BOUNCING BOULDERS

Bouncing Boulders is a new, fast paced arcade-style game for your Coco. As you race your man around the screen you try to collect enough stars to open the exit to the next level. You can drop rocks to kill aliens that follow you around the screen trying to catch you. But beware of the falling and bouncing boulders as they will crush your man if you get trapped under one. The many different screens with lots of puzzles will keep you playing for hours on end.

A refund of 10/12ths the subscription amount after two issues are mailed. No refund after mailing of three or more magazines.

Computers To Go

Editor:

Two of your RAINBOWfest articles have mentioned an accomplishment by CoCo users who have made their CoCos portable. I have a Model 4P and, while I like the clarity of the monitor and the built-in number pad, I wish it had the insides of my CoCo. I lack the skill and the tools to make the necessary changes. Is there another reader in the Pittsburgh area who has the ability and the desire to help me with the transplant?

I enjoy your magazine very much. Few products provide a support service as good as yours. It is like having a user's club meeting in my home every month.

*John H. Mooney
217 Terrace Avenue
Zelienople, PA 16063*

IBM Follows the Leader

Editor:

Chalk up another point for the new CoCo 3 and CM-8 monitor. In a recent issue of *PC Weekly*, (December 9, 1986) it was announced that a new IBM PC will be introduced in 1987 that "will support an analog (as opposed to the standard digital) monitor." Is IBM trying to be Tandy Color Computer 3 compatible?

*Steve Ostrom
Minnetonka, MN*

A Powerful Solution

Editor:

I do not understand why some people need a separate power indicator. Years ago, my system got to a point where I had to ask myself, "Now, what piece of equipment is on?" In addition, the floor was covered with extension cords. Then I woke up.

Since the power requirement of the normal home computer system is very low, much less than the normal 15 watts of a household outlet, I decided to use a power strip to turn everything on or off at the same time. If I need more than the six or eight outlets on a power strip, I just use a second one either from the first or from a second wall outlet. I have never had any problems.

*Bobi Tweddell
Brampton, Ontario*

Super Controller Update

Editor:

Owners of the Disto Super Controller may experience problems using it with the new CoCo 3. A timing problem in some of the older controllers can cause the computer to "hang up" while accessing a disk. If you have this problem, contact C.R.C. Computers, Inc. at (514) 383-5293. The CoCo 3 update costs \$8 and includes return shipping and handling.

*Tony DiStefano
C.R.C. Computers
Montreal, Quebec*

BACK TALK

Editor:

In the November 1986 issue [Page 10], E. W. Rees stated that the *VIP Library* is very hard to use and that Softlaw [now VIP Technologies] has terrible support. I must agree with him on the support, but disagree about the ease of use. I find *VIP* programs very easy to use. To me, the documentation is very complete and easy to understand. On top of all that, every program has a help feature. I truly enjoy using *VIP* software, and find them very user-friendly.

*Paul E. Jones
Princeton, KY*

Still Kickin' in Spokane

Editor:

The membership of the MC-10 International User's Group read with great resentment Mr. Scerbo's comments ["Prepare for Thanksgiving Cooking With Liquid Measure," November 1986, Page 62] about the MC-10 computer. If his intent was to see how much flack he could get, or to poll readers to see how much interest is left in the MC-10, he has succeeded.

Tandy stopped producing the MC-10 micro Color Computer, but it did not die. It is a great, affordable piece of hardware. This computer allowed some of us less fortunate to get our feet in the door of the computer world, and most of us have never set foot outside since.

Our group was started in 1984 with the publishing of newsletters to inform computer users about the wonders of the MC-10. We grew rapidly, combining forces from six countries, and in 1986, each issue of our newsletter contained 20 pages of informa-

tion about the MC-10 (with a couple pages dedicated to crosslinking information with CoCos).

*Larry Haines
East 2924 Liberty
Spokane, WA 99207*

Fred Scerbo replies to Mr. Haines and other MC-10ers in his "Wishing Well" column this month.

HINTS AND TIPS

Editor:

TX word processor is CoCo 3 compatible. Edit Line 6 and change the variable G=65495 to G=65497. Save *TX* on a new disk and label it "CoCo 3 Only" (the new value in G scrambles the screen on the older CoCos). *TX* must be used with the WIDTH 32 screen display.

An attempt to list Line 0 of *TX* will lock up the CoCo 3.

*Fred Kolesar
Westfield, PA*

Cassette Port Conversion

Editor:

Readers interested in building an adapter that will convert the cassette port of a CoCo to an RS-232 port will find construction plans in the December 1986 issue of *Modern Electronics*. The article includes a BASIC program listing that loads a machine language subroutine to drive a printer from a BASIC program, as well as patches to create an OS-9 printer driver. The following corrections should be made. In Figure 1, the polarity of D2 should be reversed. In Figure 3, the "K" at the top end of R5 should be at the top end of D1 and the top end of C3 should be labeled "t".

*Duane M. Perkins
Mount Gretna, PA*

Aiding the Doctor

Editor:

I'm pleased to see the "Doctor ASCII" column added to RAINBOW. I find this column very informative and interesting. However, in the November 1986 issue [Page 154], Scott Lane asked how the INKEY\$ is used. While the answer Mr. Esposito gave is correct, there is another way to use INKEY\$. The code I use is as follows:

```
100 EXEC 44539 : A$=INKEY$
```

RUNS ON
COCO 3

AUTOTERM TURNS YOUR COLOR COMPUTER INTO THE WORLD'S SMARTEST TERMINAL!

YOU'LL ALSO USE AUTOTERM FOR SIMPLE
WORD PROCESSING & RECORD KEEPING

NOW HI-RES

EASY COMMUNICATION + WORD PROCESSING + TOTAL AUTOMATION

Full prompting and error checking. Step-by-step manual has examples. Scroll text backward and forward. No split words on screen or printout. Save, load, delete files while on line. Print, save all or any part of text. XMODEM for machine language files. 128 ASCII characters, 1200 baud, etc. Works with D.C. Hayes or any modem. Handles files larger than memory. Print on line with J&M or RS232 Pak. Screen widths of 32, 40, 42, 51, 64.

Editing is super simple with the cursor. Find strings instantly too! Insert printer control codes. Specify page size and margins. Switch quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text or files, download information, file it, and sign-off; then edit the receive data, print it in an attractive format, and/or save it on file. Compatible with TELEWRITER.

Advanced system of keystroke macros lets you automate any activity, such as dial via modem, sign-on, interact, sign-off, print, save. Perform entire session. Act as message taker. At start-up, disk version can automatically set parameters, dial, sign-on, interact, read/write disk, sign-off, etc. Timed execution lets AUTOTERM work while you sleep or play. No other computer can match your COCO's intelligence as a terminal.

Please hire the mentally retarded. They are sincere, hard working and appreciative. *Thanks!* Phyllis.

Thumbs Up for Solitaire

Editor:

I've played the commercially available version of *Solitaire* and after a while it gets boring and predictable. I didn't find this to be true with Tudor Jones' version that appeared in the December 1986 issue [Page 76]. It's much easier and doesn't always come up with the same starting set of cards as does the other version. This version also doesn't allow you to cheat.

As a programmer, I found it irresistible to modify Mr. Jones' program slightly. It runs exactly the same. The only two changes I've made were to include Line 141 so that the hearts and diamonds were painted red:

```
141 IF SUIT=1 OR SUIT=3 THEN POKE
178,2:PAINT(XC+11,YC+22),,0:PO
KE178,0
```

I also changed the values of S\$(1) through S\$(4) so that the cards would have the symbols instead of the letters on top denoting the suits, like this:

```
1230 S$(1)="BR2H3UERFERFDG3":S$(
2)="R3HUEFU3GHEL3F3HD3EFD2U
4RDL":S$(3)="BU3F2E2H2G2":S
$(4)="BRR2LU2L2R4UL4E2FL"
```

With these minor changes, you don't have to look at the H, C, S and D on the card and try to remember which is black and which is red when placing cards.

Bill Bernico
Sheboygan, WI

There is a minor correction to Solitaire appearing on Page 182 of this issue.

Clearly a Problem

Editor:

I'd like to point out a bug in the new Enhanced BASIC for the CoCo 3. If you type CLEAR 17000:WITH40, the computer locks up. If you use a slightly lower value in the

CLEAR statement, it works. Anything higher than about 16350 does not work.

Raju Dash
Downers Grove, IL

Please read the following letter.

Editor:

I would like to inform all CoCo 3 owners about two potentially dangerous problems concerning programming the CoCo 3. It seems that if you should use the CLEAR command to reset the value of the stack pointer in BASIC between the \$2000 to \$3FFF range when using the Hi-Res text screens, BASIC will destroy its stack clearing the screen. This will crash the computer.

The second problem is using the Hi-Res text screens and the old ROM/RAM page switch at \$FFDE and \$FFDF. Should you run a program that uses the 96K switching method, BASIC tries to switch in a page already in use by the Hi-Res text screen with the possibility of losing your work or locking up your machine.

Aside from these glitches in the CoCo 3, I find it better than most 68000-based microcomputers costing much more.

If anyone can explain how Xmodem protocol works, please write me. I am writing a terminal program and will gladly share credit for it.

Mike Pepe
15 Lambs Lane
Manalapan, NJ 07726

REQUEST HOTLINE

Editor:

I am looking for programs in science and math. Does anyone have information on where I can find such programs?

Anthony J. Dee
135 East 38th Street
Erie, PA 16501

Personnel Planner

Editor:

I work at a hospital that requires continuous coverage day and night. I must make out work schedules for three shifts per day, seven days a week, taking into account holiday time, vacation time, etc. This is done by hand and is incredibly time-consuming. If anyone has a program that would help or information about one, please write me.

William Caldwell
1718 Great Highway
San Francisco, CA 94122

Out in Left Field

Editor:

I'm a big baseball card collector and I am trying to make a listing of all my cards using files. Can anyone give me a hand?

Mike Bushman
25655 Salem
Roseville, MI 48066

We suggest you see *Baseball Card File* by James W. Wood. His program was in the May 1986 issue on Page 66.

MC-10 Transfer

Editor:

Is there a program available to convert MC-10 programs to run on the Color Computer 2 with disk? Anyone having this information, write me.

Nila D. Grose
R.D. 1, Box 173A
Manheim, PA 17545

Hand-to-Hand Combat

Editor:

Does anyone know where there is a good hand-to-hand combat game in which you fight different things or people on a certain level and then progress to a different level to fight more? I am looking for one similar to the one in the arcades called "Gladiator."

Mike Rebbecca
208 Osage Avenue
Somerdale, NJ 08083

INFORMATION PLEASE

Editor:

I have the new CoCo 3 and a DMP-430 printer and I am wondering if there is anyone who has used this printer with a CoCo. I am a member of a local duplicate bridge group and I print bulletins for the club. The printer contains IBM character sets containing the card symbols and I would like to be able to call them up to use. I had a short program that would allow me to do this but, unfortunately, it was accidentally

erased and I have not been able to duplicate it. I would appreciate any assistance. Call (803) 873-8375 or write me.

Karl Gulliford
136-B Braly Drive
Summerville, SC 29483

Where Is It?

Editor:

I own a CoCo I with 64K ECB, disk drive, printer, modem and cassette deck. I went to a Radio Shack Computer Center hoping that they might solve my long quest for *Flight Simulator II*. They said it would be out in late September or early October. I was wondering if anyone has heard when *Flight Simulator II* will be out since it's already out for many other computers?

Corrie Bender
11216 S.E. 235th Place
Kent, WA 98031

Thinks It Re-Inks

Editor:

I've heard that there is a new printer ribbon on the market. It seems that someone has taken a regular ribbon cartridge and modified it so that it continuously re-inks itself. The cartridge apparently lasts longer than regular cartridges. Is this for real? I have found that costs are substantial for ribbon replacement. Do you know who I can contact to buy this new type of ribbon?

Sharon A. Hartzog
2546 Moonstone Drive
San Diego, CA 92123

We are not aware of a regular ribbon cartridge that re-inks itself continuously. However, *Computer Friends* advertises an automatic ribbon re-inker on Page 89 in the January 1987 issue. They may be able to provide you with more information.

Unsavoury Characters

Editor:

In "Reviewing Reviews," November 1986 [Page 131], Graham Langford of Pickering, Ontario complained of a problem with his *Penpal* software that I experience when using *Ultra Telepatch* with *Telewriter 64*. The problem completely spoils an otherwise excellent word processor. The keys A, H, I, G and O, when held down even briefly, intermittently repeat unwanted incorrect characters. I'm using a 2-year-old CoCo 2 with an FD501 controller and no other peripherals attached. This problem occurs both in the editor and the menu screens.

I've written to the author twice since testing this software on CoCo 2 models in two different Radio Shack stores, where it also exhibited this problem. Mr. van der Poel claims this is the only complaint of this nature he has received and could not duplicate the problem, even with a copy of my working disk. [See Bob van der Poel's letter in "Reviewing Reviews."]

He suggested that I may have a bad PIA, but why did the two newer computers I

tested it on behave in the same manner? All my other software runs perfectly on this machine.

Has anyone else in the CoCo Community experienced this problem and if so, what did you do to solve it? I want to continue to use my CoCo 2, but if I can't get the best word processor program to work flawlessly on it, I will have to give it up.

Blenheim, Ontario
Canada N0P 1A0

BOUQUETS

Editor:

I want to comment about the outstanding quality of service from hi-tech Stationery. The quality of the products and the wide selection, coupled with the wonderful touch of personally signed letters from the president of the company (to name just a few), make me want to order from them more often.

R. Harp
Dongola, IL

Personal Service

Editor:

Like most of your readers I purchase all of my software through companies that advertise in RAINBOW. Some of these companies do their job while others go out of their way.

I recently sent for a disk upgrade of my old *Grafplot* tape from Hawkes Research Services. After getting the disk and trying to get it to work with my screen print programs I soon gave up. My screen print programs simply would not work.

After calling Chris at Hawkes to see if he could help, we attempted to solve the problem over the phone. Without success, he then asked that I send my printer manual, screen print program and instruction sheet to him. In a week everything came back, including a modified *Grafplot* program that worked perfectly with my printer.

Chris went out of his way to help me, and I want to let others know what a reputable and considerate software house he runs!

Mark Perry

Duck Delivers

Editor:

I want to highlight a new, unsung hero in this not-so-perfect world.

I have a monitor driver, three programs, and two rapid-fire circuits from Duck Productions. All materials came with excellent manuals or installation instructions. I have come to know when I order stuff from the Duck, I usually get more than I expect. I sent my first order by letter and promptly received my goodies. What's more, I also got information on all the other things they have, a free contest entry to win software, a coupon and a whole page of CoCo hints and tips.

My Class Monitor driver and Micro-Fire

500 POKES, PEEKs, 'N EXECs

FOR THE TRS-80 COCO

NEVER BEFORE has this information of vital significance to a programmer been so readily available to everyone. This book will help you 'GET UNDERNEATH THE COVER' of the Color Computer and develop your own HI-QUALITY Basic and ML programs. SO WHY WAIT??

This 80-page book includes POKES, PEEKS and EXECs to:

- ★ Autostart your basic programs
- ★ Disable Color Basic/ECB/Disk Basic commands like LIST, LLIST, POKE, EXEC, CSAVE(M), DEL, EDIT, TRON, TROFF, PCLEAR, DLOAD, RENUM, PRINT USING, DIR, KILL, SAVE, LOAD, MERGE, RENAME, DSKINI, BACKUP, DSKI\$, and DSKO\$.
- ★ Disable BREAK KEY, CLEAR KEY and RESET BUTTON.
- ★ Generate a Repeat-key.
- ★ Transfer ROMPAKS to tape (For 64K only).
- ★ Speed Up your programs.
- ★ Reset, MOTOR ON/OFF from keyboard.
- ★ Recover Basic programs lost by NEW.
- ★ Set 23 different GRAPHIC/SEMIGRAPHIC modes
- ★ Merge two Basic programs.
- ★ AND MUCH MUCH MORE!!!

COMMANDS COMPATIBLE WITH 16K/32K/64K/COLOR BASIC/ECB/DISK BASIC SYSTEMS and CoCo 1, 2, & 3.

ONLY \$16.95

All orders \$50 & above shipped by 2nd day Air UPS with no extra charge. Last minute shoppers can benefit.

NEW!
SUPPLEMENT
to
**500 POKES,
PEEKs 'N EXECs**
ONLY **\$9.95**

200 additional Pokes, PEEKs 'n Execs to give you MORE PROGRAMMING POWER. Includes commands for:

- Rompak Transfer to disk
- PAINT with 65000 styles!
- Use of 40 track single/double sided drives with variable step-rates
- High-Speed Cassette Operation
- Telewriter 64[®], Edtasm+[®] and CoCo Max[®] Enhancements
- Graphics Dump (for OMP printers) & Text Screen Dump
- AND MUCH MUCH MORE!
- 500 POKES, PEEKS 'N EXECs is a prerequisite

DISK TUTORIAL

(2-Disk Package)

An indispensable tutorial for serious disk Basic/ML programmers. Gives almost everything you MUST know about the disk system. Some features:

- Learn about track/sectors/granules
- How the Directory is organized
- Useful disk utilities
- Useful ROM routines
- How to use double sided/40/80 track drives
- Information security on disk
- Insight into common disk errors
- Many Tips/Hints/Secrets you won't find elsewhere!
- And Much Much More!

COCO GRAPHICS DESIGNER

The CoCo Graphics Designer allows you to create beautifully designed Greeting Cards, Signs and Banners for holidays, birthdays, parties, anniversaries and other occasions. Comes with a library of pre-drawn pictures. Also includes utilities which allow you to create your own character sets, borders and graphic pictures. Requires a TRS-80 COLOR COMPUTER I, II OR III OR TDP-100 with a MINIMUM OF 32K, ONE DISK DRIVE and a PRINTER compatible with DISK BASIC 1.0/1.1, ADOS 1. Supports the following printers: EPSON RX/FX, GEMINI 10X/SG-10, NX-10, C-Itoh 8510, DMP-100/105/400/430, SEIKOSHA GP-100/250, LEGEND 808 and GORILLA BANANA.

DISK ONLY \$29.95

PICTURE DISK #1

This disk includes OVER 100 pre-drawn pictures for use with the CoCo Graphics Designer.

DISK ONLY \$14.95

COLOR SCRIBE III

THE COCO3 WORD-PROCESSOR

This superb word processor uses the 80 COLUMN display of the CoCo III and includes the following features: Justification, Headers, Footers, Pagination, OVER 20 Line Editing Commands such as Character Insert/Delete, skip over words, breaking a line and more. Comes with a comprehensive manual. Requires a 128K COCO III with Disk Drive.

ONLY \$49.95

COCO DISK ZAPPER

Are you frustrated with crashed disks? If so, this program can save hours of labor by restoring complete or part of the information from the disk. It's indispensable!

Requires minimum 32K/64K disk system

hardware mods were simply explained and worked great from the time I installed them. Likewise, the Duck's programs *Map 'n Zap*, *Micro-Fire* and *Keeping Track* are super programs to tame my CoCo.

My first order was a great deal. When I ordered again I forgot to send my coupon and they sent me a check for the discount with my order. Since then, I have been phoning them up direct. I noticed that Ian Millard was the guy who gave us *Writer Zap* in the September 1986 RAINBOW [Page 116]. What a gem! He's been very helpful, and not just about his own programs. Best of all, he honors his registered discount coupons over the phone. I'm looking forward to my next program from Duck Productions.

*Richard Leach
Mississauga, Ontario*

KUDOS

Editor:

I have just returned from a three-year tour overseas and would like to thank all of you for your magazine, my one contact with the CoCo world. With the folding of the three other major Color Computer magazines, I was beginning to dread the fate of our favorite machine. But then THE RAINBOW would arrive, and all was right in my world. Thank you RAINBOW from all of us who were, or are, far from home.

*Clell A. Harmon
Wichita, KS*

The Number One Source

Editor:

I have been a CoCo owner for two years now, and I had worked for Radio Shack for almost as long. Nowhere in Tandy Corp. did I find the amount of information for the CoCo that appears each month in the pages of RAINBOW magazine. Well done RAINBOW; long may your colors fly!

*Alex Hahn
U. Montclair, NJ*

CoCo 3 Draws Raves

Editor:

Three weeks ago I replaced my 'F' board CoCo with a CoCo 3. Wow, your rave reviews were certainly justified. One look at the demo disk on an RGB monitor made me forget the Atari 1040 that I had been looking at. The 80-column text display is my favorite improvement. Thanks for your entertaining and instructive approach to covering all aspects of CoCodom.

*Bob Stephens
Courtenay, British Columbia*

CoCo Cat Controversy

Editor:

I am against the abuse of illegal drugs. But it both shocked and annoyed me when I discovered CoCo Cat is now on the political soapbox and is no longer involved with

computers. Come off it! Must everybody get into the act? Just because the anti-drug bandwagon is rolling, must CoCo Cat jump aboard?

I read CoCo Cat to find out about my computer and maybe have a little chuckle. In your January 1987 issue [Page 159], you have deprived me and other readers of that simple pleasure. Really, CoCo Cat was the only comic relief in your magazine, and now we have lost him to the world of politics.

Will CoCo Cat now be taking positions on gun control, illegal immigration, the Iran arms deal and everything else in the realm of politics? Not only did you give over the CoCo Cat comic itself to your current "cause," but I was further dismayed to see a half page [Page 25], in full color, along the same lines. In the future I wish you would do your editorializing in your editorials.

*John Tiffany
Washington, D.C.*

Editor:

I would like to extend my thanks for the no-nonsense stance that you have adopted with regards to drugs. I know that your magazine is eagerly read by many young people and the positive educational value of the CoCo Cat is not to be underestimated. Your concern with the broader social issues has always been evident and is to be commended.

*Det. Daniel Montalvo
Baltimore, MD*

Editor:

I would like to let you know that the CoCo Cat buttons were a big hit with my Brownies. They loved them and they say NO to drugs!

*JoAnn Karajfa
Wilmerding, PA*

BULLETIN BOARD SYSTEMS

● CoCo Jet BBS has been revised to run under my new JBBS 4.5 software. CoCo Jet features four subboards, an open public board, private mail for password users, downloads, a time and temperature module, 30/1200 baud, movie reviews, information on CoCo clubs, added features for password users, four access levels and much more.

CoCo Jet runs on a 64K CoCo 2, two 40-track drives and one 35-track drive, a multi-pack, RS-232 Deluxe Program Pak, precision time module, WCS temperature module and a Bell 212/A modem. The board runs 24 hours a day at (602) 969-8545. No password is needed, but more features are granted with a password and different access levels.

A Healthy CoCo for Years to Come

One of the recurring themes I am seeing, both from our mail as well as the numerous CoCo Club newsletters which come to us each month, is that of wondering just where the Color Computer 1 and CoCo 2 are now that we have a CoCo 3.

We've answered a lot of mail (and the newsletters keep restating the theme) saying the CoCo 1 and CoCo 2 are both alive and well. Yes, we're excited about the 3, as is most everyone else, but it would be foolish for us to forget that the vast number of Color Computers out there are 1s and 2s, and will be for a long time to come.

And, too, while there is a lot of talk and excitement about the 3 (for very good reasons), I happen to feel THE RAINBOW is more than able to support all the machines. We consider them all CoCos, and that is what we are here to do.

We will certainly see lots and lots of new stuff for the CoCo 3 — but I think there will be more new products for the 1 and 2 as well. The reason is simply that activity breeds more activity. As I have said many times, I think we'll see a healthy and growing CoCo market for years to come.

Incidentally, one of the places to see the first real evident interest in that market will probably be at RAINBOWfest in Chicago, April 10-12. The Princeton show was, of course, too soon after the introduction of the CoCo 3 for any products to really be available. But, I think there will be significant things on hand at Chicago — and the best of what will be new for the CoCo 1 and 2 as well. I hope you won't miss the show.

End of commercial.

* * *

One of the things I hear from a few people that, sometimes, makes me wonder is the complaint that there is little software yet for the CoCo 3; that the information is slow to come; that Tandy is dragging its heels on the machine.

Well, let's put this into perspective. Even though Tandy said it would be four to six weeks before the CoCo 3 was available (and they did run into some import problems that made it a bit later) on

their late July announcement, let's, just for the sake of argument, consider that the CoCo 3 became available on August 1.

If you put this into the time frame of the original CoCo, in terms of the development of the machine and market, I, personally, as of right now, had been in possession of my original machine for a little over a month.

It was a 4K, non-Extended machine. I was "waiting" for a 16K upgrade (imagine that!) and Extended BASIC. Neither would arrive for a while yet.

"What I am suggesting is that the CoCo 3 be placed in the time frame of the original CoCo."

At that stage, too, there were virtually no programs available, other than some ROM-Paks from Tandy. The first programs — from Computerware and The Micro Works — did not appear for a couple of months.

What I am suggesting is that the CoCo 3 be placed in the time frame of the original CoCo. If you do that, don't expect more than 4K until April and Extended BASIC until the end of May. The first third-party programs will be available sometime in July. A disk drive? By December.

See what I mean?

Back when I was in college and took a course in Greek and Roman mythology from a Dr. Perry (a most charming and entertaining professor), one of the tales was of some goddess springing full-grown from Zeus' thigh. While I am sorry I don't recall which goddess it was (I don't think I remembered for the final exam, either) there does seem to be a parallel here: I think a lot of us expect to see all the body of programs for the CoCo 1 and 2 spring full-grown immediately for the CoCo 3.

Considering the time it has been available, I think the initial development of CoCo 3 programs is really pretty good. And, needless to say, I think it will be even better as time goes on. I look forward to seeing all those marvelous creations with you.

— Lonnie Falk

Metric Industries

Model 101 Interface \$39.95

The Model 101 is a serial to parallel interface intended for use with a COCO and any Centronics compatible parallel input printer. The 101 has 6 switch selectable baud rates (300-9600). The 101 is only 4" x 2" x 1" and comes

with all cables and connectors for your computer and printer.

The Model 104 Deluxe Interface \$51.95

The Model 104 is a serial to parallel interface like the Model 101 but it has the added feature of a serial port (sometimes referred to as a modem switch). This feature allows the connection of a parallel printer and any serial device (modem, serial printer

etc.) to your computer. You may then select either output, serial or parallel, with the flip of a switch. The 104 is only 4.5" x 2.5" x 1.25" and comes with all cables and connectors for your computer. You supply the serial cable, for your modem or other serial device.

Model 102 Switcher \$35.95

The Model 102 has 3 switch positions that allow you to switch your computer's serial output between 3 different devices (modem, printers or another computer). The 102 has color coded lights that indicate the switch position. These

lights also act as power indicators to let you know your computer is on. Supplied with the 102 are color coded labels that can be applied to your accessories. The 102 has a heavy gauge anodized aluminum cabinet with non-slip rubber feet.

Cassette Label Package \$15.95

Organize Your Tapes, Label Your Data Tapes, Color Code Your Tapes, Label Your Audio Tapes

Save \$8.40 when you purchase the Cassette Label program and label package. You get the Cassette Label program, 100 WHITE labels, 100 RED labels, 100 BLUE labels, 100 YELLOW labels, and 100 TAN labels. A value worth \$24.35, but

you pay only \$15.95. When ordering, specify the Cassette Label PACKAGE

Save!

Cassette Label Program \$6.95

New Version 1.2-Tape transferrable to disk. Now save and load Labels from tape or disk.

This fancy printing utility prints 5 lines of information on pinfeed cassette labels. "Cassette Label" is menu driven and is very easy to use. It uses the special features of your printer for standard, expanded or condensed characters. Each line of text is automatically centered. Before the label is printed, it is shown on your

CRT — enabling you to make changes if you like — then print 1, 2 or 100 labels. The program comes on tape and it is supplied with 24 labels to get you started. 16K ECB required.

THE 101, AND 104 REQUIRE POWER IN ORDER TO OPERATE. MOST PRINTERS CAN SUPPLY POWER TO YOUR INTERFACE. STAR, RADIO SHACK, AND OKIDATA ARE JUST A FEW THAT DO. EPSON DOES NOT. THE INTERFACES CAN ALSO BE POWERED BY AN AC ADAPTER (RADIO SHACK MODEL 273-1431 PLUGS INTO ALL MODELS). IF YOU REQUIRE A POWER SUPPLY, ADD A "P" TO THE MODEL NUMBER AND \$5.00 TO THE PRICE. (MODEL 101P \$44.95. MODEL 104P \$56.95)

The Model 101, 102 and 104 will work with any COCO, any level basic and any memory size. These products are covered by a 1 year warranty.

The Model 101 and 104 work with any standard parallel input printer including Gemini, Epson, Radio Shack, Okidata, C. Itoh and many others. They support BASIC print commands, word processors and graphic commands.

We manufacture these products. Dealer Inquiries are invited.

How To Read Rainbow

Please note that all the BASIC program listings in THE RAINBOW are formatted for a 32-character screen — so they show up just as they do on your CoCo screen. One easy way to check on the accuracy of your typing is to compare what character “goes under” what. If the characters match — and your line endings come out the same — you have a pretty good way of knowing that your typing is accurate.

We also have “key boxes” to show you the *minimum* system a program needs. But, *do* read the text before you start typing.

Finally, the little disk and/or cassette symbols on the table of contents and at the beginning of articles indicate that the program is available through our RAINBOW ON DISK or RAINBOW ON TAPE service. An order form for these services is on the insert card bound in the magazine.

What's A CoCo?

CoCo is an affectionate name that was first given to the Tandy Color Computer by its many fans, users and owners.

However, when we use the term CoCo, we refer to both the Tandy Color Computer and the TDP System-100 Computer. (While many TDP-100s are still in service, the TDP Electronics division of Tandy no longer markets the CoCo look-alike.) It is easier than using both of the “given” names throughout THE RAINBOW.

In most cases, when a specific computer is mentioned, the application is for that specific computer. However, since the TDP System-100 and Tandy Color are, for all purposes, the same computer in a different case, these terms are almost always interchangeable.

Rainbow Check Plus

The small box accompanying a program listing in THE RAINBOW is a “check sum” system, which is designed to help you type in programs accurately.

Rainbow Check PLUS counts the number and values of characters you type in. You can then compare the number you get to those printed in THE RAINBOW. On longer programs, some benchmark lines are given. When you

reach the end of one of those lines with your typing, simply check to see if the numbers match.

To use *Rainbow Check PLUS*, type in the program and save it for later use, then type in the command RUN and press ENTER. Once the program has run, type NEW and press ENTER to remove it from the area where the program you're typing in will go.

Now, while keying in a listing from THE RAINBOW, whenever you press the down arrow key, your CoCo gives the check sum based on the length and content of the program in memory. This is to check against the numbers printed in THE RAINBOW. If your number is different, check the listing carefully to be sure you typed in the correct BASIC program code. For more details on this helpful utility, refer to H. Allen Curtis' article on Page 21 of the February 1984 RAINBOW.

Since *Rainbow Check PLUS* counts spaces and punctuation, be sure to type in the listing exactly the way it's given in the magazine.

Using Machine Language

Machine language programs are one of the features of THE RAINBOW. There are a number of ways to “get” these programs into memory so you can operate them.

The easiest way is by using an editor/assembler, a program you can purchase from a number of sources.

An editor/assembler allows you to enter mnemonics into the CoCo and then have the editor/assembler assemble them into specific instructions that are understood by the 6809 chip, which controls your computer.

When using an editor/assembler, all you have to do, essentially, is copy the relevant instructions from THE RAINBOW's listing into CoCo.

Another method of getting an assembly language listing into CoCo is called “hand assembly.” As the name implies, you do the assembly by hand. This can *sometimes* cause problems when you have to set up an ORIGIN or EQUATE statement. In short, you have to know something about assembly to hand-assemble some programs.

Use the following program if you wish to hand-assemble machine language listings:

```
10 CLEAR200,&H3F00:I=&H3FB0
20 PRINT "ADDRESS:";HEX$(I);
30 INPUT "BYTE";B$
40 POKE I,VAL("&H"+B$)
50 I=I+1:GOTO 20
```

This program assumes you have a 16K CoCo. If you have 32K, change the &H3F00 in Line 10 to &H7F00 and change the value of I to &H7FB0.

The Rainbow Seal

The Rainbow Certification Seal is our way of helping you, the consumer. The purpose of the Seal is to certify to you that any product that carries the Seal has actually been seen by us, that it does, indeed, exist and that we have a sample copy here at THE RAINBOW.

Manufacturers of products — hardware, software and firmware — are encouraged by us to submit their products to THE RAINBOW for certification. We ascertain that their products are, in actuality, what they purport to be and, upon such determination, award a Seal.

The Seal, however, is not a “guarantee of satisfaction.” The certification process is different from the review process. You are encouraged to read our reviews to determine whether the product is right for your needs.

There is absolutely no relationship between advertising in THE RAINBOW and the certification process. Certification is open and available to any product pertaining to CoCo. A Seal will be awarded to *any* commercial product, regardless of whether the firm advertises or not.

We will appreciate knowing of instances of violation of Seal use.

VANGUARD PD-1

MORE STANDARD FEATURES IN A SMALLER PACKAGE THAN ANY OTHER OS-9 COMPUTER

OS-9 is a very high performance operating system that brings Unix-like Multi-User, Multi-Tasking power to a Microcomputer. It is a disk intensive operating system and to realize its full capabilities, a computer system must have a very high performance disk driver/disk hardware system. The Vanguard PD-1 computer from Hemphill Electronics, Inc. offers one of the most advanced and versatile disk operating systems available on any OS-9 based computer.

STANDARD FEATURES OF THE VANGUARD PD-1 OS-9 LEVEL 1 COMPUTER

THE MOST ADVANCED DISK DRIVE SYSTEM AVAILABLE ON AN OS-9 computer.

- 4,456 Sectors Free !
 - 1 Megabyte High Density Drives (IBM · AT Type) with **twice the data transfer rate** of Double Density Drives and over 2 MB of total storage
 - 8K Hardware Disk Cache
 - Reads Single or Double Sided, 35, 40 or 80 Track Single, Double or High Density Disks in Std. OS-9, Radio Shack, Mizar or Fujitsu Formats! IBM PC Format capability optional.
 - 450K Ram Disk
 - SASI/SCSI Interface
-
- 2MHz CMOS 6809 CPU
 - 3 Software configurable Serial Ports with special SETBAUD Command
 - Centronics Compatible Printer Port
 - Built in A.C. socket strip with 3 auxillary outlets.
 - Hardware RealTime Clock with On-Chip Crystal with ± 6 seconds/month accuracy
 - Hardware Diagnostics in ROM
 - Terminal Program Standard
 - XECOM XE 1203 Internal 300/1200 Baud Modem with voice, data, touch tone decoding and speech synthesis capabilities.
 - Complete Line Of Matching Mass Storage Units
 - All Aluminum Case is Only 1" higher than a Dual Half-Height Floppy Drive Package

CoCo Owners.....

Thinking of upgrading your Hardware to take full advantage of the power of OS-9? Before you do, consider this. By the time you purchase an Expansion Bus, an 80 Column Card, a Disk Controller, Dual 80 Track Drives (you can not get a Controller Card to operate the High Density 1 Megabyte Drives), Three Hardware Serial Ports, a Parallel Printer Port, a SASI Hard Disk Interface, a 450K RAM Disk, a Hardware Clock and a 300/1200 Baud Modem you will have spent more than the cost of a Vanguard PD-1 and you will have a system that will not even begin to compare to the power, performance and features of the PD-1.

THE VANGUARD LINE OF COMPUTER HARDWARE

A complete line of highly sophisticated, compact computer equipment, with GUARANTEED Hardware and Software Compatibility, bringing the full power of the OS-9 Multi-Tasking, Multi User operating system to the micro-computer user. Featuring the PD line of computers, the HD line of Hard Disk Drives and the HDT line of Hard Disk/Streaming Tape Drives.

PD-1 2 1MB Floppy Drives	\$1495.00
PD 20H 1MB Floppy, 20MB Hard Disk	\$1995.00
WYSE-50 Terminal	\$ 395.00

Diet Smith was right . . .

OS-9 Users Re-Group

. . . and pardon our "provinciality"

I was online to RAINBOW's Delphi CoCo SIG recently, using Greg Miller's great new *Greg-E-Term* to download Rick Adams' even newer *Rickeyterm*. I couldn't wait to get it, even though I have about every CoCo terminal program around. After all, *Rickeyterm* can send "super macros," a novel feature indeed.

While I was downloading, I was also copying some old record albums over to tape for use on my car stereo. By habit, I also had the TV on. Well, with one eye on the *Greg-E-Term* block counter and the other on the tape counter, I had one ear listening for the end of the record and the other hearing fragments of the TV program. Candidly, I became a bit frazzled and began to wonder whether I was in control or technology was having its way with me!

It seems as if much of my very existence is on tape or disk! I mean, if someone with a bulk eraser were to "sweep" my house, I'd have a magnetic seizure. If the office were hit, we'd probably all fall into the glitch and disappear. From my childhood, I recall Dick Tracy's buddy Diet Smith always proclaiming: "The nation that conquers magnetism will rule the universe!" While gravity was that cartoon prophet's obsession, those words have an Orwellian tone. A magnetic shield instead of a DEW line? ICBMs with giant bulk-eraser warheads? Hand grenades with "worm" programs? Well, effects of the EMP *are* a key concern of our national defense!

Ahem. Add a big grain of salt to all of the above while I make a hard copy (just in case). Speaking of printed material, did I tell you that Dale Puckett and Peter Dibble are doing a new RAINBOW guide — all about using OS-9 Level II on the CoCo 3. Look for it in late spring! And, speaking of OS-9, Tandy's Fran McGehee assures me at press time that Level II will be on the store shelves by February 15.

Also, just as we're sending this issue to the printer, Dale Puckett tells me that the OS-9 Users Group is making a big push "to get caught up" with all its activities and will soon resume publication of their *MOTD* newsletter. While President Brian Lantz has resigned for personal reasons due to a heavy workload as a church youth minister, Acting President Bill Turner has taken the reins and, Dale says, "Bill's digging in. He's called on the board of directors to help him and even his wife is pitching in." In addition to rekindling the newsletter, Bill has arranged for a private service to handle member mail. So, if you have pending correspondence, Dale suggests you might want to send a reminder to the new mailing address: *OS-9 Users Group, Suite R-237, 1715 East Fowler Avenue, Tampa, FL 33612*. An even quicker way to touch base and catch up on the latest developments is to check out OS-9 Online, RAINBOW's new OS-9 Special Interest Group on Delphi.

Briefly said, a deadline for entering the "Free the CoCo Three" contest I announced in our December issue: March 1. More than a half dozen different correct answers have emerged in entries from *most, but not all*, states and Canadian provinces. It was just an oversight on my part that I did not mention provinces when I said "first from every *state*." For that matter, overseas entries are, of course, being honored, too.

Concluding our "mail call," we like to think that THE RAINBOW has a certain magnetism of its own, but if you want a hard copy every month, a yearly subscription makes a fine backup to most any CoCo configuration!

— Jim Reed

The Ultimate Color Computer

Enhancements
for Productivity
from HJL Products

*★ Now at all-time
Low prices!*

Now available for all models, including CoCo 3

To achieve maximum productivity with your Color Computer, you have to make it as easy as possible to get information into and out of the system.

This is why we developed the HJL family of high-performance enhancements for ALL MODELS of the Color Computer.

The Keyboard - \$79.95

The overwhelming favorite of serious Color Computer users worldwide, the HJL-57 keyboard has the smooth, consistent feel and reliability you need for maximum speed with minimum input errors. Includes 4 Function Keys and sample function key program. Installs in just a few minutes with no soldering.

The Numeric Keypad - \$89.95

The NumberJack is a self-contained, cable-connected keypad for heavy-duty number-crunchers. Besides the number keys, it has all the cursors, symbols and math keys, including autoshifted (one-touch) ADD and MULTIPLY. Comes complete with 3-foot cable and all necessary connectors for quick and easy installation without soldering.

The Monitor Adapter - \$25.95

This universal driver works with all monochrome monitors, and is easily installed without clips, jumpers or soldering (except in some later CoCo 2s with soldered-in video chips). Here's crisp, clear, flicker-free monitor output with all the reliability you've come to expect from HJL Products.

The Monitor - \$89.95

The GoldStar high-resolution amber monitor brings you the monochrome display that's preferred by most computer professionals today. Once you've used it you'll never connect your computer to a TV set again. The 12-inch diagonal CRT has an etched non-glare faceplate. (Requires adapter sold above)

The BASIC Utility - \$25.95

Quick Basic Plus, a high-performance programming utility, can be used with any color computer that has four function keys. 26 pre-defined BASIC statements, 10 user-defined macros at a time (you can save as many sets of macros as you like), automatic line-numbering, word wrap, global search,

and instant screen dump to printer, make this software the BASIC programmer's dream come true. Comes with re-legendable 3-way reference chart. Specify disk or cassette.

The HJL Warranty

Every HJL product comes with a full, one-year warranty and the exclusive HJL 15-day unconditional guarantee (except software).

Pick a Pair & Save 15%

Now, for a limited time, we'll give you 15% off the price of any two or more products shown here. Just mention this ad when you order.

PRODUCTS

Div. of Touchstone Technology Inc.

955 Buffalo Road • P.O. Box 24954
Rochester, New York 14624

Ordering Information: Specify model (Original, F-version, or CoCo 2 Model Number). Payment by C.O.D., check, MasterCard, or Visa. Credit card customers include complete card number and expiration date. Add \$2.00 for shipping, 3.50 to Canada; except monitors (call for shipping charges before ordering monitors). New York state residents add 7% sales tax. **Dealer Inquiries Invited**

The CoCo Gallery

1

Telecoco

Daniel Van Buskirk
Sandown, New Hampshire

Our first place winner, Daniel, purchased his CoCo 3 at the October '86 RAINBOWfest in Princeton, New Jersey, and hopes to someday get a job in commercial art using computers. This graphic was created with CoCo 3 Sketch (a program he wrote).

Honorable Mention

The Super Computer

Steve Baker
Hattiesburg, Mississippi

Steve created this graphic with BASIC and utilized the X-pad and Speech/Sound cartridge. Steve is married and has three children. He collects comic books and enjoys role-playing games.

Honorable Mention

Lighthouse

Ray Larabie
White Lake, Ontario

Ray is 16 years old and lives on the lower part of the Madawaskas River. He created this serene view with BASIC and a program he devised himself.

SHOWCASE YOUR BEST! You can nominate original work for inclusion in upcoming showings of "CoCo Gallery." Share your creations with the CoCo Community! Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also, please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere. A digitized copy of a picture that appears in a book or magazine is not an original work.

We will award a first prize of \$25, a second prize of \$15 and a third prize of \$10. Honorable mentions will also be given.

Please send your entry on either tape or disk to the CoCo Gallery, THE RAINBOW, P.O. Box 385, Prospect, KY 40059.

Jody Doyle, Curator

2

Haupt's Mill Bridge

John Murvine

Ebensburg, Pennsylvania

The second place winner is another exceptional graphic created with BASIC. The drawing is an autumn view of Haupt's Mill Bridge, which was built in 1872 in Bucks County, Pennsylvania. John is a self-taught programmer and commercial artist. Also, THE RAINBOW apologizes for misspelling Ebensburg in the last issue.

3

Ole' Smokey

C.W. Harriman

Bradford, Massachusetts

Third place winner, "Harry," as he likes to be called, created this 1920's version of the Ole' Smokey steamroller with BASIC. Harry is retired from the Western Electric Co. and finds CoCoing a very exciting way of passing the hours.

Check It Out

By Robert A. Green

Here is a program I believe many RAINBOW readers will find useful. It provides a fast and easy printed personal-sized check, is simple to use, and offers a number of "foolproof" features.

Checkwriter makes it easy to correct any mistakes in the date, payee's name, amount (in both the digits and the written form) and memo line prior to printing. If the payee line, written amount line or memo line are too long, *Checkwriter* rejects the entry and asks for another try that doesn't exceed the limitations established by the parameters of the check.

Checkwriter also keeps an eye on the amount you enter, and rejects any entry that exceeds \$99,999.99. It prompts for another entry that is lower than this maximum. (After all, who writes checks for more than that?)

The program automatically prints the month and day flush-right to the "19" that's provided for the year, and then prints the last two digits of the year in the appropriate location. For protection, *Checkwriter* automatically inserts the word "only" following the written amount of the check if space permits, and then fills any remaining space on the line with asterisks.

I wrote this program for the parameters of commonly used Deluxe Check Printers personal-size checks, but it can easily be altered to print correctly on checks by other printers, or on larger business checks. You can also make multiple copies of the same check if you want, or additional checks to different payees in differing amounts with the same date, without entering the date each time.

After you have entered the program, put a blank sheet of paper in your printer, align the top edge with the top of

the printer head, and run it. If you are not using a Gemini-10X printer, delete Line 330, which contains the code to disregard the "paper out" signal you get with small paper like a check. You may need to replace this code with one that is appropriate for your printer.

(Questions about this program may be directed to the author at 346 Crest Drive, Whitehall, PA 18052. Please enclose an SASE for a response.)

The Amazing A-BUS

NEW

An A-BUS system with two Motherboards
A-BUS adapter in foreground

The A-BUS system works with the original CoCo,
the CoCo2 and the CoCo 3.

About the A-BUS system:

- All the A-BUS cards are very easy to use with any language that can read or write to a Port or Memory. In BASIC, use INP and OUT (or PEEK and POKE with Apples and Tandy Color Computers)
- They are all compatible with each other. You can mix and match up to 25 cards to fit your application. Card addresses are easily set with jumpers.
- A-BUS cards are shipped with power supplies (except PD-123) and detailed manuals (including schematics and programming examples).

Relay Card

RE-140: \$129

Includes eight industrial relays, (3 amp contacts, SPST) individually controlled and latched. 8 LED's show status. Easy to use (OUT or POKE in BASIC). Card address is jumper selectable.

Reed Relay Card

RE-156: \$99

Same features as above, but uses 8 Reed Relays to switch low level signals (20mA max). Use as a channel selector, solid state relay driver, etc.

Analog Input Card

AD-142: \$129

Eight analog inputs. 0 to +5V range can be expanded to 100V by adding a resistor. 8 bit resolution (20mV). Conversion time 120us. Perfect to measure voltage, temperature, light levels, pressure, etc. Very easy to use.

12 Bit A/D Converter

AN-146: \$139

This analog to digital converter is accurate to .025%. Input range is -4V to +4V. Resolution: 1 millivolt. The on board amplifier boosts signals up to 50 times to read microvolts. Conversion time is 130ms. Ideal for thermocouple strain gauge, etc. 1 channel. (Expand to 8 channels using the RE-156 card).

Digital Input Card

IN-141: \$59

The eight inputs are optically isolated, so it's safe and easy to connect any "on/off" devices, such as switches, thermostats, alarm loops, etc. to your computer. To read the eight inputs, simply use BASIC INP (or PEEK).

24 Line TTL I/O

DG-148: \$65

Connect 24 input or output signals (switches or any TTL device) to your computer. The card can be set for: input, latched output, strobed output, strobed input, and/or bidirectional strobed I/O. Uses the 8255 A chip.

Clock with Alarm

CL-144: \$89

Powerful clock/calendar with: battery backup for Time, Date and Alarm setting (time and date); built in alarm relay, led and buzzer; timing to 1/100 second. Easy to use decimal format. Lithium battery included.

Touch Tone® Decoder

PH-145: \$79

Each tone is converted into a number which is stored on the board. Simply read the number with INP or POKE. Use for remote control projects, etc.

A-BUS Prototyping Card

PR-152: \$15

3 1/2 by 4 1/2 in. with power and ground bus. Fits up to 10 I.C.s

ST-143

CL-144

RE-140

IN-141

AD-142

Smart Stepper Controller sc-149: \$299

World's finest stepper controller. On board microprocessor controls 4 motors simultaneously. Incredibly, it accepts plain English commands like "Move arm 10.2 inches left!". Many complex sequences can be defined as "macros" and stored in the on board memory. For each axis, you can control: coordinate (relative or absolute), ramping, speed, step type (half, full, wave), scale factor, units, holding power, etc. Many inputs: 8 limit & "wait until" switches, panic button, etc. On the fly reporting of position, speed, etc. On board drivers (350mA) for small steppers (MO-103). Send for SC-149 flyer.

Remote Control Keypad Option RC-121: \$49

To control the 4 motors directly, and "teach" sequences of motions.

Power Driver Board Option PD-123: \$89

Boost controller drive to 5 amps per phase. For two motors (eight drivers).

Breakout Board Option BB-122: \$19

For easy connection of 2 motors. 3 ft. cable ends with screw terminal board.

Stepper Motor Driver ST-143: \$79

Stepper motors are the ultimate in motion control. The special package (below) includes everything you need to get familiar with them. Each card drives two stepper motors (12V, bidirectional, 4 phase, 350mA per phase).

Special Package: 2 motors (MO-103) + ST-143: PA-181: \$99

Stepper Motors MO-103: \$15 or 4 for \$39

Pancake type, 2 1/4" dia, 1/4" shaft, 7.5"/step, 4 phase bidirectional, 300 step/sec, 12V, 36 ohm, bipolar, 5 oz-in torque, same as Airpax K82701-P2.

Current Developments

Intelligent Voice Synthesizer, 14 Bit Analog to Digital converter, 4 Channel Digital to Analog converter, Counter Timer, Voice Recognition.

A-BUS Adapters for:

IBM PC, XT, AT and compatibles. Uses one short slot	AR-133...\$69
Tandy 1000, 1000 EX & SX, 1200, 3000. Uses one short slot.	AR-133...\$69
Apple II, II+, IIe. Uses any slot.	AR-134...\$49
TRS-80 Model 102, 200. Plugs into 40 pin "system bus"	AR-136...\$69
Model 100. Uses 40 pin socket (Socket is duplicated on adapter).	AR-135...\$69
TRS-80 Mod 3, 4, 4 D. Fits 50 pin bus. (With hard disk, use Y-cable).	AR-132...\$49
TRS-80 Model 4P. Includes extra cable. (50 pin bus is recessed).	AR-137...\$62
TRS-80 Model I. Plugs into 40 pin I/O bus on KB or E/I.	AR-131...\$39
Color Computers (Tandy). Fits ROM slot. Multi-pak, or Y-cable	AR-138...\$49

A-BUS Cable (3 ft, 50 cond.) CA-163: \$24

Connects the A-BUS adapter to one A-BUS card or to first Motherboard.

Special cable for two A-BUS cards: CA-162: \$34

A-BUS Motherboard MB-120: \$99

Each Motherboard holds five A-BUS cards. A sixth connector allows a second Motherboard to be added to the first (with connecting cable CA-161: \$12). Up to five Motherboards can be joined this way to a single A-BUS adapter. Sturdy aluminum frame and card guides included.

- The A-BUS is not a replacement for the Multi-pak

CoCo Max™ II

You'll use it all the time and love using it.

What is CoCo Max?

Simply the most incredible graphic and text creation "system" you have ever seen. A Hi-Res Input Pack (more on the pack later) is combined with high speed machine language software. The result will dazzle you.

CoCo Max disk system, with Y-cable.

Is CoCo Max for you?

Anyone who has ever held a pencil or a crayon for fun, school or business will love it. A 4 year-old will have fun doodling, a 15 year-old will do class projects and adults will play with it for hours before starting useful applications (illustrations, cards, artwork, business graphics, flyers, charts, memos, etc.) This is one of the rare packages that will be enjoyed by the whole family.

What made CoCo Max an instant success?

First there's nothing to learn, no syntax to worry about. Even a child who can't read will enjoy CoCo Max. Its power can be unleashed by simply **pointing** and **clicking** with your mouse or joystick. With **icons** and **pull down menus**, you control CoCo Max intuitively; it works the same way you think.

Don't be misled by this apparent simplicity. CoCo Max has more power than you thought possible. Its blinding speed will astound you.

It lets you work on an area 3.5 times the size of the window on the screen. It's so friendly that you will easily recover from mistakes: The **undo** feature lets you revert to your image prior to the mistake. As usual, it only takes a single click.

Later, we will tell you about the "typesetting" capabilities of CoCo Max II, but first let's glance at a few of its graphic creation tools:

With the **pencil** you can draw free hand lines, then use the **eraser** to make corrections or changes. For straight lines, the convenient **rubber-banding** lets you preview your lines before they are fixed on your picture. It's fun and accurate. Lines can be of any width and made of any color or texture.

The **paint brush**, with its 32 selectable brush shapes, will adapt to any job, and make complicated graphics or calligraphy simple. For special effects, the **spraycan** is really fun: 86 standard colors and textures, all available at a click. It's like the real thing except the paint doesn't drip.

CoCo Max will instantly create many shapes: circles, squares, rectangles (with or without rounded corners), ellipses, etc. Shapes can be filled with any pattern. You can also add hundreds of custom patterns to the 86 which are included.

The **Glyphics** are 58 small drawings (symbols, faces, etc.) that can be used as rubber stamps. They're really great for enhancing your work without effort.

Pull down menus

Zoom In!

Control Over Your Work

CoCo Max's advanced "tools" let you take any part of the screen, (text or picture) and perform many feats:

- You can move it around
- Copy it
- Shrink or enlarge it in both directions
- Save it on the electronic **Clipboard**
- Flip it vertically or horizontally
- Rotate it
- Invert it
- Clear it, etc. etc.

All this is done instantly, and you can always **undo** it if you don't like the results.

For detail work, the **fat bits** (zoom) feature is great, giving you easy control over each pixel.

To top it all, CoCo Max II works in color. Imagine the pictures in this ad in color. If you own a Radio Shack CGP-220 or CGP-115, you can even print your work in full color!

There is so much more to say, such as the capability to use CoCo Max images with your BASIC programs, the possibility to use CoCo Max's magic on any standard binary image file. There are also many advanced features such as the incredible **lasso**.

Inside the Hi-Res Input Pack

Why a Hi-Res Input Pack?

Did you know that the CoCo joystick input port can only access 4096 positions (64x64)? That's less than 10% of the Hi-Res screen, which has 49152 points! (256x192). You lose 90% of the potential. The Hi-Res Input Pack distinguishes each of the 49152 distinct joystick or mouse positions. That's the key to CoCo Max's power. The pack plugs into the rom slot (like a rom cartridge). Inside the pack is a high speed multichannel analog to digital converter. Your existing joystick or mouse simply plugs into the back of the Hi-Res Pack.

Electronic Typesetting...

You'll be impressed with CoCo Max's capability. Text can be added and moved around anywhere on the picture. (You can also rotate, invert and flip it...) At a click, you can choose from 14 built in **fonts** each with 16 variations. That's over 200 typestyles!

Examples of printouts

Printing Your Creations

There are a dozen ways to print your work. All are available with a click of your joystick (or mouse) without exiting CoCo Max. Your CoCo Max disk includes drivers for over 30 printers!

CoCo Max II™

The whole family will enjoy CoCo Max. Here are a few examples of the possibilities.

All these pictures are unretouched screen photos or printouts (on an Epson RX-80).

1 Publish a newsletter or bulletin

5 Over 200 typestyles to choose from! generate flyers.

2 Fun for children while stimulating creativity.

6 A new way to express your imagination.

3 Business graphs, charts, diagrams. Also memos

7 Video portrait (with optional digitizer).

4 Junior's homework and science projects. Term papers too!

8 This is a cartoon.

9 schematics and floor plans.

10 Logos and letterheads.

System Requirements:

Any 64K CoCo and a standard joystick or mouse. (The koala pad and the track ball work, but are not recommended.)
Disk systems need a Multi-Pak or our Y-Cable.
CoCo Max is compatible with any Radio Shack DOS and ADOS.
Note: the tape version of CoCo Max includes almost all the features of CoCo Max II except *Shrink*, *Stretch*, *Rotate*, and *Glyphics*. Also, it has 5 fonts instead of 14.
CoCo Max is not compatible with JDOS, DoubleDOS, MDOS, OS-9, the X-pad, and Daisy Wheel Printers.

Printers Supported:

Epson MX, RX, FX and LX series, Gemini, Star, Micronix, Delta 10, 10X, 15, 15X, SG-10, Okidata 82A, 92, 93, C. Itoh Pro-writer, Apple Image-writer, Hewlett-Packard Thinkjet, Radio Shack DMP 100, 105, 110, 120, 200, 400, 500, Line Printer 7, Line Printer 8, TRP-100, CGP-220. (DMP-130 use Line Printer 8), PMC printers, Gorilla Banana.
Color printing: CGP-200, CGP-115

Pricing

CoCo Max on tape \$69.95
with Hi-Res Pack and manual.
CoCo Max II (disk only) \$79.95
with Hi-Res Pack and manual.
Upgrade: CoCo Max to CoCo Max II
New disk and manual \$19.95
New features of CoCo Max II: 14 fonts and glyphic font, dynamic shrink and stretch, rotate, multiple drive capability, 68 page scrapbook, point and click file load, color printer drivers, full error reporting.
Upgrade: CoCo Max tape to disk
manuals, disk and binder \$24.95
Y-Cable: *Special Price* \$19.95
Super Picture Disks #1, #2, and #3
each: \$14.95
All three picture disks \$29.95

Guaranteed Satisfaction
Use CoCo Max for a full month.
If you are not delighted with it,
we will refund every penny.

Font Editor Option

A font is a set of characters of a particular style. CoCo Max includes 15 fonts. You can create new fonts of letters, or even symbols or graphics with the font editor. Examples: set of symbols for electronics, foreign alphabets, etc. \$19.95

Video Digitizer DS-69

This new Low Cost Digitizer is the next step in sophistication for your CoCo Max system. With the DS-69 you will be able to digitize and bring into CoCo Max a frame from any video source: VCR, tuner, or video camera. Comes complete with detailed manual and C-SEE software on disk. Multi-Pak is required.
New Low Price Save \$50 \$99.95
New: faster DS-69A \$149.95

Only NRI teaches you to service all computers as you build your own fully IBM-compatible microcomputer

NEW!
Train with the newest Sanyo 880 Series Computer—it's fully IBM-compatible and runs almost twice as fast!

With computers firmly established in offices—and more and more new applications being developed for every facet of business—the demand for trained computer service technicians surges forward. The Department of Labor estimates that computer service jobs will actually *double* in the next ten years—a faster growth rate than for any other occupation.

Total systems training

No computer stands alone... it's part of a total system. And if you want to learn to service and repair computers, you have to understand computer *systems*. Only NRI includes a powerful computer system as part of your training, centered around the new, fully IBM-compatible Sanyo 880 Series computer.

As part of your training, you'll build this highly rated, 16-bit, IBM-compatible computer system. You'll assemble Sanyo's "intelligent" keyboard, install the power supply and disk drive and interface the high-resolution monitor. The 880 Computer has two operating speeds: standard IBM speed of 4.77 MHz and a remarkable turbo speed of 8 MHz. It's confidence-building, real-world experience that includes training in programming, circuit design and peripheral maintenance.

