CoCo 3 Hi-Res
Screen Dumps

An Animation Film Festival

With

CoCo Draw refinements,
Easy screen scrolling and
A graphics transfer utility

Plus

Queens Quarrel brainteaser,
A Halloween word search,
A talking debugger, and more!

DIECOM PRODUCTS INC.

THE RAT GRAPHIC DESIGN PACKAGE

This is the most complete graphics design package currently available for the Coco 3. It supports 320 x 200 hi-res polygons and many more standard drawing functions. You can draw lines, circles, ovals, boxes, polygons and can then be enlarged, shrunk, rotated, inverted and flipped and stamps from the screen which can then be used in various ways. You can paint areas of the screen in one of the pre-defined color textures. You can label your pictures with one of the pre-defined fonts or define your own custom lettering style. Now don't worry about trying to draw your pictures with the keyboard or even a cumbersome joystick. "THE RAT" comes with its own MOUSE. Yes that's right, it comes with a MOUSE, and not a simple analog one button mouse. Ours is a high quality digital, two button mouse like you find on a more expensive computer like the Tandy 1000. You don't have to worry about selection squares around your drawing screen, just push a button on the mouse and you flip to a separate screen to select your drawing mode. Or you can use one of our pull down menus to load and save your pictures on disk. We also include screen print routines for many of the most popular printers.

Now that's a GRAPHIC DESIGN PACKAGE that beats them all! That's right, you get the graphics program, screen print routines, the mouse and the mouse pad all for one low price of

\$69.95 U.S. AVAILABLE APPROX. SEPT. 1, 1987
\$99.95 Can.

Requires 128 k Coco 3 and one disk drive

IRON FOREST

This is the first in our series of light phaser games. You have just been teleported to a strange land. As the mist clears you find a light phaser in your hand and yourself deep inside the Iron Forest. Your mission: to protect the sacred White Dove and all good creatures from the evil of the forest. As you aim, you zap a space pod, and then quickly turn and zap an evil spinning blade as it comes dangerously close to the Dove. Many evil creatures inhabit the forest. How long can you keep them under control? Many different backgrounds and increasing difficulty make this a unique new game for your Coco 3.

Requires 128 k Coco 3 and one disk drive

A refund of 10/12ths the subscription amount after two issues are mailed. No refund after mailing of three or more magazines.

CoCo Party Plan

Editor:

While I am grateful for the continued support of frankly frustrated publishers, programmers and software vendors in the wide world of CoCo, I am somewhat dismayed at the vitriol used against program pirates. I feel this subject needs less vitriol and more ideas, and I have a few to shell out.

We all know that software piracy is destructive to the CoCo Community and discourages promising programmers, but I don't feel that the situation is as bad as many have led us to believe. After all, true software "crackers" are relatively few, and the pirate programs of yesteryear don't work on the new CoCo 3. Your magazine and others in the community should not advertise pirate programs as a matter of policy, and the professional software manufacturers should avoid making them, of course.

Further, a different marketing strategy should be used: there are many companies now that use parties and clubs as a medium of sales — Tupperware and Avon to name a few. Why not CoCo? I have quite a grudge against Tandy, and the general move in the direction of selling programs via Radio Shack stores is repugnant to me because Tandy personnel don't generally know enough about their own wares, much less CoCo wares. I don't suggest sending out programs and hardware willy-nilly to every club around, but I *do* suggest full-time salesmen using the medium of CoCo clubs to sell their wares. Salesmen could even support these clubs with regular freeware in return for showing off their wares, perhaps tying freeware grants to sales through the club, offering discounts for sizable sales and other aids to boost membership.

I feel that much software theft is a result of attempts to bring people together. The theft of software is too widespread simply to be the result of a rise in the crime rate of users. Powerful psychological factors are at work: the need to "belong" to a group and to bring something sensational to it (newcomers may feel this especially), the desire to bring others to your own level, the desire to obtain something of proven value instead of a pig in a poke, the desire to see how something works, the desire to out-smart a pro. All these desires are present, and many more besides. Direct sales through clubs would eliminate several of these motives, especially that of buying

something strictly on the basis of advertising reputation.

This is not the answer to all our needs, but it provides an answer to several problems; and similar innovations will do so, too. Piracy is currently easy, and that ease is something that CoCo enthusiasts will have to be weaned from with constant, diligent reminders and innovation.

Thank you for the forum.

*Mike Brant
Martinez, CA*

SIGs International

Editor:

Since the first computer clubs were established, the number of members has grown to several million. There is a need for an international organization of computer clubs that can help all the clubs, organize meetings, publish its own journal and so on.

The difficulty is that the millions of computer users do not form an integral whole. At the best, clubs are joined together in a partnership in the same country only. The reason they can't form connections with clubs in foreign countries is rather simple: partners are unknown to each other.

To overcome on this difficulty, NJSZT is ready and willing to give a helping hand as an agent.

NJSZT has called into action several computer clubs in Hungary. If you're interested please send a letter with the following information to NJSZT, P.O. Box 240, H-1368, Budapest, Hungary.

Include the club's name, address, telephone number; leader's name, address, telephone number; types of computers used by the members in the club; names of sections (if any); number of members; frequency of the meetings; the goal of the meetings; partnerships (if any).

Also, please tell us what you think is required of an international organization.

*M. Havass
General Secretary
Budapest, Hungary*

CoCo on Ice in Holland

Editor:

Sadly, I have to report that the last CoCos seem to have disappeared from Tandy outlets here in The Netherlands. The word

is that the CoCo 3 will not be available here. I assume that will also be the case in other countries on the 220/240 volt and PAL television systems.

When my trusty old gray CoCo 1.1 eventually gives up the ghost, will this mean farewell CoCo and farewell RAINBOW? Let's hear from CoCo fans in Australia, Western Europe and elsewhere.

*Keiran Kenny
The Hague, Holland*

BACK TALK

Editor:

The August issue of RAINBOW contained a letter from a D.J. Leffler under the title "Bit-Banger Rebuttal." This letter needs a little clarification since it contained a few incomplete statements.

Mr. Leffler says his CoCo's serial port (the "bit-banger") can operate at baud rates up to 4800 "in duplex," but he failed to mention whether it is operating in half or full duplex. From the application he mentioned (two CoCos in a master-coprocessor configuration), I believe he meant half duplex since full duplex would not be necessary in his dedicated application. In any event, very few CoCo owners would apply their computer in this manner. Most prefer to purchase a modem and get online with Delphi or their local BBSs.

It is quite true that CoCos can achieve transfer speeds of 9600 bits per second in half duplex mode, and many CoCo owners routinely operate their printers at 9600 bits per second through the serial port. Half duplex operation, of course, requires data transmission in only one direction at a time.

However, in full duplex mode, one must be able to send and receive data at the same time. While full duplex operation through the serial port may appear to be successful, a continuous incoming stream of data will cause the terminal software to drop either incoming or outgoing characters, or possibly both. Additionally, some "garbling" will appear from time to time as the terminal software attempts to maintain synchronization with both the incoming and outgoing bit streams. This situation is unavoidable, even if one takes unusual care in the design of the time delay loops.

Conversely, full duplex operation at 1200

RUNS ON
COCO 3

AUTOTERM
TURNS YOUR COLOR COMPUTER INTO THE
WORLD'S
SMARTEST TERMINAL!
YOU'LL ALSO USE AUTOTERM FOR SIMPLE
WORD PROCESSING & RECORD KEEPING

NOW HI-RES

EASY COMMUNICATION + WORD PROCESSING + TOTAL AUTOMATION

Full prompting and error checking. Step-by-step manual has examples. Scroll text backward and forward. No split words on screen or printout. Save, load, delete files while on line. Print, save all or any part of text. XMODEM for machine language files. 128 ASCII characters, 1200 baud, etc. Works with D.C. Hayes or any modem. Handles files larger than memory. Print on line with J&M or RS232 Pak. Screen widths of 32, 40, 42, 51, 64.

Please hire the mentally retarded. They are sincere, hard working and appreciative. *Thanks!*
Phyllis.

Editing is super simple with the cursor. Find strings instantly too! Insert printer control codes. Specify page size and margins. Switch quickly between word processing and intelligent terminal action. Create text, correct your typing errors; then connect to the other computer, upload your text or files, download information, file it, and sign-off; then edit the receive data, print it in an attractive format, and/or save it on file. Compatible with TELEWRITER.

CASSETTE \$29.95

DISKETTE \$39.95

Add \$3 shipping and handling
MC/VISA/C.O.D.

Advanced system of keystroke macros lets you automate any activity, such as dial via modem, sign-on, interact, sign-off, print, save. Perform entire session. Act as message taker. At start-up, disk version can automatically set parameters, dial, sign-on, interact, read/write disk, sign-off, etc. Timed execution lets AUTOTERM work while you sleep or play. No other computer can match your COCO's intelligence as a terminal.

PXE Computing
11 Vicksburg Lane
Richardson, Texas 75080
214/699-7273

bits per second is quite possible through the CoCo 3's bit-banger port. The popular terminal programs *Rickeyterm* and *GeTerm* support such operations quite well. This is primarily due to hardware differences incorporated in the design of the CoCo 3.

On the CoCo 3, the programmable interrupt timer can be used to provide a stable time base from which the terminal software may sample the incoming bit stream and send the outgoing bit stream very reliably. This allows for the creation of a software UART, and unlike the situation in the CoCo 1 and 2, it allows more precise timing. Since it's a hardware device, fewer actual interrupts occur, which means a noticeably larger amount of processor time is available. In actual practice, baud rates higher than 2400 are still rather hard to do using the bit-banger on the CoCo 3 in full duplex mode. Both *GeTerm* and *Rickeyterm* will function at 2400 bits per second in full duplex mode.

So, you see, even if using a well-designed modem and appropriate terminal software, the integrity of data communications may be jeopardized because of the unreliability of the CoCo's PIA-driven serial port. A hardware-based serial port, such as the Deluxe RS-232 Program Pak, is the way to go.

Don Hutchison
Atlanta, GA

Obsolescence Scare

Editor:

I am very angry that you have switched

most of your programs so that they only work on the new CoCo 3! I, who have had the original CoCo for several years, am not happy that half of your programs can't be run on my computer! I am sure I am not alone. Reading the August 1987 issue of RAINBOW, I was disappointed when I saw that the game *Danger Zone* was only for the CoCo 3. I would like to know the reason for this switch.

Jason Max
Phoenix, AZ

The August 1987 issue presented 17 programs for the CoCo 1 and 2 and four for the CoCo 3. We will continue to support the CoCo 1 and 2 users. However, we must also support the newer CoCo 3! Yes, some programs will only run on the CoCo 3, but that is because the enhancements in the machine allow such programs to be written. The earlier CoCos can't run these programs because they don't have these enhancements.

HINTS AND TIPS

Editor:

I'd like to share a simple little program for making a blue and red checkerboard design on your computer. If you change the SCREEN value in Line 3 to SCREEN 1,0, you'll get green and blue on a green background. If

you change the step rate at the end of Line 3, you'll see many different patterns emerge. Enjoy!

```
1 PMODE4,1:PCL51
2 SCREEN1,1:COLOR0,1
3 FOR Z=0 to 247 STEP 1.93
4 LINE (Z,0)-(Z+9,191), PSET
5 NEXT Z:EXEC44539:GOTO 1
```

Bill Bernico
Sheboygan, WI

CoCo in the Key of 3

Editor:

In using Joseph Platt's program *Musical+TR* from June 1987, I discovered a way to combine several keys of music into the same song.

You must place the first half of the song in the desired key on disk, then copy the second half to begin at the end address of Part One, plus one. Transpose Part Two then load Part One back from the disk. Part One will load over Part Two, zeroing only the first two notes of Part Two. By replacing these you will have a key change within the same song.

Jim Hillhouse
Live Oak, FL

The BASIC Solution

Editor:

I have read that in order to benefit from

the 80 columns available on the CoCo 3 you must use the RGB monitor.

While it's true that a color composite monitor is less than ideal for the 80-column format, such is not the case with a monochrome. While awaiting the availability of the CoCo 3, I dug out my Amdek 300 green screen, which had been packed away since I got a new color monitor. Every night I had visions of a nice 80-column display on that lovely green screen. When the big day came I was very disappointed at the first results.

On power-up, the default values give you black characters on a green background in all three text formats. A monochrome monitor displaying this combination produces undesirable vertical bars in 32- and 40-column format and makes 80 columns unreadable. However, as in most cases with the CoCo, problems are usually greatly outnumbered by solutions. On the CoCo 3, the solutions are built into BASIC. Within 10 minutes of that first disappointment, I had found my favorite combination of bright letters on a black background using PALETTE 2,0 and ATTR 3,2. I feel this combination on a green screen monitor is unbeatable. On my black-and-white monitor I prefer dark characters on a light background. Using ATTR 6,4, this, too, is a snap. Both the 13-inch green and the 9-inch black-and-white display beautifully sharp and crisp characters in 80 columns.

Big Blue CoCo?

Editor:

I would like to ask all of the hardware buffs out there if they have plans for either of the following. I would like to see an accelerator card for the CoCo 3. How about a card to let the CoCo 3 be IBM-compatible? We've got all the right specs (memory, graphics, drive format, etc.). The market would be immense for such products.

*Eric A. Wolf
South Bend, IN*

INFORMATION PLEASE

Editor:

I own a Model 101 Metric Industries Interface for my printer, a Legend 880. I bought the interface on sale from a private owner. The owner said no instructions for the interface came in the box when he

bought it. If someone has instructions for the Model 101, I would appreciate it.

Concerning my Legend 880 printer, I would like to find anyone who has one and can share their experience with it. I am trying to find compatible graphics and word processing software for it.

Roanoke, IL 61561*

Picture This

Editor:

I wrote a program displaying a picture on the CoCo 3's 320-by-192 graphics screen. I would like to save it to MGE format so it can be loaded into *Color Max 3*.

KUDOS

Editor:

Determined to learn how to access the CoCo 3's extra memory using assembly language, and after beating my brains out, making call after call and poring over the CoCo 3 articles in the RAINBOW, I finally called RAINBOW and talked to Cray Augsburg. He suggested I purchase a CoCo 3 service manual, because sometimes it explains technical information not supported elsewhere. I ordered one from my local Radio Shack for \$15, and Cray was correct. This manual contains all the information needed to access the extra memory. As an added bonus it even tells how to access the PALETTE from assembly language. At \$15 this is a very worthwhile investment. Thanks a lot to Cray Augsburg; my hat is off to you.

*Arron W. Branigan
Jacksonville, AR*

A KDSK Fan

Editor:

I recently downloaded KDSK by Ken Wuelzer after reading Richard White's enthusiastic review in the April 1987 issue. I totally agree with Mr. White that this is one of the best programs written for the CoCo. I rate it up there with my favorite program, ADOS, by Art Flexser. Art really outdid himself on this one. He has succeeded in taming the unruly CoCo 3 with his modified RSDOS program. For those users like myself who use a monochrome monitor, now you can boot up the CoCo 3 with a good monochrome picture without having to type in commands to make the display readable. Plus, there are numerous other "customized" subroutines you can create to make your CoCo easier to use by using single keystroke entries.

Madison, WI*

Telecommunication Inflation

Editor:

The Federal Communications Commission (FCC) has announced a proposal that calls for assessing additional connect charges of about \$5 hourly for computer telecommunication services going through packet switching, value-added services such as Telenet and Tymnet, starting January 1, 1988. This will add at least \$5 an hour cost to any service connected to packet switches such as CompuServe, Bix, Source, Delphi, Genie and People-Link, and will add an hourly charge to such services as the pending Tymnet's PC Express and Telenet's PC Pursuit (which charges \$25 a month for non-prime time use of Telenet reaching local systems in the 25 largest cities in the U.S.).

Of course this will kill off such efforts by Tymnet and Telenet to offer mass-consumer, inter-city telecommunications at low rates, and will probably just about kill off individual subscribers (rather than corporations and government agencies) to national services like CompuServe, Source, Genie and BIX. It will also ensure that no public educational institution will get into these type services. The minimum non-prime time rates for any national service will exceed \$10 an hour, and daytime rates will be above \$25 an hour.

The new chairman of the FCC is Dennis Patrick. The other commissioners are James Quello, Mimi Dawson and Patricia Diaz Dennis (there is still an unfilled seat vacated by chairman emeritus Mark Fowler).

The FCC is accepting comments on the ruling. You can write to: Office of Opinion and Review, The Secretary, 1919 M Street, N.W., Room 222, Washington, D.C. 20554. Refer to "Interstate Access Charges Exemption for Enhanced Service Providers CC Docket 87-208."

Copies of this document are available by calling the FCC at (202) 632-7000, who will refer you to a transcript company called ITS at (202) 857-3800.

In Response to Recurrent Inquiries . . .

While group purchases of RAINBOW ON TAPE and RAINBOW ON DISK are permitted, no license to make copies is conveyed or implied. Yes, your group may even purchase a subscription to our disk/tape services, but such purchase in no way authorizes that *any* copies be made of that original disk/tape.

Specifically, this means that the original disk/tape itself may indeed be kept in a club library for use by members. However, a group purchase *does not* entitle club members, individually or as a group, to copy that disk/tape.

Unauthorized copying of any copyright product is strictly illegal. The copyright (right to make copies) is in no way conveyed in the purchase transaction.

BOOKS & GRAPHICS

500 POKES, PEEKs, 'N EXECs FOR THE TRS-80 COCO

NEVER BEFORE has this information of vital significance to a programmer been so readily available to everyone. This book will help you 'GET UNDERNEATH THE COVER' of the Color Computer and develop your own HI-QUALITY Basic and ML programs. SO WHY WAIT??

This 80-page book includes POKEs, PEEKs and EXECs to:

- ★ Autostart your basic programs
- ★ Disable Color Basic/ECB/Disk Basic commands like LIST, LLIST, POKE, EXEC, CSAVE(M), DEL, EDIT, TRON, TROFF, PCLEAR, DLOAD, RENUM, PRINT USING, DIR, KILL, SAVE, LOAD, MERGE, RENAME, DSKINI, BACKUP, DSKIS\$, and DSKO\$.
- ★ Disable BREAK KEY, CLEAR KEY and RESET BUTTON.
- ★ Generate a Repeat-key.
- ★ Transfer ROMPAKS to tape (For 64K only).
- ★ Speed Up your programs.
- ★ Reset, MOTOR ON/OFF from keyboard.
- ★ Recover Basic programs lost by NEW.
- ★ Set 23 different GRAPHIC/SGRAPHIC modes
- ★ Merge two Basic programs.
- ★ AND MUCH MUCH MORE!!!
COMMANDS COMPATIBLE WITH
16K/32K/64K/COLOR BASIC/ECB/DISK
BASIC SYSTEMS and CoCo 1, 2, & 3.

ONLY \$16.95

All orders, \$50 & above (except CODs) shipped by UPS 2nd Day Air at no extra charge. Last Minute Shoppers can benefit.

SUPPLEMENT to 500 POKES, PEEKs 'N EXECs ONLY \$9.95

200 additional Pokes, Peek's 'n Execs to give you MORE PROGRAMMING POWER.

Includes commands for:

- Rompak Transfer to disk
- PAINT with 65000 styles!
- Use of 40 track single/double sided drives with variable step-rates
- High-Speed Cassette Operation
- Telewriter 64[®], Edtasm+[®] and CoCo Max[®] Enhancements
- Graphics Dump (for OMP printers) & Text Screen Dump
- AND MUCH MUCH MORE!
- 500 POKES, PEEKs 'N EXECs is a prerequisite

NEW! 300 POKES PEEKs 'N EXECs FOR THE COCO III

Get more POWER for your CoCo III. Includes commands for:

- 40/80 Column Screen Text Dump
- Save Text/Graphics Screens to Disk
- Command/Function Disables
- Enhancements for CoCo 3 Basic
- 128K/512K Ram Test Program
- HPRINT Character Modifier
- AND MANY MORE COMMANDS

ONLY \$19.95

Pen Pals

● I am 40 years old and am seeking pen pals who are licensed radio amateurs and short-wave listener hobbyists. I have a CoCo 2 and 3, an FD-500 SSDD drive, and a Legend 880-DMP.

*John C. Onken
113 South Celina Street
Roanoke, IL 61561*

● I am 10 years old and searching for pen pals around my age. I have a CoCo 2, a CoCo 3, disk drives and a printer.

*Jeremy Radachowsky
P.O. Box 60
Bantam, CT 06750*

● I am looking for pen pals seriously interested in BASIC programming. I have a CoCo 3, disk drive, printers and a Speech/Sound Pak.

*Jim Cannon
526 Industry Road
Atwater, OH 44201*

● I am interested in having a pen pal anywhere in the United States. I am 12 years old and have a 64K CoCo 2, multi-pack, disk drive, DMP-105 printer and a cassette recorder.

*Mike O'Neal
437 Main Street
P.O. Box 233
West Townsend, MA 01474*

● I'm 61 years old and retired. I have plenty of time to trade ideas. So, take a chance, and drop me a line. We could be friends for many years.

*John Jenkins
7333 West 112th Place
Worth, IL 60482*

● I am looking for pen pals in northern New York and eastern Vermont. I am 13 and have had my CoCo for four years. I also have a disk drive, CCR-81 cassette deck and a DMP-130 printer. I would especially like to correspond with any dungeons and dragons players.

*David M. Endersbee
33 Scenic Pt. Drive
Jay, NY 12941*

● I have three 64K CoCo 2s, six disk drives, cassettes, multi-pack, SG-10 printer, CGP-115 printer and a CGP-220 printer. I have just started a new club in my area and any advice will be appreciated. I will answer all who write.

*Bobby Roger Queen
1737 Farmville Road
Shelby, NC 28150*

● I have just moved to San Antonio, and I feel very much alone. I would like to get in touch with the CoCo Community of San Antonio. I have a CoCo 3 with two disk drives, a DMP-105 and a modem. I am an avid OS-9 hobbyist, too.

*Todd Larsen
7371 Estrid Trail
San Antonio, TX 78244*

● I am looking for a pen pal who enjoys Adventures and music programs. I have a CoCo 2, joysticks, mouse, disk drive, cassette recorder and I'm going to purchase a printer soon. I am a 16-year-old male.

*Curtis Schaaft
RR 1, Box 186
Moro, IL 62067*

● I have a CoCo 1 with two drives, cassette and a DMP-100 printer. The CoCo has 128K, but operates as a 64K machine. My interests are games, Adventures and utilities.

*Richard Durr
7337 Brookview Circle
Tampa, FL 33614*

● I am 12 years old and have a CoCo 2, DMP-105, modem and disk drive.

*Eric Mathurin
1129 Soderlind
Ottawa, Ontario
Canada K2C 3B1*

● I'm 28 years old and proud owner of two CoCo 2s. If there are any other "old fogies" out there (if you aren't 14 and brilliant, you can't really understand computers) who'd like to correspond with a merely-adequate-but-obsessive programmer, please write.

*David B. Smith
4112 Trinity Road
Duluth, MN 55811*

● I have a 64K CoCo 2, one FD-501 drive, a CCR-81 recorder, a DMP-105 printer and a DCM-3 modem. I would love to hear from anyone to talk about the glorious CoCo.

*Andy Engle
2303 Highland Hill
St. Peters, MO 63376*

● I would like only pen pals who are Doctor Who fans. All letters will be answered.

*Chris Curtis
Route 1, Box 186
Walling, TN 38587*

● I am a publisher of a fledgling newsletter for world-wide pen pal hobbyists. I do most of the writing myself, but there is a lot of reader participation. My "printing press" is none other than a 64K CoCo 2, a DMP-105 and *Color Scripts*.

The best way to enjoy *La Pluma* is to read it, write to people who list themselves for pen pals and even list yourself. Have fun discussing computers, or anything else that you like. Anyone wishing to join *La Pluma Press* should write to me at P.O. Box 77, Crompond, NY 10517. People of all ages from any place are welcome.

*Jacqueline D. Gannuscio
Editor/Publisher LLP*

● I am 14 years old and looking for a pen pal who lives anywhere in the world. I own a CoCo 2, CoCo 3, FD-501 disk drive, DMP-130 and CCR-81 cassette. I love games and have just started working with OS-9 Level II.

*Jason Ebbeling
Gulf Road
Berkshire, MA 01224*

● I'm 10 years old and have a 64K CoCo 2, disk drive, cassette recorder and a DMP-105 printer. I'm a game nut — I like all games, especially arcade. I'm looking for Canadian pen pals of any age.

*Jason Nielsen
1535 Winslow Drive
Sooke, British Columbia
Canada V0S 1N0*

● I am 15 years old and own a CoCo 2 and 3, a CGP-220 printer and a CCR-81 cassette. I will soon own a disk drive and a CM-8 monitor.

I enjoy using my CoCo, drawing and reading, and would like to have a pen pal between 14 and 16 years of age. I would like someone with a creative mind who likes to write Adventure games.

*Dana E. Sonnie
21 Chapel Street
Yalesville, CT 06492*

● I'm 23 and looking for someone who likes to write their own programs and graphs. I have a CoCo, disk drive, cassette player, and a modem.

*Maryann Exum
2987 S. Clara
Fresno, CA 93706*

● I am 17 years old and looking for pen pals. My present system consists of a 64K CoCo 2, DMP-130 printer and cassette recorder. I will return all letters sent to me.

*Eddie Mendonca
3000 Merlan Way
Hanford, CA 93230*

● I am 10 $\frac{1}{3}$ years old and have a CoCo 2 and some joysticks. Anyone wanting a pen pal, please write to me.

*Armando Perea
824 N. Humbolt #4
San Mateo, CA 94401*

● I am 17 years old and have a 64K with two disk drives and a multipack interface with many accessories. I would like to have a pen pal who is interested in exchanging ideas.

*Marc Steinman
620 28th Ave. So.
Grand Forks, ND 58201*

● I am 14 years old and am looking for a girl pen pal who lives on the East Coast and has a CoCo 2 or 3. I have everything you can attach to the CoCo, and then some. I also have a very good sense of humor.

*Eric Humphreys
327 Snowden Lane
Princeton, NJ 08540*

THE RAINBOW welcomes letters to the editor. Mail should be addressed to: Letters to Rainbow, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. Letters should include the writer's full name and address. Letters may be edited for purposes of clarity or to conserve space.

Letters to the editor may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG> prompt, type RAI to take you into the Rainbow Magazine Services area of the SIG. At the RAINBOW> prompt, type LET to reach the LETTERS> prompt and then select Letters for Publication. Be sure to include your complete name and address.

UTILITIES

SUPER TAPE/DISK TRANSFER

- Disk-to-Disk Copy (1 - 3 passes)
- Tape-to-Disk Copy
- Tape-to-Disk Automatic Relocate
- Disk-to-Tape Copy
- Tape-to-Tape Copy

Copies Basic/ML programs and DATA files.
CoCo 1, 2 & 3 32K Disk System
(Disk to Disk Copy requires 64K)

DISK ONLY **\$24.95**

COCO DISK ZAPPER

Are you frustrated with crashed disks? If so, this program can save hours of labor by restoring complete or part of the information from the disk. It's indispensable!

Requires minimum 32K/64K disk system
ONLY **\$24.95**

DISK TUTORIAL

(2-Disk Package)

An indispensable tutorial for serious disk Basic/ML programmers. Gives almost everything you **MUST** know about the disk system CoCo 1, 2 & 3

ONLY **\$36.95**

UTILITY BONANZA I

Includes 20 best-selected utilities:

- 40K Disk Basic ● Disk Cataloger
- Super Tape-to-Disk Copy (with Automatic Relocate)
- LList Enhancer ● X-Ref for Basic Programs
- Graphics Typesetter (two text sizes!)
- LARGE DMP Graphics Dump ● Basic Stepper
- Hidden 32 K (Use the "hidden" 32K from your 64K CoCo)
- RAM Disk (for Cassette & Disk Users)
- Single Key Printer Text Screen Dump
- And much, much more!!!

Most programs compatible with CoCo 3

We're Doing OK

Probably the most common letter I get these days is from those readers who ask why THE RAINBOW has decreased its number of pages in the past year. I think it is a fair question, and one that needs to be answered.

The way we determine the number of pages that appear in the magazine is simply by the number of advertisements we have. We establish a ratio of advertising to editorial copy and try as much as we can to adhere to that. So, when the number of ads goes down — as it has been doing lately — then the number of total pages in the magazine goes down, too.

Of course, the inverse is also true. You will notice that this month's issue is larger, in terms of pages, than last month's issue. The reason is that we have more ads. By the way, pages are usually added in increments of 16, although we would like to be able to add 32 at a time. Why? Because the 32-page package is the most economical to run on a printing press.

Despite the fact that our editorial (and advertising) pages have been down in the last year or so, THE RAINBOW continues to be in good financial health. We have a wealth of subscribers, a good, stable advertising base, and we work hard to keep our costs down. This translates into sure knowledge that we will be a part of the CoCo Community for a long time to come.

I get most distressed when I see letters from readers who try to draw comparisons between some of the defunct Color Computer magazines in their last months of life and a decrease in the pages of THE RAINBOW. There are vast differences between the two situations. The main one is we have a strong subscriber base and sell well in the bookstores we allow to carry THE RAINBOW. Those late and lamented publications never had a strong subscriber base

and their circulation figures were generated primarily by the number of magazines they *printed to be sold* (as compared to *actually* sold).

Yes, we're not as thick as we were, but I feel we're working harder on quality. The desktop publisher program we are printing in this issue is but one example of our efforts to bring you more quality in the future. You will see more examples of this sort of thing.

Can you help us? Yes, of course you can. And, at the same time, you'll be helping the CoCo Community itself grow stronger, too.

First, patronize our advertisers. I know it is a trite saying, but it is a very important one. If someone advertises in these pages, let them know you saw their ad. If they don't advertise, and you hear about them in some other way, ask them, "Why not?" Second, and just as important, continue to subscribe. Help us by renewing your subscription when you get your notice (we only send one!). And just as important, help us get new subscribers. Encourage others to join our ranks.

Yes, we're doing OK. But we'd like to do better. It'll help us do a better job for you.

* * *

While on the subject of advertising, I would like to mention a recent mail-order computer sales scam about which many of you have, no doubt, heard.

One of the reasons for my writing is to reassure you. We're not looking to pat ourselves on the back, but, at the same time, when we accept advertising for a magazine like this one — in a field where there is a great deal of mail-order buying and selling — we have to do a little more than make cursory checks.

One of our ad sales people got a call several weeks ago from a company called Compusystems in California. The company wanted to advertise in this magazine and sent an impressive array of credit materials: an audited financial statement from a certified public accountant, bank references, business references and the like. All including telephone numbers, addresses and so forth. The company listed assets

"That seemed somewhat suspicious, but, after all, we're a magazine, not a detective agency."

of more than \$6 million and an inventory of about \$4.5 million. Not too shabby. They wanted to run a full-page advertisement offering excellent prices on both software and hardware.

Our credit department checked their references. All of them checked out very well — the companies they were doing business with, the bank, the CPA firm. In fact, the reports were glowing.

However, our sales rep was somewhat disconcerted. It seemed that everyone she talked with sounded alike; no matter who she called, and no matter what number, the voices were of the same man and the same woman.

That seemed somewhat suspicious, but, after all, we're a magazine, not a detective agency. All the phone numbers were different and even in different area codes. We checked with information, which had all the companies listed.

Every time we checked, though, even in different area codes, we discovered the same two voices. Then, upon realizing that there had recently been some changes in the Los Angeles area code — so that either one could be used for a time — we decided to do a little more investigating.

A call to the Federal Reserve Bank in Los Angeles revealed that the bank and the banker we had called did not exist. A call to the Los Angeles association of CPAs revealed no firm or accountant by the name we had been given. The Better Business Bureau had never heard of them.

We declined the advertisement, and we sent the information we had to the Federal Reserve and the CPA association for them to follow up.

Several other publications, including CW Communications' *InfoWorld*, accepted it. In a story about the scam, which was run a week after the Compusystems full-page ad appeared, *InfoWorld* said that the credit was checked by "the credit department at IDG, *InfoWorld's* parent company." IDG, as many of you probably know, is a big company that owns a large number of magazines, including *80 Micro*.

I would not try to pretend that we were not concerned that we would not be paid for the ad — after all, that is the purpose of a credit check. But I am also glad that we're small enough to be thorough — and to prevent our readers from being caught in a scam.

— Lonnie Falk

Hint . . .

Returning from BREAK

I am sure there has been, or will be, a time in every computer user's life when a BASIC program stops because of an inadvertent press of the BREAK key. Many times, typing `CONT` doesn't get you back into the program. And, if you type `RUN`, all the variables and counters will be reset and you will lose any data you were working on. What do you do? Keep in mind that, in most cases, you can enter `GOTO` followed by the line number at which the program stopped execution. If it stopped with an error, use the next line number in the program. Such a re-entry preserves all data, `CLEAR` values and even the counter values in `FOR-NEXT` loops.

Darryl L. Petrak
House, NM

Hint . . .

Peeking the INKEY\$

Most Color Computer programmers are aware of the `INKEY$` statement and how to use it to scan the keyboard for a specific key press. Quite a few of these people also know that you can use `EXEC 44539` for the same purpose. But, did you know that the `ASCII` value of the key press is stored and can be found at memory location `I35`? All it takes is a quick peek there and you can test for which key was pressed. This really helps if you are trying to do something fancy and need to perform calculations on the `ASCII` value.

Steven Shimatzki
Dunbar, PA

ALL HARDWARE COMPATIBLE WITH COCO 1, 2 & 3

DISK DRIVES

Double Sided, Double Density 360K 40 track disk drives for the Color Computer 1, 2 and 3. Buy from someone else and all you get is a disk drive. Buy from us and not only do you get a quality disk drive, you also get \$60 worth of disk utility software (Super Tape/Disk Transfer and Disk Tutorial) and our DISKMAX utility which allows you to use BOTH sides of our disk drives. It's like buying TWO disk drives for the price of ONE!!

Graphics Adventure game on Cray Augsburg's monitor stopped me in my tracks the other day. It was a stunner! "Where did *that* come from?" I quizzed him. "It's an Adventure Contest entry," our Technical Editor boasted in a playful, but keep-your-mitts-off tone.

As it turns out, it's this year's contest entry from last year's grand prize winner, Dr. Bruce K. Bell, and it's sure to be "in the money" when Cray, our contest chief judge, and his able assistant (and wife) Ruth Ann announce the contest winners in our February issue. A long time away, you say? Well, do remember you'll be getting that issue right at the beginning of the new year, and, since I was the chief judge of our last Adventure contest, believe me when I promise you they'll be quite busy over the next three months!

After all, there are entries from Maine to Florida, California to Washington. Would you just look at a sampling of some of these towns: Natrona Heights, Red Wing, Apulia Station, Dunkirk, Beeville, Dayton (Tennessee, not Ohio), Okanogan, York, Irmo, Chippewa Falls, Carigan, Ogalla, Villas, Crivitz, Kent, Toronto (Ohio), Olivet, Cynthiana, Kankakee, Lebanon, Crete — even some from Milwaukee (with an "ie" in Oregon and an "ee" in Wisconsin) and one from Miller Place. Yes, more readily known communities such as Tucson, Orlando, Montreal and Charleston are represented, too.

Add in all the others from Canada, many more from the United States and one from Cordoba, Argentina, and you get the idea. Since Judge Ruth Ann is also a registered nurse, maybe she'll have something for red eyes, insomnia and the other symptoms of "Adventuritis" that's bound to infect our judges. Considering that we'll be busy on our December holiday issue by the time you see this, our February issue is not as far away as it might seem.

What's just around the corner is our Princeton RAINBOWfest! We're finalizing the schedule, including the new "Delphi Saturday Night" get-together and our new "Educational Sandbox" programs for children and their parents. CoCo Cat's already packed! Our keynote speaker, RAINBOW's own Jim Reed, is so busy making notes that all of us here in Prospect are a bit nervous about what he's going to divulge when he "tells all."

With the great seminar lineup, you'll want to be there all day Saturday and Sunday if at all possible. Among our new speakers are copyright expert Professor Ed Samuels, OS-9 expert Greg Law and high-flying programmer Dr. Larry Preble. Longtime CoCo telecommunicator Don Hutchison is going to be "downloaded" from Atlanta via something he'd probably call "Delta protocol." I do hope you'll be able to make it to this 'fest, our fifth East Coast show, and get to know other members of our CoCo Community.

Have you noticed that we're "up" 16 pages this month? I know many of you have written in to comment on RAINBOW's size this summer, so it feels good to see our annual prediction that we'll get bigger in the fall and winter hold true again this year. You see, computer magazines in general have a slow spell in the summer, presumably because people are out in the sunshine and on vacation, etc., and then things get back into the groove as we head indoors again.

Speaking of annual events, this is our annual Graphics issue and we welcome H. Allen Curtis back to our pages, this time helping harness the power of the CoCo for desktop publishing! John Williams provides a new version of *CoCo Draw* to help you create Hi-Res graphics, and even OS-9 guru Dale Puckett is at the drawing board. Solla Carrock introduces *Animate* and *Picture Book* for displaying your creations and, if you're ambitious, you can produce movies, too! Bill Bernico's back again and so is Becky Matthews for "splash on the color" month as we explore the brightest side of CoCo.

So, the CoCo Adventure continues, our 14th RAINBOWfest beckons and you can color us excited in this seventh year of our CoCo Community. I hope you'll join with us as we keep exploring the CoCo world.

— Jutta Kapfhammer

CoCo Gallery

Logan Ward

Rainboeen

This multicolored scene was developed with *Color Max 3*. Logan also designs the Maxwell Mouse cartoons printed in *THE RAINBOW*, and lives in Memphis, Tennessee.

Honorable Mention

Tina and Robert Hermanek
Haunted House

Tina and Robert, who live in Chaska, Minnesota, used BASIC to create this frightening scene.

Chris Foster
CoCo 3

This graphic creation shows the organization of Chris' computer setup and was created with *Color Max 3*. He lives in Texarkana, Texas, and is a sophomore in college.

Francisco Rios

Space Ace

Francisco used a program he wrote to display his perception of a ship in outer space. He lives in Houston, Texas.

Dennis "CoCo" Hatton

Autumn

Dennis created this rich and full-toned view of the harvest in BASIC on the CoCo 3. He lives in Cockeysville, Maryland.

SHOWCASE YOUR BEST! You are invited to nominate original work for inclusion in upcoming showings of "CoCo Gallery." Share your creations with the CoCo Community! Be sure to send a cover letter with your name, address and phone number, detailing how you created your picture (what programs you used, etc.) and how to display it. Also, please include a few facts about yourself.

Don't send us anything owned by someone else; this means no game screens, digitized images from TV programs or material that's already been submitted elsewhere. A digitized copy of a picture that appears in a book or magazine is *not* an original work.

We will award two first prizes of \$25, one for the CoCo 3 and one for the CoCo 1 and 2; one second prize of \$15 and one third prize of \$10. Honorable Mentions may also be given.

Please send your entry on either tape or disk to the CoCo Gallery, THE RAINBOW, P.O. Box 385, Prospect, KY 40059. Remember, this is a contest and your entry will not be returned.

— Angela Kapfhammer, Curator

A FRIGHTFULLY GOOD TIME!

By Ricky Sutphin

Halloween is a favorite of many children. I have written this program, *Horror*, to add to those anticipation-filled days before the big night. *Horror* has 20 search puzzle. Many of these questions rely on those truly awful puns that delight the younger set.

The text is formatted for a 32-column screen. After loading and running the program, you are presented with a question. You have the option of viewing the searchlist for the answer, entering your guess, or giving up. If you successfully answer all 20 questions, you will be rewarded with a bonus joke. Happy hunting!

(Questions about this program may be directed to the author at Route 1, Box 20, Henry, VA 24102. Please enclose an SASE when writing for a reply.)

The Amazing A-BUS

NEW

An A-BUS system with two Motherboards
A-BUS adapter in foreground

The A-BUS system works with the original CoCo,
the CoCo 2 and the CoCo 3.

Plug into the future

With the A-BUS you can plug your PC (IBM, Apple, TRS-80) into a future of exciting new applications in the fields of control, monitoring, automation, sensing, robotics, etc.

Alpha's modular A-BUS offers a proven method to build your "custom" system today. Tomorrow, when you are ready to take another step, you will be able to add more functions. This is ideal for first time experimenting and teaching.

A-BUS control can be entirely done in simple BASIC or Pascal, and no knowledge of electronics is required!

An A-BUS system consists of the A-BUS adapter plugged into your computer and a cable to connect the Adapter to 1 or 2 A-BUS cards. The same cable will also fit an A-BUS Motherboard for expansion up to 25 cards in any combination.

The A-BUS is backed by Alpha's continuing support (our 11th year, 50000 customers in over 60 countries).

The complete set of A-BUS User's Manuals is available for \$10.

About the A-BUS system:

- All the A-BUS cards are very easy to use with any language that can read or write to a Port or Memory. In BASIC, use INP and OUT (or PEEK and POKE with Apples and Tandy Color Computers)
- They are all compatible with each other. You can mix and match up to 25 cards to fit your application. Card addresses are easily set with jumpers.
- A-BUS cards are shipped with power supplies (except PD-123) and detailed manuals (including schematics and programming examples).

Relay Card

RE-140: \$129

Includes eight industrial relays. (3 amp contacts. SPST) individually controlled and latched. 8 LED's show status. Easy to use (OUT or POKE in BASIC). Card address is jumper selectable.

Reed Relay Card

RE-156: \$99

Same features as above, but uses 8 Reed Relays to switch low level signals (20mA max). Use as a channel selector, solid state relay driver, etc.

Analog Input Card

AD-142: \$129

Eight analog inputs. 0 to +5V range can be expanded to 100V by adding a resistor. 8 bit resolution (20mV). Conversion time 120us. Perfect to measure voltage, temperature, light levels, pressure, etc. Very easy to use.

12 Bit A/D Converter

AN-146: \$139

This analog to digital converter is accurate to .025%. Input range is -4V to +4V. Resolution: 1 millivolt. The on board amplifier boosts signals up to 50 times to read microvolts. Conversion time is 130ms. Ideal for thermocouple, strain gauge, etc. 1 channel. (Expand to 8 channels using the RE-156 card).

Digital Input Card

IN-141: \$59

The eight inputs are optically isolated, so it's safe and easy to connect any "on/off" devices, such as switches, thermostats, alarm loops, etc. to your computer. To read the eight inputs, simply use BASIC INP (or PEEK).

24 Line TTL I/O

DG-148: \$65

Connect 24 input or output signals (switches or any TTL device) to your computer. The card can be set for: input, latched output, strobed output, strobed input, and/or bidirectional strobed I/O. Uses the 8255A chip.

Clock with Alarm

CL-144: \$89

Powerful clock/calendar with: battery backup for Time, Date and Alarm setting (time and date); built in alarm relay, led and buzzer; timing to 1/100 second. Easy to use decimal format. Lithium battery included.

Touch Tone® Decoder

PH-145: \$79

Each tone is converted into a number which is stored on the board. Simply read the number with INP or POKE. Use for remote control projects, etc.

A-BUS Prototyping Card

PR-152: \$15

3 1/2 by 4 1/2 in. with power and ground bus. Fits up to 10 I.C.s

ST-143

CL-144

RE-140

IN-141

AD-142

Smart Stepper Controller sc-149: \$299

World's finest stepper controller. On board microprocessor controls 4 motors simultaneously. Incredibly, it accepts plain English commands like "Move arm 10.2 inches left". Many complex sequences can be defined as "macros" and stored in the on board memory. For each axis, you can control: coordinate (relative or absolute), ramping, speed, step type (half, full, wave), scale factor, units, holding power, etc. Many inputs: 8 limit & "wait until" switches, panic button, etc. On the fly reporting of position, speed, etc. On board drivers (350mA) for small steppers (MO-103). Send for SC-149 flyer.

Remote Control Keypad Option RC-121: \$49

To control the 4 motors directly, and "teach" sequences of motions.

Power Driver Board Option PD-123: \$89

Boost controller drive to 5 amps per phase. For two motors (eight drivers).

Breakout Board Option BB-122: \$19

For easy connection of 2 motors. 3 ft. cable ends with screw terminal board.

Stepper Motor Driver ST-143: \$79

Stepper motors are the ultimate in motion control. The special package (below) includes everything you need to get familiar with them. Each card drives two stepper motors (12V, bidirectional, 4 phase, 350mA per phase).

Special Package: 2 motors (MO-103) + ST-143: PA-181: \$99

Stepper Motors MO-103: \$15 or 4 for \$39

Pancake type, 2 1/4" dia, 1/8" shaft, 7.5°/step, 4 phase bidirectional, 300 step/sec, 12V, 36 ohm, bipolar, 5 oz-in torque, same as Airpax K82701-P2.

Current Developments

Intelligent Voice Synthesizer, 14 Bit Analog to Digital converter, 4 Channel Digital to Analog converter, Counter Timer, Voice Recognition.

A-BUS Adapters for:

IBM PC, XT, AT and compatibles. Uses one short slot.	AR-133...\$69
Tandy 1000, 1000 EX & SX, 1200, 3000. Uses one short slot.	AR-133...\$69
Apple II, II+, IIe. Uses any slot.	AR-134...\$49
TRS-80 Model 102, 200. Plugs into 40 pin "system bus"	AR-136...\$69
Model 100. Uses 40 pin socket. (Socket is duplicated on adapter).	AR-135...\$69
TRS-80 Mod 3, 4, 4D. Fits 50 pin bus. (With hard disk, use Y-cable).	AR-132...\$49
TRS-80 Model 4P. Includes extra cable. (50 pin bus is recessed)	AR-137...\$62
TRS-80 Model I. Plugs into 40 pin I/O bus on KB or E/I.	AR-131...\$39
Color Computers (Tandy). Fits ROM slot. Multioak or Y-cable	AR-138...\$49

A-BUS Cable (3 ft, 50 cond.) CA-163: \$24

Connects the A-BUS adapter to one A-BUS card or to first Motherboard.

Special cable for two A-BUS cards: CA-162: \$34

A-BUS Motherboard MB-120: \$99

Each Motherboard holds five A-BUS cards. A sixth connector allows a second Motherboard to be added to the first (with connecting cable CA-161: \$12). Up to five Motherboards can be joined this way to a single A-BUS adapter. Sturdy aluminum frame and card guides included.

• The A-BUS is not a replacement for the Multi-pak

Amazing Color Sequencing

"The best program ever written for the Color Computer"

That's how thousands of enthusiastic users rated the **CoCo Max II** drawing program. With **CoCo Max III** we are ready to amaze them again. Instead of "patching" CoCo Max II, we rewrote it from scratch to take advantage of the CoCo Max III hardware. The results will knock your socks off! Below is a brief list of some of the *new* features, but some, such as **animation**, **color sequencing**, or the **slide show**, have to be seen. Send for the Demo Disk, and see for yourself.

Everybody's favorite drawing package features:

- A 50% larger editing window.
- Zoom area 400% larger.
- New drawing tools: **rays**, **3D cubes**, **arcs**,...
- New editing tools: shadow, text size,...
- Rotate by 1.5° steps
- Select any 16 of the 64 possible colors (all 64 colors displayed at once!)
- Powerful **color mix**: additive, subtractive, overlay,...
- Full **color editing** of patterns and color changing patterns.
- Incredible **special effects** with **color cycling** up to 8 colors with variable speed.
- **Animation** adds the dimension of motion to your image. (Must be seen.)
- Sophisticated data compression saves up to 70% of disk space when saving pictures.

In addition, there are dozens of enhancements to the multitude of features that made CoCo Max II a best seller.

More about CoCo Max III

- CoCo Max III is not an upgrade of CoCo Max II. It is entirely rewritten to take advantage of the new CoCo 3 hardware (More memory, resolution, colors, speed,...)
- The new CoCo Max III **Hi-Res Interface** and the CoCo Max II **Hi-Res Pack** are *not* interchangeable.
- The new interface plugs into the joystick connector.
- The CoCo Max III disk is not copy protected.
- CoCo Max III only works with the CoCo 3.
- A Y-Cable or Multi-pak is not necessary.
- Colors are printed in five shades of gray.
- CoCo Max III can read CoCo Max II pictures and fonts.

Note: CoCo Max II (for the CoCo 2) is still available on disk (\$79.95). CoCo Max I is still available on tape (\$69.95). For details, refer to our double page ad in any *Rainbow* from January '86 to July '87

Toll Free operators are for orders only. If you need precise answers, call the **tech line**. (Detailed CoCo Max specs are included with the Demo Disk.)

Add \$3.00 per order for shipping. Visa, MC, checks, M.O. welcome. CT residents add sales tax. C.O.D. add \$3.00 extra. Canada: shipping is \$5 Overseas add 10%

Imagine this picture in sixteen colors!

Guaranteed Satisfaction
Use CoCo Max for a full month.
If you are not delighted with it,
we will refund every penny.

System Requirements:

Any CoCo 3 disk system with a Joystick or a Mouse.

We apologize to tape users, CoCo Max III needs the flexibility of a disk.

The **CoCo Max III** system includes: • The special Hi-Res interface (for your mouse or joystick) • The CoCo Max III disk • Many utilities: (To convert Max II pictures, Max II fonts, etc.) • A detailed User's Manual. Complete system; nothing else to buy. **CoCo Max III: \$79.95***

COLOR TALK 3

The Complete Terminal/Communications Program you've been waiting for!

