T & D SUBSCRIPTION SOFTWARE

DISK USERS: Insert disk and run 'DIR'. CASSETTE TAPE USERS: Rewind tape. Zero the tape counter.
Fast Forward to desired program's tape counter number and enter 'CLOAD' or 'CLOADM'
If while loading (or running a program), you get a FC, OM, or SN error, you probably have to enter the
PMODE and PCLEAR values from the keyboard. We try to put as many
duplicates of the programs on each tape as possible. For the first copy of
any program, you, for the second copy, or if it has one, the third. If you cannot get the
tape or disk to load the programs properly, then send it back for a prompt
replacement.

TUT	KING TUT	3		255:467	192:467

Welcome to our 87th issue of subscription software. We have two fixes for last month's
program "PRONE". In line 150 it reads PO=0 when it should read PO= -2. In line 400 it reads
PO=0:PO=1. It should read PO= -2:PO=0. We hope that this did not cause too much confusion.

1. PURCHASE ORDER - This business program allows you to manipulate and maintain 2 databases: one
   for vendors, one for your purchase orders. Vendor information stored includes name, address, and
   phone number. Up to 100 vendors may be entered into one file on a 32K system. The purchase order
   database lets you enter in date, description, vendor #, amount, purchase type (either CASH or
   ON-ACCOUNT), and whether the order has been received or not. Up to 350 PO's may be put into one
   file on a 32K system. The data created may be inported into the General Journal/General Ledger
   program which will appear next month. The first thing you do when running this program is to
   select 'V' for Vendor menu. Next, add all the vendors (companies which you will be purchasing a
   product from). Once you have done this you can easily create/print purchase orders. You can also
   personalize your program in lines 27-29 by inserting your name and address and then re-saving the
   program. This program has an additional data file called PO-COUNT.DAT.

2. INVENTORY INVOICE - This business program works with three databases: Customer data, Inventory
   and Sales invoice data. The customer data can be displayed, printed and also, mailing
   labels can be printed. Inventory data stored includes part #, description, wholesale cost, retail
   price, and quantity. Up to 50 different parts may be entered into a 32K machine. When sales
   invoices are entered, the operator need only specify customer, and part #'s and quantities of each
   item ordered. The computer will total up the invoice and add applicable sales tax. You can have

2490 MILES STANDISH DR - HOLLAND MI 49424 - (616)399-9648

thing you should do when running this program is to run 'I' and add all the inventory. Next, you should add to your customers list all the customers. When a customer makes a purchase you can create a invoice for him and your inventory will be automatically reduced. This program has an additional data file called IV-COUNT.DAT.

3. AMERICAN TRIVIA - This trivia game is based upon the United States and its presidents. There are 12 rounds in a game. Answering three correct questions in a row will bring you to a bonus screen. There you may earn extra points by correctly answering the capitol cities of various states and their state flowers. This game has a database of over 150 questions and can be played with 1-4 players.

4. KROACHI ADVENTURE - In this 2nd part of the Kroach adventure you find yourself in a huge dungeon with people chained to the wall. The main commands include L-Left, R-Right, B-Back, F-Forward, U-Up, D-Down, N-No, Y-Yes, and P-Pistol. Also included are Examine, get, go, look, open, read, search, use, break, grab, hit, jump, kick, push, smack, and speak to. Good luck!

5. TETRA - Tetra is a version of the popular Tetris program offered by Tandy. 7 different shapes will appear at the top of the screen. You can rotate these shapes using the left/right arrow keys. You get bonus points for each layer you fill across. There is an instructional program preceding the main program called "TETRANI" which contains additional instructions.

6. SOLO POKER - This addicting game involves placing 25 cards one at a time on your 5 by 5 grid. You must try to get the best ten poker hands. (5 down, 5 across) Scoring goes as follows: Royal flush - 40, straight flush - 30, four of a kind - 16, full house - 10, flush - 4, straight - 12, 3 of a kind - 6, two pairs - 3, 1 pair - 1. An average score is 50. You need 60 to win.

7. GALAXY Q3 - The mini galaxy is infested with planets, star bases, weapon decides, moons, suns, and more. Use your right joystick to maneuver your spaceship in this Coco3 only machine language game. You may touch planets, bases, moos and weapon dealers. Since this program is in machine language, you must enter LOADM"GALAXYQ3" or CLOADM (if using tape) to load. Enter EXEC instead of RUN. To save this program, enter (C)SAVEM "GALAXYQ3",4096,27400,4096.

8. IBM PICTURE VIEWER - There are tons of digitized and scanned computer pictures out there on bulletin board systems and on public domain disks. These pictures come in many different pre-defined graphic formats. One of these formats is called IBM BLOAD format. With this utility you will be able to view the pictures and save them as normal PMODE4 Coco pictures. When you run this program, it will read the disk directory, searching for files with an "/IBM" extension. (make sure the BLOAD files you get are saved with an /IBM extension). Once the picture is loaded, you can use your joystick to move around. Pressing the 'S' key will save the current screen frame on disk. This program is a disk only program.

9. RGB ANALOG PATCH 3 - If you are using an RGB analog monitor with your Coco3, you've noticed by now that some of the best games and programs do not seem to run in color. With this utility we were able to get 80% of all programs to work without any need to edit the original program. We found that an additional 10% could be made compatible with only minor modifications. To run: Turn the computer off and on. Load and run RGBA-PIX. A machine language file called RGBAFIX.BIN will be automatically loaded and executed. Lastly, run your program as usual. This program will allow Coco3 users to get color from the next program. To save the ML part, enter (C)SAVEM "RGBAFIX",32700,32767,32700.

10. KING TUT - Here is another Ton Mix favorite. Journey through the caverns of King Tut's tomb. You are on a quest to find treasures hidden in the caverns below. You light your way with only a small candle that grows dimmer as time passes. Watch out for the snakes and the ghost of King Tut himself. Five screens challenge your abilities every step of the way. You get an extra life for each 20,000 points. The screen goes darker when time reaches 1000. The screen goes completely black when time reaches 0. You are not dead but you have to go back to the top of the candle. Since this program is written in ML, you must enter LOADM"TUT" or CLOADM"TUT" to load. Enter EXEC to run. To save this program, enter (C)SAVEM"TUT",7168,16080,7168.

We have included NFL 89 predictions for the 1989 season. The first program, NFLINS, will give you instructions on how to run NFL89.

Until next month.............................
