Marooned!

By Steve Hartford

Marooned! is a two-part graphic adventure with over 100 locations and 30 commands. It requires a 32K Color Computer and one disk drive.

SCENARIO:

Sitting outside on the back porch one fine afternoon, you see a strange, flashing UFO-type object descend from the clouds and land in the corn field. Being the curious type, you run out to investigate (NORTH) and find a spaceship with its hatch open. As you step inside (NORTH again), the hatch closes and the ship takes off! The object of the adventure is to find your way back home. Good luck!

LOADING:

Insert the disk into your drive and type RUN "BOOT". A color test will appear on your screen. If the screen is red, press the RESET button until the screen is blue. Press ENTER when the screen is blue. The game will load and execute automatically. You will see and hear the UFO land, so go investigate!

PLAYING:

You can enter normal two-word commands consisting of a verb and a noun (GO NORTH, GET BOX, OPEN EGG, etc.), or complete sentences that are less than 22 characters long (PLEASE RUN NORTH NOW!, etc.). You can use either upper or lower-case letters, using <SHIFT> ⌘ to select.

As you wander around inside the UFO (and where it may take you...), be sure to create a map to keep track of your location. The game has an extensive vocabulary, but if the computer does not understand you, rephrase the command. If the computer still doesn't understand, the command (or thought) will probably not help you achieve your goal. You can pause and continue games by typing SAVE or LOAD, and then typing the game number (from one to nine). If there is an error, or you BREAK the program, you will have to re-boot the adventure, so please be careful.

Read the information above and below the picture to be sure that you know where you are and what is happening. Pay close attention to the picture - it may contain an important clue. If you are stuck, ask for HELP.

You may make copies of this disk for your own use with the BACKUP command. Please respect the time invested in this program and do not give copies of the disk away. A software manufacturer must be able to recover the costs involved in producing a piece of software. Please do your part to insure the availability of quality software for the Color Computer by using good moral sense. Thank you!

This program is guaranteed to load for the original owner for life, even if accidentally abused. Simply return the original disk for replacement.