Just look at this partial list of Impressive Features:

*Supports COCO 3 as well as COCO 1 & 2. *Screen Display options: COCO3: 80x24, 40x24, 32x16.....Standard COCO: 32x60, 32x24, 51x24, 64x24, 85x24. *Supports PBJ Wordpack & Double 80+. *XMODEM & YMODEM. *Upload & Download. *Save to buffer or direct to disk. *Full ASCII XON/XOFF support. *ASCII filtering. *ASCII buffering. *Customizer-set and store frequently used options/parameters. *10-64 character user programmable macros. *Conference/Chat mode. *Selectable Baud rates of: 110,300,600,1200,2400,4800,9600 (will support RS232 Pak to achieve the baud rates to 9600). *Parity: Odd, Even, Mark, Space, None. *VT-52 Terminal Emulation. *Duplex: Half, Full, Echo. *Set Begin Block/End Block for selected save and print functions. *Browse/View through buffer. *Define margins, word-wrap, and justification for print-outs. *Complete support of the COCO's serial port and the RS232 Pack. *Optional prompted ASCII upload. *Customize Colors to suit your display. Much, Much More!

Ideal for accessing Compuserve & Delphi & other Information Services. Send your Color Max 3 "MGE" pictures to friends and fellow COCO users. **THIS IS THE ONLY COMMUNICATIONS PROGRAM AVAILABLE FOR YOUR COCO WITH ALL OF THIS POWER!** Compare COLOR TALK 3 with programs for the "PC" market costing 4 to 5 times as much. I'm sure you'll agree that COLOR TALK 3 represents real value for your COCO Dollars!

Screen Scrolling Made Easy

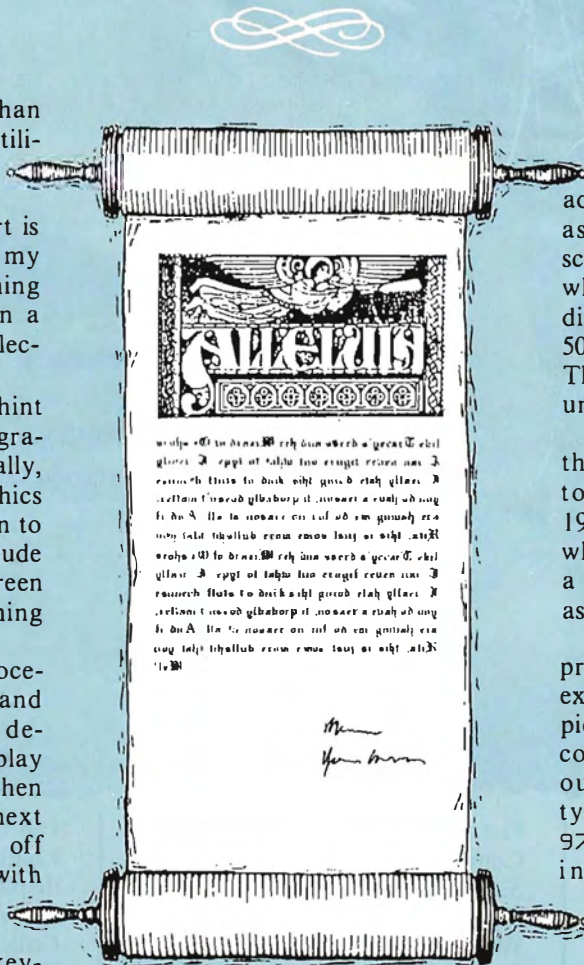

More than games, more than Adventures, more than utilities — come to think of it, more than almost any other aspect of computing, my favorite part is discovering new ways to improve my own original programs. Programming hints and tips are tucked away on a special disk all their own in my collection, and I refer to them often.

I recently added another helpful hint to that disk, concerning Hi-Res graphics screen presentations. Normally, after I've displayed a picture or graphics text, or both, and I want to move on to the next part of the program, I include the PCLS command to clear the screen and make room for whatever is coming up next.

This is technically the correct procedure, but by itself it is rather bland and unexciting. With the procedure described here you'll be able to display your graphics screen as usual, but when it comes time to move on to the next screen, you can scroll the contents off instead of quickly erasing them, as with the PCLS command.

If you'd like to save some time entering the program from the keyboard, you can leave out lines 10 through 40 and any odd-numbered line. They are merely remark statements describing what's happening in the next line. For example, Line 45 tells you what the purpose of Line 50 is. The REM lines are there to help you understand how to modify this procedure to suit your own program.

Bill Bernico is a self-taught computerist who enjoys golf, music and programming. He is a drummer with a rock band and lives in Sheboygan, Wisconsin.

Basically, there are three steps to this procedure. First, define the scroll address and assign it to the variable A, as in Line 50. Next, set up the graphics screen and draw your picture, text or whatever. Lastly, after the screen is displayed, EXEC the variable from Line 50 — in this case you will type EXEC A. This starts the scrolling and continues until the screen is clear.

Notice the remark in Line 65. It says that if you frame the screen all the way to the bottom (vertical screen position 191), it will scroll up black instead of white. Keep this in mind when drawing a picture or text. Avoid drawing down as far as 191 if you want a "clean" scroll.

Finally, it's just as easy to use this procedure with binary picture files. For example, if you want to make a binary picture file of these particular screen contents, type in lines 60 to 210, leaving out the remark lines in between. Then type 220 SAVEM"PICTURE",3584,9727,3584 and run the program, making sure you have a disk in the drive. This will create a binary picture file for later use.

Your next step is to type in lines 50, 60, 220 and 230, leaving out all other lines. Now add 70 LOADM"PICTURE" and save this five-line program as your "loader" program. When run, it will load the picture file and wait for you to press any key before scrolling up and off the screen. You can substitute any other picture file you like. The effect is really worthwhile.

(Questions or comments may be addressed to the author at 708 Michigan Avenue, Sheboygan, WI 53081. Please enclose an SASE when requesting a reply.)

Bill Bernico

INTRODUCING COLOR MAX 3

Unleash the power of your CoCo 3 with 320 x 200 screen resolution, and the choice of any 16 colors from the CoCo 3's 64 color palette, and your graphic creations almost can't help but come alive with color and detail. Icons, pull down menus, and dialog boxes make COLOR MAX 3 very easy to use. 11 fonts are supplied, making hundreds of lettering styles possible. Text can use any combinations of color, shadow, outline, bold, and italics. Painting is a snap with 16 colors and 32 editable patterns. COLOR MAX 3 requires a 128K CoCo 3 with disk drive. High-Resolution Joystick interface, and a joystick device (mouse, touch pad, or joystick).

The Queens Quarrel

By Scot Allen

Queens Quarrel is a puzzle written in BASIC for the Color Computer 3. The object is to place eight queens on a chess board so that no one may capture another — that is, no piece may line up with another either vertically, horizontally, or diagonally.

Just load and run the program. The title screen will appear and the letters will change colors. You'll then be asked whether you're using an analog RGB monitor or a composite monitor (television). After you answer the question, the chess board pops up on the screen with a flashing box in the center.

To put a queen on the board, just move the flashing box to the desired square using the arrow keys and press ENTER. If you have made a legal move, then a white queen appears in the square. If you cannot place a queen in the square, then you have attempted an illegal move (another queen is in line with the square) and need to try some other square or remove another piece or pieces from the board. To remove a piece from the board, just move the flashing box over the piece, press ENTER, and the piece will vanish.

Get all eight queens on the board and you'll see "you win" on the screen. If you get too frustrated, you may press the S and the computer will show you a possible solution to the puzzle.

(Questions about this program may directed to the author at 6905 Kinard Road, Plant City, FL 33566, 813-986-1645. Please enclose an SASE when writing for a reply.)

Scot Allen is a 16-year-old junior at Plant City High School in Plant City, Florida. He has owned a Color Computer for many years and has recently bought a Color Computer 3.

Screen Dump Extraordinary

By H. Allen Curtis

One of my greatest needs in purchasing a CoCo 3 was high resolution graphics screen dump options, I wanted a screen dump that could handle a variety of control codes. In writing a screen dump program to meet my own needs, I realized that my finished product could be readily adaptable to work with most other makes of dot matrix printers.

My screen dump, called SCRNDMP, is shown in Listing 1. It prints a 640-by-384 dot image of a Mode 1 or Mode 3 high resolution graphics screen. Each dot appearing vertically on the screen is printed twice to match more closely the CoCo 3 scaling of the graphics screen.

Because some printers won't support 640 dots across the page, I wrote a second screen dump, called SCRNDMPS, which is Listing 2. SCRNDMPS provides a sideways view of a Mode 1 or Mode 3 screen, a 384-by-640 dot image.

There's one restriction common to both SCRNDMP and SCRNDMPS: They can be used only with printers that can print a column of eight dots at each print position as the print head moves across the page. Having a Radio Shack LPVII or LPVIII can only print graphics columns seven dots high. Therefore, I wrote a third screen dump specifically for those two printers; it's called LP7BDMPS and is shown in Listing 3. Like SCRNDMPS, it yields a 384-by-640 dot image of a Mode 1 or Mode 3 screen.

LP7BDMPS also works with the Radio Shack DMP-200 printer. For a well-proportioned printed image, the DMP-200's elongated print mode should be used. Deleting the apostrophe from Line 45 of Listing 3 allows a proper "elongated" screen dump for the DMP-200. Just send the elongation control code before running the program. If you have some other Radio Shack printer, you may find that LP7BDMPS will also work for it.

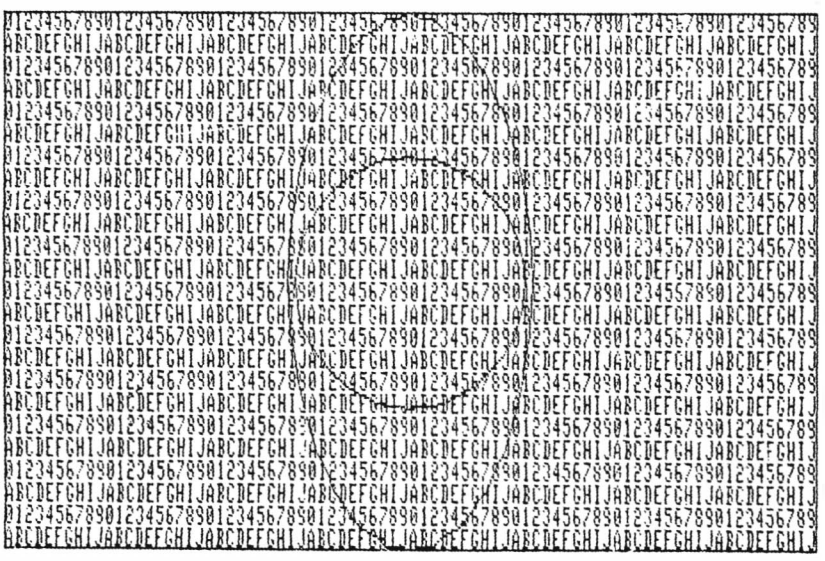

Figure 1: Upright Image of Test Screen

All three screen dumps contain pokes of data values to CoCo 3's memory. A typing error associated with a poke address could lead to a program self-destruct situation. Therefore, it's advisable to save the typed screen dump before running it. When you do run it, you may be greeted with either an OD Error message or a Data Error message. The omission of one or more data values or of one or more commas in a DATA statement (lines 400 to the end of each listing) is a likely cause of an OD Error. Typing one or more data values incorrectly will cause the appearance of the Data Error message.

For your initial use of SCRNDMP or SCRNDMPS, have your printer manual handy. You'll need to consult the manual to determine ASCII control code sequences that these two programs require. Through a series of prompting messages, each of these programs will tell you what kinds of control code sequences are needed and what their purposes are. Additionally, editing lines 320 through 350 of either of these two programs lets you take any of four different options.

In brief, the four options are as follows:

- 1) Reverse dot in eight-dot column.
- 2) Allow negative image.
- 3) Set line feed.
- 4) Set baud.

The first option means that a printer, in producing a column of eight dots, responds to an eight-bit character code. Usually the top through bottom dots printed correspond to the highest through lowest bit positions, respectively, of the associated character code.

Some printers require codes whose low to high bit positions cause the printing of the top to bottom dots. The option associated with Line 320 allows the reversal of the bit structure of the codes for eight-dot columns.

The second option permits the printing of a negative, rather than a positive, image of the Hi-Res graphics screen.

Some printers provide an automatic line feed with every carriage return. Other printers don't. The third option is a necessity for printers that do not have one.

The CoCo 3 sets the rate at which it sends information to the printer at 600 baud. If your printer accepts information at a higher rate, you may want to take the fourth option.

Figure 2: Upright Negative Image of Test Screen

Each of the options is taken by merely deleting the first apostrophe in its associated line — 320, 330, 340 or 350. The baud-setting option of Line 350 requires one further change. You must replace the question mark in the poke command with a number. The number should be 41, 18 (6 or 7) or 1 for baud rates of 1200, 2400, 4800 or 9600, respectively.

Listing 4 shows a program that provides a Mode 3 graphics screen suitable for testing the operation of each of the three screen dumps. The graphics screen consists of patterns of numbers and letters accompanied by a circle within a large ellipse. A bordering rectangle encloses all of this.

For printers that can print eight-dot columns, try SCRNDMPS first. If your printer needs a reversed eight-dot column and you do not take the first option, then the numbers and letters will be printed as mirror images of those on the test screen. Thus, for your first run of SCRNDMPS, print the test screen to determine whether you need to take the first option.

Use of LP78DMPS does not require any consultation of your printer manual. It also doesn't offer any options and doesn't set the baud rate: You must do this prior to running LP78DMPS.

Each of the BASIC programs generates and executes a machine language routine that does the actual screen dumping. These routines are stored and executed from the low resolution graphics screen area of CoCo 3.

If you have a disk system, Line 370 of each of the three BASIC screen dumps allows you to save the associated machine language routine. Merely delete the apostrophe in Line 370. Then when the program has completed a screen dump, the associated machine language routine will be saved on disk. Later, the saved machine language screen dump routine can be loaded and executed by employing one of the following command sequences:

```
LOADM"SCRNDMP":EXEC
LJADM"SCRNDMPS":EXEC
LOADM"LP78DMPS":EXEC
```

By deleting the apostrophes in lines 380 and 390 of the BASIC screen dumps, you can save the associated machine language routines on cassette tape. Each of these machine language screen dumps can later be loaded and executed by typing CLDADM:EXEC after you have positioned the tape appropriately. □

NOW Your Computer Writes PROGRAMS for YOU with QUIKPRO+II

In minutes even if you know nothing about programming!
For COCO, IBM, Tandy, Apple, Commodore, and others.

To Computer Users.

Now you can tell your computer what you want and your computer can write your programs for you in minutes to your custom design — easily and without requiring any programming background from you...with QUIKPRO+II.

A Breakthrough In Micro Computer Technology

You know your computer is fantastically fast...once it knows what to do. Programs and software are what makes it happen. Every task your computer performs for you requires some kind of program. Until now, you could only get programs in just one of two ways: buy a canned package that many times doesn't meet your needs or hand over hundreds or thousands of dollars for a custom programming job. Now, you have a better choice...

Programs Without Programming

Automatic programming is what it's all about. And, with QUIKPRO+II the Automatic Program Writer, your computer can actually write programs for you. You can quickly generate a new individual application program when you want it with QUIKPRO+II. Each program you create is a completely stand alone program that will run in the standard BASIC language you already have on your own computer. QUIKPRO+II creates filing, data retrieval, and report programs. Best of all, **you do not have to become a programmer** to use QUIKPRO+II. The QUIKPRO+II software becomes your personal programmer, waiting to do your work for you any time of the day or night you choose to use it.

QUIKPRO+II comes complete in its own vinyl storage binder, with 80 page manual and disk ready to use.

Proven and Widely Used

Businesses, Schools, Hobbyists and Government are among our thousands of users...

STOCK MARKET PORTFOLIO FOR THE COLOR COMPUTER

If You Are Serious About Stocks. . .
This Program Is A Must!

Stock Market portfolio for the color computer will keep track of all your current stock listings and keep a listing of stocks you have sold by the year, they were sold with all totals, profit and loss, and percentages. More than one person can use this program as long as the first three letters on both first and last name are not the same. The program is menu driven and will give you the option for either screen print or information to be printed on printer.

EARS™

Electronic
Audio
Recognition
System

\$99.95

- SPEECH RECOGNITION
- HANDS OFF PROGRAMMING
- HIGH QUALITY SPEECH REPRODUCTION

EARS Does It All!

INCREDIBLE!

**CoCo 3
Compatible**

Two Years In the Making. Speech Systems was formed to develop new and innovative speech products. After 2 years of intensive Research and Development, we have created a truly sophisticated speech recognition device. Recognition rates from 95% to 98% are typical. Until now, such a product was outside the price range of the personnel computer market, and even small businesses.

EARS is trained by your voice and capable of recognizing any word or phrase. Training EARS to your particular voice print takes seconds. Up to 64 voice prints may be loaded into memory. You may then save on tape or disk as many as you like so that your total vocabulary is virtually infinite.

Speech and Sound Recognition. EARS is really a sound recognition system, so it really doesn't matter whether you speak in English, Spanish, or French. In fact you do not have to speak at all, you can train EARS to understand sounds such as a musical note or a door slamming.

Hands Off Programming. Imagine writing your own BASIC programs without ever touching the keyboard. Everything that

you would normally do through a keyboard can now be done by just speaking.

Programming EARS Is Easy. LISTEN, MATCH and other commands have been added to BASIC so that programming EARS is a piece of cake! The single BASIC line: 10 LISTEN: MATCH will instruct EARS to listen to you and return the matching phrase.

It Talks. EARS is also capable of high quality speech. We mean REALLY high quality. The speech is a fixed vocabulary spoken by a professional announcer. Speech Systems is currently creating a library of thousands of high quality words and phrases. For a demonstration call (312) 879-6844, you won't believe your ears or our EARS.

DISK OWNERS. EARS will work with any disk system with either a MULTI-PAK or Y-CABLE. Our new Triple Y-CABLE was specifically developed for those wishing to add SUPER VOICE as a third device.

You Get Everything You Need. You get everything you need including a specially designed professional headset style noise

cancelling microphone. The manual is easy to use and understand. Several demonstration examples are included so you don't have to write your own programs unless you want to. EARS will work in any 32K or 64K Color Computer.

SUPER VOICE \$20 OFF

Imagine talking to your computer and it talking back to you. When you need an unlimited vocabulary, you can't beat SUPER VOICE. For a limited time, we will give you the SUPER VOICE for \$59.95 with your EARS purchase. Even if you already have another speech unit, here is your chance to buy the best and save \$20.

VOICE CONTROL

Applications for EARS are astounding. Here is our first of many listening programs to come. VOICE CONTROL is a program specifically designed to allow you to control any appliance in your house with your voice and our HOME COMMANDER (sold separately) or the Radio Shack Plug 'N' Power controller. For example, you can control your TV by saying "TV ON" or "TV OFF". . . \$24.95

TURBO CHARGE YOUR COCO 3

- ✓ 512K Fast High Quality Memory.
- ✓ Super Easy Solderless Installation. Installs in minutes.
- ✓ Assembled, tested, and burned-in.
- ✓ 120 ns RAM Chips
- ✓ High Quality Double Sided, Solder Masked, Silkscreened PC Board.
- ✓ Ideal for OS9 Level 1
- ✓ 2 Year Warranty.
- ✓ Free GIME Chip Technical Specs (\$10.00 without Turbo Ram).
- ✓ Free 512K Ram Test Program (\$10.00 without Turbo Ram).
- ✓ Free MUSICA RAM Disk (\$10.00 without Turbo Ram).
- ✓ \$5 OFF TURBO RAM Disk.
- ✓ Also available, TURBO RAM less memory chips. **\$49.95**

INSTALLATION

If you know how to hold a screwdriver, we're convinced you can install Turbo Ram in minutes. However, if you like, send us your COCO 3 insured, postage paid, and we will install it, pay the return postage and guarantee it for 1 year. **\$15.00**

SATISFACTION GUARANTEED

If for any reason you wish to return Turbo Ram, you may do so within 15 days and be charged only a 10% restocking charge. You may keep the GIME CHIP Technical Specs, 512K Ram Test program and MUSICA RAM DISK, a \$30 value.

TURBO RAM DISK

TURBO RAM DISK adds 2 lightning fast Ram Disks to your COCO system. Imagine saving and loading programs instantaneously and having hundreds of your programs "on line" for fast access. Single disk system users can

use TURBO RAM DISK to easily make backups without continuously switching disks.

Requires 512K Turbo Charged COCO 3 **\$24.95**
When purchased with TURBO RAM **\$19.95**

COCO 3 128K

COLOR CONNECTION IV

This is the most comprehensive modem package for the COCO 3. All standard protocols are supported including CompuServe's Protocol B, XMODEM protocol, and XON/XOFF. Full support of the auto answer/auto dial feature for both Hayes compatible and some Radio Shack modems is provided. Single key macros allow easy entry of often-used passwords and ID's with a single key stroke.

Disk **\$49.95**

THE MAGIC OF ZANTH

In the Land of Zanth, magic is commonplace. Dragons, Griffins, Centaurs and Demons abound. You are sent on a quest to discover the source of magic in the Land of Zanth. This intriguing adventure features over 2 dozen hi-res 16 color animated graphic screens, 4 voice music and sound effects. The 16 color, 320 x 192 graphics look great.

Disk **\$34.95**

COLOR SCRIBE III

This great Word Processor can take full advantage of the 80 column display of the COCO 3. Justification, Headers, Footers, and Pagination make it perfect for letters and documents as well as programming in BASIC, PASCAL, "C," and Assembly Language. Over 20 line editing commands include capabilities like character insert and delete, skip over words, breaking a line, and more!

Disk **\$49.95**

RETURN OF JUNIOR'S REVENGE

This is the same Junior you've seen in the Kong arcade series, but with new COCO 3 graphics. This tireless little monkey must overcome all sorts of obstacles (4 screens worth) to rescue his father, The King, from the mean zookeeper. He will traverse the jungle and swamp, climb vines, avoid chompers and birds, open locks, and more before he finally meets with his big daddy. The 16 color, 320 x 192 graphics are superb.

Disk **\$34.95**

A MUST
 FOR MIDI
 USERS

LYRA is the most powerful music composition program we have seen on any computer. We don't mean just the COCO, we really mean any computer. Whether you are a novice trying to learn music or a professional musician with MIDI equipment you will find LYRA a powerful tool. You

see, we wrote LYRA for musicians that hate computers. If you want proof, purchase a LYRA demo for \$7.95. We will apply the demo price to your purchase. MIDI output requires the LYRA MIDI cable (#MC158) or COCO MIDI Seq/Editor (#CM147).

- ✓ Ultra Easy to use, just point with joystick or mouse and click.
- ✓ Compose with up to 8 completely independent voices
- ✓ Room for over 18,000 notes. (This is not a misprint!)
- ✓ Super Simple Editing Supports.
 - Note insert Block insert
 - Note delete Block delete
 - Note change Block copy
- ✓ Output music to
 - TV Speaker Monitor Speaker
 - STEREO PAK ORCHESTRA 90
 - SYMPHONY 12 COCO MIDI S/E
 - MIDI Synth MIDI Drum Machine
- ✓ Output up to 4 voices without additional hardware

- ✓ Output all 8 voices using either SYMPHONY 12 or one or more MIDI synthesizers and drum machines
- ✓ Output any voice on any of the 8 MIDI channels
- ✓ Transpose music to any key
- ✓ Modify music to any tempo
- ✓ Automatically inserts bar for each measure as you compose
- ✓ Key signature lets you specify sharps and flats only once, LYRA will do the rest.
- ✓ Plays MUSICA 2 files using LYRA CONVERT (#LC164).
- ✓ Each voice may be visually highlighted or erased.
- ✓ Each measure is numbered for easy reading.

- ✓ Solo capability
 - ✓ Block edits are highlighted.
 - ✓ Tie notes together for musical continuity
 - ✓ Name of note pointed to is constantly displayed.
 - ✓ Jump to any point in the score instantaneously.
 - ✓ Memory remaining clearly displayed, however you will have plenty of memory even for the most demanding piece
 - ✓ Help menu makes manual virtually unnecessary.
 - ✓ LYRA is 100% software, no need for extra hardware unless you want more power
 - ✓ Music easily saved to tape or disk
 - ✓ Requires 64K and mouse or joystick
- LYRA (Disk only) #LY122 \$54.95

LYRA OPTIONS

These LYRA options are **not** required. They are provided for those wishing additional flexibility.

LYRA CONVERT

A program to convert MUSICA 2 files to LYRA files.
 (Disk) #LC164 \$14.95

VERSION UPDATE

To receive the latest version of LYRA return your original disk. #UP162 \$10.00

LYRA MIDI CABLE

A cable to connect your computer to your MIDI synthesizer.
 #MC158 \$19.95

LYRA SYMPHONY 12 ENHANCER

Lets LYRA play all 8 voices through SYMPHONY 12
 (Disk) #LS177 \$19.95

LYRA LIBRARY

A collection of 50 songs ready to play for hours. Most have 7 and 8 voices. #LL137 \$39.95

SYMPHONY 12

A real hardware music synthesizer, lets LYRA play all 8 voices in stereo.
 (T or D) #SY149 \$69.95

COCO MID Seq/Editor

A professional quality MIDI interface for MIDI synthesizers.
 (Disk only) #CM147 \$149.95

MUSIC LIBRARY

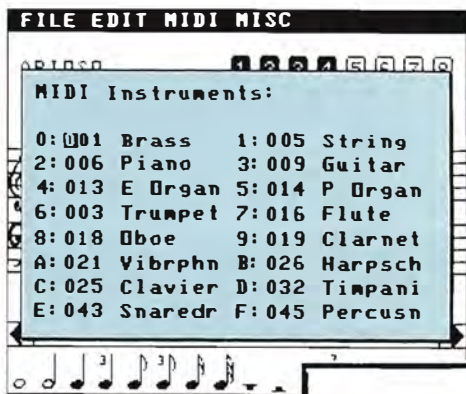

A collection of over 900 songs. When used with CONVERT, it gives an incredible LYRA library. Each volume 100 songs.
 (T or D) #MLXXX \$29.95

TRIPLE Y-CABLE #TY173 \$34.95

DX LIBRARIAN™

Save and load voice parameters for the Yamaha DX series of synthesizers (DX-7, DX-100, DX-21 etc.). Save sounds individually or as a group letting you load the entire synthesizer in seconds.

Comes with professionally developed voices for the DX-7 worth 10 times the price. Requires COCO MIDI hardware interface.
DX LIBRARIAN (Disk only) #DX143 \$39.95

CASIO LIBRARIAN

Save and load voice parameters for any Casio synthesizer (CZ-101, CZ-1000, CZ-5000 etc.) You can save from the: presets, cartridge,

memory or buffer. Requires COCO MIDI hardware interface.
CASIO LIBRARIAN (Disk only) #CL169 \$39.95

MUSICA MIDI™

MUSICA MIDI takes any MUSICA 2 music file and plays it through your MIDI synthesizer. We offer you over 800 tunes from our MUSIC LIBRARY series (sold separately) or create your own music

using MUSICA 2. Includes: documentation, plenty of music, and the cable to connect between the COCO and your synthesizer.
MUSICA MIDI Complete (Disk Only) #CM126 \$39.95

MIDI KEYBOARD

If you own the Casio CZ-101 or similar MIDI synth, you know that the mini keys and the short 3 or 4 octave keyboard is limiting. MIDI KEYBOARD when used with our full size 5 octave keyboard

gives you the flexibility you need. Comes with cable to connect the COCO to your MIDI synth.
MIDI KEYBOARD (Disk only) #MK167 \$29.95

Electrifying Graphics

Using PMODE Power

By Becky F. Matthews

Figure 1

There is nothing like a colorful computer animation to pique a person's interest. Using animation, the most serious subject can become as entertaining as Saturday morning cartoons are to a child. You want to get a point across? Catch someone's eye (and attention) by using lots of color and movement.

Computer animation is easy. *Energy pro-*

Becky Matthews has a degree in music education from the University of Mississippi. She and her husband, David, have three CoCos and two CoCo cats.

vides three examples of simple animation sequences illustrating three different sources of energy. Each animation uses two PMODE1 screens. A picture is drawn on the first screen (PMODE 1,1), which uses graphics pages 1 and 2. The second screen for each animation (PMODE 1,3) uses graphics pages 3 and 4. The animation is achieved by offsetting on the second screen the portions of the picture that you want to animate.

In the wind power sequence (see Figure 1), the blades of the windmill are horizontal and vertical on the first screen. On the second screen the blades are drawn diagonally. The top edge of the field is also offset to

Figure 2

Telewriter-64™

the Color Computer Word Processor

- 3 display formats: 51/64/85 columns × 24 lines
- True lower case characters
- User-friendly full-screen editor
- Right justification
- Easy hyphenation
- Drives any printer
- Embedded format and control codes
- Runs in 16K, 32K, or 64K
- Menu-driven disk and cassette I/O
- No hardware modifications required

THE ORIGINAL

Simply stated, Telewriter is the most powerful word processor you can buy for the TRS-80 Color Computer. The original Telewriter has received rave reviews in every major Color Computer and TRS-80 magazine, as well as enthusiastic praise from thousands of satisfied owners. And rightly so.

The standard Color Computer display of 32 characters by 16 lines without lower case is simply inadequate for serious word processing. The checkerboard letters and tiny lines give you no feel for how your writing looks or reads. Telewriter gives the Color Computer a 51 column by 24 line screen display with *true lower case characters*. So a Telewriter screen looks like a printed page, with a good chunk of text on screen at one time. In fact, more on screen text than you'd get with Apple II, Atari, TI, Vic or TRS-80 Model III.

On top of that, the sophisticated Telewriter full-screen editor is so simple to use, it makes writing fun. With single-letter mnemonic commands, and menu-driven I/O and formatting, Telewriter surpasses all others for user friendliness and pure power.

Telewriter's chain printing feature means that the size of your text is never limited by the amount of memory you have, and Telewriter's advanced cassette handler gives you a powerful word processor without the major additional cost of a disk.

... one of the best programs for the Color Computer I have seen...

— Color Computer News, Jan. 1982

TELEWRITER-64

But now we've added more power to Telewriter. Not just bells and whistles, but major features that give you total control over your writing. We call this new supercharged version Telewriter-64. For two reasons.

64K COMPATIBLE

Telewriter-64 runs fully in any Color Computer — 16K, 32K, or 64K, with or without Extended Basic, with disk or cassette or both. It automatically configures itself to take optimum advantage of all available memory. That means that when you upgrade your memory, the Telewriter-64 text buffer grows accordingly. In a 64K cassette based system, for example, you get about 40K of memory to store text. So you don't need disk or FLEX to put all your 64K to work immediately.

64 COLUMNS (AND 85!)

Besides the original 51 column screen, Telewriter-64 now gives you 2 additional high-density displays: 64 × 24 and 85 × 24! Both high density modes provide all the standard Telewriter editing capabilities, and you can switch instantly to any of the 3 formats with a single control key command.

The 51 × 24 display is clear and crisp on the screen. The two high density modes are more crowded and less easily readable, but they are perfect for showing you the exact layout of your printed page, *all on the screen at one time*. Compare this with cumbersome "windows" that show you only fragments at a time and don't even allow editing.

RIGHT JUSTIFICATION & HYPHENATION

One outstanding advantage of the full-width screen display is that you can now set the screen width to match the width of your printed page, so that "what you see is what you get." This makes exact alignment of columns possible and it makes hyphenation simple.

Since short lines are the reason for the large spaces often found in standard right justified text, and since hyphenation is the most effective way to eliminate short lines, Telewriter-64 can now promise you some of the best looking right justification you can get on the Color Computer.

FEATURES & SPECIFICATIONS:

Printing and formatting: Drives any printer (LPVII/VIII, DMP-100/200, Epson, Okidata, Centronics, NEC, C. Itoh, Smith-Corona, Terminus, etc).

Embedded control codes give full dynamic access to intelligent printer features like: underlining, subscript, superscript, variable font and type size, dot-graphics, etc.

Dynamic (embedded) format controls for: top, bottom, and left margins; line length, lines per page, line spacing, new page, change page numbering, conditional new page, enable/disable justification.

Menu-driven control of these parameters, as well as: pause at page bottom, page numbering, baud rate (so you can run your printer at top speed), and Epson font. "Typewriter" feature sends typed lines directly to your printer, and Direct mode sends control codes right from the keyboard. Special Epson driver simplifies use with MX-80.

Supports single and multi-line headers and automatic centering. Print or save all or any section of the text buffer. Chain print any number of files from cassette or disk.

File and I/O Features: ASCII format files — create and edit BASIC, Assembly, Pascal, and C programs, Smart Terminal files (for uploading or downloading), even text files from other word processors. Compatible with spelling checkers (like Spell 'n Fix).

Cassette verify command for sure saves. Cassette auto-retry means you type a load command only once no matter where you are in the tape.

Read in, save, partial save, and append files with disk and/or cassette. For disk: print directory with free space to screen or printer, kill and rename files, set default drive. Easily customized to the number of drives in the system.

Editing features: Fast, full-screen editor with wordwrap, block copy, block move, block delete, line delete, global search and replace (or delete), wild card search, fast auto-repeat cursor, fast scrolling, cursor up, down, right, left, begin line, end line, top of text, bottom of text; page forward, page backward, align text, tabs, choice of buff or green background, complete error protection, line counter, word counter, space left, current file name, default drive in effect, set line length on screen.

Insert or delete text anywhere on the screen without changing "modes." This fast "free-form" editor provides maximum ease of use. Everything you do appears immediately on the screen in front of you. Commands require only a single key or a single key plus CLEAR.

... truly a state of the art word processor...
outstanding in every respect.

— The RAINBOW, Jan. 1982

PROFESSIONAL WORD PROCESSING

You can no longer afford to be without the power and efficiency word processing brings to everything you write. The TRS-80 Color Computer is the lowest priced micro with the capability for serious word processing. And only Telewriter-64 fully unleashes that capability.

Telewriter-64 costs \$49.95 on cassette, \$59.95 on disk, and comes complete with over 70 pages of well-written documentation. (The step-by-step tutorial will have your writing with Telewriter-64 in a matter of minutes.) To order, send check or money order to:

Cognitec
704 Nob Street
Del Mar, CA 92014

Or check your local software store. If you have questions, or would like to order by Visa or Mastercard, call us at (619) 755-1258 (weekdays, 8AM-4PM PST). Dealer inquiries invited. (Add \$2 for shipping. Californians add 6% state tax.)

look like a field of wheat blowing in the breeze. Line 250 animates the sequence by flipping back and forth between the two pictures.

In the second animation sequence, hydroelectric power, the water wheel paddles and the waves in the river are offset. The illusion of movement at the end of the water wheel is achieved by circles drawn there on the first screen (Line 360) but not on the second screen. The water wheel sequence is animated by Line 530.

The third animation illustrates solar power (see Figure 2). The sun's rays are

offset and the flowers are drawn slightly larger on the second screen to show their growth from the sun's energy. This sequence is animated by Line 790.

In each animation, the second picture is drawn on a hidden screen. This is possible by using the PMODE statement (PMODE 1,3 in this example) and not following it with a SCREEN command (see lines 190, 460 and 690). The SCREEN command displays the screen. Without the SCREEN command, that screen is active (that is, you can draw on it), but it is not shown. To see the second screen of the wind power animation being

drawn, edit Line 190, inserting SCREEN 1,0: after PMODE 1,3:. To see the other two second screens as they are drawn, edit lines 460 and 690, inserting SCREEN 1,1: after PMODE 1,3: in each line.

I hope this simple program has demonstrated how easily you can animate an object. The next time you have a point to make, remember, cartoons can entertain, but they can teach, too!

(Questions about this program may be directed to the author at 3917 Baxter Street, Nashville, TN 37216. Please enclose an SASE when writing for a reply.) □

NEW * INNOVATIVE * EXCITING

COLOR WRITER — 128
THE WORD PROCESSOR FOR THE COCO 3

\$24.95

NOT A PATCH, BUT AN EXCITING NEW CONCEPT THAT USES YOUR COCO 3'S TEXT COLORING CAPABILITIES TO DISTINGUISH BETWEEN SCRIPT, SUPER SCRIPT, BOLD, ELONGATED AND UNDERLINE. A 40/80 COLUMN TOGGLE WITH ON-SCREEN HELP MENU IS ALSO FEATURED. REQUIRES A 128K COCO 3 WITH DISK DRIVE OR CASSETTE. ANY PRINTER WORKS. \$24.95

BLACKBOOK
FOR THE COCO 1, 2 AND COCO 3

\$7.95

HAVE YOU EVER LOST OR MISPLACED YOUR ADDRESS BOOK AT A CRUCIAL MOMENT? THEN YOU NEED BLACKBOOK. IT SAVES OVER 500 NAMES TO DISK AND WILL FIND THEM QUICKLY WITH ITS DEDICATED SEARCH BY NAME, ADDRESS, CITY, STATE OR ZIP CODE. FEATURES PASSWORD PROTECTION, A PRINT FUNCTION AND AN EASY-TO-USE EDIT AND ADD. \$7.95

CARTOONAMATOR
FOR THE COCO 2 AND COCO 3

\$14.95

CARTOONAMATOR IS A NEW AND EXCITING PROGRAM THAT USES ALL NINE OF YOUR 64K COCO 2'S VIBRANT COLORS. IT FEATURES THE SAME ANIMATION TECHNIQUE THAT DISNEY USED IN HIS CREATIONS. CREATE CARTOONS OF HUNDREDS OF FRAMES AND UP TO A MINUTE IN LENGTH. THIS EXCITING PRODUCT IS BEING INTRODUCED AT THE LOW PRICE OF \$14.95

Graphics Creation Transfer

By Scott Montgomery

Here is a program that graphics fanatics might find useful. Since graphics screens reside in different memory locations in disk and tape systems, even commercial transfer utilities don't fix your favorite graphics files. Suppose you have a disk-based system (as I do) and your friends have tape-only systems. How do you transfer your graphics creations to tape format for your friends? This is where *Graftran* comes in. It's for PMODE 3 or 4 standard 6K graphics screens.

Graftran is written in Extended Color BASIC and is menu-driven. There are five selections on the menu: load in a tape graphic, load in a disk graphic, view graphic in memory, save graphic to disk and save graphic to tape. These are all straightforward, but I have outlined the various options below.

The first is loading in a tape graphic. Press Play on your cassette player when you have inserted the tape containing the graphic. Press the number 1 on the computer keyboard and press any key except ENTER. If no I/O Error occurs, the graphic will be loaded into memory. If you press ENTER by itself, the load process will be aborted and you will be returned to the main menu.

The next option is loading in a disk graphic. Pressing 2 from the main menu puts you into the disk load routine. If

Scott Montgomery of Seymour, Indiana, has a certificate in electronics from the Cleveland Institute of Electronics and is completing an associate's degree in electronics at Indiana Vocational Technical College. He, his wife, Cyndi, and daughters Cheri and Sara, are all confirmed CoCo maniacs.

you want to see the directory, enter DIR. Otherwise enter the filename and extension of the graphic you want to load. Pressing ENTER by itself will send you back to the main menu once again.

Next is viewing a graphic in memory. Upon pressing 3, you will be prompted to enter either 3 or 4 for the PMODE in which you want to view the graphic. When you are finished viewing the graphic, pressing ENTER returns you to the menu.

The fourth option is saving a graphic to disk. After selecting this option, you will have to enter the filename and extension of the graphic to be saved. Again, ENTER returns you to the menu.

The last option is saving a graphic to tape. This is the only tricky part. Enter the filename of the graphic you want to save. If a disk controller is connected to your computer, you will be informed that the resulting tape copy of the graphic will not be compatible with tape-only systems. To make it tape-only compatible, you must have a tape copy of *Graftran* to load into your tape-only system. All you have to do is disconnect the disk controller, load in and run *Graftran* from tape, select 1, load in the tape copy of the graphic and select 5 to save it back again. *Graftran* will do the rest. The resulting copy of the graphic image will be saved at the correct addresses for a tape-only system. I'd like to thank Andy Kluck for his tape load routine which appeared in the October 1984 RAINBOW.

(Questions or comments may be addressed to the author at 600 Polley Drive, Seymour, IN 47274. Please enclose an SASE for a reply.) □

Tandy Computers:
Because there is
no better value.™

Tandy® Color Computer 3™

We cut \$20 off our most powerful Color Computer—now just \$199.

Now Radio Shack's most advanced version of the famous Color Computer is more affordable than ever! The Color Computer 3 is great for small business and home applications such as education, programming, word processing, graphics, entertainment and more.

It's easy to expand with disk drives, printer, telephone modem and more. Plus, the Color Computer 3 comes with 128K RAM (expandable to 512K), giving you greater programming and data-processing power. And for added versatility, the Color Computer 3 is compatible with software and accessories designed for the popular Color Computer 2.

Create razor-sharp graphics with our CM-8 high-resolution monitor (sold separately). You can achieve up to 160 × 192 or 320 × 192 resolution graphics using 16 colors, or 640 × 192 with 4 colors.

The Color Computer 3 offers uncompromising performance at a terrific price. Visit Radio Shack today for a demonstration!

Send me a new 1988 computer catalog.

Corrections

"The Kingdom of Le Lutin" (July 1987, Page 58): Some readers have indicated they could not get *Le Lutin* to run on their machines. Upon entering RUN, the computer would lock up. The problem revolves around the high speed poke in Line 1. The high speed poke, POKE 65495,0, will not work on any CoCo revisions earlier than the 'F' board. Just delete POKE65495,0: from that line and *Le Lutin* should work fine.

"CoCo Sets the Pace" (September 1987, Page 140): For those wishing to use *Tachistoscope* on a disk system, three changes are indicated at the bottom of the first column on Page 141. The second change, the one to Line 4030, is unnecessary and, in fact, will not work. Only the changes to Lines 4010 and 4040 should be made. We apologize for any inconvenience this might have caused.

For quicker reference, Corrections will be posted on Delphi as soon as they are available in the Info on Rainbow topic area of the database. Just type DATA at the CoCo SIG> prompt and INFO at the TOPIC> prompt.

Tandy Computer
Accessories:
Because there is
no better value.™

Radio Shack has the best of everything.

Accessories make the difference between *just* a computer system and an efficient computer system. That's why Radio Shack offers a wide selection of accessories to make the most of your computer.

Organize your computer workspace with our Computer Workcenter (A, \$99.95). Our Universal Monitor Pedestal (B, \$16.95) rotates and tilts for a perfect viewing angle. The Universal Printer Supports (C, \$16.95) allow you to stack paper beneath your printer. Fanfold printer paper (D, from \$8.95) is available in various sizes, colors and quantities.

We've got the diskettes (E) you need, for as little as \$11.95. Protect your diskettes using our Disk Library Box (F, low as \$12.95), and Disk Drive Head Cleaning Kits (G, from \$7.95). Provide protection against power surges with a Twin Outlet Power Protector (H, \$18.95).

Come in and see our complete line of computers and accessories.

Send me a new
1988 computer
catalog.

A DIVISION OF TANDY CORPORATION

HOW DO YOU PRESCRIBE A RAINBOW?

It's simple — Give a RAINBOW gift certificate . . .

THE RAINBOW is the perfect remedy for an ailing CoCo; let a gift subscription perk up your friends' tired old computers. THE RAINBOW is *the* information source for the Tandy Color Computer.

Each month, your friends will enjoy the intelligent programs, reviews and articles written exclusively for their CoCo.

First, your gift will be announced in a handsome card. Then, all year 'round, they'll remember you and your thoughtfulness when they get each edition of THE RAINBOW — more than 200 pages loaded with as many as 24 programs, 15 regular columns and lots of helpful hints and tips.

Generosity benefits the giver, too. There'll be no more tracking down borrowed copies of THE RAINBOW. Your collection will be safe at home.

Give a RAINBOW gift certificate and let your friends in on the fun. THE RAINBOW is the perfect companion for the Color Computer!

Get your order to us by October 25 and we'll begin your friends' subscriptions with the December issue of RAINBOW.

Please begin a one-year (12 issues) gift subscription to THE RAINBOW for:

The Falsoft Building
P.O. Box 385
Prospect, KY 40059**

For credit card orders call (800) 847-0309, 8 a.m. to 5 p.m. EST.
All other inquiries call (502) 228-4492.

Subscriptions to THE RAINBOW are \$31 in the United States; U.S. \$38 in Canada. The surface rate to other countries is U.S. \$68; the air rate, U.S. \$103. Kentucky residents add 5% sales tax. U.S. currency only, please. All subscriptions begin with the current issue. Please allow 6 to 8 weeks for delivery. In order to hold down non-editorial costs, we do not bill.

Initially 3-D

By Anchor Wright

This program turns your initials into 3-D letters. To enter your initials, press the 1 key and type your first initial; you won't see it yet, so press the 1 key again for your first initial to appear.

To enter your other initials, just press the 2 key, type in your second initial, then press 2 again. Finally, press 3, type in your third initial, and press 3 again.

Now that you have three initials, jazz them up by pressing the zero key. Then the program starts over.

(Questions about this program may be addressed to the author at 1112 N. Keene Road, Clearwater, FL 33515. Please enclose an SASE for a written response.) □

Anchor Wright is a junior at Clearwater High School in Florida. He enjoys science and art and is an amateur inventor. In the past, he was a volunteer computer counselor at the Clearwater Library and taught people of all ages how to use the CoCo.

The Professional Color Computer

Enhancements for Productivity from HJL Products

For peak performance with any computer, you have to get information into and out of the system as easily as possible.

This is the purpose of the HJL family of professional enhancements for ALL MODELS of the Color Computer, including CoCo 3.

The Self-contained ProCase-57 Keyboard - \$79.95

NEW

It's the popular HJL keyboard perfectly fitted into its own sleek, low-profile case. Put your CoCo on a shelf or hang it on the side of your desk. ProCase-57 comes with 5-foot cable; installs in just a few minutes with no soldering.

The HJL-57 Keyboard Kit - \$59.95/69.95

Overwhelming favorite of serious CoCo users worldwide, the HJL-57 keyboard provides the smooth consistent feel and reliability you need for maximum speed with minimum input errors. Installs in your color computer without soldering. Just \$59.95 for Original or F-version. Kits for CoCo 2 and CoCo 3 are \$69.95.

The NumberJack Keypad - \$59.95

A self-contained numeric keypad for serious number-crunching. Besides the

numbers, it has all the cursors, symbols and math keys, including autoshifted ADD and MULTIPLY. Includes cable and connectors for solderless installation.

The Monitor Adapter - \$25.95

This universal driver works with all monochrome monitors. Easily installed without clips, jumpers or soldering (except some CoCo 2s with soldered-in video chips). Here's crisp, flicker-free monitor output with all the reliability you've come to expect from HJL Products.

The Monitor - \$99.95

Our high-resolution amber monitor gives you the display preferred by most computer pros. Once you've used it, you'll never go back to the TV set. 12-inch CRT has etched non-glare faceplate. (Requires adapter sold above)

Quick Basic Plus - \$19.95

High-performance programming aid works with any CoCo that has 4 function keys. 26 one-touch BASIC statements, 10 user-defined macros at a time (save as many sets of macros as you like), auto line-numbering, instant screen dump to printer, and global search, make this software ideal for any BASIC programmer. Specify disk or cassette.

The SoftSwitch - \$89.95

Connect any two parallel printers to one computer; select printers manually or insert a simple printer code in the text to be printed for fully-automatic, all solid-state switching. Complete with three cables and operating instructions.

The HJL Warranty

Every HJL product comes with a full, one-year warranty and the exclusive HJL 15-day unconditional guarantee (except software).

Pick a Pair and Save 15%

Take 15% off the price of any two or more products shown here. Just mention this ad when you order.

Ordering Information: Specify model (Original, F-version, or CoCo 2 Model Number). Payment by C.O.D., check, MasterCard, or Visa. Credit card customers include complete card number and expiration date. Add \$2.00 for shipping, 3-50 to Canada; except monitors (call for shipping charges before ordering monitors). New York state residents add 7% sales tax. **Dealer Inquiries Invited**

A Desktop Publisher on a Shoestring

By H. Allen Curtis

The Rainbow Chronicle

First Year - No. 1

* Morning Newspaper * Prospect, KY

Two Bits

CoCo Cat For PRESIDENT

In an exclusive interview with our newspaper, CoCo Cat

announced his candidacy for President. He has the backing of both the DemoCATs and the RepubliCATs. Also sponsoring him are Aristocat, AutoCATs, PlutoCATs (even Mickey's dog?), DixieCATs, BureauCATs, and Sam Katz. Additionally, he has independent backers all over America from CATalina to the CAT-skills. With all this support, CoCo Cat says that he will be no mere CATspaw to any party.

This CATrismatic candidate running on a law and order form. His slogan is "less ies and more FELINES!!!" heartily endorses CATastrophic health for everyone. As en in the Rainbow,

CoCo Cat is running a strong campaign against drugs. He says "Drugs are NOT User-Friendly". CoCo Cat also advises: Avoid cocaine but use CoCos 1, 2, or 3. CoCo Cat will be a hard working President. He plans to minimize waCATions and CATnaps. Like two former presidents, CoCo Cat is an accomplished pianist. As a youth he was known as that "kitten on the keys". When he entertains at the White House, he will frequently serve his favorite meal: CATfish CAT-ciatore with plenty of CATsup on it.

This fantastic feline will run a clean political campaign: no CATty remarks, no CATcalls, no CATERwauling, and no DOG-matism. If he is elected, he promises that no one will go hungry. There will be a MOUSE in every pot.

* * *

Desktop publishing is riding the crest of popularity in business computing. It is also widely appealing to the individual who would like to produce attractive newsletters, schedules, greeting cards, pamphlets, ads, and so on. Unfortunately, desktop publishing is too costly for the typical CoCo owner.

The great popularity and expense of desktop publishing provided the inspiration for the development of the shoe-string desktop publisher presented in this article. The requirements for using the publisher are a CoCo 1, 2 or 3, Extended Color BASIC, 32K RAM, a disk system and a dot matrix printer.

