DISK USERS: Insert disk and run DIV. CASSETTE TAPE USERS: Rewind tape. Zero the tape counter. Fast Forward to desired program's tape counter number and enter CLGAD or CLGADM. If while loading or running a program, you get a FC, OM, or SN error, you probably have to enter the PMODE and PCLEAR values from the keyboard. We try to put as many duplicates of the programs on tape as possible. If the first copy does not load, try the second copy, or if it has one, the third. If you cannot get the tape or disk to load the programs properly, then send it back for a prompt replacement.

Welcome to 93rd issue of subscription software. We hope that you enjoy this month's selection.

- MR. MOVIE - More flexibility and power are provided in this video tape database. Up to twelve different segment types can be used to define your movies. This program allows you to enter in a title, score, time, count description and stars of the movie. You can also search for your movies by star, score, or type. All this information can be printed or saved to tape or disk.
- INVADERS - Use your right joystick to maneuver in this fun arcade past favorite. Press the button to fire up at the descending invaders. This program uses the high speed poke to speed up the action.
- COCO3 RECIPE MACHINE - This program allows you to enter, edit, list, and print recipes to your printer. It requires a disk drive and a Cocom. Upon entering a recipe, you have up to 14 preset categories to choose from. This program is designed to store long recipes. You can store 61 recipes on each disk. We have a sample recipe called 'Cherry' stored on the disk.

4. SILVERCAPE 3 ADVENTURE - Find Lord Silvercape and free him from the spell placed on him by an evil witch in this graphic adventure for the Cocom3. Use standard adventure syntax like get, drop, and examine. There is a graphic window on the top right of the screen and a compass on the left. The middle two boxes will tell you your inventory or the objects in the room. Good luck!

5. BABY-SITTER'S DATABASE - This program will allow you to keep track of a database of clients who you earn money from. Although it is labeled Baby-sitters Database, it can be used for other methods of keeping track of clients - any time you earn money from more than one source. With this program you can create a client list, edit the client list, search for clients and print the transactions of each client. With a 16K system you can have up to 25 clients with 100 transactions. In a 32K system you can have up to 50 clients with up to 500 transactions.

6. BIBLE SCRIPTURE - How well do you know your Bible? This program will quiz you on some of the more common scripture texts. You can decide how many questions - up to 53 to answer. At the end of the program you are scored and graded. You can also review some of the scriptures.

7. VOCABULARY QUIZ - Choose the correct number that will best complete the question in this multiple choice vocabulary quiz. Up to 100 questions are available.

8. DROP PACK - Like Tetris, this program requires you to rotate the pieces around to fill up the wall. First you must use the arrow keys to select a level. Next, press 'S' to start the game. Use the right joystick to control the blocks. Push the stick right to rotate, press the fire button to drop. Push the stick up to pause. Try to make a solid level as you drop pieces, thus creating a wall. This program is written in machine language. To load this program, you must enter LOADM"DROP" or CLOADM"DROP" for tape. Then, you must enter EXEC instead of RUN. To save this program, enter (C)SAVEM "DROP",10000,13823,12080.

9. DOCTOR WHO 3 - Based on the British TV series, this ML game for the Cocom3 involves helping the Doctor travel through time. There are four levels in this game. Once you complete a level, you do not have to go through it again. When your score reaches 500, you get to advance to the next level. You must enter LOADM"WHOPART1" and EXEC instead of RUN. This program requires the use of the right joystick. To save this program, enter (C)SAVEM "WHOPART1",4096,32030,4096.

10. GRABBER - Here is another Tom Mix favorite. In this ML game, you are the Grabber. Your object is to grab the 8 treasures and store them in the center boxes. You start with 3 Grabbers and get an extra Grabber at 20,000 points. When playing the two player version, player 1 uses the right joystick and player 2 uses the left. Each board consists of 2 mazes, one above the other. Pressing the button on your joystick allows you to switch mazes. The white box shows you where the Grabber will materialize in the other maze when you press the button. The Grabber can not switch mazes if there is something in the box. The monster is out to get you. When he appears in the maze, he is the same color as you. As long as this is the case, his touch kills. You can rectify the situation by running over an X. This changes your color and allows you to get him. There is a bonus board every third and eight board of each level. Pressing <ENTER> will pause the game while pressing the SPACEBAR will resume. To save this machine language game, enter (C)SAVEM "GRABBER",7664,32513,7664.

Until next month.....
