Here you'll find all of the files needed to open/modify and order
a motherboard for the Tandy Color Computer 2 models 26-313xA.

The schematic was captured in KiCAD, an open source EDA program
available to for anyone to download and use for free. To open and edit
the design you'll need KiCAD 5.1.5 or above. If you just want to order
the boards as they are from a PCB manufacturer, the gerber and drill
files are included so that you can do this.

I plan on keeping updated files of all of the CoCo motherboards in a github
repository.

https://github.com/qbancoffee/coco_motherboards

What's included.

26-313xA   A directory containing the KiCAD project files for the board.
coco2_26-313xA_kicad_schematic.pdf   PDF version of the KiCAD schematic
coco2_bom.csv   A CSV formatted version of the Bill Of Materials or parts list.
gerber   A directory containing there gerber files.
interactive_bom.html   An interactive web page to help locate parts and assemble the board.
README.odt   ODT version of the README
README.pdf   PDF version of the README