The main program comprising the desktop publisher has two versions — one for CoCos 1 and 2 and the other for the CoCo 3. The CoCo 1 and 2 version is called *Desktop Low* (for low resolution) and is shown in Listing 1. The CoCo 3 version, *Desktop High*, is presented in Listing 2. Listings 3 and 4, GENFONT1 and GENFONT2 generate two data files called FONT1 and FONT2, and are necessary for the running of either *Desktop Low* or *Desktop High*. Each of the DATA files is a fancy font for 84 of the CoCo's character keys. Henceforth, *Desktop Low* and *Desktop High* will be referred to as *DL* and *DH*, respectively.

DL and *DH* have been designed to work with eight other fonts. The details on how you can obtain the additional fonts are given at the conclusion of this article.

Type and save Listing 3 first. Then run it to obtain the FONT1 file necessary for the proper execution of *DL* or *DH*. Next, type and save *DL* or *DH* depending on which CoCo you are using. After you get *DL* or *DH* working properly, type, save and run the program of

H. Allen Curtis lives in Williamsburg, Virginia. He is interested in 17th and 18th Century history and enjoys biking through the colonial Capital. He balances past and present with his computer work.

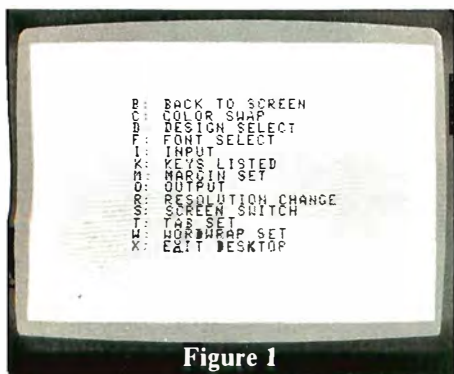

Figure 1

Figure 3: Border design options

Listing 4 to make a second font choice available for your use. Note: If you have a CoCo 3, augment each of the listings 3 and 4 by inserting WIDTH32: before CLS in Line 0.

Each of the programs is easy to learn because of its menus and information list. For *DL* or *DH*, you must remember that when in doubt, press the CLEAR key or the function key F2, respectively. In their respective programs, these keys summon the main menu to the screen (see Figure 1). Via the main menu, you can gain access to other menus and the information list, as well as carry out *DL* or *DH* commands and return to the graphics screen.

On the graphics screen, you can compose documents. *DL* or *DH* acts as a rudimentary screen editor. An information list accessible through the main menu describes the keys needed for

cursor control in working your way around the screen (see Figure 2). *DL* or *DH* commands on the main menu are also available to set top, left and right margins of the screen, to set tabs, and to enable or inhibit word wrap. Word wrap is the automatic erasing of an incomplete word from the very end of one line and rewriting it at the very beginning of the next line. The spacing between characters and at the beginnings of lines is better in *DL* than in *DH* due to idiosyncracies of the CoCo 3's HGET, HPUT and HBUFF commands.

Usually, the CoCo's garbage collection routines, used periodically to clean out memory space for strings to be stored, have a decided slowing effect on allowed typing rates. Programming has been incorporated in *DL* and *DH* to minimize these effects. Also, high-speed pokes have been included for additional typing rate increases. If your CoCo 1 or 2 does not support the high-speed poke, omit POKE&HFFD7,0 from Line 340 of Listing 1.

Besides being able to type with a variety of fonts, you can further dress up your documents with border designs (see Figure 3), which are drawn by means of a key whose associated design is selected from the *DL* or *DH* main menu. The default design (the design available before you make a selection) is the face of CoCo Cat. He was given

AND FOR RS DOS ...

SMALL BUSINESS ACCOUNTING

This sales-based accounting package is designed for the non-accounting oriented businessman. It also contains the flexibility for the accounting oriented user to set up a double entry journal with an almost unlimited chart of accounts. Includes Sales Entry, transaction driven Accounts Receivable and Accounts Payable, Journal Entry, Payroll Disbursement, and Record Maintenance programs. System outputs include Balance Sheet, Income Statement, Customer and Vendor status Reports, Accounts Receivable and Payable Aging Reports, Check Register, Sales Reports, Account Status Lists, and a Journal Posting List.

\$59.95

INVENTORY CONTROL/SALES ANALYSIS

This module is designed to handle inventory control, with user defined product codes, and produce a detailed analysis of the business' sales and the sales force. One may enter/update inventory data, enter sales, run five sales analysis reports, run five inventory reports, set up product codes, enter/update salesman records, and update the SBAP inventory.

\$59.95

PAYROLL

Designed for maintaining personnel and payroll data for up to 200 hourly and salaried employees with 8 deductions each. Calculates payroll and tax amounts, prints checks and maintains year-to-date totals which can be automatically transferred to the SBA package. Computes each pay period's totals for straight time, overtime and bonus pay and determines taxes to be withheld. Additional outputs include mailing list, listing of employees, year-to-date federal and/or state tax listing, and a listing of current misc. deductions. Suited for use in all states except Oklahoma and Delaware.

\$59.95

PERSONAL BOOKEEPING 2000

Handles 45 accounts. Enters cash expenses as easily as checks. Handles 26 expense categories. Menu driven and user friendly.

\$39.95

ACCOUNTS RECEIVABLE

Includes detailed audit trails and history reports for each customer, prepares invoices and monthly statements, mailing labels, aging lists, and an alphabetized customer listing. The user can define net terms for commercial accounts or finance charges for revolving accounts. This package functions as a standalone A/R system or integrates with the Small Business Accounting package.

\$59.95

ACCOUNTS PAYABLE

Designed for the maintenance of vendor and A/P invoice files. The system prints checks, voids checks, cancels checks, deletes cancelled checks, and deletes paid A/P invoices. The user can run a Vendor List, Vendor Status report, Vendor Aged report, and an A/P Check Register. This package can be used either as a standalone A/P system or can be integrated with the Small Business Accounting Package.

(612) 633-6161

this honor in appreciation of the motivation he inspired in the development of CoCo 3 screen mode switching (see "Our Highfalutin' Feline Does a CoCo 3 Fandango," on Page 52, May 1987 issue of THE RAINBOW), which was crucial in the formulation of *DH*.

DH permits the use of a Mode 1 or Mode 3 screen as well as switching back and forth from these two modes. Mode switching allows you to incorporate the large size print and/or border designs of Mode 1 into a Mode 3 screen document with its smaller print and design sizes. The smaller print and designs of Mode 3, when switched to Mode 1, undergo deformation. Fortunately, they regain their pleasing shapes when a switch is made back to Mode 3.

DL employs a PMODE 4 graphics screen only. However, you are given a choice of either of the available two-color sets of PMODE 4. Furthermore, you may swap foreground and background colors, but for proper operation you must clear the screen just before or after making the swap. *DH* allows color swapping, too, and you needn't accompany the swap with a screen clear.

Both *DL* and *DH* provide facilities for saving and loading screens as disk files. In both saving and loading, you must furnish (when prompted) a filename without an extension. In loading, the filename must necessarily be that of a file on the disk in the default drive. The loaded screen may be one that you composed using *DL* or *DH* or a graphics screen derived by the employment of some other program. In the case of a PMODE 4 screen from another program, it must have been recorded from the video page whose starting and ending addresses are 3584 and 9727, respectively. The use of screens from other programs in *DL* and *DH* permits greater versatility in blending graphics and text in your documents.

The *DH* save and load routines were patterned after the HISAVE and HILOAD routines developed by Richard Esposito in his "Doctor ASCII" column (January 1987 issue of THE RAINBOW). HISAVE and HILOAD were designed to work in short programs and long programs but not in medium-sized programs where string location information resides in the memory area from hexadecimal addresses 4000 to 5FFF. *DH* is a program of the latter class. Its save and load routines were adjusted to work properly by the use of "dummy" filenames during the actual loading and saving processes (when the true filename string is lost) and then renaming

the files to their true filenames after the string information is once more available. This means that when saving a screen, you must *not* choose a filename of a file already on disk. Otherwise, the RENAME command will induce an AE Error.

***"You can work on
two Mode 1 or
Mode 3 screens and
switch back and
forth between them."***

There is one command noticeably lacking in both *DL* and *DH* — a line print command. To obtain a hard copy of a screen, you must terminate *DL* or *DH* with an exit command, load an appropriate screen dump and run it. If you have a CoCo 1 or 2 but no screen dump program for your particular printer, refer to back issues of THE RAINBOW (see Richard Lack's "Get the Picture With Gemini Screen Print" [May 1985, Page 45] and Mark Sullins' "Picprt: Good Things Come in All Sizes" [May 1986, Page 72]) to remedy the situation. If you have a CoCo 3 and a dot matrix printer I recommend that you use one of the three programs listed in this month's "Screen Dump Extraordinaire" beginning on Page 30. If you are using a printer capable of printing a column of eight dots at each print position as the print head moves across the page, the program called SCRNDMP shown in Listing 1 may be used.

There is one innovation included in *DH* worth pointing out for its applicability in other programs. The employment of the innovation doubles the amount of screen memory usable for Mode 1 and Mode 3. The high resolution graphics screen is located in 32K bytes of memory from Hex address 60000 through 67FFF. Each of the Mode 1 and Mode 3 screens uses only the first 16K bytes of this memory area. Line 1 of *DH* installs a short machine language routine that interchanges the contents of the first and last 16K bytes of the screen memory area. You can call

for the screen interchange in *DH* by making use of the main menu command S (screen switch). Thus, you can work on two Mode 1 or Mode 3 screens and switch back and forth between them. Two such screens correspond to one full, 8½-by-11, printed page when SCRNDMP controls the printing. One word of caution: Use of the SHIFT-CLEAR key combination will clear *all* 32K bytes of the screen memory.

SCRNDMP was originally designed to handle only the screen at the first 16K bytes of the screen memory area. The following changes in SCRNDMP allow it to print each of the two screens in succession.

Change Line 35 to:

```
35  POKEX+145,22:POKEX+146,0:
    POKEX+147,152:Q$="30B0FF2
    7ECB4C1712608C30202EDB416
    FF11830202EDB417FEEDB60D1
    6FF4A":FORI=0T030:T$=LEFT$(
    (Q$,2):POKEX+I+300,VAL
    ("&H"+T$):Q$=RIGHT$(Q$,
    LEN(Q$)-2):NEXT
```

Change Line 370 to:

```
370  'SAVEM"SCRNDMP2",&H1200
    ,&H13 4A,X+73
```

Editor's Note: The font menu (see Figure 4) of DL or DH provides small samples of each of 10 different fonts. However, due to space limitations, only the files which generate fonts 1 and 2 are listed in the magazine, therefore, you will only be able to choose between fonts 1 and 2. Selection of any other font or pressing a non-number key will result in a beep sound and a return to the graphics screen.

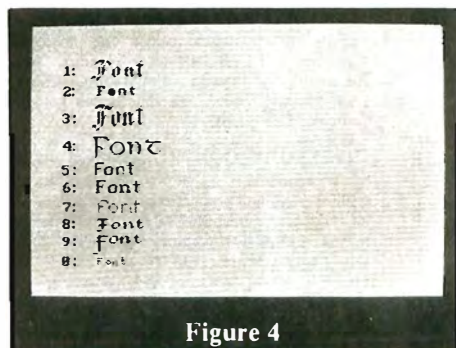

Figure 4

The additional eight font files, FONT3 through FONT9 and FONT0, may be obtained by ordering them from H. Allen Curtis at 172 Dennis Drive, Williamsburg, VA 23185. The complete cost of the disk containing eight font files is \$6.50. Please include payment by check or money order. □

SUNDOG SYSTEMS

Kung-Fu Dude

An exciting new arcade game by Glen Dahlgren. This is the long-awaited response to the huge demand for a Kung-Fu program for the Coco. The graphics and sound effects are spectacular. The action and animation will please even the most die-hard arcade enthusiast. Destroy your opponents and evade obstacles with over ten different moves as you grow ever closer to your ultimate objective. This is the BEST karate game ever available for the color computer. Req. 64K, disk drive, and joystick. Introductory price: only \$24.95.

WHITE FIRE OF ETERNITY. Enter the age of monsters, magic, and adventure. Here you will search for the legendary power of White Fire throughout the Forbidden Wood and dark caverns of the Mount. The Rainbow review of 12/86 says, "Visually, White Fire is quite an achievement. The graphics are excellent!" Discover what adventuring on the Coco is all about. Req. 64K and disk drive. Only \$19.95.

CHAMPION. Become a superhero in your fight to rid the world of the evil forces of Mr. Bigg in this action adventure. The combat is hot and heavy and requires a fast joystick. The graphics and sound effects are sensational. "This is a fascinating game and a difficult one to master. You'll get a blast out of (Champion)!" says the Rainbow review of 5/87. Defend the innocent and defeat the villainous: be a true Champion! Req. 64K, disk drive, and joystick. Only \$19.95.

All programs Coco 1, 2, 3 compatible.

NEW

IRON CROSS

War in Russia

by John & Michael Galus

Directive No 21

Operation Barbarossa
16 December 1941

The German forces must make preparations to crush Soviet Russia in a lightning campaign. For this purpose the Army will commit all available forces except those needed to safeguard the occupied territories against surprise attacks. The Air Force will earmark sufficient forces to support the ground operations and guarantee the rapid conclusion of this campaign.

During the initial phase the bulk of the Russian Army stationed in western Russia is to be destroyed in a series of daring & lightning spearhead attacks.

All services will submit to me progress reports on their projected preparations through the Armed Forces High Command.

ADOLF HITLER

The German invasion of Russia began at 0300 on 22 June 1941. Two massive armies faced each other in a titanic struggle which would decide World War II. The object of IRON CROSS is to defeat the Russian forces controlled by the computer & to take control of the Russian cities.

Requires 64K, Ext. Basic, Disk. \$24.95

Color Max 3

Now 320 x 200 screen resolution & a choice of 16 of the 64 colors are available on your CoCo 3. Painting is a snap with its easy to use icons, pull down menus, & dialog boxes. Color Max 3 has 11 fonts making hundreds of lettering styles possible. Please specify printer type when ordering.

Req. 128K, disk, hi-res joystick interface \$57.50

Colorbowl Football

by David Kincaid

Choose from a variety of plays on offense & defense like screens, sweeps, bombs, & slants. You control the quarterback or roving safety w/ joystick.

Req. 32K, RSDOS, & joystick
Cass \$24.95 Disk \$27.95

Pro Golf

by John Sandberg

Tee off into a challenging computer simulation of 36 holes of realistic golf plus practice sessions with the putting green & driving range!

Req. 32K, RSDOS, Ext. BASIC,
joystick & Disk \$29.95

SAVE

OS-9 Tools

Screen Star
by Scott Cabit

This excellent screen editor implements the popular WordStar editing capabilities on OS-9 & includes a unique Speller. Move, copy, or delete blocks of text with one keystroke. Powerful cursor commands allow fast, easy movement throughout the file. The find/replace command makes mass changes & searches a snap. Set tabs, toggle the video, access the OS-9 shell & define up to 10 function keys for fast repetitive functions. And it will edit files larger than memory too! Easy interface with Computerware's Text Formatter makes an exquisite word processing package!

Requires OS-9 \$49.95
With Text Formatter \$74.95

OS-9 Text Formatter

The OS-9 Text Formatter turns text files into beautifully printed documents. It supports right & left justification, automatic pagination, headers & footers, macros, tabs, page numbering, auto date insert, ESC & CTL codes for printer directives & more. It interfaces with any editor that produces standard ASCII text files like Computerware's Screen Star & Radio Shack's TSEdit. Why just print it when you can format it?!

Requires OS-9 \$34.95

The Saint John Gallery
Presents:

THE ASTRO FORTUNE TELLER

A VERITABLE ORACLE
BASED UPON YOUR PERSONAL
PLANETARY CONFIGURATIONS
AFTER ENTERING YOUR GIVEN NAME
YOUR BIRTHDATE & THE PRESENT DAY
YOU RECEIVE THE ANSWER TO ANY
OF 30 PREDEFINED QUESTIONS
THOSE QUESTIONS OF LIFE • LOVE •
SUCCESS • MARRIAGE • FORTUNE •
MOST OF ASKED BY MEN & WOMEN
THIS PROGRAM IS OVER 150K YET DUE
TO MODULAR APPROACH WILL RUN ON 32K-512K SYSTEMS
FOR THE SERIOUS INQUIRER OR GREAT FOR PARTIES!!
The Astro Fortune Teller • DISK \$19.95

THE BEST BBS
WILL WORK WITH COCO'S OWN SERIAL PORT & ANY AUTO-ANSWER
MODEM • 1-4 DRAIVES • 32K-512K DISK \$12.00

Temple Of Lost Ark + ADK 32K (TEXT) DISK \$8.00

THE SOUND MACHINE 32K
HAVE YOUR COCO DIGITIZE AND SAVE YOUR SPEECH
DOZENS OF SAMPLES INCLUDED • DISK \$12.00

DISK EDITOR II INNOVATIVE TECHNIQUE
LETS YOU EDIT YOUR
DISKS LIKE LARGE WORD PROCESSING FILES • DISK \$12.00

SEND CHEQUE OR M.O. + \$1.75 P&H (CANADA \$2.25) TO
ST. JOHN GALLERY, P.O. BOX 613 M.L. SINAI, N.Y. 11766

Vidicom Corp's CoCoWorks Group Proudly Presents SolidDrive™

SolidDrive™ goes ordinary ramdisk one better! It doesn't forget. Fully Static and battery backed-up SolidDrive™ is ready to use instantly. No more formatting and copying work files to a ramdisk then carefully copying back your changes to floppy. No more fear that the power will go down and everything you've done will be lost. The instant power loss is detected SolidDrive™ write-protects itself and your valuable work. SolidDrive™ gives you even more since it's manufactured using the latest in high reliability surface mount technology allowing us to give you the best guarantee in the industry - Two full years limited repair/replacement, top that! SolidDrive™ is compatible with Multi-Pak® and comes complete with OS9® device driver, formatter and self-test software. Available in two versions 512K and 1 Megabyte with factory upgrades available for 512K version.

SolidDrive™ by Vidicom Corp		
512K	(524,288 bytes)	\$395.00
1 Meg	(1,048,576 bytes)	\$695.00

SolidDrive™ is the fastest, most reliable long-term storage available for small computer users. Faster than hard disk, no moving parts, no mechanical delays, ultra-low power and no noise.

Please add \$4.00 shipping. Visa MasterCard orders welcome. Arizona Residents add 5.5% sales tax.

Vidicom Corp 20 East Main Street Suite 525 Mesa, Arizona 85201 (602) 827-0107 Hours M-F 9:00 AM to 5:00 PM MST.

J & M'S 3.5" MICROFLOPPY DRIVES

**Give your
 Coco 3
 the OS-9
 Storage Boost!**

Upgrade to the Latest in Technology: J & M's 3.5" microfloppy drives allow a 720K format under OS-9 Level 2. (Four times the storage capacity of a standard Coco format OS-9 disk on a single microfloppy diskette!)

Two Configurations Available: The external drive comes complete with case, power supply and cable. The internal drive is ready for installation. It simply replaces an existing 5.25" half-height drive. Utilize JDOS, RS DOS or your DOS.

Internal \$199.00

External \$250.00

We accept VISA, Mastercard or prepayment. Or, we can ship COD for cash or certified check. Shipping is extra.

J&M Systems Ltd.

ALL OF A SUDDEN YOU'RE IN NOTELAND

...where learning to read music

Already a classic! is easy and fun!

Now also for CoCo3!

NOTELAND, a unique combination of a musical instrument and a course in music developed by Boston composer Andy Gaus, will let you:

- approach music as a complete beginner;
- learn from an audio cassette and a written manual;
- fool around—and be learning;
- play a tune with a joystick (optional) or cursor keys;
- record a tune and play it back with notation;
- save your tune on tape or disk;
- test yourself with a beat-the-clock quiz;
- load the program from disk or cassette if you have a CoCo I

- or CoCo 2 with 32K and Extended Color Basic;
- take it home with you—IF YOU ORDER NOW—for the special introductory price of \$24.95. (Mass. residents add 5% sales tax.)

Be sure to specify disk or cassette.

NOVICES NICHE

THE RAINBOW is a teaching environment and we realize that the majority of our readers will always be beginners. In our continuing effort to always keep the new user in mind, and in addition to the many beginner feature articles and programs published in every issue, "Novices Niche" contains shorter BASIC program listings that entertain as well as help the new user gain expertise in all aspects of the Color Computer: graphics, music, games, utilities, education, programming, etc.

A Demonstration in Art

By Ricky Sutphin

Looking for a way to show off your CoCo? Run this program and become the center of attention! You'll think your CoCo went to a modern art gallery and absconded with an *objet d'art*.

The computer starts by picking random start and stop points in the Hi-Res (PMODE 4) mode. You can gain access to the main menu by pressing any key once the artwork has stopped. By pressing the key of the option you want, you can save and load a picture, draw a new picture, look at a list of available pictures or end the program. Selecting the End option completely erases the program from memory and your computer resets. You might omit this line, if entering by hand, until you're through typing and have a copy on disk.

When saving a copy, don't enter an extension with the name; the program automatically adds .ART to the filename. It's the same when loading files, too.

Your files will consume three grans each. To save other PMODE 4 screens to disk, use this command:

```
SAVEM"name.ext",3584,9727,3584
```

Mirror Image

By Keiran Kenny

16K
ECB

Playing with this fun program is like creating a Rorschach test with an Etch-a-Sketch. After you finish drawing, you can give someone a personality test.

With this program, you can draw a picture in the right half of the graphics screen (128, 1-255, 191), and it will be repeated as a mirror image on the left half of the screen.

The program uses PEEK(135) and the keyboard. Use the arrow keys for up, down, left or right movement; Q for northwest; W for northeast; A for southwest; and S for southeast.

Start with a pixel set at 128,96. Pressing 1 gives you a flashing cursor, and 2 restores the pixel. Press 3 to save a picture and 4 to load a saved picture.

You need only press a direction key once, and your trace or cursor will continue moving in the chosen direction until you press another key. When your trace or cursor is at the edge of the screen or at horizontal position 128, it stops until you press another key.

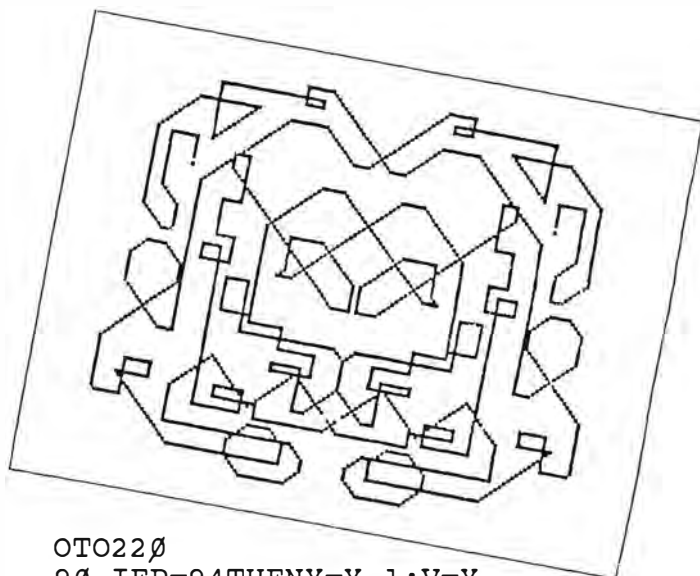

The program only responds to direction keys that will move it along or away from the boundary of the graphics screen.

Prepare Before You Paint

By Bill Bernico

Poke 178 and Graphics Locator is a handy tool for graphics programmers.

Part one is the Locator section and uses the right joystick. Upon running, you'll see two numbers separated by a comma in the upper left-hand corner of the screen. Moving the joystick advances a cross-hair cursor around the screen. As it moves, the coordinates of that cursor will also change. Locator helps you estimate the approximate location on the screen where you'd like to draw something.

To move on to part two, the Poke section, press P and a new screen appears. POKE 178,0 is displayed, and directly below that is a black box, which is colored by a POKE 178 with a zero. Use the up and down arrow keys to change that zero to a number up to 255. Change the number and the box will be colored by that particular poke value. This is handy for visualizing how graphics would look printed a certain color.

The box is colored using PSET,BF, which is Background Fill. You can also use the POKE 178 values in PRINT statements to achieve these colors. Right before your PRINT statement, add POKE 178,v (v is the value of the color you want). Now change your PRINT statement to PRINT (X,Y),,0 and your paint will use the color in the POKE 178 statement.

To return to part one, press L. Exit either screen by pressing Q (Quit).

How Cold Is It?

By Harvey Dettmann

Wind Chill is an accurate way to determine the wind chill temperature just by entering the temperature and wind velocity at the prompts. When you enter anything above 9 degrees Fahrenheit and a wind velocity, you get the wind chill. If you enter 9 degrees or lower with a wind velocity of 10 mph or more, you will get a little surprise! (Try entering 86 degrees with a wind velocity of 0, and you'll get another little surprise.)

4K

It's a Touchdown!

By Darrel Behrmann

This program is a Simulation based on hand-held football games. The object is simply to score a touchdown.

The player is shown on the screen as an 'X', and the opposing team (controlled by the computer) is shown with dashes (--). Press the arrow keys to move the player up, down and across the screen. The player can't move backward.

The tacklers move toward the player at a rate determined by the level of difficulty you select. Two tacklers may occupy the same position simultaneously. Yards to go to a first down are shown at the top of the screen, while yards to a touchdown are shown below. Have fun!

The listing: FOOTBALL

Contributions to "Novices Niche" are welcome from everyone. We like to run a variety of short programs that can be typed in at one sitting and are useful, educational and fun. Keep in mind, although the short programs are limited in scope, many novice programmers find it enjoyable and quite educational to improve the software written by others.

Program submissions must be on tape or disk. We're sorry, but we cannot key in program listings. All programs should be supported by some editorial commentary, explaining how the program works. If your submission is accepted for publication, the payment rate will be established and agreed upon prior to publication.

Much Ado About Nothing

By Joseph Kolar
Rainbow Contributing Editor

Last month we took our first tentative steps to immerse ourselves into the vast, newly-discovered sea of CoCo 3 concepts. The water wasn't too deep, and we got a taste of things to come.

Our thesis for today is that, too often, we race through a tutorial, complete and save the results, and race off to chase down the next challenge, little realizing more challenges stalk us at the very instant we supposedly finish our last project.

We need to oil the squeaky cogs of our minds and use the resultant program as a stepping stone to greater creative efforts.

Type Listing 1. You may have saved it last month and squirreled it away. If so, save time — load and run it. Did you notice on the first trial, the screen was completely green? Only after pressing BREAK and typing RUN did the desired screen color emerge.

The three strips of text seem final. At first blush, it seems that except for relocating the lines, we can do nothing further to enhance, modify or improve our work. A creative dead end has been reached.

The three strips were placed near the top of the screen to keep the work in progress as near to eye level as practical. Relocating can wait until the program is set in concrete. Repositioning is a joy using the LOCATE statement.

Florida-based Joseph Kolar is a veteran writer and programmer who specializes in introducing beginners to the powers of the Color Computer.

If you pause to stare at the display and don't get mesmerized by the blinking strip, you may detect a flickering creative thought. You will find, as a newcomer to the CoCo 3, that revising an existing tutorial is very productive. You get additional practice to sharpen your new skills.

The first thing that came to mind was to replace my name with another. Since I love my name, the next idea was to restore it in place of the usurping name. This is just another way to say "alternate two names."

The plan evolved! Without changing any colors of KOKONUT1, modify the program to alternate Joseph Kolar and Belinda Ramsey.

When working on a program, it is advisable to make frequent saves. After I give my first save a full name, each following modification uses only the first letter and a number for each succeeding save. If it is merely a variant of the previous one with no significant change, I add a letter. Thus, K4A is the fifth progression of KOKONUT1 that is a renumbered version of K4. K4B is the sixth progression, but the multiple LINE statements were broken up into individual LINE statements. Type `61 PRINT "BELINDA RAMSEY";` and run.

This is Listing K3A, which indicates this is a slight modification, A, of the fourth modification, 3, in the KOKONUT, K, series.

```
DEL199-
300 WIDTH40:LIST
100 GOTO100
```

Now run this. Belinda came out OK, but we lost Joseph. Type:

```
60 IF PEEK(343=191) THEN
   GOTO61 ELSE 62
62 PRINT " JOSEPH KOLAR";
```

Run this. All we get is Joseph. FI doesn't do a thing.

Mask Line 60 with a REM and run. We get both names. Unmask Line 60. Now type `PRINT PEEK=(343)` and press ENTER.

We get 255, which is why we get Line 62. If FI were pressed, it would be 191 and the CoCo would be directed to Line 61. We must find some way to activate Line 61.

At the end of Line 61, type:

```
:GOTO200 (We want to bypass
   Line 62.)
DEL100
199 IF PEEK(342)=191 THEN
   GOTO61 ELSE 200
200 IF PEEK(342)=191 THEN
   GOTO 62 ELSE 199
```

Now run and press CTRL. We are on the right track, even though it doesn't look like it. Line 199 tells us to type GOTO61 to see if CTRL is pressed. If it isn't, type GOTO200. If it is pressed, type GOTO62 or else go back to Line 199. In other words, CTRL must be pressed or the CoCo loops, patiently waiting for that happy event.

What we must do now is bring the two names into the red ribbon strip. REM both lines 40 and 50.

At the beginning of both lines 61 and 62, type `LOCATE11,5:ATTR4,7:.` Run and press CTRL. Repeat this a few times. Sometimes we get one or the other of the two names. The third ribbon of text

is shaky. Once in a blue moon, we get an orange background.

This is Listing K. Type DEL40-50.

In order to stop the third strip from quivering like jello, stabilize the display and get rid of the cursor after Belinda, in front of Line 200, type LOCATE0,0:ATTR2,4:. This moves the cursor away from the main display. Just to be safe and make sure we don't get an orange screen, in front of Line 199 type ATTR2,4: and run.

To use the ALT key for Belinda, change 342 to 341 in Line 200. Now run. Toggle between the CTRL and ALT keys. This is Listing K1.

Mask Line 50 and run. The third strip is missing until CTRL is pressed. This means we must relocate lines 61 and 62 after Line 90.

Rekey Line 61 as Line 91 and rekey Line 62 as Line 92. Type DEL60-62.

In Line 99 change 61 to 91. In Line 200 change 62 to 92 and run. Type RENUM10000,0,10 and run. This was done to avoid programming confusion, because the first digit of the line number falls off the screen on my TV. This is Listing K2.

Toggling back and forth gave me the

idea to coordinate the blue strip with the orange strip by giving the blue strip a meaningful title. It didn't take much head-scratching to pick a pair of titles.

Since Belinda appeared after typing RUN, rekey 10050 ~ TUTORIAL FOR BELINDA~;. Start with two blank spaces to maintain symmetry. Now run. It looks good. Toggle between the CTRL and ALT keys.

It finally dawned on me that I needed two parallel constructions to keep Joseph and Belinda separate.

Edit Line 10090 to insert at the beginning the information embedded in lines 10030 to 10050. Type 10090 LOCATE8,2:ATTR3,2,B:PRINT" TUTORIAL FOR BELINDA. Now run.

Edit Line 10100 and insert at the beginning the hot scoop from lines 10030 to 10050 — except change BELINDA to JOSEPH. Leave a blank trailing space after JOSEPH and don't forget to insert a colon (:) between each statement in the new line. Now run. Type DEL10030-10050 and run. This is Listing K3.

Type DEL10110. In front of Line 10120, type LOCATE0,0: and run.

This is Listing K3A, which indicates

this is a slight modification, A, of the fourth modification, 3, in the KOKONUT, K, series.

All we must do now is add the information in lines 10060 to 10080 to the end of Line 10100.

Add the following to Line 10100: LOCATE8,8:ATTR2,4:PRINT" INVERNESS, FL., 32650"; and run.

In Line 10090, in front of :GOTO 10130, type LOCATE8,8:ATTR2,4:PRINT" HERNANDO,FL., 32642". Note two blank spaces in front of the ZIP. Now run.

Type DEL10060-10080 and run. Note that you always check your work to see if it is OK — before you delete supposedly redundant program lines. This is Listing K4.

Type RENUM0,10000,10 and run. This is Listing K4H.

If you want to view the listing in the regular 32-by-16 text format, simply type WIDTH32, press ENTER and type LIST.

Since the high program line numbers tend to confuse, Listing K4A is merely a more acceptable line numbering sequence. It is a condensed, multiple LINE statement program.

For the newcomer KoKonuts, or should I say CoConauts, who find multiple LINE statements uncomfortable to handle, K4B is broken down into one statement per program line.

You should be able to dope it out and follow the action. You will be struck with how simple the program really is. Outside of being aware that the program isn't earth-shattering, you may wonder, why K4B wasn't created in the first place.

Sad to say, but the obvious solution eluded me. Only through trial and error did I manage to get on the right track, and even then I had to grope around seeking the best way to make it work to my satisfaction. It was fun solving each small problem that inexorably advanced to its completion.

When I looked at KOKONUT1, I didn't foresee the final product. Each vaguely defined idea gradually coalesced until a definite program was envisioned. Once the end product was conceptualized, it was a matter of working stubbornly toward the goal. You were left to your own initiative to save or not to save any of the intervening listings we developed.

For your homework assignment, from what you have discovered in last month's tutorial, substitute the F1 and F2 keys to flip back and forth between displays.

If you are a glutton for punishment, type in TRON, press ENTER and study K4B. You will see some jittery line numbers in brackets at the top of the display. Press CTRL and hold it. You will be able to compare the bracketed line numbers with Listing K4B. It starts out waiting for a key to be pressed. One or the other must be pressed. The default is the Belinda display, which skirts the Joseph one with the GOTO30 instruction. Can you trace the routes that the program took?

To come full circle and convert K4B

on the CoCo 3 to the Lo-Res, 32-by-16 text screen and make an equivalent program, type 20 WIDTH32 and run.

It was relatively easy to convert the program. Whatever lines bombed out, the CoCo began from the beginning of the listing and rewarded me with an HP Error message (Hi-Res print error). I edited the guilty line to an equivalent Lo-Res statement (i.e., PRINT@x, ""; in place of LOCATEa,b).

X was determined by trial and error and the lines adjusted to maintain symmetry. These were the changes I made:

Lines 31 and 40, type PRINT@37, "";
 Lines 33 and 43, type PRINT@104, "";
 Lines 36 and 46, type PRINT@165, "";
 Lines 32 and 42, remove one space at the beginning.
 Lines 35 and 45, take out one space between the names.
 Line 38, remove one space before the ZIP number.
 Line 45, insert one space at the end.
 Line 48, remove the period.
 Lines 50 and 60, mask with REM and run.

Note: ATTR statements are ignored by the CoCo 3. Remarkd, Hi-Res lines are harmless. If you have a CoCo 3, you may use the ALT, CTRL, F1 and F2 keys in the 32-by-16 mode.

Type 29 CLS3. In front of Line 40, type CLS4:. Delete lines 31, 34, 37, 41, 44, 47, 51 and 61. In Line 52, change 30 to 25 and run. This is Listing K5.

The program could have been refined further by making Line 32 begin with PRINT@37, instead of PRINT and DEL30 and so forth. Make all the required changes. Type DEL50 and DEL60. In lines 39 and 52, change 60 to 62. This is Listing K6.

The enterprising CoCo 3 owner will want to convert K6 so owners of older CoCo models can view the unvarnished version.

Compare listings K6 and K7. Lines 10 and 20 were both killed because older CoCo models did not understand the CoCo 3 statements. Now run.

Lines 32 and 35 added the final blank space, and Line 38 had the period removed. Moving to the other display, Line 48 was relocated one unit to the left; the period was edited out; a final blank space was added.

Do you recall that last month it was brought to your attention that in a PRINT statement the CoCo 3 automatically adds a final blank space if the semicolon is used? This is not the case with the older models; therefore, we had to realign the characters.

Type DEL52-62. These lines were unintelligible to older versions of the CoCo 3. To parody these missing keys, ALT and CTRL, the INKEY\$ function was substituted. If the up arrow key was pressed, the CoCo was instructed to display Belinda, and if the SHIFT and up arrow keys were pressed, then Joseph would be displayed. If the @ key was tapped, the program would be listed. If no keys were pressed, the CoCo would wait patiently for some instruction.

Finally, Line 39 was changed, after the initial display of Belinda, to go to INKEY\$ to await the user's pleasure.

When I printed the listing from the CoCo 3, Line 53, the left arrow was printed as an underline in the listing on my printer. This is Listing K7.

Looking back at what we created, it sure isn't impressive. In fact, it is downright mundane. This tutorial is much ado about nothing. Thanks to the ado, I hope you have enjoyed the jaunt through some of CoCo's features and had a productive learning experience. □

NAME THE OWL CONTEST

During September 1987 OWL-WARE is 5 years old! Our current owl logo was first formed in October of that year. Now that our logo is five years, someone said it should have a name. We don't know if the owl is a he, she, or it. You help us decide! Rules are as follows:

1. All *entries must be in writing* and received by Oct. 8, 1987 or at Rainbowfest Oct. 9 or 10. *No phone entries.*
2. All entries becomes the property of OWL-WARE, and owl names will be used in ads as we wish.
3. No purchase necessary.
4. To win you must be the first entry of a selected name. There will be 4 *different* names winning prizes.
5. At least one of the winning names will be selected from an entry at Rainbowfest.
6. Prizes will be in OWL-WARE gift certificates as follows: 1st \$250, 2nd \$100, 3rd. \$50, and \$50 from Rainbowfest entries only.
7. Winners will be announced at Rainbowfest Oct. 11.

Announcing:

The finest graphics/drawing program for the COCO 3!

Da Vinci 3

- 16 colors on screen at one time
- Modify each color from 64 available colors
- Use composite or RGB monitor
- Draw with custom paintbrushes
- Full resolution 320 X 192
- Picture converter for conversion of COCO 2 pictures to COCO 3
- Multiple text fonts
- Accepts input from joystick, X-pad, mouse, or touch-pad
- Boxes, circles, line, paint generation
- Screen dump for Tandy mono and color ink-jet printers. (NX-10 and others pending)
- Sensible price
- No additional hardware required because of course/fine joystick movement modes
- Zoom mode for individual pixel editing
- Great on screen menu which is removable at the touch of a key to allow full screen edit

Proven Technology

On the Razor's Edge of the Color Computer Frontier

OS-9 Hard Drive Systems

Proven Performance for Demanding Home or Business Use
Drive Access is at *Least 8 Times Faster* than Floppy Drives
Control up to 2 Drives per Controller each as Continuous Storage

Every hard drive system is **complete** with software, hard drive, controller, heavy-duty power supply, and LR Tech Interface. When a complete drive system is ordered, the drive is fully **assembled, tested, and burned in** for 3 full days. This ensures dependability and optimum performance.

We have now been supplying CoCo hard drive systems and parts for systems for more than 2 years. This is the longest history in the CoCo market of any available drive system. About 3/4 of all hard drive systems currently in use in the CoCo market use the LR Tech/OWL-WARE system. We have reached this position in the CoCo hard drive market by providing our customers with a quality product that they (and we) can be proud to own and use.

A number of drive systems were in the market place when the LR Tech Interface was introduced and 2 have been introduced since. Most of these are no longer available. We provide the only system which provides a combination of standard interface (SASI), rugged unit construction (not hacked to a floppy drive controller), high speed, and reasonable price. **These systems are even several times faster than the standard XT hard drive system.** Ideal for multi-user system because processor does not stop for hard drive access.

For OS-9

30 MEG

Super I/O Board for OS-9

Each Board Provides 2 Serial Ports and Centronics Parallel Port
First Board has Real Time Clock and Beeper... With Second Board up to 5 Users

The serial ports are usable **up to 19,200 Baud**, and the parallel port is a **true Centronics standard**. Plug into your multi-pak. **On CoCo 3, multi-pak must be upgraded.** You will have a multi-user system with additional computers or terminals plugged into the serial ports. An OWL hard drive and 512K upgrade are strongly recommended for multi-user systems.

Intro. Prices **\$165.**

Board 2 **\$139.**

Hard Drive Interface (Includes Software)

For those who want to put together their own system, we have an exclusive arrangement to distribute the LR Tech Interface. Please note that an interface is not a controller. **A Xebec, WD, or Adaptec SASI controller are required for a drive system.**

To assemble a hard drive system yourself requires some reasonable knowledge of OS-9 and electronic construction and **a hard drive that works.** CoCo 3 users will have to upgrade their Multi-pak

Only **\$119.**

Xebec Controller **\$139.**
Adaptec RLL Controller **\$199.**

CoCo 3 512K Upgrade

The LR Tech 512K upgrade uses all gold contacts and **120 nanosecond 256K chips.** Provides large system memory from OS-9 Level 2.

Without Mem Chips **\$59.** With Chips **\$105.**

Special! Complete 512K CoCo 3 ready for use **\$289.**

The Best Money Can Buy . . . HDS Floppy Drive Controller Board

Features*

- Gold Plated Edge Cards
- Dual Selectable ROM Sockets
- Compatible with COCO I & II
- 120 Day Warranty
- Double and Single Density

Reduce your I/O errors with the Hard Drive Specialist Floppy Drive Controller for the Color Computer. Gold edge card connectors, advanced design, and the absence of potentiometers make it the best available. Our newest version controller allows the use of either (two 24 pin ROMs), or (one 24 pin and one 28 pin ROM). Using this board with the standard Radio Shack ROM gives you 100% compatibility with all Radio Shack software.

- Completed and Tested Board with Radio Shack ROM \$99.**
(Includes Case, and DOS Instructions)
- Completed and Tested Board without ROM . . . \$79.**
(Includes Case)
- Bare Board with Instruction manual \$30.**
- Parts Kit For Bare Board without ROM \$30.**
- Radio Shack ROM (current version) \$20.**
- Radio Shack ROM 1.0 \$40.**

Ordering Information:

Use our WATS line to place your order via Visa, MasterCard, or Wire Transfer. Or mail your payment directly to us. Any non-certified funds will be held until proper clearance is made. COD orders are accepted as well as purchase orders from government agencies. Most items are shipped off the shelf with the exception of hard drive products that are custom built. UPS ground is our standard means of shipping unless otherwise specified. Shipping costs are available upon request.

DOUBLE SIDED!

- Drive 0 Complete \$199.
- Drive 1 Complete \$129.
- Drive 0 & 1 Dual Drive \$319.

Learning in the End Zone

By Steve Blyn
Rainbow Contributing Editor

Fear not, sports fans! As the baseball season draws to a close, the football season is gearing up. For our junior sports fans, we are presenting a learning tool in the form of a football game. *Blitz Quiz* is given here as a quiz testing knowledge of the Color Computer, but it is really a quiz format that can be used in almost all school subject areas.

Blitz Quiz is an entertaining way for students to review information to be learned, memorized or reviewed. We have used this program with greatly varied data for students of all ages.

Computers are wonderfully convenient tools that can easily catch the interest of children through their senses. The more methods we have to present material, the more likely it is to be absorbed. I have long felt that new computer approaches in presenting familiar material often provide the spark that piques a reluctant student's interest to finally learn a topic.

We have included 20 questions in a short computer terms quiz. You may increase the number of questions by adding more data pairs in extra DATA lines. You must also be certain to adjust

that amount in Line 30, which contains the variable Z telling the computer how many DATA groups there are.

"Computer terms" is merely one of many topics that you may use. Foreign language words or phrases, math flash-card facts or social studies facts are a few other areas this program can be used for. In fact, most school subjects have facts to be memorized or reviewed, and they can be applied to this program.

The game shows the outline of a football field similar to the one below. It is drawn by lines 100 to 210.

The football is represented by an asterisk, and is initially placed at the 50 yard line by Line 220. CoCo asks a question, and the student enters an answer. If the student answers correctly, the ball moves toward the goal line. If the student is incorrect, the ball moves a loss of 10 yards in the opposite direction. The game is over when the ball reaches either the goal or the other end of the field.

The variable A represents the current

position of the football. A\$(R) represents the question. B\$(R) is the correct answer. AN\$(R) is the student's answer. The program compares the student's answer with the correct answer in lines 300 and 310. The football repositions and the user is informed of a correct answer. If a wrong answer is given, the correct answer will be shown.

Lines 380 through 390 check to see if the ball has reached either end of the field, ending the game. After each game, the user may press either the G key to play again or the E key to end the program.

We hope you find many uses for *Blitz Quiz*. It is a good idea to save the program before you want to change the contents. Then you merely replace old data with your new data to have a new program. You may repeat this procedure as often as there is new information to be learned. We at Computer Island hope your children have fun and learn, too, while scoring touchdowns. □

Steve Blyn teaches both exceptional and gifted children, holds two master's degrees and has won awards for the design of programs to aid the handicapped. He owns Computer Island and lives in Staten Island, New York.

SCOREBOARD POINTERS

In conjunction with THE RAINBOW's Scoreboard, which appears bimonthly, we offer this column of pointers for our game-playing readers' benefit. If you have some interesting hints, tips or responses to questions, or want help yourself, we encourage you to write to the Scoreboard, c/o THE RAINBOW.

FEEDBACK

In response to letters from:

• Howard Larsen: To get past the anaconda in *Dallas Quest*, try typing TICKLE ANACONDA and see what happens.

Michael Jones
Mobile, AL

• John Tiffany: In *Polynesian Adventure*, to get the hot knife, go to the lagoon and fill the gas can by typing FILL CAN. Then go to the room with the hot knife and type POUR CAN.

In *Search for the Ruby Chalice*, to stop the wildcat, get the gun from your base camp. When it leaps at you, type SHOOT GUN.

In *Dr. Avaloe*, to get out of the first room, type LOOK HOLE. After its response, type DOWN HOLE.

Fred Reiss
McAlester, OK

• Thomas Payton: If you are talking about the locked room where you first find the 5-Bota token in *Robot Odessey*, grab the key with the top-most part of the cursor, unlock the door, drop the key and ride inside the robot, rewiring as you go along.

If you are talking about after the coin falls through the slot, this is how to do it. When the turnstile starts moving, get through as fast as possible. When you need the token again, start the robot with the wallcrawler chip hooked up inside it at the upper-right corner with the grabber connected. Grab whatever it touches, and get to the lower left-hand corner. The exit ticket is at the laundrobot station.

How do I get through the Master Control Center of *Robot Odessey I*? I've pressed the first button, but I can't get any farther.

Alex Beckers
Middletown, RI

• Erik Yoder: To fill the pool in *Hall of the King*, you need the bucket. First you must repair the bucket and go to the kitchen to fill it.

D. Harold Kruse
Peoria, IL

• Dianne Piper: To get on the train to Paris in the *Interbank Incident*, you have to get a ticket. After you get a ticket, point the arrow at the foot and then at f (forward).

How do you get to the ghost town?

James Carr
Twin Falls, ID

• Neil Johnson: In *Pyramid*, you don't have to change the batteries. Just buy them and the computer will change them when it wants to.

How do you find the mummy's chest in the maze, and do you use the scepter?

Chad Glover
Absecon, NJ

• Joseph Delaney: To get the powerful Kulcad spell in *Enchanter*, go out through the south gate and go to the beach. Use the Nitefall spell on the turtle and ask him to follow you. Then go to the engine room in the tower. Cast the EXEX spell on the turtle and type TURTLE. Go southeast and get the scroll. Go northwest and the obedient rainbow-hued turtle will retrieve the scroll for you.

Is it possible to get the adventurer to help you?

Barret Kelley
Kerrville, TX

• Troy Phelps: In *Dallas Quest*, to get the shovel you must first give the sunglasses to the owl. The owl will come to you and you should then go into the barn and the owl will eat the rat.

• Domenick Doran: In *Dallas Quest*, to get past the cannibals by the cave, you have to type WAVE RING.

• Jeff Hurteau: In *Dallas Quest*, to get all the inventory down the ladder, you must take one item down at a time (take the flashlight first) and find the direction for the village. Then take one item down at a time and drop it. Repeat these steps until the rest of the items are downstairs. Remember to turn the flashlight off when you're done!

Roger Rosebrock
Leipsic, OH

• Jeff Stewart: In *Wrestle Maniac*, when your opponent is on the mat, stand your man over him, hold down the button and pull the joystick back.

In *Sands of Egypt*, type HELP for each object you find.

What does the shovel remind you of?

In *One-On-One*, how do you get 3-pointers and how do you do a backwards slam?

Eric Reitz
Mendham, NJ

• Rick Moore: To get past the dog in *Bedlam*, first you have to get the blue pill in the dispensary. Next, open the refrigerator and get the hamburger meat that falls on the floor. Put the blue pill in the meat and feed it to the dog.

How do you get the green key?

Thomas Overmyer
Round Lake Beach, IL

Scoreboard:

In *Dungeons of Daggorath*, to kill the blobs, you must hit them with your sword quite a few times, or use an ice ring.

In *Dallas Quest*, to get past the anaconda, you must tickle him. Also, when you get to the crossroads, grab the coconuts and go to the screen with the bird's nest. To stop the boat from leaking, give some tobacco to the monkey.

In *Trekboer*, you must refill the beaker with acid and pour the acid on the grate.

In *Calixto Island*, you must take the pottery to the professor's study. Make sure you take the tire pump with you when you go to the island. Also, to get past the jungle edge, you must cut the foliage with the machette that you trade either the rug or the chest for.

To bend the bars in *Hall of the King I*, you must get the key piece. You will find the key piece in a room hidden behind the fermented grain. You must burn the grain, then go into the room. In the room there is a pedestal surrounded by beams of light. Reflect the light off of the mirror and take it from there. You will need the vile of acid.

In *Black Sanctum*, to get past the cabin, you must walk through the mirror. Make sure you have the robe first.

