performance at the track! These 16K programs for **Thoroughbred, Harness** and **Greyhound** racing rank the horses or dogs in each race quickly and easily, even if you've never handicapped before. All the information you need is readily available from the Racing form, harness or dog track program. We even provide diagrams showing you where to find each item!

**Thoroughbred factors** include speed, distance, past performance, weight, class, jockey's record, beaten favorite and post position. **Harness factors** include speed, post position, driver's record, breaking tendencies, class, park-

ed-out signs and beaten favorite. **Greyhound factors** include speed, past performance, maneuvering ability, favorite box, class, kennel record, beaten favorite and breaking ability.

We include complete instruction and a wagering guide that tells you which races to bet and which to avoid—one of the real secrets of good handicapping. You can buy a more expensive handicapper, but we don't think you can buy a better one! **Thoroughbred, Harness or Greyhound Handicapper**, \$34.95 each on tape or disk. Any two for \$54.95 or all three for \$74.95.

Federal Hill Software 8134 Scotts Level Rd. Baltimore, Md. 21208

## Identifying the CoCo 3 "challenge" . . .

. . . and working together to meet it!

This is our annual beginners issue and we have more beginners than ever this year. Even the "old soldiers" are getting into "new beginnings" as the CoCo Community assesses the Color Computer 3 and what we are going to do with it.

With more memory, 80 columns, real lowercase and much higher resolution graphics, there's a new wave of excitement. But, there's also what the uninitiated might mistakenly regard as pessimism, the talk about what the new CoCo 3 *won't do*. Tandy did a much better job with respect to preserving compatibility than many CoCo veterans were expecting, and deserve high marks for doing so; still, old timers will try out dozens of programs, most of which run fine and without incident, and then, when they find one that won't work right on the new machine, you'd think the world was at an end. Well, you have to read between the lines of "bellyaching" to recognize "the challenge." Yessir, there's nothing a Radio Shack junkie likes better than the challenge, and opportunity, offered by something that needs a bit of fixing.

I am firmly convinced that the CoCo Community will meet the CoCo 3 challenges that lie ahead, and "getting there" will be half the fun. You can rest assured that, as the rough edges and problem areas are identified and fixes or patches or rewrites become available, we'll report it all to you as soon as we can. For instance, in this issue, Dick White reports that older disk controllers (those requiring 12 volts) won't work with the CoCo 3, at least without some modification — not big news since they wouldn't work with the CoCo 2 either. Perhaps the easiest way to get 12 volts to the controller is to use a Multi-Pak Interface, but *these units themselves* need a minor upgrade to work with the CoCo 3. Not to worry, the cost of parts is small and our article "A PAL for Your CoCo 3" explains how to do this upgrade yourself.

In "Turn of the Screw," Tony DiStefano discusses the different types of monitors, since the CoCo 3 needs an RGB analog monitor for best results. In "CoCo Consultations," Marty Goodman discusses why PMODE4 artifact colors don't work on RGB analog monitors. Roger Bouchard says those with monochrome monitors will want to kill the color burst for greater clarity: Use POKE &HE033, PEEK (&HE033) OR &H10 for the 32-column mode, and replace the &HE033 address above with &HE03C for 40 columns or &HE045 for 80-column mode. If the screen then looks a bit dim, try CLS 5 to brighten things up. Richard Esposito informs us that no provision was made under BASIC for saving the new CoCo 3 Hi-Res screens to disk, but then tells us how in "Doctor ASCII."

In his column, Bill Barden says *Color Disk EDTASM* works just fine, almost. In our letters section, Speech Systems' Randy Spector give a rundown on that company's products and what to do to fix the three that need patching. Look for similar reports from others in upcoming issues. Incidentally, I hear that OS-9 Level II should begin appearing in the stores by the time you see this, and that the 1,100-page manual has been the holdup.

While some CoCo programs may require major rewrites, many just need a bit of modification. For instance, some VIP programs appear to work while other versions of the same program have problems on the CoCo 3. Marty has discovered that the memory test that runs at bootup of *VIP Writer* writes over the top 256 bytes of memory on the CoCo 3 (\$FE00-\$FEFF). The test must be made to stay out of this region to avoid "crashing." If you can use a disk zapper, try changing the \$FF00 at \$6B17 to \$FE00, though the fix may vary from version to version.

Similar problems affect Radio Shack's *Ghana Bwana*, *Desert Rider*, *One-On-One* and *Pitfall II*, but these are now patched and they run in full color, too. Look for these longer fixes to be posted soon in our Delphi CoCo Sig and we'll include them along with assembled notes, such as the discovery that Radio Shack's Sound/Speech Program Pak won't run right at double-speed, in a "round up" of fixes in a future issue of RAINBOW. At this writing (mid-November), the information is just beginning to come in.

To stay abreast of the latest CoCo 3 news, and to learn how to get the most from your present system, or that bargain-priced CoCo 2 you just got for Christmas, or that old gray workhorse with the paint half rubbed off, why not make this a "beginning" of your own, by joining the tens of thousands who take advantage of an annual subscription to keep following THE RAINBOW.

— Jim Reed

# The Ultimate Color Computer

Enhancements  
for Productivity  
from HJL Products

*★ Now at all-time  
Low prices!*

**Now available for all models, including CoCo 3**

To achieve maximum productivity with your Color Computer, you have to make it as easy as possible to get information into and out of the system.

This is why we developed the HJL family of high-performance enhancements for ALL MODELS of the Color Computer.

### The Keyboard - \$79.95

The overwhelming favorite of serious Color Computer users worldwide, the HJL-57 keyboard has the smooth, consistent feel and reliability you need for maximum speed with minimum input errors. Includes 4 Function Keys and sample function key program. Installs in just a few minutes with no soldering.

### The Numeric Keypad - \$89.95

The NumberJack is a self-contained, cable-connected keypad for heavy-duty number-crunchers. Besides the number keys, it has all the cursors, symbols and math keys, including auto-shifted (one-touch) ADD and MULTIPLY. Comes complete with 3-foot cable and all necessary connectors for quick and easy installation without soldering.

### The Monitor Adapter - \$25.95

This universal driver works with all monochrome monitors, and is easily installed without clips, jumpers or soldering (except in some later CoCo 2s with soldered-in video chips). Here's crisp, clear, flicker-free monitor output with all the reliability you've come to expect from HJL Products.

### The Monitor - \$89.95

The GoldStar high-resolution amber monitor brings you the monochrome display that's preferred by most computer professionals today. Once you've used it you'll never connect your computer to a TV set again. The 12-inch diagonal CRT has an etched non-glare faceplate. (Requires adapter sold above)

### The BASIC Utility - \$26.95

Quick Basic Plus, a high-performance programming utility, can be used with any color computer that has four function keys. 26 pre-defined BASIC statements, 10 user-defined macros at a time (you can save as many sets of macros as you like), automatic line-numbering, word wrap, global search,

and instant screen dump to printer, make this software the BASIC programmer's dream come true. Comes with re-legendable 3-way reference chart. Specify disk or cassette.

### The HJL Warranty

Every HJL product comes with a full, one-year warranty and the exclusive HJL 15-day unconditional guarantee (except software).

### Pick a Pair & Save 15%

Now, for a limited time, we'll give you 15% off the price of any two or more products shown here. Just mention this ad when you order.

### SHOWCASE YOUR BEST!

You are invited to nominate original work for inclusion in upcoming showings of "CoCo Gallery." Share your creations with the CoCo Community!

Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also, *please* include several facts about yourself, the more the better.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere. A digitized copy of a picture that appears in a book or magazine is *not* an original work.

We will award a first prize of \$25, a second prize of \$15 and a third prize of \$10. Honorable mentions will also be given.

Jody Doyle, Curator

Send your entry on either tape or disk to:  
CoCo Gallery  
THE RAINBOW

Prospect, KY 40059  
Attn: Jody Doyle

Here's a clever program to display all 64 colors available on the CoCo 3 onscreen at the same time

# Color Chart for the CoCo 3

By Rick Adams and Dale Lear

One of the first things new Color Computer 3 users want to do is explore the greatly expanded selection of colors available. Frantically, they flip through the pages of the manual looking for a color chart, or a list of the color codes in numerical order with descriptions of each.

Alas, all that can be found is Sample Program 23 (which shows the colors, eight at a time), and a "color chart" on Page 295 that invites you to run the sample program and "fill in the blanks."

Until now, with the eight colors available on the Color Computer 1 and 2, there has been little ambiguity involved in interpreting the colors. There is no way, other than with a severely mis-adjusted color TV set, or a color-blind observer, that the color red would be mistaken for the color blue, for example.

With the 64 colors now available on the Color Computer 3, however, an element of ambiguity has been introduced. With 64 colors to choose from, there is not only red, there is also light red, dark red, orange-red, red-orange, purplish-red, magenta-red, red-ma-

*Rick Adams is a systems programmer for a company that develops 68000-based systems software. In addition to writing games, he likes science fiction and is the author of Radio Shack's Temple of ROM. Rick lives in Rohnert Park, California.*

*Dale Lear owns Dale Lear Software and makes his living developing programs for the Color Computer. He has authored games and other software such as Double Back, Baseball, TSEDIT, TSWORD and D.L. LOGO. Dale, his wife, Laurel, and their six children live in Petaluma, California.*

genta, etc. You get the idea. With so many color shades, each perhaps only slightly different from its neighbor, an element of subjectivity creeps in. As we put it: "One person's light magenta is another's pink." Also, the interpretation of the colors by the video hardware in various TVs may differ due to the adjustment of the tint and color controls, the bandwidth of the TV and many other factors.

So, we suspect that Tandy's "do-it-yourself" color chart was produced to avoid forty zillion phone calls from frantic users wanting to know, "Why does the CoCo 3 color chart in the manual say that Color Code 49 is light cyan, whereas on my TV it is pale blue?"

Don't worry, we have a solution for you. Tandy's Sample Program 23 is 44 lines of BASIC code, and shows eight colors at a time. Our version is 26 lines long (if you don't enter the comments), and shows all 64 colors on the screen at once!

Now, we can almost see some of you scratching your heads at this point, and thinking, "Now wait a minute. I know the CoCo 3 is a great machine, but I thought that only 16 colors were available at any one time." Yes, that's true. So, how is it

that we can go right ahead and break the rules? The answer is simple: We cheat.

Down at the bottom of the BASIC program listing are a number of DATA statements, containing values that are poked into memory to load a short machine language program. This short program, for which we have provided a separate assembler listing, switches the

# The Amazing A-BUS

**NEW**

An A-BUS system with two Motherboards  
A-BUS adapter in foreground

The A-BUS system works with the original CoCo,  
the CoCo 2 and the CoCo 3.

## Plug into the future

With the A-BUS you can plug your PC (IBM, Apple, TRS-80) into a future of exciting new applications in the fields of control, monitoring, automation, sensing, robotics, etc.

Alpha's modular A-BUS offers a proven method to build your "custom" system today. Tomorrow, when you are ready to take another step, you will be able to add more functions. This is ideal for first time experimenting and teaching.

A-BUS control can be entirely done in simple BASIC or Pascal, and no knowledge of electronics is required!

An A-BUS system consists of the A-BUS adapter plugged into your computer and a cable to connect the Adapter to 1 or 2 A-BUS cards. The same cable will also fit an A-BUS Motherboard for expansion up to 25 cards in any combination.

The A-BUS is backed by Alpha's continuing support (our 11th year, 50000 customers in over 60 countries).

The complete set of A-BUS User's Manuals is available for \$10.

### About the A-BUS system:

- All the A-BUS cards are very easy to use with any language that can read or write to a Port or Memory. In BASIC, use INP and OUT (or PEEK and POKE with Apples and Tandy Color Computers)
- They are all compatible with each other. You can mix and match up to 25 cards to fit your application. Card addresses are easily set with jumpers.
- A-BUS cards are shipped with power supplies (except PD-123) and detailed manuals (including schematics and programming examples).

#### Relay Card

RE-140: \$129

Includes eight industrial relays. (3 amp contacts. SPST) individually controlled and latched. 8 LED's show status. Easy to use (OUT or POKE in BASIC). Card address is jumper selectable.

#### Reed Relay Card

RE-156: \$99

Same features as above, but uses 8 Reed Relays to switch low level signals (20mA max). Use as a channel selector, solid state relay driver, etc.

#### Analog Input Card

AD-142: \$129

Eight analog inputs. 0 to +5V range can be expanded to 100V by adding a resistor, 8 bit resolution (20mV). Conversion time 120us. Perfect to measure voltage, temperature, light levels, pressure, etc. Very easy to use.

#### 12 Bit A/D Converter

AN-146: \$139

This analog to digital converter is accurate to .025%. Input range is -4V to +4V. Resolution: 1 millivolt. The on board amplifier boosts signals up to 50 times to read microvolts. Conversion time is 130ms. Ideal for thermocouple, strain gauge, etc. 1 channel. (Expand to 8 channels using the RE-156 card).

#### Digital Input Card

IN-141: \$59

The eight inputs are optically isolated, so it's safe and easy to connect any "on/off" devices, such as switches, thermostats, alarm loops, etc. to your computer. To read the eight inputs, simply use BASIC INP (or PEEK).

#### 24 Line TTL I/O

DG-148: \$65

Connect 24 input or output signals (switches or any TTL device) to your computer. The card can be set for: input, latched output, strobed output, strobed input, and/or bidirectional strobed I/O. Uses the 8255A chip.

#### Clock with Alarm

CL-144: \$89

Powerful clock/calendar with: battery backup for Time, Date and Alarm setting (time and date); built in alarm relay, led and buzzer; timing to 1/100 second. Easy to use decimal format. Lithium battery included.

#### Touch Tone® Decoder

PH-145: \$79

Each tone is converted into a number which is stored on the board. Simply read the number with INP or POKE. Use for remote control projects, etc.

#### A-BUS Prototyping Card

PR-152: \$15

3½ by 4½ in. with power and ground bus. Fits up to 10 I.C.s

ST-143

CL-144

RE-140

IN-141

AD-142

### Smart Stepper Controller SC-149: \$299

World's finest stepper controller. On board microprocessor controls 4 motors simultaneously. Incredibly, it accepts plain English commands like "Move arm 10.2 inches left". Many complex sequences can be defined as "macros" and stored in the on board memory. For each axis, you can control: coordinate (relative or absolute), raming, speed, step type (half, full, wave), scale factor, units, holding power, etc. Many inputs: 8 limit & "wait until" switches, panic button, etc. On the fly reporting of position, speed, etc. On board drivers (350mA) for small steppers (MO-103). Send for SC-149 flyer.

### Remote Control Keypad Option RC-121: \$49

To control the 4 motors directly, and "teach" sequences of motions.

### Power Driver Board Option PD-123: \$89

Boost controller drive to 5 amps per phase. For two motors (eight drivers).

### Breakout Board Option BB-122: \$19

For easy connection of 2 motors. 3 ft. cable ends with screw terminal board.

### Stepper Motor Driver ST-143: \$79

Stepper motors are the ultimate in motion control. The special package (below) includes everything you need to get familiar with them. Each card drives two stepper motors (12V, bidirectional, 4 phase, 350mA per phase).  
**Special Package: 2 motors (MO-103) + ST-143: PA-181: \$99**

### Stepper Motors MO-103: \$15 or 4 for \$39

Pancake type, 2¼" dia. ¼" shaft. 7.5°/step, 4 phase bidirectional, 300 step/sec. 12V, 36 ohm, bipolar, 5 oz-in torque. same as Airpax K82701-P2.

### Current Developments

Intelligent Voice Synthesizer, 14 Bit Analog to Digital converter, 4 Channel Digital to Analog converter, Counter Timer, Voice Recognition.

### A-BUS Adapters for:

IBM PC, XT, AT and compatibles. Uses one short slot.	AR-133...\$69
Tandy 1000, 1000 EX & SX, 1200, 3000. Uses one short slot.	AR-133...\$69
Apple II, II+, IIe. Uses any slot.	AR-134...\$49
TRS-80 Model 102, 200. Plugs into 40 pin "system bus"	AR-136...\$69
Model 100. Uses 40 pin socket (Socket is duplicated on adapter).	AR-135...\$69
TRS-80 Mod 3, 4, 4 D. Fits 50 pin bus. (With hard disk, use Y-cable).	AR-132...\$49
TRS-80 Model 4P. Includes extra cable. (50 pin bus is recessed).	AR-137...\$62
TRS-80 Model I. Plugs into 40 pin I/O bus on KB or E/I.	AR-131...\$39
Color Computers (Tandy). Fits ROM slot, Multipak, or Y-cable.	AR-138...\$49

### A-BUS Cable (3 ft, 50 cond.) CA-163: \$24

Connects the A-BUS adapter to one A-BUS card or to first Motherboard.

### Special cable for two A-BUS cards: CA-162: \$34

### A-BUS Motherboard MB-120: \$99

Each Motherboard holds five A-BUS cards. A sixth connector allows a second Motherboard to be added to the first (with connecting cable CA-161: \$12). Up to five Motherboards can be joined this way to a single A-BUS adapter. Sturdy aluminum frame and card guides included.

- The A-BUS is not a replacement for the Multi-pak

# CoCo Max II<sup>TM</sup>

**You'll use it all the time and love using it.**

## What is CoCo Max?

Simply the most incredible graphic and text creation "system" you have ever seen. A Hi-Res Input Pack (more on the pack later) is combined with high speed machine language software. The result will dazzle you.

CoCo Max disk system, with Y-cable.

## Is CoCo Max for you?

Anyone who has ever held a pencil or a crayon for fun, school or business will love it. A 4 year-old will have fun doodling, a 15 year-old will do class projects and adults will play with it for hours before starting useful applications (illustrations, cards, artwork, business graphics, flyers, charts, memos, etc.) This is one of the rare packages that will be enjoyed by the whole family.

## What made CoCo Max an instant success?

First there's nothing to learn, no syntax to worry about. Even a child who can't read will enjoy CoCo Max. Its power can be unleashed by simply **pointing** and **clicking** with your mouse or joystick. With **icons** and **pull down menus**, you control CoCo Max intuitively; it works the same way you think.

Don't be misled by this apparent simplicity. CoCo Max has more power than you thought possible. Its blinding speed will astound you.

It lets you work on an area 3.5 times the size of the window on the screen. It's so friendly that you will easily recover from mistakes: The **undo** feature lets you revert to your image prior to the mistake. As usual, it only takes a single click.

Later, we will tell you about the "typesetting" capabilities of CoCo Max II, but first let's glance at a few of its graphic creation tools:

With the **pencil** you can draw free hand lines, then use the **eraser** to make corrections or changes. For straight lines, the convenient **rubber-banding** lets you preview your lines before they are fixed on your picture. It's fun and accurate. Lines can be of any width and made of any color or texture.

The **paint brush**, with its 32 selectable brush shapes, will adapt to any job, and make complicated graphics or calligraphy simple.

For special effects, the **spray can** is really fun: 86 standard colors and textures, all available at a click. It's like the real thing except the paint doesn't drip.

CoCo Max will instantly create many shapes: circles, squares, rectangles (with or without rounded corners), ellipses, etc. Shapes can be filled with any pattern. You can also add hundreds of custom patterns to the 86 which are included.

The **Glyphics** are 58 small drawings (symbols, faces, etc.) that can be used as rubber stamps. They're really great for enhancing your work without effort.

Pull-down menus

Zoom In!

## Control Over Your Work

CoCo Max's advanced "tools" let you take any part of the screen, (text or picture) and perform many feats:

- You can move it around
- Copy it
- Shrink or enlarge it in both directions
- Save it on the electronic **Clipboard**
- Flip it vertically or horizontally
- Rotate it
- Invert it
- Clear it, etc. etc.

All this is done instantly, and you can always **undo** it if you don't like the results.

For detail work, the **fat bits** (zoom) feature is great, giving you easy control over each pixel.

To top it all, CoCo Max II works in color. Imagine the pictures in this ad in color. If you own a Radio Shack CGP-220 or CGP-115, you can even print your work in full color!

There is so much more to say, such as the capability to use CoCo Max images with your BASIC programs, the possibility to use CoCo Max's magic on any standard binary image file. There are also many advanced features such as the incredible **lasso**.

Inside the Hi-Res Input Pack

## Why a Hi-Res Input Pack?

Did you know that the CoCo joystick input port can only access 4096 positions (64x64)? That's less than 10% of the Hi-Res screen, which has 49152 points! (256x192). You lose 90% of the potential. The Hi-Res Input Pack distinguishes each of the 49152 distinct joystick or mouse positions. That's the key to CoCo Max's power. The pack plugs into the rom slot (like a rom cartridge). Inside the pack is a high speed multichannel analog to digital converter. Your existing joystick or mouse simply plugs into the back of the Hi-Res Pack.

## Electronic Typesetting...

You'll be impressed with CoCo Max's capability. Text can be added and moved around anywhere on the picture. (You can also rotate, invert and flip it...) At a click, you can choose from 14 built in **fonts** each with 16 variations. That's over 200 typestyles!

Examples of printouts

## Printing Your Creations

There are a dozen ways to print your work. All are available with a click of your joystick (or mouse) without exiting CoCo Max. Your CoCo Max disk includes drivers for over 30 printers!

# CoCo Max II™

The whole family will enjoy CoCo Max. Here are a few examples of the possibilities.

All these pictures are unretouched screen photos or printouts (on an Epson RX-80).

## Journal Report

NO MAJOR NEWS TODAY

Reporters Desperate  
They always say the news is good news, but hasn't come out yet. If some thing doesn't happen quick! Reporter Earl Schimidt is a tired and unhappy man. He really hates this job. Just working over happens around here. Says Earl Schimidt, a 31 year old native of the city, has often come in to the newspaper office without a single story. But this week is different, according to Schimidt. The editor assigned him a couple of articles to write. The editor said I could think of something interesting that wouldn't get me in trouble. So the reporter went to the office and wrote a report. He never had the problem I think about you are the latest bunch of news for the news crew. King Johnson.

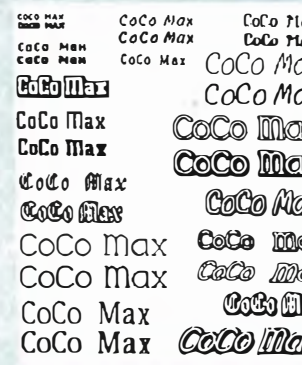

Why is this lady smiling?

Life in the fast lane... it's cracked up to be.

So you think you want to go into the fast lane? Well, you should know that the fast lane is not for everyone. It's a very fast lane and you have to be able to handle it. The fast lane is a very fast lane and you have to be able to handle it. The fast lane is a very fast lane and you have to be able to handle it.

1 Publish a newsletter or bulletin

5 Over 200 typestyles to choose from! generate flyers.

2 Fun for children while stimulating creativity.

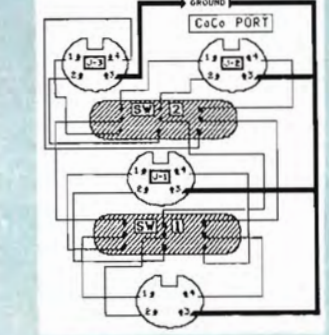

6 A new way to express your imagination.

3 Business graphs, charts, diagrams. Also memos

7 Video portrait (with optional digitizer).

9 schematics and floor plans.

4 Junior's homework and science projects. Term papers too!

8 This is a cartoon.

10 Logos and letterheads.

**System Requirements:**  
Any 64K CoCo and a standard joystick or mouse. (The koalpad and the track ball work, but are not recommended.)  
Disk systems need a Multi-Pak or our Y-Cable. CoCo Max is compatible with any Radio Shack DOS and ADOS.  
Note: the tape version of CoCo Max includes almost all the features of CoCo Max II except Shrink, Stretch, Rotate, and Glyphics. Also, it has 5 fonts instead of 14.  
CoCo Max is not compatible with JDOS, DoubleDOS, MDOS, OS-9, the X-pad, and Daisy Wheel Printers.

**Printers Supported:**  
Epson MX, RX, FX and LX series, Gemini, Star, Micronix, Delta 10, 10X, 15, 15X, SG-10, Okidata 82A, 92, 93, C. Itoh Pro-writer, Apple Image-writer, Hewlett-Packard Thinkjet, Radio Shack DMP 100, 105, 110, 120, 200, 400, 500, Line Printer 7, Line Printer 8, TRP-100, CGP-220. (DMP-130 use Line Printer 8), PMC printers, Gorilla Banana.  
Color printing: CGP-200, CGP-115

**Pricing**  
CoCo Max on tape ..... \$69.95  
with Hi-Res Pack and manual.  
CoCo Max II (disk only) ..... \$79.95  
with Hi-Res Pack and manual.  
Upgrade: CoCo Max to CoCo Max II  
New disk and manual ..... \$19.95  
New features of CoCo Max II: 14 fonts and glyphic font, dynamic shrink and stretch, rotate, multiple drive capability, 68 page scrapbook, point and click file load, color printer drivers, full error reporting.  
Upgrade: CoCo Max tape to disk  
manuals, disk and binder ..... \$24.95  
Y-Cable: Special Price ..... \$19.95

palette registers as a screen is drawn.

Sixteen times for each time the screen is drawn, the palette registers are reloaded with a new set of values. In this manner, every possible available color can be shown on the same screen. Another nice thing about this color chart is that it clearly shows the relationship between the "intensity" and "color phase" portions of the color values.

The color codes are six-bit values. This means that color codes 0-63 are available. For the composite color set, which is the color set those using a color TV will see, the leftmost two bits in the value are the color intensity, while the four remaining bits are the color phase.

The first column of the color chart shows color values 0 through 15, all of which correspond to color phase 0 through 15, color intensity 0. These colors are so dark that some of them may be indistinguishable from black on your TV, unless you turn up the color brightness.

The next column, which displays color codes 16 through 31, again shows values corresponding to color phase 0 through 15, except that the intensity

value is 1. These colors should all be visible, yet somewhat dark.

The third column, displaying colors 32 through 47, contains colors with intensity 2. These colors appear quite bright and vibrant.

The last column, showing colors 48 through 63 (which are colors with intensity level 3), appears so bright that its colors are pastels.

You may notice some small horizontal dashes at the left edge of your TV screen. These dashes appear because the colors generated by the GIME chip in

the Color Computer 3 become "unsettled" briefly whenever the contents of the palette registers are changed.

Since the palette registers are being reloaded 16 times per screen refresh (which is 960 times a second), this disturbs the GIME enough to result in this side effect. This is even more noticeable if the high-speed poke is removed from the program. You may have noticed this effect on some video games on the Atari VCS, which uses this same technique to expand the number of available colors. □

Those of you with analog RGB monitors will see a set of colors on your screens that is very different from what one would see on a color TV or a composite color monitor. On a composite monitor, there are 16 distinct colors that are presented at four different luminance levels. For example, the "colors" 8, 16, 24 and 32 are the same color, but 16 is brighter than 8, 24 is brighter than 16 and 32 is brighter than 24. However, the four sets of 16 colors are presented in a very different way on

RGB monitors, and the colors in each set no longer have this relationship. Figure 1 shows the colors you see on a color TV or composite monitor (this was photographed from a Panasonic CT-1300D); Figure 2 shows the colors as displayed on Tandy's CM-8 analog RGB monitor.

Why are the colors so different in the two modes? Perhaps the analog RGB output was added after the GIME chip design was already well into the final design stages.

— Ed Ellers

*These fun "quickies" help ease the newcomer into the amazing world of computing*

# It's Only The Beginning

**T**he new Color Computer owner buys his/her versatile machine for its graphics and music capabilities, organization of their home and office, educational purposes — both in the home and school and to acquire programming knowledge — and some, simply for pure fun and entertainment.

As far as the CoCo is concerned, the more you learn, the more you realize how little you actually know. That is why every session at the keyboard is an adventure in learning.

THE RAINBOW is a teaching environment and we realize that the majority of our readers will always be beginners. In our continuing effort to always keep the new user in mind and in addition to the many beginner feature articles and programs published in every issue, "Novices' Niche" will contain shorter BASIC program listings that will

entertain and help the new user gain expertise in all aspects of the Color Computer: graphics, music, games, utilities, education, programming, etc.

Contributions to "Novices' Niche" are welcome from everyone. We like to run a variety of short programs that can be typed in at one sitting and will be useful, educational and fun. Keep in mind, although the short programs are limited in scope, many novice programmers find it enjoyable and quite educational to improve the software written by others.

Program submissions must be on tape or disk. We're sorry, but we do not have the time to key in program listings. All programs should be supported by some editorial commentary, explaining how the program works. If your submission is accepted for publication, the payment rate will be established and agreed upon prior to publication.

### Finger Sprints

By Bruce K. Bell, O.D.

Computer newcomers are often not accustomed to efficient typing methods and yet will spend hours entering programs from the keyboard. *Home Row Bomber* provides a fun way to develop and sharpen typing skills, even for the most experienced typist.

Upon running the program, a fleet of eight battleships will appear on the blue water in the lower screen. Pressing a number (1-9) starts the game at the skill level chosen. Using

Level 1, only the "home row" keys will be used (A, S, D, F, G, H, J, K, L, ;). As higher levels are reached or selected, additional keys are added.

After a level is chosen, letters will descend toward the ships in the water. Press the letter on the keyboard corresponding to the letter on the screen and the letter will explode. However, if the letter reaches your battleships first, one battleship will be destroyed for each missed letter. After each

## Wet 'N' Wild

By James E. Rittenhouse

*The Leaky Roof* game is one which combines eye-hand coordination and a little luck.

Using the A and L keys, move the red bucket under the water dripping from the ceiling to achieve a catch. Ten points are awarded for each drip caught. Your score and the number of drips missed are displayed just below the floor, and missing five drips ends the game.

Try not to get all wet!

## A Visit To The Past

By Allen Drennan

*Backstabber 1986* is similar to the old Breakout games first available for the CoCo 1 and is a great game for beginners.

You need a joystick to play. Start by bouncing the ball off your paddle and the four layers of blocks. If the ball hits the ground below your paddle you lose a man. Three men are given at the start of the game and the CoCo keeps score. To win you must clear the entire board of blocks or reach a score of 240.

screen and by pressing the appropriate key, the trace will continue drawing in the required direction. Press another directional key and the trace will change direction without stopping. To stop movement, press any key except 1, 2, 3 or 4.

The 1 key will give you a flashing cursor which can be moved to any location using the direction keys. The 2 key will restore the pixel for drawing at the new location. To erase a line, press 1 and go back in the direction from which you came. And, if you run into the edge of the screen, the trace stops and wait for another directional key to be pressed.

To save a masterpiece, press the play and record buttons on the cassette recorder and then press 3. To load a previously saved picture, position the tape in the appropriate position and press 4. A flashing cursor will appear at the top-left corner of the screen when the loading is complete.

## Songwriter's Word Rhymers

By Bill Bernico

Whether you're a poet, a songwriter or just a wise guy who needs to come up with a rhyming word, the following program may suit your needs.

All you have to do is type in the word you are trying to rhyme and the CoCo will display 65 combinations of words, 13 at a time, that rhyme with it. Granted, not all 65 words will be valid words, or even words that make sense. However, if the list contains even one word that helps finish your poem, it's done its job.

The listing: RHYMER

## Teacher's Pet

By Christine Terrio

*Spelling Worksheet Generator* is a simple program that will print a spelling word list of up to 20 words to aid students in handwriting practice of words on spelling tests.

To replace the words with your own, change the data statements in lines 1000, 1010, 1020 and 1030. The elongated or double-wide printer codes are located in Line 75, and are turned off in Line 115. The baud rate is set to run on the Olivetti ink-jet printer at 2400 baud.

## The magazine for Tandy portable and MS-DOS users

Not only does Tandy produce our favorite CoCo, we think they produce the best and best-priced lap-top portable and MS-DOS computers as well. We've found that when satisfied Color Computer users decide to add portability or move to MS-DOS, many stick with Tandy. For these people we publish PCM, The Personal Computer Magazine for Tandy Computer Users.

Each month in PCM, you'll find information and programs for the Tandy 100, 102, 200 and 600 portable computers. And you'll find even more coverage for their MS-DOS machines, the 1000, 1200, 2000 and 3000, along with the great new 1000 EX, 1000 SX and 3000 HL.

### FREE PROGRAMS!

We learned from THE RAINBOW that readers want programs to type in, so each month we bring you an assortment of them: games, utilities, graphics, and home and business applications.

### BAR CODE LISTINGS AND PROGRAM DISKS!

For portable users, PCM is the only home computer publication in the world that brings you programs in bar code, ready to scan into memory like magic with the sweep of a wand! For those who don't have time to type in listings, we offer a companion disk service with all the programs from the magazine.

### TUTORIALS AND PRODUCT REVIEWS!

As if all this weren't enough, we offer regular tutorials on telecommunications and hardware; assembly language, BASIC and PASCAL programming tips; and in-depth reviews of the new software, peripherals and services as they are released. Add it all up and we think you'll find PCM to be the most informative and fun magazine for this market today!

To order by phone (*credit card orders only*) call 800-847-0309, 8 a.m. to 5 p.m. EST. For other inquiries call 502-228-4492.

**YES! Please send me a one year (12 issues) subscription to PCM for only \$28.\* A savings of 22% off the newsstand price.**

For greater convenience, order a PCM Subscription through the shopping area of the CoCo SIG of Delphi!

**Most Howard Medical products are COCO 3 compatible, some require special patches. Please inquire when you order.**

**GUARANTEE** — Howard Medical's 30-day guarantee is meant to eliminate the uncertainty of dealing with a company through the mail. Once you receive our hardware, try it out, test it for compatibility. If you're not happy with it for any reason, return it in 30 days and we'll give you your money back, (less shipping).

## COCO MAX II

Lets the graphic capabilities of your CoCo EXPLODE on the screen or on paper.

**\$78.45**

## Y CABLE

Needed to connect CoCo Max and disk drive at same time.

**\$19.45**

## FONT EDITOR

Lets you create your own fonts or symbols

**\$19.45**

## RS DOS ROM CHIP

ROM chip fits inside disk controller. 24 pin fits both J&M and RS controller Release 1.1.

Reg. \$40  
(\$2 shipping) **\$20** each

## BOTEK

Serial to parallel converter converts the CoCo 4 pin serial output to run a parallel printer like Star or Epson. Includes all cables. Add \$10 for modem attachment.

(\$2 shipping) **\$68.45**

## DISK CONTROLLER

## NEW FROM J&M

The DC-4 is a scaled down version of the popular DC-2 without a parallel port or memory minder. It includes a switch with 2 ROM sockets, JDOS, manual and such features as gold connectors and metal box. It accesses double sided drives and accepts RSDOS 1.1 for Radio Shack compatibility.

(\$2 shipping) **\$65**

## WORD PACK RS

This ROM pack is the hardware answer for an 80 column display. It includes a built-in video controller to drive a monochrome monitor like our 123A. To get started, you need OS-9 2.0, a Y-cable or multipack interface drive 0, and a monochrome monitor.

(\$2 shipping) **\$89**

New basic driver runs word pack without need for an OS-9.

**\$10**

## TEAC DISK 55B DRIVE

The Teac 55B fits into the spare slots in the Radio Shack 501 Disk Drive. This bare drive features 40 Track, double sided 360K potential and a six millisecond track seek rate.

(\$2 shipping) **\$132**

The DD-2 combines the Teac 55B with our 1/2 height horizontal case and heavy duty power supply.

(\$2 shipping) **\$188**

DE-1 disk enclosure 1/2 height horizontal with heavy duty power supply. Includes all mounting hardware.

(\$2 shipping) **\$35.00**

DE-2 full height disk enclosure. Accepts two 1/2 height drives. Includes power supply for 2 drives and all mounting hardware.

(\$2 shipping) **\$39.50**

Howard Medical has located and tested a select few typewriters that can connect to the Tandy Color Computer and we offer them here at mail order prices. These typewriters bridge the gap between dot matrix and daisy wheel printers with excellent letter quality and keyboard access. Try one in your home for 30 days and if you do not agree that this is the best of both worlds return it pre-paid for a courteous refund.

# The Biggest The Best The Indispensable

## ORDER RAINBOW ON DISK NOW AND SAVE!

As a special introductory offer, you can subscribe to **RAINBOW ON DISK** before March 15, 1987, for only \$90 — \$9 off the regular subscription price. *Don't miss out — order today!*

# The RAINBOW

THE COLOR COMPUTER MONTHLY MAGAZINE

It's called the *premier Color Computer magazine* for good reason. **THE RAINBOW** is the biggest, best, brightest and most comprehensive publication a happy CoCo ever had! Is there any wonder we get letters daily praising **THE RAINBOW**, the magazine one reader calls "A Pot Of Gold" for his Color Computer.

**THE RAINBOW** features more programs, more information and more in-depth treatment of the Tandy Color Computer than any other source.

A monthly issue contains more than 200 pages and up to two dozen programs, 14 regular columns and as many as 20 product reviews. And advertisements: **THE RAINBOW** is known as *the* medium for advertisers — which means every month it has a wealth of information unavailable anywhere else about new products! Hundreds of programs are advertised in its pages each month.

But what makes **THE RAINBOW** is its people. Nationally known people like Bill Barden, who has written 27 books on computer topics and writes for us each month. Or, Fred Scerbo, who writes special programs at the request of readers. Experts like Dick White and Joseph Kolar, two of the most knowledgeable writers on BASIC. Communicators like Marty Goodman and Cray Augsburg, who stay abreast of telecommunications advances. Or, Dan Downard, **RAINBOW** technical editor, who answers our readers' toughest questions. Educators like Dr. Michael Plog and Steve Blyn, who show how CoCo can be used at home or school. Advanced programmers like Dale Puckett, who guide you through the sophisticated OS-9 operating system. Electronics experts like Tony DiStefano, who explain the "insides" of the CoCo. These people, and many others, visit you monthly through columns available only in **THE RAINBOW**.

Every single issue of **THE RAINBOW** covers the wide spectrum of interests in the Tandy Color Computer — from beginners' tutorials and arcade games to telecommunications and business and finance programs. Helpful utilities and do-it-yourself hardware projects make it easy and fun to expand your CoCo's capabilities. And, monthly reviews by independent reader reviewers take the guesswork out of buying new software and hardware products.

Join the tens of thousands who have found **THE RAINBOW** to be an absolute necessity for their CoCo. With all this going for it, is it surprising that more than 90 percent of **THE RAINBOW** subscribers renew their subscriptions?

We're willing to bet that, a year from now, you'll be doing the same. For more information call (502) 228-4492. **For credit card orders only, you may call (800) 847-0309.**

## Get Your Very Own Pot O' Gold!

Here's your chance to have a Pot O' Gold full of programs, articles and information about CoCo every month of the year! A subscription to **THE RAINBOW** is only \$31\* and you won't miss a single chock-full issue.

As the premier magazine for the Tandy Color Computer, **THE RAINBOW** has more of everything — and greater variety, too. Do yourself and your CoCo a favor and subscribe to **THE RAINBOW** today!

We accept VISA, MasterCard and American Express. Non-U.S. rates higher. U.S. currency only, please.

YES! Sign me up for a year (12 issues) of **THE RAINBOW**.

\*Subscriptions to **RAINBOW ON TAPE** are \$80 a year in the United States, \$90 U.S. funds in Canada and \$105 U.S. funds in all other countries. Special introductory subscriptions through March 15, 1987, to **RAINBOW ON DISK** are \$90 (regularly \$99) a year in the United States, \$100 (regularly \$115) U.S. funds in Canada, and \$115 (regularly \$130) U.S. funds in all other countries. \*\*Individual issues of **RAINBOW ON TAPE** are \$10 in the United States, \$12 U.S. funds in Canada and all other countries. Individual issues of **RAINBOW ON DISK** are \$12 in the United States, \$14 U.S. funds in Canada and \$16 U.S. funds in all other countries. Kentucky residents add 5% sales tax. In order to hold down non-editorial costs, we do not bill.

**RAINBOW ON TAPE** and **RAINBOW ON DISK** are not stand-alone products; you will still need the magazine for loading and operating instructions and the necessary documentation. **THE RAINBOW** magazine is a separate purchase.

**Two great ways to bring  
the Rainbow into your life**

## **Rainbow on Tape & Rainbow On Disk!**

For more than four years now, tens of thousands of **RAINBOW** readers have enjoyed the luxury of **RAINBOW ON TAPE**. Each month our tape service subscribers receive all the great programs from the pages of **THE RAINBOW** (those over 20 lines long), without the trouble of having to type them in.

Now, in addition to **RAINBOW ON TAPE**, there is **RAINBOW ON DISK** — another great way to bring **THE RAINBOW** into your life.

Each month, all you do is pop the tape into your cassette player or the disk into your drive. No more lost weekends typing, typing, typing. As soon as you read an article about a program in **THE RAINBOW**, it's ready to load and run. No work. No wait.

Yes, you could type the programs in yourself, as many people do. But all of them? Every month? There simply isn't enough time.

Just think how your software library will grow. With your first year's subscription, you'll get almost 250 new programs: games, utilities, business programs, home applications — the full spectrum of **THE RAINBOW**'s offerings without the specter of keying in page after page of listings and then debugging. And, with **RAINBOW ON DISK**, you'll also get all the OS-9 programs.

**RAINBOW ON TAPE** and **RAINBOW ON DISK** — as we've said before, they're the "meat" of **THE RAINBOW** at a price that's "small potatoes." And now you even have a choice about how it should be served up to you.

To get your first heaping helping, just fill out and return the attached reply card. No postage necessary.

Only your skill and nerve can protect the planet from these elusive enemies.

# Let the Laser Battle Begin

By Curt Coty

**D**ef Mov is an action game which challenges you to defend your home planet against the enemy. After loading and running *Def Mov*, a low resolution title screen appears while the computer sets up the graphics screen. When the game board appears, the computer plays a short tune and the ground begins to scroll by as you fly your ship over the blue soil. Press the right joystick button to begin your battle against the enemy.

The object of the game is to shoot down the enemy before his ship reaches the left side of the screen. To do this, you use the right joystick to move your ship vertically and to fire the laser. Your spare ships are located on the lower-left part of the screen. You also have three superzappers in your arsenal that you can activate by moving the joystick completely to the left. Be careful not to activate a superzapper by mistake, for they will prove to be very valuable as the game progresses. Your superzappers are the z-shaped

lines on the lower-right side of the screen. When activated, superzappers destroy the enemy regardless of where he is.

The enemy attacks in waves of 10, and beginning with the fourth wave they begin to shoot back at you. With each new wave, the enemy becomes faster and harder to hit.

Located in the lower center of the screen is your enemy casualty gauge. When you shoot down about 35 enemies and the gauge reaches the full mark, you have a chance to earn an extra superzapper. You now enter what is called the bonus tunnel. To earn an extra superzapper you must successfully fly your ship through the jagged tunnel without crashing into the walls. Once the ship has started moving you can't stop it, so be ready.

The scrolling of the ground and the movement of the ships are all created using the GET and PUT statements. I used combinations of the PMODE4 and PMODE3 screens to add color to the high resolution PMODE4 screen. Score is kept by summing the horizontal positions of the enemy ships each time you hit one. Therefore, the quicker you shoot the enemy, the greater the X value will be, and in turn, the more points you will earn.

I welcome comments on the quality of my program, or perhaps suggestions on improving the play. I am only familiar with BASIC language, however. Good luck and have fun!

*(Questions or comments about this game may be addressed to Curt at 4072 Eleven Mile Rd., Auburn, MI 48611. Please enclose an SASE when writing.)* □

*Curt Coty attends college in Michigan, and is pursuing a degree in electrical engineering. A self-taught programmer, Curt also enjoys sports.*

## Now Create Your Own Signs, Banners, and Greeting Cards.

### Introducing The Coco Graphics Designer

Last Christmas we introduced our COCO Greeting Card Designer program (see review April 86 Rainbow). It has been so popular that we've now expanded it into a new program called the COCO Graphics Designer. The Coco Graphics Designer produces greeting cards plus banners and signs. This program will further increase the usefulness and enjoyment of your dot matrix printer.

The Coco Graphics Designer allows you to mix text and pictures in all your creations. The program features picture, border, and character font editors, so that you can modify or expand the already built in libraries. Plus a special "grabber" utility is included to capture areas of high resolution screens for your picture library.

**Requirements:** a Coco or Coco II with a minimum of 32K, One Disk Drive (Disk Ext. BASIC 1.0/1.1,ADOS, or JDOS). Printers supported include: Epson RX/FX, GEMINI 10X, 3G-10, NX-10, C-Itoh 8510, DMP-100/105/400/450, Seikoha GP-100/250, Legend 808 and Gorilla Banana. Send a SASE for complete list of compatible printers.  
#C332 Coco Graphics Designer \$29.95

### Over 100 More Pictures

An optional supplementary library diskette containing over one hundred additional pictures is available.  
#C333 Picture Disk #1 \$14.95.

### Colored Paper Packs

Now available are packs containing 120 sheets of tractor-feed paper and 42 matching envelopes in assorted bright RED, GREEN, and BLUE. Perfect for making your productions unforgettable.  
#C274 Paper Pack \$19.95

With Zebra's Coco Graphics Designer It's easy and enjoyable making your own greeting cards, signs, and banners.

## WICO TRACKBALL

Now \$19.95

Order Cat#TBR501  
(Was \$69.95)

You can benefit from our purchase of brand new WICO Trackball Controllers at closeout prices. This model was designed specifically for the Radio Shack Color Computer and plugs right into the joystick port.

WICO is the largest designer and manufacturer of control devices for commercial arcade video games. If you've ever played an arcade video game, chances are you've used a WICO joystick or trackball and experienced its

superior control, pinpoint firing accuracy, and exceptional durability.

Includes one-year limited warranty. Phenolic ball offers 360-degree movement. Two optical encoders provide split-second response.

Quick-action fire button for smooth, two handed arcade response and feel. Long 5' computer connection. Heavy duty plastic case for long hard use. Compatible with all color computer models.

We have bargain priced trackballs for ATARI, Commodore, TI, and other computers. Call or write for our price list.

**Ordering Instructions:** All orders add \$3.00 Shipping & Handling. UPS COD add \$3.00. VISA/MC Accepted. NY residents add sales tax.

# EARS™

Electronic  
Audio  
Recognition  
System

# \$99.95

Now Your  
Computer  
Can Listen  
To You!

- SPEECH RECOGNITION
- HANDS OFF PROGRAMMING
- HIGH QUALITY SPEECH REPRODUCTION

EARS Does It All!

INCREDIBLE!

**Two Years In the Making.** Speech Systems was formed to develop new and innovative speech products. After 2 years of intensive Research and Development, we have created a truly sophisticated speech recognition device. Recognition rates from 95% to 98% are typical. Until now, such a product was outside the price range of the personnel computer market, and even small businesses.

EARS is trained by your voice and capable of recognizing any word or phrase. Training EARS to your particular voice print takes seconds. Up to 64 voice prints may be loaded into memory. You may then save on tape or disk as many as you like so that your total vocabulary is virtually infinite.

**Speech and Sound Recognition.** EARS is really a sound recognition system, so it really doesn't matter whether you speak in English, Spanish, or French. In fact you do not have to speak at all, you can train EARS to understand sounds such as a musical note or a door slamming.

**Hands Off Programming.** Imagine writing your own BASIC programs without ever touching the keyboard. Everything that

you would normally do through a keyboard can now be done by just speaking.

**Programming EARS Is Easy.** LISTEN, MATCH and other commands have been added to BASIC so that programming EARS is a piece of cake! The single BASIC line: 10 LISTEN: MATCH will instruct EARS to listen to you and return the matching phrase.

**It Talks.** EARS is also capable of high quality speech. We mean REALLY high quality. The speech is a fixed vocabulary spoken by a professional announcer. Speech Systems is currently creating a library of thousands of high quality words and phrases. For a demonstration call (312) 879-6844, you won't believe your ears or our EARS.

**DISK OWNERS.** EARS will work with any disk system with either a MULTI-PAK or Y-CABLE. Our new Triple Y-CABLE was specifically developed for those wishing to add SUPER VOICE as a third device.

**You Get Everything You Need.** You get everything you need including a specially designed professional headset style noise

cancelling microphone. The manual is easy to use and understand. Several demonstration examples are included so you don't have to write your own programs unless you want to. EARS will work in any 32K or 64K Color Computer.

### SUPER VOICE \$20 OFF

Imagine talking to your computer and it talking back to you. When you need an unlimited vocabulary, you can't beat SUPER VOICE. For a limited time, we will give you the SUPER VOICE for \$59.95 with your EARS purchase. Even if you already have another speech unit, here is your chance to buy the best and save \$20.

### VOICE CONTROL

Applications for EARS are astounding. Here is our first of many listening programs to come. VOICE CONTROL is a program specifically designed to allow you to control any appliance in your house with your voice and our HOME COMMANDER (sold separately) or the Radio Shack Plug 'N' Power controller. For example, you can control your TV by saying "TV ON" or "TV OFF". . . \$24.95

SUPER VOICE is no ordinary speech synthesizer. It uses Silicon Systems, Inc. SSI-263, the most advanced speech/sound chip available. SUPER VOICE is not only capable of highly intelligible speech, sound effects, and singing over a 6 octave range, but now we have turned SUPER VOICE into a monophonic Super Music Synthesizer with our PIANO KEYBOARD.

IT TALKS. A free TRANSLATOR text-to-speech program makes writing your own talking program as easy as SAYING "HELLO."

SUPER VOICE works in any 32K or 64K computer. A disk system requires a Y-Cable or Multi-Pak.

**Here are the facts;  
the decision is yours.**

# Lyra™

The Musical  
Coco Max™

IF YOU  
CAN POINT,  
YOU CAN COMPOSE

PULL  
DOWN  
MENUS  
ICONS!

A MUST  
FOR MIDI  
USERS

LYRA is the most powerful music composition program we have seen on any computer. We don't mean just the COCO, we really mean any computer. Whether you are a novice trying to learn music or a professional musician with MIDI equipment you will find LYRA a powerful tool. You

see, we wrote LYRA for musicians that hate computers. If you want proof, purchase a LYRA demo for \$7.95. We will apply the demo price to your purchase. MIDI output requires the LYRA MIDI cable (#MC158) or COCO MIDI Seq/Editor (#CM147).

- ✓ Ultra Easy to use, just point with joystick or mouse and click
- ✓ Compose with up to 8 completely independent voices.
- ✓ Room for over 18,000 notes. (This is not a misprint!)
- ✓ Super Simple Editing Supports:
 

Note insert	Block insert	■
Note delete	Block delete	
Note change	Block copy	
- ✓ Output music to:
 

TV Speaker	Monitor Speaker
STEREO PAK	ORCHESTRA 90
SYMPHONY 12	COCO MIDI S/E
MIDI Synth	MIDI Drum Machine
- ✓ Output up to 4 voices without additional hardware.

- ✓ Output all 8 voices using either SYMPHONY 12 or one or more MIDI synthesizers and drum machines.
- ✓ Output any voice on any of the 8 MIDI channels.
- ✓ Transpose music to any key.
- ✓ Modify music to any tempo.
- ✓ Automatically inserts bar for each measure as you compose.
- ✓ Key signature lets you specify sharps and flats only once, LYRA will do the rest.
- ✓ Plays MUSICA 2 files using LYRA CONVERT (#LC164).
- ✓ Each voice may be visually highlighted or erased.
- ✓ Each measure is numbered for easy reading.

- ✓ Solo capability
  - ✓ Block edits are highlighted.
  - ✓ Tie notes together for musical continuity.
  - ✓ Name of note pointed to is constantly displayed.
  - ✓ Jump to any point in the score instantaneously.
  - ✓ Memory remaining clearly displayed, however you will have plenty of memory even for the most demanding piece.
  - ✓ Help menu makes manual virtually unnecessary.
  - ✓ LYRA is 100% software, no need for extra hardware unless you want more power
  - ✓ Music easily saved to tape or disk.
  - ✓ Requires 64K and mouse or joystick.
- LYRA (Disk only) #LY122 ..... \$54.95**

## LYRA OPTIONS

These LYRA options are **not** required. They are provided for those wishing additional flexibility.

### LYRA CONVERT

A program to convert MUSICA 2 files to LYRA files.  
(T or D) #LC164 ..... **\$14.95**

### LYRA STEREO ENHANCER

Gives the LYRA stereo output when used with the STEREO PAK or ORCHESTRA 90.  
(T or D) #LS149 ..... **\$14.95**

### LYRA MIDI CABLE

A cable to connect your computer to your MIDI synthesizer.  
#MC158 ..... **\$19.95**

### LYRA SYMPHONY 12 ENHANCER

Lets LYRA play all 8 voices through SYMPHONY 12.  
(T or D) #LS177 ..... **\$19.95**

### STEREO PAK

Plugs into the COCO ROM cartridge slot allowing easy connection to your stereo system.  
#SP193 ..... **\$39.95**

### SYMPHONY 12

A real hardware music synthesizer, lets LYRA play all 8 voices in stereo.  
(T or D) #SY149 ..... **\$69.95**

### COCO MID Seq/Editor

A professional quality MIDI interface for MIDI synthesizers.  
(Disk only) #CM147 ..... **\$149.95**

### MUSIC LIBRARY

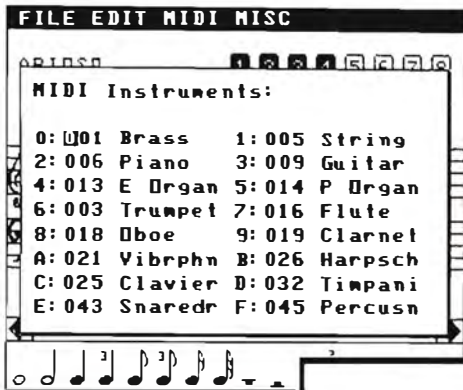

A collection of over 800 songs. When used with CONVERT, it gives an incredible LYRA library. Each volume 100 songs.  
(T or D) #MLXXX ..... **\$29.95**

COCO MAX is a trademark of Colorware.  
ORCHESTRA 90 is a trademark of Radio Shack

Introducing  
CoCo 3  
Compatible **COCO  
MIDI 2**

**LYRA  
COMPATIBLE!**

**MORE  
FEATURES!**

**MORE  
POWER!**

Now your COCO can talk to your MIDI music synthesizer. Whether you have a Korg, Roland, Casio, Yamaha, or Moog, it doesn't matter as long as it's MIDI equipped. Choose from our

entry level MUSICA MIDI system that plays MUSICA files or our Professional COCO MIDI 2 system.

- ✓ Supports 16 Track recording and playback
- ✓ Adjustable tempo.
- ✓ Over 45 Kbytes available (Over 15,500 MIDI events possible).
- ✓ Record to any track.
- ✓ Low Level track editing.
- ✓ LYRA editing. (one voice per track)
- ✓ Playback from any number of tracks
- ✓ Quantizing to 1/16, 1/32, 1/64 intervals

- ✓ Filter out MIDI data:
  - Control Change
  - Key pressure
  - Channel Pressure
  - Program change
  - System Message
  - Pitch wheel
- ✓ Graphic Piano Keyboard Display in both record and playback mode.
- ✓ Adjustable Key (Transposition).
- ✓ Save recording to disk for later playback or editing.
- ✓ Syncs to drum machine as MASTER or SLAVE.

- ✓ Sequencer features.
  - ✓ 100% machine code.
  - ✓ "Musician Friendly" Menu Driven.
  - ✓ Metronome
  - ✓ Many songs included. Includes MIDI hardware interface, 2 MIDI cables, detailed manual, and software. Requires 64K CoCo, Y-Cable or Multi-Pak.
- |                                       |                 |
|---------------------------------------|-----------------|
| <b>COCO MIDI 2 (disk only) #CM147</b> | <b>\$149.95</b> |
| <b>DOUBLE Y-CABLE #DY181</b>          | <b>\$28.95</b>  |
| <b>TRIPLE Y-CABLE #TY173</b>          | <b>\$34.95</b>  |

**DX LIBRARIAN™**

Save and load voice parameters for the Yamaha DX series of synthesizers (DX-7, DX-100, DX-21 etc.). Save sounds individually or as a group letting you load the entire synthesizer in seconds.

Comes with professionally developed voices for the DX-7 worth 10 times the price. Requires COCO MIDI hardware interface.