No experience necessary—NRI builds it in

Even if you've never had any previous training in electronics, you can succeed with NRI training. You'll start with the basics, then rapidly build on them to master such concepts as digital logic, microprocessor design, and computer memory. You'll build and test advanced electronic circuits using the exclusive NRI Discovery Lab®, professional digital multimeter, and logic probe. Like your computer, they're all yours to keep as

Your NRI total systems training includes all of this: NRI Discovery Lab® to design and modify circuits • Four-function digital multimeter with walk-you-through instruction on audio tape • Digital logic probe for visual examination of computer circuits • Sanyo 880 Series Computer with "intelligent" keyboard and 360K double-density, double-sided disk drive • High resolution monochrome monitor • 8K ROM, 256K RAM • Bundled software including GW BASIC, MS DOS, WordStar, CalcStar • Reference manuals, schematics, and bite-sized lessons.

NRI is the only technical school that trains you on a total computer system. You'll install and check keyboard, power supply, disk drive, and monitor, following step-by-step directions.

part of your training. You even get some of the

most popular software, including WordStar, CalcStar, GW Basic and MS DOS.

Send for 100-page free catalog

Send the coupon today for NRI's 100-page, full-color catalog, with all the facts about at-home computer training. Read detailed descriptions of each lesson, each experiment you perform. See each piece of hands-on equipment you'll work with and keep. And check out NRI training in other high-tech fields such as Robotics, Data Communications, TV/Audio/ Video Servicing, and more.

The Private Accounting WIZARD

By J.A. Phillips

CoCo Accountant is a very easy-to-use home accounting program. It provides for user-defined data categories and numerous summaries to help organize and analyze your accounting information.

After loading the program and typing PCLEAR1 and RUN, you see the main menu. Options include Load Old Data, Define/View Accounts, Add New Data, View/Delete Data, Print Summaries, Sort Data and Save New Data. Use the second option, Define/View Accounts, to set up new accounts (for getting started). When defining accounting categories, use a plus sign (+) as the first character of assets/income categories, and a minus sign (-) as the first character for debits/deduction

Jim Phillips is an engineering test manager for large computer systems. He programs in PASCAL, Assembly and BASIC as a hobby. He lives in Poughkeepsie, New York, and enjoys writing educational software for the CoCo.

categories. Using these symbols allows automatic net calculations at various points in the *CoCo Accountant* program. Categories that do not begin with a plus or minus sign are excluded from net calculations, but are included in all other summary tracking reports.

Use Option 3 to add new data. This option is designed to be used on a monthly basis. Upon entry, it asks for the month and assumes all data entered thereafter is for the same month. To add data for a different month, simply use CLEAR to return to the previous menu and reenter Option 3. This is where you create the database from which all other information is derived. You may enter a brief description and dollar amount for any account.

Option 4 is used to view the database and to delete any entries. A deleted entry will appear in the database with DELETED as its description, but will not be printed to tape/disk or printer, or used in any calculations. Thus, when saving the database to tape or disk, the entry is, in fact, deleted.

If an error is made in data entry using Option 3, use Option 4 to delete the incorrect information and go back to Option 3 to enter the correct information.

Sort Data is used to sort the database by month or account. This will make it

easier for you to locate a particular entry. A 64K machine holds 360 entries. For a 16K machine, change Line 40 to E=120 and Line 30 to CLEAR 2000. It will hold approximately 120 entries.

Option 3 gives the totals of any account over the 12 month period. Monthly Nets, Option 4, gives the nets for each of the 12 months based on the way you defined your accounts (with + or -) at setup.

The strength of the program is Option 5, Print Summaries. Upon entering this option, you are presented with a menu from which you select information to be displayed to the screen, printer, or both. The options include Year-to-Date Account Totals, One Month Account Totals, Single Account Summary, Monthly Nets, Account Data (Printer), Account Names (Printer) and Main Menu. The first and second options also give nets. All screen outputs can be printed by pressing P (as indicated at the bottom of the screens).

The last two choices are for printer output only. Account Date would be very useful for income tax records. It prints out all items in the database assigned to a particular account so you can see where the year-to-date total came from. Account Names, Option 6, prints out a handy cross reference to the main menu account code letters.

For Tape Systems

To allow the *CoCo Accountant* to be used with cassette tape systems, make the following changes:

```
205 PRINT@196, **REWIND TAPE -
PRESS PLAY**
230 OPEN*'I',#-1,**ACCOUNT**
240 INPUT#-1,A1$(I)

HOW DO YOU GIVE A RAINBOW?

It's simple — Give a RAINBOW gift certificate . . .

Let a gift subscription to THE RAINBOW carry the premier Color Computer magazine right to your friends' doorsteps. THE RAINBOW is *the* information source for the Tandy Color Computer.

Each month, your friends will enjoy the intelligent programs, reviews and articles written exclusively for their CoCo.

First, your gift will be announced in a handsome card. Then, all year 'round, they'll remember you and your thoughtfulness when they get each edition of THE RAINBOW — more than 200 pages loaded with as many as 24 programs, 15 regular columns and lots of helpful hints and tips.

Generosity benefits the giver, too. There'll be no more tracking down borrowed copies of THE RAINBOW. Your collection will be safe at home.

Give a RAINBOW gift certificate and let your friends in on the fun. THE RAINBOW is the perfect companion for the Color Computer!

Get your order to us by March 25 and we'll begin your friends' subscriptions with the May issue of RAINBOW.

Please begin a one-year (12 issues) gift subscription to THE RAINBOW for:

Name _____

Address _____

City _____ State _____ ZIP _____

From:

Name _____

Address _____

City _____ State _____ ZIP _____

My payment is enclosed.

Bill to: VISA MasterCard American Express

Acct. # _____ Exp. date _____

Now Create Your Own Signs, Banners, and Greeting Cards.

Introducing The Coco Graphics Designer

Last Christmas we introduced our COCO Greeting Card Designer program (see review April 88 Rainbow). It has been so popular that we've now expanded it into a new program called the COCO Graphics Designer. The Coco Graphics Designer produces greeting cards plus banners and signs. This program will further increase the usefulness and enjoyment of your dot matrix printer.

The Coco Graphics Designer allows you to mix text and pictures in all your creations. The program features picture, border, and character font editors, so that you can modify or expand the already built in libraries. Plus a special "grabber" utility is included to capture areas of high resolution screens for your picture library.

Requirements: a Coco or Coco II with a minimum of 32K, One Disk Drive (Disk Ext. BASIC 1.0/1.1,ADOS, or JDOS). Printers supported include: Epson RX/FX, GEMINI 10X, 9G-10, NX-10, C-Itoh 8610, DMP-100/130/400/430, Seikosha GP-100/250, Legend 808 and Gorilla Bannana. Send a SASE for complete list of compatible printers.
#C332 Coco Graphics Designer \$29.95

Over 100 More Pictures

An optional supplementary library diskette containing over one hundred additional pictures is available.
#C333 Picture Disk #1 \$14.95.

Colored Paper Packs

Now available are packs containing 120 sheets of tractor-feed paper and 42 matching envelopes in assorted bright RED, GREEN, and BLUE. Perfect for making your productions unforgettable.
#C274 Paper Pack \$19.95

With Zebra's Coco Graphics Designer it's easy and enjoyable making your own greeting cards, signs, and banners.

WICO TRACKBALL Now \$19.95

Order Cat#TBR01
(Was \$69.95)

You can benefit from our purchase of brand new WICO Trackball Controllers at closeout prices. This model was designed specifically for the Radio Shack Color Computer and plugs right into the joystick port.

WICO is the largest designer and manufacturer of control devices for commercial arcade video games. If you've ever played an arcade video game, chances are you've used a WICO joystick or trackball and experienced its

superior control, pinpoint firing accuracy, and exceptional durability.

Includes one-year limited warranty. Phenolic ball offers 360-degree movement. Two optical encoders provide split-second response. Quick-action fire button for smooth, two handed arcade response and feel. Long 6' computer connection. Heavy duty plastic case for long hard use. Compatible with all color computer models.

We have bargain priced trackballs for ATARI, Commodore, TI, and other computers. Call or write for our price list.

Ordering Instructions: All orders add \$3.00 Shipping & Handling. UPS COD add \$3.00. VISA/MC Accepted. NY residents add sales tax.

RS DOS ROM CHIP

ROM chip fits inside disk controller. 24 pin fits both J&M and RS controller Release 1.1. For CoCo 3 Compatibility

Reg. \$40

\$20 each

(\$2 shipping)

BOTEK

Serial to parallel converter converts the CoCo 4 pin serial output to run a parallel printer like Star or Epson. Includes all cables. Add \$10 for modem attachment.

\$68.45

(\$2 shipping)

WORD PACK RS

This ROM pack is the hardware answer for an 80 column display. It includes a built-in video controller to drive a monochrome monitor like our 123A. To get started, you need OS-9 2.0, a Y-cable or multipack interface drive 0, and a monochrome monitor.

(\$2 shipping)

\$89

New basic driver runs word pack without need for an OS-9.

\$10

DISK CONTROLLER

NEW FROM J&M

The DC-4 is a scaled down version of the popular DC-2 without a parallel port or memory minder. It includes a switch with 2 ROM sockets, JDOS, manual and such features as gold connectors and metal box. It accesses double sided drives and accepts RSDOS 1.1 for Radio Shack compatibility.

\$65

(\$2 shipping)

TEAC DISK 55B DRIVE

The Teac 55B fits into the spare slots in the Radio Shack 501 Disk Drive. This bare drive features 40 Track, double sided 360K potential and a six millisecond track seek rate.

(\$2 shipping)

\$132

The DD-2 combines the Teac 55B with our 1/2 height horizontal case and heavy duty power supply.

(\$2 shipping)

\$188

DE-1 disk enclosure 1/2 height horizontal with heavy duty power supply. Includes all mounting hardware.

(\$2 shipping) **\$35.00**

DE-2 full height disk enclosure. Accepts two 1/2 height drives. Includes power supply for 2 drives and all mounting hardware.

(\$2 shipping) **\$39.50**

TYPEWRITERS

Howard Medical has located and tested a select few typewriters that can connect to the Tandy Color Computer and we offer them here at mail order prices. These typewriters bridge the gap between dot matrix and daisy wheel printers with excellent letter quality and keyboard access. Try one in your home for 30 days and if you do not agree that this is the best of both worlds return it pre-paid for a courteous refund.

The Biggest The Best The Indispensable

**ORDER RAINBOW
ON DISK NOW
AND SAVE!**

As a special introductory offer, you can subscribe to **RAINBOW ON DISK** before March 15, 1987, for only \$90 — \$9 off the regular subscription price. *Don't miss out — order today!*

The RAINBOW THE COLOR COMPUTER MONTHLY MAGAZINE

It's called the *premier Color Computer magazine* for good reason. **THE RAINBOW** is the biggest, best, brightest and most comprehensive publication a happy CoCo ever had! Is there any wonder we get letters daily praising **THE RAINBOW**, the magazine one reader calls "A Pot Of Gold" for his Color Computer.

THE RAINBOW features more programs, more information and more in-depth treatment of the Tandy Color Computer than any other source.

A monthly issue contains more than 200 pages and up to two dozen programs, 14 regular columns and as many as 20 product reviews. And advertisements: **THE RAINBOW** is known as the medium for advertisers — which means every month it has a wealth of information unavailable anywhere else about new products! Hundreds of programs are advertised in its pages each month.

But what makes **THE RAINBOW** is its people. Nationally known people like Bill Barden, who has written 27 books on computer topics and writes for us each month. Or, Fred Scerbo, who writes special programs at the request of readers. Experts like Dick White and Joseph Kolar, two of the most knowledgeable writers on BASIC. Communicators like Marty Goodman and Cray Augsburg, who stay abreast of telecommunications advances. Or, Dan Downard, **RAINBOW** technical editor, who answers our readers' toughest questions. Educators like Dr. Michael Plog and Steve Blyn, who show how CoCo can be used at home or school. Advanced programmers like Dale Puckett, who guide you through the sophisticated OS-9 operating system. Electronics experts like Tony DiStefano, who explain the "insides" of the CoCo. These people, and many others, visit you monthly through columns available only in **THE RAINBOW**.

Every single issue of **THE RAINBOW** covers the wide spectrum of interests in the Tandy Color Computer — from beginners' tutorials and arcade games to telecommunications and business and finance programs. Helpful utilities and do-it-yourself hardware projects make it easy and fun to expand your CoCo's capabilities. And, monthly reviews by independent reader reviewers take the guesswork out of buying new software and hardware products.

Join the tens of thousands who have found **THE RAINBOW** to be an absolute necessity for their CoCo. With all this going for it, is it surprising that more than 90 percent of **THE RAINBOW** subscribers renew their subscriptions?

We're willing to bet that, a year from now, you'll be doing the same. For more information call (502) 228-4492. **For credit card orders only, you may call (800) 847-0309.**

Get Your Very Own Pot O' Gold!

Here's your chance to have a Pot O' Gold full of programs, articles and information about CoCo every month of the year! A subscription to **THE RAINBOW** is only \$31* and you won't miss a single chock-full issue.

As the premier magazine for the Tandy Color Computer, **THE RAINBOW** has more of everything — and greater variety, too. Do yourself and your CoCo a favor and subscribe to **THE RAINBOW** today!

We accept VISA, MasterCard and American Express, Non-U.S. rates higher. U.S. currency only, please.

Two great ways to bring the Rainbow into your life

Rainbow on Tape & Rainbow On Disk!

For more than four years now, tens of thousands of **RAINBOW** readers have enjoyed the luxury of **RAINBOW ON TAPE**. Each month our tape service subscribers receive all the great programs from the pages of **THE RAINBOW** (those over 20 lines long), without the trouble of having to type them in.

Now, in addition to **RAINBOW ON TAPE**, there is **RAINBOW ON DISK** — another great way to bring **THE RAINBOW** into your life.

Each month, all you do is pop the tape into your cassette player or the disk into your drive. No more lost weekends typing, typing, typing. As soon as you read an article about a program in **THE RAINBOW**, it's ready to load and run. No work. No wait.

Yes, you could type the programs in yourself, as many people do. But all of them? Every month? There simply isn't enough time.

Just think how your software library will grow. With your first year's subscription, you'll get almost 250 new programs: games, utilities, business programs, home applications — the full spectrum of **THE RAINBOW**'s offerings without the specter of keying in page after page of listings and then debugging. And, with **RAINBOW ON DISK**, you'll also get all the OS-9 programs.

RAINBOW ON TAPE and **RAINBOW ON DISK** — as we've said before, they're the "meat" of **THE RAINBOW** at a price that's "small potatoes." And now you even have a choice about how it should be served up to you.

To get your first hearing helping, just fill out and return the attached reply card. No postage necessary.

Drive 0 and 1 269⁹⁵

One double sided drive with doubler board and new RS controller so you can have the equivalent of 2 drives in one. You can even backup from 0 to 1. Works with all CoCo's. Compatible w/RS DOS. No special operating system needed.

EPSON® LX-80 PRINTER 239⁹⁵

The logical choice for your CoCo! 80 column, 100 CPS in draft mode, 16 CPS in near letter quality mode, 1K Buffer, compatible with CoCo max. 1 year warranty* LX-80 Tractor Feed 27.95. Serial to parallel converter starting at only 49.95.

*We are authorized Epson® Sales and Service

2 Drives 299⁹⁵

Both our drive 0 and 1 in one case, with cable and R.S. controller. The best just got better!

Drive 1 Upgrade 119⁹⁵

Add a second 1/2 height drive to your Radio Shack® Thin Line Disk Drive. Comes with 3 minute installation instructions, screwdriver required. Please specify either catalog #26-3129 or 26-3131 when ordering.

Drive 1 125⁹⁵

Your Choice
Silver or White

199⁹⁵ Drive 0

SUPER DRIVE SALE

Special prices on new first quality disk drives. They even have GOLD connectors on the back... Some other places charge 229.00 for dr. 1 and 299.00 for dr. 0, not us! Drive 1 is I, Second Color Computer drive, or external mod III, IV. Drive 1 just plugs into the extra connector on your Drive 0 cable. Both drives are compatible with any version of the Color Computer and all versions of drives. Drive 0 is your first Color Computer drive and comes complete with cable, manual, and R.S. controller. Bare full hgt SSDD drive only 79.95.

THE COMPUTER CENTER

901-761-4565, 5512 Poplar, Memphis, TN 38119

Add \$4.90 for shipping and handling—Visa, MC & money orders accepted, No CODs

A program that lets you make practical financial projections

Thrifty CoCo Handles What-If Calculations

By Murray Zanger

Frequently throughout the year, I find I have to carry out some "what if" calculations either for myself or for others. In my program library I have several financial programs which, for example, give me a complete printout of a mortgage amortization schedule. Usually, I don't really want that extensive a result. What I would rather do is try out several sets of input data and quickly get a result for comparative purposes.

Financial Planner does just that. After thinking about the typical financial calculations most people might like to carry out, and after asking various friends for input, I determined that there are six (well, actually seven) common "what if" calculations that are most frequently wanted.

The first is Compound Interest, which lets you know how rapidly your savings are growing. If you choose this option, you are led to a submenu that permits you to compound as often as daily, or as infrequently as annually. You can quickly and easily check how much more you will get if your money is compounded more frequently. (Not as much as you might think.)

A popular option is number 2, Mortgage/Loan Payments. Before you go seek that mortgage or loan, check out what your monthly payments will be first. Also, the program will tell you what your sum total payments will be. Very depressing!

Option 3, Years to Reach Desired Amount, is for dreamers and planners.

You have x dollars; you ultimately want to have y dollars for some project or trip. At a given interest rate, how many years will it take for your initial investment to grow to your goal?

Being a cynic (or a realist), I like Option 4, Yield Calculator. You see an ad in the paper, "Invest \$1,000 with us today and receive \$5,000 in just 20 years," or some similar nonsense. Is this really a good deal? Option 4 calculates the actual annual yield on your investment.

For frugal CoCo Nuts, Option 5 is really two programs in one: an IRA calculator that lets you see how your annual contributions will grow until retirement, and a similar program that keeps track of the growth of your monthly savings contributions. You must assume some typical or average interest rate, but otherwise the calculations are accurate.

The last option, What Mortgage Can I Afford?, is for young professionals or couples who want to buy a home but don't know how large a mortgage they can afford. Pick the monthly payment

Murray Zanger is a professor of organic chemistry at the Philadelphia College of Pharmacy and Science. He has been a CoCo owner for about four years and has found it invaluable for his work. He has developed several chemical applications that utilize the text and graphics capabilities of the CoCo.

you can afford, and this option will calculate the size of the mortgage you can get.

All of the calculations have a print option that gives you a hard copy of the results. Typical printouts are shown in Figure 1. The options are adaptable to many combinations and variations that you may find useful. For example, suppose you already have a mortgage at some high rate. What if you re-financed it several points lower? What would your new monthly payments be? How much less money would you pay over the life of the mortgage?

Or suppose you have been in an IRA for a number of years. You know what you have contributed and you know what it is worth. What average rate has

your money been growing at? For this you can use Option 5 with a twist. Plug in your annual contributions and the number of years you've contributed, and then try different interest rates until you find the one that gives you the amount you actually have accrued. For the answer to these and other fascinating money questions, give *Financial Planner* a try.

The program itself is fairly simple in organization. The only difficult part was working out the actual equations needed.

If anyone makes any improvements or additions to the program, I'd appreciate hearing from you. For me at least, this program is worth a million!

An exciting sound-generating peripheral for ■ computer room

The 8088 Sounds Off

By Tobin Schuster

Casting around to discover an application [quite possibly the best] for the 8088 microprocessor, I hit upon a unique system that I hope will be of interest to hackers everywhere. I have devised a solar-powered, microprocessor-controlled wind chime. I call this system the SPMCWC. It is a suitable sound-generating peripheral for any computer room, or can be used as a high-tech designer element wherever needed.

As shown by the schematic, the ceramic 8088 is well-suited for the intended environment, and provides adequate support for the rest of the circuit. The circuit consists of the supporting 8088 microprocessor and six COM2017 UARTs (universal asynchronous receiver transmitter).

The operation of the SPMCWC is very simple. The operator

(you) must hang the system on a suitable hook. The SPMCWC is automatically activated when the operator releases it. Easy enough!

A Little Theory

The theory behind the SPMCWC is also quite simple. The sun warms the Earth's surface; the heat rising from the surface causes air currents. The UARTs are struck by these air currents and begin to move around. As they move, they bump into other UARTs. This bumping action causes the UARTs to begin vibrating. This vibration, transmitted into the air, is perceived by us as sound.

I hope you find the SPMCWC system as educational and entertaining as I have! □

TURBO RAM™

~~\$149.95~~
\$119.95

TURBO CHARGE YOUR COCO 3

- ✓ 512K Fast High Quality Memory.
- ✓ Super Easy Solderless Installation. Installs in minutes.
- ✓ Assembled, tested, and burned-in.
- ✓ Gold Connectors assure ultra high reliability.
- ✓ High Quality Double Sided, Solder Masked, Silkscreened PC Board.
- ✓ Ideal for OS9 Level ■
- ✓ 2 Year Warranty.
- ✓ Free GIME Chip Technical Specs (\$10.00 without Turbo Ram).
- ✓ Free 512K Ram Test Program (\$10.00 without Turbo Ram).
- ✓ Free MUSICA RAM Disk (\$10.00 without Turbo Ram).
- ✓ \$5 OFF TURBO RAM Disk.
- ✓ Also available, TURBO RAM less memory chips. **\$69.95**

INSTALLATION

If you know how to hold a screwdriver, we're convinced you can install Turbo Ram in minutes. However, if you like, send us your COCO 3 insured, postage paid, and we will install it, pay the return postage and guarantee it for 1 year. **\$15.00**

SATISFACTION GUARANTEED

If for any reason you wish to return Turbo Ram, you may do so within 15 days and be charged only a 10% restocking charge. You may keep the GIME CHIP Technical Specs, 512K Ram Test program and MUSICA RAM DISK, a \$30 value.

TURBO RAM DISK

TURBO RAM DISK adds 2 lightning fast Ram Disks to your COCO system. Imagine saving and loading programs instantaneously and having hundreds of your programs "on line" for fast access. Single disk system users can

use TURBO RAM DISK to easily make backups without continuously switching disks.

Requires 512K Turbo Charged COCO 3 **\$24.95**
When purchased with TURBO RAM **\$19.95**

COCO 3 128K

COLOR CONNECTION IV

This is the most comprehensive modem package for the COCO 3. All standard protocols are supported including CompuServe's Protocol B, XMODEM protocol, and XON/XOFF. Full support of the auto answer/auto dial feature for both Hayes compatible and some Radio Shack modems is provided. Single key macros allow easy entry of often-used passwords and ID's with a single key stroke.

Disk **\$49.95**

THE MAGIC OF ZANTH

In the Land of Zanth, magic is commonplace. Dragons, Griffins, Centaurs and Demons abound. You are sent on a quest to discover the source of magic in the Land of Zanth. This intriguing adventure features over 2 dozen hi-res 16 color animated graphic screens, 4 voice music and sound effects. The 16 color, 320 x 192 graphics look great.

Disk **\$34.95**

COLOR SCRIBE II

This great Word Processor can take full advantage of the 80 column display of the COCO 3. Justification, Headers, Footers, and Pagination make it perfect for letters and documents as well as programming in BASIC, PASCAL, "C," and Assembly Language. Over 20 line editing commands include capabilities like character insert and delete, skip over words, breaking a line, and more!

Disk **\$49.95**

RETURN OF JUNIOR'S REVENGE

This is the same Junior you've seen in the Kong arcade series, but with new COCO 3 graphics. This tireless little monkey must overcome all sorts of obstacles (4 screens worth) to rescue his father, The King, from the mean zookeeper. He will traverse the jungle and swamp, climb vines, avoid chompers and birds, open locks, and more before he finally meets with his big daddy. The 16 color, 320 x 192 graphics are superb.

Disk **\$34.95**

We accept CASH, CHECK, COD, VISA and MASTER CARD orders.
Shipping and handling US and Canada \$3.00
Shipping and handling outside the US and Canada \$5.00
COD Charge \$2.00
Illinois residents add 6 1/2% sales tax.

Introducing
CoCo 3
Compatible

Lyra™

The Musical
Coco Max™

IF YOU
CAN POINT,
YOU CAN COMPOSE

PULL
DOWN
MENUS

ICONS!

A MUST
FOR MIDI
USERS

LYRA is the most powerful music composition program we have seen on any computer. We don't mean just the COCO, we really mean any computer. Whether you are a novice trying to learn music or a professional musician with MIDI equipment you will find LYRA a powerful tool. You

see, we wrote LYRA for musicians that hate computers. If you want proof, purchase a LYRA demo for \$7.95. We will apply the demo price to your purchase. MIDI output requires the LYRA MIDI cable (#MC158) or COCO MIDI Seq/Editor (#CM147).

- ✓ Ultra Easy to use, just point with joystick or mouse and click.
- ✓ Compose with up to 8 completely independent voices.
- ✓ Room for over 18,000 notes. (This is not a misprint!)
- ✓ Super Simple Editing Supports:

Note insert	Block insert
Note delete	Block delete
Note change	Block copy
- ✓ Output music to:

TV Speaker	Monitor Speaker
STEREO PAK	ORCHESTRA 90
SYMPHONY 12	COCO MIDI S/E
MIDI Synth	MIDI Drum Machine
- ✓ Output up to 4 voices without additional hardware

- ✓ Output all 8 voices using either SYMPHONY 12 or one or more MIDI synthesizers and drum machines.
- ✓ Output any voice on any of the 8 MIDI channels
- ✓ Transpose music to any key.
- ✓ Modify music to any tempo.
- ✓ Automatically inserts bar for each measure as you compose.
- ✓ Key signature lets you specify sharps and flats only once, LYRA will do the rest.
- ✓ Plays MUSICA 2 files using LYRA CONVERT (#LC164).
- ✓ Each voice may be visually highlighted or erased.
- ✓ Each measure is numbered for easy reading.

- ✓ Solo capability
 - ✓ Block edits are highlighted.
 - ✓ Tie notes together for musical continuity
 - ✓ Name of note pointed to is constantly displayed.
 - ✓ Jump to any point in the score instantaneously.
 - ✓ Memory remaining clearly displayed, however you will have plenty of memory even for the most demanding piece.
 - ✓ Help menu makes manual virtually unnecessary.
 - ✓ LYRA is 100% software, no need for extra hardware unless you want more power.
 - ✓ Music easily saved to tape or disk.
 - ✓ Requires 64K and mouse or joystick.
- LYRA (Disk only) #LY122 \$54.95**

LYRA OPTIONS

These LYRA options are **not** required. They are provided for those wishing additional flexibility.

LYRA CONVERT

A program to convert MUSICA 2 files to LYRA files.
(T or D) #LC164 **\$14.95**

LYRA STEREO ENHANCER

Gives the LYRA stereo output when used with the STEREO PAK or ORCHESTRA 90.
(T or D) #LS149 **\$14.95**

LYRA MIDI CABLE

A cable to connect your computer to your MIDI synthesizer.
#MC158 **\$19.95**

LYRA SYMPHONY 12 ENHANCER

Lets LYRA play all 8 voices through SYMPHONY 12.
(T or D) #LS177 **\$19.95**

STEREO PAK

Plugs into the COCO ROM cartridge slot allowing easy connection to your stereo system.
#SP193 **\$39.95**

SYMPHONY 12

A real hardware music synthesizer, lets LYRA play all 8 voices in stereo.
(T or D) #SY149 **\$69.95**

COCO MID Seq/Editor

A professional quality MIDI interface for MIDI synthesizers.
(Disk only) #CM147 **\$149.95**

MUSIC LIBRARY

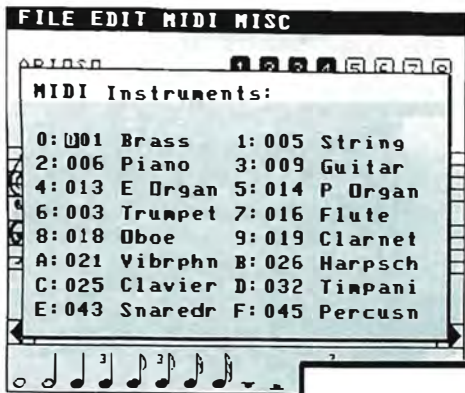

A collection of over 800 songs. When used with CONVERT, it gives an incredible LYRA library. Each volume 100 songs.
(T or D) #MLXXX **\$29.95**

COCO MAX is a trademark of Colorware.
ORCHESTRA 90 is a trademark of Radio Shack.

FEATURES!**

**MORE
POWER!**

Now your COCO can talk to your MIDI music synthesizer. Whether you have a Korg, Roland, Casio, Yamaha, or Moog, it doesn't matter as long as it's MIDI equipped. Choose from our

entry level MUSICA MIDI system that plays MUSICA files or our Professional COCO MIDI 2 system.

- ✓ Supports 16 Track recording and playback
- ✓ Adjustable tempo.
- ✓ Over 45 Kbytes available (Over 15,500 MIDI events possible).
- ✓ Record to any track.
- ✓ Low Level track editing.
- ✓ LYRA editing. (one voice per track)
- ✓ Playback from any number of tracks
- ✓ Quantizing to 1/16, 1/32, 1/64 intervals.

- ✓ Filter out MIDI data:
 - Control Change
 - Key pressure
 - Channel Pressure
 - Program change
 - Pitch wheel
 - System Message
- ✓ Graphic Piano Keyboard Display in both record and playback mode.
- ✓ Adjustable Key (Transposition).
- ✓ Save recording to disk for later playback or editing
- ✓ Syncs to drum machine as MASTER or SLAVE

- ✓ Sequencer features
- ✓ 100% machine code.
- ✓ "Musician Friendly" Menu Driven.
- ✓ Metronome
- ✓ Many songs included. Includes MIDI hardware interface, 2 MIDI cables, detailed manual, and software. Requires 64K CoCo, Y-Cable or Multi-Pak.
- COCO MIDI 2 (disk only) #CM147 . \$149.95**
- DOUBLE Y-CABLE #DY181 \$28.95**
- TRIPLE Y-CABLE #TY173 \$34.95**

DX LIBRARIAN™

Save and load voice parameters for the Yamaha DX series of synthesizers (DX-7, DX-100, DX-21 etc.). Save sounds individually or as a group letting you load the entire synthesizer in seconds.

Comes with professionally developed voices for the DX-7 worth 10 times the price. Requires COCO MIDI hardware interface.
DX LIBRARIAN (Disk only) #DX143 \$39.95

CASIO LIBRARIAN

Save and load voice parameters for any Casio synthesizer (CZ-101, CZ-1000, CZ-5000 etc.) You can save from the: presets, cartridge,

memory or buffer. Requires COCO MIDI hardware interface.
CASIO LIBRARIAN (Disk only) #CL169 \$39.95

MUSICA MIDI™

MUSICA MIDI takes any MUSICA 2 music file and plays it through your MIDI synthesizer. We offer you over 800 tunes from our MUSIC LIBRARY series (sold separately) or create your own music

using MUSICA 2. Includes: documentation, plenty of music, and the cable to connect between the COCO and your synthesizer.
MUSICA MIDI Complete (Disk Only) #CM126 \$39.95

MIDI KEYBOARD

If you own the Casio CZ-101 or similar MIDI synth, you know that the mini keys and the short 3 or 4 octave keyboard is limiting. MIDI KEYBOARD when used with our full size 5 octave keyboard

gives you the flexibility you need. Comes with cable to connect the COCO to your MIDI synth.
MIDI KEYBOARD (Disk only) #MK167 \$29.95

Two Years In the Making. Speech Systems was formed to develop new and innovative speech products. After 2 years of intensive Research and Development, we have created a truly sophisticated speech recognition device. Recognition rates from 95% to 98% are typical. Until now, such a product was outside the price range of the personnel computer market, and even small businesses.

EARS is trained by your voice and capable of recognizing any word or phrase. Training EARS to your particular voice print takes seconds. Up to 64 voice prints may be loaded into memory. You may then save on tape or disk as many as you like so that your total vocabulary is virtually infinite.

Speech and Sound Recognition. EARS is really a sound recognition system, so it really doesn't matter whether you speak in English, Spanish, or French. In fact you do not have to speak at all, you can train EARS to understand sounds such as a musical note or a door slamming.

Hands Off Programming. Imagine writing your own BASIC programs without ever touching the keyboard. Everything that

you would normally do through a keyboard can now be done by just speaking.

Programming EARS Is Easy. LISTEN, MATCH and other commands have been added to BASIC so that programming EARS is a piece of cake! The single BASIC line: 10 LISTEN: MATCH will instruct EARS to listen to you and return the matching phrase.

It Talks. EARS is also capable of high quality speech. We mean REALLY high quality. The speech is a fixed vocabulary spoken by a professional announcer. Speech Systems is currently creating a library of thousands of high quality words and phrases. For a demonstration call (312) 879-6844, you won't believe your ears or our EARS.

DISK OWNERS. EARS will work with any disk system with either a MULTI-PAK or Y-CABLE. Our new Triple Y-CABLE was specifically developed for those wishing to add SUPER VOICE as a third device.

You Get Everything You Need. You get everything you need including a specially designed professional headset style noise

cancelling microphone. The manual is easy to use and understand. Several demonstration examples are included so you don't have to write your own programs unless you want to. EARS will work in any 32K or 64K Color Computer.

SUPER VOICE \$20 OFF

Imagine talking to your computer and it talking back to you. When you need an unlimited vocabulary, you can't beat SUPER VOICE. For a limited time, we will give you the SUPER VOICE for \$59.95 with your EARS purchase. Even if you already have another speech unit, here is your chance to buy the best and save \$20.

VOICE CONTROL

Applications for EARS are astounding. Here is our first of many listening programs to come. VOICE CONTROL is a program specifically designed to allow you to control any appliance in your house with your voice and our HOME COMMANDER (sold separately) or the Radio Shack Plug 'N' Power controller. For example, you can control your TV by saying "TV ON" or "TV OFF". . . \$24.95

A look at one reader's personalized system

Look What They've Done to My CoCos

By Harold L. Wolff

Our first printer was a dot-matrix Radio Shack DMP-100 and it has served us very well. But we had a problem with it (created by me) which resulted in its being out of service for two weeks. Since my wife, Sandi, uses our computer system every day, sometimes for as much as four to six hours at a time, this two-week down time was unacceptable.

This incident led to the development of the system we now have. It is this system that I will attempt to describe in my article.

We own three CoCo 2s, and I recently purchased a Smith Corona L-1000 daisy wheel printer. We have retired the DMP-100 to backup status. The L-1000 is a marvelous printer at a good price. It has 16 Baud rates and parallel input.

As you may have guessed, a major factor in the development of my "cheap and dirty" system was Sandi's substantial use of it. A 100 percent backup had become a major requirement.

Back in the beginning, I installed a 400-watt inverter to power only the CoCos in order to prevent data loss. The CoCo only consumes about 24 watts, so a 60-watt inverter would have

done. I "overbought" because of the occasional hurricane in our area.

The inverter has a square wave output rather than a sine wave. A square wave inverter is relatively cheap and easy to make. The 120 VAC feeds the power transformer which feeds the bridge rectifier. The CoCo works on +5 VDC and -5 VDC regulated, so the square wave ultimately has no noticeable effect on the CoCo. The inverter is powered by a 12 VDC car battery which is on continuous float charge.

Since then, I have developed a battery backup for the CoCo for the cost of six D cells and two diodes.

I spent a long time searching for a CoCo diagram with no success. Finally, I tried Radio Shack. Within a week I had a complete service manual. Radio Shack to the rescue.

Our CoCos are almost exclusively used for word processing with the *Color Scribes* program packs, and the computers are never turned off. In our part of town we average a power dip once every four weeks, so the battery backup system is a necessity, not a luxury.

There are several ways to accomplish battery backup. I used a minimum number of parts to do it the cheapest and most reliable way. Since the +DC output of the bridge is about +9.50 VDC to ground, I chose to tie in the 9 VDC battery backup output isolated with diodes (see Figure 1). No current will flow from the battery pack into the CoCo unless the magnitude of the

Harold Wolff is an electrical engineer employed by a pipeline firm in Houston, Texas. His wife, Sandi, is a licensed ordained minister. She used their CoCos for all seminary work, including preparation of her thesis.

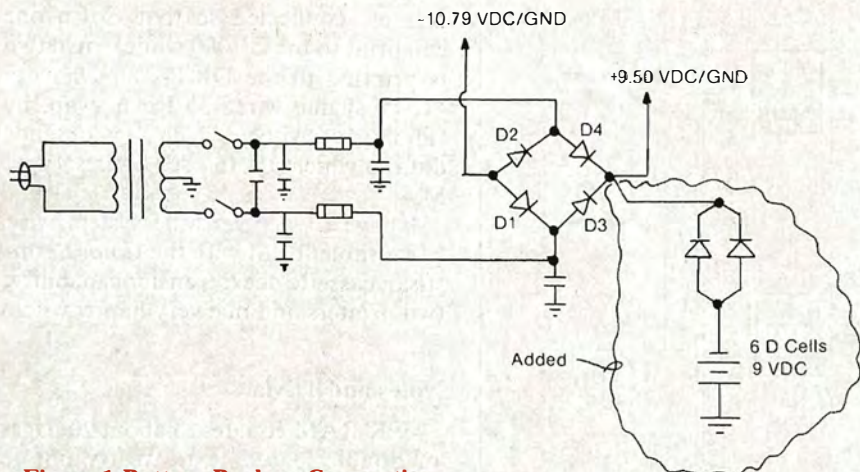

Figure 1: Battery Backup Connections

CoCo supply becomes less than that of the battery pack. The diodes inhibit the CoCo power supply from feeding the battery pack, which could possibly overload the power supply. I chose to use alkaline non-rechargeable cells.

I tied in the positive where the cathodes of D3 and D4 tie together. D3 and D4 are larger than D1 and D2 since they supply more current to the +5 VDC supply than D1 and D2 supply to the -5 VDC supply. The -5 VDC is only used for the RS-232C output drivers. I tied the negative to the black lead of the secondary of the power transformer.

You can verify that you are at the right diodes by checking with your voltmeter that there are about +9.5 volts

from there to ground. Don't be fooled; the two fuses look almost like diodes.

I also defeated the off/on switch so it could not be left in the off position causing the battery pack to be drained (see Figure 2).

I paralleled two 3-amp diodes to give me plenty of current capacity and to lower the drop across the diodes on the battery backup system. Some people call this overkill, but diodes are cheap and I'm buying some insurance for pennies.

Test the battery backup once a month and replace the batteries each year. To test the backup, have some data in memory you don't mind losing. Unplug the cord from the outlet and leave it

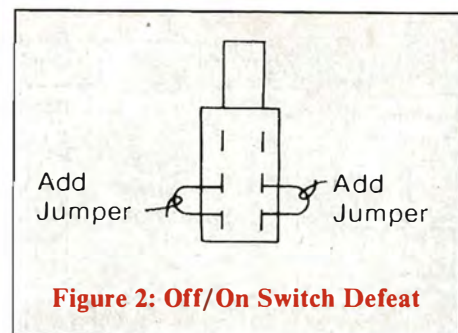

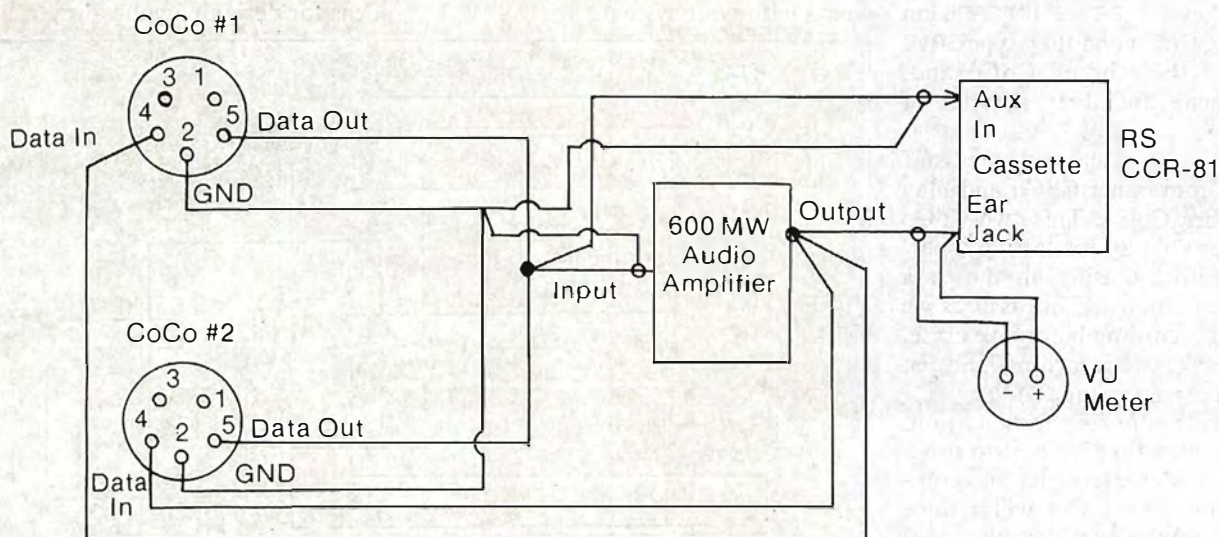

Figure 2: Off/On Switch Defeat

unplugged for 10 seconds. Plug it back in. If the screen went blank or there was some data loss, replace the battery pack.

The purpose of this battery backup is to ride through power dips. An extended electrical outage would result in the battery pack being drained. A switch could be added so that the 120 VAC power and the 9 VDC battery would be turned off simultaneously.

For \$9.95 each, I ordered upgrade kits for the CoCos. The kits each included eight 4164N/20 chips and an instruction sheet. There are eight plug-in chips to change and one solder-in jumper to add. This gives me 32K of RAM accessible in each CoCo now. The upgrades are not a true 64K upgrade since I did not install the plug-in ROM and did not do the necessary changes required to allow disk operation. I did a cheap and dirty upgrade which increased my RAM memory for word processing from 16K to 32K per CoCo.

Now I would like to describe how two of our CoCos are hooked together.

Note: All cables use ground shields. All shields are tied together.

Figure 3: Cassette Deck and VU Meter Connections

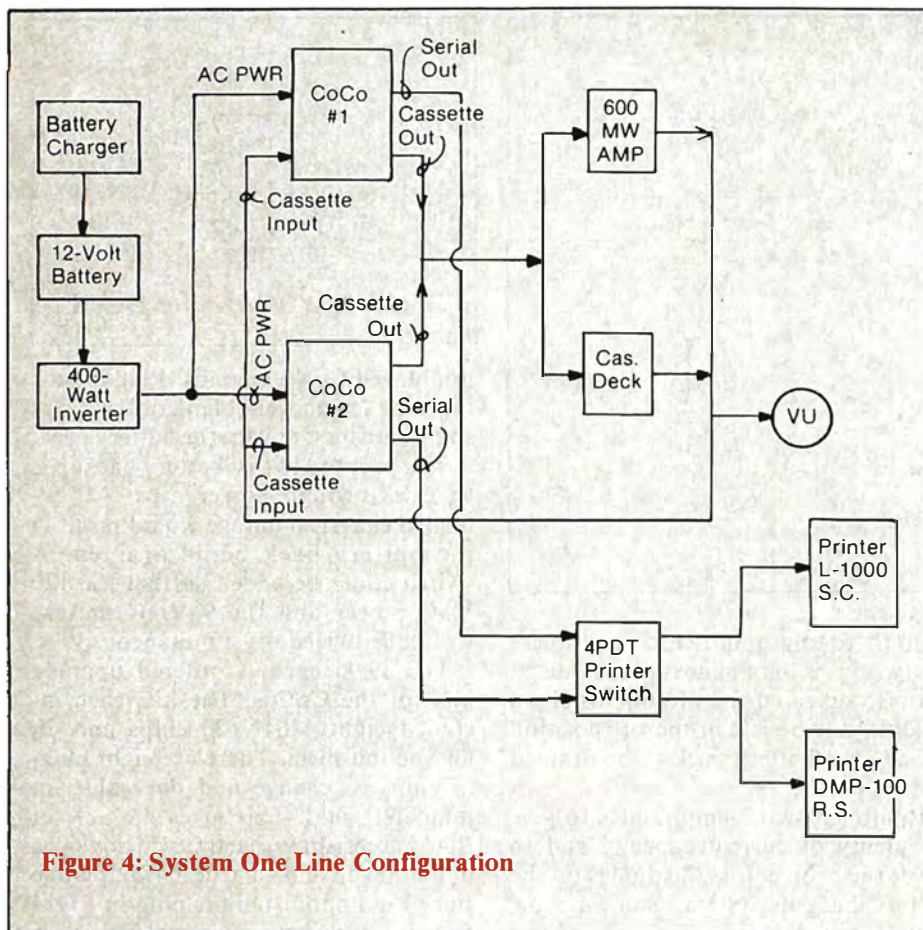

Figure 4: System One Line Configuration

I tied the cassette output of each CoCo to the cassette input of the other one. I can send data from one CoCo to the other. To accomplish this I had to use a small audio amplifier to bring the level of the CoCo output up to the required input level of the other one (see Figure 3).

I simply key in LOAD FROM TAPE on the receiving CoCo and then type SAVE ON TAPE on the sending CoCo and, bingo, a cheap and dirty transfer of data.

I have a cassette deck connected so I can record from either CoCo and play back to either CoCo. This two-CoCo system is very handy for testing a new recording before erasing all the data that has been entered. This assures we have a good recording before we erase. We always make two recordings and test them both before erasing RAM.

In the course of my experimentation, I have concluded that it's best to use a high quality cassette recorder and computer cassette tapes. You will reduce your aspirin intake considerably. READ ERROR becomes the norm when you use audio tapes and a cheap recorder.

I also put a VU meter on my system. The VU meter monitors the signal level of what's going into the receiving CoCo.

The CoCo is somewhat sensitive to the level of its input. The VU meter is used when transferring data between CoCos and when playing a tape back into the CoCo (see figures 3 and 4).

A good level is about -4 on my VU meter. All VU meters are not created equal. You just need to try and see what works with your system.

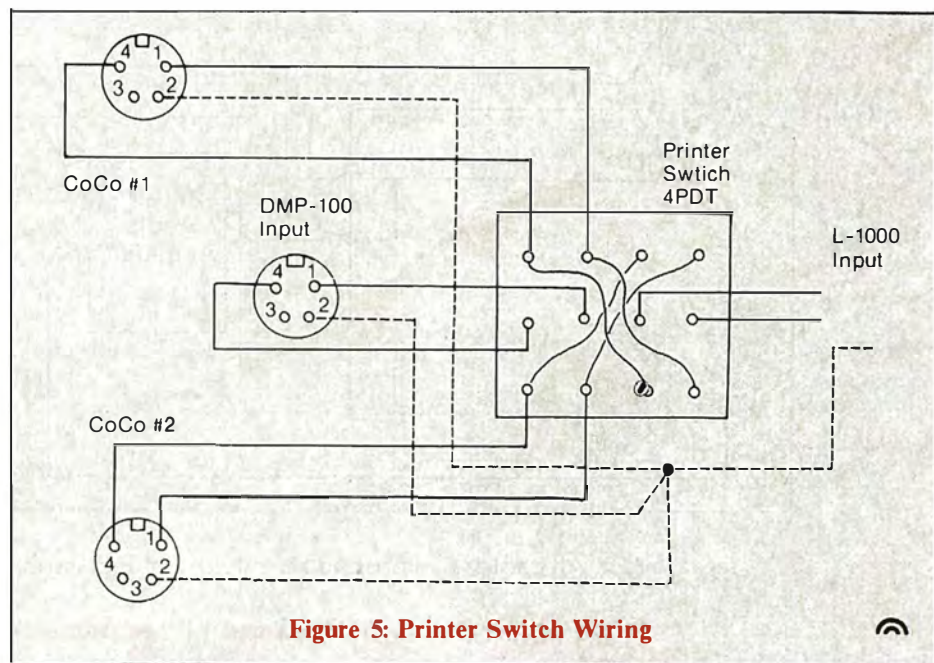

Figure 5: Printer Switch Wiring

I have both the L-1000 and DMP-100 printers connected so that CoCo one can print to the L-1000 while CoCo two is printing to the DMP-100. I have a 4PDT switch wired so I can swap, by flipping a switch, which CoCo sends data to which printer (see figures 4 and 5).

I have a very versatile system with 64K usable RAM with the *Color Scripts*, a cassette deck, transfer capability, two printers and one very happy wife.

Notes and Trivia

32K RAM equates to about 20 pages of double-spaced text. We try not to exceed 16K blocks for our tape file. Of course, this is optional, but I feel that the longer the file, the more apt you are to have a READ problem.

I have also found that where you locate your cassette recorder in relation to the CoCo, TV and printer sometimes makes a difference when trying to SAVE and LOAD from tape. I located our cassette about 12 inches below all of our other equipment on a special shelf.

The amplifier must be off while the cassette deck is in use. The cassette deck must be off (not in use and not in pause) when data transfer is being used.

We do not use the automatic cassette start/stop feature of the CoCo, but I suppose you could just parallel the two isolated contacts out of each CoCo to start and stop the cassette.

I hope you've enjoyed this brief tour of our system. Maybe this will give you ideas for designing your own. □

More than a book . . .

A MILESTONE

THE COMPLETE RAINBOW GUIDE TO OS-9

Today's programmers use short modules of readable code to build complex programs. The OS-9 operating system and the high level languages it brings you make the job easy.

OS-9 has so many things going for it that you need a guide as comprehensive and thorough as *The Complete Rainbow Guide To OS-9* to show you how to talk to OS-9 and realize the potential of this extremely efficient implementation of the UNIX operating philosophy.

Co-authored by Dale L. Puckett and Peter Dibble — two of the foremost authorities on OS-9 — *The Complete Rainbow Guide to OS-9* demystifies the dynamic operating system that gives the Color Computer more power and flexibility than many of the high-cost computers on the market . . . and gives you the ability and confidence to reach new programming heights.

With *The Complete Rainbow Guide To OS-9*, you will be prepared to take full advantage of the multitasking system that is setting new standards for Color Computer programming. For only \$19.95!

Also Available!

The Rainbow Guide To OS-9 Disk. An adjunct to and complement to the book. You'll want the book for the tutorials, and the package of two disks to save the many hours of typing in lengthy programs. Two-Disk Package, \$31

**Coming soon also by Dale Puckett and Peter Dibble:
A complete Rainbow guide to using OS-9 Level II on the Color Computer 3.**

Please send me *The Complete Rainbow Guide To OS-9* for \$19.95.*

Please send me *The Rainbow Guide To OS-9 Disk* (a package of two disks) for \$31.* Does not include book.

For greater convenience, The Complete Rainbow Guide to OS-9 and disk can be ordered through the shipping area of the Color SIG on Delphi!

FREE CoCo Catalog!

Nuke the Love Boat!

by Steve Hartford

Master terrorist Abdul Mullah has sent a suicide squad of fanatics to destroy the last symbol of the American way. Their mission:

Nuke the Love Boat!

They are bent on detonating their stolen nuclear device onboard but you stumbled upon it first. With the help of Doc, Julie, Gopher, the rest of the crew and an assortment of guest stars, you must form a commando army to keep the bomb out of terrorist hands.

Your forces hold the bow. The terrorists are attacking from the stern. They have a modern arsenal. Your only weapons are the ones your ingenuity can create. Fire hoses against firearms, the battle wages from deck to deck.

This strategy simulation is much more than a sitcom. It's a race against time and all the odds. The fate of prime time America rests in your hands. Can you and the crew stop Abdul Mullah before he: Nukes the Love Boat?

This simulation is fully **mouse/joystick driven** with **pull down menus** and **windows**. It takes full advantage of the CoCo 3's graphics. If your CoCo has 512K, it will be used as a fast Ramdisk. This is an adventure in strategy and an in-depth exploration of the CoCo 3's real capabilities.

Requires CoCo 3, mouse or joystick, Disk only **\$34.95**

Return of Junior's Revenge

The best graphics you've ever seen on a Color Computer 3! Junior (with your help) has to make it through all sorts of obstacles to rescue his father from the mean zookeeper. You must get him through the swamp and the jungle, guide him up vines, and help him avoid the chompers and more before he finds his father, the King. This is a great arcade and adventure that really takes advantage of the graphic capabilities with 16 colors and 320 x 192 graphics. It's superb on a composite color monitor, RGB analog monitor, or TV. Also works great with 512K.

Requires 128K, CoCo 3, Disk **\$34.95**

The Magic of Zanth

Dragons ... Demons ... Griffins ... Centaurs ... kind of stirs the imagination, doesn't it? You have been sent on a quest to discover the source of the magic in the Land of Zanth. Watch the 16 color graphics come alive with over 2 dozen hi-res animated screens. There are 4 voice music and sound effects, and speech (when used with the Tandy SSC pak). The graphics look great on either a composite color monitor, RGB analog monitor, or TV. It takes advantage of 512K if available. Excellent graphics, and an excellent game.

Requires 128K, CoCo 3, Disk **\$34.95**

celebrates the CoCo 3!!!

New OS-9 Screen Editor
with Smart Speller!

Screen Star

by Scott Cabit

This is the screen editor everyone has been waiting for! Screen Star is clearly the most powerful editing product ever available on the Color Computer.

WordStar Implementation

What makes it so powerful? Screen Star implements the popular WordStar editing capabilities. If you know or use WordStar on any other computer, you already know how to use Screen Star on your CoCo! Plus, what you learn with Screen Star you can use on nearly any other computer you use later.

Edit Files Larger than Memory

Since Screen Star uses the disk as an extension of memory, it will edit files larger than memory. You are not confined to small text or program files!

Block Commands

With a keystroke you can mark the start and end of a block, then move, copy, or delete the block with another keystroke.

Cursor Movement

An array of powerful cursor commands help you to move left or right one character, or one word, or one line; scroll forward or back one line, one screen, one block; jump to the start or end of the line or the screen, block, or file.

Find & Find/Replace Commands

Full implementation of find and find/replace commands make mass changes and searches a snap. This is so time saving when programming or word processing!

Parameter Commands

Personalize your editing environment using the parameter commands. Set tabs, toggle the video, access the OS-9 Shell, and choose wordwrap. CoCo 3 users can define up to 10 functions keys for fast, repetitive functions.

Smart Speller Included

Smart Speller is included in the package too! This is a revolutionary new idea in spelling checker programs. Unlike most spelling checkers which require a huge dictionary file containing every word you ever wish to use, Smart Speller utilizes a relatively small dictionary which contains the most common English misspellings and their correct spellings. This makes Smart Speller much easier to use, since it will not stop at every word and requires much less space.

Smart Speller will also recognize any abbreviations you commonly use and replace them with their full spellings automatically! This feature alone can save you countless hours of typing time.

Pop-Up Help Menus

Help is as close as a keystroke. At any time you can bring up a concise list of commands and functions to help you use Screen Star's full capabilities.

Closing Commands

Not only can you exit the editor with or without save, but you can import or export files whenever you need them.

Use with Text Formatter

Screen Star works especially well with Computerware's OS-9 Text Formatter to provide a full word processing team. You simply imbed the Text Formatter commands in your Screen Star file. It will then be printed in style with headers, footers, pagination, justification, etc. We offer a special package price for this powerful duo!

Level 1 for CoCo 1 & CoCo 2

Screen Star uses OS-9. The original CoCo and CoCo 2 are supported under Level 1. A special 51 x 24 screen driver is provided (and required) to make available the added screen capabilities.

Level 2 and CoCo 3

CoCo 3 users can run Screen Star with either Level 1 or Level 2 OS-9 and have the added advantage of the ALT and function keys. The Level 2 screen driver provided (and required) offers extended capabilities for scrolling and display features on an 80 x 24 screen.

All versions included

All versions are included in the Screen Star package, so you can enjoy its power on any CoCo you use!

Requires 64K Disk

\$49.95

With Text Formatter

\$74.95

(Save \$10!)

Ask for our FREE CoCo Catalog!

OS-9 Text Formatter

Page and Line Directives:

Text Formatter includes commands for left and right justification, page breaks, special spacing, automatic pagination for your given number of lines per page and the width of the lines, automatic page numbering, and more.

Centering, Tabs, and Special Printing:

There are many ways to format your text with centering, indenting, tabs, and underlining. Also included is the ability to send escape and control codes to your printer to utilize its special features.

At last, an easy way to get beautiful documents and letters with OS-9! You need not buy and learn another editor. This Text Formatter interfaces with any editor that produces standard ASCII text files including Computerware's Advanced Editor, Radio Shack's TS Edit, and Computerware's new Screen Star. You simply imbed any of the dozens of print commands in your text file and let the Text Formatter print your beautifully formatted text for you.

Headers and Footers:

You can direct the Text Formatter to put a constant heading or footing with date, page number, or your special phrase on the left, right, or in the middle of the top or bottom of the page.

Special Features

Other important features include macros for often used sequences and formatting, relative arguments for setting spacing directives, upper and lower case modes, nonprintable remarks, and more!

The Text Formatter makes changing the whole look and format of your document as easy as a few keystrokes. You have no excuse for not having the most professional looking documents!

Requires 64K, OS-9

\$34.95

Find the right combination to control this colorful confusion

CoCo 3 Gets You Over a Barrel

By Paul D. Buttacavoli

The *Barrel Puzzle* is a single-unit puzzle that contains a total of 23 movable colored balls. There are two rings, each holding 10 balls, and a plunger that moves 15 of the balls up and down through the rings. The balls are arranged in six colors, four each of five colors, and three gray.

While there are fewer possible combinations with this puzzle than with the Rubik's cube, this one is much more difficult to solve because of the number of moves necessary to make a simple change.

Instructions for using the program are in the listing, so just type it in and run. The colors have been chosen for an RGB monitor. The program saves to disk as listed; to save to cassette, just change all #1s to #-1s.

Enjoy yourself — and good luck; you'll need it!

Paul Buttacavoli lives in Alameda, California, and works at the Claremont Country Club. He has been programming the CoCo for six years, and uses his CoCo 1 to run the "Cosmic Connection" BBS.

Look What's New at NOVASOFT!

Top-quality software at affordable prices, written by well-known authors in 6809 Machine Language

CoCo 3 Compatible only
NEW RELEASE
THE WILD WEST

Get out your six shooter and polish your spurs! Journey into the gunslinging land of the old west. As sheriff of Dry Gulch, your job is to keep the peace. But the notorious desperado Black Bart has escaped from jail and is on his way to Dry Gulch to recover his hidden fortune!

Can you set a trap to capture Black Bart? Or will he get you! You'll have to use every trick in the book, and be quick on the draw as well, as you talk to some unsavory characters. Decide what items you'll need to buy from the General Store, and lay a trap for your enemy!

The Wild West is designed to be played exclusively on the Tandy Color Computer 3.) It has several features not seen in most adventures.

- Incredible animated 320 x 192 16 color hi resolution graphic scenes!
- Four voice music and sound effects.
- Save and load games in progress.
- A vocabulary of over 100 words.
- Automatically SPEAKS with a Tandy Speech Pak.

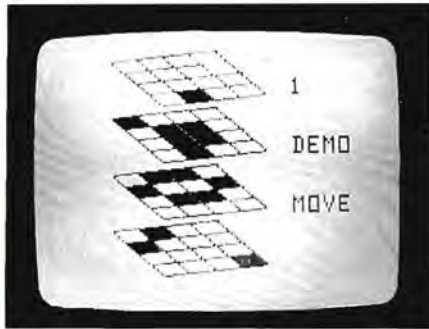

Requires a 128k Coco³ and one disk drive
Disk \$25.95

Buy 1, get 12 FREE!

Buy the PRO-COLOR-SERIES for \$79.95 and get 12 months of The Rainbow FREE! If you are an existing subscriber* to The Rainbow, we'll renew your subscription for an additional 12 months. This is a savings to you of \$31.00! The PRO-COLOR-SERIES consists of three programs.

PRO-COLOR-FILE *Enhanced* V2.0 Design a record structure up to 60 fields with 1020 spaces per record, 4 custom designed data entry screens, math functions on single records with IF-THEN-ELSE capability. Extremely flexible reporting capability for totals, averages and summaries. Mailing label generation of up to 10 labels across and 30 lines per label. Use the posting function to perform mathematical calculations on the entire database, with records updated automatically. Output reports to the printer, disk or screen. Send information directly into a DYNACALC[®] compatible file for use in spread sheets. Design custom menus for report selections and streamline repetitive tasks into one keystroke with the command processor. Sort 750 records in less than 5 minutes and create special indexes of your file for reporting and accessing. Store as many records as your disk will hold!

PRO-COLOR-FORMS V2.0 This mail-merge feature will

allow you to write a letter and have names from your database inserted automatically. Design invoices, inventory cards and other forms. Or if you use pre-printed forms, you can set up a template to print information in the appropriate places. You can

use printer codes for features like "bold" and "underline." If you have our TELEGRAPHICS[®] program, you can have hi-res pictures included as part of the form! You can even right justify your text for a more professional look.

PRO-COLOR-DIR This utility will read the directory of all your diskettes and create a data file that can be accessed by PRO-COLOR-FILE. Store up to 1,000 entries on one diskette and generate a master report that shows where each program is in your library. You can keep track of the date you created a disk and the date you last updated it by generating labels for your disks. The PRO-COLOR-SERIES gives you database capabilities found on larger computers, but at a fraction of the cost. Our PRO-COLOR-SERIES lets you organize important information together in one place, right at your finger tips. Not only will you be getting the most widely used database program for the CoCo 1, 2 and 3, but also the ONLY magazine that can give you all the facts about the CoCo!

Yes, I would like to receive The PRO-COLOR-SERIES and 12 months of the Rainbow magazine for just \$79.95.

This Jeopardy-like game can be played by up to 10 people at once

'Life of the Party' for \$200, Please

A hand holding a red game controller. The controller is a large, teardrop-shaped device with a central joystick and a button on top. The hand is holding the controller from the top, with the thumb resting on the button. The background is a light blue gradient.

Most computer games are fine entertainment when you have a friend over. But when you fire up your CoCo in a crowd, only a few get to play and the rest just look on. My friends and family don't like to be left on the sidelines so I stopped putting my CoCo on the guest list at parties. *G-Party*, a trivia game similar to TV's *Jeopardy* but large enough to include up to 10 contestants, has again put the CoCo on the social register.

All of the fun roles are kept for the humans. The CoCo does the things we don't enjoy, such as keeping score, displaying questions and deciding who answered first.

The game may be played using the standard keyboard for contestant bidding. However, it takes on a much more realistic feel when the players can leave the keyboard to the M.C. and use their own game buttons. These are inexpensive and can be built by following the accompanying instructions.

Dale Collins lives in Moorestown, New Jersey. He is a senior district software specialist with Motorola Computer Systems where he programs in C in a UNIX environment.

By Dale R. Collins

Playing the Game

Run the BASIC program *G-Party*. You must indicate whether you want the contestants to share the keyboard with the M.C. or use separate game buttons. Indicate whether you will be using question and picture files from the tape or disk.

Use Option 4 to identify the contestants. The M.C. enters the name, then that player must press his game button or a key 0 to 9 or A to Z. When there are no more contestants to be identified, press ENTER to display the player list. Pressing ENTER again gives the menu. Before each level of *G-Party* you must load your question file using Option 5.

Single and Double *G-Party*

In these rounds, the categories are

displayed with the question values in a column-row grid. The name of the current player is displayed in the lower-left corner of the screen.

The player announces his choice, such as "Sew It Is for 200," and the M.C. keys in the column and row numbers. If this question is a daily or video double, the selecting player must specify the amount he wants to wager before he sees the question.

However, if this is a normal question, the CoCo displays the question and begins timing for a player to press his button. The first person to press his button is named on the screen and has a few seconds to answer. The M.C. must know the questions and answers in advance to be judge. Correct answers are logged with the right arrow, and

incorrect answers with the left arrow. If no answer is logged before that player's time expires, or he is logged as incorrect, his score is debited and the question is once again fair game for any others who want to try. If no one has answered correctly and no one else wants to try, the answer is displayed until the M.C. presses ENTER.

The round continues until all questions are used. The M.C. then returns to the menu using an M to load the next question file and start the next round. During a round the M.C. may also use A to show the last answer, T to display the current total score or C to correct a player's score.

Final *G-Party*

Only those players with a score

Behind the Scenes: Building the Game Buttons

By Dale R. Collins

We love to watch TV game shows, imagining ourselves standing with the game button under our sweaty hand, believing we would leave the other contestants in the dust.

Until now, our attempts to mimic TV competition games have been limited by hardware. Two contestants can make do with the buttons on the joysticks, but for a greater number, they must all crowd around the keyboard and screen. At best, only three or four have a chance at active play. Contestants cannot become absorbed in the game because they must constantly shift to see the screen and press "their" key.

I will show you how to make a set of 10 individual game buttons that will set

the contestants free to concentrate on the game. This is an excellent hardware project for a beginner for several reasons. First, the electronic components you will be working with are very inexpensive (less than \$14) and readily available. Second, the components are all sturdy and not likely to be damaged by inexperience. Third, this hardware will only be connected to the computer when you have finished construction and are ready to use it. There is never a phase of construction during which your computer is "down." Fourth, you will not need to open your CoCo thereby voiding the warranty.

The operation of these buttons is a very simple thing. The joystick port is actually

a device called an analog-to-digital converter. Normally it monitors very low-voltage values determined by positions of the joystick, and then estimates it on an integer scale from 0 to 63 through the function JOYSTK(0). We are replacing the joystick with the set of game buttons which return unique voltages for each button pressed. Each button will always put out the same voltage, which is always expressed as the same integer 1 to 63. Thus, our basic program only needs to test the value in JOYSTK(0). If it has a non-zero value, we can tell which button is pressed.

There is one caution to note. Because the voltages are so low and we are introducing many solder joints and lengths of wire, the values may waver a bit for each button. I recommend that when you test a button that normally yields a value of 47, you accept a range of 46 to 48 as a true value for that button.

Let's get down to the business of assembling the game buttons.

Drill the switch-mounting holes in the bottom of 10 margarine tubs and a hole for the wire in the side, close to the lip. The eleventh tub is to be the central location of the circuit. You will need to drill 10 holes for the wires to the switches and two more for the wires to the DIN plug. Drill them equally spaced around the side.

Cut the wire into 12 equal pieces and strip the ends back $\frac{1}{4}$ inch. Split one length into two single conductors.

Push a wire through the hole in the side of each button tub. Tie a knot in the wire so that when the wire is pulled from the outside of the tub there will be a little slack when the switch is mounted. Solder a conductor to each post of the switches. Mount the switches in the holes and put the lids on the tubs.

Slide the hood of the plug a few inches back onto the remaining pair and one

Photo of 10 game buttons and hub (center).

greater than zero are allowed to play the final question. The current scores are displayed until the M.C. presses ENTER. The category is displayed and each player should write down how much of his score he will be risking. After all players are committed, the M.C. presses ENTER to display the question. He should allow the players about 30 seconds to write their answers before pressing ENTER. The players are asked

their answers, which should be logged as correct with the right arrow or incorrect with the left arrow, and their wager. CoCo announces the winner.

Entering Question Files

You may create new sets of questions using Option 7. You will be prompted to first enter the category. Each question has three parts. First is the "special" field which is blank for most questions.

If you want this question to be a daily double, put a 'D' in this field. To make it a video daily double, enter the name of the binary picture file to be loaded. The question and answer may each contain 60 characters. After you have entered a full set of questions, you may edit them individually using Option 8. Remember to save them using Option 6. You may print a list of a question set currently in memory using Option 9. □

QTY	Description	Radio Shack #
100 feet	22 gauge speaker wire	278-1385
1	component perfbord	276-149
1	6-pin DIN plug	274-020
10	switches norm open	275-1547
9	10K ohm ¼-watt res.	271-1335
1	22K ohm ¼-watt res.	271-1339
1	220K ohm ¼-watt res.	271-1350
11	soft margarine tubs with lids	

Figure 1: Parts List

single wire (3 conductors). Solder the single wire to Pin 1 and the double to pins 2 and 5. Solder a jumper wire connecting pins 2 and 3. Assemble the plug and lock the hood in place.

Push the second end of all button wires and plug wires into the eleventh tub. Tie knots in each so when pulled from the outside of the tub they will reach about 1 inch beyond the opposite lip.

Place all of the resistors on the board to construct the circuit in Figure 2. Place a totally stripped wire long enough to connect 11 holes on the board starting at the end of R11. Solder all connections on the board.

Solder one of the conductors of every button pair to a resistor junction starting at the free end of R1 up to the junction between R9 and R10. Solder the other

conductor in each pair onto the totally stripped wire on the board. Solder the single wire from the DIN plug Pin 1 to the totally stripped wire. Solder the conductor from Pin 5 to R1 and from Pin 2 to the junction between R10 and R11.

Check your connection with Figure 2. If they match, put the lid on this tub.

The set of 10 game buttons should be connected to the right joystick port. Test each button by running the following BASIC program.