In *Sea Quest*, how do you buy the diving equipment and how do you get past the pirate?

Jared Brookes
Alberta, Canada

Scoreboard:

To get through the bronze doors in *Dragon's Blade*, go to the grave and dig to get the key.

To use the scroll, you must go into the room with the gargoyle and type SAY KASSAMAY.

How do you get past the tunnel?

Richard Deane
Chicago, IL

Scoreboard:

How do you get past the green fierce monster in *Pyramid 2000*?

Marc Hodgson
Georgetown, Ontario

Scoreboard:

How do you get past the serpent in *Pyramid 2000*?

Brian Ferro
Burke, VA

Scoreboard:

In *Dallas Quest*, when I get to the tunnel under the trap door at the trading post, it says to turn on the flashlight. Where do I get the flashlight?

In *Hall of the King III*, what must I do to get past the snake in the hole on the river bank?

Robert Taylor
Yuma, AZ

Scoreboard:

In *Dallas Quest*, ask the parrot; he'll tell you a way to avoid being eaten by the anaconda; try the shovel as an oar; bribe the monkey and the boat won't sink; at the crossroads, go to mama vulture and get her eggs.

In *Sands of Egypt*, you'll have to dig for the magnifier and torch. To leave the underground passage, get underneath the exit and untie the rope, drop and climb the ladder. Ride only *once* from the pool and you will end up at the pyramid. To empty the pool, type HOOK SCEPTER TO HANDLE and PULL SCEPTER.

Beware: If you use the canteen in any way, except for drinking, you will automatically drop it!

Duane Whitlock
North East, MD

Scoreboard:

Anytime you want to restart play in *Wrestle Maniac*, press the R key. If you want to have a demonstration of the

game running, press the D key at the single players or teams prompt.

David Kauffman
South Haven, MI

Scoreboard:

In *Sands of Egypt*, I have the drain open, but I cannot find the torch to enter the hole.

John Barsh
Strykersville, NY

Scoreboard:

In *Sands of Egypt*, where are the dates and the pool?

Jason Jasmin
Margate, FL

Scoreboard:

In *Raaku-Tu*, how do you get across the rug to the carved door on the other side?

In *Dungeons of Daggorath*, how do you kill the wizard's image?

Fallon Yager
Bellevue, ID

Scoreboard:

What do I do after you have the golden chopstick in *Raaku-Tu*? How can I open the wooden door that says "do not enter"? What use is the secret tunnel?

In *Dungeons of Daggorath*, what is the use of the Abye flask? When is the best time to use the Hale flask?

In *Pyramid*, how can I keep the mummy from taking my treasures? How do you open the sarcophagus? After chasing the serpent away, is there any other use for the statue?

Steven Kaschimer
Tucson, AZ

Scoreboard:

In *Trekboer*, roman numerals will lead you to an unusual planet, but I cannot find the amulet that helps you get across the bridge.

In *Major Istar*, I have found the dome and have landed safely, but how do you beat the security guard droids?

Rick Kelton
Newport News, VA

Scoreboard:

In *Rogue*, when battling a lot of monsters in a room, stand in a doorway. Doing this will allow only one monster to attack you at a time.

To keep your man alive, after you save a game, cover the write protect notch on the disk. This way, when your man dies it won't erase your saved game. This also prevents your man from being permanently entered into the hall of fame.

Wands and staves may ricochet. Zapping creatures diagonally may be less

convenient, but is safer. Polymorphing magic is dangerous at beginning levels because the chances are greater that you will change a monster into something more powerful.

Around the fifth or sixth level, Aquadors start appearing. If you see one, remove your armor. These creatures do no physical damage; they just rust your armor. If you save all your enchant armor scrolls, use them on the first leather armor you find — leather can't rust.

Where are the dates in *Sands of Egypt*?

Brent Dingle
Norwalk, IA

Scoreboard:

You can shoot the wildcat with the rifle in *Ruby Chalice*. Typing DOWN HOLE in the first room of *Dr. Avaloe* will send you to the monster room.

How do you move the slab in *Ruby Chalice*? How do you get out of the dark in *Hitchhikers Guide to the Galaxy*, and how do you cross the rug in *Raaku-Tu*?

Chris Casey
Vernon, MI

Scoreboard:

In the *Interbank Incident*, if you want to get on the train at Paris just past the Louvre, simply type GO and point to the door of the train. To get on the next train to Germany, you need the orange European train pass. It can be found anywhere in Paris. Remember to search the flower pots.

The locker at the Seattle terminal will open as soon as you put in the quarter. Now search the locker. If nothing happens after your search, the locker is empty. If something is in the locker, you should see the message, "Look, you found something!"

The rope is used later to tie someone up and the pass is used to ride the train or ferry boat in Seattle.

CoCoDraw Update

By John G. Williams

Congratulations to Darin Herr for the fine work he did on the *CoCoDraw* program ("CoCoDraw Concoctions," Page 58) published in the October 1986 issue. It is a very well-written program with excellent documentation. In fact, it would not have been possible for me to modify the program without the line descriptions he provided. The only part of the program that gave me any trouble was the switching back and forth from joystick to arrow keys for precise pointer positioning. I just could not seem to master that procedure with any speed or accuracy at all.

One way around the pointer positioning problem is to use the joystick command as "change of position" command rather than position command itself. That is, the joystick position tells the pointer how many pixels to move during each blinking cycle of the pointer. Both vertical and horizontal positioning of the pointer can be controlled in this manner. A stick movement of one unit could result in a pointer movement of one pixel and so on.

The problem with this simple relationship is that the extreme sensitivity the pointer exhibits is no improvement at all over the original method. What is needed here is a non-linear stick command so that near-center movement of the stick results in very slow pointer movement, yet rapid pointer motion

John Williams is an aircraft industry structural engineer. He lives in Azle, Texas, and enjoys his CoCo very much. His son, a Texas A&M engineering major, is also a CoCo fan.

can be obtained when needed.

This method may be familiar to some, as it was the subject of a short article in the August 1985 issue ("The Joystick Fix It," Page 226). In that article I demonstrate how the stick command could be tailored to any requirement with a non-linear equation. Such an equation could be solved repeatedly for new pointer location and would suit our *CoCoDraw* problem exactly. However, we already know about that method, so why not learn yet another way to use stick commands for our purposes?

Since the joystick has only 64 possible positions in each axis, an equation relating stick command to pointer motion could have only 64 answers for each axis. Rather than solving the equation over and over for only 64 possible pointer motion commands, why not solve the equation once for each stick position and save the results in a table? We can then look up these results in the table and move the pointer as slowly or quickly as desired. In fact, this procedure is known as the "table-look-up" method and is much faster than having to solve the non-linear equation repeatedly.

The table is a one-dimensional array of values I call $DP(J)$, where J is the subscript of DP and ranges from zero to 63, which is of course the range of our joystick command. If you need to review arrays and subscripts, see your BASIC manual for more information.

The name DP stands for "delta pointer," since the Greek letter delta is frequently used to represent change in a variable.

To generate the table of stick com-

mands, insert Line 11 into the *CoCoDraw* program:

```
11 DIM DP(63):FORJ=0TO63:N=J
   -31:DP(J)=INT(.5+(ABS(N)*
   N/50):NEXT
```

This line provides space for the array with $DIM DP(63)$, calculates all 64 values of $DP(J)$ and stores them in the array. Of course other equations could be derived which would do just as well. For example, the sensitivity of the pointer can be adjusted by changing the divisor. Larger values such as 70 or 80 give slower movement, while smaller values give faster movement.

If you are interested, it would be easy to list out the values of $DP(J)$, just to see what the array looks like. Another possibility is to put the values of $DP(J)$ in $DATA$ statements and use a $READ$ statement to store the values.

The lines in the original program that read joystick and arrow key commands are 9400 through 9540. Those lines must be deleted and the following new lines must be added which read the stick and calculate the new pointer position.

```
9400 X=X+DP(JOYSTK(0)):Y=Y+
      DP(JOYSTK(1)):FB=PEEK(&
      HFF00)OR&HB0
9410 IFX<0THENX=0ELSEIFX>255
      THENX=255
9420 IFY<0THENY=0ELSEIFY>191
      THENY=191ELSERETURN
```

The new position (X or Y) is the old position plus the delta position (DP) commanded by the joystick. Note the joystick command is the subscript of the

array DP. In this manner the stick position is directly related to the previously calculated table of DP(J) values, and the stick merely tells which value of DP to add to the old pointer position.

The range checks in lines 9410 and 9420 are added to prevent crashes resulting from trying to plot off the screen.

Two other minor changes are necessary to make the pointer behave properly with these new commands. The following statement must be inserted in Line 6280 just before the GOTO 62B0 at the end of the line:

```
X=XX:Y=YY:
```

Line 5630 must be modified by inserting the following statement between ELSE and 5600 near the end of the line:

```
X=XX:Y=YY:GOTO
```

These modifications result in better control of the pointer. It is now very easy to move one pixel at a time for precise control, yet it can be moved rapidly when you want to get to a distant part of the screen. The motion is different since the pointer does not

follow the position of the stick but moves in the direction the stick points, at a velocity related to stick displacement. After just a few minutes of practice, it feels natural.

One other difference in the program now is how the Ray function works. To use Ray, move the pointer to the center point as before and click the button (do not hold it down). Move the ray to where you want it and click again. So far, no difference; but now if you want another ray, click the button again and move the new ray to the desired point. Repeat as desired. When you don't want another ray from that origin, just hold the button down until it beeps and continue with another set of rays or select another option.

I hope you find this modification useful. It has made an already fine program just a little easier to use. CoCoDraw now has the ability to easily put the pointer on any pixel without an expensive analog-to-digital converter like CoCo Max uses. I have tried it with both the standard and deluxe joysticks, but not with a mouse. The deluxe stick is much better because of self-centering, and I would encourage everyone to use one if possible. With the standard stick

you will probably want to slow the motion down as described earlier.

Keep in mind that there are ways to use joysticks other than what is shown in the manuals, and that this array/subscript procedure has other applications limited only by your imagination. Our CoCo is a marvelous machine and is capable of doing far more than most of us ever ask it to do, as are our own brains.

Again, thanks to Mr. Herr for a very nice job of programming and documentation. If anyone has comments or questions about the modification, write me at Rt. 2, Box 285, Azle, TX 76020. Please remember to enclose an SASE when requesting a reply. □

Editor's Note: The complete CoCo-Draw system consisting of two programs, MENUGEN and COCODRAW, will appear on RAINBOW ON TAPE and RAINBOW ON DISK this month. The modifications detailed in this article will have already been made. Refer to your October 1986 issue of RAINBOW for specific instructions regarding how to use CoCoDraw. Page 168 contains information on ordering back issues. ☺

PRICKLY-PEAR SOFTWARE

QUALITY PROGRAMS FOR YOUR COCO I, II & III

HALL OF THE KING TRILOGY — Now with Animation

HALL OF THE KING III is finally here to complete the most extensive trio of two disk adventures ever available for the color computer. Amazing hi-res graphics fill your screen as you follow your quest for the Earthstone. HALL OF THE KING I, II, & III may be played separately for a great challenge and wonderful entertainment. The Rainbow review of 9/86 called Hall of the King II a "Winner" while 6/86 Rainbow review called Hall of the King I "one of the best adventure programs I have experienced to date". Try one or all of the Hall of the King series. Each adventure is now only \$34.95 if purchased separately. You may order all three for a package price of \$89.95. If you are one of the lucky adventurers who has already purchased Hall I & II, send proof of purchase (invoice, cancelled check, etc.) and receive a \$10.00 discount on the new HALL OF THE KING III. The Hall of the King series is compatible with all versions of the Color Computer including the COCO III. Requires 64K and 1 disk drive.

Fall
Specials

WARP FACTOR X (Rainbow Review 2/86) \$29.95
DARKMOOR HOLD (Rainbow Review 8/86) \$19.95
DOLLAR WISE Requires 32K Tape \$19.95 — Disk \$24.95

FONTFILE — (New for the COCO III) \$19.95
DRAGON BLADE (Rainbow Review 11/86)
 Animated Graphics Adventure \$24.95

POLICY ON PROTECTION

We believe our customers are honest—all of our software can be backed up using standard backup procedures.

Your Personal check is welcome no delay. Include \$1.50 shipping for each order. TX residents add 6 1/4% sales tax. Orders shipped within 7-10 days

Dealer and author inquiries are always welcome. Canadian dealers should contact Kelly Software Distributors, Ltd. 608, STNT, Calgary, Alberta T2H 2H2, (403) 236-2161.

A Conversation With the CoCo SIG Manager

By Cray Augsburg
Rainbow Technical Editor

Over the past several months, many readers and Delphi users have asked why RAINBOW doesn't publish some of the excellent programs that have been uploaded to Delphi. To gain some insight into this matter, I discussed the subject with Jim Reed (JIMREED), who is both the CoCo SIG Manager on Delphi and the Executive Editor here at Falsoft.

Cray: What is the basic reason THE RAINBOW doesn't publish material that has been uploaded to Delphi?

Jim: Certainly, there is a great deal of very good Color Computer material on Delphi, Cray. But, we must keep in mind the availability of this same material from many sources, such as CompuServe and local bulletin boards. I can see someone saying, "How dare you print and charge money for a magazine with public domain listings I can get lots of other places!" We like to think of our Delphi service as an extension of THE RAINBOW. I don't see it as an either/or situation.

Cray: Is all of the material in the CoCo SIG public domain?

Jim: No! Most of the material on the SIG is *not* public domain. The great majority of the items are copyrighted. A lot of people do not understand this. We can't, for instance, just grab *Mikey-Term*, *Greg-E-Term* or *Rickyterm* and

print them in the magazine; they are all copyrighted!

Cray: But, what about all of the programs that are, in fact, in the public domain? Many of our readers don't have modems.

Jim: Yes, there are a lot of clearly designated public domain programs in the databases, and, yes, many RAINBOW readers cannot just jump online and

download them easily. But, please keep in mind that Delphi is a for-profit business. It does not make good business sense for Delphi to lose revenue by allowing the best stuff to be published in a magazine.

Additionally, even if we were to "commandeer" some of the best public domain programs, in order to print them, we would have to give up space

Database Report

This month was a busy one on the RAINBOW SIGs! Uploading activity was brisk in spite of the summer heat as users were busy drawing and digitizing pictures for others to enjoy. The Graphics topic of the database is the largest by far of all the topic areas, occupying about 40 percent of the entire database. If you're interested in graphics, (especially *Color Max 3* graphics) then the RAINBOW CoCo SIG on Delphi is the place to be!

OS-9 Online

In the Graphics topic area, **Dave Archer** (DAVEARCHER) contributed *FAT.FNT*, a "fat" IBM font converted from the RS-DOS font of the same name that Marty Goodman uploaded to the CoCo Sig. **Jerry Greiner** (JERRYCG) gave us a graphics editor with documentation and a sample start-up window. **Jason Forbes** (COCO3KID) contributed 33 Level II fonts in an *ARed* file for use with graphics windows. Jason also included a documentation file giving full information on how to load and display the fonts on Level II windows.

In the Users Group topic area, OS-9 Online SIGop **Greg Law** (GREGL) enabled seven more of the Users Group files: *CAL*, *CCGOTOXY*, *CHANGE PASSWORD*, *CHANGE TERM*, *CHAR TO INT TO CHAR*, *CHECK* and *CHECKBOOK*.

In the Utilities topic area, **George Janssen** (GBJANSSEN) contributed an updated version of his fine *PAK* utility. *PAK* compresses several files into a single file, which is called an "archive" file. Such archived files take up a minimal amount of space. Another good use for *PAK* is storing all pieces of a system into one archive and eliminating excessive directory entries.

George also provided *FILEX.PAK*, a utility for a recursive directory listing showing name, date last modified and size of the file. The listing may be in name, date or size sequence, in either ascending or descending order. *FILEX* also has a Find option that will search for all filenames beginning or ending with *xxxx*, such as all files ending in *.c* or all files beginning with *test*.

Steve Bjork (6809ER) submitted his program *Setype*, which allows a user to

Cray Augsburg is RAINBOW's technical editor and has an associate's degree in electrical engineering. He and his wife, Ruth Ann, have two children and live in Louisville, Kentucky. His username on Delphi is CRAY.

in the magazine used for original material we purchase from our readers — programs that are *not available anywhere else*. As it stands now, you get a variety of material, both in the magazine and on Delphi.

Cray: Couldn't RAINBOW alternatively add a couple of public domain programs on RAINBOW ON TAPE and RAINBOW ON DISK each month to help those who cannot access Delphi?

Jim: That would be a problem, too. As you know, there is often little room left on the tape and disk when we finish saving all the programs appearing in the magazine. Sometimes we even have to use both sides of RAINBOW ON TAPE, rather than have one side as a backup, just to hold all the material.

More important, we already have problems with readers being unable to use RAINBOW ON TAPE programs, simply because they have not bought — or bothered to read — the magazine article corresponding to the program. I hate to think of the situation we would create if we decided to "throw in" some extra, totally undocumented programs.

Finally, keep in mind that we do copyright the tape and disk products, as well as the magazine. Therefore, we would be in the position of copyrighting a product that clearly had some public

domain programs on it! Now, there is actually nothing wrong with that — for instance, a copyrighted history textbook has lots of public domain material in it — but I think it would serve to "muddy the water" as to whether RAINBOW ON TAPE/DISK is indeed a copyrighted product.

Cray: Then, there are no plans to somehow publish some of the Delphi material in THE RAINBOW?

Jim: In spite of my foregoing concerns, we do discuss such possibilities as finding some avenue to deliver to our RAINBOW readers material that is available on Delphi, but inaccessible to those without modems, local nodes, etc. But, the key thing is that we cannot ruin the market for Delphi by "skimming off the cream." Delphi is providing a needed service and deserves a return on its investment, too. Remember, Delphi usually provides free upload time as an incentive, and it pays people to organize the databases, to publicize the existence of these CoCo programs and to help members with these programs. Plus, Delphi keeps it all stored on disk. All of this constitutes an investment that should provide a reasonable return.

Cray: What would you recommend to those who do not have access to Delphi?

Jim: I'd point out that I've seen brand new modems for as little as \$15. There's a whole new world to explore with your CoCo when you reach out through the telephone lines. It's mighty handy to be able to post a gnawing technical question on the CoCo SIG — even in the middle of the night — and have it answered in a matter of hours, sometimes minutes. I'd also point out that Christmas is coming!

Online Shopping

Jim Reed invites all SIG members to visit the Shopping area in the CoCo SIG. Recently, the Shopping area underwent active development, and several advertisers have already started selling their products online. Along with all Falsoft products, you can order items from such advertisers as Computer Plus, Gimmesoft, Speech Systems and Spectrum Projects.

To get to the Shopping area, just enter SHOP from the CoCo SIG or OS-9 Online SIG prompt. Once there, you can browse the area for vendors or products. If it is your first time in the Shopping area, you will first need to set up a method of payment. Then, when you order a product, the process will be much quicker and easier. □

set the joystick type (low or high resolution) and monitor type using an option list or a menu for selection. It's very handy for autoboot programs and may be added to the start-up file. **Bert Challenor** (BERTAC) sent us the source code to his spooler program, which allows up to five files to be spooled.

In the Patches topic, **Kevin Darling** (KDARLING) submitted an interesting text file describing the known bugs, fixes and patches for CoCo 3 OS-9 Level II Version 2.00.01.

CoCo SIG

In the General topic area, **Brian Wright** (POLTERGEIST) sent us some interesting jokes from his collection and a text file clarifying his first grouping of files about the FCC proposal for Value Added Networks. Brian has also published a copy of the entire FCC docket, as well as some counterproposals and arguments. **Rick Adams** (RICKADAMS) provided a list of Tandy's top 10 games for the CoCo. **Kevin Nickols** (NICKOLS) provided us with the Tandy Newsletter for July. (Kevin is the SIG manager for the Tandy and PC Compatibles SIGs.)

In the Source Code topic area, **Roger Krupski** (HARDWAREHACK) posted the

source code for the newest version of his popular Morse Code generator program, and an enhanced Screen command for CoCo 3s that allows the user to set up a 40- or 80-column screen without complicated PALETTE and WIDTH commands. I posted the source code for a short line feed stripper utility, and a similar utility that converts all-uppercase text files into all-lowercase. I use these utilities sometimes to clean up documentation files on the SIG, making them a bit more readable. I also posted the source code to the BASFIX utility I submitted in the Utilities topic.

In the Utilities topic area, Roger Krupski favored us with an updated version of his Morse Code generator program. **Glen Hathaway** (HATHAWAY) posted an experimental version of his SNAP disk editor for the CoCo 3. Several SIG members downloaded the program and made suggestions for improvement, which he has promised to include in the final version.

Roger Bouchard (HARBIE) posted an ML utility to add the SaveS and LoadS commands to ADOS-3 users, just as Steve Bjork's DFIX utility provided for the users of Disk BASIC. **Kenneth Wuelzer** (WUELZERKEN) posted Version

2.5 of his very popular KDSK disk editor. KDSK can examine/modify any sector on a disk in either R/S, OS-9, FLEX, or MS-DOS formats. It has provisions for fast copies, backups, formatting, sorting and cataloging disks, printing labels and other features.

Jason Forbes posted a program for astronomy buffs called POSITION.BAS, written by Jeff Yoder. Give the program a date and a planet and it will return the correct ascension and declination relative to the Celestial Plain. I also posted my line feed/null remover programs as well as the previously described uppercase to lowercase utilities. These files were posted in response to a user's request in Forum.

Additionally, I posted a program called BASFIX, which I hope will eliminate several problems for cassette users. BASIC programs saved on disk contain control information which is not present in BASIC programs on cassette, making files on disk incompatible with cassette systems unless that control information is removed. BASFIX is a machine language utility that reads a compressed BASIC cassette file that originated on a disk system and removes the control information. This will make the RAIN-

BOW ON TAPE files in the database accessible to tape users.

In the Hardware topic, **Bob Mahoney** (COCO3) sent us a complete listing of the RS-232 connector for the RS-232 pack. This file includes information that is not found in Tandy's otherwise excellent documentation. **Marty Goodman** (MARTYGOODMAN) continued providing us with his informative, hardware-related articles. This month, Marty contributed an article describing how to repair a damaged disk controller. This file originated as the result of several Forum questions from SIG members.

Marty also provided us with an interesting technique for breaking out of protected games and programs in his file called "SHIFT-BREAK-Reset Trick Revealed." Using this technique, you may examine and modify your game programs to get more lives, or you may choose to modify your utilities according to your own needs. This technique will usually work with programs that auto-start, and is usually effective even with the ones that normally require one to power-down to exit the game.

Marty then provided us with a description of how to get a composite color signal from a CoCo 2. This file contains information that is peculiar to the CoCo 2 and resulted from a member's question in the Forum. Marty is available frequently in the Forum to assist you with your hardware problems. The more interesting ones may also be published in Marty's "CoCo Consultations" column in RAINBOW Magazine.

In the Games topic, Rick Adams and **Mike Ward** (MIKEWARD) teamed up to provide patches for the *Dungeons of Daggorath* game to allow it to run on the CoCo 3, as well as to provide some enhancements. Brian Wright posted a bowling game, and **Jim Pogue** (JIM-

POGUE) posted a revised and greatly enhanced version of his very popular *Scrabble* game. **James McDaniel** (NEWKID) contributed an excellent game called *Crescue*. This game features several high resolution screens and very interesting action.

In the Graphics topic area, **Bob Wharton** (BOBWHARTON) posted a total of 18 MGE files! This makes Bob this month's most prolific contributor. Bob posted 10 nudes converted from ST pictures and several other original and converted pictures. I posted a couple of digitized pictures of possible candidates for CoCo Cat at the Princeton RAINBOWfest. (Others are invited to post their candidates/dreams also.) I also posted four new "fantasy" style pictures that are converted ST pictures. These are all quite detailed and unusual. **Mike Andrews** (MANDREWS) posted his patch to Erik Gavriluk's *Macverter* program. Mike's program converts Erik's program to print on a Tandy DMP-105 printer instead of an Epson printer, and may work with other Tandy printers, as well.

Jason Forbes posted two MGE pictures of the starship *Enterprise* from the movie *Star Trek* and an outstanding converted ST picture of a springboard high diver. **Eric Robichaud** (EGROBICHAUD) contributed a very colorful MGE picture of everybody's hero, Bugs Bunny. The quality of this picture is truly outstanding. Rick Adams contributed a BASIC program that changes the palette positions of selected colors in an MGE format picture. It does not change the actual colors, just the palette positions. This is useful for pictures whose colors in palette positions 0 and 15 are so similar (or identical) that it is next to impossible to use *Color Max 3* to view or edit them.

D.K. Lee (HORNET1) posted four new original pictures he drew using *Color*

Max 3. **Roger Bouchard** posted *Mandrill Mania*, two pictures of the gorilla that you've seen on the Amiga, the ST, the Apple II GS and the IBM. Now you can see that gorilla face to face on your CoCo 3. **James Farmer** (MODEMMASTER) sent us a digitized picture of Charles D. Tandy in MGE format. Tandy buffs will want this one for sure.

Clay Kunz (ZAFODBEELBRX) contributed an interesting raindrop "splash" program that draws concentric circles spreading out from the center of the screen. **Billy Hambric** (SNOOPYDOG) gave us an interesting *Peanuts* MGE picture of Lucy holding the football for Charlie Brown. Just in time for the Fourth of July, he also sent us an MGE picture of Snoopy waving the flag and shooting fireworks, plus a digitized, 16-level picture of Snoopy and Alf done with the DS-69 digitizer.

In the Music topic area, **Randy Cassel** (BBTROLL) sent us his rendition of "Jingle Bells" as done on the *CoCo Composer*, which was published in the December 1983 RAINBOW. **John Brennan** (FIREFLY) sent us three of his favorite classic folk rock songs, which he arranged using the *Bells and Whistles* program from RAINBOW. **Bryan Eggers** (SOFTAFFAIR) provided us with 17 new music files for *Orchestra-90*. All *Orchestra-90* fans should check these out because Bryan sent us some of the best of his collection.

In the Data Communications topic area, **Bill Tucker** (BILLTUCKER) sent us a listing of governmental BBSs that may be accessed by the public. **Mike Fischer** (MIKE88) sent us Version 2.2 of *Phone Clone*, a disk transfer utility.

We hope to see all of you on the RAINBOW CoCo SIG on Delphi!

— Don Hutchison
RAINBOW CoCo SIG Database Manager

Two-Liner Contest Winner . . .

This little graphics quickie will surely excite some of you sci-fi fans out there.

Mark Rucinski
Oshkosh, WI

(For this winning two-liner contest entry, the author has been sent copies of both *The Third Rainbow Book of Adventures* and its companion *The Third Rainbow Adventures Tape*.)

Computer/Baud Rate Destruction

By Marty Goodman
Rainbow Contributing Editor

I have the old Color Sripsit ROM pack. When I type POKE 150,18 to set the CoCo to 2400 baud (which I like to use for my DMP-130), and then plug in the Color Sripsit ROM pack, the POKE does not "take." That is, the baud rate is still 600 under Color Sripsit. How can I make that POKE stick? Also, I have found my CoCo 2 contains 88 in location 150, not the 87 I read was supposed to be there. Why is this?

Michael R. Wetzstein
Tifton, GA

Never ever plug in a ROM pack cartridge with your computer turned on! This will result in the destruction of the computer. If you read the literature Tandy supplies with the computer and the ROM pack, you would have been warned against this most dangerous practice.

The old *Color Sripsit* ROM pack uses its own internal program code to operate the RS-232 port on the CoCo, and this code is fixed at 600 baud. There is little you can do about that. I recommend you switch to a better word processor. *Telewriter 64* is available as a tape program. It has provisions for

Martin H. Goodman, M.D., a physician trained in anesthesiology, is a longtime electronics tinkerer and outspoken commentator — sort of the Howard Cosell of the CoCo world. On Delphi, Marty is the SIGop of RAINBOW's CoCo SIG and database manager of OS-9 Online. His non-computer passions include running, mountaineering and outdoor photography. Marty lives in San Pablo, California.

baud rates from 300 to 9600 in addition to supporting 51-, 64- and 85-column displays, plus many other things not found in *Color Sripsit*.

Microsoft changed the official baud rate constant for 600 baud from 87 to 88. Thus, later model CoCo 2s have 88 in the baud rate delay constant location 150, not the 87 that is usually referred to in older Color Computer literature.

Saving PMODEs

How do I save PMODE 4 graphics screens to tape or disk?

John Smith, Jr.
St. Peter, FL

If you have a tape system, the command `CSAVEM "filename", &H600, &H1DFF, &HA027` will save the screen to tape. With a disk system, the way to save such a screen would be `SAVEM "filename.ext", &HE00, &H25FF, &HA027`. Just substitute your file in place of *filename*. The first two numbers in those commands are the addresses in memory of the CoCo's first four graphics pages. The last number in each command (&HA027) is the address of the reset routine in the CoCo, and is used as a safety factor, just in case you accidentally mistake those graphics files for a machine language program and try to execute it. If you have a graphics screen saved to tape and want to load it into the graphics area on a disk system, merely load it using the command `CLOADM "filename", &HB00`. This will "offset load" the tape system graphics screen into the area that is correct for a disk system.

Converting Speech to Sound

What is the address of the analog-to-digital converter in the CoCo? I want to use the joystick line to convert speech to digitized sound.

Brian Kschak
Reigelsville, PA

The analog-to-digital conversion hardware in the CoCo is *not* accessible via a simple address. It is largely software driven: You must, using assembly language, operate the digital-to-analog converter a multiple of times and compare the values to what is seen by the analog-to-digital port, adjusting the value up or down depending on whether the value you have was reported as higher or lower than what was on the analog lines. Naturally, this must be done quite rapidly, in assembly language, to be at all useful. The routine in the BASIC ROM located at the address contained in locations \$A00A and \$A00B does this. You might want to study that routine, even though the one given in BASIC is rather slow. The best means of digitizing voice on the CoCo is to use Delta modulation. Delta modulation is far more memory-efficient than digitizing the amplitude of the wave form. With Delta modulation you merely use a single bit per sample of the sound to record whether a "guess" at the amplitude of the wave form was higher or lower than the actual wave form. Thus, you can pack eight times as many samples into memory, and digitization of the sound proceeds far faster, too. This approach "chases" the wave form as it rises and falls.

Dead Keys

My CoCo 3's keyboard is malfunctioning. Two rows of characters in the wiring matrix no longer work. I have substituted a second keyboard, but the problem remains, and the original keyboard works fine on another CoCo. I have also replaced the 74LS30 chip on the CoCo 3, but this has not cured the problem. Can you help?

Bill Jackson
(BILLJACKSON)
Sacramento, CA

Keyboard problems of the sort you describe (a row or column of dead keys) are often caused by a break in the wires on the keyboard mylar cable and are very hard to fix without replacing the keyboard. In your case, however, you have proven that this is not the problem. Another cause of a row or column going out is a damaged PIA chip. On the CoCo 3, IC 5 (LSC81001) is the keyboard PIA chip. You will have to desolder this 40-pin chip, socket it and obtain a replacement chip from Tandy. Fortunately, the replacement chip is relatively inexpensive and available from National Parts. I recommend you "destructively" remove the old chip, cutting each pin off it, desoldering the pins and removing them using long-nosed pliers, then cleaning up the holes with a solder slurper prior to placing a socket there and soldering it in. Of course, you will first have to remove the CoCo 3 motherboard and remove its ground plane metal sheet. The 74LS30 chip is involved in generating the keyboard interrupt and could not cause the type of problem (one or more rows or columns dead) you describe. The only other thing to check before replacing your PIA is to make sure all lines from the keyboard connector on the CoCo 3 are intact on their way to the pins of the keyboard PIA.

Cheap Communications

What communications program do you recommend for a 64K CoCo 2 that costs under \$25?

John Freidrich
Narona Heights, PA

I am in full agreement with Dr. ASCII (see Page 127 of the August 1987 RAINBOW) that your two best bets are *Mikeyterm* and *GEterm*. Each is available for \$10 from their authors (Mike Ward, 1807 Cortez, Coral Gables, FL 33134, and Greg Miller, 9575 Royston

Road, Grand Ledge, MI 48837). I recommend you buy both, for both are excellent, and the total cost will be under \$25.

Malfunctioning Joysticks

I have connected a Sony KV1311CR monitor/TV to my CoCo 3 using a cable like the one you described in the August RAINBOW. It "steals" 5 volts from the joystick port to run its sync combiner chip. But now my joysticks do not function. Full movement of the joystick no longer fully affects the value seen by the computer. Can you help me?

Herbert F. Farmer
Ipswich, MA

The problem is caused by a current-limiting resistor in the joystick port circuit. The cure is quite simple: Merely open your CoCo 3 and short out the resistor labeled R13. This resistor is 100 ohm (color code brown, black brown) ½ watt (slightly fatter than most other resistors on the CoCo 3), that can be found to the right of the rear-most of the four 4464 18 pin DRAM chips on the CoCo 3, near the rear of the computer. The Sony KV1311CR to CoCo 3 RGB cables currently being sold by Spectrosystems and by Spectrum Projects now have two extra pages of instructions added to explain this and give several alternative approaches to curing this problem.

Remote Keyboard

I read your article giving tips on how to make a remote keyboard cable for the CoCo. Could you please list the components needed and provide me with step-by-step directions for making one?

Mike Duvall
Zanesville, OH

Without the use of special adapter boards, making a keyboard extender cable is a job for an experienced hacker, and it is not easy to provide step-by-step instructions. But because I had so many requests like yours for more specific instructions on making such a cable, I engineered a keyboard extender cable that is now available to the public (see Spectrum Projects ad). This cable still requires some ingenuity to fully and properly install, but much of the hard part of keyboard cable construction (especially the connection between cable and CoCo and cable and keyboard) is done for you. You still have

to supply your own case for the remote keyboard.

Drive Alignment

I've had problems with the drives on my CoCo 2. Finding a place that would do alignment on them was difficult, and the work was expensive. After the drive was repaired, our CoCo 2 behaved as if it had only 32K. Why? We plan to get an NEC monitor but are not sure how to hook it up.

Thomas Crowe
Villavicencio, Colombia

J&M systems sells *Memory Minder*. This package, which costs about \$90, is a superb disk drive alignment system. With it, those who are familiar with the basics of how floppy drives work and how they are adjusted can do all common disk drive alignment tasks without use of an oscilloscope. I've tested this program extensively against the more traditional method of disk drive alignment and find it to be extremely accurate and much easier to use.

I have no idea why the upper bank of RAM on your CoCo 2 has ceased to operate. It is possible that one or another chip in your CoCo 2 has been damaged.

There are many vendors that advertise in RAINBOW (Moreton Bay, Howard Medical, Computerware, and others) that sell adapters needed to hook a monitor to a CoCo 2. It is important that you specify whether the monitor is a color or a monochrome monitor and what kind of monitor it is. The CoCo 2 can be easily made to work with composite color and composite monochrome monitors. It cannot be adapted to RGB monitors, nor can it be adapted to IBM type TTL monochrome monitors.

Your technical questions are welcomed. Please address them to CoCo Consultations, THE RAINBOW, P.O. Box 385, Prospect, KY 40059.

We reserve the right to publish only questions of general interest and to edit for brevity and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Questions can also be sent to Marty through the Delphi CoCo SIG. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASK (for Ask the Experts) to arrive at the EXPERTS> prompt, where you can select the "CoCo Consultations" online form which has complete instructions.

FROM C.R.C COMPUTERS DISTO SUPER PRODUCTS

DISTO SUPER CONTROLLER
\$99.95

- Gold contacts on all connectors
- Shielded metal box
- Four 28 pin sockets for software expandibility
- Uses 2764 or 27128 EPROMs only
- EPROMs are software selectable
- Internal Mini-Expansion-Bus Interface for DISTO SUPER add-ons or user projects
- C-DOS included (RS-DOS compatible), single or double sided, 6 to 30ns step rate
- Works on all CoCo 1, 2 & CoCo 3's

**CoCo 3
512K Upgrade**

DISTO SUPER RAM 3
\$79.95/512K
\$29.95/0K BOARD

- 512K Memory upgrade
- Easy to install
- Solder less Plug-in card
- Fully compatible with OS-9 Level II
- State-of-the-Art Fast 120ns DRAM
- Free Software included:
 - Printer Spooler — Ramdisk
 - Memory Test
- Zero K Board complete without memory chips

 - For the COCO II & III
 - Upgradable to 1 MEG
 - Software included
- RGB TO MONOCHROME VIDEO & AUDIO ADAPTER FOR COCO III **\$29.95**
- RGB ANALOG TO RBG TTL VIDEO ADAPTER FOR COCO III **(Coming Soon)**
- HARD DISK INTERFACE **\$49.95**
 - Fits inside Super Controller or Ramdisk.
 - S.A.S.I. interface compatible. OS-9 drivers included. Supports WD-1002-SHD or ZEBEC 1410 controller.

Yakety-Yak

the CoCo Talks Back

By Bob Roberts

Unless you are a better typist than I am, you are in for a debugging session after keying in a long program listing. The listing on the screen must be compared to the printing on the page. Your eyes will shift back and forth between the screen and the magazine many times. It would be a lot easier to have the computer read the program while you sit in your easy chair and follow along until an error is found. The program *Readprog* uses the Speech/Sound Cartridge to read BASIC programs residing in the computer's memory. ■

Once *Readprog* is typed in and debugged, save it to tape or disk. To use the program, load it into the computer before beginning work on a new listing. *Readprog's* line numbers begin at 60000 to avoid conflict with the program being entered. If you have a disk system, you can merge *Readprog* after you've finished typing. Remember that in order to use the MERGE command, *Readprog* must first be saved in ASCII format (i.e., SAVE "READPROG", A).

To get *Readprog* started, type RUN 60000. A menu will appear with the option to begin reading at the start of the program, start reading at a specified line number or read only line numbers.

The option of reading only line numbers was included as a quick check for one of my favorite errors, leaving out a line.

The program is most useful for reading long, number-packed code, such as DATA statements containing machine language instructions or DRAW strings. So, I built in the ability to skip the mundane stuff and get directly to the area of the program that is causing the problem.

Bob Roberts is an industrial engineer for Anchor Hocking Corporation in Lancaster, Ohio. He is married and has two daughters who are more interested in boys than computers, a cat (also non CoCo) and a cocker spaniel.

If you select any option but reading the line numbers, you will have two more choices to make. The program will ask if you want to pronounce the word "space" each time a blank is encountered. With a few exceptions, spaces do not affect the proper functioning of BASIC programs, so I usually elect not to have blanks spoken. The next choice is whether or not to read all of the material following a REM statement or apostrophe. Again, remarks do not affect the operation of the program, and a lot of time can be spent listening to program notes or to the computer saying "asterisk" 32 times. If you opt not to hear the remarks, the program will say the line number and then say "skipping" to indicate the omission.

The BASIC keywords are pronounced as they might be spoken instead of being read literally. For example, RND is read as "random;" CLS is read as "clear the

screen" instead of simply C-L-S. If you don't like my versions of the pronunciation, you can substitute your own. The DATA statements contain strings for saying and printing the keywords.

If the pronunciation of a word is different from the way the word will be printed, the string consists of the part to be pronounced to the left of an up arrow and the printed part to the right of the arrow. Words sounding the same as they are printed, e.g., LIST, do not have an arrow.

Integer numbers less than 10,000 are also spoken as they are usually pronounced. Line number 943 will be read as "nine hundred forty-three" instead of "nine four three."

The computer will print the words on the screen as it says them. To pause, press any key. Press any key again to continue.

Readprog will run on CoCo 2s and

3s, and it will read Color BASIC, Extended BASIC, Disk BASIC and CoCo 3 keywords.

Start up *Readprog* and follow along as it reads, noting any changes you will need to make to the program. Enter all changes in one editing session, and you should be in business. When you are finished, don't forget to delete *Readprog* by typing DEL 60000- before saving your new program.

By the way, if anyone knows how to make the Speech/Sound Cartridge sound like a female Klingon, I'm dying to hear from you. I hope you find the program useful.

(Questions regarding this program may be directed to the author at 3180 Meadowbrook Drive, Lancaster, OH 43130. Please enclose an SASE when requesting a reply.) □

LOWEST CONTROLLER PRICE EVER!! The New JFD-EC, Only \$75

*NOW COCO 3 Compatible**

JFD-EC DISK CONTROLLER

The JFD-EConomical controller combines the best features of the original JFD-COCO with the two switchable ROM sockets, fully buffered data lines and Memory Minder in ROM. The JFD-EC replaces the JFD-COCO in our product line at an even lower price. The controller includes JDOS, the JDOS manual and Memory Mind-
er in ROM. (Precision Alignment Disk not included.)

JFD-EC Disk Controller with JDOS

\$75

OPTIONS

- Precision Alignment Disk & Memory Minder Manual D/S \$ 40.00
- Precision Alignment Disk & Memory Minder Manual S/S \$ 26.00
- JFD-EC Disk Controller with RS DOS 1.1 \$ 75.00
- JFD-EC Disk Controller with JDOS and RS DOS 1.1 \$ 95.00
- JFD-EC Drive O System with one double sided drive \$250.00
- JFD-EC Drive O.1 System with two double sided drives \$365.00

NEW TERMS

One year warranty on parts & labor. Free shipping via UPS in continental United States for payment by Visa, MasterCard or Cashiers check. Blue Label & foreign shipping extra.

DRIVE SYSTEMS

Drive systems include our JFD-CP or JFD-EC disk controller, JDOS with Memory Minder in ROM and one or two half-height floppy drive(s) with case and power supply.

JFD-CP DISK CONTROLLER

Our new JFD-CP, compatible with the original COCO, COCO 2 and the new COCO 3, features a parallel port to support a Centronics compatible printer or our hard drive, and an external ROM switch, which allows you to select JDOS or an optional RS DOS-type ROM. It comes in a case and includes JDOS 1.2 and manual. JDOS implements all RS DOS commands, plus many more, including auto line numbering, error trapping, baud rate selection, OS/9 boot from floppy or hard drive, and Memory Minder, our disk drive analysis program. (Precision Alignment Disk not included.)

JFD-CP Disk Controller with JDOS

\$ 99.00

OPTIONS

- Precision Alignment Disk & Memory Minder Manual D/S \$ 40.00
- Precision Alignment Disk & Memory Minder Manual S/S \$ 26.00
- JFD-CP Disk Controller with RS DOS 1.1 \$ 99.00
- JFD-CP Disk Controller with JDOS and RS DOS 1.1 \$119.00
- JFD-CP Drive O System with one double sided drive \$265.00
- JFD-CP Drive O.1 System with two double sided drives \$379.00

*JFD-EC and JFD-CP with JDOS or RS DOS are COCO 3 compatible.

A CoCo 3 Grab Bag

By Richard E. Esposito
Rainbow Contributing Editor
with Richard W. Libra

R How can I make my CoCo 3 display true lowercase letters in the 32-column mode? At what speed is my computer at power-up? Is it true that my CoCo 3 is in the all-RAM mode at power-up? Also, what happened to the 160-by-192 Hi-Res screen that Tandy advertises in its catalogs?

Douglas McLaurin
Nogales, AZ

R You can get true lowercase and 32 columns with POKE &H95C9, &H39: POKE &HFF22, &H34. Your CoCo comes up at 1 MHz. POKE 65497, 0 puts it in 2 MHz mode. The CoCo 3 is in all-RAM mode after it powers up. Enhanced BASIC puts the machine in all-RAM mode, then patches CoCo 2 BASIC and adds the extensions to RAM. The 160-by-192 graphics are only available to machine language programmers.

Using BASIC09

R I recently purchased OS-9 Level II, for which I waited over four months. My problem is that my CoCo will not load in BASIC09, but gives me an error — file not found. I checked the directory of the BASIC09 disk, and everything is there. The local Radio Shack can't

Richard Esposito is a senior project engineer with Northrop Corp. He holds bachelor's, master's and doctorate degrees from Polytechnic Institute of Brooklyn. He has been writing about microcomputers since 1980.

Richard Libra is a simulator test operator for Singer Link Simulation Systems Division.

help me. What is wrong? Also, how do you get into BASIC09?

Walter Dovawa
Bradenton, FL

R If you are still using the anemic 35-track, single-sided drives, after booting up replace your system disk with the BASIC09 disk and type CHX /D0/ CMDS. Then type BASIC09 #40K to get into BASIC09 with maximum RAM availability.

Head Banging

I I have problems with floppy disk drive head alignment. I currently use a CoCo with three disk drives, and my son runs a BBS (CoCoJet) on a CoCo 2 with four disk drives. One drive on each system will make clanking

sounds during the first access after power-up or a cold start, and the heads will go out of alignment. Is there any way to correct the problems other than using another operating system or running a short program to set the heads at a low track after power-up?

Bill Sobczak
Mesa, AZ

R If you want a permanent fix to the head-banging problem, get an EPROM version of ADOS, which also adds some other nice features, while largely maintaining compatibility with Disk BASIC 1.0.

Composite Monitor Colors

R Although what you tell Eric Crichton in your June 1987 RAINBOW column is true, there is a way to get several hundred colors on screen at the same time with a composite color TV monitor. A program called Color 640 from Moreton Bay Software is included in A Guide to CoCo 3 BASIC and Graphics. These are artifact colors, but they have a very nice appearance. I suggest that future commercial programs include this feature, as I will not buy any that do not.

John Dotson
Mason City, IA

Thanks for the information.

Piggyback Upgrade

R Regarding "64K Modification Revisited" June 1985, HOT CoCo; I would like to upgrade my granddaughter's 16K CoCo 2 to 64K using

2118 RAM chips in piggyback configuration. I have had no luck in locating a source for 2118 RAM Chips. Is there a different ID number I can ask for?

Bill Rosenfeld
Roslyn Heights, NY

RX The 2118 chips are 5-volt-only, 16K-by-1 dynamic RAMs and with piggybacking can bring your machine to 32K. If you do not already have these chips on hand, you may consider a set of 4164 chips, which are 64K-by-1 dynamic RAMs, require significantly less installation effort, and cost about the same.

Lame Drives

I own a 512K CoCo 3, an RS-DOS 1.0 Disk Controller and OS-9 Level II. Since OS-9 Level II seemingly supports 80-track, double-sided drives, I recently bought a pair of Mitsubishi 80-track drives from True Data Products, who assured me that these drives were compatible with the Teac 55F. The drives did not come with any documentation, and I am not even certain what kind of drives they are. I have tried many different things, but I cannot format an 80-track disk without effectively disabling everything else. I can't make the drives double step. I attempted the procedure outlined in your June 1987 column, but once I had modified the device descriptors I could not access any of the drives. Calling True Data Products did not help me, but they offered the advice that OS-9 Level II might still be a bit buggy and that TEAC has stopped making 55Fs. Great. It looks like I may be stuck with a couple of lame drives. Can you help me?

Bryan Mau
College Station, TX

RX You said you have a DOS 1.0 controller. Assuming it is one of those that needs 12 volts, it may be your problem, since no one on Delphi has reported fully successful Level II operation with one of those. I am also aware of instances with CoCo 3 operation where overheating problems in the computer resulted in problems with disk I/O when running Level II. These were solved by adding a cooling fan.

12-Volt Controller

I have a major problem with OS-9 Level II and my 512K CoCo 3. It will

format or back up disks. Radio Shack told me disk drive alignment was extremely critical for OS-9, and I sent my drives to a Radio Shack repair facility. Still no success. The computer still hangs up and a series of lines moves across the screen if I try to format a disk. From successfully using OS-9 with a friend's system, I am convinced that the problem must lie in the Disk Controller. Perhaps you can give me some advice as to the best next move.

Russell Obbink
Prospect, KY

RX It appears as though you, too, have an old 12-volt controller. Most likely, if you replace it with one of Tandy's newer 5-volt-only ones, the problems will go away.

Download Troubles

I am having problems getting the programs ARCHIE.BAS and ARC.BAS to run on my CoCo 2 or CoCo 3. In an attempt to access any of the submenus, I get RG Errors in lines 525, 545, etc. The article by Bruce K. Bell was in the May 1987 issue of RAINBOW and was downloaded from Delphi.

Calvin Fuller
Jacksonville, FL

RX There were three complaints about the ARCHIE series shortly after it was made public, and in each case it was because a tape user had downloaded the tokenized files from the database using MikeyTerm. This was a problem because MikeyTerm cannot save tokenized BASIC programs to tape. Such saves work fine on disk systems, however. Also, Don Hutchison (DON-HUTCHISON) has uploaded BASFIX, a program designed to fix tokenized programs downloaded to tape, to the Utilities section of the database on Delphi.

Disto Controller Hang Up

I recently acquired a CoCo 3 to upgrade my CoCo 2 system, which includes a Disto Super Controller with CoCo 3 DOS 1.1, CDOS 2.3, and RS-DOS 1.1. I can't get any of my programs that require an OS-9 boot (such as MicroIllustrator and Child-

pace) to run under any of the DOSs. When I boot up using either the DOS command or the boot program supplied with the programs, the OS-9 boot screen is displayed, but then either the computer gets hung up or garbage is displayed on the screen.

John P. Penny
(JOHN PENNY)
Staten Island, NY

RX Tony DiStefano of C.R.C. Computers, 10802 Lajeunesse, Montreal, Quebec, Canada H3L 2E8, (514) 383-5293, reports that a timing problem in some of the older Disto controllers can cause the computer to "hang up" while accessing a disk. The CoCo 3 update can be obtained for \$8. This includes return shipping and handling.