**DX LIBRARIAN (Disk only) #DX143 . . . . . \$39.95**

**CASIO LIBRARIAN**

Save and load voice parameters for any Casio synthesizer (CZ-101, CZ-1000, CZ-5000 etc.) You can save from the: presets; cartridge,

memory or buffer. Requires COCO MIDI hardware interface.

**CASIO LIBRARIAN (Disk only) #CL169 . . . . . \$39.95**

**MUSICA MIDI™**

MUSICA MIDI takes any MUSICA 2 music file and plays it through your MIDI synthesizer. We offer you over 800 tunes from our MUSIC LIBRARY series (sold separately) or create your own music

using MUSICA 2. Includes: documentation, plenty of music, and the cable to connect between the COCO and your synthesizer.

**MUSICA MIDI Complete (Disk Only) #CM126 . . . . . \$39.95**

**MIDI KEYBOARD**

If you own the Casio CZ-101 or similar MIDI synth, you know that the mini keys and the short 3 or 4 octave keyboard is limiting. MIDI KEYBOARD when used with our full size 5 octave keyboard

gives you the flexibility you need. Comes with cable to connect the COCO to your MIDI synth.

**MIDI KEYBOARD (Disk only) #MK167 . . . . . \$29.95**

**NEW!**

# CHRISTMAS FANTASIA

We got so many compliments last year for Christmas Fantasia Volume 1, we added a second all new version.

Christmas Fantasia is a collection of traditional Christmas music combined with beautiful high resolution Christmas scenes. Christmas Fantasia picks one of more than a dozen Christmas scenes and music selections from tape or disk, displays the picture and plays the music. Upon completion, another scene and piece of music is loaded and played. The Christmas scenes are beautiful. One shows a chapel nestled in a valley with **snow actually falling**. The low price is our way of saying "SEASONS GREETINGS" from Speech Systems. 64K required.

- Volume 1** (Tape or Disk) #CF125 ..... \$19.95
- Volume 2** (Tape or Disk) #CF126 ..... \$19.95

# MUSICA 2

**\$29.95**  
Tape or Disk

- When in stereo mode, music is played through our STEREO PAK (purchased separately).
- Loudness of each voice may be individually specified.
- Memory available is constantly displayed.
- Voice waveshapes may be exchanged between voices at any point.
- Tempo may be specified and may even be altered as the music plays.
- Flats and sharps supported.
- Billions of timbre combinations.
- High resolution graphic display, looks just like sheet music.
- MUSICA 2 is 100% software, no need for hardware unless you want music produced in STEREO. In that case, the STEREO PAK may be purchased separately. It's a must for the audiophile!
- Repeat bars allow repeating of music without re-inserting music a second or third time.
- 30 page manual describes all.
- Requires 64K.

**Coco 3  
Compatible**

- Output music to your printer (Gemini 10X, Epson, R.S. printers).

- Allows you to specify key signature.
- Voice timbre (waveshape) may be altered by specifying harmonic content just like stops on an organ.
- During editing, voice being inserted is displayed.
- Each measure is numbered for easy reading of music.
- Measure bars aid in reading and developing music.
- Each voice may be visually highlighted for easy identification.
- 4 Voices produced simultaneously.
- Input notes from Coco keyboard, joystick, or Piano Keyboard.
- Play music from your own BASIC program.
- Block copy music for easy music development.
- 100% machine language so it is lightning fast.
- Vibrato effect easily produced.
- With STEREO PAK, voices may be switched between left and right speakers as music plays.
- Durations include: whole, half, quarter, eighth, sixteenth, thirty-second, sixty-fourth, and triplet.

## MUSIC LIBRARY™

The MUSIC LIBRARY series consists of 8 volumes: 100 through 800 each sold separately. Each contains over 100 four voice music selections with a playing time of over 3 hours each. The disk version is shipped on 5 full disks. When coupled with STEREO PAK, the music is reproduced with unsurpassed realism.

A JUKEBOX program is included to allow you to select specific songs or automatically play each. These songs are ready to go, you don't need MUSICA 2 or a knowledge of music. MUSICA 2 users may customize each song. Each volume sold separately, specify tape or disk. #MLXXX ..... \$29.95  
List of 800 songs #LS800 ..... \$3.00

# Lyra™

MEETS SYMPHONY 12™

CoCo 3  
Compatible

12 SIMULTANEOUS  
VOICES

4 NOISE  
GENERATORS

STEREO & MONO

SOUND EFFECTS

**SPECIAL  
COMBINATION  
OFFER!**

If you want to compose music, experiment, or just listen to music, LYRA is the tool you need. LYRA represents the new state-of-the-art super user friendly software. Pull down menus and icons make composing music as easy as pointing with a joystick or mouse and clicking. LYRA is capable of 8 individually controlled voices. You may take advantage of the 8 voice power of LYRA using external MIDI synthesizers or SYMPHONY 12. We believe that LYRA and SYMPHONY 12 was a match made in heaven. For a limited time, when you purchase both, we will include free the LYRA SYMPHONY 12 CONNECTION, a \$19.95 value.

**STEREO AND MONO.** By connecting SYMPHONY 12 to your home stereo system, music is produced in stereo, 6 voices from each channel. However, you don't need to have a stereo system, all 12 voices also come out of your TV or monitor.

**SOUND EFFECTS.** SYMPHONY 12 is a sophisticated sound generator. 12 voices and 4 noise generators give you incredible sound effect capability. We have included gun shot, explosion, racing car and more.

**SYMPHONY 12.** You get over a dozen music and sound effect selections and complete documentation. Software is shipped on Tape or Disk.

**PIANO KEYBOARD.** For those wishing to turn SYMPHONY 12 into a real polyphonic synthesizer we offer a full size 61 note piano keyboard.

Tape users using both SYMPHONY 12 and the PIANO KEYBOARD will require a Y-CABLE. Disk systems require a Triple Y-CABLE or MULTI-PAK.

**SYMPHONY 12 (T or D) #SY149 .. \$69.95**  
**LYRA SYMPHONY 12 ENHANCER #LS177 .. \$19.95**  
**PIANO KEYBOARD #PK185 .. \$169.95**  
**DOUBLE Y-CABLE #DY181 .. \$28.95**  
**TRIPLE Y-CABLE #TY173 .. \$34.95**

## GUITAR CHORD BOOK

This program, written by a guitar instructor of 17 years, displays in high resolution graphics the exact fingering for over 100,000 chord combinations. You may even tune your guitar to the computer and play along.

Whether you are a beginning guitar student or an advanced player, you will find this quick reference to guitar chords invaluable.

32K Disk only #GC153 .. \$29.95

## MUSIC THEORY

### COURSE 1

This course covers all the basics from music notation & duration, key signatures, tempo, to an introduction of the keyboard. This is an entry level course recommended as a prerequisite for Course 2.

32K Disk only. #MT101 .. \$49.95

### COURSE 2

A more advanced course that deals with: Major and Harmonic Minor scales, interval spelling, Triad (Chord) theory, Inversions, Dominant 7th chords, and ear training of the intervals.

32K Disk only #MT102 .. \$49.95

# Date Tracking Through the Ages

By Roger Bouchard

**T**he Last Calendar (TLC) is likely to be the last calendar program you will ever need to type in. It can print any calendar year, from 1583 to whenever they revise the calendar again, on any 80-column printer.

It uses only one control code, for expanded print. Although this version is configured for Epson and compatible printers, it can very easily be adapted by changing lines 100 and 110 to whatever codes your printer uses. If your printer does not have expanded print capabilities, the program can be modified to work with even a teletype, if the lines in Listing 2 are typed in to replace those in Listing 1.

Another feature includes the ability to highlight a special date of your choice by replacing it with two asterisks (\*\*).

The program is also self-prompting and fairly bulletproof, but if you have any questions you may call, write or contact me on the Delphi CoCo SIG (username:HARBIE).

(Questions about this program may be directed to the author at 5105 Cote St-Luc Rd. #12, Montreal, Quebec, Canada H3W 2H5, 514-486-2147. Please enclose an SASE when writing.)

An electronic technician who specializes in the repair of minicomputers, Roger Bouchard bought his CoCo to learn about microprocessors and programming. Roger lives in Montreal and is devoted to his CoCo.

## About Your Subscription

Your copy of THE RAINBOW is sent second class mail. If you do not receive your copy by the 5th of the month of the publication date, send us a card and we will mail another. Canadian subscribers and foreign airmail allow two additional weeks.

You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an "account number" and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone except those whose subscriptions are through our distributor in Australia.

**64K Disk or Tape BATTLE HYMN — The Battle of Gettysburg**

Player controls Lee's army of 11 divisions (39 individual) brigades including 3 cavalry (Stuart) and 3 artillery (Alexander) and must capture 5 victory objectives to win decisively. It's all here, from Culp's Hill to Little Round Top, from Pickett's charge to Hood's heroic victory at Devil's Den.

Play starts on the second day of the battle with Johnson, Early and Rodes facing an unreinforced Union line running from Culp's Hill down to Cemetery Hill and east. Player has early size advantage but must act quickly as Union reinforcements are seen arriving; and must form the line and charge up hill over a great distance. Where is Stuart?

Brigades must be turned to march or fire. Union troops must reload after firing.

Player may limber or unlimber cannon; must watch his fatigue factors and prevent troops from routing. The object is to force the flank and pin the enemy in a cross fire. Easier said than done. Very historic, with an Ark Royal touch.

Hi res graphics; machine language. Game save. Play takes 3-5 hours. **\$29.00**

**32K LUFTFLOTTE — The Battle of Britain**

Player takes the German side and tries to succeed where Goering and the entire Luftwaffe failed: destroy Britain's will to fight from the air.

A mammoth game, Luftflotte has it all. Twenty-four British cities producing one of six war materials: petroleum, armaments, aircraft, shipping, morale, electronics; 26 air bases, 18 low radar sites, 17 high radar sites all forming a complex web of inter-communication and defense. Can you break the web?

Player controls 3 Luftflottes of over 2000 individual planes including Stuka, Junkers, Dornier and Heinkel bombers; Me110 and Me109 fighters. Player may launch bomb runs, recon missions, strafing sorties or transfers: up to five flights per Luftflotte.

Player watches as his flights head for London or Bath or Glasgow or land site 'j' or ■. It's up to you. There are 85 individual targets in the game.

Hi res screen shows aerial combat, bombing and strafing missions and supplies brief information. Watch targets and planes explode! Semigraphic strategic map of England and targets. For conclusive information, view the intelligence screen to see everything. Unless, of course, you prefer playing EXPERT in which case you'll be flying blind as the real Germans did not so long ago.

Playing time: 3-6 hours. Game save. Machine language. **\$29.00**

**32K Disk Only THE FINAL FRONTIER**

You have been chosen as commander in a struggle to gain control of an unexplored section of the galaxy. Your foe: an alien race called VOLSUNG. Here in the distant future, when space travel has become commonplace, on uncharted star systems you hope to find the raw materials which are vital to your industry and construction of a fleet of space craft.

Starting with limited ships and resources, you must quickly search, locate and bring needed systems under your influence, before the aliens can gain a foothold and threaten your expansion.

A star system can support industry, mining, energy or farming. You must decide on how to concentrate your efforts to maintain a balance to best serve your needs for developing your civilization and producing new space craft. Spacecraft that you will surely need when you and the alien VOLSUNGS eventually collide in a titanic struggle for the control of the Final Frontier.

100% hi res, total machine language, disk based. **\$25.00**

Isn't it time for a newsletter/magazine that talks about the games you've been playing? An in-depth resource of playing hints, strategies and tactics? Wouldn't it be nice to whip the computer?

The *Keyboard General* is published bi-monthly. We'll publish your letters; your game plays, your thoughts and ideas. You'll hear from us, our program authors. You'll learn gaming, playing and programming hints, and perhaps discover new ways to assault that village or attack that flank.

Every month we'll feature a Company Commander replay; discussion of new and old products, and letters from you. There will be special discounts and promotions offered only subscribers of the *Keyboard General*.

Don't miss out! The *Keyboard General* is filling a great need in the software industry: a publication dedicated to discussing those programs you've been playing. Subscribe today, and find out how to beat the computer! **\$15.00 year subscription**

**ARK ROYAL GAMES**

P.O. Box 14806

Three entertaining games to challenge visual memory

# The Eyes Have It

By Bruce K. Bell, O.D.

**D**iscrimination actually consists of three games that can be used in three different ways. They were written for use in my office with patients undergoing vision therapy, but as you'll see, are genuinely entertaining as well.

Beat the Clock is similar to Perfection, a popular game in which various-shaped playing pieces must be placed in a puzzle within a certain time period. In this version, a shaded area with white "holes" appears in the upper half of the screen representing the puzzle board, and the lower screen contains the black playing pieces. Move the blinking box to the piece you desire to "pick up." Press the firebutton and the cursor moves to the upper half of the screen. Move the blinking box to the hole matching the piece you "picked up" and press the firebutton to "drop" it in the hole. The piece does not disappear from the lower screen until the piece is correctly placed in the puzzle board in the upper screen. Continue this process until all the pieces are used.

The object of the second game, Memory Match, is to remember the location of shapes that are "hidden" under different numbers. Move the blinking box over a number and press the firebutton to reveal the shape "underneath" it. Then move to another number and press again to reveal a second shape. If they are the same, you have a match. Continue until all shapes are revealed.

Look and Find is played by moving the blinking box over the shape in the upper screen that is the same as the shape in the lower screen. Continue until all shapes are identified.

In all three games the right joystick moves the blinking box. Your score represents the approximate number of seconds it took for you to complete the game. Of course, the lower the score, the better you have done. Four levels are available, with Level 4 being the most difficult. The "Best Score" is reset each time a new level is selected.

There are three ways *Discrimination* may be used. First of all, it may be played just as a game of challenge with your only goal being to enjoy yourself.

Secondly, it may be used to improve visual skills by training in a controlled environment. *Discrimination* may be used to help improve

*Bruce Bell practices optometry in his home town of Rockmart, Georgia. He spends hours using programs he finds in THE RAINBOW and programming his CoCo for use in his office and at home. Bruce's program, CoCo Zone is the grand prize winner in the Third Rainbow Adventure contest.*

eye-hand coordination, rapid eye movements, dynamic peripheral awareness (side vision), visual memory and visual strategies. This may be especially helpful for athletes in high speed sports, such as tennis and basketball.

Finally, it can be used to help preschoolers and early elementary students learn size and shape discrimination, as

well as laterality skills (knowing right from left) and visual memory.

What is the difference in the three ways of using *Discrimination*? None, really, except for who is using *Discrimination* and why they are playing it. Please note that none of this is intended to be medical advice; if you suspect you have any eye or visual problem, you

should consult your eye care professional. I just wanted to point out the many ways *Discrimination* can be enjoyed, by young and old alike.

(Questions about this program may be directed to Dr. Bell at 614 East Elm St., Rockmart, GA 30153; 404-684-5650. Please enclose an SASE when writing.) □

## ADOS ENHANCED, EPROM-ABLE DISK BASIC

Now you can supercharge Basic with an impressive array of extra features WITHOUT sacrificing compatibility! ADOS is compatible with virtually 100% of commercial software. Customizing utilities are provided to allow user-defined command abbreviations, baudrate, step rate, tracks per disk (35 or 40), support of double-sided drives, and more. After customizing ADOS you can have it burned into an EPROM that plugs into the Disk Basic ROM socket or just use it in RAM as a 64K disk utility (EPROM burning will cost about \$20—we provide information concerning how you can have this done.) Features include: repeat and edit of the last direct-mode command • 26 definable control-key abbreviations • automatic line number prompts • DOS command lowercase command entry (a line complement to a LowerKit™ PBJ WordPak) • COPY (filename to (drive number) • AE error override option • RAM command (64K) • RUNM command • text echoing to printer • ML monitor • text file scan • unchanged directory • error trapping • hex text utility (included) 42, 51 or 64 characters per line.

"I COULD NOT FIND ANY SOFTWARE THAT WOULD NOT RUN UNDER ADOS."  
THE RAINBOW, December 1984  
"I LOVE ADOS! A GENUINELY FIRST RATE PRODUCT."  
Color Micro Journal, February 1985  
"I WON'T PART WITH MY ADOSE PROM FOR ANYTHING NO COMPATIBILITY PROBLEMS."  
HotCoCo, May 1985

Disk \$27.95

## THE PEEPER ML PROGRAM TRACER

Monitor machine-language programs AS THEY ARE RUNNING! Peeper actually timeshares with the target program, giving FULL CONTROL as ML programs run. Switch instantly between watching regular program output and Peeper's trace of registers and stack on screen or printer. Inspect memory in any of 26 display modes. Execution speed can be varied from full speed to the barest crawl or halted entirely as programs run. Single-stepping, breakpoints, memory or register examine/change. Relocatable, supports 64K (16K required). See February 85 review.  
Disk \$23.95 Tape \$21.95 Assembler source listing Add 3.00

## NEW FOR COCO3

### CUSTOM CABLE FOR MAGNAVOX RGB MONITOR

The Magnavox 8CM515 and 8CM505 monitors, containing RGBI, and audio inputs, sell at prices comparable to Tandy's CM-8, and represents a far better buy for CoCo 3 users. Composite input, which CM-8 lacks, is required for seeing PMODE 4 displays in color. RGBI allows the Magnavox, unlike the CM-8, to be used with PC-Compatibles — a big resale consideration.

## Submitting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

Program submissions must be on tape or disk and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs. All programs should be supported by some editorial commentary explaining how the program works. Generally, we're much more interested in how your submission works and runs than how you developed it. Programs should be learning experiences.

We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submissions Editor, THE RAINBOW, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. We will send you some more comprehensive guidelines.

Please do not submit programs or articles currently submitted to another publication.

### The Magic of Zanth

In Zanth, magic is commonplace. Dragons, Griffins, Centaurs and Demons abound. You are sent on a quest to discover the source of magic in Zanth. This intriguing adventure features over 2 dozen hi-res 16 color animated graphic screens, 4 voice music and sound effects, and speech (when used with the Tandy SSC pak). The 16 color graphics look great, and will bring hours of thrilling adventure.

Requires 128K, CoCo 3, disk

\$34.95

### Color Connection IV

The best has just been made better for the Color Computer 3. Use baud rates up to 1200 directly from the back, or up to 9600 with a Multi-pak. It supports all standard protocols including CompuServe's Protocol B, XMODEM, and XON/XOFF. It features a 40, 64, or 80 column display in amber, green, blue or monochrome modes, and reverse video display options are in the set-up file. Auto answer/auto dial features for both Hayes compatible and some Radio Shack modems are supported. The buffer holds over 65K. Single key macros enter often used ID's with a single key stroke. Our favorite Color Connection 3 for the CoCo 1 and CoCo 2 is included.

Requires 128K, CoCo 3, disk

\$49.95

### Color Scribe III

Take advantage of the power of your Color Computer 3 for all your word processing and editing. Have it your way with either a 40, 64, or 80 column display on either a green, amber, blue, or monochrome screen, and reverse video! A huge buffer of over 64K is available. No more guessing how much buffer space is left as a command tells you how many bytes are available. There are over 20 line editing commands. You can even move a block of text from one file to another. Save keystrokes with macro commands. Includes extensive text formatting — pagination with headers and footers, left and right justification, etc. Color Scribe III is a must for anyone who is serious about word processing.

Requires 128K, CoCo 3, disk

\$49.95

### Return of Junior's Revenge

This is the same Junior you've seen in the Kong arcade series, but with new CoCo 3 graphics. This tireless little monkey must overcome all sorts of obstacles (4 screens worth) to rescue his father, the King. He will traverse the jungle and swamp, climb vines, avoid chompers and birds, and more before he finally meets with his big daddy. The 16 color graphics are superb.

Requires 128K, CoCo 3, disk

\$34.95

# ESCAPE FROM THE BUG ZONE

BY EUGENE VASCONI

Picture, if you will, a dimly lit workshop. The only perceptible activity centers around quickly moving fingers performing a computeresque symphony on the keyboard. Atop the paper-clogged table rests a smoking beaker of cocoa (what else?); in the distance, thunder rumbles. Line after line is entered from voluminous pages of THE RAINBOW, still warm after the journey from Prospect, Ky.

Meet Mr. I.N. Putter, an unsuspecting participant in this pseudo-Frankenstein scenario, who is unaware of his imminent, never-to-be-forgotten voyage into "The Bug Zone." (Music, please.)

Those of us having an affinity for the Color Computer have the chance to conquer The Bug Zone. Since we create most of them ourselves, we can quite easily eradicate our bug problems provided we are armed with the right ammunition: knowledge. Debugging is in itself an art, just like creating original programs. As such, it can be quite rewarding and a valuable aid toward better understanding programming.

This is written for less experienced computer users who are still refining their basic skills. It offers certain techniques about debugging and should make the prospect of entering listings and handling the debugging process less frightening.

What can be done to help Mr. Putter avoid an unnecessary journey into The Bug Zone? The most obvious ammunition is some understanding of how BASIC vernacular is applied to make the computer perform a particular task. For that, he must become familiar with the language: Where do O's go in a PLAY statement? How big a number can be

used in a circle coordinate? When can remarks be eliminated? Attempting to enter a listing without at least an elementary understanding of the parameters is like playing a trumpet and not knowing what the valves are for.

Assuming we have done our homework, most bugs can be squashed during the actual typing phase. Listings such as those in the RAINBOW are very helpful, since they reflect what should appear on the computer screen (the 32-character width). As you enter the listing, pay particular attention that what you've typed matches the ends of the magazine lines. Make your information match the RAINBOW's exactly. Any variation could mean you've made an error. Take a moment after every line to check this. Use a marker to help avoid jumping to another line. Try a pen clipped to the side which points to the proper spot; as you continue, move it down the page. This technique can prevent line jumping or typing in the same information twice. As we all know, wading through tightly packed lines for hours can be hazardous to your eyesight; this will help.

Pay attention to addresses. A "28" typed in place of a "280" will eventually cause the program to act strangely or give a UL Error when the CoCo tries to locate an address that doesn't exist.

Even if there is no machine language in the program, always save it to tape before you run it. You may have typed in an accidental poke that will lock the unit, and your typing efforts will have been wasted when the power must be turned off to free the machine. An even wiser practice is to make in-progress saves while entering, so if the power goes off you won't have lost everything. I learned this lesson when hours of typing during a storm ended in a one-second power failure. My CoCo, trained as it was, got scared and forgot everything I had been teaching it. I now save, even when taking a short break.

Keep a spare work tape around for this purpose.

If the program doesn't run properly go about your debugging and, especially if machine language is used, mark your corrections in the magazine, power down, reload and then edit. Again, save before trying. In this way, you'll be certain everything is correct from scratch and not helped by a past input from you or the program, which may be masking a problem.

Trips into The Bug Zone are most frequently scheduled by Syntax Errors. They are the most common and usually the easiest to find except for the ones pointed out by the computer that you check 30 times to no avail. Don't worry, they're there. They hide in things like those formulas the geniuses create with 200 parentheses and 50 multiplications. Remember, you need just as many ('s as you need )'s for it all to work. You don't need to understand the formula to be sure it is entered correctly, just count. Pay particular attention to semicolons, colons, periods and commas; they can look alike. This is an area many programmers need to watch, and I have been a violator as well. Let's start avoiding similar-looking letter/number combinations where possible, like  $D(\theta)=I(1)$  or  $S\$(B)=MN\$(I)$ . Of course, certain information must be programmed according to basic requirements such as `PLAY "LBB05"`, but notice how many of the following look similar to type-weary eyes especially on a television plagued with RF interference:

- - 0 - Q
- I - 1
- B - 8
- S - \$
- N - M
- G - 6
- \* - +

This is one area where thoughtful programming can assist the variety of debugging talents found in the CoCo

*Eugene Vasconi is a helicopter pilot in San Antonio, Texas, as well as a musician and free-lance television producer. His major interests on the CoCo are graphics and music.*

community and make entering listings much easier.

TM Errors are solved simply by finding the place where a \$ or string designation was either omitted or added by mistake. \$ can only designate string material like A\$="DOG" not A\$=76. There are a few modifications to this rule, but basically when acquiring the TM Error, look for a dropped \$.

The two errors that strike most fear into human hearts are the OD Error and the FC Error. The first because it tells us we must wade through those 800 data lines we barely got through in the first place, and the second because it can be caused by something far away from the line listed as the error line.

The OD or (Out of Data) Error is not a particularly overwhelming problem. First, by yelling "out of data" the computer is saying that it wanted to read more than you gave it. That tells us we have one problem: The read amount doesn't match the amount of data available. It isn't necessary to understand the program to find the fix, simply check the read amount. If it says 10 FOR X=1 TO 99:READ A\$(X):NEXT X, we know we need 99 pieces of data to satisfy the computer. Be certain the 99 is correct. Now go to all those data lines and simply count the numbers between the commas; they should total 99. If not, you missed one somewhere, so double-check the magazine listing for proper alignment at the edges of the margins. This should help; if it doesn't, you will need to go line by line to find the problem.

Sometimes you get to the end and still can find no omitted data number. Is the computer wrong? Don't bet on it. The problem here is usually a period typed in place of a comma. This would make a statement like: DATA 77,54,32,71,10, which has five separate numbers, turn into: DATA 77,54,32.71,10, which has only four. That little period is almost invisible among myriad lines of numbers, and most people would rather hear fingernails on a chalkboard than go through them one by one.

So, do it the easy way. If you find yourself in this position, check each DATA line with EDIT. If we enter EDIT and search for the period, S., the cursor will move to the end of a good line or stop on the period we've been looking for. Change it and you're on your way. Don't forget to mark it in the book as a problem, in case you need to find it again.

We now come to the infamous FC

(Function Call) Error. This accounts for most of the one-way trips into The Bug Zone.

Let's look at a few possibilities with an FC Error in Line 100: 100 PLAY"T255L355;01;ABCDEF;XZ\$;". Everything in the line looks OK. The 'O' is an 'O' and not a zero, quotes are there, 255 is the maximum legal amount for tempo and length, 1 is legal for the octave, the note names are proper, and the semicolons are really semicolons. So why still an FC Error in 100?

The only culprit left to cause a problem is XZ\$, so now we must find Z\$ and check it out. If it's bad, the computer came to Line 100 in good faith and did what it was told, but when it smacked into Z\$, it found someone asked it to do something illegal for the PLAY command. Presto — The Bug Zone.

To find Z\$, we have to look at Line 50: 50 Z\$="CCCAABBBQ4ACEGF". Looks OK, but wait. The Q before the 4 doesn't make sense; it should be an O for octave. The mistake could just as easily have been any letter other than A through G or a command not allowed in PLAY. So, we see here how a mistake way up in the program can affect a line anywhere.

The DRAW command is another good place for problems, since countless letter/number combinations are used to create a particular screen image. How about an FC Error in Line 100 again: 100 DRAW"BM125,95;563;E30R10D9L12;XA\$;".

Aha, the obvious problem is the illegal number for the SIZE command. It can only be a maximum of 62. We'll fix it and all will be well. Unfortunately, we still have an FC Error, so let's find where A\$ is created: 10 A\$="U4R3G9L3U7H3U5R47B5F9R6".

Remember, you must know something about the parameters allowed in BASIC commands. If you do, you find that A\$ calls for a line to be drawn 4,785 points to the right. When you check the listing you find out it should have been R47D5.

FC bugs can take on a wide variety of disguises: PUT parameters must equal their respective GET partners, PRINT @XXX, can be no more than 511, and line commands must not exceed 256 horizontal and 192 vertical. The possibilities are endless, and we can't cover them here. The solution is to break the problem down into small parts starting with the called line number, then search for the other areas brought into play to make that line work. By doing this,

you'll eventually escape The Bug Zone.

A final hint concerning breaking the large program down into small parts. Don't be afraid to insert a GOTO or STOP command in a listing to test the waters. Things go by rapidly when the computer works, so you need to center in on your problem.

If, for example, a PAINT command makes color spill out of your graphics try this:

```
10 DRAW"BM125,96R40D40L40U3B"  
20 PAINT(130,100),4,3
```

Put 15 GOTO 15 in and check whether the line makes a complete container for the paint. You won't see it until it is too late. Then fix the DRAW statement and remove the GOTO. If the container is complete and there is still a problem, double-check the paint coordinates by changing PAINT to a PSET(130,100), put in 25 GOTO 25 and see where the dot sets. If the listing is correct you won't need this, but mistakes do happen.

For number variables like 10 X=X\*2 or 200 LINE(X,30)-(X+7,120), PSET, the program will work for a moment until X gets too big to be legal. If it's part of a larger program, put a stop on Line 201 and ask the computer to ?X. What if it says X=250? No good, because the second part of the line command adds 7 to X and therefore equals 257, which is not allowed. Your problem then becomes the X=X\*@ statement, which maybe needed to be an X=X+2.

So, don't be discouraged by an occasional voyage into The Bug Zone. Those more experienced have spent many an hour saying nasty things to their CoCo while learning to discover elusive bugs. Just remember to:

1. Learn the rules
2. Compare with the listing
3. Save to tape before running
4. Check each line before continuing
5. Double-check address numbers
6. Be careful of similar characters
7. Narrow down the problem
8. Don't be in a hurry

You will soon find you've acquired a key that unlocks the many doors you may encounter on your next trip into The Bug Zone.

*Create your own zany puzzles*

# CoCo-Nect-A-Dot

By Eric White

**F**rom time to time, I enjoy exploring the graphics capabilities of the CoCo. The Color Computer's Extended BASIC is a very powerful construction set. It can provide hours of fun and occasionally frustration. With it you can successfully create a variety of interesting and useful programs.

*CoCo-Nect-A-Dot* is one such program, using commands such as DRAW, LINE, PAINT, GET and PUT as the main building blocks. Explored in this program is the incorporation of a simple data interpreter. By coding each dot puzzle in a standard format, the puzzle can be displayed by simply processing the puzzle data through the interpreter. Once the user interface is finished and operating, additional puzzles can be created by entering more puzzle data.

*CoCo-Nect-A-Dot* accepts input from either the joystick port or keyboard. Press the firebutton on the

desired joystick to select it as the input device. I will be using the keyboard throughout the rest of the program operation instructions. The active keys are the arrow keys and the space bar.

There are three menu options available: Dots, Lines and Color. To select a new puzzle, move the pencil with the arrow keys until the point of the pencil is on the box marked Dots, then press the space bar.

The Lines menu item is automatically selected when the program first starts, and after each new puzzle has been constructed. Lines is the drawing mode used to connect the dots. Position the pencil point where you want to tack a line down and press the space bar. Next, move the pencil to where you want the line to stop and press the space bar a second time.

Once your puzzle is complete, you may want to add a little color. Move the pencil point to the box marked Color and press the space bar. A flashing box will surround one of four color bars located at the bottom right of the screen. Use the up- and down-arrow keys to move the flashing box to the desired color and press the space bar to select that color. Next, position the pencil point where you want to add

---

*Eric White is a self-taught programmer with a graphic arts background, who has been writing software for five years. He lives in Altamont Springs, Fla., and has coauthored many programs in association with WHITESMITH.*

color and press the space bar to fill the area.

The program consists of nine sections. Lines 50 to 390 are for device input, lines 400 to 650 are pencil position update, lines 660 to 980 draw the main screen, and lines 990 to 1170 are the puzzle data interpreter. Lines 1180

to 1320 do Hi-Res text printing, lines 1330 to 1630 are the menu options, lines 1640 to 1760 have the puzzle data, lines 1770 to 2200 are the Hi-Res character data and program variables, and lines 2210 to 5000 are the start-up display.

To create a new puzzle, simply add puzzle data in this order: x position (0-255) for hint message, y position (0-191) for hint message, and the hint message string. Next, each point of the puzzle is described by the x (0-255), and y (0-191), R or L (which puts the dot's number on the right or left of the dot), and 0,0,END (which is used to end the puzzle's data).

Note: The x coordinate must be divisible by 4 and the y coordinate must be divisible by 3, so the pencil point can be placed exactly on the dots. With a little planning, almost any simple shape

can be encoded into a *CoCo-Nect-A-Dot* puzzle.

THE SECOND RAINBOW BOOK OF  
**SIMULATIONS**

Challenges Await You In

The Second Rainbow Book Of

**SIMULATIONS**

Put your wits and skills to the test with 16 outstanding programs from the winners of our Second Simulation Contest. You'll encounter explosive action as the leader of the Rainbow City *Bomb Squad*. As the *Master Train Dispatcher*, the pressure is intense to avoid accidents and keep the trains on time. When all this activity seems too much, who ya gonna call? *Ghostgetters*, of course! Then it's off to *CoCo's Bowling Alley* for a little Monday night relaxation.

**Plunge into real-life action with:**

**Bush Pilot** — Danger lurks above the canopy of the dense African jungle

**Nereid Countdown** — Many different skills are needed to launch the massive Ezekial into orbit

**Stock Market** — Failure or fortune in the world of high finance

**Vacation U.S.A.** — On the trail of adventure through the American heartland

**Project Theta** — Alone in your fighter, you stand before Zygor's invasion fleet

**Olympic Decathlon** — Qualify in 10 grueling events

Our award-winning authors: Curtis Boyle, Peter Brandt, Audrey DeLisle, Bill English, Aryeh Glaberson, Floyd Keirnan, Ray Ligocki, Brian Maiorano, Chris McKernan, Baron Quintana, Joel Robbins, Charles Santee, Randy Simpson, Bob Tyson, E.L. Vasser and Duane Wood.

**All This For Only \$9.95!**

**And for all the fun without the fuss —  
The Second Rainbow Simulations Tape or Disk**

Save yourself hours of typing listings. Just load these great Simulations into your computer and run them. What could be easier?

The tape or disk is an adjunct and complement to the book. Even if you buy either the Second Rainbow Simulations Tape or Disk, you'll want and need the book for the introductory material and loading instructions.

**Tape Only \$9.95 Disk Only \$10.95**

- Please send:  The Second Rainbow Book Of Simulations for \$9.95\*  
 The Second Rainbow Simulations Tape \$9.95  
 The Second Rainbow Simulations Disk \$10.95

NEW FREE CATALOG

**'KEEP-TRAK' General Ledger Reg. \$69.95—ONLY \$24.95**  
 "Double-Entry" General Ledger Accounting System for home or business. 16k, 32k, 64k. User-friendly, menu-driven. Program features: balance sheet, income & expense statement (current & 'YTD'), journal, ledger, 899accounts & 2350entries on 32k & 64k (710 accounts & entries on 16k) (disk only). Version 1.2 has screen printouts. Rainbow Reviews 1.1 - 9/84 : 1.2-4/85

**"OMEGA FILE" Reg. \$69.95—ONLY \$19.95**  
 Filing data base. File any information with Omega File. Records can have up to 16 fields with 255 characters per field (4080 characters/record). Sort, match & print any field. User friendly menu driven. Manual included (32k/64k disk only). Rainbow Review 3/85, Hot CoCo 10/85

**BOB'S MAGIC GRAPHIC MACHINE**  
 Can generate BASIC code to use in your programs. Easy drawing and manipulation of circles, ellipses, boxes, lines and ARCS. Single joystick operation with on line HELPS at all times. Allows text on the graphics screen & movement of objects on the screen. Can be used as a stand-alone graphics editor. Instruction Manual. **GRAPHICS EDITOR. Reg. \$39.95—ONLY \$19.95** for disk or tape. 64k ECB. Rainbow Review 7/85, Hot CoCo 9/85 "The graphics bargain of the year"

**'KEEP-TRAK' Accounts Receivable.** (Avail. 10/01/85).  
 Features: auto interest calculation, auto ageing of accounts, installment sales, total due sales, explanation space as long as you need, detailed statements. 'KEEP-TRAK' General Ledger tie in, account number checking, credit limit checking & more. User friendly/menu driven. Includes manual. **\$39.95** or **\$49.95** General Ledger & Accounts Receivables. (Disk Only).

**'COCO WINDOWS'** Available 10/31/85  
 With hi-res character display and window generator. Features an enhanced key board (clicks) and 10 programmable function keys. Allows the user to create multiple windows from basic. Includes menu driven printer setup and auto line numbering. Four function calculator, with memory. The above options can be called anytime while running or writing in BASIC. **APPLE PULL YOUR DRAPES. YOU DON'T WANT TO SEE THIS. \$19.95** (disk or tape) includes manual.

*Here's what you need to know to have a healthy, happy organization*

# The Care and Feeding of a CoCo Club

**By Mark Haverstock**

**A**re you a member of a Color Computer club? If you are, you're in good company. In the October 1986 RAINBOW, there were approximately 146 CoCo clubs listed in the United States and Canada. This doesn't even take into account clubs that have Color Computer SIGs, or ones that have yet to make themselves known to the CoCo Community.

Sometimes, these clubs start from small and humble beginnings. Often, a few friends who have a common interest in the CoCo get together for informal meetings, and soon find themselves attracting other enthusiasts who want to share their ideas and problems. Other

---

*Mark Haverstock teaches computer applications and language arts classes for the Boardman Schools in Youngstown, Ohio. He is also editor of the C3 Crier, newsletter of the Color Computer Club, Inc., of Canfield, Ohio.*

clubs form out of the frustrations found in their present users groups. Our club, for example, came about as a result of finding no Radio Shack computer users groups in the Youngstown area. The group that was formed by five owners of the early Color Computers now boasts a membership of over 100, and will celebrate its fifth birthday this year.

As a member of this modestly successful computer club, I'd like to share a few tested hints to help your CoCo club grow and thrive with a little involvement from your officers and members.

## Membership

The most important ingredient in any club is a pool of active members. After you've gotten your crew of friends and acquaintances together, how do you attract new members? You're dealing with a fairly narrow group: those interested in the Radio Shack Color Computer. These people are probably already owners or prospective owners of this particular computer. To find this select group of people, mailings to computer owners, newspaper ads and the like are not a very effective way to reach CoCo owners.

If you think about it, the most likely place to find a Color Computer owner would be at a Radio Shack store or franchise. But wait! Before you go stake out the computer section of your local store, here are some suggestions and realistic expectations you should have.

Tandy does acknowledge TRS-80 computer users groups, and even publishes its own newsletter for them. This doesn't imply, however, that your local store manager or computer representative is going to supply you with customer names, nor does it mean that they will hang signs or pass out promotional literature for you. Company policy dictates otherwise. In spite of these policies, we've found that store personnel have been some of our best allies, as

---

---

far as referring potential members to us by word of mouth.

Often, customers will ask if there are any local Color Computer clubs, or seek technical help or advice that store salespeople cannot provide. We regularly mail newsletters and a few information sheets about our club to local stores. On the average, we gain three to six members per month who mention they heard about us at a Radio Shack store.

Other stores that sell computer supplies, software and related products can help with membership referrals. We also find that providing them with monthly newsletters and general information sheets helps remind them of us, and in turn generates new members.

Listing club information on local BBS systems is another way of recruiting potential members who have modem capabilities. Leave a message on the board about your club; better yet, ask the SysOp to put information about your club in a more prominent place, such as the bulletin section.

Other users groups can also be a source of new members. I'm not suggesting that you proselytize from other clubs, but there are two situations you should consider: 1) a person who owns a Color Computer and another brand; 2) a person who belongs to a Color Computer SIG within a larger club. After all, a second membership may be beneficial to their understanding and use of the CoCo, as well as to your membership rolls.

Last, but certainly not least, have announcements about your club printed in computer magazines of interest to CoCo users. Magazines such as *RAINBOW*, *CoCo Ads* and *Spectrogram* provide sections for club listings free of charge.

### Meetings

According to our club historian, the first meeting of the Color Computer Club (later to become the Color Computer Club, Inc. of Canfield, Ohio) held its first meeting at a local bar. The then-elected secretary scrawled our first minutes on a cocktail napkin. It's more likely that your meetings started at the home of a member than in a bar. Eventually, these places will become too small to accommodate a growing club.

The next question is, where can you hold your meetings?

The most likely (and cheapest) candidates for meeting places are schools, libraries, churches and lodges. Most of these places will provide facilities at a nominal charge, or no charge at all. Some restaurants have meeting or community rooms that are free for the asking or may be provided for free if your meeting agenda happens to include ordering a meal or snack. Least desirable from the standpoint of cost is a rented room or hall.

If there is a charge involved, ask your members to each donate a dollar toward the cost of the meeting room. If the collection exceeds the cost of the room, you may eventually decide to do what we did. Any excess went to purchasing a door prize for the next meeting. This is one way to take care of the surplus, as well as providing an added incentive to attend each month.

When planning meeting activities, the best policy is to take care of the business meeting first, when you have everyone's attention. Whatever time is left can be devoted to demonstrations, help sessions, lectures, etc. Remember, the mind only absorbs what the seat can endure, so frequent breaks are a must if your meeting lasts any length of time. Some of our members have been caught sneaking out to get a burger and fries during a long-winded business meeting.

Encourage your members to bring their computers if space and the number of electrical outlets permit. This practice provides easy access to hardware for demonstrations or help sessions. There's nothing like seeing the program or hardware in action.

Be sure to make your meetings educational and informative. Besides being a social gathering for computer owners, a meeting should provide some learning experiences for members and visitors who may attend. A club that provides a forum to exchange information and educate will meet the needs of its present members, as well as attract beginners who seek help and advice.

### Club Assets

The club assets I will refer to don't have anything to do with the treasury. When a prospective member is looking over your club, the one implied question

always in his or her mind is, "What's in it for me?" A good club will provide services to attract and keep members.

One of the most valuable services we've found is providing a club library of public domain programs. This is a great attraction for new computer owners who have little or no software. They can borrow a wide array of programs without making any major investment.

Keep your library public domain only! There are several reasons for this. First, it's cost efficient. Public domain programs cost the club nothing, except for the cassettes or disks on which they are stored. Secondly, the issue of program privacy becomes non-existent. Members, if they desire, can copy these programs legally. Public domain programs have no strings attached. In contrast, licensing agreements in commercially produced programs may limit use to the original buyer only, making them unsuitable for a lending library. If a member illegally copies a program, both the member and club could be liable.

There are many places a club library can obtain public domain software. Programs can be downloaded from BBS systems, and the Color SIGs on information services, such as Delphi. A few companies who advertise in *RAINBOW*, including PD Software of Houston, Texas, compile and sell disks of public domain software at a nominal price to cover the cost of the disk and duplicating. Established clubs, like our own, will often exchange library disks of public domain programs on a one-for-one basis. Finally, don't forget your members who may want to donate programs they have written to your library.

Offering classes is a great draw for new members, especially those who are first-time computer owners. BASIC language classes will probably be the most well attended, and suit the needs of most of the membership. Advanced courses in BASIC, as well as PASCAL and assembly language, can be considered if there are members qualified to teach them. Our club usually holds these classes at the homes of members, and limits the amount of students accordingly.

An alternative to formal classes is a resident "expert" on applications pro-

grams. Incorporated into some of our meetings have been demonstrations of specific programs, such as a particular word processor or filing program. These "experts" are members who are thoroughly acquainted with the programs and give either a small group demonstration or one-on-one help to members.

A club BBS system can also be an inducement for prospective members. It can provide an instant means of communication between club members and a current update on club activities and concerns. Our club BBS is open to all, but members have several reserved sections and privileges not available to the public.

Since the purchase of equipment and phone costs can quickly go beyond the ability of a club to support it, sponsorship of a club member's existing board is an attractive alternative. Sharing the cost of monthly phone charges is one way a SysOp and club can benefit each other.

#### Newsletters

One visible sign of a growing club is a newsletter. It may start from humble beginnings on a single copied sheet, or be a mini-magazine with regular columns, programs and tutorials. Whatever size or format, we've found this to be one of the club's greatest assets. Our members appreciate, even look forward to, the arrival of a monthly newsletter.

Getting a newsletter started requires the efforts of several dedicated members. I emphasize the word several here for a good reason. A single editor cannot go it alone. A good newsletter needs people who can write and communicate clearly, have a talent for graphic arts, and editors who have a

good working knowledge of grammar and spelling.

Articles from members are crucial to the success of any club newsletter. As in many clubs, most of the articles submitted are from officers and a handful of regular contributors. To promote writing for our club newsletter, we've offered some incentives that have been a modest success. Each member who has an article printed in the newsletter receives a one-month extension on his club membership. Periodically, programming contests are held to solicit programs for publication. The winning program is published, and the winner receives a prize or gift certificate for his/her efforts.

To make things simpler for the editor, our newsletter requires submissions on tape or disk from a word processor, written in ASCII format. That way, the editor only needs to load the file into his word processor, make corrections, and print out the article. The articles and artwork are then pasted up on layout sheets and sent to the printer.

If your club can afford it, offset printing by a professional printer produces the best quality newsletters. A good alternative for budget-conscious clubs is to find a professional printer who has a high-speed copier. Most of these copiers will print both sides and collate at a reasonable cost.

#### Money Raising Activities

To support a newsletter, BBS and other club activities, you'll need to have a treasury with sufficient funds. Dues for membership will always be a significant form of income, but usually won't be enough to cover a club's entire expenses. Money-raising activities now become a major consideration. Try to

avoid money-raising activities that require a substantial cash outlay in advance.

Raffles can be a hit or miss proposition. In the past, our club has held raffles for two Color Computer systems; one was successful and one barely covered expenses. There is an obvious element of risk if you can't at least break even. One type of raffle that involves no investment is a "50/50 raffle," in which the proceeds are evenly distributed between the club and the winner. The 50/50 raffle has been successful at both meetings and membership drives.

Traditional money raisers such as candy sales are possibilities if you can form a good working relationship with the supplier. Many of these fund-raising companies will buy back unopened boxes of items that have not been sold. Also, they may not bill you for the merchandise immediately. This gives the club an opportunity to pay the bill from the first round of sales money that is turned in. Whatever you choose to sell, be sure you have support from your members, as well as a sales plan from the supplier that is to your liking.

#### Final Thoughts

These are just a few suggestions that will contribute to the growth of a Color Computer club. Of course, this is not the final word on how to run a club, nor is it intended to be. The ideas are ones that have worked for us over the last few years. I'd welcome comments on what projects and ideas have worked for your particular club.

*(Questions about this article may be addressed to Mr. Haverstock at 6835 Colleen Drive, Youngstown, OH 44512. Please enclose an SASE when writing.)*

#### Two-Liner Contest Winner . . .

Use the joystick to make your player avoid the potholes. This one is great and is even more difficult when using the high-speed poke.

## Clubs, Clubs, Clubs

**W**e compile a list quarterly of Color Computer Clubs because of the many requests we receive. CoCo Clubs may wish to exchange newsletters, share ideas for topics of discussion at monthly meetings, etc.

Please let us know if we have omitted any clubs and send us complete up-to-date addresses. Only those clubs that have signed our anti-piracy agreement form will appear in this listing of CoCo Clubs. Also, please notify us if you wish to add or delete any names on this list. Send your information to:

## new clubs

### Editor:

We would like to inform CoCo owners in the San Joaquin Valley of our new club. We are looking for new members to join us. We will have many activities, one being monthly meetings. Anybody interested in joining, please call (209) 646-2632 or write to me.

*Matthew L. Reyna  
695 'I' Street  
Parlier, CA 93648*

● I would like to announce a new Color Computer user group in the Orlando/Winter Park area. The club has its own BBS. Details about the BBS can be obtained at the club meetings which are the first Wednesday of every month at my condominium's clubhouse. To get directions, call (305) 855-7867 or write to me.

*George M. Ellenburg  
CoCoNuts of Central Florida  
Box 5913790  
Orlando, FL 32859-3790*

● Anyone interested in joining the CoCo Trading Post Club, please write me.

*Bart Stanley  
490 Potts Road  
Conyers, GA 30208*

● I publish a newsletter called Lewis Clark Exchange and am currently looking for new members. I print ideas, programs and interesting articles. I would like to exchange newsletters with other clubs and organizations. For more information on subscribing or exchanging newsletters, write to me.

*Leslie Miller  
Lewis Clark Exchange  
1130 Bryden Avenue  
Lewiston, ID 83501*

● I'm pleased to announce the formation of the COMPuTer Assembly Serving Shelby (COMPASS) Club. COMPASS meets the second Monday of every month at 7:30 p.m. on the third floor of the First Christian Church in Shelbyville.

*Duke Norris  
P.O. Box 241  
Shelbyville, IN 46176*

● I would like to know if there is a CoCo users club in the Leavenworth area. Anyone knowing of one or anyone wanting to organize one, please contact me.

*Michael Frick  
839 Ottawa Street  
Leavenworth, KS 66048*

● We would like to inform your readers of the Ft. Meade Color Computer Club. Our meetings are held on the second and fourth Monday of each month. We meet at the Land, Sea and Air Recreation Center located in the N.S.A. complex at Ft. Meade. No dues are collected and all are invited to attend. We start at approximately 6:30 p.m. and cover a wide range of interests. For further information contact either Frank Powers (301) 262-9573 for the Washington area or Mike Clancy (301) 551-7520 for the Baltimore area.

*Frank A. Powers  
12207 Mackell Lane  
Bowie, MD 20715*

● The GOSUB TRS-80 Computer Club has been together for eight years. We are a Tandy computer club, with sections for all Tandy computers. We have a BBS that operates 24 hours a day at 300/1200 baud. You can reach it at (617) 756-1442. The club meets every third Sunday of the month at St. Peter's-Marian High School on Grove Street.

*Edward J. Donovan  
357 June Street  
Worcester, MA 01602*

● The Tandy Users Group of Grand Rapids (formerly known as the Grand Rapids Area Tandy Users Group) meets on the third Tuesday of each month, 7 p.m., Radio Shack Computer Center, 3142-28th Street in Kentwood. Our group is represented equally by the MS-DOS, OS-9 and CoCo users. At the present time, there are no dues and membership is open to all, regardless of hardware.

*Robert M. Worth, Jr.  
1726 Millbank S.E.  
Grand Rapids, MI 49508*

● The Jackson Color Computer Club meets on the third Tuesday of each month, 7 p.m., V.A. Medical Center. For information, call (601) 856-7255 or write us.

*Dorothy N. Welch  
424 Church Street  
Madison, MS 39110*

● I would like to announce the start of the New York Color Computer Program exchange group. Our group wants to get public domain programs in circulation. We do print a newsletter which is filled with contests, facts and other interesting things. There is no fee. For information please write to us.

*Larry Chattoo  
230 Lott Avenue, Apt. 5-B  
Brooklyn, NY 11212*

● Announcing the formation of the CoCo Users Group of Elmira. For information write to us or call (607) 734-0065.

*Bill Cecchini  
P.O. Box 4181  
Elmira, NY 14904*

● It is with great pleasure that I announce the extension of the United States largest Color Computer user's group to the Enid and northwest Oklahoma area with the formation of the Enid Chapter, CoCo Inc. We have 20 members in our third month of existence and are growing rapidly. We offer

the same benefits as the Oklahoma City parent organization; club disks monthly, a newsletter, a BBS and monthly meetings with seminars on BASIC, OS-9 and other points of interest to all CoCo users. Interested parties should contact their favorite Radio Shack dealer or write me.

*David Graham  
724 E. Maple  
Enid, OK 73701*

● The Williamsport Area Color Computer Club meets every third Wednesday of the month. If you have any questions, contact me at (717) 322-9715 or drop me a message on the Delphi CoCo SIG. We meet at 7 p.m. in the James V. Brown Library.

*Christian Ross  
(CGR)  
Williamsport, PA*

● A new club is being formed in the northern Virginia area. We are supported by two local BBSs and have started a public domain library with over 800 entries. We would also like to hear from other clubs about exchanging ideas, newsletters and anything else that will benefit the clubs involved. Our BBS support numbers are Handy Tandy (703) 532-5317 and CoCo Corner (703) 573-3362. Any interested party wanting more information about this club, please write to me.

*Rick Blouin  
12007-C3 Greywing Square  
Reston, VA 22091*

● The Richmond Area Color Computer Organization (RACCO) meets on the fourth Tuesday of each month. We publish a newsletter each month. For information call me at (804) 282-7778 or write to me.

*Bill Mays  
6003 Westbourne Drive  
Richmond, VA 23230*

● I am starting The Poor Man's CoCo Club. Although based in Wisconsin, CoCoists from anywhere around the world who want to see what owning a CoCo is all about should send an SASE to me.

*Mark Andreessen  
Rt. 2, Box 103W  
New Lisbon, WI 53950*

● We would like to announce the existence of the Bonnyville User Group (BUG's). Although we are an all-types of computer club, the majority of our members are CoCo users. We have a monthly newsletter as well

as our own club BBS and other benefits. For more information, call Doug MacDonald at (403) 826-4790 or write to me.

*Gerhard Wolf  
P.O. Bag-R  
Bonnyville, Alberta  
Canada T0R 0L0*

• The Calgary Color Computer Club is interested in exchanging newsletters with other clubs. Thank you RAINBOW for providing this service to the international community of CoCo users.

• The First Color Computer Club of Israel is in need of public domain programs. Since we are a long distance call to all BBSs, we are asking for any individual/clubs to send us programs to add to our library. If requested, we will be happy to send you our current newsletter. Please send an SASE. We have a new mailing address and phone number. Phone city code (02) 863-354; please call 07:00-20:00 GMT.

*J. Yosef Krinsky  
52 Ramot Polin  
Jerusalem, Israel*

• Announcing The Great German CoCo-Cooks Club. We are only a few CoCo users, but we would like to get in contact with all German CoCo users and, of course, with CoCo users in every country.

*Hans - Joerg Sebastian  
Kalkumerstr. 96  
4000 Duesseldorf 30  
West Germany*

## ORDER PHONE (416) 456-0032

Call or Write! For your free catalogue, more info or give us suggestions! Duck Productions, 18 Rowe Court, Brampton, Ontario, Canada L6X 2S2 Please add \$2.00 for handling Ontario residents add 7% provincial tax Watch our catalogue for discounts, hints and tips and chance to win software.

### Micro • Fire the ultimate secret weapon.

Have you beat your thumbs more than the aliens? This is a great rapid fire circuit that's easily installed on any joystick. Has no computer side effects. Comes with complete instructions and calibration program for adjustment to taste. \$19.95 (\$24.95 CDN.)

### Class Monitor Dual monitor driver

The best monitor driver for any Coco. It drives any composite, colour or monochrome monitors. Complete with dual audio outputs for immediate access of either or both monitors. Simple installation instructions. \$31.50 (\$39.50 CDN.)

### Laser Mazer master puzzle of reflection

Captain, Starfleet wants Regula One protected from intruder attack. A battle of wits, pitted against six cloaked Romulan vessels lurking in the quadrant. Can you find and engage them in time? A master puzzle of reflection for your sensors. Identify the locations of physical mass in space and command your attack. Misjudgement is a deadly option. Adventure in thoughtware for only \$24.95 (\$29.95 CDN.)

### Battle to D-Day The multiple player adventure

Can you change the course of history? General, your mission is to locate and secure the Third Reich's emergency command post before the allied landing on Normandy. Think through obstacles, battle after battle to find the entrance code. Then command your assault! Battle against time! Battle against three opponents. Adventure in thoughtware for only \$29.95 (\$38.95 CDN.)

DUCK QUALITY

### Keeping Track more than a disk manager.

If you own more than two disks you'll love Keeping Track. A manager menu of nine utilities that do it all! The real highlight is "D". The directory/autostart. It's a continuous access I.D. directory that loads and executes any program with a single keystroke. All programs fully documented. \$29.95 (\$38.95 CDN.)

### Map 'n Zap semi automatic disk repair

The layman's step by step kit for directory and grain table repair. Locates errors, maps out disk contents to screen or printer, backs up any flawed disk and prompts built in disk zap for repair. Complete with full tutorial on Coco's disk input / output access operation. \$19.95 (\$24.95 CDN.)

### Code Buster machine language disassembler

Three terrific programs to explore machine language. Screen or printer accurate disassembly of binary code. Simple prompted procedure with some instruction to dissect and understand your ROMs. Fully documented for only \$19.95 (\$24.95 CDN.)

# From Derringer

## PRO-COLOR-FILE \*

© 1984 by Derringer Software, Inc.

### ENHANCED 2.0

- 60 Data Fields for each record
- 1020 spaces available per record if needed
- Maximizes multiple drive operation
- 28 equation lines (+ - \* /)
- IF-THEN-ELSE logic test in equations
- Full Screen editing on up to 4 data entry screens
- Key click and auto key repeat
- Stores custom designed report formats
- Obtain totals, averages, or summaries for any field
- Output reports to printer, screen, or disk file
- Send data out to a DYNACALC compatible file
- Separate label generator for up to 10 across labels
- Pre-define up to 16 indexes for searching/reporting file
- Sorts 750 records in under 5 minutes
- User defined selection menus
- Repeated tasks performed with one keystroke
- Comes with 75 pages of documentation in a 3 ring binder
- Supported by a national users group
- Full time programmer support
- Supplied on an unprotected disk

~~\$59.95~~ ~~\$49.95~~

## PRO-COLOR-FORMS 2.0 \*

© 1984 by Derringer Software, Inc.

