

S T A R S K I D

Use the right joystick to travel the planet surface in search of valuable treasures. Manuever your skid to avoid meteors which continually bombard this desolute alien planet or use the fire button to blast and disinergrate them before they collide with you. The surface can be hazordous too as it is strewn with boulders. Push up on the joystick for a temporary burst of energy to fly over them.

As you travel, your proximity to the treasures is plotted along the bottom of the screen. When you succeed in recovering all seven treasures of the same type, you advance to the next difficulty level and a new type of treasure. Higher difficulty levels have an indestructable cruise missle to contend with. If the missle is close to the ground, it also must be flown over with an energy burst.

An additional Star Skid is awarded every 10,000 points. You are rewarded with 100 points for destroying meteors, 1000 points for recovering each treasure, and 5000 points for recovering all of each treasure type. Additional points are given for successfully flying over objects in your path. Push the fire button to begin your journey and any future journeys--and may the course be with you!