A Major Blowout

While using my system recently I had a "blowout." A flash came from the port, frying everything. I have spares for the CoCo 2 and my controller but my FD-501 drive is down. When powered up, the LED is on, and when activated the motor spins but it returns an I/O Error. The LED always remains on. None of the internal components are visibly damaged or hot. I thought this would only happen if the controller was removed, but it wasn't even nudged. Help!

Bill Nattress
Prospect Hts., IL

RX In addition to the chips, resistors, capacitors, etc., in the computer and the controller, there are vulnerable components on the PC board attached to your disk drive. Try swapping major components (CoCos, disk controllers and drives) to localize the problem before testing individual piece parts.

For a quicker response, your questions may also be submitted through RAINBOW's CoCo SIG on Delphi. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASK for "Ask the Experts" to arrive at the EXPERTS> prompt, where you can select the "Doctor ASCII" online form which has complete instructions.

Animation Film Festival

By Solla Carrock

Animate uses the Lo-Res screen to draw up to 20 pictures and save them to tape for later viewing. While the program may be used simply to draw and store pictures, there are many things you can do with the screens created with *Animate*.

Using its companion program, *Picture Book*, you can create a picture show or a short, animated movie, with or without captions. To aid the animation process, *Animate* allows you to copy one screen to the next, shift screens up, down, left and right, and show them one after another at a speed and order you choose. By choosing a faster speed to show your pictures you may develop short, animated cartoons. The programs may also be used to encourage writing by elementary-age children. As pictures are randomly chosen and displayed, the child can write a sentence

Solla Carrock is a writer and artist who has a master's degree in psychology. She has worked with children, both normal and emotionally disturbed, in a variety of settings, including alternative schools and daycare, and has taught and counseled adults as well. She purchased a Color Computer about a year ago for her daughter and has been writing programs ever since. Solla lives in Portland, Oregon.

about each picture in order to create his/her own story.

Once you type in or load the *Animate* program and run it, you will be presented with a list of choices: Draw, Read in pictures from tape, Tape stored pictures, View pictures, Copy last drawing on next screen, Shift a picture, Redo a drawing, Animate, Choose a different picture screen to be last, and End.

Draw

When you choose to draw, you first see a list of drawing directions. Pressing different keys on the keyboard causes a line to be drawn on your screen. There are eight keys that control the direction of the line. These are the four arrow keys and Q, W, A and S. Their directions are given in the chart below. The

drawing point is initially in the center of the screen. To draw with it you simply press a direction key and a number from

1 to 9 to tell how far. To move rather than draw, press the D key. To begin to draw, just press the D key again.

To change the drawing color, simply press one of the color keys (H to P). The keys and their corresponding colors are: H, black (erase); I, green; J, yellow; K, blue; L, red; M, buff; N, cyan; O, magenta; and P, orange.

You may also add a line of text to the bottom of your screen. The text will start at the bottom left-hand corner, taking up the last two drawing rows (the screen holds 32 rows of drawing pixels, but only 16 lines of text). The first line will wipe out anything there. If you type more than one line of text, your whole screen will move up two drawing lines in order to make space for it. So leave space at the top of the drawing if you have a lot of text.

Press T for text. Press ENTER when finished with text, then you can draw again if you wish. If you press T again, you can write text, but it will write over everything in the bottom two drawing rows (or over the last line of text).

You may clear the whole screen by pressing the CLEAR key.

To store your completed drawing in the computer memory, press the @ key. Once this is done, the program will instruct you about how to return to make a new choice. If you choose to

draw again, the next screen will be Screen 2. In this way you can fill up all 20 screens. The program will let you know when all 20 are filled. Any drawing made after that will replace a previous one, beginning with Screen 1.

Read in Pictures From Tape

At the beginning of the program a drawing will be read into Screen 1 and the next into Screen 2, etc. But if screens are occupied by previous drawings, a drawing will move into the next available screen. The program continues reading until all the pictures on the tape are read in or until the 20 screen storage areas are full. You can create a collection of captioned movies or animation features to play back whenever you want. If you finish only part of a movie, you may tape the finished screens, later read them in, add more screens and retape the entire movie.

Reading in the pictures from tape does take some time, however — about 30 seconds per screen, or 10 minutes for 20 screens.

Store Drawings on Tape

Again, saving screens takes about 30 seconds each. One side of a 20-minute tape (10 minutes per side) will hold 20 screen drawings or a 20-screen movie.

View Pictures

This choice lets you view the screens as slowly as you want. This can be helpful if you have lost track of which screen you are on or want to look at a screen at length. You choose when the screen is changed, as opposed to the Animate choice, which changes screens automatically.

Copy Last Screen Onto a New Screen

This is a feature to help you with animation. It copies the last picture drawn onto the next available screen. The drawing is displayed on the screen, and you can make any changes needed. One way to make a cartoon is to draw a beginning picture, then make just a few changes to it in each succeeding frame. This feature makes cartooning much easier to do.

Another use of this feature is in combination with the Shift feature. For example, you could copy Screen 1 onto Screen 2, store Screen 2, then use Shift to move Screen 2 to the right. You could then copy Screen 2 onto Screen 3 and shift Screen 3 to the right, and so on. Using Animate, you would see the object you had drawn moving to the right.

Shift Screen

Use this choice to shift the screen just drawn or copied. You are given a choice of shifting it left, right, up or down.

Redo a Drawing

You do need to know which screen you want to change; if you don't, use View and count the screens until you reach the one to be changed. Then use the Redo option.

“One way to make a cartoon is to draw a beginning picture, then make just a few changes to it in each succeeding frame.”

Animate

This is the core of the program. After you have drawn as many screens as you want, you may show them with Animate. There are five speeds possible. The two fastest speeds work for animation, moving screens so fast that movement is simulated. The slower speeds are more like a movie, with the slowest speed allowing time for reading a caption. To have text in fast animation, simply repeat the words in the same place on subsequent screens. The text will appear to remain still as the rest of the screen appears to move. You are given the option of showing the screens once and stopping or having them repeat until you press a key to stop.

Change Number of End Screen

After I had used an old version of the *Animate* program a few times, I discovered I needed this choice. For instance, my daughter was using it once and she accidentally pressed the BREAK key. For some reason, typing CONT and pressing ENTER did not work to return the program. Since the computer hadn't been turned off, I knew her pictures were still there stored in the computer memory, but I had no way to get to them.

Suppose you had eight screens drawn and you wanted to insert a new one after Screen 6. It would take a little manipulation, but here's how to do it:

- 1) Choose to copy the last screen. Copy Screen 8 onto Screen 9.
- 2) Change the number of the last screen to 7. Then choose Copy and copy Screen 7 onto Screen 8.
- 3) Change the number of the last screen to 9. What you have now are nine screens; screens 7 and 8 are exactly the same.
- 4) Choose to Redo a screen, changing Screen 7 to what you want. Be careful with this choice. It would be easy to wipe out something you want by copying over it. Remember, you can always choose to view the screens to find out exactly where you are.

End

When you make this choice the program asks you several times whether you would like to tape your pictures first so that you don't lose something you want to keep.

The Picturebook Program

This is a program I wrote to make use of a picture file created with the *Animate* program. It is a program for use with a child, preferably one who already can write a little. But with adult help, it can be used with a younger child as well. The idea is to provide a stimulus to write by presenting the child with pictures of a picture book, which the child writes the words for.

When the program is run, it first instructs the user how to load the picture files, which were previously created with *Animate*. Next, the child is asked how many pages (up to 10) he or she wants in the picture book. The pictures for the pages are chosen randomly from those in the PICTURES file. Ideally there are 20 pictures for the program to choose from, but you may have fewer in your file, which just means there will be less variety and greater chance of a picture being repeated.

The child is instructed to type a line for each picture and press ENTER when finished. After ENTER is pressed, the next picture is shown. Once all the pictures have captions, the child is asked to press ENTER to see the picture book. Then the entire book is shown, one screen after another, like a captioned movie. At the end, the child is asked if he or she would like to see it again. If not, the text is printed on the screen to be copied, if the child wishes.

When you are creating a picture file with *Animate*, keep in mind that the first line of text the child writes will cover a narrow space at the bottom of the picture. The next line of text and

following lines will push the entire picture upward. Therefore, the best approach is to leave the last two drawing rows of the picture blank and also to leave some space at the top in case you have a prolific writer.

Incorporating Pictures Into Another Program

Begin your program with an instruction to go to a block of commands at the end of your program. I have used Line 200 to begin the block, but you may use a bigger number if your program is longer. At the end of the block, return to the main program.

The following is a machine language program to display pictures from among those read into memory areas from the tape file:

```
200 CLEAR 10240,22500: CLEAR
    20,22470: PCLEAR 1: CLEAR
    1000: CLS0
210 DIM A$(10),R(10)
215 DATA &HBD,&HB3,&HED,&H1F,
    &H01,&H10,&HBE
220 DATA &H04,&H00,&HAG,&HB0,
    &HA7,&HA0,&H10
225 DATA &HBC,&H06,&H00,&H26,
```

```
&HF6,&H39
230 FOR J=22470 TO 22489
235 READ DA:POKE J,DA
240 NEXT J
245 DEFUSR1=22470
```

This loads a desired picture file into the memory area of the computer:

```
315 CLS0:PRINT"LOAD THE PIC-
    TURE TAPE. CHOOSE THE ONE
    YOU WANT TO USE, PUT IT IN
    THE TAPE RECORDER AND RE-
    WIND IT. PRESS DOWN THE PLAY
    BUTTON."
320 LINE INPUT"PRESS<ENTER>
    WHEN READY";AN$
330 I=22500:K=I+20*512-1
335 OPEN"I",#-1,"PICTURES"
340 FOR LD=I TO K
345 IF EOF(-1) THEN LD=K:XT=1
    :CLOSE#-1:GOTO 360
350 INPUT#-1,A
355 POKE LD,A
360 NEXT LD
365 IF XT<>1 THEN CLOSE#-1
370 CLS0:PRINT@192,"PRESS ANY
    KEY TO BEGIN"
375 PLAY"CDE"
380 I$=INKEY$:IF I$="" THEN GO
    TO 375 ELSE GOTO 4
```

Line 4 would continue with the main program. Now the pictures are in memory, but to be used they must be called by the program. Let R be the variable that represents the number of the picture you want. Suppose you want to call picture four; use these lines:

```
110 R=4:D=I+(R-1)*512
115 DI=USR1(D)
120 FOR TI=1 TO 3000:NEXT TI
```

(Line 120 is merely a delay to enable the picture to be seen. You may vary the count for a longer or shorter exposure.)

To use another picture, just change Line 110 to set R equal to a different value (I to 20). Or to have the picture chosen randomly, use these lines instead:

```
105 Z=RND(-TIMER):R=RND(20)
110 D=I+(R-1)*512
115 DI=USR1(D)
120 FOR TI=1 TO 3000:NEXT TI
```

(Questions about this program may be directed to the author at 2555 N.W. Savier #4, Portland, OR 97210. Please enclose an SASE for a reply.) □

Information
Management
System

CSG IMS is *THE* full featured relational database manager for the Color Computer and OS9. The comprehensive structured application language makes CSG IMS the ideal development tool for sophisticated file-intensive applications.

- Interactive access to databases and quick queries.
- CSG IMS includes a recursive compiled language supporting program modules with full parameter passing.
- User defined screen and report formats.
- Record, index and file size almost unlimited.
- Text, BCD floating point (14 digits), short and long integer and date types.

CSG IMS for CoCo2/3 OS9 L1/2 (single user) \$169.95
 CSG IMS for OS9 L2 or 68000(multi user) \$495.00
 CSG IMS demo with manual \$30

Shipping: N. America - \$5, Overseas - \$10

Clearbrook Software Group

P.O. Box 8000-499
 Sumas, WA 98295

OS9 is a trademark of Microware Systems Corp., MSDos is a trademark of Microsoft Corp.

ERINA - Symbolic User Mode Debugger for OS9

ERINA is a must for all serious assembler and C software developers. It lets you find bugs quickly by displaying the machine state and instructions being executed. You can set address and register break points, dump, search and change memory, assemble and disassemble code and many other things to numerous to mention. This program will pay for itself over and over by the time you save solving your bugs.

Requires 80 column display, OS9 L1/2 \$69.00

SERINA - System Mode Debugger for OS9 L2

SERINA is a debugger for OS9 system modules (device drivers, file managers, etc.). It allows you to trace execution of any system module, set break points, assemble and disassemble code and examine and change memory. There are special provisions for executing code with critical timing loops and for accessing I/O registers. A must for system programmers.

Requires CoCo3, OS9 L2, \$139.00
 80 col. terminal connected to /T1 or /T2

MSF - MSDos File Manager for CoCo 3/OS9 Level 2

MSF is a file manager which allows you to use MSDos disks directly under OS9. You don't have to change the format of the data before using it!

Requires CoCo 3, OS9 L2, SDISK3 driver \$45.00

Princeton

October 9-11

RAINBOWfest

Come meet
CoCo Cat
in person!

That fun-loving
feline is on the
loose and ready
to meet the CoCo
Community in
Princeton

RAINBOWfest is the only computer show dedicated exclusively to your Tandy Color Computer.

Nowhere else will you see as many CoCo-related products or be able to attend free seminars conducted by the top Color Computer experts. It's like receiving the latest issue of THE RAINBOW in your mailbox!

RAINBOWfest is a **great opportunity** for commercial programmers to **show off new and innovative products for the first time**. Princeton is the show to get information on capabilities for the new CoCo 3, along with a terrific selection of the latest CoCo 3 software. In exhibit after exhibit, there will be demonstrations, opportunities to experiment with software and hardware, and special RAINBOWfest prices.

Set your own pace between visiting exhibits and attending the valuable, free seminars on all aspects of your CoCo — from improving BASIC skills to working with the sophisticated OS-9 operating system.

Many people who write for THE RAINBOW — as well as those who are written about — are there to meet you and answer questions. You'll also meet lots of other people who share your interest in the Color Computer. It's a person-to-person event and a tremendous learning experience in a fun and relaxed atmosphere.

To make it easier for you to participate, we schedule RAINBOWfests in different parts of the country. If you missed the fun in Chicago, why don't you make plans now to join us in Princeton? For members of the family who don't share your affinity for CoCo, RAINBOWfest is located in an area with many other attractions.

A special feature of RAINBOWfest is the **Educational Sandbox**, which features **child-oriented workshops** to give hands-on experience to an age group often neglected. There are sessions for the kindergarten through third-graders, and for fourth- through seventh-graders. And, as an additional treat for CoCo Kids of all ages, we've invited frisky feline CoCo Cat to join us for the show. RAINBOWfest has something for everyone in the family!

The Hyatt Regency Princeton offers special rates for RAINBOWfest. The show opens Friday evening with a session from 7 p.m. to 10 p.m. It's a daytime show Saturday — the CoCo Community Breakfast (separate tickets required) is at 8 a.m., then the exhibit hall opens promptly at 10 a.m. and runs until 6 p.m. On Sunday, the exhibit hall opens at 11 a.m. and closes at 4 p.m.

Tickets for RAINBOWfest may be obtained directly from THE RAINBOW. We'll also send you a reservation form so you can get your special room rate.

The POSH way to go. You can have your travel arrangements and hotel reservations handled through RAINBOW affiliate, POSH Travel Assistance, Inc., of Louisville. For the same POSH treatment many of our exhibitors enjoy, call POSH at (502) 893-3311. All POSH services are available at no charge to RAINBOWfest attendees.

Show Schedule:

Friday evening

— Exhibits open from 7 p.m. to 10 p.m.

Saturday

— CoCo Community Breakfast at 8 a.m.

— Exhibits open at 10 a.m. and close at 6 p.m.

Sunday

— Exhibits open from 11 a.m. to 4 p.m.

CoCo Community Breakfast

Jim Reed — Executive Editor, Falsoft, Inc.

Our keynote speaker for the traditional CoCo Community Breakfast is Jim Reed, who served for 4½ years as managing editor of THE RAINBOW. Not only does Jim know the CoCo Community intimately, he's been "back-stage" at THE RAINBOW since the magazine's early days when it was produced in the basement of Lonnie Falk's house. Jim has the "inside story" on CoCo developments and CoCo people and says his testimony "will tell it all: the good, the bad and the funny."

Dale Puckett will be autographing copies of *The Complete Rainbow Guide to OS-9 Level II, Volume I: A Beginners Guide to Windows* in the exhibit hall on Saturday and Sunday.

RAINBOWfest - Princeton, New Jersey

Dates: October 9-11, 1987

Hotel: Hyatt Regency Princeton

Rooms: \$86 per night, single or double

Advance Ticket Deadline: October 2, 1987

Join us at a future RAINBOWfest!

RAINBOWfest - Chicago, Illinois

Dates: May 20-22, 1988

Hotel: Hyatt Regency Woodfield

Rooms: \$64 per night, single or double

Advance Ticket Deadline: May 13, 1988

FREE T-Shirt to first five ticket orders received from each state.
First 500 ticket orders received get a Chromasette tape.

▲ SPECIAL EVENT!

We're pleased to announce The Educational Sandbox, a joint Tandy/RAINBOW effort. This is a computer workshop for RAINBOWfest kids. There will be two sessions on both Saturday and Sunday. One workshop will be for the kindergarten through third-grade set, and the other for fourth through seventh graders. Each workshop will last between 45 minutes and one hour, and will give the children and their parents hands-on experience in using Tandy computers and software.

YES, I'm coming to Princeton! I want to save by buying tickets now at the special advance sale price. Breakfast tickets require advance reservations.

Please send me:

___ Three-day tickets at \$9 each total _____

___ One-day tickets at \$7 each total _____

Circle one: Friday Saturday Sunday

___ Saturday CoCo Breakfast at \$12 each total _____

___ RAINBOWfest T-shirts at \$6 each total _____

(Advance sale-priced T-shirts must be picked up at the door.)

Handling Charge \$1 \$1.00

TOTAL ENCLOSED _____

(U.S. Currency Only, Please)

Also send me a hotel reservation card for the Hyatt Regency Princeton (\$86, single or double room).

Name (please print) _____

Address _____

City _____ State _____

Telephone _____ ZIP _____

Company _____

Payment Enclosed, or Charge to:

VISA MasterCard American Express

Account Number _____

Exp. Date _____

Signature _____

Advance ticket deadline: Oct. 2, 1987. Orders received less than two weeks prior to show opening will be held for you at the door. Tickets will also be available at the door at a slightly higher price. Tickets will be mailed six weeks prior to show. Children 4 and under, free; over 4, full price.

Make checks payable to: The RAINBOW. Mail to: RAINBOWfest, The Falsoft Building, 9509 U.S. Highway 42, P.O. Box 385, Prospect, KY 40059. To make reservations by phone, in Kentucky call (502) 228-4492, or outside Kentucky call (800) 847-0309.

Dissecting the Disk Controller

By Tony DiStefano
Rainbow Contributing Editor

A little over a year ago, I started a series of articles describing the LSI (Large Scale Integrated) circuit chips of the CoCo. There was the CPU, the SAM, the PIAs and the VDG along with a whole lot of other TTL support chips. One thing that I did not touch upon is the disk controller. The controller from Radio Shack also has some LSI chips. In fact, the first Radio Shack controller, Catalog No. 26-3022, used a three-chip set. The later controllers used more up-to-date parts. What I intend to do this month is to describe the older controller and the newer controller. In both cases, you will learn more about the FDC (Floppy Disk Controller).

The controller chip that Radio Shack used in their first controller is a part made by Western Digital. The FD1793-02 is a floppy disk formatter/controller. That means that the controller can format a disk as well as read and write to it. This chip had many features: soft sector format compatibility, automatic track seek with verification, single and double density, and IBM 3740 and 34 densities, just to name a few. This was a wonderful chip. It came in a 40-pin package, very compact for its day. But it required at least two other support chips — the WD1691 Data Separator and the WD2143-01 Four Phase Clock Generator. Together these three chips

and a half-dozen or so other support chips made up the controller. The power requirements for this setup is 5 volts and 12 volts.

The chips in Figure 1 are the pinouts of the three Western Digital parts that make up the heart of the controller followed by a pin-by-pin description of the FD1793-02 controller. Overlines indicate that the signal is an active low pin.

The other two chips are used to support the FDC. They connect to each other in various ways and connect to other TTL circuitry. It would be a little too long to explain each pin of these two chips and maybe even useless. Yes, useless, because the three-chip FDC combination is now obsolete. Western Digital has since redesigned the FD1793 and made a new chip called the WD1773. This chip has the WD1691 and the WD2143 built right into the new FDC. That's right, three chips in one. Another welcomed feature of the WD1773 is that it does not require +12 volts. It will run on a +5 volt supply only.

This development was great for Radio Shack because they had just released the new CoCo 2. It was smaller, lighter and less expensive than the CoCo 1. Following the new CoCo 2 came a new controller. Radio Shack had to come up with a new controller that did not use +12 volts. It was easy with the new FDC. Not only did it not use +12 volts but was less expensive than the older three-chip set. It also required less

support circuitry. Another plus for the new FDC was that it did not have any adjustments. The older 1793 had three trim pot adjustments.

This new controller was great all around. Less money, no +12 volts, only one part, and no adjustments. It also had one more feature: It came in a 28-pin package. Figure 2 shows the pinout of the WD1773 and a pin-by-pin description. Notice that functionally, the parts in Figure 1 and Figure 2 are the same.

Since the introduction of this new FDC chip, many companies have used it to make their own version of Radio Shack's controller. Though the exact circuitry may vary from design to design, they have to follow certain rules. First, the FDC has to be mapped to the same memory area. That requires some sort of memory-mapping chips. The way in which the FDC and the CPU transfer data has to be the same if it is to be compatible.

The technique used in a Radio Shack or compatible controller to transfer data (a complete sector) is not too difficult to understand. It starts off with the CPU setting up the FDC registers for the right track and sector. It then turns on the proper drive motor and drive select. Next, it gives the read or write sector command to the FDC. It checks to see that everything is all right, then, it flips the bit that halts it. This is done by hardware that pulls the HALT line of the CPU low. When the FDC has data ready or needs data from the CPU,

Tony DiStefano is a well-known early specialist in computer hardware projects. He lives in Laval Ouest, Quebec.

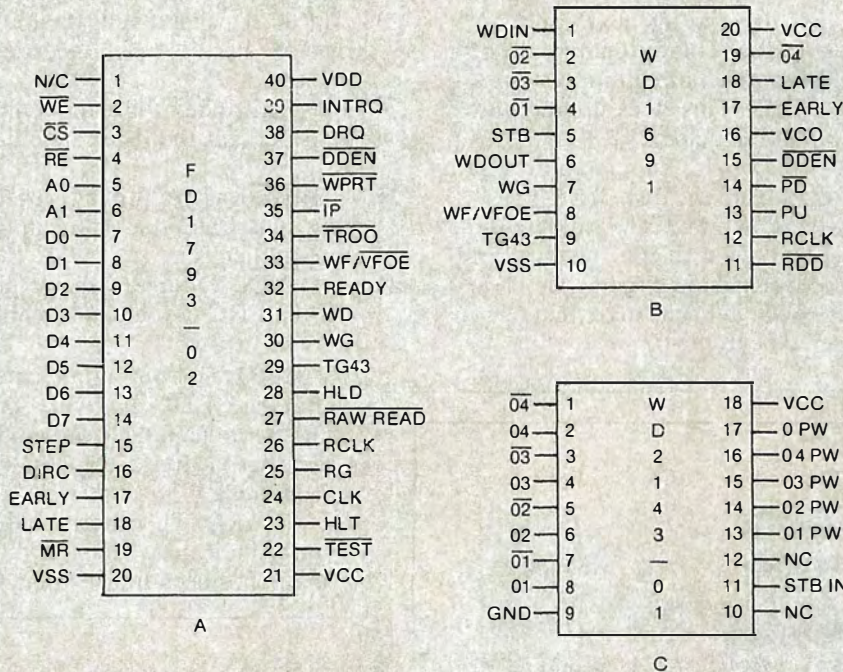

Figure 1

- 1 — NC. This pin has to be left N/C though it connects to a back bias generator.
- 2 — \overline{WE} . The Write Enable pin tells the FDC to write data.
- 3 — \overline{CS} . The Chip Select is used to map the FDC into the CPU's memory area.
- 4 — \overline{RE} . The Read Enable pin tells the FDC that a read cycle is being done.
- 5 and 6 — A0 and A1. Two address lines select one of the four registers of the FDC.
- 7 to 14 — D0 to D7. The eight data lines that transfer data to and from the FDC and the CPU.
- 15 — STEP. This output steps the

- disk drive to the next track.
- 16 — DIRC. This output tells the disk drive which direction to step.
- 17 — EARLY. This indicates an early write precompensation.
- 18 — LATE. This indicates a late write precompensation.
- 19 — \overline{MR} . A low on this pin resets the FDC completely.
- 20 — VSS. This line is the ground line for the FDC.
- 21 — VCC. This line requires +5 volts.
- 22 — \overline{TEST} . This pin is used for testing and should be kept high during normal operation.
- 23 — HLT. The Head Load Timing signal is high when the head is engaged.

- 24 — CLK. This input requires a free-running 1MHz. clock.
- 25 — RG. The Read Gate is used to synchronize the external data separators.
- 26 — RCLK. The Read Clock is a square-wave signal derived from the data stream.
- 27 — RAW READ. Data stream directly from the drive.
- 28 — HLD. Head Load controls the loading of the disk head against the floppy disk.
- 29 — TG43. This outputs tells the support circuits that the head is sitting on a track greater than 43 (for 80-track drives).
- 30 — WG. Tells the drive that a write is to be done.
- 31 — WD. The Write Data output contains the data and address marks to be written to the drive.
- 32 — READY. The Ready input tells the FDC that the disk is ready for a read or a write operation.
- 33 — WF/ \overline{VFOE} . A bi-directional signal. When WG=0, a low will terminate any write command. When WG=1, this pin remains low until the end of the data field.
- 34 — $\overline{TR00}$. This input tells the FDC when the head is positioned over Track 0.
- 35 — IP. This Index Pulse input tells the FDC that the index hole has just gone by.
- 36 — \overline{WPRT} . The Write Protect input tells FDC that you cannot write to the disk.
- 37 — \overline{DDEN} . Double Density pin tells the FDC if you want double or single density.
- 38 — DRQ. This output indicates that the FDC is ready for another byte in the write mode and that the buffer is full in the read mode.
- 39 — INTRQ. The Interrupt Request indicates that any command has been finished.
- 40 — VDD. This input requires +12 volts.

it unhalts the CPU via the DRQ line of the FDC. The CPU then stores that byte of data into memory on a read or fetches another byte from memory on a write and then halts itself again. This procedure is repeated until all the data of that sector is transferred. At this point the FDC fires the INTRQ; this signal is connected to the IRQ of the CPU. The IRQ routine then gets the CPU out of this loop and continues to the rest of the

read/write sector software.

This procedure is the same for all controllers that hook to the CoCo. Until now that is. Disto is soon to announce a new controller called the Super Controller II. This controller will do everything the Radio Shack controller can and more. It also has a different way to transfer data. It has built-in RAM memory and the support circuitry to transfer data to and from

this RAM without the use of the CPU. In the OS-9 operating system, this is a big boost. Data is transferred without the use of the HALT line. The CPU does not have to mask the interrupts. That means that once the CPU gives the command to the FDC, it is free to do other things and return to get the data when the FDC is finished. That means no more missed characters on the keyboard when a disk operation is running.

- 1 — CS. The Chip Select is used to map the FDC into the CPU's memory area.
- 2 — RW. The Read/Write pin tells the FDC what cycle is being done.
- 3 and 4 — A0 and A1. Two address lines select one of the four registers of the FDC.
- 5 to 12 — D0 to D7. The eight data lines that transfer data to and from the FDC and the CPU.
- 13 — MR. A low on this pin resets the FDC.
- 14 — GND. The ground return for all signals.

- 15 — Vcc. Power supply of +5 volts only.
- 16 — STEP. This output steps the disk drive to the next track.
- 17 — DIRC. This output tells the disk drive which direction to step.
- 18 — CLK. This clock input requires an 8MHz. clock.
- 19 — RD. This input requires raw data from the disk drive.
- 20 — PRECOMP. This input tells the FDC when to use the write pre-compensation circuit.
- 21 — WG. Tells the drive that a write is to be done.

- 22 — WD. The Write Data output contains the data and address marks to be written to the drive.
- 23 — TR00. This input tells the FDC when the head is positioned over Track 0.
- 24 — IP. This Index Pulse input tells the FDC that the index hole has just gone by.
- 25 — WPRT. The Write Protect input tells FDC that you cannot write to the disk.
- 26 — DDEN. Double Density pin tells the FDC if you want double or single density.
- 27 — DRQ. This output indicates that the FDC is ready for another byte in the write mode and that the buffer is full in the read mode.
- 28 — INTRQ. The Interrupt Request indicates that any command has been finished.

CoCo 3

Color Max 3 — Graphics Editing System

For the first month or so after the introduction of the Color Computer 3 very little software existed that would take advantage of this new machine's enhanced powers. Soon we began to see a few minor pieces of software enter the market. We had even seen a few simple graphics programs. But it was not until the recent Chicago RAINBOWfest that we saw a full-blown graphics editing system that utilized nearly every feature of the CoCo 3. To be sure, I am speaking of *Color Max 3* from Computize.

Color Max 3 is a full-featured graphics editor with a simple-to-use point and click user interface such as is found on other systems and even on some programs designed for earlier CoCos. A

point and click interface means exactly what it says. First you "point" at a picture of what you want to do (an icon) with your mouse or joystick and then you "click" the button to select that option. It is easy enough that even young children can learn to use the program in a short amount of time. That is, if they can get mom and dad away from the system long enough.

Don't let its simplicity fool you, though. *Color Max 3* offers complete control over an image 320-by-200 pixels in size, in any 16 of 64 colors. It supports the use of both RGB and color composite monitors. You can edit your picture on a pixel-by-pixel basis or make sweeping changes to the image with one

or two quick mouse movements. At the touch of a button, you can add text to the drawing in any of several fonts and styles. Your imagination is the limit to what you can create.

I am by no means an artist. In fact, my main interest in computer graphics stems from my technical background and the need to create circuit diagrams. However, *Photo 1* will give you some idea of what a neophyte da Vinci can do in just a few hours. It also gives you some idea of what *Color Max 3* looks like on the screen. (Both *Photo 1* and *Photo 2* were taken from a Radio Shack CM-8 RGB monitor.)

The words you see across the top of the screen are the titles for the pull-down menus. When you click on one of these titles, a menu full of options will scroll down the screen. The File menu lets you save and load pictures as well as clear the screen or print an image.

The Edit menu gives you the ability to transfer and copy sections of the screen from one place to another. You can use options under this menu to save

certain portions of the screen, as well. Other options allow you to invert an image or "flip" it horizontally and/or vertically.

The Goodies menu offers several interesting items. It is through this menu that you enter "Fat Bits." Fat Bits literally blows a certain section of the screen up to a size that allows easy single-pixel editing (see Photo 2). Some of the other options allow you to change your color selection or edit a fill pattern or select the shape and color of the paintbrush.

The Font menu lets you select any of the standard 11 fonts included with *Color Max 3*. It also works in conjunction with the Style menu, which allows you to alter the 11 fonts with the following options: Plain, Bold, Italic, Outline and Shadow. In addition, several styles can be active simultaneously, which gives you quite a choice of how your text will look.

On the far left side of the *Color Max 3* screen you will see the usable icons. These allow you to select which basic designs *Color Max 3* will draw next. If you click on the Box icon, *Color Max 3* knows you want to draw boxes. If you click on the Pencil icon, you are all set to do some freehand drawing. Other icons include the Eraser, Circle, Paintbrush, Text Entry and Edit Lasso. The most used functions of *Color Max 3* are available through the icons.

Just below the icons is a section that allows you to select how wide you want lines to appear when drawing lines, circles and boxes. Just click on the line width you desire and off you go.

To the right of the line width section are the fill patterns and colors. You can select any of the 16 colors in the top row as your foreground and/or background colors. Also, through the Goodies menu, you can change which colors you are allowed to use. Color change is done by choosing a mix of different hues of red, green and blue, if you are using an RGB monitor. If you are using a composite color monitor, simply select an intensity level for the colors available in

the CoCo 3's CMP mode.

The bottom row on the screen indicates the patterns you can use to fill sections of your picture. These patterns are all black-and-white when you first run *Color Max 3*, but, again, you can edit colors into the patterns as well as completely alter the patterns. My only misgiving about the patterns is that, once created for a given image, they are not saved with that image when it is saved to disk as the selected colors are. This means you must recreate the patterns during a different editing session.

Now, let's talk about printing your picture. Keep in mind that *Color Max 3* allows the use of up to 16 colors on the screen. I don't know about you, but my Radio Shack DMP-200 can't quite handle that many colors. In fact, the *Color Max 3* manual tells you it might be best to use black-and-white designs if you are using a dot matrix printer. It also suggests that one of the best ways to keep a copy of the screen is to use a good 35mm camera.

Computize does sell versions of *Color Max 3* that support the Epson printers, Radio Shack dot matrix printers and even a version that produces 16-color printouts of the screen on a CGP-220. For those whose printer is not yet supported, Computize offers a version of the program containing no printer driver. Instead, you receive a coupon that entitles you to a free printer driver when one for your printer is written.

Each copy of *Color Max 3* includes only one printer driver. This is an interesting and commendable way to deter software piracy, but it can be annoying to those people lucky enough to own two different printers.

Color Max 3 can be controlled with either a joystick or a mouse. In either case, it requires the new High Resolution Joystick Interface (Catalog No. 26-3028) from Radio Shack. This is the only way to achieve single-pixel control on the Hi-Res screen. I have used *Color Max 3* with both a mouse and a joystick. If it is at all possible, you will want to purchase and use a mouse. You will find that pointer control is much smoother (see following review of the High Resolution Joystick Interface).

When you first run *Color Max 3*, the program will use defaults that set it up for the RGB monitor and also set the printer baud to 600. Both of these defaults and how to change them are thoroughly covered in the manual. All that is required is one or two simple changes to a BASIC program. This is very handy and will allow present users with TVs to change their systems when they upgrade to RGB-capable monitors. It also enables those with RGB monitors to view pictures created on composite monitors.

Speaking of the manual, I have seen few CoCo software manuals that devote as much time to helping the user as this one. Each aspect of the program is

Hardware

CoCo 3

High Resolution Joystick Interface

The new Radio Shack High Resolution Joystick Interface is both literally and figuratively a "black box." It is a design marvel that will allow your CoCo 3 to access any of its possible 640-by-192 pixels. Simply connect the interface to your CoCo 3's cassette port and one of the two joystick ports. Then plug your joystick or mouse into the port on the interface.

Unfortunately, the interface is not easily programmed with BASIC. Because of speed requirements, the software must use machine language drivers to read the joystick. This, however, is not a major drawback when you consider the abilities of the unit. Also, plenty of software is, and will be, available to utilize the interface.

Personally, I find the results far better when using a mouse with this unit. When using a joystick, screen movement seems jerky. I also found that, when setting points on the Hi-Res screen, the joystick will sometimes set two dots in different locations. Before I go any further, I must say that this is not the fault of the interface or the software! It has happened with several different programs, and the problem clears up completely when a clean mouse is used. It appears that the joystick ports get a little dirty and cause the erratic behavior. The joystick seems to work just fine if you use a little tuner cleaner to clean the ports up before using it. I have seen the problem occur when the mouse is dirty, as well. Once cleaned, though, everything works OK.

I must admit, I was quite surprised that a simple product could produce such accuracy. Needless to say, just as a hammer is the first important tool a carpenter has, every CoCo 3 owner should have one of these.

(Tandy Corporation; \$9.95. Available in Radio Shack stores nationwide.)

covered. While you really don't need the manual to get started with the software (it really is user-friendly), it is handy for some of those complicated maneuvers *Color Max 3* allows. In addition, the 25-page manual explains some of the technical and background concepts behind the software. I tip my hat to Computize for their consideration in this area. It really shows their support for the user.

Another area in which *Color Max 3* is supported is optional utility programs. In addition to offering several versions of *Color Max 3*, Computize sells picture converter utilities, which let you convert pictures created with *CoCo Max*, *Graphicom* and even the Atari ST to a format compatible with *Color Max 3* (the MGE format used by *Color Max 3* is designed to allow full use of the CoCo 3's capabilities and, additionally, to allow easy compression of graphics files to reduce the amount of required disk space). Also available is a set of over 25 additional *Color Max 3* fonts from Derringer Software and even a Font Editor, which allows you to create your own font designs. Unfortunately, we have not yet received these items for review. However, we will let you know about them as soon as they are submitted.

All in all, *Color Max 3* is a well-designed graphics editing system for the CoCo 3. It takes full advantage of many of the CoCo 3's capabilities and is very easy to use. I can certainly recommend this program to anyone whose interests include computer graphics.

CoCo 3

My Artist — Graphics Editor for the CoCo 3

I remember well the rush of excitement that overcame me when I first laid eyes on my CoCo 3. New, improved BASIC commands! Up to 80-by-24 true text modes! Direct monitor connectors! Enhanced keyboard! Ahh — but all these features paled next to the feature that really made the CoCo 3 shine — graphics! Up to 16 different colors from a palette of 64 different colors, shades and hues, and resolution as high as 640-by-192. With all this power waiting to be tapped, I knew it would not take long for the software companies to release new software to bring out the Picasso in all of us.

My Artist by Seesof is a graphics editor written in Super Extended BASIC for the CoCo 3. It supports the four new HSCREENS, which vary in resolution from 320-by-192 to 640-by-192 with four colors available. Saved in an unprotected format to allow the user to easily back up the original disk for safekeeping, the program is simple to load and run.

Upon running the program, the user is presented with a brief title screen and has the option to load a previously stored creation, or create a new one. At this point either the stored graphics are loaded, or the user is prompted to select from the various graphics modes. After this, the graphic screen is presented, and editing can begin.

Because the entire screen is used for your artwork, there are no icons or other point-and-click type amenities. Instead, the user selects the choice of

tools from the keyboard. Various commands support the drawing of simple points, lines, boxes, filled boxes and ovals. In most cases, the user keys the appropriate letter, selects the initial point, presses the firebutton, relocates the cursor to the terminal point, and presses the firebutton again.

The current location is indicated by a small crosshair cursor. Movement is achieved by pushing the joystick in the direction you want the cursor to move. In the fast mode, the cursor moves five to 10 pixels at a time. In the slow mode, the cursor moves on a pixel-by-pixel basis. These modes are selected by the F2 and F1 keys, respectively. The user may also move directly to a desired location by choosing the 'J' option which moves the cursor to a point on the screen directly represented by the X,Y coordinates of the joystick. However, because the resolution of the screen is up to 10 times greater than that of the joystick, the user will need to choose the slow mode afterward to achieve precise positioning.

Some of the other supported commands include copying, whereby the user can store a portion of the screen contained in a rectangle of any size and duplicate it in any area as many times as desired; text mode, which allows the user direct entry of characters from the keyboard; and paint, which allows the filling of an enclosed area with any available color. The hue command allows the selection of the various shades available for the palette slots, while the color command selects the current color in use. Save allows the pictures to be stored either to disk or cassette. Finally, a help screen is available at the touch of the ? key.

Unfortunately, I found the program difficult to use and flawed to a certain extent. The program does not support

a true 'undo' command, which I came to regret quite often. The manual suggests that the user save the file prior to using the Paint command; however, I cannot envision doing this every five to 10 minutes, as it is a tedious process for the disk user and takes up quite a bit of disk space, and for the cassette user, it is even more tedious. Also, the Paint command itself was very difficult to use, as the user is required to know the numeric code representing the border of the object. The manual states that the user should write down the color name and its code value, but this is an inconvenience that could have been easily avoided. I would suggest that the new user make his/her own 'crib sheet' until he/she is familiar with all the commands.

On the plus side, *My Artist* has adequate documentation and is suited for very simple pieces of work.

(Seesof, P.O. Box 574, Beaufort, SC 29901, 803-524-0116; \$14.95: First product review for this company appearing in THE RAINBOW)

— David C. Barry Jr.

commands used in your graphic; or load a previously created graphic to edit with the Art option.

If you are using the joystick to make your drawing, move the cursor with the lever, and press the firebutton when you want to draw a line. When using the keyboard as your drawing tool, you can do exact, one-pixel-at-a-time drawings. Using one of the eight directional keys allows you to move the cursor one pixel up, down, left, right or any of the four diagonals. Pressing ENTER draws a line.

To load a graphics screen to be used with the Art option, you must first save the BASIC program in the binary format. The instructions are very well-written on this point, but I misread this part and couldn't get the graphics program to load back into *Leonardo's Pencil* to edit it. I called James M. Bennett, who developed the program, and he patiently explained the procedure to me. This was impressive, because one of the main things I look for when I buy software is after-sale support.

There is a second program included called *Paint*. With this program you can have your computer write routines for coloring the outline drawings you have created with *Leonardo's Pencil*. When you have colored your picture, you can save the program in BASIC. This will not be a stand-alone program so you will have to merge it with a drawing program preceding it.

Jim has suggested you make a drawing with a felt marker on clear plastic wrap and tape it to your monitor. This way you can simply trace the drawing. Jim included a demonstration program on the cassette version and it really shows what you can draw using this program! I have been using *Leonardo's Pencil* since I received it for review, and although I am not very good at drawing with the joystick, I was able to draw a very respectable bear using the keyboard.

I am very impressed with the ease of operation and user-friendliness of this program. The instruction manual is

well-written and easy to understand. I would certainly recommend *Leonardo's Pencil* for anyone who would like to be able to create special graphics.

(E.Z. Friendly Software, 1308 Belmont Ave., Front Royal, VA 22630, 703-635-1354; Tape \$10.95; Disk \$12.95 plus \$1.50 S/H: First product review for this company appearing in THE RAINBOW)

— John H. Appel

Software

CoCo 3

Polytint — Changes Palette Colors

With so many new features to play with, it was only a matter of time before CoCo 3 products that use those features hit the market. *Polytint* is just such a program, designed to copy PMODE 3 or 4 images to the Hi-Res 16-color screen. On that screen, you can modify the image by changing colors to any 16 you select from the 64 possible choices.

The program performs as advertised. Images are quickly transferred to the left four-fifths of the Hi-Res screen from your disk. The right fifth is dedicated to a box showing the 16 available colors and offering instructions on how to proceed. A lot of time and effort went into this program, and it shows in the fine online help it offers.

First up when running the program is a menu that lets you choose between loading and coloring a new image or looking at a previously colored image. For now, we will choose the first — load and color. You are prompted for a filename (the extension .BIN is assumed as this is a disk-only program) and the file is loaded. It takes about three seconds to move the image to the Hi-Res screen. The picture appears on the left four-fifths with the right fifth displaying your palette.

Now, you can begin to change palette colors to suit your taste. Color selection is made by positioning the cursor in front of a palette box (using the up or down arrow keys) and entering the numeric value desired for that slot. The small box displays the color you selected and you can proceed to the next slot or change this slot again. You might want to use one of the fine public domain programs to familiarize yourself with the colors and their values, as stepping through the other 48 values to find 16 you like can take some time.

Software

CoCo 1, 2 & 3

Leonardo's Pencil — Draw Special Graphics

Leonardo's Pencil is a BASIC program that lets you create very detailed graphics. It also converts your picture into a stand-alone BASIC program you can save to tape or disk for later use.

After you load and run the program, you must center the joystick (your drawing tool). Once this is accomplished, press the firebutton to see the go-ahead message. Type RUN and press ENTER, and you see the title screen of the program. Pressing any key on the keyboard or the firebutton brings up the drawing board. Written across the bottom of the board is a list of options: Keys, Speed, Erase, Undo, Test, Basic, Hcopy and Art. The first option shows which keys and what direction they move the cursor. You can select the drawing Speed (slow or fast); Erase a drawing; back up and erase the previous move with Undo; have the computer draw your graphic with Test; save your graphic as a stand-alone BASIC program; get a Hard copy of the BASIC

After color selection is complete, you can start coloring your picture. The cursor is placed in the first area available for coloring and can now be manipulated with the right and left arrow keys. The cursor appears as a small flashing graphics block. Color selection is made by entering the palette slot desired. The slots and their colors are still on display on the right fifth. When ENTER is pressed, the area is colored. Press one of the arrow keys to move on to the next area to color. It's that simple.

When you have finished coloring your picture, you can save the image or recolor any portion of the picture. This program was written before the advent of editors such as *Color Max 3*, so the save is not in a true Hi-Res format. It is quite ingenious, though. The regular PMODE 3 or 4 screen is saved, with the palette values, X and Y coordinates for painting and the paint value, appended to the end of the image. Thus, a fairly complex image (requiring many places to be painted) takes more disk space than a rather simple image.

The other option on start-up is to view a picture already colored. This option loads the image, copies it to the Hi-Res screen and colors it. You may then observe the picture. When you are through looking it over, you return to the main menu and can either look at another picture or start coloring another image.

A second program is included that enables you to add on to the Hi-Res screen. Once an image is loaded and colored, press the BREAK key and exit the main program. Then run the second program (called ADDITS), which clears the color block from the right fifth of the screen. By adding BASIC statements to the ADDITS program (the manual tells you how), you can use that right fifth and add anything to the picture — or, if you want, you can add anything to the left four-fifths, as well.

While you can save the updated image, the manual advises you to save your own version of the ADDITS program to conserve disk space. The next time you want to view that picture, you follow the procedures above, substituting the name of your custom version of the ADDITS program.

There are a few very minor flaws in the program, but some of these cannot be helped. One such flaw is that extremely complex images cannot be loaded as there are too many paint locations. The manual warns about this problem, although I couldn't find an image that wouldn't work. You are

allowed up to 2,047 different paint locations, more than enough for the average picture. Another problem is the size of the paint cursor. Although it flashes, it is still very small and difficult to find on occasion. A small plus symbol (+) would better suit the purpose.

The last problem is something that may be ongoing trouble. Because there is no real standard for saving Hi-Res screens (yet), the method used works. When a standard is adopted by the CoCo community, though, it is my suggestion that the program be changed to reflect that standard and to make it compatible with what I am sure will be a flood of other programs.

All in all, *Polyint* is a fine program. The manual is very clear and not too technical. You have not just one, but four different examples to play with. The program is virtually "goof-proof." The price makes it one of the CoCo 3 bargains.

(Boiling Spring Lakes Software, P.O. Box 2536 B.S.L., Southport, NC 28461, 919-845-2881; \$17.50 plus \$1.50 S/H: First product review for this company appearing in THE RAINBOW)

CoCo 1, 2 & 3

Art-Deli — A Smorgasbord of Images

As editor of your club's newsletter, you find yourself in somewhat of a jam. The Christmas edition is due in the mail in three days and you don't have a nice picture for the cover. There isn't enough time to create your own, and everyone has seen the picture you used last year.

This is where *Art-Deli* comes to the rescue. The package consists of 10 double-sided disks with a total of 440 different pictures. They are all PMODE 4

black and white images, and most are printer-ready.

All of the images are high quality. They load easily into your favorite graphics editor. This is beneficial, as there are a few pictures that require some sort of text or other addition. Be warned, though — the pictures are not meant to be colored. You may add a background color to most, but given the nature of the digitized images, even that may require work (such as closing off areas you don't want painted).

Almost all of the pictures are ready to go as-is, though. And if you don't have access to a graphics editor (*McPaint*, *CoCo Max*, *Graphicom*, etc.), never fear. A utility is provided that allows you to view all the pictures on the disk. Once loaded, any screen dump that works with your printer will do the trick.

The cost may be a little prohibitive for the average club, so there is an option that allows you to buy one double-sided disk at a time. A single disk gives you 44 pictures with the following titles: Travel, Pets, Christmas 1 & 2, Halloween, Thanksgiving, Winter, New Year, Patriotic, Creative Art, People 1 & 2, Spring, Summer, Easter, Valentines, Sports, Fun Sports, Food, and the ever popular Miscellaneous. When ordering the single disk, you can specify any two of the above titles.

Finances permitting, the way to go is to purchase the full set. There are more than enough pictures to justify the cost. Also, when purchasing the full set, a book showing the entire gamut of available images is included, thus saving the tedium of looking through each disk for just the right picture.

In short, *Art-Deli* is the perfect resource for the newsletter editor, club leader or anyone who organizes activities. The package is a virtual smorgasbord of images for special occasions.

(Specialty Projects, 4810 McCrory, Memphis, TN 38122, 901-682-8737; \$12.95 per disk; \$99.95 for the set plus \$3 S/H: First product review for this company appearing in THE RAINBOW)

— D.A. Ferreira

Software

CoCo 1, 2 & 3

Scan and Restorit — Recovers Lost Files

Scan is a program designed to scan a binary file and display to the screen and/or printer any ASCII sequences

that it finds. The author mentions one intended usage of *Scan*, that of finding the right command to use in an Adventure game.

The program is distributed in unprotected form on disk and requires at least 32K of memory in which to operate. It is loaded into the computer with the LOADM command from BASIC.

Scan is a machine language utility that contains its own disk module, presumably for purposes of independence from the various incompatibilities between several of the alternative disk ROMs in use. It is invoked with a command line from BASIC in the form of EXEC *filename.ext* >DEV. The >DEV parameter, if replaced with >PRN, will route all output to the printer. If left blank, output will be sent to the screen.

The special command EXEC VER would not work. However, most people would not be too concerned with which version of the program is in use, so I don't feel this deficiency is of major importance.

Scan worked well when tested on several M/L files. It displays only the ASCII codes within a file, and this could be an attractive feature when scanning Adventure games. I think that *Scan* belongs with every true Adventure gamer. It is also a convenient, clever utility for the curious.