PRO-COLOR-FORMS will access data files created with PRO-COLOR-FILE and merge them with a letter or place them on pre-printed forms.

- STORE UP TO 6 FORMATS • USER DEFINED PAGE SIZE
- SUPPORTS SPECIAL PRINTER CONTROL CODES • RIGHT JUSTIFICATION • PASSWORD PROTECTION • MERGES WITH GRAPHICS FROM MASTER DESIGN OR TELEGRAPHICS •

## PRO-COLOR-DIR \*

© 1984 by Derringer Software, Inc.

PRO-COLOR-DIR will read your directories and create a master data file that can be accessed by PRO-COLOR-FILE for sorting and reporting. 1000+ records can be stored on one diskette with valuable information about each program.

You can obtain hard copies of the information and create labels of the filenames for placing on the diskette itself.

- DISK ID NAME • FILENAME/EXT • TYPE OF FILE
- DATE CREATED • DATE UPDATED • NUMBER OF GRANS ALLOCATED • NUMBER OF SECTORS ALLOCATED AND USED • MACHINE LANGUAGE ADDRESSES •

(Includes Dynagraph, Sidewise)

~~\$79.95~~ INCLUDES @SUMMARY!

## Telewriter-64™

### WORD PROCESSOR POWER

~~\$59.95~~ INCLUDES MASTER DESIGN

## Coco Max II

### GRAPHICS SUPERIOR

~~\$79.95~~ INCLUDES TELEGRAPHICS!

## @ SUMMARY \*

© 1985 Derringer Software, Inc.

If you use your spreadsheet program to keep track of your expenses then @SUMMARY can help you analyze those expenses. For example, if you indicate a "Category" for each expense then @SUMMARY will produce a report that shows a total for each category, the highest amount, the lowest amount and the average amount. In addition, @SUMMARY can produce a hi-res line graph or bar graph of the analysis and allow you to place titles on the graph. A hardcopy of the graph can also be generated as well as saved to disk.

The analysis can be saved in a "data file" which can be loaded into DYNACALC or read in by @SUMMARY for future additions to the analysis. If you use other Spreadsheets such as ELITE\*CALC then you have added a graphing feature to your spreadsheet applications. The analysis can also be saved in an ASCII file which can be read by word processors for inclusion in a report.

@SUMMARY is compatible with any spreadsheet program that can generate an ASCII text file of worksheets.

Specify RS-DOS or OS9\*

~~\$199.95~~ \*OS9 version does not have Hi-Res graphing and requires Basic09.

DYNACALC™ is a registered trademark of Computer Systems Center  
ELITE\*CALC is a trademark of Elite Software  
OS9 is a registered trademark of MICROWARE and MOTOROLA

\* CoCo 3 Compatible

## SIDEWISE \*

© 1984 by Derringer Software, Inc.

Add a new "twist" to your printer's capabilities!

SIDEWISE makes your printer do something you never thought possible—print side ways!

SIDEWISE will read in any ASCII text file and print it out side ways using a Radio Shack, Epson, Okidata, C-Itoh or Gemini printers having dot-graphics ability.

SIDEWISE OS9 is compatible with DYNACALC OS9 and requires Basic09

SIDEWISE OS9 ~~\$399.95~~ \$299.95 (Disk only)

SIDEWISE RS-DOS ~~\$249.95\*~~ \$199.95

\* RS-DOS version included FREE with DYNACALC™

OS9 is a registered trademark of MICROWARE and MOTOROLA

## TELEGRAPHICS \*

© 1984 by Derringer Software, Inc.

PRINT HI-RES GRAPHICS USING TELEWRITER-64!

Use CoCo Max, Graphicom or other graphics programs to create letter heads and print them while using Telewriter-64.

Telegraphics interfaces with Radio Shack, Epson, Gemini, C-Itoh and Okidata printers having dot-addressable graphics. A simple modification to Telewriter-64 will allow you to exit Telewriter via the DISK I/O MENU and print out the graphic without affecting any of your text in the buffer.

This is the same feature that is included in our MASTER DESIGN program. Since we felt you don't need to buy two graphics editing programs, we have made this feature available at a reduced price.

~~\$249.95~~ \$199.95

(Available Only On Disk)

NO OTHER DISCOUNTS APPLICABLE

## MASTER DESIGN \*

© 1984 by Derringer Software, Inc.

Generates lettering in hi-res graphics that can be different sizes, skinny, bold, textured, drop shadowed, raise shadowed or tall. Also interfaces with the Telewriter-64 word processor for printing hi-res displays with your letters.

Take full advantage of all the extended BASIC hi-res graphic commands including boxes, circles, lines, copy displays and utilize GET and PUT features. Added commands include mirror reflection, turn displays backwards or upside down. Squish displays, create dot patterns for shading or diagonal lines.

The Letterhead Utility allows you to access hi-res graphics from Telewriter-64, your own BASIC programs or PRO-COLOR-FORMS.

Interfaces with dot matrix printers having dot addressable graphics.

# Let the Little Ones Learn by Counting on CoCo

By Steve Blyn  
Rainbow Contributing Editor

**T**his month's program is one for the little folks — the preschoolers. It is always wise to try to interest preschoolers in using computers. This will help them to avoid fears and anxieties about computer usage that may develop later in life. Usually, a young child will want to "play with" the home computer if he or she has seen parents or older siblings using it. This has certainly been the case in my home. My youngest child has always wanted to imitate the activities of the rest of us. She is now 5 years old. Her first two years were spent observing computer use in the home and during the next three years, using it herself.

This program is meant to ease a young child into using a computer comfortably. It is simple, colorful, and presents a concept that most youngsters have experienced before — counting objects. A car will travel across the screen beeping its horn. Immediately afterward, a group of cars will appear on the screen. The child is required to

---

*Steve Blyn teaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.*

count the cars and type in the correct answer. The number of cars varies randomly from two to eight. The computer displays the child's answer if he presses a number from one to eight. Other keys produce no response from the computer.

If a wrong answer is given, the computer displays it but makes no negative reaction. We are, after all, dealing with very young children and do not want the computer to present any unpleasant impressions to them. The child may continue to press keys until the correct answer is given. A happy tune accompanies a correct answer.

Sounds reinforce the visual picture of the number of cars. This is an extra aid to the child. Some may prefer to use the number of beeps as an initial aid to counting, and then use the pictures as a secondary source of counting. If the child becomes too reliant on counting the beeps, you can turn off the volume on your TV or monitor.

The words for the numbers are also displayed each time the child presses a number from one to eight. We felt that some of the children might be up to learning how to spell the numbers. Nursery schools and *Sesame Street* do a lot toward making our kids aware of the numbers and letters at an early age.

The INKEY\$ is used throughout this program to make it easier for the little ones to use the keyboard. It is sometimes difficult for them to coordinate pressing the correct letter and then finding the ENTER key. This becomes even more difficult on the new Color Computer 3. (The ENTER key is less prominent on the new computer and will no doubt present problems to adults and children alike for awhile.) The ENTER key is used only to go on to the next group of cars to count. Mom or Dad can provide some assistance if needed.

Lines 60-110 draw and print the original car across the screen. Line 120 changes the position of the car by three places, and the loop created by lines 40 and 130 moves the car along.

Lines 150 and 230 choose random numbers from one to four. The number of cars drawn will therefore be a number between two and eight. The cars are drawn in lines 160 through 290. Lines 300 to 320 create a box for the answer to be placed in.

Line 340 looks for the child's response. Lines 350 through 420 check to see whether that response was one of the acceptable answers (one through eight). If not, the program immediately looks for the next response. If an acceptable

response was keyed in, it is printed and checked to see whether it is the correct answer by lines 460 and 470.

After the correct answer is given, a happy tune is played by Line 460 and

the computer waits for the next instruction. Pressing ENTER gives another example; pressing the E key ends the program.

We hope that your young ones enjoy

working with this program. We do suggest, however, that you stay with them to provide encouragement, help when necessary, and give a lot of praise for their accomplishments. □

# Understanding Relationships Between Fractions, Decimals and Whole Numbers

By Fred B. Scerbo  
Rainbow Contributing Editor

*Editor's Note: If you have an idea for the "Wishing Well," submit it to Fred c/o THE RAINBOW. Remember, keep your ideas specific, and don't forget that this is BASIC. All programs resulting from your wishes are for your use, but remain the property of the author.*

Another new year is upon us. It is a time for reflection and a time for new resolutions. As I look back on the past year, I feel that a good deal of what I set out to do in the "Wishing Well" successfully came to pass. We have had games, educational programs and a heavy dose of tutorial approaches in the column as a whole. What does the future hold?

Well, with a little luck I hope to be able to introduce some CoCo 3 programs in the "Wishing Well" before the next year is out. However, I will make this one *firm* resolution: I will not forget the overwhelming numbers of you who have a CoCo 1 and 2. Knowing the vast

*Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.*

numbers of RAINBOW readers who rely on these pages for software, I feel it will be a long time until the CoCo 3 users are in the majority. Therefore, fear not. I am not about to discard our trusty Color BASIC and Extended BASIC just because something new has come down the line.

Now, let's get down to business for this month.

## Mail and Wishes

During the last year, the "Wishing Well" has become much more difficult to prepare. There are several reasons for this. First, many readers have suggested programs that are virtually impossible to create in BASIC. I cannot write programs that jump in and out of OS-9 or alter the configuration of the BREAK key so it re-boots your disk system. These things are just not possible without getting into assembly language. Remember, the "Wishing Well" was designed to take ideas you submit and synthesize them into real programs in BASIC. Sometimes, ideas from four or five different sources will serve as the stimulus for a different program. Remember, creating a brand new program each month does take time and is not the easiest task in the world.

Secondly, some of the most requested ideas readers have submitted can no

longer be created in the "Wishing Well." The most requested features are sequels to *Rockfest*, *Baseball Fever*, *Football Fever* and most of my other graphic designs.

Unfortunately, our legal department has informed me that we can no longer reproduce logos and symbols that are protected under copyright. We have not had a major problem with this in the past, but the legal department is paid to warn magazines about areas where trouble could develop. Therefore, don't expect *Rockfest III* or *Basketball Fever*. The lawyers say no.

A few readers have written expressing outrage that I did not drop everything to write their program to project pork belly futures or to calculate schedules for school crossing guards. Some ideas are just too limited and I cannot devote a whole column to a program that only two or three RAINBOW readers can use. My goal always has been to create programs that the greatest number can use. That's why I won't abandon CoCo 1 and 2 either.

A lot of recent mail has commended the Life Skills series and programs like *Color Change Quiz II*. Sheila Jackson from Moline, Ill., wrote that her two children use these programs extensively and asked for more of the same. Kenneth Burdon of Plaistow, N.H., echoed

the same ideas in expressing thanks for programs like *Math Driller II*, which his grandchild uses.

Elementary educator Jack Lamoureux also expressed a need for a program like these dealing with the issue of relationships between numbers. All of us have struggled with those less-than and greater-than signs, < and >. Therefore, the next Life Skills program, offered this month, will deal with number relationships and recognition. Mrs. Jackson, Mr. Burdon and Mr. Lamoureux, this one's for you, as well as all the other "Wishing Well" readers who have a use for an educational program dealing with a valuable math skill.

### The Program

Life Skills 5 is designed to fit into a 16K Color BASIC computer or a 20K MC-10 without modifications. Like most other Life Skills programs, this one has a variable skill level, and three different types of material are covered. On running the program, the user will be presented with three choices: fractions, decimals or whole numbers.

The program is written in such a way as to adjust the location of the numbers

displayed on the screen, especially in the case of fractions.

If D is selected for decimals, the next line reads:

Select the number of decimal places (2-6).

If F for fractions or W for whole numbers is pressed, the choice is:

Select the number of number places (1-5).

Pressing the corresponding number gives the choice you desire. The next prompt asks:

Do you want to have hints given? (Y-N)

By hints, I mean explaining what the greater-than (>) or less-than (<) signs stand for. If N is chosen, the multiple choice selections A through C will only have the signs shown.

Next, the screen gives us our first problem and says:

Look at the two values below.  
The first number is   
the second number.

Below this are printed the two values, whether they are whole numbers, decimals or fractions. Next will be the three choices:

- A) Greater than . . . >
- B) Less than . . . <
- C) Equal to . . . =

If no hints are given, only a row of dots and the signs will appear next to the letters. The user need only press the letter desired. If the answer is wrong, the screen displays:

Sorry, try again !!

If the answer is correct, the screen will say:

VERY GOOD! THAT IS CORRECT!  
PRESS ENTER TO CONTINUE!

An arrow will also flash next to the correct response. Pressing ENTER advances to the next problem while pressing @ gives us our score card, which has now become a standard feature of all these educational programs. When the score card is on the screen, pressing Y reruns the program, pressing N ends it,

95	.....	83
165	.....	91

# MEMORY MINDER™

## A unique approach to disc reliability

Memory Minder from J&M Systems is one of the most comprehensive disk drive diagnostic programs available for microcomputers. It quickly and easily runs comprehensive testing of all vital operating parameters to assure data integrity.

## Data Integrity Means Data Confidence

Memory Minder is so easy to run you will be inclined to test your disk drives on a regular basis and correct problems before they ever endanger your data. This program provides long term confidence in your data integrity.

Memory Minder is currently available for the following:

### Version 1.03

TRS-80 Model III/4  
48 tpi Single Side  
48 tpi Double Side  
96 tpi and 48 tpi Double Side

TRS-80 Model-I  
48 tpi Single Side Single Density  
TRS-80 Color Computer and TDP-100  
48 tpi Single Side  
48 tpi Double Side

## Technical Knowledge Not Required

Simply slip in the Memory Minder disk and select one or more of eight sophisticated tests. Easy to understand graphics on your screen display findings in a few moments. Now you can discover potential misalignments and problems before they endanger your valuable data.

We accept MasterCard and Visa

and pressing C continues the program already in progress.

I have not included the function of Computer Paced Learning introduced a few issues ago because it is not appropriate for this material. Still, you may adjust the level of the difficulty at the beginning of each run.

Like all my other educational programs, examining the listing will help you get an idea of how variables can be used to create multi-subject programs. Without the use of variables, it might be

necessary to write three different programs to cover fractions, decimals and whole numbers. Study the listing and it might give you some ideas for your own programming skills.

### Conclusion

I hope all of you will find this program to be a valuable addition to your educational program library. If my mail has been any indication, many young CoCo users have been cutting their teeth on the software available only in

these pages. Therefore, give me a hand in coming months by suggesting some other ideas for material and subjects to be covered in this type of program. Since our options are now so limited, as I mentioned earlier in the article, your input would be helpful.

Also, don't be hesitant to suggest an idea for a game. I have some ideas percolating and someone out there might just provide enough stimulus to get the idea going! See you next month! □

## SUPER PROGRAMMING AID

"Best value of the year", see the review in the July Rainbow.

The Super Programming Aid is the best integrated software utility available for your COCO. Add what Tandy left out, COPY and MOVE statements, FIND, PRINT FORMATTER, KEY CLICKER, PROGRAMMABLE KEYBOARD, MULTIPLE EDIT SESSIONS, MERGE PROGRAMS, TYP-O-MATIC keys and much more, saves hours of time for BASIC programmers. Version II and III add many more features, PRINT SPOOLER, FULL SCREEN EDIT COMMAND, SCREEN PRINTING and more.

VERSION I — \$19.95 — for 16K & 32K COCO  
 VERSION II — \$24.95 — for 64K COCO  
 VERSION III — \$29.95 — for COCO 3

*Bring your graphics to life with this two-face tutorial*

## The Case of the Shifty-Eyed Animation Tutor

By Bill Bernico

I have worked with graphics for years and it's become my favorite part of computing. Once I got the drawing, painting and circling down pat, I wanted a way to stay interested enough in graphics to continue writing programs. The next obvious step was animation — making my pictures move.

I did a little research and worked with the various commands until I got a fairly good grasp of the workings of simple animation. Once you know why and how things work for a simple program like this, you can adapt the procedure to more complicated drawings. The time spent understanding this technique is worth the effort when you see your creations move.

*Two* creates FACE 2.BIN. Now that you have the two picture files on disk you can run *Facetest*.

*Facetest* is the program that brings all these processes together. First it PCLEARs eight graphics pages. Then it loads FACE 1.BIN with an offset of 6144. This will store the picture starting on Graphics Page 5. Next, it loads FACE 2.BIN and stores it in memory. With the aid of the SCREEN command, the pictures are displayed one after another in rapid succession to create the illusion of animation.

The time delay in Line 160 determines how fast the eyes will shift. They will continue to shift until you press any key, which stops the process.

Drawing, erasing, and redrawing is slow and awkward. GET and PUT are fine for moving across the screen. But suppose you have a portion of your picture that only needs to move in place or alter itself. That's what this technique will teach. It's done with the PCOPY command.

The sample programs, *Face One* and *Face Two*, each draw a face. The only difference in the two drawings is the direction that this fellow is looking. *Face One* has the guy looking right and *Face Two* has him looking left. As you run *Face One*, it creates a binary disk picture file called FACE 1.BIN. *Face*

To save you a little typing time, *Face One* and *Face Two* are the same except for lines 110-140. You can type in *Face One*, save it and edit lines 110-140 to those lines from *Face Two*.

(Questions about this program may be directed to the author at 708 Michigan Ave., Sheboygan, WI 53081: 414-457-4861. Please enclose an SASE when writing.) □

*Bill Bernico is a self-taught computerist who enjoys golf, music and programming. He is a drummer with a rock band and lives in Sheboygan, Wisconsin.*

Hint . . .

### Command Performance

Here is a tip for those with the new Color Computer 3. Tandy did a wonderful thing in eliminating some commands for Hi-Res graphics. When you issue the HSCREEN command, the screen is automatically cleared for you. Sounds great! But, what if you want to enter the Hi-Res screen without clearing it? Try entering POKE&HE6C6,33. This will cause the system to bypass the automatic HCLS. The original value for memory location &E6C6 is 141.

# OWL-WARE WINCHESTER BASIC

**ANNOUNCING... the Development of a Major Breakthrough in  
HARD DRIVE SYSTEMS for the COLOR COMPUTER!!!**

Several months ago OWL-WARE introduced the Finest OS9 Hard Drive System for the Color Computer. Now we are about to introduce the only RSDOS Interface System worthy of our computer, OWL-WARE Winchester Basic. For the first time you have available a true Winchester System, although there are 10 directories made available to BASIC, the only limit to size of any file is the size of your drive. On a 10 meg drive you could have a 8 meg file on directory 5 and a 1 meg file on directory 8 and small files everywhere. You turn the computer on and you can immediately access your drive from BASIC or any language using commands you already know. You do not have to know or use OS9 to use OWL-WARE WINCHESTER BASIC, but if you do, all files saved from RSDOS are available to OS9. All files generated from OS9 can be made available to RSDOS by copying to the WINCHESTER BASIC directories. There are no partitions to wall you into, only one operating system, but nothing forces you to use an operating system you don't like.

**Call for further details and availability on this breakthrough product!!!**

*Prices*

**WITH  
DRIVE  
BELOW**

**ONLY... \$50. WITHOUT DRIVE \$75.**

OS9 HARD DRIVES FOR CoCo 1, 2, 3.

# The Formatting Review: MID\$ Struts Its Stuff

By Joseph Kolar  
Rainbow Contributing Editor

**K**nowing you are eager to continue your studies, MID\$ takes center stage today. Three listings plus a modification were prepared to reinforce your understanding of putting text onto the screen one letter at a time without any hands-on interference. As you will see, the programs are very short, considering what they do.

The actual text in the three programs is not to be taken seriously. If memory serves me right, I think that only one of the programs is factual. The others are overworked figments of a sick imagination. They are meant to be reading material for this tutorial.

Key in Listing 1 and run it. Impressed? List through Line 10.

We will use arrays to place each succeeding string of text onto the screen. Arrays should be dimensioned in a line near the beginning of a program. Line 6 is a good place to put DIM A\$(5). However, faithful CoCo allows for 10 items in an array without protest. That being the case, the line was omitted as superfluous.

Insert Line 6 DIM A\$(4), run it and get the BS Error. If you have more items to stuff into an array (in this case, A\$(5)) and you do not reserve enough array containers to store all of them, CoCo shoots back immediately with a BS Error message. Change the (4) to (5) in Line 6. Leave it in the program; it doesn't do any harm.

Whenever you work with strings of text, enter CLEAR 500 to reserve space in memory. Chances are you will need it, as you will soon see.

Look at Line 10. Almost all of the allowed characters that could be contained in A\$(1) were stuffed in. In fact, if you get into the edit mode and take off the final quote mark and space over, the best you can do is add three more blank spaces before CoCo balks and hangs up.

If you care to find out LEN(A\$(1)) or the total number of characters/spaces in the program, without using any program line number, key in:

```
PRINT LEN(A$(1))
```

and press ENTER, or type:

```
PRINT LEN(A(1))+LEN(A$(2))  
+LEN(A$(3))+LEN(A$(4))+LEN  
(A$(5))
```

and press ENTER.

■ enjoy using these calculator functions to extract information from a program in progress, because the program lines remain undisturbed.

Line 10 contains one complete sentence and part of a second sentence — as much text as was reasonably possible to cram into the container. Add the temporary lines:

```
11 PRINT A$(1);  
12 GOTO 12
```

and run. We did not bother to locate the text on any particular row. We just want to view it and check out the formatting, spelling and punctuation for a neat layout.

List Line 20. In this array unit, A\$(2), we completed the unfinished sentence and followed up with a complete sentence that ends the paragraph. Since we wanted a space after hueigo, we began our string with a space.

Delete Line 12. Add:

```
21 PRINT A$(2);  
22 GOTO 22
```

and run. One substantial paragraph results!

Be aware of the importance of the semicolon. We will use the semicolon solely to put on all the text, one character/space at a time, without the use

---

**SHACK UP WITH A LIBRARIAN**

of any locating point values or variables. If you want to give this technique a name, the Follow gambit is as good as any.

List Line 30. For demo purposes, we shall create an even larger paragraph. It is a new sentence, so two spaces are placed in front of the start of text. It contains two sentences. Delete Line 22 and add:

```
31 PRINTA$(3);
32 GOTD32
```

Run this. It scrolls up and we lose the beginning. Good! We gave up on the long paragraph and started a new one with the second sentence. Note that the last line in array unit A\$(3), has 21 blank spaces after it. Directly from the display, count the number of blank spaces from the closing quote to the end of the row.

List Line 40 and delete Line 32. Add:

```
41 PRINTA$(4);
42 GOTD42
```

Run your work.

In order to begin a new paragraph and stay within the semicolon, Follow gambit at the beginning of A\$(4), we must account for all that blank area at the end of A\$(3). There is room for 22 characters/spaces to fill up the remainder of the row. A two-space indent is required for the new paragraph. Thus, 22+2 blank spaces must be the first element in A\$(4) so that the first letter falls exactly where it is intended.

Delete Line 42 and add these lines:

```
51 PRINTA$(5);
52 GOTD 52
```

Now run. You can see that the blank area at the end of A\$(4) plus two extra indenting spaces set the A\$(5) text in the correct location. We are satisfied with our layout. Look, Ma, no locations!

Delete lines 11, 21, 31, 41, 51 and 52. Run the result. The program should run slow enough for you to read along. Note that somewhat longer pauses after F1 a t and f a c t o r are created. CoCo has to cycle (actually put on all those blank spaces) but this doesn't detract from the readability.

List lines 200 to 250. We have three nested loops. The inner one at Line 240 determines the length of the pause between the placement of each succeeding character/space. The middle loop, Line 220, is where B is the number of

each character/space of the text as it is fingered in a particular array unit. It is to be printed, using MID\$, where one letter in the Bth location in array unit A\$(A), is printed, after the previous letter, thanks to the semicolon. No doubt you could combine lines 210 and 220, but it makes more sense to the beginner to show it as two lines. The outer loop, at Line 200, chooses the array containers, A\$(A), to be worked on by CoCo in succession.

How would you tell CoCo to begin on the third row? Work it out!

Did you know that CoCo is an accomplished linguist? It can speak pure Jargonese. Save Listing 1 and type NEW. Key in Listing 2. If you are sure you have lines 200 to 240 exactly as listed, run. Do you want a translation? Then run again.

List lines 200 to 240. This is the nice tight routine with an assist from Line 5 that allows you to use a single array to write a neat program.

Let's fool around and listen to CoCo beat its gums. Insert 211 FOR B=1 TO LEN(A\$(A)) STEP 3: PLAY" T2400 5L32CP32L16EP16L32GPBLBB".

Turn up the volume and run. It is using a different dialect this time. Run for the translation.

By the way, if you want to begin displaying the text on some row other than the top one, insert at the beginning of Line 200 as many PRINT:s as the number of lines you want to drop down.

At this point, the DEL211: in Line 240 becomes harmless. Save Listing 2 and type NEW. Key in Listing 3 and run. This version is displayed with the MID\$ routine in lines 200 to 230. List lines 200 to 240 and you will see nothing you haven't tackled before. It is a very satisfactory version.

Nevertheless, blank rows divide each set of statements. Working them into a program where every bit of text is put on in succession, using an array item, makes CoCo demand that the empty rows be created inside array units.

List lines 10 to 40. STRING\$ would solve this problem. It would be necessary to fill the balance of Line 10, A\$(1), on the last row, with blanks. It's easy to count the number of remaining spaces (14). A complete blank row consists of 32 spaces. The blank spaces could be simulated by using CHR\$(143), which produces an invisible green square.

Line 20 told CoCo that in array unit A\$(2), a string of 46 green squares, using graphics block 143, were required. The Follow gambit would tack

them at the end of A\$(1). They would also act as a pause routine to allow more time to read the text blocks.

To see this from another perspective, in Line 20, change 143 to 12B and run.

Replace 143 in Line 20. Save Listing 3. List lines 10 to 40, 50 to 60, 70 to 80 and 90 to 100. Note that no empty row was placed after Line 90, much less a new paragraph.

This was done on purpose to demonstrate the need for the DIM statement to dimension an array. Change Line 100, A\$(10) to A\$(11). Then, create the spacing between blocks of text.

Add 95 A\$(10)=STRING\$(2B+32, 143). Reformat Line 100 in order to make it into a new paragraph as originally conceived but not executed. Employing the Invisible Vertical Line ploy, the second through fifth rows should have the following words beginning at the left margin: language, they, Saxon and large. Make appropriate adjustments at the end of each row and remember to indent two spaces for the paragraph. (Refer to the modified listing if you are encountering difficulty.) Now run.

CoCo rebels and gives out a BS Error in Line 100. Sure! No provision was made for storing A\$(11). Try adding 5 DIM A\$(11) and run. Still no good. Press BREAK. CoCo breaks at Line 240. List lines 200 to 240. CoCo did what was expected of it. It ran A\$(1) through A\$(10) and relaxed. We failed to allow for A\$(11), where A=11. Modify by editing Line 200 to change 10 to 11. Now run.

Save *Modified* and type NEW. Load Listing 3 and remove the REM from Line 199 and run. This version uses LEFT\$ to put on the blocks of text with adequate pauses for reading time. There is a discontinuity where the last paragraph, A\$(10), is smacked onto the end of A\$(9). We are going to straighten out this mess and add The End! in an appropriate spot.

List lines 300 to 360. Here is a good example of good-natured CoCo saving me from myself. Look carefully. There are two separate T variables due to my carelessness. The T in Line 300 belongs to the outer, inclusive loop. The T in Line 320 gives CoCo the current value to be used in Line 340 to print the letter at that T location in the string A\$(A).

Change T in lines 300 and 350 to B and run. Since the program works, CoCo proves that T was really two separate variables with separate functions. They did not impinge upon each other's

territory, so CoCo saw no problem. Use TRON to study this.

Type NEW and load *Modified*. Remove the masking REM from Line 199 and run. Oh no! What did we forget? List lines 300 on. Right! Change Line 310, from 10 to 11 and run.

We are going to add a proper ending. List Line 100. Two blank spaces remain at the end of the last row of text. If we skip down three rows, we calculate 32 multiplied by 3 equals 96 spaces. We shall print The End!, centered, of course, so that we guesstimate about nine spaces in front of the legend. We shall create 110 A\$(12)=STRING\$(107,143)+" The End".

Line 6 needs to reserve another item in the array. Thus, rekey: 6 DIM A\$(12). Learning from experience, we increase A in Line 310 by one to 12. While we are at it, we might as well as do the same in Line 200, (the other version that we will check out later). Now run this.

We got an OS Error after a while. CoCo is having problems, due to our desire to add an ending. It is crying for more reserved memory to store all those extra blanks. Raise the value in Line 5 to 600 and run. That works! But we better change 107 to 110 in Line 110 and, at the end of it, add +STRING\$(3B,143). Now run to see what we created.

We created another OS Error. We need to reserve still more memory. In Line 5, change 600 to 700 and run. That's fine! For the acid test, replace the masking REM marker in Line 199 and run. That's it! Wrap it up by saving it.

You've learned a lot with hands-on investigation. You had fun exercising your inquiring mind and created two impressive variations of a theme. We didn't use any specific value to locate anything, but used a vague, indistinct system. CoCo used the semicolon to present the text from start to finish.

There is a third variation you may want to try. Using *Modified* with Line 199 unmasked, add STEP2 to Line 310 and at the end of Line 330 add :CLS.

I am sure, with your creative juices flowing, you will find a way to add The End to the program. I bet you will also come up with a way to center each panel. No hints except to say that you learned one technique (in bits and pieces) in this tutorial, although you may not have realized it.

What better way to leave you — having fun while being engrossed in working out a problem and adding to your programming skills? □

## A Christmas gift?

Choose from the following COMPUTER FRIENDS winners. SPECIAL CHRISTMAS OFFER. Buy one item and get 15% discount on any other item or supply accessory.

**MAC INKER™, Automatic Ribbon Re-inker.** Re-ink any fabric or spool fabric ribbon for **less than 5 cents.** Over 70,000 in the field and we support **ALL** printers. Universal Cartridge or Universal Spool **MAC INKER**

**\$68.50. Dedicated Imagerwriter or Epson \$42.00.** We have cartridges re-inkable in 10 colors. Ask for your printer type or for complete listing. Bottle ink \$3.00/each. Shipping \$3.00.

### PROTEUS™, the 'Siamese' Buffer.

It is a **Data Switch** with buffer on both ports. Switch manually or via software. Saves time, space and money. Or ask about our **MAC MASTER** line of Universal Buffers and Printer Controllers (serial or parallel up to 1 MEG).

#### PROTEUS 64 K-199.00

256 K-299.00 Shipping \$4.00.

Of course we have **Data Switches**, serial/parallel, 2 way, 4 way, crossed etc., at most competitive prices (all lines switched).

**MERCURY MODEM.** Really 100% Hayes\* Compatible. 300/1200 baud, speaker, full status light display and 2 years warranty. Includes

**QUICK LINK**, easiest and most reliable Comms Software (available for IBM PC or

Macintosh). **\$205.00** Shipping \$4.00.

\*Hayes is a trademark of Hayes Microproducts.

**MAC THE RIPPER.** Our newest, original and welcome printer companion. Pulls off paper perforations and tears the sheets apart. Takes little space and will pay for itself almost immediately in saved time and tedium. Ask for brochure. Introductory Price **\$299.00.** Shipping \$10.00.

#### Order Toll Free.

# Viewing PMODE 4 Pictures on Your CoCo 3

By Marty Goodman  
Rainbow Contributing Editor

● *When I view PMODE 4 pictures on my CoCo 3 using my (Tandy) CM-8 monitor, there are no colors. Why is this?*

Noel Fallon  
(FALLON)  
Lawton, OK

The colors you are accustomed to seeing in PMODE 4 pictures using a color TV or composite color monitor are what we call "artifact colors." They are an "artifact" of some idiosyncrasies of the composite video signal protocol. When you switch over to using the RGB signal protocol, those colors are lost. What is gained by the RGB protocol is the potential to display more colors, more precisely, in higher resolution. But we will have to wait for the arrival of quality Hi-Res graphics editor programs to make use of that capability on the CoCo 3. Please see my answer to the next question for more hints on viewing old PMODE 4 CoCo pictures on your CoCo 3.

● *What monitor do you recommend for the CoCo 3?*

Rick Adams  
(RICKADAMS)  
Rohnert Park, CA

While the CM-8 is made for the CoCo 3, I recommend that folks buying a

*Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. Marty is the database manager of RAINBOW's CoCo SIG on Delphi. His non-computer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.*

monitor for their CoCo 3 also consider models that can accept both RGB A and color composite video inputs. Using such a monitor, you can switch at will to composite video, and see your old PMODE 4 pictures in full color. Note that these monitors also have an RGB I (TTL) input, so they can be used with IBM PC (or Tandy 1000) RGB CGA outputs also. Two such monitors are the 8CM8505 and the 8CM8515 from Magnavox, but a special cable to go between the CoCo 3 and the Magnavox monitors will be needed. Other monitors with a variety of color inputs that can be made to work with the CoCo 3 in both RGB A and composite video mode include the Sony 11CR series and the Teknika MJ305. Sony's 11CR series requires that you use the composite video from the CoCo 3 to supply its sync line, for it demands a combined sync signal, instead of the separate H and V sync supplied by the CoCo 3, and used by some monitors. Note that unlike Tandy's CM-8, all of the monitors mentioned can also be used with VCRs.

● *I just bought a Drive B for a Tandy 1000 and installed it in my CoCo FD 500 case. It works fine as Drive 1, but I'd like to know how to use both sides of it under OS-9.*

Bruce E. Ondersma  
(BEO)  
Grand Rapids, MI

There are several ways to use double-sided drives under OS-9. On Delphi, we have posted patches to the existing CC-Disk drivers that will allow this. Alternatively, you might want to buy one of the commercial packages that allows you to configure your OS-9 drivers for one or two sides. Computerware and D.P. Johnson both make such pack-

ages. The Computerware package (*Disk Fix and other Utils*) is particularly nice in that it includes some other useful OS-9 tools. The Computerware product does not, however, support 80-track drives.

● *Can I use Colorcom/E with my Volksmodem 12?*

Steve Short  
Jackson, TN

Yes, you should be able to use *Colorcom/E* with your Volksmodem. The proper cable is needed and you may have to set appropriate switches on the modem. A careful study of the modem and its manual will be needed, as each modem requires slightly different tinkering with its setup and pinouts. In general, set any switches so that DTR (data terminal ready) is true always. Disable the auto-answer. Wire up a four-pin DIN to a 25-pin DB connector for your CoCo as follows: Pin 4 of the CoCo DIN connector goes to Pin 2 of the modem DB-25 connector, Pin 2 of the CoCo DIN goes to Pin 3 of the modem DB connector, Pin 3 of the CoCo DIN goes to Pin 7 of the modem DB connector, and Pin 1 of the CoCo DIN connector goes to Pin 8 of the modem DB connector. The required four-pin DIN connector, 25-pin DB connector, and necessary hoods and wire for this cable can all be purchased at Radio Shack. Note that there are some patches for *Colorcom/E* on Delphi that fix some bugs in it, de-protect it, and make it CoCo 3 compatible. Look for these in the Data Communications database, where they were posted by Art Flexser.

● *I am tired of the small viewing area and black border that surround my*

CoCo's 32-column green screen. Why did Tandy do this, and what can be done to fix it?

Richard Hill  
Owensboro, KY

The characteristic of that screen that you complain of was established not by Tandy, but rather by Motorola in the design of the 6847 VDG video chip used in the CoCo 1 and 2. The reason they limited the display to the center of the screen was that many different models of TV sets had different amounts of "overscan," and they wanted to make the display sufficiently small so it would never be cut off due to the particular adjustment of a given TV set. Because it is fixed inside the hardware of the VDG chip, there is no easy way to alter this. You have two routes to using more of the screen:

1) Purchase a PBJ Word-Pak along with a multipack interface and a monochrome monitor and software that uses the pack, and you will have 80-column text capability under OS-9 and under a few Disk Extended BASIC programs.

2) Purchase a CoCo 3 and either a monochrome (\$60 to \$100) or an RGB color (\$270 to \$450) monitor. The CoCo 3 has both text and graphics video modes that use the screen edge to edge. But watch out! In its 40- and 80-column text mode, the CoCo 3's screen often is not visible in its first and last two or three columns, due to overscan on some commercial television sets and on some commercial color composite video monitors. This is the kind of problem that Motorola sought to avoid in its design of the old VDG chip. The wider display of the CoCo 3 will always be properly displayed on monochrome and RGB A monitors.

Note that a TV service technician can adjust some TVs and many monitors for a narrower display and thus fit in the full CoCo 3 screen. This sometimes merely involves turning a slug in a coil inside the monitor, though at times it involves an actual patch to the horizontal oscillator circuit.

● *I am designing a board to plug in to the CoCo 2B, on which I plan to put a 2764 EPROM and a few small to medium scale TTL chips. Will the CoCo*

*be able to supply enough power for such a board?*

Steve Allen  
(STEVEALLEN)

All of the power supplies for the CoCo 1 and 2 have been on the marginal side in terms of power to spare. However, all of them have been able to power a disk controller, which has both an EPROM and a number of other chips on it. I suspect that the CoCo will quite adequately power a board of the sort you describe. Since I am conservative when it comes to hardware design, I'd recommend you use a 27C64 (CMOS) EPROM and 74C, 74HC, or 74HCT series chips, all of which are CMOS (complementary metal-oxide semiconductor) and so consume much less power. The cost of the CMOS EPROM and 74 series chips is not much greater than that of NMOS (N-channel metal-oxide semiconductor) EPROMs and 74LS series logic chips. Given the marginal power capabilities of the CoCo, it might make the difference between the CoCo running too hot or acceptably warm.

Interestingly, the CoCo 3 appears to use the same power supply as that used in the CoCo 2. Now, the CoCo 3 circuit appears to draw less power than a CoCo 2 circuit. The GIME chip, which replaces both the power hog TTL SAM (transistor-transistor logic synchronous address multiplexer) chip and the VDG (video display generator) chip, is a low power CMOS chip. I would predict from this that the CoCo 3 will run cooler than its predecessors, with more power to spare for driving devices plugged into its port. Note also that the CoCo 3 has its eight data lines on its bus buffered with a 74LS245 chip. Though the address lines on its port are still unbuffered.

● *Recently when I plugged my disk interface cartridge into my CoCo I saw sparks flying out of the interface. My system was fried. Most of the damage came from pins 36 and 43 (sic) of the cartridge port. My drives may be good, but I don't know where to get a separate disk controller pack without the drives. Also, can I possibly use some of my old chips (RAMs) from my fried CoCo to upgrade a new one?*

Lee Killough  
Conroe, TX

Before you do anything else you need to find out why you fried your CoCo, or else you risk frying the next CoCo you hook up! Your information was garbled (there is no "Pin 43" on the cartridge connector — that connector has only 40 pins). But it sounds as if you got high voltage (probably 120 volts AC) on your ground lines. This could happen from improperly grounded disk drives that had a fault inside the case. Or the fault might be inside your CoCo itself. This could be the case even though you had the switches off on both the CoCo and the disk drives. Such a fault not only will roast CoCos, but can also constitute a lethal shock hazard. You need to take your drives in to a service center and have them checked out. Same for the rest of your system.

Given the sort of problem you describe, it is quite possible you burned out every chip in your CoCo, so none of them may be usable. You'll need to experiment by trying the chips out in another machine.

Disk controller cartridges can be purchased through any of a dozen or more sources that advertise in RAINBOW. Look through this or any issue for details. Among the many companies that sell them are DISTO (CRC), J&M systems, HDS, True Data Products, and Spectrum Projects. Check the advertisers index in RAINBOW. The price is often in the \$70 to \$100 range for a given unit.

Sorry to hear you smoked your CoCo. But I'm glad you are alive to tell the tale.

# Taking a Look at How Monitors Work

By Tony DiStefano  
Rainbow Contributing Editor

Well, I finally got my CoCo 3. The first thing I needed to do was to plug it into a monitor. In my computer room I have various color monitors, TVs and monochrome monitors. I read through the CoCo 3 manual and found out it has three ways of connecting a display to it. The first and most common is the RF output. This is where you connect an ordinary TV to it. The second is a composite color output, sometimes known as a video output. The third is an RGB output.

Now, most people are familiar with the RF output. Many people know about video outputs, but what is this RGB stuff? It is not new to me because I use an RGB monitor for my other computers. With the right connector, a piece of ribbon wire and the right information, I connected the CoCo 3 to my Sony RGB monitor.

Ever since I wrote an article on how to connect your CoCo to a monochrome monitor, I have been getting calls about it. So, with the coming of the CoCo 3, it is time to do an "everything you ever wanted to know about monitors but were afraid to ask" article. Here it is.

I am going to start from the basics and work my way up to RGB. Let's begin with some theory on a monochrome monitor. The mono part of that word implies one color. At first, all picture tubes were white. Then green was the "in" color and then amber became popular. Whatever the actual color of the tube, it is still one color,

hence monochrome. A picture tube is made of glass. Inside this tube is a vacuum. On the inside surface of the display area there is a thin coating of phosphorus. One physical property of phosphorus is that when bombarded with electrons (high voltage electricity) it glows. Inside the back end (neck) of a picture tube there are circuits that shoot electrons at the phosphorus. The construction of the tube is beyond this article, but when it is on, a stream of electrons hits the phosphorus, and where it hits, the phosphorus glows. But alone, all that does is make a glowing dot in the center of the screen. Not much good.

Since electrons are affected by a magnetic field, putting a magnet close to the tube will deflect our dot. The dot would move according to the strength and direction of our magnetic field. An electric current through a wire creates a magnetic field. The more current, the stronger the magnetic field. A length of wire wrapped in a coil is enough to deflect our dot anywhere on the screen. In most monitors, two coils of wire wrapped around the neck of the tube are used to move our dot around. One coil is positioned so that a varying amount of current makes the dot move sideways or horizontally. The other is positioned to give up/down or vertical motion.

Given the right amount of current and in the proper sequence, our dot now moves from right to left and from top to bottom, in the same motion as reading. Make that dot move fast enough and it appears to fill the screen with light, since phosphorus continues to glow for a short time after the dot has moved. Those lines you see on your screen are made by one moving dot.

So far, we have one moving dot that fills the screen with light. If, while moving this dot, you were to increase and decrease the number of electrons hitting the phosphorus, you would get varying amounts of light. The amount of light produced is directly proportional to the number of electrons hitting the phosphorus.

Things are shaping up to a picture. In a TV monitor, there are many signals and currents, one of which is called the horizontal oscillator. This circuit is connected to the coil that deflects the dot horizontally. Figure 1 shows the wave shape of the horizontal oscillator. It starts off negatively, deflecting the dot to the left. It increases linearly to a positive position, moving the dot smoothly across the screen. Then, it

*Tony DiStefano is a well-known early specialist in computer hardware projects. He lives in Laval Ouest, Quebec.*

quickly jumps back to the original position. During this time the electron flow is cut off so that it will not appear on the screen. This time period is known as the retrace time, and the circuit that cuts off the electron flow is called a blanking circuit.

Another circuit in a TV is the vertical oscillator and yes, you guessed it, it controls the dot vertically. The wave shape of the vertical oscillator is basically the same as the horizontal one, only much slower. Many horizontal cycles fit inside one vertical cycle (more on this later). The vertical oscillator also has retrace time and vertical blanking circuits. Due to its nature, one horizontal cycle is called a scan line, and one vertical cycle is called a frame.

When our dot is not doing horizontal retrace or vertical retrace it appears on the screen. This is known as active video. It is during this time that our dot gives the viewer useful information. This information can be a picture like ordinary TV, or computer generated characters. In either case, the video signal is proportional to the brightness of the picture. A higher signal produces a brighter dot and a lower signal produces a softer dot.

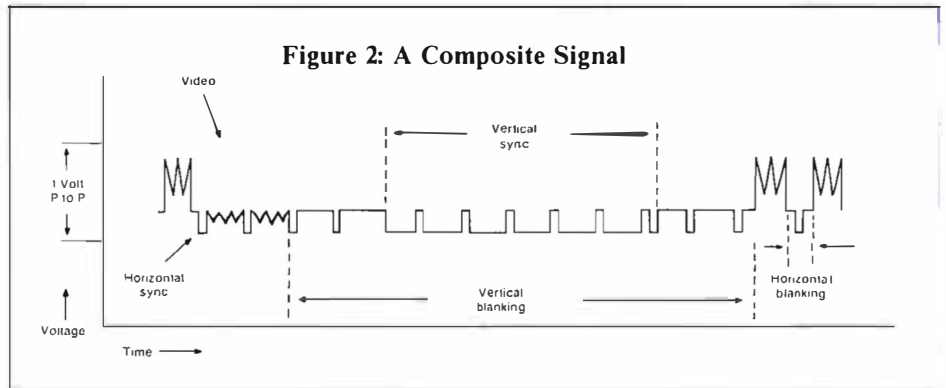

In order for a picture to appear on a

video monitor, three signals are needed; horizontal, vertical and video signals. It is not efficient to run three signals and a ground return to a TV receiver or monitor. A method was developed to combine these three signals into one. Instead of supplying complete horizontal and vertical wave shapes, the source need only send a pulse signifying the start of every horizontal line and the start of every vertical frame. These pulses are known as sync pulses. The rest of the wave shape is then regenerated inside the monitor. It is then up to the monitor to make sure that the internal horizontal and vertical oscillators keep up with the sync pulses.

These sync pulses and video signals

are mixed together in a specific way to form one signal called "composite video," for obvious reasons. Figure 2 shows part of a composite signal. In North America, all composite video conforms to the NTSC (National Television Systems Committee) standard; more on that later. In a monitor, circuits are made to separate the video information from the sync signals, and are then translated to drive currents that connect to the coils and the picture tube.

Up till now, I've been talking about monochrome (black and white) pictures. But, there is a good reason why Tandy calls our CoCo a Color Computer — it can display a color picture. When TV first came out, it was only in

### "XPNDR2 and SuperGuide - an Ideal Expansion Card Set"

— RAINBOW 2/86  
HARDWARE REVIEW

#### XPNDR2 \$39.95 each or 2/\$76

This prototype card features a 40 pin connector for projects requiring an on-line disk system or ROM paks. The CoCo signals are brought out to wire-wrap pins. Special gold plated spring clips provide reliable and noise-free disk operation plus solid support for vertical mounting of the controller. The entire 4.3x7 inch card is drilled for ICs Assembled, tested and ready to run.

#### XPNDR1 \$19.95 each or 2/\$36

A rugged 4.3x6.2 inch bare breadboard that brings the CoCo signals out to labeled pads. Both XPNDR cards are double-sided glass/epoxy, have gold plated edge connectors, thru-hole plating and are designed with heavy power and ground buses. They're drilled for standard 0.3 and 0.6 inch wide dual in-line wirewrap sockets; with a 0.1 inch grid on the outboard end for connectors.

#### SuperGuide \$3.95 each

Here is a unique plastic insert that aligns and supports printed circuit cards in the CoCo cartridge port. Don't forget to **ORDER ONE FOR YOUR XPNDR CARDS.**

Included with each XPNDR card are 8 pages of APPLICATION NOTES to help you learn about chips and how to connect them to your CoCo.

## THE COCO-PC IS HERE!

Wouldn't it be great to use an IBM PC, XT, AT or compatible to run CoCo OS-9 and FLEX software.

Well, now you can with our PI-6809 processor card. PI-6809 fits neatly into a full size expansion slot in the PC. It features ONE MEGABYTE RAM, 128K EPROM and a full RS-232 interface.

Our software runs FLEX and boots CoCo OS-9 from disk yet gives you FULL ACCESS to PC facilities including hard disk, printer, network . . . and file transfer between FLEX, OS-9 and PC/MS-DOS formats.

**NO RISK TRIAL — Buy the PI-6809 now and we give you a money back guarantee if you are not satisfied. DON'T DELAY — ORDER TODAY!**

# XTEAM & OS-9

# BOTH WINNERS

CoCo 3  
SUPPORTED

## XTERM

OS-9 Communications program.

- Menu oriented
- Upload/download. Ascii or XMODEM protocol
- Execute OS-9 commands from within XTERM
- Definable macro keys
- Works with standard serial port, RS232 PAK, or PBJ 2SP Pack. Includes all drivers.
- Works with standard screen. XSCREEN, or WORDPAK 80 column board.

**\$49.95** with source **\$89.95**

## XMENU

Creates a menu driven environment for OS-9.

- Create your own menus
- Works with standard screen, XSCREEN, WORDPAK, O-PAK

**\$29.95** with source **\$59.95**

## XSCREEN

OS-9 hi-res screen

- 51/64/85 chars per line
- Easy menu operation

**\$19.95** with source **\$39.95**

## XDIR & XCAL

- Hierarchical directory
- Full sorting
- Complete pattern matching
- OS-9 calculator
- Decimal, Hex, Binary

# AND FOR RS DOS ...

## SMALL BUSINESS ACCOUNTING

This sales-based accounting package is designed for the non-accounting oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor Status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List.

**\$79.95**

## INVENTORY CONTROL/SALES ANALYSIS

This module is designed to handle inventory control, with user defined product codes, and produce a detailed analysis of the business' sales and the sales force. One may enter/update inventory data, enter sales, run five sales analysis reports, run five inventory reports, set up product codes, enter/update salesman records, and update the SBAP inventory.

**\$59.95**

## PAYROLL

Designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pay and determines taxes to be withheld. Additional outputs include mailing list, listing of employees, year-to-date federal and/or state tax listing, and a listing of current misc. deductions. Suited for use in all states except Oklahoma and Delaware.

**\$59.95**

These programs are user friendly and menu driven. Sample transactions are included. Each package features a hi-res screen. Each requires a printer, a minimum of 32k and at least 1 disk drive.

## ACCOUNTS RECEIVABLE

Includes detailed audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package.

**\$59.95**

## ACCOUNTS PAYABLE

Designed for the maintenance of vendor and A/P invoice files. The system prints checks, voids checks, cancels checks, deletes cancelled checks, and deletes paid A/P invoices. The user can run a Vendor List, Vendor Status report, Vendor Aged report, and an A/P Check Register. This package can be used either as a standalone A/P system or can be integrated with the Small Business Accounting Package.

black and white. When color came out, a method had to be developed so that a color signal would be compatible with a black and white TV.

It was up to the NTSC to develop a composite signal that would carry the extra color signal and still be compatible with the older black and white signal. In 1953, the NTSC established the color television standards. In these standards, the signal is to have 525 line interlaced scan. The horizontal scan frequency is 15.734 kHz; the vertical frequency is 59.94 Hz. The color information is contained in a 3.579545 MHz subcarrier. The phase angle of the subcarrier represents the color, and the amplitude of the carrier represents the saturation. Figure 3 shows one horizontal line. Notice the color frequency burst just after the horizontal sync. The phase difference between this reference burst and the actual signal describes what color that particular part of the screen should be. The amplitude of the color signal represents how much of that color to put on the screen.

On the monitor side, color is quite complicated to reproduce. You have to start with a completely new tube. Instead of smooth monochrome phosphorus, the tube has to be striped with alternate red, green and blue phosphorus. The smaller the stripe the better the picture quality.

When a color composite video signal enters a color monitor, it is first stripped of its sync signals, and then the monochrome (called luminance) and color signals (called chroma) are split into three signals, the red content, the green content and the blue content. Three separate electron beams are used to display the three colors on the screen. The beam carrying the red content has to hit all the red strips. The green hits the green strips and so on. If a beam that has red information hits any other color than red, a wrong color results. It requires a lot of electronic circuits to keep this from happening. That is not the worst part; the color frequency carrier is 3.58 MHz. In order to isolate the color carrier from the monochrome signal, a filter is used that removes any frequency higher than 3.58 MHz. This seriously limits the resolution of a color signal. In fact, the resolution of a color signal, at absolute best, is about 400 lines. That is OK for the CoCo and CoCo 2 but is not good enough for the CoCo 3.

When you put a color signal in a monochrome monitor, the color information shows up as dots on the screen. Figure 3 shows that. The frequency of the color signal is 3.58 MHz. A monochrome monitor with a 20-MHz bandwidth has no filter to remove the color carrier. The monitor will have no prob-

lems displaying the color carrier — as an annoying monochrome mess of dots.

Now comes the CoCo 3. It has a resolution of 640-by-192. That is very nice but have you ever seen a 640-by-192 screen on a regular composite monitor? Believe me, it's not a pretty sight. What is Tandy to do? The only reasonable thing is to get rid of that color carrier and put out the color information separately. Now that is a great idea and for once Tandy did it right! The CoCo 3 has an output known as an RGB output. That's right, RGB stands for Red, Green and Blue. No color carrier, no filters and no sync pulses, just clean color.

Wait a minute, that won't work without sync pulses. So Tandy added some more lines and added sync pulses. In fact, the CoCo 3's RGB output is the best color picture ever for a CoCo! The clarity is limited only by the resolution of the monitor.

You don't have to have a Tandy RGB monitor. However, if you plan on going out to buy a brand X monitor at some discount mail order house, here are a few tips to help you get started with fewer headaches.

First, when you select a model you want (or can afford), make sure that it is an RGB analog monitor with negative or composite sync (like my Sony) with a horizontal frequency of 15.7 kHz and a vertical frequency of 60 Hz. Also make sure that the bare connector to the monitor is available. You will also need a connector for the CoCo 3 side of it. That requires a 10-pin female socket connector for flat ribbon cable. And don't forget to get three or four feet of 10-conductor flat ribbon cable. Use the pinout supplied in the CoCo 3 manual and match the pinout of the RGB monitor manual to it. Now plug it in and watch it go!

Figure 3: One Horizontal Line

**ASSEMBLY  
 LANGUAGE  
 PROGRAMMING  
 TRS-80 COLOR COMPUTER**

This hands-on guide begins with the basics and progresses to the expert level. It's written as a tutorial, taking you each step of the way to assembly language programming. First it lays the foundation by explaining binary and hexadecimal numbers. Then the MC6809E microprocessor is explained - internal architecture, addressing modes, and instruction set. Programming guidelines are described including subroutines, stack use, and interrupt handlers. Finally, all the internal secrets of the SAM, PIA, memory, disk, keyboard, joysticks, serial port, cassette, graphics display, ROM, and sound are revealed. All this is presented in a clear and understandable fashion.

*What you need to know to upgrade your Multi-Pak Interface for use with your new CoCo 3*

# A PAL for Your CoCo 3

By Marty Goodman

Reference has been made to the fact that you will need to upgrade your Multi-Pak Interface if you want to use it with your new CoCo 3. There has been a lot of confusion about this. In this article, I hope to clarify matters regarding this upgrade, explaining why it is necessary, how to do it, and where and how to get the needed parts. Much of my information for this article comes from *Tandy Technical Bulletin CC:29*, dated August 14, 1986. This bulletin is distributed to Tandy Computer Service Centers. Some of it comes from personal tests, and some from personal communication with Mark Siegel of Tandy Corporation.

There are two different types of Multi-Pak Interfaces (MPI) for the CoCo. The "old MPI" was the first MPI sold by Tandy. It is physically larger than the newer ones, and is Radio Shack Catalog No. 26-3024. This model was first sold with a battleship gray case, though later it was sold with a white case.

Later on, Tandy redesigned the MPI, making it smaller and much less expensive to produce. This newer, slimmer, trimmer MPI is Radio Shack Catalog No. 26-3124. The catalog number can be found on a sticker on the bottom of your Multi-Pak.

When folks first got their CoCo 3s, brought them home, and plugged them

into their old Multi-Paks (with the disk controller plugged into Slot 4 as recommended by Tandy), they discovered one of three things. Some found that their MPIs appeared to work perfectly. Others found that their disk controller would be recognized by the CoCo 3 only if it was plugged into Slot 1. Still others found that regardless of what slot they plugged their disk controller into, it simply would not be seen by the CoCo 3. This different behavior is explained by the fact that different releases of the same catalog number MPI had slightly differently programmed PAL chips in them.