```
10 PRINT JOYSTK(Ø) : GOTQ 10
```

The value shown on the screen when no button is pushed should be 0. Press one button at a time, noting the number for each. They should all be unique. If there are any problems check your connections against Figure 2. □

Here's a program that's just your "type"

The Key to Success

By Leonard Hyre

This program, *CoCoType III*, is a typing tutor for your Color Computer 3. It lets would-be typists learn proper typing techniques, and may also be used by those of us whose typing skills are a bit rusty. To utilize *CoCoType III*, you must have a Color Computer 3 and a compatible 80-column RGB display, such as the Tandy CM-8 monitor.

After the title screen is presented, the program goes right to work, allowing the user to select from four different options. The first option, Beginner

Exercises, is ideal for first-timers. Just place your fingers on the highlighted home keys and type in the displayed exercise. Starting with the most easily mastered keys, this option allows the beginner to get comfortable with the idea of typing without looking at the keyboard. After an exercise is correctly typed four times, a new one appears.

The second option on the main menu is Advanced Exercises. These are similar in style to Option 1, but take in the "tough" keys, such as the numbers. Option 3 presents complete words for

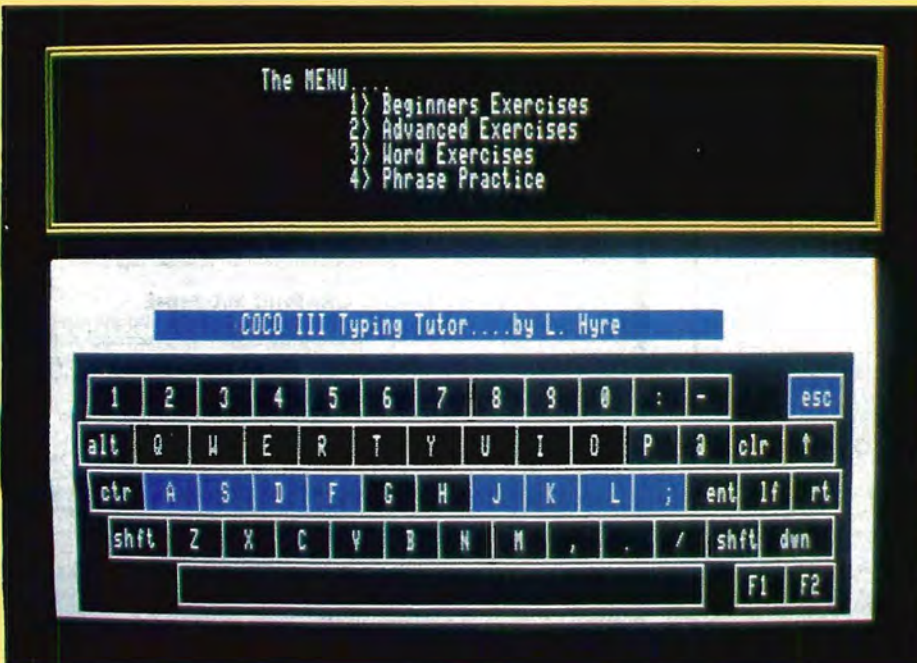

the user to enter. It is suggested that this exercise be repeated until real proficiency is attained.

The fourth option is Phrase and Sentence Exercises. As suggested by the title, the idea is to type in complete sentences. If typed correctly, a new one appears. If not, the same exercise is repeated. Completing 24 sentences correctly here will send the program off to the graduation routine.

A few pointers concerning learning to type are in order here. Always rest your fingers on the highlighted home keys, all other keys being reached from this location. Resist looking at the keyboard as much as possible. You will find it very natural to press the proper key without looking after only a few short sessions. Remember, you will not master typing in a few minutes. Short practice sessions over a period of a few weeks will be required before you begin to type confidently. Lastly, don't worry about speed! Speed will come automatically as you learn to instinctively press the correct keys.

Program flow is relatively straightforward, with no mind-boggling techniques to ponder. As such, it may serve well as an introduction to programming, or as a bit of a tutorial for those of you new to the CoCo 3. The use of the high resolution screens presents some new concepts to those of us who have been banging on the CoCo 1 and CoCo 2 keys for years.

When typing in the program, I make one strong suggestion. Line 130, which enables high-speed operation, also creates problems when trying to load or save files. You may wish to defer typing in this line until after the rest of the

Leonard Hyre is the author of Federal Hill Software's Handicapper series and a number of articles for RAINBOW. He also published several articles in RAINBOW's sister publication, SOFT SECTOR, and is the author of Sanyopoly, a new Sanyo game from Michigan Software.

Software/Hardware patch to
run CoCo Max II on a CoCo III
Req 26-3024 Multi-Pak Interface
\$29.95

GREAT CoCo III Products!

• SECRETS REVEALED

An introduction to the Color Computer III that compares the differences between the CoCo I/II and the NEW CoCo III. Includes: GIME chip specs, CoCo II to CoCo III converter, CoCo III memory map and a 128K/512K RAM test. "Offers some very good information to programmers." - Rainbow Review Feb '87 \$19.95

• C III GRAPHICS

A drawing program for the CoCo III using the new Enhanced graphic features: 320x192 graphics, 16 of any 64 colors, plus the ability to Save and Load 32K screens. "Paint pretty pictures on the CoCo3." - Rainbow Review Dec '86 \$19.95

• ROLLER CONTROLLER

Meet the challenge of super fast arcade action using the brilliant colors of the CoCo III. Six completely different maddening mazes with progressive skill levels. 128K DISK \$29.95

• FONT BONANZA

Replace the "PLAIN" CoCo III characters from a menu of INCREDIBLE fonts or create your own. 128K DISK \$29.95

• ELITEWORD-80

The third generation CoCo Word Processor is here! All the powerful features, advantages and benefits of EliteWord plus 40/80 column display formats for the CoCo III. Available only from Spectrum Projects! \$79.95 Special word processing package of EliteWord and EliteSpel for \$99.95 (see Rainbow Review March '87)

• FKEYS III

A productivity enhancement that gives you the capability to add twenty (20) pre-defined functions to the CoCo III by using the CTL, F1 and F2 keys! \$24.95

• 512K UPGRADE (NOW \$99.95*)

Easy installation with a superior design for a reliable upgrade, processing efficiency and AVAILABLE NOW for the CoCo III! \$99.95* A 512K upgrade without RAM chips \$49.95* (see March '87 Rainbow Review) *-The lowest upgrade prices in Rainbow magazine, period!

• 512K RAMDISK

Expand your processing power at a fraction of hardware costs. This fantastic feature is like adding two (2) more very fast, high speed disk drives to your CoCo III for only \$24.95

• VIDEO DIGITIZER III

Take pictures with speed! The fastest CoCo Video Digitizer ever! Twenty-five (25) frames a second (3 Xs faster than the DS-69A!) Now available for the CoCo III. \$149.95 Req. 128K CoCo III with a 40 pin 'Y' cable or Y-Box.

• RGB ANALOG MONITOR

Our monitor is much more versatile than the Tandy CM-8! Takes a variety of video inputs, including: RGB Analog, Color Composite and RGB TTL. Unlike the CM-8, PHODE 4 artifact colors don't show up BLACK and WHITE (when processed through the Color Composite input) \$299.95

• PAL SWITCHER

Have the best of both worlds by being able to switch between CoCo II and CoCo III modes when using a Multi-Pak Interface. Req. OLDER PAL chip and NEW PAL chip for the 26-3024 Multi-Pak Interface \$29.95

CoCo III Multipak PAL chip \$19.95
CoCo III Monochrome driver \$39.95

CoCo III Service Manual \$39.95
512K CoCo III Computer \$299.95

C III GRAPHICS
Both for only \$29.95

program is typed in and working. Alternatively, you could enter 130, 170 and 1840 as your first lines. Then, pressing the BREAK key will restore the machine to slow speed and allow saving and loading files automatically. This, by the way, is an ideal example of the value of the new ON BRK command in CoCo 3 BASIC.

The first subroutine to be called by the program is the title routine (lines 1630 through 1800). Please forgive me for the length of this routine, but I was so excited with the new color and graphics I couldn't help myself. After drawing the typewriter and scrolling up the title, a return is made to the main program.

Next, we need to read in all the data needed to define the various exercises. This is handled by the routine contained in lines 1440 through 1510. Nothing fancy here, but be especially careful typing them in, as an error in the data could give very misleading errors at run time.

At last, ready to start to work, the program draws a representation of the full CoCo 3 keyboard on the screen. This serves to help users keep their eyes on screen and not on the actual keyboard. Note that the home keys are highlighted in a different color from the

regular keys. The keyboard drawing (subroutine in Line 1140) remains on the screen regardless of which exercise is being used.

Selections 1 and 2 from the main menu are controlled from a loop found in lines 750 through 920. When called, the routine first clears the upper work area (using HPUT to put a black mask over the old text), then presents the exercise to be typed and awaits user input.

Because text uses the HPRINT rather than PRINT command to put text on the Hi-Res screen, the INPUT statement that would otherwise be used in this type of situation is not usable. As a substitute, the program creates and checks strings made up of a number of INKEY\$ commands. For example, if the exercise is "SFAD," the INKEY\$ will loop a number of times equal to the length of the exercise.

Starting with a string of "" (nothing), the loop adds the INKEY\$ input to the start string on each pass. After the first pass, the string will be 'S', after the second, "SF," etc. When the end is reached, this string is compared to the exercise presented to check for correctness, and appropriate action is taken.

Incorrect answers result in a flash of the screen (using PALETTE) and presen-

tation of the same exercise. Correct answers update the "Number Correct" and continue the exercise loop. Several error traps are built in and the option to exit to the menu at any prompt is always available. The user just presses the question mark key and the program goes back to the main menu.

Menu options 3 and 4 basically work the same way, with minor variations in display and error-handling. Note that with Option 4, Phrase Practice, the user can abort entry of a sentence by pressing ENTER-? at any time.

Throughout the program listing, you will find numerous uses of PALETTE, HPRINT, HCOLOR, HBUFF, HPUT, HGET and other new CoCo 3 commands. By noting the use in the listing and comparing it with actions on screen, you may be able to get a few useful tips for your own programming.

Should you encounter difficulty in entering the program, feel free to contact me, either by mail at P.O. Box 403, Cambridge MD 21613, or by phone at (301) 228-0064 (after 5 p.m. EST). You may also leave me messages on the Delphi network in the CoCo SIG (my username is MUNCH). I hope you find *CoCo Type III* a useful addition to your library of software for the new and powerful Color Computer 3. □

MULTI-PAK CRAK

Save ROMPAKs to your 64K Disk system using the RS Multi-Pak Interface. Eliminate constant plugging in of ROMPAKs now by keeping all your PAK software on disk. Includes POKES for "PROBLEM" ROMPAKs- including the NEW 16K PAKS! (Demon Attack, Dragons Lair, etc) 64K DISK \$24.95

TELEPATCH III

All the FEATURES of TELEPATCH plus the classically proportioned characters of the WIZARD with TRUE lowercase! Now CoCo III compatible! (Upgrade \$15 w/proof of purchase) \$29.95

DISK UTILITY 2.1A

A multi-featured tool for USER FRIENDLY disk handling. Utilize a directory window to selectively sort, move, rename and kill file entries. Lightning fast Disk I/O for format, copy and backup. Examine contents of files, the Granule Table, plus the size, load addresses and entry points of all programs. Single command execution of both Basic and ML programs. 32K/64K DISK \$29.95 Now also CoCo III compatible! Upgrade only \$15 w/proof of purchase. (see Oct'84 Rainbow Review)

SPECTRUM FONT GENERATOR

Write files using any CoCo Word Processor (Telewriter-64, VIP Writer, etc.) and convert them to special Highly Detailed character sets! Some of the sets supported are Italics, Old English, Futuristic and Block. A character set editor is included to create or modify custom sets! Supports most dot-matrix printers! DISK \$29.95 (see Dec '85 Rainbow Review)

SPECTRUM DOS

Add 24 NEW Disk commands with 2 Hi-Res screens! Supports 40 track & Double-Sided drives, 6 ms stepping, auto disk search, error trapping & "EPROMABLE". 64K DISK ~~\$49.95~~ New LOW price!! \$29.95

COCO GRAPHIC DESIGNER

Create custom greetings for any occasion: Birthdays, Anniversaries, Holidays, etc. Also BANNERS & SIGNS! Includes "GRABBER" utility - capture Hi-Res CoCo screens for your GRAPHIC LIBRARY! Easy to use & comes with a set of pre-drawn graphics. Includes a screen & font editor. 32K DISK \$29.95

64K DISK UTILITY PACKAGE

Take advantage of an expanded 64K machine. Make an additional 8K of RAM available by relocating the Ext Basic ROM from \$8000 to \$D800. Copy ROMPAKs to disk (even "protected" PAKs) and create a 32K SPOOL buffer for printing. DISK \$24.95

TAPE/DISK UTILITY

A powerful package that transfers tape to disk and disk to tape automatically. Does an automatic copy of an entire disk of programs to tape. Ideal for Rainbow On Tape to disk. Also copies tape to tape & prints tape & disk directories. TAPE/DISK \$24.95 (see Sept '83 Rainbow Review)

COCO III UTILITIES

Terrific utility support programs for the new Color Computer III! Includes a CoCo II to CoCo III converter, 32K Hi-Res screen saver, 40/80 column Word Processor, RAM tester, DEMO BALL generator, SMOOTH scrolling demos. 128K DISK \$24.95

THE OS-9 SOLUTION

NOW, a program that creates a "USER FRIENDLY" environment within OS-9! The OS-9 SOLUTION replaces 19 of the old "USER HOSTILE" commands with single keystroke, menu driven commands. No more complex long pathnames or remembering complicated syntaxes! Set all XMODE parameters at the touch of keys! \$39.95 New LOW price!!! \$24.95 (OS-9 Level II compatible!!!)

SOFTWARE BONANZA PACKAGE

Create an instant library of Spectrum Projects TOP Colorful Utility software. Select any of the following 12 programs to customize your own SPECTACULAR SOFTWARE BONANZA! CoCo Checker, Multi-Pak Crak, CoCo Screen Dump, Disk Utility 2.1, Spectrum Font Generator, Tape/Disk Utility, Fast Dupe II, 64K Disk Utility, Spectrum DOS, CoCo Calendar, Schematic Drafting Processor, OS-9 Solution, Basic Plus, EZ Base or Blackjack Royale (a \$300 plus value) for only \$99.95!!!

MIKEY-DIAL

When used with any Hayes compatible modem & Deluxe Program Pak, adds to Mikeyterm 4.0 the ability to Autodial 22 numbers from a menu & load a set of 3 MACROS for each directory choice. Also EASY redial & changing of MODEM settings by command menu. DISK \$19.95 "Mikeydial is an excellent program that increases the power of Mikeyterm." -Dec'86 Rainbow

All U.S. orders plus \$3 S/H (Other \$5)

Making the Dewey Decimal System User-Friendly

By Steve Blyn
Rainbow Contributing Editor

This article will help familiarize students with one important aspect of the library — The Dewey Decimal System. This system is used with non-fiction books only. When students begin to do reports in social studies or science, sometime near the end of their elementary school career, the use of non-fiction material will become essential. Knowing how to utilize what the library has to offer will be of great benefit.

The overwhelming majority of our libraries have numbers and letters marked on the spines of all non-fiction books. Some large libraries use Library of Congress numbers to organize their books. There are also a small number of libraries that use computers to organize and locate their books. Someday, computers may altogether replace the need for numbering systems. When computerized, the books can merely go in alphabetical or any other order and be easily located on a video monitor.

At the moment, however, the overwhelming majority of libraries in our country use the Dewey Decimal System. A man named Melvil Dewey created this system, which arranges all non-fiction books into 10 subject areas. Dewey's system uses a decimal point. This allows the continuous addition of numbers for any new books acquired.

Steve Blyn teaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.

Thumbnail Sketch of the Dewey Decimal System

000-099 General Works — Includes many types of reference books including encyclopedias and almanacs.

100-199 Philosophy — Includes different ways of thinking through the ages as well as psychological topics.

200-299 Religion — Includes religions past and present and Bible stories.

300-399 Social Sciences — Includes how people live together, costumes, holidays, etiquette, folk tales and fairy tales.

400-499 Language — Includes various dictionaries of all languages, including English.

500-599 Pure Science — Includes physics, biology, astronomy, chemistry, botany, animals and many other topics from nature.

600-699 Applied Science — Includes ways that science helps us, such as computers, rockets, television, farm animals and pets.

700-799 Fine Arts — Includes art, music, puppets and other amusements.

800-899 Literature — Includes English and American plays and poetry, as well as literature from other countries.

900-999 History and Travel — Includes geography, travel, biographies and histories of ancient and modern times.

This program asks the student in which section of the library can we learn more about various subjects. We hope that the program will make the Dewey Decimal System less frightening and

more understandable to students. The system is often quite intimidating to beginners.

Line 50 reads the DATA statements for the Dewey Decimal System. Line 90 prints out this information in the form of a chart. This chart is to be referred to by the student throughout the program.

Line 60 reads the DATA statements for the questions and answers. Lines 110-130 ask where we can find information about one of the 21 randomly selected questions included in this program. Line 140 asks the student for an answer and lines 160 and 170 tell if the answer was correct or incorrect. The correct answer will be displayed if the student gave an incorrect response.

Twenty-one questions and answers have been included in this program. These are represented by D\$ and E\$. They are the DATA statements in lines 300-360. You may change these DATA statements or add more of your own. If you want to add any, be certain to adjust the DIM statement in Line 40, the T variable in Line 60 and the R variable in Line 120.

Line 80 has the counter for this program. After 10 questions, the score is displayed by lines 210-230. The student may at that time press the E key to end the program or the G key to go again.

We hope this program will help familiarize your child or students with the Dewey Decimal System. Although computers may someday truly cancel out the need for this system, that day is quite some time in the future. □

Five Easy Pieces

The new Color Computer owner buys his/her versatile machine for its graphics and music capabilities, organization of their home and office, educational purposes — both in the home and school and to acquire programming knowledge — and some, simply for pure fun and entertainment.

As far as the CoCo is concerned, the more you learn, the more you realize how little you actually know. That is why every session at the keyboard is an adventure in learning.

THE RAINBOW is a teaching environment and we realize that the majority of our readers will always be beginners. In our continuing effort to always keep the new user in mind and in addition to the many beginner feature articles and programs published in every issue, "Novices Niche" contains shorter BASIC program listings that entertain and help the new user gain expertise in all aspects of the Color

Computer: graphics, music, games, utilities, education, programming, etc.

Contributions to "Novices Niche" are welcome from everyone. We like to run a variety of short programs that can be typed in at one sitting and will be useful, educational and fun. Keep in mind, although the short programs are limited in scope, many novice programmers find it enjoyable and quite educational to improve the software written by others.

Program submissions must be on tape or disk. We're sorry, but we do not have the time to key in program listings. All programs should be supported by some editorial commentary, explaining how the program works. If your submission is accepted for publication, the payment rate will be established and agreed upon prior to publication.

— Jutta Kapfhammer
Submissions Editor

Game

4K

Tricks Of The Trade

By Michael B. Kromeke

Switch is a puzzle-type game that can be solved by moving the four blue blocks on the left to the right side of the screen and the four red blocks on the right to the left side of the screen.

Blocks can only be moved forward one space at a time and only the blocks of opposite color can be jumped over. Blue blocks can only be moved to the right and red blocks only to the left; the program will prevent you from making illegal moves.

If you get stuck and cannot make another move, just press X to start the game again.

Business Calculations

4K

Payday Pal

By John Gallagher

Have you ever wondered how much an hourly wage increase would affect your daily, weekly, monthly or yearly earnings? By entering either the percentage of the increase or the hourly rate you wish to examine, *Wage Calc* will do just that. (If you only wish to examine the increased wage rate per hour, you must enter 0 to bypass the percentage input.)

The program will also display the difference between your old and new rate of pay in hourly, daily, weekly, monthly and yearly totals. (See Figure 1.)

Tips On The CoCo 3

By Eric White

A few secrets have been discovered regarding the CoCo 3 that are not mentioned in Tandy's Color Computer 3 Extended BASIC manual.

To detect whether the following keys are being pressed, you can use these statements in your programs:

```

IF PEEK(341) = 191 THEN key ALT is pressed
IF PEEK(342) = 191 THEN key CTRL is pressed
IF PEEK(343) = 191 THEN key F1 is pressed
IF PEEK(344) = 191 THEN key F2 is pressed

```

A GUIDE TO COCO 3 BASIC AND GRAPHICS

Do you want to learn more about your
Color Computer 3? If so, A Guide to Coco
3 Basic and Graphics is what you need!

This practical guide to the Coco 3 is
written by Linda Nielsen, a long time
Coco user. It has more than 50 pages of
examples, explanations, and programs
especially for the Coco 3.

Not only that, the Guide includes a
disk of programs and pictures. Translate
low res graphics onto the high resolution
screen. Draw on the 320 by 192, 16 color
or the 640 by 192, 4 color screens.
Learn how to display 256 artifacted
colors on a television or composite
monitor.

Unlock the power in your Color Computer
3, order your GUIDE today!
Price effective March 1.....\$21.95

BETTER GRAPHICS ON YOUR COCO 3

Use the graphic power
of your Coco 3! More
good information and
examples of high res
graphics on the Coco 3.
Create better static
illustrations. Learn
more about Basic
animation, screen
scrolling, tips on
HPUT and HGET, how to
use HDRAW and much more. Better Graphics on your Coco
3 plus two disks of programs and pictures. \$24.95.

DOUBLE DRIVER II

Finally a monitor driver for
the Color Computer II that
lets you use a monochrome
and a color monitor
simultaneously. We're proud
of this new driver. The six
transistor circuit provides op-
timal signal mixing and signal
gain. Excellent monochrome
output and better quality
resolution in the color output

than any driver we have
seen. Audio output also. Fits
all models of the Color Com-
puter II. \$29.95.

OKIMATE 20 WITH PLUG 'N' PRINT

Small, quiet and colorful! Eight vivid colors.
Excellent print quality. Italics, super and sub
scripts. Ten, twelve or fifteen characters to the
inch. The perfect second printer for your Coco.

Printer, Plug'n'Print, paper, black and color ribbons,
instruction and software. \$240 plus \$10 shipping.

GRAPHIC SCREEN DUMP FOR THE OKIMATE 20

Dump PMODE 3 and PMODE 4 graphics from your Color
Computer to the Okimate 20 printer. Select 2 color, 4
color or black and white screen dumps. \$29.95

DOUBLE DRIVER I

The BEST monitor driver available.
Color composite, monochrome and
audio output For original CoCo D, E
and F boards. \$24.95.

MONO II

Mono II for Color Computer 2. An
excellent monochrome monitor driver
that has audio output also Specify
model needed.

AND FOR RS DOS ...

SMALL BUSINESS ACCOUNTING

This sales-based accounting package is designed for the non-accounting oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List.

\$79.95

INVENTORY CONTROL/SALES ANALYSIS

This module is designed to handle inventory control, with user defined product codes, and produce a detailed analysis of the business' sales and the sales force. One may enter/update inventory data, enter sales, run five sales analysis reports, run five inventory reports, set up product codes, enter/update salesman records, and update the SBAP inventory.

\$59.95

PAYROLL

Designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pay and determines taxes to be withheld. Additional outputs include mailing list, listing of employees, year-to-date federal and/or state tax listing, and a listing of current misc. deductions. Suited for use in all states except Oklahoma and Delaware.

\$59.95

These programs are user friendly and menu driven. Sample transactions are included. Each package features a hi-res screen. Each requires a printer, a minimum of 32k and at least 1 disk drive.

ACCOUNTS RECEIVABLE

Includes detailed audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package.

\$59.95

ACCOUNTS PAYABLE

Designed for the maintenance of vendor and A/P invoice files. The system prints checks, voids checks, cancels checks, deletes cancelled checks, and deletes paid A/P invoices. The user can run a Vendor List, Vendor Status report, Vendor Aged report, and an A/P Check Register. This package can be used either as a standalone A/P system or can be integrated with the Small Business Accounting Package.

By Ralph D. Miller

While in the process of purchasing a home recently, I had various financing schemes to consider. In order to evaluate each properly, I needed an amortization program. As always, CoCo to the rescue!

Amortize is small, residing in only 1,982 bytes of memory. It does require Extended BASIC. The printer baud rate is set in Line 2. If you are using the default baud rate of the CoCo (600), just delete Line 2. Printer codes are found in lines 17, 19, 22 and 43. On my IDS-460 (as well as all other printers I've encountered), CHR\$(13) is a carriage return, and CHR\$(12) is a form feed.

Amortize is simple to use. Upon running it, you will be asked for the annual interest rate in percent, number of interest periods annually (if your interest is compounded daily, this would be 365; for interest compounded monthly,

enter 12, etc.), number of payments per year, the amount of the loan in dollars, and the term of the loan in years. You need enter digits only, no %, \$, etc. are needed.

The program then checks to be sure your printer is online and notifies you if it is not. Upon finding the printer online, *Amortize* prints a header describing the loan and the computed installment amount, then details each payment by the amount of the payment applied to interest, the amount applied to principal, and the amount of debt outstanding. These tables really come in handy when you decide to prepay principal payments in order to save interest. After printing the last payment, *Amortize* goes to the data input prompts to run another table.

A word of caution, which I learned through experience: If you let it be known that you can run amortization tables, you'd better shop around for a good price on a couple of boxes of printer paper.

(Questions about this program may be directed to the author at P.O. Box 13322, Tallahassee, FL 32317; 904-386-3618. Please enclose an SASE for a reply when writing.) □

NEW

OWL-WARE WINCHESTER BASIC

**ANNOUNCING... the Development of a Major Breakthrough in
HARD DRIVE SYSTEMS for the COLOR COMPUTER!!!**

Several months ago OWL-WARE introduced the Finest OS9 Hard Drive System for the Color Computer. Now we are about to introduce the only RSDOS Interface System worthy of our computer, OWL-WARE Winchester Basic. For the first time you have available a true Winchester System, although there are 10 directories made available to BASIC, the only limit to size of any file is the size of your drive. On a 10 meg drive you could have a 8 meg file on directory 5 and a 1 meg file on directory 8 and small files everywhere. You turn the computer on and you can immediately access your drive from BASIC or any language using commands you already know. You do not have to know or use OS9 to use OWL-WARE WINCHESTER BASIC, but if you do, all files saved from RSDOS are available to OS9. All files generated from OS9 can be made available to RSDOS by copying to the WINCHESTER BASIC directories. There are no partitions to wall you into, only one operating system, but nothing forces you to use an operating system you don't like.

Call for further details and availability on this breakthrough product!!!

OS9 HARD DRIVES FOR CoCo 1, 2, 3.

WINCHESTER BASIC CoCo 1, 2 ONLY (CoCo 3 Version Pending)

NEW COCO 3 VERSION!

CREATE BEAUTIFUL PICTURES WITH

MASTER ARTIST

- vers. 2.0
- * Convenient, on-screen menu
- * Accepts input from X-PAD, TOUCH-PAD, MOUSE or JOYSTICK
- * Magnification mode
- * Draw with custom paintbrushes
- * Easy free-hand sketching
- * "Paint" command
- * 10 Colors at a time
- * Pictures are ready for use in BASIC programs
- * Lettering in any size
- * Screen dump to Color Ink-Jet or other Tandy printers

64K DISK

\$29.95

VIEW 3-DIMENSIONAL OBJECTS FROM ANY ANGLE WITH

- * Convenient, on-screen menu
- * Supports input from X-PAD, TOUCH-PAD, MOUSE or JOYSTICK
- * Built-in screen dump to Tandy printers
- * Calculates dimensions for you from just a rough sketch
- * Plots or calculates lines and arcs
- * On-screen sketching mode

64K DISK

Develop versatile line and bar graphs

Charting the Ups and Downs of Life

By Michael Sims

Originally, I wrote *Graphit* to keep track of my school grades, but I have since adapted it for various uses.

Graphit is an all-purpose graphics program in which you enter values and it develops a line or bar graph. You can then save, load, print out or add more data. There is also room on the graph

Michael Sims is a junior at North Rickland high school in New York, and is a self-taught programmer and CoCo fanatic. He plans to pursue a career in systems analysis.

for a title and labels for the 'X' and 'Y' axes.

This program is user friendly and menu driven; there shouldn't be any problem with it.

The menu options include:

Add Data — This is where you enter the numbers to be graphed. To leave this mode, press ENTER.

Save Data — Saves data to disk.

Load Data — Loads data from disk.

Graph Data — Makes a line or bar graph from the data provided. If no name is specified for the graph, you

are sent back to the menu to pick one at Option 5.

Name Graph — Where you specify name, horizontal and vertical labels.

Print Data — Prints data to printer or screen. Baud rate is set to 1200. To change, edit Line 10000.

New Memory — Clears the memory. I recommend this always be done before loading a new file or starting a new graph.

If there are any questions about this program, don't hesitate to write me at 5 Skinner Court, Tomkins Cove, NY 10986. Please enclose a SASE. □

Finding Resources for Computer Learning

By Michael Plog, Ph.D.
Rainbow Contributing Editor

Recently I received a little newsletter in the mail called *Adventures in Learning*. This publication used to be called *DragonSmoke*, and is edited by two people who used to write for the RAINBOW, Bob Albrect and Don Inman. Both continue to produce material and software for the Color Computer.

The newsletter claims to have no carefully and precisely defined audience. It is supposed to be a newsletter for all enthusiasts of the Color Computer. As the name implies, however, the emphasis is on learning — about the Color Computer and about things to do with computers.

The name, by the way, is very apt. The newsletter presents learning as an adventure. I have a personal attachment to dragons, and thus have some feeling of loss for the name *DragonSmoke*. However, the new name fits the periodical better than the old one.

There are many small (and a few large) classroom activities listed in the newsletter. A creative teacher could easily take material from this newsletter

and implement it directly into a lesson. The material is easily adapted to other activities the teacher wants.

There are entire lessons within the publication, as well as pieces on how to teach bits, bytes, and numbering systems: binary, hexadecimal, and decimal. Also, they have a section on simulations for use in schools. The simulations are presented and considered as learning activities, not simply games.

There is a challenging word-learning activity called Wordsworth; each letter gets a number value, and each word is the sum of the values of its letters. This activity can prove difficult even for your brightest students. (Can you find a word whose sum is 30?) There are also book and software reviews, and my favorite, BASIC Challenges (puzzles) for students to solve.

I am not making a self-serving plug for this particular periodical. No commission for subscription will ever come my way. I do, however, think educators should examine a sample copy of the newsletter, but only to determine for themselves if the information is valuable for their individual classrooms. Some teachers will not find the material worthwhile; my guess is that most will find some utility in *Adventures in Learning*.

The major reason for bringing this publication to your attention is that it is the only one I have seen that consists entirely of support materials for educators. The RAINBOW has a lot of good

information for teachers: programs; suggestions for class activities; reviews of software and books; and naturally, learning exercises. The RAINBOW is a multi-purpose (perhaps full-purpose is a better term) publication. Contained within these pages is something for everyone with a Color Computer, including the electronic hobbyists, folks running a business, people interested in playing games — everyone. *Adventures in Learning*, on the other hand, is limited to learning-type activities.

It seems to me that educators need support materials. Teachers in classrooms need to have more than just a few places to share information, learn new techniques, and build a file of activities for students. Some teachers get support materials from their local school district through a computer consultant. Some teachers have access to a consortium that provides support materials for classroom experiences with computers. Many teachers, unfortunately, are on their own, or share ideas with just a few close colleagues.

Every teacher has a few good ideas. Even the worst teacher in your school can come up with a good idea for students in classrooms now and then. Most teachers have many good ideas to implement in their classrooms. A very few teachers have a large number of good ideas. It is rare for any teacher, no matter how good, to fill a school year just with self-generated ideas. Teachers, like all other professionals, need to have stimulation from others, and the type of

Michael Plog received his doctorate degree from the University of Illinois. He has taught social studies in high school, worked in the central office of a school district and is currently employed at the Illinois State Board of Education.

"Build up enough of these techniques, and you soon find you have an entire set of valuable educational experiences for your classes."

support materials contained in the newsletter helps provide this.

One overworked word these days is "network." Despite the overuse of the term, teachers do need a network system (or systems) to learn from each other. The key to a network is sharing. Teachers need to share ideas with each other, and select for use those that fit with their style and classrooms.

A network system should thus involve software development, classroom tips, learning exercises, entire units of instruction, and almost anything else that teachers want to share with each other. The RAINBOW magazine is not structured as a learning network, but does provide some networking capabilities for readers. The RAINBOWfests held around the country are excellent networking devices for teachers as well as for other types of Color Computer users. Something like *Adventures in Learning* is an excellent complement to a network system for educators using computers in classrooms.

Conducting a network system by newsletter is not as satisfying as face-to-face communication, but a newsletter is naturally much better than nothing. The essence of the value of the newslet-

ter, or any networking system, is for teachers to discover what they might try in classrooms. Much of what you discover from any network will have to be filtered through your unique needs and capabilities (those of your students as well as yourself). After that filtering process, you should have a set of new techniques to try in the classroom. Build up enough of these techniques, and you soon find you have an entire set of valuable educational experiences for your classes.

In the ideal situation, teachers will have several networks for idea generation and sharing. In addition to things like newsletters and the RAINBOW, it would be valuable for teachers to have access to resources such as consortia and computer experts within a school. If your situation is less than ideal (whose isn't?), you might want to add one more resource to your list.

For those interested in learning more about the newsletter *Adventures in Learning*, write to P.O. Box 7627, Menlo Park, CA 94062. Perhaps there are other network systems that I haven't heard about. If you know of one, please let me know at 829 Evergreen, Chatham, IL 62629.

SPECIAL DEAL ON 500 PROGRAMS!

GET 50 DISKS OR 50 CASSETTE TAPES FULL OF OVER 500 PROGRAMS. HERE IS WHAT YOU'LL RECEIVE:

- * Over 250 Utility/Home Application Programs including a Word Processor, DataBase, Spreadsheet, Account Manager, 2 Basic Compilers, Terminal Programs, ROM Copies, Mail List, Machine Language Tutorials, Plus Much More!
- * Over 200 exciting games including Warlords, Star Trek, Super Vaders, Solar Conquest, Horse Races, Football, Baseball, Frog Jump, Invader, Plus Much More! (Many machine language games)
- * Over 30 adventures including The College Adventure, Dungeon Master, Space Lab, Ice World, Ship Wreck, Zigma Experiment. Plus 32K Graphic Adventures.

EACH INDIVIDUAL ISSUE SOLD FOR \$9.⁰⁰ EACH OR \$450 FOR ALL 50 ISSUES. WE SLASHED THE PRICE TO ONLY 150.⁰⁰.

Changes Make Delphi Even Easier to Use

By Cray Augsburg
Rainbow Technical Assistant

The OS-9 SIG, which is reachable from the CoCo SIG menu, was officially opened January 6, 1987. This SIG is designed to meet the needs of the ever-increasing population of OS-9 users. Several people have already stopped in and said hello in the OS-9 Online SIG Forum. Several other changes have also taken place on Delphi. These changes will affect users of both SIGs. First, the WHO and SEND commands now work across node boundaries, just as they do in Conference. Some of you will remember that, not too long ago, we couldn't even "see" people who were accessing Delphi via a different node. It's good to know that we can easily communicate with these people now. The WHO command also shows the number of people in Conference, if anyone, and indicates these people by placing parentheses around their usernames. The SEND command has been altered such that it doesn't truncate your message to 128 characters if you make it issue the message prompt by entering just SEND or SEND *username*. Finally, in addition to being a little quicker to start up, the Conference "head count" is displayed upon entry to the SIG.

In addition to these changes, Delphi

has spent considerable time working on specific items in the software which controls the Forum section of the SIG.

A new version of the Forum software was installed in late December. At the Forum prompt, entering an R brings up

DATABASE REPORT

The big news is the opening of RAINBOW's OS-9 Online Special Interest Group. Dale Lear, Rick Adams, Greg Law, Don Hutchison, Jim Reed and I have been working on this project for the last month. We've moved all of the OS-9 files that were formerly lumped together in the one OS-9 Topic Area on the CoCo SIG, and sorted them out in the OS-9 Online database in a more organized fashion. We also expect very soon to start uploading those long-promised five megabytes of OS-9 Users Group material to a special and separate topic area on the OS-9 Online SIG. We have already posted there a complete listing of the files that will soon be arriving.

We welcome all to OS-9 Online. Dale Lear is our SysOp. You can get there either from the CoCo SIG by typing OS, or from the Groups menu of Delphi. Note that if you enter OS-9 Online via the CoCo SIG, you will return to the CoCo SIG when you exit it. Note also that the Conference areas of OS-9 Online and of the CoCo SIG are merged, so that anyone in the Conference Area of OS-9 Online can "see" everyone on both the CoCo and the OS-9 Online SIGs if they type WHO (or /WHO if they are actually in a particular group). You can also conveniently page or send to anyone in either group from Conference of either group.

I want to give special thanks to two of our staff: Don Hutchison, who both

helped us set up OS-9 Online directly, and whose tireless work on the CoCo SIG database gave me and others time to work on constructing OS-9 Online. I also want to thank Greg Law, one of our most knowledgeable OS-9 "gurus." Greg has been exceedingly active on the CoCo SIG answering questions about OS-9, and I look forward to seeing him being equally active in his "new home" on OS-9 Online.

Note: If you plan on submitting new OS-9 material to us, please submit it to the OS-9 Online database. Of course, as usual, free time for uploading is available. Just go to the help menu and fill out the form for "request for free upload time." The original CoCo SIG will remain the place for those using Disk Extended BASIC programs, and for most of those with CoCo hardware questions or suggestions. It will continue to support CoCo owners who are not using OS-9, and also provide some OS-9 coverage for a while longer. Those primarily using OS-9 are encouraged to "hang out" at OS-9 Online.

New Submissions

The following new programs are on OS-9 Online: Duane M. Perkins (DPERKINS) sent us *TESTASM*, a tutorial file that illustrates use of the MMU in a 128K CoCo 3. His *ACTDDC.B09* is an aid to design of DC power supplies. Kevin Darling (KDARLING) has submitted an enhanced SCF editor, which upgrades

Cray Augsburg is RAINBOW's technical assistant and has an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Ky. His username on Delphi is RAINBOWMAG.

the reply prompt for a reply to the current message. In earlier versions, there was some system confusion between READ and REPLY since both begin with 'R'. There is no need to enter READ since a message number alone will accomplish the same thing. If you want to enter the READ command, you will have to type it out. Also, issuing a REPLY, or R, after an attempt at FOLLOW fails will no longer send a reply to some other message. Using NEXT after you start following a thread interrupts the FOLLOW. Use ENTER to continue following. A NEXT will cause you to read the next unread message whether it is in the thread or not.

How about following a thread backwards? You can do this by entering BACK when you wish to see previous messages in the thread. Just as with FOLLOW, use ENTER to see the next previous message. A NEXT will abort the process and take you to the next unread message. Please note that the FOLLOW command is disabled while reading backwards since it could cause the system to go awry.

Another new feature of our Forum software is TAG (you can abbreviate this command by entering T). This com-

mand causes Forum to remember a message you may want to reread again before leaving Forum. This is handy if you want to read all the messages in the Forum before replying to any of them. If you try to exit the Forum without rereading your tagged message, you will be prompted to READ TAG. Rereading a tagged message untags it, but DIR TAG does not.

The HIGH command has been altered so that you can change your current high message without having to see the secondary prompt. Just enter HIGH xxx, where xxx is the message number you want as your highest message. You can also use HIGH 0. The HIGH command normally clears which new messages you have read, but if you press ENTER at the prompt for a new high message number, the Forum software assumes you just wanted to see your current high message number. It does not forget which new messages you have already read. Along with these changes in Forum, the new software has been designed to be much more lenient about what punctuation is allowed in commands involving ranges of message numbers. For instance, each of the

following command lines performs the same task:

