DISK USERS: Insert disk and run. **CASSETTE TAPE USERS:** Rewind tape. Zero the tape counter. Fast Forward to desired program's tape counter number and enter 'LOAD' or 'LOADM'. If while loading or running a program, you get a FC, CM, or SN error, you probably have to enter the 'P.MODE' and 'PCLEAR' values from the keyboard. We try to put as many duplicates of the programs on tape as possible. If the first copy does not load, try the second copy, or if it has one, the third. If you cannot get the tape or disk to load the programs properly, then send it back for a prompt replacement.

Welcome to our 107th issue of subscription software. We hope that you enjoy this month's fine selection. Thank you for supporting the Color Computer.

- 1. DESERT STORM** - You are commander-in-chief in this battle simulation. Kuwait is attacked and you are determined that this aggression will not be tolerated. The problem: Your forces in the theatre are rather low at the beginning of the war. You must accumulate more and more troops, aircraft, tanks, patriots, and trucks before you attack. You must also try to destroy the incoming scud missiles as you force Saddam out of Kuwait.
- 2. BUSINESS PROFIT PLANNER** - If you ever wanted to start your own business and you were not sure how much sales you needed to break even, then this program will help. First, you should enter in all the projected expenses. We automatically put in rent as your first expense. You can edit this entry and/or add more expenses. Next, add all the income data and your business taxes. You can save data to tape or disk and you can also get a printed report of the information you have accumulated.
- 3. THE ULTIMATE RULER** - How many years can you last in this small Agrerian society? You decide how much land to harvest, how much money goes towards feeding your people, etc. You can sell land to foreign industry as well. You must try to become the **ultimate ruler!** Good luck!

4. **MATH DERBY** - This educational program will help the beginning math students with addition, subtraction, multiplication, or division. There are different levels of play which allows for two people at different levels to compete. After you enter in both players names, enter in a code number between 01 - 12 depending on what level and what operation. You then are each asked to solve math problems and fill your grid.

5. **BLOOD PRESSURE DATABASE 3** - This Coco3 only program allows you to keep track of your blood pressure through out the day or week. Since information is constantly being transferred, this program requires a disk drive. Once the information is stored, it can be printed to your printer or to the screen. When you select "Print the weekly chart", the program will ask you for seven specific days. If you want to see a sample, simply enter in the dates 01/21/91 through 01/27/91. There is also some helpful health information built into the program which came from the Encyclopedia and pamphlets from the author's doctor.

6. **COBRA ATTACK** - The enemy is fast approaching. Before he can maneuver his attack chopper into position and lock into the target, you must shoot him down. Use the right joystick to maneuver your scope. Press the fire button to fire the attack guns. Be careful, some enemy choppers require more than one direct hit.

7. **MONOGRAM** - Monogram is a program that will draw a large monogram for fancy letterheads. Letters may be plain or surrounded by a randomly designed motif. On-screen options make it quite user friendly. Once drawn, the user will need a graphic screen dump, however to make a hard copy. Note: There is a graphic screen dump program available on T&D Software issue #10.

8. **COUNTRY CLUB ADVENTURE** - You are dying to get out to the golf course. You have a twelve o'clock tee-off time. Someone stole your club pass card! What will you do? Use standard adventure syntax to do things such as open door, get card, etc. in this 32K-required adventure. You only have so much time so do not waste it. Good luck! Maybe we will see you at the club house.

9. **SCREEN BLANKER** - If your computer is left on a long time with the same screen than this program may help you increase the life of your monitor. As you know, your monitor or TV can have images permanently burnt in. Once this program is loaded you can run your other software as usual. If the computer is left alone for more than a minute, the screen will automatically blank out. To reset the screen, simply press any key. If you want to change the time it takes to blank the screen, you can poke a different value into the address of 15553. For instance, entering POKE 15553,1 will make the screen blank in about 5 seconds. Entering POKE 15553,255 will make the screen blank in about 10 minutes. To load this program, enter LOADM"SCREEN" for disk or CLOADM"SCREE" for tape. Enter EXEC to run. To save this program to tape or disk, enter (C)SAVEM"SCREEN",15500,16327,15500.

10. **COLOR GOLF** - Color golf is another exciting Tom Mix favorite for one to four players. First you enter in the number of players and their names. When the first hole comes up on your screen choose either a wood (W) or iron (I) or sand iron (S). Next choose the number of wood (1 thru 4) or the number of iron (1 thru 9). Now you must choose the direction you want the ball to go. This is done by indicating clock direction. Example: Straight right is 3. Straight left is 9 etc. You may also use 3.5, 9.5, ETC. Once on the green you need only indicate distance and direction. The green is 180 units wide and the hole is 8 units. Watch out for sand traps and water hazzards. The program also has a built-in 12 % slice/hook random factor.

Until next month.....