The critically important thing to note here is that *regardless* of how your MPI behaves with your CoCo 3, it is *necessary* to upgrade it either by replacing the PAL chip (in the case of the older MPIs) or by adding in a satellite board (in the case of the newer ones). Both the technical bulletin and Mark Siegel, personally, were quite firm in this recommendation.

Note that earlier, several folks alleged that this upgrade was needed only if you were going to install 512K in your CoCo 3. That is false. You need to do this upgrade regardless of the amount of memory in your CoCo 3.

At the Princeton RAINBOWfest, I heard that all local Radio Shack retail outlets had been briefed in the problem with the Multi-Pak. However, I called five Radio Shack Computer Centers in the San Francisco Bay area, and five Radio Shack stores with computer divisions. No one had heard of this problem. Because of this, I urge you, the RAINBOW reader, to tell *your* local Computer Center or division personnel about this problem.

By informing the local stores, you may save other CoCo 3 purchasers some grief. You might even consider urging your local Radio Shack store employee to buy a copy of this issue of RAINBOW for reference on this matter.

If your Multi-Pak is still under warranty (if it has been less than 90 days since it was bought or last repaired) I have been told by Mike Ward that you can get it upgraded for free. Please check out this possibility if your MPI falls into that category. I do not know how much, if anything, Tandy ordinarily charges for labor on upgrading the Multi-Pak. The parts fee is \$7.50. You may want to inquire about this before deciding to do the upgrade yourself. Usually Tandy's minimum labor charge is \$15. Even if Tandy is providing the labor for the upgrade for free, you still may want to upgrade the Multi-Pak yourself, because that way it will not be out of your hands for the one to two weeks that such repairs often take.

## Upgrading Your Old Multi-Pak

If you own one of the older MPIs (Catalog No. 26-3024) it will be relatively easy for you to do the upgrade yourself. All you need is a 20-pin PAL chip. To order it, just go to your local Radio Shack store and tell them you want to order, from National Parts, Part Number AXX 7123, and also tell them that that part is for Catalog No. 26-3024. It should cost \$7.50. It usually takes about two weeks for the part to arrive at your local Radio Shack store.

Be sure the MPI is unplugged, then open the case of your old Multi-Pak. This, of course, will involve breaking the warranty sticker that covers one of the four screws.

---

# RAINBOWfest

**R**AINBOWfest is the only computer show dedicated exclusively to your Tandy Color Computer. Nowhere else will you see as many CoCo-related products or be able to attend free seminars conducted by the top Color Computer experts. It's like receiving the latest issue of THE RAINBOW in your mailbox!

RAINBOWfest is a **great opportunity** for commercial programmers to **show off new and innovative products for the first time**. Chicago is the **show** to get information on capabilities for the new CoCo 3. In exhibit after exhibit, there will be demonstrations, opportunities to experiment with software and hardware, and special RAINBOWfest prices.

**Set your own pace** between visiting exhibits and attending the valuable, free seminars on all aspects of your CoCo — from improving BASIC skills to working with the sophisticated OS-9 operating system.

**Many people who write for THE RAINBOW** — as well as those who are written about — are there to meet you and answer questions. You'll also meet lots of other people who share your interest in the Color Computer. It's a person-to-person event and a tremendous learning experience in a fun and relaxed atmosphere.

To make it easier for you to participate, we schedule RAINBOWfests in different parts of the country. If you missed the fun in Princeton, why don't you make plans now to join us in Chicago? For members of the family who don't share your affinity for CoCo, RAINBOWfest is located in an area with many other attractions.

As a new feature for RAINBOWfest, we are planning an **Educational Sandbox**. This will feature **child-oriented workshops** to give hands-on experience to an age group often neglected. There will be a session for the kindergarten to third grade set and another for fourth through seventh graders. RAINBOWfest has something for everyone in the family.

**The Hyatt Regency Woodfield offers special rates** for RAINBOWfest. **The show opens Friday evening** with a session from 7 p.m. to 10 p.m. It's a daytime show Saturday — the CoCo Community Breakfast (separate tickets required) is at 8 a.m., then the exhibit hall opens promptly at 10 a.m. and runs until 6 p.m. On Sunday, the exhibit hall opens at 11 a.m. and closes at 4 p.m.

**Tickets for RAINBOWfest** may be obtained directly from THE RAINBOW. We'll also send you a reservation form so you can get your special room rate.

**The POSH way to go.** You can have your travel arrangements and hotel reservations handled through RAINBOW affiliate, POSH Travel Assistance, Inc., of Louisville. For the same POSH treatment many of our exhibitors enjoy, call POSH at (502) 893-3311. All POSH services are available at no charge to RAINBOWfest attendees.

#### Show Schedule:

Friday evening

— Exhibits open from 7 p.m. to 10 p.m.

Saturday

— CoCo Community Breakfast at 8 a.m.

— Exhibits open at 10 a.m. and close at 6 p.m.

Sunday

— Exhibits open from 11 a.m. to 4 p.m.

Remove the black cardboard shield that covers the space around the four card sockets. You will now see the circuit board. Note that only one chip on that board is socketed. All others are soldered directly to the board. The chip you are interested in is the socketed one, a 20-pin chip called U8. Carefully remove this chip and replace it with the new chip you just bought. In doing this you must be careful not to bend pins on the new chip, and you must be careful to put in the new chip with its notch pointing the same way as the notch on the chip you just removed. Also, observe the usual anti-static precautions for handling delicate chips. The new chip will come to you on a piece of black anti-static foam. Place the old chip that you removed into this foam, and save it in a safe place. I will explain why later.

After successfully replacing the old PAL chip, put your MPI back together again and the upgrade is complete. Be careful about positioning the plastic extension of the slot select switch as you are reassembling the Multi-Pak.

### Upgrading Your New Multi-Pak

If you own one of the newer MPIs

(Catalog No. 26-3124), I recommend you take your MPI to Tandy and have them upgrade it for you. This is because the upgrade involves cutting a trace on the circuit board, and then delicately soldering seven wires of that satellite board to various integrated circuit chip pins on the board. If you feel totally comfortable with doing such work, what follows is a brief outline of the upgrade process.

Go to your local Radio Shack and order from National Parts a Satellite Board, Part No. AXX 7119 (for Catalog No. 26-3124). This should also cost \$7.50.

When you get the satellite board, open up your MPI, being careful to note the length of the screws that hold it together and what holes they go in. Be sure, that your MPI is unplugged. Now:

1) Unscrew and free the printed circuit board. This involves removing three screws that hold it down, removing all metal clips that hold the shield to it, and removing the shield itself. Carefully note the position of the metal clips for reassembly. You need not disconnect the transformer.

2) Locate IC6, the monster 64-pin

chip. Cut the trace that connects Pin 52 of IC6 to Pin 19 of IC1 (the 74LS245 chip used to buffer the data lines).

3) Position the satellite board over IC 6, with its components up, and with its wires facing the card edge.

4) Locate IC4. This is one of three 74LS367 buffer chips. Solder the three yellow wires from the satellite board to pins 3, 9, and 11 of IC4. It does not matter which yellow wire goes to which of the three pins on IC4.

5) Solder the white wire from the satellite board to Pin 52 of IC6 (the big IC).

6) Solder the blue wire from the satellite board to Pin 19 of IC1 (the 74LS245).

7) The remaining red and black wires from the satellite board need to be hooked up to +5 volts and ground, respectively. This can be gotten from the power supply pins of any of the chips on the board. Tandy recommends using pins 16 and 8 of IC5, respectively. (Red wire to Pin 16 of IC5 and black wire to Pin 8 of IC5.)

8) Replace the shield on the circuit board. Using two of the three screws that held it to the case, reattach it. The

screws to use are the one near the power switch and the one near the selector switch. Now close up the case, being careful to make the extension of the selector switch fit properly.

### Problems You Must Know About

After you have completed either of these upgrades (or had Tandy do them for you), the Multi-Pak will now work fine with your CoCo 3 with nearly all Tandy hardware and software. *But*, the fix causes some serious problems with some third-party products. After upgrading your Multi-Pak, it will *not* work with the *CoCo Max* Hi-Res joystick interface. Even if you use that upgraded Multi-Pak with an old CoCo 1 or 2 (the *CoCo Max* software itself will not run on the CoCo 3), the *CoCo Max* hardware card will cease to work. The PBJ Word-Pak I and II will also cease to work with Multi-Paks that have been upgraded for the CoCo 3. The Microworks DS-69A digitizer will also not work with upgraded Multi-Paks.

The reason for this is that the upgrade locks out address space \$FF80 through \$FF9F. The upgraded Multi-Pak can no longer access those addresses. This lockout is done because the GIME chip in the CoCo 3 uses those addresses, and the upgrade makes sure that no other device will affect those locations. The third-party devices I just mentioned all use port addresses in the \$FF90 to \$FF9F range, and thus are locked out by the Multi-Pak upgrade.

Note that the PBJ Word-Pak I and II are no longer in production, and the current model (PBJ's Word-Pak RS) uses ports at \$FF76, 7, 8, and 9. Thus, it is not affected by the Multi-Pak upgrade. I have spoken with Bob Lentz

of Microworks, and he is in the process of fixing his DS-69A digitizer to work on the CoCo 3. At present, I have no word on whether or not a fix for *CoCo Max* will be available.

### A Possible Solution for Hackers

If you own one Multi-Pak and occasionally want to use it with a CoCo 2 with some of the hardware that is now locked out, there are a few approaches to fixing this problem. In all cases you need to be a little bit of a tinkerer.

If you have a new, small MPI (Catalog No. 26-3124) the fix is quite easy. Open the Multi-Pak and remove the circuit board and shield. Remove the white and blue wires of the satellite board from where they are soldered to the ICs on the main board. Now, send wires from Pin 52 of IC6 and Pin 19 of IC1 to the two poles of a DPDT switch. On one of the two positions, short the two connections together. On the other, hook up the blue and white wire from the satellite board. Refer to my description of the upgrade of the new Multi-Pak to clarify just what wires go where. In effect, what you are doing is switching the satellite board in and out of the circuit. Mount the DPDT switch on the case of the Multi-Pak. You now have a Multi-Pak that can be switched between CoCo 2 and CoCo 3 modes. In CoCo 2 mode, it will work with a CoCo 2 and any of the add-on, third-party hardware I mentioned above. In CoCo 3 mode, it will work properly with a CoCo 3.

If you own one of the older Multi-Paks (Catalog No. 26-3024) you might consider rigging up a "PAL switcher." This switcher is easier to build than you might think, because most of the pins on the PAL chip are either power or inputs. Indeed, only pins 14, 15, 16, and

18 are outputs. Armed with this knowledge, you can piggyback or wire in parallel all but those four pins, then switch them using a 4PDT switch.

### Ghost Busting

The reason for the Multi-Pak fix for the CoCo 3 is at least twofold.

First, the older PAL chips used to decode the software slot select port for the Multi-Pak "ghosted" from \$FF7F to \$FF9F. That is, when a value was written to \$FF7F, it appeared at \$FF9F also, and vice versa. This ghosting caused no problems with the CoCo 2, but it plays havoc with the CoCo 3, which occasionally wants to write to \$FF9F when talking to its GIME chip. Similarly, any attempt at slot selection with a ghosting Multi-Pak will send spurious data to the GIME chip. Thus, the decoding of the software slot selection port had to be made more complete.

Second, Tandy felt it necessary to lock out the \$FF80 through \$FF9F range (\$FFA0 and up are already locked out by the programming of the old Multi-Pak PAL chips). This was to protect the GIME chip from conflicts with information from other external devices that might be addressed in that range.

I have been asked many times already why one should upgrade one's existing Multi-Pak if it happens to be one that appears to work fine with the CoCo 3. I can't fully answer that question at this time. I must emphasize, however, that both the Tandy technical bulletin and top Tandy officials strongly insist that regardless of whether or not your Multi-Pak *appears* to work properly with your CoCo 3, you must get it upgraded to assure proper operation. ☺

# RAINBOW ON TAPE

## Those Great RAINBOW Programs Without All The Fuss! Subscribe to RAINBOW ON TAPE!

Every month, RAINBOW ON TAPE brings as many as two dozen ready-to-run programs right to you. Using the current issue of THE RAINBOW as documentation, all you have to do is load and run them. Just a one-year subscription gives you more than 230 new programs! The typing time saved is time that can be spent with the CoCo. (RAINBOW ON TAPE does not include OS-9 programs or those less than 20 lines.)

**Need a back issue of RAINBOW ON TAPE?  
Issues available beginning with April 1982**

### Subscribe to RAINBOW ON TAPE Today! LOOK FOR OUR ORDER CARD BETWEEN PAGES 34 AND 35

The cost for a single copy of RAINBOW ON TAPE is \$10 within the United States; U.S. \$12 in all other countries. The annual subscription rate for RAINBOW ON TAPE is \$80 within the U.S.; U.S. \$90 in Canada; and U.S. \$105 for all other countries. **U.S. currency only, please.** In order to hold down non-editorial costs, we do not bill.

### DISK USERS: RAINBOW ON DISK IS NOW AVAILABLE!

All the programs from THE RAINBOW — including OS-9 — are now available on disk. For more information, see page 151 of this issue.

### NOW AVAILABLE ON DELPHI!

For your convenience, RAINBOW ON TAPE can also be ordered via the Delphi Information Network, in our Shopping Service area of THE RAINBOW's Color Computer SIG (Special Interest Group).

The individual programs from our past January issues are also available for immediate download in the RAINBOW ON TAPE Database area in THE RAINBOW's Color Computer SIG on Delphi. There is a \$3.50 per program surcharge.

RAINBOW ON TAPE is not a stand-alone product, but is intended as an adjunct and complement to the magazine. Even if you purchase RAINBOW ON TAPE, you will still need the magazine for loading and operating instructions.

**To order by phone, (credit card orders only) call 800-847-0309, 8 a.m. - 5 p.m. EST. All other inquiries call 502-228-4492.**

### Programs from Our Past Beginners Issues:

**January 1986** — *CoCo Puzzler*, a game to create puzzles easy enough for children yet challenging enough for experts; *Pattern Blocks*, an educational discovery process of colors and shapes; *Novices' Niche*, eight short programs especially for the beginner; *Color My CoCo*, a simple program that demonstrates your computer's music and graphics capabilities; *Remote Burglar Alarm, Part II*, a computerized alarm system for the home; *Add/Sub5*, an educational program that generates addition and subtraction math problems; *Firestorm*, an arcade-type game involving skill; *The Seed*, a graphics program that illustrates the growth from seed to flower; *CoBBS*, part three of a complete bulletin board system; *Caltime*, an electronic calendar that never forgets special dates and appointments; and *Joysticks, Touch Pads and Digitizing the World*, a graphics program that shows the techniques for creating digitized patterns. Plus six additional programs.

**January 1985** — *It Is Better To PUT Than To GET*, how to use complementary commands to create graphics; *Home Sweet Home*, a graphics program featuring the sights of home life; *The Keyboard Cassette Editing System*, a tape utility that works on BASIC or Extended BASIC to simplify tape commands; *Link*, a utility that concatenates RAM records and writes them to tape; *DISKTEST*, a utility that will check your disk for errors; *A Simple Test Processor*, an easy, efficient text handler; *The Interplanetary Fruit Fly*, a game that demonstrates pseudo high resolution graphics on a text screen. Plus 11 additional programs.

# PIPELINE

---

**TWISTER** Ohm/Electronics recently introduced their Scooter Model SP500M monitor stand, the newest member of the Scooter line of Guard-It Control Centers. With electrical power protection built into the base, the new control center features a locking tilt and full swivel capabilities. The SP500M provides five protected and switchable sockets. The tilt feature allows the SP500M to be locked at any tilt angle while still allowing the unit to swivel. Other features include a master on/off switch with indicator light and a resettable circuit breaker. Suggested retail price is \$79.95. *Contact Scooter Products, Ohm/Electronics, Inc., 746 Vermont Street, Palatine, IL 60067, (800) 323-2727 (Illinois, call 312-359-6040).*

**CLEANING SERVICE** New from Networx is Screen Clean, a low-cost cleaning system designed to eliminate dust and static from CRT screens on computer monitors and terminals. A package of Screen Clean contains 10 sets of cleaning pads; each set includes a wet pad and a dry pad. The wet pad is pre-moistened with an anti-static solution. The dry pad is a lint-free absorbent cloth that completes the cleaning process and leaves the screen dry and free of residual static electricity. Screen Clean is priced at \$5.95 each. *Contact Networx, 203 Harrison Place, Brooklyn, NY 11237-1587, (718) 821-7555.*

**IDENTITY CRISIS** MatheGraphics Software has announced *Trig Identity Graphs* for the CoCo. *Trig Identity Graphs* brings a visual dimension to the subject of trig identities in trigonometry. With this high resolution graphics program, the user can explore the geometric relationships between the two sides of any trig identity and be able to see clearly whether a supposed identity is really valid. *Trig Identity Graphs* is available individually on tape or disk for the Color Computer I, 2 or 3 with Extended BASIC for \$25, or as part of

the *Trig Graphs Package* from MatheGraphics. The *Trig Graphs* package also contains *SIN&COS Graphs* and is priced at \$40. *Contact MatheGraphics Software, 61 Cedar Road, E. Northport, NY 11731, (516) 368-3781.*

**HIGH FINANCE** Tandy Corporation has announced that consolidated sales and operating revenues for the first quarter of its 1987 fiscal year were \$742,550,000, an increase of 14 percent over the previous year's sales and operating revenues of \$650,834,000. Net income for the three months ending September 30, 1986, rose 5 percent to 43,720,000 from 41,713,000 in the same quarter of the prior year.

**COVER UP?** The Cover Craft line of dust covers from Amherst International Corporation has been expanded to include 50 new models. All covers are anti-static, made with fold stitching and are guaranteed for the life of the hardware. Among the new additions to the line are covers for Okidata, Epson, Citizen and Panasonic printers in versions which include tractor feed, cut sheet feed or just plain. Covers retail for \$9.95 to \$16.95. *Contact Amherst International Corporation, 540 North Commercial Street, Manchester, NH 03101, (800) 547-5600.*

**FREE CATALOG** The new *Black Box Catalog* features 52 new products. The *Black Box Catalog* provides a source for items ranging from switches and cables to modems and data acquisition devices. *For your free copy of the catalog, write Personal Black Box Catalog, P.O. Box 12800, Pittsburgh, PA 15241, (412) 746-5500.*

**MICROWARE SPEAKS** The following is taken from the a recent Microware Systems Corporation press release:

The Color Computer 3 combines an economical, high-performance system with an end-user oriented inter-

face. At the nucleus of the machine is an enhanced version of OS-9 Level II, providing upward compatibility from the Color Computer 2 which uses OS-9 Level I. OS-9 is a real-time, multi-user, multi-tasking operating system that is compact, ROMable and provides a UNIX-style applications environment. The Color Computer version of OS-9 Level II includes a multi-screen, multi-window environment that allows several programs to run simultaneously within different windows. It also has over 30 utility command programs for system and disk file control. OS-9 is available from Tandy for both the 128K and 512K versions of the Color Computer 3.

*Multi-View* is an enhanced windowing environment designed specifically for the Color Computer 3. It gives a common, graphics-based, user-friendly environment for application programs to run under. It consists of systems support for title bars, menu bars, pull down menus and dialog boxes. The graphics shell allows the user, with the aid of a mouse, to select picture oriented commands to process programs and create windows. Standard desk top utilities include: Calculator, Calendar/Memo Book, Alarm Clock, Printer Configuration, Help, Control Panel and Clipboarding Support.

The Color Computer 3's version of Color BASIC, compatible with previous 64K Extended Color BASIC, has been enhanced by Microware for greater control of its new power and capabilities. Commands added to the system allow access to all 512K of memory and high resolution graphics. High resolution text and graphics screens are outside the BASIC workspace and do not use up program memory space.

A *Development Pak*, designed to provide advanced utilities for program development, has also been released by Tandy. Features of the *Development Pak* include: a relocatable macro assembler and linker, hard disk driver, RAM disk driver, descriptors, system programmer utilities, programming support for utilizing the window environment, plus a screen editor.

## Success Mansion

By Paul Ruby, Jr.

**Y**ou are lying in bed one evening. As you lie there, you glance over at the clock on the dresser and notice that it is after midnight. Your eyes begin to feel heavy. You are getting sleepy, very sleepy. You can hardly keep your eyes open. ZZZZZzzzzzz . . .

That's it! You're sound asleep. In your slumber, you begin to dream. You are Joe I. Gonamakit. You live in the small town of Tinysville. You have heard rumors of the old man who used to live in the mansion on the hill. The gossip in town says that he once stole the 13 scrolls of success from a guru in India.

You begin to talk in your sleep. You talk about going in the mansion and retrieving the 13 scrolls. Before you realize it, someone has overheard your talk. The rumor spreads like wildfire. The townspeople begin to laugh and talk behind your back.

The dream drags on; months seem to pass. You are still the laughing stock of the town. As you are washing pots and pans in the local restaurant, you decide you are "sick and tired of being sick and tired."

You march out of the restaurant and head straight for Success Mansion. When you reach the

## The Rainbow Book of Simulations

Features 20 award-winning entries from THE RAINBOW's first Simulation programming competition. You are the Commander-in-Chief of the Confederate Army during the Civil War, an air traffic controller at one of the nation's busiest airports, the owner of your own software business, a civil defense coordinator in charge of saving Rainbow City from a raging flood, a scientist conducting experiments on Mars . . . Your wits are on the line.  
Book \$9.95, Tape \$9.95

## The Second Rainbow Book of Adventures

This sequel features 24 of the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanies, find a hidden fortune, or win the heart of a beautiful and mysterious princess. Experience the thrills and chills of the most rugged Adventurer without ever leaving your seat. *Ring Quest, Secret Agent Man, Dark Castle, Curse of Karos, Island* and more!  
Book \$13.95, Tape \$13.95

## The Second Rainbow Book of Simulations

The 16 winning programs from our second Simulation contest. Fly through the dense African jungle as a bush pilot, bull your way down Wall Street, lead the Rainbow City bomb squad, or try your hand at Olympic events. Test your skills and talents.  
Book \$9.95, Tape \$9.95, Disk \$10.95

doorstep you begin to have second thoughts. You remember the rumors of the mansion being haunted.

As you turn to walk away, you realize the entire town has followed you to the doorstep of the mansion. The people begin to laugh at you and dare you to go in. You know if you walk away now, you will never hear the end of it. Your pride is at stake. You decide to show everyone that you can retrieve the 13 scrolls, or your name isn't Joe I. Gon-amakit!

*Success Mansion* is a beginner's Adventure program, that has been designed to progress into a real life adventure. It requires a 32K Color Computer, and either a cassette recorder or one disk drive. (Multipack interface and speech/sound cartridge are optional.) The mansion contains 13 scrolls listing principles of success, which are used by millionaires across the country.

Your goal in the Adventure is to retrieve the 13 scrolls and exit the mansion. While retrieving the scrolls, you will discover other items in the mansion. Examine the items and find them in the real world. Answer the Success Quiz if you can. Try to apply the information you have learned to your life. That is when the *real* Adventure begins.

The program plays like most other text Adventure programs. First, it displays a description of your surroundings. Then, it prompts you for a command, which is composed of one verb followed by a noun. The program will not allow any abbreviations for commands. (Can you figure out the principle behind that?)

### Moving in the Mansion

To move through the mansion, you will need to type a verb — either WALK, RUN or GO, followed by a direction. The direction must be either NORTH, SOUTH, EAST, WEST, UP or DOWN. The description, displayed by the program, will list the valid directions that you may use.

Example: WALK NORTH

### Looking Around

The program will also list objects that are in the room with you. When there are objects in the room with you, you may want to look at some of them. Typing the verb LOOK by itself, for a command, displays the room description.

Example: LOOK DOOR

### Picking Up Objects

Some of the objects in the mansion may be picked up. To pick up an object, simply type the verb GET followed by the name of the object you want to pick up.

Example: GET BOOK

### Taking Inventory

As you explore the mansion, you may forget what you are carrying. To list the objects you are carrying, type the command INVENTORY by itself.

### Getting A Little Help

If you are having difficulty when you start, try typing the command HELP.

### Quitting the Adventure

Should you desire to quit the Adventure before finishing it, you can quit by typing the command QUIT.

### Saving an Adventure

If you do not have time to complete the Adventure during one sitting, you can save it to tape or disk. To save the Adventure, simply type the command SAVE. The program will then prompt you for the device to save the Adventure on (tape or disk). If the Adventure is to be saved on tape, put the desired tape in the recorder and press the play and record buttons.

### Loading an Adventure

To load a previously saved Adventure, with the present Adventure in memory, simply type the command LOAD by itself. The program will then prompt you for the device to load the Adventure from (tape or disk). If the Adventure is saved on tape, make sure the correct tape is in the recorder and press the play button. If the Adventure is saved on disk, make sure the correct disk is in the disk drive.

### Talking or Non-talking

If you have the Speech/Sound Program Pak from Radio Shack, this Adventure will talk to you.

During the Adventure, you may want to either turn the talking routine on or off. To turn the talking routine on, type the command TALK ON. To turn the talking routine off, type the command TALK OFF.

### Beware the BREAK Key

Should you press the BREAK key by mistake, you can continue the Adventure where you left off by typing the command CONT and pressing ENTER.

### Hint

Be sure to write down the things you

## LOWEST CONTROLLER PRICE EVER! The New JFD-EC, Only \$75

NOW COCO 3 Compatible\*

### JFD-EC DISK CONTROLLER

The JFD-Economical controller combine the best features of the original JFD-COCO with the two switchable ROM sockets, fully buffered data lines, and Memory Minder in ROM. The JFD-EC replaces the JFD-COCO in our product line at an even lower price. The controller includes

JDOS, Memory Minder in

JFD-EC Disk Controller with JDOS

\$75

JFD-EC Disk Controller with RSDOS1.1

\$75

For both add \$20 additional

### NEW TERMS

One-year warranty on parts & labor. 30-day money back guarantee (except shipping) if not totally satisfied. Items must be returned in like new condition.

Free shipping via UPS in continental United States for payment by VISA, MasterCard, or cashiers check. COD requires 10% prepayment by bank card plus 3% shipping. Blue Label and foreign shipping extra.

**J&M SYSTEMS, LTD.**  
15100-A CENTRAL SOUTHEAST  
ALBUQUERQUE, NM 87123  
505/292-4182

We accept MasterCard and Visa

### JFD-CP DISK CONTROLLER

Our new JFD-CP, compatible with both the original COCO and the COCO 2, features a parallel port to support a Centronics compatible printer or our hard drive, and an external ROM switch, which allows you to select JDOS or an optional RS DOS-type ROM. It comes in a case and includes JDOS 1.2 and manual.

JDOS implements all RS DOS commands, plus many more, including auto line numbering, error trapping, baud rate selection, OS/9 boot from floppy or hard drive, and Memory Minder, our disk drive analysis program (Precision Alignment Disk not included).

JFD-CP Disk Controller with JDOS

\$139

JFD-CP Disk Controller with RSDOS1.1

\$139

For both add \$20 additional

\*JFD-EC The JFD-EC, our newest controller, exhibits no compatibility problems with the COCO 3. Using RSDOS 1.1 in the JFD-EC users will have complete access to the new capabilities of the COCO 3.

\*JFD-CP The JFD-CP controller is compatible with the COCO 3, however the parallel port will not function with the COCO 3. Users of the JFD-CP and COCO 3 should not connect anything to the parallel printer port.

\*The JDOS disk operating system will yield unpredictable results when used on a COCO 3. It is recommended that JDOS not be used on the COCO 3. Radio Shack DOS (vers. 1.0 or 1.1) will work in all J&M Controllers.

## RAINBOW'S BROADENING ITS SPECTRUM

THE RAINBOW and the Delphi Information Utility have joined together to allow CoCo owners all over the world to connect with one another!

Delphi is a full-service information utility. It offers everything from up-to-the-minute news stories from The Associated Press to electronic mail services. But, *best of all*, it now has a **special forum for Color Computer owners, and it's operated by the people who bring you THE RAINBOW each month.**

The CoCo Special Interest Group (SIG) features a variety of services, including an open forum where you can send and receive messages from Color Computer owners all over the world. It also has several databases to which you can upload your favorite programs and from which you can download programs written by other CoCo enthusiasts. Some of these databases are BASIC programming, OS-9 and home applications.

When setting up your account with Delphi, if you do not have a credit card or prefer not to use it, Delphi requires that you send \$20 to give your account a positive balance. This will be refunded after your first free hour if you choose to no longer use the system or it will be applied to future connect charges. If you do not maintain a positive balance, you will be charged \$3.50 each month for direct billing.

## PEEK INTO THE RAINBOW

The CoCo SIG's conference feature allows you to meet electronically with other members of the CoCo Community. You can join conferences with notables such as Dale Puckett, Cray Augsburg, Marty Goodman, Don Hutchison, Jim Reed, Lonnie Falk and others — on a regular basis. Conference schedules will appear in THE RAINBOW each month. Be sure to check online announcements for changes and additions.

## THE OTHER SIDE OF THE RAINBOW

On Delphi, you also are able to buy RAINBOW ON TAPE — order a whole set, or download an individual program immediately. You can also renew your RAINBOW subscription, make a fast and easy order for software or hardware from a multitude of vendors, or inquire about products on the CoCo SIG.

We also have a number of **programs that you can download** and use, just for the cost of the time you spend transferring them. There'll also be **corrections for RAINBOW articles**, helpful hints and many other useful features.

## FREE LIFETIME MEMBERSHIP

THE RAINBOW is offering subscribers a **free lifetime subscription to Delphi** — a \$24.95 value — and a free hour of connect time — a \$7.20 value at either 300, 1200 or 2400 Baud — so you can sample Delphi and the RAINBOW CoCo SIG. That's right. Your subscription to THE RAINBOW entitles you to this \$32.15 value as a **free bonus!**

**If you're not a RAINBOW subscriber**, just enter your order when you sign on with Delphi and you'll get the same great deal! For our \$31 subscription fee, you'll get the finest Color Computer magazine ever, a free lifetime subscription to Delphi and a free hour of connect time.

## SAVE EVEN MORE

Want to save even more? While you're online you can order, for only \$29.95, a deluxe package which includes the Delphi membership, the *Delphi Handbook and Command Card* (\$21.95) and a total of three hours of connect time (\$21.60).

Delphi provides us all with **Immediate CoCo Community**. Check it out today. After all, you can sample it for free!

Problems? Call Delphi:  
**(800) 544-4005**  
**(617) 491-3393**

---

# DELPHI

---

# TYPE: GROUP COCO

# COMMUNITY TOGETHER

## How to reach RAINBOW's Color Computer SIG . . .

There are several ways to connect to Delphi and THE RAINBOW's CoCo SIG. In most cities you will not even have to pay long distance charges; you can use special data communications networks like Telenet, Tymnet and the Canadian Datapac network.

First, set your terminal program to operate at either 300 or 1200 Baud (depending on the modem you have), and also select either 7 bits with even parity or 8 bits with no parity, and one stop bit. (If one combination doesn't work, try another.)

Decide which network you should use. There is no surcharge for Telenet or Tymnet. Canadian residents using Datapac will be charged an additional \$12 (U.S.) per hour.

**On Telenet:** The Uninet network has now merged with Telenet. To get the Telenet number for your area, call (800) 336-0437. After you call your local access number and make connection, press the ENTER key twice. When the "TERMINAL=" prompt appears, press ENTER again. When the "@" prompt appears, type C DELPHI and press ENTER.

**On Tymnet:** Call (800) 336-0149 to get the Tymnet number for your area. After you dial your designated number and connect, you will see either "garbage" or a message saying "please type your terminal identifier." At this point, even if the screen is garbled, simply press 'A'. When "please log in:" appears, type DELPHI and press ENTER.

**From Canada (on Datapac):** Call Delphi Customer Service at (617) 491-3393 to get the Datapac number for your area. After you connect, press the period key (.) and ENTER (use two periods if you're using 1200 Baud). Type SET 2:1, 3:126 and press ENTER. Now type p 1 3106, DELPHI; and press ENTER. Delphi's new rates indicate an additional \$12 hourly surcharge for evening use of Datapac, which means a total of \$18 (U.S.) for connect time.

**From other countries:** Many countries have their own data networks that can connect to either Telenet or Tymnet. Check with the telephone authorities in your country for details on how to sign up for this service. When you have an account set up, you can reach Delphi with a "host code" of 312561703088 through Telenet, or 310600601500 through Tymnet. (You'll have to pay the toll charges for this connection.)

### Type in Your Username

If you're already a subscriber to THE RAINBOW, at the "USERNAME:" prompt, type RAINBOWSUB and press

ENTER. At the "PASSWORD:" prompt, type your individual subscription number from the mailing label of your latest issue of THE RAINBOW. (If there are one or more zeros at the beginning of this number, include them.)

**If you don't already have a subscription,** at the "USERNAME:" prompt, type RAINBOWORDER and press ENTER. At the "PASSWORD:" prompt, type SENDSUB and press ENTER. Have your MasterCard, VISA or American Express card ready, because you'll be led through a series of questions that will enable us to put your RAINBOW and Delphi subscriptions into effect. In an effort to hold down non-editorial costs, we do not bill for subscriptions.

If you make a typing error, just press ENTER and start over. Remember that at any point, when you're on Delphi, you can type HELP to get help on how to use the system. To get off the system just type BYE.

If you find that you're unable to log on to Delphi and enter the CoCo SIG after following these instructions, call us during afternoon business hours at (502) 228-4492. We'll be glad to offer assistance.

### Come Visit Us! Type: GROUP COCO

After you sign in, you'll be prompted to set up your own, personal "user name" — Delphi is a friendly service, no numbers to remember — and you'll be asked a number of questions so Delphi can set up your account. You'll also be assigned a temporary password. No time is assessed against your free hour of service while you answer these questions.

Delphi will tell you that your account will be ready after 6 p.m. the same day if you sign up before noon (Eastern time zone.) If not, your account will be ready at 6 p.m. the next day. Once an account is opened, *each RAINBOW subscriber will be credited with an hour of free time!*

When you log back in, use your chosen username and your temporary password to access the system. At that point, you will meet Max, who will help you configure things and will change your temporary password into your own *personal* password. This is the password you will use for subsequent sessions — or until you change it.

After Max bids you goodbye, you'll wind up at the Delphi Main Menu; type in GROUP COCO and **join us on the CoCo SIG!**

More than a book . . .

# A MILESTONE

# THE COMPLETE RAINBOW GUIDE TO OS-9

Today's programmers use short modules of readable code to build complex programs. The OS-9 operating system and the high level languages it brings you make the job easy.

OS-9 has so many things going for it that you need a guide as comprehensive and thorough as *The Complete Rainbow Guide To OS-9* to show you how to talk to OS-9 and realize the potential of this extremely efficient implementation of the UNIX operating philosophy.

Co-authored by Dale L. Puckett and Peter Dibble — two of the foremost authorities on OS-9 — *The Complete Rainbow Guide to OS-9* demystifies the dynamic operating system that gives the Color Computer more power and flexibility than many of the high-cost computers on the market . . . and gives you the ability and confidence to reach new programming heights.

With *The Complete Rainbow Guide To OS-9*, you will be prepared to take full advantage of the multitasking system that is setting new standards for Color Computer programming. For only \$19.95!

## Also Available!

*The Rainbow Guide To OS-9 Disk*. An adjunct to and complement to the book. You'll want the book for the tutorials, and the package of two disks to save the many hours of typing in lengthy programs. Two-Disk Package, \$31

Please send me *The Complete Rainbow Guide To OS-9* for \$19.95.\*

Please send me *The Rainbow Guide To OS-9 Disk* (a package of two disks) for \$31.\* Does not include book.

To order by phone (*credit card orders only*) call 800-847-0309, 8 a.m. to 5 p.m. EST.

For other inquiries call 502-228-4492.

\*Add \$1.50 per book shipping and handling in U.S. Outside U.S. add \$4 per book. Allow 6-8 weeks for delivery. KY residents add 5% sales tax. In order to hold down costs, we do not bill. ALL ORDERS IN U.S. FUNDS.

OS-9 is a trademark of Microware Systems Corporation.

### Success Quiz

Q1: Why must you type GO, WALK or RUN followed by a direction to move through the mansion?

Q2: Why must you exit the mansion with the 13 scrolls?

Q3: Why has the program been written in BASIC instead of machine language?

Q4: What is written on the following scrolls:

- A: SCROLL1
- B: SCROLL2
- C: SCROLL3
- D: SCROLL4
- E: SCROLL5
- F: SCROLL6
- G: SCROLL7

- H: SCROLL8
- I: SCROLL9
- J: SCROLL10
- K: SCROLL11
- L: SCROLL12
- M: SCROLL13

Q5: Of all the objects in the mansion, which item contains the detailed description of each of the principles on each scroll?

Q6: List the title of each book on the suggested reading list:

- A:
- B:
- C:
- D:

find and any observations you make.

### Loading the Program From Cassette

1. Type the command: PCLEAR 1
2. Type the command: CLOAD
3. Type the command: RUN

### Loading the Program From Disk

1. Type the command: PCLEAR 1
2. Type the command: LOAD "SUCCESS"
3. Type the command: RUN

Enjoy your success!

(Questions about this program may be addressed to Mr. Ruby at Route 3 Box 21, Beeville, TX 78102; 512-358-8819. Please enclose an SASE when writing.)

# Radio Shack has the...

## ...best of everything!

Unleash the true potential of your Color Computer with accessories from Radio Shack.

Add a pair of joysticks (A, 26-3008, Pair/\$19.95) for fast 360° movement or our Deluxe Joystick (B, 26-3012, \$29.95) that adjusts to your touch, allowing "fine tuning". For maximum control of games and graphics, simply "roll" the Color Mouse (C, 26-3025, \$49.95) across a tabletop to accurately position the cursor.

Maximize your Color Computer's power with the Multi-Pak Interface (D, 26-3124, \$99.95). You can change programs instantly using the selector switch, or under program control. And you can connect disk drives or other accessories, too.

Here are two more great-sounding accessories! The Sound/Speech Cartridge (E, 26-3144, \$79.95) adds three-voice sound and text to speech. The Orchestra-90 CC (F, 26-3143, \$79.95), lets you create electronic music and sound effects.

The 300-baud DC Modem Program Pak (G, 26-2228, \$89.95) makes it possible to join the telecommunications wave. Since the modem and software are built in, you can access information services by phone. Need more memory? Hard disk storage is yours with the Hard Disk Interface (H, 26-3145, \$129.95)\*.

Come in today for the accessories that make your Color Computer even more of a high performer!

# DeskMate® 7-in-1 software makes your Color Computer better than ever.

Now our popular DeskMate® software is available for disk-based Color Computers! DeskMate (26-3259, \$99.95) features seven popular personal-productivity programs—all on one disk! A general-purpose *TEXT* entry and editing program is ideal for writing correction-free letters, memos and short reports. *LEDGER*, a simple spreadsheet program, helps you do budgeting, sales forecasting, profit-and-loss projections and other “What if . . . ?” calculations. Using the four-color *PAINT* picture editor,

LEDGER

The *INDEX CARDS* personal filing system lets you enter and edit data and perform simple sorts and searches. It's ideal for keeping track of names and addresses. *TELECOM* gives you access to national information services, plus transmits

TELECOM

you can create colorful charts, graphs, designs and “doodles” on your screen. Print a copy on a dot-matrix or ink-jet printer.

INDEX CARDS

and receives files from other computers by phone (requires modem). A simple monthly calendar program displays “to do’s” for any date. *CALENDAR* is an easy way to organize your day. A four-function *CALCULATOR* is available within the operations of any application.

TEXT EDITOR

Don't have a disk drive? You can add one for just \$299.95. (26-3131). Come in today!

# STAR NX-10 COMPLETE SYSTEM

Easy-to-use and ready for the heavy workloads from your TRS-80 Color Computer 1, 2, 3 or PC compatible. Control pitch, margins, NLQ, Italics and more from the Front Control Panel. Stuff the 5K data buffer with your own unique character set or use one of the 11 built in character sets. 1 Year limited warranty serviceable nationwide. Deluxe Users manual. System includes the NX-10 Dot Matrix printer with BLUE STREAK II serial-to-parallel interface and our Software Trio (see below).

SPECS: 120cps Draft, 30cps NLO, Italics Sub & Superscripts, Emphasized, Doublestrike, Proportional, International, Down Loadable Char., Left, Right, or Center Justification, Underline, Vertically Enlarged 2X/4X, 5, 6, 8.5, 10, 12, & 17 CPI, Graphics 480-1920 dots/line, Horiz & Vert, Tabs, Forward or Reverse n/216" Line Feeds, Hex Dump, Friction & Push Tractor, 5K Data Buffer.

**\$299<sup>95</sup>** +\$10 Shipping and Insurance  
**COMPLETE**

# SEIKOSHA SP-1000AS COMPLETE SYSTEM

Triple Mode Dot Matrix printer with serial interface, cable and our Software Trio (see below). Ready to run single sheet or 4" to 10" tractor paper from your TRS-80 Color Computer 1, 2, or 3. Compatible with your programs that let you control your baud rate, like CoCoMax, VIP, Basic and OS-9 etc. 24 month limited warranty. 76 page users manual.

SPECS: 100cps Draft, 20 cps NLO, Italics, Sub & Superscripts, Bold, Doublestrike, Proportional, International, Underline, 5, 6, 8.5, 10, 12, & 17 CPI, Graphics 480-1920 dots/line, Horizontal and Vertical Tabs, n/216" Line Feeds, Hex Dump, Friction and Tractor Paper Feed

**\$219<sup>95</sup>** +\$10 Shipping and Insurance  
**COMPLETE**

# CITIZEN 120D COMPLETE SYSTEM

Triple Mode, High performance Dot Matrix printer with serial interface, cable, and our Software Trio (see below). Ready to run with your TRS-80 Color Computer 1, 2, or 3. Load single sheets with one button ease or use the adjustable tractor with rear or bottom feed. Fill the 4K buffer with text and graphics from your favorite programs such as CoCoMax, VIP and Basic at rates up to 9600 baud. 12 month limited warranty. Deluxe users manual.

SPECS: 120 cps Draft, 25 cps NLO, Italics, Sub & Superscripts, Emphasized, Doublestrike, Proportional, International, User Defined Characters, Left, Right, Center or Full Justification, Underline, Overscore, Reverse Print, Vertically Enlarged 2X, 5, 6, 8.5, 10, 12, 17, & 20 CPI, Graphics 480-1920 dots/line, Horiz and Vert, Relative & Absolute Tabs, n/216" Line Feeds, Hex Dump, Friction and Tractor, 4K Buffer.

**\$229<sup>95</sup>** +\$10 Shipping and Insurance  
**COMPLETE**

## BLUE STREAK II Serial to Parallel Interface

Transfer your data from CoCo 1, 2, 3 to your parallel printer with a fury. The Blue Streak can increase your data transmission 4 fold over conventional-compatible interfacing and increase printer throughput. An additional serial I/O port permits port sharing with another serial device without recabling.

SPECS 300, 600, 1200, 2400, 4800, 9600 Swithable Baud Rates, Power Supply 276-1431A UL Listed, 1 Year Warranty, Input 4 Pin Serial, Output 36 Pin Parallel and 4 Pin Serial, Total Cable Length 54 Inches, Box 4"x2"x1"

**\$49<sup>95</sup>** without power +\$2 Shipping and Insurance  
**\$54<sup>95</sup>** with power +\$2 Shipping and Insurance

## SOFTWARE TRIO

### Drayon's WORD PROCESSOR 2.2

TAPE OR DISK VERSION

A feature packed program that turns your CoCo into an office machine. Create and save letters and documents with the Word processor tailored for your printer.

### SUPER GEMPRINT

A FULL 8"x11" SCREEN DUMP PROGRAM

A well-written and documented program written in machine language position independent code. Features include user definable color shading and printing in all 5 Pmodes. Tape transferable to disk. Requires 16K extended color basic.

### TYPE SELECTION TUTORIAL PROGRAM

Menu driven program for the CoCo. Teaches and shows the new user the numerous features of their printer. (Specify printer when ordering)

**ALL THREE PROGRAMS \$19<sup>95</sup>**

# HOW DO YOU GIVE A RAINBOW?

It's simple — Give a RAINBOW gift certificate . . .

Let a gift subscription to THE RAINBOW carry the premier Color Computer magazine right to your friends' doorsteps. THE RAINBOW is *the* information source for the Tandy Color Computer.

Each month, your friends will enjoy the intelligent programs, reviews and articles written exclusively for their CoCo.

First, your gift will be announced in a handsome card. Then, all year 'round, they'll remember you and your thoughtfulness when they get each edition of THE RAINBOW — more than 200 pages loaded with as many as 24 programs, 15 regular columns and lots of helpful hints and tips.

Generosity benefits the giver, too. There'll be no more tracking down borrowed copies of THE RAINBOW. Your collection will be safe at home.

Give a RAINBOW gift certificate and let your friends in on the fun. THE RAINBOW is the perfect companion for the Color Computer!

**Get your order to us by Jan. 25 and we'll begin your friends' subscriptions with the March issue of RAINBOW.**

**Please begin a one-year (12 issues) gift subscription to THE RAINBOW for:**

Name \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_ ZIP \_\_\_\_\_

**From:**

Name \_\_\_\_\_

Address \_\_\_\_\_

City \_\_\_\_\_ State \_\_\_\_\_ ZIP \_\_\_\_\_

My payment is enclosed.

Bill to:  VISA  MasterCard  American Express

Acct. # \_\_\_\_\_ Exp. date \_\_\_\_\_

Signature \_\_\_\_\_

Mail to:

**Rainbow Gift Certificate, The Falsoft Building, P.O. Box 385, Prospect, KY 40059**

For credit card orders call (800) 847-0309, 8 a.m. to 5 p.m. EST.

All other inquiries call (502) 228-4492.

Subscriptions to THE RAINBOW are \$31 in the United States; U.S. \$38 in Canada. The surface rate to other countries is U.S. \$68; the air rate, U.S. \$103. Kentucky residents add 5% sales tax. U.S. currency *only, please*. All subscriptions begin with the current issue. Please allow 6 to 8 weeks for delivery. In order to hold down non-editorial costs, we do not bill.

# REVIEWING REVIEWS

## Bowling League Secretary

### Editor:

I would like to take this opportunity to thank reviewer Donald Dolberg for the thorough and favorable review of my first commercial software venture, *Bowling League Secretary* (September 1986, Page 141).

I would also like to address the question he raised of the omission from the reports of a final tally sheet for each player. During program development, I had originally planned to include this report. However, in the attempt to keep everything within the capabilities of a 32K CoCo and one disk drive system (what most people seem to have), the storage requirements for this data precluded its inclusion in Version 1.0. A weekly report is, however, generated that includes the required data, i.e., the season's high average, game and series as well as total pins and games for each player. This can be entered into the individual's tally sheet.

In Version 1.0, I attempted to maximize the number of bowlers that could be accommodated, since I had no idea what size leagues would be attracted to this program. The program can presently handle over 200 bowlers' statistics; even more by reserving more buffer memory and string storage space in some of the sorting programs.

If user interest shows that the smaller leagues want this feature, I will try to add it to the one-disk version for a limited number of requirements for both reports and number of bowlers.

I am now working on a version with full reporting capabilities but, at present, it looks like a two-drive system will be required.

Incidentally, I am about to release Version 1.1 which is designed for mixed leagues and keeps separate statistics for men and women. The same storage limitation applies to this new version, so this first release will be for a one-drive system.

I would like to thank RAINBOW for the excellent magazine, and for the interest and encouragement given new software suppliers by way of "Received and Certified." This gives the sincere newcomer a chance to get started in the CoCo world. Again, thanks for your coverage of the CoCo and keep up the good work.

Tom Barnett  
TOMELA\*CO

## Try-O-Tax

### Editor:

I have been using *Try-O-Tax* (available from Try-O-Byte, 1008 Alton Circle, Florence, SC 29501; 803-662-9500) for two tax seasons. I use it primarily to check returns prepared by other members of the firm. To date, I have processed more than 200 income

tax returns using *Try-O-Tax*. I am well satisfied with the application. I have read comments from others that the program is very slow. In fact, the program is just as fast as your printer. My printer operates at 9600 baud and prints (draft) at 140 cps. In such an environment, the program operates faster than I can enter data. The program is actually a series of programs for the various forms, which are accessed by a main menu. The program is written in BASIC, which allows one to alter it. For example, earlier versions automatically rounded to the nearest dollar. In our firm, all of the tax practitioners use dollars and cents; it was a simple matter to alter the program to accommodate that.

I have just received the 1986 version of *Try-O-Tax*. The new version contains some very substantial enhancements. The system now completes Schedules A, B, C, D, E, F, G (income averaging), SE (self-employment tax) and W (deduction for married couples working), and Forms 1040, 2106 (employee business expense), 2441 (child care credit) and 6252 (installment sale). Further, Tax Schedules X, Y and Z are incorporated in the program. Thus, in doing Schedule G, there is no need to look up tax rates, and for incomes over \$50,000, the tax is figured automatically. (For incomes below \$50,000, you still have to look up the tax in the tax tables.) Further, there is a provision for selecting the baud rate of output and an automatic form feed, both of which save considerable time. Also, the new version uses dollars and cents in the output. The outprint format has been improved immensely; with some printers it comes very close to meeting the IRS' requirements for computer-produced facsimile forms. However, the author cautions that all offices may not accept these and advises attaching the printouts to the standard forms, particularly if you are expecting a large refund. The disk also contains the 1986 Tax Estimator, which was reviewed earlier in RAINBOW. Further, the documentation is greatly improved. This application is also available for Radio Shack models III and 4.

In summary, I was pleased with *Try-O-Tax* over the past two years, but the new version is a program of professional quality at a very reasonable price for a reasonably priced computer — a rare value. Also, it has been my experience over the years that the author is always ready and eager to help if you have a problem. The programs are unprotected and written in BASIC, so if one does encounter a problem, it can easily be resolved with a phone call to the author. I have not had time to extensively test the programs, but have spent some time running them all and have encountered no problems.

## PenPal

### Editor:

I received my November RAINBOW today, and as is my usual habit, promptly sat down and read it cover to cover. I was rather disturbed when I came to Graham Langford's letter in Reviewing Reviews on Page 131. My experience with Four Star Software in general, and *PenPal* in particular, seems to have been just the opposite of Graham's.

I first ordered *PenPal* shortly after its release. I did experience problems in that I could not get the program to load in my 64K CoCo 2. After a couple of telephone calls to Four Star, during which they were most understanding and helpful, they explained to me that my problem was being caused by the copy protection used on Version 1.0. They promised that the problem would be corrected in Version 2.0, and that I would be sent a copy as soon as it was ready for release.

As promised, I received Version 2.0 last spring and began using it with no problem whatsoever. To my surprise, a few weeks later Version 2.1 appeared in my mailbox. With it came a letter explaining that a bug had been found in 2.0, and had been fixed in 2.1. I was not even aware of the bug in 2.0!

I have been using and thoroughly enjoying *PenPal* ever since. It has replaced *TW-64* as my word processor of choice (I am using it now to write this letter), and the communications program is fantastic for the CoCo SIG on Delphi! I am sorry that Graham has had problems with *PenPal*, but obviously not everybody else has encountered these problems.

Leonard K. Hull  
Dallas, TX

## TX-Word Processor

### Editor:

A bug has been located in *TX* Version 03.07.1. When typing the Descriptor line, *TX* attempts to perform a word-carry if you type past the end of the line. A word-carry from the Descriptor line (67) will crash *TX*.

Fixing the bug is very easy. Load *TX* Version 03.07.1 into your CoCo and edit Line 69 as shown below:

```
69 IF MID$(T$(R),RM,1)=H$ORR
>65 THEN 3BELSEFORF=RM TORM-20
STEP-1:IF MID$(T$(R),F,1)><H$T
HENNEXT:GOTO3BELSEB=F:F=RM-20
:NEXT:IF MID$(T$(R+1),5,87-B)>
<STRING$(87-B,H$) THEN 2
```

Save the repaired program. That's it. The bug is gone.

Fred Kolesar B/S  
Westfield, PA

# RECEIVED & CERTIFIED

The following products have recently been received by *THE RAINBOW*, examined by our magazine staff and approved for the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

This month the Seal of Certification has been issued to:

**Checkers-32K**, a computer version of the popular board game. Challenging play for players with varied skill levels. *Applied Machine Intelligence*, P.O. Box 358, Salida, CO 81201; \$3.95 plus \$.85 S/H.

**Chess-32K**, for the Color Computer. Compete against the CoCo with this Hi-Res assembly language game. Features six skill levels with strong play and fast responses. *Applied Machine Intelligence*, P.O. Box 358, Salida, CO 81201; \$5.95 plus \$.85 S/H.

**CoCo III Secrets Revealed**, a book filled with useful information and powerful secrets to help you utilize the new features of the Color Computer 3. *Spectrum Projects, Inc.*, P.O. Box 264, Howard Beach, NY 11414; (718) 835-1344, \$16.95 plus \$3 S/H.

**Disk Minizap**, a 32K BASIC disk utility program that allows the user to alphabetize a directory, save a backup directory, print a directory and edit sectors of the disk. *Drayon Software*, P.O. Box 2516, Renton, WA 98056; (206) 255-8562, disk only, \$6.

**Quotes**, a 32K game for the CoCo that simulates the famous television show, *Wheel of Fortune*. Compete with your friends for points, not cash (up to eight players). *B. Erickson Software*, P.O.

Box 11099, Chicago, IL 60611; (312) 276-9712, \$25.

**Speak-Easy**, a speech synthesizer for the Color Computer. Features include a serial interface for use with the disk drive. No programming of words, just simple commands initiate speech. This device plugs into the printer port of the CoCo and appears as a printer to the CoCo. *Fazer Electronics, Inc.*, 539 McDaniel Mill Road, Conyers, GA 30207; (404) 929-1657, \$149.

**CoCo III 512K Board**, for the Color Computer 3. Easy to install. Includes 16 prime 256K DRAM chips. The board can also be purchased without the 256K DRAM chips. Compatible with OS-9 Level 2 and Multi-View. *Spectrum Projects, Inc.*, P.O. Box 264, Howard Beach, NY 11414; (718) 835-1344, \$139.95 (with chips) or \$99.95 (without chips) plus \$3 S/H.

**Teacher Pak II**, a collection of four 16K ECB programs for teachers. *Teacher Pak Plus*, a powerful 32K test-making program, is also included. *Tothian Software, Inc.*, Box 663, Rimersburg, PA 16248; (814) 473-3887, \$47.95.

**TRY-O-TAX**, is directed to the individual taxpayer and provides a convenient and economical way to remove some of the confusion and hassle associated with federal income tax preparation. *Try-O-Byte*, 10008 Alton Circle, Florence, SC 29501; (803) 662-9500, \$39.99 plus \$3 S/H.

**VIP Writer Enhancer**, designed for people who take files from *VIP Writer* and use them in another context, like uploading them to a BBS. It is also useful for downloading files from another word processor and changing them for use with *VIP Writer*. *Spectrum Projects, Inc.*, P.O. Box 264, Howard Beach, NY 11414; (718) 835-1344, \$19.95 plus \$3 S/H.

**The Word Factory Word Meanings**, a 64K educational game for the CoCo. This is a three-program package for the teacher, the parent and the student. For the student, an entertaining game that helps build a better vocabulary. The teacher and parent are provided with a program to build new word lists. And, for the teacher, a program that generates test sheets for the classroom. *SECA*, P.O. Box 3134, Gulfport, MS 39505; (601) 832-8236, \$24.98.

---

The *Seal of Certification* program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in **THE RAINBOW**.

By awarding a *Seal*, the magazine certifies the product does *exist* — that we have examined it and have a sample copy — but this *does not* constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to **THE RAINBOW** reviewers for evaluation.

— Judi Hutchinson

## Educational Software Makes Math Fun

Look. Listen. Learn. Three simple words, but when used in conjunction with the software available from Compass education, these words take on a new and deeper meaning.

This educational software is available on cassette tapes and is made to run on any CoCo that has at least 16K of memory. This software library consists of five main study courses which cover standard school curriculum. Each study course contains two volumes of material with eight cassettes in each volume for a total of 144 individual lessons.

The five main study courses are Developing Reading Comprehension, Rules of Writing, Math, Science/Physics and American History.