```
DIR 123:150
DIR 123,150
DIR 123-150
DIR 123;150
DIR 123/150
```

You can also enter something like READ #500 instead of READ 500. If you want to read a range of messages non-stop, you can accomplish this by entering READ 123:150 NS. Before, you had to enter the NS before the range numbers. Please note that some other commands are still sensitive to order. One example of this is REPLY 150 / EDIT.

The /EDIT must be after the message number. In any event, these changes should make life a little easier for those people who are used to other systems and bulletin board systems.

Last is a change which allows you to type ahead one command when entering Forum. For instance, at the CoCo SIG or OS9 prompt, you could enter FORUM READ NEW to enter Forum and read your new messages. □

the simple command line editor of OS-9. **Jay Truesdale** (JAYTRUESDALE) has given us a very simple database utility written in 6809 assembly for compactness and speed. **Vincent Figundio** (VINFIG) has sent us SAD.REB, a text rebuttal to a member's account of his problems getting OS-9 running. **Roger Smith** (SMUDGER) has sent us UNLOAD.B09, a utility that unlinks modules loaded into memory more than once. It saves typing UNLINK over and over.

MikeyTerm 4.3

Just in case you Disk Extended BASIC users thought we had forgotten you, I have a major new announcement: *Mikey-Term 4.3* is now released and is available in the Data Communications section of the CoCo SIG. This revision of the classic terminal program by **Mike Ward** (MIKEWARD) includes support for the CoCo 3 in 80-column mode. The full program, accessory files and documentation are available in the Data Communications section. Now CoCo 3 users have a choice in 80-column Disk Extended BASIC free-ware programs: the new *MikeyTerm 4.3* or *Greg-E-Term* (the latter was announced last month).

Both are in our Data Communications topic area, and I recommend you download *both* of them. I want to give special thanks to Mike Ward for sharing with our membership on Delphi his latest revision of what is by far the most famous CoCo terminal emulator program.

Another highlight of this past month on the CoCo SIG was the uploading of three new graphics image converter programs. **Erik Gavriluk** (ERIKGAV) has provided a Commodore 64-to-CoCo 3 picture converter.

Inspired by an earlier and cruder project for the CoCo 2 that he and I had worked on together, Erik has written an all-machine language utility that can now display Commodore 64 pictures on a CoCo 3 screen, preserving their full original colors and displaying the entire picture on the screen without need of scrolling. Erik has also written and uploaded a Macintosh picture converter for the CoCo 3, allowing Macintosh pictures to be viewed on the CoCo 3's screen. His partner, **Greg Miller** (GREG-MILLER), has uploaded a CoCo 3 converter program for uncompressed Atari ST *Degas* format pictures.

All three of these converter programs are to be found in the Graphics topic area, along with some sample images from these three "alien" machines. The group names to look for are C64PIX.BIN, *Macintosh Pix Converter*, and *Atari ST Converter*.

Erik has also uploaded some alternative printer dump routines for both his CoCo 2 and CoCo 3 Macintosh converter programs. The potential for cross-pollination of artistic ideas due to the availability of such converters is immense. I even heard a rumor that more

impressive graphics programs are on the way from these two talented CoCo programmers, who may soon be releasing their first major commercial product.

NOTE: Uploaders and downloaders should please remember that from now on all files in the database that support the CoCo 3 will be flagged in two ways. They will have the expression "(C3)" in the group name title, and will all have as one of their key words "C3." This will hopefully aid CoCo 3 owners who are searching the database for new material for their machines.

I also want to call special attention to an important new contribution from **Greg Geary** (GJG). This is a group called PMODE to HIRES Converter. This machine language utility converts PMODE 4 old-style CoCo graphics screens into CoCo 3 HSCREEN 2 images, an extremely useful trick! **John Snyder** (MYTHRANDIR) has added a sort of BASIC Driver as a "front end" to Greg's utility, to make it even easier to use. John's contribution is listed as HCOPY.

Michael Fischer (MIKE88), (the winner of our "who will bag Forum msg # 20,000 contest) has sent us a stunning CoCo 3 graphics demo called *Bouncing Ball*. There have been many such Amiga-like bouncing ball demos for the CoCo 3, but this one sent to us by Mike is by far the most precise rendition of the Amiga graphics demo classic. The version we currently have posted has benefitted

from two modifications of the original upload, and now works properly on both 128K and 512K CoCo 3s, and supports either a composite video or an RGB color monitor.

Also in the Graphics database we have had a great number of new files. **Tom Rawlinson** (TOMINO) has sent us a graphics demo, and **Carmen Izzi Jr.** (CIZZIJR) has provided a palette display. Both are for the CoCo 3. **Raymond Lueders** (MOONSHINE) has sent us quite a lot of material, including dreamgirl pictures, pix of Bruce Lee and Karen Allen, and several stunning nudes.

Don Hutchison (the backbone of our database submissions processing on the CoCo SIG) has contributed a digitized picture of Mike Ward. **Billy Hambric** (SNOOPYDOG) has sent us a Snoopy Dog Calendar. **Derrik Kardos** (DTG) has provided a James Bond image.

Ira Goldwyn (IRAG) has sent us more digitized images, including one of Joan Rivers. **Bob Montowski** (GRAPHICSPUB) has sent a viewer utility for looking at Hi-Res DS-69 images. Greg Geary has provided a DMP-220 screen dump for the CoCo 3 Hi-Res screen. **Fred McDonald** (FREDMCD) has sent us *Viper.Pix*. Last but not least, **Michael Schneider** (MSCHNEIDER) has sent us a very intriguing BASIC version of a bouncing ball

demo *BOUNCE2.BAS* for the CoCo 3, which shows the impressive power of the CoCo 3's BASIC graphics commands.

In the Music database **Robert Heil** (LURKER) has sent us two new compositions, and **Ray Wright** (RAYWRI) has uploaded over 16 new tunes, including both classical and popular material. Ray has been one of our most prolific music uploaders. Mike Fischer has sent us a version of "Ghostbusters." All of these are in the *Musica II* PLAY format.

In the Utility database, **Keith Smith** (UGLY) has provided a CoCo 3 joystick utility. **Ted Christensen** (TEDCHRISTEN) has sent us a budget utility, **David Wendt** (DWENDT) has sent us a disk file comparison utility, and Don Hutchison has provided a tape inventory program. **Chris W. Brown** (CRISPWILLIAM) has sent us a patch for *TelePatch* to allow it to run on the CoCo 3, and we have a budget program from **Jim Manning** (JIMBM). Roger Smith has uploaded a file that may help make some versions of *VIP Writer* run on the CoCo 3.

In the Games topic area, **Steve Macri** (DRACMAN) has sent us *Kelly Checkers*. **Loren Howell** (XENOS) has sent us *Proto 7*. Don Hutchison has provided a version of *The Game of Life* that had previously disappeared from our database. Don has also sent us two other files, *Astro Mines*

and the famous *Ultimate Adventure* game. I am sure Adventure game folks will find that last one quite amusing. **David Ferreira** (SKEEVE) has sent us a *BIO.BAS*, and Fred McDonald has provided *Thunder Cat Game*.

In the General topic area, Carmen Izzi Jr. has sent information on disk error codes to aid CoCo 2 and 3 programmers. I've also uploaded a couple of articles I wrote, including some thoughts on the 512K upgrade for the CoCo 3 and some observations of mistakes made in RAINBOW articles.

The Product Review topic area now contains a comparative review I wrote after evaluating both the PBJ 512K memory upgrade and a prototype of the Disto CRC 512K memory upgrade for the CoCo 3.

As you can see, there is a lot of new material in the Delphi RAINBOW CoCo SIG database well worth downloading. And we now have another entire special interest group, OS-9 Online, to serve CoCo and other OS-9 6809 machine users (we even plan on some degree of support for 68000 OS-9). Do drop by and check all of this out! See you on the CoCo SIG and on OS-9 Online.

— Marty Goodman
Rainbow's Delphi Database Manager

From the Princeton RAINBOWfest . . .

The CoCo 3 Round-Table Tape!

THE RAINBOW recorded the main event of RAINBOWfest Princeton, the Saturday evening (Oct. 18) round-table discussion:

"The Design, Development and Marketing of the CoCo 3."

Speakers included Tandy's Barry Thompson and Mark Siegel, as well as independent CoCo 3 programmers Steve Bjork and Dale Lear (filling in for Greg Zumwalt).

This was a lively and informative session and, therefore, we want as many people as possible to hear what these RAINBOWfest guests had to say.

YES, Please send me _____ copies of the "CoCo 3 Round-Table Tape" at \$5 per copy plus \$1.50 S/H for a total of _____ (U.S. Currency only, please.)

Make checks payable to The Rainbow. Mail to CoCo 3 Round-Table Tape, The Rainbow, P.O. Box 385, Prospect, KY 40059. To place credit card orders, call our toll-free number: (800) 847-0309.

DELPHI™

This abbreviated, modified version of Delphi's command card has been created to help our readers who use Tandy® Color Computers get started quickly on Rainbow's new COCO SIG. It is being reproduced here for your convenience and can be removed, if you wish, and kept near your computer for easy reference.

WELCOME TO DELPHI

Most Delphi commands are self-explanatory. This card will serve as a handy backup reference.

In the following command reference, use ENTER in place of RETURN.

Signing onto Delphi Directly

1. Dial 617-576-0862.
2. When you have carrier, press RETURN once or twice.
3. At USERNAME type your membername and press RETURN.
4. At PASSWORD type your password and press RETURN.

How To Sign On Using Telenet

1. Dial your local Telenet number.
2. Press RETURN twice.
3. When TERMINAL= appears, press RETURN.
4. When © appears, type C DELPHI and press RETURN.
5. Then type your USERNAME and PASSWORD as outlined above.

How To Sign On Using Tymnet

1. Dial your local Tymnet number.
2. When PLEASE TYPE YOUR TERMINAL IDENTIFIER or a string of x's appears, type A without a RETURN.
3. When PLEASE LOG IN appears, type DELPHI and press RETURN.
4. Then type your USERNAME and PASSWORD as outlined above.

How To Sign On Using DataPac (Canada)

1. Dial your local DataPac number.
2. Type . for 300 bps or .. for 1200 bps and press RETURN.
3. Type PROF 1 and press RETURN to permit use of Xmodem.
4. Type SET 2:1 and press RETURN to allow echo of next command.
5. Type P 1 3106,DELPHI and press RETURN to use Tymnet.
6. Or type P 1 311061703088 and press RETURN to use Telenet.
7. Then type your USERNAME and PASSWORD as outlined above.

Your computer has a key marked either RETURN, NEW LINE, XMIT or ENTER. When you see the word RETURN here, press the corresponding key.

You can obtain your local access number by calling Telenet at 1-800-336-0437 or Tymnet at 1-800-336-0149. If you have any difficulty, call DELPHI toll-free at 1-800-544-4005 (in Massachusetts, 1-617-491-3393).

MAIN MENU OF DELPHI

Starting point for getting the most out of DELPHI.

BUSINESS & FINANCE - Financial and business news and analysis, brokerages services, stock and commodities quotations and more.

CONFERENCE - Real time communication with one person or a group.

DELPHI MAIL - Electronic mail, Batch Mailthru and Telex to users of other online services.

ENTERTAINMENT - Games, trivia, polls, horoscopes, Collaborative Novel and more.

GROUPS & CLUBS - Online meeting places - both clubhouse and clearing-house - for people with personal computers, hobbies and other special interests in common.

HELP - Explanation of Main Menu commands and other features of DELPHI.

LIBRARY - Healthnet, Online Gourmet, CAIN, encyclopedia and other business and consumer databases.

MAGAZINES & BOOKS - Talk back to your favorite publications and subscribe.

MERCHANTS' ROW - Interactive shopping service.

NEWS-WEATHER-SPORTS - Continually updated news and sports, weather forecasts, movie reviews, etc.

PEOPLE ON DELPHI - Member directory and Chatter Board.

TRAVEL - Plan your trip and make reservations.

WORKSPACE - Create, edit, upload and download files.

USING DELPHI - Rates and other information about DELPHI and your use of DELPHI.

DELPHI MAIL

Primary Mail Menu:

BATCH MAILTHRU - Send electronic mail to users of other online services.*

CATALOG - List your Mail files.

GLOBALINK TRANSLATION - A professional translation service.*

MAIL - DELPHI's electronic mail; receive and send messages.

TELEX - Send messages via Western Union's Telex.*

WORKSPACE - Create, edit, upload, download and maintain files of text.

SETMAIL - Set your Mail message counter.

Use these commands for DELPHI Mail:

RETURN - Press RETURN upon entering Mail to read new messages, if any. Pressing RETURN then presents the subsequent message or more of the current message.

BACK - Display message that precedes that currently displayed.

DELETE - Delete just-read message. Or follow DELETE with a number to designate the number of the message you wish to delete.

DIRECTORY - List summary of your Mail messages.

DIRECTORY folder name - List summary of messages in specified folder.

DIR/FOLDER - Display all folders in your mail box.

DIR/NEW - List your new messages.

DIR/SINCE= 4-JUL-86 - List messages received since specified date.

EXIT - Return to previous menu.

EXTRACT filename - Save displayed message in specified file.

FILE folder name - Add displayed message to specified folder.

FORWARD username - Send displayed message to others.

NEXT - Display subsequent message (same as pressing RETURN).

READ - Display your Mail messages.

READ/NEW - Display newly arrived Mail.

REPLY - Send instant response to sender of displayed message.

SEARCH string - Search Mail file for specified character string.

SELECT - Pick messages for deletion, extracting or searching.

SELECT folder name - Choose folder that contains desired messages.

SEND - Transmit message.

SEND filename - Send specified file.

SEND/EDIT - Call editor to edit a new message.

SEND/LAST - Send just-sent message to someone else.

GROUPS AND CLUBS

Program libraries, discussions, conferences, newsletters and polls for users of Atari, Apple, Commodore, Texas Instruments, Tandy, Wang and IBM-compatible computers as well as for those interested in science fiction, theology, computer art, music, model building and more.

Entering a group for the first time gives you its nonmember menu and lets you JOIN the group as a member. If you select the JOIN option, you are asked to provide your real name, rather than your DELPHI membername, and to agree to the group's rules. There is no extra cost to becoming a group member.

Use commands for Conference and Workspace when using those functions in Groups and Clubs.

Database

Programs and other files organized into groups of related items.

DIRECTORY - Display a directory of all groups in the topic.

READ - Read description of a group. You must read the description before downloading the file(s) contained in the group.

SEARCH - Search a topic by keyword.

SET TOPIC - Switch from one topic to another without leaving the database section.

SUBMIT - Submit one or more files for inclusion in a topic. You upload file(s) to your workspace and then use the SUBMIT command to send them to the group manager for inclusion in the database.

WORKSPACE - Enter your workspace area.

To access a file, first READ it. Then use these commands:

DESCRIPTION - Display description of file again.

DISPLAY - Display/list the file on your screen.

DOWNLOAD - Use with buffer-capture downloading method.

LIST - Like display, list a file unformatted.

NEXT - Advance to next group or file. Pressing ENTER or RETURN does the same thing.

XMODEM - Download file using Xmodem protocol.

KERMIT - Download file using Kermit protocol. Downloading commands that apply to one file of a multiple group require specifying the number of the file within the group.

Forum

Leave a message or read a message left by another.

ADD - Start new message thread with a different subject and categorize it according to Topics established by group manager. Type ? to see designated Topics.

DELETE - Remove a message written by you or addressed to you.

DIRECTORY - Display directory of messages.
 EDIT - Edit current message written by you.
 FILE - Place copy of message in your workspace.
 FOLLOW - Follow message thread. Read only those messages of designated thread.
 FORWARD - Send copy of message via DELPHI Mail.
 HIGH - Set/show high message number.
 MAIL - Enter DELPHI Mail while keeping your place in Forum.
 MENU - Show complete menu of commands.
 NEXT - Read next message. Pressing ENTER or RETURN does the same thing.
 READ - Read message (follow READ with message number to display designated message).
 READ WAITING - Read messages only to you.
 READ NEW - Read all new messages.
 READ NEW NS - Read messages nonstop (use with computer buffer on).
 READ NS 2000 - Read nonstop all messages with numbers greater than 2000.
 REPLY - Respond to message.
 RETURN - Read next message in thread (used after FOLLOW) or read next new message.
 TOPIC - Set/show message topic.

CONFERENCE

'Talk' online with other DELPHI members.

Use these commands before joining a group.

EXIT - Return to previous menu.
 JOIN groupname - Join existing group or start new one.
 NAME name - Change your name or 'handle.'
 PAGE membername - Page another DELPHI member to join you in Conference.
 WHO - List members online and Conference groups.

Immediate Commands to use while in Conference

/CANCEL - Terminate a page to another member.
 /EXIT - Leave a group.
 /GNAME name - Change group name.
 /JOIN groupname - Join an existing group.
 /MAIL - Enter Mail, but retain your place in Conference.
 /NAME - Change your name or 'handle.'
 /PAGE - Invite another member into your group.
 /REJECT - A pleasant 'No, thank you' to a pager.
 /REPEAT - Control viewing of your own Conference comments.
 /SEND membername - Send private message to another member.
 /SQUELCH membername - Ignore messages from a member.
 /WHO - List all current members and Conference groups.
 /WHOS membername - Display profile.

PEOPLE ON DELPHI

Enter information about yourself; find out about others.

I-AM - Add, change information about yourself.
 ADD - Add information about yourself.
 CHANGE - Alter your existing profile.
 DELETE - Remove all or part of your profile.
 DISPLAY - Show your profile.
 WHO-IS membername - Display profile, if available.
 LIST-KEYWORDS - Display keywords used in profiles.
 BROWSE - Read member profiles.

SEARCH - Search for certain information, using keywords.
 CHATTER BOARD - Bulletin Board for general messages.

Chatter Board menu:

ADD - Post a message on the Chatter Board.
 READ - Read posted messages.
 HELP - Explanation of Chatter Board commands.

WORKSPACE

You store files and messages here. Upload a file here before submitting it to a database, file forum messages for later retrieval and store mail messages.

CATALOG - Show those files you have created.
 CREATE - Create text file and store in your workspace.
 DELETE - Remove file you no longer need.
 DIRECTORY - Same as Catalog, show the files you have created.
 DOWNLOAD - Download text file from DELPHI to disk.
 EDIT - Create and edit your own text files.
 LIST - List contents of any text file in your workspace.
 PURGE - Delete all but current version of duplicate files.
 RENAME - Change name of any file in your workspace.
 UPLOAD - Upload text file to DELPHI from your computer.
 XDOWNLOAD - Download text or non-text file via Xmodem protocol.
 XUPLOAD - Upload text or non-text file via Xmodem protocol.
 KDOWNLOAD - Download text or non-text file via Kermit protocol.
 KUPLOAD - Upload text or non-text file via Kermit protocol.

USING DELPHI

Your source for information about DELPHI.

ADVICE FROM DELPHI - Replies to frequently asked questions.
 CREDIT POLICY - Explanation of policy.
 DELPHI ADVANTAGE - Explanation of special membership plan and application for membership in plan.
 FEEDBACK - Send ideas to DELPHI Product Development Group.
 GUIDED TOUR - Brief version of tour you took at sign-on.
 INDEX - Quickly locate information on DELPHI.
 MAIL TO SERVICE - Send your comments, questions to DELPHI.
 MANUALS - Information for obtaining DELPHI and Dialog documentation.
 MEMBER SERVICES - Hours for DELPHI Member Services.
 MEMBERSHIP AGREEMENT - Your contract for using DELPHI.
 NETWORK INFO - Phone numbers and log-on procedures for Tymnet, Telenet and DataPac.
 PREMIUM SERVICES - Rates, information on extra-cost services.
 WHAT'S NEW ON DELPHI - Online newsletter.
 RATES AND PRICES - Line-time rates, with a comparison to DELPHI Advantage rates.
 TELEX CODES - Needed to send Telex messages.
 REVIEW BILLS/INVOICES - View your DELPHI account.
 USAGE HISTORY - View to-date DELPHI activities.
 SETTINGS (PROFILE) - Using the following options, tailor response of DELPHI to your unique requirements.

Select from the Settings Menu to alter your interaction with DELPHI. Most settings also may be changed at any time with the appropriate 'slash' (/) command. Type /HELP FULL for a complete list.

BUSY-Mode - Turn off or turn on pages from Conference or alerts to new Mail messages.
 DEFAULT-Menu - Bypass the Main Menu by choosing the menu you wish to greet you at sign-on.
 DOWNLOAD-Line-Terminator - Adjust text-line termination to your computer type.
 ECHO-Mode - Control how characters are 'echoed' to you as you type.
 EDITOR - Select the editor you need for Workspace or Mail.
 KERMIT-SETTINGS - Change options affecting the way you do Kermit file transfers.
 LENGTH (Lines/page) - Adapt DELPHI output to your computer screen's length.
 NETWORK-PARAMETERS - Select settings to suit your terminal configuration and establish solid communication with your terminal software.
 PASSWORD (Change) - Guard your password by changing it from time to time or if you feel its confidentiality may have been compromised.
 PROMPT-Mode - Select the prompt level that suits you: BRIEF provides only a keyword, VERBOSE gives you a keyword and a prompt message, MENU provides all your options at that level.
 SLASH-Term-settings - Specify terminal settings to be maintained each time you log on to DELPHI.
 TERMINAL-Type - Indicate type of terminal you operate.
 TIMEOUT - Indicate number of minutes DELPHI awaits your input before logging you off.
 UTILITIES - Advanced operations on your profile settings.
 WIDTH (Columns) - Adjust DELPHI output to the width of your computer screen.
 XMODEM-SETTINGS - Alter the way DELPHI executes Xmodem file transfers.

DELPHI TERMINAL CONFIGURATION GUIDE

8-bit ASCII, 1 stop bit, no parity, asynchronous, full-duplex, no auto-linefeed, XON-XOFF, or handshaking, enabled.

DELPHI CONTROL CHARACTERS

Control-Z - End input or exit to previous menu.
 Control-S - Suspend sending.
 Control-Q - Resume sending.
 Control-O - Skip to end of file or message.
 Control-U - Cancel input for current line.
 Control-R - Redisplay current line.
 Control-X - Cancel everything typed ahead but unsent.
 Control-C - Cancel current activity and start over.

An easy way to mind your business

The Bookkeeper's Helper

By Harvey Dettmann

The following program will be beneficial to the bookkeepers of small businesses. *Payroll* figures the gross and net amounts on weekly employee checks

Harvey Dettmann, a retired senior citizen on disability, has enjoyed the Color Computer for three and a half years. He says it has given his life a new direction.

based on the number of regular and overtime hours worked, the hourly wage, and F.I.C.A., state and federal tax deductions. These deductions can be obtained from the tables supplied by your state and federal government.

Payroll will print to the screen or an LP VII or compatible printer. It can also be used to confirm the accuracy of your own payroll check.

Sample printout

A game of poker you can play without gullible buddies or beer nuts

JOKER POKER

BY ROBERT BRIMNER

Feel like turning CoCo into Lady Luck, cracking open a fresh deck of onscreen cards, and settling down to some extravagant betting? Presenting *Joker Poker*, a colorful version of Five Card Draw that allows you to place bets and accumulate (or lose) money depending on the cards CoCo deals you.

Don't worry if you're a little unsure of poker terminology. This game provides onscreen definitions of the various hands (a "flush" is five in the same suit, etc.), and lists the returns you can expect for each hand — for instance, if you bet \$2 and draw a royal flush, you win \$200 (but if you bet \$20, you win \$2,000!)

Pressing the R key brings up the rules, which include a list of what keys to use to place bets. Pressing S shows the score, E ends the game, and the space bar repeats your last bet.

After you have entered your bet, a graphic representation of five playing cards appears across the

Robert Brimner has a degree in electrical engineering and worked 30 years as a manager for Bell of Pennsylvania. Now retired, he enjoys music, tennis, bowling and writing useful or entertaining programs for the CoCo.

top of the screen. You're prompted to discard any or all of these cards by pressing keys 1 through 5 (if you want to get rid of the first card, press 1, for the second, press 2, etc.). When you press the space bar, CoCo deals your new cards; your winnings (or losses) are calculated according to the hand you end up with after the "draw."

If you're in the mood to throw around some money, take

some chances, and see what kind of dealer your CoCo can be, try a few hands of *Joker Poker* — and let the chips fall where they may!

(Questions about this game may be addressed to the author at 5427 Pocusset Street, Pittsburgh, PA 15217, 412-421-0126. Please enclose an SASE for a reply when writing.) □

LOWEST CONTROLLER PRICE EVER!! The New JFD-EC, Only \$75

NOW COCO 3 Compatible *

JFD-EC DISK CONTROLLER

The JFD-EConomical controller combines the best features of the original JFD-COCO with the two switchable ROM sockets, fully buffered data lines and Memory Minder in ROM. The JFD-EC replaces the JFD-COCO in our product line at an even lower price. The controller includes JDOS, the JDOS manual and Memory Minder in ROM. (Precision Alignment Disk not included.)

JFD-EC Disk Controller with JDOS	\$75
JFD-EC Disk Controller with RS DOS 1.1	\$75
Optional	
Precision Alignment Disk & Memory Minder Manual	\$40
Both ROM chips add an additional \$20	

*JFD-EC and JFD-CP with JDOS or RS DOS are COCO 3 compatible.

NEW TERMS

One-year warranty on parts & labor: 30-day money back guarantee (except shipping) if not totally satisfied. Items must be returned in like new condition.

Free shipping via UPS in continental United States for payment by VISA, MasterCard, or cashiers check. COD requires 10% prepayment by bank card plus 3% shipping. Blue Label and foreign shipping extra.

J&M SYSTEMS, LTD.
15100-A CENTRAL SE
ALBUQUERQUE, NEW MEXICO 87123
505/292-4182

JFD-CP DISK CONTROLLER

Our new JFD-CP, compatible with the original COCO, COCO 2 and the new COCO 3, features a parallel port to support a Centronics compatible printer or our hard drive, and an external ROM switch, which allows you to select JDOS or an optional RS DOS-type ROM. It comes in a case and includes JDOS 1.2 and manual. JDOS implements all RS DOS commands, plus many more, including auto line numbering, error trapping, baud rate selection, OS/9 boot from floppy or hard drive, and Memory Minder, our disk drive analysis program. (Precision Alignment Disk not included.)

JFD-CP Disk Controller with JDOS	\$139
JFD-CP Disk Controller with RS DOS 1.1	\$139

DRIVE SYSTEMS

Upgrade your Color Computer by adding our JFD-CP disk controller, JDOS with Memory Minder in ROM and one or two half-height floppy drive(s) with case and power supply.

Drive O System with one double sided drive	\$279	Drive 0,1 System with two double sided drives	\$399

Also from Falsoft, The RAINBOW MAKER, . . .

The magazine for Tandy portable and MS-DOS users

Not only does Tandy produce our favorite CoCo, we think they produce the best and best-priced lap-top portable and MS-DOS computers as well. We've found that when satisfied Color Computer users decide to add portability or move to MS-DOS, many stick with Tandy. For these people we publish PCM, The Personal Computer Magazine for Tandy Computer Users.

Each month in PCM, you'll find information and programs for the Tandy 100, 102, 200 and 600 portable computers. And you'll find even more coverage for their MS-DOS machines, the 1000, 1200, 2000 and 3000, along with the great new 1000 EX, 1000 SX and 3000 HL.

FREE PROGRAMS!

We learned from THE RAINBOW that readers want programs to type in, so each month we bring you an assortment of them: games, utilities, graphics, and home and business applications.

BAR CODE LISTINGS AND PROGRAM DISKS!

For portable users, PCM is the only home computer publication in the world that brings you programs in bar code, ready to scan into memory like magic with the sweep of a wand! For those who don't have time to type in listings, we offer a companion disk service with all the programs from the magazine.

TUTORIALS AND PRODUCT REVIEWS!

As if all this weren't enough, we offer regular tutorials on telecommunications and hardware; assembly language, BASIC and PASCAL programming tips; and in-depth reviews of the new software, peripherals and services as they are released. Add it all up and we think you'll find PCM to be the most informative and fun magazine for this market today!

To order by phone (*credit card orders only*) call 800-847-0309, 8 a.m. to 5 p.m. EST. For other inquiries call 502-228-4492.

YES! Please send me a one year (12 issues) subscription to PCM for only \$28.* A savings of 22% off the newsstand price.

Chicago

April 10-12

RAINBOWfest

Feel the energy of the city. Fresh, provocative. This spring, there's another glittering light in the Chicago skyline — RAINBOWfest!

Explore stimulating new ideas and broaden your horizons at RAINBOWfest, the only computer show dedicated exclusively to your Tandy Color Computer. The CoCo Community congregates April 10 to 12 at the Hyatt Regency Woodfield and we want you to join us.

This is where commercial distributors gather to show off **new and innovative products** for the first time. Where RAINBOW authors and CoCo experts come to share their expertise in **seminars and one-to-one chats**. Where hardware and software sell for **low RAINBOWfest prices**.

Set your own pace for visiting exhibits and attending the many free seminars on all aspects of your CoCo. You'll see demonstrations, have opportunities to experiment with software and hardware, and meet with some of the **most creative and forward-thinking people** in the industry today. RAINBOW publisher and editor Lonnie Falk will be there along with many of the Falsoft staff, ready to answer your questions and give you the "inside scoop" on the CoCo.

Only 15 minutes from O'Hare International Airport, RAINBOWfest provides a perfect get-away weekend not only for the computer fanatic, but for the whole family. We're right across the street from the world's largest mall and just 30 minutes from downtown Chicago.

The show begins Friday evening with the exhibit hall open from 7 p.m. to 10 p.m. Saturday's action is nonstop beginning with the 8 a.m. CoCo Community Breakfast (separate tickets required). Our featured speaker is Greg Zumwalt, president of ZCT software. Exhibits and seminars will be in full swing from 10 a.m. to 6 p.m., and from 11 a.m. to 4 p.m. on Sunday. That will be hardly enough time to see and do everything you'll want to, between scheduled events and our new **Educational Sandbox** for the kids — plus a **special appearance by CoCo Cat**, too!

You can get RAINBOWfest tickets directly from THE RAINBOW. We'll include a reservation form so you can take advantage of the Hyatt Regency's special room rates of \$60 for single or double occupancy.

For the same POSH treatment many of our exhibitors enjoy, have your travel arrangements and hotel reservations handled through RAINBOW affiliate POSH Travel Assistance of Louisville. Call POSH at (502) 893-3311. All POSH services are available at no charge to RAINBOWfest patrons.

Show Schedule:

Friday evening

— Exhibits open from 7 p.m. to 10 p.m.

Saturday

— CoCo Community Breakfast at 8 a.m.

— Exhibits open at 10 a.m. and close at 6 p.m.

Sunday

— Exhibits open from 11 a.m. to 4 p.m.

CoCo Community Breakfast

Greg Zumwalt — CoCo 3 Programmer

Our keynote speaker for the traditional CoCo Community Breakfast is Greg Zumwalt, one of the early CoCo specialists who has created everything from flight simulators to computer games. An independent programmer and computer designer, Greg is one of the few people Tandy has selected to write software for the new Color Computer 3. He owns ZCT Software, of Tulsa, Okla., and also writes software for business applications in such areas as aviation, the oil industry and the medical field.

RAINBOWfest - Chicago, Illinois

Dates: April 10-12, 1987

Hotel: Hyatt Regency Woodfield

Rooms: \$60 per night, single or double

Advance Ticket Deadline: April 3, 1987

Join us at a future RAINBOWfest!

RAINBOWfest - Princeton, New Jersey

Dates: October 9-11, 1987

Hotel: Hyatt Regency Princeton

Rooms: \$86 per night, single or double

Advance Ticket Deadline: October 2, 1987

FREE T-Shirt to first five ticket orders received from each state.

First 500 ticket orders received get the *First Rainbow Book of Adventures*.

▲ SPECIAL EVENT!

We are pleased to announce **The Educational Sandbox**, a joint Tandy/RAINBOW effort. This is a computer workshop for RAINBOWfest kids. There will be two sessions on both Saturday and Sunday. One workshop will be for the kindergarten through third-grade set, and the other for fourth through seventh graders. Each workshop will last between 45 minutes and one hour, and will give the children and their parents hands-on experience in using Tandy computers and software.

Doing the Program Shuffle

By Joseph Kolar
Rainbow Contributing Editor

It is time to put MID\$ function under the microscope. Last month, you were asked to save PART1, the first part of PROGRAM.

In that portion of the program, you blanked out a portion of a sample sentence and then supplied the missing text. The MID\$ function can handle this problem effectively. To your credit, you managed to invoke an alternate method.

Look at the PART1 listing. It may be a bit different from your copy in some minor aspects. I extracted my version from the completed PROGRAM. This is a good programming technique — extract pertinent parts of an existing program to save time and effort in recreating that which is extant.

Load PART1 or, if you desire, key in the listing for PART1 in this issue. Drop GOTD20 from Line 10. It serves no purpose. Delete GOTD40 from lines 24, 26 and 28. If you followed instructions implicitly, the four truncated lines end in a colon.

CoCo ignores a final colon because, finding no instructions after it, it goes on to the next statement. Ending a program line with a dangling colon looks so amateurish, especially in a finished product.

A final colon is a hint. It cries out that you may want to add some GOTD/GOSUB routine here to present a new problem or condition. It also hollers, "Here I am! Here is where a routine could be added!"

The reserved Line 40 is harmless, and is a constant reminder that the next

segment has a home waiting for it. The real reason for these particular changes is to cycle through all the variations in succession in a perpetual loop.

MID\$ function allows CoCo to replace a designated portion of a string, S\$, beginning at the Ath character/space, for a length of N characters/spaces and replace same with an appropriate replacement string.

Our specific problem is to operate on Line 21 and make various modifications. It is one thing to know what a statement or function does. It is another to put it to good use.

List Line 5. Lines 3 and 5 did the work. We know that we must have a complete sentence, X\$. Rekey 5 PRINT@X, X\$;:RETURN and run. You can see that it prints out X\$ just fine. Do not be deceived or overconfident, however. We don't know precisely where we will wind up. Rekey Line 5, P=181:PRINT@X,LEFT\$(X\$,P);:RETURN, and run. This is our expanded statement.

In order to portray the second, translating sentence, type EDIT 5 to delete, press RETURN and add our MID\$ function, :MID\$(Y\$,A,N)=STRING\$(N,143):PRINT@Y,Y\$;:RETURN. Now run. FC Error in 5! FC means there is an illegal function error in the line called or some line executed previously by CoCo. Press BREAK. If typing PRINT Y\$ and pressing ENTER prints string Y\$ OK, we can eliminate Line 5 as the culprit. Line 23 was the last line CoCo ran through before it pooped out. Let's check the A and N values. Uh-Oh! In MID\$ function, A must be at least 1. Under our previous method, A was the screen location. Now, it is the numerical value of the first character/space that we pinpoint to be blanked out.

Edit Line 23, changing 0 to 1, and

run. We have a partially blanked-out sentence. At the end of Line 24, add GOTD10 and run. How are we going to fill in the balance of the sentence to make it whole?

List Line 24. GOSUB 4 doesn't do it! Let's change 4 to 3 in Line 24 and see if GOSUB 3 handles it. No! Why?

Think about it for a few minutes. Press BREAK, type PRINT Y\$ and press ENTER. We get the blank-out sentence that is equal to string Y\$. We changed Y\$ from its original form (Line 21). We must recapture the original Y\$.

One way to have our cake and eat it, too, is to create a new string variable, S\$, which is equal, yet distinct, from Y\$. Doing so allows us to work on S\$ and change its contents without losing the original Y\$. Can you alter Line 5 to do this?

Edit Line 5 and insert S\$=Y\$: at the beginning. Change both Y\$s to S\$s and run. We see a flicker, so we know that we did it! Change Line 24, drop off GOTD10 and run. The second variation is not quite with it. It should be apparent that A must be augmented by +1. Make the change in Line 25 and run. You now have an equivalent of listing ALT. Save ALT after you make an appropriate change in Line 0.

Last month, when we created our PROGRAM, I wasn't sure what additional havoc we might wreak on the paired sentences, so I automatically added all those LEFT\$ statements requiring P and Q values to make them operational.

Continuing, we look over our work to tighten it up. Look at listing ALT1. Make modifications to ALT that should still be in CoCo's memory.

Now that I have made a big deal out of the LEFT\$ routines, let us assume that our ultimate program will stay within the confines of our basic idea.

Florida-based Joseph Kolar is a veteran writer and programmer and specializes in introducing beginners to the powers of the Color Computer.

In Line 5, substitute the short, one-purpose `PRINT@X,X$;` for `P=181:PRINT@X,LEFT$(X$,P);` and run. In Line 4, substitute for `Q=181:PRINT@Y,LEFT$(Y$,Q);`, the equivalent, `PRINT@Y,Y$;` and run.

List Line 5. In the `MID$` function part of Line 5, the length, `N`, of the portion of `S$` that is to be replaced, may be omitted if the entire replacement string will be used. In our program, the replacement string, `STRING$(N,143)`, contains the length, `N`. Edit Line 5 further by deleting `,N` in the `MID$` function and run it.

Now list. Observe that `GOSUB5` is followed by `EXEC44539:GOSUB4` in a following program line in all four variants.

This calls for `GOSUBing` the `GOSUB`, a favorite ploy. We choose a program line, 2, so we don't have to overtax our mental resources. Key in Line 2, `GOSUB5:EXEC44539:GOSUB4:RETURN`.

In Lines 23, 25, 27 and 29, change 5 to 2. Delete the four unrequired lines 24, 26, 28 and 30. Now run this. The result should be listing `ALT`, which you should save.

A few asides on `GOSUB`. With a little ingenuity, you might have worked out one long `GOSUB5` by dropping `RETURN` and including the `EXEC44539` from Line 2 and the scoop in Line 4. Naturally, you would delete lines 2 through 4 and change 2 to 5 in lines 23 through 29. Run your work. See listing `ALT2`.

The self-imposed limitations are that you can't use the hot scoop in `GOSUB4` by itself, much less the scoop in the original `GOSUB5`. (See `ALT1`.) We have cut down on our options.

A long multi-statement program line is difficult for a newcomer to work with. A case in point: Using either `ALT1` or `ALT2` as a guide, modify our program so that in string `Y$`, both `BIG` and `OLD` are blanked out together. That's a good problem. Which listing would you rather use?

Big deal me! I started to tinker with Line 5 in `ALT2` and quickly became confused and got lost. I wound up using `ALT1`. Now, I could use Line 5 as a model or guide. It didn't take long before one solution was discovered. Look over listing `PROBLEM`. Can you follow my thinking?

The basic plan ran thusly: To blank out one area, we required two forms of the second, translating sentence, `Y$`, the complete sentence, and `S$`, the modified sentence with one blank-out.

It would not serve our purpose to

have `T$=Y$` to develop our second blank-out. I may be wrong, but we would get either the first or second blank-out, never both. If `T$=S$`, (one blank-out), we could modify `S$` to make the second blank-out. Thus, `T$` should print both blank-outs so `T$` would provide the desired effect.

“One of the secrets of using TRON effectively is to isolate the suspect portion of a program.”

Key in `PROGRAM` and run. Now list Line 23. In Line 23, we determined the `A` and `N` values to hide `BIG` and used `GOSUB5` to print it. We did not need to print it. We could have deleted `:PRINT@Y,S$;`. Delete it and run. As soon as `GOSUB5` executed it and returned, we knew (using Line 5 as a model) that the next order of business would be to extract what information we need to display the additional blank-out and modify it so it wouldn't conflict with Line 5.

Compare Line 6 to Line 5. We had to make `T$=S$`. Having already printed the top sentence, `X$`, we skipped over it. We used `MID$` function for the second time. We played it safe and changed our variables, `B` equivalent to `A` and `M` equivalent to `N`, both working on `T$`, not `S$`!

Now, we printed our `T$` sentence that contains the pair of blank-outs. We paused for a key to be pressed and returned to continue.

Look at Line 23! Our two values to zap `OLD` were `B=22` and `M=5`, followed by `GOSUB6` (sic). We headed for `GOSUB4` and over-printed `T$` with `Y$`, the completed sentence. We paused for a key press, chose a different color and returned to attack the next variant.

We combined `GOSUB6` and `GOSUB4` into a single `GOSUB7`, merely as a simplification in programming.

Note the `B` and `M` values in Line 23 can easily be distinguished as the values necessary to produce the second blank-

out. It also announces in a program line that two blank-outs exist.

As you will agree, it is better to have many short `GOSUBs` as opposed to a few long ones. In this last program, we used `GOSUBs` in both the single and double blank-out routines.

I love to work with `GOSUB` routines. `CoCo` doesn't mind, and hops back and forth dutifully in a flash.

Did you note how one creative program solved a problem, suggested a new problem — and away we went! From `PART1` to `ALT` to `ALT1` to `ALT2` to `PROBLEM`. We could go on and make other modifications, but we have gotten sufficient practice with `MID$` function.

`TRON` and its sister command `TROFF`, are a pair of debugging goodies that are all too often ignored or misunderstood by the newcomer.

`TRON` is the command that is entered into `CoCo`, allowing `CoCo` to list, in square brackets, the numbers of the lines that are being executed sequentially. The newcomer becomes disenchanted when he activates `TRON`, only to see `CoCo` go berserk in a runaway state. It fast becomes confusing, disillusioning, and finally, hopeless. `TROFF` is quickly invoked to return to a normal state of chaos. Sound familiar?

One of the secrets of using `TRON` effectively is to isolate the suspect portion of a program. The good part is that you can generally run a program, beginning with any line number you designate. For example, `RUN40` or `RUN200` starts executing the program at lines 40 and 200, respectively.

The bad part is that it will run through to the end of the program unless it is tied up waiting for an input, passing beyond the error, and effectively shielding it from detection. Disappointingly, it will pass through a lot of program lines without listing them on the screen.

Type `CLOAD~ALT1~ TRON`, press `ENTER` and run. The display we see has `20; 2; 23; 2; 5;` in brackets at the top of the screen and sentences `X$` and `Y$` displayed.

List Line 20. You can see that lines 0, 1 and 10 precede the lines in the first display. Now run. What happened to them and how do you know `CoCo` passed through them?

A general rule is that if `CoCo` does something to alter the visible screen, it will be indicated in brackets — general, but not universal.

Edit Line 10 to insert `STOP` at the beginning, and run. Now you can see

that CoCo noticed the REM line, 0. It read and stored a couple of variables, a formula and some instructions in Line 1, then went as directed to Line 10 and stopped. Type CONT and press ENTER.

CoCo cleared the screen at 10, obliterating 0, 1 and 10.

Rekey Line 10 CLSZ: and run. CoCo read and committed to memory lines 20 and 21; read and absorbed the value of variables A and N, 23; and jumped to 2. There it was told to print X\$ and S\$, at which point, returning to the next part of Line 2, it waited with bated breath for instructions.

List Line 23. What do you expect to happen? Run and see. CoCo is still entwined in Line 2. Since a key was pressed, granting CoCo permission to continue, it executed Line 4 and displayed Y\$, and at the end of the newly displayed line, 4. Again, it awaits your pleasure. It goes to the next variation, Line 25, and does its thing as requested. Go through the rest of the variations.

Another way to look at it is to consider each set of brackets as a stepping stone in a path that wends its way through a routine. Since it spells out the progression through the routine only, it

is advisable to have a hard copy or the listing for comparison, to avoid switching back and forth between the listing and the display.

Type NEW CLOAD "PART1". Keep in mind, if you don't TROFF before you load in the new listing, you will remain in TRON mode. Now run.

Notice where 24 appears on the display. The GOSUB routines are somewhat different. See if you can follow this! The last thing that happened was the alteration of Y\$ by creating the blank area, followed by 24, impinging on the text. CoCo pauses for permission to continue.

For a better perspective, delete the final GOTOS in lines 10, 24, 26 and 28, and run through the whole routine. Observe each stepping stone. CoCo is so sophisticated! Note that after lines 28 and 30 are executed, the next step is Line 4 in both instances. Where was 4 after 24 or 26?

I can only guess that the ending in the last two variations of Y\$ were blanked out, causing CoCo to invoke Line 4 to change the last segments of the display. Thus, the last change was a highlighted stepping stone, Line 4.

Right or wrong, the point is that some stepping stones are omitted. It all depends on the individual display since all four variant routines, lines 23 through 30, tell it to perform similar operations.

That is what makes TRON of limited value to a newcomer. It becomes more and more useful as you gain confidence and experience.

In my judgment, a newcomer should call on TRON, especially when checking out small routines. If the stepping stones seem incomprehensible, TROFF, and resort to a more familiar technique such as trial and error, intuitive changes, or studying the listing.

In other instances, as in PROBLEM, a stepping stone will overprint previous stepping stones and give you an apparent erroneous sequence. For example, the first variation ends in 7; 6. Then after a key press, 4 is printed over 7. But, it looks like 4; 6, due to 6 remaining on the screen.

TRON is a fun tool that is helpful in understanding what CoCo is doing, and when. It will give you a new perspective, and increase your respect for CoCo's amazing versatility. □

PRICE CUT 33%!

□ Makes tuning musical instruments so easy!

At last, the all electronic equivalent of the Strobotuner* is now available for your CoCo. The CoCoTuner is a plug-in module for the Color Computer. By plugging a microphone into this module (a sensitive preamp is built in) you enable the CoCoTuner to display a pitch comparison. Bands on the screen move to the right if the note is too sharp and left if it is too flat. You can adjust for a true "zero beat" to the internally generated pitch, which is accurate to within .003 Hz at middle C. This precise pitch is also available through the TV speaker so you can hear the pitch comparison as well as see it. Easy single-keystroke commands change notes for fast operation.

* Strobotuner is a trademark of C.G. Conn. Limited

BITS AND BYTES OF BASIC

Exploring the CoCo 3 Color System

By Richard A. White
Rainbow Contributing Editor

Using last month's program, you can display any grouping of up to 16 CoCo 3 colors and see their numbers. Why Color 38 should be orange or Color 9 bright blue is elusive.

The situation is further muddled since TV and composite video color monitors display colors differently than the CM-8 analog RGB monitor does. This led Ed Ellers to suggest that the CM-8 monitor was added after the TV interface was complete (January 1987, Page 24). It turns out that the color numbering arrangement is coldly logical, at least to the CoCo 3 and the CM-8. It's the TV system that's out of phase.

The key to the way both TV and RGB analog monitors work is called "additive color mixture" by my college physics text (I looked it up). Now my book is a bit old, predating color television, but it has the principles right. We'll update the example using the color cathode ray tube instead of projectors with colored lenses.

Each dot on the screen is really three dots, one green emitter, one blue emitter and one red emitter. There are three electron guns: one to shoot at red dots, one to shoot at green dots and one to

illuminate the blue dots. How bright each dot is depends on the strength of the electron beam aimed at it.

The eye cannot detect the components in any color mixture. In this respect, the eye differs from the ear. Those who have one of the multi-voice music synthesizers for the CoCo will attest that they can hear the separate notes in a chord. The listener does not hear a single middle pitch between the tones being sounded. The ear is analytical while the eye is not. So, if the red dot and the green dot of a pixel are illuminated the observer sees a yellow dot. If the red dot is strongly illuminated while the green dot is weakly illuminated, the result is orange.

Sixty-four colors are available in the CoCo 3 system. The low-order six bits in a byte define the color for the palette. Because composite video and TV work differently from the CM-8 monitor, it is not unreasonable to expect some differences in color display.

In composite video systems the two highest-order bits carry intensity information, so there can be four intensities for each basic color. You might say there are five intensities since, if both bits are off, black results. That leaves the four lower-order bits to specify the color. The result is four intensities of 16 basic colors. According to Rick Adams and Dale Lear, these bits control color phase in the signal (January 1987, Page 20). As we will see, this system is more restrictive and less subject to logical

analysis than the analog monitor system.

When using the analog monitor, the CoCo 3 controls three separate color signals that are sent to the monitor. There are separate wires in the cable for red, green and blue. Each of the signals may be off, or be at low, medium or high intensity levels. Each directly controls its dot in a pixel. There is no phase shifting and decoding. You can directly decode a color number to determine the illumination state of each of the color dots in a pixel.

A byte is usually represented as a series of eight bits. The left-most bit is the high-order bit, while the right-most bit is the lowest-order bit. This bit is designated '0' while the eighth bit is designated '7'. For example:

Bit Number	7	6	5	4	3	2	1	0
Bit Value	0	1	1	0	1	0	1	0

A bit with a value of 1 is on, while a value of 0 indicates the bit is off. Each of the six bits the palette deals with to determine color in the analog RGB system has a specific meaning:

Bit Number	7	6	5	4	3	2	1	0
Bit Meaning	X	X	R	I	G	B	R	O

'R', 'G' and 'B' refer to red, green and blue. The '0' and the '1' pertain to color intensity. If Bit 0 only is on, blue will be turned on at low intensity. The color number is 1. If Bit 3, corresponding to

Richard White lives in Fairfield, Ohio, has a long background with microcomputers and specializes in BASIC programming. With Don Dollberg, he is the coauthor of the TIMS database management program.

WE'RE BRINGING THE COCO

RAINBOW'S BROADENING ITS SPECTRUM

THE RAINBOW and the Delphi Information Utility have joined together to allow CoCo owners all over the world to connect with one another!

Delphi is a full-service information utility. It offers everything from up-to-the-minute news stories from The Associated Press to electronic mail services. But, *best of all*, it now has a **special forum for Color Computer owners, and it's operated by the people who bring you THE RAINBOW each month.**

The CoCo Special Interest Group (SIG) features a variety of services, including an open forum where you can send and receive messages from Color Computer owners all over the world. It also has several databases to which you can upload your favorite programs and from which you can download programs written by other CoCo enthusiasts. Some of these databases are BASIC programming, OS-9 and home applications.

When setting up your account with Delphi, if you do not have a credit card or prefer not to use it, Delphi requires that you send \$20 to give your account a positive balance. This will be refunded after your first free hour if you choose to no longer use the system or it will be applied to future connect charges. If you do not maintain a positive balance, you will be charged \$3.50 each month for direct billing.

PEEK INTO THE RAINBOW

The CoCo SIG's conference feature allows you to meet electronically with other members of the CoCo Community. You can join conferences with notables such as Dale Puckett, Cray Augsburg, Marty Goodman, Don Hutchison, Jim Reed, Lonnie Falk and others — on a regular basis. Conference schedules will appear in THE RAINBOW each month. Be sure to check online announcements for changes and additions.

THE OTHER SIDE OF THE RAINBOW

On Delphi, you also are able to buy RAINBOW ON TAPE — order a whole set, or download an individual program immediately. You can also renew your RAINBOW subscription, make a fast and easy order for software or hardware from a multitude of vendors, or inquire about products on the CoCo SIG.

We also have a number of **programs that you can download** and use, just for the cost of the time you spend transferring them. There'll also be **corrections for RAINBOW articles**, helpful hints and many other useful features.

FREE LIFETIME MEMBERSHIP

THE RAINBOW is offering subscribers a **free lifetime subscription to Delphi** — a \$24.95 value — and a free hour of connect time — a \$7.20 value at either 300, 1200 or 2400 Baud — so you can sample Delphi and the RAINBOW CoCo SIG. That's right. Your subscription to THE RAINBOW entitles you to this \$32.15 value as a **free bonus!**

If you're not a RAINBOW subscriber, just enter your order when you sign on with Delphi and you'll get the same great deal! For our \$31 subscription fee, you'll get the finest Color Computer magazine ever, a free lifetime subscription to Delphi and a free hour of connect time.

SAVE EVEN MORE

Want to save even more? While you're online you can order, for only \$29.95, a deluxe package which includes the Delphi membership, the *Delphi Handbook and Command Card* (\$21.95) and a total of three hours of connect time (\$21.60).

Delphi provides us all with **Immediate CoCo Community**. Check it out today. After all, you can sample it for free!

DELPHI

TYPE: GROUP COCO

COMMUNITY TOGETHER

How to reach RAINBOW's Color Computer SIG . . .

There are several ways to connect to Delphi and THE RAINBOW's CoCo SIG. In most cities you will not even have to pay long distance charges; you can use special data communications networks like Telenet, Tymnet and the Canadian Datapac network.

First, set your terminal program to operate at either 300 or 1200 Baud (depending on the modem you have), and also select either 7 bits with even parity or 8 bits with no parity, and one stop bit. (If one combination doesn't work, try another.)

Decide which network you should use. There is no surcharge for Telenet or Tymnet. Canadian residents using Datapac will be charged an additional \$12 (U.S.) per hour.

On Telenet: The Uninet network has now merged with Telenet. To get the Telenet number for your area, call (800) 336-0437. After you call your local access number and make connection, press the ENTER key twice. When the "TERMINAL=" prompt appears, press ENTER again. When the "@" prompt appears, type C DELPHI and press ENTER.

On Tymnet: Call (800) 336-0149 to get the Tymnet number for your area. After you dial your designated number and connect, you will see either "garbage" or a message saying "please type your terminal identifier." At this point, even if the screen is garbled, simply press 'A'. When "please log in:" appears, type DELPHI and press ENTER.

From Canada (on Datapac): Call Delphi Customer Service at (617) 491-3393 to get the Datapac number for your area. After you connect, press the period key (.) and ENTER (use two periods if you're using 1200 Baud). Type SET 2:1, 3:126 and press ENTER. Now type p 1 3106, DELPHI; and press ENTER. Delphi's new rates indicate an additional \$12 hourly surcharge for evening use of Datapac, which means a total of \$18 (U.S.) for connect time.

From other countries: Many countries have their own data networks that can connect to either Telenet or Tymnet. Check with the telephone authorities in your country for details on how to sign up for this service. When you have an account set up, you can reach Delphi with a "host code" of 312561703088 through Telenet, or 310600601500 through Tymnet. (You'll have to pay the toll charges for this connection.)

Type in Your Username

If you're already a subscriber to THE RAINBOW, at the "USERNAME:" prompt, type RAINBOWSUB and press

ENTER. At the "PASSWORD:" prompt, type your individual subscription number from the mailing label of your latest issue of THE RAINBOW. (If there are one or more zeros at the beginning of this number, include them.)

If you don't already have a subscription, at the "USERNAME:" prompt, type RAINBOWORDER and press ENTER. At the "PASSWORD:" prompt, type SENDSUB and press ENTER. Have your MasterCard, VISA or American Express card ready, because you'll be led through a series of questions that will enable us to put your RAINBOW and Delphi subscriptions into effect. In an effort to hold down non-editorial costs, we do not bill for subscriptions.

If you make a typing error, just press ENTER and start over. Remember that at any point, when you're on Delphi, you can type HELP to get help on how to use the system. To get off the system just type BYE.

If you find that you're unable to log on to Delphi and enter the CoCo SIG after following these instructions, call us during afternoon business hours at (502) 228-4492. We'll be glad to offer assistance.

Come Visit Us! Type: GROUP COCO

After you sign in, you'll be prompted to set up your own, personal "user name" — Delphi is a friendly service, no numbers to remember — and you'll be asked a number of questions so Delphi can set up your account. You'll also be assigned a temporary password. No time is assessed against your free hour of service while you answer these questions.

Delphi will tell you that your account will be ready after 6 p.m. the same day if you sign up before noon (Eastern time zone.) If not, your account will be ready at 6 p.m. the next day. Once an account is opened, *each RAINBOW subscriber will be credited with an hour of free time!*

When you log back in, use your chosen username and your temporary password to access the system. At that point, you will meet Max, who will help you configure things and will change your temporary password into your own *personal* password. This is the password you will use for subsequent sessions — or until you change it.

After Max bids you goodbye, you'll wind up at the Delphi Main Menu; type in GROUP COCO and **join us on the CoCo SIG!**

Bit 1 is on, blue will be on at medium intensity. The color number corresponding to Bit 3 on and all others off is 8. Both bits 1 and 4 may be on at the same time, in which case a high-intensity signal is sent to the monitor and the color number is 9.

We can now accurately predict the color of blue from its color number. Color 1 is dark blue, Color 8 is medium blue and Color 9 is bright blue.

An identical analysis can be made for green. Only Bit 1 on means dark green, whose color number is 2. Bit 4 on means medium green, whose color number is 16. Bright green results when both bits 1 and 4 are on and its number is 2 + 16, or 18. Red uses bits 2 and 5. Dark red is Color 4, medium red is Color 32, while bright red is Color 36. Thus the intensities of the pure colors, red, green and blue are defined. Color 0 is black (all colors off).

Of course any bits can be on at any time. The 64 colors encompass all possible combinations of bits on and off. At this point, readers with CM-8 monitors may want to type in the BASIC program at the end of the article. It is a CoCo 3 version of the lab experiment described in my physics book. But, instead of having projectors show intersecting circles of colored light on a screen, we will let the CoCo 3 generate the same experiment on the monitor. Again, this only works right on the CM-8 monitor. On a composite video monitor or TV there is no logic associated with the colors.

When you run the program, the display shown in Figure 1 is drawn on the screen with three intersecting primary color ovals with all three intensities set at high. To the left, the color numbers are displayed. To the lower left, intensities are displayed with an arrow pointing to an intensity number adjacent to one of the primary color names. Move the arrow by pressing any key except the numbers 0 to 3. The arrow steps down and then goes back to the top color. You can also press a number 0 to 3 to set the intensity for the primary color the arrow is pointing to. Zero turns the color off while 1, 2 and 3 correspond to dark, medium and bright.

Moving on to color mixing, let's start with mixing bright colors. Bright red and bright green produce yellow. Bright red, green, blue and yellow comprise the first PMODE 1 and 3 color set used in previous CoCos. The alternate color set is buff, cyan, magenta and orange. Buff

is a mixture of bright red, bright green and bright blue. It is essentially white when the brightness of the TV or monitor is on full. Cyan is a mixture of bright green and bright blue with red off. Magenta is a mixture of bright blue and bright red. Thus, yellow, buff, cyan and magenta are the four colors resulting from mixing equal brightness pairs of primary colors and, with orange substituted for yellow, constitute the second set of PMODE 3. You can see these colors in the areas where the three ovals in Figure 1 intersect. Now the logic behind CoCo half-color selections is apparent. It only took me six years to discover it.

On a cold start, the CMP versions of these colors are stored in slots 0 to 7 of the palette. Black is in Slot 8. Those with CM-8 monitors should execute PALETTE RGB or include the command in their program if they want to have correct color graphics.

Mixing medium and dark primary colors produce medium and dark versions of the bright color mixtures. For example, buff goes to medium and dark gray. The dark mixtures would produce some nice dungeon or cave illustrations. Figure 2 illustrates the low-intensity primary colors and some of their mixtures. Figure 3 illustrates the generation of orange in the CoCo half-color set by mixing high-intensity red and low-intensity green.

This covers the simpler color mixtures. We discovered that there are three intensities for each of three primary colors resulting in nine separate colors. Each of these can make nine different two-color mixtures, producing a total of 27 two-color mixtures. Twenty-seven three-color mixtures are available and, adding black, all 64 possible colors are accounted for.

The program is divided into seven sections: lines 5 to 160 initialize and draw the screen, lines 200 to 240 get and process an input character, lines 300 to 390 process a red intensity change, lines 400 to 490 process a green intensity change, lines 500 to 590 process a blue intensity change, lines 600 to 690 update the color number display, and Line 1010 contains color number data for the various primary color intensity levels. This is read into the IN(X,Y) array.

Figure 1: High-intensity primary colors red, green and blue and their mixtures.

Figure 2: Low-intensity primary colors and their mixtures.

Figure 3: Mixing high-intensity red and low-intensity green produces orange. Blue is off.

NEW LOWER PRICES!!!

CALLIGRAPHER

CoCo Calligrapher - (Hybrid BASIC/ML) Turn your CoCo and dot-matrix printer into a calligrapher's quill. Make beautiful invitations, flyers, certificates, greeting cards, labels and more. Includes 3 fonts: *Gay Nineties*, *Old English* and *Cartoon*. The letters are 1/2 inch high and variably spaced. Works with many printers including Epson, Gemini, Radio Shack, Okidata 92A, Banana and Prowriter. Additional fonts are available (see below). Tape/Disk; \$24.95.

OS9 Calligrapher - (C) Although a different program from the CoCo Calligrapher, the OS9 Calligrapher prints all the same fonts. It reads a standard text file which contains text and formatting directives. You may specify the font to use, change fonts at any time, centering left, right or full justification, line fill, margin, line width, page size, page break and indentation. Similar to *troff* on UNIX (tm) systems. Includes Gay Nineties, Old English and Cartoon fonts. Additional fonts are available (see below). Disk only; OS9; \$24.95.

Calligrapher Fonts - Requires Calligrapher above. Each set on tape or disk; specify RSDOS or OS9 version; \$14.95 each. Set #1 - (9 fonts) Reduced, reversed and reduced-reversed versions of Gay Nineties, Old English and Cartoon; Set #2 - (8 fonts) Old Style and Broadway; Set #3 - (8 fonts) Antique and Business; Set #4 - (8 fonts) Wild West and Checkers; Set #5 - (10 fonts) Stars, Hebrew and Victorian; Set #6 - (8 fonts) Block and Computer;

Economy Font Packages on disk; specify RSDOS or OS9; 20.05: Font Package #1 - Above font sets 1, 2 and 3 (25 fonts) on one disk. Font Package #2 - Above font sets 4, 5 and 6 (26 fonts) on one disk.

UTILITIES

Auto Run 04 - (Hybrid BASIC/ML) Utility to allow your own *tape-based* BASIC or ML programs to display a graphics title screen and then self-start after loading. Includes a graphics editor to create professional looking title screens. Tape only; 16K ECB; \$10.95.

Piratecor - (100% ML) Utility to allow your own *disk-based* BASIC or ML programs to display a graphics title screen and then self-start after loading. Adds copy protection to your programs but still allows users to create *non-executable* backups! Includes Semigraf. Disk only; CoCo I, II, III (except Semigraf); \$30.95.

A complete catalog of other sweet Sugar Software products is available.

Semigraf Graphics Editor - (100% ML) Use 8 colors and standard text characters to draw graphics pictures and screens in high resolution *semigraphics* mode. Includes sample pictures. Tape/Disk; 16K CB; \$10.95.

Super Screen Machine - (100% ML) Put your CoCo into high resolution mode for your own BASIC or ML programs. Smooth scroll, key click, lower case with colored characters, many other features. Tape/Disk; 32K CB; CoCo I, II, III (except 64K mode); \$10.95.

Color Disk Manager - (100% ML) Disk utility with these features: Disk repair, selective track initialization, verify sectors, backups, tape to disk transfer, ROM Pak execution from disk, much more! Tape/Disk; CoCo I, II, III (except for 64K mode); \$24.95.

Color Tape Manager - (100% ML) Tape utility with these features: display start, end and exec address of ML programs, convert ML programs into BASIC DATA statements, append ML to BASIC, load, display/modify and save tape file, handles missing EOF and filename blocks, much more! Tape/Disk; 16K ECB; CoCo I, II, III (except for 64K mode); \$10.95.

INFORMATION MGT.

TIMS (The Information Management System) - (Hybrid BASIC/ML) Tape or disk, fast and simple general data base program. Create files of records that can be quickly sorted, searched, deleted and updated. Powerful printer formatting. Up to 8 user fields, sort on up to 3 fields. Tape/Disk; \$10.95 (see combo pkg below).

TIMS Mail - (Hybrid BASIC/ML) Tape or Disk based mailing list management program. Files are compatible with TIMS. Fast and simple to use. Supports labels 1, 2 or 3 across, 2 1/2 to 4 inches wide. Tape/Disk; \$10.95 (see combo pkg below).

TIMS Utility - (Hybrid BASIC/ML) Utility companion for TIMS and TIMS Mail to allow multi-term search (AND and OR logic), global change and delete, split large files and more! Tape/Disk; \$14.95 (see combo pkg below).

TIMS Combo Package - All three of the above programs: TIMS, TIMS Mail and TIMS Utility on one disk - \$34.05.

SPORTS STATISTICS

Statistics programs for the coach, team manager or avid fan who wants to keep accurate team and opponent records. Printer output supported. The following are available: Baseball, Basketball, Football and Soccer. Disk only; \$10.95 each.

EDUCATIONAL

Silly Syntax - (Hybrid BASIC/ML) Ages 5 and up. Story creation game; output to screen or printer; includes 2 stories or create your own. Tape/Disk; \$10.95 or disk with 62 stories for \$20.95. Sets of 10 stories on tape/disk for \$4.95: Fairy Tales, Current Events, X-Rated, Sing-Along, Adventure, Potpourri.

Bible Stories Adventure - (Hybrid BASIC/ML) Ages 4 and up. A simple graphics adventure game for young children and their families. Old testament. Tape/Disk; \$10.95.

The Presidents of the USA - (100% ML) Ages 10 and up. Two trivia games, user modifiable, printer output supported. Tape/Disk; 16K ECB; \$10.95.

The Great USA - Ages 9 and up. Sharpen your knowledge of the 50 states. Capitals, nicknames, abbreviations, flowers, trees, birds. Trivia! Tape/Disk; 16K ECB; \$10.95.

Galactic Hangman - Ages 7 and up. Exciting new twist to the popular word game. Outstanding graphics; 700 word vocabulary. Tape/Disk; 16K ECB; \$10.95.

PreReader - (Hybrid BASIC/ML) Ages 3-5 (level 1); Ages 5-7 (level 2); Great graphics and music. Level 1: matching colors, shapes, letters and numbers; Level 2: association of letters and consonant blends with their sounds. Tape/Disk; Joystick; \$10.95.

Statgraf - High school and college level; Linear regression analysis program combined with a plotting and line graphing system. Enter up to 250 x/y pairs; data transformation; residuals; regression line; print graph with screen print program (not supplied); much more! Tape/Disk; \$10.95.

SPECIAL INTEREST

Rental Property Income and Expense Management Package - Maintain your rental property income and expense records. Print output supported. 28 expense categories. *This program may be tax deductible.* Disk only; \$20.05.

Radio Systems Design Calculations - Performs 14 different calculations commonly used in design or evaluation of land mobile radio systems, satellite TV, etc. Tape/Disk; \$10.95.

CoCo Knitter - Easy to use program to display or print instructions to knit a sweater: Cardigan or Pullover; Round or V-neck; Raglan or Set-in Sleeve; 3 weights or yarn; 8 sizes from baby to man. Tape/Disk; \$10.95.

Flying Tigers - (100% ML) Fast Defenders style arcade game. 5 levels of difficulty; Great graphics and sound effects. Tape/Disk; Joystick; \$10.95.

SUGAR SOFTWARE
P.O. Box 7446
Hollywood, Florida 33081
(305) 981-1241

All programs run on the CoCo I, II and III, 32K Extended Basic, unless otherwise noted. Add \$1.50 per tape or disk for postage and handling. Florida residents add 5% sales tax. COD orders add \$4. Dealer inquiries invited.

In Line 5, a two-dimension array for the data from Line 1010 is created; the high-speed poke is made and the primary color intensity variables RD, GN and BL are initialized.

In Line 10, the RGB palette is established. The screen display includes three ovals that intersect in a way that produces seven specific areas. The outer portions of the ovals contain only the primary colors red, green and blue. Their colors are specified by the variables RR for red, GG for green and BB for blue. The values initially assigned, 36, 18 and 9, correspond to maximum intensity of all three colors.

The intersecting ovals define three sectors where two of the primary colors mix. The variables defining the colors in these sectors are RG for red and green, GB for green plus blue and BR for blue and red. The initial color numbers are 54, 45 and 27. These numbers are obtained simply by adding the color numbers of the two primary colors involved. Finally, there is the center sector where all three primary colors mix. Its variable is AL with the value 63, initially.

In Line 20, HCOLOR 11, B defines the palette slots to be used for the foreground and background colors while HSCREEN 2 displays the 320-by-192, 16-color graphics screen. In lines 30 and 40, two buffers are defined and filled with the current black screen color. When numbers printed on the screen are updated later, the program will retrieve black from these buffers to erase the previous numbers.

The three circles are drawn in Line 50.

The numbers within the parentheses define the centers, the B0 sets the diameter as 80 dots while the .75 defines the aspect ratio, causing the resulting figure to be an oval rather than a circle. I did this to maximize the size of each figure while leaving room for text on the screen. The circle color is not specified and defaults to the foreground color.

I noted before that the default palette contains the high-intensity three primary colors and their mixes. To paint the circle sectors we need only to specify the palette slot containing the desired color and specify Slot 11, which is the color of the sector outline where painting is to stop. The palette slot assignments are now fixed and color changes to a particular sector are made by changing the color assigned to its palette slot.

In Line 90, the color numbers relating to the various primary color intensities are read into the IN(XY) array. Lines 100 to 160 write the needed text onto the screen. About midway down the screen on the left side is a block of numbers displaying the current color numbers in each of the sectors. Since this needs updating each time colors are changed, it was put in a subroutine starting in Line 600.

The HPUT statement in Line 600 erases the currently displayed numbers and the HPRINT statements rewrite using the most current color numbers.

With the basic display complete, the program goes to Line 200 and looks for a keystroke. At this point, there is a left arrow pointing toward "red" in Line 20 near the bottom of the page. The cur-

rent line of the arrow is held in variable CL. If a key other than the numbers 0 to 3 is pressed, I\$ is assigned a space that is detected in Line 210. Using the variable CL to establish arrow location, the HPUT statement in Line 210 erases the arrow. Then if the arrow was not on Line 22, it is moved down one line. If the arrow had been on Line 22, it would have been printed on Line 20. CL is updated accordingly.

When a number in the range 0 to 3 is entered, changes to the displayed colors are called for. The program uses AP=CL-19 to get a 1, 2 or 3 in AP and moves to Line 230 to select the appropriate color change subroutine. An alternate to the IF-THEN statements in Line 230 is ON AP GOSUB 300, 400, 500. ON-GOSUB can be much faster and clearer when many options are involved.

The subroutine starting in Line 300 changes colors as the red intensity changes. Subroutines starting with lines 400 and 500 are nearly identical except that they are tailored to handle green and blue intensity changes. First the intensity number is recovered from I\$. Next, the previous intensity shown at the bottom of the screen is erased and the new intensity printed. Then the color number for the new intensity is obtained from the array IN(1, RD). Finally the new colors for the mixed-color sectors involved are calculated and palette slots changed accordingly. A call is made to GOSUB 600 to update the color numbers on the screen and the program returns for the next keystroke.

HACKER'S DREAM Omnitronix, Inc. is now offering a self-contained, stand-alone, 8031-based microcontroller package for applications development. The MSC-8031 Controller features two bi-directional serial ports that are independently selectable for up to 19,200 baud. The front panel of the controller has two on/off switches and two LED indicators that are under the processor's control. The board supports one 2764 EPROM and one 8K SRAM. An internal expansion header permits additional memory or I/O interfacing. A programmer's development package is offered that includes the MSC-8031 Controller, 8K SRAM, UL approved AC adapter, schematics and programming examples. The kit cost is \$249. *Contact Omnitronix, Inc., 760 Harrison Street, Seattle, WA 98109, (206) 624-4985.*

STATIC BATTLE Ohm/ Electronics has provided an economical solution to the static problems that plague users of electronic equipment. With the introduction of the Scooter Model STP10 Anti-Static Touch Pad, both user and equipment are protected. The pad, which measures 2 $\frac{3}{8}$ by 3 $\frac{3}{4}$ by $\frac{3}{8}$ inch, mounts to any equipment or work surface with a pressure sensitive backing. The fully conductive front surface connects to 10 feet of cord that terminates with a banana plug and/or alligator clip for easy connection to any

adjacent ground. The user simply touches the conductive pad before equipment operation for positive grounding between user and equipment. Scooter Anti-Static Touch Pads carry a suggested retail price of \$12.95. *Contact Scooter Products, Ohm/ Electronics, Inc., 746 Vermont Street, Palatine, IL 60067, (800) 323-2727; Illinois, call (312) 359-6040.*

LOW PRICES Accutest Instruments, Inc.'s new 20-page electronic test equipment catalog and price list features thousands of off-the-shelf items, both new and reconditioned, at up to 70 percent off original list prices. All custom-reconditioned equipment is thoroughly checked and precision calibrated by Accutest's technicians. The line of equipment offered by Accutest includes power supplies, X-Y plotters, oscilloscopes, counters and DVMs. *For a free copy of Accutest's catalog and price list, contact Accutest Instruments, Inc., P.O. Box 130, Route 526, Clarksburg, NJ 08510, (609) 259-0460 or call toll-free (800) 524-0747.*

SALES UP Tandy Corporation has announced consolidated sales and operating revenues for the month of November were \$336,135,000, an increase of 14 percent over the November 1985

sales and operating revenues of \$294,737,000. Tandy's U.S. retail operations recorded a 17 percent gain in sales and operating revenues to \$296,841,000 in November 1986, from \$254,132,000 in November 1985. Sales and operating revenues of U.S. retail stores in existence more than one year increased 14 percent in November 1986.

DRIVE FOR THE BLUES J&M Systems, Ltd. of Albuquerque, N.M., has announced a new 3.5-inch floppy drive to upgrade existing 5.25-inch systems to the new industry standard at an affordable price. The system is designed for all IBM products and Compatibles. It is available as either an internal or external unit that is installed quickly and easily without special knowledge or tools. Internal units utilize the standard IBM floppy drive controller. External drives can be connected to any system that has a 37-pin connector. All drives include a copy of ARC, the acclaimed file compression and backup utility. The new J&M drives may be of interest to anyone wanting to upgrade a system, gain the increased storage available with a 3.5-inch disk or exchange information with other systems and portables. *Full information and prices are available from J&M Systems, Ltd., 15100-A Central S.E., Albuquerque, NM 87123, (505) 292-4182.*

DeskMate® 7-in-1 software makes your Color Computer better than ever.

Now our popular DeskMate® software is available for disk-based Color Computers! DeskMate (26-3259, \$99.95) features seven popular personal-productivity programs—all on one disk! A general-purpose *TEXT* entry and editing program is ideal for writing correction-free letters, memos and short reports. *LEDGER*, a simple spreadsheet program, helps you do budgeting, sales forecasting, profit-

and-loss projections and other "What if . . . ?" calculations. Using the four-color *PAINT* picture editor,

CALENDAR

LEDGER

The *INDEX CARDS* personal filing system lets you enter and edit data and perform simple sorts and searches. It's ideal for keeping track of

TELECOM

you can create colorful charts, graphs, designs and "doodles" on your screen. Print a copy on a dot-matrix or ink-jet printer.

TELECOM gives you access to national information services, plus transmits

INDEX CARDS

names and addresses. *CALENDAR* is an easy way to organize your day. A four-function *CALCULATOR* is available within the operations of any application.

TEXT EDITOR

and receives files from other computers by phone (requires modem). A simple monthly calendar program displays "to do's" for any date. *CALCULATOR* is available within the operations of any application.

Don't have a disk drive? You can add one for just \$299.95. (26-3131). Come in today!

See How Your Stocks Stack Up

By Mark Evans

Stock Tracker was developed to help me monitor the stock market. It allows the user to track the daily price of stocks. The user can print averages, highs and lows as well as stock prices. In addition, the accompanying *Graph* program (which uses the

same data files as *Stock Tracker*) displays a graph of the 30-day moving average, stock prices and the year-to-date average.

Each file can track up to five stocks (mutual funds, indexes, etc.) for up to 130 days. *Stock Tracker* also allows the

user to back up data. This is useful when starting a new tape after the first 130 days are up to preserve recent highs, lows and averages.

Programming techniques that may be of interest are found at various points in the programs. In *Stock Tracker*, lines of interest include:

36-42	Calculate the stock price highs, lows and average
69-77	Scroll the daily prices on the screen
92-94	Contain the routine to back up data
107-124	Contain a variable map

Of interest in the *Graph* program are lines 10 to 12, where the program graphs the stock price, calculates the most recent 30-day average and graphs this average. *Graph* adjusts the scales to ensure full use of the graphics page.

When keying in this program, especially on a 16K CoCo, it is important to type the lines just as they appear in the listing. Both *Stock Tracker* and *Graph* use all of the available memory on the 16K CoCo. Therefore, unnecessary spaces and lines can cause an Out of Memory Error. Note that lines 34 and 42 in *Stock Tracker* and lines 3, 6, 25 and 26 in *Graph* contain the high speed poke (65495,0). Delete this if it does not work on your computer.

(Questions about this program may be directed to the author at 2184 Coathbridge Drive, Germantown, TN 38138. Please enclose an SASE for a reply.) □

This graph depicts a certain stock's 30-day moving value (jagged line) along with its year-to-date average (dotted line). This helps the user get an overall picture of how well the stock is performing.

Mark Evans is a sophomore at Memphis State University where he is majoring in business and is a member of the Student Activities Council. He works with the youth group at Farmington Presbyterian Church and writes computer programs in his spare time.

Uncompromising performance at an incredible price.

The Tandy® Color Computer 3

More colors, superb graphics,
greater power for only \$219⁹⁵

Our most powerful Color Computer

Finally, the ideal computer for your family: our most advanced Color Computer ever. The Color Computer 3 is great for small business and home applications. You get the advantages of a high-priced computer—without the high price!

A rainbow at your fingertips

The Color Computer 3 features 128K memory (expandable to 512K), giving you greater programming power. With the CM-8 High-Resolution Monitor (26-3215), you can create razor-sharp graphics using 64 colors.

The Color Computer 3's Extended BASIC features 21 new commands that allow you to alternate screens, colors, and backgrounds—all at a higher resolution and with a greater variety of colors than any previous Color Computer.

Compatible and expandable

Best of all, the new Color Computer 3 is compatible with software and accessories designed for the Color Computer 2, including a wide selection of educational, personal-management and game programs. Expand with a modem or printer, or add a disk drive to create a

sophisticated disk system and open the door to a library of advanced disk software.

The Color Computer 3 (26-3334) is your affordable alternative. See it today at Radio Shack.

Send me an RSC-17B Computer Catalog.

STAR NX-10 COMPLETE SYSTEM

Easy-to-use and ready for the heavy workloads from your TRS-80 Color Computer 1, 2, 3 or PC compatible. Control pitch, margins, NLQ, Italics and more from the Front Control Panel. Stuff the 5K data buffer with your own unique character set or use one of the 11 built in character sets. 1 Year limited warranty serviceable nationwide. Deluxe Users manual. System includes the NX-10 Dot Matrix printer with BLUE STREAK II serial-to-parallel interface and our Software Trio (see below).

SPECS: 120cps Draft, 30cps NLQ, Italics Sub & Superscripts, Emphasized, Doublestrike, Proportional, International, Down Loadable Char., Left, Right, or Center Justification, Underline, Vertically Enlarged 2X/4X, 5, 6, 8.5, 10, 12, & 17 CPI, Graphics 480-1920 dots/line, Horiz & Vert Tabs, Forward or Reverse n/216" Line Feeds, Hex Dump, Friction & Push Tractor, 5K DataBuffer

\$289⁹⁵ +\$10 Shipping and Insurance
COMPLETE

SEIKOSHA SP-1000AS COMPLETE SYSTEM

Triple Mode Dot Matrix printer with serial interface, cable and our Software Trio (see below). Ready to run single sheet or 4" to 10" tractor paper from your TRS-80 Color Computer 1, 2, or 3. Compatible with your programs that let you control your baud rate, like CoCoMax, VIP, Basic and OS-9 etc. 24 month limited warranty. 76 page users manual.

SPECS: 100cps Draft, 20 cps NLQ, Italics, Sub & Superscripts, Bold, Doublestrike, Proportional, International, Underline, 5, 6, 8.5, 10, 12, & 17 CPI, Graphics 480-1920 dots/line, Horizontal and Vertical Tabs, n/216" Line Feeds, Hex Dump, Friction and Tractor Paper Feed

COMPLETE

CITIZEN 120D COMPLETE SYSTEM

Triple Mode, High performance Dot Matrix printer with serial interface, cable, and our Software Trio (see below). Ready to run with your TRS-80 Color Computer 1, 2, or 3. Load single sheets with one button ease or use the adjustable tractor with rear or bottom feed. Fill the 4K buffer with text and graphics from your favorite programs such as CoCoMax, VIP and Basic at rates up to 9600 baud. 12 month limited warranty. Deluxe users manual.

SPECS: 120 cps Draft 25 cps NLQ, Italics, Sub & Superscripts, Emphasized, Doublestrike, Proportional, International, User Defined Characters, Left, Right, Center or Full Justification, Underline, Overscore, Reverse Print, Vertically Enlarged 2X, 5, 6, 8.5, 10, 12, 17, & 20 CPI, Graphics 480-1920 dots/line, Horiz and Vert Relative & Absolute Tabs, n/216" Line Feeds, Hex Dump, Friction and Tractor, 4K Buffer

\$229⁹⁵ +\$10 Shipping and Insurance
COMPLETE

BLUE STREAK II Serial to Parallel Interface

Transfer your data from CoCo 1, 2, 3 to your parallel printer with a fury. The Blue Streak can increase your data transmission 4 fold over conventional-compatible interfacing and increase printer throughput. An additional serial I/O port permits port sharing with another serial device without recabling.

SPECS: 300, 600, 1200, 2400, 4800, 9600 Switchover Baud Rates, Power Supply 276-1431A UL Listed, 1 Year Warranty, Input 4 Pin Serial, Output 36 Pin Parallel and 4 Pin Serial, Total Cable Length 54 Inches, Box 4"x2"x1"

\$49⁹⁵ without power +\$2 Shipping and Insurance
\$54⁹⁵ with power +\$2 Shipping and Insurance

SOFTWARE TRIO

Dragon's
WORD PROCESSOR 2.2
TAPE OR DISK VERSION

A feature packed program that turns your CoCo into an office machine. Create and save letters and documents with the Word processor tailored for your printer.

SUPER GEMPRINT

A FULL 8"x11" SCREEN DUMP PROGRAM

A well-written and documented program written in machine language position independent code. Features include user definable color shading and printing in all 5 Pmodes. Tape transferable to disk. Requires 16K extended color basic.

TYPE SELECTION TUTORIAL PROGRAM

Menu driven program for the CoCo. Teaches and shows the new user the numerous features of their printer. (Specify printer when ordering)

Challenges Await You In

The Second Rainbow Book Of

SIMULATIONS

16 Great New Programs for the Tandy® Color Computer
From the publishers of THE RAINBOW®
The Color Computer Monthly Magazine

Put your wits and skills to the test with 16 outstanding programs from the winners of our Second Simulation Contest. You'll encounter explosive action as the leader of the Rainbow City Bomb Squad. As the Master Train Dispatcher, the pressure is intense to avoid accidents and keep the trains on time. When all this activity seems too much, who ya gonna call? Ghostgetters, of course! Then it's off to CoCo's Bowling Alley for a little Monday night relaxation.

Plunge into real-life action with:

Bush Pilot — Danger lurks above the canopy of the dense African jungle

Nereid Countdown — Many different skills are needed to launch the massive Ezekial into orbit

Stock Market — Failure or fortune in the world of high finance

Vacation U.S.A. — On the trail of adventure through the American heartland

Project Theta — Alone in your fighter, you stand before Zygor's invasion fleet

Olympic Decathlon — Qualify in 10 grueling events

Our award-winning authors: Curtis Boyle, Peter Brandt, Audrey DeLisle, Bill English, Aryeh Glaberson, Floyd Keirnan, Ray Ligocki, Brian Maiorano, Chris McKernan, Baron Quintana, Joel Robbins, Charles Santee, Randy Simpson, Bob Tyson, E.L. Vasser and Duane Wood.

All This For Only \$9.95!

And for all the fun without the fuss —
The Second Rainbow Simulations Tape or Disk

Save yourself hours of typing listings. Just load these great Simulations into your computer and run them. What could be easier?

The tape or disk is an adjunct and complement to the book. Even if you buy either the Second Rainbow Simulations Tape or Disk, you'll want and need the book for the introductory material and loading instructions.

Tape Only \$9.95 Disk Only \$10.95

- Please send: The Second Rainbow Book Of Simulations for \$9.95*
 The Second Rainbow Simulations Tape \$9.95
 The Second Rainbow Simulations Disk \$10.95

REVIEWING REVIEWS

Wall Street

Editor:

I would like to thank Patricia Arrington for her review of *Wall Street* (October 1986, Page 137). The review was excellent, except for one omission. The instructions to the program did not mention that *Wall Street* is also available on disk; however, a disk version is available for \$6.

Andre Needham
Drayon Software

Bob van der Poel Software

Editor:

In the November '86 issue of THE RAINBOW two of my products were reviewed; I would like to make a couple of additional comments.

Ultra Telepatch (Page 138) is completely compatible with the CoCo 3. Also, it is mentioned that the copy reviewed was Version 3.0. This was a misprint in the documentation — the copy reviewed was 1.0; we're now shipping release 2.0.

The review of *Lister* (Page 139) mentions some problems with baud rates: "... the program assumes you are using ... 600 baud." Actually, it uses the standard outputs provided by BASIC, and the user can set these to any rate he wants (POKE 150, xx just like you do with any other program). Since this program was submitted for review, I have received my CoCo 3. Because of the method used by Microware to add the new tokens to BASIC, I found that *Lister* would not handle these tokens properly. A new version is now being shipped that handles the CoCo 3's tokens (it works with the CoCo 1 and 2 as well).

In the same issue you had a letter from Graham Langford in which he complained about a problem with *Penpal*. I am not associated in any way with Four Star Software; but the complaint Mr. Langford had is similar to one I

received from one of my *Ultra Telepatch* customers — that of intermittent extra characters appearing, usually @'s and h's [see the letter from Paul Cundle, Page 8]. I have been unable to duplicate the problem. I've tried the "defective" version on at least 10 other computers and found it to work fine on every one. My guess is that my customer and Mr. Langford both have a hardware problem with their computers. I suspect a slow or flaky PIA. If any other users have experienced similar problems with *Ultra Telepatch*, or any other program, and have come up with a fix, I'd really like to hear from them.

Lyra

Editor:

It was with some interest that I read the review of *Lyra* by Speech Systems in the December RAINBOW. After extensive use of the *Lyra* demo, I feel obliged to comment on the problems with *Lyra* that the reviewer passed off with, "I am told that we can expect the works on this package as well." Unfortunately, this just isn't the case!

I have been a choir director, soloist and composer for 20 years in the U.S. and Europe and have found some shortcomings with *Lyra* which preclude really serious work with it.

First, when successive notes have the same pitch, they sound as one long note, and the only way to break them up is to shorten the notes and add rests. In part singing and accompaniment this is unacceptable, and I can't imagine composing this way.

Secondly, a new or additional voice (a fifth note in a chord, for example) can be added to the music only if it is preceded from the beginning of the music with rests in every measure until it is sounded. Thus, if a fuller chord is desired in Measure 27, rests must be added as place holders for this voice in measures 1-26.

Yes, there are eight voices, but for

normal composition where varied chord size is more the rule than the exception, trying to use them is extremely unwieldy. And the inability to change volume or tempo within *Lyra* relegates it to a position below *Musica* in my opinion.

I contacted Speech Systems concerning these problems and was informed that *Lyra* was intentionally written the way it is now, and no correction to my two major objections will be forthcoming. I hope the attitude of Speech Systems wasn't truly represented by the young man I talked to on the phone. Their products are good and fill a need in the CoCo software market.

Lawrence A. Reed
Peoria, AZ

Editor's Note:

The review of Lyra was done by our technical editor, Cray Augsburg, who also has a background in music. We asked him to read your letter and would like to share his comments with you.

"The reason the notes sound as one long note when short notes of the same pitch are tied together is because Lyra does not support any form of envelope control. This is true of all Speech Systems' music programs except Symphony 12. To get around this, you must enter a note of shorter duration and fill the space with a rest. This is not a major fault, rather an inconvenience.

"The Color Computer does have a slow clock speed by today's standards. It is also relatively small in the memory department. Because of this, and because of the complex nature of Lyra, rests are required to precede voices that do not appear until later. Again, this is an inconvenience I can live with.

"Musica and Musica 2 went through several revisions, so let's give Speech Systems a chance to feature-pack Lyra."

RECEIVED & CERTIFIED

The following products have recently been received by THE RAINBOW, examined by our magazine staff and approved for the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

This month the Seal of Certification has been issued to:

Blackout Bingo Game, a program to assist the player in winning TV Bingo. Let CoCo play over 100 cards while you watch the game on television. CoCo 3 compatible. *R. E. Powell, 309 Foster Street, Greensburg, PA 15601; tape only, \$19.95 plus \$2 S/H.*

Datapack II Plus, a 32K terminal program requiring one disk drive. This program allows you to communicate with other computers and computer information services at rates varying from 300 to 9600 baud. Features include Hi-Res screen and 80-column displays, built-in buffer editor, programmable key buffers and Auto-Log files, and supports RS-232 hardware. *Cer-COMP, 5566 Ricochet Avenue, Las Vegas, NV 89110; (702) 452-0632, \$59.95.*

Dragon's Castle, a 32K Adventure game. The fire-breathing dragon has attacked the castle of your king. He has killed everybody except the beautiful princess. Your mission is to save the princess and destroy the dragon using weapons and magic spells you find along the way. CoCo 3 compatible. *Mitchell Software, P.O. Box 194, Tomahawk, WI 54487; (715) 453-4204, \$14.95 plus \$1.50 S/H.*

Elite*Word/80, Color Computer 3 word processing program. Includes 40/80-column display, onscreen command line, wide range of control keys for text editing and file manipulation. *Spectrum Projects, Inc., P.O. Box 264, Howard Beach, NY 11414; (718) 835-1344, \$79.95 plus \$3 S/H.*

Lockout, a 16K Disk ECB utility. Create your own passwords to protect your disks. Compatible with CoCo 3. *Custom Software, Box 42,*

Long Lane, MO 65590; (417) 345-8163, \$15 plus \$1.25 S/H.

Mega Sound, a software/hardware device designed to assist in recording actual voice, music or any other sound you want into your computer's memory. Requires standard audio source and one disk drive. *Lucas Industries 2000, 14720 Cedar Street NE, Alliance, OH 44601; (216) 823-4221, \$49 plus \$2.50 S/H.*

Sigmaword, word processor designed for a 32K disk system. Features include onscreen line and character counters, full-screen editing, justified display and printing, disk I/O, and is menu-driven. The program can also be customized. *Sigma Software, 14024 152nd Avenue SE, Renton, WA 98056; \$9.95.*

State the Facts Game, a 64K educational program that requires one disk drive. This geography game helps players learn the states and capitals, and provides interesting facts about individual states. *Mikaron Software Company, P.O. Box 1064, Chester, CA 96020; \$22.95 plus \$.50 S/H.*

Survey Programs, 32K ECB programs for surveyors. Package includes three "traverse" routines. Field Traverse accepts field data. Bearings, included/excluded angles and deflection angles are processed, and distances can be corrected for slope and temperature. Map Check accepts bearings and distances only, and the distances cannot be corrected. The third routine is included with the Coordinate Geometry programs. It accepts bearings and distances only, and no adjustments are available. *TP Jones, 2338 Ryder Street, Ottawa, Ontario, Canada K1H 6X6; \$119; \$159 Cnd.*

Title, a 32K disk utility. Choose background and character colors, and print large titles on the screen. This program also lets you create subroutines that can be merged into BASIC programs. *B. Erickson Software, P.O. Box 11099, Chicago, IL 60611; (312) 276-9712, \$30.*

Ultra Editor, a 128K CoCo 3, full-screen line editor. Features include Find, Change and Jump commands, block transfers and macros. The program has two buffers: a 50K-plus main buffer and a 16K secondary buffer. Both disk and cassette I/O are supported. *CMD Micro Computer Services Ltd., 10477 124th Street, Edmonton, Alberta, Canada T6M 1E1; \$19.95 plus \$2 S/H.*

Wild West, a 128K CoCo 3 Adventure that requires one disk drive. Get out your six-shooter and polish your spurs! Journey into the land of the old west. As sheriff of Dry Gulch your job is to keep the peace, but Black Bart has escaped from jail and is on his way to recover his hidden fortune. Can you set a trap to capture Black Bart? Or will he get you? *Tom Mix Software, P.O. Box 201, Ada, MI 49301; (616) 676-8172, \$25.95.*

The Seal of Certification program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a Seal, the magazine certifies the product does exist — that we have examined it and have a sample copy — but this does not constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW reviewers for evaluation.

— Judi Hutchinson

WE'VE OUTDONE OURSELVES!

DS-69A DIGISECTOR™ THE VIDEO DIGITIZER NOBODY CAN BEAT!

NEW

The DS-69A is the best video digitizer available for your COCO at any price. This new, turbocharged version of our original DS-69 Digisector allows your 64K COCO to see clearly into the world of any television picture.

- SPEED!** The fastest — 8 images per second!
- PRECISION!** The highest — 64 levels of true grey scale!
- RESOLUTION!** The finest — 256 × 256 picture elements!
- Compabitibility** Use with a black and white or color camera, a VCR or tuner.
- Compactness** Self contained in a plug in Rompack.
- Convenience** Use with a Y-cable, Multi-Pak, PBJ Bus or plug directly into the cartridge slot.
- Ease of Use** Software on disk will get you up and running fast!

POWERFUL C-SEE™ SOFTWARE

C-SEE is the menu driven software package included with your DS-69A. Available on disk or cassette, it provides lightning fast 5 level digitizing to the screen, high precision 16 level digitizing for superb hard copy printout and simple keyboard or joystick control of brightness and contrast. Or call our driver routines from your own Basic program for easy 64 level random access digitizing. Pictures taken by the DS—69A may be saved on disk or cassette by C-SEE and then edited with COCO MAX, MAGIGRAPH or GRAPHICOM for special effects. Any of the popular printers may be used to obtain printouts of images digitized by the DS-69A.

ONE YEAR WARRANTY

DS-69A Digisector & C-SEE III Software	\$149.95
OR your DS-69 &	\$ 59.95
MAGIGRAPH Graphics Editor on disk	\$ 39.95

NOW IN STOCK
DS-69B for CoCo 3

DS-69 DIGISECTOR™ THERE'S ONLY ONE BETTER VIDEO DIGITIZER. —

And that's the DS-69A. The DS-69 is The Micro Works' original video digitizer, tried and true since 1984. It provides almost all the features of the DS-69A and is now available at a new low price. The DS-69 features;

- SLUGGISHNESS** 2 images per second. Quick enough to freeze all but the fastest moving pictures.
- INCOMPATIBILITY** Brightly colored scenes may be striped when using a color camera.
- INCONVENIENCE** Will not work with a Y cable.

Otherwise, it's a DS-69A. Precision, resolution, compactness, ease of use, software and warranty. Except one last thing.

DS-69 Digisector & C-SEE III Software	\$ 99.95
---------------------------------------	----------

Superb image quality produced by both Digisectors.

Elite*Word/80 Offers Superior Word Processing for CoCo 3

*Elite*Word/80* is a third-generation word processing program for the Color Computer 3. This third revision builds on the many popular features of the previous versions and provides both 40- and 80-column text displays. This program will *not* work on either the CoCo 1 or 2; only the CoCo 3. Furthermore, the 80-column text display can only be appreciated on an RGB or monochrome composite monitor. I used it on my Tandy CM-8 RGB monitor, as well as on an NAP monochrome composite monitor and an Amdek color composite monitor. The 80-column text display was beautiful on the RGB and monochrome monitors but horrible on the color composite monitor. In the 40-column mode, the text was fine on all three monitors.

The program is supplied on disk and contains a BASIC driver in addition to the main machine language program. A test file is also provided on the disk and is used as a tutorial on how the commands work. This gives you the chance to actually try the various commands and functions

right on the screen. Also included on the disk is a program called Setup. This BASIC program can be used to start the program with default values of your choice, such as screen width, disk drive number, upper- and lowercase, printer fonts and baud rate, etc. The disk is not copy-protected, so a backup for your own use is recommended.

I found *Elite*Word/80* to be very user-friendly. I'm an old *Telewriter-64* fan, but I can tell you that *Elite*Word* is easier to learn and use. I was impressed with its overall speed and smoothness of operation. My one dislike is that the program does not feature audible key-clicks. I've grown to like this feature on my many-patched version of

Telewriter. Somehow, the sound and rhythm of the "clicks" seem to make me a better typist. What the heck, this program has so many great features, what's wrong with a simple little key-click option?

The start-up screen on the RGB monitor is black with white letters. The command line at the top of the screen can be changed by pressing ENTER to advance to the next set of commands. You never have to leave the text screen to execute commands from the main menu.

One of the main menu options, the Insert (I) mode, displays current status information consisting of Insert, K Free, Column Location and U/L Case.

“. . . destined to become a new standard in word processing for the Color Computer 3.”

Insert reminds you that you are in the typing or editing mode. K Free indicates the space free in the text buffer in thousands. (This was 48K on my 128K CoCo 3.) Column Location is a counter starting at 1, which increments on each keystroke to either 40 or 80 depending on your column width selection. U/L Case indicates either upper- or lowercase, and is toggled with SHIFT-O just like in BASIC.

You will also find that the F2 key functions as a backspace delete key while in the Insert mode. Automatic key repeat is also invoked and repeats any key held down after about a one-second delay. You can exit the Insert mode at any time by pressing the BREAK/ESCAPE key.

The Print command invokes a format menu with impressive options that can be changed by the user.

Space simply does not permit me to explain each and every detail of *Elite*Word/80*; however, suffice it to say there is also a whole range of control keys available for text editing and file manipulation. These commands are used in conjunction with the CLEAR or CONTROL keys. CLEAR-E, for example, inserts an "Eject" control code in the text file that causes your printer to do a form feed to the top of the next page. You can also define headers and footers to be printed at the top and bottom of each page. And one I especially liked was the auto-centering command CLEAR-C. CLEAR-W toggles between 40- and 80-column text modes.

One other important point is that error codes and sounds are used throughout the program to tell you if you are doing something wrong. If you do encounter an error, you will be returned to the main command mode and will not lose your text.

In summary, I was impressed with the overall ease of this program's operation. The documentation is detailed and complete in every way. There are 38 pages of easy-to-read, understandable instructions provided, with examples. I believe that *Elite*Word/80* is destined to become a new standard in word processing for the Color Computer 3. If you have not yet purchased a word processor for your new computer, I urge you to consider this latest development from Elite Software. I think you will be glad you did.

(Spectrum Projects, P.O. Box 264, Howard Beach, NY 11414; 718-835-1344, \$79.95 plus \$3 S/H)

— Jerry Semones

River Crossing for the Armchair General

Tired of "shoot-'em-up" games? Are your joysticks smoldering from trying to shoot all those space nasties? Then it's time to sit back, give the old wrist a chance to relax and get those brain cells working with *River Crossing*.

In the past, armchair generals have simulated famous battles in history using the typical implements of the board game — counters, dice and a map of the battle. Such games often have a board the size of the average kitchen table and literally hundreds of counters which designate the various military/naval units in the battle. On top of this is the rule book, which not only gives the instructions for play but also the decision logic needed to determine who won when opposing units meet in battle. The rule book is usually 25 pages or more and takes considerable time to digest. When you are finally ready to play, you then have to find someone who has also gone through the same process. If you are successful at all this and manage to get a game going, Murphy's Law (if anything can go wrong, it will) surfaces about half-way through the game, e.g., the family cat jumps on the board and sends those hundreds of counters all over the place. At this point, enter Ark Royal with *River Crossing* and, of course, your friendly CoCo.

River Crossing is a tactical computer wargame that simulates "small-scale" battles. In other words, it does not attempt to simulate large-scale battles such as *DDay* or *Battle of the Bulge* (also products of Ark Royal). The game requires a 32K Color Computer and is written in BASIC with machine language subroutines. Essentially, the program does two things: It provides all of the implements needed to simulate the battle; and it provides the opponent, i.e., you don't have to find someone who has read the rules — CoCo knows them all.

River Crossing displays the battle map using semi-graphics (text graphics) with letters representing your military units and various color blocks representing the river, roads, forest, etc. Now, before all you "must-have-Hi-Res" people get bent out of shape, I actually like this approach. I can sit back and enjoy the game without eyestrain.

Provided with *River Crossing* are 12 scenarios, so you really have 12 games in one. For each one of the 12 scenarios, you can choose one of five skill levels. Upon loading the game, which is available on tape or disk, you select the scenario, skill level and if you want to use the high-speed poke.

The objective is to eliminate the prescribed number of enemy units and secure a defined area of the map with a designated troop strength. In some of the scenarios, you must marshal your forces, cross the river and secure the designated area. In others, you already occupy the area and must defend against the enemy. The objective is accomplished by moving your forces and engaging in battle with the enemy using weapons available in that scenario.

River Crossing contains a number of features that attempt to make the Simulation as realistic as possible. For

example, a unit cannot fire on an enemy unless it can see the enemy, i.e., the terrain does not block the "line of site;" air strikes cannot be called by a unit unless it has a radio; unit movement, which is based on an assigned movement factor, i.e. the maximum number of squares which a unit may move in its turn, is a function of the terrain — roads are full movement whereas the forest reduces a unit's movement and river crossing takes essentially one square per turn. Other factors such as the late arrival of additional troops and the surprise enemy attacks from behind the trees leave the impression of a realistic battle.

During the review of *River Crossing*, my son Chris and I played approximately 25 separate games and found no bugs in the game. Once you get the hang of it, the game is very interesting and challenging. Unfortunately, like so many software packages, the documentation is not particularly good. While all of the information needed to play the game is there, it is not clearly organized and presented in a fashion that the newcomer can pick up easily. If you have played war game Simulations, you will have little problem learning *River Crossing*; if you haven't, it will take some time and study, but I can assure you that it is worth it.

Ark Royal specializes in wargaming and has put a lot of effort in this area as one can easily see from their bimonthly newsletter, *The Keyboard General*, available for a nominal yearly subscription.

(Ark Royal Games, P.O. Box 14806, Jacksonville, FL 32238; 904-786-8603, \$23)

Build a Better Vocabulary With *The Word Factory's* *Word Meaning*

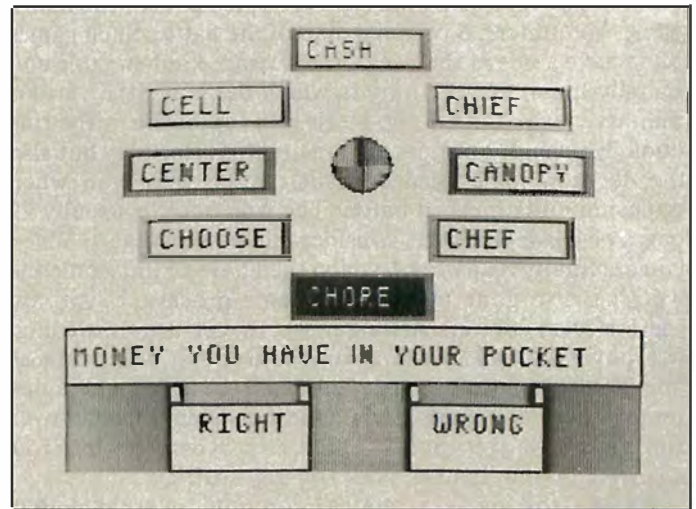

The Word Factory's Word Meaning consists of three educational programs, Game, List Maker and Printer. The programs are designed to build a child's vocabulary by fitting the right word to a sentence. The program also allows a parent to input new words and sentences, and a teacher to prepare written tests.

The program is written for a CoCo with 64K, and requires a disk drive and a printer if tests are desired. I ran the program on my CoCo 3, with RS-DOS and disk drive, and an Epson MX-80 printer. Everything worked well, but I had to experiment to find the right baud rate for my printer.

The manual recommends a backup disk and asks that the copyright be protected. Upon running the program, you are treated to a high resolution graphics title page followed by a menu allowing selection of any of the three programs. The first program, Game, tests a child's vocabulary. It presents a phrase or sentence and eight blocks containing single words. The program rotates from word to word until the player selects the word most pertinent to the phrase and presses the space bar. There are two boxes shown for "right" and "wrong" where scores are kept. At the outset of the program, the player selects the game list to be played from a menu shown. If a list has been created in the List Maker

program, it appears here. The player then selects the number of questions to be presented (from 10 to 50) and the speed of play (four speeds).

The game allows rotation through the array of words three times before declaring the player wrong. Players get a second chance to answer wrong words at the end of the specified number of questions. Scoring is based upon the speed selected (the faster the speed the higher the score), the quickness of the answer (higher score bonus for answer on first rotation) and, of course, correctness of answer. Scores may be saved to disk providing they are higher than those already stored. The highest possible score is obtained by using the maximum number of questions at the highest rate of speed.

List Maker provides the means for creating original sets of words and phrases. The program uses a code name supplied by the user to identify and store lists created. This is a particularly useful part of the program package because it provides the capability to create an endless series of lists that can be tailored to a child's particular vocabulary needs. The lists can be stored on the program disk or on a separate disk, allowing greater storage capacity. A menu option allows previously created lists to be added to, providing you stay within the 143 maximum word limit. An option is also provided to correct existing lists.

The third program, Printer, produces test sheets for classroom use. The tests are of the multiple-choice type with four choices. The program also produces an answer sheet for each test generated. Three menu choices are available for test preparation. The first selects a list at random, the second uses a list of the user's choice. The third option allows the user to select words as the program scans lists.

A bonus program called Dir is included in the package. This program loads into the unused 8K of memory located above Disk BASIC RAM. Dir allows viewing of all the files on a disk at one time.

The Word Factory's Word Meaning comes with a concise, clear manual and is user-friendly. This is a good educational package to aid in the development of a child's vocabulary and is a fun game to play. I think it is a good value for the price, particularly with the offer of 20 free disks with each program sold.

(SECA, P.O. Box 3134, Gulfport, MS 39505; 601-832-8236, \$24.98)

— Mel Siegel

SUPER PROGRAMMING AID

"Best value of the year", see the review in the July Rainbow.

The Super Programming Aid is the best integrated software utility available for your COCO. Add what Tandy left out, COPY and MOVE statements, FIND, PRINT FORMATTER, KEY CLICKER, PROGRAMMABLE KEYBOARD, MULTIPLE EDIT SESSIONS, MERGE PROGRAMS, TYP-O-MATIC keys and much more, saves hours of time for BASIC programmers. Version II and III add many more features, PRINT SPOOLER, FULL SCREEN EDIT COMAND, SCREEN PRINTING and more.

VERSION I — \$19.95 — for 16K & 32K COCO
VERSION II — \$24.95 — for 64K COCO
VERSION III — \$29.95 — for COCO 3

What Else, But a RAM Disk — The SC68008 *RAMdisk*

When I first heard that Cir-Pak had designed a 68008 coprocessor card that would work with the CoCo, I dreamed of the unlimited possibilities that were now within reach. Quite honestly, though, using this powerful device as a RAM disk was not one of them. While at first skeptical, I soon became an ardent fan of Cir-Pak Limited's SC68008 OS9-*RAMdisk*.

It should be made clear that this software package does require Cir-Pak's SC68008 coprocessor card and the OS-9 operating system; without both you cannot utilize this package.

Since the SC68008 allows for 256K of memory, Cir-Pak wrote an OS-9 device descriptor and a device driver that allows this memory to be used as a RAM disk. For those not familiar with the concept, a RAM disk is a block of memory that appears to the operating system as another disk drive. The big advantage to this, in addition to adding another disk drive to your system, is that RAM disks typically run 10 to 50 times faster than a normal disk drive. This *RAMdisk* is given the name /rd and can be used anywhere that /d0 and /d1 are normally used. Cir-Pak also provides a batch file that transfers all of the OS-9 system commands to the *RAMdisk* so that the access and loading of these commands is much faster. Believe me, once you are used to the speed of a RAM disk, floppies become painful.

What does give the SC68008 *RAMdisk* an edge over all of the other OS-9 RAM disks is that most of the code associated with making this *RAMdisk* work resides on the coprocessor card, not within the CoCo's precious memory space (as all other RAM disks do). In the OS-9 environment, quite often the name of the game is to save as much memory as possible. The less that is tied up with hardware drivers and system overhead, the better. Of course, the cost is that you must own an SC68008 card.

The documentation for this product consisted of two pages, but none was really needed. There is just enough documentation to install the software perfectly every time.

If you already own, or are planning to purchase an SC68008 coprocessor card to use with the OS-9 operating system, don't even hesitate — buy the SC68008 *RAMdisk*. You will not be disappointed.

The **RAINBOW**
THE COLOR COMPUTER MONTHLY MAGAZINE

Back Issue Availability

Back copies of many issues of **THE RAINBOW** are still available.

All back issues sell for the single issue cover price. In addition, there is a \$3.50 charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by United Parcel Service. There is a \$5 charge for the first issue, plus a \$1 charge for each additional issue on orders sent by U.S. Mail. UPS *will not* deliver to a post office box or to another country.

Issues July 1981 through June 1982 are available on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 5 percent state sales tax. In order to hold down costs, we do not bill and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To order, just fill out the form on the next page and mail it with your payment to:

THE RAINBOW
The Falsoft Building
P.O. Box 385
Prospect, KY 40059

For greater convenience order RAINBOW Back Issues through the shopping area of the CoCo SIG of Delphi!

Teacher Pak Plus Lightens the Classroom Load

Teacher Pak Plus consists of a set of four 16K programs that have been revised and improved. They are specifically intended for teachers as an aid to grading and managing classes. An additional program, *CoCo Testem II*, is sold separately to prepare tests.

These days with the variety of hardware types and mods available, it is important to define the hardware required for a program. These programs are written for the CoCo, cassette or disk drive, 16K of RAM capacity, and a Radio Shack printer. I used my new CoCo 3, RS-DOS with disk drive and my Epson MX-80 printer, with complete success. The instructions provide some simple changes that can be made for non-Radio Shack printers for underlining.

The first program, *Dister2*, performs statistical analyses of a series of numbers. It provides averages, sample and population standard deviations, and variances. Though intended for class grades, it can be used for any series of numbers. This program produces both printed and onscreen presentations, and data can be saved on tape or disk. It would be a valuable tool for a teacher to establish test scoring distributions and averages, and to provide direction in scoring by the curve.

Grader2 is designed to calculate end-of-term or mid-term grades for individual students. This program also provides printouts and onscreen presentations, with input titles including class description and student names. Data can be saved to tape or disk.

The third program, *Alpher2*, alphabetizes input class names. Output can be saved to tape and disk, and may be used with *Grader2* and *Seater2*.

The last program, *Seater2*, utilizes input names to prepare classroom seating charts. Remember how Professor Kingsfield used a class chart to call on his law students in *Paper Chase*? This program not only prepares the chart, but allows the teacher to move students on the chart as the occasion arises.

The extra program, not included in the *Teacher Pak Plus* package, is *CoCo Testem II*. This program helps the teacher in preparing tests. It will take multiple choice, completion, short answer, true/false or matching questions. Again, data may be saved on tape or disk and revised or reused.

Though the instructions provided are on two pages and are therefore brief, the programs are user-friendly and do not require a great deal of familiarization. The menus are self-explanatory and allow review and modification of data, as well as subsequent addition or deletion of information. I did not run into any glitches in operating these programs, which is somewhat unusual in unfamiliar program operation.

Teacher Pak Plus and *CoCo Testem II* should be valuable aids to a teacher with a CoCo. The ability to score individual tests and track grading through a semester, as well as to prepare tests, will make any teacher's life easier.

(Tothian Software Inc., Box 663, Rimersburg, PA 16248;
Teacher Pak Plus, \$47.95; *CoCo Testem II*, \$19.95)

Interbank Incident: A Rendezvous With Adventure

Who but a secret agent gets a private jet and a large expense account, while getting more than a fair share of excitement? You can become an agent for The Agency in the *Interbank Incident* from Tandy, and set out to recover a code book that controls a top secret satellite capable of destroying a city. Your search for this elusive book takes you around the world. From a small bookstore in Seattle to the Louvre in Paris to a huge casino in Rio de Janeiro, clues are scattered in every corner of the world.

There are three things that make this Adventure especially interesting. The first, and most important, is that instead of typing in your commands, you can use a joystick or a mouse to select from a panel of eight icons to carry out your task. For example, instead of typing EXAMINE THE PAINTING, all you have to do is point to the icon of the eye or the magnifying glass and then to the painting. By combining the various icons, you can do just about everything you've ever wanted to do in an Adventure game (except swear at it, of course). For those of us who have never been very good typists, this feature is a boon.

Another thing that makes this game great is the highly developed graphics. The details are very good, and it doesn't add objects that it does not recognize. The many screens of detailed graphics keep you interested, even though you have to wait for them, but I'll explain that later.

The final thing that makes this game fun is that every time you play it, it is different. The first thing you do in each Adventure is choose which secret agent you want to play. Each of the eight agents has strong and weak points. From an ex-marine to a Nobel Prize winner, there is an agent made for you. All the agents get different responses from the people they meet and each handles situations differently. Also, the clues are scrambled and no object is in the same place twice.

Unfortunately, this program is not quite problem-free. There are a couple of flaws that keep this Adventure from being the best it could be. Tandy seems to have forgotten the ones who made the CoCo successful originally. They make the owners of CoCo 1s type in a special program to boot it up. Although it is nice that they set it up so that it boots with CoCo 2's DOS command, it really bothers me that Tandy seems to think now that old CoCos are not

important. Also, this game is really slow. On many commands, especially movement, you have to wait while the program accesses the disk to find out the results. It becomes even worse when you select the wrong thing and have to wait such a long time to correct yourself. But as I said above, the great graphics do help pass the time because they are so interesting.

I would heartily recommend this game to everyone but the most impatient CoCo users. In my opinion, the benefits of this spectacular game outweigh the few disadvantages.

(Infocom, Inc., 125 Cambridge Park Drive, Cambridge, MA 02140; 617-492-6000, \$29.95. Available in Radio Shack stores nationwide.)

— Karl Lowenstein

Mystical Mayhem in The Magic of Zanth

The Magic of Zanth is a new graphics Adventure game for a 128K or 512K Color Computer 3. It features over two dozen high resolution, 16-color, animated graphics scenes. The Adventure also features four-voice music, and when used with a Multi-Pak interface and a Tandy Sound/Speech Program Pak, even talks. This Adventure has it all!

The program is supplied on a copy-protected disk, but a generous replacement offer is available should you experience loading problems. Its best colors and resolution are obtained on an RGB monitor such as the Tandy CM-8. During the loading process, you may select a composite monitor. I tried an Amdek Color-I Plus, but the colors and detail were not nearly as good as on the CM-8. You should also plan on having a blank RS-DOS formatted disk handy to be used as a "game save" disk. Believe me, you will want to use the Save option frequently!

This Adventure centers around the land of Zanth where magic abounds. It takes a very active imagination and a lot of patience to solve this Adventure. You will come face to face with dragons, griffins, centaurs and demons. Your mission is to discover the source of all magic in Zanth. You must enlist the aid of the good magician, Humfrey, to assist you in your Adventure and this in itself is quite a task.

The use of the voice pack, while novel and cute, is by no means a necessary addition. In fact, you can toggle the speech on and off with the command Voice at any prompt. After listening to the slow, monotone computer voice for 5 or 6 moves I had heard enough and turned it off. I could read the text a lot faster and be ready for the next move before the darned thing quit talking! This is not to condemn the use of the voice pack, however. On the contrary, I'm sure it will benefit younger children by helping them read the text. I believe the program's author, Scott Cabit, was wise to include the use of the voice pack as an option. If you don't plug in a voice pack, it can't talk anyway and the Voice command will be ignored.

As is customary in Adventure games, directions of travel such as North, South, East and West are invoked by typing GO NORTH or by using the arrow keys. The clustered location of the four arrow keys on the CoCo 3 make them the easiest and fastest way to enter directions. You can also Get, Drop and Examine things. Questionable or dangerous situations can be dealt with by using Info or Help and, by all means, Save. You can only carry a limited number of objects and typing INV supplies you with your current inventory. Another valuable command in *Zanth* is Talk, which can be used to interact with characters as you encounter them. You will find this to be important during your Adventure.

I found *The Magic of Zanth* to be a real challenge. I enjoy graphics Adventures and have solved many, but as of this writing, this one eludes me . . . though I'm getting close. This is a fine program, with excellent loading and operating instructions and it is nicely packaged. It does a nice job of capitalizing on the new features of the Color Computer 3, and I recommend it for challenging enjoyment.

(Computerware, 4403 Manchester Ave., Suite 102-Box 668, Encinitas, CA 92024; 619-436-3512, \$34.95 plus \$2 S/H)

Kamelion — The Interface

Operating systems of a Different Color

Whenever new hardware is brought onto the market, there is often a substantial wait until the proper accompanying software is developed. More often than not there are tools designed to help make this delay as short as possible. Cir-Pak's SC68008 coprocessor card is that hardware and *Kamelion* by D.J. Leffler is that tool. *Kamelion* is self-titled as an Interface Operating System (IOS). It was designed to provide future software developers with a pseudo-operating system for the SC68008. If you do not own an SC68008, this software is of no value to you. This IOS is an extension to the Monitor provided by Cir-Pak. All features available to Monitor are directly accessible by *Kamelion*.

Kamelion provides four basic types of commands: Disk Basic, Monitor, 68008 Direct and Complex routines. Monitor commands are just duplicates of those commands already provided by Cir-Pak's Monitor, as stated earlier. Disk BASIC commands are a few of the commands provided by RS-DOS or JDOS. Among those available are DIR, DRIVE, EXEC, FREE, KILL, LOADM, RENAME, SAVEM, UNLOAD and CLS for both RS-DOS and JDOS users and RATE for JDOS users only. While both the Monitor and Disk BASIC commands are handy, they are simply extensions to previously available software. All of the unique software lies in the 68008 Direct and Complex routines.

There are five 68008 Direct commands: Load, Save, Go, Do and Bas. Load and Save are equivalent to the RS-DOS compliments in that they load and save data from memory to disk or vice-versa. They differ in that they work with the 68008's memory area rather than the CoCo's. The Go command is equivalent to RS-DOS's EXEC. It allows for the execution of 68008 user mode programs. Do performs the same function except that it executes 68008 system mode programs, and Bas allows the user to return to the CoCo's warm start state (BASIC).

There are two Complex commands: Configure and Lbug. Configure is used as a multiple-program loader. Its function is to load the files listed in the file CONF IGUR.BAS into the 68008's memory. CONF IGUR.BAS is a simple ASCII file that has a 68008 filename on each line. I am not sure of the great advantage of this command or why it is considered "complex." It is left for the user to discover its value. Lbug, on the other hand, is a useful little program that can be used to debug 6809 programs. It is an interrupt-driven debugger. Its function is similar to Monitor's except that it works with 6809 code only and has a few sparse commands. These commands include the ability to breakpoint, alter the CoCo's memory, single step and dump 10 bytes of memory. Each command is executed by a single keystroke.

In addition to the BASIC commands provided by *Kamelion*, some BASIC interface service routines are provided that the user can call from any of his programs. These are an assortment of various routines that allow for the fetching of user input and the moving of data from memory to disk and to the screen in various combinations. *Kamelion*

performs exactly what it claims to do. However, as is the case with all software, there is much more to consider in a proper evaluation, namely the human interface. I feel very strongly that the designer must have forgotten about the person sitting in front of the keyboard. This can first be evidenced by the fact that *Kamelion* requires the CoCo to be in 64K "all-RAM" mode — the designer assumes the user has such a program at his disposal, rather than providing one. His choice of how the screen is displayed is also lacking. He chooses to display data in both normal text and inverse video, which can sometimes be effective, but not in the manner he chose. It makes the screen very difficult to read, at best. Also annoying is the fact that Lbug does not remember where it was last working, except in the single step command. For instance, if you want to change several contiguous memory locations, you must enter a new command and address for each byte. This alone is unacceptable.

Also lacking in performance was the *Kamelion* owner's manual. There isn't a subject in the manual that shouldn't have been elaborated upon more than it is. A whole section is dedicated to what is termed "Vocabulary." This section is meant for those who also own a companion program called *LFAST*. This is fine, except that the exact same section is repeated in the *LFAST* manual. Not only is it unnecessary, it is very confusing. The order in which topics are handled makes very little sense. One-half of the manual is an appendix. This would be OK, but why are the Lbug directions in the appendix, when "Vocabulary" is not? The sense of organization conveys little to the user. I know that organization can be a very personal thing, so I decided to ask several other, knowledgeable CoCo users to read through the manual. Not surprisingly, I received the same criticisms.

In viewing the package as a whole, I find *Kamelion* has some very good possibilities. I think, however, that it needs some major revisions. Since there is no other package to compete with it, these criticisms may be unimportant to those who need what this package has to offer.

(D.J. Leffler, 955 Trinidad Road, Cocoa Beach, FL 32931; 305-783-2713, \$78.50.)

Control Disk Pile-Up With *Keeping Track*

Presently, many, if not most, Color Computer users own disk drives for their CoCos. As these people use their disk drives, a strange phenomenon occurs; the diskettes pile-up. We get so many disks involved to perform relatively few tasks that we become confused about what is where and how to get to it. *Keeping Track* from Duck Productions was designed to help us in our time of need.

Keeping Track is actually a compilation of several useful routines and utilities for disk drive owners. The first program on the disk is named D. This BASIC utility, when run, presents a directory of the disk in the drive on the screen. Information regarding disk name, number and backup notation is also presented on this screen.

This information is created using a different utility so it won't necessarily appear the first time you run D. From the "screen directory," you can use the arrow keys to point to a given file and press ENTER to run the file. This can be quite handy, as D only occupies one granule of disk space and can be copied to every disk in your library.

The other program on the disk, the *Keeping Track* program itself, is a menu for several smaller utilities. These include Dos Boot Creator, Alpha Directory, Disk File Address, Disk Comparison, Directory Print, Directory Saver, True Drive Test and Parameter Reset.

Dos Boot Creator writes the D binary file and installs it on any formatted disk. It embeds your disk number and name, which you enter, into the binary code of the D program. While running Dos Boot Creator, you are also given the opportunity to begin creating an identical set of backups of the disks in your library.

Alpha Directory is a utility designed to alphabetically sort the directory of any disk you select. As a bonus, it sorts the disk as usual, but if it finds the D program, it will automatically place it at the beginning of the directory. This makes it easier when you want to run the D program.

Disk File Address will print the start, ending and execute addresses of any machine language file on the disk, as well as the length of the file. You have the option of printing this information to the screen or a printer. You may also have the program print this information for every ML file on the disk or just specific files. This particular utility, while very useful, appeared to be quite slow in operation.

Disk Comparison is designed to keep your backup disks current. It compares one disk to another, say, a backup to a working copy, and reports all programs that do not have duplicates on the other disk. You then have the option of copying the unduplicated files in bulk or singly by entering the filenames. The copying procedure uses "verify on" which, while more time-consuming, ensures accurate copies of the files in question.

Directory Print, a general-purpose directory printing utility, will send a copy of a disk's directory to your printer so you can have a hard copy. This program prints the disk directory in two columns on a standard page. My gripe with this utility is that it seems to bomb out. When selecting this option from the *Keeping Track* menu, the disk drive kicks

on to load the routine and then the user gets a Syntax Error in Line 11.

The program is list-protected, so you cannot even find out for sure what is happening. It appears the program tries to perform a PCLEAR0. Simply entering RUN at this point will cause the program to continue normally, but this is a hassle. Personally, I prefer a simple POKE111,254:DIR. It may only print in one column, but it works every time.

The Directory Saver utility is rather useful. It allows the user to protect up to 56 files on a disk by saving directory information to a place higher up in the directory track. Note that this does not take up any of the normally available space on the disk. It is then a simple matter to replace a damaged directory if the occasion arises.

The True Drive Test routine gives the user the ability to see how fast his/her disk drive is operating. This can be quite an important diagnostic tool when you begin having trouble with I/O Errors. It can also be quite useful if you take pride in maintaining your disk drives, though most technical types would be using much more sophisticated programs to maintain their disk drives.

The last selection on the *Keeping Track* menu is Parameter Reset. This routine is designed for the user to enter specific information about his system, such as the number of disk drives and printer baud rate. This selection should be the first one the new user picks. I was somewhat dismayed that the printer baud selection did not allow baud rates above 2400 baud.

Overall, *Keeping Track* is not a bad system. It combines several of the most desired utilities into one package. However, I don't think it is up to par with some of Duck Productions other offerings. I have seen what I consider to be far more useful disk utility programs at lower prices. I give *Keeping Track* a two-star rating on my four-star scale.

(Duck Productions, 18 Rowe Court, Brampton, Ontario,
Canada L6X 2S2; 416-456-0032, \$29.95)

— Cray Augsburg

Hint . . .

Banishing Burn-In

There are many times when I want to leave my computer system on while I am doing something else. The problem with this is that there is a chance the image coming from the computer will "burn in" on my display. To avoid this problem, I issue the following line:

