Welcome to another exciting issue of subscription software. We apologize for being so late. We are having a shortage of good quality software submissions. If you have any, please send them in. We hope you enjoy this month's selection.

1. **BOXES**- Create as many boxes as you can without touching any of the sides in this addicting game. Use the arrow keys to control the movement of your racing pen. The person with the highest game can get his initials entered into the boxes hall of fame.

2. **TIC TAC TOE 3** - A popular game for the Color Computer 3, the object of the game is to place 3 X's or O's in a row. They can be placed up and down, sideways, and diagonal. This game will even keep track of how many games you won against the computer. There are two skill levels. Level 1 is for novice players and learners alike. Level 2 is for those who like a challenge against the computer.

3. **MENU**- Here we have one of the best menuing programs we've seen. This disk only program allows you to keep track of the time as well as perform many menuing functions. The menu works to put all of the files on one screen so that they can be run with the touch of a button instead of typing out a long command line. This program will allow you to kill files, get stats on any disk or program, rename programs, and purge the disk (Clean off the Disk of all files unwanted). When you first run this program it will create a data file called DISK.DAT.

4. **MUNCHER**- This cute simple game will challenge you to beat your high score. A somewhat Pac-Man similarity, the object is to avoid the pound keys as they come after you. Press the space bar to jump them. You get 3 lives to start out with. How high can you score? Our personal best is 197.

5. **RIDDLE RIDDLE RIDDLE**- This program will force a smile on almost anyone. There are 15 riddles for you to scroll through each with a graphic picture.

6. **LOTTOGME**- This program is here to help increase your luck in playing the lotteries. Full instructions are written inside the program itself. You start out with $250 and try to become the next millionaire. You can play each week if you like.

7. **HCOPY 128-512** - These Coco3 only programs will enable you to save pictures (or backgrounds) from the hi-res screens to RAM for later recall so you do not have to redraw them. There are two versions of the software. One is for a standard Coco3 with 128K called HCOPY128 and the other with 512K called HCOPY512.

8. **RAHUL'S QUEST 3** - This CoCo 3 adventure requires the use of a joystick. The object of the game is to search for the secret letter of love, use the fire button to jump, the joystick to control movements and to climb up and down ropes. There is an instructional program called RAHINST which should be run first. To load this ML program, enter LOADM "RAHUL". Enter EXEC to run. To save type SAVEM "RAHUL" 4096, 32185, 4096

9. **CARS TYPING TUTOR** - This program is sort of a typing tutor with a twist. In the lower left-hand corner of the screen a key on the keyboard will appear. Press that key to advance the car. You can choose the level of your opponents to determine how fast they move.

10. **PROTECT**- The object of this Tom Mix game is to blast away all the ships before they destroy the cities of the world. Use the left joystick button to start. Use the left joystick to control up/down movement as well as firing movement. Use the right joystick button to change the firing direction. The "X" key will quit the game. To load this ML game, enter LOADM"PROTECT". Enter EXEC to run. To save this program, enter SAVEM "PROTECT",8704,29096,8704.

Until Next Month................................................