Restorit is a program designed to aid the novice user in restoring text files that have been made unreadable for some reason. It is in the form of a BASIC program made to "look like" a machine language program in that it is loaded into the computer with the LOADM command. *Restorit* will scan an entire text file in search of the readable portions. The program is capable of detecting if a file is intact and correctly structured. If a file is determined to be flawed, then a new file is written to disk

with the extension RES. Portions not readable are marked within the new file. This allows recovery of as much of the original file as possible. Both single- and multiple-drive systems are supported.

The author of *Restorit* realized that many folks will not have an unreadable disk file available, so he provided a special modifier program. I did most of my testing with the *Restorit* program merged with the special program called RESTOR.TST, which modifies the main program to report disk errors when none actually exist.

Restorit displays a binary representation of the file in the top half of the screen as it is being restored. The bottom half of the screen contains a status display, such as line numbers and sector numbers of the input file.

I encountered IE and FC Errors while using *Restorit*. These errors came from BASIC and indicate that a few problem areas remain in the program. A bit more attention to error trapping and recovery is probably all that is needed.

The documentation and miscellaneous disk files could use a minor amount of attention. For instance, the RDOC.DAT file is a small text file that is almost the same as the printed documentation, yet two different individuals, addresses and phone numbers are supplied in case the user has questions about the product. Also, the BASIC program called RUNTHIS.BAS (which prints the RDOC.DAT file) should have been four lines in length, yet it had an earlier version of the *Restorit* program appended to it, which increased the apparent size of the program to four grams. These are minor points and are probably indicative of some last minute changes by the program's author.

However, *Restorit* could be a valuable utility for many users. After all, if it saves just one file, it may well be worth

its initial cost. The author states that the loss of a file representing three months of work was the reason *Restorit* was written.

(Semmesoft, 10 Strawhat Road, #2A, Owings Mills, MD 21117. \$21.95 each: First product review for this company appearing in THE RAINBOW)

— Don Hutchison

Software

CoCo 1, 2 & 3

Super Tape/Disk Transfer — Simple and Useful

Super Tape/Disk Transfer is a collection of useful I/O utilities for the CoCo user. It features menu options that provide the following transfers:

Disk To Disk Copy backs up your disk in one to three swaps instead of the usual six to seven. It also works on multiple drive systems.

Disk to Tape Copy archives your disk onto cassette tape. Each disk file is displayed and can be copied to tape or bypassed. ML starting, ending and execution addresses will be displayed.

Tape To Disk Copy reads your favorite programs from tape to disk. Each tape file is read into the computer, and you are given the opportunity to save it to disk or ignore it.

Tape To Disk Copy Automatic Relocate lets you copy all of the files on tape to disk without prompting. It also automatically relocates any ML program with starting addresses between 1536 and 3584 to 3584 in order to avoid conflict with disk memory.

POLYTINT converts your disk-saved CoCo 1 or 2 pictures to CoCo 3 format and gives you a fast, friendly way to recolor them in any 16 colors of your choice. Your new masterpieces will be saved in far less disk space than usual. **See Rainbow Review Oct. 1987.**

Requires CoCo 3, disk drive, RGB monitor preferred.

Order from: BOILING SPRING LAKES SOFTWARE
P.O. Box 2536, BSL
Southport, NC 28461
Telephone: (919) 845-2881

Money order or check: \$17.50 plus \$1.50 postage and handling.
NC Residents please add 5% sales tax.

Tape To Tape Copy prompts you as it reads each tape file to copy to another tape.

There are a couple of features I liked about this program. The program will not crash if it encounters an I/O Error. Instead it issues an error warning and just restarts. This can be a real help on those tapes or disks that are partially bad. Another special feature is that you can copy DATA files as well.

(Microcom Software, P.O. Box 214, Fairport, NY 14450, 716-223-1477; Disk, \$24.95 plus \$3 S/H)

Software

CoCo 3

Gates of Delirium — Fantasy Role Playing

As you enter the dungeon, fear creeps up your spine. You, Orniix the wizard, along with Gazer the Cleric and Sheena the fighter, move stealthily through the myriad passages hoping to find some clue or artifact (or at least a little gold) to help you on your quest. You suddenly come face to face with a band of skeletons. Already weak from past fights, you realize this might be it. As you enter into combat, you know that at least you will go down fighting!

Gates of Delirium, a new graphics adventure/fantasy Simulation by Diecom products is another attempt to mimic fantasy role-playing games on the computer. Yet, this is the closest and best done rendition I have seen for the Color Computer to date. It is basically a conversion of similar games available on other computers, but I believe that Roland Knight, Dave Shewchun and Dave Dies have done the CoCo Community a great favor by producing *Gates*.

The premise of *Gates* is this: You enter the ancient and extensive land of Gates alone, with no knowledge of a purpose, only the need to add other people to your group and survive. In your adventures, you enter cities, castles and dungeons. You attempt to find the mystic lunar gates and transport yourself to a more fruitful land. You will fight skeletons, trolls, thieves, wizards, and many horrible monsters.

The game comes with two disks. The

game disk is copy-protected and Diecom will replace it within one year of purchase if anything goes wrong. It is important you make a copy of the player disk (which is not copy-protected) and use it, for the disk is continually updated during play. Also included are 14 pages of documentation, with a page of corrections and additions, and the "Ancient Map of the Land of Gates."

You start the Adventure by generating a character. This is done by choosing a class or profession (such as a fighter or a cleric) and a race (such as human or elven). You then divide up 50 points into four areas: Strength, Dexterity, Intelligence and Wisdom. The more points you put into an attribute, the better you are in that area. For example, a fighter would want to maximize his strength since he specializes in fighting. A thief might want to put extra points into dexterity since his profession relies on quickness and agility (not to mention his ability to swipe chests of gold underneath the noses of the town guards). A cleric or holy man would want high wisdom, and a wizard high intelligence as these attributes affect spell-casting ability. The race you choose sets the limits of how many points you can eventually fit into each category (you must start out with a minimum of 5 in each slot and a maximum of 25). The documentation covering this is fairly well-done, but is poorly typeset, which might possibly confuse the reader. After a little examination, you should be able to divine the correct procedure. One of the little pleasures of this game is that you need go through this task only once. The master program automatically scans the player disk to see if a character has been generated and, if found, starts the game near where the player last left off.

The documentation is intentionally brief. This is to prevent the player from learning too much before starting the Adventure and, thereby, spoiling the fun of discovery. I believe it could have been more complete without risking the fun or mystery of the game. A minor background could have been introduced that would have given the player some purpose, and the text itself could have been greatly expanded. Things such as weapon and armor limitations for class have been incorporated into the game but left out of the directions. This is discouraging when you've just bought a sling for your cleric only to find he can't use it. An experienced role-player could be expected to know these

things, but a player with little or no knowledge will have some difficulty.

The game board itself is a graphics display of the character and his/her companions and their surroundings. The game uses what it terms "shadowing," that is, showing basically only what the character can see, and hiding that which is hidden (usually by mountains or walls). This effect and the animation present in the graphics takes any tedium out of the play. The graphics are a pleasure to watch. The sound effects are complimentary, not competitive (but even these can be turned off). The character and his party always stay in the middle of the graphic display as the countryside scrolls around them. In the upper right-hand corner is a box that shows the members of your group and how healthy they are. The lower right-hand area is taken up by the "dialogue box." It displays the commands entered and any responses and messages.

The game play itself is controlled via approximately 22 one-key commands with other commands that must be typed in. These one-key commands and auto-repeat-on-movement keys make playing relatively easy once the commands are mastered. They consist of the arrow keys for north, south, east and west and other manipulative commands such as Open, Steal and Transact. The typed-in commands must be learned during the course of play.

Combat is handled by switching to a different combat screen that cannot be left unless either you or your opponent is dead. Retreat is not an option. Nor is running from a monster once it has locked onto you. Here, you and your party move around the screen or attack one at a time and, at the end of every one's turn, the monsters may also move or attack. It progresses in this series until the eventual conclusion. One can learn to predict the movement of the monsters, however, and use that knowledge to help defeat the enemy.

One minor irritation I had with the

CBASIC III EDITOR/COMPILER

The ULTIMATE Color Computer III Basic Compiler!!!

If you want to write fast efficient machine language programs and you don't want to spend the next few years trying to learn how to write them in Assembly language or with a cheap compiler, then CBASIC III is the answer!!!

CBASIC III is the only fully integrated Basic Compiler and Program Editing System available for the Color Computer 3. It will allow you to take full advantage of all the capabilities available in your CoCo-3 including 512K RAM, without having to spend years trying to learn assembly language programming. CBASIC III allows you to create, edit and convert programs from a language you are already familiar with Enhanced Disk Color Basic, into fast efficient machine language programs easily and quickly. CBASIC III supports all the enhanced hardware available in the CoCo-3, including Hi-Res Graphics & Screen displays, Extended Memory and Interrupts (Keyboard, Timer, Serial & Clock). We even added advanced commands not available in Basic to give you a level of control only available to very advanced Machine Language Programmers. Plus we made it exceptionally easy to use, not like some other compilers. CBASIC III is the friendliest and easiest compiler available for the Color Computer III.

CBASIC III is a powerful tool for the Beginner as well as the Advanced Basic or Machine Language programmer. You can write programs without having to worry about the Stack, DP Register, memory allocation and so on, because CBASIC III will handle it for you automatically. For Advanced users, CBASIC III will let you control every aspect of your program, even generating machine code directly in a program easily.

CBASIC III features well over 150 Compiled Basic Commands and Functions that fully support Disk Sequential and Direct access files, Tape, Printer and Screen I/O. It supports ALL the High and Low Resolution Graphics, Sound, Play and String Operations available in Enhanced Color Basic, including Graphics H/GET, H/PUT, H/PLAY and H/DRAW, all with 99.9% syntax compatibility. CBASIC III also supports the built in Serial I/O port with separate programmable printer & serial I/O baud rates. You can send and receive data with easy to use PRINT, INPUT, INKEY, GETCHAR and PUTCHAR commands.

CBASIC makes full use of the powerful and flexible GIMI chip in the Color Computer 3. It will fully utilize the 128K of RAM available and install 2 Ultra Fast Ramdisks if 512K is available, for program Creation, Editing and Compilation. You can easily access all 512K of memory in a Compiled program thru several extended memory commands that can access it in 32K or 8K blocks and single or double bytes.

CBASIC has its own completely integrated Basic Program Editor which allows you to load, edit or create programs for the compiler. It is a full featured editor designed specifically for writing and editing Basic programs. It has block move & copy, program renumbering, automatic line numbers, screen editing, printer control and much more.

The documentation provided with CBASIC III is an 8 1/2 by 11 Spiral Bound book which contains approximately 120 pages of real information. We went to great lengths to provide a manual that is not only easy to use and understand, but complete and comprehensive enough for even the most sophisticated user.

CBASIC III is the most expensive Color Basic Compiler on the market, and well worth the investment. You can buy a less expensive compiler for your CoCo-3, and then find out how difficult it is to use, or how limited its features are. Then you'll wish you had bought CBASIC III in the first place. Dollar for dollar, CBASIC III gives you more than any other compiler available. If you can find a better CoCo-3 Basic Compiler then buy it!!!

Requires 128/512K & Disk \$149.00

DATAPACK III PLUS V1.1

SUPER SMART TERMINAL PROGRAM

AUTOPILOT & AUTO-LOG PROCESSORS

X-MODEM DIRECT DISK FILE TRANSFER

VT-100 & VT-52 TERMINAL EMULATION

- * No lost data even at 2400 Baud on the COCO-3 Serial I/O port.
- * 8 Display Formats. 32/40/64/80 columns at 192 or 225 Res.
- * 50K Text Buffer when using the Hi-Res Text Display and Disk.
- * ASCII & BINARY disk file transfer support via XMODEM.
- * Directly record receive data to a disk file (Data Logging).
- * VT-100 terminal emulation for VAX, UNIX and other systems.
- * VT-100/52 cursor keys, position, insert/delete, PF & Alt. keys.
- * Programmable Word Length, Parity, Stop Bits and baud rates.
- * Complete Full and Half Duplex operation, with no garbled data.
- * Send full 128 character set from Keyboard with control codes.
- * Complete Editor, Insert, Delete, Change or Add to Buffer.
- * 9 Variable length, Programmable Macro Key buffers.
- * Programmable Printer rates from 110 to 9600 Baud.
- * Send Files directly from the Buffer, Macro Keys or Disk.
- * Display on Screen or Print the contents of the Buffer.
- * Freeze Display & Review information On line with no data loss.
- * Built in Command Menu (Help) Display.
- * Built in 2 Drive RAMDISK for 512K RAM support and much more.

Requires 128/512K & Disk, Only \$59.95

Supports: R.S. Modem-Pak & Deluxe RS-232 Pak, even with Disk.

TEXTPRO IV

"The Advanced Word Processing System"

- * 9 Hi-Res Displays from 58 to 212 columns by 24 lines in 225 Resolution
- * On Screen Display of Bold, Italic, Underline & Double Width print.
- * Up to 8 Proportional Characters Sets Supported with Justification.
- * Up to 80 Programmable Function keys & loadable Function key sets.
- * Fully Buffered keyboard accepts data even during disk access.
- * Autoexecute Startup files for easy printer & system configuration.
- * 8 Pre-Defined Printer function commands & 10 Programmable ones.
- * Supports Library files for unlimited printing & configurations.
- * Disk file record access for MAIL MERGE & BOILER PLATE printing.
- * Completely Automatic Justification, Centering, Flush left and right.
- * Change indents, margins, line length, etc. anytime in the text.
- * Create and Edit files larger than memory, up to a full disk.
- * Easily imbed any number of printer format and control codes.
- * Built in Ultra Fast 2 drive RAMDISK for 512K support.

TEXTPRO IV is an advanced word processing system designed for speed, flexibility and extensive document processing. It is not like most of the other word processing programs available for the Color Computer. If you are looking for a simple word processor to write letters or other short documents, then most likely you'll be better off with one of the other simpler word processors. But, if you want a powerful word processor with extensive document formatting features to handle large documents, term papers, manuals, complex formatting problems and letter writing, then TEXTPRO IV is what you're looking for. TEXTPRO IV works in a totally different way than most word processing programs. It uses simple 2 character abbreviations of words or phrases for commands and formatting information that you imbed directly in your text. There are over 70 different formatting commands you can use without ever leaving the text you're working on. There are no time consuming, and often frustrating menu chases, you are in total control at all times. You can see what the formatted document will look like before a single word is ever printed. This includes margins, headers, footers, page numbers, page breaks, column formatting, justification and Bold, Italic, Underline and Double Width characters right on the screen.

TEXTPRO IV can even support LASER PRINTERS with proportional fonts, take a good look at this AD? It was done with TEXTPRO IV on an OKIDATA LASERLINE-6 laser printer!!! All the character sets used on this AD are proportional spaced characters, all centering, justification, and text printing was performed automatically by TEXTPRO IV.

Requires 128/512K & Disk \$89.95

HI-RES III Screen Commander

The display you wanted but didn't get on your CoCo-3.

- * 54 Different Character Sizes available 14 to 212 cpi.
- * Bold, Italic or Plain character styles.
- * Double Width, Double Height and Quad Width characters.
- * Scroll Protect from 1 to 23 lines on the screen.
- * Mixed Text & Graphics in HSCREEN3 mode.
- * PRINT @ available in all character sizes.
- * Programmable Automatic Key repeat.
- * Full Control Code Keyboard supported.
- * Selectable Character & Background color.
- * Uses only 4K of Extended or Basic RAM.
- * Written in Ultra Fast Machine Language.

HI-RES III will improve the standard display capabilities of the Color Computer 3, even the 40 and 80 column display have several features missing. For example you can't use PRINT @ or have different character sizes on the same screen, even mixing text and graphics with the HPRINT command leaves a lot to be desired. HI-RES III can give you the kind of display capabilities you always dreamed about having on your color computer but didn't get with your COCO-3. Well now it's here and with a wide variety of display options that you can easily use with your Basic or ML programs.

HI-RES III is totally compatible with Enhanced Color Basic and its operation is invisible to Basic. It simply replaces the normal screen display with an extremely versatile display package. It also overcomes some of the disadvantages found when using the Width 40 & 80 screens. You can use the Print @ function on any line length with HI-RES III. It also gives you a programmable automatic key repeat that can be very handy for editing your Basic programs. Automatic key repeat can be adjusted from ultra fast to super slow and can be disabled entirely if desired. You also get a full control code keyboard using the 'CTRL' key. So many of HI-RES III's extended functions can be controlled directly from the keyboard easily. With just a couple of simple keystrokes you can change character sizes and styles at any time.

Requires 128/512K Tape or Disk \$34.95

To order products by mail, send check or money order for the amount of purchase, plus \$3.00 for shipping & handling to the address below.
To order by VISA, MASTERCARD or COD call us at (702) 452-0632

(702) 452-0632

game was the fact it locks up if everyone in the party dies (and this tends to happen quite a lot early in your career). This necessitates rebooting the whole game, which gets a little tedious. If you have two drives, it is not as time consuming because you can keep the main disk in Drive 0 and the player disk in Drive 1. This eliminates switching disks all the time.

I have to conclude by restating that *Gates of Delirium*, in my opinion, despite minor problems, is one of the finest and most professional conversions of fantasy role playing games available for the Color Computer. It is exciting, extensive, and pleasing to the eye.

(Diecom Products, 6715 Fifth Line, Ontario, Canada L9T 2X8, 416-878-8358; \$38.95 U.S.; \$52.95 CDN)

Software

CoCo 1, 2 & 3

Stock Market Portfolio — Track Your Performance

With all of the interest in the stock market these days, the investor needs a means of keeping track of his investments. Are you making money on your portfolio? Are you keeping track so you can pay Uncle Sam his share of your profits? *Stock Market Portfolio* is a program that can help you in these matters, using the faithful CoCo.

Stock Market Portfolio is designed to keep track of all your current stock holdings and to keep a listing of stocks you have sold by year. It also maintains a tally of your total investment and the amount of profit or loss you have at the moment.

The manual supplied with the program is clear and easy to follow. It contains three major programs: Setup, Current Stock List and Stocks Sold. It also contains sample printouts of the two stock programs.

The Setup program creates the files that will be stored and maintained on the program disk. Several people can create files that will be maintained simultaneously. The program calls for a first and last name for the file, which

provides access for future activities. The Setup program also allows for changes in information as required. One of Setup's features is the input of a "Stop Loss Percentage." This is a fixed percent of the cost of a stock that, when subtracted from the cost, represents the selling price you would use to prevent losses on the down side. The program uses this stop loss feature against the original purchase price. I would suggest to the author that it be modified to be a percentage of the current quoted price, which is representative of a realistic situation to protect profits or minimize losses.

The Current Stock List program is designed to be a file of all stocks currently held. The menu asks for such information as Ticker Code, Stock Name, Number of Shares Held, Date Bought, Purchase Price and Current Price. Information can be easily changed, and you can review your entire holdings either on the screen or printer. The current price of stocks in this program can be updated by using the Change Current Stock Price option on the menu. This program also provides a summation of the entire portfolio showing the total cost, current value, profit or loss total, and percentage of profit or loss. When a stock is sold, it can be transferred to the Stocks Sold program. The program accomplishes this transfer when you change the status from B (bought) to S (sold). The capacity of this program appears to be very large, certainly more than a typical investor may have in his portfolio.

The Stocks Sold program maintains files on stocks that have been sold by year of sale. This is particularly useful at income tax time, because it provides all the information required for your IRS return by year. Again, you can change information if necessary and can review the entire file on the screen or printer. This program also provides a summation of total portfolio cost, total sale price and total profit or loss in dollars and percent. You should note that to obtain true profit or loss, the actual price per share, including broker commissions, should be used.

The program also handles dividends by requesting the annual dividend by year, showing the dividend as a percent of purchase price, and showing the total dividend per year for the number of shares held. This is useful in reporting dividend earnings to the IRS by year.

I would not hesitate to recommend *Stock Market Portfolio* to any serious stock market investor or to amateurs

who want to follow the market on paper. The program is easy to use, and it provides a good picture of your current portfolio and your transaction history by the year.

(Papariz Enterprises, Inc., 700 York Street, Williamsburg, VA 23185; \$22 plus \$3 S/H: First product review for this company appearing in THE RAINBOW)

— Mel Siegel

Software

CoCo 3

TW-80 — A CoCo 3 Telewriter-64 Enhancer

I don't often get a chance to review software that really gets me fired up, but that's just what happened when I opened the package containing a new program from Doug Masten. I have written many reviews using *TW-64* and its various enhancements which made it a delight to use on the CoCo 1 and 2. Now I have the pleasure of reviewing an enhancement for the CoCo 3.

Besides a Color Computer 3 with at least 128K of RAM, this enhancement requires one disk drive and an unmodified version of *TW-64*. If you have 512K, you will also be able to utilize the built-in RAM Disk feature.

After you have backed up your new *TW-80* disk, you're all set to install the software. This is very easy to do, and the six-page instruction booklet explains each step. The documentation also explains how to use the new features of the program. When this is all done, *TW-64* with the *TW-80* enhancement is booted up using the familiar `LOADM*T` `ENTER`, but that is where the similarity ends. *TW-80* is written specifically for the CoCo 3, and the new features are truly outstanding.

The first thing you'll notice is a clean, uncluttered main menu.

All of the options work the same as on the previous versions, but there are some differences. One of the most obvious is a reverse video (black on white) status line at the bottom of the screen. This line shows you at a glance the current cursor position as a line and column number. Insert or overstrike modes are displayed and can be toggled using the `CTRL-0` key. Also indicated is whether or not Wordwrap is on or off

and the name of the file you are reading. Memory available for text is displayed and counts down as you type. On my 512K CoCo 3, this number was 45056, or just over 45K of text space available in an empty buffer. The program defaults to 80-characters per line with white letters on a jet-black background. The filename is displayed in the status line.

A program called CONFIG.BAS is included on the disk and lets you change all of the default parameters in the program such as screen and text color, key click and repeat rate, disk drive stepping rate, and printer format.

The displayed text with true lowercase letters with descenders is very easy to read on my CM-8 RGB monitor. Six available screen fonts are included on the disk, but changing them is somewhat of a pain in the neck; so once you choose your favorite, you won't want to change often. Because each font is unique in style and image quality, I ended up making a TW-80 disk for each one. Now all I have to do is load in the TW-80 disk with the particular font style I'm in the mood for. I was delighted with all the fonts. They are a big improvement over the 80-column text contained in CoCo 3's ROM. I can clearly see all three top points in the lowercase 'w'.

The added CoCo 3 CONTROL and ALT keys are also supported. The ALT key used with four other characters yields left and right brackets and braces. Visible carriage returns are also available and are a big help when setting up columns.

The Disk I/O menu is clean and neat looking and contains the two columns of commands. The most noticeable change in these commands is evident when selecting Read, Append, Name Change or Kill. In those cases, all of the

file names on the disk appear on the screen, and the up or down arrow keys are used with a highlighted cursor to select the file name. And like earlier TW-64 enhancements, the Disk I/O is in memory; there is no delay in accessing Disk I/O. I especially liked the use of the F1 and F2 keys. Switching from the text screen to the main menu and back is a snap. Also added to the Disk I/O menu is Format. How many times have you tried to save a TW-64 file only to find out the disk was full? You either had to kill something else on the disk or exit to BASIC to format a disk. Now you can format a disk without losing your text. And much to my delight, you can go directly to the Disk I/O menu from the text screen without going to the main menu first.

Another nice touch that has been added is an automatic file backup. The new disk driver for TW-80 checks before saving a file to disk to see if there is already a file under the same name. If there is, it renames that file with an extension of BAK (Backup). If there is also a file with the same name and BAK extension, then TW-80 kills the original BAK file, renames the existing TXT file to BAK, and saves the current file with a TXT extension. And to top it all off, if you are using a 512K CoCo 3, the extra memory can be used for two RAM Disks. You'll find this instant disk access a pleasure to use, but be sure to save your work to a floppy disk before you quit TW-80; otherwise, you will lose your work.

The Format menu has the same commands as earlier versions except an Abort Printing command has been added. Again, the menu is clean, orderly, and it also incorporates the F1 and F2 keys to get back quickly to either the main menu or the text screen.

About the only negative point I can

make is that some mention needs to be made in the documentation of printer baud rate settings. The CONFIG.BAS program shows a default of 7 for 9600 baud, but my old version of TW-64 uses a 1 for 9600 baud. I think a table or other explanation would be helpful for those using different types and speeds of printers.

As you can see, I'm excited about TW-80. This is a fine piece of software for the CoCo 3, and I highly recommend it.

(Spectrum Projects Inc, P.O. Box 264, Howard Beach, NY 11414, 718-835-1344; \$39.95 plus \$3 S/H)

Software CoCo 1, 2 & 3 OS-9

Screen Star/OS-9 Text Formatter — Word Processing Made Easy

Screen Star is billed as a WordStar clone. WordStar is a popular MS-DOS word processor that has been around for quite a while. Although it is a difficult piece of software to learn, it is considered by many to be one of the best. The advantage of using a WordStar clone on the CoCo is that you can work comfortably on both the MS-DOS and OS-9 systems without having to relearn commands. I have not used WordStar, but my Dynastar experience made learning Screen Star quite easy since the commands are very similar.

One difference between the WordStar clones and most RS-DOS word

LOTZALUK IS HERE!

LOTZALUK, machine language program for COCO 1, 2, & 3. Studies history of LOTTO game as a handicapper studies horses. Arizona 6/39, California 6/49, Iowa 6/36, Missouri 6/39, New York 6/40, New York 6/48, Oregon 6/42, Tri-State (Maine, New Hampshire, & Vermont) 6/36, & Washington State 6/44 available. Others to follow. Requires 64K. Specify game desired with order.

processors such as *Telewriter* is that word processing is done in two stages with two different programs. *Screen Star* is described as a text editor, which is used for entering and editing text. In order to obtain the printed hard copy, a second program, *OS-9 Text Formatter*, is used. While the two packages are sold separately, they are usually purchased together, especially when setting up a word processor.

The *Screen Star* package comes with two versions — OS-9 Level I and Level II. Also included is a spelling checker with dictionary. The disk contains a Level I OS-9 boot and a limited number of OS-9 commands for Level I operation of *Screen Star*. This version has its own 50-character screen, similar to other RS-DOS word processors. The screen scrolls horizontally so you can see the whole text, and the scrolling is very crisp. However, it is no substitute for an 80-column screen.

I tried running *Screen Star* with my 80-column driver under Level I, Version 2, but was unsuccessful since *Screen Star* looks for its own screen driver. I would like to see Computerware change this, as there are many Level I users who have 80-column screen capability. It is important to note that those of you who do not own OS-9 can still have a good word processor without a major expenditure. Hopefully, you will like OS-9 and purchase the operating system at a later date.

The Level II version does not come with a Level II boot and commands. Those who want to use this version will have to purchase OS-9 Level II separately from Tandy. Also, a 512K CoCo is required for the Level II version. This version provides the extra options to directly call the text formatter and the spelling checker from within *Screen Star*.

Starting up *Screen Star* is easy. For OS-9 Level I, simply make a backup of the master disk and, using the backup disk, type DOS after powering up your CoCo. OS-9 will prompt you for the date, and at the OS-9 prompt enter SSTAR. For Level II you will have to copy the Level II version of *Screen Star* to `<drive>/CMD5` of your system disk. Also, make sure you are in an 80-by-24 text screen before starting *Screen Star*. You will also want to set up the colors in the palette to your liking if you are using a color monitor.

Although *Screen Star* is a *WordStar* clone, Computerware has done some simplification of cursor movement, which has always been a "pain" for new

users of *WordStar*. Cursor motion on the screen is controlled by the arrow keys, as we have come to expect. For seasoned users of *WordStar*, *Screen Star* also retains the original cursor motion control.

Before going further in the discussion of *Screen Star* commands, I will talk a little about the online help facility, which can be eliminated once you are proficient in *Screen Star*'s commands. This option is available in both versions. *Screen Star* comes configured with the online help activated. If you enter the appropriate help command, a window will open that gives information on the four categories of *Screen Star* commands.

"In the Level II version, capability is provided for setting up 10 function keys that make Screen Star operations easier."

The basic command set (ALT-I) takes care of the most commonly used commands for cursor movement, insertion and deletion. The CTRL-K commands (Block and Disk I/O) handle the disk I/O and the block text copying, moving, inserting, deleting and saving/loading of files to disk. The CTRL-P commands (Parameter Features) are used to set up tabs, line length, word wrap and several other features. These parameters can be saved in a parameter file that is read by *Screen Star* on start-up. The CTRL-Q commands (Quick Key Sequences) are used for rapid horizontal and vertical motion as well as jumping to the beginning or end of the document. The CTRL-Q commands also cover the search and replace options.

In the Level II version, capability is provided for setting up 10 function keys that make *Screen Star* operations easier. The definitions for each key can be saved in a parameter file along with line length, tabs and other parameters so that everything is ready to roll each time that you run *Screen Star*. The function keys are used by pressing the combination of ALT plus a number from 0 to 9.

The evaluation was done using the Level II version of *Screen Star*. Overall, it is a good introductory word processor

with quite a bit of power. However, I found two problems with *Screen Star* — speed and lack of screen formatting. I never lost any characters, but I found that text insertion was very slow, as was block movement of paragraphs.

Screen Star provides a very nice feature when doing block moves, copies or deletions. After marking the start and end of the block, the block is reprinted in inverse video so you can see exactly what has been marked. While this is a handy feature, it is slow, since a complete screen refresh occurs to the point of a block. The printing of the block in inverse video is extremely slow and almost negates the value of this feature.

A bit of caution is also in order here. I found that marking a part of a line with the block commands resulted in the loss of the entire line when I did a block delete. This is unusual since block deletion works on parts of lines on every word processor that I have used and is quite useful. The only way around this problem is to use the word delete command, CTRL-T. One positions the cursor at the start of the deletion and presses CTRL-T to delete words to the right. There was no provision for a left word delete.

The use of windows for help menus is also slow. I don't believe that this is due to the OS-9 system, as I have seen faster window operation using BASIC09. In any case, the windows are nicely set up and provide valuable information for the new user. I did run into several situations where the text under a window was not restored after the window was closed. At first, I thought I had lost several lines of text; however, moving the cursor to the appropriate lines somehow restored the text. This is obviously a non-destructive bug, but it's quite disheartening to see lines of text vanish.

As I said in the beginning of this review, the philosophy of *WordStar* clones is to let one program do the editing and another do the formatting. *Screen Star* does exactly this — there is no screen formatting. Everything is left to the text formatter.

One of the major advantages of OS-9 is the hierarchical directory system. For example, on my document disk I have a directory for RAINBOW reviews, `<drive>/RAINBOW_REVIEWS`. Unless you remember to do a change directory before starting *Screen Star*, there is no way to change directories from within it. I found out the hard way by calling a shell with CTRL-PO and trying to do

a chd. The net result was I hung up the CoCo and could not get back into *Screen Star*. The bottom line is doing the chd before starting *Screen Star*; hopefully, Computerware will add this option (which is virtually a standard on any OS-9 software).

I mentioned earlier when talking about the function keys that *Screen Star* sets up a parameter file that is read on start-up. Thus, you are able to set various parameters and customize *Screen Star* to your liking. One parameter is tab spacing. *Screen Star* comes with a default setting of tabs every 16 spaces. This can be changed to whatever spacing you like, but only equally spaced tabs can be set, such as every five spaces.

The documentation provided consists of a 23-page manual, which provides all the necessary information to run *Screen Star*. The manual provides a discussion of all of the commands and a command summary at the end of the manual. In addition, a help card is provided. Since I had experience with the *WordStar* command approach, I had no problem using *Screen Star*. For the beginner, I think that it would be appropriate for Computerware to provide a tutorial illustrating *Screen Star* operation. Otherwise, the manual is easy to use as a reference of command information.

Included on the *Screen Star* disk is a spelling checker program called *Smart Speller (Spell)*, along with a 25,000-word dictionary and a dictionary editor. The approach taken in *Smart Speller* is different from most spelling checkers. The dictionary contains misspellings of the most common words used in a typical document. Instead of scanning through a large dictionary of proper spellings, *Spell* looks in a small file of misspellings. This is presumably a faster approach than the more traditional versions and takes about 80 seconds per page of text. Of course, if you are like me and type non-standard misspellings, *Spell* will miss the error. This is the price you pay for speed.

Spell can be run either directly from the OS-9 command line or, if using the Level 11 version of *Screen Star*, by entering the command CTRL-KZ. For no specific reason, I prefer to run *Spell* from the command line where the two options are D, display all misspellings and the correct spelling; and P, the prompted mode that displays each misspelling and prompts if you would like to replace the misspelled word with its correct spelling. The latter option is

to be preferred since there are always some words that are correct but a spelling checker might change. Of course, with this option you must remain at the computer in order to tell *Spell* whether it should replace each word that it finds with the correct word from the dictionary.

Also provided with the *Smart Speller* is a dictionary editor, *Edict*, which will allow you to add or delete words within the limit of 25,000 words. This is a menu-driven program that provides easy editing of the dictionary.

“Text provides a wealth of commands to meet almost any printing situation.”

I ran *Spell* several times during the time spent with the *Screen Star* package and found no problems. It works especially nice if you have a two-disk system since you can place the new copy on the second drive.

Now that you have entered and edited a text file with *Screen Star* and checked the spelling with *Spell*, it is time to print the file. You will recall in the beginning of this review, I mentioned that *WordStar* and its clones consist of two programs, the screen editor and the text formatter. This approach is quite different from that of most RS-DOS word processors, in which the setup for the printed page is done within the word processor, usually from a menu. In the *WordStar* approach, text formatting commands are embedded in the text file using the screen editor.

Text formatting commands, often referred to as dot commands, consist of a period followed by two letters that identify the command function. Each command must be placed at the beginning of a line; otherwise, *Text* will print the line as part of the text. A number of the commands have arguments that are entered on the same line following the command. For example, the command .SP causes one blank line to print whereas .SP 3 causes three lines to print. *Text* provides a wealth of commands to meet almost any printing situation.

Besides commands for text formatting, there are commands for setting up the printer, inserting data or text from other files such as mail merge files,

stopping the printer to directly enter text from the keyboard, and macro capability. This last capability is very important since it allows the user to create specific sets of instructions for special formats. A very good example, which is provided in the documentation, is a macro for creating footnotes at the bottom of a page. Anyone who has ever typed a term paper knows quite well the problem of allowing enough space at the bottom of the page to type the footnotes. With the footnote macro, all you have to do is type .BF when you enter the footnote reference in the text. This command is then followed by the actual reference citation. When *Text* begins processing the file to the printer, it will save all references encountered and print them at the bottom of the next page. In this way you let the computer take care of calculating needed space for footnotes.

There is a lot of powerful capability that will meet almost any type of page formatting. It will take time to learn all the options as well as the interactions of all of the commands; however, the effort will be well worth it. For those who plan to do simple word processing such as letters and documents, you will only need a few commands such as the margins, line spacing and perhaps some printer format commands. Also, many of the commands have defaults that meet most conditions. This review used only the centering command and relied on the default settings.

Overall, the combined package of *Screen Star*, *Spell* and *OS-9 Text Formatter* makes a very good word processing package. The price for the combined package is reasonable, especially considering the capability provided. I do have reservations about the *Screen Star* editor with regard to speed. Since I use a word processor almost on a daily basis, with a lot of formatting that I want to see onscreen as opposed to the printed page, I would rate the editor as fair. The user should always take into consideration such factors as cost, expected usage and any special needs before buying any word processor. However, no matter what your likes or dislikes, this package provides the capability to meet all home computer needs.

(Computerware, 4403 Manchester Ave., Suite 102-Box 668, Encinitas, CA 92024, 619-436-3512; *Screen Star*, \$49.95; *OS-9 Text Formatter*, \$34.95; both \$74.95)

— Donald Dollberg

The following products have recently been received by THE RAINBOW, examined by our magazine staff and issued the Rainbow Seal of Certification, your assurance that we have seen the product and have ascertained that it is what it purports to be.

Assembly Language Programming for the CoCo 3, a book that describes the CoCo 3 enhancements and how to use them with assembly language. This is a continuation of the book *Assembly Language Programming for the TRS-80 Color Computer*. *Tepco, 30 Water Street, Portsmouth, RI 02871, (401) 683-5312; \$12 plus \$1 S/H.*

Color Max 3, a 128K graphics editor that allows use of 16 colors in 320-by-200 resolution. Features icons, pull-down menus and dialog boxes. For the CoCo 3. *Computize, Inc., P.O. Box 207, Langhorne, PA 19047, (215) 946-7260; \$59.95.*

DeskMate 3, an integrated package of seven personal productivity applications: Text, Ledger, Index Cards, Paint, Telcom, Calendar and Calculator. Text, Ledger and Telcom permit the use of either 40 or 80 columns. For the CoCo 3. *Tandy Corporation, 1700 One Tandy Center, Ft. Worth, TX 76125; \$99.95. Available in Radio Shack stores nationwide.*

GrafFind, a disk utility that lets you view, transfer, rename, and kill standard graphics files. For the CoCo 1, 2 and 3. *RainyDay Software, 10625 SE 362nd, Sp. B-32, Boring, OR 97009, 503-663-7160; \$10.*

Iron Cross: War in Russia, a 64K war game for the armchair general. The German invasion of Russia began on June 22, 1941. The object of this program is to defeat the Russian forces controlled by the computer to take control of the Russian cities. For the CoCo 1, 2 and 3. *Computerware, Inc., 4403 Manchester Avenue, Suite 102,*

Encinitas, CA 92024, (619) 436-3512; \$24.95.

Mickey's Space Adventure, a 64K Adventure game for ages 8 and up. Join Mickey and Pluto on a journey through the solar system in their quest to help friendly aliens recover lost pieces of a valuable memory crystal. For the CoCo 1, 2 and 3. *Sierra On-Line, Coarsegold, CA; \$34.95. Available in Radio Shack stores nationwide.*

MLBASIC Revision 2.0, a 128K enhanced BASIC compiler that allows users who are unfamiliar with machine language programs to create a machine language program from a BASIC program with little or no effort. For the CoCo 3. *WasatchWare, 7350 Nutree Drive, Salt Lake City, UT 84121, (801) 943-6263; \$69.95 CoCo 2, \$49.95 CoCo 3 plus \$4 S/H.*

PYRAMIX, a 128K arcade game. The object is to hop Kubix — a short, roundish little guy with a long snout — on the tops of the blocks that make up

the pyramid. Your goal is to change all the blocks in the pyramid to the same color and move on to a higher level of play. For the CoCo 3. *Dr. Preble's Programs, 6540 Outer Loop, Louisville, KY 40228, (502) 966-8281; \$24.95.*

Robot Odyssey 1, a 64K educational program that helps develop skills in logical problem-solving, abstract reasoning and creative thinking. Design robots, navigate invisible mazes, solve puzzles, and sneak past sentries to unlock the secret exit from Robotropolis. For the CoCo 1, 2 and 3. *The Learning Company, 545 Middlefield Road, Menlo Park, CA 94025, (800) 852-2255; \$34.95. Available in Radio Shack stores nationwide.*

TW-80, an 80-column enhancement for *Telewriter-64* with *Telepatch* using the F1 and F2 keys to access the main menu or editor. Includes new fonts and print spooler. For the CoCo 3. *Spectrum Projects, P.O. Box 264, Howard Beach, NY 11414, (718) 835-1344; \$39.95 plus \$3 S/H.*

F First product received from this company

The *Seal of Certification* program is open to all manufacturers of products for the Tandy Color Computer, regardless of whether they advertise in THE RAINBOW.

By awarding a *Seal*, the magazine certifies the product does *exist* — that we have examined it and have a sample copy — but this *does not* constitute any guarantee of satisfaction. As soon as possible, these hardware or software items will be forwarded to THE RAINBOW reviewers for evaluation.

— Judi Hutchinson

WRITEST

Editor:

I would like to update the information on my program *WRITEST* as reviewed by Mel Siegel (January 1987). As a result of his comments, the program has been condensed twice, for a gain of about 5K, so it now handles a CLEAR4500 rather than the 1500 for Version 1.0.

The edit feature has been reworked twice and is being touched up a bit more. It is very similar to the EDIT in the CoCo's Extended BASIC, but slower, due to the use of BASIC programming.

Filing now includes an append feature so two files from the same section can be combined. For those with non-Radio Shack recorders, MOTORON and MOTOROFF can be controlled from the file menu.

Auto-wordwrap no longer wipes out following lines, but appends them. Line spacing can be set and changed within the "line processor."

For those with a memory problem, a split version of the program is sent direct (disk and tape). The program is available on disk (RS-DOS or JDOS) with cassette filing for merge. The program is now available for Tandy DMP-130 and similar printers, for the Star Gemini 10 and similar printers, as well as for the original Epson Graftrax.

I will continue to send the program at my duplication and mailing costs (\$3) and rely on the buyer to be conscientious enough to subse-

quently send me fair value for what it is worth to him/her.

Darryl L. Petrak
House, NM

Backup and Backup III

Editor:

In your review of *Backup* and *Backup III* (July 1987), Dale Shell stated that he would like to be able to use the utilities on multiple drive systems. The programs were intended primarily for single-drive users but can be modified for two drives with the following patches:

Backup:

```
10 CLEAR1000: DSKI$0,16,1,
  A$,B$: DSKI$0,16,2,C$,
  D$:MID$(B$,94,1)=CHR$(
  33):MID$(B$,116,1)=CHR$(
  1):MID$(C$,67,1)=CHR$(
  33):MID$(D$,75,1)=CHR$(
  1):DSKO$0,16,1,A$,B$: DSKO
  $0,16,2,C$,D$
```

Backup III:

```
10 CLEAR1000: DSKI$0,16,1,
  A$,B$: DSKI$0,16,2,C$,
  D$:MID$(B$,123,1)=CHR$(
  33):MID$(C$,30,1)=CHR$(
  1):MID$(C$,118,1)=CHR$(
  33):MID$(D$,126,1)=CHR$(
  1):DSKO$0,16,1,A$,B$: DSKO
  $0,16,2,C$,D$
```

Enter the proper patch and run it with a backup copy of your utility in Drive 0. (Don't use it on the original — a typing mistake will

destroy the program!) The patches change the destination drive to Drive 1.

Carl England
Brainchild Software
Calhoun, GA

Telewriter 64

Editor:

In the August 1987 issue of *RAINBOW* is a review of *Telewriter 64*. It states that *TW-64* "defaults to the Insert mode rather than to the Overstrike mode . . . besides, you can select the overstrike mode, if you prefer, with a simple keystroke."

I have searched through the instruction manual and can find no reference to Overstrike mode nor a simple keystroke.

I would appreciate your telling me how to initiate an Overstrike mode for making corrections in text.

Ralph C. McCormic
Keno, OR

Editor's Note: You are quite correct in your observation concerning the Insert mode (TW-64). The review was supposed to point out that Telepatch or Ultra Telepatch defaults to the Insert mode. In these programs you simply press CLEAR-O for overstrike.

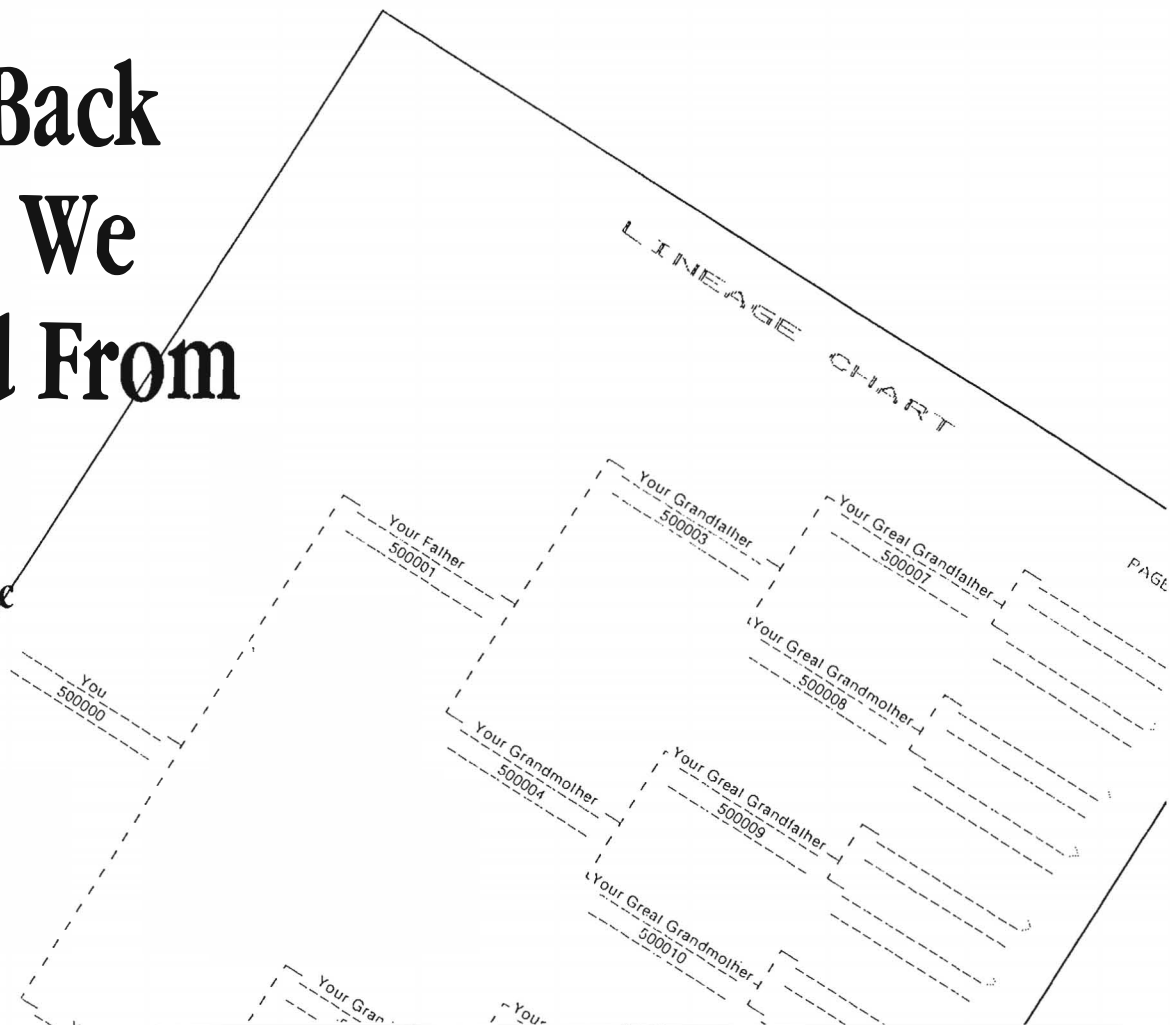

We're sorry for the inconvenience this may have caused you and appreciate your calling this error to our attention.

Right Back Where We Started From

Part II

By Brian LeBlanc

Last month, we presented the first part of the *Genealogy* program — the part that generates family information sheets. Now that you have gathered data from your family members, it's time to enter that information into the computer and generate a lineage printout.

Load the **FAMILY** program and insert a newly formatted data disk. **FAMILY** creates two files on this disk. The first file, **NAMES**, contains the first eight entries on a family history information page, plus the data location on the **DATA**

Brian LeBlanc is a licensed industrial electrician and a qualified electronics technician. He troubleshoots and repairs industrial computers and programmable controllers. Brian holds eight diplomas from various computer courses, and he lives in Digby County, Nova Scotia.

file. The second file, **DATA**, holds a complete record for each family member.

After 50 records have been entered, the program will prompt for a new data disk. Disregarding this notice could cause a system crash, and some or all of the data on the disk could be lost.

Entering Data

When entering data, try having the family members information close at hand to avoid undue errors. If a **DATA** line has more than 28 characters, the excess will be cut off. The first three entries on the first page (i.e., last name, first name, middle name) *must* contain names or, if the names are not known, a letter must be inserted for the program to continue.

The lineage number can be any number from 1 to 99,999,999. (See the lineage chart for possible uses.) The

generation, baptized date, birth date and death date can be any number from 1 to 99,999,999. The above notes will only accept numbers.

When entering dates, it is imperative that they are entered as year, month, day; they do not contain any spaces or commas, and they contain eight digits. As an example, January 5, 1987, would be 19870105.

When all the data has been entered, you can skip to the end of the routine by pressing L for Last Entry. You then have two choices: aborting (press M to abort and return to the menu), which will erase all entered data; or saving data (press S to save on disk), which will ask if the proper disk is in the drive (the proper disk being any initialized disk).

After the data has been saved on disk, you can either press E to enter more data or press M to return to the menu.

Searching Data

Trying to search an empty disk will cause an error and prompt you to return to the menu. The program will search for a full name or part of a name. As an example, entering P for Last Name will display all last names beginning with P.

You can search for a specific birth date: all birth dates up to and after a specific date, and those between two specific dates. You can also search for a specific death date: all death dates up to and after a specific date, and those between two specific dates. The screen

will show how many matches were found in the file.

When displaying a searched record, press the space bar to display the next page. When changing a searched record, press the space bar. Display the next page. Pressing C will put the cursor on the top of the page, pressing the down arrow will lower the cursor one line at a time, and pressing the left arrow or right arrow will erase the current DATA line and put the cursor at the beginning of the line.

After the data has been entered, pressing ENTER will place the cursor at the left of the page. To continue down the page, press the down arrow key. When the cursor reaches the bottom of the page, the next page will be displayed.