```
0 CLS0:GOTO0
```

Now, when I am away, the screen will be black and no image can get burned in on my monitor. This line also works well from within a BASIC program, especially if used with some form of time delay.

Thomas J. Strike, Jr.
Saugas, CA

A Synopsis of the Books of the Holy Bible

Eddie Davis has used the power of BASIC to write a very simple program that provides the user with a short synopsis of the 66 books of the Bible.

Each synopsis contains the name of the book, the number of verses, the number of words and a brief outline of the material covered in the chapter.

The program would be an excellent addition to the collection of a beginning Bible student, a Sunday School teacher or a pastor. The material is quite simple, so it would also be useful for children, almost from the age of literacy.

The program loads by typing BIBLEBKS. You get a welcoming billboard, a few beeps and a message to press any key. You are then asked to select the book you want to see. You press any key and then type in the name of the book of the Bible. The synopsis appears on the screen and you are asked if you want a printout. If you say yes, the printer comes to life and zips out a neat little synopsis. I always print at 9600 baud, but my POKE 150, 1 had little effect on the speed of the program, which is quite slow. There is not too much to print in the first place, so I suppose speed is not that important.

The manner in which the synopsis printing is accomplished caused my DMP-200 to deliver a couple of lines of symbols, which meant it did not understand a CHR\$ string being sent to it. It did not interfere with the working of the program, but it got my attention.

All in all, this is a very interesting program about a very interesting subject. It is on a beginner's level, so far as the study of the scriptures, and could be a very good teaching tool.

(Country Software, Route 1, Box 590, Taylorsville, MS 39168; 601-782-4633, \$5 plus \$1 S/H)

— Howard Lee Ball

One-Liner Contest Winner . . .

Here is a program that converts U.S. dollars to Canadian dollars or Mexican pesos, or vice versa. You will need to find the present exchange rate and edit it into the listing where you see the question marks.

The listing:

