DEK USERS: Insert disk and run DIR. CASSETTE TAPE USERS: Rewind tape. Zero the tape counter. Fast Forward to desired program's tape counter number and enter 'LOAD' or 'LOADM'.

If while loading or running a program, you get a PC, OM, or SN error, you probably have to enter the

PACKE and PCLEAR values from the keyboard. We try to put as many duplicates of the programs on tape as possible. If the first copy does not load, try the second copy, or if it has one, the third. If you cannot get the tape or disk to load the programs properly, then send it back for a prompt replacement.

Welcome to our 86th issue of subscription software. We hope that you enjoy this month's selection.

1. TIME TRAP - As the protector of a time tunnel you must destroy the time jumpers with your powerful death beam. The jumpers will grow in the tunnels as you try to destroy them before they become full grown. You have three men to accomplish your task. You also have different levels of play.
2. TELEPHONE ACCOUNT - This program will help you keep a running track of your long distance phone calls. While you are placing a long distance call, it will time the call and tell you how much you are spending while you are talking. You can also save this phone log/directory to tape or disk and print them on your printer.
3. ON TARGET - How good of an aim do you have? Use your light phaser to shoot the black objects as they appear on the screen. You must hit about 15 black objects on each level to advance to the next level. You only have a little bit of time to zero in on the black objects so before the computer shoots for you, shoot the open white area on the screen.
4. NAME THIS TUNE - This coco3 only program allows up to 4 players to play. Players take turns spinning a spinner and uncovering the squares on a grid. If a musical note or the number 2 appears, then parts of a song are played. If you

can guess the score, you will win the points. When all the squares are removed, the player with the most points wins.

5. LASER DEFENSE - Welcome to Laser Defense where you must defend your city from incoming missiles. Use your right joystick to maneuver your underground turret. Moving the joystick down moves the turret faster. To rebuild your buildings press (B). To end the game and find out your score, press the <SPACEBAR>.

6. CHECKBOOK BALANCER 3 - This coco3 only program can make balancing your checkbook a lot easier. It comes with its own manual and requires 1 disk drive. The instruction manual is printed/viewed by running the program 'LISTMANU'. It will automatically load and print a documentation file called 'MANUAL.DOC'. Some of the features of this program are the following: Enter data, check deposit, interest payment, and service charge. Print to printer/screen individual month and entire year data along with a monthly summary. It includes bank statement reconciliation and it allows for sorting by account numbers. It keeps a running balance for that account. It displays all transactions and balances and allows for error trapping. There are also instructions included to make this program A-DOS compatible. The program 'CHECKPRG' requires maximum memory and can't be loaded without the loader program 'CHECK'. This program simulates a Pclear 0 and also disables the <CLEAR> and <BREAK> keys so you don't accidentally crash the program.

7. KROACH ADVENTURE - The Kroach invaders are terrible alien creatures who treat humans like dirt! Your mission is to get inside of their ship, find a way to destroy it and then along with it. The instructions for this 32K adventure are found in the beginning of the program. They include a list of main commands as well as the special situation commands.

8. SUPER BAR GRAPH - This program will allow you to create a bar graph that can be viewed on the screen or printed on any printer. You can change the minimum and maximum of the graph as well as edit your entries. This tape can be saved/loaded from tape/disk.

9. EASY LETTERS - This small letter writer (designed for our young computer enthusiast), is very simple. Simply run the program and type until your hearts content. Press the shift + up arrow to save, load or print a file. This program will work on tape or disk. The large letters make it easier to see.

10. DEVIL ASSAULT - Here is another Tom Mix exciting ML arcade game. Devil Assault is a multi-level game with each level getting progressively more difficult. To load this machine language game, enter LOADM"DEVIL" for disk or CLOADM"DEVIL" for tape. Then enter EXEC to run. You can start at 6 different levels, 0-5. Even numbered levels (0-2-4) result in a game where a missile will fly straight up after being fired. Odd number selections result in a game where a missile's path will respond to the joystick. If you start at level 0, the game will start at level 0 and not increment. In screen 1, bird-like creatures fly back and forth across the screen while the lowermost one tracks you and tries to bomb you. At higher levels, the devil himself will appear, flying across the top of the screen and dropping a flaming cauldron. In screen 2 crazed robots march down at your base firing as they come. In screen 3 the Sproings will try to stomp your base. When hit, the Sproing will sometimes release a little Sproing. After the 3rd screen is completed, the game level is incremental to the next higher level (up to level 9). A bonus base is awarded for every 10,000 points. To reset, hit the 'R' key. To save this program, enter (C)SAVEM"DEVIL",7856,16009,7856.

BONUS: We have six 2 part religious songs included with this issue. You can load them individually or load and run "BIBLMENU" which will play them for you. The six song files are ALLTHAT, AMAZING, COMERS, COMSOUND, DAYBY, and TOPRAY.

Until next month.....
