

# SKY-DEFENSE

## QUASAR ANIMATIONS

### 1982

The object of the game is to defend your planet by destroying as many of the attackers as you can without being destroyed. You have 5 ships to complete your mission with no replacements, so skill is a must .. You will use the left joystick as well as its fire button (some machines will use the right joystick). Your score will be in the top left corner of your screen and the top right corner of your screen will have the number of ships you have lost, not the number of ships remaining.

There are three major attack waves and you receive a bonus of 100 points as you complete each. If you survive all three, you will start over, but retain your score.

You are restricted to three shots at a time and sometimes two at a time. Sometimes one of your phasers will fire slower than normal to indicate your on board computer is failing, and as your ship makes repairs, it will work properly.

- 1) Place tape in tape unit and press "PLAY"
- 2) Type "CLOADM" at the computer and press the "ENTER" key
- 3) After the "OK" message appears, type "EXEC" and press the "ENTER" key again and game play will start, or press joystick button.

TIP: Watch for non-shooters; they are easy points and you cannot crash into them .....