```
1 PRINT"$1CAN.=???U.S.":INPUTC
:PRINT"1 PESO=???U.S.":INPUTP:
PRINT"HOW MANY?":INPUTX:PRINT"$
X"U.S=$"X/C"CAN", "$"X"U.S=="X/P"
MEXICAN PESOS":PRINT"$"X"CAN=$"X
*C"U.S", "X" MEXICAN PESOS=$"X*P
"U.S."
```

Gerald Carroll
Kirkland, Quebec

(For this winning one-liner contest entry, the author has been sent copies of both *The Second Rainbow Book of Simulations* and its companion *The Second Rainbow Simulations Tape*.)

That Old Time Religion With CoCo Hymnal

Have your parents ever wondered just what it is you spend so much time doing on the old CoCo? Why not give them a treat by playing a few hymns, in four voices, upon your CoCo organ! *CoCo Hymnal* is a collection of 40 hymns on disk. It is full of many of your (and your parents') favorite gospel hymns, and is quite well done.

The arranger of these tunes, Mark Camp, states in the concise documentation that "they are by no means fancy arrangements, but should be considered in light of their meaning," but I disagree. In light of their meaning there really is no need to get too fancy, yet he has used a variety of voice tones and tempos so they don't all come out sounding the same. The words to many of the verses are included so you can sing along, or at least "make a joyful noise," and the option of playing each song separately or in groups is included. You are limited to choosing from eight at a time, but this is little inconvenience.

I must admit that although I am an ordained pastor, I only recognized about half of the hymns. However, my wife, who plays the organ, picked out almost every one. So, when you get tired of programming and need a little inspiration, *CoCo Hymnal* should be just the ticket.

(Sovereign Grace Software, 221 Highview Drive, Ballwin, MO 63011; 314-227-3238, \$9.95 plus \$2 S/H)

In Touch With the World: *Softreader*

If you are one of the many CoCo users who also own a short-wave receiver and would like to get added utility from your computer, *Softreader* from CoCo Enterprises will be of interest to you. If you are not into short-wave, you may want to be after you hear what this program can do.

Softreader is an RTTY (Radio Teletype) program designed to work with all versions of the Color Computer, including the new CoCo 3. It requires at least 16K and can be ordered for either tape or disk systems. The software is not copy-protected, so backup copies can be made for your own use and protection. The copy supplied for review was on disk so keep that in mind as you read this.

No interfacing is required. All you have to do is connect the black cassette plug that normally plugs into the cassette earphone jack to the loudspeaker or phone jack of your short-wave receiver. A simple audio filter that runs off two 9-volt transistor radio batteries is available at extra cost and improves RTTY reception quality. This filter simply connects between the loudspeaker or jack and the black cassette plug.

Documentation is detailed and complete. Nine pages are contained in a plastic report cover and provide all of the information needed to get the program up and running in a very short period of time. A 20-minute demo cassette is provided that contains typical RTTY signals and can be used immediately to see the program actually work.

Upon running the program a main menu is presented with the following options: Manual, Automatic, Options, Print Buffer, Save Buffer and Quit.

In the Manual mode, you must select the received signal's baud rate, shift, and either normal or reverse. In the Automatic mode all this is done for you except for normal/reverse which you must select. If Options is selected, you will be sent to another menu where you can set such things as your printer's baud rate and automatic buffer dump to disk. You can turn on the auto buffer in the Options menu and send everything in the buffer to disk. An empty disk holds about 16 full buffers of about 9.6K each, which means you can get about 150K of text on each disk. After you have listened to the demo tape, you will begin to recognize what RTTY signals sound like. Then you can tune your short-wave receiver to the many international frequencies that are used for RTTY transmissions. There is a handy list included in the documentation that shows what frequencies to listen to as well as the time of day and the baud rate and shift of the transmitting stations. All kinds of information is transmitted via RTTY, ranging from news and weather to military traffic and ham radio.

"Tuning in" RTTY signals can be tricky without some sort of tuning indicator, but the authors of this program have made it simple. A built-in tuning indicator appears on the screen when you go to either the Automatic or Manual mode. As you slowly tune your receiver through the signal, a cursor appears over the three available "shifts" that the program will copy. These shifts are 850Hz, 425Hz, and 170Hz, which represent the majority of RTTY transmis-

sions. The program can copy baud rates ranging from 45 to 100. A handy "noise gauge," which ranges from poor to good, is also shown on the screen. If the signal you are trying to tune in registers in the poor range of the gauge, then chances are pretty slim that you will be able to get reliable copy.

This is where the optional audio filter comes in handy since it helps filter out unwanted noise from the signal you are trying to copy. During actual RTTY reception, the top line of your screen displays the status of the various program parameters. All of the parameters can be changed instantly with a single keystroke. This makes it easy to change the baud rate, shift, and normal/reverse while listening to the signal and trying to tune it in. With the Automatic mode, a lot of the guesswork is taken out of these parameter changes, but it can take a minute or two for the program to detect the baud rate and shift. By that time you can usually set the baud rate and shift manually with a minimum of trouble. Once you get the hang of it, it's pretty simple to use.

One last point about the short-wave receiver. You don't need the latest state-of-the-art digital \$300 wonder, but you do need a receiver that is fairly stable and does not drift excessively. It should also have a BFO (Beat Frequency Oscillator) like that used to copy CW or Morse Code transmissions. If the receiver can copy CW or Upper/Lower Side Band, it has a BFO. In order to copy international RTTY transmissions the receiver should tune frequencies from 2 to 27 MHz. You can find good used receivers at "Hamfests," flea markets and military surplus outlets.

I found *Softreader* to be an exciting entry into the Color Computer market. It's a lot of fun to use and provides a unique application for our favorite computer that could put you on the leading edge of world events.

(CoCo Enterprises, P.O. Box 5211, Laurel MD 20707; 301-498-1110, *Softreader*, \$37.50; Audio Filter, \$43.95; Both, \$63.45)

CoCo III 512K Upgrade: Money-Saving Modification

For those of you who are not afraid to tinker with the insides of your CoCo 3, here is a quick and simple 512K plug-in upgrade that you may want to consider.

The upgrade is made by PBJ Inc., and is a nicely designed and well-constructed plug-in circuit board. It consists of a double-sided glass-epoxy circuit board with 16 socketed 41256 120-ns DRAMS.

The overall size of the L-shaped board is 4½ by 2¾ inches. Two rows of header pins extend from the bottom of the board and plug into matching sockets on the CoCo 3 board.

Installation is quick and simple. A four-page booklet is included that guides you through a step-by-step process. The instructions are well done and pictorial diagrams are used to help you find the various components that are affected during the installation. A 128K/512K RAM test is also included with the documentation.

After unplugging your CoCo 3 and removing six (the instructions say five) screws, the top of the computer is lifted off and set aside. At this point, you must make sure your body does not contain static electricity. You can touch a nearby cold water pipe or other grounded metal object to discharge yourself. The four 64K by 4 RAM chips (41464) that make up the present 128K RAM are removed and set aside. I recommend you place these chips in conductive foam and store them in a safe place so that you can go back to 128K RAM if the need ever arises.

Before you plug in the new 512K board, you must clip the leads on two small capacitors on the CoCo 3 board. They are identified as C65 and C66 in the diagram, and are easy to find and remove. The 512K board is then plugged into the two white sockets on the CoCo 3 board. I did have to slightly bend the long, narrow metal shield near the rear of the CoCo 3 board to allow the upgrade board to push down into the sockets. This shield is located just behind the joystick, cassette and serial sockets.

I noticed one other area of caution: While the instructions do not point this out, I strongly recommend that you place a small piece of thin cardboard over the upright, 10-mFd., 25-volt electrolytic capacitor designated as C82 on the CoCo 3 board. This capacitor is orange on my CoCo and sits just to the right of C66, which is one of the capacitors that must be removed prior to installing the 512K board.

The reason for this precaution is quite simple: The PBJ 512K board mounts all components on the top of the board, which is desirable from a heat dissipation standpoint. However, this then allows the cut ends of the various component connections to face down and possibly touch other components underneath. After examining this closely, the only vulnerable point was at C82. The vinyl covering on the capacitor does not completely cover the top and could be contacted by the cut ends of components protruding from the bottom of the 512K board. I should point out that in my case no contact was made, but if C82 were taller or soldered higher on the board, contact *could* be made. Just keep this in mind when you install this upgrade

It's interesting to note that Tandy gets around this problem not only by mounting the chips upside down, but also by using three nylon spacers that snap into the upgrade board and the CoCo 3 board, preventing the board from being pushed down too far in the sockets. The disadvantage to the Tandy approach, however, is poor air circulation.

Tandy also uses a ground plane or RF shield on the bottom of their board, which serves to cover the connection points. I was not able to determine if the ground plane made a difference, but I could not "hear" any RF interference on my short wave equipment nor could I "see" any additional interference while hooked up to a TV set.

Total installation time is about 20 minutes, not including the time it takes to type in the memory test program. It worked perfectly on power-up. I reassembled the case making sure I put the short screws in the keyboard end of the case. I was impressed with the quality of the PBJ upgrade. It also comes with a one-year warranty.

The best part is that you can upgrade it yourself and save money. So if you're ready to expand your CoCo 3's memory to its capacity, I recommend the PBJ 512K Upgrade. Now that we have the memory, all we need are some programs to use it all!

(Spectrum Projects, Inc., Box 264, Howard Beach, NY 11414; 718-835-1344, \$139.95 with chips; \$99.95 without chips, plus \$3 S/H)

— Jerry Semones

Speak-Easy FOR \$149.00
TM

the speech synthesizer that leaves the others tight lipped
FINALLY . . .

- * No more fumbling with Multi-Pac or Y-Connectors
- * No vocabulary ROM or disk needed
- * Compatible with all operating systems
- * No driver program needed
- * Appears as a printer to Co-Co

Harvey says, "Finally, I can ask for dinner."

CONNECTS TO THE SERIAL I/O PORT!

Speak-Easy plugs into the serial port of your Co-Co, not the card slot, and appears as a printer to the Co-Co. Incorporated in Speak-Easy is a unique state of the art two chip set which phonetically converts ASCII text to speech. What this means to you is extreme ease of use, virtually unlimited vocabulary, and complete flexibility in a speech synthesizer. Just look at this sample BASIC program:

```

10 INPUT A$
20 PRINT #-2, A$
30 GOTO 10
                    
```

and imagine how you could upgrade your games and applications with simple printer statements to use Speak-Easy. It can say anything including foreign words. If you can spell it, Speak-Easy can say it.

Also available in RS-232C configuration with selectable baud rate, word length and stop bits. Choose between 4 pin DIN or DB-25 connectors. If you have a special need or configuration, let us know. We will have you talking in no time!

Language Arts Software for Reading and Spelling Skills

For the past two months, I've been reviewing study courses comprising an educational series available from Compass Education. This month, I will review the Language Arts study course.

The Language Arts curriculum is divided into three sub-categories. In Lesson Plan 1, volumes I and II both contain short stories that are used to help the student develop essential reading ability and comprehension. In Lesson Plan 2, the student is introduced to spelling. The student will learn about pluralizing words, adding suffixes, spelling by syllables, and how to distinguish between homonyms like "scent" and "cent."

In Lesson Plan 3, the student will be helped to develop comprehension in definitions, spelling and synonyms in everyday vocabulary.

As I have stated in previous articles, these lesson plans are very well thought out, organized and presented. I especially enjoy the fact that there is an audio portion. This

helps by explaining each new word and giving examples of how that word is used.

My son Eddie (he is usually my "tester" for any software I receive) and I sat down to check out these study courses. First we went through the reading comprehension series. Each lesson plan is actually a story that was read to Eddie while he followed the printed words that were displayed on the screen. Every couple of paragraphs or so, Eddie would be asked a few questions about material that had been previously presented. I think this way of teaching really develops comprehension, as Eddie wasn't just reading the words, he was really understanding what he had read.

At the end of each lesson plan you are shown a scoreboard, which shows you the total number of questions asked, the number answered correctly on the first try and the number of wrong responses. The two other sections, The Magic of Spelling and Vocabulary Comprehension, were both as enjoyable and challenging as the Reading Comprehension lesson plan.

I would recommend these study courses for anyone who enjoys language arts, or anyone who would like to review the rules of spelling.

(York Software, 9525 Vassar Avenue, Chatsworth, CA 91311; 818-700-0330, \$49.95 per two-volume set, plus \$3 S/H)

Citizen 120-D System: Sleek, Efficient and Easy to Use

Citizen America Corporation understands that the average computer user wants not only a good, versatile printer, but also one that can add pizzazz to graphics and text on demand. To this end, they have given us the 120-D, an attractive, affordable dot matrix printer.

It offers a wide range of type styles including pica, elite, compressed, expanded, compressed expanded, italic, proportional, emphasized, double strike and correspondence quality. It also supports underlining, overscoring, reverse print, superscript, subscript and vertically enlarged print. Combining modes gives even greater flexibility — elite expanded emphasized italic, for example. For greater convenience, common combinations can be selected using the Master Print mode. Correspondence quality is available in all 14 character widths and heights, but not in reverse print. The control panel on the front allows the user to select various fonts.

The 120-D also has 11 international character sets, math and graphic symbols and even Greek letters available. The international characters (U.S., France, Germany, England, Denmark I, Sweden, Italy, Spain, Japan, Norway and Denmark II) can be used with any of the 120-D's other features including correspondence quality and italics.

Formatting your printout is easy. The 120-D has left and right justification, and auto-centering, along with tab printing, variable line spacing and variable line feeds.

Of course, it also does graphics. There are eight densities available: single-density, 60 dots per inch (dpi); double-density, 120 dpi; high-speed double-density, 120 dpi; quadruple-density, 240 dpi; CRT screen, 80 dpi; one-to-one, 72 dpi; Hi-Res CRT, 90 dpi; and two-to-one, 144 dpi.

For those who are just not satisfied with the amazing array of characters and styles available, the 120-D allows the user to design his own characters. This feature is useful not only for adding a little flair to your printing, but also

for special applications such as business, science or a foreign language not already included.

It is important to note that this package from Dayton Associates is a complete printer system. The printer includes a built-in serial interface with a cable to attach it to the CoCo. With this interface, the CoCo can send data to the printer at baud rates from 300 to 9600.

This system is not only ready to plug-and-go, it also includes a software package that contains a word processor to take advantage of the features of the printer; a program that allows you to set special features of the printer and test those functions; and SUPERPRT for producing screen dumps. The software is available on tape or disk, and normally sells for \$19.95.

This printer is sleek, efficient and easy to use. At 9600 baud it prints fast enough to keep all but the most fanatical speed demons happy. The only drawback I could discover is the sound level. It tends to be a bit louder than other printers I have heard. But this is only a minor problem and detracts not at all from its fine performance.

The manual is very well-written and logically put together. The control codes are summarized in an appendix and there is a handy tear-out quick reference card.

With all its features, special characters and graphics, the Citizen 120-D System, including software and cable, is a good package at a good price.

(Dayton Associates, 7201 Claircrest Drive, Dayton, OH 45424; 513-236-1454, \$229.95)

Uncovering ROM RAM Mysteries

By Marty Goodman
Rainbow Contributing Editor

Why is it that when I run a ROMRAM program ("Downloads" August 1985) on my CoCo 3, I find that programs which would not previously run on my CoCo 3 now run correctly?

Bruce E. Ondersma
(BEO)
Grand Rapids, MI

When the CoCo 3 wakes up after power up or cold start, it has copied its ROMs into RAM, and then heavily patched them for the CoCo 3's extra BASIC commands. You are operating in "all-RAM" mode. But, although you are using a heavily patched and modified version of the ROMs, a pretty near exact image of the old CoCo 2 ROMs is lurking within. When you run the ROM-RAM program, you are actually loading into RAM a nearly exact (and unpatched) image of the old CoCo 2 ROMs.

Support for the RS-232

During a recent sale I bought a RS-232 pack for \$30 and a Multi-Pak Interface for \$70. Will I be able to use them with Autoterm? Is it true I need these items to operate at 1200 baud? Where can I get a cable to connect a CoCo 2 to the Multi-Pak to make my system fit better on my desk?

David Johnson
(DAVIDJOHNSON)
Leicester, NC

RAINBOW's Jim Reed tells me that the new Disk Version 5 of *Autoterm* supports the RS-232 pack and Xmodem, too. He says an added advantage of the RS-232 pack is that you can toggle the printer while online. *MikeyTerm* and *Greg-E-Term* among "shareware" programs, *Color Connection IV* from Computerware and *Data Pak II+* from Cer-Comp also provide support for the RS-232 pack from Radio Shack. When using it with these programs, you do need the Multi-Pak if you are using a disk-based system.

The RS-232 pack is needed if you want completely smooth and professional operation at 1200 baud or higher. Although it is interesting to note that *Autoterm*, *Greg-E-Term* and *Colorcom/E* all allow some degree of operation at 1200 baud via the "bit banger" (built-in 4-pin DIN serial) port, such operation is flawed by sluggish screen response and failure of proper full duplex operation at times, though Xmodem works fine at 1200 baud in such programs (due to the fact that Xmodem is an intrinsically half duplex protocol).

I urge you to not use a cable to connect the Multi-Pak to the CoCo. This will result (in most cases) in unreliable operation and occasional crashes during disk operation. The Multi-Pak must be plugged directly into the CoCo. The only reasonable way to clear up the mess caused by a CoCo system sprawling on your desk is to make a remote keyboard, and put the main CoCo system below, above, or to one side of your desk.

Drive Addition

I have a Radio Shack FD 500 disk drive unit and want to add a second drive to it. Should I get a single- or a double-sided drive? What is involved in adding the drive?

John D. Oravec
(JORAVECZ)
Warren, OH

The drive you have in the unit is a single-sided drive. Radio Shack's Disk Extended BASIC is geared to work only with single-sided drives. OS-9 supports double-sided drives, but if you have one single- and one double-sided drive you will not be able to conveniently make backups of material on the double-sided drive. I recommend that if you are using only Radio Shack's Disk Extended BASIC system you add only a single-sided drive. But, if you are going to use OS-9, you would do well to get a double-sided drive, realizing that soon you'll need to get rid of the existing single-sided drive in the FD-500 unit and replace it with a double-sided drive.

Adding a drive is not hard; the details vary considerably from brand to brand. You must hook up the drive to a source of power, and hook up the 34-pin edge card connector to the cable inside the cabinet. Sometimes you will have to redo the cable if the edge card connector of one brand of drive does not exactly line up with that of the existing drive.

You will have to "configure" the new drive to make it think it is a given drive number. This consists of setting a jumper or switch on the drive. Typically such jumpers are labeled "DS0, DS1, DS2, DS3, HM, HS, MX." You should set the DS1 jumper to make the drive think it is Drive 1. Note that on some drives, the drive select jumpers are numbered DS1, DS2, DS3 and DS4. On these drives you would set the DS2 jumper for the drive to think it is a Drive 1. Also set the HM jumper, if it is present.

Finally, be sure that only one of the drives in the system has a "terminator resistor pack" in place. This is usually a gizmo that looks like an integrated circuit with 14 or 16 pins, and is plugged into a socket on the disk drive. There must be only one of these to a system. If the drive you are adding has a terminator pack plugged in when you get it, remove that pack because the existing drive in the FD-500 already has such a terminator.

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. Marty is the database manager of RAINBOW's CoCo SIG on Delphi. His non-computer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

Ghosting Memory Addresses

I've heard that some programs will work on a 128K CoCo 3 but not on a 512K CoCo 3. Is this so? If so, why?

*James McDaniel
(NEWKID)
Brooklyn, NY*

The problem you refer to occurs only under Radio Shack's Disk Extended BASIC, and not under OS-9. The problem only affects a small number of software offerings that were written by programmers who did not understand the workings of the CoCo 3's memory management unit.

The MMU on the CoCo 3 causes memory addresses to ghost in 64K blocks on a 128K CoCo 3. That is, if you write to address \$0000, what you put there will be readable at \$60000 also. Thus, some programmers carelessly wrote data into memory at one address, then later looked for it at another address modulo 64K. Because the two different addresses were matched by ghosting on the 128K CoCo 3, the program worked. But, when a 512K CoCo was used, the program was in the position of storing data in one place and then later looking for it in another.

True Break on the RS-232

How do I program the RS-232 pack to send a "true break"? I've looked at the information that comes with it, and I am still confused.

*Rick Adams
(RICK ADAMS)
Rhonert Park, CA*

I am not surprised you are confused by the information that accompanies the pack. Radio Shack included most of the technical information on the 6551 UART chip, but left out critical material on just what bit does what in some of the registers. The information you want is present on Page 15 of the RS-232 pack manual. The register you need to deal with is called the Command Register and is mapped to \$FF6A on the Multi-Pak. Bits 3 and 2 concern themselves with sending a true break signal. Those bits affect the pack as follows:

Bit	Transmitter	*RTS	Transmitter
3	Interrupt	Level	status
0	disabled	high	off
0	enabled	low	on
1	disabled	low	on
1	disabled	low	transmit Break

Thus, to send a true break, you merely need to store a \$0C (bits 2 and 3 set) into \$FF6A. Remember to first store the original contents of \$FF6A, pause for the break to be sent, then restore the original contents into \$FF6A.

Note that Bit 4 of the Command Register sets echo mode, Bit 0 sets DTR and Receiver interrupts, and Bit 1 sets the *IRQ interrupt

from Bit 3 of the Status Register. Also note that in the table on Page 14 of the RS-232 pack manual regarding the Status Register, Radio Shack forgot to print the bit numbers. The items in that table relate to bits 0 through 7, with Bit 0 being the top item (Parity Error Bit) and Bit 7 being the bottom item (IRQ status). On Page 16, the table of Control Register functions also lacks needed information on what bit does what. The baud rate is set by bits 3, 2, 1 and 0 (these are represented respectively left to right in the table at the bottom of Page 16). The Receiver Clock Source is set by Bit 4, and the number of stop bits is set by Bit 7 of the control register.

The RS-232 to Modem Connection

I'm trying to get my RS-232 pack to talk to my Radio Shack modem. I'm using a cable from Radio Shack that has a 4-pin DIN connector at one end and a DB25 connector at the other. The DB25 is plugged into the RS-232 pack and the DIN connector is plugged into the modem. Yet, I can't get the modem to work. Can you help me?

*George McCashin
(GMCC)
Chattanooga, TN*

Several others on Delphi have had this problem. You are using the wrong cable. Instead, try using a 25-wire DB 25 to DB 25 connector to hook your pack to your modem. Radio Shack sells such a cable (Catalog No. 26-1408) for about \$17, or you can make one for about \$6 in parts if you shop discount catalogs. Nearly all modems will work fine with the RS-232 pack with such a "straight-through, 25-wire cable", provided their switches are set correctly. Note that you were using the DIN to RS-232 cable backwards; that cable was intended to have the DIN connector plug go to the CoCo and the DB25 connector go to the modem. Your problem stemmed from not tying high the needed hand shake pins on the RS-232 pack. But the best thing to do is to use the 25-wire cable.

CoCo-ized Dragon

I want to add a disk drive to my Dragon 64 computer, and want to make it Color Computer compatible.

*Raymond E. Heath
Renton, WA*

It is possible to make a Dragon 64 nearly 98 percent CoCo compatible. What is involved is replacing one EPROM with a slightly modified version of the code that is in the CoCo ROMs, rewiring the keyboard just a little, and rewiring the 40-pin bus so that + and - 12 volts are in the correct places. For a while some companies (such as Super Choc in Canada) sold CoCo ROMs modified for the Dragon, and the Los Angeles Users Group had a number of members

running Dragons with modified CoCo EPROMs in them. These modifications resulted in a Dragon that thought it was a CoCo, would print out through the parallel port, but could access the serial port via a PRINT #-3. Because the Dragon was now pretty nearly a CoCo from both hardware and software points of view, it could even work fine with a normal CoCo disk controller plugged in.

The problem would be finding someone with a copy of the code for the "CoCo-ized Dragon" ROMs, who also had an EPROM programmer and could burn a version into a 27128 EPROM. For most, I would not recommend using a Dragon because it is an unsupported machine in this country. Rather, get a CoCo, a Multi-Pak and, if you need it, you can buy cards from RAINBOW advertisers that add a parallel port to the Multi-Pak.

Null Modem Cable

How do I make a null modem cable to connect the "bit banger" (4-pin DIN serial) ports from my CoCo 2 to my CoCo 3?

*Richard Trasborg
(TRAS)
Staten Island, NY*

To make the null modem you ask about, get two 4-pin DIN connectors (Catalog No. 274-007 at Radio Shack) and a three (or more) wire cable. Connect the pins as follows:

Plug 1	Plug 2	Signal Connection
Pin 3	Pin 3	ground to ground
Pin 2	Pin 4	RS-232 out to RS-232 in
Pin 4	Pin 2	RS-232 in to RS-232 out

This should work. It is possible that some CoCo software might demand a carrier detect line to be pulled up. This would require supplying some voltage (9 volts from a transistor radio battery would work) to Pin 1 of the serial connector on one or both of the CoCos.

Your technical questions are welcomed. Please address them to CoCo Consultations, THE RAINBOW, P.O. Box 385, Prospect, KY 40059.

We reserve the right to publish only questions of general interest and to edit for brevity and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Questions can also be sent to Marty through the Delphi CoCo SIG. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASK (for Ask the Experts) to arrive at the EXPERTS> prompt, where you can select the "CoCo Consultations" online form which has complete instructions.

RAINBOW

Give us your best: Join the ranks of these courageous CoCoists in showing the Color Computer world your high score at your favorite micro-diversion. We want to put your best effort on record in THE RAINBOW's "Scoreboard" column. All entries must be received 60 days prior to publication. Entries should be printed — legibly — and must include your full name, address, game title, company name and, of course, your high score. Each individual is limited to three score entries per month. Send your entries to Scoreboard, c/o THE RAINBOW. The "Rainbow Scoreboard" is now a bimonthly feature.

For greater convenience, your high scores may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS.

SCOREBOARD POINTERS

In conjunction with THE RAINBOW's Scoreboard, we offer this column of pointers for our game-playing readers' benefit. If you have some interesting hints, tips or responses to questions, or want help yourself, we encourage you to write to the Scoreboard, c/o THE RAINBOW.

FEEDBACK

Scoreboard:

In response to Danny Perkin's and Andy Wolstromer's letter (December '86), about *Dungeons of Daggorath*, there are four key points to solving the game:

- 1) Save all equipment and drop in front of you.
- 2) When fighting the wizard's image, attack him with both fire and ice rings.
- 3) When the wizard's image dies you only have left what you are carrying, so put a ring and sword in your hands.
- 4) To kill the wizard you must use the energy ring and elvish sword, and keep moving.

Maurice MacGarvey
Dawson Creek, British Columbia

Scoreboard:

Here are some hints in response to letters from David Beyer and Michael Heitz in the December '86 issue of RAINBOW.

In *Hitchhiker's Guide to the Galaxy*, you must keep the robot so busy it will not have time to clean up the fish. Try putting the satchel in front of the panel and the mail from your house on top of it.

In *Trekboer*, if you look at the panel in the wrecked ship, you will see one way it can be opened. Go north of the wrecked ship and you will find the material you need. On a different planet, there is a cenotaph, and if you look at it, you should be able to figure out the coordinates you need. Also, be sure to climb the cenotaph to get something you will need later.

Can anyone tell me how to get to the cave in *El Diablero*? I have tried to dream to get there, but keep getting told that "His power is too strong," so any help would be appreciated.

Richard King
Plymouth, IN

Scoreboard:

To help Sam Waldrop get the red and green keys in *Bedlam*:

To get the red key you must use the window hook.

To get the green key, go to the room but don't go in, then type GET GREEN KEY.

Michael Leturgez
Bloomington, IN

Scoreboard:

In reference to Joel De Young's letter about *The CoCo Zone*, you do not need the flashlight to get out of the casket. Try DIG SHOVEL or DIG WELL. You will find the flashlight, which you will need later on, after you get out of the casket. Good luck.

R. Sinesi
Saranac Lake, NY

Scoreboard:

In response to Mark Bourdeaux's question in the December '86 issue of THE RAINBOW. For *Hall of the King*: to find the stick you must go to the pool; it's up to you to see how to fill it. You'll find the match in the library (somewhere) and light a fire before you light your stick. Last but not least, you have to be powerful to bend the bars. To do that you need a key piece!

Paul Maxwell
Vancouver, British Columbia

OFF THE WALL

Scoreboard:

I have a few tips on *Downland*. When you are on Level 5, you must get the key off the wall by having your head slightly lower than it and jumping off the rope.

To get off the wall, hold the joystick toward the wall and press your button. You will bounce off the wall and catch the rope.

After moving from Chamber 0 to 1, stay in Chamber 1 until the timer is under 2000. Then go back to Chamber 6. The timer will be back to 4000, so you are not pressed for time.

I have trouble with Level 8 because I can't get from the horizontal to the second vertical rope. If anyone can help, please write to the "Scoreboard."

Quinn Granfor
Bismark, ND

WISE MOVES

Scoreboard:

Here are some assorted tips.

For *Vortex Factor*: To get into Cairo Moon you need a candle; try this. Take the statue of the bird to London 1200, then find the string there (somewhere). Go back to the cylinder and before going in, type

MELT BIRD, then simply MAKE CANDLE. It is a wise move to find everything in London before lighting the candle and moving on. Also, try pulling a torch or two!

For *Draconian*: Unless you are a crack shot, you must sacrifice a man on levels 5 on up. What may be helpful is to blast all the modules except for one on your first pass (i.e., sacrificial jet), then, on the second pass, pick up all of the men.

Paul Maxwell
Vancouver, British Columbia

VORTEX VERSE

Scoreboard:

I've finally solved the *Vortex Factor*! Here's a poem I wrote for those of you who are still counting the fish.

Turn a torch that opens a wall,
Go on in — there's no need to stall.
Pick the lock with the pin,
Get the treasure and come out again.
Melt the bird while you have the string,
Make the candle and get into the machine.

Press the button and get the ring,
As you prepare to see the king.
Give him the object and follow him,
(Better hurry, your candle's gettin' dim.)
Pull the lever that opens a hole,
Go on down — you don't need a pole.
Get the final treasure and win the game,
Write to THE RAINBOW and enjoy the fame!

Hopefully, it will help. The whole solution can be obtained by calling the 21st Century Connection BBS (304) 768-7191, going to the CoCo SIG, and pressing M for the Color Computer Magazine.

Tommy Crouser
Dunbar, WV

DON'T ROCK THE BOAT

Scoreboard:

I have some hints for *ZORK I*. Always bring the scepter in the boat with you.

Also, drop all sharp things before boarding the boat, then get them afterwards. How do you kill the thief? I've tried, but I'm always unsuccessful.

Ronnie Scott
Ridgefield, WA

FINDING THE KEY

Scoreboard:

I have a few tips for *Bedlam*. Examine every room to find the secret door. Have Napoleon open the secret door. Or, get the pill, put it into the meat, then feed it to the dogs. Or, lead Picasso to the room where you started, then open the painted door. To get the red key, go to the dispensary and GET RED KEY WITH HOOK. To get the green key, stand outside the electro' room and type GET GREEN KEY WITH HOOK.

In *Raaka-Tu*, the rug is just a decoy to distract the player. EXAMINE every wall to find the gem.

In *Madness & the Minotaur*, I have gotten the flute, parchment and rope, played the flute at the music at the maze, exposed the ledge, but where does it reveal? Giving the sapphire to the packrat does nothing. Would someone please answer these questions so I can get the other 20 points?

John Riddle
Linthicum, MD

FREEZE WARNING

Scoreboard:

Here are some hints for *Enchanter*:

The adventurer goes where gnome man has gone before.

For defeating lances, find an armored foe: by the sea, from the sea, with speed, we go.

A warning about *Raaka-tu* — typing in an unknown word or phrase while running

on the CoCo 3 causes the program to freeze.

Charly Rushing
Santa Rosa, CA

ESSENTIAL AMULET

Scoreboard:

I have a few helpful hints for *Trekboer* and *Planetfall*. On *Trekboer* — yes, you do need the amulet. It's on top of the cenotaph on the frozen planet. If you get as far as the garden planet, and have tied the rope to the tree, you need to carry *only* the amulet, another beaker-full of acid (gotten from the desert planet) and the yellow capsule. Cross the bridge; don't press the button before you go into the room — you'll get zapped. Go in the room; get the plant, and you are on your own. One last hint: You need to have the plant in your possession when you teleport to Earth.

On *Planetfall* — don't mind the demerits, always go by the port. Once the explosions begin, go to the escape pod and always go in the safety netting.

I am having problems solving the *Vortex Factor* by Mark Data. I keep dying on Cairo. Is there a light? How do you get the Bable fish on the *Hitchhiker's Guide to the Galaxy*? Help!

Eric Jones
Gautier, MI

THE THINGS THAT GET AWAY

Scoreboard:

I have a tip for *Protectors*: If you put the opposite joystick just about in the center of the "lasers" it will go over to the other side of the screen as well as the right side. This will help destroy the things that get away.

Keith Walter
Belvidere, IL

MADNESS TIDBITS

Scoreboard:

Here are some tidbits for *Madness & the Minotaur* players:

Never carry more than three objects and two treasures; the floor can easily cave in, reducing your strength, and it puts you in a bad situation.

If you have the scroll in hand, type OPEN SCROLL to summon the troglodyte to you. But only after something has already attacked you will that work. A spell with an 'O' in it helps with "a pile of rocks." A spell with an 'M' in it, plus the rope helps with the thing that the oracle never mentions.

Can anyone tell me what "the score on the parchment" means? Please send aid to "Scoreboard."

Dale Lampe
Sacramento, CA

To respond to other readers' inquiries and requests for assistance, reply to "Scoreboard Pointers," c/o THE RAINBOW, P.O. Box 385, Prospect, KY 40059. We will immediately forward your letter to the original respondent and, just as importantly, we'll share your reply with all "Scoreboard" readers in an upcoming issue.

For greater convenience, "Scoreboard Pointers" and requests for assistance may also be sent to us through the MAIL section of our Delphi CoCo SIG. From the CoCo SIG> prompt, pick MAIL, then type SEND and address to: EDITORS. Be sure to include your complete name and address.

— Jody Doyle

Two-Liner Contest Winner . . .

This program lets you quickly and easily find the average value of a group of numbers. Just follow the screen prompts.

The listing:

```
Ø CLS:PRINTTAB(3);"AVERAGER BY M
ICHAEL CRESS":PRINTSTRING$(32,"-
");:INPUT"HOW MANY NUMBERS TO BE
AVERAGED";Q
```

```
1 CLS:C=C+1:INPUT"NUMBER-";N:T=T
+N:IFC=Q THEN A=T/Q:PRINT"AVERAG
E OF NUMBERS =";A,"NUMBERS ADDED
=";T ELSE GOT01
```

Michael Cress
Bridgetown, Nova Scotia

(For this winning two-liner contest entry, the author has been sent copies of both *The Second Rainbow Book of Simulations* and its companion *The Second Rainbow Simulations Tape*.)

Picture Perfect Graphics Commands

By Robert C. Montowski

I have written two commands to use under OS-9 versions 1.00, 1.01, or 2.00 so that OS-9 users will have a quick and easy way to save and load graphics under OS-9. The commands are called `gload` and `gsave`. The commands act like the `LOADM` and `SAVEM` commands under RS Disk BASIC. No memory addresses are needed and you don't need to know the size or location of the graphics screen in memory. The commands do it all for you.

While I have supplied several different format pictures on the disk, I realize RAINBOW has no way to pass these pictures on to their readers. So I have written a procedure file called `makepic` that will not only draw a picture of some lines/circles; it will also show how the `gsave/gload` commands work. You can list the file to see how it works and also to be sure that you have all the correct commands in your `/d0/CMD5` directory for this procedure file to work.

The `gsave` command writes picture files out to disk in two possible formats. One is \$180A bytes long and the other is \$1800 bytes long. The \$1800 size file

is suitable for use under OS-9 with either the `gload` command, the BASIC09 graphics modules, OS-9 *Deskmate*, or OS-9 *Micro Illustrator*. The \$180A size picture file can be copied to a Radio Shack CoCo format disk with either O-Pak's *Xcopy* or the `COPY` command. The picture file can also be Xmodem-ed across to any CoCo BBS and it will already be in the correct format to be loaded into memory under Disk BASIC.

The `gload` command can load pictures of several different formats. It can load in a Disk BASIC format picture that is \$180A bytes long, a BASIC09 picture that is \$1800 bytes long, an OS-9 *Deskmate* picture that is \$1640 bytes long or an OS-9 *Micro Illustrator* picture that is \$1800 bytes long. For picture formats shorter than \$1800 bytes (*Deskmate*) you will see a blank space at the bottom of the screen. If a picture file is shorter than \$1640 bytes, the `gload` command will terminate with an error.

The `gsave` command has two forms:

- `gsave /d0/picture` Saves picture in OS-9 format
- `gsave + /d0/picture` Saves picture in Disk BASIC format with extra header and footer bytes

The `gload` command has two formats:

- `gload /d0/picture` Loads in any OS-9 picture from

- BASIC09, OS-9, *Deskmate* or *Micro Illustrator*
- `gload - /d0/picture` Loads in any Disk BASIC picture and ignores the extra bytes in the file

When I say the picture is in Disk BASIC format I mean that it is a picture file with a length of \$180A bytes — not that the picture is on an RS format disk! Pictures made under RS-DOS must be copied to an OS-9 format disk with either O-Pak's *XCopy* or BASIC's `COPY` command or the file/picture must be downloaded with an OS-9 terminal program and then saved to an OS-9 Disk.

Very simple animation can be done under OS-9 by `gloading` several pictures one after another. If you are using O-Pak's Hi-Res screen or Xscreen's Hi-Res screen you can load pictures and use the text of those Hi-Res drivers for doing Hi-Res tutorials. The only limits to these commands are the user's imagination.

I can be reached by phone or on my OS-9 BBS (The Graphics Pub) at (215) 277-6951. The BBS hours are 7 p.m. to 7 a.m. EST.

(Questions about this article may be directed to Mr. Montowski at 1151 Sterigere Street, Apt. B-18, Norristown, PA 19403. Please enclose an SASE for a reply when writing.) □

Bob Montowski works at Norristown State Hospital in Pennsylvania. He runs an OS-9 BBS called the Graphics Pub and is presently learning assembly language and C under OS-9. His Delphi username is GRAPHICSPUB.

DataPack II Plus V4.1
SUPER SMART TERMINAL PROGRAM
AUTOPILOT and AUTO-LOG Command Processors
X-MODEM DISK FILE TRANSFER SUPPORT
VT-100 & VT-52 TERMINAL EMULATION

- * No lost data using Hi-Res Display, Even at 1200 Baud on the Serial port.
- * 0 Hi-Res Displays, 28 to 255 columns by 24 lines & true Upper/Lower case.
- * 45K Text Buffer when using the Hi-Res Text Display and Disk.
- * ASCII & BINARY disk file transfer support via XMODEM.
- * Directly record receive data to a disk file while online.
- * VT-100 terminal emulation for VAX, UNIX and other systems.
- * VT-100/52 cursor keys & position, insert/delete, PF & Alt. Kbd. keys.
- * Programmable Word Length, Parity, Stop Bits and baud rates 300 to 9600.
- * Complete Full and Half Duplex operation, with no garbled data.
- * Send full 128 character set from Keyboard with control codes.
- * Complete Editor, Insert, Delete, Change or Add to Buffer.
- * Variable length, Programmable Macro Key buffers.
- * Programmable Printer rates from 110 to 9600 Baud.
- * Send Files directly from the Buffer, Macro Key Buffers or Disk.
- * Display on Screen or Print the contents of the Buffer.
- * Freeze Display & Review information On line with no loss of data.
- * Built in Command Menu (Help) Display.
- * And much, much more.

Supports: Word-Pak I, II, R.S. and Double Density 80 Column Cards
 Disto Controller w/80 column card & parallel printer
 PBJ Parallel Printer Card and Dual Serial Port (2SP-Pak)
 R. S. Modem-Pak & Deluxe RS-232 Pak, even with Disk.

Requires 32K & Disk, Only \$59.95

HI-RES II Screen Commander

Tired of looking at the 16 line by 32 character display on your CoCo? Wish you could see more lines and characters? Then HI-RES II is the answer, it can give you the big screen display you've always wanted. It will display 24 lines of 32, 42, 51, 64 and even 85 true upper and lower case characters per line without extra hardware. HI-RES II is the most powerful screen enhancement package available for the Color Computer, yet it is the least expensive. It is completely compatible and transparent to Basic. Once the program is loaded, everything works the same as before, only you have a much better display to work with. It even allows you to have mixed text and Hi-resolution graphics on the same screen or have separate text and graphics screens. It also has an adjustable automatic key repeat feature and allows you to protect up to 23 lines on the screen.

HI-RES II features over 30 special control code functions that allow you to change characters per line, protect display lines, change background color, position cursor, switch normal/reverse video, under line, double size characters, erase line/screen to end of screen, home cursor, character highlight and much more. It works on all models of the CoCo with 16, 32 or 64K and provides automatic reset control so HI-RES II won't disappear when you press reset.

Only 24.95 on Tape or \$29.95 on Disk

"The Source"

Now you can easily Disassemble Color Computer machine language programs directly from disk and generate beautiful, Assembler Source Code. And "The Source" has all the features and functions you are looking for in a Disassembler.

- * Automatic Label generation and allows specifying FCB, FCC and FDB areas.
- * Disassembles programs directly from Disk or ROM.
- * Output Disassembled listing with labels to the Printer, Screen or both.
- * Generates Assembler source files directly to disk, or a printed listing.
- * Generated source files are in standard ASCII format.
- * Built in Hex/ASCII dump/display to locate FCB, FCC and FDB areas.
- * Built in Disk Directory and Kill file commands.
- * Menu display with single key commands for smooth, easy operation.
- * Written in fast machine language, one of the easiest to use Disassemblers

Requires 32K Disk \$34.95

TEXTPRO III

"The Advanced Word Processing System"

- * 3 Hi-Res Displays from 28 to 255 columns by 24 lines & Upper/Lower Case
- * Three Programmable Header lines that can be re-defined at anytime.
- * Programmable Footer line & Automatic Footnote System.
- * 10 Programmable Tab stops & 7 Powerful Tab Function Commands.
- * Completely Automatic Justification, Centering, Flush left and right.
- * On screen display of underline and Double size characters.
- * Change indents, margins, line length, etc. parameters anytime in the text.
- * Create and Edit files larger than memory, up to the size of a full disk.
- * Easily imbed any number of format and control codes.
- * Automatic Memory sense 16-64K with up to 48K of memory workspace.
- * Fully supports the use of 80 column hardware cards.

TEXTPRO III is an advanced word processing system designed for speed, flexibility and extensive document processing. It is not like most of the other word processing programs available for the Color Computer. If you are looking for a simple word processor to write letters or other short documents, then most likely you'll be better off with one of the other simpler word processors. But, if you want a powerful word processor with extensive document formatting features to handle large documents, term papers, manuals, complex formatting problems and letter writing, then TEXTPRO III is what you're looking for. TEXTPRO works in a totally different way than most word processing programs. It uses simple 2 character abbreviations of words or phrases for commands and formatting information that you imbed directly in your text. There are over 50 different formatting commands you can use without ever leaving the text you're working on. There are no time consuming, and often frustrating menu chases, you are in total control at all times. The formatted output can be displayed directly on the screen, showing you exactly what your printed document will look like before a single word is ever printed. This includes margins, headers, footers, page numbers, page breaks, underlining, column formatting and full justification.

DISK \$59.95 TAPE \$49.95

The CBASIC Editor/Compiler V1.1.2

Do you want to write fast machine language programs but you don't want to spend the next few years trying to learn how ???

Well with CBASIC, you could be writing them right now!

CBASIC is the only fully integrated Basic Compiler and program editing system available for the Color Computer. It will allow you to take full advantage of all the capabilities available in your color computer without having to spend years trying to learn assembly language programming. CBASIC allows you to create, edit and convert programs from a language you are already familiar with Extended Disk Color Basic, into fast efficient machine language programs easily and quickly. We added advanced features like a full blown program editor, Hi-Res text Displays and 80 column hardware support for editing, compiling and your compiled programs. Plus we made it exceptionally easy to use, CBASIC is the friendliest and easiest compiler available for the Color Computer.

"The most complete Editor/Compiler I have seen for the CoCo..."

--The RAINBOW, March 1986

CBASIC is a powerful tool for the Beginner as well as the Advanced Basic or Machine Language programmer. You can write programs without having to worry about the Stack, DP Register, memory allocation and so on, because CBASIC will do it for you automatically. Or, CBASIC will let you control every aspect of your program, even generating machine code directly in a program easily.

CBASIC features well over 100 compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen I/O. CBASIC supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Extended Color Basic, including Graphics GET, PUT, PLAY and DRAW, all with 99.9% syntax compatibility. CBASIC also supports the built in Serial I/O port with separate printer & serial I/O baud rates. You can send and receive data with PRINT, INPUT and INKEY commands.

CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or create programs for the compiler. It is a full featured editor designed specifically for writing and editing Basic programs. It has block move & copy, program renumbering, automatic line numbers, screen editing, printer control and more.

"The Editor is a very good one and could be the subject for review all by itself..."

--The RAINBOW, March 1986

"Comparing ECB's edit mode to CBASIC's text editor is like comparing a World War II jeep to a modern sedan. Both get you to your destination, but what a difference in the ride."

--Hot CoCo, February 1986

The documentation for CBASIC is an 8 1/2 * 11 Spiral Bound book which contains approximately 120 pages of real information.

"CBASIC's manual is easy to read and written with a minimum of technicalese."

--Hot CoCo February, 1986

The price of CBASIC is \$149.00. It is the most expensive Color Basic Compiler on the market, and well worth the investment.

Compare the performance of CBASIC against any Color Basic compiler. Dollar for dollar, CBASIC gives you more than any other compiler available. Requires 64K & Disk, not JDOS compatible.

"The price tag it carries seemed a bit steep for a snitlager compiler on first glance, but when you add 64K, hi-res drivers, and full-screen editing, CBASIC begins to look more like a bargain."

--Hot CoCo February, 1986

"A Complete Editor/Compiler Well Worth its Price" --RAINBOW March 1986

EDT/ASM 64D

64K DISK EDITOR ASSEMBLER

EDT/ASM 64D is a Disk based co-resident Text Editor & Assembler. It has a Hi-Resolution 51, 64 or 85 column by 24 line display, so you see your program listings easily and it supports Column cards. The disk also contains a free standing ML Debug Monitor, to help you debug your assembled programs.

This is the most powerful, easy to use Text Editor available in any Editor/Assembler package for the Color Computer. It even has automatic line number generation for easy entry of program material.

- * Local and Global string search and/or replace.
- * Full screen line editing with immediate line update.
- * Easy to use Single keystroke editing commands.
- * Load & Save standard ASCII formatted Tape/Disk files.
- * Move or Copy single & multiple text lines.
- * Create and Edit disk files larger than memory.
- * Hi-Res Text Display 28 to 85 columns by 24 lines.
- * Supports Word-Pak I, II, & R.S. and Disto 80 column display cards.

The Assembler portion of EDT/ASM 64D features include:

- * Supports the full 6800 instruction set.
- * Supports conditional IF/THEN/ELSE assembly.
- * Supports Disk Library files (include).
- * Supports standard Motorola assembler directives
- * Allows multiple values for FDB & FCB directives.
- * Generates listings to Hi-Res text screen or printer.
- * Assembles directly to disk or tape in LOADM format.
- * Supports up to 0 open disk files during assembly.
- * Allows assembly from editor buffer, Disk or both.

Requires 32K Disk \$59.95

**CoCo-3 versions now available
 for most programs!!!**

**CoCo-3 512K upgrade \$149.95, card without Ram \$49.95
 Two Drive RAM-DISK program for 512K CoCo-3 \$19.95**

To order products by mail, send check or money order for the amount of purchase, plus \$3.00 for shipping & handling to the address below.
 To order by VISA, MASTERCARD or COD call us at (702) 452-0632
 (Monday thru Saturday, 8am to 5pm PST)

RAINBOW ON TAPE

Those Great RAINBOW Programs Without All the Fuss! Subscribe to RAINBOW ON TAPE!

Every month, RAINBOW ON TAPE brings as many as two dozen ready-to-run programs right to you. Using the current issue of THE RAINBOW as documentation, all you have to do is load and run them. Just a one-year subscription gives you more than 230 new programs! The typing time saved is time that can be spent with the CoCo. (RAINBOW ON TAPE does not include OS-9 programs or those less than 20 lines.)

**Need a back issue of RAINBOW ON TAPE?
Issues available beginning with April 1982**

**Subscribe to RAINBOW ON TAPE Today!
LOOK FOR OUR ORDER CARD
BETWEEN PAGES 34 AND 35**

The cost for a single copy of RAINBOW ON TAPE is \$10 within the United States; U.S. \$12 in all other countries. The annual subscription rate for RAINBOW ON TAPE is \$80 within the U.S.; U.S. \$90 in Canada; and U.S. \$105 for all other countries. **U.S. currency only, please.** In order to hold down non-editorial costs, we do not bill.

DISK USERS: RAINBOW ON DISK IS NOW AVAILABLE!

All the programs from THE RAINBOW — including OS-9 — are now available on disk. For more information, see Page 197 of this issue.

NOW AVAILABLE ON DELPHI!

For your convenience, RAINBOW ON TAPE can also be ordered via the Delphi Information Network, in our Shopping Service area of THE RAINBOW's Color Computer SIG (Special Interest Group).

The individual programs from our past March issues are also available for immediate download in the RAINBOW ON TAPE Database area in THE RAINBOW's Color Computer SIG on Delphi. There is a \$3.50 per program surcharge.

RAINBOW ON TAPE is not a stand-alone product, but is intended as an adjunct and complement to the magazine. Even if you purchase RAINBOW ON TAPE, you will still need the magazine for loading and operating instructions.

**To order by phone, (credit card orders only) call
(800) 847-0309, 8 a.m. - 5 p.m. EST. All other
inquiries call (502) 228-4492**

Programs From Our Past Business Issues:

March 1986 — *Receipt File*, prints receipts and saves to disk for tax purposes; *CoCoflow*, a modified version of an icon-driven program to aid in drawing flow chart diagrams; *Rule of 78s*, determines early pay-off amounts on installment loans; *Cash vs. Financing*, a program that shows which way is the most economical for you; *Home Budget Analysis*, a program that assists in budgeting and forecasting personal finances; *Analyzer*, examines disk file structure; *Varlist*, a utility that lists program variables; *Marquee*, a utility that adds pizzazz to title and menu screens; *Expense Tracking and Management System*, three programs that provide budgetary analysis for accounts; and *Mortgage Planner*, demonstrates how paying off a mortgage early is an advantage. Plus eight additional programs.

March 1985 — *EOQ Calc*, helps find the ultimate bargain for economic management; *Lurkley Manor*, a graphics Adventure game; *Payroll*, part one of a complete small business payroll package; *Home Financial Statement*, keeps track of home finances; *Landlord's Helper*, part one of a two-part series on managing rental property; *CFRR*, a finance program that analyzes prospects for good investments; *PERT*, an aid to project and estimate the efficient use of time; *T-Bill Computation*, computes the worth of treasury bills; *Convert*, figures foreign exchange rates; *Stock Index*, gauges stock market performance; *Joystick*, a tutorial on incorporating joysticks into programs; *Demon's Defiance II*, a mini arcade game; *Education Notes*, a lesson on how to formulate math solutions; and *Personable Pascal*, a tutorial on compiling a program in several smaller pieces.

Plus 17 programs from the **March 1984** issue of THE RAINBOW.

Listing 1: gsave

```

*****
* GSAVE
*
* An OS-9 command for saving a Pmode 4
* Hi-Res screen out to disk as a 6144 byte
* file.
* Before this command can be used you MUST
* use the display command from OS-9 to
* invoke the Hi-Res screen.
* You can do this like this:
* OS9:DISPLAY 0F 01 0F
*
* If doing this from Basic09 then you must
* call the Hi-Res screen with the line
* RUN GFX("MODE",1,15)...If there is
* no Hi-Res screen present Gsave will exit
* with an error.
*
*
* Gsave can save pictures out to disk in
* 2 formats:
* If the picture is to be used again with
* Basic09, Micro-Illustrator, or Deskmate
* than you save the picture out to disk with
* this line:
* OS9:Gsave /d0/picture.name
*
* If the picture is to be used under RS Disk
* Basic and you are going to Xmodem it to a
* BBS or use OPAK's XCOPY to get this file
* onto a RS Dos disk than you save the picture
* to disk like this:
* OS9:Gsave + /d0/picture.name
* This will save the picture to disk with an
* additional 10 bytes added to the file that
* are needed under RS Disk Basic to know where
* to load the picture into memory.
*
*****
* To get rid of the Hi-Res screen under OS-9
* all you need to do is:
* OS9:display 12
*
* From Basic09 you can get rid of the Hi-Res
* screen with:
* RUN GFX("quit")
*****
* NOTE
*
* Gsave will only save out a standard size
* Pmode 4 picture screen. It will not save
* out a double screen that is considered
* standard under CoCo MAX.
*

Listing 2: gload

```

*****
* Gload
*
* An OS-9 Command for loading in a Pmode
* 4 Hi-Res screen into memory. Before
* this command can be used...You MUST...
* use the display command from OS-9 to
* invoke the Hi-Res screen.
* You can do this like this:
* OS9:DISPLAY 0F 01 0F
*
* If doing this from Basic09 then you must
* call the Hi-Res screen with the line
* RUN GFX("MODE",1,15)...If there is
* no Hi-Res screen present Gload will exit
* with an error.
*
* Gload can load in two types of Pmode 4
* pictures. If the pictures was created
* with Micro-Illustrator or OS-9 Deskmate or Basic09
* than you can load those pictures like
* OS9:Gload /d0/picture

