

# A Wordle clone for the MC-10

Feb. 17, 2022

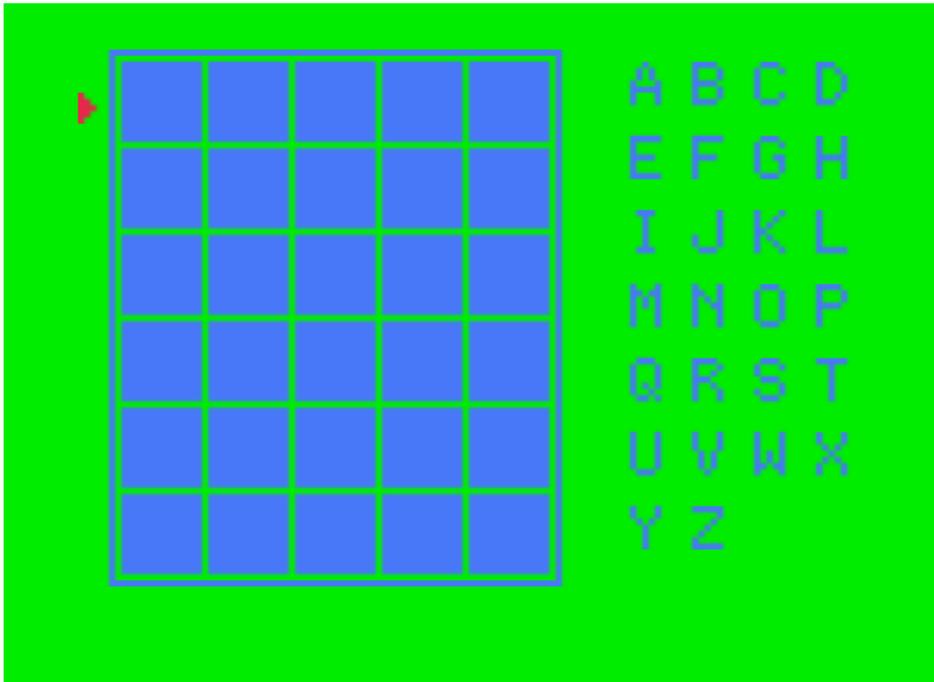

## Instructions

The game is provided as a single file which must be copied to an SD card for use in the MCX32-SD expansion unit. You can rename the file, but it must retain the .BIN extension. The game will not run if loaded from Emcee server.

Version 3.1 or later of MCX Basic is required. If you have version 3.0 you can download an installer for the latest version from [mcxwares.blogspot.com](http://mcxwares.blogspot.com).

Use the `LOADM` command to load and run the game. You don't need to include the extension in the file name. The program will `EXEC` itself automatically.

```
LOADM "WORDGAME"
```

To guess the word, type all five letters and press ENTER.  
The BREAK key or the < key can be used to backspace.  
Only valid words (contained in the program's dictionary) will be accepted.

After entering a valid guess, letters in the correct position are shown on the grid with a green background. Letters that are contained in the secret word but were entered in the wrong position have a yellow background. Letters not contained in the secret word retain the grid's blue background.

You can press SHIFT and BREAK together to quit the game at any time.