The first cassette in each volume contains the main loader used to run all of the lessons in that volume. As the loader is written in machine language, you will need to insert the cassette in your cassette player and rewind it. After you turn on your CoCo and monitor, all you will need to do is to type CLOADM:EXEC: and press ENTER. When the program is loaded and running, just follow the prompts on the screen.

When using these lesson plans, you can stop the program at any time by pressing the pause key on your cassette player. If you don't have a pause key, just stop the recorder. You can also rewind or fast forward the tape so that you can review or skip any section of the lesson plan.

I received the entire library, so over the next few months we will review each study course separately. This month we begin with Math.

The Math study course contains numbers, fractions and basic algebra.

As I mentioned earlier, there are two volumes in each lesson plan. In Lesson Plan One, Volume One starts with learning number digits and ends with different numbering systems. Volume Two starts with raising numbers to powers and ends with naming and defining fractions.

In Lesson Plan Two, Volume One starts with numerators and denominators of fractions, and ends with addition and subtraction of fractions. Volume Two starts with addition of mixed numbers and ends with using a ruler to measure fractions.

Lesson Plan Three, Volume One begins with the logic of algebra and ends with fractions and division. Volume Two starts with solving problems with equations and ends with equations and trigonometry.

These lesson plans are very well thought out, organized and presented. Each lesson plan starts out with the basic concept of that lesson and advances, cassette by cassette, to the more complex information provided by that lesson.

We were having a small family gathering on a football Sunday. My brother-in-law, Jerry, his wife, Julie (who are avid sports fans), and my niece Misty spent more time with CoCo and the algebra then they did watching the games.

Jerry couldn't stop raving about the program. He enjoyed it as a review of basic algebra. He told me that it has been a while since he got out of high school and he thought he had forgotten all of the algebra he had struggled through. Using this program brought it all back to him. He was impressed.

Misty is just starting junior high school this year and, although she hasn't been formally introduced to algebra, she still managed to enjoy this lesson plan. Misty summed it up very well when she said, "Uncle John, algebra is fun."

These programs are presented in such a way as to allow both adults and children to look, listen and learn. But most of all, to enjoy them.

To me, the main values of any type of educational software are the varying levels of difficulty, positive reinforcement, and whether or not it is user-friendly.

These programs certainly contain all of the preceding requirements and, on a scale of one to 10, I would not hesitate to give the Math study course a 9.5.

(York 10 Software, 9525 Vassar Avenue, Chatsworth, CA 91311; 818-700-0330, \$49.95 per volume plus \$3 S/H)

— John A. Appel

### Speak-Easy for \$149.00

the speech synthesizer that leaves the others tight lipped  
**FINALLY . . .**

- \* No more fumbling with Multi-Pac or Y-Connectors
- \* No vocabulary ROM or disk needed
- \* Compatible with all operating systems
- \* No driver program needed
- \* Appears as a printer to Co-Co

Harvey says, "Finally, I can ask for dinner."

Speak-Easy plugs into the serial port of your Co-Co, not the card slot, and appears as a printer to the Co-Co. Incorporated in Speak-Easy is a unique state of the art two chip set which phonetically converts ASCII text to speech. What this means to you is extreme ease of use, virtually unlimited vocabulary, and complete flexibility in a speech synthesizer. Just look at this sample BASIC program:

```
10 INPUT A$
20 PRINT #-2, A$
30 GOTO 10
```

and imagine how you could upgrade your games and applications with simple printer statements to use Speak-Easy! It can say anything including foreign words. If you can spell it, speak-Easy can say it!

Smokey says, "For \$149.00, don't let the cat get your tongue."

Also available in RS-232C configuration with selectable baud rate, word length and stop bits. Choose between 4 pin DIN or DB-25 connectors. If you have a special need or configuration, let us know. We will have you talking in no time!

539 McDaniel Hill Rd.      Visa and MasterCard  
Conyers, Ga. 30207      phone 404-929-1657 welcome

Hint . . .

### Topsy-Turvy

Many CoCo users encounter I/O Errors when loading programs from tape which were saved by a different CoCo. The most likely culprits are the volume setting and tape alignment. If you have tried various volume settings with no luck, try turning the tape recorder, with the cassette in place, upside-down on the table. This will change the way the tape travels across the playback head and may result in a "good" load of the program.

## Delve Into the Delightful Depths of *Dragon Slayer*

Grab your sword, fellow game players, for you are about to proceed into the lair of the awful dragon to save the villagers of Pendor.

What's that? You say you're tired of searching for treasure, fighting monsters and, most of all, going after fire-breathing dragons? Ah, but don't despair, because from this time-worn saga Tom Mix Software has created a game of epic proportion that will delight many a Color Computer owner. And — even more good news — this game runs on the CoCo 3.

You see, in *Dragon Slayer*, you do not frantically mash the joystick button in an attempt to exterminate evil life forms. Nor do you madly pound on the keyboard in your quest to HACK MONSTER. Rather, you, a shortish cone-shaped fellow with two spindly legs, wander about a 10-level dungeon (with 16 rooms per level) moving objects to facilitate your quest for the aforementioned fire-breather.

Each room is depicted on the screen with walkways, ladders, ropes and other objects shown graphically. Using either the arrow keys or joystick, you move up and down ladders and ropes, gathering keys to unlock doors, wielding swords to crush enemies, donning boots for treks across dangerous turf, restoring downed bridges, maneuvering through darkened passageways and, of course, collecting the ubiquitous bags of money scattered throughout the dungeon. One press of the space bar allows you to pick up objects, but with the exception of money, only one object may be carried at a time.

Juggling objects and determining how to deal with traps and other tricks requires thought and strategy, not to mention exploration, and trial and error. This is especially true at higher levels where there are many, many obstacles, puzzles and assorted challenges. Solving this game is no easy matter, especially since you have only three "lives" with which to complete the task.

*Dragon Slayer* effectively meshes the visual aspects of an arcade game with the challenges and strategy of an Adventure game. The graphics are excellent. The animation is smooth and relatively flicker-free. Sound effects, though, could be improved.

When it comes to features, *Dragon Slayer* deserves a high rating. You can control your speed (or stop), pause the game and quit, or save the game after solving a level. I found a problem with the last feature. When I had solved Level 1, I pressed the S key as instructed to save my game position. However, the next time I loaded the game, it did not continue with Level 2 as the instructions said it would, but started all over at Level 1. I have talked with others who haven't had this problem, so perhaps it was a bug in the review copy.

All in all, *Dragon Slayer* is a game that provides countless hours of fun and challenge for practically everyone. The game, while designed for adults, is equally suitable for children, and could even help them learn basic puzzle solving. On a scale of one to five, *Dragon Slayer* gets a four.

*Dragon Slayer* expertly combines arcade action with strategy, exploration and challenging puzzles, making it easy to play but hard to master. Good graphics and 160 different rooms further enhance this game.

(Tom Mix Software, P.O. Box 201, Ada, MI 49301; 616-957-0444, disk \$29.95 plus \$3 S/H)

## Colorscan Delivers Dazzling Results

So you bought a Radio Shack CGP-220 Color Ink-Jet Printer on sale . . . but you haven't been able to do much with it, since software for Tandy's most colorful printer was scarce. Have no fear! Computize, Inc., and the Whitesmith partnership (of *Graphicom II* and *Hardcopy* fame) have just what you're looking for.

*Colorscan* is more than just a screen dump program. One quick glance at the documentation has you up and running. The program greets you with simple instructions for making sure you get the correct colors on your screen. Next, you're whisked away to the icon-oriented main menu, where you can choose one of eight different "modules," or selections, by using either the keyboard or joystick. By selecting Disk, you can load or view any 6K (one screen) picture, specify which drives to use and change the baud rate.

The two "regular" screen dump modules allow you to create a ¼-page or ½-page printout, with an adjustable left-hand margin. Disk Dump lets you view 6K pictures on the selected disk or print them all out, two across on the paper, with just a flick of the wrist.

The Poster module creates multi-page printouts of either the entire picture or just part of it. You are told how long it will take, as well as how many sheets of paper. This feature also works to make a small printout of just a portion of the picture quickly.

Customizing the colors of your printout is done via the Custom Ink module. This lets you to determine whether the reds, blues, blacks and whites on the screen are printed just as they look, or maybe as violet, green, yellow and magenta, instead. Colors can be selected individually, and a test printout can be done, which gives a hard copy of the pokes needed to change the BASIC driver to default to these colors.

But wait, there's more! Rainbow-colored banners can be produced using the Banner module. Select four colors and one of the seven fonts that are included to make a banner up to 27 inches long. The estimated time is displayed for this feature, also.

And as if this weren't enough, *Colorscan* has a feature I've not seen anywhere else. This gives the capability to make a listing of any BASIC program, but with one important difference. You can have your line numbers printed in one color, program code in another, and remark statements in a third color. You're also allowed to specify four strings to be highlighted in your choice of colors as well. In addition, you may also have any multi-command lines separated in the listing. All this is a little slow, but the resulting printout is fascinating. Unlike other parts of the program, I was unable to find a way to break out once printing has started.

I also liked the fact that what this program says is violet, looks violet. If you go according to Ink-Jet's manual, what they say is violet, looks blue, and vice versa. I find this quite annoying, not to mention confusing. Whitesmith's decision to make this change was, in my opinion, a good move.

The first disk I received had a few garbled files, and some of the features did not function properly. After contacting Eric White, it was determined that I'd received an early production copy, and a new disk was rushed to my house. The second copy worked just fine. I found Mr. White and Computize to be as user friendly as their program.

There are only a few minuses that I can see with *Colorscan*. Documentation is minimal, and leaves a few things to your own discovery. For example, there is no explanation of how to exit the String Search (use the BREAK key), or the Banner Edit mode (the BREAK key again). The line numbers to change in the boot program for default colors aren't listed anywhere, (lines 710-740). If you view a BASIC program before listing it from the Color List module, make sure the printer is on, or the program hangs up. To exit the program use the reset button, or turn the computer off. Personally, I like to exit through the software. And while you are told that two-screen *CoCo Max* pictures can be loaded, you are not told to scroll the picture with the arrow keys. Also be aware that *Colorscan* cannot be used with ADOS, but works well with 1.0 or 1.1 Disk BASIC.

All in all, I feel that *Colorscan* is a fine, easy-to-use piece of software. So if you're looking for a program that can help your Color Ink-Jet Printer really strut its stuff, *Colorscan* delivers dazzling results!

(Computize, Inc., P.O. Box 207, Langhorne, PA 19047; 215-946-7260, disk only, \$29.95 plus \$3 S/H)

— Gay Crawford

### One-Liner Contest Winner . . .

Run this program, *Grid*, and enter the spacing you desire by entering any number from 1 to 255. Try some fractional values for interesting effects.

#### The listing:

```
1 CLS:INPUT"ENTER GRID SIZE";X:P
MODE4,1:PCLS:SCREEN1,1:FORA=X TO
255STEP X:LINE(A,Ø)-(A,192),PSE
T:LINE(Ø,A)-(255,A),PSET:NEXTA:L
INEINPUTA$:GOTO 1
```

Keith Biasillo  
Indianapolis, IN

(For this winning one-liner contest entry, the author has been sent copies of both *The Rainbow Book of Simulations* and its companion *The Rainbow Simulations Tape*.)

# PRICKLY-PEAR SOFTWARE

## QUALITY PROGRAMS FOR YOUR COCO & TDP-100

PROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTHERWISE NOTED.

### HALL OF THE KING (Rainbow Review 6/86)

This program combines all the things you look for in a great two disk graphics adventure program. The Hi-Res graphics are superbly done. The text portion of the screen and the graphics change quickly as you move through the **HALL OF THE KING**. You can move freely from one portion of the adventure to another. Call up your inventory at any time. You can even save or load a game at ANY time. **HALL OF THE KING** will challenge even the most seasoned adventurer.

**HALL OF THE KING** requires 64K EB and one disk drive. This exciting two disk adventure comes packaged in a vinyl case. **\$39.95.**

### HALL OF THE KING II (Rainbow Review 9/86)

Continue your quest for the Earthstone in The Inner Chambers of the **HALL OF THE KING**. Outstanding graphics help show the way to success in your search to help restore the legendary power of the Earthstone to the dwarven race. The deeper you travel into the inner chambers, the more difficult your progress becomes. **HALL OF THE KING II** has all the fine features of the first adventure. It is designed to follow the original **HALL OF THE KING** but may be played as a stand-alone adventure. The adventure fills two disks and comes packaged in a handsome vinyl folder. It requires one disk drive and 64K. **\$39.95**

### WARP FACTOR X (Rainbow Review 2/86)

If you have been waiting for a game for your color computer that has everything, your wait is over. **WARP FACTOR X** is here. This all graphics simulation game requires strategy, fast thinking, an eye for detail, and above all experience in knowing the capabilities of your starship and its computer. (See review in Feb. 85 issue of Rainbow.) It requires 32K one disk drive and comes packaged in a vinyl library case. **\$34.95**

### DARKMOOR HOLD (Rainbow Review 8/86)

You and your comrades will explore the levels of Darkmoor Hold in an effort to gain great riches and defeat the dark wizard. The Wizard will soon realize the threat you pose and the many monsters you meet and battle will become stonger and more powerful as you move through the 10 levels of Darkmoor. A keen eye will help you find weapons and armor to aid your battle along with treasures for you to keep. Your party consists of a Dwarf, an Elf, and you, the Human, each with their own special attributes. The weapons, armor and treasure are placed randomly in each level to provide a new challenge each time you play. You may also save the game you are playing since defeating the evil Wizard is not an easy task. It has great graphics and an impressive text screen to give you more fun than a barrel of elves. Requires 64KEB and 1 disk drive. **\$29.95**

#### POLICY ON PROTECTION

We believe our customers are honest — all of our software can be backed up using standard backup procedures.

Your Personal check is welcome - no delay. Include \$1.50 shipping for each order. TX residents add 5 1/8% sales tax. Orders shipped within two days.

Dealer and author inquiries are always welcome. Canadian dealers should contact Kelly Software Distributors, Ltd. 608, STNT, Calgary, Alberta T5H 2H2, (403) 236-2161

### DRAGON BLADE (Rainbow Review 11/86)

#### Animated Graphics Adventure

This 100% hi-res graphics adventure features many animated screens which will delight the avid adventurer. You search for the magic Blade which is the only way to rid your homeland of the fearsome dragon which has risen from a long rest to terrorize your village. Fill your screen with super graphics as you try to solve the difficult challenge the village leaders have set before you. Dragon Blade requires 64K EB and 1 disk drive. **\$29.95**

### DOLLAR WISE

In today's world of high finance, variable interest rates, balloon payments, and lease options there is a program that can help you sort out the details and make sense of the small print. **DOLLAR WISE** is an extremely flexible program that will allow you to find the best loan by substituting values for all the different variables that make up the loan. Find the future value and interest paid for either single or multiple deposit savings accounts. Determine mortgage interest paid during a tax year—very good for estimating tax savings on credit purchases also. Should you rent or buy. **DOLLAR WISE** gives you all the options. It will even provide a loan amortization table print out with Tax Year summaries either by month or year. Requires 32K Tape - **\$24.95** Disk - **\$27.95**

### FONTFILE — (New for the COCO III)

**FONTFILE** replaces the standard Hi-Res COCO III font with a character set you select. Choose from a menu of 26 or create your own and save it to disk for future use. Use the fontfile in your own basic programs or liven up an old program with a Hi-Res font screen. **FONTFILE** will work on all versions of the COCO but is especially written to take advantage of the special capabilities of the new COCO III. Requires 64K and one disk drive. **\$24.95**

## Super Programming Aid Version 2 Is Better Than Ever

A great utility program has just gotten better! If you don't already own the *BASIC Programming Aid*, check out the review in the July 1986 RAINBOW. It was already a super program for anyone who programs in BASIC, and now it has been improved. Briefly, the main programming aids that were already available include Automatic Line Numbering, Auto-Load of a disk menu program, Keyboard Clicker, Suspend, Copy, Move, Find, List Scrolling, Key Repeat, Program Formatting, Clear Key Disable, Current Line Edit and Command Keys. The Command Keys feature allows keys on your keyboard to become function keys. By pressing the control key (down arrow) and then a letter, a command or a line of text is automatically typed for you. You can use the command table supplied or program your own command keys.

Version 1 works with 16K ECB or more, but doesn't take advantage of 64K. Version 2 has been designed to run with the 64K CoCo. It will not run on the 16K CoCo. Version 2 works with 32K, but the new print spooler will not work in this mode.

Version 2 allows you to configure the CoCo as an all-RAM machine. This gives the option of placing the *Programming Aid* in RAM that is not used by BASIC,

Extended BASIC or Disk BASIC, and permits use of all the normal 32K of RAM for a BASIC program.

The addition of a print spooler lets you get back to work while listing a program and allows better performance from BASIC programs. Depending on how you set up your memory, you can have between 6K and 32K of print spooler available. For instance, if you have 64K, it's possible to use that "hidden" 32K of RAM as a print spooler. You never again need to wait for the printer to finish before getting back to work. You and the printer can now work at the same time. Running the spooler also gives you the option of cancelling output that has already been spooled.

Version 2 is configured to your system at startup time. The memory and command table options are easy to set. Prompts give you the opportunity to change any of the startup options to make it meet your programming needs any time you use it.

The manual is clear and detailed. Each function is fully explained and examples are given. Onscreen prompts, status messages and error messages keep you from getting lost or confused.

Bangert Software Systems has put all these options together in one compact machine language program. It can be used with either tape or disk based systems and works with any ROM version.

Anyone who programs in BASIC should have this program. After all, you deserve it.

(Bangert Software Systems, P.O. Box 21056, Indianapolis, IN 46221; 317-632-0174, \$29.95)

— James Ventling

## SPECIAL DEAL ON 500 PROGRAMS!

GET 50 DISKS OR 50 CASSETTE TAPES FULL OF OVER 500 PROGRAMS. HERE IS WHAT YOU'LL RECEIVE:

- \* Over 250 Utility/Home Application Programs including a Word Processor, DataBase, Spreadsheet, Account Manager, 2 Basic Compilers, Terminal Programs, ROM Copies, Mail List, Machine Language Tutorials, Plus Much More!
- \* Over 200 exciting games including Warlords, Star Trek, Super Vaders, Solar Conquest, Horse Races, Football, Baseball, Frog Jump, Invader, Plus Much More! (Many machine language games)
- \* Over 30 adventures including The College Adventure, Dungeon Master, Space Lab, Ice World, Ship Wreck, Zigma Experiment. Plus 32K Graphic Adventures.

## A CoCo Nut's Best Friend: Spike, *The Electronic Robotic Dog*

This just has to be the ultimate science fair project! Imagine if you will, a CoCo-controlled robotic dog scampering around in front of your booth nipping at the heels of the judges!

The idea sounded hilarious to me when I first heard of it, but the folks at Electronic Motion Control have developed plans and software to actually accomplish this feat. In spite of the humorous setting I have depicted, the subject should not be taken lightly. The resultant robot built from the available plans is capable of some pretty neat tricks.

The plans consist of detailed drawings, diagrams and circuit board layouts, as well as a parts list of the hardware items needed. Besides a dedicated Color Computer 2 with ECB and 64K RAM, you also need various other circuit boards, motors and gear boxes. A list of where to buy these items is included in the package, many of which can be purchased from EMC.

A program is supplied on tape that allows you to program "Spike" to follow a specific pattern. As Spike runs the pattern he quickly learns his directions and runs it himself without any further training from his master. You program the initial pattern with the use of a joystick plugged into the CoCo. By the way, the computer is removed from its plastic case and installed directly onto Spike's chassis. Your TV or monitor is used during this initial programming process in order to see what you are doing. If you want, you can also hook up a printer and make a listing of the program with your unique pattern and other changes.

The CoCo 2 is modified to the extent of bypassing the AC power supply and using motorcycle batteries and charger for the power supply. Other minor CoCo logic board modifications are also required and detailed.

A clever option utilizing a Polaroid Sonic Board, like that used in the auto-focus instant camera, allows Spike to "see" obstructions and react accordingly. You can also add an optional speech synthesizer so that Spike can "speak," or maybe just bark.

In looking over the detailed, 41-page instruction booklet, it appeared that everything you need to know to build this robot is there. One should not take this project lightly, however. It requires a lot of sheet metal work and some machining as well as electronic savvy; definitely not a project for the novice. The finished product is well worth the effort and adds still another dimension to your Color Computing interests.

Although this represents a "fun" type project, it will not be a snap to build and train Spike; but unlike the real thing, this dog won't leave a mess on your living room floor!

(Electronic Motion Control Inc., P.O. Box 17271, Air Port Station, Clearwater, FL 33520; 813-536-1694, \$69.50 plus \$3 S/H)

— Jerry Semones

# THE RAINBOW

THE COLOR COMPUTER MONTHLY MAGAZINE

## Back Issue Availability

Back copies of many issues of **THE RAINBOW** are still available.

All back issues sell for the single issue cover price. In addition, there is a \$3.50 charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by United Parcel Service. There is a \$5 charge for the first issue, plus a \$1 charge for each additional issue on orders sent by U.S. Mail. UPS *will not* deliver to a post office box or to another country.

Issues July 1981 through June 1982 are available on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 5 percent state sales tax. In order to hold down costs, we do not bill and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To order, just fill out the form on the next page and mail it with your payment to:

**THE RAINBOW**  
The Falsoft Building  
P.O. Box 385  
Prospect, KY 40059

For greater convenience, order RAINBOW back issues through the shopping area of the CoCo SIG of Delphi!

## MouseTop — A Furry Companion for Your CoCo

Remember the ads for *Jaws II* — “Just when you thought it was safe to go back in the water”?

Well, just when you think you've seen everything, it always comes along. And here it is: The MouseTop mouse cover.

You don't need this little cover that fits right over your computer mouse. Oh, certainly, it keeps the grime, dust and grit off the mouse. But I have honestly seen darn few people use keyboard, disk drive and (for that matter) typewriter covers. Too much trouble.

Those things don't have something that the MouseTop does — it's cute.

“What's that?” someone asked a few minutes after it arrived. “It's a mouse cover,” I said. “It keeps my mouse clean and warm.”

“It's cute,” was the reply. “Really cute. At last, you have something cute to go with all that equipment.”

OK. I've bought laser printers, 70-Meg hard drives, jazzy plotters and every computer Tandy's made in the past five years. Nothing has brought as much comment as this little MouseTop.

It is cute. Two ears, glasses and a shiny black nose. It fits right over my computer's mouse. The “tail” is the mouse cord.

Each MouseTop is hand-made, which makes each unique. And they are machine washable.

I like this little varmint and I think you'll like it, too. It does add a touch of furry personality to your computer.

(H&H Enterprises, P.O. Box 2672, Corona, CA 91718; 714-737-1376, \$5.95, 20/20 vision model [without glasses] \$5.49)

— Lonnie Falk

## Miscellaneous Writings Enhances Bible Studies

The idea of a book or books on disk isn't new, so I will not make further comment on the concept, except to agree that it is a case of the future being the here and now.

The Rev. Mark Camp has used the idea to great advantage for Bible scholars, ministers or people just plain interested in the scriptures. I'm excited about that, but the whole concept of book disks has to be even more exciting!

Just think of a school having history books on disk that could be updated every year as history is being made. Use your imagination on this one; there are hundreds of applications.

As for *Miscellaneous Writings*, I put them to the test by using the outlines for a sermon and a couple of Bible studies. Nobody fell asleep and fell out the window, so they must have been effective.

Seriously, they were very good outlines that are easy to follow. I will reserve any review on doctrinal grounds for religious publications.

The text files print out well on *VIP Writer*, which has always been my workhorse word processor. They also print on *Telewriter-64* and with a text file printer included on the disk.

This is a superior program for Bible students, Sunday schools or folks interested in the Bible, but don't let that keep you non-biblical types from taking a look. It is a great concept.

The material on the disk is explained in *DISKINFO.TXT*, which tells you all about the files. Using the built-in word processor, or your own word processor program, you can read or print out the file you want. This is a superior way to obtain and store text. I would call this an inexpensive must for all Bible students and an interesting disk for everyone.

Also included in the review package was a collection of programs called *CoCo Hymnal II*.

This program was conceived out of necessity when Pastor Mark was caught on a night when his regular pianist was not available.

All he had around was his "Tandy Steinway" so he sat down and programmed some favorite hymns along with a text display of the words. It was well received by the

congregation, and Pastor Mark expanded it using a couple of graphics programs to include some title pages and a menu.

The program operates by typing `RUN "FT.BAS"`, which prints out (onscreen) the instructions and sets a Hi-Res screen for the text printing.

You can choose Old and New Favorites, Songs About the Holy Spirit, Hymns of the Reformed Faith or Songs for Children. Each general area gives you several choices of hymns.

Mark modestly says the arrangements are not professional, but they sound like the mighty Wurlitzer to me. It is amazing how much music can come out of my old gray F-board CoCo.

My only problem with the *CoCo Hymnal* is the inability of the program to take you back to the menu after a set of selections has been played.

You can access another group if you run the basic program for that group, but that requires keeping the list handy, and you know how lazy we can get about things like that. I am sure Mark Camp is working on that program along with a lot of good stuff.

Sovereign Grace Software is filling an important function. I found both disks in the review package well worth the money and the time.

(Sovereign Grace Software, 221 Highview Drive, Ballwin, MO 63011; 314-227-3238, Writings Disk \$9.95; CoCo Hymnal, by donation)

— Howard Lee Ball

## Disk Programming Package Provides Additional Security

From time to time everyone sits in front of his CoCo and thinks, "I sure wish someone would write a utility to do that. It would be so nice!" At least four of those wishes have now come true thanks to Bob van der Poel Software's *Disk Programming Package*.

The *Disk Programming Package* consists of four utilities that could be of use to all Disk BASIC programmers. The four utilities are ADDML, which appends machine language subroutines to your BASIC program; UNPACKER, which reverses the action of BASIC line packers; MLBASIC, which converts a BASIC program to a machine language file; and JOIN, which links several machine language routines into one file and optionally adds an autoexec feature.

The four utilities come on a single disk, which is not copy protected. The documentation consists of five sheets of typewritten instructions written in a chatty, friendly style that leads you through the operation of each of the utilities. The programs run exactly as the instructions state. The operation of the four utilities is so simple, I was able to run all of them without having to look at the instructions.

The ADDML utility is perhaps the most useful utility of the four. With it, you can take a BASIC program, code the slow parts in machine language, and then use the utility to combine the two into one file. When you run the utility, it asks you for the name of the BASIC program to add the machine language routine to, the name of the machine language file, and the name of the file to write the combined output to. The disk then churns for a while and you have a new BASIC program file, which is the original BASIC program and the machine language routine combined. The new BASIC program can be edited and re-saved many times because the machine language part now "rides" along with it in memory and on disk at the bottom of the new BASIC program. Also created is an extra line in the new BASIC program to calculate the execution offset of the machine language routine.

The UNPACKER utility is designed to reverse the effects of BASIC packer programs that delete spaces and create multi-statement lines when they can. Although a specific packer program is mentioned in the documentation, I found out that UNPACKER will take any BASIC program, packed or not, and create a new program with one statement per line and spaces between all the BASIC keywords.

MLBASIC is a fascinating utility. It converts a BASIC program from BASIC format to a format that can then only be loaded with the LOADM command. In addition, it encrypts the BASIC program and provides for protection against the BREAK key. With this utility, you can easily protect a BASIC program from being listed, edited or changed in any way. The machine language file that MLBASIC creates is fully ready to be placed on a PROM chip. The documentation states that this utility may cause problems on CoCos with Extended BASIC 1.0 because of the PCLEAR bug.

The final utility, JOIN, lets you take several machine language files and merge them all together into one file. You may also add an autoexec option to your new file.

Bob van der Poel has provided all CoCo users with a set of utilities that are both useful and practical. The *Disk Programming Package* is easy to use and well-documented. Dr. Megabyte recommends these utilities to anyone who may have a use for them.

(CMD Micro, 10447-124 Street, Edmonton, Alberta, Canada T5N 1R7; 403-488-7109, \$14.95 plus \$2 S/H)

— Mark E. Sunderlin

### About The One-Liner Contest . . .

THE RAINBOW'S One-Liner Contest has now been expanded to include programs of either one or two lines. This means a new dimension and new opportunity for those who have "really neat" programs that simply just won't fit in one line.

*Here are the guidelines:* The program must work in Extended BASIC, have only one or two line numbers and be entirely self-contained — no loading other programs, no calling ROM routines, no poked-in machine language code. The program has to run when typed in directly (since that's how our readers will use it). Make sure your line, or lines, aren't packed so tightly that the program won't list completely. Finally, any instructions needed should be very short.

Send your entry (preferably on cassette) to:

THE RAINBOW One-Liner Contest  
P.O. Box 385  
Prospect, KY 40059

### One-Liner Contest Winner . . .

Type this one, but try to guess what it does before you run it.

#### The listing:

```

,11,D,1:PAINT(F,G),D,D:LINE(F,G+
8)-(F,G+18),PSET:NEXTPL:FOR HT=1
TO444*3:NEXTHT:GOTO10
```

John Beck  
Suitland, MD

(For this winning one-liner contest entry, the author has been sent copies of both *The Rainbow Book of Simulations* and its companion *The Rainbow Simulations Tape*.)

## You Can Have 3-D Graphics Without the Glasses

As you may have noticed, one of the things the CoCo does best is graphics. Logicware has developed a program that makes CoCo shine in that regard, and with a flair.

This machine language program is available on tape or disk and needs 64K of RAM and Extended Color BASIC. It is not copy-protected so a backup copy is possible. A 29-page detailed set of instructions is well-done and full of examples on how to put the program through its paces.

*3-D Graphics* provides simultaneous rotation, movement, zoom and animation of 3-D graphics images. The images can be printed on most dot matrix printers; the program is specifically designed to work with Radio Shack printers.

Samples of what can be done with this software are provided. You can see a spaceship (*The Enterprise*), a cube, a sphere and a pyramid, all of which rotate and move about the screen to show every perspective.

Running the program is as simple as loading and executing *THREED*. You are prompted to enter a command. Pressing H provides a menu of options. A demonstration of 3-D with animation of the spaceship can be viewed.

A zero is used for the shortest possible delay time between successive graphics images. It provides very smooth rotation and alternate views of the spaceship. Increasing the value results in stop-action-type still shots. Exit the viewing mode by pressing the ENTER key.

A demonstration is also provided using a sphere, a cube and a pyramid. The unique thing about this demo is that not only are the objects rotating and moving on the screen, but the pyramid actually zooms from a small to a large size giving it the appearance of real 3-D as it moves toward the viewer. A pretty neat trick — and no 3-D glasses!

Some other unusual techniques are possible with this program. You can select a single view of any of the objects and make it as small or as large as you like.

It takes about 2½ minutes for the view to be completed, and it remains on the screen. While the picture is drawn on a black background, it can be inverted by pressing I and ENTER. At this point you can send the picture to the printer.

As you can see, the commands are very powerful and allow the programmer almost unlimited freedom in ways to view an object. Since the size of the object on the screen is proportional to the Scale Value, the objects size can be changed easily. The Standing Point of Observation Value (SPO) can also be changed for close-up or far away views. The X, Y and Z values of rotation and translation are extremely useful. The center of the screen represents a value of zero while positive values of X go to the right and negative values to the left. The Y values are positive going up and negative going down from the center. The Z values are positive coming toward the user (out of the screen) and negative going away from the user (into the screen). In a similar fashion, the X, Y and Z translations move the object off of center.

Also included is a program called Edit. This program is used to create your own 3-D graphics images. The user enters appropriate coordinates to create any image the imagination can dream up, although I found this part of the program to be a little user hostile. You have to resort to pencil and paper to create these images, since you are dealing with tri-axis information. While this is complex, it is not impossible and I suspect that many CoCo users will catch on quickly. I also feel that the Edit program is lacking in one important area. It needs a way to “see” what’s going on. As it stands, you can’t see the fruits of your labor without first saving the file and then looking at it with the *THREED* program. Another useful feature would be a disk command to allow the user to see the directory. A Dir option would be a real help since you wouldn’t have to break out of the program to see the filenames you couldn’t remember or forgot to write down.

In spite of these shortcomings, *3-D Graphics* is a powerful program that allows talented programmers to create some very interesting 3-D images. The authors, Robert Steidl and Johnathan Lein, have put together a useful package that challenges graphics lovers in a unique and imaginative way. You will soon find out that your imagination does not have to be limited to flat screen images, but can display depth and movement in a way not often seen on the likes of a CoCo.

## Make Your Own Banner

*Banner* is designed to print banners, which it does without fuss or fanfare. The 16-page booklet of instructions is well-written. In clear, simple, easy-to-understand language it tells how to load the program and operate it.

Need a "HAPPY BIRTHDAY" sign for the kiddie party or a "VOTE FOR JOHN HATHAWAY" sign for the political rally? *Banner* produces what you want with neatness and dispatch. Well, the dispatch depends on the printer. I used 600 baud and the speed was satisfactory, but not blinding. If your equipment permits, you can have only one cup of coffee while printing a sign of several words, but don't expect the printer to throw it out faster than you can fold the output.

The menus are clear, complete and easy to use. When the program is loaded with LOADM"BANNER, the first menu comes up on the monitor and asks what baud rate to use. After selecting a baud rate, you are asked if you want a line feed after each carriage return. After you answer this question the main menu comes up, providing eight possible selections. The first selection invites you to enter the message you want printed on the banner. Just type out the message as if you were using a typewriter and press ENTER. Next, select Display Message and check your entry for correctness. If all is well, select Print and watch the banner being prepared before your very eyes!

*Banner* uses Xs to fill out the characters on the sign or banner unless you select a different character at the main menu, such as graphics blocks for solid figures. The letters are Roman, well-proportioned and neatly formed. The result is easy to read and makes an attractive display.

Other selections from the main menu permit entries of various printer codes to change the height of the characters, etc.

*Banner* is a fun program and I recommend it even if you don't need banners!

(B. Erickson Software, P. O. Box 11099, Chicago, IL 60611;  
312-276-9712, \$25)

— Charles L. Redman, Jr.

Hint . . .

## GIME That Lowercase

This one is for the CoCo 3. As you well know, the Color Computer features true lowercase in the 40- and 80-column modes, but not in the 32-column mode. However, the GIME allows emulation of the MC6847T1. To enable the lowercase in the 32-column mode, just enter `POKE&H95C9,&H7F:POKE&HFF33,&H10`.

Bob Rosen  
Howard Beach, NY

## Easy-To-Use *D.L. LOGO* Is as Simple as ABC

What is *D.L. LOGO*? In a nutshell, *D.L. LOGO* is a programming language that uses English instead of symbolic commands. No line numbers are used, as it is also a structured language. It has gained popularity in educational circles, and seems to be a good introductory language. Many school systems are standardizing on *D.L. LOGO* for young students.

To run *D.L. LOGO* on your Color Computer you must have a 64K Color Computer and one disk drive. The programming language uses the OS-9 operating system and is a good example of quality OS-9 programming. But you don't need OS-9 to use LOGO. A boot program is included in the back of the manual for users with Disk BASIC 1.0.

To use all of the functions you also need the following optional equipment: Multi-Pak, Speech/Sound Cartridge, X-Pad Graphics Tablet, two joysticks and a dot matrix printer. For speech capabilities you need both the Multi-Pak and Speech/Sound Cartridge. The Multi-Pak is also recommended for the X-Pad.

The documentation is excellent. The manual is slightly over 400 pages long and starts with the very basics and continues with a logical progression of all of the commands and functions. Many programming examples are given and a summary is included at the end of each chapter. I would classify the manual as hands-on and informative, but not technical.

*D.L. LOGO* uses a method of drawing called "turtle graphics." Two types of screens are used. One is a text screen

for program development, and the other is a graphics screen for programs. When using the graphics screen, 16 background and foreground colors are possible. English commands are used to move the turtle around the graphics screen. The turtle leaves a tail. The graphics screen has 256 horizontal and 192 vertical steps.

You can do more than draw with *D.L. LOGO*. As in any other programming language, both string and numerical variables are supported. A full set of numerical and logical functions is included with variable precision from zero (an integer) to 100 places. When first loaded the precision is set to two places.

Sound/Speech is supported by SAY and SOUND primitives. (*D.L. LOGO* calls commands primitives.) Using these audio commands, an example is given for how to use your CoCo as a talking alarm clock. How about that?

A full set of file-handling commands is also included. An editor is included for memory-resident files. As in any other language, you can store and retrieve files using your disks. One example in the manual is a disk catalog program.

Dale Lear, the author of *D.L. LOGO*, has really done justice to LOGO for the Color Computer. I am pleased to see Radio Shack make the commitment to education by the introduction of this type of program.

There was one problem. I never could get the demo program to fully execute. I kept getting an OM Error. Several other programming examples on the production disk ran without a flaw.

I recommend *D.L. LOGO* as a full implementation of LOGO for the Color Computer. If you are having trouble understanding BASIC, or are already familiar with LOGO, try it; it's like learning your ABCs.

Editor's Note: *Hotel CoCo*, a game requiring *D.L. LOGO*, is scheduled to appear in next month's issue.

(Available in Radio Shack stores nationwide, Catalog No. 26-3033, \$99.95)

— Dan Downard

## Map 'n Zap Relieves Disk System Headaches

Do you want to learn about how and where programs are actually stored on your disks? Have you ever had the frustrating experience of I/O Errors with your disks? Have you ever killed a file only to immediately (yet, not quickly enough) realize it was your favorite game from THE RAINBOW? Then *Map 'n Zap* is for you!

*Map 'n Zap* is a disk editor and repair system intended for anyone who has discovered the headaches that go with owning a disk system. This person might be a layman or a big-time "hacker." Disk drives really are nice. They provide a great amount of fast and usually reliable data storage. Occasionally, though, things go awry and you are stuck with a disk you would like to use for a coffee cup coaster. The *Map 'n Zap* manual, along with the associated programs, will take you away from your misery and put you back in business.

With *Map 'n Zap*, you can alter how data appears on the disk. You can edit the directory and restore those inadvertently killed files. You can even edit your programs directly on the disk. The included manual takes you from step one of disk repair through the entire process. At the same time, it gives you a good deal of knowledge about your disk system and how files are stored. While the manual may sometimes get a little over the head of the average user, one or two rereadings of the confusing section will usually clear things up. It is obvious that much thought was given to providing a package for the novice as well as for the advanced CoCo user.

I am thoroughly impressed with what Duck Productions has done. They have offered an excellent package, which includes a bonus directory program and several disk utilities, at a quite affordable price. Everyone who uses a disk drive with his CoCo should have a disk zap program, and *Map 'n Zap* is definitely one which should not be overlooked.

(Duck Productions, 18 Rowe Court, Brampton, Ontario, Canada L6X 2S2; 416-456-0032, \$19.95, \$24.95 Cnd.)

— Cray Augsburg

## The Pony Express Rides Again

In 1860, when men were men and horsepower meant just what it said, the new wonder of data transfer technology was the Pony Express. Those brave riders sped the mail across the mountains and prairies, from Missouri to California, come hail or high water. The record time for the trip was a breathtaking seven days and 17 hours. And at a cost of \$5 per half-ounce of mail.

Little more than a century later, we can send information over far greater distances at 2,400 characters per second. And at considerably lower cost, even though your monthly information service bill might make that hard to believe.

With a nod to those early riders, there is an information carrier for the new age: the Telenetics PonyExpress 24A modem.

The PonyExpress 24A is a 2400 baud external modem, featuring asynchronous operation, auto-dial/auto-answer capabilities and complete call progress monitoring. It is fully compatible with the Hayes AT command set, and is therefore compatible with most communications software available.

According to the Telenetics literature, the modem was designed for the greatest ease of operation. Only two LEDs are located on the front panel, one for "modem ready" and one for "on line." When you turn on or reset the modem, it performs a self-test and the modem-ready light comes on; when you make a connection, the on-line light comes on. And if you have problems, a convenient reset button is included on the front panel that puts it back through the automatic self-test.

On the back, along with the input phone line jack, is a jack for a telephone handset, a knob that controls the speaker volume, a power switch and, of course, the RS-232 port to connect it to your computer. Conveniently, a bank of four DIP switches is also located on the rear panel, rather than hidden away inside the chassis.

I have put the PonyExpress through its paces over the past 12 weeks, leaving it turned on for 10 hours a day even when it wasn't being used. It has stood up to the treatment like a champion. Had it not, it was reassuring to know that it comes with a three-year warranty.

Of special note is that the Telenetics PonyExpress 24A is being offered in a special online promotion on Delphi. For \$330.95, significantly below retail, you can travel across the land with the speed of the PonyExpress. For more information about the offer, send electronic mail to username 2400MODEM.

(Telenetics Corporation, 895 E. Yorba Linda Blvd., Placentia, CA 92670; 714-524-5770, \$495)

— Kevin Nickols

Hint . . .

### Cut It Out

To obtain a printout of a disk directory from your CoCo, first make sure your printer is set correctly and is online. Then, type

```
POKE111,254:DIR
```

and press ENTER. The disk will spin and your directory will be printed out for you. You may want to cut it out and tape it to the disk jacket so you will always know what program is where.

## B.E.S.T. Expert System Toolkit

Thinking Software has produced a simple menu-driven approach to generating your own rule-based backward chaining expert system. An expert system asks the user a series of questions to be answered on a scale of zero to 10. The expert then decides on a correct solution. Questionnaires that rate the level of stress in your life or your life expectancy would be good examples of simple expert systems. Large scale systems can be created with hundreds of questions and dozens of possible solutions. An expert system could be built to help you decide what's wrong with your car or if you should take a sick pet to the vet.

Simple menus and clear prompts make *B.E.S.T.* easy to use. You must type in all the questions the expert might need to ask. Then, you type in all the possible solutions and rate each question as it relates to the solution. You can add or modify questions and solutions at any time, so you don't have to complete the system in one sitting.

The expert is smart enough to ask only the questions that it needs to decide on a solution. Often, this will be all the questions in the system. If, however, the expert can tell from your answers that certain solutions have zero possibility of being true, the expert skips any further questions that deal with those solutions.

You do need to keep in mind that the expert is only as good as the questions and solutions that you type into it. The expert is not smart enough to learn from experience.

Though I couldn't test it, the expert toolkit is supposed to work on the new CoCo 3. A talking version is also available for use with the Radio Shack speech cartridge.

Bad points: The expert toolkit would not run properly on a CoCo 1 (D board). Software developers need to remember that not all CoCos are 2s and 3s.

Any expert system that you create must be first booted from the toolkit disk, making it awkward for users who are unfamiliar with computers. Even more unfortunate is that the toolkit disk is copy protected. This one disk that is used to create and start-up any and all of your expert disks will be subject to a lot of wear, yet there is no way to make a backup for safety or to use with each expert system disk. You can, however, order a replacement disk for \$5.

The screens that display the title and directions are shown for a set length of time. Average readers will have no problem, but slow readers may not be able to finish reading the directions in time. A prompt to press a key when finished reading would have been better.

The *B.E.S.T.* expert system you create is rather slow as it asks the questions, though the manual does state that the speed-up poke can be used if your computer can handle it.

(Thinking Software, 46-16 65th Place, Woodside, NY 11377; 718-429-4922, B.E.S.T. Expert System with Stock Market and Executive Health Expert Systems ready to consult, \$59.95; talking version, \$64.95)

## WRITEST Is the Teacher's Pet

Tests, exams and quizzes may be the cause for student nightmares but are a vital part of a teacher's daily life. Preparing tests is a time-consuming chore that can be made simpler if the teacher has a CoCo and WRITEST.

WRITEST is a test preparation program that produces many copies of Matching, Multiple Choice, True or False, and Short Answer or Long Answer tests on your printer. The program randomizes input or re-randomizes the order on command. WRITEST is programmed in BASIC allowing changes to be easily made.

The program is written for a minimum 32K CoCo, requires a cassette recorder and an Epson RX-80 printer with Graftrax. However, any 80-column printer may be used with suitable changes in printer code. The program uses the full capability of the printer, including Pica wide, Elite, condensed, emphasized and double strike. Underlining and superscripts are possible, as well as a variety of specially programmed symbols for mathematical usage such as pi, radicals, angles and circles.

Since it's written in BASIC, the program consumes a large amount of RAM. The instructions recognize this problem and recommend the use of PDKE 25,6 to free about 1,500 bytes. Deletion of statements regarding print codes and a possible RENUM provide another 500 bytes. Having received the program on cassette, I first tried to copy and run it on

disk but received Out of Memory statements for my trouble. The disk operating system just takes away too much memory from this program.

I also had problems with memory on cassette until I followed all the recommendations for additional free memory. Being challenged by running this program on disk, I experimented. The PDKE 25,6:NEW shut everything down in the disk mode. However, deleting the statements regarding print codes and renumbering (RENUM 1,1,1) provided sufficient memory to operate with my system. Once I was past these obstacles, I was able to generate some tough tests.

The menu for test creation is straightforward and easy to follow. I tried all the formats and easily produced professional looking documents. Tests can be filed (on tape) and reloaded to be modified or used again. Options are provided in the formats. The program also allows the allocation of scores for each question.

The documentation is extensive, 12 pages, but I had a little problem understanding what the program did until I ran it. The author goes into features and printer codes immediately without describing what the program can do. The documentation is good, particularly the printer code section for other printers, and the trouble-shooting section.

The programmer states that the program is sent at his cost (\$2) and he would appreciate it if you would send "whatever you feel it is worth, after you have had a chance to use and evaluate it." It is difficult for me to judge the value of WRITEST, but it is certainly capable of producing professional exams in the formats described above and could save time for a teacher.

(Cocosoft, Darryl L. Petrak, Beech and Broadway, Box 665, House, NM 88121; tape only, send what it's worth to you)

— Mel Siegel

Hint . . .

## Silence Is Golden

Many I/O Errors encountered when loading programs from tape can be corrected. Often, the user is trying to load a program with the tape positioned past the point where that program starts. You must start the loading process at a point where there is no data on the tape — the quiet space between the programs. One way to make sure you're at one of these points is to issue the following commands:

AUDIOON:MOTORON

then press ENTER. You will hear the high-pitched noise of computer data through your TV speaker. When the noise stops, you are at a silent spot. At this point, force a Syntax, or SN, Error by pressing a letter key and then ENTER. You can then load your program.

It's here!

# RAINBOW ON DISK!

ANOTHER GREAT SERVICE FROM THE LITTLE ELVES AT THE END OF THE RAINBOW

Remember the story of the cobbler and the elves, when the little people crept into the old man's shop and did all his chores while he slept? Well, there is a monthly chore we can now eliminate for you — transferring RAINBOW ON TAPE to disk! Now, in addition to RAINBOW ON TAPE, we're offering RAINBOW ON DISK, the perfect companion to RAINBOW magazine for all our readers with disk drives. No more typing. No more transfers. We take care of all the work for you.

## OS-9 programs

Thanks to the elfin magic going into RAINBOW ON DISK, part of one side of the disk is formatted for the OS-9 operating system. That means that you can now get all the OS-9 programs from the magazine — programs that cannot be put on tape. And, with the introduction of the new CoCo 3, OS-9 programs will become more and more prevalent.

## More than two dozen programs

If you're a RAINBOW reader and you have a disk drive, you won't want to go another day without RAINBOW ON DISK. For only \$99, 12 full issues of RAINBOW ON DISK will follow the RAINBOW to your door. That's only \$8.25 for each disk. To start your subscription, call our toll-free number or use the handy order card between pages 34 and 35. When your copy of the RAINBOW arrives next month, you can start enjoying the programs without any extra effort. The little people at the end of the RAINBOW will already have taken care of all the work.

**SUBSCRIBE NOW AND SAVE AN EXTRA \$9!**  
That's right, you can subscribe to RAINBOW ON DISK between now and March 15, 1987, for only \$90\* — \$9 off the regular subscription price of \$99. Order now and receive 12 issues for only \$7.50 each! It's our extended introductory offer!

\* Don't miss out. During this extended introductory offer, good until March 15, 1987, subscriptions to RAINBOW ON DISK are only \$90 a year in the United States (regularly \$99), Canadian rate U.S. \$100 (regularly \$115). All other countries U.S. \$115 (regularly \$130), RAINBOW ON DISK single copy rate is: \$12 within the U.S.; Canadian rate U.S. \$14; all other countries U.S. \$16. Kentucky residents add 5% sales tax. All subscriptions begin with the current issue unless otherwise specified. Please allow 6 to 8 weeks for first copy. U.S. currency only, please. In order to hold down non-editorial costs, we do not bill.

RAINBOW ON DISK and RAINBOW ON TAPE are not stand-alone products, but are intended as adjuncts and complements to the magazine. Even if you purchase RAINBOW ON DISK or RAINBOW ON TAPE, you will still need the magazine for loading and operating instructions. For information on RAINBOW ON TAPE, see Page 103.

To order by phone (credit card orders only), call 800-847-0309, 8 a.m. to 5 p.m. EST. All other inquiries call 502-228-4492.

# WE'VE OUTDONE OURSELVES!

## DS-69A DIGISECTOR™

### THE VIDEO DIGITIZER NOBODY CAN BEAT!

**NEW**

The DS-69A is the best video digitizer available for your COCO at any price. This new, turbocharged version of our original DS-69 Digisector allows your 64K COCO to see clearly into the world of any television picture.

- SPEED!** The fastest — 8 images per second!
- PRECISION!** The highest — 64 levels of true grey scale!
- RESOLUTION!** The finest — 256 x 256 picture elements!
- Compatibility** Use with a black and white or color camera, a VCR or tuner.
- Compactness** Self contained in a plug in Rompack.
- Convenience** Use with a Y-cable, Multi-Pak, PBJ Bus or plug directly into the cartridge slot.
- Ease of Use** Software on disk will get you up and running fast!

## POWERFUL C-SEE™ SOFTWARE

C-SEE is the menu driven software package included with your DS-69A. Available on disk or cassette, it provides lightning fast 5 level digitizing to the screen, high precision 16 level digitizing for superb hard copy printout and simple keyboard or joystick control of brightness and contrast. Or call our driver routines from your own Basic program for easy 64 level random access digitizing. Pictures taken by the DS-69A may be saved on disk or cassette by C-SEE and then edited with COCO MAX, MAGIGRAPH or GRAPHICOM for special effects. Any of the popular printers may be used to obtain printouts of images digitized by the DS-69A.

### ONE YEAR WARRANTY

DS-69A Digisector & C-SEE III Software  
 OR your DS-69 &  
 MAGIGRAPH Graphics Editor on disk

\$149.95  
 \$ 59.95  
 \$ 39.95

for  
CoCo 3*

## DS-69 DIGISECTOR™

### THERE'S ONLY ONE BETTER VIDEO DIGITIZER...

And that's the DS-69A. The DS-69 is The Micro Works' original video digitizer, tried and true since 1984. It provides almost all the features of the DS-69A and is now available at a new low price. The DS-69 features;

- SLUGGISHNESS** 2 images per second. Quick enough to freeze all but the fastest moving pictures.
- INCOMPATIBILITY** Brightly colored scenes may be striped when using a color camera.
- INCONVENIENCE** Will not work with a Y cable.

Otherwise, it's a DS-69A. Precision, resolution, compactness, ease of use, software and warranty. Except one last thing.

DS-69 Digisector & C-SEE III Software \$ 99.95

Superb image quality produced by both Digisectors.

### NO RISK GUARANTEE

If you are not completely satisfied with the performance of your new DS-69A or DS-69 you may return it, undamaged, within ten days for a full refund of the purchase price. We'll even pay the return shipping. If you can get any of our competitors to give you the same guarantee, buy both and return the one you don't like. We know which one you'll keep.

# The CoCo ROS, Part II: Building the ROS Circuit

By Dennis H. Weide

Last month, I introduced you to the CoCo ROS and gave you a brief explanation of what it can do. This month, I'd like to show you the actual ROS circuit and give some tips on how to build and test it. I'll explain how the circuit works and how to program it.

## The ROS Design

The idea for the ROS circuit came from the book *TRS-80 Models I, III, & Color Computer Interfacing Projects*, by William Barden, Jr. It's an excellent book on interfacing projects and shows various methods for interfacing the CoCo. Borrowing from his idea, I've increased the capacity of the original circuit by adding a second 8255 Processor Peripheral Interface chip and providing the proper address, read/write and chip select (CS) decoding for it.

Figure 1 is the programmable peripheral interface circuit used by the ROS. We'll refer to it as the Robot Operating System Signal Processor circuit or simply the ROSSP. It uses two 8255 PPI chips whose data buses are connected in parallel. The chip select (CS)

*Dennis Weide is a communications technician for AT&T communications in Albuquerque, New Mexico, where he programs AT&T and IBM PCs. He enjoys making toys and teaching computer programming.*

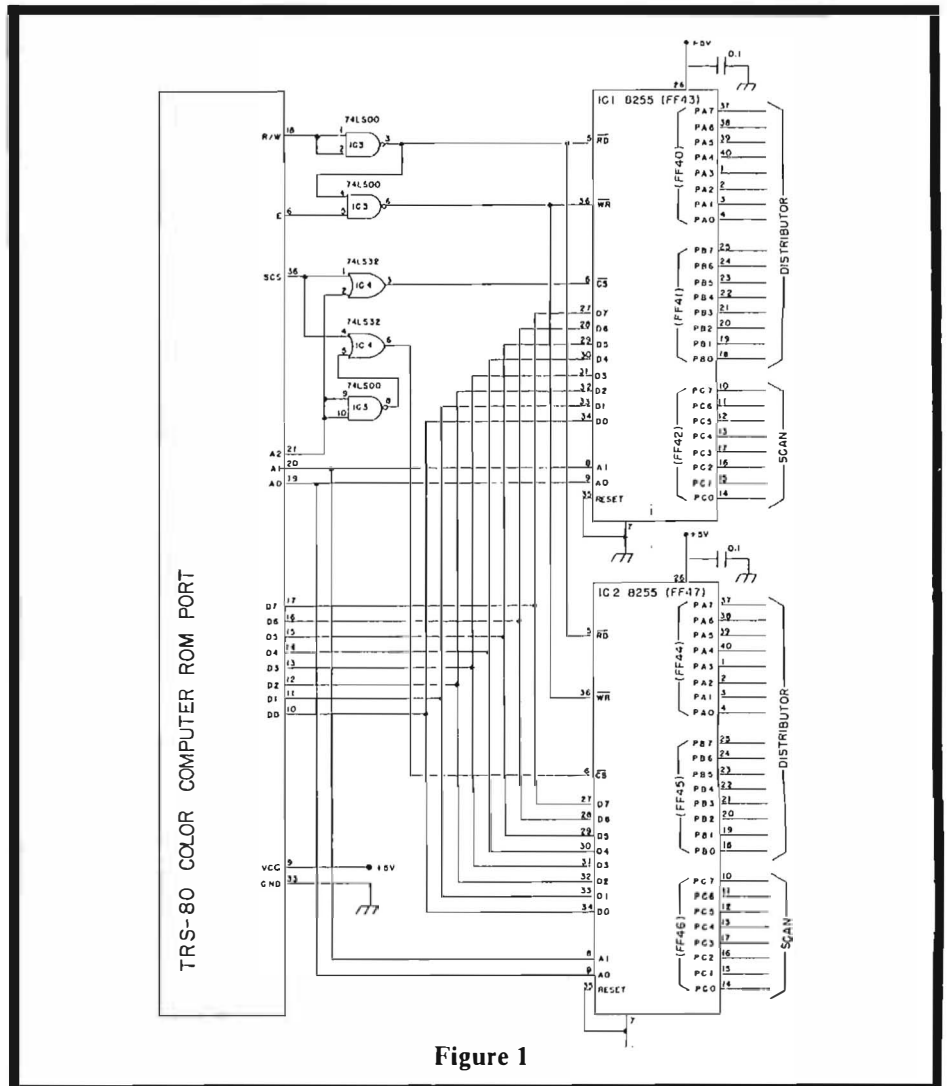

Figure 1

**Figure 2: PPI Control Word Layout**

Bit	Function	Input	Output
0	Port C (lower)	1=Input	0=Output
1	Port B	1=Input	0=Output
2	Mode select	0=Mode 0	1=Mode 1
3	Port C (upper)	1=Input	0=Output
4	Port A	1=Input	0=Output
5,6	Mode select	00=Mode 0	01=Mode 1
		10=Mode 2	
7	Mode set flag	1=Active	

Examples:

Dec Value	Binary Value	Input Ports	Output Ports
128	10000000	None	A,B,C
129	10000001	C(lower)	A,B,C(upper)
130	10000010	B	A,C
131	10000011	B,C(lower)	A
136	10001000	C(upper)	A,B,C(lower)
144	10010000	A	B,C
146	10010010	A,B	C
154	10011011	A,B,C,	None

Decimal value to be poked into &HFF43,&HFF47

XXXX is the hexadecimal address to load and YYY is the value (0-255) to write. For example, to write to address \$FF40 Port PA3 only, POKE &HFF40,B; 8 is the binary value of Bit 3. You can use the AND, OR and NOT functions to control multiple actions from the same address. Figure 3 shows how I wired the inputs and outputs for use in the ROSSP. Each 8255 PPI chip requires one circuit of Figure 3. Only one bit of each chip is shown wired although all bits must be. For IC 2, the pin designations change from 1-8 to 10-16. All other designations stay the same. Besides the ROSSP, this circuit has many other useful applications.