```

```

* If the picture is a binary picture in
* Radio Shack format and you have down-
* loaded it with an OS-9 Terminal program
* than there are extra bytes in the file
* that are not needed. To get this pix
* into memroy call Gload like this:
* OS9:Gload - /d0/picture
*
*****
* NO'FE
*
* Gload will only load pix made with
* either OS-9 Basic09, OS-9 Deskmate,
* OS-9 Micro Illustrator, or a PMODE 4
* pix that has been download via XMODEM
* to an OS-9 Disk. It will not load
* double size pix made by CoCo MAX...

• I would like to bring to the attention of all RAINBOW readers the following list of BBSs. All are affiliated with the California Computer Federation, but are open to use of everyone. All boards operate 24 hours a day.

Presidio BBS, San Francisco
(415) 567-3287

Redwood Gatorboard, Redwood City
(415) 364-6630

Colorboard of San Francisco
(415) 591-7366

Vallejo Colorboard, Vallejo
(415) 557-9221

Los Altos Colorboard, Los Altos
(415) 965-7949

Hal 2001, San Mateo, (415) 345-1802

East Bay CoCo Hangout, Oakland
(415) 530-2444

San Bruno CoCo BBS, San Bruno
(415) 877-8141

Colornet, Burbank, (818) 840-8903
L.A. Color Users Board, Los Angeles
(213) 773-3024

If you have questions concerning these California Computer Federation BBSs, contact Dan Eckert (415) 567-3287 (Presidio BBS).

*Dan Eckert
San Francisco, CA*

• I have a CoCo modem and would like to communicate with someone in the Denver area. Call (303) 650-6035.

*Fred Schmidt
3966 Shaw
Westminster, CO 80030*

• The Village CoBBS is online in Cromwell. We support 300/1200 baud, 24 hours a day. Call (203) 635-1401.

*Barilett B. Shattuck
46 R. Geer Street
Cromwell, CT 06416*

• I would like to announce the White House Colorama V.300 BBS. It has downloads, boards and more; 300 baud. Call (305) 799-0784.

*Lance Easley
Cocoa Beach, FL*

• The Dreamland Express BBS is up and running at (904) 686-0094 featuring original software, four message boards, plus one board dedicated to the CoCo. Also featuring a full CoCo download menu and text files. It's worth a long distance call from anywhere.

*Charles Opperman, SysOp
4497 Crescent Road
Spring Hill, FL 33526*

• I would like to announce one of the newest BBSs in the central Indiana area called The Gator Board at (317) 482-1079, online from 10 p.m. to 8 a.m., seven days a week, operating at 300/1200 baud. It offers one club and six public SIGs, up/downloading, a voting booth, nine news files and the usual private and public message bases. One main attraction is the music SIG containing top ten lists for all kinds of musical tastes, concert updates (for our area) along with album, C.D. and stereo equipment reviews.

*Derk Gates, SysOp
307 N. Grant Street
Lebanon, IN 46052*

• The Duke's Shelbyville Colorama has been online for over one year. It runs 24 hours a day, seven days a week, and its features include: message base, online program and games, downloading, screen pause and other well-known Colorama features. The communications protocol is 300 baud, 7 bit, even parity, 1 stop bit. Call (317) 392-2769.

*Duke Norris
P.O. Box 241
Shelbyville, IN 46176*

• I would like to announce the M&M Electronics BBS in Winfield. New users are welcome. Call (318) 628-2087 after 7 p.m. (Central time), Monday through Friday. Voice (318) 628-6434.

*Keith Guillotte
P.O. Box 194
Joyce, LA 71440*

• Experience the Launching Pad BBS in Baltimore. Now operating at 300/1200 baud, 24 hours a day, seven days a week. Featuring plenty of CoCo downloads and several message bases. Call (301) 661-1826.

*Tom DiMarco, Jr.
9502 Perry Hall Blvd.
Baltimore, MD 21236*

• The Graveyard BBS is a multi-purpose system that includes: online games, X-modem downloads, multiple message bases and E-mail. It runs on a 64K CoCo with three disk drives and a Hayes 1200 baud modem. The BBS operates 24 hours a day at 300/1200 baud. Call (617) 792-0381.

*Glenn May
192 Oak Street
Shrewsbury, MA 01545*

• The GOSUB TRS-80 Computer Club has a BBS that operates 24 hours a day at 300/1200 baud. Call (617) 756-1442.

*Ed Donovan, SysOp
357 June Street
Worcester, MA 01602*

• We are pleased to announce the Instant CoCo BBS. Hours are 10 p.m. to 7 a.m. weekdays and 10 p.m. Friday to 7 a.m. Sunday. We are 300/1200 baud, 7 bit, even or 8 bit, none and 1 stop bit. The board is FIDO running on a Tandy 1000. We have several download sections and a reading room. There are message sections for general and technical help. Call (614) 870-6544.

*Robert E. DeBolt
9667 Taylor Court
Pickerington, OH 43147*

• The Toledo area Colorama BBS serves most of northeast Ohio. We operate at 300 BPS (soon to be 1200) 24 hours a day. Phone (419) 877-0694 or BBS (419) 877-5556.

*John Kendzrara
6016 Kathy Drive
Whitehouse, OH 43571*

• I am disappointed I have not found a BBS around the Oklahoma City area yet. If anyone has a BBS please put down the baud rate and parity and the number and send it to me.

*Patrick Wamhoff
1024 Big Oak Drive
Midwest City, OK 73110*

• The Hideaway BBS runs 24 hours a day, seven days a week, 300 baud, 7-n-1. Call (405) 598-6113. We feature a message base, online games, downloads, an advertising section, plus a whole lot more.

*Jeff Cahill
Route 1, Box 110
Tecumseh, OK 74873*

• The ASCII-80 BBS is online 24 hours a day for telecommunication callers. Call (215) 252-1608.

*Nevin Keller
136 S. 15th Street
Easton, PA 18042*

• I am running an OS-9 PBBS system with PBBS software 4.2 at (215) 277-6951. The BBS runs from 7 p.m. to 7 a.m. EST. It runs at 300/1200 baud, has four message bases, nine download areas and over 10 megabytes of hard disk storage space. The BBS runs under a 256K RAM disk and is very fast. All those interested in graphics or OS-9 or just looking for a friendly place to talk with other CoCoites. Call the Graphics Pub.

*Bob Montowski
B-18 1151 Sterigere Street
Norristown, PA 19003*

• I am pleased to announce the CoCo SIG on Dagnet BBS in Harrisville. It runs 24 hours a day at (401) 568-2343.

*Eric G. Robichaud
10 Stoneham Drive
Woonsocket, RI 02895*

• This is to announce a new BBS in the Greenville-Spartanburg area. The Boardwalk BBS runs at 300/1200 baud, 24 hours a day, 7 bit word, even parity, 1 stop bit. Features CoCo downloads, text files, message base and online games. Supports the CoCo 1, 2 and 3. Being a computer marketing representative with the Radio Shack Computer Center in Greenville, I have lots of advance notice about CoCo goings on. Call (803) 271-9243, everyone is welcome to call.

*C.W. Gordon, SysOp
Greenville, SC*

• CoCo Palace BBS now operates under 4.0 Colorama. I have added another 180K of storage and have multiple downloads and security levels, as well as special user input files that are ongoing. It also features a voting section that has a new topic each month. Call (615) 581-9752.

Another new BBS in Morristown is the Great White North. Phone (615) 587-0051. The SysOp is McPhail Hunt.

*Marty Cline
936 Hall Drive
Morristown, TN 37815*

• Announcing the Computech-80 BBS, running 300 baud, 24 hours a day Monday through Sunday, 7- or 8-bit words, all access is free. Multiple computer forums available, and lots of downloads for CoCo. Call (703) 365-2018 or write.

*Ricky Sutphin
Route 1, Box 20
Henry, VA 24102*

• The CoCo Beach BBS has been running for a year. Colorama software, 1200 baud, 7 bits, even parity, one stop bit, 15 megabytes disk storage half-filled with public

When You're Running Hot, It's Time for a Change

By Richard E. Esposito
Rainbow Contributing Editor
with Richard W. Libra

 I have a CoCo 2 with Extended BASIC, but only 16K of memory. It has reached the point where I must upgrade my CoCo to at least 64K. I also have a problem in that after about 30 minutes of computer operation with either Scripsit or just in the command mode, the components below the slotted air intake on the top left get very hot. When this happens, the words on the screen start misspelling themselves. I need to know the easiest and possibly cheapest way to cure both of these problems.

Ken Banghart
Redlands, CA

R Ken, upgrade techniques depend upon the model of the machine. In his "Earth to Ed" column in the March and April 1985 RAINBOWS, Ed Ellers covers how to upgrade Korean-manufactured CoCo 2s. If yours is one of the earlier, American-made CoCo 2s, refer to his "RAM/ROM Upgrade Roundup" in the May 1984 issue. But, with your overheating problem compounding the situation, I think you would be better off cutting your losses and buying a new CoCo 3.

Changeable Character Set

 Is there any software available that would allow me to change the character set on my 64K CoCo 2?

Kevin Callis
Alberta, VA

Richard Esposito is a senior project engineer with Northrop Corp. He holds bachelor's, master's and doctorate degrees from Polytechnic Institute of Brooklyn. He has been writing about microcomputers since 1980.

R Computerware, Box 668, Encinitas, CA 92024, (619) 436-3512, sells a machine language program called *Screen Expander*, Kevin. It uses the high resolution display screen to generate a new character set.

A New Keyboard for CoCo

 I'm considering purchasing a keyboard for my old gray 'E' board CoCo 1. I am quite satisfied with CoCo's original keyboard layout and have no need for special function keys. Could I purchase Tandy's replacement keyboard kit (Catalog No. 26-3016, \$39.95) and install it myself?

David Turk
Richland Center, WI

R Installing a keyboard is simple enough, David, but be sure that they supply you with an adapter, because the old gray Color Computers

(those with 'C', 'D' and 'E' boards) used a wire cable instead of the mylar one which is used on the newer machines.

Bugged by ZBUG

 I'm 15 years old and am trying to learn assembly language after two years of experience with BASIC. I purchased the EDTASM+ program and have been having some problems executing programs in ZBUG. One problem that I have had is that when I try to execute a program in ZBUG, it hangs up and resets the program. Is this a problem with the program or with the editor? Is there a program for EDTASM+ which turns object code into the editor's source code?

Wayne Facer
Chiloquin, OR

R The problem is with your program, Wayne. When you program in BASIC, you are using a built-in interpreter; the interpreter systematically scans each line for errors and, if it is correct, translates the line into machine language which it then executes. If the line is incorrect, the program halts and an appropriate error message is displayed. When you program in assembler or machine language, no such error checking is done, so if you make a logic error in your code, the odds are that the machine will lock up or do a reset. Unfortunately, the only thing you can do is to save the source code before assembling so that you can make corrections and try again. ZBUG allows you to disassemble small portions of code and there are more sophisticated disassemblers available from advertisers in the magazine. The most difficult part of the disassembly process

domain software. First log on restricted, mail privileges, no download restriction.

Montreal, Quebec

ADOS ENHANCED, EPROM-ABLE DISK BASIC

Now you can supercharge Basic with an impressive array of extra features WITHOUT sacrificing compatibility! ADOS is compatible with virtually 100% of commercial software. Customizing utilities are provided to allow user-defined command abbreviations, baud rate, step rate, tracks per disk, 135 or 401 support of double-sided drives, and more. After customizing ADOS you can have it burned into an EPROM that plugs into the Disk Basic ROM socket. Or just use it in RAM as a 64K disk utility. (EPROM burning will cost about \$20—we provide information concerning how you can have this done.) Features include: • repeat and edit of the last direct-mode command • 26 definable control key abbreviations • automatic line-number prompts • DOS command • lowercase command entry (a line complement to a Lowerkit or PBJ WordPak) • COPY (filename to drive number) • AE error override option • RAM command (64K) • RUNM command • text echoing to printer • ML monitor • text file scan • enhanced directory • error trapping • hires text utility included (42, 51, or 64 characters per line)

"I COULD NOT FIND ANY SOFTWARE THAT WOULD NOT RUN UNDER ADOS."
THE RAINBOW December 1984

"I LOVE ADOS! . . . A GENUINELY FIRST RATE PRODUCT."

Color Micro Journal, February 1985
"I WON'T PART WITH MY ADOS EPROM FOR ANYTHING . . . NO COMPATIBILITY PROBLEMS."

THE PEEPER ML PROGRAM TRACER

Monitor machine-language programs AS THEY ARE RUNNING! Peeper actually timeshares with the target program, giving FULL CONTROL as ML programs run. Switch instantly between watching regular program output and Peeper's trace of registers and stack on screen or printer. Inspect memory in any of 26 display modes. Execution speed can be varied from full speed to the slowest crawl or halted entirely as programs run. Single-stepping, breakpoints, memory or register examine/change. Relocatable, supports 64K use (16K required). See February '85 review.

NEW FOR COCO3

CUSTOM CABLE FOR MAGNAVOX RGB MONITORS

The Magnavox 8CM515 and 8CM505 monitors, containing RGBA, RGBI, and audio inputs, sell at prices comparable to Tandy's CM-8, and represent a far better buy for CoCo 3 users. Composite input, which CM-8 lacks, is required for seeing PMODE 4 displays in color. RGBI allows the Magnavox, unlike the CM-8, to be used with PC-Compatibles—a big resale consideration.

NEW

THE COCO-PC IS HERE!

Wouldn't it be great to use an IBM PC, XT, AT or compatible to run CoCo OS-9 and FLEX software.

Well, now you can with our PI-6809 processor card. PI-6809 fits neatly into a full size expansion slot in the PC. It features ONE MEGABYTE RAM, 128K EPROM and a full RS-232 interface.

Our software runs FLEX and boots CoCo OS-9 from disk yet gives you FULL ACCESS to PC facilities including hard disk, printer, network . . . and file transfer between FLEX, OS-9 and PC/MS-DOS formats.

NO RISK TRIAL — Buy the PI-6809 now and we give you a money back guarantee if you are not satisfied. DON'T DELAY — ORDER TODAY!

The Best Money Can Buy . . . HDS Floppy Drive Controller Board

Features*

- Gold Plated Edge Cards
- Dual Selectable ROM Sockets
- Compatible with COCO I & II
- 120 Day Warranty
- Double and Single Density

Reduce your I/O errors with the Hard Drive Specialist Floppy Drive Controller for the Color Computer. Gold edge card connectors, advanced design, and the absence of potentiometers make it the best available. Our newest version controller allows the use of either (two 24 pin ROMs), or (one 24 pin and one 28 pin ROM). Using this board with the standard Radio Shack ROM gives you 100% compatibility with all Radio Shack software.

**Completed and Tested Board
with Radio Shack ROM \$99.**

Ordering Information:

Use our WATS line to place your order via Visa, MasterCard, or Wire Transfer. Or mail your payment directly to us. Any non-certified funds will be held until proper clearance is made. COO orders are accepted as well as purchase orders from government agencies. Most items are shipped off the shelf with the exception of hard drive products that are custom built. UPS ground is our standard means of shipping unless otherwise specified. Shipping costs are available upon request.

is distinguishing between code and tables or data.

Double-Precision Arithmetic

 I would like to be able to use double-precision arithmetic on my CoCo 32K with Extended Color BASIC 1.1, RS-DOS 1.1. Do you know of any machine language programs available that would give me this capability? I have heard that VIP Calc has such capability. Using EDTASM+ (tape) I think I could find the section related to double precision arithmetic, but I would need a printout of VIP Calc. Do you have a patch to make this printout possible? My goal is to obtain as exact solutions as possible and I would gladly sacrifice operating time for the increased accuracy.

Willard Conner
Chadds Ford, PA

RX VIP Calc does not come with source code. This means that you would have to use a disassembler, which is not an easy task. You would have to have some machine language savvy, and would have to use the disassembler to try to find the code that performs the calculations desired. Even distinguishing between code and data is a difficult task at times. A better way to obtain the accuracy that you desire, Willard, would be to write the code using the C language. In order for you to use C, though, you will need to operate under OS-9. Another way for you to obtain accurate solutions would be to write the code using *x*BASIC, under FLEX. Both of these environments require at least 64K of memory. You said that you had 32K, but if you have an 'F' board, you may really have 64K.

DOS Determination

 How can I tell what DOS my Color Computer is using? I have a DMP-105 printer and a couple of my friends have DMP-110 printers. Do you know of any screen dump one-liners that we can use with our printers?

Paul Dumin
Southington, CT

RX To date, Paul, Radio Shack has supplied only DOS versions 1.0 and 1.1. The version that is loaded into your machine will appear on your screen when you turn on your computer. If you have a CoCo 3, the version will either appear as DOS 2.0 or DOS 2.1, even though they are the same as 1.0 and 1.1. The only significant difference between DOS 1.0 and 1.1 is the addition of the DOS command. This command enables the Color Computer to load OS-9. It would be relatively simple to write a one-liner that would dump the screen to either of the mentioned printers, but it would be dreadfully slow. A fast machine language screen dump program that should work with your printers is called *Versadump*, which appeared in "Printer Answers," *HOT CoCo*, March 1985, Page 24.

Travel Keyboard Connector

 I have a CoCo 1 'D' board 32K, upgraded to an 'E' board, two disk drives and a Gemini 10X printer. I have two problems that have been driving me crazy. I have a CoCo 1 keyboard (pin and cable connection) and an excellent full travel keyboard that a friend gave me. It has a flat ribbon that slides into a connector, not the plug/pin like my old keyboard. I have not been able to find an adapter that would allow me to connect the new keyboard to my CoCo 1. I've tried placing the ribbon on top of the pins and clamping them together, which gives me about 90 percent of the keys, but if the keyboard moves even a nanometer I have to reclamp it and start all over. Radio Shack has not been able to help me in my search for the adapter, can you? I also have the Radio Shack graphics software. What can I buy that would allow me to print out the pie, bar and scatter charts on my Gemini printer? Is this software only compatible with Radio Shack printers? I bought a screen dump program, but it doesn't seem to work with the Radio Shack graphics.

Larry Pistelli
Fountain Valley, CA

RX For the adapter that you require, Larry, contact Spectrum Projects, P.O. Box 264, Howard Beach, NY 11414, (718) 835-1344. Explain that you need an adapter that connects a new-

type keyboard to the older CoCo 1 machine. These adapters are a Tandy product that were distributed for keyboard upgrades when the CoCo 2 was introduced. For the screen dump desired to print the pie, bar and scatter charts, see the *Versadump* program mentioned in the previous answer.

The Software Needs an IBM

 In reply to my question in the November 1986 issue of *RAINBOW* concerning the use of IBM software on my CoCo, your answer said, "The program that allows you to do this is the CoCo Util II, by Mark Data." I bought the program only to find that it must be run on an IBM (or Compaq) which I do not have. I called Mark Data to inquire about this and they told me that I cannot transfer the data on anything other than an IBM or Compaq, and to add insult to injury, I couldn't even get a refund! I feel that you should let your readers know that CoCo Util II will not do the job, before others buy the program and discover the same thing.

A. Obner
Hendersonville, NC

RX In answering your question, I assumed that you either had an IBM-compatible machine or had access to one. Otherwise, why would you have IBM software? The advertisement for the *CoCo Util II* program in this magazine (see Spectrum Projects, Inc.) states "Requires 128K MS-DOS Computer W/2 Disk Drives." *CoCo Util II* is designed for the person who has access to an IBM-compatible machine. IBM software is usually written and read on both sides of a disk, 40 tracks per side, nine sectors per track and 512 bytes per sector, whereas the CoCo can normally only access one side of a disk containing 35 tracks, 18 sectors per track and 256 bytes per sector.

When using the *CoCo Util II* program, you would first need to format a CoCo disk, then insert the formatted CoCo disk into the IBM-compatible machine and copy an ASCII file to the CoCo disk. You could then edit the file on your CoCo, and later transfer the file back to the IBM-compatible machine in a similar fashion.

Be alerted that only high-level source code saved in ASCII can be transferred. Neither the *CoCo Util II* program nor

any other is designed for the person who wants to buy IBM software and use it on the CoCo unless, of course, the source code is supplied, but this situation is quite rare. It is designed for the person who, perhaps, uses an IBM-compatible machine at work and wants to edit the same files at home, then take them back to work.

Any IBM-compatible machine can transfer the disks using the *CoCo Util II* program. If you want to transfer IBM PC programs written in BASIC and saved in ASCII to your CoCo you can use one of several methods. D.P. Johnson, 7655 S.W. Cedarcrest Street, Portland, OR, markets *PC/XFER Utilities*, \$45. *PC/XFER* also requires *SDisk*, \$29.95, marketed by the same company. To use *PC/XFER Utilities*, you pipe the standard input/output to/from the single-sided PC/MS-DOS disk. You can also refer to Marty Goodman's "Transfer CoCo Text Files to MS-DOS Disks" in the June and July 1985 issues of *THE RAINBOW*.

Bar Code Reader

 Is there a bar code reader wand with corresponding hardware and software that would allow me to read data in, and print bar codes with a DMP-105 and/or DMP-500 Radio Shack printers, under CoCo 2 control?
Jose Pedro Alberti
Argentina

R Radio Shack markets the wands, bar code drivers and read/write software only for the model 100/102/

200s. In order to use these wands on your Color Computer, you would have to design your own hardware adapters and write your own software to convert the Model 100 system to your CoCo.

JDOS-CoCo 3 Incompatibility

 I am a longtime CoCo 'F' board user who recently acquired one of the first CoCo 3s at the RAINBOWfest. So far, I've found that the machine has great potential, but it's giving me some initial heartburn. I have two disk controllers, J&M and HDS, each with two ROM chips, giving me JDOS 1.2, RS-DOS 1.0 and RS-DOS 1.1. When running with disk, all of the CoCo 3 commands seem to disappear. For example, the WIDTH command gives a Syntax Error. What do I have to do to achieve successful CoCo 3 disk operation? What can I do to achieve successful CoCo 2 emulation running a CoCo 3 as a disk system? Also, How do you get Telewriter-64 to work on the CoCo 3?

Col. H.L. Elman
Port Jefferson Station, NY

R JDOS is not compatible with the CoCo 3. If you want an alternate DOS with additional capabilities, be on the lookout for ADOS3, by Spectro-systems, 11111 N. Kendall Drive, Suite A108, Miami, FL 33176, (305) 274-3899. It might already be on the market by the time you read this.

As far as CoCo 2 emulation is concerned, if you mean you want the CoCo 3 to boot up and indicate Disk Basic 1.x instead of 2.x, then type POKE&

HFFDE,0: POKE&H71,0: EXEC&H A027.

If your *Telewriter-64* does not work, I assume that you have an older version, which has problems with improper response to the keyboard. In your disk version of *Telewriter-64*, add the following lines to the program *U/BAS* and replace its Line 200 with the line below.

```
200 LOADM"TW64",OF:GOSUB 500
      :POKE386,57:IF(SW)GOSUB 330
500 P1=PEEK(&HA000):P2=PEEK(&HA
      001)
501 POKEOF+7931,P1:POKEOF
      +7932,P2
502 POKEOF+8210,P1:POKEOF
      +8211,P2
503 POKEOF+9845,P1:POKEOF
      +9846,P2
504 POKEOF+13783,P1:POKEOF
      +13784,P2
505 POKEOF+14774,P1:POKEOF
      +14775,P2
506 POKEOF+15241,P1:POKEOF
      +15242,P2
507 IF PEEK(&HC004)=215 THEN
      POKEF+8929,202:POKE8930,103
508 RETURN
```

For a quicker response, your questions may also be submitted through RAINBOW's CoCo SIG on Delphi. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASK for "Ask the Experts" to arrive at the EXPERTS> prompt, where you can select the "Doctor ASCII" online form which has complete instructions.

DISK DRIVE SYSTEMS!

ALL 1/2 HEIGHT DOUBLE SIDED

Drive 0 (addressed as 2 drives!) \$235
 Drive 0,1 (addressed as 4 drives!) \$350

All above complete with HDS controller, cable, & drive in case with power supply

Bare Double Sided Drives \$109
 Dual 1/2 Height Case w/Power Supply \$49
 Double Sided Adapter \$25
 HDS Controller, RS ROM & Instructions \$99
 25 CDC DS/DD Diskettes \$32 & \$3 s/h

We use the HDS controller exclusively. Can use 2 different DOS ROM's.
 Shipping Costs: \$5/drive or power supply, \$10 max.
 Co Co Serial Cables 15 ft.—\$10, Co Co/RS-232 Cables 15 ft.—\$20.
 Other cables on request. (Add \$3⁰⁰ shipping)

SP-2 INTERFACE for EPSON PRINTERS:

- 300-19,200 BAUD rates
- Fits inside printer — No AC Plugs
- Optional external switch (\$5⁰⁰ extra) frees parallel port for use with other computers
- \$49⁹⁵ (plus \$3⁰⁰ shipping)

SP-3 INTERFACE for MOST OTHER PRINTERS:

- 300-19,200 BAUD rates
- External to printer — No AC Plugs
- Built in modem/printer switch—no need for Y-cables or plugging/unplugging cables
- \$64⁹⁵ (plus \$3⁰⁰ shipping)

Both also available for IBM, RS-232 and Apple IIC computers.

Roboflip: Anatomy of a Game

By Fred B. Scerbo
Rainbow Contributing Editor

Editor's Note: If you have an idea for the "Wishing Well," submit it to Fred c/o THE RAINBOW. Remember, keep your ideas specific, and don't forget that this is BASIC. All programs resulting from your wishes are for your use, but remain the property of the author.

Since a number of people are very excited about the game and graphics possibilities of the new CoCo 3, this month we will review the basics of game-making by presenting a brand new Color BASIC game inspired by the letters and phone calls of a number of readers. In the following paragraphs I will unfold the story that led to the creation of this month's program: *Roboflip*.

Wishes? What Wishes?

During the last year and a half, the wishes submitted by many readers have been darn near impossible to grant. The original intention behind the "Wishing Well" was to have RAINBOW readers bounce ideas off me that could possibly be turned into working BASIC programs. Unfortunately, some readers have either requested programs that only one or two people in the entire

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.

world could use, or projects that could not be done in BASIC, even with 128K!

A number of readers have been requesting more games. Others have insisted that programs be made to work on the MC-10 as well. One such reader, Mr. Larry Haines, editor of the *MC-10 International User's Group* in Spokane, Wash., blasted me for suggesting that the MC-10 was dead. (Sorry, I only said I felt not many people were using it. I never said it was *dead*!)

Anyway, I felt this would be a good time to come up with a program that would still work on the MC-10 (with 20K). Prompted by Mr. Haines' request that I not abandon the MC-10, I started scratching my head to come up with something new.

At that point, I got on the phone to Tony Morris, co-owner of a new computer supply outlet in western Massachusetts, called Computer Food. I needed some repair work done on my line printer, so we got into a short conversation. Tony commented that his nieces were now using the 64K disk system he gave them and used a heavy dose of "Wishing Well" programs, such as *Math Driller* and *Color Change Quiz*. He also asked when some new games would be coming down the line.

"This is getting tough lately, Tony. No one has suggested any workable ideas for games lately. Everyone wants games, but I'm at a loss of what to come up with. Writing a new program each month for several years has taken its toll!"

"Oh, come on now," he answered. "There are a lot of things you could make for games. It doesn't have to be elaborate!"

"Oh yeah?" I replied. "What would you suggest?"

"What about a game of Flip?"

"Flip?"

"Yeah, you remember playing Flip with baseball cards when you were a kid. Why not make a computer version?"

A computer game of Flip? I reflected that Flip was not such an old game, after all. It seems that every day I have to break up a game of Flip somewhere in the school building. (The only problem here is that most of the high school students I catch are playing Flip with dollar bills, with real money as the prize. This is forbidden in school!)

Now seemed like a good time to introduce a computer game of Flip. Maybe I could come up with an attractive game that would satisfy my students' desire to play the game, without involving any money, and also satisfy those who wanted a new CoCo game (including the MC-10 fans).

The result is *Roboflip*, a Lo-Res graphics version of the game I played as a kid on the grammar school playground. However, getting the game to work correctly was a much tougher task than I expected.

Writing the Game

What, you might ask, is so difficult about writing a game of chance? Just

"The computer has a very predictable way of generating random numbers."

random numbers. Copy them down. Now turn the computer off and on again. Repeat the same command again and compare the numbers on the screen with the numbers you wrote down. They are the same, aren't they!

The point is, the computer has a very predictable way of generating random numbers. Most users of the Color Computer will be familiar with the way to overcome this. Making a variable equal to the negative value of the TIMER resets the random number generator.

A=RND(-TIMER)

This is even more effective if placed inside a loop using the INKEY\$ command, which keeps resetting the value until the user responds to the keyboard.

This was not the major obstacle, however. The big problem was making the game "winable" or "loseable." If you flip a coin one hundred times, odds say you should get a 50/50 split nearly all the time. If I made each player's values too large, the game would eventually reach an equal point where neither one would win or lose. One player's losses would later be offset by the other's.

I got around this by giving each player only 10 cards. This number lets

the game be completed within a reasonable amount of time. (No one wants to play Flip for half an hour!)

Once I got the program lines workable, I created a graphic to go along with the game. This type of game could be written with just text, but it would be a complete drag. Therefore, I designed two colorful robots who play the game. One is the player, the other is the computer. Using a number of FOR-NEXT statements and the SET, RESET and PRINT@ commands, I was able to put together a simple animation that shows each robot shaking a set of colorful cards and then flipping them, thumbs up, into the air. The cards then gently flutter to the ground.

Sure, this could have been a Hi-Res game, but then it wouldn't work on Color BASIC CoCos or on the MC-10. I hope none of you are too spoiled by Hi-Res to ignore the many uses of the SET command and character strings. When working with very young children, a game like this in Lo-Res is much more effective and will hold the youngster's attention.

Playing the Game

On running the game, you will notice a slight variation on our "Wishing Well"

use the RND command, right? Not so simple, my friends. Those of you familiar with how a computer works will know that a computer does not generate true random numbers. Try this little test.

Turn on your computer, type the following and press ENTER.

```
FOR I=1 TO 10:PRINT RND(10):NEXT
```

The screen will print out a string of

MEMORY MINDER™

A unique approach to disc reliability

Memory Minder from J&M Systems is one of the most comprehensive disk drive diagnostic programs available for microcomputers. It quickly and easily runs comprehensive testing of all vital operating parameters to assure data integrity.

Data Integrity Means Data Confidence

Memory Minder is so easy to run you will be inclined to test your disk drives on a regular basis and correct problems before they ever endanger your data. This program provides long term confidence in your data integrity.

Memory Minder is currently available for the following:

Version 1.03
TRS-80 Model III/4
48 tpi Single Side
48 tpi Double Side
96 tpi and 48 tpi Double Side

TRS-80 Model-I
48 tpi Single Side Single Density

TRS-80 Color Computer and TDP-100
48 tpi Single Side
48 tpi Double Side

Technical Knowledge Not Required

Simply slip in the Memory Minder disk and select one or more of eight sophisticated tests. Easy to understand graphics on your screen display findings in a few moments. Now you can discover potential misalignments and problems before they endanger your valuable data.

Call or write for details and more information

We accept MasterCard and Visa

title. I have only a few DATA lines that are used more than once with the RESTORE statement. This repeats our *Roboflip* title without duplicating lines. Pressing ENTER starts the game from the title page.

The screen creates two robots. The one on the left is you, and has a green head. The one on the right with the red head is the computer. At random, one of you will have the first "flip." If the computer goes first, he will just shake his hand and flip. If you go first, the screen will wait until you press the space bar to flip. Don't worry, the screen prompts you with directions as the game is played.

If the two cards are both green, like your robot, you win both cards. (You start with 10 cards apiece.) If both cards turn up red, the computer wins. If they split, the cards stay in the pot and you both flip again, in reverse order. The screen shows a number dead center, which is the number of cards in the pot. The next one to win a hand collects the whole pot. The number of cards is displayed above each player's head. If a player hits zero while there is a split, both players split the pot and continue until one player hits zero on a loss.

Sound simple? You will be surprised

how frustrating the flipping can be when things are not going your way. The game can be interesting, especially for the very young who never played Flip with baseball cards.

Typing in the Game

For those of you who are new to the "Wishing Well," I will repeat a few standard points. Be sure to type in the DATA lines exactly as you see them. The commas are not a mistake. Also, if you see any lowercase letters in the listing, you must use SHIFT-0 to get into and out of the lowercase mode. The letters appear as a reversed black block on the screen, which looks very attractive once you get down to playing the game.

MC-10

There is only one change that is required when you type in this listing. The MC-10 doesn't have a TIMER function, so you should replace the command TIMER with some large number, say 9999, instead. This will give you a random appearance when in the INKEY mode. Make this change anywhere in the listing where you see -TIMER.

New Challenges

As this year progresses, I would really

like to develop some elaborate games, preferably with an educational application. When it comes to Adventures, I don't usually have a good idea to start with. Therefore, I am going to issue a challenge.

If you have a theme you would like to see used for a game, drop me a line with your idea. Be as specific as possible. If you can think of a way to have it include an educational task, suggest that too. If your idea is good, I will even include your name or names in the title card, which I haven't done in the past. Get these in the mail to me c/o THE RAINBOW or to my home address (60 Harding Avenue, N. Adams, MA 01247). Please don't expect a written response — I don't have the time for computer pen pals, as much as I would like to.

Conclusion

This program was short and simple, but for those of you just starting out or with young children, it will be a good way to get your feet wet. I hope you enjoy the game. In return, I hope to receive an avalanche of valuable suggestions. Either way, you will be the winners. □

Hint . . .

Sound Advice

When I hooked my Color Computer up to a monitor, I knew something was missing. I had built my own video driver, but had not made accommodations for the audio. I started looking for an easy way to obtain sound from the Color Computer without having to build a special circuit. It was then that I stumbled across the cassette port. I just used an adapter to change the 1/8-inch phone plug on the cassette cable to an RCA-type phono plug I could plug into my monitor. The adapter is readily available at your local Radio Shack. Although it doesn't work for some programs, it is an effective and very inexpensive way to get sound from the CoCo.

*Frank Mattia
Brooklyn, NY*

The Budget Master's Companion

By David V. Haas

This is a monthly budget for use on a tape-based system. It will store up to nine fixed monthly expenses, plus nine other bills. You may enter as many as five paychecks.

Budget will keep a current balance of all checks minus any bills. When a bill is deducted, it is locked out with a PAID flag. These flags are stored with your other data on tape to indicate all previously paid bills.

After reviewing paid bills, reset the flags and you're ready for the current week's deductions. I recommend that you save your data after each session and, at the end of each month, save the past month's data so it may be referred to if necessary.

Included is a print function that prints the beginning balance and the balance after each deduction. This is handy for checking off each payment as you mail it.

The paycheck entry section holds a maximum of five entries and each one is added to the current balance as it is entered. Paychecks load in sequence automatically. The date of the entry is also displayed.

When loading miscellaneous bills, you are prompted to clear all bills, keep previous entries, or return to the main menu. The number of currently loaded bills is displayed below the menu as a reminder. When loading miscellaneous

bills, no entry names longer than eight characters are allowed.

Load fixed expenses by editing Line 130 to contain up to nine expenses. Then edit Line 110 to load the dollar amounts for the entries made in Line 130. All loaded bills are displayed when deducting fixed or miscellaneous expenses. The current balance (total of all checks minus deducted expenses) is also displayed. You are prompted for Deduct Bill or Main Menu. After deducting a bill, it is locked out with a PAID flag. Any time you select a bill higher than those displayed, or one that is locked out, an error tone sounds.

Use the Skipf/Set Gap Option to skipf your user copy of *Budget* and to set a blank gap after it before you save new data to tape.

The printer output is formatted for the CGP-220. The finished printout is color-coded orange for deduction, and green for balances after expenses are subtracted. The control codes are easily changed for other printers. When choosing this option, you are prompted for the amount of pay for the week you are in and the current day of the month. Then you are given the option of printing each expense. Each is printed and subtracted from the paycheck listed. Then the balance is printed and the next expense is listed.

Use the last option, Quit/Reset Flags, to reset all lockout flags after reviewing paid bills. When you are finished, simply choose Quit, and you are through for the day.

(You may contact the author at 126 A Oak Drive, Eglin AFB, FL 32542, 904-651-2913. Please enclose an SASE for a reply when writing.)

Dave Haas is a staff sergeant in the U.S. Air Force stationed at Eglin Air Force Base in Florida, and is a maintenance technician for fire control avionics on F-16 aircraft. He is married, has three children, and enjoys Color Computer programming in his spare time.

PRICKLY-PEAR SOFTWARE

QUALITY PROGRAMS FOR YOUR COCO & TDP-100

PROGRAMS REQUIRE 16K EXTENDED BASIC FOR TAPE, AND 32K DISK UNLESS OTHERWISE NOTED.

HALL OF THE KING (Rainbow Review 6/86)

This program combines all the things you look for in a great two disk graphics adventure program. The Hi-Res graphics are superbly done. The text portion of the screen and the graphics change quickly as you move through the **HALL OF THE KING**. You can move freely from one portion of the adventure to another. Call up your inventory at any time. You can even save or load a game at ANY time. **HALL OF THE KING** will challenge even the most seasoned adventurer.

HALL OF THE KING requires 64K EB and one disk drive. This exciting two disk adventure comes packaged in a vinyl case. **\$39.95.**

HALL OF THE KING II (Rainbow Review 9/86)

Continue your quest for the Earthstone in The Inner Chambers of the **HALL OF THE KING**. Outstanding graphics help show the way to success in your search to help restore the legendary power of the Earthstone to the dwarven race. The deeper you travel into the inner chambers, the more difficult your progress becomes. **HALL OF THE KING II** has all the fine features of the first adventure. It is designed to follow the original **HALL OF THE KING** but may be played as a stand-alone adventure. The adventure fills two disks and comes packaged in a handsome vinyl folder. It requires one disk drive and 64K. **\$39.95**

WARP FACTOR X (Rainbow Review 2/86)

If you have been waiting for a game for your color computer that has everything, your wait is over. **WARP FACTOR X** is here. This all graphics simulation game requires strategy, fast thinking, an eye for detail, and above all experience in knowing the capabilities of your starship and its computer. (See review in Feb. 85 issue of Rainbow.) It requires 32K one disk drive and comes packaged in a vinyl library case. **\$34.95**

DARKMOOR HOLD (Rainbow Review 8/86)

You and your comrades will explore the levels of Darkmoor Hold in an effort to gain great riches and defeat the dark wizard. The Wizard will soon realize the threat you pose and the many monsters you meet and battle will become stonger and more powerful as you move through the 10 levels of Darkmoor. A keen eye will help you find weapons and armor to aid your battle along with treasures for you to keep. Your party consists of a Dwarf, an Elf, and you, the Human, each with their own special attributes. The weapons, armor and treasure are placed randomly in each level to provide a new challenge each time you play. You may also save the game you are playing since defeating the evil Wizard is not an easy task. It has great graphics and an impressive text screen to give you more fun than a barrel of elves. Requires 64KEB and 1 disk drive. **\$29.95**

POLICY ON PROTECTION

We believe our customers are honest — all of our software can be backed up using standard backup procedures.

Your Personal check is welcome - no delay. Include \$1.50 shipping for each order. TX residents add 5 1/8% sales tax. Orders shipped within two days.

Dealer and author inquiries are always welcome. Canadian dealers should contact Kelly Software Distributors, Ltd. 608, STNT, Calgary, Alberta T5H 2H2, (403) 236-2161

DRAGON BLADE (Rainbow Review 11/86) Animated Graphics Adventure

This 100% hi-res graphics adventure features many animated screens which will delight the avid adventurer. You search for the magic Blade which is the only way to rid your homeland of the fearsome dragon which has risen from a long rest to terrorize your village. Fill your screen with super graphics as you try to solve the difficult challenge the village leaders have set before you. Dragon Blade requires 64K EB and 1 disk drive. **\$29.95**

DOLLAR WISE

NEW

In todays world of high finance, variable interest rates, balloon payments, and lease options there is a program that can help you sort out the details and make sense of the small print. **DOLLAR WISE** is an extremely flexible program that will allow you to find the best loan by substituting values for all the different variables that make up the loan. Find the future value and interest paid for either single or multiple deposit savings accounts. Determine mortgage interest paid during a tax year—very good for estimating tax savings on credit purchases also. Should you rent or buy. **DOLLAR WISE** gives you all the options. It will even provide a loan amortization table print out with Tax Year summaries either by month or year. Requires 32K Tape - **\$24.95** Disk - **\$27.95**

FONTFILE — (New for the COCO III)

NEW

FONTFILE replaces the standard Hi-Res COCO III font with a character set you select. Choose from a menu of 26 or create your own and save it to disk for future use. Use the fontfile in your own basic programs or livenup an old program with a Hi-Res font screen. **FONTFILE** will work on all versions of the COCO but is especially written to take advantage of the special capabilities of the new COCO III. Requires 64K and one disk drive. **\$24.95**

COMING SOON! Hall Of The King III

INDUSTRY QUALITY
COMPUTER PRODUCTS
PRODUCTIONS

Micro • Fire the ultimate secret weapon.

Have you beat your thumbs more than the aliens? This is a great rapid fire circuit that's easily installed on any joystick. Has no computer side effects. Comes with complete instructions and calibration program for adjustment to taste. \$19.95 (\$24.95 CDN.) Reviewed October 88

Class Monitor Dual monitor driver

The best monitor driver for any Cocom. It drives any composite, colour or monochrome monitors. Complete with dual audio outputs for immediate access of either or both monitors. Simple installation instructions. \$31.50 (\$39.50 CDN.)

Lazer Mazer master puzzle of reflection

The supreme game of suspense. Yours is the strategic battle of time and space. \$24.95 (\$29.95 CDN.)

Battle to D-Day the multiple player adventure

The master game of strategy. Battle against time, battle against the Third Reich. Up to four joystick players. Adventure in thoughtware. \$29.95 (\$38.95 CDN.)

Machine Genesis assembly tutor...plus

is a clean and simple approach to learning binary programming. The package includes full beginners instruction in plain language, an editor assembler, a debugger, a disassembler and utilities for advanced study and application. Fantastic value at only \$34.95 (\$49.95 CDN.)

Buy Quality and Value!

Keeping Track more than a disk manager.

If you own more than two disks you'll love Keeping Track. A manager menu of nine utilities that do it all! The real highlight is "D": the directory/autostart. It's a continuous access I.D. directory that loads and executes any program with a single keystroke. All programs fully documented. \$29.95 (\$38.95 CDN.) Reviewed March 87

Map 'n Zap semi automatic disk repair

The layman's step by step kit for directory and grain table repair. Locates errors, maps out disk contents to screen or printer, backs up any flawed disk and prompts built in disk zap for repair. Complete with full tutorial on Cocom's disk input / output access operation. \$19.95 (\$24.95 CDN.) Reviewed January 87

Code Buster machine language disassembler

Three terrific programs to explore machine language. Screen or printer accurate disassembly of binary code. Simple prompted procedure with some instruction to dissect and understand your ROMs. Fully documented for only \$19.95 (\$24.95 CDN.)

Submitting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

Program submissions must be on tape or disk and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs. All programs should be supported by some editorial commentary explaining how the program works. Generally, we're much more interested in how your submission works and runs than how you developed it. Programs should be learning experiences.

We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submissions Editor, THE RAINBOW, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. We will send you some more comprehensive guidelines.

Please do not submit programs or articles currently submitted to another publication.

Telewriter-64™

the Color Computer Word Processor

- 3 display formats: 51/64/85 columns × 24 lines
- True lower case characters
- User-friendly full-screen editor
- Right justification
- Easy hyphenation
- Drives any printer
- Embedded format and control codes
- Runs in 16K, 32K, or 64K
- Menu-driven disk and cassette I/O
- No hardware modifications required

THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with *true lower case characters*. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.

...one of the best programs for the Color Computer I have seen...

— Color Computer News, Jan. 1982

TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer — 16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays: 64 × 24 and 85 × 24! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command.

The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, *all on the screen at one time*. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing.

RIGHT JUSTIFICATION & HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.

Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

FEATURES & SPECIFICATIONS:

Printing and formatting: Drives any printer (LPV11/VIII, DMF-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Terminus, etc).

Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dot-graphics, etc.

Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification.

Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.

Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files — create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).

Cassette verify command for sure saves. Cassette auto-retry means you type a load command only once no matter where you are in the tape.

Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.

Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.

...truly a state of the art word processor...
outstanding in every respect.

— The RAINBOW, Jan. 1982

PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs \$49.95 on cassette, \$59.95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.) To order, send check or money order to:

Cognitec
704 Nob Street
Del Mar, CA 92014

Or check your local software store. If you have questions, or would like to order by Visa or Mastercard, call us at (619) 755-1258 (weekdays, 8AM-4PM PST). Dealer inquiries invited. (Add \$2 for shipping. Californians add 6% state tax.)

If You Pay Taxes You Need Coco-Accountant

All our software is CoCo 3 Compatible

"It's the most useful piece of software I own."

That's what we hear again and again from folks who buy Coco-Accountant II. This 32/64K single-entry accounting system for the home and small business is all you need to manage your finances and give you the information you need at tax time.

We wrote the original version for ourselves two years ago because we wanted to know three things: Where did the money come from, where did it go, and what can we deduct from our taxes?

As it turned out, we liked it better than anything else on the market, so we decided to sell it. And we've been improving it ever since.

People say they like it because it's easy to use. Just spend a few minutes each month entering your data: checks, cash outlays, credit card expenses or income. In any order. CoCo-Accountant takes the whole mess and makes sense out of it. Here's what it does:

- ◆ Lists and totals entries by month, offsetting income against expenses.
- ◆ Lists and totals entries by account, for a month or the whole year.
- ◆ Lists and totals entries by payee or income source, for a month or the whole year.

- ◆ Provides a year-to-date summary by account.
- ◆ Prints a spreadsheet showing activity by account and month for the whole year (seeing this one is believing).
- ◆ Flags deductible expenses.
- ◆ Flags expenses subject to sales tax and figures out how much sales tax you paid!
- ◆ Lets you define up to 48 accounts (in 64K version).

◆ Takes 900 entries in 64K version, 500 in 32K disk and 450 in 32K tape.

◆ Sorts entries by date.

◆ Stores your data to tape or disk.

You can use CoCo Accountant as a simple check-book register or make it into a comprehensive home accounting package. Our customers tell us they use it in the home, at school, for their clubs, churches and small businesses. In fact, they use it in ways we never dreamed of!

CoCo-Accountant II is so easy to use and flexible that you'll be delighted. So stop shoving all those records in a shoe box and join the computer age!

The price of Coco-Accountant II is \$34.95. Please be sure to tell us your memory requirements and whether you want tape or disk.

Thoroughbred, Harness, Greyhound

HORSE RACES

HARNESS RACES

DOG RACES

Use your **Color Computer** to improve your performance at the track! These 16K programs for **Thoroughbred, Harness** and **Greyhound** racing rank the horses or dogs in each race quickly and easily, even if you've never handicapped before. All the information you need is readily available from the Racing form, harness or dog track program. We even provide diagrams showing you where to find each item!

Thoroughbred factors include speed, distance, past performance, weight, class, jockey's record, beaten favorite and post position. **Harness factors** include speed, post position, driver's record, breaking tendencies, class, park-

ed-out signs and beaten favorite. **Greyhound factors** include speed, past performance, maneuvering ability, favorite box, class, kennel record, beaten favorite and breaking ability.

We include complete instruction and a wagering guide that tells you which races to bet and which to avoid—one of the real secrets of good handicapping. You can buy a more expensive handicapper, but we don't think you can buy a better one! **Thoroughbred, Harness or Greyhound Handicapper**, \$34.95 each on tape or disk. Any two for \$54.95 or all three for \$74.95.

Corrections

“GIME That Lowercase” (Hint, January 1987, Page 146): Due to a production error, one of the addresses in the POKE statement is incorrect. The address &HFF33 should be changed to &HFF22.

“Fortune Wheel on Tape” (December 1986, Page 50): Line 580 of the tape patch should be as follows:

```
580 FOR R0=1 TO R0
```

The variable name R0 was listed incorrectly in that issue.

“The Solitary Endeavor” (December 1986, Page 76): Tudor Jones has written to tell of a problem with the shuffle routine in SOLITAIRE. Apparently, the cards are not fully shuffled, resulting in the king of spades

appearing too often as the top card in Column 7. To fix this, change the value of 51 in the second FOR-NEXT loop of Line 230 to 52.

“Turn Of The Screw: Taking a Look at How Monitors Work” (January 1987, Page 94): The CoCo 3's RGB output uses positive-going sync pulses — not “negative or composite,” as stated in this article. The preferred monitors are those that have separate horizontal and vertical sync input lines and accept positive sync. The Sony monitor mentioned by Tony DiStefano (or others in the Profeel, XBR and 11CR series with analog RGB inputs) can be used as well, but a specially made monitor cable is needed.

For quicker reference, Corrections will be posted on Delphi as soon as they are available in the Info on Rainbow topic area of the database. Just type DATA at the CoCo SIG prompt and INFO at the Topic? prompt.

Computer Island Educational Software

ETT ELECT. TYPING TEACHER

32K Ext. - \$21.95 tape/\$26.95 disk
Visual clues guide you while you learn to type without watching your fingers! ETT shows your accuracy, response time, and word per minute. You quickly see how you improve with practice. Over 1000 sentence variations using every letter of the alphabet, or create your own practice sets. 10 page study guide included. Makes learning to type fun. From CoCo Warehouse.

PRESCHOOL PACK 1

16K Ext. - \$11.95 tape/\$16.95 disk
Clown and Fish-Num: Two programs to help your child recognize and count the words and numbers 1-10. Hi-res graphics and lively songs help to attract and keep attention.

PRESCHOOL PACK 2

16K Ext. - \$11.95 tape/\$16.95 disk
Count Kids and Add Penny: Two programs to help your child count and add up to 10. Beautiful hi-res graphics.

KING AUTHOR'S TALES

32K Ext. - \$29.94 disk only
This innovative program allows children in grades 2 to 6 to write compositions, book reports, or short stories and save them to files. The material can be reviewed, corrected, rewritten, saved and reloaded at any time. Teachers may create reading comprehension material for their classes.

COMPARISON SHOPPING

32K Ext. - \$19.95 tape/\$24.95 disk
Learn to be a smart shopper. Player compares prices at 3 stores and calculates savings. Hi-res screen. Scoring.

DISTANCE PROBLEMS

32K Ext. - \$19.95 tape/\$24.95 disk
Moving graphics and text combined on a Hi-res screen. Rate x Time equals Distance in all its forms.

SALES & BARGAINS

32K Ext. - \$19.95 tape/\$24.95 disk
Learn to find the discounted price. Hi-res text and beautiful graphics.

THE HISTORY GAME

32K Ext. - \$14.95 tape/\$19.95 disk
"Jeopardy" type game. 5 categories and 5 questions in each category. One or two player game checks your knowledge of American History. Different questions each round. Hi-res graphics.

GRAPH TUTOR

32K Ext. - \$19.95 tape/\$24.95 disk
Line, bar, pie and pictographs are demonstrated. Learn to read and use these graphs. Create your own graphs. Test mode. Hi-res graphics throughout.

EXPLORERS & SETTLERS

32K Ext. - \$19.95 tape/\$24.95 disk
Hi-res screen. Multiple choice quiz on explorers and settlers of the new world.

FAMOUS AMERICAN WOMEN

32K Ext. - \$19.95 tape/\$24.95 disk
A who-am-I game of over 50 multiple choice questions on a Hi-res screen.

KNOW YOUR STATES

32K Ext. - \$19.95 tape only
Hi-res graphics portray each state for you to identify. If you can't, try the "HELP" command where you can see the state's position within the entire United States. Choose the number of states you want to try and see your score at the end.

You Just Have To Stay Cool

By Dan Downard
Rainbow Technical Editor

● *Is there a way to mount a fan inside of a CoCo 2 without another power supply? My computer always overheats and destroys whatever I am doing.*

Chris Inacio
York, PA

Chris, I have seen several versions of fans for the CoCo, from muffin fans, to a little device that I call a "hummingbird." I looked through the ads and couldn't find any for sale. Fans are quite common for serious CoCo users. I would recommend a "hummingbird," my term for a small vibrating, rather than oscillating, fan.

Before you try a fan though, I would suggest a heat sink (to draw off heat and dissipate it) on your PIA chip. Just take a small piece of aluminum (not foil) stock and glue it to your PIA chip using heat conductive cement. Be sure to avoid any contact between the metal and any of the pins on the chip. Good luck, and stay cool!

Level I on CoCo 3

● *I can't get OS-9 Level I to boot on my CoCo 3. Do I have to wait for Level II or do I have a problem with my software or hardware?*

Dennis Alvarez
Euclid, OH

Dennis, you don't need OS-9 Level II to run OS-9 on the CoCo 3. You need Version 02.00.00 of Level I. If you have Version

Dan Downard is an electrical engineer and has been involved in electronics for 27 years through Ham radio (K4KWT). His interest in computers began about eight years ago and he has built several 68XX systems.

01.00.00, or 01.01.00, we understand that you can exchange it at your local Radio Shack store for an upgrade. There will be a charge, of course.

While we are on the subject, those of you with CoCo 3s who are interested in 80-by-24 text using OS-9 Level I should check the OS-9 Database on Delphi. There is a program called *CO380* that replaces *CCIO* with either an 80-by-24, or an 80-by-25 full-color driver. The driver uses screen memory outside your Level I workspace, and supports several *O-PAK* and Level II screen commands. You can use most existing Level I software, including most versions of *Dynastar*.

Hopefully, by the time you read this OS-9 Level II should be in the stores. Should you buy Level II? If you are in doubt, try the Level I driver. When you get Level II, the programs will be the same, you'll just have more memory, and a windowing environment.

Auto-Modem Appeal

● *I am in need of a modem with auto-answer/auto-dial capability. I don't have the RS-232 pack. Could you please suggest one? Also, where can I get a copy of super-patched EDTASM+?*

Jason McCampbell
St. Johns, MI

You do not need the RS-232 pack to use a modem, Jason. I use a Hayes Smartmodem connected to the serial I/O port on the rear of my CoCo. You will need an RS-232 pack if you buy a modem that is 1200 baud, or above. Reliable communications through the serial I/O port can only be obtained at 300 baud.

As far as modems are concerned, I would

recommend any brand as long as it's Hayes compatible. That means it uses standard Hayes control codes for auto-dial and auto-answer.

As far as obtaining a copy of *Super Patched EDTASM+*, the article originally appeared in the September 1983 issue of the RAINBOW. You must have the original ROM pack to use the patch. Try it, you'll like it!

Delphi Saving

● *I have a 64K CoCo 2 with both disk and cassette. I am currently using a Tandy direct connect modem with a Multi-Pak Interface. I would love to save to disk and am told it can be done, but no one seems to know how. Can you help?*

Vince Falcone
Minden, NY

The problem you are having is typical, Vince. I assume you are using an RS-232 pack. I guess you could be using the Modem pack, but that's a different story. You need to use another terminal package instead of the one in the RS-232 pack. You can disable the ROM in the RS-232 pack by cutting the CE pin. It would probably be better to remove the entire ROM. This prevents a conflict between the disk ROM and the RS-232 pack ROM.

Several programs are available for using the RS-232 pack as a terminal driver. *Autoterm* from PXE Computing, and *Datapak II Plus*, from Cer-Comp both support the RS-232 pack. Two popular public domain programs are *MikeyTerm* and *GETerm*. I'm using *GETerm* on a CoCo 3, and I think it's great.

● In your January 1987 column, Craig Leininger asked you about the up and left arrows in the listing from the assembly language book.

The up arrow should have been a down arrow which, when shifted on the CoCo, produces the left bracket, and the left arrow should have been listed as the right arrow which, when shifted, produces the right bracket on the CoCo.

Hope this information will help.

Carmen M. Izzi, Jr.
Naugatuck, CT

Thanks for the help, Carmen. I stand corrected. It's clear in the text that these codes stand for the left and right brackets respectively, or indirect addressing in assembly language. I should have known better than to question Radio Shack's proofreaders.

Downloading Doldrums

● Dan, I'm having no luck at all with the downloads on Delphi. I've downloaded at least six programs and none of them will run. I have no trouble with the downloads on any other BBS, including CompuServe, so I'm wondering if Delphi's downloads work differently from the others. Any advice? Thanks.

Joseph R. Lavallee
Carrollton, TX

Joe, I haven't noticed a difference between Delphi and any other bulletin boards. I would suggest using the Xmodem protocol for best results. You didn't mention your terminal software, or protocol. As I mentioned in a previous letter, I have used MikeyTerm and GETerm for downloads with no problems whatsoever. After reading the summary of the program you want to download, just type XM, enable your terminal software, and you should be on your way.

● I have a 64K Color Computer 1. My model number is 26-3002A. Is this an 'F' board? I want to upgrade my CoCo to a Color Computer 3. How can I do this? What VDG chip does the Color Computer 3 have? How can I upgrade my CoCo to red-green-blue analog color (RGB) for use with the CM-8? I understand it is difficult, but I want it done. From what chip does the CoCo 3 get its 640-by-192 graphics? How can I get 128K to 512K? Is its VDG like the CoCo 2? How many BASIC chips are there? In mine I have two BASIC chips (BASIC ROM 1.1 and Extended BASIC 1.0). Would I have to add another "ROM plug" to adapt the CoCo 3's 2.0 BASIC? From what chip does it get the 80-by-24 column display? In CoCo 2 mode are you able to get 80-by-24 display with the CM-8? In what chip does the CoCo 3 hide its 64 colors? How does it switch between ROMs? Where do I get these chips and hardware? This information is very important to me. Thanks a "byte."

Dan Trusz
Charleston, ME

Dan, you get this year's award for the most questions in the shortest space. You indeed have an 'F', sometimes called a "285" board.

In my opinion, it would be a waste of time to convert your present board to be equivalent, if not impossible. The last time I inquired, the price of 128K CoCo 3s was somewhere around \$170. The CoCo 3 already has an RGB output, plus the memory you want.

Now, as Paul Harvey says, you get the rest of the story. The CoCo 3 does not use a VDG, but instead uses a GIME chip both for memory management and graphics, including the 80-column screen. The 64 colors are hidden in memory pointers called palette registers. Physically, the GIME is a very small chip with a multitude of pins, not well suited for breadboarding, to say the least. It would be nearly impossible to duplicate a CoCo 3 without a GIME chip.

One ROM is used that contains both

BASIC and Extended BASIC, plus some patches by Microware to add commands to Extended BASIC. The only place to get it is from Radio Shack. The CoCo 2 mode supports only 256-by-192 graphics, the same as you now have. You cannot get good 80-column graphics in the CoCo 2 mode at present, even with an RGB monitor. It's better, but still not good.

I have an excellent idea. Why don't you buy a CoCo 3, take the guts out, put it in your CoCo 1 enclosure, and see what everyone says?

Moving Into High Memory

● Please tell me how to load the Tandy Hi-Res Screen Print Utilities cassette program, Catalog No. 26-3121, into high memory. This program loads: 14848, 16127, 14848 and there are instructions to relocate it at 12288. I have a 32K CoCo and would like to load into higher memory. I've made several attempts without success.

H.G. Williamson
Myrtle Beach, SC

H.G., all you have to do is add 16383 to each address you mention. It will work fine and allow you to use your extra 16K of memory.

Your technical questions are welcomed. Please address them to: Downloads, THE RAINBOW, P.O. Box 385, Prospect, KY 40059. We reserve the right to publish only questions of general interest and to edit for space and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Your technical questions may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASK to arrive at the EXPERTS> prompt, where you can select the "Downloads" online form which has complete instructions.

***** ASSEMBLY LANGUAGE PROGRAMMING TRS-80 COLOR COMPUTER**

This hands-on guide begins with the basics and progresses to the expert level. It's written as a tutorial, taking you each step of the way to assembly language programming. First hexadecimal numbers are explained. Then the processor is explained - internal architecture, addressing modes, and instruction set. Programming guidelines are described including subroutines, stack use, and interrupt handlers. Finally, all the internal secrets of the SAM, PIA, memory, graphics display, joysticks, serial port, cassette, disk, keyboard, ROM, and sound are revealed. All this is presented in a clear and understandable fashion.

THE BOOK!

Sailing Off to C

By William Barden, Jr.
Rainbow Contributing Editor

When the C language first became popular on microcomputers, I was given a strong sales pitch by one of my friends, a software developer who had done a lot of work for Radio Shack.

"Oh, we're doing all of our work in C now. It's almost as fast as assembly language!"

"How fast is it?" I queried, doing my best Johnny Carson impression, "About a third as fast as assembly language?"

"Oh, no. Much faster than that — maybe only 10 or 15 percent slower than assembly language," he replied. "You can do everything you can do in assembly language, but much easier; all systems programmers are going to use it!"

Is C really that good? Should you use it on the CoCo 1, 2 or 3? We'll help you answer those questions in this column and the next. Among the neater things possible with C on the CoCo is embedded assembly language within the C compiler itself! Our ultimate goal will be to use C with short assembly language code for critical processing that must be as fast as possible.

OS-9 Rears Its Ugly Head

Radio Shack's C Compiler (26-3038, \$99.95) runs on the CoCo with no problem, but only under OS-9. This means, of course, that you must plunk down the \$69.95 for OS-9 and suffer through learning OS-9 before being able to program in C. You'll also need two disk drives.

Let me say at the outset that learning *any* new system is usually excruciating agony. OS-9 is no exception. I can't tell you with a straight face that I didn't spend hours wondering why I was getting compilation errors when I used uppercase only, hours puzzling over the fact that `edit` in OS-9 may process less than the total file in its buffer, hours over the

OS-9 system generation program. I'll leave that to programmers who smugly say, "Well, of course OS-9 works that way." They aren't telling you about the hours they spent puzzling over some minor problem that was obvious once they had found the answer. In this column I'll try to give you hints and steps to help alleviate that first painful encounter with OS-9 and C.

Steps to Running Your First C Program

The steps in running a C program for the first time are as follows:

- 1) Prepare a system disk with the C compiler on it in some reasonable, workable configuration.
- 2) Use the OS-9 `build` command, the OS-9 `edit` utility, or some other editor to produce a C source program in ASCII (text) format.
- 3) List that program and do a fair amount of desk checking.
- 4) Compile the program with the C compiler to produce an object program that will run "stand-alone."
- 5) Run the compiled object program and verify that it runs the way you expected it to.
- 6) Go back to steps 2 through 6 to correct errors and retry the program until you have a perfect copy.

We'll take these steps one at a time. By the end of this column we will have compiled two small C programs. In the next column we'll work on a larger program and assembly language. ■

Preparing the System Disk

The C compiler for OS-9 comes on two disks. The first bit of advice I'd give, of course, is to back up those disks and then lock them away. I normally make one backup containing an exact copy of the original disks. This backup is then used to generate working disks.

To back up the two C disks, you'll have to load OS-9, format two disks, and back up the originals. I'll assume that you've never used OS-9 before.

Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years experience in the industry covers a wide background: programming, systems analyzing and managing projects ranging from mainframes to microcomputers.

Booting Up OS-9

Turn on the system. You'll see the familiar:

```
DISK EXTENDED COLOR BASIC 1.0
COPYRIGHT (c) 1981 BY TANDY
UNDER LICENSE FROM MICROSOFT
OK
```

Put the OS-9 Boot disk into Drive 0, type RUN "*" and press ENTER. You'll see this display on the screen:

```
OS-9 UTILITY DISK VER 01.00.00
```

```
B BOOT OS-9
T TEST DISK DRIVE
```

```
COPYRIGHT 1983 TANDY CORP
ALL RIGHTS RESERVED
```

Type B, but *don't* press ENTER. You'll now see the message:

```
INSERT OS9 DISKETTE
INTO DRIVE 0 AND PRESS A KEY
```

Place the OS-9 System disk into Drive 0 and press a key. If you have Disk BASIC 1.1, just put the OS-9 System Master in Drive 0 and enter DOS. The screen will clear and the message OS-9 BOOT appears. After the boot message, OS-9 will be loaded and you'll see:

```
OS-9 LEVEL ONE VR. 02.00.00
COPR. 1980 BY MOTOROLA INC. AND
MICROWARE SYSTEMS CORP.
LICENSED TO TANDY CORP.
ALL RIGHTS RESERVED
YY/MM/DD HH:MM:SS
TIME?
```

Enter the current date and time and press ENTER. The screen will display SHELL and OS9:.

You're now ready to format two disks. Insert the first disk to be formatted in Drive 1 (/d1). Type format /d1. You'll see:

```
COLOR COMPUTER FORMATTER
FORMATTING DRIVE /D1
Y {YES} OR N {NO}
READY?
```

Press Y. The formatting will begin. After about 10 seconds, the message DISK NAME: will appear. Enter any legal OS-9 name.

The formatter will now do a verify pass to check the disk. If all is OK, you'll see:

```
000 001 002 003 004 005 006 007
.
.
020 021 022
NUMBER OF GOOD SECTORS: $000276
OS-9:
```

Repeat the formatting process for as many disks as you'll need, in this case I'd recommend four; two to hold the copies of the original C disks and two working disks.

Backups

Backing up a disk is about as simple. Put a formatted disk in Drive 1. After the OS-9: prompt, type backup. The backup command assumes a two-drive copy from Drive 0 to Drive 1 if the command is entered this way. You'll now see:

```
READY TO BACKUP FROM /D0 TO /D1
```

At this point remove the system disk from Drive 0 and put in the C disk to be copied. Press Y, and you'll see:

```
A
IS BEING SCRATCHED
OK ?:
```

Press Y. The backup will now take place. When it's finished, you'll see:

```
SECTORS COPIED: $0276
VERIFY PASS
SECTORS VERIFIED: $0276
OS9:
```

Repeat the process for the second C disk.

C and OS-9 Modules

At this point you're standing around with a silly grin and two copies of the original C disks. The goal now is to merge the data on those C disks into two usable disks that contain an editor, the C compiler and associated modules, and a BASIC subset of the OS-9 system. This is a real problem. With only

single-sided disk drives, there is no way to have an entire OS-9 system *and* a C compiler on two disks — there simply isn't enough room. Some of the capability of the system will have to be discarded — things like `format` and `backup`, which can be maintained on another disk.

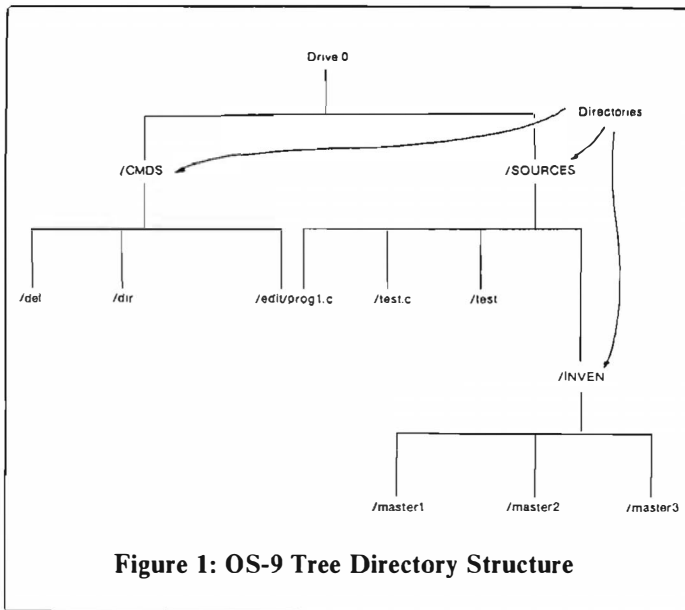

To see what's on the C compiler disk, put the disk into Drive 1 and the OS-9 system disk in Drive 0 and type:

```
chd /d1
dir
```

You'll see:

```
DIRECTORY OF . 10:36:00
CMDS
```

The `chd` command changes the current data directory to be the main directory on Drive 1. That main directory contained a subdirectory (another directory) called `CMDS`. `CMDS` is the main OS-9 directory that contains the modules necessary to implement OS-9 commands and other commands. OS-9 uses directories in a type of tree structure shown in Figure 1. The `dir` command lists the contents of the current directory.

To see the modules in `CMDS`, type:

```
chd /d1/cmds
dir
```

You'll see:

```
DIRECTORY OF . 10:37:00
cc1          c.prep      c.pass1
c.pass2     c.opt       c.asm
c.link      copy      del
dir         echo      list
```

Many of these program modules are obviously connected with the C compiler; `c.pass1` and `c.pass2` control the two compiler passes, `c.asm` assembles the compiled code and `c.link` links the object modules with library and user modules. Anything with a `C` prefix is a C-related program module. The `copy`, `del`, `dir`, `echo` and `list` modules,

however, are all OS-9 modules that can be found on the master OS-9 disk. They are redundant if an OS-9 disk is available on the system.

If you perform the same process on the C library disk, you'll see three sets of modules — `LIB`, `DEFS` and `SOURCES`. The `LIB` directory contains `clib.r` and `cstart.r`. The file `clib.r` is the main set of library routines for handling day-by-day processing for compiled C programs. Links are made to these routines during the link process. The `DEFS` directory contains other modules necessary for the operation of the C compiler.

The `SOURCES` subdirectory contains source code modules for compilation. You can put your source code modules in this directory or establish your own directory. We'll assume in this article that you'll be putting your source code in this directory.

Getting a Usable C Disk

The best way to get a master C disk is to use the Version 02.00.00 upgrade for OS-9 (26-3030). This upgrade is *not* Level II OS-9. It is an upgrade to Level I OS-9 which is necessary for the CoCo 3. It also supports 80-column screen displays for the CoCo 3 and provides other niceties. Among the benefits is a program called `Config`.

`Config` automatically configures an OS-9 system disk by a question and answer procedure; the result is a tailored disk which is efficient in terms of storage as unnecessary modules are not included. `Config` comes on the boot disk for Version 02.00.00. To use it, load OS-9, put the Boot disk in Drive 0 and type `chx /d0/cmds`.

This changes the execution directory to the `CMDS` directory of the boot disk. The execution directory is used by the system to find programs to be executed. Often the execution directory is set to `D0/CMDS`. Now, execute the `Config` program by typing `Config`. The `Config` program will now load from Drive 0 and display:

```
CONFIG
RS VERSION 01.00.00
.
.
HOW MANY DRIVES DO YOU HAVE:
1 - ONE DRIVE ONLY
2 - TWO OR MORE DRIVES
SELECTION [1,2]
```

Press 2 for two drives. You'll see:

```
BUILDING DESCRIPTOR LIST
. . . PLEASE WAIT
```

You'll see a menu of items:

```
->TERM32      X
    TERM80
    D0
    D1
    D2
    D3
    H0 15
    H1 15
    H0 35
    H1 35
```

By using the `S` and arrow keys, you can put an 'X' opposite the appropriate module you want included in the system.

These modules are "drivers" for the I/O devices — TERM32 is a 32-character display driver, TERMB0 an 80-character display driver, D0 through D4 are disk drives, and H0 or H1 are hard disks. Pressing the right arrow displays the second set of devices:

```
T1
T2
T3
M1
M2
NIL
SSC
PIPE
```

P is printer, T is a terminal port, M is a modem and SSC is a Speech/Sound cartridge.

In the example here, I selected TERM32, D0, D1 and P. Pressing D then brings up the query ARE YOU SURE (Y/N)?:. Pressing Y brings you into the next part of Config, the I/O subroutine select:

```
CO32
COB0
GRFD
```

The selections are for either a 32- or 80-column display, or a graphics module. In the example here I chose CO32 with the S key and arrow keys and then pressed D for done. After answering another ARE YOU SURE (Y/N)?, you'll see:

```
BUILDING BOOT LIST
. . . .PLEASE WAIT
```

You'll see a clock module selection:

```
WHAT CLOCK MODULE IS NEEDED
1 - 60 HZ (AMERICAN POWER)
2 - 50 HZ (EUROPEAN POWER)
SELECTION 1,2
```

Press 1, of course.

You'll now see the message:

```
PLACE A FORMATTED DISK
IN DRIVE NUMBER 1
HIT ANY KEY TO CONTINUE
```

Put a formatted disk in Drive 1 and press a key. There will be a great deal of disk activity, but you'll finally see:

```
DO YOU WISH TO ADD
[N]0 COMMANDS, STOP NOW
[B]ASIC COMMAND SET
[I]NDIVIDUALLY SELECT
[?] RECEIVE HELP
SELECTION [N,B,F,I,?]
```

We want a minimum disk, therefore press B. The message:

```
PLACE YOUR SYSTEM DISK
IN DRIVE 0
HIT ANY KEY TO CONTINUE
```

appears on the screen.

Put the original OS-9 disk in Drive 0 and press a key. Again, there will be much disk activity — the Config program is copying system modules from Drive 0 to Drive 1. The program ends with the OS-9 prompt.

The disk you have generated is bootable from your CoCo 3 or newer versions of the CoCo 2 by entering dos. Since a minimum system configuration was requested, it is a "bare-bones" disk, with as few CMDS modules as possible. Still, the free command reveals only 423 free sectors out of 630.

The C compiler disk uses 521 sectors to store its modules. However, copy, del, dir, echo and list are found on the compiler disk and are redundant; they take up 14 sectors, so we're left with a space of about 507 sectors that must be found.

Remove the Boot disk and store. Now put the disk you just generated into Drive 0 and the original OS-9 system disk in Drive 1.

At this point, it's merely a question of deleting enough modules on the disk we just configured. Use the del command and this sequence to delete from the disk just configured.

