FROG	THE FROG	3	4	235:426	172:426

Welcome to our 101st issue of subscription software. We hope you enjoy
this month's fine selection.

1. **GOSSIP** - Gossip consists of four programs which rely on the Coco's ability
to pick and use random data. The four parts include 1) Story Idea Generators:
Picks random scenarios for authors with writer's block. 2) Endless Gossip: This
part strings together enough situations to make tabloids envious. 3) Excuses:
Provides hi-tech sounding terms that really do not mean anything. 4) Book
Titles: Lists titles never seen on the Best Seller's list.

2. **COST ESTIMATOR** - This program will easily help you keep track of your cost
estimates. The first thing you should do when running this program is to run
the "Configure Program" section of the program. This will allow you to edit up
to 100 entries (or labor or material). Here you can enter a brief description,
a unit identification, and a cost per unit. When you finish putting in this
information, select "D" for cost estimate. Here you can input the name of the
cost estimate, as well as all the material and labor. This program will then
print out the cost estimate on the printer.

3. **SALON INVENTORY** - This disk only program is designed to help run a
hair/beauty salon. The first thing you should do is add your employees as well
as print a list of your employees. Next, you should add all your products and
services and get a printout of this. Your customers can be added at this time
along with a report of your customers. When your customers come in, you can
add their name to the customers file. This program can also products/services
they received to be totaled and printed in detail. Note: Please make a backup of this
program before running. This program will automatically add some files to your
disk.

4. **PERSONAL STATISTICIAN** - This program will allow you to enter numbers while performing stats on them quickly and easily. It somewhat resembles a spreadsheet. For instance, if you want to keep track of all your assets you would first label and add all your assets under A - Add field. You could then run X - Add Expressions to add all of them if you desired. You could print/view this report if you desired.

5. **BINGO CALLER 3** - This Coco3 only program is fairly explanatory. If you select 1 for house rules, you will get a list of all the possible bingo combinations. You can select between single game or 3 game set. You also can set the timer for amount of seconds in between each letter calling. You can view all the numbers picked as the computer randomly picks them.

6. **ALIAX 3** - This Coco3 ML game involves controlling a Robot as you dig from one room to the next. There are two scenes with eight rooms in each to explore. There are also instructions built into the program which will tell you more. This program is in machine language. To load this program, enter CLOADM "ALIAX" for tape or LOADM "ALIAX" for disk. Enter EXEC to run the program. Enter (C)SAVEM "ALIAX",4096,23540,4096.

7. **DEATH HUNT 3** - The object of this Coco 3 only ML game is to find your opponent and defeat him. Each player controls his Knight with a joystick. The view will appear as if you are in the dungeon. You can turn right and left, go forward, and attack by pushing the firebutton. On your way you will see many objects on the walls. They don't really do anything but help you find your way. (along with your compass) Beware! There are some problems you will encounter. We can not tell you too much because that is half of the fun. Enter CLOADM "DEATH" for tape or LOADM "DEATH" for disk. Enter EXEC instead of run. To save this program, enter (C)SAVEM "DEATH" ,3584,20912,9728.

8. **512K RAM CATALOGER 3** - This program requires a Coco3 which has been upgraded to 512K as well as a disk drive. To run, enter RUN "CATALOG". First, the program asks which version of RS-DOS you are using and then loads the ram disk. Some of the features of this powerful program are as follows: 1) Read Disk Directory 2) Sort Data File 3) Search/View (various items) 4) Return To Basic. There are two ML files on the disk called DISK 1-0 and DISK 1-1. The save addresses for these are 3584, 3711, and 3584.

9. **DUCK HUNT** - Use your joystick to shoot at the ducks while avoiding falling eggs and dead falling ducks in this addicting ML game. Speed will increase when your score reaches ten or twenty thousand points. But watch out, you only have three lives! The first program, DUCK will load a machine language file called DUCKHUNT. To save this program, enter (C)SAVEM "DUCKHUNT",26150,30999,26150.

10. **THE FROG** - Cross the busy highway to the safety of the median and rest awhile before you set out across the swollen river teaming with hidden hazards. The four arrow keys are used to move the frog about the screen. The object of this Tom Mix favorite is to safely get the frog across the road and river. You may jump on the backs of the turtles and the alligators to complete your river crossing. Be careful of the alligators jaws and watch out for the turtles as they submerge. The white or yellow frog setting on one of the logs is a female. You get extra points for safely taking her across with you and for getting items in the boxes. Bonus frogs are awarded at each 10,000 points. Alligators appear on the 2nd screen, snakes on the 3rd. To load this ML program, enter CLOADM "FROG" for tape or LOADM "FROG" for disk. Enter EXEC to run. To save this program, enter (C)SAVEM "FROG",7168,16037,7168.

Until next month.............................