For example, to change the birth date of John Doe:

- 1) Call up the Search routine.
- 2) Enter DOE for the last name.
- 3) Enter JOHN for the first name.
- 4) Press ENTER until the cursor reaches the bottom of the page.
- 5) Press S to begin the Search.
- 6) Press I (display record) to verify that the correct record has been found.
- 7) Press the space bar until the menu is displayed.
- 8) Press 5 (change record).
- 9) Press C to begin the data Change routine.
- 10) Press the down arrow until the

- cursor is opposite the birth date.
- 11) Press the left arrow or right arrow to put the cursor on the old data.
- 12) Enter the correct data and press ENTER.
- 13) Press the down arrow until the cursor reaches the bottom of the page.
- 14) When the next page is displayed, press the space bar to scroll pages.
- 15) At the Screen prompt, press S to save the data on disk.

Printouts of Records

Pressing 2 (printout complete record) will ask you to make sure the top of the printer paper is flush with the tractor feed cover. Pressing P will cause the printer to scroll through one page and begin printing the record on the second page. And, pressing 3 (printout partial record) will print the first page only.

Record printouts consist of two pages. Page 1 contains the first three screen pages and Page 2 contains the remaining two screen pages.

The printer I used is the Tandy DMP-105. You may have to adjust lines 1730 and 4230 for your printer to adjust the start position of printing on the paper.

(Questions about this program may be directed to the author at RRI Church Point Box 67-B, Digby County, Nova Scotia, Canada B0W1M0. Please enclose an SASE when writing for a reply.) □

J&R ELECTRONICS

Easy, Solderless Installation

“JramR”

512K COCO 3 Memory Expansion Board. Upgrades stock 128K COCO 3 to full 512K for OS9 Level II. Similar to RS upgrade.

Now pardner...reach for your

SIXDRIVE!

With purchase of a BANKER II or JramR you can have a #9008 **SIXDRIVE**

for only **\$995**

SIXDRIVE is a machine language utility that modifies Disk Extended Basic 1.0, 1.1, or FKEYS III to allow the use of 3 double sided drives as 6 single side drives without **ANY** hardware modifications.

FEATURES two different drive select assignments:

(1) [0,2] [1,3] [4,5] (2) [0,1] [2,3] [4,5]

Ramdisk is compatible with GIMMESOFT's SIXDRIVE

Made in U.S.A. Complete Hardware & Software

COCO 3 ONLY

#1010	\$39.95	JramR bare board plus connectors and software
#1011	\$79.95	JramR kit includes all parts plus memory chips and software
#1012	\$99.95	JramR assembled and tested plus memory chips and software
#1013	\$19.95	JramR SNW deluxe customizable ramdisk & spooler, memory test, and ramdisk utility programs. Compatible with all CoCo 3 512K JramR 0K bytes (#1012 less memory chips)
#1014	\$49.95	

Readily available: User Replaceable Socketed Memory Chips, no hard-to-find SIP memories.

To place an order, write to J&R Electronics, P.O. Box 2572, Columbia, MD 21045. OR call (301) 987-9067—Jesse or (301) 788-0861—Ray.

HOURS: Weekdays 7 p.m.-9 p.m.; Sat. Noon-5 p.m. EASTERN TIME, usually, if no answer try later.

Add \$4.00 shipping & handling (FOREIGN ORDERS \$7.00), COD charge \$3.00. Maryland residents add 5% state tax. Foreign orders must include payment on U.S. bank.

CHECKS, MONEY ORDERS OR COD's only please (personal check—2 weeks for clearance), IMMEDIATE DELIVERY. Give COCO Radio Shack model #(i.e. 26-3136). Disk or Tape when ordering.

QUANTITY DISCOUNT AVAILABLE. For information on shipping or previously placed orders call (301) 788-0861. COCO II 26-31XX owners call (soldering experience may be required).

Refer to back issues of RAINBOW for other products.

SPECIAL DEAL ON 500 PROGRAMS!

GET 50 DISKS OR 50 CASSETTE TAPES FULL OF OVER 500 PROGRAMS. HERE IS WHAT YOU'LL RECEIVE:

- * Over 250 Utility/Home Application Programs including a Word Processor, DataBase, Spreadsheet, Account Manager, 2 Basic Compilers, Terminal Programs, ROM Copies, Mail List, Machine Language Tutorials, Plus Much More!
- * Over 200 exciting games including Warlords, Star Trek, Super Vaders, Solar Conquest, Horse Races, Football, Baseball, Frog Jump, Invader, Plus Much More! (Many machine language games)
- * Over 30 adventures including The College Adventure, Dungeon Master, Space Lab, Ice World, Ship Wreck, Zigma Experiment. Plus 32K Graphic Adventures.

EACH INDIVIDUAL ISSUE SOLD FOR \$9.00 EACH OR \$450 FOR ALL 50 ISSUES. WE SLASHED THE PRICE TO ONLY 150.00.

REG. \$450

NOW \$150.00

★★ THIS MONTH ONLY ★★

Buy this package of 500 programs and receive a free 6 month subscription. (A \$35 value)

Available on COCO 1, 2 and 3!
All Programs Include Documentation!

THE GREATEST SOFTWARE DEAL ON EARTH JUST GOT BETTER!

THAT'S RIGHT! THIS MONTH WE'VE DROPPED OUR YEARLY SUBSCRIPTION RATE AN UNBELIEVABLE \$10.00 TO ENTICE YOU INTO SUBSCRIBING WITH US. GET 12 DISKS OR TAPES A YEAR CONTAINING OVER 120 QUALITY PROGRAMS. A SUBSCRIPTION TO T & D SOFTWARE CONSISTS OF 10 READY-TO-LOAD PROGRAMS DELIVERED BY FIRST CLASS MAIL EVERY MONTH.

NO WE ARE NOT THE SAME AS THE RAINBOW ON TAPE. IN FACT, MANY SUBSCRIBERS HAVE WRITTEN IN AND SAID THAT WE ARE MUCH BETTER THAN RAINBOW ON TAPE!

**" I cannot imagine the CoCo 3 without ADOS-3;
it would not be a complete machine."**

The RAINBOW, July 1987

You've moved up to a CoCo 3. A powerful new machine. Now, it's time to give BASIC a shot in the arm, with ADOS-3. Wouldn't it be nice to turn on your machine and be greeted by an 80-column display, in the colors of your choice, with your own custom startup message? To run routinely at 2 MHz (double speed) without having to slow down for disk and printer operations? This and much, much more is possible with ADOS-3, our CoCo 3 adaptation of the acclaimed original ADOS, which shares the original's virtual 100% compatibility with commercial software. After customizing ADOS-3 using the provided configuring utility, you can have it burned into an EPROM that plugs into the Disk BASIC ROM socket, or just use it in RAM as a disk utility. (EPROM + burning will cost \$15-20; we provide information concerning how you can have this done.) Supports double-sided drives (35, 40, or 80 tracks). FAST and SLOW commands, auto line number prompts, RUNM command, keystroke macros, arrow-key scroll through BASIC programs, auto-edit of error line, and many more valuable features.

"ON A SCALE OF 1 TO 10, I RATE ADOS-3 A SOLID 15." RAINBOW, 7/87

Disk \$34.95 Original ADOS for CoCo 1 or 2 \$27.95 (See 6/87 RAINBOW review)

THE PEEPER

ML program tracer that multitasks with the target program. An excellent learning tool for the ML novice; an invaluable debugging aid for the expert. CoCo 1, 2, or 3 compatible.

◀◀ GIMMESOFT ▶▶

A new generation of CoCo III software

FKEYS III (CoCo I/II/III)

A user friendly, user programmable function key utility that creates up to 20 function keys. Other features include an EDITOR, OOS mods, and DISABLE. Comes with an enhanced CoCo III version and it's EPROMable. (See April '87 review)

Disk (latest version)..... \$19.95

■ Multi-Label III

(CoCo III only)

An easy to use, versatile label creating program including many new CoCo III features. Even if you already own a label program, this one's a must for the III!

(See July '87 review) Disk..... \$16.95

Custom Palette Designer

(CoCo III only)

Easily alter the contents of any palette without having to remember numbers or colors! Once configured, all sixteen palettes can be saved to disk as a single subroutine which may then be used in a basic program.

(See Aug. '87 review) Disk..... \$19.95

Technical assistance: 7pm to 9pm
Orders: 9am to 9pm Eastern time
On-line orders: Delphi's CoCo Sig

SIXDRIVE (Coco I/II/III)

This machine language utility modifies DECB 1.0, 1.1, or FKEYS III to allow the use of 3 double-sided drives (or 2 double-sided drives and **J & R'S RAMDISKS**) as 6 single-sided drives without ANY hardware mods.

Includes 2 selectable drive assignments and it's EPROMable.

Disk..... \$16.95

With purchase of FKEYS III \$12.95

With purchase of any JramR \$ 9.95

JramR 512K Upgrade

(CoCo III only)

#1010 JramR bare board, connectors, and software \$39.95

#1014 JramR assembled and tested with software, without memory chips \$49.95

#1012 JramR assembled and tested with software, 512K memory \$99.95

(See June '87 review)

▶▶ PYRAMIX ◀◀ (CoCo III only)

Experience brilliant colors, sharp graphics, and hot action in this super machine language arcade game! \$24.95

Now Create Your Own Signs, Banners, and Greeting Cards.

Introducing The Coco Graphics Designer

Last Christmas we introduced our COCO Greeting Card Designer program (see review April 86 Rainbow). It has been so popular that we've now expanded it into a new program called the COCO Graphics Designer. The Coco Graphics Designer produces greeting cards plus banners and signs. This program will further increase the usefulness and enjoyment of your dot matrix printer.

The Coco Graphics Designer allows you to mix text and pictures in all your creations. The program features picture, border, and character font editors, so that you can modify or expand the already built in libraries. Plus a special "grabber" utility is included to capture areas of high resolution screens for your picture library.

Requirements: a Coco or Coco II with a minimum of 32K, One Disk Drive (Disk Ext. BASIC 1.0/1.1, ADOS, or JDOS). Printers supported include: Epson RX/FX, GEMINI 10X, 8C-10, NX-10, C-Itoh 8510, DMP-100/130/400/430, Seikosha GP-100/260, Legend 808 and Gorilla Bannana. Send a SASE for complete list of compatible printers.
#C332 Coco Graphics Designer \$29.95

Over 100 More Pictures

An optional supplementary library diskette containing over one hundred additional pictures is available.

#C333 Picture Disk #1 \$14.95.

Colored Paper Packs

Now available are packs containing 120 sheets of tractor-feed paper and 42 matching envelopes in assorted bright RED, GREEN, and BLUE. Perfect for making your productions unforgettable.
#C274 Paper Pack \$19.95

With Zebra's Coco Graphics Designer it's easy and enjoyable making your own greeting cards, signs, and banners.

NEWS FLASH! CGP-220 and DMP-105 NOW SUPPORTED

As of June 1, 1987 we are shipping version 2.3 of the CoCo Graphics Designer. This version includes drivers for the CGP-220 and DMP-105 printers, and improved menu dialogs for single disk drive users. By the time this issue appears in print we will probably also have added Okidata printer drivers - check with us if you have an Okidata.

Ordering Instructions: All orders add \$9.00 Shipping & Handling. UPS COD add \$3.00. VISA/MC Accepted. NY residents add sales tax.

Understanding Verb Use

By Fred B. Scerbo
Rainbow Contributing Editor

Editor's Note: If you have an idea for the "Wishing Well," submit it to Fred c/o THE RAINBOW. Remember, keep your ideas specific, and don't forget this is BASIC. All programs resulting from your wishes are for your use, but remain the property of the author.

I'd like to offer my thanks to all of you who sent letters of encouragement with suggestions on new educational programs. Judging from my mail, many of you have enjoyed our *Life Skills* series as well as our newer series on *How Your Body Works*.

I regret that I cannot offer individual responses to your kind letters; however, I am sure all of you would rather I spent what little time I have available for programming rather than for corresponding, especially when many requests for help with program bugs are simply a result of incorrect typing.

With your letters and suggestions in mind, I am presenting a slightly differ-

Fred Scerbo is a special needs instructor for the North Adams Public Schools in North Adams, Massachusetts. He holds a master's in education and has published some of the first software available for the Color Computer through his software firm, Illustrated Memory Banks.

ent educational program this month, titled *Conjugate Instructor*. It will help with some English grammar skills that are too often neglected by software writers: the sometimes confusing skill of conjugating verbs, both regular and irregular. This program will allow you to study the various forms of the verb "be" as used in the present, past, future, present perfect, past perfect and future perfect tenses. The best part of *Conjugate Instructor*, unlike some other "Wishing Well" programs, is that you add absolutely *nothing* to it in terms of data. The program is designed to generate its own text sample sentences. The random possibilities are great, in fact. With all of its features, it is designed to keep from constantly repeating the same examples and, hence, boring you to death.

Why Verbs

About four years ago I listed a program in our second "Wishing Well" called *VerbQuiz*, which dealt with irregular verbs in the present, past and past participle. It was a relatively simple program that required you to supply the three forms of any irregular verbs you wanted to have the program quiz. You would then store these verbs in DATA statements at the end of the program, which would generate sentences such as:

Today I eat it.
Yesterday I ate it.
I have eaten it many times.

The verbs you selected would fit into sample sentences such as the ones above. While the program is a valuable tool in grammar education, it is limited to using irregular verbs (i.e., verbs that change in each of their tenses). There is little sense in using verbs that do not change in their written form, such as:

Today I read it.
Yesterday I read it.
I have read it many times.

As you can see, all the responses would be the same. I have always wanted to go one step further, but I haven't really had the need to develop any new English programs, since for most of the last few years I have been teaching either math or, more recently, science and history to my students.

Some readers suggested I develop more programs along this line, but the spark just wasn't there. This summer, things changed a bit. A good friend asked me to tutor her son, Kevin, during the summer in both math and English. In fact, Kevin is an average student. His mother just wanted him to get a little help before returning to school in the fall for his final year in middle school.

As part of Kevin's work, I dug up the old *VerbQuiz* and let him work with it. As you all know, since necessity is the mother of invention, the stimulus I needed to create a new English grammar program was no longer lacking. Therefore, Kev, this one's for you!

TOM MIX'S MINI-CATALOG

*Flight 16

Our very newest flight simulator. A full instrument aircraft that features the following:

- Works with all COCO's
- Realistic flight controls
- Flight editor included to change flight parameters
- Design your own airports and flight areas
- Flies like Cessna 150
- Full graphics & sound

Joysticks Required \$34.95

Specify Tape or Disk

*Worlds of Flight Small Plane Simulation

Real-time simulation generates panoramic 3-D views of ground features as you fly your sophisticated plane in any of nine different "worlds." Program models over 35 different aircraft/flight parameters. Realistic sound effects too! Manual included helps you through a typical short flight.

32K Machine Language

Joysticks Required \$34.95

Specify Tape or Disk

*Goldfinder

Here's the quality you've come to expect from TOM MIX. Endless possibilities await you in this exciting new creation. Move over Goldrunner and Loderunner, here comes GOLDFINDER

32K & Joysticks Required Disk \$22.95

- * **Dragon Slayer**—Defeat the dragon by finding your way through a mountain maze. Gather treasure but avoid the deadly traps! 160 exciting screens.

32K & Joystick or Keyboard
Disk \$24.95

- * **Sailor Man**—Defeat the bigfatbadguy and win Elsie's heart. Super graphics.

64K \$27.95

- * **The King**—

32K \$27.95

- * **Draconian**—

32K \$22.95

- * **Ms. Maze**—

32K \$22.95

- * **Kater Pillar II**—

16K \$22.95

- * **Warehouse Mutants**—

16K \$21.95

- * **Buzzard Bait**—

32K \$22.95

All Above Specify Tape or Disk

*COCO 3 Compatible

TOM MIX SOFTWARE

P.O. Box 201
Ada, Michigan 49301
616/676-8172

NOVASOFT

A Tom Mix Company

*Wizard's Den

Another of our outstanding graphic adventures! You must recover the Gem of Damocles stolen by the Evil Wizard and hidden in his den. Dare to fight your way through eight levels of mazes and dangers. But beware the Wizard's magic. He can make you see things that don't exist! Don't stray from the path or it's certain death!

64K Joystick or Keyboard \$22.95

Disk only

*P-51 Mustang Attack/Flight Simulation

The ultimate video experience! Link two CoCo's together by cable or modem, and compete against your opponent across the table OR across the country! (Both computers require a copy of this program). The P-51 flight simulator lets you fly this WWII attack fighter in actual combat situations against another player, OR a non-combatant computer drone.

32K Machine Language

Joysticks Required \$34.95

Specify Tape or Disk

Educational

- * **Teachers Database II**—Allows teachers to keep computerized files of students. Recently updated with many new features!

- Up to 100 students, 24 items per student
- Many easy-to-follow menus
- Records can be changed, deleted, combined
- Statistical analysis of scores
- Grades can be weighed, averaged, percentaged
- Individual progress reports
- Student seating charts
- Test result graphs/grade distribution charts

64K TDBII \$59.95 Disk Only

32K TDB \$42.95

*Video Cards & Keno

(Color III Only)

Four outstanding games on one disk: Poker, Jokers Wild, Blackjack and Keno! So real you expect Wayne Newton to walk by! Never before have you seen such excellent graphics and realistic movement as that created in this package. Wanna Bet?

\$29.95, Disk only

Also available — Vegas Slots* (Color III only) — Same outstanding graphics! Seven of the most popular slot machine games found in Vegas.

Keyboard or joystick \$34.95

Disk only

- Many more titles—write for free catalog!

Ordering Information

- Call us at 616/676-8172 for Charge Card orders
- Add \$3.00 postage and handling
- MI residents add 4% sales tax
- Authors—We pay top royalties!

The Program

Conjugate Instructor, unlike *Verb-Quiz*, is designed to be instructional as well as a quiz program. It is written entirely with Color BASIC commands, so it should work on the Color Computer 1, 2 and 3. (It should even work on the MC-10 with 20K, but I have not had a chance to test it out on that machine. Any of you with an MC-10 are welcome to try it; you will have to change the -TIMER command to -9999.)

This program uses quite a few multi-dimensional arrays to store the various tenses and sentence fragments. By generating random numbers to select the arrays, it can create an endless number of sentences with different tenses, openings and endings.

One drawback is the time it takes to set up these arrays. I have included a PLEASE STAND BY screen so you do not think your computer has locked up. There is quite a bit of data to read in, and each verb is also recreated in an inverse video form so you can obtain a flashing effect on the screen.

When typing in the program, you will notice some lowercase letters in the listing. To type these in on your CoCo, press SHIFT-0 to get into lowercase. The letters will appear as inverse video on the screen. Press SHIFT-0 again to return to uppercase. (This may be old hat to most of you, but I have to assume we may have a few new CoCo users out

there who do not know these little tricks. I always get a few letters about these simple things each month.)

Running the Program

Upon running the program, you will be asked if you want to review (R) or quiz (Q). If you press R, the program will present an explanation of each of the tenses with the correct use in each person, both singular and plural. Pressing ENTER will advance you to each new screen. At the end of the review, the program will return to the start so you may go through the review part again if you want.

If you press Q, the program will then ask you to select a difficulty level, 1 through 6. The levels correspond to the various tenses in order:

- 1) Present
- 2) Past
- 3) Future
- 4) Present Perfect
- 5) Past Perfect
- 6) Future Perfect

After selecting a level, you will be asked if you want to have the levels assorted. If you press N for no, the program will quiz you only on the level you selected. If you press Y for yes, then the program will jumble the tenses up to the level you selected.

After making this choice, the program will ask you to PLEASE STAND BY.

The screen will next read something like:

STATEMENT NUMBER 1.

HOW WOULD YOU CONJUGATE <BE>
IN THE PRESENT TENSE?

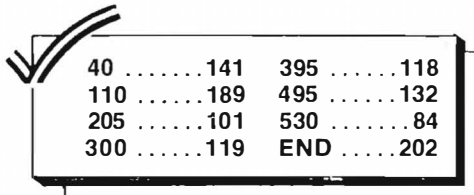

HE SITTING QUIETLY
NOW.

YOUR ANSWER=>

You must type in your response exactly as it should fit into the blank. The screen will inform you whether your answer is correct or incorrect. In either case, the sentence will be reprinted on the screen with the correct answer flashing in the sentence. This serves as a good visual indicator. You may continue to the next problem by pressing ENTER. To check your score, press the (@) key. The score card will then come up on the screen. To continue with the program, press C. You may rerun the program by pressing Y for yes or end by pressing N for no. You may do as many problems as desired.

Conclusion

This program was valuable to me in my work with Kevin. I hope you will let me know what you think of it and will also come up with some suggestions on how we can take this type of program even further. □

DOWNLOADS

A Case of CD's and WORMs

By Dan Downard
Rainbow Technical Consultant

Since the introduction of the compact disc player, I have wondered if it would be possible to record programs and data on a CD. With the price of CD players at \$200, would they work as fast as a disk drive or faster than my slowpoke cassette recorder? Would it cut down on annoying I/O Errors?

Andy Bailey
Madison, WV

Andy, you have the makings of an electronic pioneer. In fact, CDs are the upcoming technology for storage media, but at present there is no way to write to a CD. The CD players you are referring to are "play" only. Equipment to cut the masters for these CDs is very expensive.

Fear not, though, the latest technology is the WORM. A WORM is a "write once" memory disc that is coated with an organic dye. Once you write to it, you can read it as many times as you like. The problem with these drives is that they are extremely expensive, as a small system starts at around 10 gigabytes. Maybe you can use that much storage space for your library, but I can't imagine needing one for my CoCo.

Assembling Low Memory

I have a CoCo 3 with a disk drive and I recently purchased Disk EDTASM

Dan Downard is an electrical engineer and has been involved in electronics for 27 years through Ham radio (K4KWT). His interest in computers began about eight years ago, and he has built several 68XX systems.

from Radio Shack. When trying to assemble an 800-byte program (position independent), I got "bad memory" errors below H5600, but it assembled fine above that address.

It seems, after some experimentation, that the object code interferes with the source code below this address. I am afraid that for larger programs, I will have to assemble at even higher addresses, leaving little RAM for my program. Do I need a different assembler for the CoCo 3, or can you suggest a solution for using Disk EDTASM on this computer? Is there any way to access memory above \$FFFF using this, or other, assemblers?

David Harris
Utica, MI

David, you can't assemble programs in low memory due to conflicts with low RAM pointers in the CoCo. At the same time you don't have to assemble programs in memory. If you issue the command A without an IM, you will indeed assemble the program in the next free memory area available to your assembler program.

BBS Garbage

I have a CoCo 3 with a Multi-Pak Interface and one disk drive. I am attempting to use a Modem I-B with an RS-232 interface without success. I can dial onto the BBS, but I end up with complete garbage on the screen. What is my problem?

Richard A. Yehle
Sacramento, CA

Richard, make sure you have the baud rate of your software set to 300. The Modem I-B is only capable of 300 baud. Evidently, it is working, since you are at least getting garbage on your screen.

CoCo 3 Memory Capacity

I just bought my new CoCo 3. I typed PRINT MEM, and it said 22824 with my disk drive plugged in. Is something wrong with it? I thought you got more memory with a new CoCo 3.

Sean E. Bishop
Hazard, KY

Sean, my CoCo 3 has 512K in it and I get the same memory as you do. In fact, you must have OS-9 Level II to take advantage of the extra memory for programs. At present, though, you can use the extra memory for graphics. BASIC still limits you to 22K (if you don't PCLEAR1) for programs.

Your technical questions are welcomed. Please address them to: Downloads, THE RAINBOW, P.O. Box 385, Prospect, KY 40059. We reserve the right to publish only questions of general interest and to edit for space and clarity. Due to the large volume of mail we receive, we are unable to answer letters individually.

Your technical questions may also be sent to us through our Delphi CoCo SIG. From the CoCo SIG> prompt, pick Rainbow Magazine Services, then, at the RAINBOW> prompt, type ASK (for Ask the Experts) to arrive at the EXPERTS> prompt, where you can select the "Downloads" online form, which has complete instructions.

OS-9 PROGRAMMING

Using Compressed Files

By Peter Dibble

Compressed files are a wonderfully useless way to consume disk space unless you have a program to uncompress them. Fortunately, it is even easier to uncompress run length encoded files than it is to compress them. Unfortunately, it takes about as much time.

The compression program writes one-byte codes. Half of each code is a count and the other half is data. To uncompress the data, we just replicate it as many times as the count indicates.

There are some tricks you have to watch out for. First, since there is no such thing as a run of length zero, I replicate the data one more time than the count seems to call for (the compression program uses a count of zero to indicate a run length of zero). Second, since the data is only half a byte long (four bits), the program needs to build

Peter Dibble has a bachelor's degree in chemistry and is currently a graduate student in computer science. He has worked as an applications programmer, systems programmer and as the user services assistant directory for the University of Rochester Computing Center. With Dale Puckett, he is co-author of The Complete Rainbow Guide to OS-9 and the first volume of The Complete Rainbow Guide to OS-9 Level II.

bytes out of the data instead of just dropping it into an array.

To try the program, compress a win-

dow with SaveImage (from last month's article), then run GetImage. You might not get back the exact image

Editor's Note: The following procedures will be combined in one source file, UnPress, on this month's RAINBOW ON DISK.

Listing 1: GetImage

```
PROCEDURE GetImage
  0000    DIM FileName:STRING[99]
  000C    INPUT "Image file name: ",FileName
  0025    RUN unpress(FileName)
  002F    END
```

Listing 2: UnPress

```
PROCEDURE unpress
  0000    PARAM FileName:STRING[99]
  000C    DIM c:BYTE
  0013    DIM nyble:BYTE
  001A    DIM RunL:BYTE
  0021    DIM Path:BYTE
  0028    DIM buffer(7680):BYTE
  0034    DIM section,i,position:INTEGER
  0043    DIM LeftNyb:BOOLEAN
  004A    DIM WinType,horiz,vert:INTEGER
  0059
  006E    OPEN #Path,FileName:READ
  007A    section:=1
  0081    position:=1
  0088    LeftNyb:=TRUE
  008E    GET #Path,WinType
  0098    GET #Path,horiz
  00A2    GET #Path,vert
```

you saved. Since the compression program didn't save the palette, the original color won't be restored. The window type was saved in the disk file, but this program displays in the current window. OS-9 will convert the data to the new window type, but the conversion may not give you just what you expect. If you want more accurate reproduction, it would be easy to alter the GetImage program so it sets up a new window with the type from the file.

This decompression program and the compression program that goes with it were designed to compress Color Computer graphics windows. They won't work well for text or for modules. They don't really work very well as stand-alone programs, either. You have to run them in the window that you want to save, and running them messes up the image in the window.

The best way to save screens is by building the compression code into programs that need it. The compression and uncompression programs work on their own standard output path because working with another program's window can be almost impossible. If you want to save images from windows that aren't being used by any other program, you can make a slight modification to compress and use it to save images from any window.

Both the compression and the uncompression programs are too slow. They are good BASIC09 programs, but they just don't run fast enough. This is the time to use assembly language.

```

00AC      WHILE NOT(EOF(#Path)) DO

BARDEN'S BUFFER

From Flatland to 3-D

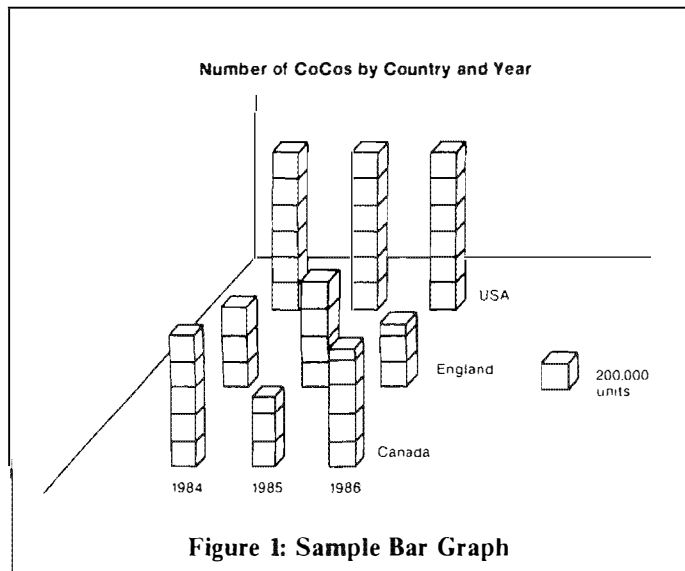

By William Barden, Jr.
Rainbow Contributing Editor

Holographic video would be great on the CoCo! Can't you imagine the Death Star exploding in space about five inches in front of your CoCo monitor? Better yet, Princess Leia imploring Obi Wan Kenobi to help her? Until that time, however, we're going to have to be content with two dimensions on the screen, like the creatures of Flatland that had only height and width.

Or will we? On reflection I thought it might make an interesting column to see just how difficult it is to implement three dimensions. Although I wouldn't mind a 3-D display of Carrie Fisher, I aimed my sights a little lower — 3-D bar graphs.

3-D Guns and Butter

I'm sure you've seen the type of thing I mean. They're usually displayed in the business section of your local newspaper or *USA Today* and show such things as countries on one axis, the year on another and number of computer systems on still another, as shown in Figure 1.

Bill Barden has written 27 books and over 100 magazine articles on various computer topics. His 20 years' experience in the industry covers a wide background: programming, systems analysis and managing projects on computers ranging from mainframes to micros.

I thought this would be an easy, short project. As it turned out, it *was* relatively short, but not all that straightforward. There are a lot of things to consider when converting Flatland graphs to three dimensions.

In the following discussion I thought it might be nice to use the powerful 640-by-192, four-color graphics of the CoCo 3. CoCo 2 readers should be able to modify the programs to work in the 256-by-192 mode without a great deal of trouble. We'll talk in terms of Extended Color BASIC and not BASIC09 to keep things simple.

A Graphic Review of Graphs

The CoCo uses an X,Y screen reference in graphics modes. There are 640 pixels in each row, numbered 0 through 639, and 192 pixels in each column, numbered 0 through 191. HSCREEN 4 sets the 640-by-192 mode, in which four colors can be used. The upper-left corner is pixel 0,0; the upper-right corner is pixel 639,0; the bottom-left corner is pixel 0,191; and the bottom-right corner is pixel 639,191 (see Figure 2).

This is not quite the same as common Cartesian coordinates, in which X increases to the right and Y increases toward the top of the graph, as shown in Figure 3. Cartesian coordinates (named after Rene DesCartes and not Hymie Descartes, as many think) are widely used in mathematics and other applications. Both a positive and negative X and Y region can be shown, and the graph can represent any range

of values. The center, or origin, of the graph is usually in the center of the viewing area.

There are two problems right off the bat:

- How can we convert to Cartesian coordinates?
- How can we make the axes (X and Y) represent any range of numbers?

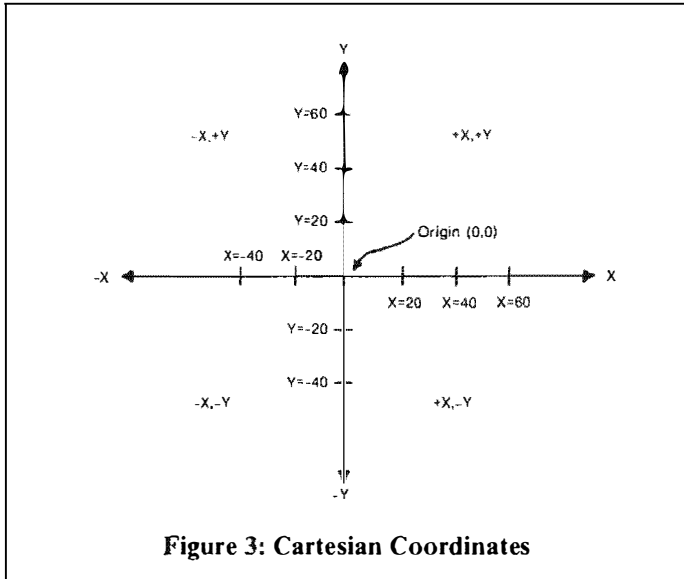

Figure 3: Cartesian Coordinates

Converting to Cartesian Coordinates

Suppose we make the center of the graph at X=320, Y=96. We can draw the X and Y axes by this code:

```
100 HSCREEN 4
110 HCLS
120 HDRAW "BM320, 96; NR319; NU95"
```

The resulting display is shown in Figure 4. HSCREEN sets the high resolution screen mode (the H prefix is used for all Hi-Res CoCo 3 commands) and HCLS clears the screen. The HDRAW subcommands move the graphics cursor to 320,96 (near screen center). Draw a line from screen center right 319 pixels to 639,96, and draw a line up 96 pixels to 319,0. The horizontal line is the X axis; the vertical line is the Y axis. The screen center represents X=0, Y=0.

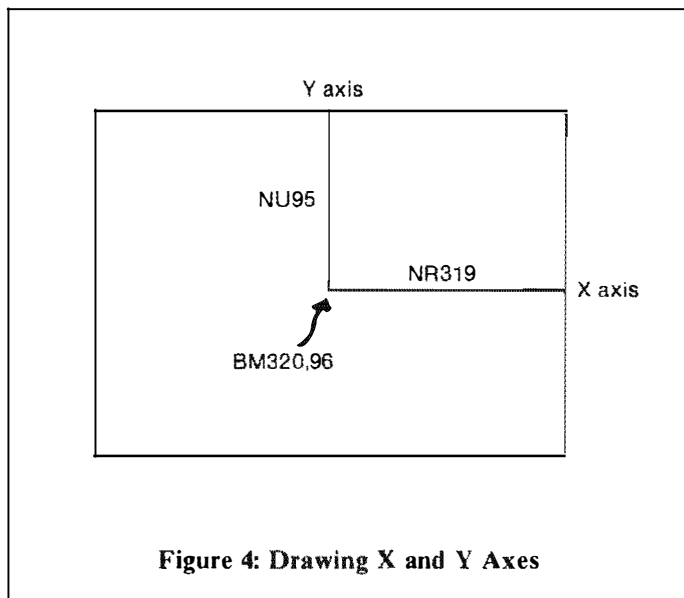

Figure 4: Drawing X and Y Axes

THE COLOR COMPUTER MONTHLY MAGAZINE

Back Issue Availability

For greater convenience, order RAINBOW Back Issues through the Rainbow Magazine Services area of our Delphi CoCo SIG.

BACK ISSUES STILL AVAILABLE

Have you explored the wealth of information in our past issues? From our very first, four-page issue to many with more than 300 pages of material, it's all just for CoCo users — a great way to expand your library!

A WORLD OF INFO AT A BARGAIN PRICE

All back issues sell for the single issue cover price. In addition, there is a \$3.50 charge for the first issue, plus 50 cents for each additional issue for postage and handling if sent by United Parcel Service. There is a \$5 charge for the first issue, plus a \$1 charge for each additional issue on orders sent by U.S. Mail. UPS *will not* deliver to a post office box or to another country.

MOST ISSUES STILL AVAILABLE

Issues July 1981 through June 1982 are available on white paper in a reprint form. All others are in regular magazine form. VISA, MasterCard and American Express accepted. Kentucky residents please add 5 percent state sales tax. In order to hold down costs, we do not bill, and no C.O.D. orders are accepted.

Due to heavy demand, we suggest you order the back issues you want now while supplies last.

To check availability and order, review and fill out the form on the next page and mail it with your payment to:

THE RAINBOW
The Falsoft Building
P.O. Box 385
Prospect, KY 40059

Scaling

The next problem is to scale the graph. As it stands, the graph can represent points whose X coordinate is 0 through 639 and whose Y coordinate is 0 through 191. We'd like the graph to represent points with different X and Y ranges. As an example, suppose that we wanted X to be -100 through +100 and Y to be -100 through +100, and in Cartesian coordinates. We'll call these the "real-world" coordinates.

On the screen, 320 horizontal pixels correspond to 100 real-world integers (or 640 pixels to 200 real-world integers), so each real-world X coordinate must be multiplied by 320/100, or 3.2.

On the screen, 96 vertical pixels correspond to 100 real-world integers, so the real-world Y coordinate must be multiplied by 96/100, or .96.

Converting the Origin

In screen coordinates, the origin of the graph is at X=0, Y=0 at the upper left-hand corner of the screen. In real-world coordinates, the origin is at screen center 320,96. After scaling, any real-world coordinate must be converted to screen coordinates by adding 320 to the scaled X coordinate and by subtracting the scaled Y coordinate from 96. For example, suppose the real-world coordinate is X=-20, Y=50. After scaling:

$$X = -20 * 3.2 = -64$$

$$Y = 50 * .96 = +48$$

Adjusting for the origins:

$$X_{screen} = -64 + 320 = 256$$

$$Y_{screen} = 96 - +48 = 48$$

The result is shown in Figure 5.

Figure 5: Converting from Real-World Coordinates to Screen Coordinates

A short program to plot three real-world points is shown below:

```

100 DATA 50,50,70,70,-10,-10
110 HSCREEN 4
120 HCLS
130 HDRAW "BM320, 96; NR319; NU95"
140 HSCREEN 0
150 READ X,Y
160 HCIRCLE ( ( X * 3.2 ) = 320, 96 - ( Y * .96 )
    ), 3
170 A$ = INKEY$: IF A$ = "" THEN GOTO 170 ELSE GOTO
150
    
```

Another point is plotted when a key is pressed. Each point is plotted as a small circle.

The codescales and converts points in two dimensions. But what about three dimensions?

From Flatland to 3-D

Let's add another axis to the graph above. It's called the Z axis and represents depth. Normally, this axis would appear as a point, because it would be coming out at a perpendicular angle to the screen, as shown in Figure 6.

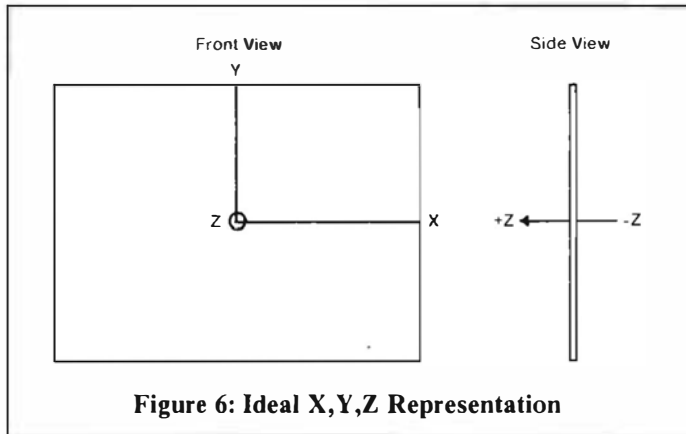

Figure 6: Ideal X,Y,Z Representation

Since we can't really bring out the axis this way (without holography), the Z axis is represented as shown in Figure 7. The axis to the left represents a positive Z value. The missing axis to the right represents negative Z values.

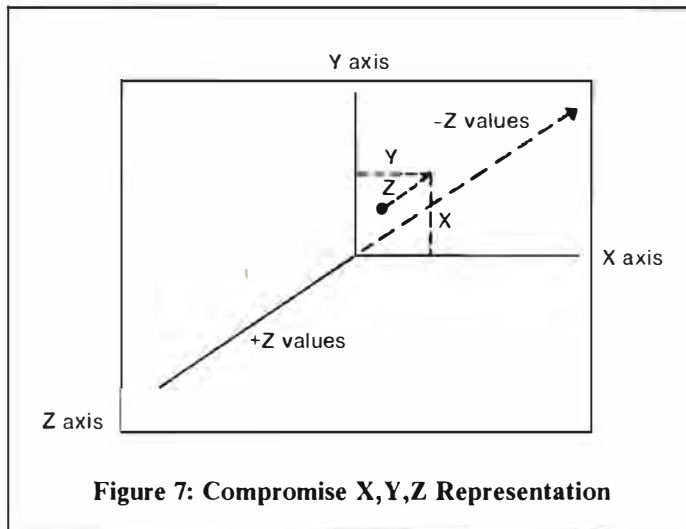

Figure 7: Compromise X,Y,Z Representation

Points are plotted in three dimensions on this graph by first plotting the point in the X and Y dimension and then moving along the Z axis. The greater the Z value, the greater the distance from the origin along Z. A program to plot the point in this fashion is shown in Listing 1. It draws lines representing the intersection of X and Y and then moves out along the Z axis to plot a small circle.

Preliminary Code

Suddenly things have gotten more complicated! However, if you can understand this program, you'll understand much of what is involved in drawing shapes in three dimensions.

The X, Y and Z values are first input, the 640-by-192 mode is set, and the Hi-Res screen is cleared.

The next section does all of the preliminary work and draws the axes. Variable AA defines the angle of the Z axis, as shown in Figure 8. This angle could be close to 0 or close to 90 degrees and would represent a different vantage point for the graph with each different angle as shown in the figure. We'll use 30 degrees as the nominal angle.

Figure 8: Angle of the Z Axis

Real-World Scaling

Next, variables XS, YS and ZS are set to 100. This represents the real-world scales for each axis. The X axis, for example, represents -100 to +100 in the real-world, with the origin at 0. Next, variable AN is set to the angle of the Z axis in radians. All of the BASIC trigonometric functions work in radians rather than degrees. A radian is an angular measurement like degrees. One radian equals 57.29583 degrees, so dividing the angle by 57.29583 gives the angle of Z in radians.

Next, variable AM is set to the complement of the AN angle. This is the second angle in the triangle formed by the Z axis, as shown in Figure 9.

Figure 9: AM Angle

Sine and Cosine

Next, CA and SA are computed. These are the sine and cosine values of the Z axis angle. Given any Z axis angle and a distance along either X, Y or the Z axis (hypotenuse), we can find the other two distances by using sine, cosine or tangent functions.

As a refresher to these functions, look at Figure 10. The sine function is the ratio of the opposite side of the triangle to the hypotenuse. When the angle is small, the opposite side is small and this ratio approaches 0. When the angle approaches 90 degrees, the opposite side is large and the ratio approaches 1. The length of the opposite side (Y) can be found by multiplying the sine of the angle times the length of the hypotenuse (the distance along the Z axis).

Figure 10: SIN, COS and TAN Functions

The cosine function is the ratio of the near side of the triangle to the hypotenuse. When the angle is small, the near side is large and this ratio approaches 1. When the angle

COCO 3 SCREEN

USE YOUR COCO 3 TO ITS FULL POTENTIAL!

Use The Micro Works' DIGISECTOR™ DS-69 or DS-69B and your COCO 3's high resolution graphics to capture and display television pictures from your VCR or video camera. The DIGISECTOR™ systems are the only COCO video digitizers available that accurately capture and reproduce the subtle shades of gray in TV pictures!

- **COLOR:** Add color to your screen for dramatic special effects.
- **HIGH RESOLUTION:** 256 by 256 spatial resolution.
- **PRECISION:** 64 levels of grey scale.
- **SPEED!** 8 images per second on DS-69B, 2 images per second DS-69.
- **COMPACTNESS:** Self contained in a plug-in Rompack.
- **EASY TO USE:** Software on disk will get you up and running fast!
- **COMPATIBLE:** Use with a black and white or color camera, a VCR or tuner.
- **INEXPENSIVE:** Our low price puts this within everyone's reach.

POWERFUL C-SEE 3.3 SOFTWARE

This menu-driven software will provide 5 and 16 shades of gray to the screen and to the printer with simple joystick control of brightness and contrast. Pictures taken by the DIGISECTOR™ may be saved on disk by C-SEE 3.3 and then edited by our optional MAGIGRAPH, or by COCO MAX or GRAPHICOM. This versatile new software is included in both DIGISECTORS™

TRADE IN YOUR OLD DIGISECTOR™

If you already have one of The Micro Works' DS-69 or DS-69A DIGISECTORS™, you may return it to us and we will upgrade your unit to a DS-69B.

UPGRADE DS-69A to DS-69B	\$49.95
UPGRADE DS-69 to DS-69B	\$69.95

The DS-69B comes with a one year warranty. Cameras and other accessories are available from The Micro Works.

NO RISK GUARANTEE

If you are not completely satisfied with the performance of your new DS-69B, you may return it, undamaged, within ten days for a full refund of the purchase price. We'll even pay the return shipping. If you can get any of our competitors to give you the same guarantee, buy both and return the one you don't like. We know which one you'll keep.

approaches 90 degrees, the near side is small and the ratio approaches 0. The length of the near side (X) can be found by multiplying the sine of the angle times the length of the hypotenuse (the distance along the Z axis). The sine and cosine, then, vary from 0 to 1 and complement each other — when the sine of the angle is near 0, the cosine is near 1, and vice versa.

The tangent of an angle is the ratio of the opposite side of the triangle to the near side. When the angle is small, this ratio is close to 0, as the opposite side is very small. When the angle approaches 90 degrees, however, the ratio becomes very large (much greater than one), as the opposite side is very large and the near side is very small. At 90 degrees, the opposite side is infinitely large and the near side is infinitely small, making the tangent ratio infinite. Given any angle and one of the two sides, the length of the other side can always be found by using the tangent value of the angle.

Drawing the Axes

Next, the X and Y axes are drawn as before. Now, the Z axis must be drawn. There are really two cases here. If the angle of the Z axis is less than or equal to 45 degrees, the Z axis intersects the left side of the screen. If the angle of the Z axis is greater than 45 degrees, the Z axis intersects the bottom of the screen. A check is made of AA, therefore, to see which case applies. If the first case applies, variable CX is set to 0 and variable CY is set using the tangent function to compute the length of Y. If the second case applies, variable CY is set to 191 and variable CX is set using the tangent function to compute the length of X. The Z axis is then drawn using the HLINE statement in BASIC. These two cases are shown in Figure 11.

Figure 11: Two Cases for Z Axis

Finding the Point

Next, the distance along X and Y are found. This is a scaling computation similar to what we did before, changing the real-world values of X and Y to screen values.

Two displacements, XD and YD, are now computed. These represent the displacement along the Z axis to represent the point. The cosine and sine values are used to find XD and YD. Adding X to XD and Y to YD gives the screen coordinate of the point in three dimensions.

Now the three locating lines can be drawn by three LINE statements. The lines defining X and Y in two dimensions are easy and involve only X and Y values. The line representing the displacement along the Z axis uses the XD and YD displacements to locate the end of the line. This line end is also used to locate the point and to draw a small circle at its location.

Confused? If so, use the program to change the angle of Z and to draw various points. The final calculations are shown in Figure 12.

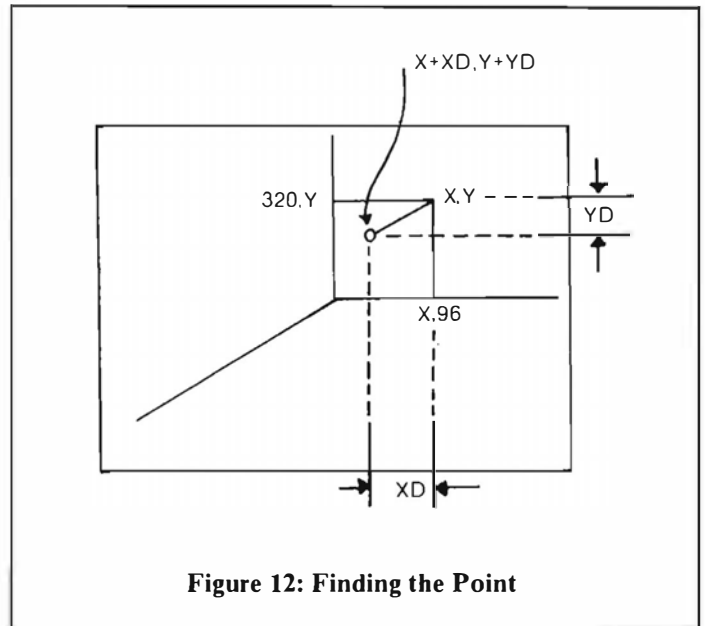

Figure 12: Finding the Point

Drawing Vertical Columns

Listing 2 shows another program. This one draws a vertical column in three dimensions. A 3-D bar graph will be made up of vertical columns, and this is a good exercise before we look at the actual 3-D bar graph.

Listing 2:

```

100 ' DRAW A VERTICAL COLUMN
110 INPUT X,Y,Z
120 HSCREEN 4
130 HCLS
140 AA = 30
150 XS = 100: YS = 100: ZS = 100
160 AN = AA / 57.29583
170 AM = ( 90 - AA ) / 57.29583
180 CA = COS( AN )
190 SA = SIN( AN )
200 HDRAW "BM320,96; NR319 NU96"
210 IF AA <= 45 THEN CX = 0: CY
= 96 * TAN ( AN ) + 96
220 IF AA > 45 THEN CY = 191: CX
= 320 - TAN( AM ) * 320
230 HLINE ( 320, 96 ) - ( CX, CY
), PSET
240 X = ( X / XS ) * 320 + 320
250 Y = 96 - ( Y / YS ) * 96

```

```

260 XD = ( Z * COS( AN ) / ZS )
      * 320
270 YD = ( Z * SIN( AN ) / ZS )
      * 96
280 HLINE ( X + XD, Y + YD ) - (
      X + XD, Y + YD + Y ), PSET
290 GOTO 290

```

This program is very similar to Listing 1. However, only one line is drawn, the line from X,Y,Z down to the "floor" of the graph — the plane made up of the Z and X axes, as shown in Figure 13.

At this point we could draw a 3-D bar graph by drawing consecutive vertical lines. However, the next program draws a better column than just a straight line.

Figure 13: Drawing a Vertical Column

A 3-D Bar Graph Program

OK, ready for the grand finale? Listing 3 shows the 3-D bar graph program. It draws an unlabeled bar graph as shown in Figure 1 with any angle you'd like from 0 to 90 degrees. The bar graph in the figure uses vertical columns with a width and depth for better appearance.

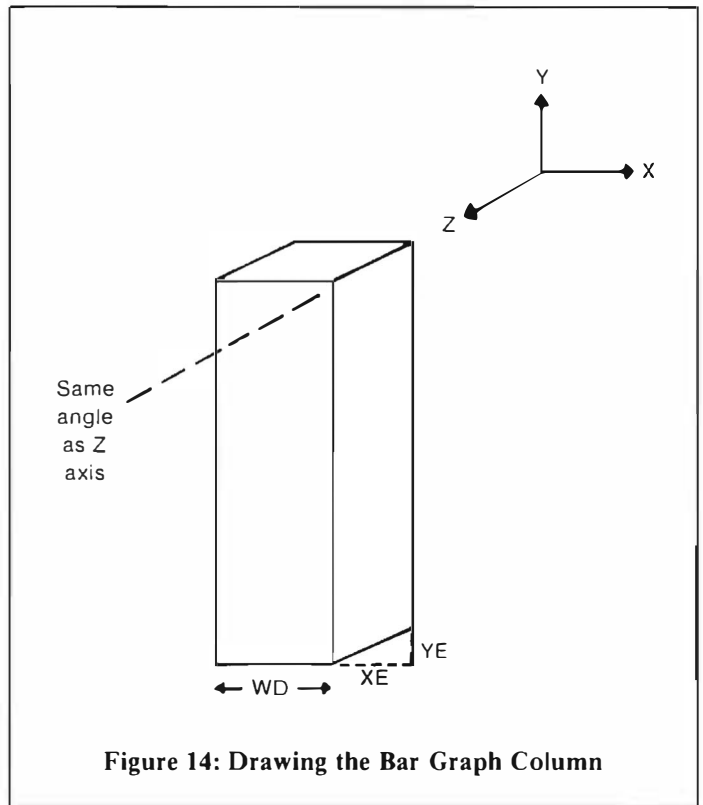

Figure 14: Drawing the Bar Graph Column

Listing 3:

```

DMC "No Halt" Disk Controller

Unleash your CoCo's potential!

