If, while loading or running a program, you get a FC, OM, or SN error, you probably have to enter the PMODE and PCLEAR values for the program from the keyboard. The label on the tape also contains the PMODE and PCLEAR values. Locations for the programs are set for the Radio Shack CTR-80. Your locations may vary slightly. We try to put as many duplicates of the programs on tape as possible. If the first copy does not load, try the second copy, or if it has one, the third. If all three do not load, then send it back for prompt replacement.

Hello everyone! We want to wish you all happy holidays. We hope that these programs will give you and your Color Computer a special lift. We want to welcome all the new subscribers. We hope that you will be satisfied with our programs. Notice that the tape must be rewound before being played. This is to allow the tape to adjust to the recorder.

1. CHRISTMAS COVER - This month's cover program shows a little boy waiting for his favorite present. After the program is done running it will automatically load and execute the next program 'Raindrops'. Note: After the last part of the basic program 'Raindrops' is loaded, (machine language) it wipes out the last part of the basic program 'Christmas Cover'.

2. RAINDROPS - This program can also be played by loading it with CLOADM and running it with the EXEC command. This music was created by the 'COMPOSER', the only four voice music compiler available for the color computer. The 'COMPOSER' is available from Speech Systems, 38 W 255 Deerpath rd, Batavia Ill, 60510, (312) 879-6880. The price is \$24.95 for cassette, \$29.95 disk.

3. STOCK MARKET - Try your luck at the stock market with this program. After you are done buying and selling shares, hold on to what you have to begin trading on the floor.

4. ADVANCED PONG - Try to knock away 16 robots by bouncing a ball between two paddles and a moveable wall. Score one point for each alien that you hit. A machine language subroutine helps this program run smoothly.

5. DESTROY - Let your ship do battle against four submarines. You must drop bombs on them while avoiding the mines which are floating up at you.

6. SOUND ANALYZER - This program creates a bar graph which goes up and down according to the tones it finds in the music that you are playing. You can also use the other option and watch as the snowman dances to the beat.

Note: In order to load the next program, 16k users must PCLEAR 0. The easiest way to do this is by keying in POKE 25,6:NEW.

7. CREATIVITY TEST - This test of 100 questions/statements is used to help determine how creative you are. After each statement you indicate your position as to disagree, agree, or in between.

8. VOICE - This program will allow you to enter voice data into the computer and then have the computer speak. It reads the cassette input and then stores it into memory bit by bit. This program also allows you to save the voice data to tape, but does take extremely long. Voice will also adjust for 32k or 16k and also for disk.

9. MACHINE LANGUAGE TUTORIAL PT.1 - This is the first of several programs on machine language for the color computer. We plan on taking you step by step into machine language. There is a quiz towards the end of the program and a machine language program ready to run at the very end.

10. LODNY LANDER - This game involves two players, the lander and the saucer. The lander must land his rocket on a flat surface while the saucer must ram the lander. The rockets are hard to control which adds skill to the game.

If you have problems loading the programs try changing the volume on your tape recorder. We have tested many tapes and all have come thru with flying colors. If you have any questions, problems, solutions or ideas please write to us. If you have any uncopyrighted programs that you want to show us, we will be glad to see them. Send them in and if we like them, we will make you an offer.

Until next month.....