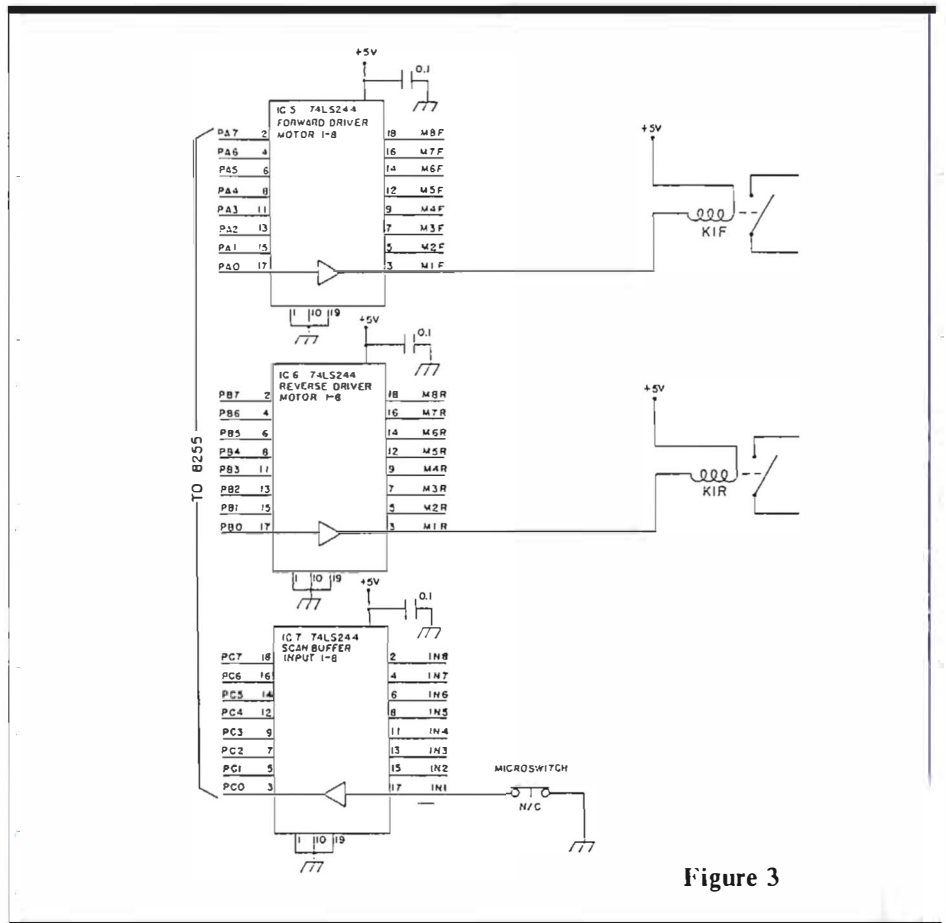

**A Look at the Octal Buffers**

For buffering between the 8255s and the peripheral equipment, I've used 74LS240s and 74LS244s. These 20-pin DIP octal buffers/line drivers are capable of handling 40 milliamps of current; enough to drive high-resistance relays or LEDs. The 74LS240 buffer inverts the input signal; the 74LS244 doesn't. Using these two buffers, you can design many different circuit configurations. For the ROSSP, the enable leads (pins 1 and 19) are grounded to enable all outputs at all times. In Figure

lead uses the A2 Address Lead and three gates to select one of the PPI chips. Address leads A0 and A1 allow you to select one of three addresses per chip to read or write. For the ROSSP, we've chosen two addresses on each chip for outputs (distributors) and one for inputs (scans). Later, I'll show you how to program the PPI chip for all inputs or all outputs.

**A Look at the PPI**

The 8255 PPI is a 40-pin DIP IC that has three programmable modes. The mode I've chosen (Mode 0) allows for two output ports (ports A and B) and one input port (Port C). The outputs are latched and must be set and reset as desired. The inputs follow the state of the peripheral. To program the PPI, poke the control word for the proper mode according to Figure 2. The addresses for each PPI chip are shown in Figure 1 in parentheses. The control word is address \$FF43 for IC 1 and \$FF47 for IC 2. To program each PPI for two outputs and one input port, POKE &HFF43,&H89 and POKE &HFF47,&H89. To read the input ports, print PEEK(&HFF42) and print PEEK(&HFF46). To write to the output ports, POKE &HXXXX,YYY where

**Figure 3**

# HOT HARDWARE AND SUPER SOFTWARE

## UNIVERSAL VIDEO DRIVER

**IT'S THE BEST!!! Great Price! Only \$29.95**

Carefully engineered to work with ALL Color Computer models including the newest COCO II. Enables your COCO to operate with a video monitor instead of a television.

- Works with monochrome monitors!
- Works with color monitors!
- Audio Connection included!
- Easy installation—no soldering!

## CHAMPION

### NEW FOR THE HOLIDAYS

A unique new arcade/adventure game!!! Take on the role of SUPERHERO and become a crusader for all that is right and good! Use your special powers to fight the criminal mastermind, Mr. Bigg and his sinister followers. Combat is hot and heavy and requires fast thinking and a quick joystick. Colorful hi-res graphics and great sound effects.

3, the 74LS240's drive relays direct. A high on any input to the buffer causes a low output, which in turn operates the relay. The ROS program is designed so that only one relay can operate at a time, thus allowing the entire ROSSP to be powered from the computer. Use relays with a high resistance winding so that current requirements are kept as low as possible. If you build a separate +5-volt power supply, be sure to keep a common ground between the computer and the ROSSP.

To operate any particular relay, write the bit value of that relay to the address of that port. When any port of the 8255 is poked to zero, all relays are released. When it's poked with a value between 1 and 255, the corresponding relays will operate.

### Building the ROSSP

Building the ROSSP circuit is easy. We won't go through a step-by-step description of how to build it because construction isn't critical. I'll give you whatever hints are necessary to help you along. If you're inexperienced in circuit construction, I recommend you study the article and schematics carefully

before beginning. If necessary, find someone in your local CoCo club to guide you along. After you've built this project, you'll be ready for almost anything.

If possible, use wire-wrap connections and 30-gauge wire. You can use point-to-point soldering, but wire wrapping is faster and easier. Keep the leads from the ROM port to the PPIs as short as possible. Use .1mfd capacitors across the power leads of all ICs to prevent high-speed switching errors. All other wiring is non-critical.

I used a double-sided Vector 3795 board with a pin spacing of .1 inch. I had to cut the pins on each side of the board to make it a 40-pin board. Any double-sided circuit board with a pin spacing of .1 inches and at least 40 pins can be modified to work. If you use the Vector board, you'll have to add on a piece of perfboard to fit the entire circuit. Use IC sockets and IDs for the bottom of the sockets to assist in wiring. Check all connections carefully and confirm your wiring with an ohmmeter before installing the ICs or plugging the board into the computer. When the wiring is correct, you're ready to plug it in and test it.

### Testing the ROSSP

Using the program listing and last month's logic tester, you can test the circuit. First, turn off the computer. Then plug the ROSSP into the ROM port. Be sure that the circuit board fits properly into the port. A shorted pin could destroy the 6809E microprocessor chip. Connect the logic tester to +5 volt (red lead) and ground (black lead) of the ROSSP then turn the computer power on. Load and run the BASIC program.

Follow the instructions on the screen to test the two 8255 PPI chips and the four 74LS240 buffer chips. Test the 74LS244 buffer chips using the PEEK command and grounding the input leads one at a time. A grounded input lead will cause the corresponding bit to be reset when the PEEK command is executed. If no input leads are grounded, the PEEK command will return a value of 255.

Next month, we'll take a look at the ROS program and discuss how to connect the circuit to the Robotix R-2000 kit. We'll also take a look at a sample ROS program. Until then, have fun with this one. □

## *Add a touch of professionalism and pizzazz to program menus*

# The Menu Selector

By Bill Bernico

I write a lot of programs that use menus. These menus typically have numbers next to each selection. To use that selection, you need only press that number and the program branches off accordingly. Well, that's OK if you're a no-nonsense programmer looking to create a bare-bones program and save as much memory as possible. However, if you want to add that extra touch to your program, here's a way to make the menu selections a little more interesting.

Look at the listing. Line 50 prints out the menu, just as you'd have to do with the old method. Lines 1000 to 1600 are merely samples of how the menu branches off. In your actual program you would replace these sections with routines from your own program.

Line 1700 is there so you can keep trying the program over and over. It can, and should, be deleted when you use this for your own program.

That leaves lines 60 to 150, the "meat" of this whole routine. Let's look at

---

*Bill Bernico is a self-taught computerist who enjoys golf, music and programming. He is a drummer with a rock band and lives in Sheboygan, Wisconsin.*

what's happening in each of them. What looks like an underline in Line 60 is actually a left arrow, created by pressing SHIFT and the up arrow. The printer prints it as an underline. Just substitute a left arrow for it. Also, the up arrow in Line 70 is printed as an up arrow without the tail (it's called a caret).

Line 60 prints the left arrow at Screen Position 180, which is just to the right of the first selection. In Line 70, just before the familiar INKEY\$ statement, you see two pokes. Inserting these two pokes immediately before this INKEY\$ statement allows the INKEY\$ command to repeat. Without these two pokes the program will still work but you'll have to press the arrow key each time you want to move the arrow up or down. With the pokes in place, you can simply hold the arrow keys and the pointer will continue to move as long as you hold down the arrow key. Line 70 checks the INKEY\$ to see if you press the up arrow, and acts accordingly. If you do press the up arrow and the pointer is lower than the top line, it moves the pointer up one notch.

Line 80 checks the INKEY\$ to see if you pressed the down arrow, which is

CHR\$(10). If you did and the pointer is higher than the bottom item on the menu, then the pointer is reprinted at the new position, one line down. It also checks to see if you pressed ENTER, or CHR\$(13). If not, it goes back to Line 60 to repeat the pointing process. If you do press ENTER, the program continues to lines 90 to 150 to see where the pointer is at the time you press ENTER so it can branch off to the correct subroutine.

Here's how that works. For each PRINT @ position on the screen there is also a poke position. This poke position is 1,024 plus whatever screen position you've printed at.

For example, if the pointer is pointing at the first selection, the "input items" line, then the pointer is being printed at Screen Position 180, which is Poke Position 1204 (1024+180). Line 90 peeks at Position 1204 to see if the left arrow occupies that space. The shifted up arrow that produces the left arrow on the screen is also known as CHR\$(95). If Peek Position 1204 contains a 95, then it goes to Line 1000, the section that deals with input items. Lines 100 to 150 check the other peek positions for the

pointer and branch off when the pointer is found.

It may seem a little complicated at first, but once you grasp what's going on, you can create a really neat, eye-

catching menu that people will remember. Go on. Give it a try. It doesn't take that much extra work or memory and it'll give your program an extra touch of professionalism.

(Questions about this tutorial may be directed to Mr. Bernico at 708 Michigan Ave., Sheboygan, WI 53081, 414-459-7350. Please enclose an SASE for a reply when writing.)

**CoCo Cat**

**J&R ELECTRONICS**  
Easy, Solderless Installation

**"JramR"**

512K COCO 3 Memory Expansion Board. Upgrades stock 128K COCO 3 to full 512K for OS9 Level II. Similar to RS upgrade.

**COCO I & II ONLY**

Part number	Price	Description
#1001	\$39.95	Banker II bare board (with long pin socket, does not include memory Expansion Board)
#1002	\$69.95	Banker II bare board + parts (does not include Memory Expansion Board)
#1003	\$89.95	Banker II assembled & tested (no memory)
#1004	\$129.95	Banker II (256K, upgradable to 512K; assembled & tested with memory)
#1005	\$169.95	Banker II (512K; assembled & tested with memory)
#1006	\$15.00	Memory Expansion Board
#1007	\$29.95	Memory Expansion Board + parts

ALL software is configurable for 256K/512K operation. Software shipped on disk, add \$10.00 for software on tape. (OS9 RAMDISK not available on tape). ALL boards below are 256K/512K capable, software & documentation included. New SAM (74LS785) not included (use your 74LS783). 74LS785 recommended for 2.0 MHz operation

**COCO 3 ONLY**

#1010	\$39.95	JramR bare board plus connectors
#1011	\$109.95	JramR kit includes all parts plus memory chips
#1012	\$139.95	JramR assembled and tested plus memory chips

**MISCELLANEOUS**

#9000	\$89.95	Down Under Controller. Ram Pack size controller with BOOS Gold plated, high reliability edge connectors, jumpers for 24/28 pin ROM. Compatible with COCO I and COCO II & COCO 3. BOOS (Enhanced DOS on 27128 EPROM)
#9001	\$35.00	64K switch
#9002	\$5.00	New SAM 74LS785 (required only for 2.0 MHz operation)
#9004	\$24.95	PowerBasic (Requires RSDOS 1.0 or 1.1 and 256K or 512K Banker)
#9005	\$24.95	Utilize the extra memory for variable storage and pass variables between programs in different pages of memory. Split a large BASIC program into smaller pieces and GOTO or GOSUB a line in another page of memory and more features included (disk only)
#9006	\$10.00	S/W Pac upgrade. 1.XX to 2.XX

To place an order, write to J&R Electronics, P.O. Box 2572, Columbia, MD 21045. OR call (301) 987-9067 — Jesse or (301) 789-0861 — Ray.  
HOURS: Weekdays 7 p.m. - 9 p.m.; Sat. Noon - 5 p.m. EASTERN TIME, usually, if no answer try later.  
Add \$4.00 shipping & handling (FOREIGN ORDERS \$7.00). CO charge \$3.00. Maryland residents add 5% state tax.  
CHECKS, MONEY ORDERS OR COD's only please (personal check — 2 weeks for clearance). IMMEDIATE DELIVERY. Give COCO Ratic Shack model # (i.e. 26-3136). Disk or Tape when ordering.  
QUANTITY DISCOUNT AVAILABLE. For information on shipping or previously placed orders call (301) 788-0861. COCO II 26-31XX owners call (soldering experience may be required).

# TAMING THE BEAST: GET COMFORTABLE WITH OS-9

BY NANCY EWART

Last year I decided to learn the C programming language, so I bought Radio Shack's OS-9 and the C Compiler. I, who have no computer math or programming background, heard the call. Elegant, fast, portable C beckoned.

I took one look at the documentation and thought, "You are not going to shove these disks in your drives and just start in. Oh my, no!" I then bought *The Complete Rainbow Guide to OS-9*, by Dale Puckett and Peter Dibble, and went through all the back issues of THE RAINBOW. These were a big help; however, through no fault of theirs, I kept falling into traps with no apparent way out. It was only last week that I compiled my first simple C program and it worked! For those of you following in my footsteps, I hope these tips will save you some of the time they cost me.

First, work through Radio Shack's *Getting Started With OS-9*, doing each operation several times. I wasted a lot of time trying to dive before I could swim, because I was too anxious to get on to the other literature. "Getting Started With The OS-9 Operating Sys-

tem," by Bruce Warner (THE RAINBOW, January 1986, Page 134) is a good beginning reference, too. It covers many of the same areas as the Radio Shack booklet and some new ones as well.

Don't study alone all of the time. I have the advantage of working with an OS-9 Special Interest Group in a CoCo Users Group. Together we solved some problems. Other people have gotten help through bulletin boards.

As you work on OS-9, if you have two separate drives, use Drive 0 for your (execution) system disk; store your files in directories in Drive 1.

For future sanity, name directories in all caps (JUNK) and name files in lowercase (phonelist). Two weeks from now you won't remember which are directories and which are files and that can waste a lot more time. Use TMODE -LPC, press CLEAR-0 and press ENTER. Pressing CLEAR-0 now toggles upper- and lowercase. If you want to include this in your start-up procedure file, write it TMODE .1 -LPC.

Before you CHX to another execution directory, use the DIR command on the proposed new directory. Think ahead to what commands you may want to use and check to see if they are resident in the new directory so that you can call them. If they are not in the new directory take them with you with the LOAD command, for example, LOAD DIR and/or LOAD FREE. Then when you CHX /dx/ CMDS after you insert a special disk you

*Nancy Ewart lives in Toms River, N.J., and is a partner in a framing/art supply/paperback book business. She has had her CoCo for nearly two years and is a dedicated user.*

will be able to read the directory, etc. Do not forget to CHX /dx/CMDS when you want to return to your system disk. CHX and CHD go with you always without your loading them.

If you have OS-9 Version 2.0, learn to use the help command. If you are using an earlier version, build a help file with the most common commands and their syntax. I still don't remember from one session to the next all the details that must be typed exactly right.

Do not try to use commands relating to modules on simple files. You cannot use ident, for example, on start-up the way you can on OS9B00t. A file is not necessarily a module, although modules may be contained in a file. (Blood, sweat and tears were spent on this one.)

Make special system disks for special applications. See the February 1986 RAINBOW for two extremely helpful articles, "Creating OS-9 System Disks," by Donald Dollberg and "Getting Started with BASIC09," by Richard A. White. I put TSEDIT and the C Compiler (both Radio Shack) in the commands directory of one 80-track disk.

I made hard copies of important information about each of my system disks, then stored them in the disk jacket using DIR >/p; FREE >/p; DIR CMDS >/p; MDIR >/p; MFREE >/p.

When you feel secure with moving

around the system, creating and saving files and using some of the more basic commands, tackle Dale Puckett's *The Complete Rainbow Guide to OS-9*, published in 1985 by Falsoft, Inc.

Keep asking questions. Sometimes you have to rephrase the question repeatedly for the same problem until you get a version of the question that communicates.

#### To Use TSEDIT

If you want to use C, you need an editor that lets you make square and curly brackets as well as back slashes. See the Appendix in the documentation for TSEDIT. Be sure to SETIME. TSEDIT should be in your current execution directory.

TSPARS must be in your current data directory if you want to change the parameters of the display. For use with the C Library, copy TSPARS to /d1/SOURCES.

At the OS-9 prompt type tse d i t and press BREAK. Now type i (for insert) and type your copy, message or source code. Press BREAK and type :w filename (to save, the colon is important). Press BREAK and type :p (to print) and press BREAK and type :q (to quit).

#### To Compile and Run a C Program

Have TSEDIT and the C Compiler in

Drive 0 and the C Library in D1. Now type:

```
chx /d0/cmds
chd /d1/sources
tse d i t
```

(To save, press BREAK and type :w filename.c). Press BREAK and type :q.

If you have to change disks to have the C Compiler commands in Drive 0, do that now. Type chx /d0/cmds again.

```
cc1 filename.c
```

The program (source code) will now compile or abort.

```
filename
```

When you look at your current execution directory you will see the filename of your C program, but without the .c. The source code, filename.c, will be in the SOURCES directory. When you type the filename, the program will execute.

By paying attention to the small steps, the giant leap to C is possible. It's really quite easy!

(Questions about this tutorial may be directed to the author at 1861 Skiff Court, Toms River, NJ 08753, 201-270-8435. Please enclose an SASE when writing.) □

# It Prints Slower Than Cold Molasses

By Richard E. Esposito  
Rainbow Contributing Editor  
with Richard W. Libra

**I** I've got a 64K CoCo 2 with a Radio Shack CGP-220 ink-jet printer that prints slower than cold molasses when printing CoCo Max II images. Do you know of any way that I can get my printer to print these pictures faster?

Harry Stonelake  
Castro Valley, CA

**R<sub>x</sub>** If the printer is not running at its limit, you can speed it up using a screen dump that is written in assembly language. If the printer's hardware can handle a higher speed, hiking the baud rate either via a built-in DIP switch or a serial-to-parallel converter, with the CoCo sending at 9600 baud or using a direct parallel interface such as the one on the J&M controller could make a noticeable difference. Of particular note with the *CoCo Max II* program is that the color driver will not print multiple colors at once with the CGP-220 printer. Colorware is reported to be updating the current version of *CoCo Max* to alleviate the problem, so help is on the way.

## Cartoon Animation

**I** I would like to know if there is any way I can make a computer animation of a person moving, similar to a cartoon video game. Also, can I use 64K and 32K programs or will I have to use only 32K programs with my 64K CoCo 2? Do I have to have a disk drive to gain access to this memory?

Brandon Carlton  
Corona, CA

Richard Esposito is a project engineer for TRW's Federal Systems Group. He holds bachelor's, master's and doctorate degrees from Polytechnic Institute of Brooklyn. He has been writing about microcomputers since 1980.

**R<sub>x</sub>** *Assembly Language Graphics for the TRS-80 Color Computer* by Don Inman and Kurt Inman, Reston Publishing Company, Inc., may help in your search for animation programs. If you put your computer into all-RAM mode you can use the 15.75K space above the BASIC interpreter as well as the normal user memory for all your assembly language programs. You do not need a disk drive or OS-9 to take advantage of this memory.

## Bright Screen Save

**I** In Milt Webb's letter to the editor, May 1986, [Page 8], he gave a POKE 359,57:SCREEN0,1 to brighten the screen. This does give a much improved screen, however when I use this when typing in a program and try to save the program in the ASCII format with an A option, it starts the disk drive, scrolls the program list, then gives the OK prompt, but doesn't save the program.

Is there any way to get the bright screen without this happening?

Phill VanNoty  
Hemet, CA

**R<sub>x</sub>** Location 359 is the position of the three-byte RAM hook for the I/O. Standard BASIC has it set to RTS, Extended BASIC changes it to JMP \$8273, DOS 1.0 changes it to JMP \$CB4A, and DOS 1.1 changes it to JMP \$CC1C. By poking an RTS, you eliminate some of the features of disk and extended BASIC, one of which is the ASCII save feature. If, after you finish editing, you poke back the original value (i.e., 126) you can restore those features.

## Printer Decisions

**I** I am about to buy a printer and can't decide what to buy. I have found a couple of printers and I would like your opinion as to which one would be the best for home use with graphics, text, and a little bit of business. The two printers are the Epson Homewriter 10 NLQ and the NEC PR103A NLQ.

Glenn Bailey  
Rogersville, TN

**R<sub>x</sub>** Of the two you mentioned, the Epson has a more standard protocol, thus finding graphics software support for it is much easier. Before making a decision however, see the November 11, 1986 issue of *PC Magazine* which reviewed 97 new printer models for 1986. To ensure availability of the ribbons and software support, you might want to stick with name brand printers which are IBM-graphics compatible. The major printer manufacturers are IBM, Tandy, Epson, Star-Micro, Toshiba and Okidata.

**DataPack II Plus V4.1**  
**SUPER SMART TERMINAL PROGRAM**  
**AUTOPLOT and AUTO-LOG Command Processors**  
**X-MODEM DISK FILE TRANSFER SUPPORT**  
**VT-100 & VT-52 TERMINAL EMULATION**

- \* No lost data using Hi-Res Display, Even at 1200 Baud on the Serial port.
- \* 9 Hi-Res Displays, 28 to 255 columns by 24 lines & true Upper/Lower case.
- \* 45K Text Buffer when using the Hi-Res Text Display and Disk.
- \* ASCII & BINARY disk file transfer support via XMODEM.
- \* Directly record receive data to a disk file while online.
- \* VT-100 terminal emulation for VAX, UNIX and other systems.
- \* VT-100/52 cursor keys & position, insert/delete, PF & Alt. Kbd. keys.
- \* Programmable Word Length, Parity, Stop Bits and baud rates 300 to 9600.
- \* Complete Full and Half Duplex operation, with no garbled data.
- \* Send full 128 character set from Keyboard with control codes.
- \* Complete Editor, Insert, Delete, Change or Add to Buffer.
- \* 9 Variable length, Programmable Macro Key buffers.
- \* Programmable Printer rates from 110 to 9600 Baud.
- \* Send Files directly from the Buffer, Macro Key Buffers or Disk.
- \* Display on Screen or Print the contents of the Buffer.
- \* Freeze Display & Review information On line with no loss of data.
- \* Built in Command Menu (Help) Display.
- \* And much, much more.

Supports: Word-Pak I, II, R.S. and Double Density 80 Column Cards  
 Disto Controller w/80 column card & parallel printer  
 PBJ Parallel Printer Card and Dual Serial Port (2SP-Pak)  
 R. S. Modem-Pak & Deluxe RS-232 Pak, even with Disk.

**Requires 32K & Disk, Only \$59.95**

**HI-RES II Screen Commander**

Tired of looking at the 16 line by 32 character display on your CoCo? Wish you could see more lines and characters? Then HI-RES II is the answer, it can give you the big screen display you've always wanted. It will display 24 lines of 32, 42, 51, 64 and even 85 true upper and lower case characters per line without extra hardware.

HI-RES II is the most powerful screen enhancement package available for the Color Computer, yet it is the least expensive. It is completely compatible and transparent to Basic. Once the program is loaded, everything works the same as before, only you have a much better display to work with. It even allows you to have mixed text and Hi-resolution graphics on the same screen or have separate text and graphics screens. It also has an adjustable automatic key repeat feature and allows you to protect up to 23 lines on the screen.

HI-RES II features over 30 special control code functions that allow you to change characters per line, protect display lines, change background color, position cursor, switch normal/reverse video, underline, double size characters, erase line/screen/Lo end of screen, home cursor, character highlight and much more. It works on all models of the CoCo with 16, 32 or 64K and provides automatic reset control so HI-RES II won't disappear when you press reset.

**Only \$24.95 on Tape or \$29.95 on Disk**

**"The Source"**

Now you can easily Disassemble Color Computer machine language programs directly from disk and generate beautiful, Assembler Source Code. And "The Source" has all the features and functions you are looking for in a Disassembler.

- \* Automatic Label generation and allows specifying FCB, FCC and FDB areas.
- \* Disassembles programs directly from Disk or ROM.
- \* Output Disassembled listing with labels to the Printer, Screen or both.
- \* Generates Assembler source files directly to disk, or a printed listing.
- \* Generated source files are in standard ASCII format.
- \* Built in Hex/ASCII dump/display to locate FCB, FCC and FDB areas.
- \* Built in Disk Directory and Kill file commands.
- \* Menu display with single key commands for smooth, Easy operation.
- \* Written in fast machine language, one of the easiest to use Disassemblers

**Requires 32K Disk \$34.95**

**TEXTPRO III**

**"The Advanced Word Processing System"**

- \* 9 Hi-Res Displays from 28 to 255 columns by 24 lines & Upper/Lower Case
- \* Three Programmable Header lines that can be re-defined at anytime.
- \* Programmable Footer line & Automatic Footnote System.
- \* 10 Programmable Tab stops & 7 Powerful Tab Function Commands.
- \* Completely Automatic Justification, Centering, Flush left and right.
- \* On screen display of underline and Double size characters.
- \* Change indents, margins, line length, etc. parameters anytime in the text.
- \* Create and Edit files larger than memory, up to the size of a full disk.
- \* Easily imbed any number of format and control codes.
- \* Automatic Memory sense 16-64K with up to 48K of memory workspace.
- \* Fully supports the use of 80 column hardware cards.

TEXTPRO III is an advanced word processing system designed for speed, flexibility and extensive document processing. It is not like most of the other word processing programs available for the Color Computer. If you are looking for a simple word processor to write letters or other short documents, then most likely you'll be better off with one of the other simpler word processors. But, if you want a powerful word processor with extensive document formatting features to handle large documents, term papers, manuals, complex formatting problems and letter writing, then TEXTPRO III is what you're looking for. TEXTPRO works in a totally different way than most word processing programs. It uses simple 2 character abbreviations of words or phrases for commands and formatting information that you imbed directly in your text. There are over 50 different formatting commands you can use without ever leaving the text you're working on. There are no time consuming, and often frustrating menu chases, you are in total control at all times. The formatted output can be displayed directly on the screen, showing you exactly what your printed document will look like before a single word is ever printed. This includes margins, headers, footers, page numbers, page breaks, underlining, column formatting and full justification.

**DISK \$59.95 TAPE \$49.95**

**The CBASIC Editor/Compiler V1.1.2**

Do you want to write fast machine language programs but you don't want to spend the next few years trying to learn how ???

Well with CBASIC, you could be writing them right now!

CBASIC is the only fully integrated Basic Compiler and program editing system available for the Color Computer. It will allow you to take full advantage of all the capabilities available in your color computer without having to spend years trying to learn assembly language programming. CBASIC allows you to create, edit and convert programs from a language you are already familiar with Extended Disk Color Basic, into fast efficient machine language programs easily and quickly. We added advanced features like a full blown program editor, Hi-Res text Displays and 80 column hardware support for editing, compiling and your compiled programs. Plus we made it exceptionally easy to use, CBASIC is the friendliest and easiest compiler available for the Color Computer.

*"The most complete Editor/Compiler I have seen for the CoCo..."*  
 --The RAINBOW, March 1986

CBASIC is a powerful tool for the Beginner as well as the Advanced Basic or Machine Language programmer. You can write programs without having to worry about the Stack, DP Register, memory allocation and so on, because CBASIC will do it for you automatically. Or, CBASIC will let you control every aspect of your program, even generating machine code directly in a program easily.

CBASIC features well over 100 compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen I/O. CBASIC supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Extended Color Basic, including Graphics GET, PUT, PLAY and DRAW, all with 99.9% syntax compatibility. CBASIC also supports the built in Serial I/O port with separate printer & serial I/O baud rates. You can send and receive data with PRINT, INPUT and INKEY commands.

CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or create programs for the compiler. It is a full featured editor designed specifically for writing and editing Basic programs. It has block move & copy, program renumbering, automatic line numbers, screen editing, printer control and more.

*"The Editor is a very good one and could be the subject for review all by itself..."*  
 --The RAINBOW, March 1986

*"Comparing ECB's edit mode to CBASIC's text editor is like comparing a World War II jeep to a modern sedan. Both get you to your destination, but what a difference in the ride."*  
 --Hot CoCo, February 1986

The documentation for CBASIC is an 8 1/2 \* 11 Spiral Bound book which contains approximately 120 pages of real information.

*"CBASIC's manual is easy to read and written with a minimum of technicese."*  
 --Hot CoCo February, 1986

The price of CBASIC is \$149.00. It is the most expensive Color Basic Compiler on the market, and well worth the investment.

Compare the performance of CBASIC against any Color Basic compiler. Dollar for dollar, CBASIC gives you more than any other compiler available. Requires 64K & Disk, not JDOS compatible.

*"The price tag it carries seemed a bit steep for an integer compiler on first glance, but when you add 64K, hi-res drivers, and full-screen editing, CBASIC begins to look more like a bargain..."*  
 --Hot CoCo February, 1986  
*"A Complete Editor/Compiler Well Worth its Price" --RAINBOW March 1986*

**EDT/ASM 64D**

**64K DISK EDITOR ASSEMBLER**

EDT/ASM 64D is a Disk based co-resident Text Editor & Assembler. It has a Hi-Resolution 51, 64 or 85 column by 24 line display, so you see your program listings easily and it supports Column cards. The disk also contains a free standing ML Debug Monitor, to help you debug your assembled programs.

This is the most powerful, easy to use Text Editor available in any Editor/Assembler package for the Color Computer. It even has automatic line number generation for easy entry of program material.

- \* Local and Global string search and/or replace.
- \* Full screen line editing with immediate line update.
- \* Easy to use Single keystroke editing commands.
- \* Load & Save standard ASCII formatted Tape/Disk files.
- \* Move or Copy single & multiple text lines.
- \* Create and Edit disk files larger than memory.
- \* Hi-Res Text Display 28 to 85 columns by 24 lines.
- \* Supports Word-Pak I, II, & R.S. and Disto 80 column display cards.

The Assembler portion of EDT/ASM 64D features include:

- \* Supports the full 6809 instruction set.
- \* Supports conditional IF/THEN/ELSE assembly.
- \* Supports Disk Library files (include).
- \* Supports standard Motorola assembler directives
- \* Allows multiple values for FDB & FCB directives.
- \* Generates listings to Hi-Res text screen or printer.
- \* Assembles directly to disk or tape in LOADM format.
- \* Supports up to 9 open disk files during assembly.
- \* Allows assembly from editor buffer, Disk or both.

**Requires 32K Disk \$59.95**

**CoCo-3 versions now available  
 for most programs!!!**

**CoCo-3 512K upgrade \$149.95, card without Ram \$49.95  
 Two Drive RAM-DISK program for 512K CoCo-3 \$19.95**

## ROM Pak on Disk

 I am in the process of writing a book and have been using the Color Scripsit ROM Pak/cassette. Instead of using the ROM Pak system, I would prefer to store my material on disk. Not only does it have more memory, but it allows me to chain the material together. My problem is that this ROM Pak system does not load into my Telewriter-64 or Elite Word Disk word processors. Can you help me solve this problem?

Norm Neaveill  
East Moline, IL

**R** Use the Print-to-Tape option on *Scripsit*, then use the program from November's column for transferring assembly language tapes to disk (use the already numbered option) to get the resulting ASCII files on disk for *Telewriter-64* or *Elite Word*.

## Learning OS-9

 I recently purchased the OS-9 PASCAL system for the Color Computer in hopes of learning PASCAL. Unfortunately, I have not yet been able to even create a PASCAL source program, which is the first step listed in the

instruction manual which came with this software. I'm totally confused with the instructions in this manual and can't get specific answers from my local Radio Shack store. Does this OS-9 package need, for example, the TSEDIT package? Why does the OS-9 system seem so difficult to interpret? Any help you can give would be much appreciated.

Alfred Walser  
Monroe, WA

**R** When you purchase OS-9, it comes with its own line-oriented text editor. Read Chapter 2 of the orange *OS-9 Program Development* manual. Also, see pages 73-75 and 180 of Dale Puckett's *The Complete Rainbow Guide to OS-9*. If you, like me, prefer a more sophisticated full-screen editor, there are (at extra cost) *Stylograph*, *Dynastar*, and *TSEDIT*.

To some, OS-9 is a blessing, but it's also a pain, especially to beginners. Since most OS-9 software was originally written for \$15,000-plus micro-mainframes, the superior quality is evident, but unfortunately for beginners, the documentation was written for professionals. If you need help, write us. Documentation can be written, but

good software at a reasonable price is hard to find.

## Television Interference

 When I turn on my CoCo with my disk controller installed, I get some TV interference, but not enough to bug me. When I boot up my machine with CoCo Max with a Y cable however, I get so much interference that I can't even see the screen. I've noticed that when I'm inputting or outputting to disk, the interference pretty much goes away. I've installed a Thunder RAM 256K upgrade. Could that be causing the problem?

Eric Hochstetler  
Mooreville, IN

**R** Both the Y cable and the 256K are contributors. Switching to a monitor should help. Eliminating the switch-box on the back of your TV and making a direct coaxial connection should also help some.

## Binary Code Identification

 Is there any way for the CoCo with Disk Extended Color BASIC to identify binary code such as A=01000001, etc.?

Bryant Wilkie  
Mountlake Terrace, WA

## CORRECTIONS

**"The Power of the Palette: Graphics on the Color Computer 3" (October 1986, Page 37):** The *Tunnel* program contains an error on the RAINBOW ON DISK and RAINBOW ON TAPE. Due to a production error, Line 540 of the program on these products became garbled. The line appears in order as Line 7226. Because of this, you will get a ?UL Error in Line 250. To correct the problem, delete Line 7226 and enter Line 540 as it appears in THE RAINBOW.

**"Coming to 'Terms' With the CoCo 3" (November 1986, Page 93):** Because of a production error, the TERM3BAS file on the RAINBOW ON DISK and RAINBOW ON TAPE fails to operate. This is because the WIDTH command in Line 450 was not properly tokenized during the file transfer. To correct the problem, simply load the program, type EDIT 450 and press ENTER twice. Then, resave the file.

Dale Lear has also written to tell us of a patch for the *Term2* program. *Term3*, as it appears in THE RAINBOW, will not work on some BBSs (including CompuServe) because of the manner in which it detects carriage returns. Dale's fix for the program

involves adding the following lines to the BASIC startup file, TERM3BAS.

```
551 POKE &H6260,&H20
552 POKE &H6261,&H11
553 POKE &H6273,&HD6
554 POKE &H6274,&H07
555 POKE &H6275,&HC4
556 POKE &H6276,&H7F
557 POKE &H6277,&H20
558 POKE &H627B,&HE9
```

**"Monochrome Magic on the CoCo 3" (Hint, December 1986, Page 48):** In addition to displaying the Microware name, the CLS9 statement also clears the border to the background color.

**For quicker reference, Corrections will be posted on Delphi as soon as they are available in the Info on Rainbow topic area of the database. Just type DATA at the CoCo SIG prompt and INFO at the Topic? prompt.**

## HDS Floppy Drive Controller Board

**Features\***

- Gold Plated Edge Cards
- Dual Selectable ROM Sockets
- Compatible with COCO I & II
- 120 Day Warranty
- Double and Single Density

Reduce your I/O errors with the Hard Drive Specialist Floppy Drive Controller for the Color Computer. Gold edge card connectors, advanced design, and the absence of potentiometers make it the best available. Our newest version controller allows the use of either (two 24 pin ROMs), or (one 24 pin and one 28 pin ROM). Using this board with the standard Radio Shack ROM gives you 100% compatibility with all Radio Shack software.

- Completed and Tested Board with Radio Shack ROM . . . . . \$99.**  
(Includes Case, and DOS Instructions)
- Completed and Tested Board without ROM . . . \$79.**  
(Includes Case)
- Bare Board with Instruction manual . . . . . \$30.**
- Parts Kit For Bare Board without ROM . . . . . \$30.**
- Radio Shack ROM (current version) . . . . . \$20.**
- Radio Shack ROM 1.0 . . . . . \$40.**

**Ordering Information:**

Use our WATS line to place your order via Visa, MasterCard, or Wire Transfer. Or mail your payment directly to us. Any non-certified funds will be held until proper clearance is made. COD orders are accepted as well as purchase orders from government agencies. Most items are shipped off the shelf with the exception of hard drive products that are custom built. UPS ground is our standard means of shipping unless otherwise specified. Shipping costs are available upon request.

**Drive 0 SS/DD \$150.**

- DOUBLE SIDED!*
- Drive 0 Complete . . . . . \$199.
  - Drive 1 Complete . . . . . \$129.
  - Drive 0 & 1 Dual Drive . . . . . \$319.

## **HARD DRIVE SPECIALIST**

**1-713-480-6000**  
**Order Line 1-800-231-6671**  
**16208 Hickory Knoll**  
**Houston, Texas 77059**

**R**X The CoCo's BASIC interpreter has built-in functions for converting back and forth between decimal and hexadecimal. Since each Hex digit can independently be converted to binary, the answer is sort of yes. For example: ?HEX\$(241) yields the Hex value F1, and since F=1111 in binary code and 1=0001 in binary, putting them together you have; 11110001 which is the binary representation of 241.

### Voice Synthesizers

**I** own a 64K CoCo 2 and want to have a voice synthesizer for it. Should I purchase Radio Shack's Sound/Speech Program Pak, or should I chance installing the SP0256-AL2 Voice Synthesizer, which needs a 2.12-MHz clock crystal, and more?

James Klimm  
Pelly, Saskatchewan

**R**X I'd wait for the 26-3144 Sound/Speech Program Pak to go on sale and then buy it. Since the release of OS-9 2.00.00, it has a device driver that supports sending speech to it simply by diverting your standard output.

### Artifactual Color Problems

**I** own an elderly gray CoCo and when running some programs, the colors come out wrong. It is very annoying to play card games with green hearts and diamonds! By pressing reset and typing, the correct colors eventually appear. With some games, the screen fills with red. By pressing BREAK until it comes up blue, the correct colors will appear when the game is started. Is there a line that I can add to the beginning of graphics programs to ensure that the correct colors will appear?

Herb Sinclair  
Wenatchee, WA

**R**X The artifactual color set on the CoCo 1 and 2 is unpredictable and cannot be fixed with software; however, on the CoCo 3, the alternate set is obtained by powering up with the F1 pressed.

### J-DOS Support

**Does anyone write software to support J-DOS? When I upgraded to disk on my CoCo 2, I bought the new J&M JFD-CP controller with both J-DOS and RS-DOS installed. Since then, I have watched for wordprocessor and spreadsheet programs advertised to**

*run under J-DOS so that I can fully use my double-sided, 40-track drives. I know that OS-9 will work, but I don't care to convert. Can you give me any clues to help me on my search?*

Tom Rea  
Chicora, PA

**R**X Software developers write programs for the operating system that the majority of CoCo owners have, and like it or not, it's Disk Extended BASIC. When you do not adhere to this standard, unfortunately, you are on your own. My advice, if you want more tracks, is to patch your Radio Shack ROM using Colin J. Stearman's "Getting on the Right Track," RAINBOW, July 1985, Page 26 and you can make a new 40-track DOS by burning the modified code into a 68766 EPROM. Note: since the new OS-9 Level II for the CoCo 3 supports double-sided and higher capacity drives, I expect the next release of Disk Extended BASIC to support these drives.

### CoCo Error-Trapping

**I** recently read an article about CoBBS in the November, 1985 issue of RAINBOW, and the subject of a program for error-trapping was discussed. How could I use error-trapping if I have Disk Extended Color BASIC using the RS-DOS chip? I've seen different brands of disk controllers that have error-trapping built in? Can I make error-trapping work on my CoCo?

Tim Fultz  
Moncks Corner, SC

**R**X In order for you to have the capability to use error-trapping on your CoCo, you would have to use a machine language subroutine to intercept the ROM vector at addresses \$018E-\$0190. An article "Trap That Error" by H. Allen Curtis, RAINBOW, August 1984, Page 61, supplies a BASIC program that pokes such a machine language program into memory for DOS 1.0. Patches for DOS 1.1 appear on Page 237 of the October 1984 issue. By the way, the new CoCo 3 has error-trapping built in with its ON ERR GOTO statement.

### BASIC Cold Start

**I** have several disk utility programs that force BASIC to cold start, then load a program. One that comes to mind is Diskutil by Jeff Francis. In this

*program, when you select the Load option, it cold starts to BASIC, and has BASIC load and run the file by injecting a statement like LOAD "THISFILE" :RUN. Is there any way to do this from BASIC?*

Eric W. Tilenius  
Huntington Station, NY

**R**X A Disk BASIC program can cause another to be executed by simply including RUN PROG2 in the first program where you want it to switch.

### Hard Disk Setup

**I** have a 64K CoCo 2 with Disk Extended Color BASIC Version 1.1, and have recently purchased OS-9. I've been curious about the hard disks and dual DSDD drives I see advertised for the CoCo. If I get either the hard disk or the dual DSDD drives, do I need a different controller to access all these tracks? Do I also need a different controller to access both sides? Do I need modified cables? Does a 5 1/4-inch disk look logically like a 3 1/2-inch and do they have the same number of tracks?

Bruce Corey  
Bradenton, FL

Hint . . .

## Baud Boy

If your printer is capable of accepting data at a higher baud rate than 600, or you just got that new serial-parallel converter and want to try it out, try the following poke. Location 150 in memory holds values which control how fast data is sent to your printer. The power-up value in this location is 87. If you want to change this, just enter

```
POKE150,X
```

where X equals one of the following values: 600 baud, 87; 1200 baud, 41; 2400 baud, 18; 4800 baud, 7; and 9600 baud, 1. If all you get is garbage, try adding or subtracting a value of one from the above values and re-poking them.

**R** Aside from the 5¼-inch single-sided drive #26-3131, Tandy also markets a double-sided, 5¼-inch 360K, 40-track drive (#25-1060), and a double-sided, 3½-inch 720K, 80-track drive (#25-1061), both of which (with modifications) are CoCo compatible. They will work with a standard CoCo controller, but require a new cable without missing teeth. Other drives worthy of consideration are TEAC's 55BV (40 tracks, 360K) and TEAC's 55F (80 tracks, 720K). All of these drives will work with Disk Color BASIC 1.0 or 1.1, but under Disk BASIC, they use only one side and 35 tracks. Note that if you are using one of the 80-track drives (5¼ inch or 3½ inch), you also need a 35- or 40-track drive to transfer software to the new media. If you want even higher capacity, but only for OS-9 (this drive will not work with BASIC), you have a wider choice. Weltec Digital in Anaheim, Calif., (714) 630-7020 markets an IBM PC-AT 1.2-Meg drive Model M16-P12 (\$149) that has a special logic board that lets it feed off a standard controller. With it and OS-9, you could have 30 sectors/track and 80 tracks on each side for a total of 4,800, 256-byte sectors. Compare that to the standard 35-track, single-sided drive with its 630 256-byte sectors, a double-sided 40-track with 1,440 256-byte sectors, and a double-sided 80-track with 2,880 256-byte sectors. Tandy markets hard drives and a controller for the CoCo, but since this is not yet a mass market item, the price is still high.

### Memory Poke Crashes

**I** have a converted 64K CoCo with two disk drives. When typing in the *memory poke*, POKE25,6:NEW, I find that I cannot load anything from a disk. The disk starts to load, stops in the middle and the computer crashes. I have to shut down the machine to do any-

thing else. Why? Is there a fix?

Raymond Home  
Billings, MT

**R** Use POKE 25,14:POKE&HE00,0:NEW for disk BASIC or you will overwrite disk BASIC's file buffers between \$600 and \$DFE.

### Hi-Res Saves

**H**ow can I save a CoCo 3 high resolution picture display to disk?

**R** You can save/load CoCo 3 graphics displays using the following routines: HISAVE and HILOAD. To use HISAVE, you must return to the Width 32 mode, then run the program supplying a filename of up to eight characters. It then saves the 32K screen memory in four 8K increments with filenames *name/HR1*, *name/HR2*, *name/HR3* and *name/HR4*.

HISAVE routine

```
10 INPUT "NAME: ";N$
20 FOR I=&H70 TO &H73
30 POKE &HFFA2,I
40 F$=N$+"HR"+CHR$(I-64)
50 SAVEMF$,&H4000,&H5FFF,44539
60 NEXT I
70 POKE &HFFA2,&H7A
```

The HILOAD routine prompts you for the filename (up to eight characters, no extension) and the HSCREEN value, then loads the graphics into memory allowing you to view them as they load.

HILOAD routine

```
10 INPUT "NAME: ";N$
20 INPUT "HSCREEN#";H
30 HSCREEN H
40 FOR I=&H70 TO &H73
50 POKE &HFFA2,I
60 F$=N$+"HR"+CHR$(I-64)
70 LOADMF$
80 NEXT I
90 POKE &HFFA2,&H7A
```

One or both routines can be incorporated into your own programs, but be sure to exercise care that this code resides below Address &H4000. This can be assured by putting this code at the very beginning of your program except for a GOTO that branches around it. You can then GOSUB one of these routines to save/load a graphics display.

The routines HISAVE and HILOAD manipulate the Memory Management Unit (MMU) registers to move 8K increments of memory into the 6809's 64K address space so the SAVEM and LOADM routines can access it. I developed the following routine, MAP/BAS, in order to help understand how these registers worked; it should be equally useful to anyone writing code in BASIC or another language to use the additional memory in the CoCo 3. You can find a CoCo 3 memory map on Page 311 of the *Color Computer 3 Extended BASIC* manual.

MAP/BAS routine

```
1 PCLEAR1
10 PRINT "TASK 0 REG. MEM. START":PRINT "REGISTER VALUE PAGE ADDRESS"
20 FOR I=&HFFA0 TO &HFFAF
30 IF I=&HFFAB THEN PRINT:PRINT "TASK 1 REG. MEM. START":PRINT "REGISTER VALUE PAGE ADDRESS"
40 X=PEEK(I)AND63
50 Y=X*&H2000
60 YH=INT(Y/65536)
70 YL=(Y-YH*65536)/4096
80 PRINT " ";HEX$(I);" ";HEX$(PEEK(I));" ";HEX$(X);" ";HEX$(YH);HEX$(YL);"000"
90 NEXT
```

For a quicker response, your questions may also be posted in the Forum section of RAINBOW's CoCo SIG on Delphi. In Forum, type ADD and address your questions to the username DOCTOR-ASCII. You may also send questions to DOCTORASCII via Delphi Mail

# A Review of the Personal 'Settings Profile'

By Cray Augsborg  
Rainbow's CoCo SIGop

Recently, a handy feature was added to Delphi. This feature is a section where you can control how Delphi interacts with your terminal. It's called Settings and is very similar to the Settings feature found under Using Delphi just off the main menu. It allows you to change your communications parameters as well as set terminal options.

To get to this area, simply enter your personal Delphi Workspace from the CoCo SIG menu or from any database prompt. Then type SET and press ENTER. Now, if you don't have your system set for prompt level three (^PR=3), enter a question mark and you will see the following Settings menu:

BUSY-Mode	PASSWORD-locked
DEFAULT-Menu	SET-High-bit
DOWNLOAD-Line-terminators	SLASH-Term-settings
ECHO-Mode	TERMINAL-Type
EDITOR	TIMEOUT
KERMIT-SETTINGS	UTILITIES
LENGTH(Lines/page)	WIDTH(Columns)
NETWORK-PARAMETERS	XMODEM-SETTINGS
PASSWORD(Change)	HELP
PROMPT-Mode	EXIT

At first glance, some of these items look pretty complicated and rightly so. We will discuss some of the simpler selections this month and save the more complicated and esoteric items for a future installment. You are always invited to experiment with any of the options. However, unless you have

*Cray Augsborg is RAINBOW's technical assistant and has an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Ky. His username on Delphi is RAINBOWMAG.*

some understanding of the impact a particular selection could make, don't fool with it!

Now, you may recognize that some items in this menu are available from nearly any prompt on Delphi. You can enter them as "slash" commands. For instance, you can type ^PR=3 to change your prompt level anywhere except Mail. You can also use ^W=XX and ^L=YY to alter the width and length of

your particular terminal. The problem with these slash commands is that their effects are only temporary. Once you log off Delphi, the next time you log on, these commands have to be reentered into the computer. However, if you make the changes in your Settings area, they become a permanent part of your default profile and become immediately effective the moment you sign on.

As we discuss the various options,

## DATABASE REPORT

October has been the month of the CoCo 3 here on the SIG. With its introduction, the SIG has been rapidly accumulating new files in the CoCo 3 and OS-9 databases.

In our CoCo 3 news database **Roy Crosby** (UNCLE) uploaded to us the image of the three Microware programmers who put their mugs inside the CoCo 3 ROM. **Jerome Kalkhof** (GRUMCLUB) gave us some thoughts comparing the CoCo 3 and the Commodore 128. **Art Flexser** (ARTFLEXSER) and I have begun to post a variety of patches and fixes for both the flawed CoCo 3 BASIC ROM and for third-party programs that initially were incompatible with the CoCo 3. Of greatest importance is the patch Art Flexser posted that describes how to fix *Telepatched Telewriter* to allow it to run on the CoCo 3. **Bill Jackson** (BILLJACKSON) gave us what will undoubtedly be the first of many "start-up" files for the CoCo 3 that accomplishes several fixes. I've provided some hardware information about the RGB signals of the CoCo 3 versus those

of the Atari ST RGB A monitor. **Kevin Darling** (KDARLING) contributed some of his thoughts on compatibility issues. **Dave and Becky Matthews** (ADOBEPAGODA) gave us some demonstration graphics programs in BASIC. **Mike Himowitz** (HIMOWITZ) has contributed a utility for the CoCo 3. Art Flexser has given us some of what will be parts of the upcoming ADOS 3, including utilities for redefinition of the CLEAR key and for defeating the automatic HCLS done whenever a Hi-Res graphics mode is invoked.

Our OS-9 database has had its index of all its contents brought up to date by our tireless OS-9 section leader, **Dale Lear** (DALELEAR). **Ronald Cole** (RONALDCOLE) has given us an assembly language and OS-9-based program for printing 16 gray level pictures made with a DS-69 digitizer from The Microworks. It was based on an earlier RS-DOS BASIC utility supplied by **Bob Montowski** (GRAPHICSPUB). **Jay Truesdale** (JAYTRUESDALE) has given two essays, including a superb product review of the Disto 512K RAM disk as

---

**“When the system doesn’t detect any activity from your terminal, it asks you to respond. If you don’t do so within 30 seconds, you are automatically logged off.”**

---

keep in mind help is only a Delphi distance away. Just type HELP at the Settings menu. You will be greeted with a list of information about the Settings utility. Then you will be given the option to ask for help on any of the items in the menu.

#### Busy Mode

Entering the Busy Mode settings option allows you to set your default as either “busy” or “not busy.” “Not busy” is the standard system default. By setting the default as “busy,” you accomplish the same thing as if you had entered /GAG or /BUSY at other Delphi prompts. It stops the interruption of other users paging you or sending you messages with the /SEND command. It also eliminates the notifications that you have received a new mail message. To turn this default off, should you

decide to set your default to busy, just enter /NOGAG at any Delphi prompt. Keep in mind, on the CoCo SIG, we prefer you set yourself as being busy only while you are reading mail or uploading/downloading. Other people may want to talk.

#### Default Menu

As the name of this selection implies, it allows you to set which menu you are first greeted with upon signing onto Delphi. The system default is Delphi’s main menu or Main. You can set the default to the CoCo SIG by entering GROUP COCO (or just GR CO) using this selection. You can set this default for nearly any area on the system. Obviously, wise use of this selection can save you a great deal of time as well as reduce the number of keystrokes required to get to the SIG.

used under OS-9. **Greg Law** (GREGL) has given us directory utilities for multi-user OS-9 systems, and an automatic baud rate selecting version of *TSMON*. **Kevin Darling** has sent us some utilities for branching or looping within a shell procedure. He also has given us *MVERIFY*, a utility for speeding the process of updating the CRC of a module in memory. In addition, he has also given us a DMODE command similar to the XMODE, but for RBF drivers. **Wayne R. Sundstrom** (DRIFTER) has provided a LOG program that logs OS-9 shell activity. It is also a tutorial on how to patch the OS-9 shell with debugger. **Rick Adams** (RICKADAMS) has given us a command under OS-9 Level I Version 2.0 that sets up the output of the CoCo 3 to be fully monochrome, eliminating those ugly vertical stripes normally seen on a monochrome display.

In the Data Communications database, I’ve uploaded all of the graphics screens that constitute the original documentation for the *WEFAX* program published in RAINBOW, February 1985. **Lance Bannerman** (STARCOWBOY) has uploaded two lists of frequencies from all over the world one can listen to, to find *WEFAX* signals. I’ve also uploaded the source code for the *RTTY* program published in the November 1986 RAINBOW. **Emery Mandel** (EMANDEL) has given us *Dazzelterm* 2.2. **Michael Banks** (KZIN), the manager of the Science Fiction SIG on Delphi, has provided us with an updated list of CoCo BBS systems. **Brian Wright** (POLTERGEIST) has sent us an updated version of *ASCII Express* for the CoCo and another terminal program for the CoCo. **Don Hutchison** (DONHUTCHISON), in charge of database submissions, has given a patch for *Colorcom/E* that adds

a FREE command for it. **Mike Ward** (MIKEWARD) has posted a patch that allows *Mikeyterm* 4.0 to run on the CoCo 3, but note that this patch does *not* allow use of either the Word-Pak or the intrinsic 40- or 80-column screen on the CoCo 3. That will have to wait for a new version of the program.

In the Utilities database **Andrew Ellinor** (CROPPER) has uploaded a disk utility, and **Earl Casper** (EARL-CASPER) has sent us a *VDG Fix* program. **Marvin D. Peterson** (MAZO) has sent us a disk editing utility called *Disk-save*. In the November database report, I erroneously credited Milt Webb with the encryption program. The program is actually courtesy of **Doug Masten** (DMASTEN). Sorry about that, Doug!

