

# ----- BREW MASTER -----

## TO PLAY:

Press reset until the start up screen is red, then push the fire button. BREW MASTER uses the right joystick and to make the joystick response quick without the tendency to over-shoot the desired location, you must recenter(approx) the joystick after each move (kind of a debounce). With a little practice, this is not difficult with the analogue type joystick, but it works even better with a self-centering joystick. Press "P" to pause.

## DESCRIPTION:

Move along the end of the bars serving beers to your thirsty customers. Press the fire button to fill and release it to serve. Keep customers from reaching the tap end of the bar while picking up any empty glasses before they reach the end and crash. Take care not to serve too many beers or they will crash on the opposite end of the bar. Also, be aware that a customer will not pick up a beer if his (or her) back is turned.

The game difficulty progressively increases through the 12th round where it remains difficult(but not impossible). A round completed by serving all customers off the screen or when a sufficient number of customers have been served off. You receive 50 points for each customer served and 25 points for each empty glass recovered.

After every two completed rounds, there is a challenge round. Here, the devious can shaker shakes four out of five cans of beer. The cans are then shuffled. Use the joystick to move left or right and press the fire button to select the can which has not been shook. A correct answer is rewarded with 3000 points.

The game begins with 4 serves and a free serve is given every 10000 points. A serve is lost if:

1. a customer reaches the tap end of a bar.
2. a full beer reaches the opposite end of the bar.
3. an empty glass reaches the end of the bar.
4. the wrong can is chosen on the challenge round.

## HINTS:

Run down the bars to pick up empty glasses quicker, but don't run back, push up or down to jump back to the tap end of the adjacent bar. You can go off the top to the bottom and visa versa. Customers close to the tap end of bars can be served more than one beer to push them further back down the bar.