Our new Dual Mode Controller (DMC) implements a new "no halt" mode of operation so it can read from or write to disk all by itself. The 6809 is freed to process other tasks and respond to interrupts. This is how OS-9 was meant to run! But the Radio Shack "halt" mode of operation is also retained to maintain full compatibility with existing non-OS-9 software.

SARDIS
TECHNOLOGIES

2261 East 11th Ave., Vancouver, B.C., Canada V5N 1Z7

Other DMC features:

- works with original CoCo, CoCo 2, or CoCo 3 (Multi-Pak required)
- no adjustments — all-digital data separator and write precompensation
- gold plated card-edge connectors for reliability
- ROM socket takes 24 pin or 28 pin chips; dual DOS capability
- Radio Shack DOS 1.1 ROM installed
- 8K bytes cache memory on board (32K optional)
- includes D.P. Johnson's SDISK package specially modified for DMC
- aluminum case
- fully assembled and tested; 120 day limited warranty

To order: DMC controller with RSDOS 1.1 and SDISK (specify Level I or II) \$149.50 plus \$5 S/H (\$12 overseas). Terms (prices in \$US): check, money order, VISA

(Also ask about our ST-2900 6809 based expandable single board computer)

Preliminary Operations

The data to be plotted is held in DATA statements at the beginning of the program. Each column is represented by three values — X, Y and Z. The height of the column is represented by Y. The DATA values are terminated by X=Y=Z=-1. The DATA values must be arranged so that columns in the back of the graph are drawn first. These columns are overdrawn by other columns. One way to do this is to sort all X,Y,Z data by Z coordinate, putting all larger values of Z later in the DATA statements.

The beginning of the program is very similar to the previous programs, aside from the DATA values. Variable WD is new and defines the width of the column in pixels. We're using 20 pixels for the width here. Variable XE and YE define the displacement of X and Y to draw the sides of the column, as shown in Figure 14. These displacements depend upon the angle of the Z axis, and the sine and cosine functions are used to find them.

The three axes are drawn as in the other program. The program then reads X, Y and Z values from the DATA list, assigning them to XX, YY and ZZ. A Draw Column subroutine

is then called to draw the bar graph subroutine. This process continues until the terminating values of -1, -1, -1 are read for XX, YY and ZZ.

Draw Column Subroutine

The Draw Column subroutine is the heart of the *Bar Graph* program. It uses the same basic scheme as Program 2 to draw a vertical column. The subroutine is divided into three parts: drawing the column outline, painting the column and redrawing the column outline.

The graph axis lines are color code 1. The column outline, however, is drawn with color code 2 because color code 2 can now be used as a boundary condition for painting the inside of the column. Each column outline is drawn by six separate LINE statements.

The first LINE statement draws the front of the column by a line with the "box" option. The WD variable is used to define the column width.

The second through sixth LINE statements draw the sides and top of the column. Variables XE, YE and WD are used to define the starting and ending points of the lines.

Next, the three areas of the column are painted. There may be an overdrawn axis line (such as the X axis), but as this is color code 1, it is ignored in PAINT. Notice that PAINT takes care to find a point that is near the center of each area to be painted.

At this point the column is solid color with no outline. The next set of LINE statements is the same as the first set, but use a color code of 1, the same as the axes color code. After these LINE statements, the column has an outline that is the

same color as the axes. This outline is ignored in case the column is later overwritten by another column in the graph.

Using the Bar Graph Plotter

The *Bar Graph Plotter* is not a perfect program. You can blow it up by choosing extreme values for X, Y and Z. It does not have error-checking for out-of-screen coordinates, for example. However, it might make a good basis for your own experiments in three-dimensional plotting. An interesting thing the program does is change the angle of the Z axis to get another view of the graph data. This is especially helpful if some of the columns are hidden by columns in front. Done fast enough, changing the angle of Z gives a three-dimensional rotation effect.

Display labels by using the HPRINT statement, which displays text data directly on the Hi-Res screen. The location of the labels is dependent upon the angle of Z, so choose the AA angle before labeling the graph.

Change the real-world coordinates by changing XS, YS and ZS. The origin, however, will always be in the center of the screen.

Any number of columns can be used and the width of the columns may be varied. You might, for example, have a continuous strip of columns both across and out from the screen.

Although this wasn't the easiest project in the world, you'll have to admit it is fun to see 3-D bar graphs on the CoCo. It convinced me that more work should be done in this area. I may try Princess Leia next.

See you next month with more CoCo topics. ☺

MLBASIC 2.0 - BASIC Compiler

The wait is over. WASATCHWARE announces the latest version of MLBASIC designed to allow more compatibility with existing BASIC programs than ever available before for the Color Computer. This version also allows full use of the capabilities and memory of the CoCo 3. Written in machine language, MLBASIC can compile programs as large as 64K bytes. Standard floating point (10 digit precision), INTEGER, and String type variables and arrays supported.

COMMANDS SUPPORTED:

1. I/O commands

CLOSE	CLOADM	CSAVEM	DIR	DRIVE	DSKIS	DSKOS	FIELD
FILES	GET	INPUT	KILL	LSET	OPEN	PRINT	PUT
RSET	USING	LINEINPUT					
2. Program control commands

CALL	DEFUSR	END	EXEC	FOR	NEXT	GOSUB	GOTO
IF	THEN	ELSE	ERROR	ON	RETURN	STOP	USR
3. Functions

ABS	ASC	ATN	COS	CVN	EOF	EXP	FIX
HPOINT	INSTR	INT	LEN	LOG	LPEEK	LOC	LOF
PEEK	POINT	PPOINT	RND	SGN	SIN	SQR	TAN
TIMER	VAL	VARPTR					
4. String functions

CHR\$	INKEY\$	LEFT\$	MID\$	MKN\$	RIGHT\$	STR\$	STRING\$
-------	---------	--------	-------	-------	---------	-------	----------
5. Graphic/Screen commands

ATTR	COLOR	CLS	CIRCLE	DRAW	HCOLOR	HSCREEN	HDRAW
HLINE	HPOINT	HPRINT	HRESET	HCIRCLE	HCLS	HSET	JOYSTK
LINE	LOCATE	PALETTE	PPOINT	PCLEAR	PCLS	PLAY	PMODE
PRESET	PSET	RESET	SCREEN	SET	SOUND	WIDTH	
6. Other commands

DATA	DIM	MOTOR	POKE	LPOKE	RESTORE	READ	REM
TRON	TROFF	TAB	VERIFY				

Plus many more commands not available with regular BASIC which allow interfacing with hardware registers and machine language programs.

KISSable OS-9

Unlock the Graphics Potential of OS-9 Level II

By Dale L. Puckett
Rainbow Contributing Editor

The ability to bootstrap is a wonderful thing. In fact, it's turned an innocent programming example into a lot of fun — and a major project. Hopefully, KISSDraw will help you unlock the graphics potential of OS-9 Level II and you'll see how easy it is to develop programs using your CoCo 3.

While Peter Dibble and I were writing *The Complete Rainbow Guide to OS-9 Level II, Volume I: A Beginners Guide to Windows*, we wanted to show you how to use Tandy's optional high resolution mouse. In the meantime, I had been using *MacDraw* for several years and always wondered how to program

Dale L. Puckett, who is author of The Official BASIC09 Tour Guide and co-author, with Peter Dibble, of The Complete Rainbow Guide to OS-9, is a free-lance writer and programmer. He serves as director-at-large of the OS-9 Users Group and is a member of the Computer Press Association. Dale is a U.S. Coast Guard lieutenant and lives in Rockville, Maryland.

this kind of magic. I volunteered and CoCoDraw was born.

Don't get me wrong, CoCoDraw is very primitive. With the version we published in our new book you can only draw boxes, circles and lines. First, you select the object you want to draw from the pull-down menu. Then, you move the pencil to one corner of the area where you would like to draw the object. And finally, you move the pencil pointer to the opposite corner and click the mouse button again.

In a split second, the object you selected from the menu is drawn on the screen. It is contained within the area of an imaginary box you defined by click on two corners.

After completing CoCoDraw and the new book, I amused myself for several hours by drawing many different objects using the three graphics tools. Before long, however, it was time to write "KISSable OS-9" for the September issue of RAINBOW. I was so fascinated with CoCoDraw that I wanted to enhance it. Before the column was complete, we had added a bar and an ellipse to the toolbox. We also used a

new method to address the packet of information from the mouse and changed the way the program worked. We gave it a new name, too — KISSDraw was born!

After you selected a tool with KISSDraw, you moved the pencil to one corner of the target area and pushed the mouse button. This time, however, you did not release the button or click it. Rather, you held the button down and dragged the pencil across the screen until you reached the opposite corner of the target area. When you released the button, KISSDraw went to work and drew the object you had selected.

This method of operation was better, but it still left a lot to be desired. For example, it was hard to imagine what an ellipse placed in the area between the two corners would look like. But, it worked better than the original version where you simply clicked the mouse in the two corners.

And while you were typing in the code, you were learning how to make menus out of overlay windows and how to use them. You were also learning how to pass parameters to OS-9's internals

with the SysCall procedure and how to get back and use a packet that contains several dozen pieces of information generated by the mouse plugged into the high resolution adapter.

"Once you have bootstrapped a minimal program, you can use it to build additional parts."

We played with September's KISS-Draw for several hours too. We still wanted more! Enter KISSDraw 2.

Once you have bootstrapped a minimal program, you can use it to build additional parts. That's the way KISS-Draw seems to be evolving. During the past month we discovered how to make BASIC09 draw the object we selected in varying sizes as we moved the pencil around on the screen. Each time we move the pencil, the program erases the object it drew at that location and draws another one at the new location.

As you pull the pencil across the screen with the mouse, the box (or whatever you happen to be drawing) expands or contracts before you. When you get it just the size you want it, you release the mouse button and KISSDraw finishes the drawing and leaves the object on the screen.

That addition was nifty enough, but we wanted more. We didn't want to have to type a number to select an object

Editor's Note: The following procedures will be combined into one source file, KISSDraw2, on this month's RAINBOW ON DISK.

Listing 1: KISSdMenu

```

0000      (* Procedure to draw 'tools' menu bar on screen
0030
0031      DIM vert: INTEGER

```

OS-9™ SOFTWARE/HARDWARE

SDISK—Standard disk driver module allows the full use of 35, 40 or 80 track double sided disk drives with COCO OS-9 plus you can read/write/format the OS-9 formats used by other OS-9 systems. (Note: you can read 35 or 40 track disks on an 80 track drive). Now updated for OS-9 ver. 02.00.00 **\$29.95**

SDISK + BOOTFIX—As above plus boot directly from a double sided diskette **\$35.95**

L1 UTILITY PAK—Contains all programs from Filter Kits Nos. 1 & 2 plus Hacker's Kit #, plus several additional programs, Over 35 utilities including "wild card" file cmds, MacGen command language, disassembler, disk sector edit and others. Very useful, many of these you will find yourself using every time you run your system. These sold separately for over \$85. **\$49.95**

SKIO—Hi res screen driver for 24 x 51 display; does key click, boldface, italics; supports upgraded keyboards and mouse. With graphics screen dump and other useful programs. **Now UPDATED FOR OS-9 Ver 2.0 \$29.95**

PC-XFER UTILITIES—Utilities to read/write and format ss MS-DOS™ diskettes on CoCo under OS-9. **\$45.00 (requires SDISK)**

CCRD 512K Byte RAM DISK CARTRIDGE—Requires RS Multipak interface, two units may be used together for 1MB RAM disk. Addressing is switch selectable. **OS-9 level 1 and 2 driver and test software included. \$169.00**

All disk prices are for CoCo OS-9 format; for other formats, specify and add \$2.00 each. Order prepaid or COD, VISA/MC accepted, add \$1.50 S&H for software, \$5.00 for CCRD; actual charges added for COD.

**D.P. Johnson, 7655 S.W. Cedarcrest St.
Portland, OR 97223 (503) 244-8152**

(For best service call between 9-11 AM Pacific Time)

from a pull-down menu. We thought it would be nicer if we could point to an object, click the mouse button to select a tool, then use that tool to draw the desired object. To do the job, we wrote KISSdMenu.

This month, we present new versions of KISSDrawBox and KISSDrawEllipse. Compare KISSDrawBox to the earlier versions in CoCoDraw and KISSDraw. Compare KISSDrawEllipse to the version we published last month. As you can see, the modifications required to add the "watch while you draw" feature were minimal. Study the differences and file them in your bag of tricks. In fact, you can use them to modify last month's version of KISSDrawLine, KISSDrawCircle and KISSDrawBar.

Notice again the advantages of the bootstrapping process. Once you have a minimal solution running, you can use it to fine-tune future versions. For example, the new versions of KISSDrawBox and KISSDrawEllipse can be run from the KISSDrawObjects menu we published last month. In fact, we used the original menu to test our new procedures.

Our listings this month include KISSDraw2, KISSdMenu, KISSDrawEllipse, KISSDrawBox and KISSFreeHand. Short procedures are included for arc, full and text tools.

Once again, keep in mind that our efforts here are still primitive. We haven't worked out all the details needed to update the menu when it's overwritten, etc. Again we are bootstrapping ourselves into a new and exciting world. There are so many features we want to add and so little time. We need to write a procedure that will let us pick a pattern and fill an area on the screen. Notice, we have already placed the icons for this function on the menu.

We also need to complete a pull-down menu that will pop up in an overlay window when you click the mouse button while pointing to the word file on the menu bar at the top of the screen. On that pull-down menu, we hope you will eventually be able to select commands that let you undo your last act, save your drawing commands to a file while you are working, load a file created earlier, print the screen to your printer, or erase an area of the screen.

Further in the future, it would be nice to add commands that let you change the foreground and background colors — either from a pull-down menu or by clicking on an icon. And ultimately, we

hope to design a data structure that will let us save each object we draw in memory as we draw it. After we do this, we will be able to select an object so we can edit, duplicate, move, change or delete it.

In this month's offering, the procedure `KISSDraw2` is the driving force. It runs `KISSdMenu` to draw the menu, sets up the mouse and then enters a loop waiting for the user to push the button on the mouse. If the mouse is over the drawing area, the graphics cursor looks like a pencil. If it is over the menu bars, it looks like an arrow or pointer.

As soon as you point to a drawing tool and click the mouse button, `KISSDraw` calls the proper tool and lets you draw exactly one object. Once that object is drawn, it returns to the loop and waits for you to select another tool. This loop will run forever or until you press `BREAK` to stop execution of the program. Eventually we'll have to add a quit command to the file menu.

If you would like to contribute anything to this package, get in touch with me at 805 West Edmonston Drive, Rockville, MD 20852. If we all pool our efforts, we could come up with one heck of a drawing program. Let me know what you think.

Presently, `KISSdMenu` draws the menu "live" when it is called by `KISSDraw2`. Eventually, we will pack `KISSdMenu` and run it from the OS-9 shell, redirecting its output to a file. Then, we'll simply use the `BASIC09 Shell` command to merge that file into our window. After we have done this, our menu will appear on the screen several times faster.

Later on, we'll probably use `KISSFreeHand` to draw a freehand logo, save it in a buffer and scale it into the menu bar as a new freehand icon. That's another one that will have to wait.

```

COCO 3 OS-9 HARDWARE UPGRADES

**The PLUS 100 — The PREMIER 512K
Memory Expansion for the COCO 3.**

Brochures and price list available on request.

DISKMASTER Disk Drive Systems Absolutely Without Equal in the COCO World!

- 20 MB SCSI Hard Drive
- 1 MB High Speed Floppy Drive
- Hardware Real Time Clock with Battery Backup
- 3 Hardware Serial Ports
- Bi-Directional Centronics Compatible Parallel Port
- Sophisticated OS-9 Drivers by D. P. JOHNSON
- RAMDISK options up to 1.5 MB
- Expansion Port for additional Floppy Drives
- Single Cable Interface to COCO 3
- A VERY HIGH PERFORMANCE, 4 Station, Multi-User System can easily be assembled using a DISKMASTER System.

TMM/HEMPHILL ELECTRONICS, INC

4480 Shopping Lane

Simi Valley, CA 93063

Fill out your CoCo library with these selections

The Complete Rainbow Guide to OS-9

Authors Dale Puckett and Peter Dibble show how to take advantage of OS-9's multitasking and multiuser features. An easy-to-read, step-by-step guide packed with hints, tips, tutorials and free software in the form of program listings.
Book \$19.95, Disk Package \$31 (2 disks, book not included)

The Windows and Applications Disk for The Complete Rainbow Guide to OS-9 Level II, Vol. I

Puckett and Dibble have done it again! Here are all the great programs from the first volume of the Level II guide. Clever new applications ready to run. Disk \$19.95

The Rainbow Introductory Guide to Statistics

Dr. Michael Plog and Dr. Norman Stenzel give a solid introduction to the realm of statistical processes and thinking for both the beginner and the professional. (80-column printer required).
Book \$6.95, Tape or Disk \$5.95, Package \$11.95

The First Rainbow Book of Adventures

Contains 14 winning programs from our first Adventure contest. Includes *Sir Randolph of the Moors*, *Horror House*, *One Room*, *Dr. Avaloe* and more. Plus hints, tips on solving Adventures.
Book \$3.50, Tape \$3.50

The Second Rainbow Book of Adventures

Featuring 24 of the most challenging Adventure games ever compiled. Meet the Beatles and battle the Blue Meanies, find a hidden fortune, or win the heart of a mysterious princess. *Ring Quest*, *Secret Agent Man*, *Dark Castle*, *Curse of Karos* and more!
Book \$13.95, Tape \$13.95

The Third Rainbow Book of Adventures

The excitement continues with 19 new Adventures. Discover backstage intrigue at the London Theatre, attempt a daring space rescue, or defeat evil in the year 2091 as a genetic android. *Evil Crypt*, *Spymaster*, *Time Machine*, *The Amulet*, and that's only the beginning! Book \$11.95, Tape \$9.95, Two-Disk Set \$14.95

The Rainbow Book of Simulations

20 award-winning entries from THE RAINBOW's first Simulations contest. You are a Civil War Commander, an air traffic controller, a civil defense coordinator, or a scientist on Mars . . . your wits are on the line.
Book \$9.95, Tape \$9.95

The Second Rainbow Book of Simulations

The 16 winners from our second Simulations contest. Fly through dense African jungle, bull your way down Wall Street, lead a bomb squad, or try your hand at Olympic events. Test your skills and talents. Book \$9.95, Tape \$9.95, Disk \$10.95

Mail to: Rainbow Bookshelf, The Falsoft Building, P.O. Box 385, Prospect, KY 40059

To order by phone (*credit card orders only*) call (800) 847-0309, 8 a.m. to 5 p.m. EST. For other inquiries call (502) 228-4492.

Please note: The tapes and disks offered by The Rainbow Bookshelf are not stand-alone products. That is, they are intended to be an adjunct and complement to the books. Even if you buy the tape or disk, you will still need the appropriate book. OS-9® is a registered trademark of the Microware Systems Corporation.

As you type in the listings this month, you'll notice that these programs use the procedures SetUpMouse and GetKISS-Mouse, which we published in September. You'll also need KISSDrawCircle, KISSDrawLine and KISSDrawBar from last month's listings. KISSDraw2 will run them if you click on the corresponding icon.

You'll probably want to delete the lines that print the instructions on the screen after you know how to use each tool because KISSDraw2 assumes you know how to use each tool. It does not erase the prompt lines like the procedure DrawObjects did.

We run KISSDraw in a 640-by-192 pixel, Type 07, four-color window. Before you run them, you will need to merge the SYS/StdFonts, SYS/StdPtrs and SYS/StdPats 4 files into an OS-9 graphics window. We do this in a procedure file we call from StartUp.

That's about it for October. Next month, we hope to add more to KISS-Draw. If you have ideas for KISSDraw or even a short procedure to add to it, drop it in the mail. In the meantime, be sure to join us in Princeton, New Jersey, for RAINBOWfest!

Model 101 Interface \$39.95

- Serial to parallel interface
- Works with any COCO
- Compatible with "Centronics" parallel input printers
- 6 switch selectable baud rates 300-600-1200-2400-4800-9600
- Small size 4.5" x 2.5" x 1.25"
- Comes complete with cables to connect to your computer and printer

Model 104 Deluxe Interface \$51.95

- Same features as 101 plus
- Built in serial port for your modem or other serial device
 - Switch between parallel output and serial output
 - Size is 4.5" x 2.5" x 1.25"
 - Comes complete with cables to connect to your computer and printer

Model 102 Switcher \$35.95

- Connect to your COCO serial port and have 3 switch selectable serial ports
- Color coded indicator lights show switch position
- Lights also serve as a power on indicator for your COCO
- Heavy gauge blue anodized aluminum cabinet with non-slip rubber feet

Model 105 Switcher \$14.95

- Connects to your COCO to give you 2 switch selectable serial ports
- 3 foot cable to connect to your COCO's serial port
- The perfect item to use to connect a printer and a modem to your COCO
- Small in size, only 4.5 x 2.5 x 1.25

Cassette Label Program \$6.95

- New Version - tape transferrable to disk - save and load labels from tape to disk
- Prints 5 lines of information on pin-feed cassette labels
- Menu driven, easy to use
- Standard, expanded and condensed characters
- Each line of text automatically centered.
- Label display on CRT, enabling editing before printing
- Program comes on tape and is supplied with 24 labels to get you started
- 16K ECB required

Other Quality Items

High quality 5 screw shell C-10 cassette tapes. **\$7.50/dozen**

Hard plastic storage boxes for cassette tapes. **\$2.50/dozen**

Pin-Feed Cassette Labels
White **\$3.00/100**
Colors **\$3.60/100** (specify red, blue, yellow, tan)

NEW! Cables for your COCO

- U.L. listed foil-shielded cable
- 2 Types: male/female extension cables (used between a serial device and existing cable) male/male cables (used between two serial devices such as a modem and one of our switchers).
- 3 ft./\$3.95, 6 ft./\$4.49, 10 ft./\$5.59 Specify M/M or M/F and length.

The 101 and 104 require power to operate. Most printers can supply power to your interface (Star, Radio Shack and Okidata are just a few that do - Epson and Seikosha do not). The interfaces can also be powered by an AC adaptor; Radio Shack model 273-1431 plugs into all models. If you require a power supply, add a "P" to the model number and add \$5.00 to the price. (Model 101P \$44.95, Model 104P \$56.95).

The Model 101, 102, 104 and 105 work with any COCO, any level basic and any memory size. These products are covered by a 1 year warranty.

The Model 101 and 104 work with any standard parallel input printer including Gemini, Epson, Radio Shack, Okidata, C. Itoh, Seikosha, Panasonic and many others. They support BASIC print commands, word processors and graphic commands.

We manufacture these products - dealer inquiries are invited.

Ordering Information

Free shipping in the United States (except Alaska and Hawaii) on all orders over \$50.00. Please add \$2.50 for shipping and handling on orders under \$50.00. Ohio residents add 6% sales tax. Call (513) 677-0796 and use your VISA or MASTERCARD or request C.O.D. (Please add \$2.00 for C.O.D. orders). If you prefer, send check or money order, payable in U.S. Funds to:

OS9 LEVEL II

SOFTWARE and BOOKS

"Frank Hogg Laboratory has supported OS9 longer than **ANY** other company!!!"

INSIDE OS9 LEVEL II

"Inside OS9 Level II is a gold mine. You'll learn more than you can ever remember about OS-9 system variables, the CoCo's GIMI, the file managers, the windows, the fonts, the descriptors and the bugs. It's a reference work extraordinaire! Buy it!" said Dale L. Puckett, in the September 1987 Rainbow. Dale is Co-Author of "The Complete Rainbow Guide to OS-9 Level II"

Just \$39.95

FONT EDITOR

for OS-9 LEVEL II

BY Chris Babcock

**CREATE NEW FONTS
EDIT EXISTING FONTS**

This is a slick new package from a fellow you're going to be hearing alot about in the coming years. Now you can create or modify your character sets (fonts) to make them just the way you want. Req. L II and 512K

ONLY \$29.95

DynaStar 3.4 WORD PROCESSING

Since 1981 DynaStar has been improved and enhanced to bring you the finest word processor available for OS9. DynaStar 3.4 is the same version available for OS9/68K with added windowing support. DynaStar 3.4 also supports any terminal(s) you may want to hook to your CoCo. Complete with the DynaForm text formatter and mail merge.

Requires Level II OS-9 and 512K

ONLY \$150

Upgrade to DynaStar 3.4 \$50

The WIZ

By Bill Brady

The Wiz is the **First and Only** program designed for the CoCo III that uses **WINDOWS!** The Wiz is a smart terminal and communications program for the CoCo III and OS9 Level II. Making use of multiple windows and overlay windows with pop up dialog boxes The Wiz really shines. Features include: Autolog- lets you configure The Wiz's colors, characters boldface etc., Xmodem and text send and receive, sleep mode, conference mode uses a separate window for your text, usage log and much more. Does not work with the CoCo's internal bit banger serial port. The complete package includes a special ACIA driver that allows baud rates from 300 to 19,200 baud. Requires the RS232 pak or the Disto RS232 or similar port plus a CoCo III with OS9 Level II and 512K.

Only \$79.95

Submitting Material To Rainbow

Contributions to THE RAINBOW are welcome from everyone. We like to run a variety of programs that are useful/helpful/fun for other CoCo owners.

WHAT TO WRITE: We are interested in what you may wish to tell our readers. We accept for consideration anything that is well-written and has a practical application for the Tandy Color Computer. If it interests you, it will probably interest lots of others. However, we vastly prefer articles with accompanying programs which can be entered and run. The more unique the idea, the more the appeal. We have a continuing need for short articles with short listings. These are especially appealing to our many beginners.

FORMAT: Program submissions must be on tape or disk, and it is best to make several saves, at least one of them in ASCII format. We're sorry, but we do not have time to key in programs and debug our typing errors. All programs should be supported by some editorial commentary explaining how the program works. We also prefer that editorial copy be included on the tape or disk using any of the word processors currently available for the Color Computer. Also, please include a double-spaced printout of your editorial material and program listing. Do not send text in all capital letters; use upper- and lowercase.

COMPENSATION: We do pay for submissions, based on a number of criteria. Those wishing remuneration should so state when making submissions.

For the benefit of those who wish more detailed information on making submissions, please send a self-addressed, stamped envelope (SASE) to: Submission Guidelines, THE RAINBOW, The Falsoft Building, P.O. Box 385, Prospect, KY 40059. We will send you comprehensive guidelines.

Please do not submit material currently submitted to another publication.

CoCo Wizard

(This is to the tune of The Who's "Pinball Wizard.")

From Ft. Worth down to Prospect,
I thought I'd seen 'em all,
But I ain't seen nothing like it
in any shopping mall,
It's brand new from Tandy, it's
Commodore's nightmare,
That new little CoCo, sure runs
some great software.

I stand like a statue, become part
of the machine, Pecking at the
keyboard, I'm staring at the
screen,
This CoCo's so much fun, it's
more than I can bear, That new
little CoCo, sure runs some
great software.

He's a CoCo Wizard, just watch
his fingers fly, A CoCo Wizard
will hack until he dies, How do
you think it does it — I don't
know. What makes it so good?

Can't run *Lotus 1-2-3*, but it
burns with *Dynacalc*, And it
beats it every time, just ask
Lonnie Falk,
That sixty-eight oh nine, no eight
bit can compare, That new
little CoCo, sure runs some
great software.

I thought I was the home comput-
er king, But I just handed my
I/O crown to him.

Even on my favorite program, his
graphics are the best, I start by
typing RUN, the GIME does the
rest,
OS-9 gives me more, multi-task if
I dare, That new little CoCo,
sure runs some neat software.

— Mark E. Sunderlin

About The One-Liner Contest . . .

THE RAINBOW's One-Liner Contest has now been expanded to include programs of either one or two lines. This means a new dimension and new opportunity for those who have "really neat" programs that simply just won't fit in one line.

Here are the guidelines: The program must work in Extended BASIC, have only one or two line numbers and be entirely self-contained — no loading other programs, no calling ROM routines, no poked-in machine language code. The program has to run when typed in directly (since that's how our readers will use it). Make sure your line, or lines, aren't packed so tightly that the program won't list completely. Finally, any instructions needed should be very short.

Send your entry (preferably on cassette or disk) to:

**THE RAINBOW
One-Liner Contest
P.O. Box 385
Prospect, KY 40059**

```

About Your Subscription

Your copy of THE RAINBOW is sent second class mail. You must notify us of a new address when you move. Notification should reach us no later than the 15th of the month prior to the month in which you change your address. Sorry, we cannot be responsible for sending another copy when you fail to notify us.

Your mailing label also shows an account number and the subscription expiration date. Please indicate this account number when renewing or corresponding with us. It will help us help you better and faster.

For Canadian and other non-U.S. subscribers, there may be a mailing address shown that is different from our editorial office address. Do not send any correspondence to that mailing address. Send it to our editorial offices at Falsoft, Inc., The Falsoft Building, P.O. Box 385, Prospect, KY 40059. This applies to everyone *except* those whose subscriptions are through our distributor in Australia.

Still pounding away on that old keyboard?

Give it, and yourself, a break! Subscribe to RAINBOW ON TAPE or RAINBOW ON DISK today! Every month, these convenient services bring as many as two dozen ready-to-run programs right to you. Using the current issue of THE RAINBOW as documentation, all you have to do is load and run them. Just a one-year subscription gives you more than 230 new programs!

RAINBOW ON TAPE For No-Fuss Fun

The typing time you save is time that you can spend enjoying your CoCo! Back issues of RAINBOW ON TAPE are available beginning with the April 1982 issue, so there's no need to miss out on any of our great offerings. A single copy of RAINBOW ON TAPE is \$10 within the United States; U.S. \$12 in all other countries. The annual subscription rate for RAINBOW ON TAPE is \$80 within the U.S.; U.S. \$90 in Canada; and U.S. \$105 for all other countries. U.S. currency only, please. In order to hold down costs, we do not bill.*

RAINBOW ON DISK Offers OS-9 Programs

In addition to all the programs offered on tape, part of one side of the disk is formatted for the OS-9 operating system program. That means you can now get all the OS-9 programs from the magazine — programs that cannot be put on tape. And, with the introduction of the CoCo 3, OS-9 programs will become more and more prevalent. Back issues of RAINBOW ON DISK are available beginning with October 1986. Subscriptions to RAINBOW ON DISK are \$99 a year in the U.S. Canadian rate is U.S. \$115. All other countries, U.S. \$130. Single copy rate is \$12 in the U.S.; U.S. \$14 in Canada; and U.S. \$16 in all other countries.*

Look for our order envelope between pages 34 and 35

RAINBOW ON TAPE and RAINBOW ON DISK are not stand-alone products, but are intended as adjuncts and complements to the magazine. You will need the magazine for loading and operating instructions.

* Kentucky residents add 5% sales tax. Please allow 6 to 8 weeks for first copy.

To order by phone (credit card orders only), call (800) 847-0309, 8 a.m. to 5 p.m.
All other inquiries call (502) 228-4492.

Please note: While group purchases of RAINBOW ON TAPE and RAINBOW ON DISK are permitted (and multiple subscriptions are even discounted, if purchased in one order from a club), no license to make copies is conveyed or implied. Yes, your group may even purchase a subscription to our disk/tape services, but such purchase in no way authorizes that any copies be made of that original disk/tape. Specifically, this means that the original disk/tape itself may be kept in a club library for use by members. However, a group purchase does not entitle club members, individually or as a group, to copy that disk/tape. Unauthorized copying of any copyright product is strictly illegal. The copyright (right to make copies) is in no way conveyed in the purchase transaction.

For your convenience, these products can also be ordered via the Delphi Information Network in our Shopping Service area of THE RAINBOW's Color Computer SIG (Special Interest Group).

Programs from our past issues are also available for immediate download in the RAINBOW ON TAPE database area in THE RAINBOW's Color Computer SIG on Delphi. There is a \$3.50 per program surcharge.

Hint .

80-Column EDTASM+

By now, most people know that Disk EDTASM+ can be used in the 80-column mode of the Color Computer 3. All you have to do is set up your screen before entering RUN "DOS". However, it is even easier to boot EDTASM+ in an 80-column mode. Just load the DOS program from disk. You can then edit this BASIC program as you please. Just add a line somewhere near the beginning that sets up the 80-column width and whatever color selections you might want. When finished, just resave the program. Make sure you perform this procedure on a backup and not on your original EDTASM+ master.

You will still not be able to see what the DOS program displays when you are in the 80-column mode so you will have to remember the keystrokes necessary to execute EDTASM+. An easy way to do this is to rename the EDTASM+ program to something like E. After running DOS, wait for the drives to stop. Then press 2, which will cause DOS to execute a program. The next time the drives stop, just press E and ENTER. That's all there is to it.

Marc Gagnon
Cap-de-la-Madeleine, Quebec

Hint . . .

Changing Color Sets

Now that you've settled in with your CoCo 3, have you ever wondered how to change to the alternate artifact color set without having to hold down F1 and press reset? Here's how you can do it.

If you are at the OK prompt (i.e., if the computer is not presently under control of a program), just enter POKE &HE033,32. You will immediately change color sets. To get back to the original set, enter POKE &HE033,0.

If you want to change sets from within a program, put POKE &HFF98,32 at the appropriate point in the program. To return, use POKE &HFF98,0. What you are essentially doing in both cases is inverting the burst phase of the video signal.

One more hint: Many programs that prompt you for a color change will continue the moment you press F1, thereby not allowing you to change color sets. The solution is to hold in the reset button, before pressing F1, then press and hold down F1. While holding F1, release the reset button.

NEW OS9 PATCHER - (C) This is a useful utility for your OS9 Level I or II system. It allows you to modify the contents of a file or memory module using easy to understand commands. Data may be displayed and entered in either decimal, hexadecimal, octal or ascii characters. Module CRCs calculated and patched automatically. Patch command files may be used as input to the Patcher and patch command files can be generated from an original and already patched file. Disk only; OS9 Level I or II; \$19.95.

CALLIGRAPHER

CoCo Calligrapher - (Hybrid BASIC/ML) Turn your CoCo and dot-matrix printer into a calligrapher's quill. Make beautiful invitations, flyers, certificates, labels and more. Includes 3 fonts: *Gay Nineties*, *Old English* and *Cartoon*. The letters are 1/2 inch high and variably spaced. Works with many printers including Epson, Gemini, Radio Shack, Okidata 92A, Banana and Prowriter. Additional fonts are available (see below). Tape/Disk; \$24.05.

OS9 Calligrapher - (C) Although a different program from the CoCo Calligrapher, the OS9 Calligrapher prints all the same fonts. It reads a standard text file which contains text and formatting directives. You may specify the font to use, change fonts at any time, centering left, right or full justification, line fill, margin, line width, page size, page break and indentation. Similar to *troff* on UNIX™ systems. Includes Gay Nineties, Old English and Cartoon fonts. Additional fonts are available (see below). Disk only; OS9 Level I or II; \$24.05.

Calligrapher Fonts - Requires Calligrapher above. Each set on tape or disk; specify RSDOS or OS9 version; \$14.05 each. Set #1 - (9 fonts) Reduced, reversed and reduced-reversed versions of Gay Nineties, Old English and Cartoon; Set #2 - (8 fonts) Old Style and Broadway; Set #3 - (8 fonts) Antique and Business; Set #4 - (8 fonts) Wild West and Checkers; Set #5 - (10 fonts) Stars, Hebrew and Victorian; Set #6 - (8 fonts) Block and Computer;

Economy Font Packages on disk; specify RSDOS or OS9; 20.05: Font Package #1 - Above font sets 1, 2 and 3 (25 fonts) on one disk. Font Package #2 - Above font sets 4, 5 and 6 (26 fonts) on one disk. Both Packages #1 and #2 (51 fonts) on one disk; 40.05. NEW

NEW Calligrapher Combo Package - *Everything!*; specify RSDOS or OS9; Includes the Calligrapher and both Font Packages on one disk; \$69.95.

UTILITIES

Piratector - (100% ML) Utility to allow your own disk-based BASIC or ML programs to display a graphics title screen and then self-start after loading. Adds copy protection to your programs but still allows users to create non-executable backups! Includes Semigraf. Disk only; CoCo 1, 2, 3 (except Semigraf); \$39.05.

Super Screen Machine - (100% ML) Put your CoCo into high resolution mode for your own BASIC or ML programs. Smooth scroll, key click, lower case with colored characters. Tape/Disk; 32K CB; CoCo 1, 2, 3 (except 64K mode); \$19.05.

Color Disk Manager - (100% ML) Disk utility with these features: Disk repair, selective track initialization, verify sectors, backups, tape to disk transfer, ROM Pak execution from disk, much more! Tape/Disk; CoCo 1, 2, 3 (except for 64K mode); \$24.05.

Color Tape Manager - (100% ML) Tape utility with these features: display start, end and exec address of ML programs, convert ML programs into BASIC DATA statements, append ML to BASIC, load, display/modify and save tape file, handles missing EOF and filename blocks, much more! Tape/Disk; 16K ECB; CoCo 1, 2, 3 (except for 64K mode); \$10.05.

INFORMATION MGT.

TIMS (The Information Management System) - (Hybrid BASIC/ML) Tape or disk, fast and simple general data base program. Create files of records that can be quickly sorted, searched, deleted and updated. Powerful printer formatting. Up to 8 user fields, sort on up to 3 fields. Tape/Disk; \$19.05 (see combo pkg below).

TIMS Mail - (Hybrid BASIC/ML) Tape or Disk based mailing list management program. Files are compatible with TIMS. Fast and simple to use. Supports labels 1, 2 or 3 across, 2 1/2 to 4 inches wide. Tape/Disk; \$19.05 (see combo pkg below).

TIMS Utility - (Hybrid BASIC/ML) Utility companion for TIMS and TIMS Mail to allow multi-term search (AND and OR logic), global change and delete, split large files and more! Tape/Disk; \$14.05 (see combo pkg below).

TIMS Combo Package - All three of the above programs: TIMS, TIMS Mail and TIMS Utility on one disk - \$34.05.

SPORTS STATISTICS

Statistics programs for the coach, team manager or avid fan who wants to keep accurate team and opponent records. Printer output supported. The following are available: Baseball, Basketball, Football and Soccer. Disk only; \$10.05 each.

EDUCATIONAL

NEW Trig Attack - (100% ML) In this educational arcade game, enemy trigs travel along math curves. Players learn important mathematical concepts as they play. Trig Attack is filled with sound effects, colorful graphics and features 11 challenging levels. First class mathematical entertainment for ages 9 and up. Excellent manual includes an introduction to trigonometry. Tape 16K CB/Disk 32K ECB; CoCo 1, 2, 3; \$19.05.

A complete catalog of other sweet Sugar Software products is available.

Silly Syntax - (Hybrid BASIC/ML) Ages 5 and up. Story creation game; output to screen or printer; includes 2 stories or create your own. Tape/Disk; \$10.05 or disk with 62 stories for \$20.05. Sets of 10 stories on tape/disk for \$4.05: Fairy Tales, Current Events, X-Rated, Sing-Along, Adventure, Potpourri.

Bible Stories Adventure - (Hybrid BASIC/ML) Ages 4 & up. A graphics adventure game for young children & their families. Old testament. Tape/Disk; \$10.05.

The Presidents of the USA - (100% ML) Ages 10 and up. Two trivia games, user modifiable, printer output supported. Tape/Disk; 16K ECB; \$10.05.

The Great USA - Ages 9 and up. Trivia game of the 50 states. Capitals, nicknames, abbreviations, flowers, trees and birds. Tape/Disk; 16K ECB; \$10.05.

Galactic Hangman - Ages 7 and up. Exciting new twist to the popular word game. Outstanding graphics; 700 word vocabulary. Tape/Disk; 16K ECB; \$10.05.

PreReader - (Hybrid BASIC/ML) Ages 3-5 (level 1); Ages 5-7 (level 2); Great graphics and music. Level 1: match colors, shapes, letters and numbers; Level 2: match letters and consonant blends with their sounds. Tape/Disk; Joystick; \$10.05.

Statgraf - High school and college level; Linear regression analysis program combined with a plotting and line graphing system. Up to 250 x/y pairs; data transformation; residuals; regression line; print graph with screen print program (not supplied); Tape/Disk; \$10.05.

SPECIAL INTEREST

Rental Property Income and Expense Management Package - Maintain your rental property income and expense records. Print output supported. 28 expense categories. *This program may be tax deductible.* Disk only; \$20.05.

Radio Systems Design Calculations - Performs 14 different calculations commonly used in design or evaluation of land mobile radio systems, satellite TV, etc. Tape/Disk; \$10.05.

MISSION: RUSH'N ASSAULT

One or two players can take on the mission to rescue POW'S hidden deep inside enemy territory. Watch out for enemy soldiers, snipers, grenade launchers and many other hazards as you journey farther over enemy lines. Forge your way through jungles and swamps and other hazardous terrain as you search for the missing soldiers. Pick up grenades, extra ammo and more powerful weapons as you continue farther into your mission. The enemy is out in great force to stop your mission. Dozens of screens will keep you playing for hours. Can you succeed and rescue the prisoners? Only time will tell!

Tape or Disk
\$28.95 U.S.
\$38.95 Can.
 AVAILABLE APPROX. SEPT. 1, 1987

Requires 64 k and one joystick. For the Coco 1, 2 or 3

GRANDPRIX CHALLENGE

Race alone against the computer, or with a friend against the computer in this high speed racing game. You compete in 5 lap races around twisting and turning race courses. Finish the race ahead of all the computer cars and you will progress to a more challenging course. Collect repair tools as you race around the track and you will be able to increase the speed and handling of your race car. But watch out for oil slicks and water puddles on the track or you might find your car crashing into a wall. Detailed 320 x 200 graphics and realistic driving conditions make this a must for your Coco 3 collection. Many different race tracks will keep you challenged.

Tape or Disk
\$28.95 U.S. **\$38.95 Can.**
 AVAILABLE APPROX. SEPT. 1, 1987

Requires 128 k Coco 3 with one joystick.

GANTELET II

It's back and better than ever. It's Gantelet II for your Coco 3. Using 320 x 200 hi-res graphics with 16 colors, we have created one of the best arcade style games you will ever see for your Coco. Four people can now play simultaneously in one game. Dozens of new levels with new monsters will challenge even the best players. Collect keys to open doors and chests, treasures, and many new magic potions to help you battle more powerful monsters. Watch out for hidden traps as you search for the exit to next level.

Tape or Disk
\$28.95 U.S. **\$38.95 Can.**

DR. PREBLE'S PROGRAMS

Introducing PYRAMIX For your Color Computer 3!

Product of
 ColorVenture

The Pyrsoid has long been associated with mystery and power. Now, PYRAMIX, for your CoCo 3, is a source of endless arcade fun.

PYRAMIX is a 100% machine language game written exclusively to take advantage of all the power in your 128K CoCo 3. The colors are brilliant, the graphics sharp, the action hot.

The object of PYRAMIX looks deviously simple. Just change the tops of the blocks in the pyramid to the indicated color. But the accomplishment can be elusive!

Falling boulders, the relentless pursuit of the Snake, the slow moving "death square" and precipitous falls challenge you from all sides. Then there's that little sneak with sunglasses, who undoes your hard-earned color changes if you don't catch him.

It's all quite maddening! As you reach more challenging levels, you'll find that you need to hop on the squares not once but twice in order to change their color. Or, worse yet, hopping on a square you already visited might undo the work you've just done.

But you do have some help in PYRAMIX. There are elevator discs. Hop on one and it will take you to the top, possibly luring the greedy Snake over the edge! If you catch a Time-Stopper Orb, time will freeze, allowing uninterrupted work for while.

PYRAMIX features the finest in animation, graphics, sound effects and game play available today. It has all the extras you want, too, such as a pause option, RGB and C&P modes, keyboard or joystick play, help screen, multiple skill level, and the ability to backup your disk.

Best of all is the low price! Available today, for only \$24.95 on disk!

Dr. Preble's Prescriptions...

BASIC FREEDOM! No one wants to be chained down. And yet, if you type in BASIC programs, you have been subject to involuntary servitude! The culprit? BASIC's limited EDIT command.

Demand Your BASIC FREEDOM! Developed by ColorVenture, this software gives you a full screen editor for typing in and editing BASIC programs! Move the cursor anywhere on the screen. Insert, delete or add text. It's the same concept as in a word processor, except you never have to leave BASIC! BASIC FREEDOM is an invisible machine language program which you can turn on and off at will. Even pressing RESET will not hurt your BASIC FREEDOM! Simple, yet powerful with an easy to read manual. Many extra "nice touches" included, like KEY REPEAT and LOW CASE INTERPRET R which lets you type BASIC commands in upper or lower case for ease of programming. Translation to uppercase is automatic for commands. Text in quotes is not affected.

For CoCo 1 2 or 3!

SPECIAL COCO 3 VERSION lets you work in 32, 40, or 80 column display modes. A separate version is available for the CoCo 1 and 2. Available on disk for \$29.95 + s/h.

MENTAL FREEDOM by Dr. Preble! **IMAGINE!** Some day, a computer so advanced that it responds to your very thoughts and emotions. Imagine, some day, thought-controlled graphics: levitation and materialization! **PLUG IN YOUR MIND** and **UNHOOK YOUR JOYSTICKS**—that day is now! The Radio Shack Color Computer has many advanced capabilities, just waiting to be tapped. Dr. Preble's Programs combines the advanced technology of the CoCo with the amazing Radio Shack Biofeedback Monitor to bring you "Mental Freedom."

For CoCo 2 or 3

THOUGHT-CONTROLLED VIDEO CHALLENGE? Unlike any video game you have ever played, our Thoughtware tests your ability to handle stress, to remain calm under adverse circumstances. **LIGHTNING FAST** reflexes will do you no good here, unless you first tame the fickle dragon of your mind. Are you the secretly nervous type? Many people can keep a "Poker Face" even when they are worried so that others may not notice; but can you really stop the worry itself? Find out with **Mental Freedom!**

AND IT TALKS! Did you know that the CoCo can produce incredibly realistic digital speech without a special speech synthesizer? The voice quality is so good, it sounds human! Honest. Best of all, no extra hardware is needed for speech, just some clever programming by Dr. Preble.

MENTAL FREEDOM - Next time your friends ask what your computer can do, show them Dr. Preble's Thoughtware! Requires Radio Shack's Biofeedback Monitor Catalogue #63-675. **Mental Freedom** - TAPE or DISK \$29.95 + s/h

VDOS, the **UnDISK**: Save multiple programs in memory. Or save multiple graphic pictures in memory. Works with or without a disk. Let's you SAVE, LOAD and KILL stored programs or graphics. **DIRECTORY** function lists files, gives the start, end and execution addresses of machine language programs and number of free bytes remaining. Own a RAM disk without buying a disk drive! Requires 64K CoCo 1 or 2. Available on tape or disk for \$24.95 + shipping/handling.

VDUMP, for the **UnDISK**: Backup all your **UnDISK** files to a single tape file for easy reloading. A **must** for **VDOS** users! On tape for \$14.95 + shipping/handling.

VPRINT, for the **UnDISK**: Paper printout for **UnDISK** Directory. On tape, \$9.95 + shipping/handling.

Check, Money Order, MasterCard, VISA or COD accepted. For Shipping to USA or Canada add \$2.50, to other countries, add \$5.00.

For CoCo 1 or 2

Check, Money Order or COD

CoCoBraille

Emboss Grade 1 or Grade 2 Braille using your CoCo 1, 2 or 3 and a Brother Daisy Wheel printer! Fast Print to Braille conversion algorithm converts word processor files, program listings and data files into touch readable Braille. For use by the blind or the sighted. No knowledge of the Braille code is necessary. Just send print to the program and out comes Braille! Note: The complex Grade 2 conversion is very good and though not always perfect, quite readable. Requires 64K or more. Brother HR series printer or the IP-50 interface series required. Low Cost! Similar software costs 3 times as much. Only \$95.

Disk Directory Dazzler

Dress up your Disk Directory with colorful messages and borders. Create useful help messages. Add that professional touch to your creations! Only \$95