In the Games database, **Emery Mandel** has sent us an Adventure game titled *CoCo Club Adventure*. **Roger Smith** (SMUDGER) has given us three new game entries.

Our Music library continues to grow with new selections provided by **Derrick M. Kardos** (DTG), **Mark Raphael** (MARKRAPHAEL), **Loren J. Howell** (XENOS) and **Ray Wright** (RAYWRI).

In the Graphics database a new host of images has arrived. **Brian Wright** has been quite active this month, sending us some extremely fine digitized images converted over from other computer systems using a picture exchange protocol being developed in his area. He’s also sent us a classic computer pinup girl image. **Emery Mandel** has provided a number of images, and a package that when downloaded and run produces a beautiful, animated fireworks display. **Ira Goldwyn** (IRAG) has again shared with us a dozen pictures from his immense library of digitized images. **Mark Kowitz** (TOBOR8) has sent two more original

pieces of digitizer art. **Marvin Peterson**, **Derrick M. Kardos** and **Ray Wright**, have also contributed this month.

**Don Hutchison**, our submissions chief, decided to collect a little detailed information on our database this month. It turns out we now have roughly a dozen megabytes of stored CoCo program, text, music and graphics data accumulated over the year we have been in operation. At this time, by far the two largest databases are our Graphics and our RAINBOW ON TAPE databases, which are nearly the same size, and which together account for over half of the total number of bytes we offer.

But times are changing. With the arrival of the CoCo 3, a greater emphasis will be placed on OS-9. Our OS-9 section is growing nicely already. However, over the next few months I expect an explosion of OS-9 material. This will be in large part due to our acquiring permission to post the entire contents of the OS-9 Users Group software library on Delphi. This library has, I am told, roughly five megabytes of data in it. We have just received the disks for the library, and will be sorting the material out and gradually posting it over a period of months.

I look forward to seeing continuing strong support for the CoCo 3 during this new year. Whether you seek tips on buying hardware and accessories for your CoCo, software to run, music to play, or images to view, the Rainbow Delphi CoCo SIG surely has something for you. See you there!

— **Marty Goodman**  
(MARTYGOODMAN)  
Delphi CoCo SIG Database Manager

## Password Change

This item allows you to change your Delphi password. This should be done fairly frequently to ensure security of your Delphi account. You will be required to enter your present password and then enter the new password you have chosen. Then you will be asked to enter your new password again for verification. Your password must be at least six characters or numbers long, and should not contain any punctuation. Passwords will not appear on the screen as you type them in.

## Prompt Mode

The Prompt Mode setting allows you to set the level of the prompts displayed by the system. Prompt Mode 3 tells the system to display a complete menu every time you enter an area on Delphi, while Prompt Mode 2 displays a single-line prompt listing the available commands. Experienced users will spend most of their time in Prompt Mode 1. This mode displays a one- or two-word description of the Delphi area you are in. It gives no clue as to available commands. This selection functions the same as `^PR=X` at other Delphi prompts, but your choice becomes a permanent part of your Delphi profile. It saves time to stay in Prompt Mode 1 and just enter a question mark when you need a menu for the present area. However, we suggest you go to Prompt Mode 3 about once a week. This is because the system software is ever-changing and you may miss out on some new additions because you didn't know they were there.

## Editor

This selection allows you to choose which editor you want to use for creating files and editing messages. The system default is the EDT editor, a product of Digital Equipment Corporation. It is somewhat difficult to learn to use. More popular is a line editor called "Oldie," which uses simple slash com-

mands. It seems to fit well in the Delphi environment. If you want to use the Oldie editor, just enter OLDIE under the Editor selection.

## Width and Length

These items function just as `^W=XX` and `^L=YY` except that, as we've said before, the changes become a permanent part of your user profile. They will only change if you change them by rewriting them or using `^W` or `^L`. A handy tip with Length is that if you set your length to zero, you eliminate all the "More?" prompts. Just use CONTROL-S and CONTROL-Q to stop and start the screen scrolling as you like.

## Timeout

Timeout is a handy new feature from Delphi. Let's say you are online late at night and your body decides to take a break. While you are examining the insides of your eyelids, Delphi is busy burning away your hard-earned dollars and you aren't even doing anything on the system. When the system doesn't detect any activity from your terminal, it asks you to respond. If you don't do so within 30 seconds, you are automatically logged off. Timeout allows you to change how long Delphi waits before asking you to respond. The system default is 10 minutes, but you can change it to whatever value is most convenient for you.

## Utilities

The Utilities feature is particularly important because it can help you avoid problems as you experiment with your settings. Before you begin changing your default settings, you can enter the Utilities selection and save your current profile to a file in your Workspace. Then you can experiment with the confidence that you can later reload your standard settings file.

In Utilities, you have three options: List, Dump and Reload. With List, you

can display a listing of your current settings; Dump saves your current profile to a file in your Workspace called PROFILE.DMP, which conveniently allows you to edit it there; and Reload reloads it after you have edited it or messed it up while you were experimenting.

There is also a special settings option called Key which is most useful for those who sign on to Delphi using different terminals. All users have a profile with a key of zero, the profile that is used each time you log on. But some users may want to have different profiles. The Key option allows you to set up additional profiles with keys of 1 to 9. Each profile key is saved with the command `^SAVE #`, and can be loaded with the command `^RESTORE #` at any time, from any area of the system.

As an example, for my CoCo with a Word-Pak I, I use a profile that has 80 columns and 22 lines selected. However, on occasion, I use a Tandy 200 so I can sit on the couch and watch my two kids. For this, I select Key 1, which is set up for 40 columns and only 14 lines. This makes it a lot easier to change, since I don't have to enter `^L` and `^W` commands.

You can `^SAVE` and `^RESTORE` keys from any prompt. Just make sure the settings you are currently using are the ones you want to save. Keep in mind, though, that any time you log on, your key will automatically be set to zero. Therefore, you will start up with the defaults you have chosen from the Settings area of your Workspace.

## Free Time Offer

Delphi has announced an interesting special offer. Delphi members can receive \$50 of online time if they have their Delphi name included on their business card or business letterhead. The user must send a sample to Delphi for verification. For more details, send Mail to NANCE, a Delphi employee. ☺

## CHECKING ACCOUNT INFORMATION SYSTEM

Let your CoCo ease the task of managing your checking accounts with CAIS. Record deposits, checks, ATM transactions, interest, service charges and other debit/credit transactions. Reconcile and balance your accounts in minutes. Search and edit capabilities.

Requires 32K and 1 disk drive (min). Printer optional.

To order, send check or MD for 24.95 plus 2.50 S/H to:  
(SC res. add 5% sales tax)

**Disneyland Hotel • January 30 to February 1, 1987**

**T**he Color Exhibition '87 promises to be one of the best events in Color Computer history! Color Computer owners throughout the United States will be gathering at the Disneyland Hotel January 30th, 31st and February 1st for a weekend of entertainment, education and plain old fun. Tentative guest speakers include Dale Puckett, Brian Lantz, Bill Turner, Bill Barden, Dale Lear, Frank Hogg, Wayne Day, Marty Goodman, John Ross, Steve Bjork, Linda Vincent and Pete Ellison . . . Plus much, much more. Throughout the 3-day event we will be running "THE COCO COUNTY FAIR" . . . This is an opportunity for you to show off your stuff in competitions ranging from a Mid-air P-51 sky duel, to entering your favorite Graphic picture, BASIC program, music file and more! Plus many of the top vendors who make up the Color Computer Community will be on hand showing off the latest in Color Computer innovations, and wheeling and dealing like never before! And, if that were not enough one of the largest CoCo bashes to rock the West Coast will take place on Saturday night . . . All this plus many more surprises are waiting for you at the beautiful Disneyland Hotel!

**Featuring Special  
Guest Speakers:**

Dale Puckett  
Brian Lantz  
Bill Turner  
Bill Barden  
Dale Lear  
Frank Hogg  
Wayne Day  
Marty Goodman  
John Ross  
Steve Bjork  
Linda Vincent  
Pete Ellison

The Color Computer Exposition '87 and CoCo County Fair are presented by the United Computer Federation. The UCF is an organization of Color Computer users with chapters throughout the western United States with the Color Expo as it's National Meeting.

**Tickets available at all Ticketron locations, or Teletron Charge  
(213) 410-1062 or (714) 634-1300**

Or send your check or money order to:  
United Computer Federation

# RAINBOW

Give us your best: Join the ranks of these courageous CoCoists in showing the Color Computer world your high score at your favorite micro-diversion. We want to put your best effort on record in THE RAINBOW's "Scoreboard" column. All entries must be received 60 days prior to publication. Entries should be printed — legibly — and must include your full name, address, game title, company name and, of course, your high score. Each individual is limited to three score entries per month. Send your entries to Scoreboard, c/o THE RAINBOW. The "Rainbow Scoreboard" is now a bimonthly feature.

For greater convenience, your high scores may also be sent to us through the MAIL section of our new Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS.

# SCOREBOARD POINTERS

In conjunction with THE RAINBOW's Scoreboard, we offer this column of pointers for our game-playing readers' benefit. If you have some interesting hints and tips, we encourage you to share them by sending them to the Scoreboard, c/o THE RAINBOW.

## FEEDBACK

### Scoreboard:

In response to the letter from Frank Heezen in the October 1986 issue, the gunk in *Zork I* is a tube of glue that can be used to repair any holes in the inflatable boat. You have to use the boat to travel down the river to recover a treasure, but if you do not take any sharp objects in the boat with you, there will probably be no holes and you will not need the glue.

Richard King  
Plymouth, IN

## BOXED IN

### Scoreboard:

You can go beyond 999,999 in playing *Quix*. When you pass one million, the screen rolls over a few times and the counter resets to zero.

Here is a simple technique to catch the two snakes: Make a lot of small boxes along the margins, as closely spaced as possible, but without touching one another. A snake will eventually enter the space between two boxes, and will be unable to come out again. Then just close off that space at your leisure.

Curtis C. Goodson  
Campinas, Brazil

## THE CRACKED CRYPT

### Scoreboard:

I have finally solved *The Martian Crypt!* Here are some pointers:

The magic word is "amore." When you cross the pit ask for help. Go into the water, go South, then West, get the crown and go East, North, North. Give the crown to the sage for another riddle. Pry the plaque with the stalactite. Then go East and fly over the cracks in the floor and throw the stalactite at the wraith. To open the big doors throw a red gem. Once inside, ask for help.

If anyone knows how to cross the bridge in *Trekboer*, please send help. I have tied the rope to the tree east of the bridge. But it doesn't work.

David Merkel  
Houston, TX

## PYRAMID PUZZLE

### Scoreboard:

In *Pyramid* I have everything but the coins and remaining treasure. How do I get them? PLUGH does not seem to change the game (as far as I can tell).

Also in *Zork I* I can't find the altar, dispose of the granite wall in the slide room or figure out what to use to exorcise in the tiny cave room. If you have the red buoy, use it to hide your valuables from the thief and the other guy. Please send help to "Scoreboard."

Dale Lampe  
Sacramento, CA

## DON'T JUMP SHIP

### Scoreboard:

I need help on the Adventure *The Stow-away* from *The Second Rainbow Book of Adventures*. I have searched the whole ship, found the power box on the wall behind the coal pile and thrown the switch. Also, I have found the message on the ceiling and moved the compass handle. Where do I go from here? Any help would be appreciated.

William R. Graham  
Swedesboro, NJ

## DID I MISS SOMETHING?

### Scoreboard:

I've just solved *Bedlam* in one sitting of about half an hour. I had fun with it but it ended too soon. Does anybody know of any other exits besides the kennel?

A hint for *Bedlam*: Drop the hook before you feed the dog the meat with the pill inside it.

Erick Molnar  
Reno, NV

## AXE-ING FOR HELP

### Scoreboard:

I'm having trouble with *Blackbeard's Island*. After I get the string, I go back through the path in the underbrush. Then I go to the dock and fish for the anchor. When I go back to the underbrush, I can't get through. It tells me the underbrush is too thick! Since my axe broke I can't cut another pathway. Can anybody help? Please write to the "Scoreboard."

David Solley  
Elyria, OH

## BOGGED DOWN IN BEDLAM

### Scoreboard:

I can't find how to get around the serpent in *Pyramid 2000*. I also haven't found out how to get over the rug in *Raaka-Tu*, or how to get the green key and red key in *Bedlam*. Any help would be appreciated.

Sam Waldrop  
Brownwood, TX

## SUPREME FLASK SURPRISE

### Scoreboard:

I am stumped on *Kingdom of Basham*. I can't get off the mountain road. In *Sands of Egypt*, I can't even find the pyramid let alone get in.

While playing *Dungeons of Daggorath* I came across a supreme flask which I could pick up, but was unable to use. I have owned the game for several years and never encountered this before. Any help would be greatly appreciated.

Joseph J. McElheny  
Pensacola, FL

# For the serious student . . . . . . . from Preschool to College . . . .

- Ages 3-5
- Hand-eye coordination
- Colors
- Shapes
- Numbers
- Great graphics and music
- Reading readiness skills
- Capital letters
- Small letters
- Learn to associate letters and letter blends with the sounds they make
- Requires 32K ECB and joysticks

## PreReader

**\$19.95 - Tape**  
**\$24.95 - Disk**

## GALACTIC HANGMAN

**Both 16K ECB and  
32K ECB versions  
included on tape  
\$17.95**

- For grade 2 and up
- Exciting version of popular word guessing game
- Play against the computer or a friend
- Outstanding high-resolution graphics and animation
- Great sound effects and music
- 700 word vocabulary included
- Create your own word files
  - your child's spelling list
  - foreign language vocabulary
  - specialized word list, i.e., geographic, chemistry, physics
- Broaden your vocabulary
- Both 16K ECB and 32K ECB versions included on tape
- Easily moved to disk

## MATH MISSION

**Math Mission** is an educational game designed to reinforce early math skills in the four math operations:

**Addition**  
**Subtraction**  
**Multiplication**  
**Division**

- Can be played on any of four optional levels of difficulty
- Joystick oriented to develop hand-eye coordination
- Shot timer simulates a classroom time test
- Picture, sound, and word rewards

**MATH MISSION** requires 32K ECB and 1 joystick

**Available on both Tape and Disk  
\$24.95, either version**

Dealer and author inquiries are always welcome. Canadian dealers should contact Kelly Software Distributors, Ltd., P.O. Box 11932, Edmonton, Alberta T5J-3L1, (403) 421-8003.

Disk software compatible with Radio Shack DOS only.

**SUGAR SOFTWARE**  
P.O. Box 7446  
Hollywood, Florida 33081  
(305) 981-1241

A complete catalog of other sweet Sugar Software products is available.

Add \$1.50 per program for postage and handling. Florida residents add 5% sales tax.

COD orders are welcome. CIS orders EMAIL to 70405, 1374. No refunds or exchanges.

# The Question of Assessment

By Michael Plog, Ph.D.  
Rainbow Contributing Editor

One of the key terms currently in vogue for education these days is accountability. Schools are being asked to improve their accountability at the national, state and local levels.

For most people, this concept has two components — fiscal and student learning. A cynical definition of “fiscal accountability” is that schools are asked to do more with less money. Fiscal accountability is most often raised as an issue by people who want to reduce school budgets. However, the main topic of interest here is not fiscal accountability, but accountability of student learning. We will leave the idea of fiscal responsibility for later.

Accountability for student learning is closely tied to the idea of assessment. With proper assessment, so goes the argument, schools will be accountable for the knowledge students acquire, and will be able to identify areas of weakness that need improvement.

---

*Michael Plog received his doctorate degree from the University of Illinois. He has taught social studies in high school, worked in the central office of a school district and is currently employed at the Illinois State Board of Education.*

The term “assessment” is normally translated into the more common term of “testing.” Ask most educators what they do for assessment of student learning, and they will respond by telling you which tests (often standardized commercial instruments) they administer to students.

Assessment, however, is a much broader concept than testing. Testing has come to mean paper and pencil instruments, where a student is presented with one question at a time and must provide one answer at a time. The answer is either right or wrong. Assessment, on the other hand, is generally used by educators to indicate a full evaluation of student abilities and knowledge.

There are arguments about the merits of testing. My personal opinion is that testing is a very poor way of determining what a student knows, but a very easy way of getting a lot of information about a lot of students in a short time. The *value* of that information is what raises questions about the merits of testing.

For example, consider the problem of a teacher who wants to determine how well students have learned programming a computer in BASIC. One option for this teacher is the test option. The

teacher develops a series of questions (generally, a set of multiple choice questions) about programming terms, examples of FOR-NEXT loops, how to use commands such as RESTORE, LINE, PMODE, CLOAD, etc. Students answer the questions. Each question is assigned one correct response, and the total number of correct responses is used to obtain a score for each student. This score is then interpreted to indicate how much students know about programming.

Unfortunately, this activity is not the best way for a teacher to determine how well students have learned BASIC programming. The obvious “best” way is for the teacher to assign a task to be completed on the computer. Students would have to program the machine to complete the task. If a student’s program does not perform the task required, the teacher can clearly state that student does not know how to program the computer. If the computer does indeed perform the task required, the student has demonstrated knowledge about BASIC programming. The level of difficulty of the task to be performed should relate to the level of knowledge of the students. For a beginning programmer in the lower grades, the task may be to input and print names of

classmates. For an advanced programmer in high school, the task might be to create a database for class attendance and grades.

Although it is entirely possible to conduct a good assessment program without a computer, it is impossible to provide a large scale testing program without some computerized assistance. Computers are used for testing in two basic ways.

The first way is to use the computer instead of paper and pencil. In this type of computer use for testing, a student is given a question on the computer screen instead of on a piece of paper. The student presses a key instead of writing an answer or marking a space on an answer sheet. The computer keeps track of all responses, scores the responses as right or wrong, gets a score for the student, and can even compare each individual student with all other students taking the test.

In this application of the computer to testing, we have simply replaced one technology with another. The computer is merely eliminating a few steps in the process. The questions need not be any different if shown on the screen than on a piece of paper. This application does allow some flexibility not available with pencil and paper tests. For instance, the order of questions can be arranged in different sequences, depending on answers to previous questions. In general, however, this use of the computer is not much different than a paper and pencil test.

Another way of using the computer for testing is management of test information. Computers can be used to score tests. Most commercial tests, and a growing number of locally developed tests, use "mark sense" answer sheets. Students darken a "bubble" on the sheet, and an electronic device records that mark as the answer. This scoring technique is much faster than having humans score the responses, with an error rate close to what humans would do. (All test scoring has error.) Schools can purchase small "readers" that score

the mark sense answer sheets and transfer the information through a standard RS-232 port. (This is about the same as using your RS-232 to communicate with Delphi. You are just communicating with the reader.)

In addition to scoring the test, another component of management of test information is the analysis of the test instrument. Analysis of test information involves two parts. First is the analysis of the items making up the test. Each item (question) can be examined by two characteristics: how well it relates to the test as a whole, and how well it performs by itself. A test composed of items showing good item characteristics is said to have strong reliability.

---

*"... widespread student testing is simply impossible without the use of computers."*

---

The second part of analysis of test information deals with the analysis of groups of students. Students may be compared with each other or to some predetermined criterion of success as measured by the test.

Thus, widespread student testing is simply impossible without the use of computers. The mathematics involved in determining item characteristics and analyses of groups of students is too prohibitive without the speed of electronic machines. If it were not for computers, very few national commercial test instruments would be available for purchase, and those would be extremely expensive. With computers,

tests can be constructed and analyzed by local school districts.

So much for the testing concept. Now, let's return to the more important concept of assessment rather than group testing. Do computers have a role to play here?

One problem in this area is that the state of the art of full assessment is not as advanced as testing. Assessment has traditionally been left up to individual teachers providing judgments about individual students. Teachers have used a variety of ways to determine student knowledge, including assigning tasks for students to perform, observing behaviors of students, and listening to students discuss detailed points about concepts learned.

It is entirely possible to use computers for assessment just as you would use them for any other educational activity. Students can be asked to express their knowledge in written form on a computer, or show they understand some concept by addressing it with assistance from the computer. These activities, however, are simply replacing other technologies with the computer. It is the same situation as having students take a test on the computer instead of using paper and pencil. We still know very little about the broader concept of assessment of determining student knowledge. We need more study in this field — more work by people at all levels of education.

There are several test companies today selling standardized test instruments for school use. All make liberal use of computers for test analysis. All use the weaker concept of testing; none (to my knowledge) use the more appropriate concept of assessment. If you have found a way to use computers to determine student knowledge (not dealing with testing, which only measures how well students can take a test), please share your information with others. I, especially, would like to hear from you. If anyone wants to write, my address is 829 Evergreen, Chatham, IL 62629. ☺

#### *One-Liner Contest Winner . . .*

Here is a good way to alleviate frustration. Get your hands on a dart pistol. Then run this program to add the finishing touch.

# Typographical Errors Bring Confusion

By Dan Downard  
Rainbow Technical Editor

• I recently bought the TRS-80 Color Computer Assembly Language Programming book. As I was paging through it I found an assembly language program for a music synthesizer, and as I began typing it in, I came upon two lines that required left arrows. When I pressed SHIFT-UP ARROW, nothing happened; the cursor just sat there.

I can get a left arrow while in BASIC, but not while in assembly.

The two lines look like this:

```
00310 MUS005 LDA ↑ ENVPTR ←
GET VALUE
00460 LDA ↑ ENVPTR ←
DUMMY
```

Craig Leininger  
Moorhead, MN

Craig, you indeed found a typo in TRS-80 Color Computer Assembly Language Programming. The up and left arrows you refer to are probably misprinted control codes. If you look at the rest of the listing you will see that ENVPTR is the label for an envelope table at address \$3F69.

• I recently ran across Rainboard in the November 1983 issue. Instead of purchasing RemoTerm, I typed in Dan

Dan Downard is an electrical engineer and has been involved in electronics for 27 years through Ham radio (K4KWT). His interest in computers began about eight years ago and he has built several 68XX systems.

Downard's terminal driver program contained in that issue, as instructed by the author of Rainboard.

When the program was executed I noticed the caller's BREAK key wasn't disabled at all. I came to the conclusion that the poke given in Rainboard's start-up routine was geared for RemoTerm only. What poke could I use to disable the caller's BREAK key in the terminal driver program?

Allen Drennan  
Sonora, CA

If you have an RS-232 Program Pak you can try using REMOTE232, which appeared in the November 1986 issue of THE RAINBOW. If not, Allen, try REMOTE2 in the November 1985 issue. Both of these programs are rewrites of the original program with a few bells and whistles.

• In your September column, you answered a letter from Mr. Richardson regarding two problems with OS-9. Several years ago, when I first purchased OS-9, I had a similar problem with the format command. When I tried to format a disk, it would format the first several tracks, however, it would eventually crash and lock up the system. Since the drives were fairly new, I had the Radio Shack technician examine them. He told me it was a defective controller board since he couldn't adjust the board to work. I believe Mr. Richardson might be well off to check his controller.

William Struts  
Burton, MI

Thanks for your help, William. This adjustment could indeed be the problem. As I have said before, Radio Shack should get better grades for their service staff.

• I have a 64K Disk Extended BASIC CoCo with BASIC Version 1.2, Extended BASIC Version 1.1, Disk BASIC Version 1.0 and an Epson MX/80 Plus printer.

Recently, I bought Graphic Screen Print Program (GSPRE) from Custom Software Engineering, Inc. for my CoCo and printer. This program only works on the cassette base; if possible, please tell me the proper procedure so I can use it with my disk base.

Tho Luong P.  
Flushing, NY

All you have to do to use the screen dump program with disk is transfer it from cassette to disk. Without having the GSPRE program I can't tell you the exact ending address, but if you have a tape-to-disk transfer program it will happen automatically. If you don't, after loading the program from cassette try:

```
SAVEM"GSPRE", &H7DD0,
&H7FFF, &H7DD0
```

Then change lines 10 and 20 of your program to:

```
10 CLEAR 200, &H7DD0-&HE00
20 LOADM"GSPRE"
```

For the rest of the instructions use

SAVE, SAVEM and LOAD instead of CSAVE, CSAVEM and CLOAD.

● I have a Gorilla Banana printer which was purchased from DAK. Any time I try a graphics printout (like CoCo Max), it never works. I have set the baud rate, checked connections and power supplies. I really want to use Hong Kwong's program in the May 1986 RAINBOW. Could you please tell me what to do?

Jim Messer  
Jacksonville, FL

Jim, we'll let William Tenison answer your question.

● On May 13, I wrote you requesting information regarding screen dump information for my CoCo to my Gorilla Banana. I also asked if this printer would print graphics.

I should have read my new RAINBOW before I wrote. In it you told about Radio Shack's screen dump program DWDUMP, Catalog No. 26-3121.

I have also solved my problem of getting the Gorilla to accept CoCo Max graphics. For anyone else who might have this problem here is how I did it:

On power-up, run the following program to put the printer in graphics mode:

```
20 PRINT #2, CHR$(8)
30 FOR TIME = 1 TO 20
40 C=C+1
50 PRINT C;
60 NEXT TIME
70 END
```

With the CoCo Max disk in the drive, type RUN "CONF IG".

Configure CoCo Max to the DMP-100 at 600 baud.

Type RUN "COCDMAX".

William J. Tenison, Jr.  
Jackson, TN

● While I was working on a program that used the 64-by-64 graphics mode, I did the following: POKE359,57: POKE65314,85. What I got is a seemingly normal screen but with a green

border instead of the usual black and real lowercase! I tried to poke some other values in Address 65314 and I came up with some interesting results:

POKE65314,21 — Real lowercase on normal screen  
POKE65314,85 — Real lowercase with green border  
POKE65314,60 — Real lowercase on inverse screen  
POKE65314,0 — Usual CoCo screen  
POKE65314,45 — Inverse screen  
POKE65314,73 — Green border

These pokes do not function on CoCos older than Tandy's latest release. Before using any of the pokes, you must first type POKE359,57. Do you know what is the cause of this? Also, do you know a way to get one of these pokes permanently on my CoCo (i.e., on power up)?

Richard Bellavance  
Rimouski, Quebec

Richard, the reason you are obtaining these results is that you have one of the new 6847T1 VDGs in your CoCo. The only way I know to have these pokes on power-up is to modify the ROMs. The VDG is initialized each time a restart is encountered.

● I have a 26-3134B. It uses the new RAM configuration. What is involved in upgrading it to 64K and Extended BASIC?

I noticed jumpers labeled 256K on the PC board. Is there a new 256K upgrade coming? Any information?

Bob Ritterbeck  
Akron, OH

Bob, the jumpers you are referring to are actually for the ROM in your CoCo. Don't you wish they were for the RAM?

● I am interested in putting BASIC and compiled machine language programs into ROM packs. Could you give me any suggestions on how to go about doing this?

Will these programs auto-execute when the computer is turned on, and when the reset button is pressed like Radio Shack ROM Packs? What is the reason for this? Where can I purchase blank ROM packs?

Darren Dykstra  
Sand Lake, MI

Darren, a program is included with the newer version of the Intronic EPROM Programmer that will do exactly what you want. Unfortunately I don't know if they sell it separately. You may write and ask.

● Is there a peek or poke, or some other simple way to "test" an item to find out what minimum RAM the program will run in?

Jeffrey Linder  
Lake Carmel, NY

You might try using the CLEAR command to limit the area of memory that BASIC uses. Entering CLEAR 200,16383 will cause BASIC to assume that there is only 16K of available RAM; if you have a CoCo with standard color BASIC (not Extended) you could go a step further and use CLEAR 200,4095 to tell BASIC to use only 4K if you wanted to check a program that is intended to run on 4K machines. After using the CLEAR statement, load your program and check to see that it runs properly. (A few programs written for 32K machines, such as those that poke their own machine language routines into high memory, will ignore the CLEAR statement; if this happens, the program will run properly even though it really requires 32K and won't run on an actual 16K CoCo.)

Your technical questions are welcomed. Please address them to: Downloads, THE RAINBOW, P.O. Box 385, Prospect, KY 40059. We reserve the right to publish only questions of general interest and to edit for space and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Your technical questions may also be sent to us through the MAIL section of our new Delphi CoCo SIG. From the CoCo SIG> prompt, pick Rainbow Magazine Services, Then, at the RAINBOW> prompt, type LET to arrive at the LETTERS> prompt, where you can select the "Downloads" online form which has complete instructions.

## How To Read Rainbow

Please note that all the BASIC program listings in THE RAINBOW are formatted for a 32-character screen — so they show up just as they do on your CoCo screen. One easy way to check on the accuracy of your typing is to compare what character "goes under" what. If the characters match — and your line endings come out the same — you have a pretty good way of knowing that your typing is accurate.

We also have "key boxes" to show you the *minimum* system a program needs. But, *do* read the text before you start typing.

Finally, the little cassette symbol on the table of contents and at the beginning of articles indicates that the program is available through our RAINBOW ON TAPE service. An order form for this service is on the insert card bound in the magazine.

## What's A CoCo?

CoCo is an affectionate name that was first given to the Tandy Color Computer by its many fans, users and owners.

However, when we use the term CoCo, we refer to both the Tandy Color Computer and the TDP System-100 Computer. It is easier than using both of the "given" names throughout THE RAINBOW.

In most cases, when a specific computer is mentioned, the application is for that specific computer. However, since the TDP System-100 and Tandy Color are, for all purposes, the same computer in a different case, these terms are almost always interchangeable.

## The Rainbow Check Plus

The small box accompanying a program listing in THE RAINBOW is a "check sum" system, which is designed to help you type in programs accurately.

*Rainbow Check PLUS* counts the number and values of characters you type in. You can then compare the number you get to those printed in THE RAINBOW. On longer programs, some benchmark lines are given. When you reach the end of one of those lines with your typing, simply check to see if the numbers match.

To use *Rainbow Check PLUS*, type in the program and *SAVE* it for later use, then type in the command *RUN* and press *ENTER*. Once the program has run, type *NEW* and press *ENTER* to remove it from the area where the program you're typing in will go.

Now, while keying in a listing from THE RAINBOW, whenever you press the down-arrow key, your CoCo gives the check sum based on the length and content of the program in memory. This is to check against the numbers printed in THE RAINBOW. If your number is different, check the listing carefully to be sure you typed in the correct BASIC program code. For more details on this helpful utility, refer to H. Allen Curtis' article on Page 21 of the February 1984 RAINBOW.

Since *Rainbow Check PLUS* counts spaces and punctuation, be sure to type in the listing exactly the way it's given in the magazine.

```
10 CLS:X=256*PEEK(35)+178
20 CLEAR 25,X-1
30 X=256*PEEK(35)+178
40 FOR Z=X TO X+77
50 READ Y:W=W+Y:PRINT Z,Y;W
60 POKE Z,Y:NEXT
70 IF W=7985 THEN B0 ELSE PRINT
  "DATA ERROR":STOP
80 EXEC X:END
90 DATA 182, 1, 106, 167, 140, 60, 134
100 DATA 126, 183, 1, 106, 190, 1, 107
110 DATA 175, 140, 50, 48, 140, 4, 191
120 DATA 1, 107, 57, 129, 10, 38, 38
130 DATA 52, 22, 79, 158, 25, 230, 129
140 DATA 39, 12, 171, 128, 171, 128
150 DATA 230, 132, 38, 250, 48, 1, 32
160 DATA 240, 183, 2, 222, 48, 140, 14
170 DATA 159, 166, 166, 132, 28, 254
180 DATA 189, 173, 198, 53, 22, 126, 0
190 DATA 0, 135, 255, 134, 40, 55
200 DATA 51, 52, 41, 0
```

## Using Machine Language

Machine language programs are one of the features of THE RAINBOW. There are a number of ways to "get" these programs into memory so you can operate them.

The easiest way is by using an editor/ assembler, a program you can purchase from a number of sources.

An editor/assembler allows you to enter mnemonics into the CoCo and then have the editor/assembler assemble them into specific instructions that are understood by the 6809 chip, which controls your computer.

When using an editor/assembler, all you have to do, essentially, is copy the relevant instructions from THE RAINBOW's listing into CoCo.

Another method of getting an assembly language listing into CoCo is called "hand assembly." As the name implies, you do the assembly by hand. This can *sometimes* cause problems when you have to set up an *ORIGIN* statement or an *EQUATE*. In short, you have to know something about assembly to hand-assemble some programs.

Use the following program if you wish to hand-assemble machine language listings:

```
10 CLEAR 200,&H3F00:I=&H3F80
20 PRINT "ADDRESS: ";HEX$(I);
30 INPUT "BYTE ";B$
40 POKE I,VAL("&H"+B$)
50 I=I+1:GOTO 20
```

This program assumes you have a 16K CoCo. If you have 32K, change the &H3F00 in Line 10 to &H7F00 and change the value of I to &H7F80.

## The Rainbow Seal

The *Rainbow Certification Seal* is our way of helping you, the consumer. The purpose of the Seal is to certify to you that any product that carries the Seal has been physically seen by us, that it does, indeed, exist and that we have a sample copy here at THE RAINBOW.

Manufacturers of products — hardware, software and firmware — are encouraged by us to submit their products to THE RAINBOW for certification. We ascertain that their products are, in actuality, what they purport to be and, upon such determination, award a Seal.

The Seal, however, is not a "guarantee of satisfaction." The certification process is different from the review process. You are encouraged to read our reviews to determine whether the product is right for your needs.

There is absolutely no relationship between advertising in THE RAINBOW and the certification process. Certification is open and available to any product pertaining to CoCo. A Seal will be awarded to *any* commercial product, regardless of whether the firm advertises or not.

We will appreciate knowing of instances of violation of Seal use.

## BARDEN'S BUFFER

# More on PSET, PRESET and Graphics Speed

By William Barden, Jr.  
Rainbow Contributing Editor

What do weather radar pictures on local TV news programs and the Color Computer have in common? More than you might think. In the last column I was nonplussed because I had coded an assembly language subroutine for setting and resetting points on a 256-by-192 graphics screen, only to find it was slower than the Microsoft BASIC PSET and PRESET! In this column I will be vindicated, to a certain extent, when I show you a Line subroutine. The whole purpose of this exercise, by the way, is to show you what's involved in CoCo graphics. The assembly language for graphics is not that easy, but once you have a few base subroutines, such as a Set Point and Draw Line, you can build upward. And we'll answer that question about TV weather radar.

### PSET Revisited

In case you missed last month's column, the assembly language PSET code is shown in Listing 1. Input to PSET is an X,Y point for a high resolution screen, stored in YX in reverse order. As there are 32 bytes per row in this resolution, each byte specifying eight pixels, dividing YX by 8 gives the displacement to the row. Adding \$E00 (for a disk system) points to the actual byte for the point. A point at X,Y = 100,50, for example, has a Y,X value of 50 \* 256 + 100 or 12,900. Dividing 12,900 by 8 gives 1,612 for the displacement from the start of the graphics page (any remainder from the division is thrown away). A decimal value of 1612 is Hex \$64C. Adding \$E00 to \$64C gives \$144C, the actual byte location containing the bit for the pixel 100,50.

The byte location actually contains on/off status for eight pixels. To locate the proper bit, the least significant three bits of X are examined and used to index into a mask table of

eight values. These three bits represent values of 0 through 7; the mask table entries of 0 through 7 contain the proper bit setting, such that the mask table value can be ORed with the pixel byte to set the proper pixel. Using the point at X,Y = 100,50 as an example, the X value in binary is 00110010. ANDing this X value with 00000111 (7) results in:

```

      00110010  X = 50
AND   00000111  To mask out three lower bits
-----
      00000010  Result = 0000010 = 2
    
```

When this index value is added to the address of MSKTAB, the mask value at MSKTAB + 2 is read. This value, \$20, is used to set Bit 5 of the byte location, regardless of the state of Bit 5 previously (set or reset).

```

      xxxxxxxx  Contents of byte location
OR   00100000  MSKTAB value, to set bit
-----
      xx1xxxxx  Bit 5 set; others unchanged
    
```

The same process can be done for PRESET, except that an AND of an inverted mask retains all bits except for the one to be reset.

```

      xxxxxxxx  Contents of byte location
AND  11011111  PRESET MSKTAB value, to set bit
-----
      xx0xxxxx  Bit 5 reset; others unchanged
    
```

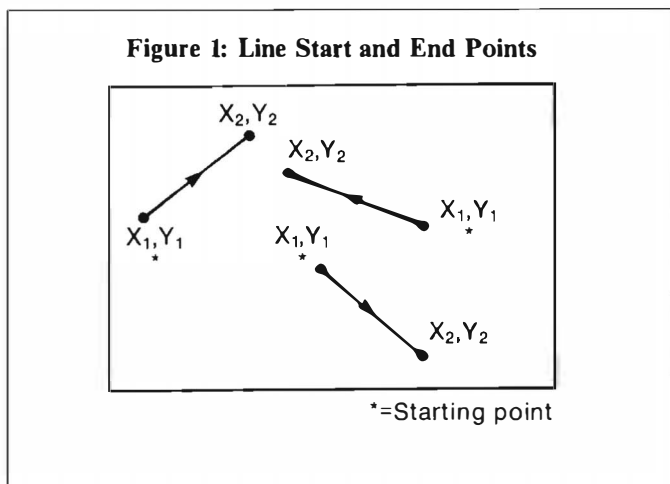

Although this code is efficient and fast, I found to my chagrin that it is not as fast as the Microsoft BASIC PSET. Although my PSET code is more efficient, the calling sequence to pass the X,Y parameters to the assembly language subroutine from BASIC is time-consuming.

*Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years experience in the industry covers a wide background: programming, systems analyzing and managing projects ranging from mainframes to microcomputers.*

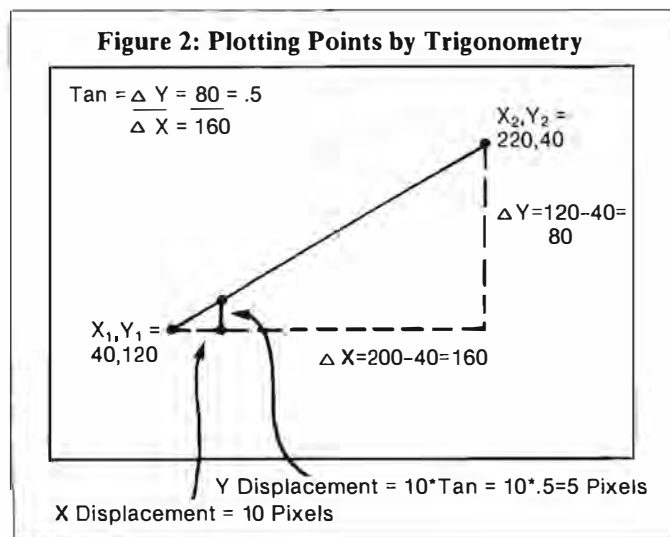

## A Line Subroutine

An assembly language subroutine to draw a line on the screen can utilize the PSET and PRESET subroutines. But how do we go about drawing a line on the screen? Let's consider some methods that could be used.

If we keep the same way of specifying lines as BASIC, we'll have a starting point called X1,Y1 and an ending point called X2,Y2, as shown in Figure 1. (We don't have to use this convention. We could specify a starting point, an angle and a line length, for example. We'll stick to the start and end point standard here, however.)

We could use trigonometry in plotting the points. The tangent of an angle is the ratio of the opposite side's length over the length of the adjacent side. Advancing one X pixel at a time, we could multiply the tan value by the new X displacement to find the corresponding Y displacement, as shown in Figure 2. But that's awfully messy, for a very good reason. It uses division to get the tan value in the first place and multiplication to get every consecutive point.

Another approach that could be used is to compute the tan value and use it as an index into a table of increment values, as shown in Figure 3. The table would give the amount that the Y value would be incremented for every step in the X direction.

Take an angle of 30 degrees, for example. Every step of one pixel in X causes a step of .577 in the Y direction. Keeping a running total of the accumulated Y value would define the Y pixel to be set. Again, though, this calls for fractional

**Figure 3: Increment Values Stored In a Table**

Tangent Values  
1-45°

arithmetic which is achieved by floating-point operations, or, at the very least, "scaling."

We're on the right track, however. The ratio of Y to X can be used not to access a table of values, but directly. This is the scheme that Microsoft uses in its implementation of LINE. It's shown in the BASIC program of Listing 2. The algorithm is a variation of one called Bresenham's Line Algorithm, which you can find in books on computer graphics, such as *Computer Graphics* by Schaum's Outline Series. (One that I can heartily recommend — it's probably clearer than most.)

The BASIC code is an emulation of the assembly language code for LINE in Extended Color BASIC at \$9401 through \$9502.

### Microsoft's LINE Algorithm

The BASIC code is entered with X1, Y1 defining the starting point, and X2, Y2 defining the ending point. Variables X and Y are set equal to X1 and Y1, the starting point. X and Y hold the coordinate of the current screen point.

First, a check is made of X2 and X1. If X2 is greater than or equal to X1, then the increment from X1 to X2 will be positive; otherwise, it is negative. Variable MA (MAJORACT) is set to 1 or 3, respectively, to record this relationship.

Next, the same check is made of Y2 and Y1, with variable

NA (MINORACT) being set to 2 if Y2 is greater than or equal to Y1 or to 4 otherwise.

Next, variables MD (MAJORDELTA) and ND (MINORDELTA) are set to the absolute value of the actual distance in pixels from start to end, as shown in Figure 4.

If MD (MAJORDELTA) is greater than or equal to ND (MINORDELTA), one point at a time along the X axis will be incremented. If ND (MINORDELTA) is greater, one point at a time along the Y axis will be incremented. In the latter case, NA (MINORACT) is swapped with MA (MAJORACT) and MD (MAJORDELTA) is swapped with ND (MINORDELTA) so that the "major" action and deltas represent the governing increment, up/down or left/right. The "minor" action involves a fraction of a pixel increment.

Next MC (MAJORCNT) is set to MD (MAJORDELTA). MC (MAJORCNT) holds the longest increment/decrement path. One PSET will occur for every pixel in this path.

NC (MINORCNT) is next set to half of MD (MAJORDELTA). NC (MINORCNT) is incremented by ND (MINORDELTA) for each PSET. This is a form of scaling where the minor increment represents a fractional increment. When the increment is greater than MD (MAJORDELTA), then the current minor coordinate will be incremented or decremented by one. For a nearly flat horizontal line, many increments will be made of NC (MINORCNT) before Y changes. For lines closer to 45 degrees, Y will be changed almost as often as X. For vertical lines, the same action is taken, but on X instead of Y. The minor increment action is really a way to step along the shorter side.

The main loop starts at Line 1000. If the MC (MAJORCNT) represents X, one increment or decrement in the X direction is done for each count in MC (MAJORCNT). For each step, PSET writes the current point. The Y NC (MINORCNT) is then adjusted by adding ND (MINORDELTA). If ND (MINORDELTA) is greater than MD (MAJORDELTA), Y is incremented or decremented in preparation for the next PSET. If the MC (MAJORCNT) represents Y, the same actions are taken but for Y and X. The four short subroutines at the end of the code represent the increment/decrement actions to be taken for incrementing or decrementing X and Y.

Confused? Admittedly, the algorithm is a little confusing. However, if you step through the BASIC code, it's fairly easy to see what is happening. The algorithm is efficient because each point along the line is written only once. In addition, there is no complicated math — just simple additions, comparisons and subtractions.

A typical call to the subroutine is shown in Listing 2 before the code for LINE.

## The Weather Radar Puzzle Explained

The idea of writing each point only once is significant. Ten years ago, I worked at a company that developed color digitizers for weather radars. The idea was to take a News At 5 black-and-white weather radar display and convert it to color. The engineer in charge had spent a great deal of time developing a hardware algorithm to simulate a radar sweep line. (To show how design efforts can be thwarted: The sweep line was "designed out" with a great deal of effort and expense in the converter electronics. However, television stations reported that viewers didn't believe the sweepless picture was really a legitimate radar scan, without the sweep line! The decision was made to put the sweep line back in.)

The engineer's algorithm was based upon incrementing X and Y an amount such that every pixel along the line of the sweep would be filled, but there would be no "gaps." He was also anxious to avoid many overwrites of pixels more than once. Unfortunately, he didn't use the Microsoft algorithm, and the resulting display, although fast enough, was inefficient, with many overwrites. But you know these hardware guys — at nanoseconds instead of milliseconds, they can afford to be sloppy.

In any event, the algorithm is one of the best in efficiency. All that's left is to speed it up by our own assembly language code.

### Assembly Language Code for LINE

The assembly language code that performs the same algorithm as the BASIC program is shown in Listing 3. It follows the same steps as the BASIC code in about the same order. It is similar, but not identical, to the Microsoft code in ROM that draws lines.

In the main loop of the code, the X and Y registers have been set up to contain the proper subroutine address for

# LEARN COMPUTER PROGRAMMING

Now you can become your own computer expert and get a computer to do just what you want. Get the most out of any computer by designing your own programs, and avoid having to pay the high price of prepackaged software.

**LEARN AT YOUR OWN PACE  
IN YOUR SPARE TIME**

Our guided independent study program allows you to learn about computers, operations, applications and programming at your own pace, in your spare time, in the privacy of your own home. No classes to attend. Our expert instructors will provide you with one-on-one counseling.

**LEARN EVEN BEFORE YOU DECIDE ON A COMPUTER**

Everything is explained in clear easy-to-understand language. You will enjoy learning to use a computer—EVEN IF YOU DON'T OWN ONE. Learn to program from the first lesson, programs that will run on any personal computer you choose: IBM, APPLE, COMMODORE, TRS, TI and more.

**LEARN AT HOME, TAKE IT TO WORK**

Programming is the best way to learn to use computers and we can show you the best and most economical way to learn programming!

incrementing or decrementing X and Y. These subroutines are LIN101, LIN102, LIN103 and LIN104. The D register (A and B combined) contains the minor count, adjusted by adding the minor delta each time through the loop. The major count in MC is decremented at the end of the loop to control the number of PSETs.

An additional function has been added in this code, however. Variable FUNC controls either a PSET or PRESET — a 0 is PRESET while a 1 is a PSET. The code for PSET and PRESET follow the LINE subroutine. It is the same as that presented in the last column, with the exception of saving and restoring the CPU registers with a stack. Separate subroutines for PSET and PRESET speed up the overall execution for setting or resetting points, as no test for the function needs to be made.

### Testing the Code

After all this work, it might be nice to have a Line subroutine that actually runs faster than the LINE function in Microsoft BASIC. The code here is faster. If used with other graphics assembly language code, it will be several times faster than calling LINE in BASIC. Even when called from BASIC, though, it is about twice as fast as LINE.

Listing 4 shows a BASIC program that illustrates the speed differences between LINE in BASIC and the code. In memory of that hardware engineer, this BASIC code simulates a radar scan in high-resolution graphics. A sweep line scans clockwise around the screen. The BASIC code to do this draws a line from the screen center to the screen edge and then erases it. There are four parts to the code, for each side of the screen.

The point at the screen center is constant, regardless of the direction of the line. We've chosen 128, 96 as the screen center.

The rightmost side is written by drawing a line from the center to a point at X=255 and a varying Y, from 0 (top-right corner) to 191 (bottom-right corner). Immediately after the line is drawn, it is erased by a PRESET. The other three sides use the same scheme — one coordinate for the side is held constant while the second varies. The sweeps of the four sides repeat continuously. One complete sweep around the screen takes about 82 seconds.

Listing 5 shows BASIC code that calls the assembly language LINE code. First, the assembly language object module is loaded from disk after memory from &H3F00 has been protected by a CLEAR. Next, the locations of X1, Y1, X2, Y2 and FUNC in the assembly language LINE subroutine are defined. This just makes it a little less work to pass parameters, using short names instead of hexadecimal addresses.

There are five parameters to be passed: the starting X and Y (X1, Y1), the ending X, Y (X2, Y2) and the functions (0 for reset and 1 for set by FUNC). These parameters are located in the middle of the assembly language Line subroutine — no great disadvantage once X1, Y1, X2, Y2 and FUNC have been defined.

The subroutine is called with the usual calling sequence. A DEF USR0 defines the starting address of &HF000, and a call is made by A=SR0(0) with a dummy argument.

All five parameters need not be defined for each call of the subroutine. The five parameters are not changed by the subroutine so they do not need to be reinitialized if they have not been changed by the BASIC code.

There's a little more work involved here in setting up the parameters, but even with the overhead, a complete sweep takes only 54 seconds.

### Using the Assembly Language LINE

You can use PSET, PRESET and LINE to do your own assembly language graphics and get a significant speed increase. You are sacrificing generality, however, as the assembly language code is designed for only high resolution two-color graphics. It's easy to see how a box function could be added to the code — four separate calls could be made for the four sides of the box. Even a filled-in box is not difficult — just draw a succession of lines from top to bottom.

BASIC graphics functions such as CIRCLE are another problem, but not impossible. A Microsoft circle is done by drawing a 64-sided polygon; again the assembly language LINE code could be used, although Microsoft uses a different approach of a sin/cosine table.

All higher-level graphics functions are built upon these "primitive" graphics operations of PSET, PRESET, LINE and a few others. If these basic functions are efficient, it will help in making higher-level operations fast as well.

### CoCo 3 Report

After many phone calls checking on the availability of CoCo 3s, I was getting a little anxious. One evening I walked into my local Radio Shack, however, and glanced toward the CoCo display. This CoCo had more keys! Sure enough, it turned out to be a 3, the only one in the store and that day's new arrival. I immediately bought it. But I was worried. Would the CoCo 3 go? Would CoCo 2 users lust after it, as I had?

I found the answer at the RAINBOWfest in Princeton, N.J., on October 17-19. I was there giving a seminar on computer languages. While there, I was astounded at the number of Color Computer 3s that were being sold — every person walking out the door seemed to have a CoCo 3 box under his arm. Admittedly, the 3s were discounted, but it was apparent to me and everyone else that the CoCo 3 is going to be a hacker's dream and another Color Computer success.

Although I haven't spent a great deal of time on the CoCo 3, I can report that the disk *EDTASM* runs just fine, except for the minor inconvenience of having to restart after coming back to BASIC from the assembler.

I love my 3 and I hope you do, too. There's a lot of material that can be covered in this column about assembly language on the CoCo 3. The old high resolution mode of 256 by 192 in two colors pales by comparison to the 640-by-192 four-color modes. The additional memory of up to 512K leaves plenty of room for high-speed graphics and other applications. And even assembly language can benefit by the higher clock speed.

In future columns we'll be looking at these applications on the CoCo 3 and also looking in detail at assembly language under OS-9. The OS-9 assembler is a different animal from *EDTASM*, but the basic instruction set is the same — it's just the way OS-9 approaches things that makes it slightly more difficult. Please let me know your feelings about what topics you'd like to see covered in the column and the mix of CoCo 3/OS-9 and CoCo 2 topics. Till I hear from you, keep assembling! □

## BITS AND BYTES OF BASIC

# The First Days With CoCo 3: Experimentation and Discovery

By Richard A. White  
Rainbow Contributing Editor

The old gray box was quiet as its plugs and multipack interface were pulled. Certainly, this had happened many times before in preparation for trips to users group meetings or the vacation cottage in Michigan. If it suspected that its successor had arrived, it did not let on.

And it had plenty of reason to doubt. In its nearly six years of existence, it had seen reams of words about other computers pour through its keyboard. The actual presence of a Model 100 had failed to change the old gray box's preeminent position. The Tandy 1000 was talked about, but never appeared on site, and dreaming about a "new CoCo" had been going on for over two years.

But, recently, a message appeared. You've seen them, the "while you were out" type, short and to the point:

Date: 10/10 Hour: 3:45  
Name: Don Eaker  
Telephoned: have good news

---

*Richard White lives in Fairfield, Ohio, has a long background with microcomputers and specializes in BASIC programming. With Don Dollberg, he is the coauthor of the TIMS database management program.*

Don runs the Fairfield, Ohio, Tandy Computer Center and has a reputation for making things happen. His is the only Radio Shack facility in the southern Ohio area whose listing in the telephone book is in boldface type. Less than an hour later, CoCo 3, Serial Number 1001394, left its last Tandy home to go on active duty.

With the old gray box on the sidelines, it was simple enough to plug 1394 in its place and fire it up. It was feeding an amber monochrome monitor, since the analog RGB monitor had not yet showed up. Marty Goodman had already alerted us to the inadequacies of a monochrome monitor handling a color composite video signal, and the 32-character screen display was certainly less than good. No surprise here, so let's move on to the 40-character screen by typing WIDTH 40. The screen cleared to one color and what looked like the  $\square$  appeared in the upper left-hand corner.

The  $\square$  was partly lost off the left edge of the screen. Adjusting the width knob on the back of the monitor brought the entire character onto the screen. There was still the black grid in the background that Marty had described a few issues ago.

Typing WIDTH 80 produced the 80-

character screen, which was also laced with background lines. Now came the discovery that makes computers so much fun. When I typed CL55, the background cleared to a uniform shade and the characters were clearly readable.

With the legibility problem solved, it was time to move on to finding out what characters were available. Actually, all the characters and their codes are in the manual that comes with the machine. But there is a saying, "When all else fails read the manual." All else had not failed. A one-liner did the job and gave me a tool to probe speed in printing to the screen and observe screen scrolling:

```
10 FOR X=32 TO 255 :PRINT CHR$(X); :NEXT :PRINT :GOTO10
```

This puts each printable character to the screen, then does a line feed and starts over again. The primary addition is a set of foreign and special characters that are not available from the keyboard. The old CoCo, colored block graphics are not available in the 40- and 80-character text screens.

The users group meeting the next day provided a chance for picky people to pass judgment on the characters and screen scrolling. A number were long-

## DOUBLE DRIVER I

The BEST monitor driver available.  
Color composite, monochrome and  
audio output. For original CoCo D, E  
and F boards. \$24.95.

## MONO II

Mono II for Color Computer 2. An  
excellent monochrome monitor driver  
that has audio output also. Specify  
model needed.

\$24.95.

Did the manual for  
your new Color Computer  
3 leave you with more questions than  
answers? If so, Color Computer 3 Basics  
And Graphics is what you need!

This practical guide to using the  
Color Computer 3 is written by Coco  
users for Coco users. It's crammed with  
examples and programs to show you how to  
use the new Basic commands.

Not only that, Color Computer 3  
Basics And Graphics comes with a disk so  
you don't have to type in the programs  
yourself.

Included is an accurate description  
of the 64 composite and RGB colors, plus  
palette suggestions so you can show your  
graphics on any kind of display. Reviews  
of hardware and guides to some software  
for the new machine.

Unlock the power in your Color  
Computer 3!

A disk full of pictures and programs  
plus a manual full of examples and  
suggestions.....\$19.95

## DOUBLE DRIVER II

Finally a monitor driver for  
the Color Computer II that  
lets you use a monochrome  
and a color monitor  
simultaneously. We're proud  
of this new driver. The six  
transistor circuit provides op-  
timal signal mixing and signal  
gain. Excellent monochrome  
output and better quality  
resolution in the color output

than any driver we have  
seen. Audio output also. Fits  
all models of the Color Com-  
puter II. \$29.95.

## THE COCO-SWITCHER

A QUALITY PIECE OF HARDWARE

The CoCo Switcher allows you to hook up  
three peripherals to your RS-232 jack. Con-  
nect your modem, printer and any other  
RS-232 compatible peripheral to the CoCo  
Switcher. An LED on the CoCo Switcher  
shows if your computer is on or off at a glance,  
The LED flickers when transmitting or receiv-  
ing data.

\$39.95 plus \$2.00 shipping and handling

Service available. California residents add 6% sales tax.

time *Wordpack* users. The consensus was that this was a good character set and that the scrolling was also good. And this came from one user who has complained long and loud about the jumpy scrolling of an IBM PC.

In the early days of the CoCo, much was made of the "high-speed pokes." POKE 65495,0 doubles the microprocessor clock speed whenever it accesses the upper 32K where the BASIC ROMs are located. POKE 65497,0 doubles the clock speed without qualification. Only the earliest models have trouble with the POKE 65495,0. The old gray box will tolerate it only if there is no disk ROM pack installed.

Since CoCo 3 supports the 1.8-MHz clock, only the POKE 65497,0 is used. Certain functions, including musical tone generation, the cassette port and serial port are clock-rate dependent and the POKE 65496,0 is used to return the machine to the slower clock to achieve proper timing. Some people have been able to use the serial port at the higher clock rate. To date I have not heard of successful cassette operations at a high clock rate. You can easily see the effect of the high speed clock by running the screen scrolling program previously mentioned to get a feel for screen writing and scrolling at low speed. Then POKE 65497,0 and run the program again. It really speeds things up. I suspect that most CoCo 3 software will be designed to use the high clock rate.