```
CHD /D0/CMDS      (points to CMDS directory)
DEL FORMAT        (delete module)
```

OS-9™ SOFTWARE/HARDWARE

SDISK—Standard disk driver module allows the full use of 35, 40 or 80 track double sided disk drives with COCO OS-9 plus you can read/write/format the OS-9 formats used by other OS-9 systems. (Note: you can read 35 or 40 track disks on an 80 track drive). Now updated for OS-9 ver. 02.00.00 **\$29.95**

SDISK + BOOTFIX—As above plus boot directly from a double sided diskette **\$35.95**

L1 UTILITY PAK—Contains all programs from Filter Kits Nos. 1 & 2 plus Hacker's Kit #, plus several additional programs. Over 35 utilities including "wild card" file cmds, MacGen command language, disassembler, disk sector edit and others. Very useful, many of these you will find yourself using every time you run your system. These sold separately for over \$85. **\$49.95**

SKIO—Hi res screen driver for 24 x 51 display; does key click, boldface, italics; supports upgraded keyboards and mouse. With graphics screen dump and other useful programs. **Now UPDATED FOR OS-9 Ver 2.0 \$29.95**

PC-XFER UTILITIES—Utilities to read/write and format ss MS-DOS™ diskettes on CoCo under OS-9. **\$45.00 (requires SDISK)**

CCRD 512K Byte RAM DISK CARTRIDGE—Requires RS Multipak interface, two units may be used together for 1MB RAM disk. OS-9 driver and test software included. **\$199.00**

All disk prices are for CoCo OS-9 format; for other formats, specify and add \$2.00 each. Order prepaid or COD, VISA/MC accepted, add \$1.50 S&H for software, \$5.00 for CCRD; actual charges added for COD.

**D.P. Johnson, 7655 S.W. Cedarcrest St.
Portland, OR 97223 (503) 244-8152**

(For best service call between 9-11 AM Pacific Time)

OS-9 is a trademark of Microware and Motorola Inc.
MS-DOS is a trademark of Microsoft, Inc.

I used `del` to delete the following modules:

<code>/D0/SYS/ERRMSG</code>	error messages in SYS directory
<code>ATTR</code>	file security
<code>BACKUP</code>	backup for disks
<code>DELDIR</code>	deletes a directory
<code>DISPLAY</code>	sends Hex characters
<code>FORMAT</code>	formats a disk
<code>INIZ</code>	initializes devices
<code>LOAD</code>	loads module into memory
<code>MAKDIR</code>	creates a directory
<code>MDIR</code>	displays current module names
<code>MFREE</code>	displays memory areas used
<code>PRINTERR</code>	prints error messages
<code>PROCS</code>	displays list of processes
<code>UNLINK</code>	deallocates module in memory
<code>XMODE</code>	changes device parameters

Then, type `del dir /d0/sys`. The modules on the compiler disk are now transferred to the minimum system disk by a `copy` command. The data directory is first set to `/d1/CMDS`. The execution directory points to `/d0/CMDS` so that the `copy` will be recognized:

```
CHD /D1/CMDS
COPY CC1 /D0/CMDS/CC1
COPY C.PREP /D0/CMDS/C.PREP
COPY C.PASS1 /D0/CMDS/C.PASS1
COPY C.PASS2 /D0/CMDS/C.PASS2
COPY C.OPT /D0/CMDS/C.OPT
COPY C.ASM /D0/CMDS/C.ASM
COPY C.LINK /D0/CMDS/C.LINK
```

Typing `free /d0` now reveals 12 free sectors on the minimum system disk. This disk will be a read-only disk during C compilations. If the data directory is set to `/d0`, the compiler will attempt to write temporary files and run out of space quickly. The data directory should always be set to the second disk, the library disk, by using `chd /d1/sources`.

You now have a minimum C compiler disk with OS-9. Set the new disk aside temporarily and load the original OS-9 disk into Drive 0.

Now turn to the library disk. This disk had 199 free sectors available. It can be used as is with one minor addition. The `edit` module can be added to the disk so that you'll have the ability to generate source files. To do this, back up the library disk and load the working copy into Drive 1. Now transfer the `edit` module from the original system disk by using `copy /d0/cmcs/edit /d1/edit`.

You now have two disks for compiling C programs. The modules on each are shown in Figure 2.

Getting the Source Code

During the following, the minimum C system disk will always be in Drive 0 and the library disk will always be in Drive 1. The data directory will always point to `/d1/SOURCES` by using `chd /d1/SOURCES`, and the execution directory will always point to `/d0/CMDS` by using `chx /d0/CMDS`.

Should you start getting strange errors, reboot and initialize the system with those conditions.

The compiler works from a pure ASCII source file. We'll always store that file in `/d1/SOURCES` as a program name of your choice, but with a C suffix. For example, you might call the program `prog1.c`, `myprog.c`, or `a.c`.

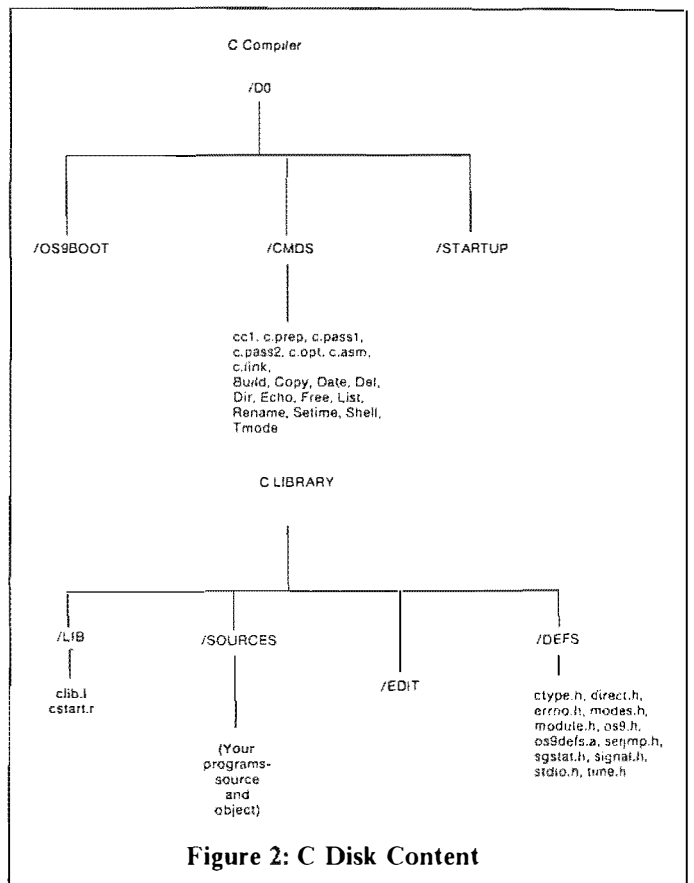

Figure 2: C Disk Content

One clue before continuing: the C language is geared to lowercase. Always use lowercase (small letters) for C programs except for necessary text strings. If this is not done, you'll probably get unsatisfied references during the linking process as `link.c` looks for a library routine with an uppercase name (such as `PRINTF`) instead of lowercase (`printf`). To set lowercase, use `tmode -upc`.

Pressing `CLEAR` followed by `0` will now switch from uppercase to lowercase. Lowercase is denoted on the screen by inverse video. To get back to uppercase once more, repeat `CLEAR-0`. You can toggle the case at any time.

The simplest way to build a text file is to use `build`. Here's the sequence with a short program:

```
chd /d1/sources
build prog1.c
/* c test program 1 */
main ()
{
printf ("This is rather simple");
}
press ENTER
```

This sequence builds a source program as `/d1/SOURCES/prog1.c`. The right and left brackets are produced by pressing `CTRL` followed by left or right parentheses.

Compiling the Source

Believe it or not, you're now ready to compile the source. This is the sequence:

```
chd /d1/sources (this should be unnecessary)
chx /d0/cmcs (this should be unnecessary)
ccl prog1.c -f=/d1/sources/prog1
```

This sequence tells the compiler to compile source program prog1.c in /d1/SOURCES and produce an executable object file called /d1/SOURCES/prog1.

The compilation is slow — about five minutes. You should see this sequence if everything is going normally:

```
CC1 VERSION RS 01.00.00
COPYRIGHT 1983 MICROWARE
REPRODUCED UNDER LICENSE
TO TANDY
'prog1.c'
c.prep:
c.pass1:
c.pass2:
c.opt:
c.asm:
c.link:
OS9:
```

The last OS-9 prompt indicates that everything went to the end successfully and that prog1 now resides in /d1/SOURCES ready to be executed.

Executing the Compiled Program

To execute prog1, enter /d1/sources/prog1. This bypasses the execution directory (still at /d0/CMDS) and executes the program. The program output here is not too impressive. However, for a first try, this is not bad! (I won't tell you how long it took me to get to this point.)

A Second Program Using Edit

Build is fine for editing short programs. However, most programs won't run the first time and must be modified. C is no exception. For this process, an editor that can read in an existing file and easily modify code is required. Edit is that type of editor.

We've stored edit on the library disk and can execute it without changing the execution directory by using /d1/edit prog1.c prog2.c.

In this sequence the program to be edited is prog1.c and the edited output program is prog2.c. To write a program from scratch, use the form /d1/edit prog1.c.

Edit will load any old program, or at least a part of the program if the program is large. After edit loads, you will see no heading, only the E prompt.

Edit operates with many commands. Examples of the most common are:

- >* — move to the end of the text in the buffer (not necessarily the entire text)
- <* — move to the start of text
- 5 — move 5 lines back
- +5 — move 5 lines forward
- d — delete current line
- R* — read in remainder of the text (for larger files)
- L* — list all text (press ENTER after each screen)
- L — list current line
- L5 — list next five lines
- Q — quit editor, return to OS-9

The CoCo Bookkeeper

A Complete Bookkeeping Package For The Color Computer

FEATURES:

- **HIGH RESOLUTION DISPLAY** - A 51x21 hi-res screen with true upper case characters
- **BUSINESS ORIENTED** - All popular ledgers and journals are included (double entry general journal, general ledger, AP, AR, sales, purchases, cash receipts & disbursements, income & expense statement, trial balance, bank reconciliation, year-end closings & openings)
- **USER-FRIENDLY** - The program is driven by pop-up menus. Transfer from any one ledger/journal to any other is accomplished with one or two keystrokes
- **POWERFUL** - User has the option of normal or "Megados" operation. Megados provides an initial 254 granules of storage on a specially formatted diskette (included with the program) and 6 millisecond operational speed. This program is designed to recognize disk storage space as memory. It will write and read files up to 252 granules (580K) long
- **SIMPLICITY** - All postings are initially made to the general journal. Postings to all other journals and ledgers, including preparation of a trial balance and the statement of income and expense is a fully automatic, menu-controlled function
- **PRINTER FUNCTION** - The user can obtain a hardcopy of any work produced by the program. Changes of baud rate (300-9600) are accomplished with a single keystroke
- **DOCUMENTATION** - Complete and comprehensive documentation covering every aspect of operation is supplied in simple, non-technical terms. Actual "keyable" examples are given throughout

The CoCo Bookkeeper operates according to generally accepted accounting procedures. It will take a business from opening day to the final balance sheet and profit and loss statement at income tax time, then open the books for the following year.

32K and one disk drive required. Supports multi-drive systems

CoCo 2, 3 Compatible **\$79.95**

White Fire Of Eternity

White Fire is a full 64K super animated graphic adventure. In an age of magic and monsters, you are lost in the forbidden woods trying to get out...

Disk \$24.95

Adventure In Mythology

By Scott Cabit

An animated graphics adventure. Battle monsters and discover treasures as you assume the personalities of various heroes in ancient Greek mythology! Your goal is to win the hand of the beautiful Atalanta, the swift-running huntress. But beware of the perils and obstacles that stand in your way as you journey through ancient Greece! Four voice music and sound effects, automatic speech when using a Tandy SSC speech pak. Load and Save feature, over 250 locations, 64K Machine language

Tape \$21.95 Disk \$24.95

The Andrea CoCo

By Art Martin

Another great animated graphics adventure! All you come down to the Yacht Club for was to get a drink and maybe play a little poker. Heck, nobody would ever guess that the closest thing you owned to a real yacht was the one over your fireplace. It was in the bar that you heard rumors of earth-shattering events about to take place. You step out onto the wharf to get a little air when your natural curiosity and sense of adventure start to work. Can you save the world? Superb graphics, save & load feature, 64K, one disk drive required

To insert lines, type in the line after a blank. The line will be inserted before the current line:

```
E:l
/* this is the current line */
E: temp1 = temp2;
E: -1
temp1 = temp2;
E:l2
temp1 = temp2;
/* this is the current line */
E:
```

A second program that adds the numbers from 1 to 100 and prints the result is shown in Listing 1. Try your hand at entering this with `edit`, compiling it, and then executing it.

On to Assembly Language

A final program is shown in Listing 2. It prints the prime numbers from 1 through 90 and uses many of the features of C in doing so. We'll discuss this program, C structures and assembly language interfacing in the next "Barden's Buffer." □

Listing 1: ADDNUM

```
/* c program 2 */
main ()
{
int n, sum;
n = 1;
sum = 0;
while ( n != 101 )
{
sum = sum + n;
n = n + 1;
}
printf ( "THE SUM=%d \n", sum );
}
```

Listing 2: PRIMENUM

```
/* PRIME NUMBER GENERATOR PROGRAM */
/* function to initialize array of numbers */
clear_array ( a, size )
int a[ 11 ], size;
{
int i;
for ( i = 0; i <= size - 1; ++i )
a[ i ] = 2047;
}

/* function to reset bit */
reset_bit ( a, i, j )
int a[ 11 ], i, j;
{
int k, mask, ptwo, temp1, temp2;
mask = 9 - ( ( i * j ) % 10 );
k = mask;
ptwo = 1;
while ( k != 0 )
{
ptwo = ptwo * 2;
k = k - 1;
}
mask = ptwo;
temp1 = a[ ( i * j ) / 10 ];
temp2 = temp1 / ( 2 * mask );
a[ ( i * j ) / 10 ] = temp1 - mask;
if ( a[ ( i * j ) / 10 ] / ( 2 * mask ) != temp2 )
a[ ( i * j ) / 10 ] = temp1;
}
}
```

```
/* function to print results */
print_res ( a, n )
int n, a[ 11 ];
{
int i, j, ptwo, mask, temp1, temp2;
for ( i = 1; i <= n - 1; ++i )
{
ptwo = 1;
mask = 9 - ( i % 10 );
j = mask;
while ( j != 0 )
{
ptwo = ptwo * 2;
j = j - 1;
}
mask = ptwo;
temp1 = a[ i / 10 ];
temp2 = temp1 / ( 2 * mask );
a[ i / 10 ] = temp1 - mask;
if ( a[ i / 10 ] / ( 2 * mask ) != temp2 )
a[ i / 10 ] = temp1;
else
printf ( "%d \n", i );
}
}

/* driver */
main ()
{
int numbers[ 11 ], i, j;
printf ( "P R I M E N U M B E R S\n" );
clear_array ( numbers, 11 );
for ( i = 2; i <= 45; ++i )
{
for ( j = 2; j <= ( 90 / i ); ++j )
reset_bit ( numbers, i, j );
}
print_res ( numbers, 90 );
}
```

About Your Subscription

Your copy of THE RAINBOW is sent second class mail. If you do not receive your copy by the 5th of the month of the publication date, send us a card and we will mail another. Canadian subscribers and foreign airmail allow two additional weeks.

You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an account number and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone except those whose subscriptions are through our distributor in Australia.

OS-9 PROGRAMMING

Finding Your Way With OS-9 Level II

By Peter Dibble

This article is to help you get started with the extended memory available on the CoCo 3 under OS-9 Level II.

On OS-9 Level II systems the 6809 CPU is insulated from memory by a device called a Dynamic Address Translation unit. Each byte in a computer has an address that the processor uses when it wants to read from or write to that memory. A 6809 can generate 64K (that's 65,535) different addresses. This seems to place a limit on the amount of memory a computer built around the 6809 can use. There is no point in having memory your computer can't address, so 6809s have no use for more than 64K of memory. Right?

When the 6809 was designed, 64K was a lot of memory. Even today it sounds like a big number if you think of it byte by byte, but it goes frighteningly fast. The 64K limit is probably the 6809's biggest problem.

The 6809 isn't the only processor with this kind of problem. For a long time mainframe computers were limited to 16 megabytes (that's 16,777,215 bytes)

of memory. That limitation turned out to be a terrible problem for them. No joke! The massively popular PC uses an Intel 8088 microprocessor that has its own kind of 64K limitation. It's not easy to use more than 64K on a PC, but it's possible, and now almost everyone does it.

We need to escape from the 64K barrier. Let's look more carefully at the problem. The 6809 can generate 64K different addresses. That means that it can directly address (or, if you like, name) 65,535 bytes of memory. We'll just make the addressing (in a sense) indirect and the barrier will lower.

Everytime the 6809 wants to access memory, we take the address it asks for (which is called a logical address) and feed it to a special device. The special device is called a Dynamic Address Translation unit, or a DAT. On the 6809 side the DAT takes an address range of 64K. On the memory side it generates whatever range it is designed for; in the case of the CoCo, that's 512K.

The addresses coming out of the 6809 are usually called logical addresses and the addresses that go to memory are called physical addresses. The actual memory that the 6809 can address at any moment is called its address space. The trick is to change the 16-bit addresses coming out of the 6809 into the 19-bit addresses required to address the 512K of memory in the machine. In jargon, the DAT maps logical addresses to physical addresses and defines the current address space.

Let's start with a very simple DAT, and do it in decimal instead of binary.

An easy way to simplify the DAT is to decrease the amount of input it has. If the address range of some imaginary decimal computer were 0 to 999, we could build a DAT that only translated the digit in the hundreds place. That's a big simplification. Instead of having to know how to translate 1,000 different addresses, the DAT only needs to deal with 10 of them. Let's say that the range of physical addresses is 0 to 4999. The DAT (which is only looking at the hundreds digit), will need to take a number between zero and nine and translate it to a number between zero and 49. The tens and ones digits from the logical address can go directly to memory.

A simple DAT is just a table. For the computer we are working on, it has 10 possible inputs. You make an array with 10 entries and in each position you put the address to which the DAT should translate that input. If the DAT contained 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, it would translate addresses into themselves. The number at Index 0 in the table is 0, Position 1 holds 1, and so forth. If the DAT contained 49, 48, 47, 46, 45, 44, 43, 42, 41, 40, it would translate address to the top 10 blocks of the physical address space — in reverse order.

Let's try it again on the 6809. Addresses on the 6809 are 16-bit binary numbers; that is, the range 0 to 65535 decimal is the same as the range 0 to 1111111111111111 binary.

Say the DAT takes the top bit in a logical address and replaces it with four bits. The 6809 will produce 16-bit logical addresses, and the DAT will

Peter Dibble has a bachelor's degree in chemistry and is currently a graduate student in computer science. He has worked as an applications programmer, systems programmer and as the user services assistant director for the University of Rochester Computing Center. With Dale Puckett, he is the coauthor of The Complete Rainbow Guide to OS-9.

"Any delay in the DAT has to be made up by using faster memory in the rest of the system, or by slowing down the 6809."

convert them into 19-bit physical addresses. Physical memory will be divided into 16 blocks of 32K each, and a program can pick any two of them for its address space. If each program needs 64K, you can run eight of them. More interesting, if all programs share 32K of common memory and have 32K of their own, you can run 15 of them.

A block is the smallest piece of memory a program can have. Doling out memory in 32K chunks isn't very efficient when many programs use only a few hundred bytes. Most Level II systems use 4K blocks, and sizes as small as 512 bytes have been tried. Tandy chose to use 8K blocks on the CoCo 3.

If you are designing a DAT, you can pick any power of 2 you like as a block size. Large blocks lead to wasted memory, but small blocks have costs too — hardware and software. The simple DAT with 32K blocks only needed to store two four-bit physical block numbers to describe an address space. If it had used 8K blocks (like the Color Computer), it would have had to store eight 6-bit numbers. That's a hardware cost. Whenever you want to change to another address space, you have to

change the numbers in the DAT. The more bits in the DAT, the more time it takes to change them. That's a software cost.

The cost of memory to store eight 6-bit numbers sounds too small to consider. It isn't. The memory used to store the DAT registers has to be so fast that the DAT can read a value out of them and put it on the physical address lines with no noticeable delay. Any delay in the DAT has to be made up by using faster memory in the rest of the system, or by slowing down the 6809.

The most frequent change to the DAT registers is made when the system switches between a user address space and the system address space. It happens every time an interrupt happens or a program calls OS-9. This is important enough that the DAT in the Color Computer has a special switch called the task register which accelerates it. The DAT actually stores two sets of translation registers, and the task register switches between them. When a program does an OS-9 call or a piece of hardware causes an interrupt, someone switches the task register and OS-9's address space becomes current. ☺

SPECTROGRAM

MAGAZINE FOR COLOR COMPUTER USERS.

Spectrogram Magazine provides useful and interesting support material with a wide range of programs and articles by some of the best writers and programmers available.

***TELEGRAM** by Bobby Ballard: A monthly column concerning the Color Computer and its use in telecommunications.

***DOWNTIME** by Rush Caley: Little-known facts, new and different ideas, opinions, and an occasional criticism or two.

***BASIC HELP** by Bill Bernico: Answers to your questions concerning the Color Computer and the BASIC language.

***PASCAL PROGRAMMING** by Delmar Searls: An in-depth study of Pascal and how to use it effectively.

Assembly, C, OS-9, REM statements as data storage, floating point math, and graphics animation are covered with an emphasis on *understanding*. Utilities, games, business and home management programs are a steady diet, and all the programs in Spectrogram are available on tape or disk. *Spectrogram Magazine could become the most informative addition to your Color Computer system!*

PLEASE SEND ME 12 ISSUES OF SPECTROGRAM MAGAZINE FOR \$18 (40% off the cover price).

J & R ELECTRONICS

Easy, Solderless Installation

"JramR"

512K COCO 3 Memory Expansion Board. Upgrades stock 128K COCO 3 to full 512K for OS9 Level II. Similar to RS upgrade.

COCO I & II ONLY

Part number	Price	Description
#1001	\$39.95	Banker II bare board (with long pin socket, does not include memory Expansion Board)
#1002	\$69.95	Banker II bare board + parts (does not include Memory Expansion Board)
#1003	\$89.95	Banker II assembled & tested (no memory)
#1004	\$129.95	Banker II (256K upgradable to 512K) assembled & tested with memory
#1005	\$169.95	Banker II (512K) assembled & tested with memory
#1006	\$15.00	Memory Expansion Board
#1007	\$29.95	Memory Expansion Board + parts

ALL software is configurable for 256K/512K operation
Software shipped on disk; add \$10.00 for software on tape. (OS9 RAMDISK not available on tape).
ALL boards above are 256K/512K capable, software & documentation included
New SAM (74LS785) not included (use your 74LS783). 74LS785 recommended for 2.0 Mhz operation.

COCO 3 ONLY

Part number	Price	Description
#1010	\$39.95	JramR bare board plus connectors and software
#1011	\$109.95	JramR kit includes all parts plus memory chips and software
#1012	\$139.95	JramR assembled and tested plus memory chips and software Software includes — deluxe customizable ramdisk & spooler memory test, and ramdisk utility programs

MISCELLANEOUS

#9002	\$5.00	64K switch
#9004	\$24.95	New SAM 74LS785 (required only for 2.0 Mhz operation)
#9005	\$24.95	PowerBasic (Requires RSDOS 1.0 or 1.1 and 256K or 512K Banker) Utilize the extra memory for variable storage and pass variables between programs in different pages of memory. Split a large BASIC program into smaller pieces and GOTO or GOSUB a line in another page of memory and more features included (disk only)
#9006	\$10.00	S/W Pac upgrade, 1.XX to 2.XX
#9007	\$19.95	Software Pac for COCO 3 includes deluxe ramdisk & spooler both highly customizable by user. Memory test and ramdisk utility programs.

To place an order, write to J&R Electronics, P.O. Box 2572, Columbia, MD 21045
OR call (301) 987-9067 — Jesse or (301) 788-0861 — Ray

HOURS: Weekdays 7 p.m. - 9 p.m. Sat Noon - 5 p.m. EASTERN TIME, usually, if no answer try later
Add \$4.00 shipping & handling (FOREIGN ORDERS \$7.00). COD charge \$3.00. Maryland residents add 5% state tax.

CHECKS, MONEY ORDERS OR COO's only please (personal check — 2 weeks for clearance). IMMEDIATE DELIVERY Give COCO Radio Shack model # (i.e. 26-3136). Disk or Tape when ordering
QUANTITY DISCOUNT AVAILABLE. For information on shipping or previously placed orders call (301) 788-0861 COCO 1126-31XX owners call (soldering experience maybe required)

Software includes — deluxe customizable ramdisk & spooler, memory test, and ramdisk utility programs.

KISSable OS-9

Bootstrapping Many Systems

By Dale L. Puckett
Rainbow Contributing Editor

We're going to show you a handy way to build new system disks — especially if you are fortunate enough to be using a hard disk-based system. But first we'll take a look at `config` — an excellent alternative for the beginner that comes with OS-9 Level I, Version 2.00.00.

`Config` gives you a menu and lets you select the device descriptors you want to have available on your new system disk. The program is stored in a directory named `CMDS`. The files that hold the modules containing all the required OS-9 device descriptors, device drivers, file managers, etc., are stored in a directory named `MODULES`.

Start by booting your system using a

backup copy of the Tandy OS-9 System Disk. After you see the "OS9:" prompt, you must take out the system disk and insert the disk containing `config`. Type `chx /d0/cmds`, press `ENTER` and type `chd /d0`.

Now, type `config` and follow the directions on the menu. You move from row to row on the menu using the up and down arrows. Select a device by pressing the `S`. If you want more information about a device, you can get it by pressing `H`.

When you have finished selecting device descriptors for all the devices you will be using, `config` creates a new `OS9Boot` file and asks if you would like a disk with no commands, a basic command set, a full command set, or a set of individually selected commands.

After you have spent a few weeks — or is it months — waiting for your computer to copy all of your files onto a new system disk, you will come to the realization that you really don't need to have all your files on each and every system disk you own. It is much easier to boot with one disk which contains only the files you need to start the system, e.g., `setime`.

As soon as the system is running you can remove that disk and insert the disk

that contains the files you use all the time. As we have mentioned in earlier editions of this column, you may want to load one disk with the files you need when writing, another with files needed while you are programming with assembly language or C. When you move up to a hard disk, you won't even need to swap disks.

Configure a System Disk Using a Pipe

Once you know your way around OS-9, you'll discover there are a lot of ways to skin a cat. For example, using an unformatted directory list utility like `d` or `ls`, and a pipeline to `OS9Gen`, you can configure new system disks quickly.

First, format a new disk to hold your module library. Then, create a directory with a name that describes the configuration you want on your new system disk. For example, I use directory names like `SDISK80`, `HDDONLY80`, `HDDONLYRS` and `DISTO80ASD0`. The first directory contains modules to make a system disk that uses Dan Johnson's `SDisk` drivers and the `Disto 80-column` card.

The second directory does not contain any floppy disk drivers and uses the `Disto 80-column` card. The third uses the original Radio Shack screen drivers

Dale L. Puckett, who is author of The Official BASIC09 Tour Guide and coauthor, with Peter Dibble, of The Official Rainbow Guide to OS-9, is a free-lance writer and programmer. He serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. Dale works as a U.S. Coast Guard lieutenant and lives on Governors Island in New York Harbor.

Hurry! Special offer ends March 15.

RAINBOW ON DISK!

Remember the story of the cobbler and the elves, when the little people crept into the old man's shop and did all his chores while he slept? Well, there is a monthly chore we can now eliminate for you — transferring RAINBOW ON TAPE to disk!

Now, in addition to RAINBOW ON TAPE, we're offering RAINBOW ON DISK, the perfect companion to THE RAINBOW for all our readers with disk drives. No more typing. No more transfers. We take care of all the work for you.

OS-9 programs

Thanks to the elfin magic going into RAINBOW ON DISK, part of one side of the disk is formatted for the OS-9 operating system. That means that you can now get all the OS-9 programs from the magazine — programs that cannot be put on tape. And, with the introduction of the new CoCo 3, OS-9 programs will become more and more prevalent.

More than two dozen programs

If you're a RAINBOW reader and you have a disk drive, you won't want to go another day without RAINBOW ON DISK. For only \$99, 12 full issues of RAINBOW ON DISK will follow the RAINBOW to your door. That's only \$8.25 for each disk.

To start your subscription, call our toll-free number or use the handy order card between pages 34 and 35. When your copy of the RAINBOW arrives next month, you can start enjoying the programs without any extra effort. The little people at the end of the RAINBOW will already have taken care of all the work.

SUBSCRIBE NOW AND SAVE AN EXTRA \$9!
That's right, you can subscribe to RAINBOW ON DISK between now and March 15, 1987, for only \$90* — \$9 off the regular subscription price of \$99. Order now and receive 12 issues for only \$7.50 each! It's our extended introductory offer!

* Don't miss out. During this extended introductory offer, good until March 15, 1987, subscriptions to RAINBOW ON DISK are only \$90 a year in the United States (regularly \$99). Canadian rate U.S. \$100 (regularly \$115). All other countries U.S. \$115 (regularly \$130). RAINBOW ON DISK single copy rate is: \$12 within the U.S.; Canadian rate U.S. \$14; all other countries U.S. \$16. Kentucky residents add 5% sales tax. All subscriptions begin with the current issue unless otherwise specified. Please allow 6 to 8 weeks for first copy. U.S. currency only, please. In order to hold down non-editorial costs, we do not bill.

RAINBOW ON DISK and RAINBOW ON TAPE are not stand-alone products, but are intended as adjuncts and complements to the magazine. Even if you purchase RAINBOW ON DISK or RAINBOW ON TAPE, you will still need the magazine for loading and operating instructions. For information on RAINBOW ON TAPE, see Page 158.

To order by phone (credit card orders only), call (800) 847-0309, 8 a.m. to 5 p.m. EST. All other inquiries call (502) 228-4492.

Listing 1: binary

```
/* ----- OS-9 utility ----- binary -----
*
*           by Dennis J. Duke
*           Bessemer, Al.
*           06 November 86
*
* This utility will accept a decimal number as input and print
* a binary number.
*
*/

# include <stdio.h>

int n;

main (argc, argv)
int argc;
char *argv[];
{
    int i;

    /* Check to make sure the utility was called properly */
    if (argc != 2) {
        fprintf (stderr, "usage: %s number\n", argv[0]);
        exit(0);
    }

    /* Convert input char to int */
    n = atoi (argv[1]);

    for (i = 15; i >= 0; i--) {
        if ((n & (1 << i)) == 0)
            putchar('0');
        else
            putchar('1');

        /* Add a space after each 4 digits */
        if (i % 4 == 0)
            putchar(' ');
    }
    putchar('\n');
}
```

Listing 2: split

```
/* ----- OS-9 utility ----- split -----
*
*           by Dennis J. Duke
*           Bessemer, Al.
*           23 November 86
*
* This utility will split a file into smaller files. This is especially
* useful when you wish to use an editor such as 'TS/EDIT' on a file too
* large for it's buffer. The syntax is "split [ -n ] infile [ outfile ]",
* where 'n' is the number of lines wanted in the new files (default 50).
* If 'outfile' is specified, the output files will be given that name
* with a-z appended to the name. If 'outfile' is not specified, the
* output files will be named xa-xz.
*
*/

# include <stdio.h>

FILE *fopen(), *fpin, *fpout;

char suffix[2];
char outfile[29];
int scnt = 97; /* Initialize at decimal value of 'a' */

main (argc, argv)
int argc;
char *argv[];
{
    int c;
    char infile[30];
    int nlines = 50; /* Set default to 50 */
    int linecnt = 0;

    /* Check to make sure the utility was called properly */
}
```

and runs on a hard disk drive without any floppy drivers. And the final example directory contains modules that let me use the Disto 80-column card on a system with a hard disk drive named d0. The floppy disk drives on that system are named d1 and d2.

“There are many ways to get the right modules in your directories.”

You can use the `mkdir` utility command to make your new directories. But, how do you get the modules into those directories? I started by saving the standard modules I would need in each and every boot file, regardless of the hardware configuration in a file called `StdBoot`. I used a command line like this:

```
save StdBoot IOMan RBF SCF
Pipeman Piper Pipe Sysgo
```

I used a similar command line to save the modules used by the standard Tandy 32-column screens in a file called `TandyScreen`.

If you forget which modules are in a file a few months after you have created your directory, you can always use the OS-9 `ident` command to find out what you did (`ident -s StdBoot`).

```
11 $C1 $5E46DE . IOMan
24 $D1 $157744 . RBF
10 $D1 $815287 . SCF
4 $D1 $1A9CC4 . PipeMan
2 $E1 $5B2B56 . Piper
80 $F1 $CC06AF . Pipe
12 $C1 $DE6D76 . Sysgo
```

Let's look at the rest of the modules in my customized directory (`dir tandy`).

**See You at
RAINBOWfest — Chicago
April 10-12**

```

Directory of tandy 00:35:13
StdBoot           parallel
cwccdisk.dr      cwd0.dd
cwd1.dd          KShell
HDBoot           TandyScreen
RSClock          Nil
NilDrv           P
R0               RamPak

```

Parallel contains the device driver that runs the Centronics parallel port on my Disto 80-column card. It is used by the device descriptor P. R0 is the device descriptor for my 512K Disto RAM Disk. It uses the device driver named RamPak. Nil is a device descriptor that gives you a way to throw the output from a program into that bit bucket in the sky. It uses the driver, NilDrv.

HDBoot is a file that contains both the device descriptor and device driver for my Disto hard disk interface. KShell, is Brian Lantz's KShell that comes with Computerware's Advanced Utilities package. And finally, cwccdisk.dr is the CCDisk replacement driver sold by Computerware. Notice that I named the file cwccdisk.dr instead of ccdisk.dr so I could tell the difference between it and the standard Tandy driver by glancing at the filename. The same holds true for the device descriptor, wd0.dd.

There are many ways to get the right modules in your directories. For example, if you own the modbuster utility from Dan Johnson or have access to the public domain SplitMod utility in disk zero of the OS-9 Users Group library you can follow these steps.

Create an empty directory to hold your new modules. Type `mkdir configmyway` and press ENTER. Then, make the new directory your working data directory. Type `chd configmyway` and press ENTER. Now, use `modbuster` like this: `modbuster /d1/OS9Boot`.

When the command finishes, you'll wind up with a directory containing a file for each module in the OS9Boot file on the disk you had mounted in Drive I. You can now use the OS-9 `del` utility command to delete all of the files that you do not want in your new system disk. After you have finished deleting the unwanted files, use the OS-9 `copy` command to copy any additional module files you may need in the OS9Boot file into this directory.

You are now ready to perform pipeline magic with OS-9. Insert a freshly formatted disk in Drive I and type `chd configmyway` and press ENTER. Then type `ls ! os9gen /d1`.

If you don't believe in magic and want to confirm that the proper modules are in your OS9Boot file, type `ident -s /d1/os9Boot`.

```

if (argc < 2)
    usage (argv[0]);

/* Check for syntax and '-n' option and set up file names */
if (argv[1][0] == '-') {
    if (argc < 3)
        usage (argv[0]);

    /* Extract the number of lines from argv[1] */
    noline = atoi (argv[1] + 1);

    /* Get the input file name */
    strcpy (infile, argv[2]);
    /* Get the output file name */
    if (argc > 3)
        strcpy (outfile, argv[3]);
    else
        strcpy (outfile, "x");
}
else {
    /* Get the input file name */
    strcpy (infile, argv[1]);
    /* Get the output file name */
    if (argc > 2)
        strcpy (outfile, argv[2]);
    else
        strcpy (outfile, "x");
}

/* Make sure the input file exists */
if ((fpin = fopen (infile, "r")) == NULL) {
    fprintf (stderr, "%s: can't open %s\n", argv[0], infile);
    exit(0);
}

/* Set up output file */
output (argv[0]);

/* Main loop to do splitting */
while ((c =getc (fpin)) != EOF)
    if (c == '\n') {
       putc (c, fpout);
        linecnt++;
        if (linecnt == noline)
            linecnt = 0;
            fclose (fpout);

            /* get next output file */
            output (argv[0]);
        }
    }
else
    /* Write to output file */
    putc (c, fpout);
}

Once you have created a directory containing the modules needed in the OS9Boot file on your first customized system disk you are almost home free. From here on out you can create new directories and copy module files back and forth. Each directory will hold the module files you use with a specific type of hardware configuration. When you're done, make sure to save the disk with these directories so you can use it in the future.

The dircopy command from the Computerware Disk Fix and utilities package is a handy tool for this kind of work. And speaking of that utility, here's a reminder that may save you some work. A typical dircopy command line might look like this:

```
dircopy /d1/mods /h0/bootmods
/hardisk/tandyscreens
```

Who wants to type all that? Try this instead. Make that long pathlist your working data directory. Then, use OS-9's anonymous directories:

```
chd /h0/bootmods/hardisk
/tandyscreens
OS9: dircopy /d1/mods .
```

The period in the second line above means use the current data directory. Anonymous directories become even more useful if you are only copying a select handful of files from a directory buried deep in OS-9's hierarchical file structure. For example, if there were a file named Co32 in the preceding directory you would only need to type:

```
copy ./Co32 /d1/Screens/Co32
```

/H0 as /D0 ?

If you want to start a debate, suggest something unconventional or different. During the past few years there have been several hard disk drives introduced for OS-9 based computers. Almost all of them have used /h0 as the name for the hard disk.

On the surface this seems very logical. It makes it very easy to tell which device is the hard drive and which device is the floppy drive. But, it creates problems with a number of programs that look for specific files in directories on device /d0. OS-9 68000 solves the problem by creating a default device named /dd and telling all software developers to use that device name as a standard.

“They really sail on a hard disk.”

We reported several months ago that Carl Kreider had found the obvious solution several years ago — rename the module containing your hard disk device descriptor. Call it /d0. I wanted to experiment with Kreider’s idea and when I received my hard disk I did just that. It’s fantastic; *Deskmate* and the many other Tandy programs that are hard coded to look for special files on device /d0 will never notice the difference. They really sail on a hard disk.

To do the conversion, follow these steps. Use the OS-9 debug utility to patch your device descriptor d1 module. Change the ‘1’ to a ‘2’. Save this new module into a file named temp. Then, verify it and update the CRC.

```
save temp D2 ENTER
verify <temp>D1asD2.dd ENTER
del temp
```

Now, do the same for the module containing the device descriptor for /d0. Call it d1 and save it in a verified file with updated CRC named D0asD1.dd.

Finally, patch the h0 device descriptor module in the same manner. Change the h in h0 to d and save it in a verified file named H0asD0.dd. Make sure that you have updated the CRC with the verify command’s ‘u’ option.

You can now put the files containing the patched device descriptor modules in a directory with all other modules you need in your new OS9Boot file — I used a directory named Dist0B0asD0 — and use the procedure above to create a new system disk. After you boot with that system disk, you will be running with a working data directory named /d0 and a working execution directory named /d0/CMDS. This new /d0 will have several megabytes of storage.

Sometimes you will want to strip your OS9boot file down to the bare minimum so that you will have the maximum amount of memory available for your application program. *Desk-mate*, for example, needs more than 150 pages to run.

“The CoCo 3 shell has a new parameter that lets you set up windows easily.”

One way to do this is to remove the floppy disk driver and device descriptors from your system, leaving the driver and device descriptor for the new hard disk named /d0 in place. We tried this with our system and it works quite well. We simply copied the modules from the directory DISTDB0ASD0 into a new directory named HDONLYB0 and deleted the floppy driver and descriptors and several other modules.

Practice with these techniques and before long you'll be able to configure your OS-9 system the way you like it. If you have a number of start-up disks, you can pick the one that matches the job you need to get done.

Exploring the CoCo 3 Shell

The CoCo 3 shell has a new parameter that lets you set up windows easily. For example, to start a shell in device /w3 — one of seven predefined CoCo 3 windows, you need only type shell -i=/w3&.

This command initializes input, output and error path for the shell running in the window named /w3. You can kill the /Term device by starting a shell on another device without including the concurrent process operator '&'. For example, shell -i=/t1.

There is also a shorthand notation. Redirect some data with ">/1" and the output will go to the standard output path. If you use ">>>" you will redirect both the standard output and standard error paths. A "<<<" will redirect the standard input and standard output paths.

}

```

Third-party developers are in hot pursuit of CoCo 3 tools. For example, Computerware will soon release a CoCo 3 KShell. It will support the operators above and up to nine function keys. It will include a data module named shelldef that will hold a set of shell parameters that you can grab when you need them.

“Third-party developers are in hot pursuit of CoCo 3 tools.”

March Listings

Our mailbox was full of educational and useful programs for “KISSable OS-9” readers this month. We feature the work of Dennis J. Duke of Bessemer, Alabama; Stephen B. Goldberg of Bethpage, New York and Greg Law of Columbus, Georgia, and Delphi CoCo SIG fame.

Dennis sent us a number of utilities and it was hard to make a choice for the first offering. We decided to list two of his C programs, *Binary* and *Split*. *Binary* gives you a quick way to find the binary value of a number. You type in a decimal number, it prints the equivalent binary number. It will print all numbers between 1 and 65,535.

If you write many long stories with *TSEdit* or the *DeskMate* editor, you will find *Split* a very useful tool. It gives you a way to split a large file into two or more smaller files. You can tell *Split* how many lines you want in each file. If you don't, you get 50 lines each in as many files as it takes to hold your original — up to 26. You can name your output files or let *Split* name them for you. If you opt for the latter, your filenames will read xa through xz.

Dennis is a staff analyst and lives in a UNIX world at Bell South Services. However, he does no C programming at work. “That's why I welcome the oppor-

tunity to play with the CoCo," he said. He asked if there was a relatively simple way to modify Level 1 OS-9 to give an 80-column display with the new CoCo 3. The answer may be found in a public domain 80-column CoCo 3 device driver on Compuserve's OS-9 SIG as well as Delphi's OS9 Online SIG.

Stephen Goldberg can't seem to stop writing excellent CoCo-based OS-9 programs. "It's always bugged me when I list or sort a file with small entries and the output marches down the left side of the screen displaying only 24 entries at a time — wasting the rest of the screen," he said. "Col is my solution.

"To use the program, type col followed by a minus sign and the number of columns you want, followed by the file or files you want to list in column form," he said. "You may display your file in two to five columns."

If you do not type a filename, Col will take its input from the standard input path. Its output goes to your standard output path. This means that both the input and output to Col can be redirected to a file or printer.

Goldberg also sent along a fun utility command that shows you how you can patch your shell command file to install a new prompt. We showed you how to do the same thing using debug and a shell script sometime ago. It's just one more way to prove that there are many ways to solve the same problem when you have a powerful operating system like OS-9 at your fingertips.

How many times have you run through the "debug, save, verify -u, os9gen" procedure — just to patch a module? Greg Law wrote a utility named ModCRC to make life simpler. His program updates the module CRC of a module while it is still in memory. Your new sequence becomes "debug, modcrc, cobbler."

If you get tired of having your CoCo give you the military time, rejoice. Law has come to the rescue of those who yearn for a less militant clock. In fact, his Date utility also gives you the Julian date — just in case you work in a military procurement center. The output from Law's program look like this:

Thursday, November 13, 1986 11:35:45 PM
Julian 86255

Enjoy this month's listings. We'll add a few more next month if the April Fool's pranksters don't strike too hard. If you have an OS-9 programming tip or utility you would like to share with "KISSable OS-9" readers, let us hear from you. Keep on hacking! □

Protect and highlight your important magazine collection with sturdy RAINBOW binders

Distinctive, Durable RAINBOW Binders

THE RAINBOW is a vital resource to be referred to again and again. Keep your copies of THE RAINBOW safe in our quality, distinctive binders that provide complete protection.

These attractive red vinyl binders showcase your collection and ensure your RAINBOWS are in mint condition for future use. Each binder is richly embossed with the magazine's name in gold on the front and spine. They make a handsome addition to any room.

Put an End to Clutter

Organize your workspace with these tasteful binders. Spend more time with your CoCo and eliminate those frustrating searches for misplaced magazines.

A set of two binders, which holds a full 12 issues of THE RAINBOW, is only \$13.50 (plus \$2.50 shipping and handling).

Special Discounts on Past Issues

To help you complete your collection of THE RAINBOW, we're offering a special discount on past issues of the magazine.

When you place an order for six or more back issues of THE RAINBOW at the same time you order binders, you are entitled to \$1 off the regular back issue price. To order, please see the "Back Issue Information" page in this issue.

Know Where to Look

You may purchase the "Official And Compleat Index To THE RAINBOW" for \$1 when you purchase a set of binders. This comprehensive index of RAINBOW's first three years (July 1981 through July 1984) is usually priced at \$2.50.

_____ **YES.** Please send me _____ set(s) of RAINBOW binders

Take advantage of these special offers with your binder purchase:

_____ Save \$1 off the single issue cover price for back issues. Minimum order of 6 magazines. Please enclose a back issue order form from a recent issue indicating magazines wanted.

_____ Purchase the "Official and Compleat Index to THE RAINBOW" for \$1. (Regular price \$2.50.)

(These offers good only with the purchase of a RAINBOW binder set)

Dr. Preble's Programs Striking A Blow For

“... Freedom is nothing else but a chance to be better...”

— Albert Camus

*** Mental Freedom ***

for CoCo 1, 2 and 3!

A Thought-Controlled Video Challenge

We call it The Preble Thoughtware.

DOES GREEN BLOOD flow in your veins like Mr. Spock? Is your mind well ordered? Or is your mind a mass of conflicting emotions like most humans?

THOUGHTWARE may answer these questions and more.

IMAGINE! Some day, a computer so advanced that it responds to your very thoughts and emotions. Imagine, some day, thought-controlled graphics: levitation and materialization!

PLUG IN YOUR MIND and UNHOOK YOUR JOYSTICKS — that day is now! The Radio Shack Color Computer has many advanced capabilities, just waiting to be tapped. Dr. Preble's Programs combines the advanced technology of the CoCo with the amazing Radio Shack BIOFEEDBACK MONITOR to bring you "Preble Thoughtware."

THOUGHT-CONTROLLED VIDEO CHALLENGE? Unlike any video game you have ever played, Thoughtware tests your ability to handle stress, to remain calm under adverse circumstances.

LIGHTNING FAST reflexes will do you no good here, unless you first tame the fickle dragon of your mind.

DO YOU HAVE SELF-CONTROL? Many people can keep a "Poker Face" even when they are worried so that others may not notice; but can you really stop the worry itself? Thoughtware will find out!

AND IT TALKS! Did you know that the CoCo can produce incredibly realistic digital speech without a special speech synthesizer? And I mean really high quality speech! Forget the mechanical robot voice. This voice quality is so good, it sounds human! Honest. Best of all, no extra hardware is needed for speech. None. The CoCo produces this amazing digital speech all by itself (with a wee bit of programming by Dr. Preble).

THOUGHTWARE — Next time your friends ask what your computer can do, show them the Preble Thoughtware!

Requires Radio Shack's Biofeedback Monitor Catalogue #63-675

The Preble Thoughtware — TAPE \$27.95 + s/h, on DISK \$29.95 + s/h

*** Basic Freedom ***

for The Color Computer 3

(with versions for CoCo 1 & 2)

A Full Screen Editor for BASIC Programming

We call it EDITOR 3. Chris Babcock wrote a pure, efficient Machine Language program to open a new dimension of ease and power for anyone typing in a BASIC program.

Here are your BASIC Freedoms!

FULL CURSOR MOVEMENT — Use the arrow keys to move anywhere on a screen. If you are using a Color Computer 3, then even the 40 or 80 column screen is supported!

INSERT, CHANGE or DELETE CHARACTERS anywhere on the screen. Simply move to what you wish to change, change it and continue working!

LOWERCASE COMMANDS are OK! EDITOR 3 lets you type in lowercase any time or all the time. Lowercase command words are automatically translated to uppercase for BASIC. Of course, lowercase text within quotes stays lowercase. This is great when typing with the CoCo 3's 40 or 80 column mode with true lowercase!

MERGE LINES within a program with just a few keystrokes!

AUTO KEY REPEAT — Hold down any key and it will repeat.

INVISIBLE — Once EDITOR 3 has been loaded in, it is activated with a single keystroke! It hides itself out of the way of other programs and can be turned off any any time. Pressing RESET will not hurt EDITOR 3!

EASY TO USE — Installation takes seconds! Well-written goof-proof manual included.

COCO 1 & 2 — Yes, even though this program was conceived for the powers of the new CoCo 3, we still support the previous Color Computers. They too, need their BASIC Freedom!

EDITOR 3 — So easy and handy, you'll never want to run your CoCo without it!

Available on DISK only for CoCo 3 @ \$29.95 + s/h

CoCo 1/2 version can not support 40 or 80 column screens. CoCo 1/2 version is available on TAPE for \$27.95 + s/h or DISK for \$29.95 + s/h.

Also Available for CoCo 1 & 2 only:

VDOS, the UnDISK: Save multiple programs in memory! Works with or without a disk drive. TAPE \$27.95 + s/h, DISK \$29.95 + s/h

VDUMP, for the UnDISK: Save multiple programs in a single file! \$14.95 + s/h on tape.

VPRINT, for the UnDISK: Printout UnDISK Directory! \$9.95 + s/h on tape.

Check, Money Order, MasterCard, VISA or COD accepted. For Shipping to USA and Canada add \$1.50, to other countries add \$5.00.

FROM C.R.C COMPUTERS DISTO SUPER PRODUCTS

DISTO SUPER CONTROLLER \$99.95

- Gold contacts on all connectors
- Shielded metal box
- Four 28 pin sockets for software expandibility
- Uses 2764 or 27128 EPROMs only
- EPROMs are software selectable
- Internal Mini-Expansion-Bus interface for DISTO SUPER add-ons or user projects
- C-DOS included (RS-DOS compatible), single or double sided, 6 to 30 ns step rate
- Works on all COCOs or COCO IIs

DISTO SUPER ADD-ONS Four add-ons are currently available

- **REAL TIME CLOCK/PRINTER INTERFACE**
An internal clock that will keep the proper time, date and year. A small battery keeps the time when the computer is off. Retrieve and set the time by using simple Basic Pokes. The Real Time Clock/Parallel Printer Adapter is a single unit. Software drivers included. \$39.95

- **MINI EPROM PROGRAMMER**
Yes, a low cost programmer that attaches to the DISTO SUPER CONTROLLER or SUPER RAMDISK. Program those often used utilities into EPROMs and plug them directly into your controller. Will program 2764's or 27128's. A perfect mate for the DISTO SUPER CONTROLLER. \$54.95

- **DISPLAY 80 SUPER CARD**
A real knock-out. DISPLAY 80 is a three in one card. It's major function is to add an 80 column by 24 line display to your computer. This feature packed package also includes a REAL TIME CLOCK and PARALLEL PRINTER INTERFACE. An all-in-one package that fits neatly inside the Controller or Super Ramdisk. OS-9 software available*. \$139.95 \$99.95

- **HARD DISK INTERFACE (Coming soon)**
Fits inside Super Controller or Super Ramdisk. S.A.S.E. interface compatible. OS-9 Drivers included*. Supports WD-1002-SHD or ZEBEC 1410 controller. \$49.95

DISTO SUPER RAMDISK \$119.95/256K \$154.95/512K

- Inexpensive 2nd drive Emulator
- Works with all COCOs (Multi-Pak required)
- Easy installation, Just plug in and go
- Low software overhead
- Much faster than a regular drive
- Plain language instructions
- Complete OS-9 Drivers available*
- Compatible with COCOMAX if used with C-DOS+
- Internal Mini-Expansion-Bus for DISTO ADD-ONS
- Gold contacts on all connectors
- Shielded metal box