The next thing to do was to turn everything off and plug in the multipack interface that held the disk drive controller. I booted back up and issued a DIR command. I got back an SN Error. BASIC had not recognized the drive controller. Eventually, I dispensed with the interface and then could boot into Disk Extended BASIC Version 2.0 or 2.1. I have controllers with both versions 1.0 and 1.1 available. The CoCo 3 converts these to versions 2.0 and 2.1. However, when I tried to access the disk, an I/O Error resulted. Finally, it dawned on me that these were older controllers that require 12 volts, which is not supplied by either CoCo 2 or CoCo 3. Even worse, these controllers almost worked. They work well enough to trash any disk you try them on. So beware!

The solution to this problem is to use the older controllers in a multipack interface. But, if CoCo 3 does not see the Disk BASIC when it is in a multipack interface, we are back to square one. The problem is in the interface, and Radio Shack has said the PAL chip

would need to be replaced. (See Marty Goodman's article on Page 98 of this issue.) However, we had assumed that interfaces would work with 128K machines and that the upgrade was needed to operate with 512K. We now know that the upgrade is needed for an interface to be operable at all. A disk controller with a Radio Shack DOS ROM that works in a CoCo 2 works in the CoCo 3.

One result of these doings is that the old gray box is back in its accustomed place performing its usual duties, while 1394 is on another table making pretty pictures. This arrangement works better for doing this column, since I can experiment on the CoCo 3 and then immediately move over to write about what I found. ■

At this point, I wanted to see some graphics. Rick Adams and Dale Lear had two programs on October's RAINBOW ON TAPE. The tape interface worked. The *Tunnel* program is not much on a black-and-white monitor, but *Wheel* does what it is intended to do. Since I had seen what I wanted to see on the monitor, it was time to hook 1394 to a color TV.

It quickly became apparent why Radio Shack has stayed with the 32-character CoCo screen so long. The 40- and 80-character text screens and the new high resolution graphics screens are 64 pixels wider than the old CoCo screens. If the TV does not properly center the screens, the edge of the left side is lost. In my case, one to two characters on the left edge of the 40-character screen and more on the 80-character screen were off the screen. The TV at the Computer Center was only somewhat better.

Interestingly, 80-character text is readable on my color TV, but it is fairly new and still has good contrast. And the quality is not what one needs for continuous use. Expect 80-column text to be illegible on old sets with poor contrast and other ills. I quickly found myself returning to the 32-character screen to enter programs. The 32-character screen looks fine on a color TV. It is only on monochrome monitors that one has trouble. This is not to say that programmers should not use the 40-character screen. It does mean that programs must forgo using a couple of columns at least on the left side of the screen.

The cause of the the centering problem lies in the computer, since the screen is offset to the left on both the TV and

monitor. I am told that the same thing happens when an MS-DOS machine runs on a TV. I expect that much new programming will use CoCo 3 modes, partly because of the ability to put text onto graphics screens.

*Tunnel* in the 16-color graphics mode on the color TV was something else entirely. The pastel colors blending into each other gives an effect totally lost in black and white.

Looking for something more led me to Sample Program 24 in the manual. It draws 80 circles on the screen and fills each with a random color. It then draws some colored bars at the top and bottom of the screen. Then the program goes into a loop and randomly changes the colors in the palette. The result is spectacular with all elements changing colors at the same time. And it's fast. I put a high speed poke into the program, but took it out because the changes came too fast.

On a reasonable quality TV, CoCo 3 is a spectacular graphics machine. On top of this it appears that the new high resolution graphics commands are a bit easier to understand and use than the original Extended BASIC commands.

While the original Extended BASIC commands remain and should run all older Extended BASIC programs, their capability is enhanced so they can use any of the computer's 64-color set. These colors are now available to all text and graphics modes. The job is done through use of the palette, which is as good a place as any to start.

In the CoCo 3, as in previous CoCos, each color is referred to by number. Previous CoCos supported eight colors plus black in the low resolution graphics and two or four color subsets of these colors in the higher resolution modes. These restraints still apply, except that the available colors are determined by reference to specific slots in the palette that are initialized with numbers that refer to colors available on previous CoCos. These default settings can be changed from the keyboard or from a BASIC program changing the available colors in any text or graphics mode at any time.

PALETTE is used in two ways. The first is to configure the colors in the slots for either a composite monitor or TV set: PALETTE CMP. This is the default from a cold start. Whenever PALETTE CMP is issued, the default palette colors are reestablished. PALETTE RGB sets up the machine to use the RGB analog monitor to be released by Tandy. The

RGB monitor interpretation of colors is different from that of a composite video monitor. When you cold start a CoCo 3 with an RGB monitor, you will have to enter the PALETTE RGB command from the keyboard. The command could also be the first line of a BASIC program. I suspect that there will be a way to configure the computer for an RGB monitor from an OS-9 start-up file.

The second use is to change the color assigned to a particular slot or palette register. The syntax is PALETTE pr, cc where pr stands for palette register or slot and cc means color code.

There are 16 palette registers numbered 0 to 15. The computer refers to the palette registers to determine which colors are to appear on the screen. When a palette register's color assignments change, all locations on the screen referring to that slot change. Here is a BASIC program that will change the screen color showing all available colors:

```
10 HSCREEN 2
20 HCLS 2
30 FOR X=0 TO 63 : PALETTE 2,X
   : FOR Y=1 TO 300 :NEXT Y,X
```

HSCREEN 2 sets the computer for the 320-by-192, 16-color graphics. HCLS2 clears the graphics screen to the color in Palette Register 2. In Line 30, X is incremented from 0 to 63 and the Color Codes are loaded into Palette Register 2 with PALETTE 2,X. FOR Y=1 TO 300 :NEXT Y is simply a delay loop so the colors can be observed.

The manual does not list all the available colors. This is probably because of differences in the ways different monitors and TVs display colors. What may be yellow on one machine could be yellow-orange on another, while a pastel green might be shifted to yellow. What they call buff looks like white to me. A program, Sample Program 23, is provided to present each color and its number in groups of eight. With this program, you can view all the colors and list them as they appear with your equipment. A picture of the first screen shown by this program should help you adjust your TV or monitor to display colors in a similar manner. There appear to be 16 basic colors with pastel variations. In the first cycle, the colors are intense with intensity diminishing in higher numbered cycles. The only colors I really missed were dark brown and a selection of grays. A picture of the old gray box might need to have a bluish cast. And it certainly will be possible to

Slot	Color	CMP Code	RGB Code
0	Green	18	18
1	Yellow	36	54
2	Blue	11	9
3	Red	7	36
4	Buff	63	63
5	Cyan	31	27
6	Magenta	9	45
7	Orange	38	38
8	Black	0	0
9	Green	18	18
10	Black	0	0
11	Buff	63	63
12	Black	0	0
13	Green	18	18
14	Black	0	0
15	Orange	38	38

**Table 1: Startup Color Assignments**

	CLS	ATTR Foreground	ATTR Background
Color 0	----	Slot 8	Slot 0
Color 1	Slot 0	Slot 9	Slot 1
Color 2	Slot 1	Slot 10	Slot 2
Color 3	Slot 2	Slot 11	Slot 3
Color 4	Slot 3	Slot 12	Slot 4
Color 5	Slot 4	Slot 13	Slot 5
Color 6	Slot 5	Slot 14	Slot 6
Color 7	Slot 6	Slot 15	Slot 7
Color 8	Slot 7	----	----
Defaults ---	Foreground:	Slot 8	Black
	Background:	Slot 0	Green

**Table 2: Color Slot Numbers**

draw an electric pink Cadillac.

The startup color assignments are listed in the manual and are reproduced in Table 1.

The colors in slots 0 through 8 include the colors used by the traditional CoCo low resolution text screen, but color number does not correspond to slot number. Black is in slot 8 and all colors are in slots numbered one slot lower than the color number. I am not satisfied that this confusion is needed.

Things get worse with the 40- and 80-column text screens. CLS works just like

it does for the 32-column screen. A new command, ATTR c1,c2,B,U is available. How ATTR does what it does is not immediately obvious. Central to understanding is that c1, the foreground color, uses one set of palette slots while c2, the background color, uses an entirely different set of slots. Further, c1 uses higher numbered slots, while c2 uses lower numbered slots. It seems backward. Reread this paragraph and make sure you understand the arrangement. Perhaps a table will help. Table 2 appears on Page 300 in the manual.

The discussion of ATTR in the front of *the manual* does not even mention the table, leaving the user to wallow in confusion.

To finish off ATTR, B is a switch to start text blinking and then stop blinking; U is a switch to start and stop underlining.

At this point we have enough information to explain why CLS5 clears the screen on a monochrome monitor and makes the lettering legible. Color 5 references Slot 4, whose default color is buff (which is white for most purposes). The default foreground color is black. The composite video signal carries only black and white information, which is what the black and white monitor wants to see. ATTR 2, 4 accomplishes the same thing. Available background colors do not include black in the default situation. Try this:

```
PALETTE 0,0
ATTR 1,0
```

This assigns the color black to Slot 0; green is in Slot 9, which is used as Foreground Color 1. The result is green

letters on a black background. ATTR 3,0 provides buff letters on black. Both displays have color fringes in a TV screen, but don't look bad from a distance. Neither color is readable on the 80-character screen, and dark on light is better on the 40-character screen. PALETTE CMP undoes all the damage we did with this experiment.

PRINT, PRINT TAB and PRINT USING work on the 40- and 80-column screen just as they do on the 32-column screen. PRINT @n, is only used on the 32-column screen. On the 40- and 80-column screens use LOCATE x,y to position the cursor to column x and row y. The next PRINT statement will begin printing at that location. The column can be 0 to 39 on the 40-column screen and 0 to 79 on the 80-column screen. On either screen, rows range from 0 to 23.

Note the difference between the ways PRINT@n, and LOCATE x,y work. LOCATE x,y merely positions the cursor at a particular column position on a specified line. When using PRINT @n, each screen location has a number. The range is 0 to 511 on the 32-character screen. Further, PRINT @n, expects there to be

a string or variable following the comma, which is to be printed. You can use PRINT @n, like LOCATE x,y, if you follow the comma with a null string and a semicolon, like PRINT @n, "";

As noted, the left one or two character positions on the 40-column screen are lost when using CoCo 3 on a color TV.

Good programming practice will be to start all printing at Column 3. This will generalize your programs so they will work on monitors or TVs. LOCATE 2,y would be used prior to each PRINT statement that is to print to the left side of the screen.

Alternately, you can use PRINT TAB(4); "TEXT". This prints the text at the same position as LOCATE 2,y. The implication is that the computer uses 80-column locations even when working on a 40-column screen.

This essentially covers the operation of the 40- and 80-column text screens. They represent a major improvement over previous CoCos. Next month we will move on to the new graphics capabilities.

From the Princeton RAINBOWfest . . .

## The CoCo 3 Round-Table Tape!

THE RAINBOW recorded the main event of RAINBOWfest Princeton, the Saturday evening (Oct. 18) round-table discussion:

### "The Design, Development and Marketing of the CoCo 3."

Speakers included Tandy's Barry Thompson and Mark Siegel, as well as independent CoCo 3 programmers Steve Bjork and Dale Lear (filling in for Greg Zumwalt).

This was a lively and informative session and, therefore, we want as many people as possible to hear what these RAINBOWfest guests had to say.

YES, Please send me \_\_\_\_\_ copies of the "CoCo 3 Round-Table Tape" at \$5 per copy plus \$1.50 S/H for a total of \_\_\_\_\_ (U.S. Currency only, please.)

## KISSable OS-9

# Debunking the Myth of OS-9 User Hostility

By Dale L. Puckett  
Rainbow Contributing Editor

Since January's RAINBOW is dedicated to beginners, we'll take a fresh look at the basics of OS-9 this month and try to eliminate some of the apprehension that surrounds Color Computer owners trying to use OS-9 for the first time. We'll wrap up the column with a few tips submitted by readers.

## Myth Versus Reality

OS-9 is the victim of a myth in Color Computer circles. Those who perpetuate that myth would have you believe that OS-9 is difficult to use and impossible to understand. Not so!

The ironic thing about this myth is the fact that it most likely exists because of the tremendous computing power

built into OS-9. Many options come with this power; options that give you the opportunity to make many choices.

Many people become overwhelmed when they face too much freedom or too many choices. They think that just because a choice exists, they have to make it. They lose sight of the fact that no action — or choice — is always an option. A professional operating system like OS-9 usually delivers a popular default action when you decide not to make a choice.

To illustrate our point we will try to give several examples that compare OS-9 to the Disk Extended BASIC used by the Color Computer. To do this, we'll show you how to do a few trivial tasks using several different tools. For example, let's imagine we want to print a message on our Color Computer screen. With Disk Extended BASIC we could type a simple command to do the job immediately after we turn on our computer.

```
PRINT "HELLO, I'M A COLOR
COMPUTER!"
HELLO, I'M A COLOR COMPUTER
```

As soon as we type the command line, our Color Computer will print the

second line on the screen. Disk Extended BASIC is a language and one of the verbs in that language is PRINT. Each time Disk Extended BASIC sees the word PRINT it looks at the string of characters or variable following that word and prints it.

If you wanted to print the same line on the screen several times, you could type in a short program and run it.

```
10 FOR X = 1 TO 10
20 PRINT "HELLO, I'M A COLOR
COMPUTER!"
30 NEXT X
RUN
HELLO, I'M A COLOR COMPUTER
HELLO, I'M A COLOR COMPUTER
```

BASIC09 is another computer language that runs under the OS-9 operating system. Using an advanced design, it compiles each line of your program into an intermediate or I-code as you type it in. As a result it can run your programs four to five times faster than Disk Extended BASIC. Additionally, programs written in BASIC09 are much easier to read and understand because they do not require line numbers and they let you use long variable names that convey a meaning. Reading a

BASIC09 program is almost like reading the solution to a problem written in English. For example:

```
FOR LINE := 1 TO 10
  PRINT "HELLO, I'M A COLOR
  COMPUTER!"
NEXT LINE
```

When we run this program, BASIC09 produces the same results on our screen as the Disk Extended BASIC program. If we wanted a stand-alone program, we could write the same program using the C language compiler that runs under OS-9.

```
main( )
{
  int line;
  for(line = 0; line != 10;
  line++)
  printf("HELLO, I'M A COLOR
  COMPUTER! \n");
}
```

---

***"Just think of an operating system as a traffic cop on a busy corner . . . OS-9 directs the flow of information inside your computer."***

---

Disk Extended BASIC, BASIC09 and C are all languages. While the syntax of each language is a bit different, the result is the same. Each language lets you do the same job.

OS-9 is not a language. Rather, it is an operating system. And the many utility commands that come with it let you do many things. For example, the OS-9 echo utility lets you simulate the first Disk Extended BASIC PRINT command line above. Even though it is a command that tells the OS-9 operating system to do something, it delivers a result just like the PRINT verb in Disk Extended BASIC. Try it. At the OS-9 prompt, type:

```
OS9: echo HELLO, I'M A COLOR
  COMPUTER ENTER
HELLO, I'M A COLOR COMPUTER
```

Note that we did not type the excla-

mation point in our example. It is a special character in an OS-9 command line and is used to set up a pipeline. We'll talk about pipelines later.

By repeating the echo command line above 10 times in an OS-9 procedure file we could even simulate the other programs. However, since the OS-9 Shell is not a complete programming language and does not allow FOR-NEXT loops we would need to type the echo command line 10 times. Let's try it!

```
OS9: build TenTimes ENTER
? load echo ENTER
```

```
? echo Hello, I'm A Color
  Computer ENTER
? echo Hello, I'm A Color
  Computer ENTER
? ...
? unlink echo ENTER
? ENTER
```

```
OS9: TenTimes ENTER
Hello, I'm A Color Computer
Hello, I'm A Color Computer
...
OS9:
```

It may not be elegant. But, it works and serves to illustrate the point that OS-9 is not really that complicated. It's just another way of getting a job done.

### OS-9 Can Do Graphics Too!

The OS-9 module that writes to your Color Computer screen can also do graphics. Just to prove the old adage that the more things change, the more they stay the same, let's look at three ways to draw a box near the edge of your CoCo graphics screen. We'll use Disk Extended BASIC first.

```
10 PMODE 1,1
20 PCLS
30 SCREEN 1,1
40 LINE (10,10) - (10,176),
PSET
50 LINE (10,176) - (240,176),
PSET
60 LINE (240,176) - (240,10),
PSET
70 LINE (240,10) - (10,10),
PSET
80 GOTO 80
```

As an alternative, we could have replaced lines 40 through 70 with Line 40 below. But, we wanted to keep our example programs parallel.

```
40 LINE (0,0) - (255,191),
PSET,B
```

To write the same program in BASIC09 we would use the following lines:

```
run gfx("mode",0,4)
run gfx("clear")
run gfx("color",7)
run gfx("move",16,16)
run gfx("line",16,176)
run gfx("line",240,176)
run gfx("line",240,16)
run gfx("line",16,16)
```

Note that when you work with graphics under OS-9, the module named `grfo` must be available in memory or in your current execution directory. We'll talk more about modules in memory and the OS-9 directories later. For now, you should know that the `gfx` in the BASIC09 program lines above is the name of a BASIC09 module that interprets the high-level language parameters within parentheses and sends out the proper control codes to the OS-9 screen driver module. The `move` command above places OS-9's invisible graphics cursor at a position 16 pixels up from the bottom of the screen and 16 pixels to the right of the screen's left edge. We drew our box in from the edge of the screen so it would be easier to see it on a monochrome monitor. All of this implies that you should be able to send these codes to the screen driver module from the OS-9 command line, and you can.

The easy way to draw the box above using OS-9 would be to use a series of command lines containing the `display` utility in a procedure file.

```
OS9: build box ENTER
? load grfo
? load display ENTER
? display F 0 4 ENTER
? display 10 4 ENTER
? display 11 7 ENTER
? display 15 10 10
? display 16 10 B0 ENTER
? display 16 F0 B0 ENTER
? display 16 F0 10 ENTER
? display 16 10 10 ENTER
? unlink display ENTER
? ENTER
```

```
OS9: box ENTER
```

You could also type `display` followed by each of the hexadecimal numbers used above in one command line. We formatted the OS-9 procedure file the way we did to make it parallel in structure to the BASIC09 program. The line with `display 15 10 10` places the invisible cursor used by the OS-9 graphics driver 16 pixels up and 16

pixels to the right of the lower left-hand corner of the OS-9 graphics screen, just like the `move` command in the BASIC09 program. Notice also that the OS-9 `display` command uses hexadecimal numbers, while the BASIC09 program used decimal numbers. The Location B0 is 176 pixels up from the bottom of the screen. The Location F0 is 240 pixels to the right of the left edge of the screen. Notice how these numbers compare to the decimal numbers in the BASIC09 and Disk Extended BASIC programs.

```
OS9: display F 0 4 10 4 11 7 15
      10 10 16 10 B0 16 F0 B0 16 F0 10
      16 10 10
```

You can also use the OS-9 `display` utility with the proper control codes to move the graphics cursor, set individual pixels on the screen to a specific color, draw circles and paint an area of the screen with a specific color.

Now that we have shown you that OS-9 is merely another way to give directions to your Color Computer, we'll move on to show you how to get started using OS-9. Hopefully, we'll be able to show you how to avoid a few trouble spots along the way.

### OS-9 is an Operating System

Before we move on we should take a few moments to talk about operating systems. In the language of a systems designer, an operating system controls the low level processes within your computer. It gives your applications programs a way to talk to and control your hardware. It also manages your memory and other finite resources within your computer.

These processes are nothing more than short programs that happen to be running and doing a job for you. They

may be putting characters in a disk file or they may be sending a series of characters to a printer. Your system resources include external devices like your terminal, printer and disk drives. They also include things inside your computer like memory and the micro-processor's time.

Just think of an operating system as a traffic cop on a busy corner. The traffic cop directs the flow of automobiles on a busy street. OS-9 directs the flow of information inside your computer, making sure that the right data gets to the right place at the right time.

### Getting Started With OS-9

There are two ways to bring OS-9 to life on your Color Computer. The method you use depends on which Disk Extended BASIC ROM is in your CoCo. If you have Disk Extended BASIC 1.0 then you must use the special OS-9 boot disk that comes with your OS-9 system disk. You must insert it in Drive 0 and type `RUN"*"`. A few seconds later the screen will instruct you to insert the OS-9 master disk in Drive 0 and press any key to continue.

If you have a Color Computer with Disk Extended BASIC 1.1, then all you need to do is put the OS-9 master disk in Drive 0 and type `DOS`, a Disk Extended BASIC command that does the same thing as the `RUN"*"` command above.

After typing `DOS`, OS-9 will ask you the date and time. OS-9 uses the date and time when it saves a file. And if you forget the date or want to know what time it is, OS-9 can retrieve that information and print it on the screen. If you are using versions 1.00 or 1.01 of OS-9, `setime`, the OS-9 utility command that asks you for the time must be run

each time you start OS-9. It starts the pseudo clock that runs within OS-9. If this clock is not running, OS-9 is not able to run multiple tasks.

If you want to know the current date while running OS-9, you can ask for it by using the `date` utility command that comes with your system. Simply type: `OS9: date` and press `ENTER`. OS-9 will print the date on your screen for you. If you need to know the time, you can ask OS-9 to print that by typing `OS9: date t` and pressing `ENTER`.

If you type this command right after you start the Color Computer, OS-9 will look in its module directory for a module named `date`. Since you haven't loaded that module, OS-9 will not find it. Because it could not find the module in memory, OS-9 will look for it in its current execution directory. This directory is almost always `/d0/CMD5` on standard OS-9 systems. If you haven't deleted the file named `date` from your disk, OS-9 will find it, load a module named `date` into memory and execute it. After it does all of this, you will see the date appear on the screen.

If you knew you were going to ask for the date and time every few minutes, you could load the `date` command in memory. After you do this, it will appear to run instantly (`OS9: load date`). In fact, you can load a number of program modules into memory and have them available instantly. However, if you try to load too many programs into the crowded 64K workspace available with OS-9 Level I, you will quickly run into a problem — you won't have enough memory left in your computer to run the large programs that do most of your real work. BASIC09, for example, takes up approximately 22,000 bytes of memory.

All of this means you have to write

## OS-9™ SOFTWARE/HARDWARE

**SDISK**—Standard disk driver module allows the full use of 35, 40 or 80 track double sided disk drives with COCO OS-9 plus you can read/write/format the OS-9 formats used by other OS-9 systems. (Note: you can read 35 or 40 track disks on an 80 track drive). Now updated for OS-9 ver. 02.00.00 **\$29.95**

**SDISK + BOOTFIX**—As above plus boot directly from a double sided diskette **\$35.95**

**L1 UTILITY PAK**—Contains all programs from Filter Kits Nos. 1 & 2 plus Hacker's Kit #, plus several additional programs. Over 35 utilities including "wild card" file cmds, MacGen command language, disassembler, disk sector edit and others. Very useful, many of these you will find yourself using every time you run your system. These sold separately for over \$85. **\$49.95**

**SKIO**—Hi res screen driver for 24 x 51 display; does key click, boldface, italics; supports upgraded keyboards and mouse. With graphics screen dump and other useful programs. **Now UPDATED FOR OS-9 Ver 2.0 \$29.95**

**PC-XFER UTILITIES**—Utilities to read/write and format ss MS-DOSTM diskettes on CoCo under OS-9. **\$45.00 (requires SDISK)**

**CCRD 512K Byte RAM DISK CARTRIDGE**—Requires RS Multipak interface, two units may be used together for 1MB disk. OS-9 driver and test software included. **\$199.00**

All disk prices are for CoCo OS-9 format; for other formats, specify and add \$2.00 each. Order prepaid or COD, VISA/MC accepted, add \$1.50 S&H for software, \$5.00 for CCRD; actual charges added for COD.

**D.P. Johnson, 7655 S.W. Cedarcrest St.

MS-DOS is a trademark of Microsoft, Inc.

your programs in a number of small modules while programming with BASIC09 on an OS-9 Level I system. You must then load each module from a disk when you need it. Modularity is a big plus for BASIC09, but loading a module from disk every time you need to run it can be a big pain.

### **OS-9 Level II Solves Many Memory Problems**

If you already own a CoCo 3 with 512K of memory, rest easy. When OS-9 Level II becomes available, many of the problems feeding the myth that OS-9 is hard to use and understand will disappear. I have been running OS-9 Level II with only 240K of memory for more than four years and I have never run into a problem.

---

***“Modularity is a big plus for BASIC09, but loading a module from disk every time you need to run it can be a big pain.”***

---

OS-9 Level II helps solve memory problems by setting up a separate 64K of workspace for each task running on your computer. Let's briefly compare OS-9 Level I and OS-9 Level II.

With OS-9 Level I you can only access 64K of memory. Part of this is due to the fact that the 6809E processor in your Color Computer can only access 64K of memory. The rest is due to the fact that OS-9 Level I does not know about memory management beyond the 64K boundary. Enter OS-9 Level II.

OS-9 Level II works with two different types of workspace. For starters, it sets aside a system workspace that holds all of the device descriptors and device drivers you need to access your hardware as well as the file managers, kernel and other internals that OS-9 needs to manage your computer's resources. And here's another bonus — that same system workspace is used for all the data memory needed by OS-9.

After setting up its own system workspace, OS-9 Level II then sets up a separate workspace for each process you start. Remember, a process is simply one of your programs that

happens to be running. The important fact to remember is that each of these user workspaces can be up to 64K long. Let's get specific and show what this really means to you.

What happens when you run BASIC09 from within OS-9 Level I? In a few words, memory space is cramped and you have very little room for programs. For example, in my system I have 145 pages, or just over 36K, of memory free immediately after I start OS-9. After loading BASIC09, I have 55 pages, or just over 13K, of free memory left. That doesn't give me a lot of space to work.

Now, let's see what happens when I run BASIC09 with OS-9 Level II. After loading BASIC09 it just sits there in memory. It will be available almost immediately, but it won't be using any data workspace until I start it as a process by running it from the command line. When I do run it, I will have nearly 64K, or 256 pages, of memory available for it and the programs it is running. This means BASIC09 will be able to use approximately 64K-22K, or nearly 42K, of memory for its programs and data. In reality, there is closer to 63.5K of memory available in each workspace because the top memory locations are mapped to the hardware. But in any case, 42K of memory is much better than 13K.

### **Making a New OS-9 Disk**

One of the most important lessons you can learn when you start to work with OS-9 is to always work with a copy of the master disk you purchased from Tandy. Never work with the original disk because accidents can happen — even to experienced hackers. So when you first run OS-9, make a backup of that precious master disk. It isn't hard to do and it shouldn't take too much time. Think of the time as a valuable investment.

First, you will need to format a new disk. To begin, type `OS9: load format free` and press ENTER. Now, take the OS-9 system master disk out of Drive 0, insert the new disk in the drive and type `OS9: format /d0` and press ENTER.

The `format` program asks you if you really want to format the disk in Drive 0. After you confirm that the disk in Drive 0 is indeed your new disk and not your master system disk, press Y for yes and the `format` program will go to work.

`Format` will then ask you to name the new disk. You can make up any name

here because that name will be replaced when you back up the master system disk on the new disk. After you type the name, `format` will verify the data it placed on the new disk and you will soon see the OS-9 prompt again. When you do, type `OS9: free /d0` and press ENTER.

The `free` utility command should report that you have a total of 630 sectors on the disk and that 620 sectors are available to use. If `format` found any bad sectors on the new disk it will report a number smaller than 630. If this happens, do not attempt to back up the system master disk on to it. The OS-9 `backup` utility requires that the `format` of the disk you are using to hold the backup is formatted exactly like the original disk you are backing up. If the two formats are not identical, the `backup` command will not work. Don't even try.

Assuming that your new disk is good, take out the new disk and put the master system disk back in Drive 0. Then type `OS9: unlink format free` and press ENTER.

This command line removes the two utility programs you loaded earlier and frees more memory for you to use when you do the actual backup. Now type `OS9: load backup` and press ENTER.

After `backup` is loaded you must take the original master disk out of Drive 0 and put the newly formatted disk in that drive. Then type `OS9: backup s /d0 #32K` and press ENTER.

When the OS-9 `backup` utility asks if you are ready to back up from `/d0` to `/d0` answer with a Y for yes. The program will instruct you to get the destination disk and press any key. Since you already have it in the drive, go ahead and strike any key. OS-9 asks you if it is OK to write over the disk in the drive. Again, press Y for yes.

You'll then be asked to get your source disk ready. Remove the `backup` disk from the drive, insert the master system disk and then press any key. You will have to repeat the steps above several times, swapping the disks when the `backup` program asks you to, until the original disk is completely copied onto the new disk.

Now that you have a new copy of the system master disk you should store the original master disk in a safe place. The important thing to remember about `backup` is that you can only back up a disk to another disk of identical size. You cannot back up up a 35-track disk to a 40-track drive. Nor can you back

up a single-sided, 40-track disk to a double-sided, 40-track disk.

To back up all the files on a disk of one format onto a disk formatted differently, you must use the OS-9 `dsave` utility command or one of the many alternative copy commands from third-party vendors. Without going into a lot of detail, here is an OS-9 command that will do the job: `OS9: dsave /d1 /d0 ! Shell` and press ENTER.

You'll notice that this command assumes you have two disk drives in operation. After you have used OS-9 a few hours, you will discover that two disk drives are indeed a necessity — not a luxury. The exclamation point in the command line above causes `dsave` to send its output to the OS-9 command interpreter, which is named Shell. It is an example of the pipelines we mentioned earlier.

### Customizing Your Disks

One of the most important advantages of OS-9 is the fact that it lets you customize your system to your heart's content. Unfortunately, this ability also makes a tremendous contribution to the myth that OS-9 is difficult to use and hard to understand.

Make the pledge right now to stick with the basics until you are ready to start modifying your system. Practice running the utility commands that are stored in the `/d0/CMDS` directory of your working system disk. Follow the directions in the OS-9 manuals or *The Complete Rainbow Guide To OS-9* carefully. After you understand what is happening when you run each command, you can move forward freely and modify your computer as you like.

Many of the problems you'll encounter if you are running OS-9 Level I revolve around the severe memory constraints forced on you by the limited 64K workspace. In fact, many of the error messages you receive when you start to work with OS-9 procedure files will occur because there is simply not enough memory to load in the module required to do a specific task.

Another error message you may see quite often at first is Error 216 — File Not Found! This error pops up a lot for beginners because they do not fully understand the OS-9 file system.

The important thing you must understand is that OS-9 always maintains two working directories. One of these directories is called the current execution directory. The other is called the current data — or working — directory.

OS-9 always looks in the current

execution directory when it is looking for a file that contains a program it needs to run. Likewise it usually stores all data files and looks for procedure files in the current data directory.

Here's the trick. The current execution directory and current data direc-

tory are seldom stored in the same physical position on two different disks. This means that even though these directories may have the same names on both disks, they are often not located on the same track or sector. Because of this, OS-9 will not be able to find your

#### Listing 1: `fixtime`

```
*****
*
* FIXTIME - COPYRIGHT (c) 1986 by S. B. GOLDBERG
*
* Updates time to help correct clock for disk usage.
*
* Counter update is $49 from start of module. Use
* Debug to change timing count, if necessary. In-
* crease the count to slow the clock, decrease the
* count to speed up the clock. Check clock operation
* and change in source code when it keeps good time
* and re-assemble object module. Do NOT unlink fixtime
* while testing, or you'll have a total system crash.
*
* Fixtime can't be unlinked if part of OS9Boot file.
* Use OS9Gen to add fixtime to boot file and execute
* from your startup file. Do NOT use Cobbler after
* executing fixtime, the CRC and header will not be
* correct!!!
*
*         ifpl
*         use /d0/defs/os9defs
*         endc
*
*****
* SET COUNT TO KEEP YOUR CLOCK ON TIME *
*****
count equ 8 disk access count
vector equ $010A NMI vector address
*
*         mod len,name,prgrm+objct,reent+1,entry,dsiz
*

bne jump not yet
lda #count yes, counter value
```

current directories if you swap disks without telling it.

Here's the solution. If you remove one disk from a drive and insert another, always type:

```
OS9: chd /d0/MyDirectory ENTER
OS9: chx /d0/CMD5 ENTER
```

Note that the directory names in these two command lines are simply examples and you need to type the names of the actual directories stored on the disk you have inserted.

Hopefully, we have given you enough information to get you started and pointed out a few of the pitfalls to avoid when you first start running OS-9. Hang in there and practice. Stick with the simple utilities until you thoroughly understand what is happening when you run them. After you conquer a command, move on to another. Before long, you'll be able to control your Color Computer like you never could before.

And, if the Not Enough Memory Errors are driving you crazy, just remember that OS-9 Level II and 512K of usable memory at your fingertips is just around the corner with the new CoCo 3. I have a hunch that the new visual shell that Microware and Tandy are developing will bring intuitive computing and applications to OS-9. Things should really be fascinating in about a year.

### CoCo SIG Database Expanding

The OS-9 database in RAINBOW's CoCo SIG on Delphi is really expanding. I understand that the complete library of the OS-9 Users Group should be available soon. And even without the Users Group Library, the number of files has expanded dramatically in the last few months.

You can now find beginners' tutorials and help with downloading files in a series of excellent articles in the database. In addition to the articles, you will find several dozen programs including a disassembler, Steve Bjork's bouncing ball demos and many utilities. You will even find drivers and descriptors for the J&R Banker RAMdisk and the Speech/Sound Cartridge from Tandy. Plus, you'll find a number of files that show you how to patch several OS-9 programs. Take a look; you'll like what you see!

### Tips From Bob Rosen

Bob Rosen reports that to use a monochrome monitor on the Color

```

sta counter,pcr reset counter

  partition's driver name.
*/
char drivename[32];
int temp;
/*
  Reboot main program.
*/
main(ac,av)
int ac;
char *av[];
{
/*
  Reboot has no default argument.
*/
if (ac != 2)
  failed("Wrong number of arguments");
/*
  Argument 1 is the diskette or hard disk
  partition name.
*/
strcpy(devname,av[1]);
/*
  Try to link to the device.  Success if
  the device is already in the module
  directory.
*/
device = modlink(&devname[1],DEVIC,OBJECT);
/*
  Verify existence.
*/
if (device == SYSERR)
{
/*
  No problem, try to load it.
*/
device = modload(&devname[1],DEVIC,OBJECT);
/*
  Verify existence.
*/
if (device == SYSERR)
/*
  Now we have a problem.  The device
  descriptor is not in the execution
  directory!
*/

```

Video Composite output of the CoCo 3 you can type:

```

WIDTH 80: PALETTE 8, 255:
PALETTE 0, 0

```

To have your CoCo 3 tell you who wrote the Microware Disk patch, type:

```

WIDTH 40 : CLS 9 : CLS 100

```

And, finally, Rosen researched the pinout of the RGB monitor jack and shares it here. Looking at the outside of the RGB out jack on the bottom of the computer, you'll see the following pinout:

```

9 7 5 3 ■
10 8 6 4 2

```

Here are the connections:

***"If you own several versions of OS-9, make sure you use only the utility commands that came with each version."***

---

#### OS9Gen Tips From Walt Weber

We received a nice note with several tips from Walt Weber in Marysville, Wash., recently that repeats some advice we have mentioned several times in the past but which bears repeating. If you own several versions of OS-9, make sure you use only the utility commands that came with each version. The same is especially true if you are using the ASM command that comes with OS-9. You need to make sure that you use the OS9DEFS files that came with the version of OS-9 you are currently using. If you don't, tricky bugs can sneak into your object code that will be almost impossible to find.

Weber has done a lot of experiment-

# Protect and highlight your important magazine collection with sturdy RAINBOW binders

## Distinctive, Durable RAINBOW Binders

THE RAINBOW is a vital resource to be referred to again and again. Keep your copies of THE RAINBOW safe in our quality, distinctive binders that provide complete protection.

These attractive red vinyl binders showcase your collection and ensure your RAINBOWs are in mint condition for future use. Each binder is richly embossed with the magazine's name in gold on the front and spine. They make a handsome addition to any room.

### Put an End to Clutter

Organize your workspace with these tasteful binders. Spend more time with your CoCo and eliminate those frustrating searches for misplaced magazines.

A set of two binders, which holds a full 12 issues of THE RAINBOW, is only \$13.50 (plus \$2.50 shipping and handling).

### Special Discounts on Past Issues

To help you complete your collection of THE RAINBOW, we're offering a special discount on past issues of the magazine.

When you place an order for six or more back issues of THE RAINBOW at the same time you order binders, you are entitled to \$1 off the regular back issue price. To order, please see the "Back Issue Information" page in this issue.

### Know Where to Look

You may purchase the "Official And Compleat Index To THE RAINBOW" for \$1 when you purchase a set of binders. This comprehensive index of RAINBOW's first three years (July 1981 through July 1984) is usually priced at \$2.50.

For greater convenience, order RAINBOW Binders through the shopping area of the CoCo SIG of Delphi!

\_\_\_\_\_ **YES.** Please send me \_\_\_\_\_ set(s) of RAINBOW binders

**Take advantage of these special offers with your binder purchase:**

\_\_\_\_\_ Save \$1 off the single issue cover price for back issues. Minimum order of 6 magazines. Please enclose a back issue order form from a recent issue indicating magazines wanted.

\_\_\_\_\_ Purchase the "Official and Compleat Index to THE RAINBOW" for \$1. (Regular price \$2.50.)

(These offers good only with the purchase of a RAINBOW binder set)

Name \_\_\_\_\_

Address \_\_\_\_\_

```

ing with the OS9Gen command. In fact, he has written a program named *GenMod* which is available in the DL6 section of the OS-9 SIG on CompuServe. It adds three options to an existing OS9Gen command and fixes a few bugs he located in the original. *GenMod* makes it easier to change your OS9Boot file if all you need to do is delete and/or add a module to it.

While he was experimenting with OS9Gen he learned that the OS-9 kernel gets located at \$F000 and is \$F00 bytes long in Version 1.00. However, in Version 2.00.00, it is located at \$EF00 and is \$F80 bytes long. Unfortunately, it seems these locations and lengths are hard coded into Cobblerr and OS9Gen. Version 1.00 of these commands marks the 15 sectors of Track 34 allocated in the disk allocation map of the diskette. Version 2.00.00 marks all 18 sectors, even though only 16 contain the kernel.

This means that if you boot up in Version 1.00, but use OS9Gen from Version 2.00, the wrong data will be written to the disk on Track 34. Booting up in Version 2.00.00 and using OS9Gen from Version 1.00 won't work either.

Weber also found a bug in Version 2.00.00 of OS9Gen. It seems that it will rewrite Track 34 if it determines that an OS-9 kernel is on the track. But, a bug in both Cobblerr and OS9Gen can cause problems in the disk allocation map when a kernel is already on Track 34. Here is Weber's patch. The Cobblerr patch begins at an offset of 23F from the beginning of the module.

```

OLD: EC B4 B1 4F 10 26 00 A6 C1 53
      10 26 00 A0 A6 04
NEW: CC 4F 53 10 A3 B4 10 26 00 A4
      A6 04 30 C8 52 12

```

Here is the OS9Gen patch. It begins at an offset of 47F.

```

OLD: EC B4 B1 4F 10 26 01 06 C1 53
      10 26 01 00 A6 04
NEW: CC 4F 53 10 A3 B4 10 26 01 04
      A6 04 30 C9 02 00

```

Additionally, you must change the A7 at an offset of 4A9 to an A6, and the 1D at an offset of 4AD to an 18.

### **Fixtime**

Stephen B. Goldberg, of 695 Plainview Road, Bethpage, NY 11714, has contributed another interesting utility program. He wrote *Fixtime* because he got fed up with having the system clock end up 20 or 30 minutes slow after a

long session at his CoCo. `Fixtime` is his attempt at keeping the clock on time. It does violate several rules of OS-9 programming. It is self-modifying and it loads and stores to fixed addresses. But it works. It must be loaded before you run it and Goldberg reports that he thinks it is a good idea to add it to your OS9Boot file after you have debugged it so that it won't get unlinked accidentally. If the `Fixtime` does get unlinked after you run it, your system will crash. Also, after you have run `Fixtime` you cannot use `Cobbler` to generate a new OS9Boot file.

### ReBoot

Bob Santy of Medford, Mass., and Greg Law both caught me when I stated that you couldn't remove the floppy disk driver and descriptor when running OS-9 from a hard disk. I stand corrected. While writing this column, I often need to transfer files from a disk someone mails me to my hard disk.

Because of this constant use, it never occurred to me that I could run the system without the floppy drivers — even though I could always load them in and use them when needed. The fact that the Tandy hard disk I used for several months seldom found the `/h0` descriptor like it should until it had been running for several hours, also side-tracked me.

As Santy pointed out in his letter, the boot module stored with the kernel and init on Track 34 of a Color Computer OS-9 disk is completely self-contained and capable of reading the system into memory without the CCDisk driver and `/d0` device descriptor. This means if you are using a hard disk you can save a lot of memory by not loading the floppy drivers. This can be a big help to you if you want to run the Tandy/Micro-ware C compiler on the Color Computer.

Santy contributed the `reboot` utility program listed this month. It requires the pathname of the device you want to boot as an argument. He wrote it for use with the hard disk he purchased from Software Support of Ashland, Mass. That disk has bootable partitions and `reboot` works well on that device.

Even if Santy's utility will not work with your hard disk, it is full of excellent C code that may help you when you need to write other C utilities. It is an outstanding example of how good comments make a program easier to understand, and it is a valuable contribution. □

# Telewriter-64™

## the Color Computer Word Processor

- 3 display formats: 51/64/85 columns × 24 lines
- True lower case characters
- User-friendly full-screen editor
- Right justification
- Easy hyphenation
- Drives any printer
- Embedded format and control codes
- Runs in 16K, 32K, or 64K
- Menu-driven disk and cassette I/O
- No hardware modifications required

### THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with *true lower case characters*. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.

...one of the best programs for the Color Computer I have seen...

— Color Computer News, Jan. 1982

### TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

### 64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer — 16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

### 64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays: 64 × 24 and 85 × 24! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command.

The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, *all on the screen at one time*. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing.

### RIGHT JUSTIFICATION & HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple. Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

### FEATURES & SPECIFICATIONS:

**Printing and formatting:** Drives any printer (LPV7/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Terminus, etc).

Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dot graphics, etc.

Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification.

Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.

Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

**File and I/O Features:** ASCII format files — create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).

Cassette verify command for sure saves. Cassette auto-retry means you type a load command only once no matter where you are in the tape.

Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.

**Editing features:** Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.

...truly a state of the art word processor...  
outstanding in every respect.

— The RAINBOW, Jan. 1982

### PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs \$49.95 on cassette, \$59.95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.)

To order, send check or money order to:

Cognitec  
704 Nob Street  
Del Mar, CA 92014

Or check your local software store. If you have questions, or would like to order by Visa or Mastercard, call us at (619) 755-1258 (weekdays, 8AM-4PM PST). Dealer inquiries invited. (Add \$2 for shipping. Californians add 6% state tax.)

Available at  
**Radio Shack stores**  
via express order  
catalogue #90-0253

& COCO III  
COMPUTERS**

**SUPER BACK-UP  
UTILITY ©**

...WITH S.B.U. FROM COMPUTIZE — YOU'LL NEVER NEED ANOTHER BACK-UP UTILITY FOR YOUR COCO!!! SUPER BACK-UP UTILITY WILL PERFORM ALL OF THE FOLLOWING FUNCTIONS:

1. TAPE TO TAPE (Regardless of most protection schemes)
  2. TAPE TO DISK (Move Cassette programs to Disk)
  3. AUTO RELOCATE (For those Cassette programs that conflict with Disk operating systems.)
  4. DISK TO TAPE (Place Disk programs onto Cassette)
  5. DISK TO DISK (Our powerful Split-N-Image Program. Copies regardless of most protection schemes)
- MENU DRIVEN
  - REQUIRES 32K EXTENDED COCO
  - REQUIRES 1 OR 2 DRIVES
  - ALL MACHINE LANGUAGE!!!
- COMPARE WITH OTHER INDIVIDUAL PROGRAMS COSTING IN EXCESS OF \$100.00

DISK \$49.95 ..... Cat. No. 107CD

**SPIT-N-IMAGE ©**  
M/L Disk Back-Up Utility

There is no need to suffer the heartbreak of crashed disks any longer. Spit-N-Image will create a mirror image of your valuable disk programs which do not respond to normal back-up functions. Will also initialize and back-up in one pass. Data processing experts always insist on having a back-up — it's good practice.

REQUIRES 32K CC  
DISK \$34.95 ..... Cat. No. 101CD

**TRIPLE TRANSFER  
UTILITY ©**

Transfer contents of disk to tape • Transfer contents of tape to disk • Automatically relocates cassette programs that conflict with the disk operating system • Displays machine language program addresses • Copies ASCII, Basic, & Machine Language Programs • All contained in 1 menu driven program!

REQUIRES 32K CC EXT.  
Disk \$24.95 ..... Cat. No. 105CD

**"Y BOX"**

If you have ever owned a "Y" Cable you know how easy it is to "bump" or dislodge the cable from the computer. With the positive mechanical connection of the "Y Box" chances are greatly reduced of the "Y" coming dislodged.

One of the most common causes of a shorted data bus in the CoCo is a misaligned or loose "Y" Cable. Don't let your computer be the next victim of a "Y" Cable. Order the "Y Box" from COMPUTIZE.

- NOISE FREE "GOLD CONTACT" TO YOUR COMPUTER
- POSITIVE MECHANICAL AND ELECTRICAL CONNECTION
- Catalog No. 162CH Only \$29.95

**MASTER KEY II**

New Improved Version! A hardware product that takes control of any program regardless of protection. Now use with RS Multi-pak, "Y" cable or optional extender cable. Captures register contents as they were when Master Key II was engaged. Complete disassembler, memory save, and much more. Requires some familiarity with Assembly Language.

ROM PAK Cat. No. 160HR ..... \$ 99.95  
Cat. No. 161HR With Ext. Cable ..... \$109.95

\*\*\*\*\* THE LATEST IN COCO NEWS!!! \*\*\*\*\*

**QUICK BACKUP  
UTILITY \$19.95**

Catalog No. .... 185CD  
Deluxe backup utility for the Radio Shack Color Computer.

- Backup a disk in as few as 32 seconds (in three passes)
  - Format and backup a full disk in one minute
  - Full error correcting features (retry, skip, infinite retry)
- Displays the current track that is being processed, works with all ROM versions. Supports 1 or 2 disk drive. A great disk production tool.

**GRAPHICOM \$24.95**

Catalog No. .... 111GD  
Simply stated - One of the finest graphic programs written for the Color Computer!

- FEATURES:
- S-U-P-E-R U-S-E-R F-R-I-E-N-D-L-Y !

- Supports 4 Hi-Res display modes
- 4 page animation mode
- Color Palette with over 15 color patterns for use with Hi-Res artifact
- Send/Receive pictures over modem
- Supplied utility allows capturing Hi-Res screens from most COCO arcade games
- Multiple Hi-Res character fonts (user re-definable)
- Supplied utility for transferring Graphicom screens to Basic or other M/L programs.
- Supplied utility for loading screens from Basic or other sources
- Built in Hi-RES SCREEN PRINT (compatible with EPSON, C-ITOH, GEMINI-10, OKI, plus Radio Shack's LP-VII, LP-VIII, DMP-100, DMP-200, and GCP-115 printers) from 110 to 9600 baud
- SEND/RECEIVE slow-scan television
- Many additional features, operating hints, hardware mod's and suggestions, etc.

REQUIRES 64K COCO, 1 DISK DRIVE, AND 2 ANALOG JOYSTICKS

**OUR  
GRAPHICOM  
DIGITIZER  
JUST GOT BETTER**

**ARE YOU LOOKING  
FOR A HI-RES GRAPHIC  
SCREEN PRINT  
PROGRAM?**

**HARDCOPY**

THE ULTIMATE PRINTER UTILITY

©1984 WHITESMITH 011.0  
ALL RIGHTS RESERVED

HARDCOPY - HarDCopy is more than just a screen print utility, compare these features with any other graphic dump program on the market;

- Full GRAPHICOM/GRAPHICOM PART II compatibility! Loads STANDARD 6K images, GRAPHICOM pictures, and COCO MAX pictures too!
- BLACK & WHITE or GREY SCALE printing. In GREY SCALE printing, colors are printed as user definable patterns. Supports hi-res in all 4 GRAPHICOM display modes!
- 1x, 2x, 3x PRINTOUTS - Three menu options are reserved for the most frequently used printout sizes; 1x (quarter page), 2x (half page), and 3x (full page).
- GRAPHIC LABELS - The label printing option allows the user to create custom mailing or disk labels with professional looking results.
- GREETING CARDS - The greeting card option allows the user to custom design greeting cards using both text and graphics.
- GIANT POSTERS - The poster option provides the user with a means of reproducing a hi-res graphic to a multi-sheet poster.
- SPECIAL EFFECTS - The special effects option allows the user to directly control the printing directives; ROTATION, X/Y SIZE, X/Y FLIP, X/Y GRID, X/Y FILL, TAB, WINDOW, POS/NEG IMAGE, and more!
- USER CALL - Have an application that HARDCOPY doesn't quite match? HARDCOPY routines can be added to EXTENDED BASIC through the USR command!

**Season's  
Greetings**

Announcing COLORSCAN, new software for the CGP-220. This program is a must for anyone who owns a Radio Shack Ink Jet Printer, and enjoys creating graphics with Graphicom, Graphicom Part II, CoCo MAX, or any program that produces a standard 6K binary picture files.

This program contains some of the popular features found in "HARDCOPY" such as 1x1, 2x2 and posters; but color scan produce full color printouts of your favorite 6K graphics files. You can also create colorful banners up to 27" in length, or dump a disk's entire graphic contents to paper.

Colorscan will print program listings in blazing color, make remarks in red, line numbers green, search for strings and print in blue, etc. All these features and more.

Colorscan catalog number 184WD ..... \$29.95

**GRAPHICOM PART II  
Catalog No. 132WD . \$24.95**

GRAPHICOM PART II DOES NOT  
REQUIRE GRAPHICOM TO RUN!

Graphicom Part II is a video processing package that provides many functions that are missing in Graphicom. Here are just a few of the features provided by Graphicom Part II:

**ENLARGE/REDUCE/ROTATE**  
Enlarge or reduce any portion of a graphic screen, just like a photographic enlarger! Rotate by any degree or fraction of a degree around any point on the screen.

**PAINT**  
Paint or "fill-in" any irregular area on the screen! More than 50 different colored patterns available. Additional paint patterns may be user-defined.

**PAN & ZOOM**  
"Zoom in" x2, x4, or x8 on any portion of the screen to do fine pixel work. Allows editing of Graphicom character sets with ease!

**TYPESETTER & FONT EDITOR**  
Add text in 16 different sizes, also supports user definable foreground & background colors. Design & Edit characters for use in the typesetter.

**PIXEL BLASTER**  
Allows the user to easily substitute or remove colors. Widen lines, swap BLUE & RED without effecting BLACK & WHITE, etc.

Graphicom Part II requires a 64K extended disk basic system, and supports 1 to 4 disk drives, keyboard or joystick (analog or switch type) input. It will load and save both Standard BIN files and Graphicom screens. All functions support color or Hi-Res operation, as well as the 4 screen display modes.

HARDCOPY\* requires a 64K Color Computer or Color Computer II, and at least one disk drive. It supports 1 to 4 disk drives, keyboard or joystick input. Please specify printer and cat. number when ordering.

\* Due to hardware differences, some features may function differently on certain printers.

# Help Us Battle the High Cost of Disk Drives

**NOW . . .  
V-PRINT**  
A utility to print  
directory on paper  
**\$9.95**

## New Lower Price Un-DISK Drives ~~\$49.95?~~ **\$34.95**

You Bet! There are empty spaces in your 32K and 64K CoCo. The Preble VDOS Un-DISK helps you fill them up with PROGRAMS!

- Un-DISK uses your computer's extra memory like a fast disk drive.
- Un-DISK can store BASIC and MACHINE LANGUAGE programs.
- Un-DISK is INVISIBLE. Yup! Un-DISK does not interfere with normal Color Computer Operation.
- Un-DISK appears only when you type the magic word VDOS.
- Un-DISK comes with comprehensive instructions which you may not need because:
- Un-DISK is self-prompting and easy to use!
- Un-DISK is provided on cassette.
- Un-DISK is faster than a slow clumsy DISK DRIVE and best of all . . .
- Un-DISK is CHEAPER than a DISK DRIVE!
- Un-DISK will work even if you already own a disk but WHY BUY A DISK AT ALL?
- Un-DISK should be in the library of every serious CoCo user even if you own a disk says Frank J. Esser, independent reviewer for RAINBOW Magazine!

OK sure, disk drives ARE NICE. I own one. But if your finances are limited, the Un-DISK can give you much of the power of the mechanical drive. Even if you already own a disk the Un-DISK can work like a super fast extra disk

**EXTRA . . . EXTRA . . . EXTRA . . . EXTRA . . .  
Additional Power For \$14.95**

Only with VDUMP for the Un-DISK!

- VDUMP lets you make a cassette backup copy of everything stored in the Un-DISK.
- VDUMP lets you save 5, 10, 15 or more programs on a single cassette tape file.
- VDUMP lets you switch Un-DISKS. With a single load operation replace a group of financial programs with a set of children's programs. (The new VDUMP tape overwrites the old.)
- VDUMP can allow you to save a whole lot of RAINBOW ON TAPE in a SINGLE file.
- VDUMP is the perfect companion to the Preble VDOS Un-DISK.

Available from Doctor Preble's Programs, naturally! Bringing you fine Color Computer Products Since 1983!

# FROM C.R.C COMPUTERS

# DISTO SUPER PRODUCTS

**DISTO SUPER CONTROLLER**  
**\$99.95**

- Gold contacts on all connectors
- Shielded metal box
- Four 28 pin sockets for software expandibility
- Uses 2764 or 27128 EPROMs only
- EPROMs are software selectable
- Internal Mini-Expansion-Bus interface for DISTO SUPER add-ons or user projects
- C-DOS included (RS-DOS compatible), single or double sided, 6 to 30 ns step rate
- Works on all COCOs or COCO IIs

**DISTO SUPER RAMDISK**  
**\$129.95/256K**  
**\$169.95/512K**

- Inexpensive 2nd drive Emulator
- Works with all COCOs (Multi-Pak required)
- Easy installation, Just plug in and go
- Low software overhead
- Much faster than a regular drive
- Plain language instructions
- Complete OS-9 Drivers available\*
- Compatible with COCOMAX if used with C-DOS+
- Internal Mini-Expansion-Bus for DISTO ADD-ONS
- Gold contacts on all connectors
- Shielded metal box

**DISTO SUPER ADD-ONS**  
 Four add-ons are currently available

- **REAL TIME CLOCK/PRINTER INTERFACE**  
 An internal clock that will keep the proper time, date and year. A small battery keeps the time when the computer is off. Retrieve and set the time by using simple Basic Pokes. The Real Time Clock/Parallel Printer Adapter is a single unit. Software drivers included. \$39.95

- **MINI EPROM PROGRAMMER**  
 Yes, a low cost programmer that attaches to the DISTO SUPER CONTROLLER or SUPER RAMDISK. Program those often used utilities into EPROMs and plug them directly into your controller. Will program 2764's or 27128's. A perfect mate for the DISTO SUPER CONTROLLER. \$54.95

- **DISPLAY 80 SUPER CARD**  
 A real knock-out. DISPLAY 80 is a three in one card. It's major function is to add an 80 column by 24 line display to your computer. This feature packed package also includes a REAL TIME CLOCK and PARALLEL PRINTER INTERFACE. An all-in-one package that fits neatly inside the Controller or Super Ramdisk. OS-9 software available\*. \$139.95

- **HARD DISK INTERFACE (Coming soon)**  
 Fits inside Super Controller or Super Ramdisk. S.A.S.E. interface compatible. OS-9 Drivers available\*. Supports WD-1002-SHD or ZEBEC 1410 controller.
